Table 1-1.1A
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Unmitigated Construction Through 2035 Operations - Lifetime Exposure
30-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	3rd Trimester	Ages 0<2	Ages 2<9	Ages 2<16	Ages 16<30	Ages 16<70
Daily Breathing Rate (DBR)	361 L/kg-d	1090 L/kg-d	861 L/kg-d	745 L/kg-d	335 L/kg-d	290 L/kg-d
Fraction of Year (EF)	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless
Absorption Fraction (A)	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	10 unitless	10 unitless	3 unitless	3 unitless	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.00357 unitless	0.01429 unitless	0.01429 unitless	0.01429 unitless	0.2 unitless	0.771 unitless
Fraction of Time at Home (FAH)	1.00 unitless	1.00 unitless	1.00 unitless	1 unitless	0.73 unitless	0.73 unitless

	Start Age	End Age
Child Resident	0	9 Year
School Child	7	16 Year
30-year Resident	0	30 Year
70-year Resident	0	70 Year

	Concentration at Location w/Maximum Risk (ug/m^3)

Table 1-1.1A
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Unmitigated Construction Through 2035 Operations - Lifetime Exposure
30-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Equations

Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF

HQ = Cair / REL

Where: HQ = Hazard Quotient; Cair = Exposure Concentration; DBR = Daily Breathing Rate; ASF = Age sensitivity factor; EF = Fraction of Year; ED = Fraction of Averaging time; A = Absorption Fraction; FAH = Fraction of Time at Home; CF = Conversion Factor; CPF = Cancer Potency Factor

Table 1-1.4
2015 OEHHA Hazard Calculation for LAX Landside Access Modernization Program, 2017 Unmitigated Construction Through 2035 Operations
Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.68 unitless	0.68 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.01 unitless	0.157 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

	Concentration at Location w/Maximum Risk (ug/m^3)

Table 1-2.1A
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Mitigated Construction Through 2035 Operations - Lifetime Exposure
30-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Equations:
Risk = Car*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Car / REL
Where: HQ = Hazard Quotient; Car = Exposure Concentration; DBR = Daily Breathing Rate; ASF = Age sensitivity factor; EF = Fraction of Year; ED = Fraction of Averaging time; A = Absorption Fraction; FAH = Fraction of Time at Home; CF = Conversion Factor; CPF = Cancer Potency Factor

70-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	3rd Trimester	Ages 0<2	Ages 2<9	Ages 2<16	Ages 16<30	Ages 16<70
Daily Breathing Rate (DBR)	361 L/kg-d	1090 L/kg-d	861 L/kg-d	745 L/kg-d	335 L/kg-d	290 L/kg-d
Fraction of Year (EF)	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless
Absorption Fraction (A)	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	10 unitless	10 unitless	3 unitless	3 unitless	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.00357 unitless	0.01429 unitless	0.01429 unitless	0.01429 unitless	0.2 unitless	0.771 unitless
Fraction of Time at Home (FAH)	1.00 unitless	1.00 unitless	1.00 unitless	1 unitless	0.73 unitless	0.73 unitless

	Start Age	End Age
Child Resident	0	9 Year
School Child	7	18 Year
30-year Resident	0	30 Year
70-year Resident	0	70 Year

	Concentration at Location w/Maximum Risk (ug/m^3)

Table 1-2.1E
2035 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Mitigated Construction Through 2035 Operations - Lifetime Exposure
School Child Scenario, 9-year and 12-year
(Based on Peak Location of Residential Cancer Risks[1])

Equations
Risk = Car*DBR*EF*CPF*A*ASF*ED*FAH*CPF
HQ = Car / REL

HQ = Haza Where: HQ = Haza HQ = Hazard Quotient
DBR = Daily Breathing DBR = Dail DBR = Daily Breathing Rate
EF = Fraction of Year EF = Fracti EF = Fraction of Year
A = Absorption Fractior A = Absorp A = Absorption Fraction
CF = Conversion Facto CF = Conv CF = Conversion Factor

Car = Exposure Concentration
ASF = Age sensitivity factor
ED = Duration of Averaging time
FAH = Fraction of Time at Home
CPF = Cancer Potency Factor

Table 1-2.1D
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Mitigated Construction Through 2035 Operations - Lifetime Exposure
Child Resident Scenario (Maximum 2019-2027)
(Based on Peak Location of Residential Cancer Risks[1])

Equations
Risk = Car*DBR*EF*CPF*A*ASF*ED*FAH*CPF
HQ = Car / REL

Where:
HQ = Hazard Quotient
DBR = Daily Breathing Rate
EF = Fraction of Year
A = Absorption Fraction
CF = Conversion Factor

Car = Exposure Concentration
ASF = Age sensitivity factor
ED = Duration of Averaging time
FAH = Fraction of Time at Home
CPF = Cancer Potency Factor

Table 1-2.3
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2017 Mitigated Construction Through 2035 Operations - Lifetime Exposure
Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Equations
Risk = Car * DBR * EF * CF * ASF * ED * FAH * CPF
HQ = Car / REL
Where: HQ = Hazard Quotient; Car = Exposure Concentration; DBR = Daily Breathing Rate; ASF = Age sensitivity factor; EF = Fraction of Year; ED = Fraction of Averaging time; A = Absorption Fraction; FAH = Fraction of Time at Home; CF = Conversion Factor; CPF = Cancer Potency Factor

[1] Residential Maximum Grid No. 484
NA = Not Available
NC = Not Calculated
ug/m^3 = micrograms per cubic meter
mg/kg-d = milligrams per kilogram day

Source: CDM Smith, 2017

Table 1-3.2
2015 OEHHA Hazard Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations
with 2024-2027 Unmitigated Construction - Lifetime Exposure, Residential Scenario
(Based on Peak Location of Residential Hazards[1])

Equations
Risk = Cair*DBR*EF*CP*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient
DBR = Daily Breathing Rate
EF = Fraction of Year
A = Absorption Fraction
CF = Conversion Factor
Cair = Exposure Concentration
ASF = Age sensitivity factor
ED = Fraction of Averaging time
FAH = Fraction of Time at Home
CPF = Cancer Potency Factor

Operation

1-4 2024 With Project vs. 2024 Without Project

With Mitigated Construction

Attachment 1 - Cancer Risk and Chronic Non-Cancer Health Hazard Calculations by 2015 OEHHA Methodology

Table 1-3.4B
2015 OEHHA Hazard Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations
with 2024-2027 Unmitigated Construction - Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	2.40 L/kg-d	2.30 L/kg-d
Fraction of Year (EF)	0.68 unitless	0.68 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.01 unitless	0.157 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

	Concentration at Location w/Maximum Risk (ug/m^3)															Toxicity Criteria

Table 1-4.1B
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations with 2024-2027 Mitigated Construction - Lifetime Exposure, 70-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Equations
Risk = Car/'DBR*EF*CP'A*ASF*ED*FAH'CPF
HQ = Car / REL
Where: HQ = Hazard Quotient — Car = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

	Cancer Risk to Adult 70-Year Resident																		
	Construction by Year				Operation by Year														TOTAL Cancer Risk to Resident for Max Location

Table 1-4.1A
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations with 2024-2027 Mitigated Construction - Lifetime Exposure, 30-Year Adult Resident Scenario
(Based on Peak Location of Residential Cancer Risks[1])

Equations
Risk = Car/'DBR*EF*CP'A*ASF*ED*FAH'CPF
HQ = Car / REL
Where: HQ = Hazard Quotient — Car = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

Table 1-4.3
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations with 2024-2027 Mitigated Construction - Lifetime Exposure, Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

NA = Not Available — ug/m³ = micrograms per cubic meter
NC = Not Calculated — mg/kg-d = milligrams per kilogram day

Source: CDM Smith, 2017

Table 1-4.2
2015 OEHHA Hazard Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project Operations with 2024-2027 Mitigated Construction - Lifetime Exposure, Residential Scenario
(Based on Peak Location of Residential Cancer Risks[1])

	Start Age	End Age
Child Resident	0	9 Year
School Child	7	16 Year
30-year Resident	0	30 Year
70-year Resident	0	70 Year

Equations
Risk = Cair*DBR*EF*CPF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

	Hazard Quotient to Resident

Table 1-5.1
2035 OEHHA Risk Calculation for LAX Landside Access Modernization Program, 2035 With Project vs. 2035 Without Project Operations
- Lifetime Exposure (Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	3rd Trimester	Ages 0<2	Ages 2<9	Ages 2<16	Ages 16<30	Ages 16<70
Daily Breathing Rate (DBR)	361 L/kg-d	1090 L/kg-d	861 L/kg-d	745 L/kg-d	335 L/kg-d	290 L/kg-d
Fraction of Year (EF)	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless
Absorption Fraction (A)	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L
Age-adjustment (ASF)	10 unitless	10 unitless	3 unitless	3 unitless	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.00357 unitless	0.02857 unitless	0.10000 unitless	0.2 unitless	0.2 unitless	0.771 unitless
Fraction of Time at Home (FAH)	1.00 unitless	1.00 unitless	1.00 unitless	1 unitless	0.73 unitless	0.73 unitless
School Child 8-hr Daily Breathing Rate (DBR)			640 L/kg-d	520 L/kg-d	240 L/kg-d	
School Child Fraction of Time at Home (FAH)			1 unitless	1 unitless	1 unitless	

	Start Age	End Age
Child Resident	0	9 Year
School Child 9 yr	7	15 Year
School Child 12 yr	7	18 Year
30-year Resident	0	30 Year
70-year Resident	0	70 Year

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL

Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

	Toxicity Criteria					Cancer Risks					Hazard Quotients
TAC	Concentration at Location w/Maximum Risk (ug/m³)	EPA Inhalation CPF (mg/kg-day)⁻¹	CalEPA Inhalation CPF (mg/kg-day)⁻¹	EPA RfC (ug/m³)	CalEPA REL (ug/m³)	Cancer Risk to 9-year Child Resident	Cancer Risk to 9-year School Child	Cancer Risk to 12-year School Child	Cancer Risk to 30-year Resident	Cancer Risk to 70-year Resident	Hazard Quotient Resident

Table 1-5.2
2035 OEHHA Risk Calculation for LAX Landside Access Modernization Program, 2035 With Project vs. 2035 Without Project Operations
- Lifetime Exposure (Based on Peak Location of Residential Hazards[1])

Exposure Parameters	3rd Trimester	Ages 0<2	Ages 2<9	Ages 2<16	Ages 16<30	Ages 16<70
Daily Breathing Rate (DBR)	361 L/kg-d	1090 L/kg-d	861 L/kg-d	745 L/kg-d	335 L/kg-d	290 L/kg-d
Fraction of Year (EF)	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless	0.96 unitless
Absorption Fraction (A)	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L	0.000001 m3/L
Age-adjustment (ASF)	10 unitless	10 unitless	3 unitless	3 unitless	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.00357 unitless	0.02857 unitless	0.10000 unitless	0.2 unitless	0.2 unitless	0.771 unitless
Fraction of Time at Home (FAH)	1.00 unitless	1.00 unitless	1.00 unitless	1 unitless	0.73 unitless	0.73 unitless
School Child 8-hr Daily Breathing Rate (DBR)			640 L/kg-d	520 L/kg-d	240 L/kg-d	
School Child Fraction of Time at Home (FAH)			1 unitless	1 unitless	1 unitless	

	Start Age	End Age
Child Resident	0	9 Year
School Child 9 yr	7	15 Year
School Child 12 yr	7	18 Year
30-year Resident	0	30 Year
70-year Resident	0	70 Year

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL

Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

	Toxicity Criteria					Cancer Risks					Hazard Quotients

Table 1-7.3
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 Without Project vs. 2014 Baseline Operations - Screening Analysis
- Lifetime Exposure, Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.68 unitless	0.68 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.01429 unitless	0.1429 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient; Cair = Exposure Concentration; DBR = Daily Breathing Rate; ASF = Age sensitivity factor; EF = Fraction of Year; ED = Fraction of Averaging time; A = Absorption Fraction; FAH = Fraction of Time at Home; CF = Conversion Factor; CPF = Cancer Potency Factor

Table 1-8.3
2015 OEHHA Cancer Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2014 Baseline Operations - Screening Analysis
- Lifetime Exposure, Worker Scenario
(Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.69 unitless	0.69 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m^3/L	0.000001 m^3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.01429 unitless	0.01429 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

Equations
Risk = Cair*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Cair / REL
Where: HQ = Hazard Quotient — Cair = Exposure Concentration
DBR = Daily Breathing Rate — ASF = Age sensitivity factor
EF = Fraction of Year — ED = Fraction of Averaging time
A = Absorption Fraction — FAH = Fraction of Time at Home
CF = Conversion Factor — CPF = Cancer Potency Factor

Table 1-9.2
2035 OEHHA Risk Calculation for LAX Landside Access Modernization Program, 2035 Without Project vs. 2014 Baseline Operations - Screening Analysis
- Lifetime Exposure (Based on Peak Location of Commercial Cancer Risks[1])

Exposure Parameters	Ages 16<30	Ages 16<70
Worker 8-hr Daily Breathing Rate (DBR)	240 L/kg-d	230 L/kg-d
Fraction of Year (EF)	0.68 unitless	0.68 unitless
Absorption Fraction (A)	1 unitless	1 unitless
Conversion Factor (CF)	0.000001 m3/L	0.000001 m3/L
Age-adjustment (ASF)	1 unitless	1 unitless
Fraction of Averaging Time (ED)	0.21 unitless	0.143 unitless
Worker Adjustment Factor (WAH)	1 unitless	1 unitless

	Start Age	End Age
Worker	16	41 Year

Equations
Risk = Car*DBR*EF*CF*A*ASF*ED*FAH*CPF
HQ = Car / REL

Where: HQ = Hazard Quotient; Car = Exposure Concentration; DBR = Daily Breathing Rate; ASF = Age sensitivity factor; EF = Fraction of Year; ED = Fraction of Averaging time; A = Absorption Fraction; FAH = Fraction of Time at Home; CF = Conversion Factor; CPF = Cancer Potency Factor

	Toxicity Criteria					Cancer Risks	Hazard Quotients
TAC	Concentration at Location w/Maximum Risk (ug/m³)	EPA Inhalation CPF (mg/kg-day)⁻¹	CalEPA Inhalation CPF (mg/kg-day)⁻¹	EPA RfC (ug/m³)	CalEPA REL (ug/m³)	Cancer Risk to Worker	Hazard Quotient Worker

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.046581968740870). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

[4] Total cancer burden is the sum of individual census tract cancer burdens.

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.046581968740870). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

[4] Total cancer burden is the sum of individual census tract cancer burdens.

Table 1-13. Residential Cancer Burden for 2024 With Project vs. 2024 Without Project Operations, 2024-2093, with Unmitigated Construction, 2024-2027

[1] Census tract was matched to air model grid points identified as residential or residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.046581968740870). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the cancer risk is the average of risk at within the census tract.

4 Total cancer burden is the sum of individual census tract cancer burdens.

[1] Census tract was matched to air model grid points identified as residential/commercial.

[2] The 2016 population is estimated from the 2010 census population number by multiplying by the ratio of the total 2016 LA County Population number to the total 2010 LA County Population (1.046581968748407). Population numbers are not available (N/A) for construction grid points identified as sensitive receptors and included in the residential category.

[3] Cancer Risk is based on the sum of exposure to unmitigated construction and operations at a grid point. When multiple grid points are located within a census tract the risk is the average of risk at within the census tract.

4 Total cancer burden is the sum of individual census tract cancer burdens.

Page 4 of 4

Cumulative Analysis

1-15 Chronic Non-Cancer Health Hazards

1-16 Acute Non-Cancer Health Hazards

Table 1 -15. Cumulative Chronic Non-Cancer Health Hazards using National-Scale Air Toxics Assessment (NATA) tables from 2011

Table 2-A.1
Summary of Incremental Acute Hazard Indices for Onsite Workers and Offsite Receptors - LAX Landside Access Modernization Program, 2035 With Project v. 2035 Without Project
Operation TAC Concentrations

| Receptor Number | X | Y | Receptor Type | acetaldehyde (ug/m³) | acrolein (ug/m³

Table 3-1.2
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2017-2027 Unmitigated Construction and 2024-2086 Operations - Lifetime Exposure - Child Resident
(Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	Residential Child
Exposure Time	24 (hrs/day)
Exposure Duration	6 (years)
Exposure Frequency	350 (days/year)
Averaging Time (non-carcinogenic	52560 (hrs)
Averaging Time (carcinogenic)	613200 (hrs)

	Concentration at Location w/Maximum Risk (ug/m³)

Table 3-2.1
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2017-2027 Mitigated Construction and 2024-2086 Operations - Lifetime Exposure - Adult Resident
(Based on Peak Location of Residential Cancer Risks[1])

RAGS F Equations
EC = (CA x ET x EF x ED) / (AT)
Risk = IUR x EC
HQ = EC / REL
Where: HQ = Hazard Quotient EC = Exposure Concentration
IUR = Inhalation Unit Risk AT = Averaging Time (for cancer or non-cancer)
REL = Reference Exposure Level

	Toxicity Criteria		Cancer Risk to Adult Resident																						Cancer Risks	
	EPA Inhalation Unit Risk	Cal EPA Inhalation Unit Risk	Construction							Construction and Operations				Operation							Ops	Ops	Cancer Risk to	Cancer Risk to

Table 3-3.1
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project - Operations - with 2024-2027 Unmitigated Construction - Lifetime Exposure - Adult Resident
(Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	Residential Adult
Exposure Time	24 (hrs/day)
Exposure Duration	70 (years)
Exposure Frequency	350 (days/year)
Averaging Time (non-carcinogenic)	613200 (hrs)
Averaging Time (carcinogenic)	613200 (hrs)

	Concentration at Location w/Maximum Risk (ug/m^3)

Table 3-3.2
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2017-2027 Mitigated Construction and 2024-2086 Operations - Lifetime Exposure - Off-Airport Worker
(Based on Peak Location of Commercial Cancer Risks[1])

RAGS F Equations
EC = (CA x ET x EF x ED) / (AT)
Risk = IUR x EC
HQ = EC / REL
Where: HQ = Hazard Quotient; EC = Exposure Concentration; IUR = Inhalation Unit Risk; AT = Averaging Time (for cancer or non-cancer); REL = Reference Exposure Level

	Toxicity Criteria		Cancer Risk to Adult Resident																		Cancer Risks

Table 3-3.2
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project - Operations - with 2024-2027 Unmitigated Construction - Lifetime Exposure - Child Resident
(Based on Peak Location of Residential Cancer Risks[1])

Exposure Parameters	Residential Child
Exposure Time	24 (hrs/day)
Exposure Duration	6 (years)
Exposure Frequency	350 (days/year)
Averaging Time (non-carcinogenic)	52560 (hrs)
Averaging Time (carcinogenic)	613200 (hrs)

	Concentration at Location w/Maximum Risk (ug/m³)

Table 3-3.4
RAGS F Risk Calculation for LAX Landside Access Modernization Program, 2024 With Project vs. 2024 Without Project - Operations - with 2024-2027 Unmitigated Construction - Lifetime Exposure - Off-Airport Worker
(Based on Peak Location of Commercial Cancer Risks[1])

RAGS F Equations
EC = (CA x ET x EF x ED) / (AT)
Risk = IUR x EC
HQ = EC / REL
Where: HQ = Hazard Quotient
IUR = Inhalation Unit Risk
REL = Reference Exposure Level
EC = Exposure Concentration
AT = Averaging Time (for cancer or non-cancer)

TAC	Toxicity Criteria		Cancer Risk to Adult Resident											Cancer Risks
