Light and Glare. Similar to the Proposed Project, future development under Alternative 3 would have the potential to create new sources of light and glare. Development and design standards associated with this alternative, in addition to implementation of the mitigation measure identified for the Proposed Project, which would be applicable to Alternative 3, would address these effects. Therefore, impacts are anticipated to be less than significant with mitigation, similar to the Proposed Project.

Air Quality

Air Quality Plans. Alternative 3 would increase population and housing to a greater extent than the Proposed Project. Future population growth under Alternative 3 exceeds the SCAG 2035 socioeconomic forecast provided to SCAQMD for incorporation into the 2012 AQMP. However, it assumed that the increase in growth would occur around the Expo LRT Line stations, thus, aligning with SCAG's 2012-2035 RTP/SCS goals to concentrate growth around transit. While Alternative 3 would have slightly greater impacts than the Proposed Project, Alternative 3 is considered consistent with the goals and policies of the 2012-2035 RTP/SCS and AQMP. Therefore, Alternative 3 would result in less than significant impacts related to conflicting with or obstructing the implementation of applicable air quality plans.

Air Quality Standards. Compared to the Proposed Project, Alternative 3 would have 3,137 more dwelling units, which is approximately equivalent to over 3 million square feet of building space. This increase would

be offset by a corresponding reduction of approximately 3.5 million square of non-residential space. Thus, construction levels, and therefore construction emissions, between Alternative 3 and the Proposed Project would be quite similar. Correspondingly, like the Proposed Project, construction emissions under Alternative 3 would exceed the SCAQMD significance thresholds. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would potentially reduce significant impacts to a less than significant level, but cannot be relied upon in the absence of a specific construction project to assess. Therefore, construction impacts would remain significant and unavoidable, similar to the Proposed Project.

Operational emissions generated by mobile sources and area sources would be similar to the Proposed Project. Area source emissions would increase as a result of architectural coating emissions and use of consumer products (e.g., cleaning supplies, cosmetics, and toiletries) associated with new residential land uses; however, the reduction in commercial space in Alternative 3 would have corresponding reductions in VOC emissions related to architectural coatings to commercial buildings, as well as from workplace and product creation activities. Similar to the Proposed Project, decreased mobile source emissions associated with a more fuel-efficient vehicle fleet would ultimately offset any increases in consumer product emissions in 2035. Therefore, impacts related to operational emissions would be less than significant, similar to the Proposed Project.

Sensitive Receptors. Toxic air contaminant impacts from construction activities under the Alternative 3 would be similar to the Proposed Project. Construction activity would generate diesel particulate emissions associated with heavy-duty equipment operations and truck traffic. Diesel exhaust causes health effects from both short-term or acute exposures, and long-term chronic exposures. Depending on the specifics of the project being developed (i.e., diesel particulate emissions and sensitive receptor locations), it is anticipated that emissions from construction activities would exceed the health risk significance thresholds established by the SCAQMD. Alternative 3 would result in approximately the same amount of new development as the Proposed Project, resulting in similar total toxic air contaminant construction emissions. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would potentially reduce significant impacts to a less than significant level, but cannot be relied upon in the absence of a specific construction project to assess. Therefore, impacts related to exposing sensitive receptors to substantial pollutant concentrations and toxic air contaminants from construction would remain significant and unavoidable, similar to the Proposed Project.

Regarding operational toxic air contaminant emissions, similar to the Proposed Project, operational activity associated with Alternative 3 would not generate significant toxic air contaminant emissions. New land uses, including employment-related uses such as creative office and light manufacturing, proposed as part of Alternative 3 are not typically associated with TAC emissions. Any use of toxic compounds would be strictly regulated through SCAQMD. Therefore, operational toxic air contaminant impacts would be less than significant, similar to the Proposed Project.

Odors. Future development under Alternative 3 has the potential to generate construction and operational odors. Potential sources that could emit odors during construction activities include equipment exhaust and paving and painting activities. Such odors are localized, generally confined to the immediate area surrounding a construction site and transitory in nature. According to the SCAQMD *CEQA Air Quality Handbook*, land uses and industrial operations that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies and fiberglass molding. Alternative 3 would not typically include land uses that are associated with odor complaints. Therefore, impacts related to odors would be less than significant, similar to the Proposed Project.

Cultural Resources

Alternative 3 would result in similar impacts related to cultural resources as the Proposed Project.

Cultural Resources. Similar to the Proposed Project, under Alternative 3, future development in the ECTNP Area has the potential to significantly impact historical resources either through direct physical effects or through indirect affects to the area surrounding a historical resource. Implementation of Plan Standards and Procedures identified in the Proposed Project, which are designed to reduce impacts to historical resources, would be applicable to Alternative 3. However, there is a reasonable possibility that during Alternative 3's development horizon a development project would necessitate the demolition, destruction, alteration or relocation of a historical resource such that the significance of that resource would be materially impaired. For this reason, despite best efforts to avoid significant impacts to historical resources, impacts related to historical resources from the implementation of Alternative 3 would be significant and unavoidable, similar to the Proposed Project.

Archeological and Paleontological Resources. Construction-related ground disturbing activities associated with future development under Alternative 3 could lead to the discovery and potential adverse change or damage to previously unidentified archeological or paleontological resources including human remains, similar to the Proposed Project. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would reduce potentially significant impacts to a less than significant level. Therefore, similar to the Proposed Project, impacts related to archeological or paleontological resources are reduced to less than significant with mitigation.

Human Remains. Compliance with the California Health and Safety Code and other state laws would ensure that any human remains encountered on a development site are appropriately managed. Impacts related to human remains are anticipated to be less than significant under Alternative 3, similar to the Proposed Project.

Geology and Soils

Similar to the Proposed Project, in order to obtain grading and building permits, all future development is required to comply with the CBC and the LABC, which would minimize the effects of seismic and geologic hazards to the maximum extent feasible. Alternative 2, similar to the Proposed Project, would not exacerbate existing conditions related to earthquake faults, ground shaking, or ground failure (including liquefaction, landslides, lateral spreading, subsidence, expansive soils, or collapse), therefore, no impact would occur.

Soil Erosion. Compliance with the City's codes, regulatory requirements, standard grading and building permit requirements, and the application of best management practice would ensure that potential impacts from erosion or loss of top soil would be less than significant. Therefore, impacts related to substantial soil erosion or the loss of top soil under Alternative 3 would be less than significant, similar to the Proposed Project.

Septic. Neither the Proposed Project nor this alternative would have an effect on septic systems. The Project Area, including the areas of proposed change, is currently served by City-owned wastewater treatment and disposal facilities and does not utilize a septic system. Therefore, similar to the Proposed Project, no impact would occur.

Greenhouse Gas Emissions

GHG Emissions. Similar to the Proposed Project, Alternative 3 would result in GHG emissions associated with the construction and operation of new land uses. GHG emissions would specifically arise from construction and from sources associated with operation, including direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. Similar to the Proposed Project, based on the plan-level analysis, Alternative 3 would increase stationary source emissions in the immediate plan area compared to 2013 as a result of new development. However, overall emissions in the plan area would decrease due to lower vehicle exhaust emissions rates anticipated in

the future. Therefore, impacts related to generating GHG emissions under Alternative 3 would be less than significant, similar to the Proposed Project.

Consistency with Plans, Policies, and Regulations. Similar to the Proposed Project, Alternative 3 would also be consistent with applicable GHG reduction plans, as it accommodates growth while providing transportation options, contributes to regional SB 375 requirements for reducing GHG emissions from cars and light trucks by reducing per capita VMT, concentrates development around transit, comprises a wide mix of uses, and better accommodates pedestrians and bicyclists. These characteristics, as well as the TDM strategies that would be incorporated into the alternative, are anticipated to reduce per capita GHG emissions associated with cars and light trucks. In addition, a recent USC study demonstrated that households located within a half mile of transit have reduced VMT and associated vehicle emissions when compared to households further away.[24] The decrease in VMT corresponded to a decrease in mobile source emissions with households within a half mile of a station having 30 percent less vehicle emissions than households further away after transit was introduced. Since Alternative 3 would concentrate housing within a half-mile of the Metro Expo Line Phase 2, Alternative 3 is anticipated to achieve these types of reductions in VMT and CO_2 emissions. Therefore, Alternative 3 would result in a less than significant impact related to GHG emissions and consistency with GHG reduction plans, similar to the Proposed Project.

Hazards and Hazardous Materials

Alternative 3 would result in similar impacts related to hazards and hazardous materials as the Proposed Project.

Transport, Use, or Disposal of Hazardous Materials. Alternative 3 may result in an increase of industrial land uses. This could increase the risk of hazardous material accidents during use, transport, and disposal. However, individual facilities that use or store large quantities of hazardous materials on-site are required to comply with numerous federal, state, and local regulations that address hazardous materials use, transport, storage and disposal. In addition, a majority of the industrial land use located within the Project Area would likely be light industrial and light manufacturing uses, which do not involve the use of hazardous materials; Alternative 3 features more residential uses than the Proposed Project and thus would minimize the likelihood of transportation, use, or disposal of hazardous materials. Future development may occur on sites where known or unknown soil or groundwater contamination has previously occurred, or that are developed with structures containing asbestos containing materials, lead based paint, and or PCB. The temporary use of potentially hazardous materials, including paints, adhesives, surface coatings, cleaning agents, fuels, and oils, is also anticipated during construction of future development. Accordingly, similar to the Proposed Project, future development has the potential to result in the transport, use, disposal, or release of hazardous materials during construction. In order to obtain permits required to commence construction, including demolition and grading, compliance with all applicable local, state and federal regulations must be demonstrated. These regulations identify safety standards and procedures related to the removal, handling, storage, transport, use, and disposal of hazardous materials and require testing, abatement, and remediation when deemed necessary. Therefore, Alternative 3 would have less than significant impacts related to the transport, use, or disposal of hazardous materials, similar to the Proposed Project.

Accidental Release of Hazardous Materials. Alternative 3 would allow for the construction of new buildings that would replace older structures that may have been built prior to the most recent building codes and regulations. Therefore, the proposed zone changes would reduce the risk of exposure to hazardous materials for those occupying buildings in the area as a result of accidents that can occur as current building codes and regulations require development projects to adhere to the seismic design requirements of the CBC and LABC to ensure new buildings are designed to withstand seismic events through modern construction techniques and minimize damage to structures or infrastructure that could result in the accidental release of hazardous

[24]Boarnet M. and Houston D., University of Southern California, Sol Price School of Public Policy, *The Exposition Light Rail Line Study: A Before-and-After Study of the Impact of New Light Rail Transit Service*, December 15 2013.

materials into the environment. Therefore, compliance with all applicable local, state, and federal laws and regulations would ensure that impacts related to the accidental release of hazardous materials would be less than significant under Alternative 3, similar to the Proposed Project.

Proximity to Schools. Alternative 3 would allow for construction of future development within a quarter mile of schools. Construction activities would involve the utilization of diesel powered trucks and equipment, which result in diesel emissions that have been determined to be a health hazard. However, similar to the Proposed Project, individual projects developed as part of the ECTNP under Alternative 3 would be required to comply with federal, state, and local hazardous materials regulations. Compliance with all applicable local, state, and federal laws and regulations would regulate, control, or respond to hazardous waste, transport, storage, disposal, and clean-up in order to ensure that hazardous materials do not pose a significant risk to nearby receptors. Therefore, compliance with all applicable regulations would ensure that impacts related to the public, schools, or the environment through the transport, use, disposal, or release of hazardous materials under Alternative 3 would be less than significant, similar to the Proposed Project.

Government Hazards Materials Site List. Future development on a site identified as previously occupied by a hazardous materials generating facility would have the potential to create a significant hazard to the public or the environment unless an environmental site assessment is conducted to determine potential risks and to ensure appropriate remediation is implemented. Therefore, Alternative 3 could result in a significant impact related to hazardous materials sites. However, a mitigation measure, similar to the one identified for the Proposed Project, would identify sites known to the Government to contain hazardous waste or hazardous materials, allowing the proper remediation to be implemented. Therefore, with mitigation, Alternative 3 would have less than significant impacts related to development on sites contained in Government lists of hazardous materials sites, similar to the Proposed Project.

Airport and Airstrip Hazards. The Proposed Project is located within two miles of the public Santa Monica Airport, beyond the planning boundaries of the airport. Existing regulations would ensure that any future development does not result in safety hazards related to the operation of the airport. Additionally, the Airport has been allowed to close after 2028.[25] Therefore, similar to the Proposed Project, Alternative 3 would result in less than significant impacts related to public airport safety hazards. Additionally, there are no private airstrips within the vicinity of the Proposed Project. Therefore, similar to the Proposed Project, Alternative 3 would result in no impact related to private airstrip safety hazards.

Emergency Plans. Alternative 3 would not impair implementation of, or physically interfere with the Safety Element of the City's General Plan, as Alternative 3 would not eliminate or reconfigure major access routes into or out of the Project Area. Therefore, impacts related to interference with adopted emergency management plans under Alternative 3 would be less than significant, similar to the Proposed Project.

Wildlands. The Project Area does not include, nor is it adjacent to, a designated wildland fire hazard area, and, thus, no wildland fire hazard impacts are anticipated for Alternative 3, similar to the Proposed Project.

Hydrology and Water Quality

Alternative 3 would result in similar impacts related to hydrology and water quality as the Proposed Project. In order to obtain grading and building permits, all future development is required to comply with City Ordinances and NPDES permit requirements. Compliance with these codes would ensure that future development occurring under Alternative 3 would result in less than significant impacts related to hydrology and water quality. Moreover, future development within the Project Area would be subject to proposed design guidelines which would result in an increase in permeable surfaces, increase water infiltration and reduce the amount of runoff entering the City's storm drain system which would serve to further reduce

[25]Federal Aviation Administration (FAA), *Press Release – FAA Reaches Settlement Agreement with City of Santa Monica*, January 28, 2017, https://www.faa.gov/news/press_releases/news_story.cfm?newsId=21394, accessed February 28, 2017.

hydrology and water quality impacts. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would reduce potentially significant impacts related to developing housing in a 100-year flood hazard area to a less than significant level. Therefore, impacts related to hydrology and water quality would be less than significant, similar to the Proposed Project.

Impede or Redirect Flood Flows. It is not anticipated that Alternative 3 would place structures that would impede or redirect flood flows within a 100-year flood hazard area. Therefore, no impact would occur, similar to the Proposed Project.

Seiche, Tsunami, or Mudflows. The Project Area is not located within areas that have the potential for inundation by seiche, tsunami, or mudflow/mudslides. Therefore, similar to the Proposed Project, Alternative 3 would have no impact related to seiche, tsunami, or mudflow/mudslides.

Land Use and Planning

Under Alternative 3, the amount of non-residential development would be reduced by approximately 20 percent, while residential development would be increased by approximately 11 percent compared to the Proposed Project. When compared to the Alternative Compliance scenario, Alternative 3 would increase dwelling units by approximately 5 percent and reduce non-residential space by approximately 12 percent (see **Table 5-4**, above).

Divide an established community. Under Alternative 3, future development within ECTNP Area would be subject to the same new development standards and policies as the Proposed Project. As Alternative 3 involves land use changes within the same areas of proposed change as the Proposed Project, Alternative 3 would not divide an established community. Similar to the Proposed Project, which would implement uniform design standards, Alternative 3 would implement development and design standards consistently throughout the Project Area. Use of these standards addressing site plans, building orientation, landscaping and pedestrian amenities would ensure that permitted new development would be consistent with a transit-oriented area and ensure compatibility with existing land uses and neighborhoods. In addition, although Alternative 3 includes increased residential capacity within proximity of the I-10 and I-405 freeways, which could result in potential land use conflicts due to toxic air contaminants emitted from freeways, the combination of existing regulatory measures as well as plan standards that apply to Alternative 3 would ensure that this impact is reduced to less than significant. As a result, Alternative 3, similar to the Proposed Project, would have a less than significant impact related to community division and barriers.

Consistency with adopted Plans, Policies, and Regulations. Alternative 3 would partially implement the policies of the City's General Plan Framework Element, other City policies, and SCAG policies, which call for new growth to be directed towards regional and commercial centers, along major corridors, and in close proximity to transit, particularly fixed rail transit. Alternative 3, similar to the Proposed Project, would rezone properties around the Bundy, Sepulveda, Palms, and Culver City stations to allow higher intensity development. However, when compared to the Proposed Project, this alternative would allow for a greater amount of residential use on what is currently industrial land, and thus would not accommodate projected employment for the area in 2035. Alternative 3 would not be consistent with community plan policies that require sufficient land for employment and other commercial development (see Goals 2 and 3 in West LA Community Plan and comparable goals in other community plans, and the SCAG RTP/SCS Goal 1).

Alternative 3 would not be consistent with the General Plan economic development goals which are designed to both facilitate job growth by providing sufficient land to support economic development activities and broaden the definition of industrial uses, due to the introduction of information age technology, in order to capture a larger share of jobs in those business sectors in the City of Los Angeles (see, General Plan

Framework goals, objectives and policies: 7B, 7.2, 7.2.6, 7.5, 7.5.1 and 7.5.3).[26] Alternative 3 would partially implement these goals, but to a lesser extent and less effectively than the Proposed Project. Because Alternative 3 is the increased residential / reduced employment alternative, it does not capture as many jobs as the Proposed Project. Therefore, impacts conflicting with land use policies would be significant and unavoidable under Alternative 3, and greater than the Proposed Project.

Habitat Conservation Plans. Similar to the Proposed Project, Alternative 3 would not conflict with any applicable habitat conservation plans or natural community conservation plans, as there are no HCPs or NCCPs within the ECTNP Area.[27] Therefore, no impact would occur under Alternative 3, similar to the Proposed Project.

Noise

Alternative 3 would result in similar impacts related to noise and vibration compared to the Proposed Project.

Noise Standards and Temporary Ambient Noise. Similar to the Proposed Project, construction activity (e.g., equipment) occurring within the ECTNP Area would result in temporary increases in noise levels on an intermittent basis. In the absence of detailed noise analyses associated with specific projects, it is anticipated that construction noise levels, particularly for infill projects in a densely developed area, would exceed the City's thresholds of significance for nearby sensitive land uses. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would potentially reduce significant impacts to a less than significant level, but cannot be relied upon in the absence of a specific construction project to assess. Therefore, similar to the Proposed Project, construction-related noise impacts under Alternative 3 would be significant and unavoidable.

Noise Standards and Permanent Ambient Noise. Under Alternative 3, mobile source noise exposure would increase over existing conditions. These changes would be similar in magnitude to the Proposed Project as vehicle trips generated by these two options are expected to be roughly equivalent. Similar to the Proposed Project, new development may border residential areas leading to noise incompatibility. Additionally, this alternative, by substantially increasing the number of dwelling units, could result in noise conflicts in those areas where standalone residential projects or mixed use projects would be permitted in previously designated commercial or industrial zones where noise-generating activities may continue to occur from remaining manufacturing, warehousing, or auto-related land uses. Alternative 3 would implement the same mitigation measures as the Proposed Project, though operational noise impacts would remain significant and unavoidable, similar to the Proposed Project.

Vibration. Regarding vibration, it is not anticipated that Alternative 3 would include substantial sources of operational vibration (e.g., blasting activities). Construction vibration is a localized event and is typically only perceptible to a receptor that is in close proximity to the vibration source. The type of low- or mid-rise buildings anticipated to be built under Alternative 3 would typically be constructed with loaders and bulldozers. However, it is possible that pile driving would be necessary depending on site-specific geologic conditions. It is also possible that heavy equipment could operate within 25 feet of, or adjacent to, nearby buildings. The vibration levels associated with equipment operated under Alternative 3 could cause building damage or substantial human annoyance. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, would potentially reduce significant impacts to a less than significant level, but cannot be relied upon in the absence of a specific construction project to assess. Therefore, Alternative 3 would result in significant and unavoidable impacts related to vibration standards, similar to the Proposed Project.

[26]City of Los Angeles, *The Citywide General Plan Framework: An Element of the City of Los Angeles General Plan,* August 2001.

[27]California Department of Fish and Wildlife, *Natural Community Planning Program,* https://www.wildlife.ca.gov/Conservation/Planning/NCCP, accessed March 6, 2017.

Airport and Airstrip Noise. The Project Area is approximately 1,400 feet north of the Santa Monica Airport, at the closest point. The nearest proposed zone or land use designation change is located approximately 2,800 feet north of the Santa Monica Airport. The Santa Monica Airport has developed noise contours to characterize the Airport's influence on community noise levels.[28] Similar to the Proposed Project, the noise contours indicate that Santa Monica Airport-related noise levels at new development associated with Alternative 3 would be less than 60 dBA CNEL. These airport-related noise levels would be consistent with the City's acceptable community noise exposure standards for all land uses. Additionally, the Airport has been allowed to close after 2028.[29] Development of the Alternative 3 would not exacerbate levels of exposure for people residing or working in the project area to excessive noise related to airstrip operations. Therefore, Alternative 3 would result in no impact related to exposing people working or residing near the Santa Monica Airport to excessive noise levels, similar to the Proposed Project. Development associated with Alternative 3 would not be located within the vicinity of a private airstrip. Therefore, no impacts related to airstrip noise would occur similar to the Proposed Project.

Population, Housing, and Employment

Growth Inducement. The year 2035 forecast for the Project Area is derived from the adopted 2012-2035 RTP/SCS and is shown in **Table 5-8.** While forecasts are adopted at a citywide level, forecasts for smaller areas derived from regionally defined TAZ data serve as targets or benchmarks that guide the planning process. Alternative 3 results in housing and population levels that exceed the SCAG forecast, though employment levels do not meet the SCAG forecast. The insufficient employment is not consistent with the 2012-2035 RTP/SCS and General Plan Framework policies to concentrate jobs within centers and transit corridors like the Project Area. Nevertheless, this alternative does not include new roads or other infrastructure, and thus does not induce substantial population growth. Therefore, impacts related to inducing growth under Alternative 3 would be less than significant, similar to the Proposed Project.

TABLE 5-8: ALTERNATIVE 3 COMPARED TO SCAG FORECAST

	Alternative 3 Increased Residential/ Decreased Employment /a/	SCAG Forecast /b/	Alternative 3 Percent of SCAG Forecast
Housing (dwelling units)	32,578	28,497 /c/	114%
Population (persons)	65,835	54,444	121%
Employment (jobs)	39,693	43,097	92%

/c/ SCAG projection for number of households was converted to dwelling units by applying average vacancy rates. See Section 4.10 for details.

Housing and Population Displacement. Alternative 3 would involve land use changes that increase heights and intensities in select areas, similar to the Proposed Project, with the aim of adding housing stock. No specific units are proposed to be demolished, converted to market rate, or removed through other means. Although there may be temporary reduction in housing stock and displacement of people as properties are redeveloped, ultimately there would be a net gain in housing of 7,560 units within the Project Area, which would meet housing growth forecasts for 2035. In addition, affordable housing requirements in the Proposed Project, which require the provision of low-income dwelling units in exchange for additional development rights on certain properties, also apply to Alternative 3. Although this is voluntary, it is anticipated that some projects will take advantage of this provision, likely resulting in a net gain in affordable housing units within the Project Area. Therefore, similar to the Proposed Project, impacts related to housing and population displacement would be less than significant.

[28]City of Santa Monica, *Calendar Year 2012 CNEL Contours for the Santa Monica Municipal Airport*, September 2013.
[29]Federal Aviation Administration (FAA), *Press Release – FAA Reaches Settlement Agreement with City of Santa Monica*, January 28, 2017, https://www.faa.gov/news/press_releases/news_story.cfm?newsId=21394, accessed February 28, 2017.

Public Services

Under Alternative 3, increased development capacity compared to existing conditions would increase the number of residents in the ECTNP Area, increasing demand for public services. Additionally, demand for these services under Alternative 3 would be greater than the Proposed Project as there would be 25 percent more additional residential units compared to the Proposed Project with Alternative Compliance Scenario, and residential uses create the largest demand for these services. Accordingly, Alternative 2 would result in impacts related to public services that are similar to, but at a greater extent than, the Proposed Project.

Parks and Recreation Facilities. With regard to parks, the increase in population associated with Alternative 3 would exacerbate the existing deficit in parks and open space in the ECTNP Area. Due to the greater population accommodated in Alternative 3, impacts related to Parks and Recreation Facilities under Alternative 3 would be greater than the Proposed Project. Thus, as with the Proposed Project, impacts related to Parks and Recreation Facilities under Alternative 3 would be significant and unavoidable.

Fire and Police Services. Alternative 3 would result in a population growth level that exceeds the SCAG 2035 forecast for the ECTNP Area (see **Table 5-8**, above). LAFD's services will continue to be based on the community's needs, as determined by on-going evaluations, taking into consideration calls for service and other metrics, including population. Therefore, on a programmatic level, Alternative 3 would exceed the projections used by public service providers, City departments, and other government agencies in planning for providing adequate levels of service. However, the Project Area is not within a hillside area or located where there are increased hazards due to a design feature or incompatible use; the Project Area is in an urbanized environment where there is sufficient street access for emergency response. With regard to police protection, such services are mobile in nature and thus additional service and personnel can be provided to address increased demand without having to construct or expand existing facilities. Therefore, as with the Proposed Project, impacts related to the need to provide new or physically altered fire or police facilities under Alternative 3 would be less than significant. However, due to increased population, impacts related to fire and police services under Alternative 3 would be greater than the Proposed Project.

Public Schools. In regards to potential impacts to schools, similar to the Proposed Project, Alternative 3 would result in population growth that would generate additional students, though to a greater extent than the Proposed Project due to the increased residential uses. However, required developer impact fees would ensure that new development would bear its fair share of the cost of accommodating additional students generated. Therefore, as with the Proposed Project, impacts related to the need for new or physically altered school facilities would be less than significant. Additionally, due to increased population, impacts related to public schools under Alternative 3 would be greater than the Proposed Project.

Library Services. Likewise, while the increase in population in Alternative 3 may create additional demand for library services, residential units within new buildings would have internet access to alleviate some of the need for library services and resources. Additionally, the LAPL Branch Facilities Plan will ensure adequate facilities are available to serve the growing population. Accordingly, Alternative 3 would not create substantial capacity or service level problems that would require the provision of new or physically altered library facilities in order to maintain an acceptable level of service for libraries, and would have a less than significant impact, however, due to increased population, impacts related to public schools under Alternative 3 would be greater than the Proposed Project.

Transportation and Traffic

Circulation System. The mix of land uses included in this alternative would result in daily trip reductions similar to the Proposed Project. Based on the shift in foreseeable development levels between non-residential and residential uses compared to the Proposed Project, Alternative 3 would be expected to generate the same or slightly fewer daily vehicle trips than the Proposed Project. However, Alternative 3 could result in greater impacts related to traffic and transportation, since this alternative would not realize as much benefit from the vehicle trip reduction requirements and associated TDM strategies as the Proposed

Project, as these apply only to commercial development. Alternative 3 could also result in less transit use because there would be fewer jobs located near the stations, since rail ridership among workers is highly dependent on proximity of workplace to a station. (Ridership among those whose workplace is within a quarter mile of a station is higher compared to residents who live within the same distance, but drops off significantly beyond a quarter mile[30]) Similarly, the decreased amount of retail and services in the corridor under Alternative 3 compared to the Proposed Project could result in more vehicle trips, since less of these uses would be accessible by transit, walking, and other non-vehicular modes. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, cannot reduce impacts below a significant level. Therefore, Alternative 3 would result in significant and unavoidable impacts to the circulation system, similar to the Proposed Project.

Neighborhood Intrusion. For the street segments within and adjacent to the Project Area, where the LOS would degrade from D to E or F, some trips could divert to adjacent streets to avoid longer travel times through congested locations, resulting in neighborhood intrusion impacts. Since Alternative 3 would likely result in similar number of trips and intersections operating at LOS E or F as the Proposed Project, this alternative would also result in trips that are diverted through adjacent neighborhoods as the Proposed Project, thus resulting in similar neighborhood intrusion impacts. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, cannot reduce impacts below a significant level. Given the above, Alternative 3 would result in a significant impact related to neighborhood intrusion, similar to the Proposed Project.

Existing and Planned Public Transportation, Bicycle, and Pedestrian Facilities. Similar to the Proposed Project, Alternative 3 would not conflict with adopted policies or plans for public transportation, bicycle, and pedestrian facilities. This alternative would promote a compact, mixed use development pattern that enhances access to transit and encourages bicycle and pedestrian circulation, which is consistent with 2012-2035 RTP/SCS and Mobility Plan policies. This alternative would also have mobility amenities and pedestrian improvements associated with new urban design standards, streetscape plans, and public benefits, similar to the Proposed Project. Therefore, Alternative 3 would have a less than significant impact related to consistency with adopted policies or plans for public transportation, bicycle, and pedestrian facilities, similar to the Proposed Project.

Freeway, Arterial, and Transit CMP Thresholds. As discussed in Section 4.12, the Proposed Project would have a less than significant impact on freeway monitoring locations within the CMP for locations within and adjacent to the Project Area. With the same or slightly fewer trip generation than the Proposed Project, Alternative 3 would also be expected to have no discernible CMP impacts to freeway monitoring locations. However, Alternative 3 would result in a significant impact related to a CMP arterial intersection similar to the Proposed Project. Additionally, the increased population under both the Proposed Project and Alternative 3 would increase transit person trips. However, similar to the Proposed Project, this increase is still well below transit capacity and would result in a less than significant impact.

Emergency Vehicle Access. Emergency vehicle access may also be significantly impacted due to the ECTNP's location within a congested area of West Los Angeles. However, similar to the Proposed Project, while Alternative 3 could also impact segment-level LOS, there is not a direct relationship between predicted travel delay and response times as California State law requires drivers to yield the right-of-way to emergency vehicles and even permits emergency vehicles to use opposing lane of travel, the center lanes, or bus-only lanes. In addition, the LAFD has a mandate to protect public safety and must respond to changing circumstances and therefore would act to maintain response times. The steps that LAFD would have to take to maintain public safety are not reasonably foreseeable at this time. Options available to LAFD include expanding the Fire Preemption System (FPS), increasing staffing levels and adding new fire stations(s) to underserved areas. The potential for new fire station construction is speculative at the present time and is,

[30]Kolko, J., Public Policy Institute of California, *Making the Most of Transit*, February 2011.

therefore, not analyzed for this alternative. Depending on the location of potential new fire protection facilities, operational impacts (primarily noise) could occur; however, such impacts are unforeseeable at this time. Therefore, Alternative 3 would result in a less than significant impact related to inadequate emergency vehicle access, similar to the Proposed Project.

Hazards due to Design or Uses. None of the transportation system improvements proposed in Alternative 3 would introduce new safety hazards or incompatible uses at intersections or along roadway segments, as most would be designed to improve safe circulation and access to the transit stations for all users. No new roadways are introduced or removed; streetscape plans are designed to help minimize conflicts between pedestrians and vehicles, and design standards in Alternative 3 are designed to limit the number, width, and location of new driveways along major streets and in areas of high pedestrian activity. Therefore, similar to the Proposed Project, impacts related to hazards due to design or use under Alternative 3 would be less than significant.

Interruption of Access or Service. Under Alternative 3, development could necessitate temporary lane, alley, or street closures or result in bus stop relocation or bus rerouting. Construction-related closures would generally be temporary. Because the study area represents a specific plan area relating to the build out of multiple parcels, construction-related impacts would depend on the approach to development of each parcel or development site. Although specific impacts related to construction cannot be known at this time, it is likely that construction activities could necessitate temporary lane, alley, or street closures or result in bus stop relocation or bus rerouting. Implementation of mitigation measures identified for the Proposed Project, which would be applicable to Alternative 3, requires the provision of a worksite traffic control plan. Therefore, similar to the Proposed Project, impacts related to interruption of access or service under Alternative 3 would be less than significant with mitigation.

Utilities and Services Systems

Alternative 3 would result in similar but increased impacts related to utilities and services systems as compared to the Proposed Project. Under Alternative 3, new development would include housing and non-residential development, increasing the number of residents and jobs in the ECTNP Area compared to existing conditions. Compared to the Proposed Project, Alternative 3 would result in more residential development and less non-residential development. As residential uses create a greater demand for utilities and service systems than commercial and industrial uses, this alternative would result in greater demand for water and electricity and produce increased quantities of wastewater and solid waste. Therefore, as with the Proposed Project, under Alternative 3, impacts related to utilities and service systems would be less than significant. However, impacts under Alternative 3 would be greater than the Proposed Project.

ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA Guidelines Section 15126.6 requires that an "environmentally superior" alternative be selected among the alternatives that are evaluated in the EIR. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No Project alternative is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

Based on the ability to result in reduced environmental impacts, Alternative 2 is the Environmentally Superior Alternative. None of the Alternatives analyzed are capable of addressing all of the significant and unavoidable impacts that would occur under the Proposed Project; however, Alternative 2 would reduce the severity of some of the impacts that would occur as a result of the Proposed Project.

Consistency with Project Objectives. **Table 5-9** shows how each of the alternatives meets or does not meet the objectives of this planning initiative. While Alternative 2 (Reduced Project) is consistent with more of the Proposed Project's objectives when compared to the other project alternatives, it does not meet all of the primary objectives of the Proposed Project. Less consistent with the goals and objectives are Alternatives 1 (No Project) and Alternative 3 (Increased Residential/Reduced Employment).

TABLE 5-9: ABILITY OF ALTERNATIVES TO MEET PROJECT OBJECTIVES

Description of Objectives	Alt. 1: No Project	Alt. 2: Reduced Project	Alt. 3: Increased Res./ Decreased Emp.
Primary Objective 1: Implement the policies of the City of Los Angeles General Plan Framework, the SCAG Regional Transportation Plan / Sustainable Communities Strategy, and West Adams-Baldwin Hills-Leimert, Palms-Mar Vista-Del Rey, and West Los Angeles Community Plans that encourage growth to be directed to transit-oriented areas and foster more sustainable, mixed use development patterns that improve mobility options and reduce auto dependence.	DM	PM	PM
Primary Objective 2: Accommodate employment, housing, and population growth projections forecasted through the planning horizon year of 2035 by focusing residential development and new job-generating uses around transit stations.	DM	PM	PM
Primary Objective 3: Maintain and expand the City's jobs base and increase opportunities for economic development in the Exposition Corridor in order to provide residents with quality jobs and to increase the generation of tax revenue in the City that will help pay for the provision of City services.	DM	PM	DM
Primary Objective 4: Implement the General Plan Framework goal to capture a significant share of regional growth in emerging environmentally-oriented and clean industries such as technology industry jobs, which are clustered on the Westside and comprise a growing industry sector; and institute zoning that accommodates and creates incentives for the location and continued clustering of these technology industry jobs in the Exposition Corridor where they will benefit from the proximity to transit and mixed use environments.	DM	PM	DM
Primary Objective 5: Create incentives for the provision of new affordable housing units in residential development and for the preservation of existing rent stabilized housing units near the Exposition Light Rail Transit Line to enhance accessibility and promote housing options for low income transit riders and to increase transit ridership.	DM	PM	M
Primary Objective 6: Improve circulation within the station areas; increase mobility choices; promote transit ridership and use of other alternative transit modes; and reduce vehicle miles traveled per capita for those who live and/or work within the Exposition Corridor.	DM	PM	PM
Secondary Objective 1: Ensure new development is pedestrian-oriented, acknowledges the transit stations, and is compatible with surrounding neighborhoods through the design of buildings, streets, and the public realm.	DM	M	M
Secondary Objective 2: Stimulate vibrancy and activity and create a unique sense of place within each station area through the design of buildings, streets, and the public realm.	DM	PM	PM

M = Meets; PM = Partially Meets; DM = Does not Meet

With regard to the achievement of project objectives, Alternative 1 would not meet the majority of project objectives. Although Alternative 1 preserves existing industrial land around the stations for jobs, helping to maintain the City's jobs base and implementing the related community plan policies, overall development capacity would not be increased under this alternative, and therefore it would not accommodate projected population, housing, and employment growth for the area. Alternative 1 does not contain the diverse mix of uses and intensity of development, and therefore would not be transit-supportive or encourage walking and bicycling. Further, Proposed Project components, such as new design standards and guidelines, streetscape plans, affordable housing, and other public benefits proposed as part of the Proposed Project, would not be implemented under Alternative 1. These components are essential in achieving the Proposed Project's objectives related to improving circulation, ensuring compatibility between uses, and creating vibrant neighborhoods around each station.

Alternative 2 would partially meet the majority of project objectives. Alternative 2 would accommodate the appropriate mix of land uses to create new opportunities for jobs and housing, though to a lesser extent than the Proposed Project. However, because this Alternative has reduced intensity of all uses, it does not meet project objectives associated with increasing the City's jobs and tax base and capturing a regional share of emerging environmentally-oriented and clean industries to the same extent as the Proposed Project nor does it fully meet the SCAG projections for housing demand. Given the City's critical housing shortage, a primary objective of the project is to meet SCAG housing projections, including for affordable housing in transit accessible areas. Since the provision of public benefits relies on private development, there will be less housing, and consequently less affordable housing provided as a public benefit--which is not consistent with Plan Objectives. Additionally, Alternative 2 would implement other components of the Proposed Project including design standards, streetscape plans as well as requirements for other public benefits; however, streetscape improvements and other public benefits will also be reduced when compared to the Proposed Project. Alternative 2 would also result in less transit use because of the reduced levels of development, and in particular jobs and affordable housing, both of which contribute to higher levels of transit ridership.

Alternative 3 would also partially meet project objectives. Alternative 3 would reduce the amount of non-residential development while increasing the number of dwelling units that could be accommodated in the ECTNP Area compared to Proposed Project by allowing more residential use on currently industrial land. This difference in land use mix reduces the ability of this alternative to accommodate jobs around transit, thus failing to meet the objective of maintaining the jobs base, increasing economic development in the area and capturing a regional share of emerging environmentally oriented and clean industries such as the technology industry jobs that are clustered in the Exposition Corridor. In addition, although Alternative 3 would typically result in less vehicle trips compared to the Project due to the increased residential and reduced non-residential use, in this case Alternative 3 would not realize as much benefit from the vehicle trip reduction requirements and associated TDM strategies as the Proposed Project which apply to commercial development. Alternative 3 could also result in less transit use because there would be fewer jobs located near the stations, since rail ridership among workers is dependent on proximity of workplace to a station. Similarly, the decreased amount of retail and services in the corridor under Alternative 3 compared to the Proposed Project could result in more vehicle trips, since less of these uses would be accessible by transit, walking, and other non-vehicular modes. Therefore, Alternative 3 would be less able to fully meet the objectives related to improving circulation and encouraging transit ridership and other alternative modes of transportation compared to the Project. As with Alternative 2, Alternative 3 includes the design standards and streetscape plans found in the Proposed Project, making it consistent with the Project's secondary goals and objectives related to the design of new development and creating vibrant, pedestrian-oriented neighborhoods.

Capacity to Accommodate Adopted Growth Forecast

According to SCAG projections, growth is expected to occur within and adjacent to the Project Area. **Table 5-10** summarizes the ability of the Proposed Project and each of the alternatives to accommodate this growth. The foreseeable development capacity associated with Alternative 2 largely accommodates anticipated projected growth; Alternative 2 accommodates projected population and employment, but not housing units. By contrast, Alternative 1 does not accommodate the projected housing, population, and employment growth; and Alternative 3 does not accommodate the projected employment growth for the area.

TABLE 5-10: COMPARISON OF ALTERNATIVES TO SCAG PROJECTION

	SCAG 2035 Projection	Proposed Project	Proposed Project Alternative Compliance Scenario	Alternative 1	Alternative 2	Alternative 3
Housing (dwelling units)	28,497	29,441	31,060	26,072	28,336	32,578
Population (persons)	54,444	59,571	62,810	52,447	57,326	65,835
Employment (jobs)	43,097	48,296	43,419	37,775	44,712	39,693

SOURCES: City of Los Angeles, Department of City Planning, 2017.

As described in detail in the Methodology section of 4.10 (Population, Housing, and Employment), a market study was prepared to determine the market demand for jobs and housing within the Project Area; see **Appendix L** for the Market Study. **Table 5-11** compares the amount of housing and jobs estimated by the market study for 2035 in the Project Area to housing and jobs resulting from the Proposed Project, Proposed Project Alternative Compliance Scenario, and the three Alternatives analyzed in this section. Of all the alternatives, Alternative 2 generally accommodates the market study estimates. The Alternative 2 employment projection falls within the range estimated by the market study; of all the Alternatives, Alternative 2 comes closest to, but does not meet, the housing demand projected by the market study. Alternative 1 falls short of the range of housing units and jobs estimated by the market study, unlike the Proposed Project and the Proposed Project Alternative Compliance Scenario. Similarly, the number of jobs resulting from Alternative 3 would not meet the estimated demand for jobs. Additionally, Alternative 3 exceeds the amount of housing estimated by the market study.

TABLE 5-11: COMPARISON OF ALTERNATIVES TO MARKET STUDY ESTIMATES

	Market Study Estimate (2035) /a/	Proposed Project (2035)	Proposed Project Alternative Compliance Scenario (2035)	Alternative 1 (2035)	Alternative 2 (2035)	Alternative 3 (2035)
Housing (dwelling units)	28,733 – 31,277	29,441	31,060	26,072	28,336	32,578
Employment (jobs)	42,078 – 49,922	48,296	43,419	37,775	44,712	39,693

Environmental Impacts

As discussed above and summarized in **Table 5-5**, none of the alternatives considered would fully eliminate significant and unavoidable impacts that would occur as a result of the Proposed Project. However, the severity of impacts would vary among alternatives. In general, impacts are proportional to the amount of development, with the exception of region-wide traffic and GHG emissions, where concentrating growth could lead to reduced per capita impacts region-wide while exacerbating local impacts in or adjacent to designated growth areas.

Although the amount of development that could be accommodated in the ECTNP Area under Alternatives 1 and 2 would be less than the Proposed Project, the impacts of future development would be similar in many respects. The same would also be true of Alternative 3, with the exception of impacts to public services, which would be greater due to the greater proportion of housing and population compared to jobs, since residents place a greater demand on public services than non-residential uses.

To varying degrees, construction activities under all the alternatives would result in significant air quality and noise impacts similar to the Proposed Project. Increases in population and jobs, which would occur to varying extents in all the alternatives, would also result in significant transportation impacts. All the alternatives would involve new development which could potentially conflict with existing neighborhood character and create shade/shadow impacts on sensitive uses, and thus aesthetics impacts would remain significant and unavoidable, similar to the Proposed Project. (Alternative 2 and Alternative 3 would have design standards and other project features that would help address aesthetic impacts, though not to the extent that these significant impacts would be eliminated.) SB 743 states that aesthetic impacts shall not be considered significant for the purposes of environmental analysis for residential, mixed use residential, or employment center projects on infill sites within a Transit Priority Area. Such projects are typical of the kinds of projects anticipated under all the Alternatives and the Proposed Project. Although a majority of the Project Area is located in a Transit Priority Area, a portion of the Project Area is not. Finally, all of the alternatives would have significant and unavoidable impacts related to parks, as there is currently a deficit of public parkland in the area, and any amount of new development would only contribute to that deficit.

Alternative 1. Alternative 1 represents a continuation of the existing community plan land use and zoning in the Project Area. It is foreseeable that approximately 1,000 dwelling units and 2.3 million square of non-residential space could be accommodated. In the absence of new zoning, development regulations and design standards, growth likely would be ad hoc, resulting from individual requests for zone changes and General Plan amendments to respond to new market conditions created by the presence of convenient and reliable transit service. This new transit service was not accounted for in the current plans. Alternative 1 would have greater impacts compared to the Proposed Project in the area of cultural resources due to the lack of new design standards and mitigation measures that would address potential impacts on visual character, shade and shadow, and historical resources.

Alternative 1 does not concentrate growth around transit or encourage mixed use development, and does not stimulate the creation of additional housing capacity to accommodate population growth. Therefore, unlike the Proposed Project, this alternative would have significant impacts related to consistency with adopted City and regional plans and policies for land use and housing. Alternative 1 would result in uses and development patterns that could create barriers between the residential areas and the transit stations and are not supportive of a walkable, transit-oriented communities due to the large, industrially zoned parcels which could be developed with heavy industry under current zoning. Therefore, unlike the Proposed Project, Alternative would cause impacts related to community division and barriers to be significant and unavoidable.

Finally, Alternative 1 does not aim to reduce emissions from automobiles, as it does not reduce VMT or expand mobility options, and thus would have significant impacts related to consistency with GHG emission reduction plans and policies, unlike the Proposed Project. It would also have greater impacts with regard to transit, bicycle, and pedestrian plans and policies, as this alternative does not include new streetscape plans and does not include zoning that encourages transit- and pedestrian-oriented development.

Alternative 2. Under Alternative 2, impacts would be similar to those identified for the Proposed Project. The severity of some impacts, such as those related to public services, utilities, and traffic and transportation, would be reduced as a result of the reduction in reasonably expected development compared to the Proposed Project. However, no significant and unavoidable impacts would be reduced to a less than significant level. Alternative 2 would not result in any additional significant and unavoidable impacts beyond those resulting from the Proposed Project.

Alternative 3. Because Alternative 3 would increase residential capacity and reduce non-residential capacity compared to both the Proposed Project and the Proposed Alternative Compliance scenario, the severity of impacts to public services would be increased since residents demand public services at a greater rate than non-residential uses. Alternative 3 does not accommodate projected employment growth and thus would not be consistent with land use policies related to maintaining land for jobs and economic development goals of the General Plan. This results in a significant and unavoidable land use impact which does not occur under the Proposed Project.

Although transportation impacts under Alternative 3 would be similar to the Proposed Project due to a similar amount of development, they could potentially be greater than the Project for several reasons. Because the vehicle trip reduction requirements and associated TDM strategies apply only to commercial development, and Alternative 3 has less commercial development compared to the Proposed Project, this alternative would not realize as much benefit from these strategies. Alternative 3 could also result in less transit use and increased number and length of vehicle trips, as there would be fewer jobs and retail/services located near the stations. Thus, although it was not analyzed to the same level of detail, Alternative 3 could have greater impacts on traffic and transportation compared to the Proposed Project.

Conclusion

Based on the ability to result in reduced environmental impacts and meet project objectives, Alternative 2 is the Environmentally Superior Alternative. None of the Alternatives analyzed are capable of addressing all of the significant and unavoidable impacts that would occur under the Proposed Project; however, Alternative 2 would reduce the severity of some of the impacts that would occur as a result of the Proposed Project. Similarly, none of the Alternatives analyzed are capable of meeting all of the project objectives.

Alternative 2 is most consistent with Project objectives, compared to the other two alternatives analyzed, however, Alternative 2, while potentially feasible, would not achieve all of the project objectives, as described above.

6.0 OTHER CEQA CONSIDERATIONS

Section 15126 of the California Environmental Quality Act (CEQA) Guidelines requires that all phases of a project must be considered when evaluating its impact on the environment, including planning, acquisition, development and operation. As part of this analysis, the environmental impact report (EIR) must also identify (1) significant environmental effects of the Proposed Project, (2) significant environmental effects that cannot be avoided if the Proposed Project is implemented, (3) significant irreversible environmental changes that would result from implementation of the Proposed Project, (4) growth-inducing impacts of the Proposed Project, and (5) secondary effects.

This chapter also identifies the effects found not to be significant as required by Section 15128 of the CEQA Guidelines.

6.1 SIGNIFICANT ENVIRONMENTAL EFFECTS OF THE PROPOSED PROJECT

Table 2-1, Summary of Impacts and Mitigation Measures, in Chapter 2.0, Summary, and Sections 4.1 through 4.14 of this EIR provide a comprehensive identification of the Proposed Project's environmental effects, including the level of significance both before and after mitigation.

6.2 SIGNIFICANT UNAVOIDABLE IMPACTS

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. Table 2-1, Summary of Impacts and Mitigation Measures, in Chapter 2.0, Summary, and Sections 4.1 through 4.14 of this EIR provide a comprehensive identification of the environmental effects of the Proposed Project, including the level of significance both before and after mitigation.

Implementation of the Proposed Project would result in the following significant and unavoidable impacts:

- **Aesthetics**. Even with the enforcement of design standards to reduce visual change in the Project Area, it is anticipated that visual effects associated with new building heights and site development intensities permitted by the Proposed Project would remain significant and unavoidable. Similarly, implementation of the Proposed Project could result in development of structures that would shade shadow-sensitive uses for more than three hours between the hours of 9:00 a.m. and 3:00 p.m. Pacific Standard Time (between late October and early April), or for more than four hours between the hours of 9:00 a.m. and 5:00 p.m. Pacific Daylight Time (between early April and late October). This impact is potentially significant and unavoidable.
- **Air Quality**. During construction, regional and localized emissions would exceed the South Coast Air Quality Management District localized significance thresholds and sensitive receptors could be exposed to substantial pollutant concentrations.
- **Cultural Resources.** Despite plan standards and existing regulations, the Proposed Project could result in substantial adverse change in the significance of a historical resource.
- **Noise**. The Proposed Project would result in significant unavoidable noise and ground-borne vibration impacts during construction activities and ambient noise during operation of the Proposed Project.

- **Public Services (Public Parks)**. While payment of applicable fees, the potential provision of publicly accessible open space as part of the Proposed Project's public benefit requirements, and the rezoning of some residential zoned land to open space would all help address demand for recreational facilities, it would not lower demand sufficiently to reduce impacts to a less than significant level. No feasible mitigation measures were identified to reduce the significant operational impact related to public parks to less than significant. Therefore, the Proposed Project would result in a significant and unavoidable impact related to public parks.
- **Transportation and Traffic**. Physical intersection improvement mitigation measures that would conflict with the Proposed Project goals were considered to be infeasible. No other feasible mitigations were identified for 50 of the 56 significantly impacted study intersections; therefore, impacts would be significant and unavoidable. The Proposed Project would also result in a significant impact related to neighborhood intrusion, which cannot be mitigated to a less-than-significant level. In addition, the Proposed Project would result in a significant impact to level of service at Congestion Management Program Arterial Monitoring Station #62 (Santa Monica Boulevard at Westwood Boulevard); the only feasible mitigation measures involve physical intersection improvements. Since these would conflict with the Proposed Project goals, they are considered to be infeasible, and, therefore, this impact would remain significant and unavoidable. In addition, because Arterial Monitoring Station #70 (Venice Boulevard and Centinela Avenue) is under dual control by the City of Los Angeles and California Department of Transportation, the City of Los Angeles does not have full control over modifications to the intersection, and cannot ensure implementation at these locations. Therefore, traffic impact at this intersection would remain significant and unavoidable.

6.3 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2(c) of the CEQA Guidelines requires a discussion of any significant irreversible environmental changes that would be caused by the Proposed Project. Specifically, Section 15126.2(c) states:

> *Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irreversible commitments of resources should be evaluated to assure that such current consumption is justified.*

Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

The ECTNP would result in the use of nonrenewable resources during construction and operation of development.

Implementation of the Proposed Project would include the construction of a variety of development projects that that would result in a commitment of limited, slowly renewable, and nonrenewable resources. Such resources would include certain types of lumber and other forest products; metals such as steel, copper, and lead; aggregate materials used in concrete and asphalt (e.g., stone, gravel, and sand); and other construction materials such as plastic. In addition, fossil fuels used in construction vehicles would also be consumed during construction of individual development projects.

Resources that would be permanently and continually consumed by the Proposed Project's implementation include water, electricity, natural gas, and fossil fuels. This represents a loss of non-renewable resources, which are generally not retrievable.

With respect to operation activities, compliance with all applicable building codes, as well as required mitigation measures, would ensure that all natural resources are conserved or recycled to the maximum extent feasible. It is also possible that new technologies or systems will emerge, or will become more cost-effective or user-friendly, that will further reduce the Proposed Project's reliance upon nonrenewable natural resources; however, even with implementation of conservation measures consumption of natural resources would generally increase with implementation of the Proposed Project.

6.4 GROWTH INDUCING IMPACTS

Section 15125.2(d) of the CEQA Guidelines requires that growth inducing impacts of a Proposed Project be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. According to the CEQA Guidelines, such projects include those that would remove obstacles to population growth (e.g., a major expansion of a waste water treatment plant). In addition, as set forth in the CEQA Guidelines, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The CEQA Guidelines also states that it must not be assumed that growth in an area is necessarily beneficial, detrimental or of little significance to the environment. As analyzed in Section 4.10, Population, Housing and Employment, the population, housing, and employment associated with the Proposed Project would be consistent with the growth anticipated by Southern California Association of Governments (SCAG) and City of Los Angeles Department of City Planning (DCP), and would direct growth to identified areas of proposed change.

The Proposed Project could remove impediments to growth in that it would increase allowable development levels in the areas of proposed change, thus accommodating a portion of City-wide anticipated growth. The area surrounding the ECTNP is already developed with commercial, industrial and residential uses. However, future development under the Proposed Plan would require localized expansion of and/or upgrades to sewer, water, and gas laterals lines in the Project Area. These systems would connect to the existing infrastructure located in the area. With regard to infrastructure-induced population growth, the Proposed Project including all streetscape improvements planned for the Proposed Project are intended to provide for better circulation flows throughout the area or to improve pedestrian safety and would not open any large undeveloped areas for new use.

The Proposed Project would be consistent with growth forecasts and would reduce regional congestion, and improve regional air quality through the reduction of vehicle miles traveled per capita. In general, the project would be growth accommodating in that it would allow the City to accommodate growth in the sustainable

manner anticipated in the 2012-2035 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).[1]

6.5 POTENTIAL SECONDARY EFFECTS

CEQA Guidelines Section 15126.4(a)(1)(D) states that, "[i]f a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measures shall be discussed but in less detail than the significant effects of the project as proposed." In accordance with the CEQA Guidelines, the following provides a discussion of the potential impacts that could occur from implementation of the proposed mitigation measures.

AESTHETICS

Mitigation Measure **AE1** requires the use of non-reflective building and construction materials, such as concrete, wood, composite materials, coated metal, non-reflective glass, and stone. This shall include, but not be limited to, art installations, fencing material, and recreational equipment. This measure would ensure that glare impacts are reduced to less-than-significant levels without creating a potential secondary effect.

AIR QUALITY

Mitigation Measure **AQ1** involves reducing air emissions from construction. This mitigation measure would reduce regional and local emissions generated by various construction activities, including equipment operation, truck trips, and painting. Implementation of this measure would have a beneficial impact on reducing air quality impacts and would not result in adverse secondary impacts.

CULTURAL RESOURCES

Mitigation Measures **CR1** through **CR4** involve reducing impacts to historic, archaeological, and paleontological resources to less-than-significant levels. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

HAZARDS AND HAZARDOUS MATERIALS

Mitigation Measure **HM1** involves requiring future developments to document that the site is not on any government list of sites containing hazardous waste or hazardous materials. If found to be on such a list, a Phase I Environmental Site Assessment is to be prepared to ensure that any potential hazards on a site are evaluated and mitigated. This mitigation measure is a procedural action that would not result in physical changes in the environment that could result in secondary impacts.

HYDROLOGY AND WATER QUALITY

Mitigation Measure **HWQ1** involves specific construction-related measures to address those parcels that are located within the 100-year floodplain. This measure is considered part of the construction phase of any development project and, thus, is generally included within the analysis contained in this EIR and would not result in additional secondary impacts.

[1]During the preparation of the ECTNP Draft EIR, the 2012-2035 RTP/SCS was the most recent adopted RTP/SCS available. The 2016-2040 RTP/SCS was adopted April 7, 2016, after the analysis in the ECTNP Draft EIR was completed. The 2016-2040 RTP/SCS has been reviewed to determine if there are any substantial differences in policy and/or growth trends associated with the socioeconomic data as compared to the 2012-2035 RTP/SCS. Based on this review it has been determined that the minor refinements in policy and associated updated socioeconomic data in the 2016-2040 RTP/SCS would not substantially affect the analyses or conclusions of this ECTNP EIR. While the SCAG transportation model itself is still not available, SCAG staff indicates that changes to the network and associated calculations are minor. Please see **Appendix K** for a more detailed discussion.

NOISE

Mitigation Measures **N1** and **N3** involve specific construction-related measures to reduce noise levels at adjacent sensitive receptors. These measures are considered part of the construction phase of any development project and, thus, are generally included within the analysis contained in this EIR and would not result in additional secondary impacts. While the use of barriers could result in visual impacts, such impacts would be temporary in nature and considered less than significant. These measures would not result in secondary impacts. Mitigation Measure **N2** involves specific operation-related measures to reduce noise levels associated with the use of heavy equipment at industrial activity yards, mechanical equipment, truck loading/unloading, and parking structures. No adverse secondary impacts would result from these measures.

TRANSPORTATION AND TRAFFIC

Mitigation Measure **TR1** requires that future development projects within the Specific Plan boundary prepare a trip generation analysis to determine the project's consistency with the transportation assumptions in the ECTNP EIR. Mitigation Measures **TR2** through **TR16** involve physical improvements and procedures that are designed to reduce traffic impacts. The physical improvements primarily consist of intersection restriping to accommodate additional lanes of travel or modifications to the existing signal phasing; implementation of some of these improvements may result in temporary air quality and noise effects, as well as traffic impacts along the associated roadways during the period construction of the improvement would occur. Such activities would not be of sufficient scale to create new significant impacts or to compound a previously analyzed impact such that a less-than-significant impact would exceed established thresholds of significance. No adverse secondary impacts would result from these measures.

6.6 EFFECTS NOT FOUND TO BE SIGNIFICANT

Section 15128 of the CEQA Guidelines states that an EIR shall contain a brief statement indicating reasons that various possible significant effects of a project were determined not to be significant and not discussed in detail in the EIR.

AGRICULTURE AND FORESTRY RESOURCES

The ECTNP Area is located in a densely-developed portion of the City of Los Angeles. The ECTNP Area is zoned for urban uses and not for agricultural purposes. Implementation of the Proposed Project would not result in the conversion of farmland to non-agricultural uses. No loss of farmland would result from the implementation of the Proposed Project. No Williamson Act contracts are applicable within the Project Area.

BIOLOGICAL RESOURCES

As stated above, the ECTNP Area is located in an urbanized portion of the City of Los Angeles. The ECTNP Area is densely developed with a variety of residential, light manufacturing, commercial, retail, office and institutional land uses. There are three endangered species (coastal dunes milk-vetch, Ventura Marsh milk-vetch, and salt marsh bird's-beak) identified in the Beverly Hills Quadrangle, located in the ECTNP Area, and are protected by the Endangered Species Act. The Ventura Marsh milk-vetch was last observed in a meadow near the seashore of Santa Monica in 1964 and the salt marsh bird's-beak was last searched for in Santa Monica in 1980. The coastal dunes milk-vetch was last seen in Santa Monica in 1964. The Ventura Marsh milk-vetch and salt marsh bird's-beak have been extirpated and the coastal dunes milk-vetch has possibly been extirpated. Thus, it is unlikely that there are any endangered species within the ECTNP Area.

GEOLOGY AND SOILS

Implementation of the Proposed Project would not involve the use of septic tanks or alternative waste water disposal system and, therefore, would not result in soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems.

HAZARDS AND HAZARDOUS MATERIALS

Implementation of the Proposed Project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires, as no wildfire areas exist within the ECTNP Area.

LAND USE

Since there are no adopted state, regional, or local habitat conservation plans or natural community conservation plans applicable to the Project Area, the Proposed Project would not conflict with such plans.

MINERAL RESOURCES

The ECTNP is not located in an area designated for mineral resources. Implementation of the Proposed Project would not result in the disruption or loss of mineral activities.

7.0 PERSONS AND SOURCES CONSULTED

A number of technical reports and studies were utilized in the preparation of this Draft EIR. These reports are referenced throughout this document where appropriate. In addition, this chapter documents all persons and sources that contributed in the preparation of this Draft EIR.

7.1 LEAD AGENCY

Los Angeles Department of City Planning
200 North Spring Street, Room 667
Los Angeles, CA 90012

Senior City Planner:	Patricia Diefenderfer, AICP
City Planner:	Lameese Elqura Chang
	David Olivo
City Planning Associate:	Laura Krawczyk
City Planning Assistant:	Dylan Sittig

CONSULTANTS

Terry A. Hayes Associates Inc.
8522 National Boulevard, Suite 102
Culver City, CA 90232

Principal-in-Charge:	Terry A. Hayes, AICP
Project Manager:	Kevin Ferrier
Sr. Environmental Scientist:	Sam Silverman
Environmental Scientist:	Anders Sutherland
Planner:	Allyson Dong
Assistant Planner:	Kieran Bartholow; Andy Uk
Graphic Artist/GIS:	Rosa Soria
Document Production:	Natasha Mapp

In association with:

Sirius Environmental
1478 N. Alta Dena Drive
Pasadena, CA 91107

Project Manager:	Wendy Lockwood, Principal

TRANSPORTATION, PARKING, AND SAFETY

Fehr & Peers
600 Wilshire Boulevard, Suite 1050
Los Angeles, CA 90017

Principal:	Jeremy Klop
Project Manager:	John Muggridge
Planner:	Alex Rixey

ECTNP DEVELOPMENT AND GRAPHICS

Gruen Associates
Architecture Planning Interiors
6330 San Vicente Blvd., Suite 200
Los Angeles, California 90048

Associate Partner: Elaine V. Carbrey

NOTICE OF PREPARATION AND PUBLIC SCOPING MEETING ENVIRONMENTAL IMPACT REPORT

CASE NO.: ENV-2013-622-EIR
PROJECT NAME: Exposition Corridor Transit Neighborhood Plan
PROJECT LOCATION/ADDRESS: Corridor along Exposition Light Rail Line (LRT) between the Culver City and Exposition/Bundy transit stations.
COMMUNITY PLANNING AREAS: West Los Angeles; Palms-Mar Vista-Del Rey; West Adams-Baldwin Hills-Leimert
COUNCIL DISTRICT: 5, 10, 11
DUE DATE FOR PUBLIC COMMENTS: April 15, 2013

The City of Los Angeles Department of City Planning will be the Lead Agency and will oversee the preparation of an environmental impact report (EIR) for the project identified herein (Project). The Department of City Planning requests your comments as to the scope and content of the EIR.

The Project Description, location, and goals and objectives are set forth below. The environmental file is available for review at the Department of City Planning, City of Los Angeles, 200 North Spring Street, Room 667, Los Angeles, CA 90012.

PROJECT DESCRIPTION:

The City of Los Angeles is preparing a Specific Plan and other regulatory changes for the Exposition Light Rail corridor, which would guide the future development of the area within the boundaries indicated in Figure 1. This Project Area is located within City Council Districts 5, 10, and 11, and comprises portions of the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas. The Project Area is located entirely within the incorporated City of Los Angeles, and abuts the City of Culver City and the City of Santa Monica. Note that not all properties shown in the Project Area will be affected.

Background

The Metro Exposition Light Rail Line is a 15.2-mile-long transit line running between Downtown Los Angeles and the City of Santa Monica. The majority of the line runs along the Exposition Right-of-Way, roughly parallel to the Santa Monica Freeway. Phase I of the line was completed in 2012. Phase II, extending 6.6 miles from the Phase I terminus in Culver City to the planned Colorado/4th Street station in Santa Monica, is currently under construction and scheduled for completion in 2015/2016.

The Project includes a variety of regulatory changes in the areas along the Exposition LRT corridor encompassing the five stations within the City of Los Angeles boundaries. The station areas to be studied are Culver City; National/Palms; Exposition/Westwood; Exposition/Sepulveda; and Exposition/Bundy.

Within a half-mile radius of each station there is a mix of zoning. Around the National/Palms and Westwood/Exposition stations the zoning is primarily residential. The Westwood/Exposition station area is comprised almost entirely of R1 (single-family residential) zoned properties, and the National/Palms station is comprised mostly of R3 (multi-family residential) zoned properties. Around the Culver City, Sepulveda, and Bundy stations, there is a concentration of industrially zoned land in the immediate vicinity of the transit stations, with a mix of residential, commercial, and public facility zoning nearby.

Project Purpose and Objectives

- Promote transit ridership on the Exposition Light Rail and other transit systems.
- Encourage walking and bicycling as a means to safely and conveniently circulate within and between neighborhoods and to access transit.
- Accommodate new mixed-use, industrial, and commercial development in station areas.
- Maintain and enhance job growth in commercial and industrial zones near transit stations.
- Create opportunities for the development of new housing that meets the diverse needs and income levels of City residents.
- Initiate land use and zoning changes of industrially zoned land in proximity to stations to encourage jobs and allow increased intensity and/or a wider mix of uses, as appropriate, to ensure a future arrangement of land uses that support transit use.
- Improve the configuration and condition of streets to better promote pedestrian, bicycle, and vehicular circulation.
- Provide open spaces and other public spaces for socializing and community-building.
- Reduce greenhouse gas emissions by encouraging infill development along transit corridors and reducing automobile dependence.
- Conserve stable single family neighborhoods.

Project Characteristics

The Project would establish a Specific Plan and initiate Zone Changes, General Plan Amendments and development, urban design and/or site planning regulations that encourage new development at transit station areas with the goal of promoting transit ridership and creating an active, mixed-use environment in the station areas. The Project would also involve new streetscape plans, modified street standards, and updated parking regulations that enhance the pedestrian experience, promote transit ridership, and encourage a variety of mobility options. Details of the Specific Plan and any proposed General Plan Amendments and Zone Changes will be developed in tandem with the environmental analysis. The Draft EIR will summarize the proposed changes and will identify and analyze development assumptions.

Required Actions may include:

- General Plan Amendments
- Zone Changes
- Adoption of Specific Plan
- Specific Plan Amendments
- Adoption of Design Standards and Guidelines
- Modified Street Designations and Standards
- Streetscape Plans
- New Parking Standards
- Form-based Development Standards

Alternatives

Alternatives to be analyzed in the EIR will be defined based on their potential to reduce or eliminate significant environmental impacts associated with the proposed Project while advancing the above-cited goals and objectives. The specific alternatives to be evaluated in the EIR will include, but are not limited to, the "No Project" alternative as required by California Environmental Quality Act (CEQA) and at least one alternative land use configuration that reduces impacts as compared to the proposed project.

Scope of Environmental Analysis

No Initial Study has been prepared for the project. Based on the Project Description and the Lead Agency's understanding of the environmental issues associated with the proposed project, the following topics have tentatively been identified to be analyzed in detail in the Exposition Corridor Transit Neighborhood Plan EIR.

Aesthetics
Air Quality (including Greenhouse Gas Emissions)
Cultural Resources
Geology, Soils and Hydrology
Hazards and Hazardous Materials
Land Use and Planning
Noise
Population and Housing
Public Services and Utilities (including Recreation and Energy)
Transportation

In addition, the EIR will address cumulative impacts, growth-inducing impacts, and other issues required by CEQA.

PUBLIC SCOPING MEETING: The location, date and time of the public scoping meeting are as follows:

Date:	April 10, 2013
Time:	6 p.m.; Brief presentation at 6:15 p.m.
Location:	IMAN Cultural Center 3376 Motor Avenue Los Angeles, CA 90034

On April 10, 2013 arrive at 6:00 P.M. or later at the IMAN Cultural Center to provide public comment, and speak one-on-one with City of Los Angeles planners and consultants regarding the proposed Project. A brief presentation about the Project and the EIR process will be given at 6:15 P.M. The purpose of the scoping meeting is to solicit public comments regarding issues to be addressed in the Draft EIR. The scoping meeting will provide information regarding the proposed Project and the anticipated scope of analyses to be contained in the Draft EIR. The Department of City Planning encourages all interested individuals and organizations to attend this meeting.

The Department of City Planning welcomes all comments regarding potential environmental impacts of the proposed Project. All comments will be considered in the preparation of the Draft EIR. **Written comments** must be submitted to this office by **April 15, 2013**. Written comments will also be accepted at the public scoping meeting described above.

Los Angeles, CA 90012

Dear Ms Elqura:

Re: SCH 2013031038 Exposition Corridor Transit Neighborhood Plan NOP

The California Public Utilities Commission (Commission) has jurisdiction over the safety of highway-rail crossings (crossings) in California. The California Public Utilities Code requires Commission approval for the construction or alteration of crossings and grants the Commission exclusive power on the design, alteration, and closure of crossings in California. The Commission Rail Crossings Engineering Section (RCES) is in receipt of the *Notice of Preparation (NOP)* for the proposed City of Los Angeles (City) Exposition Corridor Transit Neighborhood (ECTN) Plan Project.

The project site area includes the Exposition Light Rail corridor. RCES recommends that the City add language to the ECTN Plan so that any future development adjacent to or near the railroad/light rail right-of-way (ROW) is planned with the safety of the rail corridor in mind. New developments may increase traffic volumes not only on streets and at intersections, but also at at-grade crossings. This includes considering pedestrian circulation patterns or destinations with respect to railroad ROW and compliance with the Americans with Disabilities Act. Mitigation measures to consider include, but are not limited to, the planning for grade separations for major thoroughfares, improvements to existing at-grade crossings due to increase in traffic volumes and continuous vandal resistant fencing or other appropriate barriers to limit the access of trespassers onto the railroad ROW.

If you have any questions in this matter, please contact me at (213) 576-7076, ykc@cpuc.ca.gov.

Sincerely,

Ken Chiang, P.E.
Utilities Engineer
Rail Crossings Engineering Section

RE: SCH# 2013031038 CEQA Notice of Preparation (NOP); draft Environmental Impact Report (DEIR) – "**Exposition Corrido Transit Neighborhood Plan**;" located in the cities of Los Angeles Culver City and Santa Monica; Los Angeles County, California

Dear Lameese Elqura:

The Native American Heritage Commission (NAHC) has reviewed the CEQA Notice regarding the above referenced project. In the 1985 Appellate Court decision (170 Cal App 3rd 604), the court held that the NAHC has jurisdiction and special expertise, as a state agency, over affected Native American resources impacted by proposed projects, including archaeological places of religious significance to Native Americans, and to Native American burial sites.

The California Environmental Quality Act (CEQA) states that any project that causes a substantial adverse change in the significance of an historical resources, which includes archeological resources, is a significant effect requiring the preparation of an EIR (CEQA guidelines 15064(b)). To adequately comply with this provision and mitigate project-related impacts on archaeological resources, the Commission recommends the following actions be required:

Contact the appropriate Information Center for a record search to determine :If a part or all of the area of project effect (APE) has been previously surveyed for cultural resources, which we know that it has. The NAHC recommends that known cultural resources recorded on or adjacent to the APE be listed in the draft Environmental Impact Report.

If an additional archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey. We suggest that this be coordinated with the NAHC, if possible. The final report containing site forms, site significance, and mitigation measurers should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum, and not be made available for pubic disclosure pursuant to California Government Code Section 6254.10.
Contact has been made to the Native American Heritage Commission for :a Sacred Lands File Check. A list of appropriate Native American Contacts for consultation

concerning the project site has been provided and is attached to this letter to determine if the proposed active might impinge on any cultural resources. Lack of surface evidence of archeological resources does not preclude their subsurface existence.

Lead agencies should include in their mitigation plan provisions for the identification and evaluation of accidentally discovered archeological resources, per California Environmental Quality Act (CEQA) §15064.5(f). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American, with knowledge in cultural resources, should monitor all ground-disturbing activities. Lead agencies should include in their mitigation plan provisions for the disposition of recovered artifacts, in consultation with culturally affiliated Native Americans. Lead agencies should include provisions for discovery of Native American human remains in their mitigation plan. Health and Safety Code §7050.5, CEQA §15064.5(e), and Public Resources Code §5097.98 mandates the process to be followed in the event of an accidental discovery of any human remains in a location other than a dedicated cemetery.

Sincerely,

Dave Singleton

Los Angeles, CA 90012

Notice of Preparation of a CEQA Document for the
Exposition Corridor Transit Neighborhood Plan

The South Coast Air Quality Management District (SCAQMD) appreciates the opportunity to comment on the above-mentioned document. The SCAQMD's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the draft CEQA document. Please send the SCAQMD a copy of the Draft EIR upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to the SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the draft EIR all appendices or technical documents related to the air quality and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include original emission calculation spreadsheets and modeling files (not Adobe PDF files). Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. The lead agency may wish to consider using land use emissions estimating software such as the recently released CalEEMod. This model is available on the SCAQMD Website at: http://www.aqmd.gov/ceqa/models.html.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has developed a methodology for calculating PM2.5 emissions from construction and operational activities and processes. In connection with developing PM2.5 calculation methodologies, the SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD requests that the lead agency quantify PM2.5 emissions and compare the results to the recommended PM2.5 significance thresholds. Guidance for calculating PM2.5 emissions and PM2.5 significance thresholds can be found at the following internet address: http://www.aqmd.gov/ceqa/handbook/PM2_5/PM2_5.html.

In addition to analyzing regional air quality impacts the SCAQMD recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LST's can be used in addition to the

recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized significance analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at http://www.aqmd.gov/ceqa/handbook/LST/LST.html.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis") can be found on the SCAQMD's CEQA web pages at the following internet address: http://www.aqmd.gov/ceqa/handbook/mobile_toxic/mobile_toxic.html. An analysis of all toxic air contaminant impacts due to the decommissioning or use of equipment potentially generating such air pollutants should also be included.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. To assist the Lead Agency with identifying possible mitigation measures for the project, please refer to Chapter 11 of the SCAQMD CEQA Air Quality Handbook for sample air quality mitigation measures. Additional mitigation measures can be found on the SCAQMD's CEQA web pages at the following internet address: www.aqmd.gov/ceqa/handbook/mitigation/MM_intro.html Additionally, SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook contain numerous measures for controlling construction-related emissions that should be considered for use as CEQA mitigation if not otherwise required. Other measures to reduce air quality impacts from land use projects can be found in the SCAQMD's Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. This document can be found at the following internet address: http://www.aqmd.gov/prdas/aqguide/aqguide.html. In addition, guidance on siting incompatible land uses can be found in the California Air Resources Board's Air Quality and Land Use Handbook: A Community Perspective, which can be found at the following internet address: http://www.arb.ca.gov/ch/handbook.pdf. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process. Pursuant to state CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed.

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's World Wide Web Homepage (http://www.aqmd.gov).

The SCAQMD staff is available to work with the Lead Agency to ensure that project-related emissions are accurately identified, categorized, and evaluated. If you have any questions regarding this letter, please call Ian MacMillan, Program Supervisor, CEQA Section, at (909) 396-3244.

Sincerely,

Ian MacMillan

Exposition Corridor Transit-
Neighborhood Plan
Vic. LA-405, PM 29.846 to 48.033
Vic. LA-10, PM 4.612 to 7.422
SCH#2013031038

Dear Ms. Elqura:
Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the proposed Exposition Corridor Transit Neighborhood Plan. The project runs along the Exposition Light Rail Line (LRT) between the Culver City and Exposition/Bundy transit stations.

The project includes a variety of regulatory changes in the areas along the Exposition LRT corridor encompassing the five stations within the City of Los Angeles boundaries. The station areas to be studied are Culver City, National/Palms, Exposition/Sepulveda, and Exposition/Bundy.

To assist in evaluating the impacts on State transportation facilities, a traffic study should be prepared prior to preparing the Draft Environmental Impact Report (DEIR). Please refer the traffic consultant to the Department's traffic study guide Website:
http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf

Listed below are some elements of what is generally expected in the traffic study:

1. The traffic impact study should include exhibits showing LTR project generated traffic routes to the proposed LTR stations. Trip distribution for all projects should be applied. The Exhibits should show volumes/Geometry/LOS.

2. Include specific proposed mitigation measures for analyzing state facilities. If no geometric mitigation measures are possible, the fair share mitigation fee is to be calculated.

3. Include all approved future projects that will be developed during construction of the LTR.

4. Analyze the following on/off ramps and intersections at the I-10 and I-405 freeways that are located in the vicinity of the LTR proposed stations :

Culver City:

a) I-10 Exposition Blvd EB off ramp at route 187/Robertson Blvd
b) I-10 WB on ramp at National Blvd

National/Palms Station:

a) I-10 WB off ramp at Palms Blvd/Manning Ave.
b) I-10 EB on ramp at Manning Ave.

Exposition/Westwood and Exposition/Sepulveda Ave Station:

a) I-10 WB on/off ramp at Overland Ave.
b) I-10 EB off ramp at National Blvd.
c) I-405 NB on ramp at Cotner Ave.
d) I-405 SB off ramp at Sawtelle Blvd.

Exposition/Bundy Station:

a) I-10 WB off ramp at Bundy Drive.
b) I-10 EB on ramp at Bundy Drive.
c) I-10 WB on/off ramp at Centinela Ave.

5. Please use the Highway Capacity Manual Methodology (HCM) when analyzing state facilities (see below guidelines):

   a) If the level of service is already at LOS E or F before project trips are added, then a significant impact is indicated if the delay increases by 2.5 seconds or greater.

   b) If the level of Service is already at LOS C or D before project trips are added, then a significant impact is indicated if the delay increases by 4 seconds or greater.

We look forward to reviewing the traffic study and expect to receive a copy from the State Clearinghouse when the DEIR is completed. If you would like to expedite the review process or receive early feedback, please feel free to send a copy of the DEIR directly to Caltrans.

If you have any questions about preparing a traffic study on the State Highway and study locations, you may reach Zeron Jefferson, project coordinator at (213) 897-0219 and please refer to IGR #130328/ZJ.

Sincerely,

DIANNA WATSON

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Exposition Corridor Transit Neighborhood Plan [I20130071]

Dear Ms. Elqura:

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Exposition Corridor Transit Neighborhood Plan to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for federal financial assistance and direct development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including its Sustainable Communities Strategy (SCS) component pursuant to SB 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.[1] Guidance provided by these reviews is intended to assist local agencies and project sponsors to take actions that contribute to the attainment of the regional goals and policies in the RTP/SCS.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Exposition Corridor Transit Neighborhood Plan. The proposed project is a specific plan to guide future development in portions of West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas located in the City of Los Angeles. As set forth in the attached, SCAG recommends that the draft EIR include a review and consideration of the adopted RTP/SCS goals and that the analyses reflect the most recently adopted growth forecasts.

When available, please send environmental documentation to SCAG's *office in Los Angeles or by email to leep@scag.ca.gov* providing, at a minimum, the full comment period for review. If you have any questions regarding the attached comments, please contact Pamela Lee at (213) 236-1895 or leep@scag.ca.gov. Thank you.

Sincerely,

Jonathan Nadler
Manager, Compliance and Performance Assessment

[1] SB 375 amends CEQA to add Chapter 4.2 Implementation of the Sustainable Communities Strategy, which allows for certain CEQA streamlining for projects consistent with the RTP/SCS. Lead agencies (including local jurisdictions) maintain the discretion and will be solely responsible for determining "consistency" of any future project with the SCS. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a finding of consistency under SB 375 for purposes of CEQA streamlining.

COMMENTS ON THE NOTICE OF PREPARATION OF AN ENVIRONMENTAL IMPACT REPORT FOR THE EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN I20130071]

CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS.

RTP/SCS Goals

The 2012-20135 RTP/SCS links the goal of sustaining mobility with the goals of fostering economic development, enhancing the environment, reducing energy consumption, promoting transportation-friendly development patterns, and encouraging fair and equitable access to residents affected by socio-economic, geographic and commercial limitations (see http://rtpscs.scag.ca.gov). The goals included in the 2012 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2012-2035 RTP/SCS are the following:

SCAG 2012-2035 RTP/SCS GOALS	
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*
RTP/SCS G3:	*Ensure travel safety and reliability for all people and goods in the region*
RTP/SCS G4:	*Preserve and ensure a sustainable regional transportation system*
RTP/SCS G5:	*Maximize the productivity of our transportation system*
RTP/SCS G6:	*Protect the environment and health for our residents by improving air quality and encouraging active transportation (non-motorized transportation, such as bicycling and walking)*
RTP/SCS G7:	*Actively encourage and create incentives for energy efficiency, where possible*
RTP/SCS G8:	*Encourage land use and growth patterns that facilitate transit and non-motorized transportation*
RTP/SCS G9:	*Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the policy and supportive analysis in a table format. Suggested format is as follows:

SCAG 2012-2035 RTP/SCS Goals		
Goal		**Analysis**
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness.*	*Consistent: Statement as to why* *Not-Consistent: Statement as to why* *or* *Not Applicable: Statement as to why* *DEIR page number reference*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region.*	*Consistent: Statement as to why* *Not-Consistent: Statement as to why* *or* *Not Applicable: Statement as to why* *DEIR page number reference*
RTP/SCS G3:	*Ensure travel safety and reliability for all people and goods in the region.*	*Consistent: Statement as to why* *Not-Consistent: Statement as to why* *or* *Not Applicable: Statement as to why* *DEIR page number reference*
etc.	etc.	etc.

Regional Growth Forecasts

The Notice of Preparation of an Environmental Impact Report for the Exposition Corridor Transit Neighborhood Plan should reflect the most recently adopted SCAG forecasts (see http://scag.ca.gov/forecast/index.htm), which are the 2012-2035 RTP/SCS population, household and employment forecasts. The forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts		Adopted City of Los Angeles Forecasts	
Forecast	**Year 2020**	**Year 2035**	**Year 2020**	**Year 2035**
Population	19,663,000	22,091,000	3,991,700	4,320,600
Households	6,458,000	7,325,000	1,455,700	1,626,600
Employment	8,414,000	9,441,000	1,817,700	1,906,800

MITIGATION

SCAG staff recommends that you review the SCAG 2012-2035 RTP/SCS Final Program EIR List of Mitigation Measures Appendix for additional guidance, as appropriate. The SCAG List of Mitigation Measures may be found here: http://scag.ca.gov/igr/pdf/SCAG_IGRMMRP_2012.pdf

Metro

April 10, 2013

Ms. Lameese Elqura
Department of City Planning
200 N. Spring Street, Room 667
Los Angeles, CA 90012

Dear Ms. Elqura:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) for the proposed Exposition Corridor Transit Neighborhood Plan. This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (LACMTA) concerning issues that are germane to our agency's statutory responsibilities in relation to the proposed project.

A Traffic Impact Analysis (TIA), with roadway and transit components, is required under the State of California Congestion Management Program (CMP) statute. The CMP TIA Guidelines are published in the "2010 Congestion Management Program for Los Angeles County", Appendix D (attached). The geographic area examined in the TIA must include the following, at a minimum:

1. All CMP arterial monitoring intersections, including monitored freeway on/off-ramp intersections, where the proposed project will add 50 or more trips during either the a.m. or p.m. weekday peak hour (of adjacent street traffic);
2. If CMP arterial segments are being analyzed rather than intersections, the study area must include all segments where the proposed project will add 50 or more peak hour trips (total of both directions). Within the study area, the TIA must analyze at least one segment between monitored CMP intersections;
3. Mainline freeway-monitoring locations where the project will add 150 or more trips, in either direction, during either the a.m. or p.m. weekday peak hour; and
4. Caltrans must also be consulted through the NOP process to identify other specific locations to be analyzed on the state highway system.

The CMP TIA requirement also contains two separate impact studies covering roadways and transit, as outlined in Sections D.8.1 – D.9.4. If the TIA identifies no facilities for study based on the criteria above, no further traffic analysis is required. However, projects must still consider transit impacts. For all CMP TIA requirements please see the attached guidelines.

MTA looks forward to reviewing the Draft EIR. If you have any questions regarding this response, please call me at 213-922-2836 or by email at hartwells@metro.net. Please send the Draft EIR to the following address:

MTA CEQA Review Coordination
One Gateway Plaza MS 99-23-2
Los Angeles, CA 90012-2952
Attn: Scott Hartwell

Sincerely,

Scott Hartwell
CEQA Review Coordinator, Long Range Planning

Attachment

APPENDIX

D

GUIDELINES FOR CMP TRANSPORTATION IMPACT ANALYSIS

Important Notice to User: This section provides detailed travel statistics for the Los Angeles area which will be updated on an ongoing basis. Updates will be distributed to all local jurisdictions when available. In order to ensure that impact analyses reflect the best available information, lead agencies may also contact MTA at the time of study initiation. Please contact MTA staff to request the most recent release of "Baseline Travel Data for CMP TIAs."

D.1 OBJECTIVE OF GUIDELINES

The following guidelines are intended to assist local agencies in evaluating impacts of land use decisions on the Congestion Management Program (CMP) system, through preparation of a regional transportation impact analysis (TIA). The following are the basic objectives of these guidelines:

- Promote consistency in the studies conducted by different jurisdictions, while maintaining flexibility for the variety of project types which could be affected by these guidelines.
- Establish procedures which can be implemented within existing project review processes and without ongoing review by MTA.
- Provide guidelines which can be implemented immediately, with the full intention of subsequent review and possible revision.

These guidelines are based on specific requirements of the Congestion Management Program, and travel data sources available specifically for Los Angeles County. References are listed in Section D.10 which provide additional information on possible methodologies and available resources for conducting TIAs.

D.2 GENERAL PROVISIONS

Exhibit D-7 provides the model resolution that local jurisdictions adopted containing CMP TIA procedures in 1993. TIA requirements should be fulfilled within the existing environmental review process, extending local traffic impact studies to include impacts to the regional system. In order to monitor activities affected by these requirements, Notices of Preparation (NOPs) must be submitted to MTA as a responsible agency. Formal MTA approval of individual TIAs is not required.

The following sections describe CMP TIA requirements in detail. In general, the competing objectives of consistency & flexibility have been addressed by specifying standard, or minimum, requirements and requiring documentation when a TIA varies from these standards.

D.3 PROJECTS SUBJECT TO ANALYSIS

In general a CMP TIA is required for all projects required to prepare an Environmental Impact Report (EIR) based on local determination. A TIA is not required if the lead agency for the EIR finds that traffic is not a significant issue, and does not require local or regional traffic impact analysis in the EIR. Please refer to Chapter 5 for more detailed information.

CMP TIA guidelines, particularly intersection analyses, are largely geared toward analysis of projects where land use types and design details are known. Where likely land uses are not defined (such as where project descriptions are limited to zoning designation and parcel size with no information on access location), the level of detail in the TIA may be adjusted accordingly. This may apply, for example, to some redevelopment areas and citywide general plans, or community level specific plans. In such cases, where project definition is insufficient for meaningful intersection level of service analysis, CMP arterial segment analysis may substitute for intersection analysis.

D.4 STUDY AREA

The geographic area examined in the TIA must include the following, at a minimum:

- ❑ All CMP arterial monitoring intersections, including monitored freeway on- or off-ramp intersections, where the proposed project will add 50 or more trips during either the AM or PM weekday peak hours (of adjacent street traffic).
- ❑ If CMP arterial segments are being analyzed rather than intersections (see Section D.3), the study area must include all segments where the proposed project will add 50 or more peak hour trips (total of both directions). Within the study area, the TIA must analyze at least one segment between monitored CMP intersections.
- ❑ Mainline freeway monitoring locations where the project will add 150 or more trips, in either direction, during either the AM or PM weekday peak hours.
- ❑ Caltrans must also be consulted through the Notice of Preparation (NOP) process to identify other specific locations to be analyzed on the state highway system.

If the TIA identifies no facilities for study based on these criteria, no further traffic analysis is required. However, projects must still consider transit impacts (Section D.8.4).

D.5 BACKGROUND TRAFFIC CONDITIONS

The following sections describe the procedures for documenting and estimating background, or non-project related traffic conditions. Note that for the purpose of a TIA, these background estimates must include traffic from all sources without regard to the exemptions specified in CMP statute (e.g., traffic generated by the provision of low and very low income housing, or trips originating outside Los Angeles County. Refer to Chapter 5, Section 5.2.3 for a complete list of exempted projects).

D.5.1 Existing Traffic Conditions. Existing traffic volumes and levels of service (LOS) on the CMP highway system within the study area must be documented. Traffic counts must

be less than one year old at the time the study is initiated, and collected in accordance with CMP highway monitoring requirements (see Appendix A). Section D.8.1 describes TIA LOS calculation requirements in greater detail. Freeway traffic volume and LOS data provided by Caltrans is also provided in Appendix A.

D.5.2 Selection of Horizon Year and Background Traffic Growth. Horizon year(s) selection is left to the lead agency, based on individual characteristics of the project being analyzed. In general, the horizon year should reflect a realistic estimate of the project completion date. For large developments phased over several years, review of intermediate milestones prior to buildout should also be considered.

At a minimum, horizon year background traffic growth estimates must use the generalized growth factors shown in Exhibit D-1. These growth factors are based on regional modeling efforts, and estimate the general effect of cumulative development and other socioeconomic changes on traffic throughout the region. Beyond this minimum, selection among the various methodologies available to estimate horizon year background traffic in greater detail is left to the lead agency. Suggested approaches include consultation with the jurisdiction in which the intersection under study is located, in order to obtain more detailed traffic estimates based on ongoing development in the vicinity.

D.6 PROPOSED PROJECT TRAFFIC GENERATION

Traffic generation estimates must conform to the procedures of the current edition of Trip Generation, by the Institute of Transportation Engineers (ITE). If an alternative methodology is used, the basis for this methodology must be fully documented.

Increases in site traffic generation may be reduced for existing land uses to be removed, if the existing use was operating during the year the traffic counts were collected. Current traffic generation should be substantiated by actual driveway counts; however, if infeasible, traffic may be estimated based on a methodology consistent with that used for the proposed use.

Regional transportation impact analysis also requires consideration of trip lengths. Total site traffic generation must therefore be divided into work and non-work-related trip purposes in order to reflect observed trip length differences. Exhibit D-2 provides factors which indicate trip purpose breakdowns for various land use types.

For lead agencies who also participate in CMP highway monitoring, it is recommended that any traffic counts on CMP facilities needed to prepare the TIA should be done in the manner outlined in Chapter 2 and Appendix A. If the TIA traffic counts are taken within one year of the deadline for submittal of CMP highway monitoring data, the local jurisdiction would save the cost of having to conduct the traffic counts twice.

D.7 TRIP DISTRIBUTION

For trip distribution by direct/manual assignment, generalized trip distribution factors are provided in Exhibit D-3, based on regional modeling efforts. These factors indicate Regional Statistical Area (RSA)-level tripmaking for work and non-work trip purposes.

(These RSAs are illustrated in Exhibit D-4.) For locations where it is difficult to determine the project site RSA, census tract/RSA correspondence tables are available from MTA.

Exhibit D-5 describes a general approach to applying the preceding factors. Project trip distribution must be consistent with these trip distribution and purpose factors; the basis for variation must be documented.

Local agency travel demand models disaggregated from the SCAG regional model are presumed to conform to this requirement, as long as the trip distribution functions are consistent with the regional distribution patterns. For retail commercial developments, alternative trip distribution factors may be appropriate based on the market area for the specific planned use. Such market area analysis must clearly identify the basis for the trip distribution pattern expected.

D.8 IMPACT ANALYSIS

CMP Transportation Impact Analyses contain two separate impact studies covering roadways and transit. Section Nos. D.8.1-D.8.3 cover required roadway analysis while Section No. D.8.4 covers the required transit impact analysis. Section Nos. D.9.1-D.9.4 define the requirement for discussion and evaluation of alternative mitigation measures.

D.8.1 Intersection Level of Service Analysis. The LA County CMP recognizes that individual jurisdictions have wide ranging experience with LOS analysis, reflecting the variety of community characteristics, traffic controls and street standards throughout the county. As a result, the CMP acknowledges the possibility that no single set of assumptions should be mandated for all TIAs within the county.

However, in order to promote consistency in the TIAs prepared by different jurisdictions, CMP TIAs must conduct intersection LOS calculations using either of the following methods:

- The Intersection Capacity Utilization (ICU) method as specified for CMP highway monitoring (see Appendix A); or
- The Critical Movement Analysis (CMA) / Circular 212 method.

Variation from the standard assumptions under either of these methods for circumstances at particular intersections must be fully documented.

TIAs using the 1985 or 1994 Highway Capacity Manual (HCM) operational analysis must provide converted volume-to-capacity based LOS values, as specified for CMP highway monitoring in Appendix A.

D.8.2 Arterial Segment Analysis. For TIAs involving arterial segment analysis, volume-to-capacity ratios must be calculated for each segment and LOS values assigned using the V/C-LOS equivalency specified for arterial intersections. A capacity of 800 vehicles per hour per through traffic lane must be used, unless localized conditions necessitate alternative values to approximate current intersection congestion levels.

D.8.3 Freeway Segment (Mainline) Analysis. For the purpose of CMP TIAs, a simplified analysis of freeway impacts is required. This analysis consists of a demand-to-capacity calculation for the affected segments, and is indicated in Exhibit D-6.

D.8.4 Transit Impact Review. CMP transit analysis requirements are met by completing and incorporating into an EIR the following transit impact analysis:

- ❑ Evidence that affected transit operators received the Notice of Preparation.
- ❑ A summary of existing transit services in the project area. Include local fixed-route services within a ¼ mile radius of the project; express bus routes within a 2 mile radius of the project, and; rail service within a 2 mile radius of the project.
- ❑ Information on trip generation and mode assignment for both AM and PM peak hour periods as well as for daily periods. Trips assigned to transit will also need to be calculated for the same peak hour and daily periods. Peak hours are defined as 7:30-8:30 AM and 4:30-5:30 PM. Both "peak hour" and "daily" refer to average weekdays, unless special seasonal variations are expected. If expected, seasonal variations should be described.
- ❑ Documentation of the assumption and analyses that were used to determine the number and percent of trips assigned to transit. Trips assigned to transit may be calculated along the following guidelines:
  - ➢ Multiply the total trips generated by 1.4 to convert vehicle trips to person trips;
  - ➢ For each time period, multiply the result by one of the following factors:

    3.5% of Total Person Trips Generated for most cases, except:

    10% primarily Residential within 1/4 mile of a CMP transit center
    15% primarily Commercial within 1/4 mile of a CMP transit center
    7% primarily Residential within 1/4 mile of a CMP multi-modal transportation center
    9% primarily Commercial within 1/4 mile of a CMP multi-modal transportation center
    5% primarily Residential within 1/4 mile of a CMP transit corridor
    7% primarily Commercial within 1/4 mile of a CMP transit corridor
    0% if no fixed route transit services operate within one mile of the project

  To determine whether a project is primarily residential or commercial in nature, please refer to the CMP land use categories listed and defined in Appendix E, *Guidelines for New Development Activity Tracking and Self Certification*. For projects that are only partially within the above one-quarter mile radius, the base rate (3.5% of total trips generated) should be applied to all of the project buildings that touch the radius perimeter.

- ❑ Information on facilities and/or programs that will be incorporated in the development plan that will encourage public transit use. Include not only the jurisdiction's TDM Ordinance measures, but other project specific measures.

- Analysis of expected project impacts on current and future transit services and proposed project mitigation measures, and;
- Selection of final mitigation measures remains at the discretion of the local jurisdiction/lead agency. Once a mitigation program is selected, the jurisdiction self-monitors implementation through the existing mitigation monitoring requirements of CEQA.

D.9 IDENTIFICATION AND EVALUATION OF MITIGATION

D.9.1 Criteria for Determining a Significant Impact. For purposes of the CMP, a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$), causing LOS F ($V/C > 1.00$); if the facility is already at LOS F, a significant impact occurs when the proposed project increases traffic demand on a CMP facility by 2% of capacity ($V/C \geq 0.02$). The lead agency may apply a more stringent criteria if desired.

D.9.2 Identification of Mitigation. Once the project has been determined to cause a significant impact, the lead agency must investigate measures which will mitigate the impact of the project. Mitigation measures proposed must clearly indicate the following:

- Cost estimates, indicating the fair share costs to mitigate the impact of the proposed project. If the improvement from a proposed mitigation measure will exceed the impact of the project, the TIA must indicate the proportion of total mitigation costs which is attributable to the project. This fulfills the statutory requirement to exclude the costs of mitigating inter-regional trips.
- Implementation responsibilities. Where the agency responsible for implementing mitigation is not the lead agency, the TIA must document consultation with the implementing agency regarding project impacts, mitigation feasibility and responsibility.

Final selection of mitigation measures remains at the discretion of the lead agency. The TIA must, however, provide a summary of impacts and mitigation measures. Once a mitigation program is selected, the jurisdiction self-monitors implementation through the mitigation monitoring requirements contained in CEQA.

D.9.3 Project Contribution to Planned Regional Improvements. If the TIA concludes that project impacts will be mitigated by anticipated regional transportation improvements, such as rail transit or high occupancy vehicle facilities, the TIA must document:

- Any project contribution to the improvement, and
- The means by which trips generated at the site will access the regional facility.

D.9.4 Transportation Demand Management (TDM). If the TIA concludes or assumes that project impacts will be reduced through the implementation of TDM measures, the TIA must document specific actions to be implemented by the project which substantiate these conclusions.

RE: Expo Corridor Transit Neighborhood Plan

Dear Ms. Elqura,

Thank you for the opportunity to provide our inputs on the Expo Corridor Transit Neighborhood Plan. Culver CityBus, as a transit provider on the Westside, has been working with Council District 5, LADOT, and LA Planning on the needs on bus facilities at the Expo stations, and we are submitting our inputs on the Expo Corridor Transit Neighborhood Plan below:

Expo Culver City Station

Prior to the start of operation of the Expo Light Rail (Expo) Phase 1, Culver City conducted an analysis that looked at the infrastructure needs of the future-anticipated feeder bus service at the Culver City Station area. As a result of the analysis, Culver City designated and constructed the Robertson Transit Hub (in the City of Culver City), which is located on the east side of the Robertson Blvd. between Venice and Washington Blvds. The Robertson Transit Hub currently provides five stop/layover spaces that accommodates six bus lines. Given the street configuration of the station area, the analysis also shows a strong need for bus stop/layover spaces on Venice Boulevard farside of the Exposition Blvd. (entrance to the Expo Culver City Station parking lot) on the eastbound direction and nearside of the Robertson Blvd. on the westbound direction. These two locations provide more convenient and direct access to the Expo station for riders of bus service that require stop/layover on Venice Blvd. for operational reasons, and a minimum of four bus stop/layover spaces (pending current and future site constraints) per direction should be established/planned.

Expo Phase 2 Stations in the City of Los Angeles

In order to maximize the mobility benefits of the Expo to the region, it is critical to provide proper bus facilities at the station and station area. Culver CityBus requests that, to the extent possible, **a minimum of four bus stop/layover spaces per direction should be provided or planned to be provided at each of the Expo stations** in Los Angeles, and **areas that would allow buses to terminate and turnaround at/near the stations should be identified**. Culver CityBus currently provides service to the future Expo Westwood and Sepulveda Stations. In addition to the comments above, we have additional comments on the Sepulveda Station below:

Sepulveda Station

1. Currently, there is no sidewalk connection on the west side of Sepulveda Blvd. from the station to the office building on the southwest corner of the Sepulveda/Pico intersection. This location is a major transfer point for bus

riders who will use the local and rapid bus lines on Pico Blvd. to connect to/from the Expo Sepulveda Station, and sidewalk connection needs to be established there to allow for safe pedestrian access to the station;

2. Culver CityBus operates both local and rapid bus lines on Sepulveda Blvd. connecting from UCLA to the future Expo Sepulveda Station, the LAX Transit Center, and the Green Line Aviation Station. It is anticipated that there will be significant rise in demand on these bus lines once Expo Phase 2 starts operation, and Culver CityBus is requesting four stop/layover spaces on southbound Sepulveda Blvd. in front of the station and a minimum of two spaces on northbound Sepulveda Blvd. in front of the station to be established to accommodate the Culver CityBus service. Pending site constraints and future developemnts, four stop/layover spaces on northbound Sepulveda Blvd. in front of the station are still recommended to be planned for the future.

Bus Stop/Sidewalk Improvements

For all the Expo stations in the Expo Corridor Transit Neighborhood Plan, Culver CityBus is recommending the following:

1. The sidewalk needs to be, at the minimum, 12-foot wide to accommodate pedestrian circulation and waiting spaces at the bus stops in the station area;
2. Concrete bus pads should be constructed at designated bus stop zones;
3. Bus benches and shelters should be provided at the bus stops and should be located to the back of the sidewalk to create a more pleasant waiting environment for bus patrons; and,
4. Tree wells and other landscapes should not conflict with the bus door zones at the bus stops.

Again, thank you for the opportunity to provide our inputs on the Expo Corridor Transit Neighborhood Plan. We understand that it takes time to create a transit-friendly environment that is conducive to the use of transit service and better transit operational efficiency; the site constraints of today may be resolved over time when re-developments and other improvement projects occur. The Expo Corridor Transit Neighborhood Plan plays an important role in guiding these improvements, and we look forward to the improvements at the station area that will have long-lasting impacts to improving the mobility of the region.

FORM GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

File: SC.CE.

DATE: April 18, 2013

TO: Lameese Elqura, Planning Assistant
Department of City Planning

FROM: Ali Poosti, Division Manager
Wastewater Engineering Services Division
Bureau of Sanitation

SUBJECT: **EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN – NOTICE OF PREPARATION EIR**

This is in response to your March 14, 2013 letter requesting wastewater service information for the proposed 15.2-mile-long transit project running along the Exposition Right-of-Way between Downtown Los Angeles and the City of Santa Monica. The Bureau of Sanitation, Wastewater Engineering Services Division (WESD) has reviewed the request and found the project to be related to construction of a transit line and five stations along the Exposition Light Rail Transit corridor only.

Based on the project description, we have determined the project is unrelated to sewer capacity availability and therefore do not have sufficient detail to offer an analysis at this time. However, as you develop your project alignment, please ensure that you put in place mitigation measures whenever your project comes near, in contact with or interferes with a sewer infrastructure to guarantee the continued safe operation of such structures. Should the project description change or details on construction become available, please continue to send us information so that we may determine if a sewer assessment is required in the future.

If you have any questions, please call Kwasi Berko of my staff at (323) 342-1562.

Los Angeles, CA 90012
Attention: Lameese Elqura

From: Fire Department

Subject: EXPOSITION CORRIDOR TRANSIT NEIHBORHOOD PLAN
ENV 2013-0622-EIR

PROJECT LOCATION

Corridor along Exposition Light Rail Line (LRT) between the Culver City and Exposition/Bundy transit stations.

PROJECT DESCRIPTION

The City of Los Angeles is preparing a Specific Plan and other regulatory changes for the Exposition Light Rail corridor, which would guide the future development of the area within the boundaries indicated in Figure 1. The Project Area is located within City Council Districts 5, 10, and 11, and comprises portions of the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas. The Project Area is located entirely within the incorporated City of Los Angeles, and abuts the City of Culver City and the City of Santa Monica. Note that not all properties show in the Project Area will be affected.

Background

The Metro Exposition Light Rail Line is a 15.2-mile-long transit line running between Downtown Los Angeles and the City of Santa Monica. The majority of the line runs along the Exposition Right-of-Way, roughly parallel to the Santa Monica Freeway. Phase I of the line was completed in 2012. Phase II, extending 6.6 miles from the Phase I terminus in Culver City to the planned Colorado/4th Street station in Santa Monica, is currently under construction and scheduled for completion in 2015/2016.

The Project includes a variety of regulatory changes in the areas along the Exposition LRT corridor encompassing the five stations within the City of Los Angeles boundaries. The station areas to be studied are Culver City; National/Palms; Exposition/Westwood; Exposition/Sepulveda; and Exposition/Bundy.

Within a half-mile radius of each station there is a mix of zoning. Around the National/Palms and Westwood/Exposition stations the zoning is primarily residential. The Westwood/Exposition station area is comprised almost entirely of R1 (single-family residential) zoned properties. Around the Culver City, Sepulveda, and Bundy stations, there is a concentration of industrially zoned land in the immediate vicinity of the transit stations, with a mix of residential, commercial, and public facility zoning nearby,

The following comments are furnished in response to your request for this Department to review the proposed development:

A. Fire Flow

The adequacy of fire protection for a given area is based on required fire-flow, response distance from existing fire stations, and this Department's judgment for needs in the area. In general, the required fire-flow is closely related to land use. The quantity of water necessary for fire protection varies with the type of development, life hazard, occupancy, and the degree of fire hazard.

Fire-flow requirements vary from 2,000 gallons per minute (G.P.M.) in low density residential areas to 12,000 G.P.M. in high-density commercial or industrial areas. A minimum residual water pressure of 20 pounds per square inch (P.S.I.) is to remain in the water system, with the required gallons per minute flowing.

Improvements to the water system in this area may be required. The cost of improving the water system may be charged to the developer. For more detailed information regarding water main improvements, the developer shall contact the Water Services Section of the Department of Water and Power.

All water systems and roadways are to be improved to the satisfaction of the Fire Department prior to the issuance of any building permits.

B. Response Distance, Apparatus, and Personnel

The Fire Department has existing fire stations at the following locations for initial response into the area of the proposed development:

Fire Station No. 68
5023 W. Washington Blvd.
Los Angeles, CA 90019
Engine,
Paramedic Rescue Ambulance,

Fire Station No. 58
1556 S. Robertson Blvd.
Los Angeles, CA 90035
Assessment Engine,
Paramedic Rescue Ambulance,
BLS Rescue Ambulance

Fire Station No. 43
3690 S. Motor Ave.
Los Angeles, CA 90034
Engine,
Paramedic Rescue Ambulance

Fire Station No. 92
10556 W. Pico Blvd.
Los Angeles, CA 90064
Assessment Light Force,
Paramedic Rescue Ambulance,

Fire Station No. 59
11505 W. Olympic Blvd.
Los Angeles, CA 90064
Assessment Engine,
Paramedic Rescue Ambulance,
EMS Battalion Caption
Rehab Air Tender,

Fire Station No. 62
11970 W. Venice Blvd.
Los Angeles, CA 90066
Assessment Engine,
Paramedic Rescue Ambulance,

Fire Station No. 63
1930 Shell Avenue
Los Angeles, CA 90291
Task Force,
Paramedic Rescue Ambulance,

Fire Station No. 37
1090 S. Veteran Ave.
Los Angeles, CA 90024
Task Force,
Paramedic Rescue Ambulance,

Based on these criteria (response distance from existing fire stations), fire protection would be considered (adequate).

The proposed project would have a cumulative impact on fire protection services.

The width of private roadways for general access use and fire lanes shall not be less than 20 feet, and the fire lane must be clear to the sky.

C. Firefighting Personnel Access

No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.

D. Firefighting Apparatus Access

Access for Fire Department apparatus and personnel to and into all structures shall be required.

The width of private roadways for general access use and fire lanes shall not be less than 20 feet, and the fire lane must be clear to the sky.

Fire lanes, where required and dead ending streets shall terminate in a cul-de-sac or other approved turning area. No dead ending street or fire lane shall be greater than 700 feet in length or secondary access shall be required.

Fire lane width shall not be less than 20 feet. When a fire lane must accommodate the operation of Fire Department aerial ladder apparatus or where fire hydrants are installed, those portions shall not be less than 28 feet in width.

Where access for a given development requires accommodation of Fire Department apparatus, overhead clearance shall not be less than 14 feet.

All access roads, including fire lanes, shall be maintained in an unobstructed manner, removal of obstructions shall be at the owner's expense. The entrance to all required fire lanes or required private driveways shall be posted with a sign no less than three square feet in area in accordance with Section 57.09.05 of the Los Angeles Municipal Code.

No building or portion of a building shall be constructed more than 300 feet from an approved fire hydrant. Distance shall be computed along path of travel.

Those plot plans be approved by the Fire Department showing fire hydrants and access for each phase of the project prior to the recording of the final map for that phase. Each phase shall comply independently with code requirements.

All street intersections with a level of service of "E" or "F" decreases the level or service of fire protection and emergency medical services provided by this Department.

CONCLUSION

Definitive plans and specifications shall be submitted to this Department and requirements for necessary permits satisfied prior to commencement of any portion of this project.

The Los Angeles Fire Department continually evaluates fire station placement and overall Department services for the entire City, as well as specific areas. The development of this proposed project, along with other approved and planned projects in the immediate area, may result in the need for the following:

1. Increased staffing for existing facilities.
2. Additional fire protection facilities.
3. Relocation of present fire protection facilities.

For additional information and comments contact Metro Rail Project Coordinator Mike Thomas (Battalion Chief) at (213) 922-7269 or Inspector Steve Douglas at (213) 922-7193.

Is the City Planning Politburo Performing Outreach or Just Outrage?

ALPERN ON PLANNING - Officially, the City Department of Planning is conducting a Transit Neighborhood Plans Project to best determine the right land use for the neighborhoods surrounding the five West LA-adjacent Expo Line stations (which includes the Venice/Robertson station located at the Culver City border).

Certainly, walkable neighborhoods, transit-oriented development and affordable housing opportunities abound as the Westside Expo Line becomes reality. Unofficially and unfortunately, however, the "outreach" meetings are potentially as dangerous to the Westside as they otherwise should be helpful to it.

The Exposition Corridor Transit Neighborhood Plan has an Environmental Scoping Meeting on Wednesday, April 10, 2013 at 6 p.m. at the IMAN Cultural Center (3376 Motor Ave., parking is available onsite or on Motor Ave.). A brief presentation about the Project and the EIR process will be given at 6:15 p.m.

I strongly recommend that all transit advocates and neighborhood leaders (particularly those of us who fought for the Expo Line) attend this meeting, and provide the input for which L.A. City Planning needs. Yet I also strongly recommend that the following questions be pointedly asked of Planning, which is increasingly behaving more like a Politburo than a proper branch of the L.A. civil service:

1) Is this true "outreach," or an official way of stating on the EIR for this Project that "outreach" was performed but, in actuality, was a session where transit-oriented development was asked for but overdevelopment was strongly cautioned against...and which is ignored in the EIR?

2) After being asked by Planning at the last outreach meeting held at the Henry Medina Parking Enforcement Building a few months ago to provide input as if there were no Casden Project next to the Exposition/Sepulveda Expo Line station being planned, and after informing Planning overwhelmingly that the Casden Project was entirely opposed by those who attended, yet after learning that Planning and the Casden developers met in private on December 27th to virtually rubber stamp the Casden Project, is the IMAN meeting just "window dressing" to show there was a token opportunity for community input (regardless of what the input was)?

3) After years of meeting with (and apparently being ignored by) City Planning in the hopes of creating an updated West LA Community Plan, why is the public now demanded to have all public input on the Exposition Corridor Transit Neighborhood Plan Draft EIR by April 15th? Why was the LA Community Plan not as fast-tracked as is the Exposition Corridor Transit Neighborhood Plan...or is this corridor being spot-zoned to the suffering of the rest of the region, and to the suffering of all those Westsiders who fought so hard for the Expo Line?

4) Why did LA City Planning officials ignore Metro's requests for planning almost a decade ago (unlike Culver City and Santa Monica, which have been working with planners, developers and residents for over a decade...and are still working with them to find the right compromises for Expo Line station-adjacent development), yet are now rushing through this project over the protests of all the neighborhood groups, Sierra Club and pro-transit groups who otherwise expected environmentally-appropriate and sustainable development in the City of Los Angeles?

5) Why is the City of LA Planning "going it alone" without working with the LADOT and Metro on this Exposition Corridor Transit Neighborhood Plan, and does it allow for the future north-south transit lines on the 405 and Crenshaw Line corridors?

6) Will the Martin Cadillac redevelopment project next to the Bundy/Olympic Expo Line station (replacing a 100,000 sq. ft. project) into a 807,000 sq. ft. residential and commercial project, be agreed to behind closed doors, regardless of what the community (even transit advocates) want, so long as the developer and the proper political connections have been made as we saw with the Casden project? *There is a Public Scoping Meeting for this project scheduled for April 3 at the Olympic Collection at 11301 Olympic Blvd. #204 from 6-8:00 pm.*

7) Is there any room left in LA for industrial zoning (where jobs and commercial development are located), now that the Exposition/Sepulveda and Bundy/Olympic projects are now being rezoned away from industrial to commercial/residential, and is the previous call from Mayor Villaraigosa, Councilmember Koretz and Councilmember-Elect Bonin to create a Silicon Beach technology corridor along the Expo Line to be dropped in favor of creating some quick land and money grabs for residential developers?

8) Is there any hope for Metro, the LADOT and the City of L.A. Planning to work together to create a true West LA Community Plan Update that includes the Exposition Corridor Transit Neighborhood Plan, and which includes a Westside Regional Transportation/Transit Center at Exposition/Sepulveda, where the future-but-budgeted Expo Line and north-south 405/Sepulveda Corridor transit line will connect with the 405 and 10 freeways, and with Pico and Sepulveda Blvds.?

9) Are there truly bicycle and pedestrian and bus amenities planned for all transit-adjacent developments in order for them to be truly transit-oriented, and not just transit-adjacent, and is the term "transit-oriented" just a buzzword shield to accommodate and facilitate overdevelopment?

10) Finally, is the rushed and nebulously-detailed method that LA Planning doing for the Expo Corridor CEQA-compliant, and will it pass legal muster, or is it just a lawsuit waiting to happen, one which will be at risk of a harsh reversal such as that we saw with the wretched decision of the L.A. City Council with the electronic/digital billboard industry? Is this a process that L.A. City Attorneys Carmen Trutanich and Mike Feuer will want to weigh in on, as the once-venerable mass transit effort devolves into a money grab by big developers?

11) Lastly, will this effort be one that kills off the mass transit movement in much of L.A. County, and are mass transit proponents now to find relief that Measure J failed last November?

The LA City Planning Politburo has recently shown a penchant for closed-door decision making and stiff-arming law-abiding residents, and appear willing to ignore Neighborhood Councils and City Councilmembers alike. After years of trying very hard to work with this Planning Politburo, it's very hard for Neighborhood Councils to restore faith in civil servants who are supposed to be true and faithful to the needs of the taxpaying voters of Los Angeles, but are now instruments for special interests and their political allies who have proven more than willing to break the law.

I urge all of you who believe in better transportation and planning for ourselves and for our children to attend the meeting at the IMAN cultural center on April 10, 2013, and I urge City Planning, from Michael LoGrande on down, to stop playing the role of spoiler to all who have fought so hard to improve the mobility, environment, and quality of life for current and future Angelenos.

(Ken Alpern is a Westside Village Zone Director and Boardmember of the Mar Vista Community Council (MVCC), previously co-chaired its Planning and Outreach Committees, and currently is Co-Chair of its MVCC Transportation/Infrastructure Committee. Please consider the following my formal feedback for the pedestrian friendly development projects for the expo line:

I would like not only consideration but intentional planning and actual development of affordable housing which preserves the current demographic (income and ethnicity) of the Palms area. Palms is a unique location that allows working class families and single young adults from many backgrounds and professions to share public spaces together - it remains one of the few affordable places to live near business hubs (culver city, to be specific) in LA county.

Hello,
I saw on the Patch info regarding the build-out of the area stations. I live in Culver City - Raintree & commute (along with many) to the Westwood Gateway towers at Santa Monica Blvd & Sepulveda. The way the area runs now it would be disastrous to ride a bike up Sepulveda to Santa Monica. It is a very pedestrian unfriendly stretch. Could there be Dash shuttles like the ones in downtown?. I would use the train if I could jump on a shuttle to work. Thank you! Betsy

Los Angeles, CA 90012 Sent via email: Lameese.Elqura@lacity.org

RE: Expo Transit Oriented Scoping Comments

Dear Ms. Elqura,

The Brentwood Community Council ("BCC") is the broadest based Brentwood community organization. The BCC has 25 seats, including homeowner groups, multi-family dwellings, members-at-large, and organizations including public and private schools, religious, public safety, volunteer, environmental, and business districts. BCC represents over 50,000 residents from Mulholland (north), Wilshire (south), 405 freeway (east), and 26th St. (west).

The Brentwood community is gridlocked by traffic flowing through our area to reach outlying destinations in the shortest amount of time.

Bundy is one of only two north-south streets that link Brentwood to areas south of us, and is therefore of vital importance to our area. The area that surrounds the site of the Exposition stop at Bundy is one of the most gridlocked areas in the entire City during peak hours as commuters from all around the County drive into the Westside in the morning and out at night.

We are deeply concerned that the Transit Oriented Development concept as proposed imposes a "one size fits all" mentality to every Expo stop. In particular, we are strongly opposed to allowing additional density within a half mile radius of the train stop with no regard given to the **traffic implications** that this causes.

Increasing density may be appropriate for some Expo line stop, but within ½ mile from the Bundy stop are many major intersections that already operate at a LOS "D" or "F" during peak hours. This includes Bundy/Olympic, Bundy/Pico, the Bundy entrance to the I-10 freeway, Barrington/Pico, and Barrington/Olympic. Many commuters are cutting through Brentwood and West LA to get to the 405 freeway, and these north-south commuters will not be helped by the Expo line.

We are particularly concerned about allowing increased commercial office space within ½ mile from the Bundy station, as the reason that peak hour gridlock is so bad is that too much office space has been built on the Westside without sufficient infrastructure to support it.

We would also note that insufficient time has been given to give comments during the scoping period, as the meeting to present this TOD plan to Westside residents was Wednesday night, April 10 and comments are due by Monday, April 15. This is simply not enough time to circulate the issue to our membership and solicit comments.

Taking into account that these comments may not be complete since we have not had time to circulate the NOP to our members, our current study requests are as follows:

- The DEIR should be on a **station by station** basis, not as a single set of recommendations that cover all stations. At a minimum, the Bundy stop should be studied separately from the other stations due to the significantly different traffic conditions.

- The study area must be large enough that it covers **all impacted intersections**. In other words, if the edges of the study area show impacted intersections, the study area must be expanded until **no significant impacts** are shown on the borders of the study area. This is the only way to get a good picture of traffic impacts in the area.

Phone: 310-472-9775 Fax: 310-471-7478 Email: GJF165@gmail.com

- The study area should include streets in Santa Monica, east of the 405, and south of the 10 as necessary to ensure that all impacts are covered.

- The study areas should not only look at the area within ½ mile of the station. We have found that traffic studies for other projects near the Expo station had impacts at intersections such as Bundy/Santa Monica, Bundy/Wilshire, Bundy/San Vicente, Bundy/Sunset, Barrington/Santa Monica, Barrington/Wilshire, Barrington/San Vicente, Barrington/Sunset, and Federal/Wilshire, all of which are more than ½ mile away from the Expo station. All of these intersections should be included in the traffic study.

- The traffic study must include the impact of all upcoming projects in the area that have not yet been built, including but not limited to:
  - Wilshire BRT
  - The Casden development at Pico and Sepulveda
  - Papermate (1681 26th Street in Santa Monica)
  - Village Trailer Park (2930 Colorado Avenue in Santa Monica)
  - The development at 3402 Pico Boulevard/2337 & 2403-2409 Centinela Avenue right at the I-10 freeway exit
  - Paseo Nebraska (3020, 3030-3060 Nebraska Avenue, 3025 Olympic Boulevard, & 1819, 1820 Berkeley Street in Santa Monica)
  - Any other pending development adjacent to the Exposition/Bundy train stop

- The study must include alternatives with no commercial office space.

- The study must include alternatives that keep any buildings to a scale in keeping with the rest of the neighborhood, not significantly higher.

- The study must include alternatives that show any projects limited to a size that all significant impacts can be mitigated.

- The study should show alternatives that include easy pedestrian access and bicycle access from surrounding areas to get to and from the station. The study should incorporate ways to get pedestrians across major intersections such as Bundy/Olympic without blocking vehicular traffic and causing dangerous conditions for pedestrians and creating more gridlock. This could include overpasses or underpasses.

Phone: 310-472-9775 Fax: 310-471-7478 Email: GJF165@gmail.com

- The study should include solutions that require no additional lights or stop signs on major streets, which have the potential to further tie up traffic in the area.

- The study should not include any retail area that could be dedicated to a "destination" grocery store such as a Ralphs, Pavilions, Whole Foods, or Trader Joes, or any "big box" retail such as a Target or Costco.

- No alternatives should merely reduce all components of project pro rata. Alternatives should study the reduction of most intensive uses in a greater percentage than less intensive uses.

- No alternatives should be limited by developer's profit objectives for project. Otherwise there would never be a true required downsize alternative.

Thank you for your consideration.

Nancy Freedman

Hello Lameese,

My name is Danny and I recently attended the Expo Transit Plan presentation you had in Palms the other day. I spoke to one of your colleagues there and I like I said to her, I think this is a great thing! I am a developer and architect so I take great interest in these things. I also lived in Palms for 6 years (just a few blocks away from where you had the meeting) and now I live in Leimert Park. In both cases, fortunately, I am only two blocks from an Expo stop. In Leimert Park, I am two blocks from the Crenshaw stop. In Palms, I was two blocks from the future Palms stop on National.

Anyway, I'm writing to just ask you to study and propose new regulations in two related areas:

1. Parking for strip malls or small retail/commercial. I think it should always be behind the buildings themselves and not in front like you see a lot in L.A. This has the effect of creating a more continuous and harmonious street facade and urban "space." Please push for this!

2. Parking regulations need to adapt and change just as the time we live in adapts and changes. For example, parking shouldn't be tied to number of dwelling units or number of spaces within a dwelling unit. It should be more flexible. Maybe we want to offer small studios with only 1 parking spot. Or a 1 bedroom unit with a parking lift. In Small Lot Subdivisions (my primary focus), we are required to provide 2 car parking regardless of the unit we design. This forces us to make bigger units because it just doesn't make sense to offer smaller units since there will be no room left for cars. I think developers should be given more flexibility here and let the market decide whether the unit is worth renting or buying or not. As the Adaptive Reuse Ordinance has shown, there is a sector of the city that is open to housing with little or no parking.

3. Lastly, parking stall size and turning radiuses need to be addressed as well. In the age of smart cars and hybrids and mini coopers, perhaps we don't need the huge stalls and even huger turning radiuses we are currently mandated to have. This one is a bit tougher I know, but just a thought.

I'm sure there are other issues you're looking at as well, so I'll leave it at that. I do appreciate your service to the city and I look forward to seeing the plan when it comes out.

Thanks so much,

Danny

Sent: April 15, 2013

Sorry for sending this so late but here goes:

- Please keep the zoning the way it is especially around the Westwood Blvd station. Busy Pico Blvd is only two short blocks away. Why would you need to bring businesses even closer? Rumor has it that Expo between Westwood and Sepulveda maybe rezoned. We have enough traffic as it is. The Sepulveda Station would be good for mixed use with commercial around it. We also need more busses to connect the Westside with the Valley from this location. Maybe people will ride the Expo line so that they can connect to busses that will take them to Westwood/UCLA, Brentwood, the Getty, the Valley, CSUN, etc. Move the Blue Lines #8,12 from Westwood Blvd to Sepulveda which is wider and attracts more ridership plus Westwood will be blocked by the train several times an hour which will lengthen times and deter riders to their cars or other means.

- Having said this, we still need more green space around the stations. The closest park is miles away. Please allow for open air spaces for families, pets, etc, around the stations. I am thrilled about the bike path!

- Will Expo provide security at these stations? Will they be video cameras? Cops on bikes, etc? I work in downtown and several of my co-workers have stopped taking the Blue Line from Long Beach to downtown due to aggressive panhandlers, vendors, etc.

Thank you for compiling this!

The Metro Expo Line was intended to improve traffic conditions. The City will probably defeat that purpose if it increases residential or commercial density at Expo stations. I believe the increased auto traffic from more worker/residents will not be offset by those using the Expo instead of cars. Please refer me to any evidence you have to the contrary. The burden of proof in this matter should be on those advocating increased density.

Thank you,
Jim Miers

Please permit me to comment on the Exposition Corridor Transit Neighborhood Plan.

I ask that you consider and value the need for open space – something that is critically short in the area between Sepulveda Boulevard and Overland Avenue.

As defined in The Statewide Park Development and Community Revitalization Act of 2008, Public Resources Code section 5642 (definitions), subdivision (b), a "'Critically underserved community' means a community that meets either of the following: [¶] (1) Has less than three acres of usable parkland per 1,000 residents. …." With much of the area ROW having zero acres of parkland per 1,000 residents, this area along the ROW is "critically underserved." (Per the "Community Fact Finder" site used by the State Parks Department http://www.parkinfo.org/factfinder2011/grantee.html.)

There is proposed parkland between Westwood and Overland Avenues (see http://expogreenway.org/), and it will be important to follow through with that project to help mitigate the shortage of open space.

Thank you,

Jonathan Weiss

You state that this Plan is being created as a Specific Plan, but there are other specific plans within the three Community Plans.

As stated in the OPR General Plan Guidelines (2003):

All principles, goals, objectives, policies, and plan proposals set forth in an area or community

and

"Area plan" and "community plan" are terms for plans that focus on a particular region or community within the overall general plan area. An area or community plan is adopted by resolution as an amendment to the general plan, in the manner set out in §65350, et seq.

and

A specific plan, on the other hand, is a tool for implementing the general plan but is not part of the general plan.

CRENSHAW CORRIDOR exists as a Specific Plan as does the SEPULVEDA CORRIDOR. Please do not neglect any lawsuit judgments or settlements such as the Southern Pacific Transportation Co.

You cover many Community Plans which are the LAND USE ELEMENT in the GENERAL PLAN. You will have to update the GENERAL PLAN.

You need to update the COMPLETE STREETS AND CIRCULATION ELEMENT.

You have not included the effect on the local economy including Small Business and Goods Movement.

You have not anticipated and overlaid the CALTRANS projects.

Missing is the mapping of schools including Charter Schools and private schools.

Seniors and Disabled Persons patterns and injuries should be mapped.

All users of the Transportation Network (streets, roads, and highways) should be identified and analyzed such as:

1. Bicyclists
2. Children

3. Persons with disabilities
4. Motorists
5. Movers of commercial goods
6. Pedestrians
7. Users of public transportation
8. Seniors

The Land Use Plan and Transportation Network should be complementary and connect people with desired destinations. Four considerations should be:

1. Physical
2. Social
3. Health and Safety
4. Economic

You should consider the data on the following:

Assess the number and distribution of households with and without an automobile.

Assess the transportation needs of special groups within the population and the extent to which such needs are being met by existing streets, roads, and highways. (e.g., children, persons with disabilities, and the elderly).

Project future modal split by estimating the percentage of trips by transit, passenger car, van pools, etc.

Assess the adequacy of the existing streets, roads, and highway systems and the need for expansion, improvements, and/or transportation operations management based on projected traffic including that generated by planned land use changes. Consider that the need for expansion should recognize economic principles such as cost effectiveness and efficiency as well as environmental and social consequences

Analyze existing street, road, and highway traffic conditions for all transportation modes to determine current levels of use throughout the entire day. Assess whether existing travel demand or transportation network supply could be better managed to limit the need for expansion of streets, roads, and highways.

Analyze existing performance and levels of service of existing streets, roads, and highways for all transportation modes. Compare projected with desired performance and level of service standards for all transportation modes

Project future traffic volumes for all modes on existing and planned streets, roads, and highways by accounting for the effects of changes in the following built environment characteristics:

- *Density of land uses;*
- *Diversity of land uses;*

- *Design of network;*
- *Destinations (regional accessibility);*
- *Distance to transit;*
- *Demographics;*
- *Development scale; and,*
- *Demand management (i.e. pricing, etc.)*

Determine the effects of projected traffic volumes for all transportation modes on existing street, road, and highway capacities.

Identify physical barriers and other constraints that prevent or inhibit use or access by all modes

Analyze historical data and trends with regard to collisions involving all modes of travel.

Review the CA Highway Patrol's Statewide Integral Traffic Record System to identify areas where safety could be addressed.

Identify problem locations by analyzing injury severity and determining collision frequency relative to exposure by conducting motor vehicle, pedestrian, and bicycle counts.

Review traffic projects pertinent to local planning that are proposed within neighboring jurisdictions.

Review pertinent regional transportation plans and project funding priorities under the regional transportation improvement program.

Analyze the potential effects of alternative plan proposals and implementation measures (related to transportation and/or land use) on desired projected performance and multimodal levels of service.

Analyze the potential effects of alternative plan proposals and implementation measures (related to transportation and/or land use) on residential land uses.

The identification of farm-to-market transportation needs on streets, roads, and highways.

Analyze existing public transit demand on transit capacity and services.

Assess the adequacy of existing transit services and the need for expansion and improvements.

Examine trends in transit use and estimates of future demand.

Assess the needs of people who depend on public transit.

Determine the effects of projected public transit demand on transit capacity and services.

Determine existing and projected performance and levels-of-service standards for transit.

Evaluate the transportation needs that are or are not being met by public or private bus companies.

Examine private bus company plans to provide bus services in the future.

Inventory existing paratransit services, uses, and routes.

Inventory the existing and future needs served by paratransit.

Inventory rail lines and facilities and assess plans for expansion and improvements.

Determine transportation needs that are not being met by railroads.

Identify abandoned railroad right of ways which could be preserved for future transportation corridor use, including bicycle paths and trails, or new passenger rail or bus service.

The identification of farm-to-market transportation needs for rail services.

Identify existing truck routes and determine needed improvements.

The identification of farm-to-market routes.

Assess the adequacy of existing pedestrian routes to determine if all routes meet Americans with Disabilities Act (ADA) Accessibility Guidelines and applicable ADATransition Plans.

Assess historical data and trends with regard to vehicle, bicycle, and pedestrian collisions

Assess the accessibility to transit stops by walking or bicycling and by people of all abilities.

Analyze the adequacy of emergency access and evacuation routes.

Project future needs for future freight trucking terminals and warehouses.

Assess the adequacy and accessibility of goods movement to and from freight truck terminals and warehouses.

Assess the adequacy and accessibility of goods movement from farms to storage facilities.

Consult with neighboring military planners to ensure that military installations, infrastructure, and training activities are considered in the circulation system.

Assess major streets, roads, and highways near or surrounding all military facilities, including the need for development and maintenance of adequate ingress and egress routes.

Assess all military terminals in the same manner as general and commercial terminals.

Assess the adequacy and availability of existing community water, sewer, energy, and drainage facilities, and the need for expansion and improvements.

Assess existing and projected capacity of treatment plants and trunk lines.

Determine the location of existing and proposed power plants, oil and gas pipelines, and major electric transmission lines and corridors.

Assess potential future development of power plants, transmission lines, and renewable and non renewable energy. Consider such factors as the demand for transmission facilities, the transport and storage of hazardous materials, and local transportation impacts of current and future power plant developments.

Assess power line or other utility easements for future bicycle paths or multipurpose paths.

Determine the locations of utility infrastructure that may be blocking the pedestrian right-of-way such as utility poles.

Determine the locations of utility infrastructure that may create hazardous conditions for bicyclists.

Any STORMWATER HARVESTING that is not being used for GROUNDWATER INFILTRATION, under State regulatory jurisdiction, should be analyzed for effects on Public Health and Safety for humans, plants and animals. All liability should be disclosed.

We assume that RECREATION and ENERGY under Public Services and Utilities implies this type of project. It is NOT a Public Utility and is not under the SAFE DRINKING WATER ACT. It is not considered RAIN WATER under the State's definition.

I very concerned about the proposed changes you envision. I live within a half-mile radius of the Westwood Station, and I have the following questions with regard to the plan:

1) If your goal is to promote transit ridership, how will increased density in this half-mile radius of the Westwood station do anything other than cause clogged streets in the vicinity of the stations, thereby making it difficult for motorists outside the half-mile radius to get to the trains? It will not be feasible for many to ride a bicycle or walk to the station.

2) I am very concerned about homes on the blocks adjacent to the boulevards of Pico, Westwood and Olympic. How will you deal with the impact of increased height levels on such homes?

3) What will be the impact on quality of life for people who have lived in, and have been good stewards of, the homes in our area? What, for example, will be the effect of increased density on mobility, infrastructure, and schools?

4) How will the project as conceived meet your stated objective to "conserve stable single-family neighborhoods?"

5) Since we now have sufficient traffic and density to justify public transit, how will greatly increased density in a concentrated area (i.e. the half-mile radius) not OVERWHELM this area?

Thank you for considering my comments and responding to my questions.

Marilyn Tusher

Sent: April 14, 2013

Dear Ms. Elqura,

I am writing to you today in regards to the above referenced Project/Specific Plan/EIR, and how it relates to my single family residential neighborhood that totally surrounds the future Westwood/Exposition station.

Taking into consideration the nature of my well established single-family neighborhood of Westwood Gardens, and its 600 homes, I would like to see the following in your report:

1. A specific reference to my area which lies within the 1/2 mile radius of the Westwood/Exposition station, and the acknowledgement that it is a stable single family neighborhood, having existed for almost 70 years. As one of the objectives of the Project is to conserve stable single family neighborhoods, I would like to see my neighborhood of Westwood Gardens specifically excluded from any plan for a zone change to increase density for new housing, or any zone change at all.
2. A specific reference to the planned Greenway between Overland and Westwood Blvds. that fullfills another of the project's goals of providing open spaces, and will improve the aesthetics of the community.
3. Walking and bicycling improvements are already included in the planned Greenway and beyond to the west of Westwood Blvd. But the status of the pedestrian sidewalks along Westwood Blvd. are in dire condition at the present. They would just need to be repaired or replaced, without any further changes in the circulation of my neighborhood. Please study as to how they can be improved.

Thank you for your consideration of my concerns. Please keep me on your mailing list for any future developments or meetings.

March 23, 2013

Ms. Hakimizadeh,

On behalf of the Palms Neighborhood Council and the Palms community, I would like to submit three comments to the draft EIR. We will also be encouraging stakeholders and Board members to attend the meeting on April 10. Please find the resolutions passed by our NC below:

Native Plants & Trees

Whereas California native plants and trees require far less water than non-natives(saving both water and the energy to move and treat that water), reduce green waste, and, unlike "drought tolerant" non-native exotics, require no soil amendments, provide crucial wildlife habitat, and create a sense of geographical identity;
And Whereas a preponderance of stakeholders surrounding the stations for Phase Two of the Expo Line have expressed a preference for California native landscaping on the right-of-way and adjacent to stations;
Therefore, the Palms Neighborhood Council requests that any public or private streetscape design, redevelopment plan, or other land use funded or incentivized by the Transit Neighborhood Plan being developed by the City of Los Angeles stipulate and require the exclusive use of California native plants and trees.

Incentives for Parking

MOTION: Whereas the lack of MTA parking in the design for the Expo Line Phase Two Palms and Westwood Stations will discourage use of the line and increase congestion and parking scarcity in Palms;
Therefore, the Palms Neighborhood Council requests that the Transit Neighborhood Plan being developed by the City of Los Angeles investigate and pursue incentives to develop devoted Expo Line rider parking as part of a redevelopment plan for the shopping center at 9860 National Blvd. (currently anchored by Vons) in a manner that would preserve the character and services in this development.

Pedestrian Corridor

Whereas the Motor/National section of Palms has a budding nightlife and would benefit greatly from easy pedestrian access from riders on the coming Palms Station on the Expo Line Phase Two;
And Whereas more Palms residents would take advantage of the Expo Line if a well-lit, welcoming pedestrian corridor connected the Motor/National area to the station;
Therefore, the Palms Neighborhood Council requests that the Transit Neighborhood Plan being developed by the City of Los Angeles investigate and pursue incentives to develop a vibrant pedestrian corridor connecting Palms Station with the Motor Avenue and National Blvd. intersection in Palms.

Yours,

Eli Lipmen

Re: Environmental Case ENV-2013-622-EIR

Dear Lameese:

Thank you for offering us the opportunity to comment on the EIR regarding the Exposition Corridor Transit Neighborhood Plan. As I discussed with you at the 4/10/2013 Meeting at the IMAN Center, the South Robertson Neighborhoods Council has some strong ideas about the transit related development surrounding the Venice/Robertson station area. These remarks form part of a longer document submitted as input to the West Adams-Baldwin Hills-Leimert Community Plan. The South Robertson Neighborhoods Council unanimously approved the following recommendations on 9 April 2013.

Doug Fitzsimmons
President

Brian Kite
Vice-President

Terrence Gomes
Treasurer

Beth Ryan
Secretary

Connecting the South Robertson corridor to the TOD area around the Expo Line Metro Station

A number of effort, including this one, address the huge economic opportunities for redevelopment around the Expo Metro stop at Robertson/Venice in a Transit Oriented Development zone (TOD), however we have yet to see a realizable vision for connecting this TOD to the neighboring South Robertson community. There is much talk of the Venice/National gateway to Culver City, little mention of how the TOD can serve as a gateway to *Los Angeles*, specifically with neighboring South Robertson, Venice boulevard heading east from the station, and the burgeoning Arts corridor on La Cienega south of Venice.

Specific Recommendations

a. National Boulevard between Venice and Robertson Boulevards should be reconceived as a mixed-use residential and pedestrian gateway that bridges the TOD to the communities of South Robertson. This street already serves heavy pedestrian traffic from the students of Hamilton High School who use the corridor to connect to the transit opportunities along Venice. The Metro stop only increases this pedestrian use, offering an opportunity to draw the wider commuter community to connect through to South Robertson.

b. In fact, the West Adams-Baldwin Hills-Leimert Community Plan designates this National connection as a Pedestrian Priority Street segment in recognition of this opportunity, yet the conflicting Industrial zoning designation is counterintuitive to that use. The current industrial use coupled with the Freeway underpass makes this street feel very unwelcoming to Pedestrian foot traffic.

c. Among improvements that should be considered here are wider sidewalks, landscaping and other buffers to vehicular traffic lanes, good lighting, trash receptacles that are regularly serviced, elimination of parking under the 10

South Robertson Neighborhoods Council

PO Box 35836
Los Angeles, CA 90035

P: (310) 295-9920
F: (310) 295-9906
E: info@soronc.org

soronc.org

City of Los Angeles Certified Neighborhood Council

Freeway (ridding the community of frequent abandoned and oversize vehicles that park here), reduction of the vehicular lane on the north side of National, as well as benches and signage.

d. There should be a clear vision to connect the two Pedestrian Priority Street segments of National and South Robertson outlined in figure 4-3 of the West Adams-Baldwin Hills-Leimert Community Plan into one cohesive Pedestrian Priority Street segment which connect at National and Robertson. In the current vision of the Plan, these two closely neighboring Pedestrian Priority Streets do not cohesively connect.

e. We feel there is opportunity for a vision that focuses this section of National Boulevard as the *pedestrian* oriented gateway from the Venice/Robertson Metro stop through to South Robertson (and the communities to the North), while refocusing the La Cienega/Jefferson Metro stop as a *transit/connection* point for those who will be connecting to ground transportation from the Metro, feeding up to Century City and Beverly Hills. This would allow La Cienega, which is better equipped to deal with increased ground transit to serve that purpose, and refocus the Robertson corridor, less well equipped to carry more traffic, to focus on a pedestrian use, with possible inclusion of a local DASH.

Opportunities and challenges along South Robertson

The West Adams-Baldwin Hills-Leimert Plan designates the South Robertson area as a Neighborhood District. This designation calls for an area that is highly walkable, drawing local residents out to the commercial corridor to meet their daily needs. Unfortunately, the West Adams-Baldwin Hills-Leimert Plan completely ignores the heavy commuter traffic that uses South Robertson as an access point to the 10 Freeway and as a connector between the 10 Freeway and bustling areas such as Century City, Beverly Hills and West Hollywood. Major development projects that are currently under review in Century City only threaten to exacerbate this problem, depositing more and more traffic on this narrow Boulevard with narrow sidewalks, and creating a less and less desirable walking and pedestrian oriented Neighborhood retail District.

<u>Specific Recommendations</u>

a. Both the West Adams-Baldwin Hills-Leimert Community Plan and the Expo Transit subdistrict vision calls for South Robertson to have bicycle lanes, yet the existing roadway can barely support the current load of cars. The bicycle lane designation, while very desirable to our vision for this community, is at odds with the findings of the TIMP that indicate Robertson is ill-prepared to sustain this use. Of all major roadways that feed into the 10 Freeway, Robertson Boulevard is by far the narrowest. This is further aggravated by the presence of Hamilton High School at the gateway to the Freeway, effectively blocking traffic flow to the Freeway at peak times twice a day.

b. Robertson's roadbed is only 60-66 feet in width and the Plan's analysis rates it at F(1) to F(2) in terms of traffic level of service. Two valuable traffic lanes are taken up for street parking, and there is little opportunity to include bike lanes as the Plan prescribes. We see an opportunity to rethink Robertson to have two lanes of traffic in each direction, a center turn lane between them and a bike lane in each direction, but this would involve removing the current street parking lanes and building a Park-Once parking structure(s) to service the commercial parking requirements. This parking solution is highly desired

by local residents who have long waited for the transformation of the depressed commercial corridor that serves their homes.

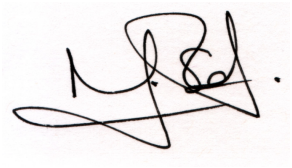
c. While observation may suggest that there is currently plenty of available street parking along South Robertson, we feel this is misleading. Current retail on Robertson only minimally serves the surrounding communities' needs, with a high proliferation of alley-only businesses and retail spaces that are underused or empty. If Robertson Boulevard were to sustain the types of sit-down restaurants and thriving retail that the Plan envisions, the LAMC would require significantly more parking than is currently available. We believe this would have the additional benefits of allowing new uses on Robertson (currently not possible because of the lack of adequate parking) and serve to stimulate the walkability of this boulevard.

d. On the portion of South Robertson that runs south of Cattaraugus (excluding Hamilton High School), we envision an opportunity for high density residential over neighborhood-oriented commercial exceeding the current 3-story limit. This area is currently designated as RD2-1. With its direct access to major transportation including the Freeways and Expo Line, as well as close proximity to Hamilton High School, this could be an ideal location for high density mixed use that could connect the Robertson corridor with the TOD area surrounding the Expo Metro.

Our Neighborhood Council is very interested in the changes around the Expo line and I would appreciate your department's partnership in continuing to keep us well-informed, and offer our residents the chance to comment on developments as they progress by coming to our meetings and presenting ideas.

You can get on the agenda for any of our meetings by contacting Doug Fitzsimmons at president@soronc.org. We meet on the third Thursday of every month and usually need one week's notice to be able to accommodate you in the agenda.

Many thanks,



Marjan Safinia

Re: Expo Transit Oriented Scoping Comments

Dear Ms. Elqura:

I am writing on behalf of the board and members of the South Brentwood Residents Association. SBRA represents approximately 7,500 residents who live in the area south of San Vicente Blvd., east of Centinela and west of Federal. Wilshire is our southern border.

Bundy is one of only two north-south streets that link Brentwood to areas south of us, and is therefore of vital importance to our area. The area that surrounds the site of the Exposition stop at Bundy is one of the most gridlocked areas in the entire city during peak hours as commuters from all around the County drive into the Westside in the morning and out at night.

We are concerned that the Transit Oriented Development concept as proposed imposes a "one size fits all" mentality to every Expo stop. In particular, we are strongly opposed to allowing additional density within a half mile radius of the train stop with no regard given to the traffic implications that this causes.

Increasing density may be appropriate for some Expo line stop, but within ½ mile from the Bundy stop are many major intersections that already operate at a LOS "D" or "F" during peak hours. This includes Bundy/Olympic, Bundy/Pico, the Bundy entrance to the I-10 freeway, Barrington/Pico, and Barrington/Olympic. Many commuters are cutting through Brentwood and West LA to get to the 405 freeway, and these north-south commuters will not be helped by the Expo line.

We are particularly concerned about allowing increased commercial office space within ½ mile from the Bundy station. The reason that peak hour gridlock is so bad in this area is that too much office space has been built on the Westside without sufficient infrastructure to support it.

We would also note that insufficient time has been given to give comments during the scoping period, as the meeting to present this TOD plan to Westside residents was Wednesday night, April 10 and comments are due by Monday, April 15. This is simply not enough time to circulate the issue to our membership and solicit comments.

Taking into account that these comments may not be complete since we have not had time to circulate the NOP to our members, our current study requests are as follows:

- The DEIR should be on a station by station basis, not as a single set of recommendations that cover all stations. At a minimum, the Bundy stop should be studied separately from the other stations due to the significantly different traffic conditions.

- The study area must be large enough that it covers all impacted intersections. In other words, if the edges of the study area show impacted intersections, the study area must be expanded until no significant impacts are shown on the borders of the study area. This is the only way to get a good picture of traffic impacts in the area.
    - The study area should include streets in Santa Monica, east of the 405, and south of the 10 as necessary to ensure that all impacts are covered.

- The study areas should not only look at the area within ½ mile of the station. We have found that traffic studies for other projects near the Expo station had impacts at intersections such as Bundy/Santa Monica, Bundy/Wilshire, Bundy/San Vicente, Bundy/Sunset, Barrington/Santa Monica, Barrington/Wilshire, Barrington/San Vicente, Barrington/Sunset, and Federal/Wilshire, all of which are more than ½ mile away from the Expo station. All of these intersections should be included in the traffic study.

- The traffic study must include the impact of all upcoming projects in the area that have not yet been built, including but not limited to:
    - Wilshire BRT
    - The Casden development at Pico and Sepulveda
    - Papermate (1681 26th Street in Santa Monica)
    - Village Trailer Park (2930 Colorado Avenue in Santa Monica)
    - The development at 3402 Pico Boulevard/2337 & 2403-2409 Centinela Avenue right at the I-10 freeway exit
    - Paseo Nebraska (3020, 3030-3060 Nebraska Avenue, 3025 Olympic Boulevard, & 1819, 1820 Berkeley Street in Santa Monica)
    - Any other pending development adjacent to the Exposition/Bundy train stop

- The study must include alternatives with no commercial office space.

- The study must include alternatives that keep any buildings to a scale in keeping with the rest of the neighborhood, not significantly higher.

- The study must include alternatives that show any projects limited to a size that all significant impacts can be mitigated.

- The study should show alternatives that include easy pedestrian access and bicycle access from surrounding areas to get to and from the station. The study should incorporate ways to get pedestrians across major intersections such as Bundy/Olympic without blocking vehicular traffic and causing dangerous conditions for pedestrians and creating more gridlock. This could include overpasses or underpasses.

- The study should include solutions that require no additional lights or stop signs on major streets, which have the potential to further tie up traffic in the area.

- The study should not include any retail area that could be dedicated to a “destination” grocery store such as a Ralphs, Pavilions, Whole Foods, or Trader Joes, or any “big box” retail such as a Target or Costco.

- No alternatives should merely reduce all components of project pro rata. Alternatives should study the reduction of most intensive uses in a greater percentage than less intensive uses.

- No alternatives should be limited by developer's profit objectives for project. Otherwise there would never be a true required downsize alternative.

Thank you for your consideration.

Sincerely,

Marylin Krell,
President, SBRA

Lauren Cole

To Whom This May Concern:

I live near the Bundy Station and support the creation of the Expo Corridor Transit Neighborhood Plan. I strongly support and encourage the following:

a) New development should be pedestrian-oriented and provide safe and convenient bicycle parking. Vehicle parking requirements should be capped or reduced. If parking is provided, please consider consolidating parking and encouraging users to park once.

b) Street design and configuration that prioritizes travel by multiple modes, including walking, bicycling, and riding transit, as well as accommodating people of all ages, including the very young and the elderly. Due to the many wide, high-traffic intersections in West LA, crossing the street can be a major barrier for people like my elderly parents. Please enhance crosswalks, reduce crossing distances whenever possible, and provide for more crossing time at the intersections leading to the stations, especially the following: Bundy Dr/Olympic Blvd, Bundy Dr/Pico Blvd, Barrington Ave/Olympic Blvd, Barrington Ave/Pico Blvd. In the traffic analysis, I strongly suggest that the project team use an approach that more accurately reflects the performance of the roadway for all users, not just vehicles.

c) Increase residential, commercial, and retail densities within walking distance of stations, especially near the Bundy Station, and transition industrially zoned areas near this station to other more appropriate locations in the city.

Thank you for the opportunity to comment.

Sincerely,

Tham Nguyen

Westwood Gardens Civic Association
westwoodgardens@gmail.com
Sent: April 15, 2013

Dear Ms. Elqura,

I am writing on behalf of the Board of Directors of the Westwood Gardens Civic Association, a homeowners association in West Los Angeles representing approximately 620 homes bordering Pico Blvd. to the north, National Blvd. to the south, Midvale Ave. to the west and Overland Ave. to the east including the Dunleer Place neighborhood accessed by Coventry from Overland Ave. The WGCA has been in existence for more that sixty years working to maintain a livable quality of life in our residential neighborhood and community.

The residential area around the Westwood station of the Exposition Light Rail Line has been, since its inception, R-1 single family zoned. It is extremely important that this area remain R-1 with the borders described above. Please include this in your report. Westwood Gardens must remain as is with no increase in density.

Sincerely,

Drew DeAscentis

President

Westwood Gardens Civic Association

West of Westwood
Homeowners Association

RE: Scoping Comments for ENV-2013-622-EIR

Dear Ms. Elqura,

Please accept the following scoping comments as part of the record for ENV-2013-622-EIR.

The West of Westwood Home Owners Association (HOA) Board of Directors are writing to you on behalf of approximately 1,200 households in the Rancho Park area to provide suggestions for the Exposition Corridor Transit Neighborhood Plan. West Los Angeles is undergoing a major transformation with the introduction of the Exposition Line. There is serious community concern that the development being planned will be inconsistent with the neighborhood, not live up to its potential and will not provide a community benefit. We are submitting these comments in the hope the City will fairly consider our input. After all, it is those who live in the area that are most impacted by this project and likely to know the impacts various changes will have.

It is our opinion that the scope of this project should be limited to the area immediately adjacent to the LRT stations, not to exceed 100 feet in radius from each station. Having a ½ mile project radius leaves too much variability that could result in project objectives such as promoting transit ridership, encouraging walking and bicycling, and preserving single-family neighborhoods going unrealized. Furthermore, there is tremendous potential for improvement to occur in the station areas that would maximize project goals. Concentrating on station areas makes sense from a planning standpoint, as it is at the stations where there will be a convergence of activity. As a key part of this project, special attention should be directed toward enhancing public safety, maintaining adequate policing and fire protection, providing superior streetscape and more.

The project goal of encouraging walking and biking, and improving street configurations is lauded by our HOA. We would like to put forward the following suggestions as possible ways this project can maximize these goals:

1. Constructing protected bike lanes on Sepulveda south of Pico that separates motorists from bicyclists. Sepulveda is set to be a key corridor for bike travel in the Los Angeles bike network and building a safe network is key to encouraging ridership.
2. Making sidewalk improvements on Westwood Blvd south of Ayres. Because the sidewalks are currently in terrible condition, it makes walking/biking a less desirable mode of transportation.
3. Installing Wayfinding Kiosk(s) that include links to Pico and Westwood businesses, so commuters and residents can find their way by foot and bike.
4. Providing adequate lighting along Exposition Blvd that will be paid for by the City, as to improve public safety.
5. Improving pedestrian/bicyclist mobility and accessibility between North and South Exposition Blvd between Military and Sepulveda. People are no longer able to easily travel between North Exposition Blvd and South Exposition Blvd because of the LRT, except by traveling directly down Military and/or Westwood Blvd. Having to walk around the perimeter decreases the desirability of pedestrian travel through the neighborhood.
6. Designing a safer crossing at Westwood Blvd. The LRT is planned to cross Westwood Blvd at grade stopping traffic every few minutes. A transit plaza is being built to accommodate increased bus services. Westwood station is predicted to be the busiest on the line. Designing crossings that minimize pedestrian/bicyclist interaction with motorists and the train is recommended.

WOWHOA supports the project objective to conserve stable single-family neighborhoods. Any development being contemplated in West Los Angeles and specifically in Rancho Park should be

consistent with the West Los Angeles Community Plan, which characterizes the neighborhood as follows: “Low Density, single-family development comprises a majority of the residential land use in the Community. A mix of multiple-family development includes apartments and condominiums at varying densities and building types (duplexes, small, medium and large complexes and some high rise structures). Commercial land use consists primarily of strip development on major arterials such as Wilshire, Santa Monica, Pico, Sawtelle, and Westwood Boulevards. The majority of commercial facilities are either small-scale and free standing or mini-mall type buildings designed to primarily serve local neighborhoods.” Zone changes are not recommended for areas currently zoned R1 because of the noise, traffic and the aesthetic impacts that could precipitate. Land and zoning changes should not occur outside main thoroughfares such as Wilshire, Santa Monica, Pico, and Sawtelle and should not be done without community agreement.

The current state of West Los Angeles at peak hours is a logjam, so any success this project could have at decreasing greenhouse gasses is supported. Large-scale development, even with the Expo Line and increased bus services being brought to the area, is likely to exacerbate an already congested situation. Allowing increased density if it will contribute to higher greenhouse gas emissions is not recommended. Our roads are already working beyond capacity and cannot support more density. Any plans for development, whether they be mixed use, industrial or commercial, should not be considered if their impacts cannot be fully mitigated with respect to traffic congestion and air pollution. Careful studies are needed to fully evaluate any proposed plans and those studies should account for the combined impacts of all the projects currently being considered in the area. Furthermore, parking and noise studies are also necessary, as they greatly impact the quality of life of people in the area. The City should focus its efforts on increasing parking and reducing noise at the Sepulveda station, where parking is predicted to be limited and the combined noise effects of the LRT and 405 freeway will be enhanced. Any development which will decrease parking or increase noise for local businesses or residences should not be permitted.

The building of the LRT is having the unfortunate consequence of removing open space in the community. The Sara Berman Greenway, which is on the Metro right-of-way between Westwood and Military, has lost many of its trees due to the addition of the LRT. Since the open space on the Greenway has vanished, providing more open space that can offset this loss is welcomed. We implore the City to keep in mind that whatever open space is created should be fully open to the public, contiguous in design (not broken up into enclaves) and should not be contained inside dwellings or enclosed spaces.

As stated above, WOWHOA suggests limiting the project to the area immediately adjacent to the LRT stations. This is the area where the project can maximize its goals and best enhance the lives of those in the community.

Sincerely,

Aaron Rosenfield
Chair, WOWHOA Mobility Committee

METHODOLOGY

GHG emissions result from direct and indirect sources. Direct emissions include emissions from fuel combustion in vehicles and natural gas combustion from stationary sources. Indirect sources include off-site emissions occurring as a result of electricity and water consumption and solid waste. In addition, construction activities would result in direct and indirect emissions.

Mobile source emissions were estimated using vehicle miles traveled (VMT) data presented in Section 4.12 Transportation & Traffic, and vehicle emission rates from the CARB's EMFAC2014 model. The VMT data included speed information, which allowed the analysis to account for increased congestion in build scenarios.

Area source emissions related to existing and future demand for water, wastewater treatment and conveyance, solid waste disposal, and energy were obtained according to the methodology explained in Appendix A of the Calculation Details for California Emissions Estimator Model (CalEEMod). GHG emissions result from the energy used to supply, distribute, and treat water and wastewater, as well as from solid waste disposal by landfilling, recycling, or composting as methane and CO2 gas is emitted in the process.

The amount of water used and wastewater generated by a project results in indirect GHG emissions. These emissions are a result of the energy used to supply, distribute, and treat the water and wastewater. Total residential indoor and outdoor water usage was calculated based on rates provided in Table ES-1 of the Pacific Institute "Waste Not Want Not" report. Data for most commercial and industrial land uses was obtained from Appendices E and F of the Pacific Institute's "Waste Not Want Not" report. The estimated amount of water and wastewater was multiplied by electrical intensity factors to calculate the amount of energy consumed. The electricity intensity factors for water and wastewater generation were obtained from the 2006 CEC report, "Refining Estimates of Water-Related Energy Use in California." The electricity intensity factors are reported in units of kilowatt-hour per million gallons of water used, and represent the amount of electricity needed to (1) supply and convey the water from the source, (2) treat the water to usable standards, and (3) distribute the water to individual users. The sum of these factors gives the total electricity required to supply, treat, and distribute water. The electrical utility emission factors per megawatt-hour of 1,228 pounds of CO_2, 0.029 pounds CH_4, and 0.00617 pounds N_2O. Electricity were then used to estimate total GHG emissions based on the total amount of electricity used. According to CalEEMod manual, the Electrical Utility emission factors used are obtained from 2012 E-Grid report for California and from May 2010 Local Government Operations Protocol.

Solid waste is the amount of material that is disposed of by land filling, recycling, or composting. Indirect GHG emissions associated with waste that is disposed of at a landfill were calculated using the following formula:

$Emit_{methane} = Gen.[Collect.(1\text{-}destruct)+ (1\text{-}Collect). (1\text{-}ox)]$

$Emit_{CO2} = Gen.[Collect.destruct+ (1\text{-}Collect). ox\text{-}1]$

Where:

$Emit_{methane}$ = Methane emitted per ton of green waste

$Emit_{CO2}$ = Carbon dioxide emitted per ton of green waste

Gen = Amount of CO_2 or methane generated

Collect = Collection efficiency of landfill gas (75%)

Destruct = Destruction efficiency of landfill gas (98%)

Ox = Oxidation efficiency of methane (10%)

To calculate the CO_2 and methane emissions, CalEEMod's default collection efficiency of 75 percent, destruction efficiency of 98 percent, and oxidation efficiency of 10 percent were assumed. Use of a collection efficiency in the above formula is due to the fact that landfill gas collection systems are not 100 percent efficient in collecting landfill gas. The destruction efficiency the efficiency of the system in destroying unwanted gaseous constituents such as unburned hydrocarbons. The oxidation efficiency takes into account oxidation of methane to CO_2 as it rises through the landfill. No cogeneration was considered in the analysis. These assumptions resulted in CO_2 and CH_4 emissions rates of 0.229 and 0.011 tons CO_2 and CH_4 per ton of solid waste material. GHG emissions due combustion of natural gas in the project area were calculated using emission factors obtained from AP-42 Table 1.4-2 Emission Factors for Criteria Pollutants and Greenhouse Gases from Natural Gas Combustion.

GHG emissions would also be generated by construction activity within the Project Area consistent with the ECTNP. No specific development projects have been proposed in this planning analysis, and an annualized quantification of construction emissions would be speculative. In addition, construction-related GHG emissions would be a negligible percentage of total regional emissions when considering the emissions generated by mobile sources. For example, the 2012-2035 RTP/SCS construction emissions presented for 2035 conditions in Los Angeles County were approximately 0.3 percent of annual mobile source emissions. A similar percentage is expected for construction emissions related to the Proposed Project. Construction emissions are amortized over 30 years in accordance with SCAQMD recommendations.

RE: Proposed Exposition Corridor Transit Neighborhood Plan

Dear Ms. Roberts,

As per your request received on October 1, 2013, a records search was conducted for the above referenced project. The search includes a review of all recorded archaeological sites within a -mile radius of the project site as well as a review of cultural resource reports on file. In addition, the California Points of Historical Interest (SPHI), the California Historical Landmarks (SHL), the California Register of Historical Resources (CAL REG), the National Register of Historic Places (NRHP), the California State Historic Resources Inventory (HRI), and the City of Los Angeles Historic-Cultural Monuments (LAHCM) listings were reviewed for the above referenced project site. The following is a discussion of the findings.

Due to the sensitive nature of cultural resources, archaeological site locations are not released.

Beverly Hills, CA USGS 7.5 Quadrangle

ARCHAEOLOGICAL RESOURCES:

Eight archaeological sites (19-000055, 19-000068, 19-000074, 19-000382, 19-002479, 19-002967, 19-002968, 19-003803) have been identified on our maps within a -mile radius of the project site. One site is located within the project site. No sites are listed on the Archaeological Determination of Eligibility (DOE) list. This does not preclude the potential for archaeological sites to be identified during project activities. One isolate (19-100249) has been identified within a -mile radius of the project site. No isolates are located within the project site.
(Located within the project site)

HISTORIC BUILT-ENVIRONMENT RESOURCES:

Forty-one above-ground historic resources (19-150323□, 19-150439, 19-150440, 19-150444, 19-162271□, 19-175298□, 19-176179, 19-177336□, 19-177338□, 19-180748□, 19-186673□, 19-186736, 19-186772□, 19-186978, 19-187052, 19-187723, 19-188008, 19-188708, 19-188715, 19-188849, 19-188984, 19-189102, 19-189419, 19-189750□, 19-189753□, 19-189757□, 19-189758□, 19-189759□, 19-189761, 19-189763□, 19-189764□, 19-189765□, 19-189766□, 19-189767□, 19-189768□, 19-189805, 19-190024□, 19-190025□, 19-190026□, 19-190027, 19-190059) have been identified on our maps within a □-mile radius of the project site. Twenty-two above-ground historic resources are located within the project site.
(□□Located within the project site)

ADDITIONAL CULTURAL RESOURCE LISTINGS:

The **California Historic Resources Inventory (HRI)** lists thirty-nine properties that have been evaluated for historical significance within a □-mile radius of the project site **(see enclosed list)**. These are additional resources that are listed in the Historic Properties Data file and are located either within the project site or within the search radius.

The **California Point of Historical Interest (SPHI)** of the Office of Historic Preservation, Department of Parks and Recreation, lists one property within a □-mile radius of the project site **(see below)**.

SPHI-LAN-038 Citizen Publishing Company Building
9355 Culver Boulevard, Culver City
The Citizen Publishing Company Building is the home of a distinguished weekly, community newspaper which has won national recognition and numerous editorial and typographical awards of excellence. Its publisher□s (Eugene Donovan 1886-1948)editorial policies and social involvements yielded him a major role in the civic life of Culver City over a period of more than twenty years. The newspaper was also known for the substantial scope of its printing activities and its noteworthy associations with the Southern California film industry.

The **California Historical Landmarks (SHL)** of the Office of Historic Preservation, Department of Parks and Recreation, lists no properties within a □-mile radius of the project site.

The **California Register of Historical Resources (CAL REG)** lists nine properties within a □-mile radius of the project site **(□see enclosed list).** These are properties determined to have a National Register of Historic Places Status of 1 or 2, a California Historical Landmark numbering 770 and higher, or a Point of Historical Interest listed after 1□1□1998.

The **National Register of Historic Places (NRHP)** lists four properties within a □-mile radius of the project site **(□see enclosed list and see below)**.

Beverly Hills 19-177338 Citizens Publishing Co. Bldg. 9355 Culver Blvd. Culver City NR87000082
Beverly Hills 19-150323 Culver Hotel 9400 Culver City NR97000296

Beverly Hills 19-180748 Washington Bldg. 9720□9732 Washington Blvd. Culver City NR91000635

The **City of Los Angeles Historic-Cultural Monuments (LAHCM)** lists two properties within the project site **(see below)**.

No. 182 Ivy Substation
Completed in July, 1907, to provide power for the ever-expanding system of the Los Angeles Pacific Railway. Its architecture is described as Mission Revival style. Located at 9015 Venice Boulevard. Declared: 2□1□78.

No. 624 Lawrence and Martha Joseph Residence Apartments
3819-3827 Dunn Drive

HISTORIC MAP REVIEW

Santa Monica, CA (1902 □1921) 15□USGS - indicated that in 1902, there was a significant amount of visible development within the project site. There were numerous roads and buildings present within the project site. There were seven buildings, six roads, and the convergence of two rail roads in the western half of the project area. Ballona Creek and the dense urban environment of the historic place name of Palms were located within the eastern half of the project area. The Southern Pacific Railroad (Santa Monica Branch) and numerous intermittent streams ran through the project site as well as the project area radius. The project area was located within the historic place names of La Ballona and Rincon de los Bueyes. Historic place names nearby included Home Junction, Palms, and Ivy. In 1921, there was a significant increase in the amount of development within the project site and project area. In the western portion of the project area there was now the dense urban environment (historic place name of Sawtelle) with many buildings and roads now present. Within the eastern portion of the project area the urban environment of Palms was visibly larger and contained many more buildings and roads. Historic place names nearby now included Sawtell, The Palms, Culver City, and Santa Monica. All other previously mentioned features remained.

PREVIOUS CULTURAL RESOURCES INVESTIGATIONS:

One hundred and two studies (LA98, LA352, LA537, LA704, LA751, LA839, LA947, LA2038, LA2200, LA2256, LA2632, LA2649, LA2838, LA3019, LA3289, LA3357□, LA3501, LA3506, LA3524, LA3525, LA3587□, LA3623□, LA3673, LA3729, LA3739 , LA3746, LA3748□, LA3765□, LA3872□, LA3966□, LA4174, LA4175, LA4184□, LA4239, LA4344, LA4549, LA4570, LA4667□, LA4881□, LA4908, LA 5009, LA5010□, LA5014□, LA5016, LA5030, LA5031, LA5033□, LA5035□, LA5036□, LA5732, LA6122□, LA6127, LA6132, LA6480, LA6488, LA6491□, LA6498□, LA6502□, LA6505, LA6509, LA6517□, LA6521□, LA6524□, LA6713, LA7094□, LA7095, LA7105, LA7119□, LA7953□, LA8002, LA8087□, LA8092, LA8655, LA8749, LA9414, LA9453, LA9673, LA9992□, LA10362□, LA10431, LA10506, LA10574, LA10575, LA10662, LA10766, LA10860, LA10906, LA11114, LA11154□, LA11183, LA11184, LA11214□, LA11224, LA11305□, LA11409, LA11793, LA11926□, LA11994, LA12033□, LA12085, LA12086, LA12111) have been conducted within a □-mile radius of the project site. Of these, thirty-four are located within the project site. There are fourteen additional investigations located on the Beverly Hills, CA 7.5□USGS Quadrangle that are potentially within a □-mile radius of the

project site. The reports are not mapped due to insufficient locational information. *(☐☐Located within the project site)*

RECOMMENDATIONS

Prehistoric cultural resources have been recorded within the ☐-mile radius of the project area footprint. Historic-era cultural resources have been recorded within the project footprint. Based upon the known archaeological sensitivity in the surrounding area, buried prehistoric or historic cultural resources may be present within the project area footprint. Furthermore, significant portions of the project site location have not been previously surveyed for cultural resources. Most of the natural ground surface within the study area is obscured by urban development; consequently, current surface conditions do not allow for an adequate survey of potential surface or sub-surface cultural artifacts. Therefore, an archaeological monitor should be in place during all ground-disturbing activities to identify, record, and evaluate the significance of any archaeological finds during project activities. Additionally, it is recommended that any historic structures (45 years and older) in the area of potential effect be identified, recorded, and evaluated for local, state, or national significance prior to the approval of project plans. Finally, the Native American Heritage Commission should be consulted to identify if any additional traditional cultural properties or other sacred sites are known to be in the area.

The professional consultant you retain may request the records search map, archaeological site records, and bibliography from the Information Center referencing the SCCIC number listed above for a fee (per the fee schedule). For your convenience, you may find a professional consultant☐at www.chrisinfo.org. Any resulting reports by the qualified consultant should be submitted to the South Central Coastal Information Center as soon as possible.

☐The SCCIC does not endorse any particular consultant and makes no claims about the qualifications of any person listed. Each consultant on this list self-reports that they meet current professional standards.

If you have any questions regarding the results presented herein, please contact the office at 657.278.5395 Monday through Thursday 9:00 am to 3:30 pm.

Should you require any additional information for the above referenced project, reference the SCCIC number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Sincerely,
SCCIC

California Historical Resource Status Codes

1 Properties listed in the National Register (NR) or the California Register (CR)

1D Contributor to a district or multiple resource property listed in NR by the Keeper. Listed in the CR.
1S Individual property listed in NR by the Keeper. Listed in the CR.

1CD Listed in the CR as a contributor to a district or multiple resource property by the SHRC
1CS Listed in the CR as individual property by the SHRC.
1CL Automatically listed in the California Register – Includes State Historical Landmarks 770 and above and Points of Historical Interest nominated after December 1997 and recommended for listing by the SHRC.

2 Properties determined eligible for listing in the National Register (NR) or the California Register (CR)

2B Determined eligible for NR as an individual property and as a contributor to an eligible district in a federal regulatory process. Listed in the CR.
2D Contributor to a district determined eligible for NR by the Keeper. Listed in the CR.
2D2 Contributor to a district determined eligible for NR by consensus through Section 106 process. Listed in the CR.
2D3 Contributor to a district determined eligible for NR by Part I Tax Certification. Listed in the CR.
2D4 Contributor to a district determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.
2S Individual property determined eligible for NR by the Keeper. Listed in the CR.
2S2 Individual property determined eligible for NR by a consensus through Section 106 process. Listed in the CR.
2S3 Individual property determined eligible for NR by Part I Tax Certification. Listed in the CR.
2S4 Individual property determined eligible for NR pursuant to Section 106 without review by SHPO. Listed in the CR.

2CB Determined eligible for CR as an individual property and as a contributor to an eligible district by the SHRC.
2CD Contributor to a district determined eligible for listing in the CR by the SHRC.
2CS Individual property determined eligible for listing in the CR by the SHRC.

3 Appears eligible for National Register (NR) or California Register (CR) through Survey Evaluation

3B Appears eligible for NR both individually and as a contributor to a NR eligible district through survey evaluation.
3D Appears eligible for NR as a contributor to a NR eligible district through survey evaluation.
3S Appears eligible for NR as an individual property through survey evaluation.

3CB Appears eligible for CR both individually and as a contributor to a CR eligible district through a survey evaluation.
3CD Appears eligible for CR as a contributor to a CR eligible district through a survey evaluation.
3CS Appears eligible for CR as an individual property through survey evaluation.

4 Appears eligible for National Register (NR) or California Register (CR) through other evaluation

4CM Master List - State Owned Properties – PRC §5024.

5 Properties Recognized as Historically Significant by Local Government

5D1 Contributor to a district that is listed or designated locally.
5D2 Contributor to a district that is eligible for local listing or designation.
5D3 Appears to be a contributor to a district that appears eligible for local listing or designation through survey evaluation.

5S1 Individual property that is listed or designated locally.
5S2 Individual property that is eligible for local listing or designation.
5S3 Appears to be individually eligible for local listing or designation through survey evaluation.

5B Locally significant both individually (listed, eligible, or appears eligible) and as a contributor to a district that is locally listed, designated, determined eligible or appears eligible through survey evaluation.

6 Not Eligible for Listing or Designation as specified

6C Determined ineligible for or removed from California Register by SHRC.
6J Landmarks or Points of Interest found ineligible for designation by SHRC.
6L Determined ineligible for local listing or designation through local government review process; may warrant special consideration in local planning.
6T Determined ineligible for NR through Part I Tax Certification process.
6U Determined ineligible for NR pursuant to Section 106 without review by SHPO.
6W Removed from NR by the Keeper.
6X Determined ineligible for the NR by SHRC or Keeper.
6Y Determined ineligible for NR by consensus through Section 106 process – Not evaluated for CR or Local Listing.
6Z Found ineligible for NR, CR or Local designation through survey evaluation.

7 Not Evaluated for National Register (NR) or California Register (CR) or Needs Revaluation

7J Received by OHP for evaluation or action but not yet evaluated.
7K Resubmitted to OHP for action but not reevaluated.
7L State Historical Landmarks 1-769 and Points of Historical Interest designated prior to January 1998 – Needs to be reevaluated using current standards.
7M Submitted to OHP but not evaluated - referred to NPS.
7N Needs to be reevaluated (Formerly NR Status Code 4)
7N1 Needs to be reevaluated (Formerly NR SC4) – may become eligible for NR w/restoration or when meets other specific conditions.
7R Identified in Reconnaissance Level Survey: Not evaluated.
7W Submitted to OHP for action – withdrawn.

Appendix C-2
Survey LA Methodology

SURVEY LA METHODOLOGY

SurveyLA field methodology is informed by best practices in historic preservation including standards developed by the National Park Service and California Office of Historic Preservation.

Background

Early on in the project, the Office of Historic Resources made the decision to group the surveys by Community Plan Area (CPA). The 35 CPAs constitute the Land Use Element of the City's General Plan and provide established geographic boundaries for survey areas which have been prioritized and phased over a period of years. Developing a methodology to cover a city of almost 500 square miles requires tools that allow field surveyors to move quickly through large geographic areas and provide consistency in evaluating and recording resources. Prior to starting any field work the OHR worked with the Planning Department's GIS Division and consultants to develop a custom-designed map-based mobile field application called the Field Guide Survey System or FiGSS. The FiGSS is used in the field on tablet PCs and is preloaded with information from previous surveys as well as tract maps, built dates, aerial photographs, zoning information, and more. By selecting from drop down lists, surveyors can record an individual property in about 15 minutes, including the architectural description. To guide property evaluations the OHR also directed development of a citywide historic context statement (HCS) using consultants, volunteers, and interns. By 2010 the survey phase officially began; field surveys of all 35 CPAs are scheduled for completion by the end of 2016.

Field Methods

SurveyLA is conducted by field surveyors working under contract to the Department of City Planning, meeting the Secretary of the Interior's professional qualification standards in historic preservation, and with extensive knowledge of Los Angeles. Prior to recording any properties, consultants complete research on the history and development of their Community Plan Area and review information submitted from the public as well as previous surveys and designations. A reconnaissance survey of the area is completed with multiple team members to identify significant properties and the themes they represent and to provide a framework for further research and analysis. Follow-up research may include building permits, newspaper and journal articles, city directories, and historic maps and photographs.

Field surveys cover the period from the incorporation of the City in 1850 to 1980. All surveys are conducted from the public right-of-way. The surveyors record individual properties and historic districts using digital cameras and the FiGSS application. Recording is generally completed using one tablet PC and two team members per CPA - one person to record with the FiGSS application and one person to take photographs. The OHR provided classroom and field training for all consultants in the use of the FiGSS and the HCS prior to starting any field work. Although surveyors walk or drive every street in Los Angeles they only record properties that meet criteria for listing in the National Register of Historic Places and California Register of Historical Resources and for designation as local Historic-Cultural Monuments (HCM) and Historic Preservation Overlay Zones (HPOZ). Some properties with little visibility or requiring more information to assess significance may

be flagged for additional research. Fields surveyors do not record or resurvey properties already designated under the programs listed above. All recorded properties receive California Historical Resources Status Codes developed by the California Office of Historic Preservation.

Survey Data

Survey data are submitted to the City in electronic format; the GIS Division processes the results in report format. All data are peer reviewed by survey team members and are vetted by OHR staff and a professional review committee which includes a representative from the California Office of Historic Preservation. Consultants are responsible for completing a Survey Report for each CPA using a standardized report format developed by the OHR. As surveys are completed the results are published in PDF format by Community Plan Area at survey findings.

Note, this methodology was first published on April 21, 2014.

For additional information please see the Survey LA Field Guide to Survey Evaluation, available at http://preservation.lacity.org/files/Field_Guide_May_2013.pdf. This document includes the Status Codes used in the Survey LA Data.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/26/2013 has revealed that there are 6 CERCLIS sites within the searched area.

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there are 30 CERC-NFRAP sites within the searched area.

EXECUTIVE SUMMARY

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 07/11/2013 has revealed that there is 1 RCRA-TSDF site within the searched area.

Site	Address	Map ID	Page
3M LOS ANGELES DYNACOLOR	***11915 WEST OLYMPIC BLVD***	***17***	***248***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 17 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 162 RCRA-SQG sites within the searched area.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 3 RCRA-CESQG sites within the searched area.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 21 RCRA NonGen / NLR sites within the searched area.

EXECUTIVE SUMMARY

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, and dated 04/09/2009 has revealed that there are 2 FTTS sites within the searched area.

Site	Address	Map ID	Page
LE LYCEE FRANCAIS DE LOS ANGEL	***3261 OVERLAND AVE***	***97***	***1665***
FIRST LUTHERAN SCHOOL OF CULVE	***3754 DUNN DR***	***101***	***1767***

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, and dated 10/19/2006 has revealed that there are 2 HIST FTTS sites within the searched area.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 03/08/2013 has revealed that there are 215 FINDS sites within the searched area.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, and dated 01/23/2013 has revealed that there is 1 US AIRS site within the searched area.

FORMER APEX METAL POLISHING	***5977 WEST WASHINGTON BO***	***76***	***1341***
COLORADO PLACE	***BROADWAY AND CLOVERFIEL***	***91***	***1610***

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2012 has revealed that there are 606 CA HAZNET sites within the searched area.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 08/05/2013 has revealed that there are 43 CA ENVIROSTOR sites within the searched area.

EXECUTIVE SUMMARY

EDR PROPRIETARY RECORDS

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 302 EDR US Hist Auto Stat sites within the searched area.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 119 EDR US Hist Cleaners sites within the searched area.

Waste code: 461
Waste name: 461

Waste code: 791
Waste name: 791

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Hazardous Waste Summary:

Waste code:	D000
Waste name:	Not Defined

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110002858408

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Longitude:	-118.456585407257
Case Type:	Cleanup Program Site
Case Worker:	PGN
Local Agency:	Not reported
RB Case Number:	0850A
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	The primary structure at the Site was originally constructed and utilized by Packard Bell for the manufacture of radios and televisions. Reportedly Packard Bell maintained boilers, an incinerator, a shaving bin and stored paint and solvents on the site. By 1970, the property was being operated by Teledyne for the manufacture of electronic devices for aviation purposes. These operations involved circuit board assembly, thermal testing, computer testing, vibration testing, and machining. Solvents, petroleum hydrocarbons, and other hazardous raw and waste products were utilized and/or produced during Teledynes manufacturing processes. According to a previous environmental assessment report prepared by Glenfos in June 1995, information concerning underground storage tanks (USTs) utilized by Teledyne is available with the County of Los Angeles Fire Department. Reportedly, four USTs were removed from the northeast corner of the Teledyne building in 1990. The USTs reportedly contained diesel fuel, gasoline, and mineral oil. The UST removal was documented in a report entitled Tank Removal Report, prepared by A&S Environmental Recovery, 14 February 1990. Subsequent soil investigations were conducted at the property by Ebasco Environmental in June 1990, and a closure letter was received by Teledyne Controls from the Los Angeles Fire Department in July 1990. Teledyne vacated the site in September 2007. Several physical structures of note remain at the Site. These structures include: A enclosed former chamber area in the shipping and receiving area adjacent to the cafeteria; An exterior hazardous chemical storage area; A pump house with an existing internal combustion engine and oil/grease staining; A four-stage clarifier in the facilities area; A detached shed containing possible UST vent pipes, and older single-stage clarifier, remnant hydraulic lift features, a concrete patch area (possibly indicating a former excavation), dark stained areas, and an exterior pipe (which appeared to be a fill port that may have been associated with an UST); and Sinks, sumps and piping of unknown use along the northwestern wall of the primary structure. Soil removal activities are dependent on the demolition of the existing structures on the site. The demolition activities are in turn dependent upon the City of Los Angeles entitlements for the planned new development at the site. The City entitlement process has been delayed. As such, the demolition and subsequent removal activities will likewise need to be deferred until the Citys entitlement process is completed.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 34.031558
Longitude: -118.459916
Case Type: Cleanup Program Site
Case Worker: PR
Local Agency: Not reported
RB Case Number: 0130D
File Location: Regional Board
Potential Media Affected: Under Investigation, Well used for drinking water supply
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons
Site History: The Boeing Company (Boeing) formerly leased the property (as Douglas Aircraft) from 1952 to the early 1970s. Little is known regarding historical operations at the Supercharger Facility, except that aircraft components were tested there. Potential sources at the site include: 1) a clarifier that was located outside the building in the southwest corner of the Site ; 2) a generator room on the northwest corner of the building was added to the building in 1956; 3) 7 isopropyl alcohol (IPA) above-ground storage tanks (ASTs) that were located on the west side of the site it is not clear if Boeing used the ASTs, but they were used after Boeings tenancy by Medical Chemical Corporation; and 4) an underground storage tank (UST) that contained IPA that was operated and maintained after Boeings tenancy by Medical Chemical Corporation. At the time of the soil vapor sampling described below, the ASTs and the UST had been removed from the site. Based on the presence of coarse gravel backfill encountered in boring drilled through the former location of the clarifier and UST, these potential source features no longer exist and were removed from the site sometime prior to 2000.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D007
Waste name: CHROMIUM

Waste code: D011
Waste name: SILVER

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Description: During a construction project, they uncovered an unknown and unpermitted underground storage tank. A 1 inch pipe was dislodged from the top of the tank causing a release. Release was cleaned up and tank top was secured to prevent anything from enteering it. The tank will be removed by a contractor specializing in tank removal monday morning.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	There are approximately 8 businesses in the area, all do auto repair. When it rains the oil and other petroleum products that have gotten onto the asphalt wash out onto the paved portion of the alley and then down the alley and onto the unpaved dirrt portion The oily water terminates and sinks in and is never cleaned up. The R/P party (who wants to remain anonymous) feels something needs to be done.

Description:	Illegal dumping. Unknown person left the substance in a marked 55 gallon drum approximately 2 weeks ago according to eye witnesses. The drum was accidentally struck this morning possibly by a delivery truck causing the substance to spill to the the ggutter which led to the storm drain. The spill is contained with the exception of an unknown amount in the storm drain which was lost. R/P does not know if this storm drain leads to marine waters.

Environmental Interest/Information System

GATEWAY AUTO CENTER (Continued) **1000225208**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0

LOCAL RUBBISH CO. INC (Continued) **S106102564**

Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact address:	11550 TENNESSEE AVE LOS ANGELES, CA 90064
Contact country:	US
Contact telephone:	(310) 479-2600
Contact email:	Not reported
EPA Region:	09
Classification:	Small Small Quantity Generator
Description:	Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name:	EDWARDS LABELS
Owner/operator address:	11550 TENNESSEE AVE LOS ANGELES, CA 90064
Owner/operator country:	Not reported
Owner/operator telephone:	(310) 479-2600
Legal status:	Private
Owner/Operator Type:	Owner
Owner/Op start date:	Not reported
Owner/Op end date:	Not reported

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D000
Waste name:	Not Defined
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

EDWARDS LABELS (Continued) **1001459752**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Violation Status: No violations found

FINDS:

Registry ID: 110002926638

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/26/1992
Comments: The Department completed review of a Preliminary Endangerment Assessment (PEA). DTSC does not concur with the recommendation that no further action is needed at the site. DTSC recommends further characterization of the entire site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/01/1991
Comments: Site screening completed. L.A county referred site to DTSC. Metcast operated the site from 1967 to 1978. Alco Standard corporation operated the site from 1978 to 1988. Metcast leased property for the manufacture of medical instruments. Process included metal plating, including a foundry. Alco continued the same processes until 1988. Currently an auto body repair shop is on site. Sampling revealed high concentrations of chromium, lead nickel, and TCE in the soil. GW encountered at 38 feet. RP informed of the PEA process. Medium priority PEA required because of contaminated soil and potential GW contamination.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D011
Waste name: SILVER

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

BARRY AVE PLATING CO INC (Continued) **1000372040**

MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste code: F007
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F008
Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Document Type: Pilot Study/Treatability Workplan
Completed Date: 03/14/2007
Comments: Pilot Test Workplan approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/04/2008
Comments: Removal Action Workplan for remediation of Volatile Organic Compounds and Hexavalent Chromium approved.

Completed Area Name: Oly-Fed Soil OU
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/23/2011
Comments: DTSC has concluded that the Removal Action Completion Report for the Oly-Fed OU, and the RACR Addendum adequately demonstrate that remediation of the Oly-Fed OU has been achieved as planned in the RAW. The RACR is approved. DTSC requests that the RACR Addendum be revised and resubmitted to address some relatively minor discrepancies to complete the administrative record.

Completed Document Type: Fieldwork
Completed Date: 01/19/2010
Comments: This was a GW sampling event and was apparently completed on 12/16/2009. The GW monitoring report is pending.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/30/2010
Comments: The 4th Quarter 2009 report was approved with comments in a comment letter on the 1st quarter 2010 report. The 1st quarter 2010 report is required to be revised and resubmitted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 04/20/2010
Comments: Field work completed approx. 4/01/2010, preliminary data submitted 4/20/2010.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 01/15/2012
Comments: DTSC is not requiring revision of the subject report at present as the subsequent monitoring report has been issued, and as the RACR has been submitted and is under review, and any issues related to the monitoring and remediation program will be handled under the RACR.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork

BARRY AVE PLATING CO INC (Continued) **1000372040**

Completed Date: 08/26/2010
Comments: This is a fieldwork exercise that was completed 8/26/2010. No deliverables were submitted, and no DTSC letter was prepared.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/30/2010
Comments: RP consultant responses to DTSC comments were not entirely adequate, however, staff availability and deadlines on higher priority tasks on this and other projects precluded DTSC follow up, so this task is being completed and the issues will be addressed in DTSC's response to the BAP OU RACR, being reviewed beginning January 2012.

Completed Date: 03/14/2007
Comments: Pilot Test Workplan approved

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 03/04/2008
Comments: Removal Action Workplan for remediation of Volatile Organic Compounds and Hexavalent Chromium approved.

Completed Area Name: Oly-Fed Soil OU
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/23/2011
Comments: DTSC has concluded that the Removal Action Completion Report for the Oly-Fed OU, and the RACR Addendum adequately demonstrate that remediation of the Oly-Fed OU has been achieved as planned in the RAW. The RACR is approved. DTSC requests that the RACR Addendum be revised and resubmitted to address some relatively minor discrepancies to complete the administrative record.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans

BARRY AVENUE PLATING CO (Continued) **1016109526**

to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 09/01/1996
Facility name: UNILAB WEST L A STAT LAB
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL

UNILAB WEST LOS ANGELES STAT LABORATORY (Continued) **1000820444**

ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: U122
Waste name: FORMALDEHYDE

Violation Status: No violations found

Lead Agency Case Number: Not reported
Latitude: 34.0329055617389
Longitude: -118.455770015717
Case Type: Cleanup Program Site
Case Worker: PGN
Local Agency: Not reported
RB Case Number: 0850B
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: * Chlorinated Hydrocarbons
Site History: The Site was formerly utilized for agricultural activities until 1950. It consists of an approximately 5.66-acre parcel of land with three buildings and paved parking areas. The three buildings are located within a mixed commercial, office, and light industrial land-use area with combined useable space measuring approximately 84,000 square feet. The 1901 South Bundy Drive building (1901 building), with an area of 30,000 square feet, was the first of the three buildings, constructed in 1950. Packard Bell initially used this building for manufacturing navy testing equipment and electronics, such as radios and televisions, from 1950 until 1970. Thereafter, Teledyne Controls occupied the building and used it for warehousing, and as office space, until 1996. The 1925 South Bundy Drive building (1925 building) was constructed in 1953, and measures

HUDSON ELEMENT LA (Continued) **S113804544**

20,000 square feet in size. This building was primarily used as office space by Packard Bell and Teledyne Inc. The largest of the three buildings is the 1933 South Bundy Drive structure (1933 building), which measures over 34,000 square feet. Packard Bell utilized this building for electronics manufacturing from 1953 until 1977 after which manufacturing activities ceased. Thereafter, Teledyne used the building as office and warehouse space until the early 1990s. AGI Properties purchased the Site between 1996 and 1997 and leased the three buildings to Fox Television. Fox Television used the buildings as a television studio, and office space, until 2003. All three buildings are presently vacant.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
- U.S. importer of hazardous waste: No
- Mixed waste (haz. and radioactive): No
- Recycler of hazardous waste: No
- Transporter of hazardous waste: No
- Treater, storer or disposer of HW: No
- Underground injection activity: No
- On-site burner exemption: No
- Furnace exemption: No
- Used oil fuel burner: No
- Used oil processor: No
- User oil refiner: No
- Used oil fuel marketer to burner: No
- Used oil Specification marketer: No
- Used oil transfer facility: No
- Used oil transporter: No

Hazardous Waste Summary:
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Number of Fatalities:	0
Description:	Per the caller, a container is leaking either a hazardous or an unhazardous material at this time, it is unknown which. UPRR will call back when an assertation is made. The container leaked on to the flat-bed car that was hauling it. This release is still under investigation by the railroad.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification:	Small Quantity Generator

Hazardous Waste Summary:

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D011
Waste name:	SILVER

Violation Status: No violations found

FINDS:

Registry ID: 110006484223

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

PLATINUM PRESS INC (Continued) **1000819794**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
