Comments for Public Posting: Hello, I'm a school nurse in Los Angeles and would like to make a comment for the meeting held on 2/9/26 by the LA City Health Commission on AI and emerging technologies on public health systems. School nurses work with various types of technologies and applications such as electronic health records, telehealth/telemedicine, data analytics and other communication platforms to support student health, safety, and care coordination. In relation to school health, although AI can facilitate communication and provide administrative support for school nurses, it poses a challenge on data privacy & security such as protecting sensitive student health information. AI and emerging technologies are the driving forces of the modern digital era but must have a strong governance to prevent bias, security vulnerabilities, and unethical outcomes. Because it has access to vast datasets, these systems should have strict adherence to HIPAA and FERPA regulations so that sensitive student data will not be compromised.
