Dear Ms. Wolcott,

Dockless electric scooters are one of several new mobility modes sweeping across America that provide a solution to the “last mile” problem. The “last mile” is the difficult to cover distances between where traditional transportation like cars or buses end and the location where a person wants to be.

In a recent blog post titled “[With Pilot Programs, Cities Can Give Micromobility a Test Drive](#),” Mercatus Research Fellow Jennifer Huddleston describes how cities have implemented a variety of policy solutions when it comes to this new and sometimes disruptive transportation option.

Click [here](#) to find out how best to structure dockless electric scooter pilot programs in your city. Please respond to this email if you are interested in learning more about this technology or would like to speak directly with the author.

Sincerely,

Sandy Liddy Bourne
