Comments for Public Posting: EIR for the proposed Prologis warehouse should be withdrawn, revised and recirculated. The EIR fails to adequately address air pollution. The site for the proposed warehouse is adjacent to California Waste Services, a construction debris recycling center, which spews out toxic dust and noise from its operation. Decisions about our community are being made by officials who do not live in our community, already overburdened by existing pollution. The Harbor Gateway Community Plan from 1995 is antiquated.
