Major Street (Approach 2):	828	Minor Street (Higher Volume App.):	69
Major Street Total (Both Approaches):	1,608	Minor Street Total:	69
Minimum Volume on Major Street to Satisfy Warrant (see note [d]):	450	Minimum Volume on Minor Street to Satisfy Warrant (see note [d]):	100

PEAK HOUR VOLUME WARRANT SATISFIED? **NO**

Notes:

a. May be used when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000.

b. Heavier left-turn movement from the major street may be included with minor street volume if a separate signal phase is proposed for left-turn movements.

a. May be used when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000.

b. Heavier left-turn movement from the major street may be included with minor street volume if a separate signal phase is proposed for left-turn movements.

c. From: USDOT, FHWA, "Manual on Uniform Traffic Control Devices," 2001, Figure 4C-1.

d. From: USDOT, FHWA, "Manual on Uniform Traffic Control Devices," 2001, Figure 4C-3.

Adopted from: U.S. Department of Transportation, Federal Highway Administration, "Manual on Uniform Traffic Control Devices, Millennium Edition," 2001; and Caltrans, "Traffic Manual," 2002.

TRAFFIC SIGNAL WARRANTS
FOUR HOUR VEHICULAR VOLUME (MUTCD Warrant 2, Caltrans Warrant 9)
PEAK HOUR VEHICULAR VOLUME (MUTCD Warrant 3, Caltrans Warrant 11)

Major Street: Barrington
Minor Street: Missouri
Scenario: F+P PM INT 23
Urban/Rural: u (U=urban, R=rural [a])

FOUR HOUR VOLUME (MUTCD Warrant 2, Caltrans Warrant 9)

Number of Lanes on Each Approach			
Major Street:	#N/A		
Minor Street:	#N/A		
Vehicles Per Hour (4th Highest Hour)			
Major Street (Approach 1):	#N/A	Major Street Left Turn (see note [b]):	#N/A
Major Street (Approach 2):	#N/A	Minor Street (Higher Volume App.):	#N/A
Major Street Total (Both Approaches):	#N/A	Minor Street Total:	#N/A
Minimum Volume on Major Street to Satisfy Warrant (see note [c]):	#N/A	Minimum Volume on Minor Street to Satisfy Warrant (see note [c]):	#N/A

FOUR HOUR VOLUME WARRANT SATISFIED? **#N/A**

PEAK HOUR VOLUME (MUTCD Warrant 3, Caltrans Warrant 11)

Number of Lanes on Each Approach			
Major Street:	1		
Minor Street:	1		
Vehicles Per Hour (Peak Hour)			
Major Street (Approach 1):	790	Major Street Left Turn (see note [b]):	0
Major Street (Approach 2):	770	Minor Street (Higher Volume App.):	130
Major Street Total (Both Approaches):	1,560	Minor Street Total:	130
Minimum Volume on Major Street to Satisfy Warrant (see note [d]):	450	Minimum Volume on Minor Street to Satisfy Warrant (see note [d]):	100

PEAK HOUR VOLUME WARRANT SATISFIED? **YES**

Notes:

a. May be used when the major-street speed exceeds 40 mph or in an isolated community with a population of less than 10,000.

b. Heavier left-turn movement from the major street may be included with minor street volume if a separate signal phase is proposed for left-turn movements.

c. From: USDOT, FHWA, "Manual on Uniform Traffic Control Devices," 2001, Figure 4C-1.

Appendix H-9
Intersection Mitigation Feasibility Matrix

Study Intersection No.	Jurisdiction*	Intersection	Potential Mitigation	Mitigation Evaluation			Final Determination	
				Parking Spaces/Loading Zones/Bus Stops	Physical Changes		Feasibility	Discussion
					Sidewalk	Roadway		
3	SM	Stewart St & Olympic Blvd	Existing conditions on Olympic Blvd at Stewart St include one (1) eastbound left-turn lane designated as permitted and one (1) westbound left-turn lane designated as protected/permitted. Proposed mitigation to modify the signal phasing for both eastbound and westbound left-turn lanes to protected only.	N/A	N/A	N/A	Feasible	Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
6	SM/LA	Centinela Ave & Exposition Blvd	Existing conditions at this intersection include a stop sign on eastbound Exposition Blvd and no stop signs or signals on Centinela Ave. Proposed mitigation to signalize the intersection.	N/A	N/A	N/A	Feasible	Intersection is partially located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
7	SM/LA	Centinela Ave & I-10 Westbound On/Off-Ramps	Existing conditions on Centinela Ave at 1-10 on/off ramps include a northbound left-turn lane operating as protected only. Proposed mitigation to allow protected/permitted operations on this lane.	N/A	N/A	N/A	Not Feasible	Proposed mitigation would allow left turns during pedestrian crossing phase. This increases potential for conflicts and reduces pedestrian safety. Additionally, intersection is partially located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
9	LA	Centinela Ave & Pico Blvd	Existing conditions on westbound Pico Blvd at Centinela Ave include one (1) through/right-turn lane. Proposed mitigation to convert to two (2) separate lanes: one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 5 feet of sidewalk on east side of street (east leg). Results in sub-standard sidewalk.	Addition of 12-foot westbound dedicated right-turn lane.	Not Feasible	Westbound Pico Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.
11	LA	Bundy Dr & Wilshire Blvd	Existing conditions on northbound Bundy Dr at Wilshire Blvd include one (1) dedicated left-turn lane, one (1) through lane and one (1) through/right-turn lane. Proposed mitigation to add (1) additional northbound dedicated left-turn lane.	N/A	Removal of 10 feet of sidewalk on east side of street (south leg). Results in sub-standard sidewalk.	Addition of 10-foot northbound dedicated left-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Northbound Bundy Dr north of Wilshire Blvd is designated Collector (13-foot sidewalk) and south of Wilshire Blvd designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.
16	LA	Bundy Dr & Olympic Blvd	Existing conditions on northbound Bundy Dr at Olympic Blvd include one (1) dedicated left-turn lane. Proposed mitigation to restripe and add one (1) northbound left-turn lane. This would result in a northbound approach of one (1) right-turn lane, two (2) through lanes, and two (2) left-turn lanes. Existing conditions on southbound Bundy Dr at Olympic Blvd include one (1) dedicated right-turn lane, two (2) through lanes, and one (1) dedicated left-turn lane. Proposed mitigation to restripe and add one (1) southbound left-turn lane and convert one (1) through lane and the right-turn lane into a shared through/right-turn lane. This would result in a southbound approach of one (1) shared through/right-turn lane, one (1) through lane, and two (2) left-turn lanes.	N/A	N/A	N/A	Feasible	N/A
17	LA	Bundy Dr & Pico Blvd	Existing conditions on eastbound and westbound Pico Blvd at Bundy Dr include one (1) dedicated left-turn lane, one (1) through lane, and one (1) through/right-turn lane. Proposed mitigation to restripe the curb lanes to result in two (2) separate lanes: one (1) through lane and one (1) dedicated right-turn lane.	4 parking spaces removed, 1 bus stop relocated	N/A	N/A	Not Feasible	Relocation of bus stop to departure side not possible due to presence of driveways. Additionally, parking removal is not desired.
18	LA	Bundy Dr & I-10 Eastbound On-Ramp	Existing conditions on southbound Bundy Dr at I-10 eastbound on-ramp T-intersection include one (1) dedicated left-turn lane and two (2) through lanes. Proposed mitigation to redesignate southbound approach lanes to allow one (1) dedicated left-turn lane, one (1) through/left-turn lane, and one (1) through lane. Additional proposed mitigation to operate split phasing for north/south approaches at this intersection in conjunction with lane changes.	N/A	N/A	N/A	Not Feasible	Proposed mitigation would direct traffic into dedicated carpool lane on freeway on-ramp.
19	LA	Bundy Dr & Ocean Park Blvd	Existing conditions on Bundy Dr at Ocean Park Blvd include one (1) dedicated left-turn lane, one (1) through lane, and one (1) through/right-turn lane. Proposed mitigation to restripe and add (1) additional northbound dedicated left-turn lane.	11 parking spaces removed	N/A	N/A	Not Feasible	Proposed mitigation would result in offsets greater than 3 feet of southbound through lanes and offsets of left-turn lanes, which reduces safety. Additionally, parking removal is not desired.
20	LA	Bundy Dr & National Blvd	Existing conditions for westbound National Boulevard at Bundy Drive include two (2) left-turn lanes and one (1) right-turn lane. Proposed mitigation to restripe and change designation to one (1) dedicated left-turn lane, one (1) left-/right-turn lane, and one (1) dedicated right-turn lane.	5 parking spaces removed	Removal of 5 feet of sidewalk on east side of street (north leg). Results in sub-standard sidewalk.	Widening of curb lane (north leg).	Not Feasible	Westbound National Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Double right-turn lanes create unsafe pedestrian conditions at intersection.
21	LA	Barrington Ave & Santa Monica Blvd	Existing conditions on eastbound Santa Monica Blvd include one (1) dedicated left-turn lane, two (2) through lanes, and one (1) through/right-turn lane available during peak hours (peak-hour curb parking restrictions). Proposed mitigation to add one (1) eastbound through lane. Existing conditions on southbound Barrington Ave include one (1) dedicated left-turn lane and one (1) through/right-turn lane. Proposed mitigation to add one (1) dedicated left-turn lane.	2 parking spaces removed, 1 loading zone removed	Removal of 5 feet of sidewalk on north and south sides of street (west leg). Results in sub-standard sidewalk. Removal of 2 feet of sidewalk on east and west sides of street (north leg). Results in sub-standard sidewalk.	Addition of 10-foot eastbound through lane and 10-foot southbound dedicated left-turn lane.	Not Feasible	Westbound Santa Monica Blvd is designated Boulevard II (15-foot sidewalk) and northbound Barrington Ave is designated Avenue II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Parking and loading zone currently exist, removal is not desired. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
24	LA	Barrington Ave & La Grange Ave	Existing conditions on northbound Barrington Ave at La Grange Ave include one (1) left-turn/through/right-turn lane. Proposed mitigation to restripe for an additional lane, resulting in one (1) dedicated left-turn lane and one (1) through/right-turn lane.	5 parking spaces removed	N/A	N/A	Not Feasible	Parking currently exists, removal is not desired.

Study Intersection No.	Jurisdiction*	Intersection	Potential Mitigation	Mitigation Evaluation			Final Determination	
				Parking Spaces/Loading Zones/Bus Stops	Physical Changes		Feasibility	Discussion
					Sidewalk	Roadway		
25	LA	Barrington Ave & Mississippi Ave	Existing conditions on eastbound Mississippi Ave at Barrington Ave include one (1) left-turn/through/right-turn lane. Proposed mitigation to restripe for an additional lane, resulting in one (1) through/left-turn lane and one (1) right-turn lane.	2 parking spaces removed	N/A	N/A	Feasible	N/A
26	LA	Barrington Ave & Olympic Blvd	Existing conditions on eastbound Olympic Blvd at Barrington Ave include one (1) through/right-turn lane. Proposed mitigation to designate one (1) through lane and one (1) dedicated right-turn lane.	2 parking spaces removed	Removal of 4 feet of sidewalk on south side of street (west leg). Results in sub-standard sidewalk.	Addition of 12-foot eastbound dedicated right-turn lane.	Not Feasible	Eastbound Olympic Blvd is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.
27	LA	Barrington Ave & Pico Blvd	Proposed mitigation on Barrington Ave at Pico Blvd to restripe the existing northbound curb lane to provide one (1) through lane and one (1) right-turn lane.	1 parking space removed	N/A	N/A	Feasible	Provides only partial mitigation.
28	LA	Barrington Ave & Gateway Rd	Existing conditions on northbound Barrington Ave at Gateway Rd include one (1) dedicated left-turn lane, one (1) through lane, and one (1) through/right-turn lane. Proposed mitigation to restripe the existing northbound shared through/right-turn lane to provide one (1) through lane and one (1) right-turn lane.	4 parking spaces removed	N/A	N/A	Feasible	N/A
29	LA	Gateway Blvd & Pico Blvd	Proposed mitigation on Pico Blvd at Gateway Blvd to add (1) additional eastbound through lane.	4 parking spaces removed	Removal of 2 feet (east leg) and 7 feet (west leg) of sidewalk on south side of street. Results in sub-standard sidewalk.	Addition of 12-foot curb lane in eastbound direction.	Not Feasible	Westbound Pico Blvd is designated Avenue I (15-foot sidewalk) and westbound Gateway Blvd is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Expo Rail bridge further constrains potential changes in road dimensions.
30	LA	Sawtelle Blvd & Santa Monica Blvd	Existing conditions on northbound Sawtelle Blvd at Santa Monica Blvd include one (1) left-turn/through/right-turn lane. Proposed mitigation to restripe for one (1) through/left-turn lane and one (1) right-turn lane.	2 parking spaces removed	N/A	N/A	Not Feasible	Parking currently exists, removal is not desired. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.
31	LA	Beloit Ave/I-405 Southbound Off-Ramp & Santa Monica Blvd	Existing conditions on eastbound Santa Monica Blvd at Beloit Ave include one (1) through/right-turn lane. Proposed mitigation to designate one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 6 feet of sidewalk on both sides of street (west leg). Results in sub-standard sidewalk.	Addition of a dedicated right-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Westbound Santa Monica Blvd is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. I-405 bridge further constrains potential changes in road dimensions. Proposed mitigation would also result in offsets greater than 3 feet, which reduces safety.
32	LA	Sawtelle Blvd & Olympic Blvd	Existing conditions on northbound Sawtelle Blvd at Olympic Blvd include one (1) right-turn lane. Proposed mitigation to restripe to designate one (1) through/right-turn lane.	N/A	N/A	N/A	Not Feasible	Existing right-of-way dimensions cannot accommodate an additional lane on the north leg of the intersection, resulting in unsafe merging conditions.
33	LA	Sawtelle Blvd & I-405 Southbound Off-Ramp	Existing Conditions on eastbound Tennessee Ave at Sawtelle Blvd include one (1) dedicated left-turn lane and one (1) dedicated right-turn lane. Proposed mitigation to restripe the eastbound approach to one (1) left-turn/right-turn lane and one (1) dedicated right-turn lane.	N/A	N/A	N/A	Not Feasible	Double right-turn lanes create unsafe pedestrian conditions at freeway ramps.
34	LA	Sawtelle Blvd & Pico Blvd	Existing conditions on northbound Sawtelle Blvd at Pico Blvd include one (1) through/right-turn lane. Proposed mitigation to designate one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 6 feet of sidewalk on east side of street (south leg). Results in sub-standard sidewalk.	Addition of northbound dedicated right-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Northbound Sawtelle Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
35	LA	Sawtelle Blvd & National Blvd	Existing conditions on northbound Sawtelle Blvd at National Blvd include one (1) through/right-turn lane. Proposed mitigation to designate one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 2 feet of sidewalk on east side of street (south leg). Results in sub-standard sidewalk.	Addition of northbound dedicated right-turn lane. Results in offsets greater than 3 feet with the southbound dedicated left-turn lane.	Not Feasible	Northbound Sawtelle Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
36	LA	I-405 Southbound On-Ramp & National Blvd	Existing conditions on eastbound National Blvd at I-405 on-ramp include one (1) through lane. Proposed mitigation to change designation to through/right-turn lane.	N/A	N/A	N/A	Not Feasible	Double right-turn lanes create unsafe pedestrian conditions at freeway ramps.
37	LA	Sawtelle Blvd & Palms Blvd	Existing conditions on northbound Sawtelle Blvd at Palms Blvd include one (1) through/right-turn lane. Proposed mitigation to designate one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 6 feet of sidewalk on east side of street (south leg). Results in sub-standard sidewalk.	Addition of northbound dedicated right-turn lane. Results in offsets greater than 3 feet on the northbound through lanes.	Not Feasible	Southbound Sawtelle Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
38	LA	Cotner Ave/I-405 Northbound On/Off ramp & Santa Monica Blvd	Existing conditions on westbound Santa Monica Blvd at Cotner Ave/I-405 northbound on/off ramps include one (1) dedicated left-turn lane, three (3) through lanes and one (1) dedicated right-turn lane. Proposed mitigation to add one (1) additional westbound through lane on Santa Monica Blvd at Cotner Ave/I-405 northbound on/off ramps.	N/A	N/A	Reduction of median width by 5 feet to allow for additional westbound through lane. Results in offsets greater than 3 feet.	Not Feasible	Proposed mitigation would result in offsets greater than 3 feet, which reduces safety. Additionally, freeway proximity and bridge further limit potential changes to road dimensions.
40	LA	Sepulveda Blvd & Olympic Blvd	Proposed mitigation on Olympic Blvd at Sepulveda Blvd to add one (1) additional eastbound through lane and one (1) additional westbound through lane.	N/A	Removal of 10 feet of sidewalk on north and south sides of street (east and west legs). Results in sub-standard sidewalk.	Addition of one (1) eastbound through lane and one (1) westbound through lane.	Not Feasible	Westbound Olympic Blvd is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.
41	LA	Sepulveda Blvd & Pico Blvd	Existing conditions on westbound Pico Blvd at Sepulveda Blvd include three (3) through lanes and one (1) dedicated left-turn lane. Proposed mitigation to designate one (1) additional through lane and one (1) additional dedicated left-turn lane on Pico Blvd.	7 parking spaces removed	Removal of 10 feet of sidewalk on north and south sides of street (east and west legs). Results in sub-standard sidewalk.	Addition of add one (1) westbound left-turn lane and one (1) westbound through lane.	Not Feasible	Pico Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation.

Study Intersection No.	Jurisdiction*	Intersection	Potential Mitigation	Mitigation Evaluation			Final Determination	
				Parking Spaces/Loading Zones/Bus Stops	Physical Changes		Feasibility	Discussion
					Sidewalk	Roadway		
43	LA	Sepulveda Blvd & Exposition Blvd	Existing conditions on eastbound Exposition Blvd at Sepulveda Blvd include one (1) left-turn/through/right-turn lane. Proposed mitigation to restripe the existing eastbound left-turn/through/right-turn lane to provide one (1) shared through/left-turn lane and one (1) right-turn lane.	3 parking spaces removed	N/A	N/A	Feasible	Provides only partial mitigation.
44	LA	I-405 Northbound Off-Ramp & National Blvd	Existing conditions on northbound I-405 off-ramp at National Blvd include one (1) left-turn/right-turn lane and one (1) right-turn lane. Proposed mitigation to restripe three (3) separate lanes: one (1) dedicated left-turn lane, one (1) left-turn/right-turn lane, and one (1) right-turn lane.	N/A	N/A	N/A	Not Feasible	Changing the operations of the Caltrans ramp requires coordination with State agency. Turning path for double left-turns limited due to one-way configuration of ramp.
45	LA	Sepulveda Blvd & National Blvd	Existing conditions on southbound Sepulveda Blvd at National Blvd include one (1) through/right-turn lane. Proposed mitigation to restripe for two (2) separate lanes: one (1) through/right-turn lane and one (1) dedicated right-turn lane.	1 loading zone removed	N/A	N/A	Not Feasible	Proposed mitigation requires removal of loading zone, which is not desired.
46	LA	Sepulveda Blvd & Palms Blvd	Existing conditions on northbound Sepulveda Blvd at Palms Blvd include one (1) through/right-turn lane. Proposed mitigation to restripe existing northbound shared through/right-turn lane to provide one (1) through lane and one (1) right-turn lane.	5 parking spaces removed	N/A	N/A	Feasible	N/A
47	LA	Military Ave & National Blvd	Existing conditions on southbound Military Ave at National Blvd include one (1) left-turn/through/right-turn lane. Proposed mitigation to restripe existing southbound shared through/right-turn lane to provide one (1) shared through/left-turn lane and one (1) right-turn lane.	4 parking spaces removed	N/A	N/A	Feasible	N/A
49	LA	Westwood Blvd & Pico Blvd	Existing conditions on Pico Blvd at Westwood Blvd include one (1) left-turn lane both eastbound and westbound. Proposed mitigation to add one (1) additional left-turn lane in each direction.	8 parking spaces removed	Removal of 5 feet of sidewalk on north and south sides of street (east leg). Removal of 2 feet of sidewalk on north side of street (west leg). Results in sub-standard sidewalk.	Addition of 10-foot westbound left-turn lane and 10-foot eastbound left-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Pico Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Parking currently exists, removal is not desired. Mitigation would result in offsets greater than 3 feet, which reduces safety.
51	LA	Westwood Blvd & National Blvd	Existing conditions on eastbound National Blvd at Westwood Blvd include one (1) dedicated left-turn lane, one (1) through lane, and one (1) through/right-turn lane. Proposed mitigation to add one (1) additional dedicated left-turn lane.	N/A	Removal of 4 feet from the north and south sides of street (west leg). Results in sub-standard sidewalk.	Addition of 10-foot eastbound left-turn lane. Results in offsets greater than 3 feet.	Not Feasible	National Blvd is designated Avenue I (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
52	LA	Overland Ave & Pico Blvd	Existing conditions on northbound Overland Ave at Pico Blvd include two (2) dedicated right-turn lanes, two (2) dedicated left-turn lanes, and one (1) through lane. Proposed mitigation to add one (1) additional through lane.	N/A	Removal of 2 feet of sidewalk from the east side of street (north leg). Results in sub-standard sidewalk.	Widening of northbound approach with 2 feet to allow for addition of northbound through lane. Lane drop would occur directly after intersection. Results in offsets greater than 3 feet on northbound approach.	Not Feasible	Overland Ave is designated Modified Collector (13-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
53	LA	Overland Ave & National Blvd/I-10 Westbound On/Off-Ramps	Proposed mitigation to restripe eastbound National Blvd at Overland Ave shared through/left-turn lane to a shared left-turn/through/right-turn lane. This results in two lanes for eastbound right-turn movements.	N/A	N/A	N/A	Feasible	N/A
55	LA	Overland Ave & National Pl	Existing conditions on southbound Overland Ave at National Pl includes one (1) through/right-turn lane. Proposed mitigation to designate two (2) separate lanes: one (1) through lane and one (1) dedicated right-turn lane.	N/A	Removal of 6 feet of sidewalk on north and south sides of street (east leg). Removal of 6 feet of sidewalk on north side of street (west leg). Results in sub-standard sidewalk.	N/A	Not Feasible	Overland Ave is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Parking currently exists, removal is not desired.
57	LA	Overland Ave & Palms Blvd	Existing conditions on Palms Blvd at Overland Ave include one (1) through/right-turn lane in both directions. Proposed mitigation to designate two (2) separate lanes: one (1) through lane and one (1) dedicated right-turn lane in each direction.	3 parking spaces removed	Removal of 2 feet of sidewalk on the south side of the street (west leg). Results in sub-standard sidewalk.	Addition of eastbound dedicated right-turn lane. No addition needed for westbound dedicated right-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Palms Ave is designated Avenue II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
58	LA	Overland Ave & Venice Blvd	Existing conditions on northbound Overland Ave at Venice Blvd include one (1) dedicated left-turn lane, two (2) through lanes, and one (1) right-turn lane. Proposed mitigation to add one (1) additional northbound through lane.	N/A	Removal of 2 feet of sidewalk on the east side of the street (south leg). Results in sub-standard sidewalk.	Addition of 10-foot northbound through lane. Results in offsets greater than 3 feet.	Not Feasible	Overland Ave is designated Boulevard II (15-foot sidewalk); reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
59	CC	Overland Ave & Culver Blvd	Existing conditions on eastbound Culver Blvd at Overland Ave include one (1) dedicated left-turn lane, two (2) right-turn lanes, and one (1) dedicated right-turn lane. Proposed mitigation to add one (1) additional dedicated left-turn lane.	N/A	Removal of 2 feet of sidewalk on the south side of the street (west leg). Results in sub-standard sidewalk.	Removal of raised median. Addition of 10-foot eastbound dedicated left-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Proposed mitigation would result in offsets greater than 3 feet, which reduces safety. Additionally, intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
60	LA	Motor Ave & National Blvd	Proposed mitigation to remove protected left-turn phase for both northbound and southbound left-turns on National Blvd to allow for permitted left turns.	N/A	N/A	N/A	Not Feasible	Proposed mitigation would result in phasing change to permitted left-turns, which reduces pedestrian safety.
61	LA	Motor Ave & Palms Blvd	Existing conditions on northbound Motor Ave at Palms Blvd include one (1) dedicated left-turn lane, one (1) through lane, and one (1) bike lane with right-turn lane access. Proposed mitigation to add one (1) additional dedicated left-turn lane.	6 parking spaces removed	N/A	Removal of 5 feet from each bike area to provide additional 10-foot northbound dedicated left-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Proposed mitigation would result in reduced bike area, which reduces cyclist safety. Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
63	LA	National Blvd/Exposition Blvd & Palms Blvd	Proposed mitigation to add one (1) additional eastbound through lane on Palms Blvd.	8 parking spaces removed	Removal of 2 feet of sidewalk on north side of street (west leg). Removal of 4 feet of sidewalk on south side of street (east leg). Results in sub-standard sidewalk.	Addition of 10-foot westbound through lane. Results in offsets greater than 3 feet.	Not Feasible	Expo Rail bridge constrains right-of-way widening. Palms Blvd is designated Modified Avenue II; reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Proposed mitigation could result in offsets greater than 3 feet, which reduces safety.

Study Intersection No.	Jurisdiction*	Intersection	Potential Mitigation	Mitigation Evaluation			Final Determination	
				Parking Spaces/Loading Zones/Bus Stops	Physical Changes		Feasibility	Discussion
					Sidewalk	Roadway		
66	LA	Manning Ave/I-10 Westbound Off-Ramp & National Blvd	Existing conditions on I-10 off-ramp at Manning Ave and National Ave include one (1) dedicated left-turn lane and one (1) through/right-turn lane. Proposed mitigation to designate one (1) dedicated left-turn lane and one (1) left-turn/through/right-turn lane. This allows dual movement from I-10 off-ramp to National Blvd westbound.	N/A	N/A	N/A	Not Feasible	Changing the operations of the Caltrans ramp requires coordination with State agency. Turning path for double left-turns limited due to raised median island.
67	LA	Castle Heights Ave & National Blvd	Proposed mitigation to restripe the northbound approach of Castle Heights Ave to allow one (1) dedicated left-turn lane and one (1) through/right-turn lane.	8 parking spaces removed	N/A	N/A	Not Feasible	Parking currently exists, removal is not desired.
69	LA	Robertson Blvd & Venice Blvd	Proposed mitigation to add one (1) additional southbound dedicated right-turn lane on Exposition Blvd.	1 loading zone removed	Reduction in width of median/pedestrian island.	Reduction in width of median/pedestrian island to allow for two (2) southbound dedicated right-turn lanes.	Not Feasible	Under Expo Rail bridge; median/pedestrian island alteration reduces pedestrian safety. Additionally, loading zone currently exists, removal is not desired.
70	LA	Robertson Blvd & National Blvd	Existing conditions on National Blvd at Robertson Blvd include one (1) dedicated left-turn lane in each direction. Proposed mitigation to add one (1) additional eastbound dedicated left-turn lane and one (1) additional westbound dedicated left-turn lane.	N/A	N/A	Addition of 10-foot westbound left-turn lane.	Not Feasible	There is not enough roadway space to complete the mitigation. The westbound approach is limited by the existing bridge.
72	LA	National Blvd & Venice Blvd	Existing conditions on southbound National Blvd at Venice Blvd include one (1) dedicated left-turn lane, one (1) through lane, and one (1) through/right-turn lane. Proposed mitigation to add one (1) additional dedicated left-turn lane.	N/A	N/A	Results in offsets greater than 3 feet for the northbound through lanes. Requires reducing the right-of-way of the south leg.	Not Feasible	Proposed mitigation would result in offsets greater than 3 feet, which reduces safety.
73	CC	National Blvd & Washington Blvd	Existing conditions on eastbound National Blvd at Washington Blvd include one (1) dedicated left-turn lane, two (2) through lanes, and one (1) dedicated right-turn lane. Proposed mitigation to restripe eastbound to add one (1) additional through lane for additional movement in that direction.	N/A	Removal of 10 feet of sidewalk on the south side of the street (east leg).	Addition of dedicated eastbound right-turn lane. Results in offsets greater than 3 feet.	Not Feasible	Proposed mitigation would result in offsets greater than 3 feet, which reduces safety. Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
75	LA	Robertson Blvd & Cattaraugus Ave	Existing conditions on southbound Robertson Blvd at Cattaraugus Ave include one (1) through/right-turn lane. Proposed mitigation to designate two (2) separate lanes: one (1) through lane and one (1) dedicated right-turn lane.	2 parking spaces removed, 1 loading zone removed	Removal of 4 feet of sidewalk on the west side of the street (north leg). Results in sub-standard sidewalk.	Addition of dedicated right-turn lane.	Not Feasible	Robertson Blvd is designated Modified Avenue II; reduction of sidewalk would not meet current standards. Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Additionally, parking and loading zone currently exist, removal is not desired.
76	LA	La Cienega Blvd & Venice Blvd	Existing conditions on westbound Venice Blvd at La Cienega Blvd include one (1) dedicated left-turn lane, three (3) through lanes, and one (1) through/right-turn yield lane. Proposed mitigation to remove the median and provide one (1) additional westbound left-turn lane.	N/A	N/A	Removal of median.	Feasible	Provides only partial mitigation.
77	CC	La Cienega Blvd & Washington Blvd	Existing conditions on La Cienega Blvd at Washington Blvd include one (1) dedicated left-turn lane in both directions. Proposed mitigation to add one (1) additional dedicated left-turn lane both southbound and northbound.	N/A	Removal of 7 feet of sidewalk on the east and west side of the street (north leg). Removal of 2 feet of sidewalk from the east side and west side of the street (south leg).	N/A	Not Feasible	Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
82	CC	Washington Blvd/Irving Pl/Watseka Ave & Culver Blvd	Existing conditions on westbound Culver Blvd at Washington Blvd/Watseka Ave/Irving Pl include one (1) dedicated right-turn lane, one (1) through/right-turn lane, one (1) through lane, and one (1) dedicated left-turn lane. Proposed mitigation to add one (1) additional westbound through lane on Culver Blvd and realign right-turn lanes on Culver Blvd and through intersection.	N/A	Removal of 12-foot of sidewalk on the north side of Culver Blvd.	Addition of westbound through lane on Culver Blvd.	Not Feasible	Without reduction of sidewalks, there is not enough roadway space to complete the mitigation. Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
84	CC/LA	Sepulveda Blvd & Venice Blvd	Existing conditions on Venice Blvd at Sepulveda Blvd include one (1) left-turn lane, three (3) through lanes, and one (1) through/right-turn lane. Proposed mitigation to remove the raised medians on Venice Blvd and restripe both the eastbound and westbound approaches to add one (1) left-turn lane to each approach.	N/A	N/A	Reduction of lane widths on eastbound and westbound approach; removal of raised median to add one (1) additional through/left-turn lane at eastbound and westbound approach.	Feasible	Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.
86	CC	Sawtelle Blvd & I-405 Northbound On/Off Ramps	Proposed mitigation to convert northbound direction from one (1) through/right-turn lane to two (2) separate lanes, resulting in one (1) through lane and one (1) dedicated right-turn lane.	12 parking spaces removed	N/A	With no change to the southbound approach, the offsets would be greater than 3 feet. Reducing the southbound approach curb lane can remove the offset. Parking spaces would need to be removed for mitigation. However, parking loss in front of multifamily homes is not feasible.	Not Feasible	Parking currently exists, removal is not desired. Intersection is located in a different jurisdiction and therefore Los Angeles cannot complete mitigation alone.

*Jurisdiction: LA = City of Los Angeles; SM = City of Santa Monica; CC = City of Culver City

Fehr & Peers, 2014.

APPENDIX I

Utility Provider
Response Letter

FORM GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

File: SC.CE.

DATE: April 18, 2013

TO: Lameese Elqura, Planning Assistant
Department of City Planning

FROM: Ali Poosti, Division Manager
Wastewater Engineering Services Division
Bureau of Sanitation

SUBJECT: **EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN – NOTICE OF PREPARATION EIR**

This is in response to your March 14, 2013 letter requesting wastewater service information for the proposed 15.2-mile-long transit project running along the Exposition Right-of-Way between Downtown Los Angeles and the City of Santa Monica. The Bureau of Sanitation, Wastewater Engineering Services Division (WESD) has reviewed the request and found the project to be related to construction of a transit line and five stations along the Exposition Light Rail Transit corridor only.

Based on the project description, we have determined the project is unrelated to sewer capacity availability and therefore do not have sufficient detail to offer an analysis at this time. However, as you develop your project alignment, please ensure that you put in place mitigation measures whenever your project comes near, in contact with or interferes with a sewer infrastructure to guarantee the continued safe operation of such structures. Should the project description change or details on construction become available, please continue to send us information so that we may determine if a sewer assessment is required in the future.

If you have any questions, please call Kwasi Berko of my staff at (323) 342-1562.

FOOTNOTES TO SGFs TABLE

(a) SFC rates for these facilities have historically been published in SFC ordinances.

(b) Bureau of Sanitation will determine the flow based on the information given by applicants for facilities with industrial discharge. The flow will be redetermined by Sanitation inspectors annually based on water bills. If the actual flow exceeds the previous year's determined flow, the applicants will be charged for the difference.
If this type of facility is exempt from an industrial discharge permit, only the domestic SFC will be assessed.

(c) The SFC for a bar shall be the sum of SFC's for all areas based on the SGF for each area (ex. fixed seat area, public table area, dancing area).

(d) The determination of SGF for juice bars and coffee houses previously depended on the extent of the actual food preparation in house, not by the types of food provided. Food is assumed to be prepared offsite and as such, the three prior subcategories have been consolidated.

1) SGF for no pastry baking and no food preparation is 720 gpd/1000 gr.sq.ft.
2) SGF for pastry baking only and no food preparation is 720 gpd/1000 gr.sq.ft.
3) SGF for complete food preparation is 25 gpd/seat, the same as a fast food restaurant.

Juice bars and coffee houses do not serve any alcoholic drinks.

(e) Building construction includes trailers, field offices, etc.

(f) Cocktail lounge usually does not serve prepared food.

(g) Cold storage facilities are categorized as follow:

1) No Sales - the cold storage facility is used only for temporary storage, no selling is involved. For example, cold storage facilities at the harbor temporarily store seafood until it is distributed.
2) Cold storage w/ retail sales - the primary function of this facility is to support the wholesale/retail operation of a store, such as supermarket freezers, refrigerators, etc.

(h) Counseling centers include marriage counseling centers, alcohol/drug rehabilitation /dependency centers, nutrition centers, diet centers, etc.

(i) Part-time basis schools or dance studios should be charged as retail area - 50 gpd /1000 gr.sq.ft. Full-time basis schools should be charged by the number of students.

(j) Domestic waste is estimated at 50 gpd/1,000 square feet in addition to total process flow.

(k) Bureau of Sanitation will determine if an industrial permit is needed for health spas. The first year flow is based on 650 gpd/1000 gr.sq.ft., and the Sanitation inspectors will redetermine the flow annually based on water bill from the previous year. The applicants are responsible for paying the difference of SFC.

Health club/spa includes lobby area, workout floors, aerobic rooms, swimming pools, Jacuzzi, sauna, locker rooms, showers, and restrooms. If a health club/spa has a gymnasium type of facility, this portion should be charged separately at the gymnasium SFC rate.

Gymnasiums include basketball court, volleyball court, and any other large open space with low occupancy density.

(l) Lobby of retail includes lounges, holding rooms, or waiting area, etc.

(m) Full service post offices include U.S. Postal Service, UPS, Federal Express, DHL, and etc.

(n) The SGF for a college dormitory based on student capacity also includes the SGF for the dormitory cafeterias.

(o) A bedroom is defined as an enclosed subdivision with 50 sq.ft. or more floor area in a residential building commonly used for sleeping purpose, and is partitioned off to form a habitable room.

(p) The SGF for schools based on the student capacity, covers the following facilities:

1) classrooms and lecture halls
2) professors' offices
3) administration offices
4) laboratories for classes or research
5) libraries
6) bookstores
7) student/professor lounges
8) school cafeterias
9) warehouses and storage areas
10) auditoriums
11) gymnasiums
12) restrooms

It does not include water used by schools for swimming pools. When a school files an application for addition of any of the foregoing facilities, the student population will be reassessed and the total gpd for the new facility will be based on the number of students increased since the last SFC was paid or when the City implemented the SFC for the first time. The SFC for any school facility (ex. stadium, dormitory, etc.) not listed above, will be based on the designated SGF for that category.

(q) The SFC for a TV or motion picture studio shall be the sum of SFC's for different facilities in the studio, based on the SGF for each facility. A studio may include one or more of the following facilities: audience viewing room, filming room, film processing, storage area, etc.

(r) No independent tanning salons with shower were encountered during 1996 survey.

(s) Alternative basis of charge for City’s consideration. The prior square footage basis is also presented should the City decide to continue charging on that basis.

APPENDIX J-2

Water Supply Assessment

Los Angeles Department of Water & Power

BOARD LETTER APPROVAL

RESOLUTION NO. _____

MARTIN L. ADAMS
Acting Senior Assistant General Manager-Water System

JAMES B. McDANIEL
Interim General Manager

DATE: February 6, 2014

SUBJECT: Water Supply Assessment (WSA) for the Exposition Corridor Transit Neighborhood Plan Project (Proposed Project)

SUMMARY

The purpose of this WSA is to meet the requirements of the California State Water Code Sections 10910-10915. Governing body of each public water system is required to make a determination on WSAs for major projects. This WSA is for the Proposed Project located within the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas of the City of Los Angeles (City). LADWP staff determined the maximum increase in the water demand for Proposed Project is 2,793 acre-feet per year (AFY) and believes this total maximum additional water demand can be met.

City Council approval is not required.

Project Name:	The Exposition Corridor Transit Neighborhood Plan Project		
Project Lead Agency:	Los Angeles Department of City Planning (Planning Department)		
Project General Scope: (Proposed and Existing to Remain)		Option 1:	Option 2:
	Commercial	8,332,654 sq ft	6,848,335 sq ft
	Industrial	2,062,968 sq ft	1,695,486 sq ft
	Institutional	417,205 sq ft	342,887 sq ft
	Residential	4,394 du	6,136 du
	Landscaping	673,257 sq ft	729,880 sq ft
Project Site Address/Boundaries:	Proposed Project area includes properties located roughly within a half-mile from the Exposition Light Rail line between the following five stations: Culver City, Palms, Westwood/Rancho Park, Exposition/Sepulveda, and Exposition/Bundy.		
Council Districts:	District 5 Councilmember - Paul Koretz District 10 Councilmember - Herb J. Wesson, Jr. District 11 Councilmember - Mike Bonin		
Total New Water Demand: (Less Conservation Savings, and Existing Uses)	Maximum of 2,793 AFY		

Abbreviations: du - dwelling unit, sq ft - square feet

RECOMMENDATION

It is recommended that the Board of Water and Power Commissioners (Board) adopt the attached Resolution authorizing WSA for Proposed Project.

ALTERNATIVES

There are no other alternatives. LADWP is required by state law, as set forth in California State Water Code Sections 10910-10915, to prepare this WSA for the proposed project.

FINANCIAL INFORMATION

The Planning Department has been invoiced for the required $17,000 fee to cover LADWP's expenses in preparing this WSA.

BACKGROUND

WSAs are prepared in conformance with California law and City ordinances to ensure proposed projects that utilize water resources are consistent with the City's conservation goals and long-term water supply availability, as detailed in the Water System's 2010 Urban Water Management Plan (UWMP).The 2010 UWMP is the water supply planning document for the City and is prepared by LADWP.

The City's Water Efficiency Requirements Ordinance No. 180822, effective on December 2009, Los Angeles Green Building Code Ordinance No.181480, effective on December 2010, and the 2010 California Green Building Standard Code, effective on January 2011, require the use of numerous conservation measures, which for this development yielded a savings of approximately 443 AFY. Additional voluntary conservation measures recommended by LADWP and committed to by the Planning Department has yielded savings of approximately 104 AFY.

Each WSA performed by LADWP is carefully evaluated within the context of the 2010 UWMP and current conditions, such as restrictions on State Water Project (SWP) pumping from the Sacramento-San Joaquin Delta (Delta) imposed by a Federal Court. The Metropolitan Water District of Southern California (MWD), from whom the City purchases its SWP and Colorado River water supplies, has also been actively developing plans and making efforts to provide additional water supply reliability for the entire Southern California region. LADWP coordinates closely with MWD to ensure implementation of MWD's water resource development plans.

Part of MWD's planning effort is the implementation of its Integrated Water Resources Plan (IRP) and Regional Urban Water Management Plan (RUWMP), which are designed to address potential reductions in water supply due to the effects of variable hydrologic conditions and regulatory restrictions on exports from the Delta. A set of resource options was developed by MWD based on the feasibility of various supply actions. These resource options focus on six main areas: conservation, Colorado River

transactions, near-term Delta actions, SWP transactions, groundwater recovery, and local resource development.

The Board adopted Shortage Year Rates and the Los Angeles City Council (City Council) implemented Phase III restrictions of the Water Conservation Ordinance (Ordinance), both of which became effective June 1, 2009. Phase II restrictions were implemented in August 2010, and are still in effect.

Projected Water Use and Conservation

On November 14, 2013, the Planning Department, the lead agency for the Proposed Project, requested LADWP perform a WSA (request letter is included in Appendix A). Based on information obtained from the Planning Department, the Proposed Project will redevelop approximately a 256-acre site of commercial, industrial, institutional and residential land uses within the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert community plans, all of which are located within LADWP's service area. It includes properties located roughly within a half-mile from the Exposition Light Rail line between the following five stations: Culver City, Palms, Westwood/Rancho Park, Exposition/Sepulveda, and Exposition/Bundy.

Existing Project area has an estimated water demand of 1,472 AFY and consists of approximately 3,237,110 sq ft of commercial space, 1,693,343 sq ft of industrial space, 174,095 sq ft of institutional space and 1,057 residential dwelling units. The Planning Department estimates that approximately 50 percent of the existing Proposed Project area will be redeveloped with new land uses and intensities, and the rest will remain as existing, with no change to the development on the site.

Proposed Project will result in one of two development options. These development options account for the total square footage and number of dwelling units representing the sum of existing areas that will remain in addition to the new proposed uses. Proposed Project options are:

> Option 1 - Expected to result in a total of approximately136 single-family dwelling units, 4,258 multi-family dwelling units, 2,062,968 sq ft of industrial space, 5,776,310 sq ft of office space, 412,593 sq ft of medical space, 171,500 sq ft of restaurant space, 1,972,251 sq ft of retail space, 417,205 sq ft of institutional space, 673,257 sq ft of landscaping, and 37,306 stalls of auto parking. The estimated net additional water demand for Option 1 is 2,793 AFY.
>
> Option 2 with Alternative Compliance Details - Expected to result in a total of approximately 136 single-family dwelling units, 6,000 multi-family dwelling units, 1,695,486 sq ft of industrial space, 4,747,360 sq ft of office space, 339,097 sq ft of medical space, 140,950 sq ft of restaurant space, 1,620,928 sq ft of retail space, 342,887 sq ft of institutional space, 320,130 sq ft of landscaping, and approximately 34,817 stalls of auto parking. The estimated net additional water demand for Option 2 is 2,570 AFY.

LADWP staff performed the water demand analysis for both options in this WSA, and determined the maximum increase in the water demand for the Proposed Project is 2,793 AFY.

LADWP staff recommended implementation of additional voluntary water conservation measures to maximize the potential water-use efficiency for the Proposed Project.
Is this one paragraph?
Recommended voluntary conservation measures are in addition to those required by City's current codes and ordinances. Based on LADWP staff recommendations, the Planning Department has voluntarily committed to requiring developers the following additional measures that are beyond those required by the City's Water Efficiency Requirements Ordinance and the 2010 California Green Building Standard Code:

- High efficiency toilets with flush volume of 1.0 gallons of water per flush
- Faucets- all indoor facets (other than City Ordinance No. 181480 requirements) with flow rate of 1.5 gallons per minute or less
- High efficiency clothes washers (residential) – water factor of 5.0 or less
- Waterless Urinals
- Showerheads-no more than one showerhead per stall
- Rotating sprinkler nozzles for landscape irrigation – 0.5 gallons per minute
- Weather-based irrigation controller
- Drought tolerant plants-100 percent of total landscaping in the public right-of-way; 70 percent of total landscaping on private property
- High-efficiency clothes washers (commercial/residential)
- Domestic water heating system located in close proximity to point(s) of use
- Individual metering and billing for water use
- Tankless and on-demand water heaters
- Cooling tower conductivity controllers or cooling tower pH conductivity controllers
- Water-saving pool filter
- Leak detection system for swimming pools and jacuzzi
- Drip/subsurface irrigation (Micro-Irrigation)
- Micro-Spray
- Proper Hydro-zoning (groups plants with similar water requirements)
- Zoned irrigation
- Landscaping contouring to minimize precipitation runoff
- Water conserving turf
- Rainwater harvesting

A written commitment of the Proposed Project's planned voluntary water conservation measures was submitted by the Planning Department and is attached with the WSA in Appendix B. With the addition of these voluntary water conservation measures, which yield additional savings of approximately 104 AFY, the total additional maximum water demand is approximately 2,793 AFY.

Planning Department has also committed to requiring developers to comply with the Standard Urban Stormwater Mitigation Plan (SUSMP) and to implement Best

Management Practices that have stormwater recharge or reuse benefits for the entire Proposed Project as applicable:

- Infiltration Basin-captures first-flush stormwater, removes particulate pollutants and some soluble pollutants, and contributes toward recharging groundwater
- Infiltration Trench- similar to infiltration basin, but used for smaller drainage areas to capture and infiltrate rainwater
- Catch Basin Insert - a device inserted into an existing catch basin design to provide some level of runoff contaminant removal
- Catch Basin Screens
- Pervious Pavements – captures runoff by allowing stormwater to pass through the pavement surface and then infiltrate into the groundwater basin
- Cistern- captures stormwater runoff as it comes down through the roof gutter system
- Greywater Systems
- Primary (On-Site) Waste Water Treatment Systems

LADWP has met with the Planning Department and the City's Department of Building and Safety (Building and Safety) staff to discuss voluntary commitments made by developers as part of WSA. These two City departments have confirmed the voluntary measures committed to by developers as part of WSA will be incorporated as requirements for both the Planning Department's approval and Building and Safety's review and approval of projects.

Anticipated maximum of 2,793 acre-feet of total additional annual water demand from the Proposed Project falls within the UWMP's projected water supplies for normal, single-dry, and multiple-dry years through the year 2035, and falls within the UWMP's 25-year water demand growth projection. Therefore, the Proposed Project is consistent with the LADWP's 2010 UWMP.

ENVIRONMENTAL DETERMINATION

In accordance with the California Environmental Quality Act (CEQA), it has been determined that this WSA is exempt from further requirements pursuant to the General Exemption described in CEQA Guideline Section 15268.

CITY ATTORNEY

The Office of the City Attorney reviewed and approved the Resolution as to form and legality

C. Appendix A.

RESOLUTION NO. _____

WHEREAS, on November 14, 2013, the Los Angeles City Planning Department (Planning Department), requested the Los Angeles Department of Water and Power (LADWP) to conduct a Water Supply Assessment (WSA) for the Exposition Corridor Transit Neighborhood Plan Project (Proposed Project) pursuant to California Water Code Sections 10910-10915; and

WHEREAS, the Proposed Project will redevelop approximately a 256-acre site area of commercial, industrial, institutional, and residential land uses within the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas of the City of Los Angeles for commercial, industrial, institutional and residential land uses; and

WHEREAS, the Planning Department identified two development options under the Proposed Project; and

WHEREAS, LADWP has prepared a WSA for the Proposed Project in compliance with California Water Code Sections 10910-10915; and

WHEREAS, LADWP staff performed water demand analysis for the two options, and determined the maximum net increase in total water demand for the Proposed Project is 2,793 acre-feet per year; and

WHEREAS, the Planning Department has agreed to implement additional conservation measures, as described in the WSA, that are in addition to those required by law; and

WHEREAS, the Proposed Project is located in the service area of LADWP's water supply system, and LADWP would serve the area of the Proposed Project development; and

WHEREAS, LADWP anticipates that its projected water supplies available during normal, single-dry, and multiple-dry water years as included in the 25-year projection contained in its Urban Water Management Plan can accommodate the projected maximum water demand associated with the Proposed Project, in addition to the existing and planned future demands on LADWP; and

WHEREAS, the Board of Water and Power Commissioners (Board) adopted Shortage Year Rates for water service effective June 1, 2009. The Board finds that the price signals contained in the Shortage Year Rates have resulted in reduced Los Angeles City-wide demands sufficient to meet demand projections.

NOW, THEREFORE, BE IT RESOLVED, that the Board finds that LADWP can provide sufficient domestic water supplies to the Proposed Project area and approves the WSA prepared for Proposed Project, now on file with the Secretary of the Board, and directs

that the WSA and a certified copy of this Resolution be transmitted to the Planning Department.

I HEREBY CERTIFY that the foregoing is a full, true, and correct copy of a Resolution adopted by the Board of Water and Power Commissioners of the City of Los Angeles at its meeting held

Introduction

Proposed major projects subject to certain requirements in the California Water Code Sections 10910-10915 require that the city or county identify any public water system that may supply water to the Exposition Corridor Transit Neighborhood Plan Project (Proposed Project) and request the public water system to provide a water supply assessment (WSA). The WSA is a determination by the water supplier that the demands associated with the Proposed Project were included in its most recently adopted UWMP showing that there is an adequate 20-year water supply.

The Los Angeles Department of City Planning (Planning Department), serving as the lead agency as prescribed by the California Environmental Quality Act (Public Resources Code Section 21000 et seq.), for the Proposed Project , has identified the Los Angeles Department of Water and Power (LADWP) as the public water system that will supply water. In response to the Planning Department's request for a WSA, LADWP has performed the assessment contained herein.

LADWP has served the City of Los Angeles (City) a safe and reliable water supply for over a century. Over time, the City's water supplies have evolved from primarily local groundwater to predominantly imported supplies. Today, the City relies on over 85 percent of its water from imported sources. As such, LADWP has taken an active role in regional and statewide water management. The sustainability of Los Angeles' local water supplies are dependent on the City's ability to maximize water conservation, increase recycled water use, expand stormwater capture and accomplish other local water resource goals.

This WSA is prepared to meet the applicable requirements of state law as set forth in California State Water Code Sections 10910-10915. Significant references and data for this WSA are from the City's 25-year water resource plan, entitled City of Los Angeles Department of Water and Power 2010 UWMP. 2010 UWMP is incorporated by reference and is available for review through LADWP's Web site, www.ladwp.com.

Findings

Proposed Project is estimated to increase the total water demand within the site by maximum of 2,793 acre feet (AF) annually based on review of information submitted by the Planning Department. The Planning Department has committed to requiring implementation of additional water use efficiency measures on all new developments within Proposed Project area that are beyond those required by law.

LADWP's WSA finds adequate water supplies will be available to meet the total additional maximum water demand of 2,793 AF annually for Proposed Project. LADWP anticipates the projected water demand from Proposed Project can be met during normal, single-dry, and multiple-dry water years, in addition to the existing and planned future demands on LADWP.

his WSA approval addresses the City's long term water supply and demand forecasts to accommodate Proposed Project, and is not an approval for water service connection nor determination of adequate distribution infrastructure and capacity to serve Proposed Project. A separate request shall be made to LADWP requesting an evaluation of water service connection for Proposed Project.

Basis for approving WSAs for developments is LADWP's UWMP. LADWP's water demand forecast as contained in UWMP uses long-term demographic projection such as land use, population, and employment. The California Urban Water Management Planning Act requires water suppliers to develop a UWMP every five years to identify short-term and long-term water resources management measures to meet growing water demands during normal, single-dry, and multiple-dry years.

The LADWP Board of Water and Power Commissioners adopted Shortage Year Rates and the Los Angeles City Council implemented Phase III restrictions of the Water Conservation Ordinance (Ordinance), both of which became effective June 1, 2009. Phase II restrictions were implemented in August 2010 and remain in effect today. Current implementation of Shortage Year Rates and higher phases of the Ordinance has resulted in reducing the total customer water usage, on average, by approximately 17.0 percent for the months of June 2009 through August 2013.

Anticipated maximum water demand from Proposed Project falls within the UWMP's projected water supplies for normal, single-dry, and multiple-dry years through the year 2035 and is within the UWMP's 25-year water demand growth projection. Therefore, Proposed Project's WSA can be approved based on the fact that Proposed Project's water need falls within the scope of the UWMP's projected increase in citywide water demands, while anticipating multi-dry year water supply conditions occurring at the same time.

Project Description

The following project information was obtained from Planning Department's WSA Request Letter and the scope confirmation e-mail (Appendix A):

Project Name:	Exposition Corridor Transit Neighborhood Plan Project
Lead Agency:	Department of City Planning
Planning Community:	West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert

Proposed Project will redevelop an approximately 256-acre site of commercial, industrial, institutional and residential land uses within the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert community plans. It includes properties located roughly within a half-mile from the Exposition Light Rail line between the following five stations: Culver City, Palms, Westwood/Rancho Park, Exposition/Sepulveda, and Exposition/Bundy. Existing Proposed Project area consists of approximately 3,237,110 square feet (sq ft) of commercial space, approximately 1,693,343 sq ft of industrial space, approximately 174,095 sq ft of institutional space, and approximately 1,057 residential

dwelling units. The Planning Department estimates that approximately 50 percent of the existing Proposed Project area will be redeveloped with new land uses and intensities, and the rest will remain as existing, with no change to the development on the site.

Proposed Project will result in one of two development options. These development options account for the total square footage and number of dwelling units representing the sum of the existing areas that are expected to remain in addition to the new proposed uses. Proposed Project options are:

> Option 1 expected to result in a total of approximately 136 single-family dwelling units, approximately 4,258 multi-family dwelling units, 2,062,968 sq ft of industrial space, 5,776,310 sq ft of office space, 412,593 sq ft of medical space, 171,500 sq ft of restaurant space, 1,972,251 sq ft of retail space, 417,205 sq ft of institutional space, 673,257 sq ft of landscaping, and 37,306 stalls of auto parking. Estimated net additional water demand for Option 1 is 2,793 acre-feet per year (AFY).
>
> Option 2 with Alternative Compliance Details expected to result in a total of approximately 136 single-family dwelling units, 6,000 multi-family dwelling units, 1,695,486 sq ft of industrial space, 4,747,360 sq ft of office space, 339,097 sq ft of medical space, 140,950 sq ft of restaurant space, 1,620,928 sq ft of retail space, 342,887 sq ft of institutional space, 320,130 sq ft of landscaping, and 34,817 stalls of auto parking. Estimated net additional water demand for Option 2 is 2,570 AFY.

LADWP staff performed the water demand analysis for both options in this WSA, and determined the maximum increase in the water demand for the Proposed Project is 2,793 AFY.

Proposed Project requires a General Plan Amendment, zone changes and establishment of a Specific Plan to conform to density and the use of the development.

WSA will no longer be valid if modifications to Proposed Project require a substantial increase in water demand. A revised WSA may then be required, which will need to be requested by the Planning Department.

Project Water Demand Estimate

Projected total water demand increase for Proposed Project is estimated to be maximum of 2,793 AF annually which includes annual water conservation.

Table I-1 shows a breakdown of the existing and the proposed new types of uses for Option 1 and the corresponding estimated volume of water usage with the implementation of the conservation measures for Proposed Project.

Table I-2 shows a breakdown of the existing and the proposed new types of use for Option 2, and the corresponding estimated volume of water usage with the implementation of the conservation measures for Proposed Project.

Types of use were derived from the WSA request letter and the scope confirmation e-mail in Appendix A.

Table II-1 and Table II-2 estimate the total volume of water conservation based on conservation measures the Planning Department commits to requiring developers for Option 1 and Option 2, respectively (Appendix B).

Water Demand Forecast

The 2010 UWMP projects yearly water demand to reach 641,622 AF by year 2035 with passive and active water conservation, or an increase of 15-percent from year 2010 actual water demand. Water demand projections in five-year increments through 2035 are available in UWMP for each of the major customer classes single-family, multifamily, commercial/governmental, and industrial. Demographic data from the Southern California Association of Government's 2008 Regional Transportation Plan as well as billing data for each major customer class, weather, conservation, price of water, personal income, family size, economy, and drought conservation effect were factors used in forecasting future water demand growth.

UWMP used a modified unit approach to develop its service area-wide water demand projections. This methodology does not rely on individual development demands to determine area-wide growth. Rather, the growth in water use for the entire service area was considered in developing long-term water projections for the City through the year 2035.

UWMP is updated every five years as required by California law. This process entails, among other requirements, an update of water supply and water demand projections for water agencies.

Efforts are underway to increase use of recycled water, expand capture of local stormwater runoff, and expand LADWP's water conservation programs to decrease reliance on purchased imported water for future demand. The City plans to meet all future increases in water demand through a combination of local water supply development.

Collaboration between LADWP and MWD is critical in ensuring that the City's anticipated water demands are incorporated into the development of MWD's long-term Integrated Water Resources Plan (IRP). MWD's IRP directs a continuous regional effort to develop regional water resources involving all of MWD's member agencies including the City. Successful implementation of MWD's IRP has resulted in reliable supplemental water supplies for the City from MWD.

State law further regulates distribution of water in extreme dry weather conditions. Section 350-354 of the California Water Code states that when a governing body of a distributor of a public water supply declares a water shortage emergency within its service area, water will be allocated to meet needs for domestic use, sanitation, fire protection, and other priorities. This will be done equitably and without discrimination between customers using water for the same purpose(s).

LADWP – 2010 UWMP

The California Urban Water Management Planning Act (first effective on January 1, 1984) requires every urban water supplier prepare and adopt an UWMP every five years. The main goal of UWMP is to forecast future water demands and water supplies under average and dry year conditions, identify future water supply projects such as recycled water, provide a summary of water conservation best management practices (BMP), and provide a single and multi-dry year management strategy.[1]

LADWP's 2010 UWMP, available for reference through www.ladwp.com, serves two purposes: (1) achieve full compliance with requirements of California's Urban Water Management Planning Act; and (2) serve as a master plan for water supply and resources management consistent with the City's goals and policy objectives.[2]

A number of important changes have occurred since LADWP prepared its 2005 UWMP. First, LADWP developed more focused strategies in 2008 to address the water reliability issues associated with the lowest snowpack on record in the Sierra Nevada (in 2007), it was the driest year on record for the Los Angeles Basin. There was an increase in water required for environmental mitigation and enhancement in the Owens Valley, San Fernando Basin (SFB) groundwater contamination, and reduced imported water from the Sacramento-San Joaquin Delta (Delta) due to a prolonged water shortage and environmental restrictions on Delta exports. Second, a number of new requirements were added to the Urban Water Management Planning Act, such as addressing California's new mandate of reducing per capita water use by 20 percent by the year 2020. And third, LADWP developed a new water demand forecast based on a more rigorous analysis of water use trends and measurement of achieved water conservation.[3]

The 2010 UWMP projects a 15 percent lower water demand trend than what was projected in the previous 2005 UWMP. It outlines plans, as described below, to significantly increase water conservation and local water supplies by year 2035. This will allow the City to reduce water purchases from MWD by half.[4]

Conservation Strategies

Enforcing prohibited uses of water. Prohibited uses of water are intended to eliminate waste and increase awareness of the need to conserve water. In effect at all times, prohibited uses have been in place since the early 1990s. Under enforcement, failure to comply would be subject to penalties, which can range from a written warning for a first violation to monetary fines and water service shutoff for continued non-compliance.[5]

Expanding the prohibited uses of water. In August 2009, and again in August 2010, the City updated the Emergency Water Conservation Plan Ordinance (No. 181288) by

[1] *City of Los Angeles Department of Water and Power 2010 Urban Water Management Plan*, at 1.
[2] *Id.* at 2.
[3] *Id.* at 2.
[4] *Id.* at 25.
[5] *Id.* at 58-59.

clarifying prohibited uses of water, modifying certain water conservation requirements, and developing new phases of conservation depending on the severity of water shortages. Prohibited uses in effect at all times (Phase I) include:[6]

- Water leaks allowed to go unattended.
- Outdoor irrigation between the hours of 9:00 a.m. to 4:00 p.m.
- Outdoor irrigation that results in excess water flow leaving the property.
- Outdoor irrigation during rain events.
- Outdoor irrigation with spray head sprinklers and bubblers for more than ten minutes per watering day per station.
- Outdoor irrigation with standard rotors and multi-stream rotary heads for more than 15 minutes per cycle and up to 2 cycles per watering day per station.
- Large landscape irrigation systems without automatic shutoff rain sensors.
- Washing paved surfaces (sidewalks, walkways, driveways, or parking areas) unless using a LADWP-approved water conserving spray cleaning device.
- Water for decorative fountains, ponds, or lakes unless the water is part of a recirculating system.
- Installation of single-pass cooling systems in buildings requesting new water service.
- Installation of non-recirculating systems in new commercial laundry facilities.
- Installation of non-recirculating systems in new conveyor car washes.
- Car washing with a hose, unless an automatic shut-off device is attached.
- Water served to customers in eating establishments, unless requested.
- Daily towel and linen service option must be offered to hotel and motel guests.

Phase II of the Water Conservation Ordinance is also currently in effect, and prohibits landscape irrigation on days other than Monday, Wednesday, or Friday for odd-numbered street addresses and Tuesday, Thursday, or Sunday for even-numbers street addresses. Watering time for non-conserving nozzles (spray head sprinklers and bubblers) is no more than eight minutes per watering day per station. These provisions do not apply to drip irrigation supplying water to a food source or to hand-held hose watering of vegetation, if the hose is equipped with a self-closing water shut-off device, which is allowed everyday during Phase II, except between the hours of 9:00 a.m. and 4:00 p.m.

On January 17, 2014, with California facing water shortfalls in the driest year in recorded state history, Governor Jerry Brown proclaimed a drought State of Emergency. Local urban water suppliers and municipalities are called upon to implement their local water shortage contingency plans immediately, and Californians are encouraged to reduce their water usage by 20 percent. For the City, Phase II restrictions of the Water Conservation Ordinance were implemented in August 2010 and remain in effect today.

Extending outreach efforts. Over the last several years, LADWP has expanded conservation outreach and education. Some activities to promote conservation include: increased communication with ratepayers through Twitter, Facebook, newspapers, radio,

[6] *Id.* at 54-55.

and television, among other types of media; outreach to Homeowner Associations and Neighborhood Councils; distribution of hotel towel door hangers and restaurant table tent cards; and ramping up marketing of expanded water conservation incentive and rebate programs.[7]

Encouraging regional conservation measures. LADWP has worked with MWD to encourage all water agencies in the region to promote water conservation and adopt water conservation ordinances which include prohibited uses and enforcement.

Long-Term Strategies

1.0 Increase water conservation through reduction of outdoor water use and new technology.

Goal

Increase water conservation savings to 64,368 AFY by cutting back on outdoor water use, expanding rebates and incentives, improving water efficiency at public facilities, and enhancing savings through review of new developments.

Water Savings

64,368 AFY by 2035.

Action Plan

Conservation Rebates and Incentives: LADWP is continuing to expand rebates and incentives for homeowners and business owners to encourage them to purchase water-saving technology.[8] Rebate and incentive programs include the following: Commercial Rebate Program; Residential Rebate Program; and Technical Assistance Program. In addition, as part of the City's ongoing effort to encourage customers to adopt active water conservation measures (i.e., measures that can help customers conserve water on a daily basis without thinking about it) in their homes and businesses, LADWP continues to distribute water-saving bathroom and kitchen faucet aerators and shower heads free-of-charge. In an effort to reduce outdoor water use, LADWP launched the California Friendly Landscape Incentive Program (Program) in 2009. This Program currently pays customers up to $2.00 per sq ft of turf removed and replaced with low water using plants, mulch, and permeable hardscapes or artificial turf.

Action by Public Agencies: LADWP assists City Departments and other public agencies in leveraging incentive funds to retrofit their facilities with water efficient hardware. Significant accomplishments include the following highlights:

[7] *Id.* at 59-61.

[8] *Id.* at 51.

- In an effort to reduce water waste and identify areas of potential water conservation, LADWP provided on-site water audit training for Department of General Services (GSD) Plumbers, City of Los Angeles Department of Recreation and Parks (RAP) landscapers and Port of Los Angeles (POLA) staff, and conducted nearly 500 facility audits.
- In January 2009, a Memorandum of Understanding was signed between LADWP and City's GSD to install 875 water-efficient urinals and 325 high efficiency toilets in City facilities.
- Ten high-use City facilities have been retrofitted with water efficient toilets, urinals, and faucets saving approximately 23 AFY. Locations include City Hall, City Hall East, Pershing Square, and LADWP headquarters.
- Utilizing a $3 million per year grant from LADWP, RAP installed 155 smart controllers at 67 parks, resulting in a savings of 12 percent of normal water usage. Additionally, this MOU has funded water use efficiency improvements at 18 park facilities saving over 400 AFY.

Enhancing Conservation through Review of New Developments: LADWP will continue working with the City's Green Building Team to pursue desired changes in local codes and standards to promote water efficiency in new construction projects and major building renovations. One of the significant accomplishments was the approval of the Water Efficiency Requirements Ordinance No. 180822 by the City Council, which modifies the City Municipal Code to establish new requirements for water conservation in construction of new buildings, and the installation of new plumbing fixtures in existing buildings to minimize the effects of any water shortages on the customers of the City, effective December 1, 2009.[9] Water savings due to Los Angeles Green Building Code Ordinance No. 181480, effective on December 2010, and the 2010 California Green Building Standard Code, effective on January 2011, were also estimated. For this development, the ordinances yielded a savings of approximately 443 AFY.

In addition, the City of Los Angeles adopted Ordinance No. 181899, also known as the "Low Impact Development" Ordinance. Purpose of this Ordinance includes rainwater harvesting and stormwater runoff management, water conservation, and recycled water reuse and gray water use. The Ordinance No. 181899 was effective as of November 14, 2011.

2.0 Water Recycling

The LADWP 2010 UWMP identifies the goal of delivering 59,000 AFY to off-set imported water. This will increase recycled water use in the City of Los Angeles eight-fold—from the current one percent to eight percent annually. In order to achieve this goal, the City is taking the following steps:

Recycled Water Master Plan (RWMP): In 2012, LADWP completed a three-year RWMP. RWMP documents will guide near-term recycled water planning through 2035, as well as long-term recycled water planning for up to 50 years beyond the 2035 horizon. RWMP documents include an evaluation of recycling alternatives

[9] *Id.* at 54.

that integrate two strategies to increase recycling: groundwater replenishment (GWR) and non-potable reuse (NPR). NPR projects will increase recycled water deliveries to irrigation and industrial customers throughout the City. The GWR project will replenish the SFB with advance treated purified recycled water.

Advance Treatment Pilot Studies: A critically important part of the GWR master planning process was to operate a pilot project consisting of different purification technologies using the actual treated wastewater from the City's Donald C. Tillman (DCT) Water Reclamation Plant (WRP). Purpose of the pilot project was to test alternative source waters available at DCT WRP and evaluate the effectiveness of advanced water purification (AWP) technologies on those specific waters. Testing results demonstrated that the proposed AWP processes provide exceptional water quality that is safe for GWR.

GWR Environmental Documentation: Environmental documentation for the GWR Project was initiated in 2012.

Harbor Refineries Pipeline Project: Of the project's 40,400 feet of recycled water piping, approximately 85 percent has already been installed in the Harbor Area that will convey recycled water to large industrial and irrigation customers. This project is anticipated to be completed in June 2014.

Recycled Water Outreach: The City developed the RWMP documents with input from stakeholders through ongoing outreach activities beginning in 2009, including the Recycled Water Advisory Group (RWAG), Recycled Water Forums for the general public, elected official briefings, outreach to Kindergarten-12 students, and presentations to Neighborhood Councils and community groups. RWAG is made up of approximately 60 stakeholders, representing neighborhood councils, environmental groups, business organizations, civic groups, and other interests. They provide the City with input and ideas related to water recycling. RWAG has participated in a series of workshops, facility tours, and update sessions, and continues to provide insightful feedback to the City as projects are implemented.

3.0 Enhancing Stormwater Capture

City's goal is to increase groundwater recharge by expanding and improving stormwater spreading basins, retrofitting large stormwater capture/flood control dams and completing other large-scale projects through cooperative partnerships with the Los Angeles County Flood Control District and other agencies. LADWP is moving forward with several stormwater capture projects with the goal of increasing long-term groundwater recharge by a minimum of 25,000 AFY.[10] Following are the large-scale projects that are expected to be completed or in construction within the next several years:

Tujunga Spreading Grounds Enhancement Project: This project proposes to deepen the spreading basins, increase their storage capacity, replace the existing

[10] *Id.* at 143.

diversion structure with two diversion structures, and add remote automation of the operating structures.[11]

- Schedule: Planning and design 2011-13; construction in 2014-16.
- Budget: Total project cost is $25 million (LADWP funded).
- Resources: Los Angeles County Flood Control District will be the project manager.
- Potential Water Savings: The recharge capacity will be increased from 5,200 to 18,600 AFY of stormwater.

Pacoima Spreading Grounds Enhancement Project: This project proposes to deepen the spreading basins, increase their storage capacity, replace the existing diversion structure, and add remote automation of the operating structures.[12]

- Schedule: Planning and design 2012-14; construction in 2014-16.
- Budget: Total project cost is $30 million (LADWP funding $15 million
- Resources: Los Angeles County Flood Control District will be the project manager.
- Potential Water Savings: Recharge capacity will be increased from 6,900 to 17,400 AFY of stormwater.

4.0 Accelerating Clean-Up of the San Fernando Basin (SFB)

City's goal is to clean up the contaminated SFB to expand groundwater storage and the ability to fully utilize the City's groundwater supplies. Result will be a reduction of imported water supply of up to 87,000 AFY – LADWP's annual allocation of San Fernando Valley groundwater supplies.[13] LADWP will also work to ensure that this SFB remains a consistent, stable and reliable resource for years to come. The following actions are proposed to achieve this goal:

Work with Regulatory Agencies and Governmental Officials: LADWP will continue to encourage the EPA to develop a long-term, comprehensive solution for existing and emerging contamination issues in SFB. In addition to the EPA, LADWP will work with the Los Angeles Regional Water Quality Control Board and the California Department of Toxic Substances Control to find and hold polluters accountable for cleaning up the SFB.[14]

Groundwater System Improvement Study (GSIS): In February 2009, LADWP began a 6-year, approximately $249.0-million Groundwater System Improvement Study (GSIS) in SFB that will provide vital information to evaluate the groundwater

[11] *Id* at 145.
[12] *Id* at 146.
[13] *Id.* at 125.
[14] *Id.* at 122.

quality in SFB and recommend treatment options to maximize the utility of the groundwater supply.[15] As part of the GSIS, LADWP is installing approximately 26 new monitoring wells in SFB, which will provide vital water quality information necessary for GSIS. Critical water supply picture in the region has forced LADWP to initiate a fast-tracked and ambitious undertaking to restore its lost groundwater production. This undertaking will also prepare LADWP to safely manage and extract water from future groundwater recharge efforts. LADWP is in the early stages of developing the Groundwater Treatment Complex (GTC) for SFB, with a design capacity of 122,900 AFY. Construction of the proposed GTC will greatly reduce LADWP's reliance on costly and diminishing imported water supplies, and will compliment LADWP's strategies for securing the City's future water supply through sustainable means. The anticipated in-service date for the GTC is 2021.

Interim Wellhead Treatment: LADWP completed the installation of interim treatment project for two wells in the Tujunga Wellfield in order to maintain groundwater pumping production. Capital cost of the project was approximately $7.5 million, and the approximate annual operation and maintenance cost is approximately $2 million.

Water Supplies

The Los Angeles Aqueducts (LAA), local groundwater, purchased water from the MWD, and recycled water are the primary sources of water supplies for the City. Table III shows LADWP water supplies over the last ten years from these sources:

TABLE III
LADWP Water Supply

Year	Los Angeles Aqueducts	Local Groundwater	MWD	Recycled Water	Transfer, Spread, Spills, and Storage	Total
2003	251,340	86,341	317,015	1,759	2,528	653,928

Note: Units are in AF

[15] *Id.* at 126.

Los Angeles Aqueducts

Snowmelt runoff from the Eastern Sierra Nevada Mountains is collected and conveyed to the City via the LAA. LAA supplies come primarily from snowmelt and secondarily from groundwater pumping, and can fluctuate yearly due to the varying hydrologic conditions. In recent years, LAA supplies have been less than the historical average because of environmental restoration obligations in Mono and Inyo Counties.

The City holds water rights in the Eastern Sierra Nevada where LAA supplies originate. These supplies originate from both streams and from groundwater. In 1905, the City approved a bond measure for the purchase of land and water rights in the Owens River Valley. By 1913, the first LAA began its deliveries of water to the City primarily from surface water diversions from the Owens River and its tributaries. Historically, these supplies were augmented from time to time by groundwater extractions from beneath the lands that the City had purchased in the Owens Valley.

In 1940, the first LAA was extended north to deliver Mono Basin water to the City pursuant to water rights permits and licenses granted by the State Water Resources Control Board. In 1970, the second LAA was completed increasing total delivery capacity of the LAA system to approximately 561,000 AF per year. The second LAA was to be filled by completing the Mono Basin diversions originally authorized in 1940, by a more effective use of water for agricultural purposes on City-owned lands in the Owens Valley and Mono Basin and by increased groundwater pumping from the City's lands in the Owens Valley.

In 1972, Inyo County filed a California Environmental Quality Act (CEQA) lawsuit challenging the City's groundwater pumping program for the Owens Valley. The lawsuit was finally ended in 1997, with the County of Inyo and the City of Los Angeles entering into a long-term water agreement for the management of groundwater in the Owens Valley. That water agreement, entered as a judgment of the Superior Court in the County of Inyo (County of Inyo vs. City of Los Angeles, Superior Court No. 12908) outlines the management of the City's Owens Valley groundwater resources. As a result of this water agreement and subsequent Memorandum of Understanding, LADWP has dedicated 37,000 AF of water annually for enhancement and mitigation projects throughout Owens Valley which includes the rewatering of 62 miles of the Lower Owens River. LADWP also provides approximately 80,000 AF of water annually for other uses in the Owens Valley such as irrigation, town water supplies, stockwater, wildlife and recreational purposes.

Further, in September 1994 by virtue of the public trust doctrine, the State Water Resources Control Board issued Decision 1631 which placed conditions on LADWP's water gathering activities from Mono Basin. LADWP currently export approximately 16,000 AF of water annually from the Mono Basin. LADWP has implemented an extensive restoration and monitoring programs in Mono Basin to increase the level of Mono Lake and to improve stream conditions, fisheries and waterfowl habitats in Walker, Parker, Rush and Lee Vining Creeks. With reduced diversions from the Mono Basin and favorable hydrologic conditions, Mono Lake's elevation has risen overtime. Once the elevation of Mono Basin reaches 6,391 feet above mean sea level, a moderate increase in water exports from the Mono Basin will be permitted pursuant to the Decision 1631.

Currently, up to 74,000 AF of water annually is being utilized for environmental restoration in Mono Basin.

In July 1998, LADWP and the Great Basin Unified Air Pollution Control District (GBUAPCD) entered into a Memorandum of Agreement to mitigate dust emissions from Owens Lake. As of December 31, 2008, LADWP mitigated dust emissions from 29.8 square miles of Owens Lake in accordance with the GBUAPCD's 2003 revised State Implementation Plan. As of April 1, 2010, LADWP mitigated an additional 9.2 square miles in accordance with the GBUAPCD's 2008 State Implementation Plan. Upon completion of Phase 8 in October 2012, LADWP has mitigated dust emissions from a total of approximately 42 square miles of Owens Lake requiring approximately 95,000 AF of water annually to sustain the dust mitigation program.

Average deliveries from the LAA system have been approximately 206,815 AF of water annually over the last five fiscal years. The average annual long-term LAA delivery over the next 25 years, using the 50-year average hydrology from FY 1956/57 to 2005/06, is expected to be approximately 254,000 AFY and gradually decline to 244,000 AFY due to projected climate change impacts.

Groundwater

The San Fernando and Sylmar Basins are subject to the judgment in City of San Fernando vs. the City of Los Angeles. Pumping is reported to the court-appointed Upper Los Angeles River Area (ULARA) Watermaster. The Central Basin is also subject to court Judgments. Pumping is reported to the California Department of Water Resources (DWR) who acts as Watermaster.

SFB is the largest of four basins within ULARA. The basin consists of 112,000 acres of land and comprises 91.2 percent of the ULARA valley fill. LADWP has accumulated nearly 486,759 AF of stored water credits in the SFB as of October 2011. This is water LADWP can withdraw from the basin during normal and dry years or in an emergency, in addition to LADWP's approximately 87,000 AF annual entitlement in the basin. Majority of LADWP's groundwater is extracted from the SFB. Sylmar Basin is located in the northern part of the ULARA, consisting of 5,600 acres and comprises 4.6 percent of the ULARA valley fill. LADWP currently has an annual entitlement of 3,405 AF from the Sylmar Basin.

Court decision on pumping rights in ULARA was implemented in a judgment on January 26, 1979. Enclosed with the assessment are copies of those pages from the judgment showing the entitlements (see Appendix D). Further information about the ULARA is in ULARA Watermaster Report. The ULARA Watermaster report and some background information on the judgment are available for review at the office of the ULARA Watermaster or on-line at www.ularawatermaster.com.

LADWP additionally has adjudicated rights to extract groundwater from the Central Basin. Annual entitlement to the Central Basin is 15,000 AF. See Appendix D for copies of relevant portions of the judgments. Complete judgments are available for review at DWR.

For the period of July 2012 to June 2013, LADWP extracted 50,550 AF, 1,952 AF, and 6,310 AF from the San Fernando, Sylmar, and Central Basins, respectively. LADWP plans to continue production from its groundwater basins in the coming years to offset reductions in imported supplies. However, extraction from the basins will be limited by water quality and overdraft protection. Both LADWP and DWR have programs in place to monitor wells to prevent overdrafting. LADWP's groundwater pumping practice is based on a "safe yield" operation. The objective, over a period of years, is to extract an amount of groundwater equal to the native and imported water that recharges the basin. Extractions by LADWP from the San Fernando, Sylmar, and Central Basins for the last available five years are shown on Table IV.

TABLE IV
Local Groundwater Basin Supply

Fiscal Year (July-June)	San Fernando	Sylmar	Central
2007-2008	57,060	4,046	12,207
2008-2009	49,106	576	11,937
2009-2010	62,218	2,998	11,766
2010-2011	44,029	225	5,099
2011-2012	50,244	1,330	9,486
2012-2013	50,550	1,952	6,310

Note: Units are in AF

Metropolitan Water District of Southern California (MWD)

MWD is the largest water wholesaler for domestic and municipal uses in Southern California. As one of 26 member agencies, LADWP purchases water from MWD in addition to the supplies from local groundwater and the LAA. MWD imports a portion of its water supplies from Northern California through the State Water Project's (SWP) California Aqueduct and from the Colorado River through MWD's own Colorado River Aqueduct. LADWP will continue to rely on MWD to meet its current and future water needs.

In ongoing efforts to evaluate MWD's own import reliability, an assessment was done to address changes in demand and supply conditions, and to provide additional resource reserves to mitigate against uncertainties in demand projections and risks in implementing supply programs. All these efforts went into MWD's RUWMP.

All 26-member agencies have preferential rights to purchase water from MWD. Pursuant to Section 135 of the MWD Act, "Each member public agency shall have a preferential right to purchase from the district for distribution by such agency, or any public utility therein empowered by such agency for the purpose, for domestic and municipal uses within the agency a portion of the water served by the district which shall, from time to time, bear the same ratio to all of the water supply of the district as the total accumulation of amounts paid by such agency to the district on tax assessments and otherwise, excepting purchase of water, toward the capital cost and operating expense of the

district's works shall bear to the total payments received by the district on account of tax assessments and otherwise, excepting purchase of water, toward such capital cost and operating expense." This is known as preferential rights. As of June 30, 2013, LADWP has a preferential right to purchase 20.22 percent of MWD's total water supply.

LADWP has worked with MWD in developing a plan for allocating water supplies during periods of shortage. On February 12, 2008, the MWD Board adopted its Water Supply Allocation Plan. LADWP supported the adoption of this plan to acquire its dry weather condition supplies from MWD.

In response to the 2009 regulatory restrictions on water supplies from Northern California, the MWD Board announced on April 14, 2009, that supply deliveries to the member agencies would be reduced by ten percent. Reduced supply allocation was to be effective from July 1, 2009 through June 30, 2010, but in April 2010, the MWD Board approved an extension of the reduced supply allocation through June 30, 2011, primarily to restore the storage balances in MWD's groundwater and surface storage facilities.

On March 31, 2011, California Governor Jerry Brown declared an end to the statewide drought emergency that had been proclaimed earlier on February 27, 2009, by then-Governor of California Arnold Schwarzenegger. MWD's Board subsequently voted on April 12, 2011, to end implementation of the 2010/11 water supply allocation. In the same decision, the MWD Board also voted to not implement a water supply allocation for 2011/12. These actions restored full imported water deliveries to member agencies without risk of allocation penalties effective April 2011.

As extremely dry conditions have persisted since 2012 and Californians are facing water supply shortages with 2014 projected to become driest year on record, Governor Brown proclaimed a drought State of Emergency on January 17, 2014.

MWD has also been developing plans and taking efforts to provide additional water supply reliability for the entire southern California region. LADWP coordinates closely with MWD to ensure implementation of these water resource development plans. MWD's long-term plans to meet its member agencies' growing reliability needs are through improvements to the SWP as outlined in the Bay Delta Conservation Plan, water transfer programs, outdoor conservation measures, and development of additional local resources, such as recycling, brackish water desalination, and seawater desalination. These plans are contained in MWD's IRP and RUWMP, which can be found at www.mwdh2o.com. Additionally, MWD has more than 5.0 million AF of storage capacity available in reservoirs and banking/transfer programs, with approximately 2.37 million AF in that storage, and of that approximately 626 thousand AF in emergency storage as of January 1, 2014.

MWD established a policy objective for water supply reliability as part of its IRP. Policy objective is: Through the implementation of its IRP, MWD and its member agencies will have the full capability to meet full-service demands at the retail level at all times.

Recent Issues Related to the State Water Project

Federal Endangered Species Act (ESA) Litigation filed by several environmental interest groups in the United States District Court for the Eastern District of California alleged that existing biological opinions and incidental take statements inadequately analyzed impacts on listed species under the Federal ESA. On May 25, 2007, Federal District Judge Wanger issued a decision on summary judgment finding the United States Fish and Wildlife Service's (USFWS) biological opinion for Delta smelt was invalid. On December 14, 2007, Judge Wanger issued his Interim Remedial Order requiring that the SWP and Central Valley Project operate according to certain specified criteria until a new biological opinion for the Delta smelt is issued. USFWS released the new biological opinion on December 15, 2008. Based on the Water Allocation Analysis released by DWR on December 19, 2008, which analyzed the biological opinion's effects on State Water Project operations, export restrictions under median hydrologic conditions reduce deliveries to MWD by approximately 500,000 acre-feet.

MWD and other impacted agencies and stakeholders filed separate lawsuits in federal district court challenging the biological opinion, which the federal court consolidated under the caption Delta Smelt Consolidated Cases. On December 14, 2010, Judge Wanger issued a decision on summary judgment finding that there were major scientific and legal flaws in the Delta smelt biological opinion and remanding the biological opinion to the USFWS for reconsideration. The court's decision invalidates some of the restrictions on project operations contained in the Delta smelt biological opinion. On May 4, 2011, Judge Wanger issued a decision directing the USFWS to complete a new draft biological opinion by October 1, 2011, and to complete a final biological opinion with environmental documentation by December 1, 2013. These events have highlighted the challenges that water suppliers throughout the state currently face regarding supplies from the Delta.

On March 22, 2013, the DWR reduced the 2013 SWP water allocation for the remainder of calendar year 2013 from 40 percent to 35 percent of total contracted water deliveries to the SWP contractors. Thirty-five percent of 1,911,500 AFY, which is the MWD's contracted water delivery amount, is 669,025 AFY. This decrease was primarily due to the well below average statewide snowpack and precipitation. For 2014, DWR initially approved on November 19, 2013, a five percent allocation for long-term SWP contractors. A five percent for MWD contracted water delivery amount is 95,575 AFY. DWR may further revise allocations if warranted by the year's developing hydrologic and water supply conditions.

Delta Policy Legislation

In November 2009, the State Legislature and then Governor Arnold Schwarzenegger passed the 2009 Comprehensive Water Package, which consisted of four policy bills and an $11.14 billion bond proposal designed to ensure a reliable water supply for California's future and to restore the Delta and other ecologically sensitive areas. The "Water Bond" is subject to voter approval and is on the November 4, 2014, ballot. The Water Bond Measure was originally certified to be on the state's 2010 ballot. It was removed and placed on the 2012 ballot. The California State Legislature, on July 5, 2012, approved a bill to take the measure off the 2012 ballot and put it on the 2014 ballot.

Senate Bill (SB) X7-1 (Simitian) of the 2009 Water Package established the coequal goals for the Delta: to provide a more reliable water supply for California and to protect, restore, and enhance the Delta ecosystem. SB X7-1 also established a framework to achieve the co-equal goals for the Delta by creating a new Delta governance structure - including the Delta Stewardship Council, Delta Conservancy; and Delta Protection Commission - and laying out a process for determining the consistency of the Bay Delta Conservation Plan (BDCP) with the co-equal goals.

Implementation of the four policy bills in the 2009 Water Package is currently underway, including the parallel development of the Delta Plan, a comprehensive, long-term management plan for the Delta adopted by the Delta Stewardship Council, and the BDCP, which will provide the basis for the issuance of endangered species permits for the operation of the State Water Project and Central Valley Project and for Delta conveyance improvements. The Delta Plan and associated Environmental Impact Report were released to the public in May 2013; the BDCP process is expected to conclude in 2014.

Responsibilities of entities created by the Delta Governance Bill are as follows:

- Delta Stewardship Council
  - Independent agency of the state composed of seven members with the responsibility to oversee and coordinate state agency actions within the Delta.
  - Develop a Delta Plan that will include all state and federal Delta ecosystem, flood management, water supply, and local economic sustainability efforts and will serve as a guide for state and local agencies to ensure that their actions are consistent with their policies.
  - Develop Performance measures to assess the progress of achieving the goals of the Delta Plan.
  - Determine compliance with the Delta Plan and will serve as the appellate body in the event of disputes over the consistency of a project with the Delta Plan.
  - Ensure consistency of the BDCP with the co-equal goals of water supply reliability and Delta restoration.

- Delta Conservancy
  - Eleven member entity with the responsibility to develop and adopt a strategic plan that will coordinate investments in the Delta's natural and cultural resources.
  - Promote the economic vitality in the Delta through increased tourism and the promotion of Delta legacy communities.
  - Promote environmental education about, and the public use of, public lands in the Delta.

- Delta Protection Commission
  - Reduce its membership from 23 to 15 and will continue to provide a forum for Delta residents to engage in decisions regarding actions to recognize and enhance the cultural, recreational, and agricultural resources of the Delta.

- Adopt an economic sustainability plan for the Delta, which is to include flood protection recommendations to state and local agencies, and is to be included in the Delta Stewardship Council's Delta Plan.

- Delta Watermaster
  - Exercise authority of the State Water Resources Control Board and monitor and enforce orders as well as license and permit terms and conditions relating to water diversions in the Delta.

- Delta Independent Science Board and Delta Science Program
  - The Delta Independent Science Board will consist of no more than ten members and will provide oversight of the scientific research, monitoring, and assessment programs that support adaptive management of the Delta.
  - The Delta Science Program will be led by a Delta Stewardship Council appointed lead scientist, and will provide unbiased scientific information to inform decision-making in the Delta.

In addition to the Delta Governance Bill, the proposed Water Bond would allocate funds for projects to assist in achieving the BDCP's co-equal goal of maintaining and restoring the Delta ecosystem. BDCP will help to reduce the risk posed by seismic activities to water supplies from the Delta, protect drinking water quality and help to alleviate conflicts between water management and environmental protection. BDCP success is crucial to providing long-term solutions in the Delta and will help to improve and maximize SWP reliability, and consequently MWD's overall reliability. These statewide initiatives along with LADWP's local supply and efficiency programs will insure that LADWP is better prepared to deal with the natural variability of our local water supplies, by having more reliable access to supplemental water supplies purchases from MWD.

In response to these recent developments in the Delta, MWD is engaged in planning processes that will identify local solutions that, when combined with the rest of its supply portfolio, will ensure a reliable long-term water supply for its member agencies. In the near-term, MWD will continue to rely on the plans and policies outlined in its RUWMP and IRP to address water supply shortages and interruptions (including potential shut downs of SWP pumps) to meet water demands. An in depth discussion on MWD is attached in Appendix F.

Secondary Sources and Other Considerations

Stormwater capture, water conservation, and recycling will play an increasing role in meeting future water demands. LADWP has implemented stormwater capture, conservation and recycling programs with efforts under way to further promote and increase the level of these programs. LADWP is committed to supply a higher percentage of the City's water demand through local water supply development.

Integrated planning has also filled an important role in developing secondary sources of supply for the City. It is generally true for large undertakings that a concerted effort with others who share a common goal will produce a higher degree of success. This is an

approach that has been taken in southern California with overall water resources planning. The City works closely with MWD, the City's Department of Public Works Bureau of Sanitation (BOS) (wastewater agency), other regional water providers, and various stakeholder groups to develop and implement programs that reduce overall water use. The City has also pioneered community-based job programs to assist in conservation program implementation. While significantly assisting with program implementation, these community-based organizations also provide important social and economic benefits to neighborhoods.

Integrated resources planning is a process that is being used by many water and wastewater providers to meet their future needs in the most effective way possible, and with the greatest public support. The planning process differs from traditional planning processes in that it incorporates:

- Public stakeholders in an open, participatory process.
- Multiple objectives such as reliability, cost, water quality, environmental stewardship, and quality of life.
- Risk and uncertainty.
- Partnerships with other agencies, institutions, and non-governmental organizations.

Through integrated planning, not only water-use efficiency and recycling activities are maximized, but potential alternative supplies such as water transfers and stormwater reuse are considered and evaluated as part of the City's long-term water resources portfolio.

Rates

Capital costs to finance facilities for the delivery of water supply to LADWP's service area are supported through customer-billed water rates. The LADWP Board of Commissioners (Board) sets the rates subject to approval of the City Council by ordinance. The Board is obligated by the City Charter to establish water rates and collect charges in an amount sufficient to service the water system indebtedness and to meet its expenses for operation and maintenance.

The water rate structure contains a Water Procurement Adjustment Factor under which the cost of purchased water from MWD is recovered, a Demand Side Management and Reclaimed Water Cost Adjustment Factor which recovers the cost of water conservation programs, and reclaimed water projects. In addition, the rate structure contains a Water Quality Improvement Adjustment Factor to recover expenditures to upgrade and equalize water quality throughout the City and to construct facilities to meet state and federal water quality standards, including the payment of debt service on bonds issued for such purposes.

Findings

Proposed Project is estimated to increase the total water demand within the site by maximum of 2,793 AF annually based on review of information submitted by the Planning Department.

The maximum of 2,793 AFY increase in the total water demand for Proposed Project falls within the available and projected water supplies for normal, single-dry, and multiple-dry years through the year 2035 as described in LADWP's UWMP. LADWP finds it will be able to meet the proposed water demand of the Proposed Project, as well as existing and planned future water demands of its service area.

This WSA approval addresses the City's long term water supply and demand forecasts to accommodate Proposed Project, and is not an approval for water service connection nor determination of adequate distribution infrastructure and capacity to serve Proposed Project. A separate request shall be made to LADWP requesting an evaluation of water service connection for Proposed Project.

Mr. James B. McDaniel
Senior Assistant General Manager – Water System
CITY OF LOS ANGELES
DEPARTMENT OF WATER AND POWER
111 North Hope Street, Room 1455
Los Angeles, CA 90012

RE: REQUEST FOR WATER SUPPLY ASSESSMENT FOR PROJECT THAT ENCOMPASSES THE HALF-MILE CORRIDOR OF THE EXPOSITION LIGHT RAIL LINE BETWEEN THE CULVER CITY AND EXPOSITION/BUNDY STATIONS; ENV-2013-622-EIR

Dear Mr. McDaniel,

The Department of City Planning is preparing an Environmental Impact Report (EIR) in accordance with the California Environmental Quality Act (CEQA) for a proposed project that encompasses the half-mile corridor along the Exposition Light Rail Line between the Culver City station and Exposition/Bundy station (Proposed Project). Pursuant to CEQA Guidelines Section 15206(b)(2)(1), this project meets the criteria for being of "regional significance" because it includes a proposed local general plan, element, or amendment thereof for which an EIR must be prepared.

For this reason, the Proposed Project must comply with the water supply assessment requirements of State Water Code (Section 10910-10915). As such, we are requesting that the Los Angeles Department of Water and Power prepare a water supply assessment to determine its ability to meet the water demands of this Project.

The requirements for a water supply assessment include the identification of existing water supply entitlements, water rights, or water service contracts held by LADWP's public water system, and prior years' water deliveries received by LADWP's public water system. Please refer to CWC Section 10910(e) and CWC Section 10910(f) and comply with the requirements of those sections.

The Department of City Planning requests that the water supply assessment for the Project include a discussion of whether LADWP's public water system's total projected water supplies available during normal, single dry, and multiple dry water years will meet the projected water demand associated with the Project, in addition to LADWP's public water system's existing and

planned future uses, including agricultural and manufacturing uses, pursuant to CWC Section 10910(c)(3).

Provided below is a description of the Proposed Project.

Project Location

The Project – known as the Exposition Corridor Transit Neighborhood Plan - is located in the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas of the City of Los Angeles. It includes all properties located roughly within a half-mile from the Exposition Light Rail line between the following five stations: Culver City, Palms, Westwood/Rancho Park, Exposition/Sepulveda, and Exposition/Bundy (See Attachment A).

Project Description

The Exposition Corridor Transit Neighborhood Plan area comprises 1,970 acres. Of this area, 256 acres are proposed for zoning and land use changes that would result in increased capacity for various land uses (See Attachment A). *Note that the project description and details below describe only these 256 acres of "change area."* It is assumed that the remaining land area within the Exposition Corridor Transit Neighborhood Plan area will not incur additional water usage beyond the levels already contemplated by current plans, and therefore is excluded from this summary.

The Project area is presently developed with approximately 5,104,548 square feet of non-residential uses. Of this square footage, the primary uses are office (1,940,009 square feet) and industrial (1,693,343 square feet), with the remaining as retail, restaurant, medical, and institutional use. The area currently contains approximately 1,050 dwelling units, including 272 single-family dwelling units, with the remaining units in duplex and larger multi-family buildings. A summary of the existing uses in the Project area is found in Table 1a below.

Table 1a
Existing Project Details

Existing Land Use	**Size/Quantity**
Industrial	1,693,343 SF
Office	1,940,009 SF
Medical	137,419 SF
Restaurant	44,078 SF
Retail	1,115,604 SF
Institutional	174,095 SF
Residential (total units)	1,057 DU
Studio	68 DU
1 Bedroom	203 DU
2 Bedroom	515 DU
3 Bedroom	271 DU
Landscaping (planted open space)	499,974 SF
Existing Parking	**Size/Quantity**
Surface Parking (non-residential)	7,363 stalls
Structured/Subterranean Parking (non-residential)	4,330 stalls
Structured/Subterranean Parking (multi-family residential)	1,261 stalls
Private Garages (single-family and two-family residential)	684 stalls

In the Plan's horizon year of 2035, it is expected that a significant number of properties within the Project area will be redeveloped with new land uses and intensities consistent with the Plan. It is also expected that some properties will remain as existing, with no change to the development on the site. The Proposed Project details described below account for the cumulative effect of all these scenarios. The total square footage and number of dwelling units represents the sum of existing uses that are expected to remain in addition to the new uses that will be introduced.

The Plan is expected to result in a total of 4,394 dwelling units and 10,813,000 square feet of non-residential development within the Project area. Table 1b, below, provides a detailed breakdown of the expected types of residential and non-residential use.

Table 1b
Proposed Project Details

Proposed Land Use	**Size/Quantity**
Industrial	2,062,968 SF
Office	5,776,310 SF
Medical	412,593 SF
Restaurant	171,500 SF
Retail	1,972,251 SF
Institutional	417,205 SF
Residential (Total units)	4,394 DU
Studio	602 DU
1 Bedroom	1,758 DU
2 Bedroom	1,318 DU
3 Bedroom	716 DU
Landscaping (planted open space)	304,886 SF
Proposed Parking	**Size/Quantity**
Surface Parking (non-residential)	7,712 stalls
Structured/Subterranean Parking (non-residential)	22,917 stalls
Structured/Subterranean Parking (multi-family residential)	6,335 stalls
Private Garages (single-family + two-family)	342 stalls

The above details describe the expected level of development resulting from the Plan's proposed regulations, which limit the amount of residential use according to zone. The Plan is also contemplating an alternative compliance system, in which property owners have the option to develop a different mix of uses in exchange for providing certain public benefits. Taking into account the current strong market demand for residential use, it is expected that under this alternative compliance system some land would be redeveloped with a greater amount of residential use when compared with development under the Plan's basic requirements. The details of this alternative are shown in Table 1c below. We are requesting that DWP analyze the impacts of both the Plan and the alternative compliance scenario independently, since both are possible outcomes and result in unique water supply impacts.

Table 1c
Proposed Project with Alternative Compliance Details

Proposed Land Use	**Size/Quantity**
Industrial	1,695,486 SF
Office	4,747,360 SF
Medical	339,097 SF
Restaurant	140,950 SF
Retail	1,620,928 SF
Institutional	342,887 SF
Residential (Total units)	6,135 DU
Studio	841 DU
1 Bedroom	2,455 DU
2 Bedroom	1,840 DU
3 Bedroom	1,000 DU
Landscaping (planted open space)	320,130 SF
Proposed Parking	**Size/Quantity**
Surface Parking (non-residential)	6,437 stalls
Structured/Subterranean Parking (non-residential)	19,092 stalls
Structured/Subterranean Parking (multi-family residential)	8,946 stalls
Private Garages (single-family + two-family)	342 stalls

Project Conformance with the General Plan

As proposed, the Project does not generally conform with the use and intensity of development permitted by the General Plan for this area. The City is proposing to amend the General Plan and rezone the area to allow for more intense development as described above. To this end, the City is initiating a General Plan Amendment and Zone Changes and establishment of a Specific Plan. For comparative analysis, Table 2 below summarizes the expected level of development in 2035 under the existing General Plan and present zoning; under the proposed Plan and new zoning; and under the proposed Plan and new zoning with the alternative compliance system. Again we are requesting that both development scenarios under the proposed Plan be analyzed independently - the "Expected Level of Development," and the "Expected Level of Development (Alternative Compliance)."

Table 2
General Plan and Project Development Comparison

Existing General Plan		Proposed Plan		
Site Zoning	Expected Level of Development	Site Zoning	Expected Level of Development	Expected Level of Development (Alternative Compliance)
R1	195 DU	R3	548 DU	548 DU

Thank you for your assistance with this request. Your expert evaluation will help to ensure that our analysis of the proposed Project's impacts on water demand is accurate and complete. If you have any questions or comments, please contact Lameese Elqura Chang at (213) 978-1178. In order to ensure a timely completion of our analysis, please provide your response (via mail, email, or fax) within 60 days from the date of this letter.

Sincerely,

Michael J. LoGrande

Subject:	Re: Exposition Corridor Transit Neighborhood Plan Project-Scope Confirmation
Date:	Tuesday, December 24, 2013 11:26:49 AM

Val,

I have reviewed this corrected scope and am confirming that it is consistent with the information we provided, and can be used for the LADWP water demand calculations for the Expo Corridor Transit Neighborhood Plan.

Re: WATER CONSERVATION COMMITMENTS FOR EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN

Dear Mr. McDaniel:

The City of Los Angeles proposes to adopt the Exposition Corridor Transit Neighborhood Plan (Specific Plan). The Plan area, which encompasses approximately 1,970 acres, is generally bounded by ½ mile corridor around the Exposition Light Rail Line between the Culver City station and the Exposition/Bundy station. Of this Plan area, 256 acres are proposed for zoning and land use changes. This "change area" constitutes the proposed Project.

The proposed Project anticipates by 2035 no more than approximately 2,062,968 square feet of industrial uses, 5,776,310 square feet of office uses, 412,593 square feet of medical uses, 1,972,251 square feet of retail uses, 171,500 square feet of restaurant uses, 4,394 dwelling units, and 417,205 square feet of institutional uses. In addition, the Plan anticipates no more than 545,766 square feet of landscaping (planted open space) on private property, and 127,492 square feet of landscaping on public right-of-way (including tree wells and medians.) The Project would also include 7,712 stalls of surface parking. As part of the Project, approximately 50% of the existing development that collectively comprises approximately 5,104,548 square feet of non-residential floor area and 1,057 dwelling units on-site is expected to be removed.

An alternative version of the project (Alternative Project), which is also being analyzed as part of the same Water Supply Assessment, anticipates the following amount of development by 2035: approximately 1,695,486 square feet of industrial uses, 4,747,360 square feet of office uses, 339,097 square feet of medical uses, 1,620,928 square feet of retail space, 140,950 square feet of restaurant uses, 6,136 dwelling units, and 342,887 square feet of institutional uses. In

addition, the Plan anticipates that no more than 605,389 square feet of landscaping (planted open space) on private property, and 127,492 square feet of landscaping on public right-of-way (including tree wells and medians.) The Alternative Project would also include 6,437 stalls of surface parking.

The City of Los Angeles' policy is that future water needs shall be met by expanding water recycling and conservation. In adopting the Plan, the Los Angeles Department of City Planning shall require the following water conservation measures for all new development within the Project area. Such requirements will be addressed through the environmental mitigation measures in the Environmental Impact Report as well as plan standards in the Specific Plan, as appropriate. Note that any existing development within the Project area that remains will not be required to conform to these measures.

- High Efficiency Toilets with flush volume of 1.0 gallons of water per flush
- Faucets – all indoor faucets (other than City Ordinance No.181480 requirements) with flow rate of 1.5 gallons per minute or less
- High Efficiency Clothes Washers (Residential) – water factor of 5.0 or less
- Waterless Urinals
- Showerheads – no more than one showerhead per stall
- Rotating Sprinkler Nozzles for Landscape Irrigation – 0.5 gallons per minute
- Weather Based Irrigation Controller
- Drought Tolerant Plants – 100% of total landscaping in the public right-of-way; 70% of total landscaping on private property.
- High Efficiency Clothes Washers (Commercial) – water factor of 7.5 or less
- Domestic Water Heating System located in close proximity to point(s) of use
- Individual Metering and billing for water use
- Tankless and on-demand Water Heaters
- Cooling Tower Conductivity Controllers or Cooling Tower pH Conductivity Controllers
- Water-Saving Pool Filter
- Leak Detection System for swimming pools and Jacuzzi
- Drip/Subsurface Irrigation (Micro-Irrigation)
- Micro-Spray
- Proper Hydro-zoning (grouping plants with similar water requirements together)
- Zoned Irrigation
- Landscaping Contouring to minimize precipitation runoff
- Water Conserving turf (approximately 31,488 square feet, Plant Factor = 0.3)
- Rainwater Harvesting

The Plan shall require that all Projects comply with the City of Los Angeles Low Impact Development Ordinance (City Ordinance No. 181899) and to implement Best Management Practices that have stormwater recharge or reuse benefits for the entire Project as applicable:

- Infiltration Basin (drainage area of 5-50 acres) – captures first-flush stormwater, removes particulate pollutants and some soluble pollutants, and contributes toward recharging groundwater.
- Infiltration Trench (drainage area of less than 5 acres) – similar to infiltration basin but used for smaller drainage areas to capture and infiltrate rainwater.
- Catch Basin Insert - a device that can be inserted into an existing catch basin design to provide some level of runoff contaminant removal.
- Catch Basin Screens

- Pervious Pavements – captures runoff by allowing stormwater to pass through the pavement surface and then infiltrate into the groundwater basin.
- Cistern - captures stormwater runoff as it comes down through the roof gutter system.
- Greywater Systems
- Primary (On-Site) Waste Water Treatment Systems

The following items are required by the Water Efficiency Requirements Ordinance - City Ordinance No.180822, Los Angeles Green Building Code Ordinance - City Ordinance No. 181480, and the 2010 California Green Building Standard Code, and the City acknowledges that all new development within the Plan area will comply with the following requirements:

- Faucets – maximum flow rate not to exceed:
  - Private Use Lavatory Faucets – 1.5 gallons per minute
  - Public Use Lavatory Faucets (residential buildings over 6 stories high and nonresidential buildings) – 0.4 gallons per minute, self-closing (0.2 gallons per minute for metering faucet)
  - Public Use Lavatory Faucets (residential buildings up to 6 stories high) – 0.5 gallons per minute, self-closing (0.25 gallons per minute for metering faucet)
  - Pre-rinse Spray Valve installed in Commercial Kitchens – 1.6 gallons per minute
  - Kitchen faucets and wash fountains – 1.8 gallons per minute at 60 psi
  - All Other Indoor Faucets – 2.2 gallons per minute

- Low-flow Showerheads – maximum flow rate not to exceed 2.0 gallons per minute, except emergency shower heads for health or safety purposes.

- All installed dishwashers must be Energy Star rated and in compliance with the following:
  - The maximum water use for high efficiency commercial dishwashers shall be in accordance with the following table:

Type	High-Temperature Maximum gallons per rack	Chemical-Maximum gallons per rack
Conveyer	0.70	0.62
Door	0.95	1.16
Undercounter	0.90	0.98

  - The maximum water use per washing cycle for high efficiency domestic dishwashers shall be 5.8 gallons.

- All cooling towers must operate at a minimum of 5.5 cycles of concentration.

- Single-pass cooling systems are strictly prohibited for use in devices, processes, or equipment installed in commercial, industrial, or multi-family residential buildings. This prohibition shall not apply to devices, processes, or equipment installed for health or safety purposes that cannot operate safely otherwise.

The following table shows the estimated number of new plumbing fixtures/appliances count for the Proposed Project:

	Residential Dwelling	Industrial	Office	Medical	Restaurant	Retail	Institutional
Toilets	5,507	32	117	20	38	32	144
Urinals	0	0	43	5	11	8	8
Bath Faucets	3,866	32	116	16	26	20	130
Kitchen Faucets	3,866	0	0	0	75	0	0
Showerheads	5,507	0	0	0	0	0	11
Clothes washer	1,833	0	0	0	0	0	0
Dishwasher	3,866	0	0	0	75	0	0

The following table shows the estimated number of new plumbing fixtures/appliances for the Proposed Alternative Project:

	Residential Dwelling	Industrial	Office	Medical	Restaurant	Retail	Institutional
Toilets	8,054	44	115	19	36	36	157
Urinals	0	0	42	5	10	9	8
Bath Faucets	5,607	44	115	16	25	22	140
Kitchen Faucets	5,607	0	0	0	70	0	0
Showerheads	8,054	0	0	0	0	0	13
Clothes washer	2,666	0	0	0	0	0	0
Dishwasher	5,607	0	0	0	70	0	0

Appendix D

Adjudicated Groundwater Basin Judgments

- San Fernando Basin – Judgment No. 650079
- Sylmar Basin – Judgment No. 650079
- Central Basin – Judgment No, 786656

SUPERIOR COURT OF THE STATE OF CALIFORNIA

FOR THE COUNTY OF LOS ANGELES

THE CITY OF LOS ANGELES, Plaintiff, vs. CITY OF SAN FERNANDO, ET AL. Defendants.	No. 650079 JUDGMENT

There follows by consecutive paging Recitals (page 1), Definitions and List of Attachments (pages 1 to 6), Designation of Parties (page 6), Declaration re Geology and Hydrology (pages 6 to 12), Declaration of Rights (pages 12 to 21), Injunctions (pages 21 to 22), Continuing Jurisdiction (page 23), Watermaster (pages 23 to 29), Physical Solution (pages 29 to 34), and Miscellaneous Provisions (pages 34 to 35), and Attachments (pages 36 to 46). Each and all of said several parts constitute a single integrated Judgment herein.

4.2.3 Separate Ground Water Basins. The physical and geologic characteristics of each of the ground water basins, Eagle rock, Sylmar, Verdugo and San Fernando, cause impediments to inter-basin ground water flow whereby there is created separate underground reservoirs. Each of said basins contains a common source of water supply to parties extracting ground water from each of said basins. The amount of underflow from Sylmar Basin, Verdugo Basin and Eagle Rock Basin to San Fernando Basin is relatively small, and on the average has been approximately 540 acre feet per year from the Sylmar Basin; 80 acre feet per year from Verdugo Basin; and 50 acre feet per year from Eagle Rock Basin. Each has physiographic, geologic and hydrologic differences; one from the other, and each meets the hydrologic definition of "basin". The extractions of water in the respective basins affect the other water users within that basin but do not significantly or materially affect the ground water levels in any of the other basins. The underground reservoirs of Eagle Rock, Verdugo and Sylmar Basins are independent of one another and of the San Fernando Basin.

4.2.4 Safe Yield and Native Safe Yield. The safe yield and native safe yield, stated in acre feet, of the three largest basins for the year 1964-65 was as follows:

Basin	Safe Yield	Native Safe Yield
San Fernando	90,680	43,660
Sylmar	6,210	3,850
Verdugo	7,150	3,590

The safe yield of Eagle Rock Basin is derived from imported water delivered by Los Angeles. There is no measurable native safe yield.

4.2.5 Separate Basins -- Separate Rights. The rights of the parties to extract ground water within ULARA are separate and distinct as within each of the several ground water basins within said watershed.

4.2.6 Hydrologic Condition of Basins. The several basins within ULARA are in varying hydrologic conditions, which result in different legal consequences.

4.2.6.1 San Fernando Basin. The first full year of overdraft in San Fernando Basin was 1954-55. It remained in overdraft continuously until 1968, when an injunction

SUPERIOR COURT OF THE STATE OF CALIFORNIA

FOR THE COUNTY OF LOS ANGELES

CENTRAL AND WEST BASIN WATER REPLENISHMENT DISTRICT, etc., Plaintiff, v. CHARLES E. ADAMS, et al., Defendants. CITY OF LAKEWOOD, a municipal corporation, Cross-Complaint, v. CHARLES E. ADAMS, et al., Cross-Defendants.	No. 786,656 SECOND AMENDED JUDGMENT (Declaring and establishing water rights in Central Basin and enjoining extractions therefrom in excess of specified quantities.)

The above-entitled matter duly and regularly came on for trial in Department 73 of the above-entitled Court (having been transferred thereto from Department 75 by order of the presiding Judge), before the Honorable Edmund M. Moor, specially assigned Judge, on May 17, 1965, at 10:00 a.m. Plaintiff was represented by its attorneys BEWLEY, KNOOP,

of the close of the water year ending September 30, 1978 in accordance with the Watermaster Reports on file with this Court and the records of the Plaintiff. This tabulation does not take into account additions or subtractions from any Allowed Pumping Allocation of a producer for the 1978-79 water year, nor other adjustments not representing change in fee title to water rights, such as leases of water rights, nor does it include the names of lessees of landowners where the lessees are exercising the water rights. The exercise of all water rights is subject, however, to the provisions of this Judgment is hereinafter contained. All of said rights are of the same legal force and effect and are without priority with reference to each other. Each party whose name is hereinafter set forth in the tabulation set forth in Appendix "2" of this judgment, and after whose name there appears under the column "Total Water Right" the figure "0" owns no rights to extract any ground water from Central Basin, and has no right to extract any ground water from Central Basin.

(b) Defendant The City of Los Angeles is the owner of the right to extract fifteen thousand (15,000) acre feet per annum of ground water from Central Basin. Defendant Department of Water and Power of the City of Los Angeles has no right to extract ground water from Central Basin except insofar as it has the right, power, duty or obligation on behalf of defendant The City of Los Angeles to exercise the water rights in Central Basin of defendant The City of Los Angeles. The exercise of said rights are subject, however, to the provisions of this judgment hereafter contained, including but not limited to, sharing with other parties in any subsequent decreases or increases in the quantity of extractions permitted from Central Basin, pursuant to continuing jurisdiction of the Court, on the basis that fifteen thousand (15,000) acre feet bears to the Allowed Pumping Allocations of the other parties.

(c) No party to this action is the owner of or has any right to extract ground water from Central Basin except as herein affirmatively determined.

2. Parties Enjoined as Regards Quantities of Extractions.

Appendix E

Water Supply Assessment Provisions
California Water Code Section 10910-10915

WATER CODE
SECTION 10910-10915

10910. (a) Any city or county that determines that a project, as defined in Section 10912, is subject to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) under Section 21080 of the Public Resources Code shall comply with this part.

(b) The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act pursuant to Section 21080.1 of the Public Resources Code, shall identify any water system that is, or may become as a result of supplying water to the project identified pursuant to this subdivision, a public water system, as defined in Section 10912, that may supply water for the project. If the city or county is not able to identify any public water system that may supply water for the project, the city or county shall prepare the water assessment required by this part after consulting with any entity serving domestic water supplies whose service area includes the project site, the local agency formation commission, and any public water system adjacent to the project site.

(c) (1) The city or county, at the time it makes the determination required under Section 21080.1 of the Public Resources Code, shall request each public water system identified pursuant to subdivision (b) to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan adopted pursuant to Part 2.6 (commencing with Section 10610).

(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g).

(3) If the projected water demand associated with the proposed project was not accounted for in the most recently adopted urban water management plan, or the public water system has no urban water management plan, the water supply assessment for the project shall include a discussion with regard to whether the public water system's

total projected water supplies available during normal, single dry, and multiple dry water years during a 20-year projection will meet the projected water demand associated with the proposed project, in addition to the public water system's existing and planned future uses, including agricultural and manufacturing uses.

(4) If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.

(d) (1) The assessment required by this section shall include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts.

(2) An identification of existing water supply entitlements, water rights, or water service contracts held by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), shall be demonstrated by providing information related to all of the following:

(A) Written contracts or other proof of entitlement to an identified water supply.

(B) Copies of a capital outlay program for financing the delivery of a water supply that has been adopted by the public water system.

(C) Federal, state, and local permits for construction of necessary infrastructure associated with delivering the water supply.

(D) Any necessary regulatory approvals that are required in order to be able to convey or deliver the water supply.

(e) If no water has been received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts, the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), shall also include in its water supply assessment pursuant to subdivision (c), an

identification of the other public water systems or water service contractholders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts, to the same source of water as the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has identified as a source of water supply within its water supply assessments.

(f) If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment:

(1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.

(2) A description of any groundwater basin or basins from which the proposed project will be supplied. For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree. For basins that have not been adjudicated, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.

(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historic use records.

(4) A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available,

including, but not limited to, historic use records.

(5) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project.

A water supply assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.

(g) (1) Subject to paragraph (2), the governing body of each public water system shall submit the assessment to the city or county not later than 90 days from the date on which the request was received. The governing body of each public water system, or the city or county if either is required to comply with this act pursuant to subdivision (b), shall approve the assessment prepared pursuant to this section at a regular or special meeting.

(2) Prior to the expiration of the 90-day period, if the public water system intends to request an extension of time to prepare and adopt the assessment, the public water system shall meet with the city or county to request an extension of time, which shall not exceed 30 days, to prepare and adopt the assessment.

(3) If the public water system fails to request an extension of time, or fails to submit the assessment notwithstanding the extension of time granted pursuant to paragraph (2), the city or county may seek a writ of mandamus to compel the governing body of the public water system to comply with the requirements of this part relating to the submission of the water supply assessment.

(h) Notwithstanding any other provision of this part, if a project has been the subject of a water supply assessment that complies with the requirements of this part, no additional water supply assessment shall be required for subsequent projects that were part of a larger project for which a water supply assessment was completed and that has complied with the requirements of this part and for which the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has concluded that its water supplies are sufficient to meet the projected water demand associated with the proposed project, in addition to the existing and planned future uses, including, but not limited to, agricultural and industrial uses, unless one or more of the following changes occurs:

(1) Changes in the project that result in a substantial increase

in water demand for the project.

(2) Changes in the circumstances or conditions substantially affecting the ability of the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), to provide a sufficient supply of water for the project.

(3) Significant new information becomes available which was not known and could not have been known at the time when the assessment was prepared.

10911. (a) If, as a result of its assessment, the public water system concludes that its water supplies are, or will be, insufficient, the public water system shall provide to the city or county its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. If the city or county, if either is required to comply with this part pursuant to subdivision (b), concludes as a result of its assessment, that water supplies are, or will be, insufficient, the city or county shall include in its water supply assessment its plans for acquiring additional water supplies, setting forth the measures that are being undertaken to acquire and develop those water supplies. Those plans may include, but are not limited to, information concerning all of the following:

(1) The estimated total costs, and the proposed method of financing the costs, associated with acquiring the additional water supplies.

(2) All federal, state, and local permits, approvals, or entitlements that are anticipated to be required in order to acquire and develop the additional water supplies.

(3) Based on the considerations set forth in paragraphs (1) and (2), the estimated timeframes within which the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), expects to be able to acquire additional water supplies.

(b) The city or county shall include the water supply assessment provided pursuant to Section 10910, and any information provided pursuant to subdivision (a), in any environmental document prepared for the project pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.

(c) The city or county may include in any environmental document an evaluation of any information included in that environmental

document provided pursuant to subdivision (b). The city or county shall determine, based on the entire record, whether projected water supplies will be sufficient to satisfy the demands of the project, in addition to existing and planned future uses. If the city or county determines that water supplies will not be sufficient, the city or county shall include that determination in its findings for the project.

10912. For the purposes of this part, the following terms have the following meanings:

(a) "Project" means any of the following:

(1) A proposed residential development of more than 500 dwelling units.

(2) A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.

(3) A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.

(4) A proposed hotel or motel, or both, having more than 500 rooms.

(5) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.

(6) A mixed-use project that includes one or more of the projects specified in this subdivision.

(7) A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500 dwelling unit project.

(b) If a public water system has fewer than 5,000 service connections, then "project" means any proposed residential, business, commercial, hotel or motel, or industrial development that would account for an increase of 10 percent or more in the number of the public water system's existing service connections, or a mixed-use project that would demand an amount of water equivalent to, or greater than, the amount of water required by residential development that would represent an increase of 10 percent or more in the number of the public water system's existing service connections.

(c) "Public water system" means a system for the provision of piped water to the public for human consumption that has 3000 or more service connections. A public water system includes all of the

following:

(1) Any collection, treatment, storage, and distribution facility under control of the operator of the system which is used primarily in connection with the system.

(2) Any collection or pretreatment storage facility not under the control of the operator that is used primarily in connection with the system.

(3) Any person who treats water on behalf of one or more public water systems for the purpose of rendering it safe for human consumption.

10914. (a) Nothing in this part is intended to create a right or entitlement to water service or any specific level of water service.

(b) Nothing in this part is intended to either impose, expand, or limit any duty concerning the obligation of a public water system to provide certain service to its existing customers or to any future potential customers.

(c) Nothing in this part is intended to modify or otherwise change existing law with respect to projects which are not subject to this part.

(d) This part applies only to a project for which a notice of preparation is submitted on or after January 1, 1996.

10915. The County of San Diego is deemed to comply with this part if the Office of Planning and Research determines that all of the following conditions have been met:

(a) Proposition C, as approved by the voters of the County of San Diego in November 1988, requires the development of a regional growth management plan and directs the establishment of a regional planning and growth management review board.

(b) The County of San Diego and the cities in the county, by agreement, designate the San Diego Association of Governments as that review board.

(c) A regional growth management strategy that provides for a comprehensive regional strategy and a coordinated economic development and growth management program has been developed pursuant to Proposition C.

(d) The regional growth management strategy includes a water element to coordinate planning for water that is consistent with the

requirements of this part.

(e) The San Diego County Water Authority, by agreement with the San Diego Association of Governments in its capacity as the review board, uses the association's most recent regional growth forecasts for planning purposes and to implement the water element of the strategy.

(f) The procedures established by the review board for the development and approval of the regional growth management strategy, including the water element and any certification process established to ensure that a project is consistent with that element, comply with the requirements of this part.

(g) The environmental documents for a project located in the County of San Diego include information that accomplishes the same purposes as a water supply assessment that is prepared pursuant to Section 10910.

INTRODUCTION

This Appendix A provides general information regarding The Metropolitan Water District of Southern California ("Metropolitan"), including information regarding Metropolitan's operations and finances. Statements included or incorporated by reference in this Appendix A constitute "forward-looking statements." Such statements are generally identifiable by the terminology used such as "plan," "project," "expect," "estimate," "budget" or other similar words. The achievement of results or other expectations contained in such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements. Actual results may differ from Metropolitan's forecasts. Metropolitan is not obligated to issue any updates or revisions to the forward-looking statements in any event.

Metropolitan maintains a website that may include information on programs or projects described in this Appendix A; however, none of the information on Metropolitan's website is incorporated by reference and none of such information is intended to assist investors in making an investment decision or to provide any additional information with respect to the information included in this Appendix A.

Formation and Purpose

Metropolitan is a metropolitan water district created in 1928 under authority of the Metropolitan Water District Act (California Statutes 1927, Chapter 429, as reenacted in 1969 as Chapter 209, as amended (herein referred to as the "Act")). The Act authorizes Metropolitan to: levy property taxes within its service area; establish water rates; impose charges for water standby and service availability; incur general obligation bonded indebtedness and issue revenue bonds, notes and short-term revenue certificates; execute contracts; and exercise the power of eminent domain for the purpose of acquiring property. In addition, Metropolitan's Board of Directors (the "Board") is authorized to establish terms and conditions under which additional areas may be annexed to Metropolitan's service area.

Metropolitan's primary purpose is to provide a supplemental supply of water for domestic and municipal uses at wholesale rates to its member public agencies. If additional water is available, such water may be sold for other beneficial uses. Metropolitan serves its member agencies as a water wholesaler and has no retail customers.

The mission of Metropolitan, as promulgated by the Board, is to provide its service area with adequate and reliable supplies of high quality water to meet present and future needs in an environmentally and economically responsible way.

Metropolitan's charges for water sales and availability are fixed by its Board, and are not subject to regulation or approval by the California Public Utilities Commission or any other state or federal agency. Metropolitan imports water from two principal sources: northern California via the Edmund G. Brown California Aqueduct (the "California Aqueduct") of the State Water Project owned by the State of California (the "State") and the Colorado River via the Colorado River Aqueduct owned by Metropolitan.

Member Agencies

Metropolitan is comprised of 26 member public agencies, including 14 cities, 11 municipal water districts, and one county water authority, which collectively serve the residents and businesses of more than 300 cities and numerous unincorporated communities. Member agencies request water from Metropolitan at various delivery points within Metropolitan's system and pay for such water at uniform rates established by the Board for each class of service. Metropolitan's water is a supplemental supply for its member agencies, most of whom have other sources of water. See "METROPOLITAN REVENUES—Principal Customers" in this Appendix A for a listing of the ten member agencies with the highest water purchases from Metropolitan during the fiscal year ended June 30, 2012. Metropolitan's member agencies may, from time to time, develop

additional sources of water. No member is required to purchase water from Metropolitan, but all member agencies are required to pay readiness-to-serve charges whether or not they purchase water from Metropolitan. See "METROPOLITAN REVENUES—Rate Structure", "—Member Agency Purchase Orders" and "—Additional Revenue Components" in this Appendix A.

The following table lists the 26 member agencies of Metropolitan.

Municipal Water Districts		Cities		County Water Authority
Calleguas	Las Virgenes	Anaheim	Los Angeles	San Diego[1]
Central Basin	Orange County	Beverly Hills	Pasadena	
Eastern	Three Valleys	Burbank	San Fernando	
Foothill	West Basin	Compton	San Marino	
Inland Empire Utilities Agency		Fullerton	Santa Ana	
Upper San Gabriel Valley		Glendale	Santa Monica	
Western of Riverside County		Long Beach	Torrance	

(1) The San Diego County Water Authority, currently Metropolitan's largest customer, is a plaintiff in litigation challenging the allocation of costs to certain rates adopted by Metropolitan's Board. See "METROPOLITAN REVENUES—Litigation Challenging Rate Structure" in this Appendix A.

Service Area

Metropolitan's service area comprises approximately 5,200 square miles and includes portions of the six counties of Los Angeles, Orange, Riverside, San Bernardino, San Diego and Ventura. When Metropolitan began delivering water in 1941, its service area consisted of approximately 625 square miles. Its service area has increased by 4,500 square miles since that time. The expansion is primarily the result of annexation of the service areas of additional member agencies.

Metropolitan estimates that approximately 18 million people lived in Metropolitan's service area in 2010, based on official estimates from the California Department of Finance and on population distribution estimates from the Southern California Association of Governments ("SCAG") and San Diego Association of Governments ("SANDAG"). Population projections prepared by SCAG in 2012 and SANDAG in 2010, as part of their planning process to update regional transportation and land use plans, show expected population growth of about 18 percent in Metropolitan's service area between 2010 and 2035. The 2010 Census population estimates are incorporated into SCAG's 2012 projections. The 2010 SANDAG regional growth projections do not incorporate the 2010 Census population estimates. The economy of Metropolitan's service area is exceptionally diverse. As measured in 2011, the economy of Metropolitan's service area had a gross domestic product larger than all but fifteen nations of the world. Metropolitan provides between 40 and 60 percent of the water used within its service area in any year. For additional economic and demographic information concerning Metropolitan's service area, see Appendix E – "SELECTED DEMOGRAPHIC AND ECONOMIC INFORMATION FOR METROPOLITAN'S SERVICE AREA."

The climate in Metropolitan's service area ranges from moderate temperatures throughout the year in the coastal areas to hot and dry summers in the inland areas. Annual rainfall in an average year is 13 to 15 inches along the coastal area, up to 20 inches in foothill areas and less than 10 inches inland.

METROPOLITAN'S WATER SUPPLY

Metropolitan faces a number of challenges in providing a reliable and high quality water supply for southern California. These include, among others: (1) population growth within the service area; (2) increased competition for low-cost water supplies; (3) variable weather conditions; and (4) increased environmental regulations. Metropolitan's resources and strategies for meeting these long-term challenges

are set forth in its Integrated Water Resources Plan, as updated from time to time. See "—Integrated Water Resources Plan" below.

Metropolitan's principal sources of water are the State Water Project and the Colorado River. Recent court decisions have restricted deliveries from the State Water Project as described below under "—State Water Project—*Endangered Species Act Considerations.*" Precipitation, in the form of snow or rain, and its resulting runoff and storage levels are key indicators for Metropolitan's supplies from both its State and Colorado River sources. Snowpack, as presented below, is a percentage of the April 1 historical average water content. April 1 is recognized as the typical peak of the season in any given year.

California hydrology is highly variable from year to year and sometimes within the same year. Following a three year drought, California Governor Jerry Brown proclaimed in March 2011 an end to the statewide drought emergency proclaimed in February 2009 by then-Governor of California Arnold Schwarzenegger. In 2011, California's snowpack peaked at 163 percent of normal. Drier conditions returned for 2012, with California statewide snowpack peaking in mid-April 2012 at 64 percent of normal. Large storms in November and December of 2012 started 2013 with above normal snowpack conditions for the State. Dry conditions from January 2013 through May 2013 resulted in the driest January through May period on record for northern California. The California 2013 snowpack peaked in March at 61 percent of normal with an associated 65 percent runoff forecasted by the California Department of Water Resources ("DWR") in May 2013. Despite these below normal water supply conditions, key DWR storage reservoirs are above or near historical average capacity in part due to the storms in late 2012, except for San Luis Reservoir which was 38 percent full in May 2013.

Metropolitan's Colorado River supply comes from watersheds of the Upper Colorado River basin in the states of Colorado, Utah, and Wyoming. The total basin wide snowpack peaked in late April at 88 percent of normal with an associated runoff forecasted by the Bureau of Reclamation on June 10, 2013 at 44 percent of normal. At the beginning of June 2013, Lake Mead storage was 48 percent of normal and total system storage was 52 percent of normal, down from 62 percent one year earlier.

Uncertainties from potential future temperature and precipitation changes in a climate driven by increased concentrations of atmospheric carbon dioxide also present challenges. Areas of concern to California water planners identified by researchers include reduction in Sierra Nevada snowpack; increased intensity and frequency of extreme weather events; and rising sea levels resulting in increased risk of damage from storms, high-tide events, and the erosion of levees and potential cutbacks of deliveries from the State Water Project. While potential impacts from climate change remain subject to study and debate, climate change is among the uncertainties that Metropolitan seeks to address through its planning processes.

Integrated Water Resources Plan

Metropolitan, its member agencies, sub-agencies and groundwater basin managers developed their first Integrated Water Resources Plan ("IRP"), which was adopted by the Board in January 1996 and updated in 2004, as a long-term planning guideline for resources and capital investments. The purpose of the IRP was the development of a portfolio of preferred resources (see "—The Integrated Resources Plan Strategy" below) to meet the water supply reliability and water quality needs for the region in a cost-effective and environmentally sound manner.

On October 12, 2010, Metropolitan's Board adopted an IRP update (the "2010 IRP Update") as a strategy to set goals and a framework for water resources development. This strategy enables Metropolitan and its member agencies to manage future challenges and changes in California's water conditions and to balance investments with water reliability benefits. The 2010 IRP Update provides an adaptive management approach to address future uncertainty, including uncertainty from climate change. It was formulated with input from member agencies, retail water agencies, and other stakeholders including water and wastewater

managers, environmental and business interests and the community. The framework places an emphasis on regional collaboration.

The 2010 IRP Update seeks to provide regional reliability through 2035 by stabilizing Metropolitan's traditional imported water supplies and continuing to develop additional local resources, with an increased emphasis on regional collaboration. It also advances long-term planning for potential future contingency resources, such as storm water capture and large-scale seawater desalination, in close coordination with Metropolitan's 26 member agencies and other utilities.

The 2010 IRP Update is available on Metropolitan's web site at http://www.mwdh2o.com/mwdh2o/pages/yourwater/irp/. Specific projects that may be developed by Metropolitan in connection with the implementation of the IRP will be subject to future Board consideration and approval, as well as environmental and regulatory documentation and compliance. The information set forth on Metropolitan's web site is not incorporated by reference.

The Integrated Resources Plan Strategy

The IRP Strategy identifies a balance of local and imported water resources within Metropolitan's service area. Metropolitan expects that the core resource strategy, uncertainty buffers and foundational actions in the IRP Strategy will be continually reviewed and updated at least every five years to reflect changing demand and supply conditions.

The following paragraphs describe several elements of the IRP Strategy.

State Water Project. The State Water Project is one of Metropolitan's two major sources of water. In addition to municipal and industrial use of this core supply, State Water Project supplies are important for maximizing local groundwater potential and the use of recycled water since State Water Project water has lower salinity content than Colorado River Aqueduct water and can be used to increase groundwater conjunctive use applications. See "—State Water Project" below and "REGIONAL WATER RESOURCES—Local Water Supplies" in this Appendix A.

Colorado River Aqueduct. The Colorado River Aqueduct delivers water from the Colorado River, Metropolitan's original source of supply. Metropolitan has helped to fund and implement farm and irrigation district conservation programs, improvements to river operation facilities, land management programs and water transfers and exchanges through agreements with agricultural water districts in southern California and entities in Arizona and Nevada that use Colorado River water. See "—Colorado River Aqueduct" below.

Water Conservation. Conservation and other water use efficiencies are integral components of Metropolitan's IRP. Metropolitan has invested in conservation programs since the 1980s. Historically, most of the investments have been in water efficient fixtures in the residential sector. Current efforts also focus on outdoor and commercial water use. See "—Water Conservation" below.

Recycled Water. Reclaimed or recycled municipal and industrial water is not potable, but can be used for landscape irrigation, agriculture, protecting groundwater basins from saltwater intrusion, industrial processes, and recharging local aquifers. Metropolitan offers financial incentives to member agencies for developing economically viable reclamation projects. See "REGIONAL WATER RESOURCES—Local Water Supplies" in this Appendix A.

Conjunctive Use. Conjunctive use is the coordinated use of surface water supplies and groundwater storage. It entails storing surplus imported water during the winter months or wet years in local surface reservoirs and recharging local groundwater basins, then using the stored supplies during dry months and droughts, thus increasing the supply reliability of the region. See "REGIONAL WATER RESOURCES—Local Water Supplies" in this Appendix A.

Water Transfers and Exchanges. Under voluntary water transfer or exchange agreements, agricultural communities using irrigation water may periodically sell some of their water allotments to urban areas. The water may be delivered through existing State Water Project or Colorado River Aqueduct facilities, or may be exchanged for water that is delivered through such facilities. Metropolitan's policy toward potential transfers states that the transfers will be designed to protect and, where feasible, enhance environmental resources and avoid the mining of local groundwater supplies. See "—Water Transfer, Storage and Exchange Programs" below.

Groundwater Recovery. Natural groundwater reservoirs serve an important function as storage facilities for local and imported water. When groundwater storage becomes contaminated, water agencies have to rely more heavily on imported water supplies. Treatment for polluted groundwater is quite costly and poses environmental challenges. Metropolitan offers financial incentives to help fund member agency groundwater recovery projects. See "REGIONAL WATER RESOURCES—Local Water Supplies" in this Appendix A.

Seawater Desalination. Seawater desalination is the process of removing salts from ocean water to produce potable supplies. It is a potential new local supply that could help increase supply reliability in Metropolitan's service area. Metropolitan offers financial incentives to member agencies for seawater desalination projects through its Seawater Desalination Program. Currently, a number of seawater desalination projects are under development within Metropolitan's service area. See "REGIONAL WATER RESOURCES—Local Water Supplies" and "METROPOLITAN REVENUES—Rate Structure" in this Appendix A.

State Water Project

General. One of Metropolitan's two major sources of water is the State Water Project, which is owned by the State and operated by DWR. This project transports Feather River water stored in and released from Oroville Dam and unregulated flows diverted directly from the San Francisco Bay/Sacramento-San Joaquin River Delta ("Bay-Delta") south via the California Aqueduct to four delivery points near the northern and eastern boundaries of Metropolitan's service area. The total length of the California Aqueduct is approximately 444 miles.

In 1960, Metropolitan signed a water supply contract (as amended, the "State Water Contract") with DWR. Metropolitan is one of 29 agencies that have long-term contracts for water service from DWR, and is the largest agency in terms of the number of people it serves (approximately 18 million), the share of State Water Project water that it has contracted to receive (approximately 46 percent), and the percentage of total annual payments made to DWR by agencies with State water contracts (approximately 53 percent for 2012). For information regarding Metropolitan's obligations under the State Water Contract, see "METROPOLITAN EXPENDITURES—State Water Contract Obligations" in this Appendix A. Upon expiration of the State Water Contract term (currently in 2035), Metropolitan has the option to continue service under substantially the same terms and conditions.

The State Water Contract, under a 100 percent allocation, provides Metropolitan 1,911,500 acre-feet of water. (An acre-foot is the amount of water that will cover one acre to a depth of one foot and equals approximately 326,000 gallons, which represents the needs of two average families in and around the home for one year.) Water received from the State Water Project by Metropolitan over the ten years from 2003 through 2012, including water from water transfer, groundwater banking and exchange programs delivered through the California Aqueduct, described below under "—Water Transfer, Storage and Exchange Programs," varied from a low of 908,000 acre-feet in calendar year 2009 to a high of 1,800,000 acre-feet in 2004.

For calendar year 2012, DWR's allocation estimate to State Water Project contractors was 65 percent of contracted amounts. For Metropolitan, the 2012 allocation provided 1,242,475 acre-feet, or 65 percent of

its 1,911,500-acre-foot contractual amount. In addition, Metropolitan began 2012 with 200,000 acre-feet of carryover supplies from prior years in San Luis Reservoir, a joint use facility of the State Water Project and federal Central Valley Project, and took delivery of approximately 75,000 acre-feet of these supplies in 2012. In 2012, Metropolitan took delivery to its service area of approximately 1.25 million acre-feet, including supplies from water transfers, exchanges and other deliveries through the California Aqueduct. Additional amounts were stored and exchanged with Metropolitan's out of service area storage and exchange partners. See "—Water Transfer, Storage and Exchange Programs" and "—Storage Capacity and Water in Storage" below.

For calendar year 2013, DWR's initial allocation estimate to the State Water Project contractors was 30 percent of contracted amounts. This estimate was increased to 40 percent on December 21, 2012, due to early season storms and decreased to 35 percent on March 22, 2013, due primarily to a record dry January and February in northern California. DWR may revise the allocation estimate if warranted by the year's developing precipitation and water supply conditions. For Metropolitan, the 2013 allocation will provide 669,025 acre-feet, or 35 percent of its 1,911,500 acre-foot contractual amount. In addition, Metropolitan began 2013 with more than 282,000 acre-feet of carryover supplies from prior years in San Luis Reservoir, all of which can be drawn in 2013. If the 2013 allocation is not sufficient, Metropolitan can draw down its storage to meet demands. See the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading "—Storage Capacity and Water in Storage" below.

Endangered Species Act Considerations

General. The listing of several fish species as threatened or endangered under the federal or California Endangered Species Acts (respectively, the "Federal ESA" and the "California ESA" and, collectively, the "ESAs") have adversely impacted State Water Project operations and limited the flexibility of the State Water Project. Currently, five species (the winter-run and spring-run Chinook salmon, Delta smelt, North American green sturgeon and Central Valley steelhead) are listed under the ESAs. In addition, on June 25, 2009, the California Fish and Game Commission declared the longfin smelt a threatened species under the California ESA.

The Federal ESA requires that before any federal agency authorizes funds or carries out an action it must consult with the appropriate federal fishery agency to determine whether the action would jeopardize the continued existence of any threatened or endangered species, or adversely modify habitat critical to the species' needs. The result of the consultation is known as a "biological opinion." In the biological opinion the federal fishery agency determines whether the action would cause jeopardy to a threatened or endangered species or adverse modification to critical habitat and recommends reasonable and prudent alternatives or measures that would allow the action to proceed without causing jeopardy or adverse modification. The biological opinion also includes an "incidental take statement." The incidental take statement allows the action to go forward even though it will result in some level of "take," including harming or killing some members of the species, incidental to the agency action, provided that the agency action does not jeopardize the continued existence of any threatened or endangered species and complies with reasonable mitigation and minimization measures recommended by the federal fishery agency.

In 2004 and 2005, the United States Fish and Wildlife Service ("USFWS") and National Marine Fisheries Service issued biological opinions and incidental take statements governing the coordinated operations of the State Water Project and the federal Central Valley Project with respect to the Delta smelt, the winter-run and spring-run Chinook salmon and the Central Valley steelhead. In July 2006, the Bureau of Reclamation reinitiated consultation with the USFWS and National Marine Fisheries Service with respect to the 2004 and 2005 biological opinions (with the addition of the North American green sturgeon, which was listed in April 2006) following the filing of legal challenges to those biological opinions and incidental take statements described under "*Federal ESA Litigation*" below. Under the Federal ESA, critical habitat must also be designated for each listed species. Critical habitat has been designated for each of the currently listed species.

Federal ESA Litigation. Litigation filed by several environmental interest groups *(NRDC v. Kempthorne;* and *Pacific Coast Federation of Fishermen's Associations v. Gutierrez)* in the United States District Court for the Eastern District of California alleged that the 2004 and 2005 biological opinions and incidental take statements inadequately analyzed impacts on listed species under the Federal ESA.

On May 25, 2007, Federal District Judge Wanger issued a decision on summary judgment in *NRDC v. Kempthorne*, finding the USFWS biological opinion for Delta smelt to be invalid. The USFWS released a new biological opinion on the impacts of the State Water Project and Central Valley Project on Delta smelt on December 15, 2008. Metropolitan, the San Luis & Delta Mendota Water Authority, Westlands Water District, Kern County Water Agency, Coalition for a Sustainable Delta and State Water Contractors, a California nonprofit corporation formed by agencies contracting with DWR for water from the State Water Project (the "State Water Contractors"), the Family Farm Alliance and the Pacific Legal Foundation on behalf of several owners of small farms in California's Central Valley filed separate lawsuits in federal district court challenging the biological opinion, which the federal court consolidated under the caption *Delta Smelt Consolidated Cases.*

On December 14, 2010, Judge Wanger issued a decision on summary judgment finding that there were major scientific and legal flaws in the Delta smelt biological opinion. The court found that some but not all of the restrictions on project operations contained in the 2008 Delta smelt biological opinion were arbitrary, capricious and unlawful. On May 18, 2011, Judge Wanger issued a final amended judgment directing the USFWS to complete a new draft biological opinion by October 1, 2011, and a final biological opinion with environmental documentation by December 1, 2013. Later stipulations and orders changed the October 1, 2011 due date for a draft biological opinion to December 14, 2011. A draft biological opinion was issued on December 14, 2011. The draft biological opinion deferred specification of a reasonable and prudent alternative and an incidental take statement pending completion of environmental impact review under the National Environmental Policy Act ("NEPA"). The federal defendants and environmental intervenors appealed the final judgment invalidating the 2008 Delta smelt biological opinion to the U.S. Court of Appeals for the Ninth Circuit. State Water Project and Central Valley Project contractor plaintiffs, including Metropolitan, cross-appealed from the final judgment. Those appeals and cross-appeals were argued on September 10, 2012. It is unknown when the court will issue a decision.

On February 25, 2011, the federal court approved a settlement agreement modifying biological opinion restrictions on Old and Middle River flows that would have otherwise applied in spring 2011. The settlement agreement expired on June 30, 2011. State Water Project and Central Valley Project contractors also moved to enjoin certain fall salinity requirements in the biological opinion that were set to become operable in September and October 2011. After an evidentiary hearing on the water contractors' motion in July 2011, Judge Wanger issued a decision on August 31, 2011, modifying the fall salinity related requirements in the biological opinion. The effect of the injunction was to reduce water supply impacts from the biological opinion's fall salinity requirements. The federal defendants and the environmental intervenors appealed the injunction on fall salinity requirements but the federal defendants subsequently dismissed their appeal in October 2011. The State Water Project and Central Valley Project contractors moved to dismiss the environmental intervenors' appeal of the fall salinity requirement on the ground that the salinity requirement for 2011 has expired, and is therefore moot. On August 23, 2012, the Ninth Circuit granted the water contractors' motion and dismissed the fall salinity appeal as moot.

On April 16, 2008, in *Pacific Coast Federation of Fishermen's Associations v. Gutierrez*, the court invalidated the 2004 National Marine Fisheries Service's biological opinion for the salmon and other fish species that spawn in rivers flowing into the Bay-Delta. Among other things, the court found that the no-jeopardy conclusions in the biological opinion were inconsistent with some of the factual findings in the biological opinion; that the biological opinion failed to adequately address the impacts of State Water Project and Central Valley Project operations on critical habitat and that there was a failure to consider how climate change and global warming might affect the impacts of the projects on salmonid species.

The National Marine Fisheries Service released a new biological opinion for salmonid species to replace the 2004 biological opinion on June 4, 2009. The 2009 salmonid species biological opinion contains additional restrictions on State Water Project and Central Valley Project operations. The National Marine Fisheries Service calculated that these restrictions will reduce the amount of water the State Water Project and Central Valley Project combined will be able to export from the Bay-Delta by 5 to 7 percent. DWR had estimated a 10 percent average water loss under this biological opinion. See "—*State Water Project Operational Constraints*" below for the estimated impact to Metropolitan's water supply. Six lawsuits were filed challenging the 2009 salmon biological opinion. These various lawsuits have been brought by the San Luis & Delta Mendota Water Authority, Westlands Water District, Stockton East Water District, Oakdale Irrigation District, Kern County Water Agency, the State Water Contractors and Metropolitan. The court consolidated the cases under the caption *Consolidated Salmon Cases.*

On May 25, 2010, the court granted the plaintiffs' request for preliminary injunction in the *Consolidated Salmon Cases*, restraining enforcement of two requirements under the salmon biological opinion that limit exported water during the spring months based on San Joaquin River flows into the Bay-Delta and reverse flows on the Old and Middle Rivers. Hearings on motions for summary judgment in the *Consolidated Salmon Cases* were held on December 16, 2010. On September 20, 2011, Judge Wanger issued a decision on summary judgment, finding that the salmon biological opinion was flawed, and that some but not all of the project restrictions in the biological opinion were arbitrary and capricious. On December 12, 2011, Judge O'Neill (who was assigned to this case following Judge Wanger's retirement) issued a final judgment in the *Consolidated Salmon Cases.* The final judgment remands the 2009 salmon biological opinion to the National Marine Fisheries Service, and directs that a new draft salmon biological opinion be issued by October 1, 2014, and that a final biological opinion be issued by February 1, 2016, after completion of environmental impact review under NEPA. On January 19, 2012, Judge O'Neill approved a joint stipulation of the parties that specifies how to comply with one of the salmon biological opinion restrictions that applies to water project operations in April and May of 2012. In January and February 2012, the federal defendants and environmental intervenors filed appeals of the final judgment in the *Consolidated Salmon Cases,* and the State Water Project and Central Valley Project contractors filed cross-appeals. Those appeals and cross-appeals are now pending in the Ninth Circuit.

On November 13, 2009, the Center for Biological Diversity filed separate lawsuits challenging the USFWS' failure to respond to a petition to change the Delta smelt's federal status from threatened to endangered and the USFWS' denial of federal listing for the longfin smelt. On April 2, 2010, the USFWS issued a finding that uplisting the Delta smelt was warranted but precluded by the need to devote resources to higher-priority matters. This "warranted but precluded" finding did not change the regulatory restrictions applicable to Delta smelt. For the longfin smelt litigation, a settlement agreement was approved on February 2, 2011. Under the agreement, the USFWS agreed to complete a range-wide status review of the longfin smelt and consider whether the Bay-Delta longfin smelt population, or any other longfin smelt population from California to Alaska, qualifies as a "distinct population" that warrants federal protection. On April 2, 2012, the USFWS issued its finding that the Bay-Delta longfin smelt population warrants protection under the ESA but is precluded from listing as a threatened or endangered species by the need to address other higher priority listing actions. The review identified several threats facing longfin smelt in the Bay-Delta, including reduced freshwater Bay-Delta outflows. The finding includes the determination that the Bay-Delta longfin smelt will be added to the list of candidates for ESA protection, where its status will be reviewed annually.

California ESA Litigation. In addition to the litigation under the Federal ESA, other environmental groups sued DWR on October 4, 2006 in the Superior Court of the State of California for Alameda County alleging that DWR was "taking" listed species without authorization under the California ESA. This litigation *(Watershed Enforcers, a project of the California Sportfishing Protection Alliance v. California Department of Water Resources)* requested that DWR be mandated to either cease operation of the State Water Project pumps, which deliver water to the California Aqueduct, in a manner that results in such "taking" of listed species or obtain authorization for such "taking" under the California ESA. On April 18,

2007, the Alameda County Superior Court issued its Statement of Decision finding that DWR was illegally "taking" listed fish through operation of the State Water Project export facilities. The Superior Court ordered DWR to "cease and desist from further operation" of those facilities within 60 days unless it obtained take authorization from the California Department of Fish and Game.

DWR appealed the Alameda County Superior Court's order on May 7, 2007. This appeal stayed the order pending the outcome of the appeal. The Court of Appeal stayed processing of the appeal in 2009 to allow time for DWR to obtain incidental take authorization for the Delta smelt and salmon under the California ESA, based on the consistency of the federal biological opinions with California ESA requirements ("Consistency Determinations"). After the California Department of Fish & Game issued the Consistency Determinations under the California ESA, authorizing the incidental take of both Delta smelt and salmon, appellants DWR and State Water Contractors dismissed their appeals of the *Watershed Enforcers* decision. The Court of Appeal subsequently issued a decision finding that DWR was a "person" under the California ESA and subject to its take prohibitions, which was the only issue left in the case. The State Water Contractors and Kern County Water Agency have filed suit in state court challenging the Consistency Determinations under the California ESA that have been issued for both Delta smelt and salmon. Those lawsuits challenging the Consistency Determinations are pending. The parties are continuing discussions of adjustments to the incidental take authorizations in light of the summary judgment ruling in the *Delta Smelt Consolidated Cases* and the *Consolidated Salmon Cases*, discussed under the heading *"—Federal ESA Litigation"* above.

The California Fish and Game Commission listed the longfin smelt as a threatened species under the California ESA on June 25, 2009. On February 23, 2009, in anticipation of the listing action, the California Department of Fish and Game issued a California ESA section 2081 incidental take permit to DWR authorizing the incidental take of longfin smelt by the State Water Project. This permit authorizes continued operation of the State Water Project under the conditions specified in the section 2081 permit. The State Water Contractors filed suit against the California Department of Fish and Game on March 25, 2009, alleging that the export restrictions imposed by the section 2081 permit have no reasonable relationship to any harm to longfin smelt caused by State Water Project operations, are arbitrary and capricious and are not supported by the best available science. The lawsuit is pending and the administrative record for the cases has been completed.

State Water Project Operational Constraints. DWR has altered the operations of the State Water Project to accommodate species of fish listed under the ESAs. These changes in project operations have adversely affected State Water Project deliveries. The impact on total State Water Project deliveries attributable to the Delta smelt and salmonid species biological opinions combined is estimated to be one million acre-feet in an average year, reducing State Water Project deliveries from approximately 3.3 million acre-feet to approximately 2.3 million acre-feet for the year under average hydrology, and are estimated to range from 0.3 million acre-feet during critically dry years to 1.3 million acre-feet in above normal water years. State Water Project deliveries to contractors for calendar years 2008 through 2012 were reduced by a total of approximately 2.3 million acre-feet as a result of pumping restrictions. Pumping restrictions impacting the State Water Project allocation for 2013 have reduced exports by approximately 556,000 acre-feet through March 31, 2013.

Operational constraints likely will continue until long-term solutions to the problems in the Bay-Delta are identified and implemented. The Delta Vision process, established by then-Governor Schwarzenegger, was aimed at identifying long-term solutions to the conflicts in the Bay-Delta, including natural resource, infrastructure, land use and governance issues. In addition, State and federal resource agencies and various environmental and water user entities are currently engaged in the development of the Bay-Delta Conservation Plan, which is aimed at addressing ecosystem needs and securing long-term operating permits for the State Water Project, and includes the Delta Habitat Conservation and Conveyance Program (DHCCP) (together, the "BDCP"). The BDCP's current efforts consist of the preparation of the environmental documentation and preliminary engineering design for Bay-Delta water conveyance and related habitat

conservation measures under the BDCP. The Delta Vision process and the BDCP are discussed further under "*—Bay-Delta Regulatory and Planning Activities*" below.

Other issues, such as the decline of some fish populations in the Bay-Delta and surrounding regions and certain operational actions in the Bay-Delta, may significantly reduce Metropolitan's water supply from the Bay-Delta. State Water Project operational requirements may be further modified under new biological opinions for listed species under the Federal ESA or by the California Department of Fish and Game's issuance of incidental take authorizations under the California ESA. Biological opinions or incidental take authorizations under the Federal ESA and California ESA might further adversely affect State Water Project and Central Valley Project operations. Additionally, new litigation, listings of additional species or new regulatory requirements could further adversely affect State Water Project operations in the future by requiring additional export reductions, releases of additional water from storage or other operational changes impacting water supply operations. Metropolitan cannot predict the ultimate outcome of any of the litigation or regulatory processes described above but believes they could have a materially adverse impact on the operation of the State Water Project pumps, Metropolitan's State Water Project supplies and Metropolitan's water reserves.

"Area of Origin" Litigation. Four State Water Project contractors located north of the State Water Project's Bay-Delta pumping plant filed litigation against DWR on July 17, 2008, asserting that since they are located in the "area of origin" of State Water Project water they are entitled to receive their entire contract amount before any water is delivered to contractors south of the Bay-Delta. If the plaintiffs are successful in this litigation, State Water Project water available to Metropolitan in a drought period could be reduced by approximately 25,000 acre-feet each year of a multi-year drought or by as much as 40,000 acre-feet in an exceedingly dry year. Metropolitan and twelve other State Water Project contractors located south of the Bay-Delta filed motions to intervene in this litigation, which were granted on February 25, 2009. In May 2012, the parties reached an agreement in principle that plaintiffs will dismiss the action with prejudice and agree to certain limitations on asserting area of origin arguments in the future; in return DWR and the intervenors will agree to operational changes that will increase the reliability of plaintiffs' State Water Project supplies at little or minimal cost to other State Water Project water contractors. The parties are drafting a settlement agreement and preparing environmental documentation.

Bay-Delta Regulatory and Planning Activities. The State Water Resources Control Board ("SWRCB") is the agency responsible for setting water quality standards and administering water rights throughout California. Decisions of the SWRCB can affect the availability of water to Metropolitan and other users of State Water Project water. The SWRCB exercises its regulatory authority over the Bay-Delta by means of public proceedings leading to regulations and decisions. These include the Bay-Delta Water Quality Control Plan ("WQCP"), which establishes the water quality objectives and proposed flow regime of the estuary, and water rights decisions, which assign responsibility for implementing the objectives of the WQCP to users throughout the system by adjusting their respective water rights. The SWRCB is required by law to periodically review its WQCP to ensure that it meets the changing needs of this complex system.

Since 2000, SWRCB's Water Rights Decision 1641 ("D-1641") has governed the State Water Project's ability to export water from the Bay-Delta for delivery to Metropolitan and other agencies receiving water from the State Water Project. D-1641 allocated responsibility for meeting flow requirements and salinity and other water quality objectives established earlier by the WQCP. The SWRCB also identified additional issues to review, which could result in future changes in water quality objectives and flows that could affect exports of water from the State Water Project. Currently, the SWRCB is reviewing salinity objectives in the Bay-Delta intended to protect Bay-Delta farming and inflow requirements upstream of the Delta to protect aquatic species.

The CALFED Bay-Delta Program was a collaborative effort among 25 State and federal agencies to improve water supplies in California and the health of the Bay-Delta watershed. On August 28, 2000, the federal government and the State issued a Record of Decision ("ROD") and related documents approving the

final programmatic environmental documentation for the CALFED Bay-Delta Program. The Environmental Impact Report (EIR) under the California Environmental Quality Act (CEQA) was challenged in three separate cases, but ultimately upheld by the California Supreme Court in June 2008.

The CALFED Bay-Delta Program resulted in an investment of $3 billion on a variety of projects and programs to begin addressing the Bay-Delta's water supply, water quality, ecosystem, and levee stability problems. To guide future development of and governance for the CALFED Bay-Delta Program and identify a strategy for managing the Bay-Delta as a sustainable resource, in September 2006, then-Governor Schwarzenegger established by Executive Order a Delta Vision process. The Delta Vision process resulted in creation of a Delta Vision Blue Ribbon Task Force that issued its Delta Vision Strategic Plan (the "Strategic Plan") on October 17, 2008, providing its recommendations for long-term sustainable management of the Bay-Delta. These recommendations included completing the BDCP and associated environmental assessments to permit ecosystem revitalization and water conveyance improvements, identifying and reducing stressors to the Bay-Delta ecosystem, strengthening levees, increasing emergency preparedness, continuing funding for the CALFED ecosystem restoration program, updating Bay-Delta regulatory flow and water quality standards to protect beneficial uses of water and working with the State Legislature on a comprehensive water bond package to fund Bay-Delta infrastructure projects.

On November 4, 2009, the State Legislature authorized an $11.1 billion water bond measure that includes over $2 billion for Bay-Delta ecosystem restoration as well as $3 billion for new water storage and additional funds for water recycling, drought relief, conservation and watershed protection projects. The bond measure is subject to voter authorization and was scheduled to be included on the November 2010 ballot; however, in August 2010 the Legislature postponed the bond election to 2012 and in July 2012 the legislature postponed the bond election to 2014. Delaying the bond election did not impact other parts of the 2009 water legislation. Related legislation created a new oversight council for the Bay-Delta, the Delta Stewardship Council, and directs that the Bay-Delta be managed with dual goals of water supply reliability and ecosystem protection, sets a statewide conservation target for urban per capita water use of 20 percent reductions by 2020 (with credits for existing conservation), provides funding for increased enforcement of illegal water diversions and establishes a statewide groundwater monitoring program. The Delta Stewardship Council, formed on February 3, 2010, is CALFED's successor agency and was directed to adopt and oversee implementation of a comprehensive management plan for the Bay-Delta. The Delta Stewardship Council certified the Program EIR for the Delta Plan and approved the Delta Plan on May 16, 2013, and adopted regulations corresponding to the policies in the Delta Plan on May 17, 2013.

On May 24, 2013, the San Luis & Delta-Mendota Water Authority and Westlands Water District filed litigation in Sacramento Superior Court challenging the adequacy of the Program EIR under CEQA, and alleged that the Delta Plan is invalid because, among other things, it is inconsistent with the Delta Reform Act of 2009. On June 14, 2013, several different actions were filed challenging the adequacy of the Program EIR under CEQA and alleging that the Delta Plan is invalid. The State Water Contractors, Metropolitan, Alameda County Flood Control and Water Conservation District, Zone 7, Santa Clara Valley Water District, Antelope Valley-East Kern Water Agency, and San Bernardino Valley Municipal Water District filed in Sacramento Superior Court; several environmental interest groups, as well as several fishing industry groups and the Winnemem Wintu Tribe filed in San Francisco Superior Court; and the City of Stockton filed in San Joaquin County Superior Court. On June 17, 2013, Save the California Delta Alliance, as well as the Central Delta Water Agency, South Delta Water Agency, Local Agencies of the North Delta, and others filed in San Francisco Superior Court. The impact, if any, that such litigation might have on Metropolitan's State Water Project supplies cannot be determined at this time.

The working draft BDCP was completed in November 2010 and a full public draft BDCP is anticipated by October 1, 2013. The planning, environmental documentation and preliminary engineering design for the BDCP are being prepared pursuant to the Delta Habitat Conservation and Conveyance Program Memorandum of Agreement ("MOA") and are also scheduled to be completed in 2013. The parties to the MOA are DWR, the Bureau of Reclamation, the State and Federal Contractors Water Agency, Metropolitan,

Kern County Water Agency, State Water Contractors, San Luis & Delta Mendota Water Authority, Westlands Water District and Santa Clara Valley Water District. On July 25, 2012, Governor Jerry Brown and Secretary of the Interior Ken Salazar announced key proposed elements to advance the BDCP planning process, including north Bay-Delta water diversion facilities with a total capacity of 9,000 cubic-feet per second ("cfs"), two tunnels sized to minimize energy use during operations and a "decision tree" process for unresolved operation criteria such as fall and spring outflows. Preliminary cost estimates for the conveyance portion of this project alternative are approximately $14 billion. When a decision selecting the final project has been made, costs will be updated and allocated. Metropolitan anticipates that it could bear approximately 25 percent of the costs of the conveyance portion of the project.

Sacramento Regional County Sanitation District Litigation. Metropolitan, along with other State and federal water contractors, has urged action to address water quality concerns with respect to both the aquatic health of the Bay-Delta and drinking water quality. On December 9, 2010, the Central Valley Regional Water Quality Control Board ("Regional Board") approved a National Pollutant Discharge Elimination System ("NPDES") permit for the Sacramento Regional County Sanitation District ("Sanitation District") setting water-quality based requirements for the Sanitation District's wastewater treatment plant that will require advanced treatment upgrades for the Sanitation District's wastewater facility. The Sanitation District's treatment plant is the largest wastewater discharger into the Bay-Delta. The treatment plant provides only a secondary level of treatment and discharges nutrients, pathogens, and total organic carbon into the Bay-Delta water supply. The treatment plant's discharge of nitrogen, particularly ammonia, has been shown to be altering the food chain in the estuary to the detriment of Delta smelt and other native species. The NPDES permit calls for a significant reduction of the nitrogen and particularly ammonia discharge which will require full nitrification and denitrification treatment by 2020, as well as tertiary filtration treatment to meet pathogen removal requirements. The NPDES permit also includes additional permit limits and monitoring requirements for other water quality constituents, including toxic contaminants.

The Sanitation District petitioned the SWRCB for review of the NPDES permit. SWRCB adopted a final order at a December 4, 2012 hearing, which concludes the administrative appeal process. The SWRCB's final order rejects the Sanitation District's arguments, upholds the substantive requirements of the NPDES permit and will impose new more stringent water quality limits. Although the administrative appeal before the SWRCB was then pending, on December 30, 2011, the Sanitation District filed a lawsuit in Sacramento Superior Court against the Regional Board and SWRCB seeking to overturn and relax the NPDES permit. Metropolitan and other water agencies that participated in the NPDES permitting process intervened in the superior court case. On April 29, 2013, in a partial settlement of the litigation, the Sanitation District agreed to drop its challenge of the NPDES permit requirements for ammonia and nitrate removal. As part of the settlement, the Sanitation District will comply with a set of milestones resulting in completion of the construction of treatment facilities necessary for full nitrification and denitrification by 2021. This leaves a cause of action concerning pathogens and filtration requirements to be litigated. In exchange for dropping the ammonia and nitrate challenge, the Sanitation District is receiving two additional years to meet filtration and disinfection requirements, should those requirements remain following conclusion of the litigation.

Metropolitan, other urban State Water Contractor agencies and the Contra Costa Water District earlier brought a successful CEQA challenge in response to significant, unmitigated water quality impacts that would occur from a planned expansion of the Sanitation District's treatment plant. The Sanitation District appealed the trial court ruling and the case remains pending in the Third District Court of Appeal awaiting oral argument.

California Water Impact Network Litigation. On September 3, 2010, the California Water Impact Network and two other non-profit organizations filed a petition for writ of mandate and for declaratory and injunctive relief in Sacramento Superior Court against the SWRCB and DWR. The petition alleges that by permitting and carrying out the export of large volumes of water from the Delta through the State Water Project, the SWRCB and DWR have failed to protect public trust fishery resources in the Delta; have been

diverting water from the Bay-Delta wastefully and unreasonably in violation of the prohibition against waste and unreasonable use in the California Constitution; and have failed to enforce and comply with water quality and beneficial use standards in D-1641, the 1995 SWRCB Water Quality Control Plan, and the Porter-Cologne Act. Among the relief sought in the petition is an injunction against Bay-Delta exports by the State Water Project pending compliance with the various laws and administrative orders that are alleged to have been violated. The State Water Contractors filed a motion to intervene in this action, which was granted on March 25, 2011. The court has ordered the plaintiffs to include the Bureau of Reclamation as a party. In response, the Bureau of Reclamation has asserted that federal sovereign immunity bars their inclusion in the state court action. If the court determines that the Bureau of Reclamation is an indispensable party, the lawsuit, or portions of it, may be dismissed.

Monterey Agreement Litigation. On September 15, 2000, the Third District Court of Appeal for the State of California issued its decision in *Planning and Conservation League; Citizens Planning Association of Santa Barbara County and Plumas County Flood Control District v. California Department of Water Resources and Central Coast Water Authority*. This case was an appeal of a challenge to the adequacy of the environmental documentation prepared with respect to certain amendments to the State Water Contract (the "Monterey Agreement") which reflects the settlement of certain disputes regarding the allocation of State Water Project water. The Court of Appeal held that the environmental documentation was defective in failing to analyze the environmental effects of the Monterey Agreement's elimination of the permanent shortage provisions of the State Water Contract. The parties negotiated a settlement agreement in the fall of 2002, which allows continued operation of the State Water Project under the Monterey Agreement principles while a new EIR was prepared. DWR completed the final EIR and concluded the remedial CEQA review for the project on May 4, 2010. Following DWR's completion of the EIR, three new lawsuits were filed challenging the project. Central Delta Water Agency, South Delta Water Agency, California Water Impact Network, California Sportfishing Protection Alliance, and the Center For Biological Diversity filed a lawsuit against DWR in Sacramento County Superior Court challenging the validity of the EIR under CEQA and the validity of underlying agreements under a reverse validation action (the "*Central Delta I*" case). These same plaintiffs filed a reverse validation lawsuit against the Kern County Water Agency in Kern County Superior Court ("*Central Delta II*"). This lawsuit targets a transfer of land from Kern County Water Agency to the Kern Water Bank, which was completed as part of the original Monterey Amendments. The third lawsuit is an EIR challenge brought by Rosedale-Rio Bravo Water Storage District and Buena Vista Water Storage District against DWR in Kern County Superior Court. The two Kern County cases have been transferred to Sacramento Superior Court and the three cases consolidated for trial. The Central Delta II case was stayed pending resolution of the Central Delta I case. In January 2013, the Court ruled that the validation cause of action in Central Delta I is time barred by the statute of limitations. The Court has scheduled a hearing on the merits of the CEQA claims for January 31, 2014. Any adverse impact of this litigation on Metropolitan's State Water Project supplies cannot be determined at this time.

Colorado River Aqueduct

General. The Colorado River was Metropolitan's original source of water after Metropolitan's establishment in 1928. Metropolitan has a legal entitlement to receive water from the Colorado River under a permanent service contract with the Secretary of the Interior. Water from the Colorado River and its tributaries is also available to other users in California, as well as users in the states of Arizona, Colorado, Nevada, New Mexico, Utah, and Wyoming (the "Colorado River Basin States"), resulting in both competition and the need for cooperation among these holders of Colorado River entitlements. In addition, under a 1944 treaty, Mexico has an allotment of 1.5 million acre-feet of Colorado River water annually except in the event of extraordinary drought or serious accident to the delivery system in the United States, in which event the water allotted to Mexico would be curtailed. Mexico also can schedule delivery of an additional 200,000 acre-feet of Colorado River water per year if water is available in excess of the requirements in the United States and the 1.5 million acre-feet allotted to Mexico.

The Colorado River Aqueduct, which is owned and operated by Metropolitan, transports water from the Colorado River approximately 242 miles to its terminus at Lake Mathews in Riverside County. After deducting for conveyance losses and considering maintenance requirements, up to 1.25 million acre-feet of water a year may be conveyed through the Colorado River Aqueduct to Metropolitan's member agencies, subject to availability of Colorado River water for delivery to Metropolitan as described below.

California is apportioned the use of 4.4 million acre-feet of water from the Colorado River each year plus one-half of any surplus that may be available for use collectively in Arizona, California and Nevada. In addition, California has historically been allowed to use Colorado River water apportioned to but not used by Arizona or Nevada when such supplies have been requested for use in California. Under the 1931 priority system that has formed the basis for the distribution of Colorado River water made available to California, Metropolitan holds the fourth priority right to 550,000 acre-feet per year. This is the last priority within California's basic apportionment. In addition, Metropolitan holds the fifth priority right to 662,000 acre-feet of water, which is in excess of California's basic apportionment. See the table "PRIORITIES UNDER THE 1931 CALIFORNIA SEVEN-PARTY AGREEMENT" below. Until 2003, Metropolitan had been able to take full advantage of its fifth priority right as a result of the availability of surplus water and apportioned but unused water. However, during the 1990s Arizona and Nevada increased their use of water from the Colorado River, utilizing their respective basic apportionments by 2002 and significantly reducing unused apportionment available for California. In addition, a severe drought in the Colorado River Basin reduced storage in system reservoirs, such that Metropolitan stopped taking surplus deliveries in 2003 in an effort to mitigate the effects of the drought. Prior to 2003, Metropolitan could divert over 1.2 million acre-feet in any year, but since that time, Metropolitan's net diversions of Colorado River water have been limited to a low of nearly 633,000 acre-feet in 2006 and a high of 1,105,232 acre-feet in 2009. Average annual net deliveries for 2003 through 2012 were approximately 821,000 acre-feet, with annual volumes dependent primarily on programs to augment supplies, including transfers of conserved water from agriculture. Metropolitan's Colorado River supply was nearly 900,000 acre-feet in 2012, of which approximately 739,000 acre-feet was delivered through the Colorado River Aqueduct and about 161,000 acre-feet of intentionally-created surplus water was stored in Lake Mead. See "*—Quantification Settlement Agreement*" and "*—Interim Surplus Guidelines*" below.

[Remainder of page intentionally left blank.]

PRIORITIES UNDER THE 1931 CALIFORNIA SEVEN-PARTY AGREEMENT[1]

Priority	Description	Acre-Feet Annually
1	Palo Verde Irrigation District gross area of 104,500 acres of land in the Palo Verde Valley	3,850,000
2	Yuma Project in California not exceeding a gross area of 25,000 acres in California	
3(a)	Imperial Irrigation District and other lands in Imperial and Coachella Valleys[2] to be served by All-American Canal	
3(b)	Palo Verde Irrigation District - 16,000 acres of land on the Lower Palo Verde Mesa	
4	Metropolitan Water District of Southern California for use on the coastal plain	550,000
	SUBTOTAL	4,400,000
5(a)	Metropolitan Water District of Southern California for use on the coastal plain	550,000
5(b)	Metropolitan Water District of Southern California for use on the coastal plain[3]	112,000
6(a)	Imperial Irrigation District and other lands in Imperial and Coachella Valleys to be served by the All-American Canal	300,000
6(b)	Palo Verde Irrigation District - 16,000 acres of land on the Lower Palo Verde Mesa	
	TOTAL	5,362,000
7	Agricultural use in the Colorado River Basin in California	Remaining surplus

Source: Metropolitan.

(1) Agreement dated August 18, 1931, among Palo Verde Irrigation District, Imperial Irrigation District, Coachella Valley County Water District, Metropolitan, the City of Los Angeles, the City of San Diego and the County of San Diego. These priorities were memorialized in the agencies' respective water delivery contracts with the Secretary of the Interior.

(2) The Coachella Valley Water District serves Coachella Valley.

(3) In 1946, the City of San Diego, the San Diego County Water Authority, Metropolitan and the Secretary of the Interior entered into a contract that merged and added the City and County of San Diego's rights to storage and delivery of Colorado River water to the rights of Metropolitan.

Metropolitan has taken steps to augment its share of Colorado River water through agreements with other agencies that have rights to use such water. Under a 1988 water conservation agreement (the "1988 Conservation Agreement") between Metropolitan and the Imperial Irrigation District ("IID"), Metropolitan provided funding for IID to construct and operate a number of conservation projects that are currently conserving up to 105,000 acre-feet of water per year that is provided to Metropolitan. Under the October 2003 Quantification Settlement Agreement and related agreements, Metropolitan, at the request of Coachella Valley Water District ("CVWD"), forgoes up to 20,000 acre-feet of this water each year for diversion by CVWD. See "*–Quantification Settlement Agreement*" below. In 2010 and 2011 CVWD's requests were for 8,000 and 4,000 acre-feet respectively, leaving 97,000 acre-feet in 2010 and 99,940 acre-feet in 2011 for Metropolitan. In 1992, Metropolitan entered into an agreement with the Central Arizona Water Conservation

District ("CAWCD") to demonstrate the feasibility of CAWCD storing Colorado River water in central Arizona for the benefit of an entity outside of the State of Arizona. Pursuant to this agreement, CAWCD created 80,909 acre-feet of long-term storage credits that may be recovered by CAWCD for Metropolitan. Metropolitan, the Arizona Water Banking Authority, and CAWCD executed an amended agreement for recovery of these storage credits in December 2007. All 80,909 acre-feet were recovered and delivered to Metropolitan between 2007 and 2010.

Metropolitan and the Palo Verde Irrigation District ("PVID") signed the program agreement for a Land Management, Crop Rotation and Water Supply Program in August 2004. This program provides up to 133,000 acre-feet of water to be available to Metropolitan in certain years. The term of the program is 35 years. Fallowing began on January 1, 2005. In March 2009, Metropolitan and PVID entered into a supplemental fallowing program within PVID that provided for the fallowing of additional acreage in 2009 and 2010. In calendar years 2009 and 2010, respectively, 24,100 acre-feet and 32,300 acre-feet of water were saved and made available to Metropolitan under the supplemental program. The following table shows annual volumes of water saved and made available to Metropolitan:

WATER AVAILABLE FROM PVID LAND MANAGEMENT, CROP ROTATION AND WATER SUPPLY PROGRAM

Calendar Year	Volume (acre-feet)
2005	108,700
2006	105,000
2007	72,300
2008	94,300
2009*	144,300
2010*	148,600
2011	122,200
2012	74,000

Source: Metropolitan.

* Includes water from the supplemental fallowing program that provided for fallowing of additional acreage in 2009 and 2010.

In May 2008, Metropolitan provided $28.7 million to join the CAWCD and the Southern Nevada Water Authority ("SNWA") in funding the Bureau of Reclamation's construction of an 8,000 acre-foot off-stream regulating reservoir near Drop 2 of the All-American Canal in Imperial County (officially renamed the Warren H. Brock Reservoir). Construction was completed in October 2010. The Warren H. Brock Reservoir is expected to conserve about 70,000 acre-feet of water per year by capturing and storing otherwise non-storable water flow. The Bureau of Reclamation has refunded to Metropolitan $2.43 million in unused contingency funds. In return for its funding, Metropolitan received 100,000 acre-feet of water that is stored in Lake Mead, with the ability to deliver up to 40,000 acre-feet of water in any one year. Besides the additional water supply, the new reservoir adds to the flexibility of Colorado River operations.

In September 2009, Metropolitan authorized participation with SNWA, the Colorado River Commission of Nevada, the CAWCD and the Bureau of Reclamation in the pilot operation of the Yuma Desalting Plant. The Bureau of Reclamation concluded the pilot operation of the Yuma Desalting Plant in March 2011. Metropolitan's contribution for the funding agreement was $8,395,313. Metropolitan's yield from the pilot run of the project was 24,397 acre-feet.

In November 2012, Metropolitan executed agreements in support of a program to augment Metropolitan's Colorado River supply from 2013 through 2017 through an international pilot project in Mexico. Metropolitan's share of the costs will be $5 million for a total of 47,500 acre-feet of project supplies.

The costs will be paid between 2014 and 2017, and the conserved water will be credited to Metropolitan's intentionally-created surplus water account in 2017. See "*— Intentionally-Created Surplus Program*" below.

Quantification Settlement Agreement. The Quantification Settlement Agreement ("QSA"), executed by CVWD, IID and Metropolitan in October 2003, establishes Colorado River water use limits for IID and CVWD, provides for specific acquisitions of conserved water and water supply arrangements for up to 75 years, and restored the opportunity for Metropolitan to receive any "special surplus water" under the Interim Surplus Guidelines. See "*–Interim Surplus Guidelines*" below. The QSA also allows Metropolitan to enter into other cooperative Colorado River supply programs. Related agreements modify existing conservation and cooperative water supply agreements consistent with the QSA, and set aside several disputes among California's Colorado River water agencies.

Specific programs under the QSA include lining portions of the All-American and Coachella Canals, which conserve approximately 96,000 acre-feet annually. As a result, about 80,000 acre-feet of conserved water is delivered to the San Diego County Water Authority ("SDCWA") by exchange with Metropolitan. Metropolitan also takes delivery of 16,000 acre-feet annually that will be made available for the benefit of the La Jolla, Pala, Pauma, Rincon and San Pasqual Bands of Mission Indians, the San Luis Rey River Indian Water Authority, the City of Escondido and the Vista Irrigation District, upon completion of a water rights settlement, expected in 2013. An amendment to the 1988 Conservation Agreement between Metropolitan and IID and an associated 1989 Approval Agreement among Metropolitan, IID, CVWD and PVID, extended the term of the 1988 Conservation Agreement and limited the single year amount of water used by CVWD to 20,000 acre-feet. Also included under the QSA is the Delivery and Exchange Agreement between Metropolitan and CVWD that provides for Metropolitan to deliver annually up to 35,000 acre-feet of Metropolitan's State Water Project contractual water to CVWD by exchange with Metropolitan's available Colorado River supplies. In calendar year 2011, under a supplemental agreement with CVWD, Metropolitan delivered 105,000 acre-feet which consisted of the full 35,000 acre-feet for 2011 plus advance delivery of the full contractual amounts for 2012 and 2013. In 2021, the transfer of water conserved annually by IID to SDCWA is expected to reach 205,000 acre-feet. See description below under the caption "*—Sale of Water by the Imperial Irrigation District to San Diego County Water Authority*"; see also "METROPOLITAN REVENUES—Principal Customers" in this Appendix A. With full implementation of the programs identified in the QSA, at times when California is limited to its basic apportionment of 4.4 million acre-feet per year, Metropolitan expects to be able to annually divert to its service area approximately 850,000 acre-feet of Colorado River water plus water from other water augmentation programs it develops, including the PVID program, which provides up to approximately 130,000 acre-feet of water per year. (Amounts of Colorado River water received by Metropolitan in 2003 through 2012 are discussed under the heading "—Colorado River Aqueduct—*General*" above.)

A complicating factor in completing the QSA was the fate of the Salton Sea, an important habitat for a wide variety of fish-eating birds as a stopover spot along the Pacific flyway. Some of these birds are listed as threatened or endangered species under the State and Federal ESAs. Located at the lowest elevations of an inland basin and fed primarily by agricultural drainage with no outflows other than evaporation, the Salton Sea is trending towards hyper-salinity, which has already impacted the Salton Sea's fishery. Without mitigation, the transfer of water from IID to SDCWA, one of the core programs implemented under the QSA, would reduce the volume of agricultural run-off from IID into the Salton Sea, which in turn would accelerate this natural trend of the Salton Sea to hyper-salinity. See "*—Sale of Water by the Imperial Irrigation District to San Diego County Water Authority*" below. In passing legislation to implement the QSA, the State Legislature committed the State to undertake restoration of the Salton Sea ecosystem. Restoration of the Salton Sea is subject to selection and approval of an alternative by the Legislature and funding of the associated capital improvements and operating costs. The Secretary for the California Natural Resources Agency submitted an $8.9-billion preferred alternative for restoration of the Salton Sea to the Legislature in May 2007. While withholding authorization of the preferred alternative, the Legislature has appropriated funds from Proposition 84 to undertake demonstration projects and investigations called for in the Secretary's recommendation. On September 25, 2010, then-Governor Schwarzenegger signed Senate Bill 51,

establishing the "Salton Sea Restoration Council" as a state agency in the Natural Resources Agency to oversee restoration of the Salton Sea. The council was directed to evaluate alternative Salton Sea restoration plans and to report to the Governor and the Legislature by June 30, 2013 with a recommended plan.

The QSA implementing legislation also established the Salton Sea Restoration Fund, to be funded in part by payments made by the parties to the QSA and fees on certain water transfers among the parties to the QSA. Under the QSA agreements Metropolitan agreed to pay $20 per acre-foot into the Salton Sea Restoration Fund for any special surplus Colorado River water that Metropolitan elects to take under the Interim Surplus Guidelines, if available. Metropolitan also agreed to acquire up to 1.6 million acre-feet of water conserved by IID, excluding water transferred from IID to SDCWA (see "*—Sale of Water by the Imperial Irrigation District to San Diego County Water Authority*" below), if such water can be transferred consistent with plans for Salton Sea restoration, at an acquisition price of $250 per acre-foot (in 2003 dollars), with net proceeds to be deposited into the Salton Sea Restoration Fund. No conserved water has been made available to Metropolitan under this program. As part of an effort to mitigate the effects of the drought in the Colorado River Basin that began in 2000, Metropolitan elected not to take delivery of special surplus Colorado River water that was available from October 2003 through 2004 and from 2006 through 2007. No special surplus water has been available since 2007. Metropolitan may receive credit for the special surplus water payments against future contributions for the Lower Colorado River Multi-Species Conservation Program (see "*—Environmental Considerations*" below). In consideration of these agreements, Metropolitan will not have or incur any liability for restoration of the Salton Sea.

Sale of Water by the Imperial Irrigation District to San Diego County Water Authority. On April 29, 1998, SDCWA and IID executed an agreement (the "Transfer Agreement") for SDCWA's purchase from IID of Colorado River water that is conserved within IID. An amended Transfer Agreement, executed as one of the QSA agreements, set the maximum transfer amount at 205,000 acre-feet in 2021, with the transfer gradually ramping up to that amount over an approximately twenty-year period, stabilizing at 200,000 acre-feet per year beginning in 2023.

No facilities exist to deliver water directly from IID to SDCWA. Accordingly, Metropolitan and SDCWA entered into an exchange contract, pursuant to which SDCWA makes available to Metropolitan at its intake at Lake Havasu on the Colorado River the conserved Colorado River water acquired by SDCWA from IID and water allocated to SDCWA that has been conserved as a result of the lining of the All-American and Coachella Canals. See "*—Quantification Settlement Agreement*" above. Metropolitan delivers an equal volume of water from its own sources of supply through portions of its delivery system to SDCWA. The deliveries to both Metropolitan and SDCWA are deemed to be made in equal monthly increments. In consideration for the conserved water made available to Metropolitan by SDCWA, a lower rate is paid by SDCWA for the exchange water delivered by Metropolitan. The price payable by SDCWA is calculated using the charges set by Metropolitan's Board from time to time to be paid by its member agencies for the conveyance of water through Metropolitan's facilities. See "METROPOLITAN REVENUES–Wheeling and Exchange Charges" and "–Litigation Challenging Rate Structure" in this Appendix A for a description of Metropolitan's charges for the conveyance of water through Metropolitan's facilities and litigation in which SDCWA and IID are challenging such charges. In 2009, 140,188 acre-feet were delivered by SDCWA for exchange, consisting of 60,000 acre-feet of IID conservation plus 25,759 acre-feet and 54,429 acre-feet of conserved water from the Coachella Canal and All-American Canal lining projects, respectively. In 2010, 151,507 acre-feet were delivered by SDCWA for exchange, consisting of 70,000 acre-feet of IID conservation plus 81,507 acre-feet of conserved water from the combined Coachella Canal and All-American Canal lining projects. In 2011, 143,243 acre-feet were delivered by SDCWA for exchange, consisting of 63,278 acre-feet of IID conservation plus 79,965 acre-feet of conserved water from the Coachella Canal and All-American Canal lining projects.

The QSA agreements provided for delivery of 80,000 acre-feet of water conserved by IID in 2011. The delivery of conserved water fell short by 16,722 acre-feet. In accordance with the terms of the exchange contract, Metropolitan served SDCWA with a Notice of Default. The exchange contract provides that

SDCWA will pay the lower water rate based on deliveries of exchange water that match the volume of conserved water made available by IID in each calendar year. Metropolitan has invoiced SDCWA for its higher water rate on the 16,722 acre-feet of additional non-exchange water delivered in 2011. SDCWA paid this invoice under protest. Metropolitan has agreed to exchange with SDCWA up to an additional 16,722 acre-feet in 2012 if IID delivers that volume of conserved water after IID has met its 2012 obligation of 90,000 acre-feet.

QSA Related Litigation. On November 5, 2003, IID filed a validation action in Imperial County Superior Court, seeking a judicial determination that thirteen agreements associated with the IID/SDCWA water transfer and the QSA are valid, legal and binding. Other lawsuits also were filed contemporaneously challenging the execution, approval and implementation of the QSA on various grounds. All of the QSA cases were coordinated in Sacramento Superior Court. Between early 2004 and late 2009, a number of pre-trial challenges and dispositive motions were filed by the parties and ruled on by the court, which reduced the number of active cases and narrowed the issues for trial, the first phase of which began on November 9, 2009 and concluded on December 2, 2009. One of the key issues in this first phase was the constitutionality of the QSA Joint Powers Agreement, pursuant to which IID, CVWD and SDCWA agreed to commit $163 million toward certain mitigation and restoration costs associated with implementation of the QSA and related agreements, and the State agreed to be responsible for any costs exceeding this amount. A final judgment was issued on February 11, 2010, in which the trial court held that the State's commitment was unconditional in nature and, as such, violated the appropriation requirement and debt limitation under the California Constitution. The trial court also invalidated eleven other agreements, including the QSA, because they were inextricably interrelated with the QSA Joint Powers Agreement. Lastly, the trial court ruled that all other claims raised by the parties, including CEQA claims related to the QSA Programmatic EIR and the IID Transfer Project EIR, are moot.

In March 2010, Metropolitan, IID, CVWD, SDCWA, the State and others filed notices of appeal challenging various aspects of the trial court's ruling. On December 7, 2011, the court of appeal issued its ruling reversing, in part, the trial court's ruling. In particular, the court of appeal held that while the State's commitment to fund mitigation costs in excess of $163 million was unconditional, actual payment of such costs was subject to a valid appropriation by the Legislature, as required under the California Constitution. Moreover, the State's commitment did not create a present debt in excess of the State Constitution's $300,000 debt limit. Thus, the QSA Joint Powers Agreement was held to be constitutional. The court of appeal also rejected other challenges to this agreement, including that it was beyond the State's authority, there was no "meeting of the minds," and there was a conflict of interest. In light of its ruling, the court of appeal remanded the matter back to the trial court for further proceedings on the claims that had been previously dismissed as moot. A two-day bench trial was held on November 13, 2012. On June 4, 2013 the trial court issued its ruling, holding that IID had acted within its authority in executing these agreements and had complied with all substantive and procedural requirements imposed under State law. In addition, the court held that the environmental reviews conducted in support of the QSA and related agreements complied with CEQA and its implementing regulations in all respects. In short, the trial court rejected all of the claims asserted by opponents of the QSA. Once the court issues a final statement of decision and enters a final judgment in this case, parties objecting to the ruling will have 60 days to file an appeal. The impact, if any, that this litigation might have on Metropolitan's water supplies cannot be adequately determined at this time.

On January 28, 2010, Metropolitan was served with a federal complaint filed by the County of Imperial and the Imperial County Air Pollution Control District alleging that execution and implementation of three QSA-related agreements violate NEPA and the federal Clean Air Act. The complaint named the Department of the Interior, Secretary of the Interior, Bureau of Reclamation and Commissioner of Reclamation as defendants, and Metropolitan, CVWD, IID and SDCWA as real parties in interest. With respect to NEPA, the complaint alleged that the environmental impact statement prepared by the Bureau of Reclamation; failed to adequately analyze potential impacts on the Salton Sea and on land use, growth and socioeconomics; improperly segmented various project components; failed to address cumulative impacts; and failed to address mitigation of potential impacts. With respect to the Clean Air Act, the complaint alleged

that the Bureau of Reclamation failed to conduct a conformity analysis as required under the Act and Imperial County Air Pollution Control District's own rules. On April 6, 2012, the court ruled against the plaintiffs and in favor of the defendants on all claims. The court held that the plaintiffs lacked standing to pursue NEPA and Clean Air Act claims and that the NEPA claims lacked merit. On May 4, 2012, the plaintiffs filed a notice of appeal. On May 22, 2012, the non-federal defendants filed a notice of cross-appeal. Briefing on all appeals is expected to be completed by the middle of 2013.

Navajo Nation Litigation. The Navajo Nation filed litigation against the Department of the Interior, specifically the Bureau of Reclamation and the Bureau of Indian Affairs, in 2003, alleging that the Bureau of Reclamation has failed to determine the extent and quantity of the water rights of the Navajo Nation in the Colorado River and that the Bureau of Indian Affairs has failed to otherwise protect the interests of the Navajo Nation. The complaint challenges the adequacy of the environmental review for the Interim Surplus Guidelines (as defined under "*—Interim Surplus Guidelines*" below) and seeks to prohibit the Department of the Interior from allocating any "surplus" water until such time as a determination of the rights of the Navajo Nation is completed. Metropolitan and other California water agencies filed motions to intervene in this action. In October 2004 the court granted the motions to intervene and stayed the litigation to allow negotiations among the Navajo Nation, federal defendants, CAWCD, State of Arizona and Arizona Department of Water Resources. After years of negotiations, a tentative settlement was proposed in 2012 that would provide the Navajo Nation with specified rights to water from the Little Colorado River and groundwater basins under the reservation, along with federal funding for development of water supply systems on the tribe's reservation. The proposed agreement was rejected by tribal councils for both the Navajo and the Hopi, who are now seeking to intervene. On May 16, 2013, the stay of proceedings was lifted. On June 3, 2013, the Navajo Nation filed for leave to file a first amended complaint. The proposed amended complaint added a legal challenge to guidelines adopted by the Secretary of the Interior in 2007 that allow Metropolitan, and other Colorado River water users, to store water in Lake Mead. Metropolitan has used these new guidelines to store over 500,000 acre-feet of water in Lake Mead that may be delivered at Metropolitan's request in future years. Metropolitan will actively participate in the litigation to defend its rights under the Secretary of the Interior's guidelines governing operation of the Colorado River. The impact of the litigation on Metropolitan, if any, cannot be adequately determined at this time.

Interim Surplus Guidelines. In January 2001, the Secretary of the Interior adopted guidelines (the "Interim Surplus Guidelines") for use through 2016 in determining if there is surplus Colorado River water available for use in California, Arizona and Nevada. The purpose of the Interim Surplus Guidelines is to provide a greater degree of predictability with respect to the availability and quantity of surplus water through 2016. The Interim Surplus Guidelines were amended in 2007, with the new Guidelines extending through 2026 (see "*—Lower Basin Shortage Guidelines and Coordinated Management Strategies for Lake Powell and Lake Mead*" below). The Interim Surplus Guidelines contain a series of benchmarks for reductions in agricultural use of Colorado River water within California by set dates.

Under the Interim Surplus Guidelines, Metropolitan initially expected to divert up to 1.25 million acre-feet of Colorado River water annually under foreseeable runoff and reservoir storage scenarios from 2004 through 2016. However, an extended drought in the Colorado River Basin reduced these initial expectations. On May 16, 2002 SNWA and Metropolitan entered into an Agreement Relating to Implementation of Interim Colorado River Surplus Guidelines, in which SNWA and Metropolitan agreed to the allocation of unused apportionment as provided in the Interim Surplus Guidelines and on the priority of SNWA for interstate banking of water in Arizona. SNWA and Metropolitan entered into a storage and interstate release agreement on October 21, 2004. Under this program, Nevada can request that Metropolitan store unused Nevada apportionment in California. The amount of water stored through 2011 under this agreement was 70,000 acre-feet. In subsequent years, Nevada may request recovery of this stored water. As part of a recently executed amendment, it is expected that Nevada will not request return of this water before 2022. The stored water provides flexibility to Metropolitan for blending Colorado River water with State Water Project water and improves near-term water supply reliability.

Lower Basin Shortage Guidelines and Coordinated Management Strategies for Lake Powell and Lake Mead. In November 2007, the Bureau of Reclamation issued a Final Environmental Impact Statement ("EIS") regarding new federal guidelines concerning the operation of the Colorado River system reservoirs. These new guidelines provide water release criteria from Lake Powell and water storage and water release criteria from Lake Mead during shortage and surplus conditions in the Lower Basin, provide a mechanism for the storage and delivery of conserved system and non-system water in Lake Mead and extend the Interim Surplus Guidelines through 2026. The Secretary of the Interior issued the final guidelines through a Record of Decision signed in December 2007. The Record of Decision and accompanying agreement among the Colorado River Basin States protect reservoir levels by reducing deliveries during drought periods, encourage agencies to develop conservation programs and allow the Colorado River Basin States to develop and store new water supplies. The Colorado River Basin Project Act of 1968 insulates California from shortages in all but the most extreme hydrologic conditions.

Intentionally-Created Surplus Program. Metropolitan and the Bureau of Reclamation executed an agreement on May 26, 2006 for a demonstration program that allowed Metropolitan to leave conserved water in Lake Mead that Metropolitan would otherwise have used in 2006 and 2007. Only "intentionally-created surplus" water (water that has been conserved through an extraordinary conservation measure, such as land fallowing) was eligible for storage in Lake Mead under this program. See the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading "—Storage Capacity and Water in Storage" below. Metropolitan may store additional intentionally-created surplus water in Lake Mead under the federal guidelines for operation of the Colorado River system reservoirs described above under the heading "*Lower Basin Shortage Guidelines and Coordinated Management Strategies for Lake Powell and Lake Mead.*" The Secretary of the Interior will deliver intentionally-created surplus water to Metropolitan in accordance with the terms of a December 13, 2007 Delivery Agreement between the United States and Metropolitan. As of January 2013, Metropolitan had approximately 572,200 acre-feet in its intentionally-created surplus accounts, made up of water conserved by fallowing in the Palo Verde Valley and from the yield allocated to Metropolitan from the Drop 2 Reservoir Project and the Yuma Desalting Plant pilot run. Metropolitan estimates that it stored over 161,000 acre-feet of intentionally-created surplus water in 2012.

Environmental Considerations. Federal and state environmental laws protecting fish species and other wildlife species have the potential to affect Colorado River operations. A number of species that are on either "endangered" or "threatened" lists under the ESAs are present in the area of the Lower Colorado River, including among others, the bonytail chub, razorback sucker, southwestern willow flycatcher and Yuma clapper rail. To address this issue, a broad-based state/federal/tribal/private regional partnership that includes water, hydroelectric power and wildlife management agencies in Arizona, California and Nevada have developed a multi-species conservation program for the main stem of the Lower Colorado River (the Lower Colorado River Multi-Species Conservation Program or "MSCP"). The MSCP allows Metropolitan to obtain federal and state permits for any incidental take of protected species resulting from current and future water and power operations of its Colorado River facilities and to minimize any uncertainty from additional listings of endangered species. The MSCP also covers operations of federal dams and power plants on the river that deliver water and hydroelectric power for use by Metropolitan and other agencies. The MSCP covers 27 species and habitat in the Lower Colorado River from Lake Mead to the Mexican border for a term of 50 years. Over the 50 year term of the program, the total cost to Metropolitan will be about $88.5 million (in 2003 dollars), and annual costs will range between $0.8 million and $4.7 million (in 2003 dollars).

Quagga Mussel Control Program. In January 2007 quagga mussels were discovered in Lake Mead. Quagga mussels can reproduce quickly and, if left unmanaged, can clog intakes and raw water conveyance systems, alter or destroy fish habitats and affect lakes and beaches. Quagga mussels were introduced in the Great Lakes in the late 1980s. These organisms infest much of the Great Lakes basin, the St. Lawrence Seaway, and much of the Mississippi River drainage system. The most likely source of the quagga mussel infestation in the Colorado River is recreational boats with exposure to water bodies around the Great Lakes. Metropolitan developed a program in 2007 to address the long term introduction of mussel larvae into the Colorado River Aqueduct from the Lower Colorado River, which is now heavily colonized from Lake Mead

through Lake Havasu. The quagga mussel control program consists of surveillance activities and control measures. Surveillance activities are conducted annually in conjunction with regularly scheduled two- to three-week long Colorado River Aqueduct shutdowns, which have the added benefit of desiccating exposed quagga mussels. Control activities consist of continuous chlorination at Copper Basin, quarterly use of a mobile chlorinator at outlet towers and physical removal of mussels from the trash racks in Lake Havasu. Recent shutdown inspections have demonstrated that the combined use of chlorine and regularly scheduled shutdowns effectively control mussel infestation in the Colorado River Aqueduct.

Metropolitan is working to enhance its ability to detect the mussels, studying mussel transport and settling in Metropolitan conveyance systems, assessing additional, more cost-effective methods to control mussels and developing and implementing control strategies for mussels in Metropolitan's lakes and reservoirs. The California Department of Fish and Game has approved Metropolitan's recreational facilities and boating plan for Diamond Valley Lake and Lake Skinner, which requires inspection of boats and quarantine of those that are potential carriers of mussels, and Metropolitan's water releases management plan, which should minimize the potential for mussels to be introduced into new water bodies while allowing for water releases associated with dewatering of aqueducts and pipelines for maintenance, repair, or upgrades. In addition, the California Department of Fish and Game provided Metropolitan with a permit approving laboratory research on quagga mussels to advance the understanding of mussel biology in California and benefit future efforts to manage the invasive species. Future quagga mussel control efforts are expected to include infrastructure upgrades and recommendations on boating practices or additional facilities to control the spread of mussels in the Colorado River Aqueduct system and additional long-term measures. In September 2007, the Board appropriated $5.91 million for design and construction of interim chlorination facilities at Copper Basin and Lake Mathews, design of permanent chlorination facilities at Copper Basin, Lake Mathews and Diamond Valley Lake and related quagga mussel control measures. In February 2008, the Board appropriated $1.77 million for a new chlorine injection point at the Lake Skinner Outlet Conduit and for the procurement of liquid chlorine trailers and mobile chlorination units. In August 2008, the Board appropriated an additional $1.87 million to complete the chlorination facilities at Copper Basin and Lake Mathews and in June 2009, the Board appropriated $1.13 million for design and construction of a chlorination system to control quagga mussel growth at the Skinner oxidation retrofit facilities. Metropolitan estimates that its costs for controlling quagga mussels could exceed $10 million per year.

Water Transfer, Storage and Exchange Programs

General. California's agricultural activities consume approximately 34 million acre-feet of water annually, which is approximately 80 percent of the total water used for agricultural and urban uses and 40 percent of the water used for all consumptive uses, including environmental demands. Voluntary water transfers and exchanges can make a portion of this agricultural water supply available to support the State's urban areas. Such existing and potential water transfers and exchanges are an important element for improving the water supply reliability within Metropolitan's service area and accomplishing the reliability goal set by Metropolitan's Board. Metropolitan is currently pursuing voluntary water transfer and exchange programs with State, federal, public and private water districts and individuals. The following are summary descriptions of some of these programs.

Arvin-Edison/Metropolitan Water Management Program. In December 1997, Metropolitan entered into an agreement with the Arvin-Edison Water Storage District ("Arvin-Edison"), an irrigation agency located southeast of Bakersfield, California. Under the program, Arvin-Edison stores water on behalf of Metropolitan. In January 2008, Metropolitan and Arvin-Edison amended the agreement to enhance the program's capabilities and to increase the delivery of water to the California Aqueduct. Up to 350,000 acre-feet of Metropolitan's water may be stored and Arvin-Edison is obligated to return up to 75,000 acre-feet of stored water in any year to Metropolitan, upon request. The agreement will terminate in 2035 unless extended. To facilitate the program, new wells, spreading basins and a return conveyance facility connecting Arvin-Edison's existing facilities to the California Aqueduct have been constructed. The agreement also provides Metropolitan priority use of Arvin-Edison's facilities to convey high quality water available on the

east side of the San Joaquin Valley to the California Aqueduct. Metropolitan's current storage account under the Arvin-Edison/Metropolitan Water Management Program is shown in the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading, "—Storage Capacity and Water in Storage" below.

Semitropic/Metropolitan Groundwater Storage and Exchange Program. In 1994 Metropolitan entered into an agreement with the Semitropic Water Storage District ("Semitropic"), located adjacent to the California Aqueduct north of Bakersfield, to store water in the groundwater basin underlying land within Semitropic. The minimum annual yield available to Metropolitan from the program is 31,500 acre-feet of water and the maximum annual yield is 223,000 acre-feet of water depending on the available unused capacity and the State Water Project allocation. Metropolitan's current storage account under the Semitropic program is shown in the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading, "—Storage Capacity and Water in Storage" below.

California Aqueduct Dry-Year Transfer Program. Metropolitan has entered into agreements with the Kern Delta Water District, the Mojave Water Agency (Demonstration Water Exchange Program) and the San Bernardino Valley Municipal Water District ("SBVMWD") to insure against regulatory and operational uncertainties in the State Water Project system that could impact the reliability of existing supplies. The total potential yield for the three agreements is approximately 80,000 acre-feet of water per year when sufficient water is available.

Metropolitan entered into an agreement with SBVMWD in April 2001 to coordinate the use of facilities and State Water Project water supplies. The agreement allows Metropolitan a minimum purchase of 20,000 acre-feet on an annual basis with the option to purchase additional water when available. Also, the program includes 50,000 acre-feet of carryover storage. In addition to water being supplied using the State Water Project, the previously stored water can be returned using an interconnection between the San Bernardino Central Feeder and Metropolitan's Inland Feeder. This program terminates on December 31, 2014. Metropolitan entered into an agreement with Kern Delta Water District on May 27, 2003, for a groundwater banking and exchange transfer program to allow Metropolitan to store up to 250,000 acre-feet of State Water Contract water in wet years and permit Metropolitan, at Metropolitan's option, a return of up to 50,000 acre-feet of water annually during hydrologic and regulatory droughts. Additionally, Metropolitan entered into a groundwater banking and exchange transfer agreement with Mojave Water Agency on October 29, 2003. This agreement was amended in 2011 to allow for the cumulative storage of up to 390,000 acre-feet. The agreement allows for Metropolitan to store water in an exchange account for later return. Through 2021, and when the SWP allocation is 60 percent or less, Metropolitan can annually withdraw the Mojave Water Agency's SWP contractual amounts in excess of a 10 percent reserve. When the SWP allocation is over 60 percent, the reserved amount for Mojave's local needs increases to 20 percent. Under a 100 percent allocation, the State Water Contract provides Mojave Water Agency 82,800 acre-feet of water. Metropolitan's current storage account under these programs is shown in the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading, "—Storage Capacity and Water in Storage" below.

Other Water Purchase, Storage and Exchange Programs in the San Joaquin and Sacramento Valleys. Metropolitan has been negotiating, and will continue to pursue, water purchase, storage and exchange programs with other agencies in the Sacramento and San Joaquin Valleys. These programs involve the storage of both State Water Project supplies and water purchased from other sources to enhance Metropolitan's dry-year supplies and the exchange of normal year supplies to enhance Metropolitan's water reliability and water quality, in view of dry conditions and potential impacts from the ESA cases discussed above under the heading "—State Water Project—*Endangered Species Act Considerations*." In addition, in the fall of 2008 DWR convened the State Drought Water Bank (the "Drought Water Bank") as a one-year program to help mitigate water shortages in 2009. During 2009, Metropolitan purchased 36,900 acre-feet of Central Valley Water supplies through the Drought Water Bank, resulting in approximately 29,000 acre-feet of water deliveries after accounting for carriage and conveyance losses. In calendar year 2010, Metropolitan

participated with other State Water Contractors as a group to purchase 88,137 acre-feet of water, resulting in approximately 68,000 acre-feet of deliveries to Metropolitan after carriage and conveyance losses. Additionally during 2010, Metropolitan entered into two transactions with the Westlands Water District and the San Luis Water District, neither of which is subject to carriage losses. Under the first transaction, Metropolitan purchased 18,453 acre-feet of water. In the second, Metropolitan accepted delivery of 110,692 acre-feet of water stored in the San Luis Reservoir and returned two-thirds of that amount from Metropolitan's State Water Project supply in 2011 for a net yield of approximately 37,000 acre-feet.

Metropolitan entered into an agreement with DWR in December 2007 to purchase a portion of the water released by the Yuba County Water Agency ("YCWA"). YCWA was involved in a SWRCB proceeding in which it was required to increase Yuba River fishery flows. Within the framework of agreements known as the Yuba River Accord, DWR and the Bureau of Reclamation entered into agreements for the long-term purchase of water from YCWA. Metropolitan and other State Water Project contractors entered into separate agreements with DWR for purchase of portions of the water made available. Metropolitan's agreement allows Metropolitan to purchase at least 13,750 acre-feet to 35,000 acre-feet per year of water supplies in dry years through 2025. The agreement permits YCWA to transfer additional supplies at its discretion. For calendar years 2008, 2009 and 2010, Metropolitan purchased 26,430 acre-feet, 42,915 acre-feet and 67,068 acre-feet of water, respectively, from YCWA under this program. No purchases were made in calendar years 2011 and 2012, due to favorable water supply conditions.

Metropolitan/CVWD/Desert Water Agency Exchange and Advance Delivery Agreement. Metropolitan has agreements with the CVWD and the Desert Water Agency ("Desert") that require Metropolitan to exchange its Colorado River water for those agencies' State Water Project contractual water on an annual basis. Because Desert and CVWD do not have a physical connection to the State Water Project, Metropolitan takes delivery of Desert's and CVWD's State Water Project supplies and delivers a like amount of Colorado River water to the agencies. In accordance with an advance delivery agreement executed by Metropolitan, CVWD and Desert, Metropolitan has delivered Colorado River water in advance to these agencies for storage in the Upper Coachella Valley groundwater basin. In years when it is necessary to augment available supplies to meet local demands, Metropolitan has the option to meet the exchange delivery obligation through drawdowns of the advance delivery account, rather than deliver its Colorado River supply. Metropolitan's current storage account under the CVWD/Desert program is shown in the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading, "—Storage Capacity and Water in Storage" below. In addition to the CVWD/Desert exchange agreements, Metropolitan has entered into separate agreements with CVWD and Desert for delivery of non-State Water Project supplies acquired by CVWD or Desert. Similarly, Metropolitan takes delivery of these supplies from State Water Project facilities and incurs an exchange obligation to CVWD or Desert. From 2008 through 2012, Metropolitan has received a net additional supply of 34,362 acre-feet of water acquired by CVWD and Desert.

Other Agreements. Metropolitan is entitled to storage and access to stored water in connection with various storage programs and facilities. See "METROPOLITAN'S WATER SUPPLY—Colorado River Aqueduct" and "REGIONAL WATER RESOURCES—Local Water Supplies—*Conjunctive Use*" in this Appendix A, as well as the table "Metropolitan's Water Storage Capacity and Water in Storage" under the heading, "—Storage Capacity and Water in Storage" below.

Storage Capacity and Water in Storage

Metropolitan's storage capacity, which includes reservoirs, conjunctive use and other groundwater storage programs within Metropolitan's service area and groundwater and surface storage accounts delivered through the State Water Project or Colorado River Aqueduct, is approximately 5.93 million acre-feet. In 2012, approximately 626,000 acre-feet of stored water was emergency storage that was reserved for use in the event of supply interruptions from earthquakes or similar emergencies (see "METROPOLITAN'S WATER DELIVERY SYSTEM—Seismic Considerations" in this Appendix A), as well as extended drought. Metropolitan's emergency storage requirement is established periodically to provide a six-month water supply

at 75 percent of member agencies retail demand under normal hydrologic conditions. Metropolitan's ability to replenish water storage, both in the local groundwater basins and in surface storage and banking programs, has been limited by Bay-Delta pumping restrictions under the Interim Remedial Order in *NRDC v. Kempthorne* and the biological opinions issued for listed species. See "—State Water Project—*Endangered Species Act Considerations*" above. Metropolitan replenishes its storage accounts when imported supplies exceed demands. Effective storage management is dependent on having sufficient years of excess supplies to store water so that it can be used during times of shortage. Historically, excess supplies have been available in about seven of every ten years. Metropolitan forecasts that, with anticipated supply reductions from the State Water Project due to pumping restrictions, it will need to draw down on storage in about seven of ten years and will be able to replenish storage in about three years out of ten. This reduction in available supplies extends the time required for storage to recover from drawdowns and could require Metropolitan to implement its Water Supply Allocation Plan during extended dry periods.

As a result of increased State Water Project supplies and reduced demands from 2010 to 2012, Metropolitan rebuilt its storage after several years of withdrawals. From 2007 to 2009 Metropolitan drew down approximately one million acre-feet of its stored water to meet regional demands. During calendar year 2012, Metropolitan increased storage of State Water Project supplies in Central Valley groundwater storage programs by about 191,000 acre-feet. Storage in Diamond Valley Lake on January 1, 2013 was approximately 690,000 acre-feet, a decrease of about 96,000 acre-feet from Diamond Valley Lake's level on January 1, 2012. Metropolitan increased aggregate storage by approximately 349,000 acre-feet in 2012. This brought total storage at the end of 2012 to approximately 3.37 million acre-feet, including emergency storage, which was the highest end-of-year total water reserves in Metropolitan's history. The following table shows three years of Metropolitan's water in storage as of January 1, including emergency storage.

Source: Metropolitan.

(1) Water storage capacity and water in storage are based on accounting estimates and are subject to change.

(2) Flexible storage allocated to Metropolitan under its State Water Contract.

(3) Article 56 Carryover storage capacity is dependent on the annual State Water Project allocation, which varies from year to year. Article 56 water is unused water that is allocated to a state water contractor in a given year pursuant to the State Water Contract. Metropolitan's carryover water is stored in the San Luis Reservoir.

(4) Following a period during which Metropolitan was not permitted to increase storage, the Mojave Storage Program agreement was amended in 2011 to allow for cumulative storage of up to 390,000 acre-feet.

(5) Metropolitan's State Water Project carryover capacity ranges from 100,000 to 200,000 acre-feet, on a sliding scale that depends on the final State Water Project allocation. At allocations of 50 percent or less, Metropolitan may store 100,000 acre-feet, and at allocations of 75 percent or greater, Metropolitan may store up to 200,000 acre-feet. For the purposes of this table, the highest possible carryover capacity is displayed.

(6) Includes 292,000 acre-feet of emergency storage in Metropolitan's reservoirs.

Water Conservation

The central objective of Metropolitan's water conservation program is to help ensure adequate, reliable and affordable water supplies for Southern California by actively promoting efficient water use. The importance of conservation to the region has increased in recent years because of drought conditions in the State Water Project watershed and court-ordered restrictions on Bay-Delta pumping, as described under "—State Water Project" above. Water conservation is an integral component of Metropolitan's IRP Strategy, Water Surplus and Drought Management Plan and Water Supply Allocation Plan, each described in this Appendix A under "METROPOLITAN'S WATER SUPPLY."

Metropolitan's conservation program has largely been developed to assist its member agencies in meeting the "best management practices" ("BMP") of the California Urban Water Conservation Council's Memorandum of Understanding Regarding Urban Water Conservation in California ("CUWCC MOU") and to meet the conservation goals of the 2010 IRP Update. See "—Integrated Water Resources Plan" above. Under the terms of the CUWCC MOU and Metropolitan's Conservation Credits Program, Metropolitan assists and co-funds member agency conservation programs designed to achieve greater water use efficiency in residential, commercial, industrial, institutional and landscape uses. Metropolitan uses its Water Stewardship Rate, which is charged for every acre-foot of water conveyed by Metropolitan, together with available grant funds, to fund conservation incentives and other water management programs. All users of Metropolitan's system benefit from the system capacity made available by investments in demand management programs like the Conservation Credits Program. See "METROPOLITAN REVENUES—Rate Structure—*Water Stewardship Rate*" in this Appendix A. Direct spending by Metropolitan on active conservation incentives, including rebates for water-saving plumbing fixtures, appliances and equipment, from fiscal year 1989-90 through fiscal year 2011-12 was about $322 million. The 2010 Integrated Water Resources Plan Update estimates that 1,037,000 acre-feet of water will be conserved annually in southern California by 2025. See "—Integrated Water Resources Plan" above.

The Water Surplus and Drought Management Plan ("WSDM Plan"), which was adopted by Metropolitan's Board in April 1999, evolved from Metropolitan's experiences during the droughts of 1976-77 and 1987-92. The WSDM Plan splits resource actions into two major categories: Surplus Actions and Shortage Actions. The Surplus Actions store surplus water, first inside then outside the region. The Shortage Actions of the WSDM Plan are split into three sub-categories: Shortage, Severe Shortage, and Extreme Shortage. Each category has associated actions that could be taken as a part of the response to prevailing shortage conditions. Conservation and water efficiency programs are part of Metropolitan's resource management strategy through all categories.

Metropolitan's plan for allocation of water supplies in the event of shortage (the "Water Supply Allocation Plan"; see "—Water Supply Allocation Plan" below) allocates Metropolitan's water supplies among its member agencies, based on the principles contained in the WSDM Plan, to reduce water use and drawdowns from water storage reserves. Metropolitan's member agencies and retail water suppliers in Metropolitan's service area also have the ability to implement water conservation and allocation programs, and some of the retail suppliers in Metropolitan's service area have initiated conservation measures. The success of conservation measures in conjunction with the Water Supply Allocation Plan is evidenced as a contributing factor in the lower than budgeted water sales during fiscal years 2009-10, 2010-11 and 2011-12.

Legislation approved in November 2009 sets a statewide conservation target for urban per capita water use of 20 percent reductions by 2020 (with credits for existing conservation) at the retail level, providing an additional catalyst for conservation by member agencies and retail suppliers. (See "—State Water Project—*Bay-Delta Regulatory and Planning Activities*" above.) Metropolitan's water sales projections incorporate an estimate of conservation savings that will reduce retail demands. Current projections include an estimate of additional water use efficiency savings that would result from local agencies reducing their per capita water use in response to the 20 percent by 2020 conservation savings goals

required by recent legislation as well as an estimate of additional conservation that would have to occur to reach Metropolitan's IRP goal of reducing overall regional per capita water use by 20 percent by 2020.

Water Supply Allocation Plan

The Water Supply Allocation Plan provides a formula for equitable distribution of available water supplies in case of extreme water shortages within Metropolitan's service area. Delivery within a member agency of more than its allocated amount of Metropolitan supplies will subject the member agency to a penalty of one to four times Metropolitan's full service rate for untreated Tier 2 water, depending on how much the member agency's water use for the twelve-month period beginning on July 1 exceeds its allocated amount. See "METROPOLITAN REVENUES—Water Rates by Water Category" in this Appendix A. Any penalties collected may be rebated to the member agency that paid them to fund water management projects.

The Water Supply Allocation Plan was approved by the Board in February 2008. On April 14, 2009, Metropolitan's Board adopted a resolution declaring a regional water shortage and implementing the Water Supply Allocation Plan, effective July 1, 2009. The Board set the "Regional Shortage Level" at Water Supply Allocation Plan Level 2, which required reduction of regional water use by approximately ten percent and resulted in a total allocation of about 2.09 million acre-feet of Metropolitan water in fiscal year 2009-10. On April 13, 2010, the Board adopted a resolution recognizing the continuing regional water shortage and again setting the Regional Shortage Level at Water Supply Allocation Plan Level 2, which sustained the regional water use reduction of approximately 10 percent. Due to improved hydrologic and storage conditions, on April 12, 2011, the Board terminated implementation of the 2010-11 Water Supply Allocation Plan, restoring imported water deliveries to member agencies without risk of allocation penalties. Although the Act gives each of Metropolitan's member agencies a preferential entitlement to purchase a portion of the water served by Metropolitan (see "METROPOLITAN REVENUES—Preferential Rights"), historically, these rights have not been used in allocating Metropolitan's water.

Metropolitan's member agencies and retail water suppliers in Metropolitan's service area also may implement water conservation and allocation programs within their respective service territories in times of shortage.

REGIONAL WATER RESOURCES

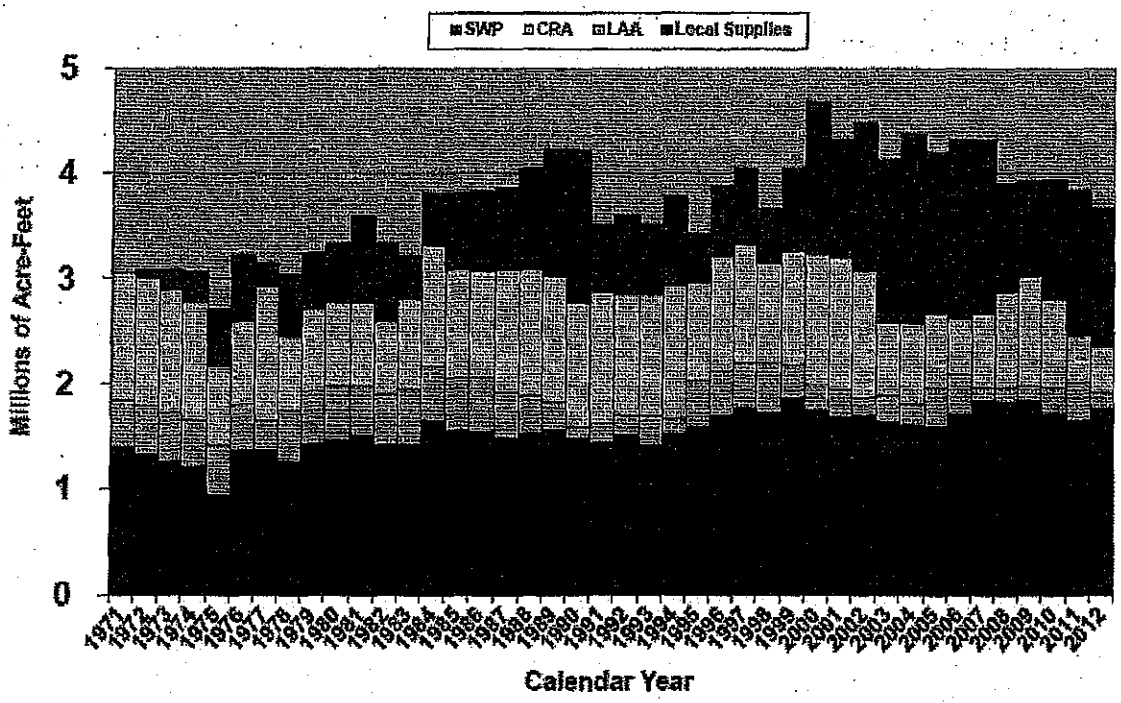
The water supply for Metropolitan's service area is provided in part by Metropolitan and in part by non-Metropolitan sources available to members. Approximately 60 percent of the water supply for Metropolitan's service area is imported water received by Metropolitan from its Colorado River Aqueduct and the State Water Project and by the City of Los Angeles (the "City") from the Los Angeles Aqueduct. While the City is one of the largest water customers of Metropolitan, it receives a substantial portion of its water from the Los Angeles Aqueduct and local groundwater supply. The balance of water within the region is produced locally, primarily from groundwater supplies and runoff.

Metropolitan's member agencies are not required to purchase or use any of the water available from Metropolitan. Some agencies depend on Metropolitan to supply nearly all of their water needs, regardless of the weather. Other agencies, with local surface reservoirs or aqueducts that capture rain or snowfall, rely on Metropolitan more in dry years than in years with heavy rainfall, while others, with ample groundwater supplies, purchase Metropolitan water only to supplement local supplies and to recharge groundwater basins. The demand for supplemental supplies provided by Metropolitan is dependent on water use at the retail consumer level and the amount of locally supplied and conserved water. See "METROPOLITAN'S WATER SUPPLY—Water Conservation" in this Appendix A and "—Local Water Supplies" below. Consumer demand and locally supplied water vary from year to year, resulting in variability in water sales. Future reliance on Metropolitan supplies will be dependent, among other things, on local projects and the amount of water, if any, that may be derived from sources other than Metropolitan. In recent years, supplies and demands have been affected by drought, water use restrictions, economic conditions, weather conditions and environmental laws, regulations and judicial decisions, as described in this Appendix A under

"METROPOLITAN'S WATER SUPPLY." For information on Metropolitan's water sales revenues, see "METROPOLITAN REVENUES" and "MANAGEMENT'S DISCUSSION OF HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES" in this Appendix A.

The following graph shows a summary of the regional sources of water supply for the years 1971 to 2012. Local supplies available within Metropolitan's service area are augmented by water imported by the City through the Los Angeles Aqueduct ("LAA") and Metropolitan supplies provided through the Colorado River Aqueduct ("CRA") and the State Water Project ("SWP").

Source of Water Supply in the Metropolitan Service Area (1971-2012)



Source: Metropolitan.

The major sources of water for Metropolitan's member agencies in addition to supplies provided by Metropolitan are described below.

Los Angeles Aqueduct

The City, through its Department of Water and Power ("LADWP"), operates its Los Angeles Aqueduct system to import water from the Owens Valley and the Mono Basin on the eastern slopes of the Sierra Nevada in eastern California. Prior to the 1990-1991 drought, the City had imported an average of 440,000 acre-feet of water annually from the combined Owens Valley/Mono Basin system, of which about 90,000 acre-feet came from the Mono Basin. Under the Mono Lake Basin Water Right Decision (Decision 1631) issued in September 1994, which revised the Department of Water and Power's water rights licenses in the Mono Basin, the City is limited to export 16,000 acre-feet annually from the Mono Basin until it reaches its target elevation of 6,391 feet above mean sea level.

Pursuant to the City's turnout agreement with DWR, Antelope Valley-East Kern Water Agency ("AVEK") and Metropolitan, the Department of Water and Power commenced construction in 2010 of the turnout facilities along the California Aqueduct within AVEK's service area. Upon completion, expected by 2020, the turnout will enable delivery of water from the California Aqueduct to the Los Angeles Aqueduct. Conditions precedent to such delivery of water include obtaining agreements for the transfer of non-State Water Project water directly from farmers, water districts or others in Northern and Central California, available capacity in the California Aqueduct and compliance with State Water Project water quality requirements. The agreement allows for use of the turnout for delivery of non-State Water Project water annually to the City in amounts not to exceed the supplies lost to the City as a result of its Eastern Sierra environmental obligations, including water for the Lower Owens River Project and the Owens Lake Dust Mitigation Project which could use up to 95,000 acre-feet of Los Angeles Aqueduct water.

Historically, the Los Angeles Aqueduct and local groundwater supplies have been nearly sufficient to meet the City's water requirements during normal water supply years. As a result, prior to the 1990-1991 drought only about 13 percent of the City's water needs (approximately 82,000 acre-feet) were supplied by Metropolitan. From fiscal year 2000-01 to fiscal year 2010-11, approximately 32 to 71 percent of the City's total water requirements were met by Metropolitan. For the five fiscal years ended June 30, 2012, the City's water deliveries from Metropolitan averaged approximately 301,000 acre-feet per year, which constituted approximately 51 percent of the City's total water supply. Deliveries from Metropolitan to the City during this period varied between approximately 167,000 acre-feet per year and approximately 433,000 acre-feet per year. See "METROPOLITAN REVENUES—Principal Customers" in this Appendix A. According to the Los Angeles Department of Water and Power's Year 2010 Urban Water Management Plan, the City is planning to increase locally-developed supplies including recycled water, new conservation, stormwater recapture and groundwater cleanup from the average for the five-year period ending June 30, 2010 of 12 percent to 43 percent of its normal year supplies by fiscal year 2034-35. Accordingly, the City's reliance on Metropolitan supplies will decrease from the five year average ending June 30, 2011 of 52 percent to 24 percent of its normal year supplies by fiscal year 2034-35. However, the City may still purchase up to 511,000 acre-feet per year or 82 percent of its dry year supplies from Metropolitan over the next 25 years. This corresponds to an increase from normal to dry years of approximately 255,000 acre-feet in potential demand for supplies from Metropolitan.

LADWP has indicated that it is currently analyzing additional impacts to the Los Angeles Aqueduct's water supply deliveries of various environmental projects aimed at improving air quality and fish and riparian habitat in the Owens Valley. In October 2012, LADWP filed a federal lawsuit challenging Owens Valley mitigation demands from air pollution control regulators. LADWP reports that, in 2012, 50 percent of its Los Angeles Aqueduct water was devoted to dust and environmental mitigation projects in the Owens Valley and Eastern Sierra, resulting in the need to purchase an equivalent amount of Metropolitan supply.

Local Water Supplies

Local water resources include groundwater production, recycled water production and diversion of surface flows. While local water resources are non-Metropolitan sources of water supply, Metropolitan has executed agreements for storage of Metropolitan supplies in local groundwater basins and provided incentives for local supply development as described below. Member agencies and other local agencies have also independently funded and developed additional local supplies, including groundwater storage and clean-up, recycled water and desalination of brackish or high salt content water.

Metropolitan's water sales projections are based in part on projections of locally-supplied water. Projections of future local supplies are based on estimated yields from sources and projects that are currently producing water or are under construction at the time a water sales projection is made. Additional reductions in Metropolitan's water sales projections are made to account for future local supply augmentation projects, based on the 2010 IRP Update goals. See "MANAGEMENT'S DISCUSSION OF HISTORICAL AND

PROJECTED REVENUES AND EXPENDITURES—Water Sales Projections" and "METROPOLITAN'S WATER SUPPLY—Integrated Water Resources Plan" in this Appendix A.

Groundwater. Demands for about 1.5 million acre-feet per year, about one-third of the annual water demands for approximately 18 million residents of Metropolitan's service area, are met from groundwater production. Local groundwater supplies are supported by recycled water, which is blended with imported water and recharged into groundwater basins, and also used for creating seawater barriers that protect coastal aquifers from seawater intrusion.

Groundwater Storage Programs. Metropolitan has executed agreements with a number of agencies to develop groundwater storage projects in its service area. These projects are designed to help meet the water delivery reliability goals of storing surplus imported supplies when available so that local agencies can withdraw stored groundwater during droughts or other periods of water supply shortage. In 2000, Metropolitan was allocated $45 million in State Proposition 13 bond proceeds to develop groundwater storage projects in Metropolitan's service area. The nine projects provide about 212,000 acre-feet of groundwater storage and have a combined extraction capacity of about 70,000 acre-feet per year. During fiscal year 2008-09, over 70,000 acre-feet of stored water was produced and sold from these storage accounts. Fiscal year 2009-10 sales from the nine accounts totaled nearly 41,000 acre-feet, leaving a balance of approximately 26,000 acre-feet in the storage accounts. Metropolitan began refilling the programs in fiscal year 2010-11. As of March 1, 2013, the balance in the nine accounts was over 82,000 acre-feet. See table "Metropolitan's Water Storage Capacity and Water in Storage" under "METROPOLITAN'S WATER SUPPLY—Storage Capacity and Water in Storage" in this Appendix A.

Recovered Groundwater. Contamination of groundwater supplies is a growing threat to local groundwater production. Metropolitan has been supporting increased groundwater production and improved regional supply reliability by offering financial incentives to agencies for production and treatment of degraded groundwater since 1991. Metropolitan has executed agreements with local agencies to provide financial incentives to 22 projects that recover contaminated groundwater with total contract yields of about 111,300 acre-feet per year. During fiscal year 2011-12 Metropolitan provided incentives for approximately 40,400 acre-feet of recovered water under these agreements. Total groundwater recovery use under executed agreements is expected to grow to 67,000 acre-feet by 2015.

Surface Runoff. Local surface water resources consist of runoff captured in storage reservoirs and diversions from streams. Since 1980, agencies have used an average of 115,000 acre-feet per year of local surface water. Local surface water supplies are heavily influenced by year to year local weather conditions, varying from a high of 193,000 acre-feet in fiscal year 1998-99 to a low of 65,000 acre-feet in fiscal year 2002-03.

Conjunctive Use. Conjunctive use is accomplished when groundwater basins are used to store imported supplies during water abundant periods. The stored water is used during shortages and emergencies with a corresponding reduction in surface deliveries to the participating agencies. Regional benefits include enhancing Metropolitan's ability to capture excess surface flows during wet years from both the State Water Project and Colorado River. Groundwater storage is accomplished using spreading basins, injection wells, and in-lieu deliveries where imported water is substituted for groundwater, and the groundwater not pumped is considered stored water.

Metropolitan has promoted conjunctive use at the local agency level under its Replenishment Service Program by discounting rates for imported water placed into groundwater or reservoir storage during wet months. The discounted rate and program rules encouraged construction of additional groundwater production facilities allowing local agencies to be more self-sufficient during shortages. (See "*–Groundwater Storage Programs*" above.) In calendar year 2006, Metropolitan delivered approximately 247,000 acre-feet of water as replenishment water. In calendar year 2007, Metropolitan delivered approximately 46,000 acre-feet of water as replenishment water through May 1, 2007 then discontinued such deliveries through May 10,

2011 when Metropolitan's Board authorized sale of up to 225,000 acre-feet of discounted replenishment service deliveries to member agencies for the remainder of calendar year 2011. In calendar year 2011, Metropolitan delivered approximately 225,000 acre-feet of this discounted replenishment water. No replenishment sales are budgeted for fiscal year 2012-13 and thereafter. The Replenishment Service Program was discontinued effective December 31, 2012. See "METROPOLITAN REVENUES—Classes of Water Service—*Replenishment*" and "MANAGEMENT'S DISCUSSION OF HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES—Water Sales Projections" in this Appendix A.

Recycled Water. Metropolitan has supported recycled water use to offset potable water demands and improve regional supply reliability by offering financial incentives to agencies for production and sales of recycled water since 1982. Metropolitan has executed agreements with local agencies to provide financial incentives to 73 recycled water projects with total contract yields of about 335,000 acre-feet per year. During fiscal year 2011-12, Metropolitan provided incentives for approximately 171,400 acre-feet of reclaimed water under these agreements. Total recycled water use under executed agreements is expected to grow to about 186,000 acre-feet by 2015.

Seawater Desalination. Metropolitan's IRP includes seawater desalination as a core local supply and supports foundational actions to lay the groundwork for accelerating seawater desalination development as needed in the future. To encourage local development, Metropolitan has signed Seawater Desalination Program ("SDP") incentive agreements with three of its member agencies: Long Beach, Municipal Water District of Orange County and West Basin Municipal Water District. The SDP agreements provide incentives to the member agencies of up to $250 per acre-foot when the desalinated supplies are produced. Agreement terms are for the earlier of 25 years or through 2040 and are designed to phase out if Metropolitan's rates surpass the unit cost of producing desalinated seawater. SDP agreements are subject to final approval by Metropolitan's Board after review of the complete project description and environmental documentation. Collectively these projects are anticipated to produce up to 46,000 acre-feet annually.

In November 2012, SDCWA approved a water purchase agreement with Poseidon Resources LLC ("Poseidon Resources") for a seawater desalination project in Carlsbad (the "Carlsbad Project") to provide a minimum of 48,000 acre-feet and a maximum of 56,000 acre-feet of desalinated supplies to SDCWA per year. The Carlsbad Project is under construction and is anticipated to be completed in 2016.

Other seawater desalination projects are under development or consideration that could provide supplies to Metropolitan's service area. Poseidon Resources is developing a 56,000 acre-feet per year plant in Huntington Beach which is currently in the permitting phase, with California Coastal Commission permit hearings anticipated in 2013. SDCWA is studying the potential for a seawater desalination plant in Camp Pendleton which would initially produce up to 56,000 acre-feet per year and potentially up to 168,000 acre-feet per year with a phased build out. SDCWA, in collaboration with Mexican government agencies, also is considering a 56,000 acre-feet per year facility in Rosarito Beach, Mexico. If developed, SDCWA could receive a portion of the desalinated supplies through a delivery pipeline across the international border to SDCWA. Otay Water District, located in San Diego County along the Mexico border, is separately considering the feasibility of purchasing water from an alternative seawater desalination project at the same site in Rosarito Beach. Approvals from a number of U.S. and Mexican federal agencies, along with State and local approvals, would be needed for either cross-border project to proceed.

METROPOLITAN'S WATER DELIVERY SYSTEM

Method of Delivery

Metropolitan's water delivery system is made up of three basic components: the Colorado River Aqueduct, the California Aqueduct of the State Water Project and Metropolitan's internal water distribution system. Metropolitan's delivery system is integrated and designed to meet the differing needs of its member agencies. Metropolitan seeks redundancy in its delivery system to assure reliability in the event of an outage.

Current system expansion and other improvements will be designed to increase the flexibility of the system. Since local sources of water are generally used to their maximum each year, growth in the demand for water is partially met by Metropolitan. Accordingly, the operation of Metropolitan's water system is being made more reliable through the rehabilitation of key facilities as needed, improved preventive maintenance programs and the upgrading of Metropolitan's operational control systems. See "CAPITAL INVESTMENT PLAN" in this Appendix A.

Colorado River Aqueduct. Work on the Colorado River Aqueduct commenced in 1933 and water deliveries started in 1941. Additional facilities were completed by 1961 to meet additional requirements of Metropolitan's member agencies. The Colorado River Aqueduct is 242 miles long, starting at the Lake Havasu intake and ending at the Lake Mathews terminal reservoir. Metropolitan owns all of the components of the Colorado River Aqueduct, which include five pump plants, 64 miles of canal, 92 miles of tunnels, 55 miles of concrete conduits and 144 underground siphons totaling 29 miles in length. The pumping plants lift the water approximately 1,617 feet over several mountain ranges to Metropolitan's service area. See "METROPOLITAN'S WATER SUPPLY—Colorado River Aqueduct" in this Appendix A.

State Water Project. The initial portions of the State Water Project serving Metropolitan were completed in 1973. State Water Project facilities are owned and operated by DWR. Twenty-nine agencies have entered into contracts with DWR to receive water from the State Water Project. See "METROPOLITAN'S WATER SUPPLY—State Water Project" in this Appendix A.

Internal Distribution System. Metropolitan's internal water distribution system includes components that were built beginning in the 1930s and through the present. Metropolitan owns all of these components, including 14 dams and reservoirs, five regional treatment plants, over 800 miles of transmission pipelines, feeders and canals, and 16 hydroelectric plants with an aggregate capacity of 131 megawatts.

Diamond Valley Lake. Diamond Valley Lake, a man-made reservoir located southwest of the city of Hemet, California, covers approximately 4,410 acres and has capacity to hold approximately 810,000 acre-feet or 265 billion gallons of water. Diamond Valley Lake was constructed to serve approximately 90 percent of Metropolitan's service area by gravity flow. Associated hydraulic structures consist of an inlet-outlet tower, pumps and generating facilities, a pressure control facility, connecting tunnels and a forebay. Imported water is delivered to Diamond Valley Lake during surplus periods. The reservoir provides more reliable delivery of imported water from the State Water Project and the Colorado River Aqueduct during summer months, droughts and emergencies. In addition, Diamond Valley Lake is capable of providing more than one-third of Southern California's water needs from storage for approximately six months after a major earthquake (assuming that there has been no impairment of Metropolitan's internal distribution network). See the table "Metropolitan's Water Storage Capacity and Water in Storage" under "METROPOLITAN'S WATER SUPPLY—Storage Capacity and Water in Storage" in this Appendix A for the amount of water in storage at Diamond Valley Lake. Excavation at the project site began in May 1995. Diamond Valley Lake was completed in March 2000, at a total cost of $2 billion, and was in full operation in December 2001.

Inland Feeder. The Inland Feeder is a 44-mile-long conveyance system that connects the State Water Project to Diamond Valley Lake and the Colorado River Aqueduct. The Inland Feeder provides greater flexibility in managing Metropolitan's major water supplies and allows greater amounts of State Water Project water to be accepted during wet seasons for storage in Diamond Valley Lake. In addition, the Inland Feeder increases the conveyance capacity from the East Branch of the State Water Project by 1,000 cubic-feet per second ("cfs"), allowing the East Branch to operate up to its full capacity. Construction of the Inland Feeder was completed in September 2009 at a total cost of $1.14 billion.

Operations Control Center. Metropolitan's water conveyance and distribution system operations are coordinated from the Operations Control Center ("OCC") located in the Eagle Rock area of Los Angeles. The OCC plans, balances and schedules daily water and power operations to meet member agencies' demands, taking into consideration the operational limits of the entire system.

Water Treatment

Metropolitan filters and disinfects water at five water treatment plants: the F.E. Weymouth Treatment Plant, the Joseph Jensen Treatment Plant, the Henry J. Mills Treatment Plant, the Robert B. Diemer Treatment Plant and the Robert A. Skinner Treatment Plant. The plants treat an average of between 1.7 billion and 2.0 billion gallons of water per day, and have a maximum capacity of approximately 2.6 billion gallons per day. Approximately 60 percent of Metropolitan's water deliveries are treated water.

Federal and state regulatory agencies continually monitor and establish new water quality standards. New water quality standards could affect availability of water and impose significant compliance costs on Metropolitan. The Safe Drinking Water Act ("SDWA") was amended in 1986 and again in 1996. The SDWA establishes drinking water quality standards, monitoring, public notification and enforcement requirements for public water systems. To achieve these objectives, the U.S. Environmental Protection Agency ("USEPA"), as the lead regulatory authority, promulgates national drinking water regulations and develops the mechanism for individual states to assume primary enforcement responsibilities. The California Department of Public Health ("CDPH"), formerly known as the Department of Health Services, has lead authority over California water agencies. Metropolitan continually monitors new water quality laws and regulations and frequently comments on new legislative proposals and regulatory rules.

In October 2007, Metropolitan began adding fluoride to treated water at all five of its treatment plants for regional compliance with Assembly Bill 733, enacted in 1995, which requires fluoridation of any public water supply with over 10,000 service connections in order to prevent tooth decay, subject to availability of sufficient funding. Design and construction of the fluoridation facilities at Metropolitan's five treatment plants were funded primarily by a $5.5 million grant from the California Dental Association Foundation, in conjunction with the California Fluoridation 2010 Work Group. On August 9, 2011, four individuals filed litigation (*Foli, et al. v. Metropolitan Water District of Southern California, et al.*) in federal district court alleging deprivation of civil rights, impairment of civil rights and unfair competition based on fluoridation of Metropolitan's treated water deliveries. On April 10, 2012 the court granted Metropolitan's motion to dismiss the case without prejudice. Plaintiffs filed a first amended complaint on April 24, 2012. Metropolitan's motion to dismiss the first amended complaint was granted on January 25, 2013, dismissing the case with prejudice.

Disinfection By-products. As part of the requirements of the SDWA, USEPA is required to establish regulations to strengthen protection against microbial contaminants and reduce potential health risks from disinfection by-products. Disinfectants and disinfection by-products ("DBPs" and, together with disinfectants, "D/DBPs") were addressed by the USEPA in two stages. In the Stage 1 Disinfectants and Disinfection Byproducts Rule ("Stage 1 DBPR"), the maximum contaminant level ("MCL") for one of the classes of DBPs, total trihalomethanes ("TTHM"), was lowered from 100 parts per billion ("ppb") to 80 ppb. MCLs were also set for haloacetic acids ("HAA") and bromate (an ozone DBP). In addition, the Stage 1 DBPR includes a treatment requirement to remove disinfection by-product precursors. Compliance with these requirements started in January 2002. Metropolitan already satisfied these requirements for its Colorado River Water, which has lower levels of disinfection by-product precursors than State Water Project water. State Water Project water has a greater amount of disinfection by-product precursors and modifications to the treatment process have been made to meet the requirements of the Stage 1 DBPR. Longer-term D/DBP control has been achieved by switching to ozone as the primary disinfectant at the Mills, Jensen and Skinner treatment plants. Mills and Jensen treatment plants only receive water from the State Water Project. Ozone facilities at the Mills and Jensen plants began operating in October 2003 and July 2005, respectively. Skinner, Diemer and Weymouth water treatment plants receive a blend of water from the State Water Project and the Colorado River. Ozone facilities at the Skinner plant became operational in October 2010. The Diemer plant is nearing the end of construction of its ozone facilities with an online date anticipated by 2014. Construction of Weymouth ozone facilities is underway and anticipated to be complete in 2016. See "CAPITAL INVESTMENT PLAN—Major Projects of Metropolitan's Capital Investment Plan" in this Appendix A. Ozone will enable these plants to reliably treat water containing higher blends of State Project

water and still meet the new microbial and D/DBP standards, while also improving the aesthetics, such as taste and odor, of water delivered to consumers.

The second stage of the D/DBP Rule ("Stage 2 DBPR") was finalized in January 2006. The Stage 2 DBPR requires water systems to meet the TTHM and HAA standards at individual monitoring locations in the distribution system as opposed to a distribution system-wide average under the Stage 1 DBPR. Metropolitan does not anticipate any further capital improvements in order to meet the Stage 2 DBPR requirements.

The Interim Enhanced Surface Water Treatment Rule and the Long Term 2 Enhanced Surface Water Treatment Rule ("LT2ESWTR") have been implemented to simultaneously provide protection against microbial pathogens while the D/DBP rules provide reduced risk from disinfection by-products. Metropolitan does not anticipate any further capital improvements in order to meet the LT2ESWTR requirements.

Perchlorate. Perchlorate, used in solid rocket propellants, munitions and fireworks, has contaminated some drinking water wells and surface water sources throughout California. Perchlorate also has been detected in Metropolitan's Colorado River water supplies. A chemical manufacturing facility near Lake Mead in Nevada is a primary source of the contamination. Remediation efforts began in 1998 and have been successful at meeting the cleanup objectives, significantly reducing the levels of perchlorate entering into the Colorado River. CDPH has established a primary drinking water standard (i.e., an MCL) of 6 ppb for perchlorate. Current perchlorate levels in Metropolitan's Colorado River supplies are below 2 ppb.

Chromium 6. Hexavalent chromium or chromium 6 is one of several forms of chromium that occur in natural waters in the environment. Chromium 6 is the relatively more harmful form of chromium that is regulated under the public health standard MCL of 50 ppb for "total" chromium. There is currently no specific MCL for chromium 6. Since monitoring began in 1998, chromium 6 in Metropolitan's treated waters has ranged from non-detect (less than 0.03 ppb) to under 1 ppb. On July 27, 2011 the California Office of Environmental Health Hazard Assessment ("OEHHA") released a public health goal ("PHG") of 0.02 ppb for chromium 6. Following public comment periods and workshops, the CDPH can proceed with final development of a MCL for chromium 6 and must set the state MCL as close to the PHG as is technologically and economically feasible. Despite the conservative PHG, it is expected that the adoption of a chromium 6 regulation will not materially affect the water supply to Metropolitan or result in significant compliance costs.

Arsenic. The federal and state MCL for arsenic in drinking water is 10 ppb. Arsenic levels in Metropolitan's treated water supplies ranged from not detected (less than 2 ppb) to 2.7 ppb in 2012, which is within the historically expected range.

Seismic Considerations

General. Although the magnitude of damages resulting from a significant seismic event are impossible to predict, Metropolitan's water conveyance and distribution facilities are designed to either withstand a maximum probable seismic event or to minimize the potential repair time in the event of damage. The five pumping plants on the Colorado River Aqueduct have been buttressed to better withstand seismic events. Other components of the Colorado River Aqueduct are monitored for any necessary rehabilitation and repair. Metropolitan personnel and independent consultants periodically reevaluate the internal water distribution system's vulnerability to earthquakes. As facilities are evaluated and identified for seismic retrofitting, they are prioritized, with those facilities necessary for delivering or treating water scheduled for upgrade before non-critical facilities. However, major portions of the California Aqueduct and the Colorado River Aqueduct are located near major earthquake faults, including the San Andreas Fault. A significant earthquake could damage structures and interrupt the supply of water, adversely affecting Metropolitan's revenues and its ability to pay its obligations. Therefore, emergency supplies are stored for use throughout Metropolitan's service area, and a six-month reserve supply of water normally held in local storage (including

emergency storage in Diamond Valley Lake) provides reasonable assurance of continuing water supplies during and after such events.

Metropolitan has an ongoing surveillance program that monitors the safety and structural performance of its 14 dams and reservoirs. Operating personnel perform regular inspections that include monitoring and analyzing seepage flows and pressures. Engineers responsible for dam safety review the inspection data and monitor the horizontal and vertical movements for each dam. Major on-site inspections are performed at least twice each year. Instruments that transmit seismic acceleration time histories for analysis any time a dam is subjected to strong motion during an earthquake are located at a number of selected sites.

In addition, Metropolitan has developed an emergency plan that calls for specific levels of response appropriate to an earthquake's magnitude and location. Included in this plan are various communication tools as well as a structured plan of management that varies with the severity of the event. Pre-designated personnel follow detailed steps for field facility inspection and distribution system patrol. Approximately 40 employees are designated to respond immediately under certain identifiable seismic events. An emergency operations center is maintained at the OCC. The OCC, which is specifically designed to be earthquake resistant, contains communication equipment, including a radio transmitter, microwave capability and a response line linking Metropolitan with its member agencies, DWR, other utilities and the State's Office of Emergency Services. Metropolitan also maintains machine, fabrication and coating shops at its facility in La Verne, California. Materials to fabricate pipe and other appurtenant fittings are kept in inventory at the La Verne site. In the event of earthquake damage, Metropolitan has taken measures to provide the design and fabrication capacity to fabricate pipe and related fittings. Metropolitan is also staffed to perform emergency repairs and has pre-qualified contractors for emergency repair needs at various locations throughout Metropolitan's service area.

State Water Project Facilities. The California Aqueduct crosses all major faults either by canal at ground level or by pipeline at very shallow depths to ease repair in case of damage from movement along a fault. State Water Project facilities are designed to withstand major earthquakes along a local fault or magnitude 8.1 earthquakes along the San Andreas Fault without major damage. Dams, for example, are designed to accommodate movement along their foundations and to resist earthquake forces on their embankments. Earthquake loads have been taken into consideration in the design of project structures such as pumping and power plants. The location of check structures on the canal allows for hydraulic isolation of the fault-crossing repair.

While the dams, canals, pump stations and other constructed State Water Project facilities have been designed to withstand earthquake forces, the critical supply of water from Northern California must traverse the Bay-Delta through hundreds of miles of varying levels of engineered levees that are susceptible to major failures due to flood and seismic risk. In the event of a failure of the Bay-Delta levees, the quality of the Bay-Delta's water could be severely compromised as salt water comes in from the San Francisco Bay. Metropolitan's supply of State Water Project water would be adversely impacted if pumps that move Bay-Delta water southward to the Central Valley and Southern California are shut down to contain the salt water intrusion. Metropolitan estimates that stored water supplies, Colorado River Aqueduct supplies and local water resources that would be available in case of a levee breach or other interruption in State Water Project supplies would meet demands in Metropolitan's service area for approximately twelve months. See "METROPOLITAN'S WATER SUPPLY—Storage Capacity and Water in Storage" in this Appendix A. Since the State and Federal governments control the Bay-Delta levees, repair of any levee failures would be the responsibility of and controlled by the State and Federal governments.

Metropolitan, in cooperation with the State Water Contractors, developed recommendations to DWR for emergency preparedness measures to maintain continuity in export water supplies and water quality during emergency events. These measures include improvements to emergency construction materials stockpiles in the Bay-Delta, improved emergency contracting capabilities, strategic levee improvements and

other structural measures of importance to Bay-Delta water export interests, including development of an emergency freshwater pathway to export facilities in a severe earthquake. DWR utilized $12 million in fiscal year 2007-08 for initial stockpiling of rock for emergency levee repairs and development of Bay-Delta land and marine loading facilities and has identified future funding for expanded stockpiles.

Perris Dam. DWR reported in July 2005 that seismic studies indicate that DWR's Perris Dam facility could sustain damage from moderate earthquakes along the San Jacinto or San Andreas faults due to potential weaknesses in the dam's foundation. The studies used technology not available when the dam was completed in 1974. Perris Dam forms Lake Perris, the terminal reservoir for the State Water Project in Riverside County, with maximum capacity of approximately 130,000 acre-feet of water. In late 2005, DWR lowered the water level in the reservoir by about 25 feet and reduced the amount of water stored in the reservoir to about 75,000 acre-feet as DWR evaluates alternatives for repair of the dam. The lower lake level elevation was intended to prevent over-topping of the dam crest in the event of a major earthquake and to prevent uncontrolled releases. In December 2006, DWR completed a study identifying various repair options, began additional geologic exploration along the base of Perris Dam and started preliminary design. DWR's preferred alternative is to repair the dam to restore the reservoir to its historical level. DWR released its draft EIR in January 2010 and final EIR in September 2011. On November 11, 2011, DWR certified the final EIR and filed a Notice of Determination stating its intent to proceed with the preferred alternative. Since that time, DWR has narrowed its scope of work and refined its cost estimates for this project. DWR now estimates that such repairs will cost approximately $141 million with commencement of construction anticipated in 2014 and completion in late 2015. Under the original allocation of joint costs for this facility, the State would have paid approximately six percent of the repair costs. However, because of the recreational benefit this facility provides to the public, the Legislature has approved a recommendation from DWR that the State assume a greater percentage of these repairs costs, namely 32.2 percent. The remaining 67.8 percent of repairs costs will be paid for by the three agencies that use the water stored in Lake Perris: Metropolitan, Desert Water Agency and Coachella Valley Water District. See "METROPOLITAN EXPENDITURES–State Water Contract Obligations" in this Appendix A.

Security Measures

Metropolitan conducts ground and air patrols of the Colorado River Aqueduct and monitoring and testing at all treatment plants and along the Colorado River Aqueduct. Similarly, DWR has in place security measures to protect critical facilities of the State Water Project, including both ground and air patrols of the State Water Project.

Although Metropolitan has constructed redundant systems and other safeguards to ensure its ability to continually deliver water to its customers, and DWR has made similar efforts, a terrorist attack or other security breach against water facilities could materially impair Metropolitan's ability to deliver water to its customers, its operations and revenues and its ability to pay its obligations.

CAPITAL INVESTMENT PLAN

General Description

Metropolitan's current Capital Investment Plan (the "Capital Investment Plan" or "CIP") involves expansion and rehabilitation of existing facilities and construction of new facilities to provide for resource development, meet future water demands, ensure system reliability as well as enhance operational efficiency, and comply with water quality regulations. Metropolitan's CIP is regularly reviewed and updated. Implementation and construction of specific elements of the program are subject to Board approval, and the amount and timing of borrowings will depend upon, among other factors, status of construction activity and water demands within Metropolitan's service area. From time to time projects that have been undertaken are delayed, redesigned or deferred by Metropolitan for various reasons and no assurance can be given that a project in the CIP will be completed in accordance with its original schedule or that any project will be completed as currently planned.

Projection of Capital Investment Plan Expenditures

The table below sets forth the projected CIP expenditures in the adopted biennial budget for fiscal years 2012-13 and 2013-14, including replacement and refurbishment expenditures, by project type for the fiscal years ending June 30, 2013 through 2017. The requirements of the CIP from fiscal year 2012-13 through fiscal year 2016-17, as set forth in the adopted biennial budget for fiscal years 2012-13 and 2013-14, are estimated to be approximately $1.45 billion in escalated dollars. This estimate is updated annually as a result of the periodic review and revision of the CIP. See "HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES" in this Appendix A.

CAPITAL INVESTMENT PLAN
PROJECTION OF EXPENDITURES[1]
(Fiscal Years Ended June 30 - Dollars in Thousands)

	2013	2014	2015	2016	2017	Total
Cost of Service						
Source of Supply	$ 347	$ -0-	$ -0-	$ -0-	$ -0-	$ 347
Conveyance & Aqueduct	49,323	37,454	27,124	9,710	2,000	125,611
Storage	8,268	8,001	5,752	8,239	9,599	39,859
Distribution	35,201	42,734	54,827	70,509	82,548	285,819
Treatment	131,722	163,269	208,627	193,812	171,820	869,250
Administrative & General	24,999	21,158	22,171	14,992	5,493	88,813
Hydroelectric	7,429	21,989	3,533	1,216	5,715	39,882
Total[2]	$257,289[3]	$294,605[3]	$322,034	$298,478	$277,175	$1,449,581

Source: Metropolitan.

(1) Fiscal year 2012-13 through 2016-17 based on the adopted biennial budget for fiscal years 2012-13 and 2013-14. Totals are rounded.

(2) Annual totals include replacement and refurbishment expenditures for fiscal years 2012-13 through 2016-17 of $132 million, $154 million, $127 million, $184 million, and $200 million, respectively, for a total of $797 million for fiscal years 2012-13 through 2016-17.

(3) Based upon actual operations through January 31, 2013 and revised projections for February through June 2013, CIP expenditures for fiscal year 2012-13 are projected to be $140 million, compared to a budget of $257 million. CIP expenditures for fiscal year 2013-14 are projected to be $214 million. These variances are attributed to significant cost savings for a single under-budget construction contract, lower than anticipated contract progress payments, and efforts to optimize design and construction scheduling while maintaining reliable service.

The above projections do not include amounts for contingencies, but include escalation at 2.77 percent per year for projects for which formal construction contracts have not been awarded. Additional capital costs may arise in the future as a result of, among other things, federal and State water quality regulations, project changes and mitigation measures necessary to satisfy environmental and regulatory requirements, and for additional facilities. See "METROPOLITAN'S WATER DELIVERY SYSTEM—Water Treatment" in this Appendix A.

Capital Investment Plan Financing

The CIP will require significant funding from debt financing (see "HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES" in this Appendix A) as well as from pay-as-you-go funding. The Board has adopted an internal funding objective to fund all capital program expenditures required for replacements and refurbishments of Metropolitan facilities from current revenues. However, in order to reduce drawdowns of reserve balances and to mitigate financial risks that could occur in upcoming years, actual and projected pay-as-you-go funding has been less than projected amounts during fiscal years 2007-08 through 2012-13. During this period, pay-as-you-go funding is now expected to be $256 million,

rather than the $521 million originally projected for this period. As in prior years, these amounts may be reduced or increased by the Board during the fiscal year. To limit the accumulation of cash and investments in the Replacement and Refurbishment Fund, the maximum balance in this fund at the end of each fiscal year will be $95 million. Amounts above the $95 million limit will be transferred to the Revenue Remainder Fund and may be used for any lawful purpose. See "METROPOLITAN REVENUES—Financial Reserve Policy" in this Appendix A. The remainder of capital program expenditures will be funded through the issuance from time to time of water revenue bonds, which are payable from Net Operating Revenues. Metropolitan's budget assumptions for the adopted biennial budget for fiscal years 2012-13 and 2013-14 provide for the issuance of additional water revenue bonds to fund the CIP in the amount of $180 million in fiscal year 2012-13, $180 million in fiscal year 2013-14, $200 million in fiscal year 2014-15, $180 million in fiscal year 2015-16 and $190 million in fiscal year 2016-17. Metropolitan does not expect to issue the entire amount of $180 million of additional water revenue bonds to fund the CIP in fiscal year 2012-13 and has not determined how that may affect the budget assumptions concerning issuances in future fiscal years.

Major Projects of Metropolitan's Capital Investment Plan

Oxidation Retrofit Facilities. The oxidation retrofit facilities program includes the design and construction of oxidation facilities and appurtenances at all of Metropolitan's treatment plants. This program is intended to allow Metropolitan to meet drinking water standards for disinfection by-products and reduce taste and odor incidents. The first phase of the oxidation retrofit program, at Metropolitan's Henry J. Mills Treatment Plant in Riverside County, was completed in 2003. Oxidation retrofit at the Joseph Jensen Treatment Plant was completed July 1, 2005. The cost for these two projects was approximately $236.4 million. Oxidation retrofit at the Robert A. Skinner plant was substantially completed in December 2009 and operational in 2010, with follow-up work expected for completion in June 2013. Expenditures at the Skinner plant through December 2012 were $242.2 million. Total oxidation program costs at the Skinner plant are estimated to be $245.5 million. Construction of the oxidation retrofit facilities at the Robert B. Diemer Treatment Plant was 99 percent complete as of May 1, 2013. The facilities are anticipated to be online by 2014. Program expenditures at the Diemer plant through December 2012 were $348.7 million and the total program cost is projected to be $372.9 million. The construction contract for the Weymouth oxidation facilities, the last Metropolitan treatment plant to be retrofitted, was awarded in June 2012. Oxidation program costs at the F.E. Weymouth plant, based upon the adopted budget, were estimated to be $338.5 million. Expenditures at the Weymouth plant through December 2012 were $80.1 million and completion is expected in fiscal year 2016-17.

F.E. Weymouth Treatment Plant Improvements. The F.E. Weymouth Treatment Plant was built in 1938 and subsequently expanded several times over the following 25 years. It is Metropolitan's oldest water treatment facility. Metropolitan has completed several upgrades and refurbishment/replacement projects to maintain the plant's reliability and improve its efficiency. These include power systems upgrades, a residual solids dewatering facility, refurbishment/replacement of the mechanical equipment in two of the eight flocculation and settling basins, a new plant maintenance facility, new chemical feed systems and storage tanks, replacement of the plant domestic/fire water system, seismic upgrades to the plant inlet structure, and a new chlorine handling and containment facility. Planned projects over the next several years include refurbishment of the plant's filters and settling basins, seismic retrofits to the filter buildings and administration building, and replacement of the valves used to control filter operation. The cost estimate for all prior and projected improvements at the Weymouth plant, not including the ozone facilities, is approximately $452 million, with $180.6 million spent through December 2012. Budgeted aggregate capital expenditures for improvements at the Weymouth plant for fiscal years 2012-13 and 2013-14 are $40.3 million.

Robert B. Diemer Treatment Plant Improvements. The Robert B. Diemer Treatment Plant was built in 1963 and subsequently expanded in 1968. It is Metropolitan's second oldest water treatment facility and has a capacity to treat 520 million gallons of water a day. Several upgrades and refurbishment/replacement projects have been completed at the Diemer plant, including power system upgrades, a new residual solids

dewatering facility, new vehicle and plant maintenance facilities, new chemical feed systems and storage tanks, a new chlorine handling and containment facility, construction of a roller-compacted concrete slope stabilization system and a new secondary access road. The current cost estimate for all prior and projected improvements at the Diemer Treatment Plant, not including the ozone facilities, is approximately $445.2 million, with $173.0 million spent through December 2012. Budgeted aggregate capital expenditures for improvements at the Diemer plant for fiscal years 2012-13 and 2013-14 are $34.4 million.

Colorado River Aqueduct Facilities. Deliveries through the Colorado River Aqueduct began in 1941. Through annual inspections and maintenance activities, the performance and reliability of the various components of the Colorado River Aqueduct are regularly evaluated. A major overhaul of the pump units at the five pumping plants was completed in 1988. Refurbishment or replacement of many of the electrical system components, including the transformers, circuit breakers and motor control centers, is currently under way. Projects completed over the past 10 years include replacement of high voltage circuit breakers and transformers at the five pumping plant switchyards, refurbishment of operators and power centers on the head gates downstream of the pumping plants, refurbishment/replacement of 15 isolation/control gates, replacement of cast iron pipe and other components at over 200 outlet structures with stainless steel components, replacement of pumping plant inlet trash racks, and replacement of several miles of deteriorated concrete canal liner. Additionally, many of the mechanical components at the pumping plants as well as the Copper Basin and Gene Wash Reservoirs will be evaluated and replaced or refurbished over the next few years. The currently projected cost estimate for all prior and planned refurbishment or replacement projects is $285.8 million. Costs through December 2012 were $143.1 million. Budgeted aggregate capital expenditures for improvements on the Colorado River Aqueduct for fiscal years 2012-13 and 2013-14 are $74.1 million.

GOVERNANCE AND MANAGEMENT

Board of Directors

Metropolitan is governed by a 37-member Board of Directors. Each member public agency is entitled to have at least one representative on the Board, plus an additional representative for each full five percent of the total assessed valuation of property in Metropolitan's service area that is within the member public agency. Changes in relative assessed valuation do not terminate any director's term. Accordingly, the Board may, from time to time, have more than 37 directors.

The Board includes business, professional and civic leaders. Directors serve on the Board without compensation from Metropolitan. Voting is based on assessed valuation, with each member agency being entitled to cast one vote for each $10 million or major fractional part of $10 million of assessed valuation of property within the member agency, as shown by the assessment records of the county in which the member agency is located. The Board administers its policies through the Metropolitan Water District Administrative Code (the "Administrative Code"), which was adopted by the Board in 1977. The Administrative Code is periodically amended to reflect new policies or changes in existing policies that occur from time to time.

Management

Metropolitan's day-to-day management is under the direction of its General Manager, who serves at the pleasure of the Board, as do Metropolitan's General Counsel, General Auditor and Ethics Officer. Following is a biographical summary of Metropolitan's principal executive officers.

Jeffrey Kightlinger, General Manager – Mr. Kightlinger was appointed as General Manager in February 2006, leaving the position of General Counsel, which he had held since February 2002. Before becoming General Counsel, Mr. Kightlinger was a Deputy General Counsel and then Assistant General Counsel, representing Metropolitan primarily on Colorado River matters, environmental issues, water rights and a number of Metropolitan's water transfer and storage programs. Prior to joining Metropolitan in 1995, Mr. Kightlinger worked in private practice representing numerous public agencies including municipalities,

redevelopment agencies and special districts. Mr. Kightlinger earned his bachelor's degree in history from the University of California, Berkeley, and his law degree from Santa Clara University.

Marcia Scully, General Counsel – Ms. Scully assumed the position of General Counsel in March 2012. She previously served as Metropolitan's Interim General Counsel from March 2011 to March 2012. Ms. Scully joined Metropolitan in 1995, after a decade of private law practice, providing legal representation to Metropolitan on construction, employment, Colorado River and significant litigation matters. From 1981 to 1985 she was assistant city attorney for the City of Inglewood. Ms. Scully served as president of University of Michigan's Alumnae Club of Los Angeles and is a recipient of the 1996 State Bar of California, District 7 President's Pro Bono Service Award and the Southern California Association of Non-Profit Housing Advocate of the Year Award. She is also a member of the League of Women Voters for Whittier and was appointed for two terms on the City of Whittier's Planning Commission, three years of which were served as chair. Ms. Scully earned a bachelor's degree in liberal arts from the University of Michigan, a master's degree in urban planning from Wayne State University and law degree from Loyola Law School.

Gerald C. Riss, General Auditor – Mr. Riss was appointed as Metropolitan's General Auditor in July 2002 and is responsible for the independent evaluation of the policies, procedures and systems of control throughout Metropolitan. Mr. Riss is a certified fraud examiner, certified financial services auditor and certified risk professional with more than 25 years of experience in accounting, audit and risk management. Prior to joining Metropolitan, Mr. Riss was Vice President and Assistant Division Head of Risk Management Administration at United California Bank/Bank of the West. He also served as Senior Vice President, director of Risk Management and General Auditor of Tokai Bank of California from 1988 until its reorganization as United California Bank in 2001. He earned a bachelor's degree in accounting and master's degree in business administration from Wayne State University in Detroit, Michigan.

Deena Ghaly, Ethics Officer – Ms. Ghaly was appointed Ethics Officer in November 2012. Ms. Ghaly joined Metropolitan with over 20 years of legal and ethics-related experience. Prior to joining Metropolitan, she served as an administrative law judge for the California Office of Administrative Hearings. She previously was head of enforcement and general counsel for the Los Angeles City Ethics Commission, which administers and enforces the laws regarding campaign contributions, lobbying, and government ethics for the city of Los Angeles. Before moving to Southern California in 2001, Ms. Ghaly lived and worked in New York City, where she headed the labor department in the general counsel's office of a large city agency. Licensed to practice law in California, New York and New Jersey, Ms. Ghaly is knowledgeable in workplace investigations, government ethics, regulatory affairs, and labor and employment matters. She has lectured throughout the nation on various topics, including parallel criminal and administrative prosecution, due process in administrative procedures, and effective internal investigations. Ms. Ghaly earned a bachelor's degree in philosophy from Wellesley College in Massachusetts and a law degree from Cornell Law School.

Gary Breaux, Assistant General Manager/Chief Financial Officer – Mr. Breaux has had extensive experience working for local governments since 1983. From 1994 until joining Metropolitan in October 2011, he served as Director of Finance for East Bay Municipal Utility District (EBMUD). At EBMUD, he was responsible for all financial areas, including treasury operations, debt management, rates, internal audit, accounting and reporting, risk management and customer and community services. Prior to joining EBMUD, he was Director of Finance for the City of Oakland, California. A native of Colorado, Mr. Breaux received a Bachelor of Science degree in Business from the University of Colorado in 1977 and a master's degree in Public Administration in 1987 from Virginia Commonwealth University. He is a Certified Public Accountant. Mr. Breaux is a member of the American Water Works Association and the American Institute of Certified Public Accountants.

Debra Man, Assistant General Manager/Chief Operating Officer – Ms. Man was appointed to this position in December 2003. Ms. Man has worked at Metropolitan since 1986, beginning as an engineer and advancing to Chief of the Planning and Resources Division. As Chief of Planning and Resources she was responsible for major initiatives adopted by Metropolitan's Board, such as the Integrated Water Resources

Plan, rate structure, and facility plans for expansion of Metropolitan's distribution system. In 1999, she was appointed as Vice President of Water Transfers and Exchanges, responsible for securing water supplies through agreements and partnerships with other water and agricultural interests in San Joaquin Valley and Southern California and demonstrating Metropolitan's water supply reliability in compliance with current laws. Ms. Man is a registered professional civil engineer in California and Hawaii. She has a master's degree in civil/environmental engineering from Stanford University and a bachelor's degree in civil engineering from the University of Hawaii.

Roger Patterson, Assistant General Manager/Strategic Initiatives – Mr. Patterson was appointed Assistant General Manager in March 2006. He is responsible for overseeing water supply and planning issues, including the Colorado River and State Water Project. He previously served as a consultant to Metropolitan on Colorado River issues. Mr. Patterson was the director of the Nebraska Department of Natural Resources from 1999 to 2005, where he was responsible for water administration, water planning, flood-plain delineation, dam safety and the state databank. Prior to his work in Nebraska, Mr. Patterson spent 25 years with the Bureau of Reclamation, retiring from the Bureau as the Regional Director for the Mid-Pacific Region. He is a registered professional engineer in Nebraska and Colorado, and earned bachelor's and master's degrees in engineering from the University of Nebraska.

Gilbert F. Ivey, Assistant General Manager/Chief Administrative Officer – Mr. Ivey is the Chief Administrative Officer and is responsible for human resources, real property management, strategic land development and Metropolitan's small business program. Mr. Ivey has been with Metropolitan for 40 years, starting as a summer trainee in the Engineering Division. He has held various positions in Finance, Right-of-Way and Land, Operation, Human Resources and Executive Offices. He earned a bachelor's degree in business administration from California State University, Dominquez Hills and holds various professional designations and certifications in management from Pepperdine University and the University of Southern California.

Linda Waade, Deputy General Manager/External Affairs – Ms. Waade is responsible for Metropolitan's communications, outreach, education and legislative matters. Prior to joining Metropolitan in August 2006, she coordinated government and community affairs for the Los Angeles office of CH2M Hill, Inc., where she provided counsel on policy development and outreach strategies for environmental and public works projects. She also maintained her own consulting firm, Waade Partners Consulting. Ms. Waade was deputy chief of staff and policy director for then Los Angeles City Councilmember Antonio R. Villaraigosa from July 2003 to January 2004. She served as transportation policy advisor for Los Angeles Mayor Tom Bradley from 1991-93, as chief of staff for U.S. Congressman Mel Levine in his Los Angeles district office from 1988-89 and as the congressman's special assistant for environmental affairs from 1987-88, and was executive director of the Coalition for Clean Air, a statewide advocacy organization dedicated to air quality issues, from 1994-98. Ms. Waade earned a bachelor's degree in political science from California State University at Los Angeles. She is a past recipient of the "Environmental Leadership Award" from the California League of Conservation Voters.

Employee Relations

The total number of regular full-time Metropolitan employees on May 15, 2013 was 1,727, of whom 1,209 were represented by AFSCME Local 1902, 96 by the Supervisors Association, 268 by the Management and Professional Employees Association and 136 by the Association of Confidential Employees. The remaining 18 employees are unrepresented. The four bargaining units represent 99 percent of Metropolitan's employees. The Memorandum of Understanding ("MOU") with the Association of Confidential Employees covers the period January 1, 2011 through December 31, 2015. The MOUs with the Management and Professional Employees Association and with AFSCME Local 1902 cover the period January 1, 2011 to December 31, 2016. The MOU with the Supervisors Association covers the period September 13, 2011 to December 31, 2016.

Risk Management

Metropolitan is exposed to various risks of loss related to the design, construction, treatment and delivery of water. With the assistance of third party claims administrators, Metropolitan is self-insured for liability, property and workers' compensation. Metropolitan self-insures the first $25 million per liability occurrence, with commercial liability coverage of $75 million in excess of the self-insured retention. The $25 million self-insured retention is maintained as a separate restricted reserve. Metropolitan is also self-insured for loss or damage to its property, with the $25 million self-insured retention also being accessible for emergency repairs and Metropolitan property losses. In addition, Metropolitan obtains other excess and specialty insurance coverages such as directors' and officers' liability, fiduciary liability and aircraft hull and liability coverage.

Metropolitan self-insures the first $5 million for workers' compensation with excess coverage of $50 million. Metropolitan separately funds remaining workers' compensation and general liability claims arising from the Diamond Valley Lake and early portions of the Inland Feeder construction projects, which were insured through Owner Controlled Insurance Programs ("OCIPs"). The OCIPs for those projects have been concluded. The costs to settle and close the remaining claims for the Diamond Valley Lake and Inland Feeder construction projects are estimated to be $1 million and $300,000, respectively.

The self-insurance retentions and reserve levels currently maintained by Metropolitan may be modified by Metropolitan's Board at its sole discretion.

METROPOLITAN REVENUES

General

Until water deliveries began in 1941, Metropolitan's activities were, by necessity, supported entirely through the collection of *ad valorem* property taxes. Since the mid-1980s, water sales revenues have provided approximately 75 to 80 percent of total revenues and *ad valorem* property taxes have accounted for about 10 percent of revenues, declining to five percent of revenues in fiscal year 2012-13. The remaining revenues have been derived principally from the sale of hydroelectric power, interest on investments and additional revenue sources (water standby charges and availability of service charges) beginning in 1993. *Ad valorem* taxes do not constitute a part of Operating Revenues and are not available to make payments with respect to the water revenue bonds issued by Metropolitan.

Generally, Metropolitan has constitutional and statutory authority, as well as voter authorization, to levy *ad valorem* property taxes as needed to pay its outstanding general obligation bonds and State Water Contract payments. Currently, *ad valorem* taxes are applied solely to pay Metropolitan's general obligation bonds and a small portion of State Water Contract payments, pursuant to MWD Act requirements that limit property tax collections to the amount necessary to pay annual debt service on Metropolitan's general obligation bonds plus the portion of its State Water Contract payment obligation attributable to the debt service on State general obligation bonds for facilities benefitting Metropolitan that were outstanding as of 1990-91. Metropolitan's *ad valorem* property tax revenue has been decreasing, and will continue to decrease, as the bonds are retired. The MWD Act permits Metropolitan to set aside the prescribed reductions in the tax rate if the Board, following a public hearing with 10 days' prior written notice to the Speaker of the California Assembly and the President pro Tempore of the Senate, finds that such revenue is "essential to the fiscal integrity of the district." On June 11, 2013, following such a public hearing, the Board adopted a resolution finding that maintaining the *ad valorem* tax rate for fiscal year 2013-14 is essential to the fiscal integrity of Metropolitan and determining that the tax limit clause in the MWD Act is suspended for fiscal year 2013-14 and the board may levy taxes at the tax rate levied for fiscal year 2012-13 (.0035% of assessed valuation, excluding annexation levies). Factors considered by the Board included current and future State Water Contract payment obligations and a balancing of proper mechanisms for funding them, the appropriate mix of property taxes and water rates and charges to enhance Metropolitan's fiscal stability and a fair distribution of costs across Metropolitan's service area.

The basic rate for untreated water for domestic and municipal uses increased from $8 per acre-foot in fiscal year 1941-42 to the rate of $593 per acre-foot for Tier 1 water, effective January 1, 2013. The *ad valorem* tax rate for Metropolitan purposes has gradually been reduced from a peak equivalent rate of 0.1250 percent of full assessed valuation in fiscal year 1945-46 to 0.0035 percent of full assessed valuation for fiscal year 2012-13. See "—Rate Structure" below. The rates charged by Metropolitan represent the wholesale cost of Metropolitan water to its member agencies, and not the cost of water to the ultimate consumer. Metropolitan does not exercise control over the rates charged by its member agencies or their subagencies to their customers.

Summary of Receipts by Source

The following table sets forth Metropolitan's sources of receipts for the five fiscal years ended June 30, 2012. The table provides cash basis information, which is unaudited. Audited financial statements for the fiscal years ended June 30, 2012 and June 30, 2011 are provided in Appendix B - "THE METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA INDEPENDENT AUDITOR'S REPORT AND FINANCIAL STATEMENTS AS OF FISCAL YEARS ENDED JUNE 30, 2012 AND JUNE 30, 2011 AND STATEMENTS OF NET POSITION AND STATEMENTS OF REVENUES, EXPENSES AND CHANGES IN NET POSITION AS OF AND FOR THE NINE MONTHS ENDED MARCH 31, 2013 AND 2012 (UNAUDITED)."

[Remainder of page intentionally left blank.]

SUMMARY OF RECEIPTS BY SOURCE[1]
Fiscal Years Ended June 30
(Dollars in Millions)

	2008	2009	2010	2011	2012
Water Sales[2]	$ 967.8	$988.1	$1,011.1	$ 995.6	$ 1,062.5
Net Tax Collections[3]	100.4	105.2	97.3	88.0	90.1
Additional Revenue Sources[4]	114.0	119.7	135.3	153.5	167.1
Interest on Investments	60.3	33.7	26.7	18.9	17.8
Hydroelectric Power Sales	41.1	22.5	18.8	22.1	31.0
Other Collections & Trust Funds[5]	8.1	3.1	9.1	61.0	53.6
Total Receipts	$1,291.7	$1,272.3	$1,298.3	$1,339.1	$1,422.1

Source: Metropolitan.

(1) Does not include any proceeds from the sale of bonded indebtedness.
(2) Gross receipts in each year are for sales in the twelve months ended April 30 of such year. Water sales revenues include revenues from water wheeling and exchanges. See "METROPOLITAN REVENUES—Wheeling and Exchange Charges" in this Appendix A. Includes $25.7 million in fiscal year 2010-11, from the Calleguas Municipal Water District related to termination of the Las Posas water storage program.
(3) *Ad valorem* taxes levied by Metropolitan are applied solely to the payment of outstanding general obligation bonds of Metropolitan and a portion of State Water Contract payments.
(4) Includes receipts derived from water standby charges, readiness-to-serve, and connection maintenance or capacity charges. See "—Rate Structure" and "—Additional Revenue Components" below.
(5) In fiscal year 2010-11 includes $10.8 million reimbursement from State Proposition 13 bond funds and $28.2 million from the termination of the Las Posas water storage program. In fiscal year 2011-12, includes $27.5 million from CVWD for delivery of 105,000 acre-feet under an exchange agreement between Metropolitan and CVWD.

Revenue Allocation Policy and Tax Revenues

The Board determines the water revenue requirement for each fiscal year after first projecting the *ad valorem* tax levy for that year. The tax levy for any year is subject to limits imposed by the State Constitution, the Act and Board policy. The tax levy is set to not exceed the amount needed to pay debt service on Metropolitan's general obligation bonds and a portion of Metropolitan's share of the debt service on the general obligation bonds issued by the State to finance the State Water Project. Any deficiency between tax levy receipts and Metropolitan's share of debt service obligations on general obligation bonded debt issued by the State is expected to be paid from Operating Revenues, as defined in the Master Resolution. See "HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES" in this Appendix A. On June 11, 2013, the Board suspended the tax limit clause in the Act and, for fiscal year 2013-14, maintained the fiscal year 2012-13 ad valorem tax rate. See "METROPOLITAN REVENUES—General" above. The State Water Contract requires that in the event that Metropolitan fails or is unable to raise sufficient funds by other means, Metropolitan must levy upon all property within its boundaries not exempt from taxation a tax or assessment sufficient to provide for all payments under the State Water Contract.

Water Sales Revenues

Authority. Water rates are established by the Board and are not subject to regulation or approval by the Public Utilities Commission of California or by any other local, State or federal agency. In accordance with the Act, water rates must be uniform for like classes of service. Metropolitan has provided three classes of water service: (1) full service; (2) replenishment (discontinued effective December 31, 2012); and (3) interim agricultural (discontinued effective December 31, 2012). See "—Classes of Water Service" below.

No member agency of Metropolitan is obligated to purchase water from Metropolitan. However, 24 of Metropolitan's 26 member agencies entered into voluntary water supply purchase orders for water purchases, which had initial 10-year terms ending December 31, 2012. Twenty-two of such purchase orders have been extended to December 31, 2014, as described under "—Member Agency Purchase Orders" below. Consumer demand and locally supplied water vary from year to year, resulting in variability in water sales revenues. Metropolitan uses its financial reserves and budgetary tools to manage the financial impact of the variability in revenues due to fluctuations in annual water sales. See "MANAGEMENT'S DISCUSSION OF HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES" in this Appendix A.

Payment Procedure. Water is delivered to the member agencies on demand and is metered at the point of delivery. Member agencies are billed monthly and a late charge of one percent of the delinquent payment is assessed for a payment that is delinquent for no more than five business days. A late charge of two percent of the amount of the delinquent payment is charged for a payment that is delinquent for more than five business days for each month or portion of a month that the payment remains delinquent. Metropolitan has the authority to suspend service to any member agency delinquent for more than 30 days. Delinquencies have been rare; in such instances late charges have been collected. No service has been suspended because of delinquencies.

Water Sales. The following table sets forth the acre-feet of water sold and water sales receipts (including receipts from water wheeling and exchanges) for the five fiscal years ended June 30, 2012. The table provides cash basis information. Water sales revenues of Metropolitan for the two fiscal years ended June 30, 2012 and June 30, 2011, respectively, on an accrual basis, are shown in Appendix B - "THE METROPOLITAN WATER DISTRICT OF SOUTHERN CALIFORNIA INDEPENDENT AUDITOR'S REPORT AND FINANCIAL STATEMENTS AS OF FISCAL YEARS ENDED JUNE 30, 2012 AND JUNE 30, 2011 AND STATEMENTS OF NET POSITION AND STATEMENTS OF REVENUES, EXPENSES AND CHANGES IN NET POSITION AS OF AND FOR THE NINE MONTHS ENDED MARCH 31, 2013 AND 2012 (UNAUDITED)."

SUMMARY OF WATER SOLD AND WATER SALES RECEIPTS
Fiscal Years Ended June 30
(Cash Basis)

Year	Acre-Feet[1] Sold	Gross Receipts[4] (in millions)	Average Receipts Per Acre Foot[5]	Average Rate Per 1000 Gallons
2008	2,305,364	$ 967.8	$ 420	$ 1.29
2009	2,166,936	988.1	456	1.40
2010	1,857,564	1,011.1	544	1.67
2011[2]	1,632,277	995.6	610	1.87
2012[3]	1,676,855	1,062.5	634	1.94

Source: Metropolitan.

(1) Year ended April 30.
(2) Includes the sale of 34,519 acre-feet and the receipt of $25.7 million from the Calleguas Municipal Water District related to termination of the Las Posas water storage program.
(3) Includes 225,000 acre-feet of replenishment sales.
(4) Gross receipts in each year are for sales in the twelve months ended April 30 of such year, with rates and charges invoiced in May and payable by the last business day of June of each year. Includes revenues from water wheeling and exchanges. See "METROPOLITAN REVENUES—Wheeling and Exchange Charges" in this Appendix A.
(5) Gross receipts divided by acre-feet sold. An acre-foot is approximately 326,000 gallons. See table entitled "SUMMARY OF WATER RATES" in this Appendix A for a description of water rates and classes of service.

Rate Structure

The following rates and charges are elements of Metropolitan's rate structure for full service water deliveries:

Tier 1 and Tier 2 Water Supply Rates. The Tier 1 and Tier 2 Water Supply Rates are designed to recover Metropolitan's water supply costs. The Tier 2 Supply Rate is designed to reflect Metropolitan's costs of acquiring new supplies. Member agencies are charged the Tier 1 or Tier 2 Water Supply Rate for water purchases, as described under "–Member Agency Purchase Orders" below.

System Access Rate. The System Access Rate is intended to recover a portion of the costs associated with the conveyance and distribution system, including capital, operating and maintenance costs. All users (including member agencies and third-party entities wheeling or exchanging water; see "—Wheeling and Exchange Charges" below) of the Metropolitan system pay the System Access Rate.

Water Stewardship Rate. The Water Stewardship Rate is charged on a dollar per acre-foot basis to collect revenues to support Metropolitan's financial commitment to conservation, water recycling, groundwater recovery and other water management programs approved by the Board. The Water Stewardship Rate is charged for every acre-foot of water conveyed by Metropolitan because all users of Metropolitan's system benefit from the system capacity made available by investments in demand management programs.

System Power Rate. The System Power Rate is charged on a dollar per acre-foot basis to recover the cost of power necessary to pump water from the State Water Project and Colorado River through the conveyance and distribution system for Metropolitan's member agencies. The System Power Rate is charged for all Metropolitan supplies. Entities wheeling non-Metropolitan water supplies will pay the actual cost of power to convey water on the State Water Project, the Colorado River Aqueduct or the Metropolitan distribution system, whichever is applicable.

Treatment Surcharge. Metropolitan charges a treatment surcharge on a dollar per acre-foot basis for treated deliveries. The treatment surcharge is set to recover the cost of providing treated water service, including capital and operating cost.

Water Supply Surcharge. Effective January 1, 2009, Metropolitan adopted a Water Supply Surcharge of $25 per acre-foot, applicable to Full Service Tier 1 untreated and treated water rates and to the Interim Agricultural Water Program untreated and treated water rates. The Water Supply Surcharge was intended to recover the costs of additional water transfers purchased to augment supplies from the State Water Project. These costs were anticipated to be about $50 million in fiscal year 2008-09. However, on April 14, 2009 Metropolitan's Board adopted a Delta Supply Surcharge, which, effective September 1, 2009, eliminated and replaced the Water Supply Surcharge. See "*—Delta Supply Surcharge*" below.

Delta Supply Surcharge. On April 13, 2010, Metropolitan's Board adopted a Delta Supply Surcharge of $51 and $58 per acre-foot, effective January 1, 2011 and January 1, 2012, respectively, and applicable to all Tier 1, Interim Agricultural Water Program and Replenishment water rates. The Delta Supply Surcharge was designed to recover the additional supply costs Metropolitan faces as a result of pumping restrictions associated with the USFWS biological opinion on Delta smelt and other actions to protect endangered fish species. The Delta Surcharge was intended to remain in effect until a long-term solution for the Bay-Delta is achieved. Metropolitan anticipated that the Delta Supply Surcharge would be reduced or suspended as interim Delta improvements ease pumping restrictions, resulting in lower costs for additional supplies. On April 10, 2012, the Board suspended the Delta Supply Surcharge, effective July 1, 2012.

The amount of each of these rates since January 1, 2007, is shown in the table entitled "SUMMARY OF WATER RATES" under "—Water Rates by Water Category" below.

Litigation Challenging Rate Structure

SDCWA filed *San Diego County Water Authority v. Metropolitan Water District of Southern California, et al.* on June 11, 2010. The complaint alleges that the rates adopted by the Board on April 13, 2010, which became effective January 1, 2011, misallocate State Water Contract costs to the System Access Rate and the System Power Rate, and thus to charges for transportation of water, and that this results in an overcharge to SDCWA by at least $24.5 million per year. The complaint alleges that all State Water Project costs should be allocated instead to Metropolitan's Supply Rate, even though under the State Water Contract Metropolitan is billed separately for transportation, power and supply costs. It states additionally that Metropolitan will overcharge SDCWA by another $5.4 million per year by including the Water Stewardship Rate in transportation charges. Eight of Metropolitan's member agencies (the Cities of Glendale, Los Angeles and Torrance, Municipal Water District of Orange County and Foothill, Las Virgenes, Three Valleys and West Basin Municipal Water Districts) answered the complaint in support of Metropolitan. IID joined the litigation in support of SDCWA's challenge to Metropolitan's charges for transportation of water.

The complaint requested a court order invalidating the rates and charges adopted April 13, 2010, and that Metropolitan be mandated to allocate costs associated with State Water Project supplies and the Water Stewardship Rate to water supply charges and not to transportation charges. Rates in effect in prior years are not challenged in this lawsuit. Metropolitan contends that its rates are reasonable, equitably apportioned among its member agencies and lawful, and were adopted under a valid rate structure and cost of service approach developed in a multi-year collaborative process with its member agencies that has been in place since 2002. Nevertheless, to the extent that a court invalidates Metropolitan's adopted rates and charges, Metropolitan will be obligated to adopt rates and charges that comply with any mandates imposed by the court. Metropolitan expects that such rates and charges would still recover Metropolitan's cost of service. As such, revenues would not be affected. If Metropolitan's rates are revised in the manner proposed by SDCWA in the complaint, other member agencies may pay higher rates unless other actions are taken by the Board.

SDCWA filed its First Amended Petition for Writ of Mandate and Complaint on October 27, 2011, adding five new claims to this litigation, two of which were eliminated from the case on January 4, 2012. The three remaining new claims are for breach of the water exchange agreement between Metropolitan and SDCWA (described herein under "METROPOLITAN'S WATER SUPPLY—Colorado River Aqueduct—*Sale of Water by the Imperial Irrigation District to San Diego County Water Authority*") based on allegedly illegal calculation of rates; improper exclusion of SDCWA's payments under this exchange agreement from calculation of SDCWA's preferential rights to purchase Metropolitan supplies (see "—Preferential Rights" below); and illegality of "rate structure integrity" provisions in conservation and local resources incentive agreements between Metropolitan and SDCWA. Such "rate structure integrity" provisions permit the Board to terminate incentives payable under conservation and local resources incentive agreements between Metropolitan and a member agency due to certain actions by the member agency to challenge the rates that are the source of incentive payments. In June 2011, Metropolitan's Board authorized termination of two incentive agreements with SDCWA under the "rate structure integrity" provisions in such agreements after SDCWA filed its initial complaint challenging Metropolitan's rates. SDCWA filed a Second Amended Petition for Writ of Mandate and Complaint on April 17, 2012, which contains additional allegations but no new causes of action. While believing that the three surviving claims added to the challenge to Metropolitan's rates adopted in April 2010 lack merit, Metropolitan is unable to assess at this time the likelihood of success of these or any future claims or the potential impact on Metropolitan's revenues or operations.

Metropolitan held $13 million in its financial reserves pursuant to the exchange contract between Metropolitan and SDCWA as of June 30, 2011, due to SDCWA's litigation challenging Metropolitan's rate structure. This amount increased to $50 million as of the end of fiscal year 2011-12 and $84.4 million as of May 31, 2013. See "—Financial Reserve Policy" below. Amounts held pursuant to the exchange agreement will continue to accumulate based on the quantities of exchange water that Metropolitan provides to SDCWA

and the amount of charges disputed by SDCWA. These amounts are transferable to SDCWA if it prevails in the litigation.

On June 8, 2012, SDCWA filed a new lawsuit challenging the rates adopted by Metropolitan on April 10, 2012 and effective on January 1, 2013 and January 1, 2014. See "–Rate Structure" above and "–Water Rates by Water Category" below for a description of Metropolitan's water rate structure and the rates and charges adopted on April 10, 2012. The complaint contains allegations similar to those in the Second Amended Petition for Writ of Mandate and Complaint and new allegations asserting that Metropolitan's rates, adopted in April 2012, violate Proposition 26. See "–California Ballot Initiatives" below for a description of Proposition 26. Metropolitan contends that its rates adopted on April 10, 2012 are reasonable, equitably apportioned among its member agencies and lawful and were adopted under a valid rate structure and cost of service approach. Metropolitan will defend this new litigation. Ten of Metropolitan's member agencies (the eight member agency parties to SDCWA's first lawsuit, Eastern Municipal Water District and Western Municipal Water District of Riverside County) answered the complaint in support of Metropolitan and IID joined the litigation in support of SDCWA. Metropolitan is unable to assess at this time the likelihood of success of this litigation or any future claims.

SDCWA filed a Third Amended Petition for Writ of Mandate and Complaint on January 23, 2013, to add new allegations that Metropolitan's rates adopted in April 2010 did not meet the requirements of Proposition 26, approved by California voters in November 2010. The court granted Metropolitan's motion to strike allegations relating to Proposition 26 on March 29, 2013, expressly ruling that SDCWA may not allege a violation of Proposition 26 in its challenge to the rates adopted in April 2010. This ruling does not affect SDCWA's separate challenge to Metropolitan's rates adopted in April 2012, which also includes Proposition 26 allegations.

Member Agency Purchase Orders

The current rate structure provides for a member agency's agreement to purchase water from Metropolitan by means of a voluntary purchase order. In consideration of executing its purchase order, each member agency that executed a purchase order and whose purchase order is in effect will be allowed to purchase up to 90 percent of its base amount at the Tier 1 Water Supply Rate in any fiscal year during the term of the purchase order, and its base amount will be the greater of (1) its highest firm demand for Metropolitan water in any fiscal year from 1989-90 through 2001-02 or (2) its ten-year rolling average of firm demand for Metropolitan water. Amounts purchased by such agencies over the applicable base amount will be priced at the Tier 2 Water Supply Rate. See "—Rate Structure—*Tier 1 and Tier 2 Water Supply Rates*" above. Member agencies that do not have purchase orders in effect will be subject to Tier 2 Water Supply Rates for amounts exceeding 60 percent of their base amount (equal to the member agency's highest fiscal year demand between 1989-90 and 2001-02).

Under each purchase order, a member agency agrees to purchase, over the term of the contract, an amount of water equal to at least 60 percent of its highest firm demand for Metropolitan water in any fiscal year from 1989-90 through 2001-02 multiplied by the number of years in the contract. Member agencies are allowed to vary their purchases from year to year, but a member agency will be obligated to pay for the full amount committed under the purchase order, even if it does not take its full purchase order commitment by the end of the contract period.

Twenty-four of Metropolitan's 26 member agencies executed purchase orders for an aggregate of 12.5 million acre-feet of water over the ten years ending December 31, 2012. As of May 31, 2011, 23 of the 24 member agencies with purchase orders had met their purchase order commitments. On November 8, 2011, Metropolitan's Board authorized the General Manager to execute a withdrawal of the City of Compton's Purchase Order committing to purchase 33,720.6 acre-feet over the original ten-year period. The withdrawal was effective January 1, 2003. This lowered Compton's Tier 1 limit as if its Purchase Order had not been executed and Compton will pay the Tier 2 Supply Rate on any future water purchases over the lower limit.

On October 10, 2012, Metropolitan's Board authorized the General Manager to execute an amended and restated purchase order to provide a two-year extension of existing member agency purchase orders, previously set to expire on December 31, 2012. Twenty-two of the 23 remaining purchase orders were extended to December 31, 2014. As of April 30, 2013, the aggregate unmet purchase order commitment was 560 acre-feet.

Classes of Water Service

Full Service Water. Full service water service, formerly known as non-interruptible water service, includes water sold for domestic and municipal uses. Full service treated water rates are the sum of the applicable supply rate, system access rate, water stewardship rate, system power rate and treatment surcharge. Full service untreated water rates are the sum of the applicable supply rate, system access rate, water stewardship rate and system power rate. Full service water sales are the major component of Metropolitan water sales.

Interim Agricultural Water Program. This program provided a discounted rate for agricultural water users that, pursuant to the Act, were permitted to receive only surplus water not needed for domestic or municipal purposes. Metropolitan delivered approximately 40,000 acre-feet of agricultural water under this program in fiscal year 2009-10, approximately 21,000 acre-feet in fiscal year 2010-11 and approximately 29,000 acre-feet in fiscal year 2011-12. On October 14, 2008, the Board approved annual reductions of the Interim Agricultural Water Program discount beginning January 1, 2010 and discontinuance of the program when the discount reached zero on January 1, 2013.

Replenishment. Under the Replenishment Service Program, water was sold at a discounted rate to member agencies, subject to interruption upon notice by Metropolitan. The program allowed Metropolitan to deliver surplus imported water to local groundwater basins and surface storage facilities when supplies were available, with the intent that member agencies could reduce imported water deliveries from Metropolitan during periods of high demand, emergencies or times of shortage. See table entitled "SUMMARY OF WATER RATES" below.

On December 11, 2012, Metropolitan's Board eliminated the Replenishment Service Program and approved adjustments to increase member agency Tier 1 limits to reflect the historical demand for water used for long-term groundwater and surface storage replenishment. See "—Rate Structure—*Tier 1 and Tier 2 Water Supply Rates*" above. Water for groundwater replenishment now is priced at applicable full service rates. This adjustment provides additional Tier 1 limits for member agencies that historically purchased water for long-term replenishment purposes and limits their exposure to the higher Tier 2 rates. Metropolitan and its member agencies continue discussions of a potential water storage program that would encourage storing water locally and provide regional benefit.

Water Rates by Water Category

The following table sets forth Metropolitan's water rates by category beginning January 1, 2008. See also "MANAGEMENT'S DISCUSSION OF HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES—Water Sales Receipts" in this Appendix A. In addition to the base rates for untreated water sold in the different classes of service, the columns labeled "Treated" include the surcharge that Metropolitan charges for water treated at its water treatment plants. See "—Rate Structure" and "—Classes of Water Service" above for a description of current rates. See "—Litigation Challenging Rate Structure" above for a description of litigation challenging Metropolitan's water rates.

SUMMARY OF WATER RATES
(Dollars per Acre-Foot)

	SUPPLY RATE		SYSTEM ACCESS RATE	WATER STEWARDSHIP RATE	SYSTEM POWER RATE	TREATMENT SURCHARGE
	Tier 1	Tier 2				
January 1, 2008	$ 73	$171	$143	$25	$110	$157
January 1, 2009	$134[1]	$250	$143	$25	$110	$167
September 1, 2009	$170[2]	$250	$154	$41	$119	$217
January 1, 2010	$170[2]	$280	$154	$41	$119	$217
January 1, 2011	$155[3]	$280	$204	$41	$127	$217
January 1, 2012	$164[3]	$290	$217	$43	$136	$234
January 1, 2013*	$140[4]	$290	$223	$41	$189	$254
January 1, 2014*	$148[4]	$290	$243	$41	$161	$297

	FULL SERVICE TREATED[5]		FULL SERVICE UNTREATED[6]		INTERIM AGRICULTURAL PROGRAM		REPLENISHMENT RATE	
	Tier 1	Tier 2	Tier 1	Tier 2	Treated	Untreated	Treated	Untreated
January 1, 2008	$508	$606	$351	$449	$394	$261	$390	$258
January 1, 2009	$579	$695	$412	$528	$465[1]	$322[1]	$436	$294
September 1, 2009	$701	$781	$484	$564	$587	$394	$558	$366
January 1, 2010	$701	$811	$484	$594	$615	$416	$558	$366
January 1, 2011	$744	$869	$527	$652	$687	$482	$601	$409
January 1, 2012	$794	$920	$560	$686	$765	$537	$651	$442
January 1, 2013*	$847	$997	$593	$743	**	**	**	**
January 1, 2014*	$890	$1,032	$593	$735	**	**	**	**

Source: Metropolitan.

* Rates effective January 1, 2013 and January 1, 2014 were adopted by Metropolitan's Board on April 10, 2012.
** The Interim Agricultural Water Program and Replenishment Service Program were discontinued after 2012.
(1) Includes $25 per acre-foot Water Supply Surcharge.
(2) Includes $69 per acre-foot Delta Supply Surcharge, which replaced Water Supply Surcharge.
(3) Includes $51 and $58 per acre-foot Delta Supply Surcharge for January 1, 2011 and January 1, 2012, respectively.
(4) Excludes Delta Supply Surcharge, which will be suspended for 2013 and 2014.
(5) Full service treated water rates are the sum of the applicable Supply Rate, System Access Rate, Water Stewardship Rate, System Power Rate and Treatment Surcharge.
(6) Full service untreated water rates are the sum of the applicable Supply Rate, System Access Rate, Water Stewardship Rate and System Power Rate.

Additional Revenue Components

Additional charges for the availability of Metropolitan's water are:

Readiness-to-Serve Charge. This charge is designed to recover a portion of the principal and interest payments on water revenue bonds issued to fund capital improvements necessary to meet continuing reliability and water quality needs. The Readiness-to-Serve Charge ("RTS") is allocated to each member agency in proportion to the rolling ten-year share of deliveries through Metropolitan's system. The RTS

generated $101.9 million in fiscal year 2009-10, $119.2 million in fiscal year 2010-11 and $133.9 million in fiscal year 2011-12.

Water Standby Charges. The Board is authorized to impose water standby or availability of service charges. In May 1993, the Board imposed a water standby charge for fiscal year 1993-94 ranging from $6.94 to $15 for each acre or parcel less than an acre within Metropolitan's service area, subject to specified exempt categories. Water standby charges have been imposed at the same rate in each year since 1993-94. Standby charges are assessments under the terms of Proposition 218, a State constitutional ballot initiative approved by the voters on November 5, 1996. See "—California Ballot Initiatives" below.

Member agencies have the option to utilize Metropolitan's existing standby charge authority as a means to collect all or a portion of their RTS charge. Standby charge collections are credited against the member agencies' RTS charges. See "*—Readiness-to-Serve Charge*" above. Twenty-two member agencies collect their RTS charges through standby charges. For fiscal years 2009-10, 2010-11 and 2011-12 RTS charges collected by means of such standby charges were $42.8 million, $43.2 million and $42.9 million, respectively.

Capacity Charge. The Capacity Charge is a fixed charge levied on the maximum summer day demand placed on Metropolitan's system between May 1 and September 30 for the three-calendar-year period ended December 31, 2010 and December 31, 2011, for charges effective 2012 and 2013 respectively. The Capacity Charge is intended to recover the cost of providing peak capacity within the distribution system. Effective January 1, 2012, the Capacity Charge was $7,400 per cfs of maximum daily flow, which decreased to $6,400 per cfs on January 1, 2013 and will increase to $8,600 per cfs on January 1, 2014.

Financial Reserve Policy

Metropolitan's reserve policy currently provides for a minimum unrestricted reserve balance at June 30 of each year that is based on probability studies of the wet periods that affect Metropolitan's water sales. The policy establishes a minimum targeted unrestricted reserve level based on an 18-month revenue shortfall estimate and a maximum level based on an additional two years revenue shortfall estimate. The Water Rate Stabilization and Revenue Remainder funds increased by $35.7 million in fiscal year 2008-09 and decreased by $29 million in fiscal year 2009-10 and $61 million during fiscal year 2010-11, which includes $13 million held in financial reserves pursuant to the exchange contract between Metropolitan and SDCWA (see "METROPOLITAN's WATER SUPPLY—Colorado River Aqueduct—*Sale of Water by the Imperial Irrigation District to San Diego County Water Authority*" in this Appendix A) due to the SDCWA litigation challenging Metropolitan's rate structure. See "METROPOLITAN REVENUES—Litigation Challenging Rate Structure" in this Appendix A. Additional transfers related to the SDCWA litigation were made during fiscal year 2011-12, such that this reserve increased to $50 million as of the end of fiscal year 2011-12. As of June 30, 2012, the minimum reserve requirement was $190 million. The maximum reserve limit at June 30, 2012 was $458 million. Funds representing the minimum reserve level are held in the Revenue Remainder Fund, and any funds in excess of the minimum reserve level (up to the maximum reserve level) are held in the Water Rate Stabilization Fund. Reserves at June 30, 2012 totaled $332 million, consisting of Water Rate Stabilization Fund, Revenue Remainder Fund and Water Stewardship Fund balances including the $50 million held in Metropolitan's financial reserves pursuant to the exchange contract between Metropolitan and SDCWA due to SDCWA's litigation challenging Metropolitan's rate structure and amounts held as collateral, from time to time, by Metropolitan's swap counterparties. The amount held due to SDCWA's litigation challenging Metropolitan's rate structure as of May 31, 2013 was $84.4 million. See "METROPOLITAN REVENUES—Rate Structure" and "—Litigation Challenging Rate Structure", "METROPOLITAN EXPENDITURES—Variable Rate and Swap Obligations" and "MANAGEMENT'S DISCUSSION OF HISTORICAL AND PROJECTED REVENUES AND EXPENDITURES—Water Sales Receipts" in this Appendix A and "THE MASTER RESOLUTION—Water Revenue Fund—*Revenue Remainder Fund*" in Appendix C—SUMMARY OF CERTAIN PROVISIONS OF THE RESOLUTIONS. Unrestricted reserves in excess of the maximum reserve level may be used for any lawful purpose of Metropolitan, as directed by

the Board. Consistent with State legislation, Metropolitan will ensure that any funds in excess of maximum reserve levels that are distributed to member agencies will be distributed in proportion to water sales revenues received from each member agency. On June 11, 2013, since reserve balances were projected on a modified accrual basis to be $75 million greater than the maximum reserve limit at June 30, 2013, the Board authorized the use of reserve amounts over the maximum reserve limit to be transferred to the Replacement and Refurbishment (PAYGO) Fund for capital projects, a trust to pre-fund Metropolitan's unfunded liability for other post-employment benefits (see "METROPOLITAN EXPENDITURES—Defined Benefit Pension Plan" in this Appendix A), and the Water Transfer Fund to offset future expenditures for water management actions. In addition, Metropolitan maintains various restricted reserves, including reserves for risk retention, operations and maintenance expenses, State Water Contract payments, and other obligations and purposes.

Wheeling and Exchange Charges

The process for the delivery of water not owned or controlled by Metropolitan is referred to as "wheeling." Under the current rate structure, wheeling parties pay the System Access Rate and Water Stewardship Rate, Treatment Surcharge (if applicable) and power costs for wheeling transactions. See "—Rate Structure" above. These payments are included in Net Operating Revenues. Wheeling and exchange revenues totaled $53.7 million during fiscal year 2009-10, $51.8 million during fiscal year 2010-11, and $89.6 million in fiscal year 2011-12. See "—Litigation Challenging Rate Structure" above for a description of litigation by the SDCWA and IID challenging Metropolitan's System Access Rate and Water Stewardship Rate.

Hydroelectric Power Recovery Revenues

Metropolitan has constructed 16 small hydroelectric plants on its distribution system. The plants are located in Los Angeles, Orange, Riverside and San Diego Counties at existing pressure control structures and other locations. The combined generating capacity of these plants is approximately 131 megawatts. The total capital cost of these 16 facilities is approximately $176.1 million. Since 2000, annual energy generation sales revenues have ranged between $16 million and nearly $30 million. Energy generation sales revenues were $22.1 million for fiscal year 2010-11 and $29.6 million in fiscal year 2011-12.

Power from five of the plants is sold to DWR under an existing contract at a price based on a contractual unit rate methodology to supply power to the State Water Project. The price is updated using an annual inflationary adjustment until the contract terminates in 2019.

Power from ten of the plants is sold to the Southern California Edison Company, a subsidiary of Edison International ("Edison"), LADWP and the Southern California Public Power Authority pursuant to contracts effective November 1, 2008. All three contracts are for the sale of renewable power and are based on a fixed energy rate for the term of the contracts. The minimum contract term is five years and maximum term is fifteen years. The Edison contract will terminate on October 31, 2013.

Energy generation from a sixteenth plant, the Etiwanda Power Plant, is sold to the Pacific Gas and Electric Company ("PG&E") under a contract that was amended in November 2004 to accommodate terminating transmission and scheduling arrangements. The contract energy price is based on a formula that includes a monthly gas rate, a capital related cost and a performance factor. The contract is subject to renegotiation upon the occurrence of specified events and can be terminated by either party under various conditions and circumstances, beginning in 2014.

Principal Customers

All of Metropolitan's regular customers are member agencies. Total water sales to the member agencies accrued for the fiscal year ended June 30, 2012 were 1.71 million acre-feet, generating $1.10 billion in water sales revenues for such period. Metropolitan's ten largest water customers in the year ended June 30,

APPENDIX K

SCAG RTP/SCS Technical Memorandum

DATE: August 4, 2016

TO: Interested Parties

FROM: Patricia Diefenderfer, AICP
Senior City Planner

SUBJECT: **SCAG RTP/SCS TECHNICAL MEMORANDUM**

On April 7, 2016, the Southern California Association of Governments ("SCAG") adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy ("SCAG 2016-2040 RTP/SCS"). As part of its preparation of the Draft Environmental Impact Report for the Exposition Corridor Transit Neighborhood Plan, the Department of City Planning has carefully reviewed and analyzed the housing, population and employment estimates contained in the SCAG 2016-2040 RTP/SCS relevant to the Project Area to determine if they are significantly different than the estimates contained in the 2012-2035 RTP/SCS.

The SCAG 2016-2040 RTP/SCS continues the same policies that were included in the 2012-2035 RTP/SCS (encouraging a mix of uses and locating uses near transit). As part of the new RTP, SCAG updated the socioeconomic data (population, housing and employment), with a baseline year of 2012 and a horizon year of 2040. The tables below compare the socioeconomic data from both the 2012-2035 RTP and the 2016-2040 RTP to the existing and proposed population, housing, and employment analyzed in the ECTNP EIR.

For purposes of regional planning and to comply with Federal regulations, SCAG adopts growth data at the jurisdictional level. For purposes of analysis in the RTP, SCAG staff allocates population, housing and employment growth to Transportation Analysis Zones (TAZs) that are typically a geographic subset of Census tracts. The growth allocation to TAZs provides an estimate of subarea population, housing and employment, for the RTP horizon year (2035 for the 2012-2035 RTP and 2040 for the 2016-2040 RTP). Each jurisdiction determines how to allocate growth in accordance with its adopted plans and to achieve effective and appropriate local planning consistent with applicable jurisdiction and regional growth projections, as well as applicable policies including the Sustainable Communities Strategy (SCS) and associated region-wide GHG targets.

The ECTNP base year (2013) population, housing, and employment estimates were derived using data from the 2010 Census, which was then adjusted to 2013 using the average annual growth rate of the City of Los Angeles and other surrounding cities during the period of 2010-2013 (see **Appendix F** for further detail). Now that the 2016-2040 RTP, which has a base year of 2012, is available, it is possible to compare the 2012 data to the 2013 data used in the ECNTP. As shown in **Table A** below, the difference between the 2012 and 2013 data for population, housing, and employment reflects a level of growth that appears reasonable for that one year period.

TABLE A: BASE YEAR COMPARISONS

	2008 2012 RTP Base Year[1]	2010 Census[2]	2012 2016 RTP Base Year[1]	2013 Proposed Project Base Year[3]
Population	47,515	49,934	48,298	50,595
Housing (Dwelling Units)	23,053	24,906	23,306	25,018[4]
Employment	39,598	32,462	32,322	33,962

1. SCAG Tier 2 Data. Note that for Housing, SCAG data is provided in terms of households. (The SCAG 2012-2035 RTP households for 2008 is 22,188 and the 2016-2040 RTP households for 2012 is 22,431.) In order to compare to Proposed Project housing units, the SCAG forecast households was converted to housing units using the following vacancy rates: 1.5% for single-family units, and 4.5% for multi-family units.
2. US Census 2010
3. Project Base Year (2013) population and housing are derived from 2010 Census adjusted to 2013 using the average annual growth rate of the surrounding cities and the City of Los Angeles.
4. Project Base Year (2013) employment was obtained directly US Census (On the Map application.)

The Proposed Project aims to accommodate the forecasted growth in population, housing, and employment for the horizon year of 2035. Since it also has a horizon year of 2035, the 2012-2035 RTP was used to guide the land use recommendations in the Proposed Project. Localized market demand forecasts for 2035 prepared as part of a market study for the Project area were also used as a guide. As discussed in detail in **Chapter 4.10 Population, Housing, and Employment**, the reasonable expected development resulting from the Proposed Project in 2035, shown in **Table B**, would accommodate the 2012-2035 RTP forecast for that year.

As stated previously, the 2016-2040 RTP/SCS has a horizon year of 2040.This new horizon year provides a perspective on the trajectory of growth anticipated between 2035 and 2040, showing a steady upward trend in population, housing, and employment. As seen in **Table B**, the Proposed Project has available capacity to accommodate this increase in forecast growth for 2040. **Table B** also demonstrates that the Proposed Project with Alternative Compliance also has available capacity to accommodate the growth anticipated by the 2016-2040 RTP for 2040.

TABLE B: FUTURE YEAR COMPARISONS: PROPOSED PROJECT

	2035 (Proposed Project)	2035 (Proposed Project – Alt Compliance)	2035 Forecast[1] (2012-2035 RTP)	2040 Forecast[1] (2016-2040 RTP)
Population	59,571	62,810	54,444	65,176
Housing (Dwelling Units)	29,441	31,060	28,497	32,285
Employment	48,296	43,419	43,097	46,562

1. SCAG Tier 2 Data. Note that for Housing, SCAG data is provided in terms of households. (The SCAG 2012-2035 RTP household forecast for 2035 is 27,427 and the 2016-2040 RTP household forecast for 2040 is 31,046.) In order to compare to Proposed Project housing units, the SCAG forecast households was converted to housing units using the following vacancy rates: 1.5% for single-family units, and 4.5% for multi-family units.

Table C illustrates the future reasonable expected development resulting from the three alternatives analyzed in the EIR, comparing the Alternatives to the SCAG growth forecasts for 2040 from the 2016-2040 RTP. Alternative 1 and Alternative 2 would not accommodate the population, housing, and employment forecast for 2040. Although Alternative 3 would meet the 2040 population and housing forecast, this alternative would notably fall short of accommodating the forecasted number of jobs, which is a primary objective of the Proposed Project.

TABLE C: FUTURE YEAR COMPARISONS: ALTERNATIVES

	2035 (Proposed Project)	2035 Alt. 1 (No Project)	2035 Alt. 2 (Reduced Project)	2035 Alt. 3 (Incr Res / Reduced Emp)	*2035 Forecast[1] (2012-2035 RTP)*	2040 Forecast[1] (2016-2040 RTP)
Population	*59,571*	52,447	57,326	65,835	*54,444*	65,176
Housing (Dwelling Units)	*29,441*	26,072	28,336	32,578	*28,497*	32,285
Employment	*48,296*	37,775	44,712	39,693	*43,097*	46,562

1. SCAG Tier 2 Data. Note that for Housing, SCAG data is provided in terms of households. (The SCAG 2012-2035 RTP household forecast for 2035 is 27,427 and the 2016-2040 RTP household forecast for 2040 is 31,046.) In order to compare to Proposed Project housing units, the SCAG forecast households was converted to housing units using the following vacancy rates: 1.5% for single-family units, and 4.5% for multi-family units.

In additional to existing and future socioeconomic data, the travel demand model used in the transportation analysis for the ECTNP is based on network assumptions found in the 2012-2016 RTP. Although the detailed transportation modeling is not currently available to the City, Naresh Amatya, Transportation Planning Manager at SCAG has indicated that the 2016-2040 RTP does not include significant new transportation projects in West Los Angeles, and therefore any changes to associated calculations would be minor.

General Limiting Conditions

Certain information included in this report contains forward-looking estimates, projections and/or statements. Pro Forma Advisors LLC has based these projections, estimates and/or statements on expected future events. These forward-looking items include statements that reflect our existing beliefs and knowledge regarding the operating environment, existing trends, existing plans, objectives, goals, expectations, anticipations, results of operations, future performance and business plans.

Further, statements that include the words "may," "could," "should," "would," "believe," "expect," "anticipate," "estimate," "intend," "plan," “project,” or other words or expressions of similar meaning have been utilized. These statements reflect our judgment on the date they are made and we undertake no duty to update such statements in the future.

No warranty or representation is made by Pro Forma Advisors that any of the projected values or results contained in this study will actually be achieved.

Although we believe that the expectations in these reports are reasonable, any or all of the estimates or projections in this report may prove to be incorrect. To the extent possible, we have attempted to verify and confirm estimates and assumptions used in this analysis. However, some assumptions inevitably will not materialize as a result of inaccurate assumptions or as a consequence of known or unknown risks and uncertainties and unanticipated events and circumstances, which may occur. Consequently, actual results achieved during the period covered by our analysis will vary from our estimates and the variations may be material. As such, Pro Forma Advisors accepts no liability in relation to the estimates provided herein.

In the production of this report, Pro Forma Advisors has served solely in the capacity of consultant and Pro Forma Advisors has not rendered any “expert” opinions and does not hold itself out as an “expert” (as the term “expert” is defined in Section 11 of the Securities Act of 1933).

This report is not to be used in conjunction with any public or private offering of securities, and may not be relied upon without the express written consent of Pro Forma Advisors.

This study is qualified in its entirety by, and should be considered in light of, these limitations, conditions, and considerations.

Executive Summary

Introduction

The City of Los Angeles Department of City Planning (DCP), supported by Metro, is undertaking a two-year project focused on station area planning around ten future light rail stations along the Exposition Light Rail Transit Line (Expo LRT) and Crenshaw/LAX Light Rail Transit Line (Crenshaw LRT). The focus of this study is on five of the ten stations, specifically the Culver City Station (Expo LRT), Palms Station (Expo LRT), Sepulveda Station (Expo LRT), Bundy Station (Expo LRT), and West Station (Crenshaw LRT). The project aims to support a number of transit-oriented district policy goals, including:

- Incentivizing an appropriate mix of uses, scale, and intensity at each station area;
- Fostering economic development and job creation;
- Encouraging transit ridership and expanding mobility options;
- Improving urban design, walkability, and the quality of the built form; and
- Providing and/or maintaining housing for a wide range of income levels.

DCP has engaged the project consulting team, led by Terry A. Hayes Associates (TAHA), to provide environmental, transportation, economic, and other technical planning support in this endeavor. Pro Forma Advisors, a land use economics consulting firm, has been retained to provide economic analyses support. Pro Forma Advisors' tasks include a baseline demographic and real estate market overview, station-specific market analyses, pro forma analysis, and recommendation of public benefits.

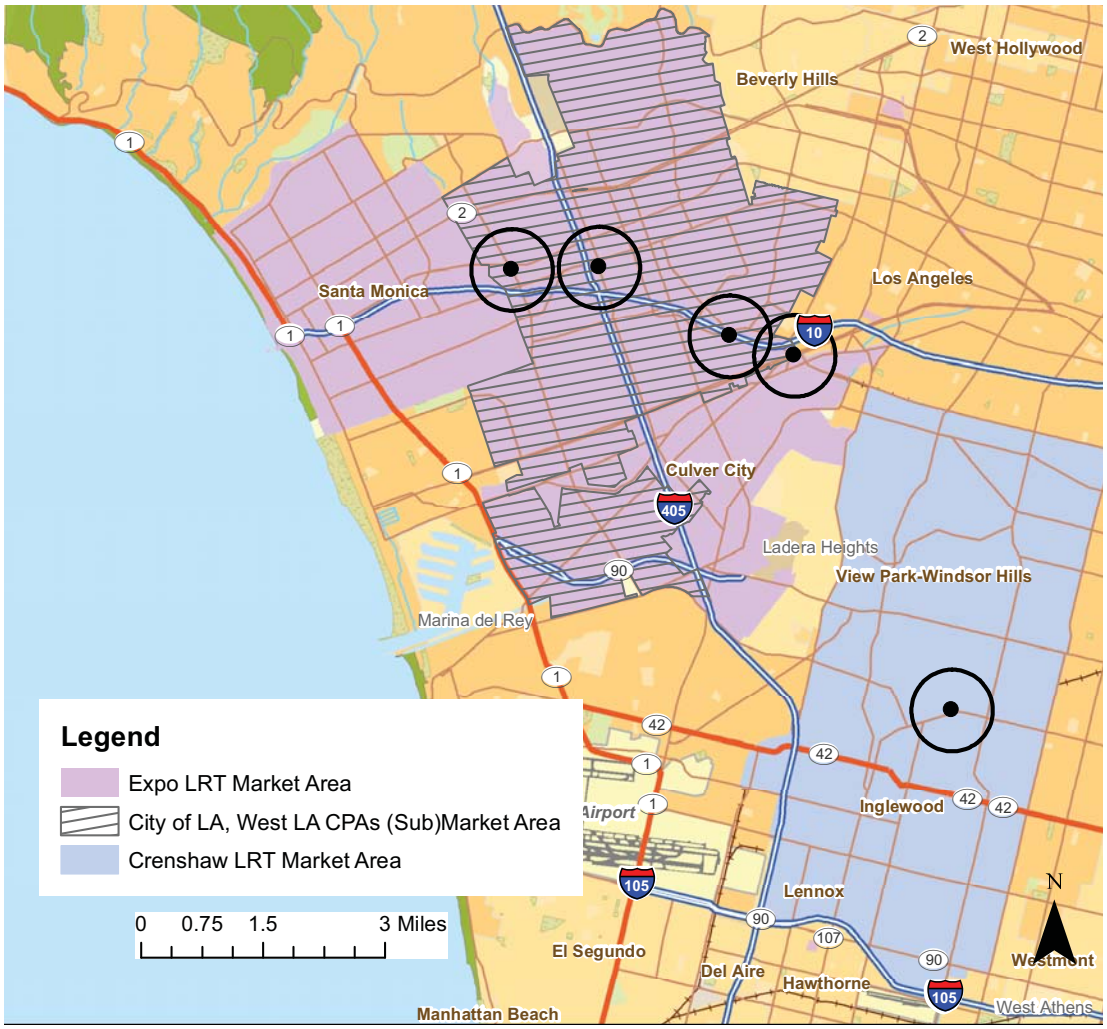
The first portion of the Market Analysis reviews demographics and the regional real estate market performance to provide context for the station area planning efforts for both the Expo LRT and Crenshaw LRT market areas. An industry analysis evaluates expected growth in the region and focuses on the creative office market. The second portion of the report evaluates the market support for new land uses in the Expo LRT market area. The station specific market analysis looks closely at existing businesses in each of the Expo LRT study station areas and projects demand for key land uses within each of these station half-mile areas.

Regional Demographic and Socio-Economic Context

Analysis Geographies

The map below presents the key geographies analyzed in this study. The Expo LRT Market Area includes the City of Los Angeles community plan areas (CPAs) of Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey, as well as the cities of Culver City and Santa Monica. To understand demographics and real estate trends specifically in the City of Los Angeles, the City of Los Angeles community plan areas of Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey are aggregated into a submarket called the West LA CPAs. The Crenshaw LRT Market Area includes portions of Los Angeles, Inglewood, and the unincorporated Lennox community.

Demographic and socio-economic data provides useful information about the current nature of the markets and station areas. Population and household growth is a major market driver of residential and retail developments. While age, income, and employment data provides insight into the possible patrons and buyers of commercial and residential developments.



Source: ESRI, Pro Forma Advisors

Population and Households

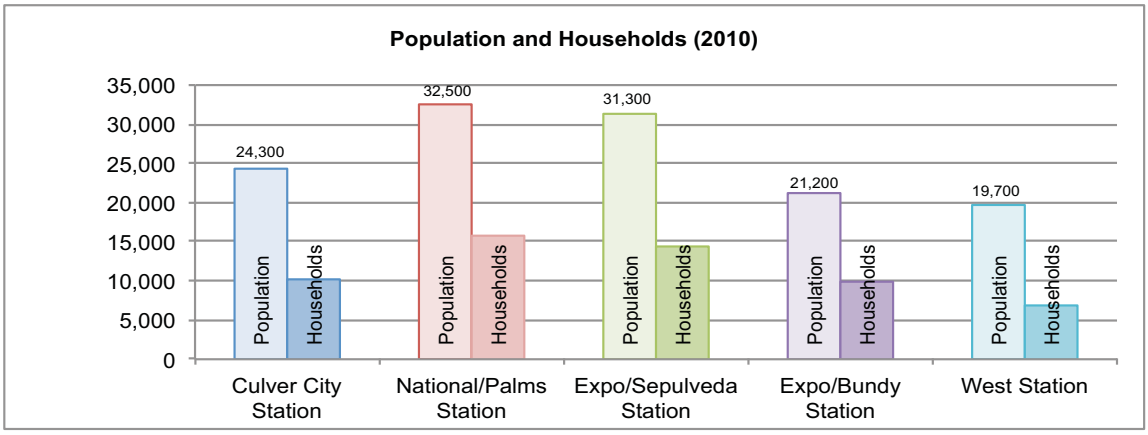
The recession impacted population growth in the City and County of Los Angeles across the last decade with notable contraction in population growth between 2005 and 2007. Despite the recession, the City of Los Angeles added an

average of 10,400 residents annually between 2000 and 2012. The City of Los Angeles has a current population of 3.83 million.

The Expo LRT Market area has a population of almost 370,000 and is a high demand residential area. Population growth rates are 50 percent higher in the Expo LRT Market Area relative to the City of Los Angeles. Between 2000 and 2010, the area added 13,000 residents in 5,000 households.

The Crenshaw LRT Market Area had a slight decrease in population between 2000 and 2010, losing 1,900 residents. In 2010, the Crenshaw LRT Market's population was approximately 230,000.

The figure below displays the 2010 population and households within the study station areas[1]. As to be expected, station areas with residential neighborhoods within close proximity, such as Palms and Sepulveda Station, have the greatest amount of residents. The Bundy and Culver City Station Areas have a greater share of existing commercial space surrounding the stations and, in result, have lower residential counts. The West Station Area includes a mix of residential and commercial. Development is lower density in this station area relative to other study stations.



Source: US Census, ESRI, City of Los Angeles, Pro Forma Advisors

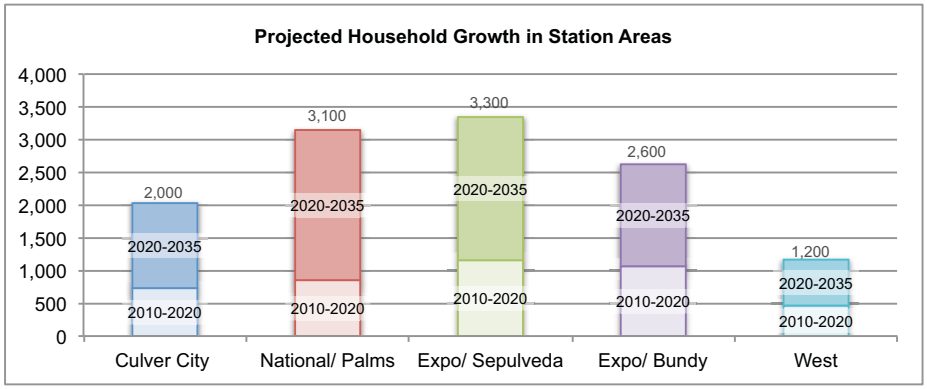
Projected Population and Households

Population and household projections produced by the Southern California Association of Governments were used to estimate future households and population anticipated in the study geographies. It should be noted that these projections should be considered benchmarks for growth. Light rail transit access is likely to further intensify development at station areas.

[1] Census tracts are used to approximate a half-mile radius around the stations.

The Expo LRT Market Area is expected to add 29,000 new households (38,600 new residents) between 2010 and 2035. The Crenshaw LRT Market Area is expected to add 13,000 new households (27,000 new residents) across the 25-year period, an average of 500 new households annually.

The figure below presents the household growth by station area. Station areas with a greater share of existing residential uses, the Palms and Sepulveda stations, are projected to grow by 120 to 130 new households a year. Station areas with a greater share of existing commercial uses, Bundy Station and Culver Station, anticipate 80 to 100 new households a year. The West Station is projected to add approximately 47 new households a year.



Source: SCAG, US Census, Pro Forma Advisors

Income

The Expo LRT Market Area has a median household income of $62,000, 30 percent higher than Los Angeles' median income of $48,000; while the individual Expo LRT station areas have median household incomes between $58,000 and $66,000, 20 to 40 percent higher than the City of Los Angeles.

The Crenshaw LRT Market Area has a median income of $43,000, approximately 10 percent lower than the City of Los Angeles. The West Station Area has a median income of $34,000, approximately 30 percent lower than the City of Los Angeles' median income.

Age

The average age is 36.9 in the Expo LRT Market Area and 31.6 in the Crenshaw LRT Market Area. The Expo LRT Market Area and the Expo LRT study stations have more single urban professionals, and less children, than found throughout most of the City of Los Angeles. The Expo LRT Market Area's age distribution may generate greater interest in multi-family rental and for sale units. The Crenshaw LRT Market area and the West Station have an age distribution in line with the City of Los Angeles.

Los Angeles County Employment

Employment statistics provide a snapshot of how the recent local and national economic conditions have impacted Los Angeles County. Between 2003 and 2007 the US and Los Angeles economy was booming, riding a tide of rising housing

prices and strong consumer spending. The Great Recession, which officially began in December of 2007, was triggered by a slowdown in housing sales and prices through 2006 and 2007 and the related US financial crisis. Between 2006 and 2009, Los Angeles County unemployment moved from 4.8 percent to 11.6 percent.

While US economic activity has improved and the recession officially ended in June of 2009, economic improvements are only translating into employment gains this year in Southern California. **Between 2008 and 2010, Los Angeles County lost 330,000 jobs, as of October 2012 only 50,000 jobs have been regained.**

As of October 2012, approximately 4.4 million persons are employed in Los Angeles County while the unemployment rate is currently at 11.3 percent. **The Los Angeles economy continues to improve, but still has not fully rebounded.**

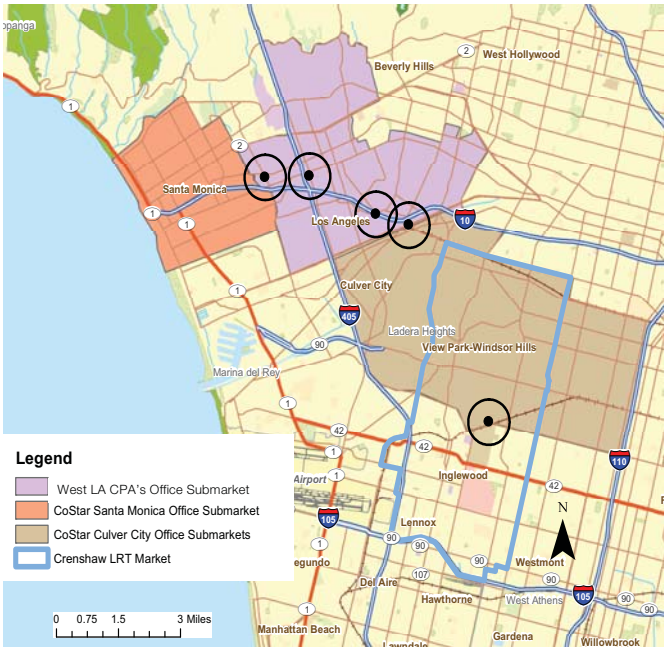
Real Estate Overview

The real estate overview reviews the current and historical market performance of the Los Angeles office, industrial, retail, and residential markets and the relevant Expo LRT and Crenshaw LRT station area submarkets. Secondary data sources, such as CoStar, Dataquick, and REIS are used to provide comprehensive understanding of regional and local trends in the performance of the commercial and residential buildings stock.

Office Space

Overbuilt in the 1980s, the Los Angeles office market has had only fair fundamentals relative to other land use types. The Los Angeles office market tightened as a result of the booming economy in the first half of the last decade and, subsequently, was severely impacted with the economic slowdown that began in 2007. When the economy was in high gear from the housing boom, office vacancy lowered to the 7 to 8 percent range. With the housing bust and financial crisis, vacancy rates moved upward again and are currently at a 15-year high of 12.6 percent.

Submarkets are defined to represent an area that is competitive for office product. The map to the right presents the office submarkets used for this analysis. The office submarkets reviewed include the West LA CPAs submarket (which roughly includes the Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey CPAs), the Culver City submarket, and the Santa Monica submarket.



Source: CoStar and Pro Forma Advisors

The majority of the office space in the West LA CPAs office submarket is Class A Space. The largest clusters of Class A office space are located in Century City and near the intersection of Bundy and Olympic. The submarket contains 10 percent of the Los Angeles County Class A office space. Class A office has higher than average vacancy rates, but this has been due to

the construction and delivery of a number of new buildings. Overall, Class A office space in the West LA CPAs submarket has been growing. A total of approximately 470,000 square feet has been absorbed since 2000. The West LA CPAs submarket is not as strong as the Santa Monica submarket but can expect continued growth.

Due to its affordability and the limited inventory, West LA CPAs Class B and C office product performs very well. Vacancy rates were as low as 4 percent at the start of the recession. While this figure doubled across the last few years, 270,000 square feet of new space was added to the market across the last decade and vacancy still remains below 10 percent.

With 8.1 million square feet of office, Culver City is the smallest of the Expo LRT office submarkets and is more affordable than Santa Monica or West Los Angeles space. A notable trend in this submarket is the increasing rents for Class B and C product in Culver City. Class B and C rents are close to Class A rents. This may be due to the increasing demand for creative office space in Culver City, which typically occupies Class B and C space.

Santa Monica has the strongest office market of all the submarkets. Class A vacancy rates are approximately 3 percent lower than the West LA CPAs and Culver City submarkets and rents (per square foot) are almost $5.00 higher than the West LA CPAs submarket and the Culver City submarket. Low vacancy rates and high rents reflect the high interest and demand in the Santa Monica office properties. **However, as prices continue to grow and the Santa Monica market continues to tighten more and more firms will consider their options in West Los Angeles and Culver City.**

The Crenshaw LRT submarket has 3.4 million square feet of office space. There is a very limited amount of Class A office space and, with a vacancy rate of 28 percent, this market is struggling to fill space. Businesses have also vacated a substantial amount of Class B and C space in the market, but with more interest in this affordable space, the Crenshaw LRT Market's Class B and C space is still performing better than the Los Angeles average.

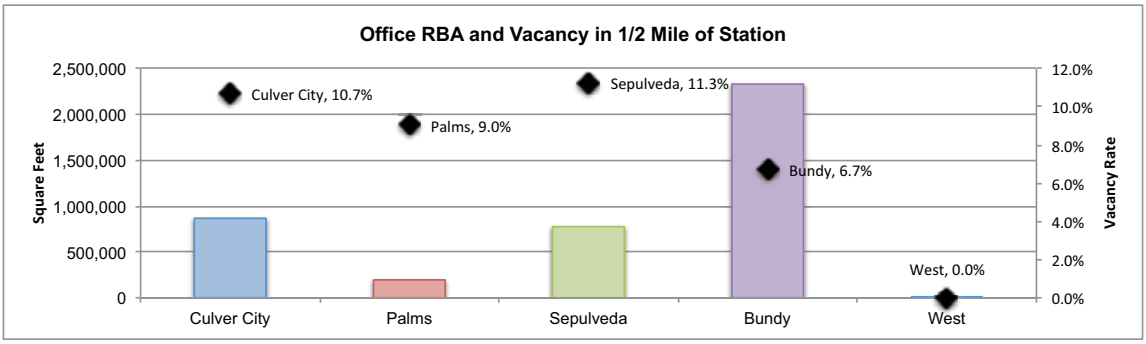
Submarket	Class	# Bldgs	Total RBA	Total Vacant %	Total Net Absorption	Total Average Rate[1]
West LA CPAs	Class A	75	20,059,381	13.9%	233,975	$42.24
	Class B&C	533	6,477,917	7.7%	68,335	$28.87
Culver City	Class A	13	2,896,785	15.0%	-6,966	$28.93
	Class B&C	443	5,206,335	11.6%	84,966	$28.52
Santa Monica	Class A	65	7,976,783	11.4%	-257,104	$46.98
	Class B&C	482	7,136,122	5.9%	53,551	$38.53
Crenshaw LRT	Class A	8	917,917	27.6%	10,648	$20.57
	Class B&C	282	2,464,522	11.1%	-13,015	$20.34

[1]Per Square Foot

Source: CoStar and Pro Forma Advisors

The Bundy, Sepulveda, and Culver City stations are the key stations with office development potential. The Bundy Station, by far, has the greatest amount of existing office space of all the station areas. This station area is in close proximity to key Santa Monica office corridors and contains a well-performing cluster of office buildings. The Culver City Station also includes a fair share of office. It is worth noting that the majority of office properties around this station are located in Culver City as opposed to the City of Los Angeles. The Sepulveda Station has clusters of office space on

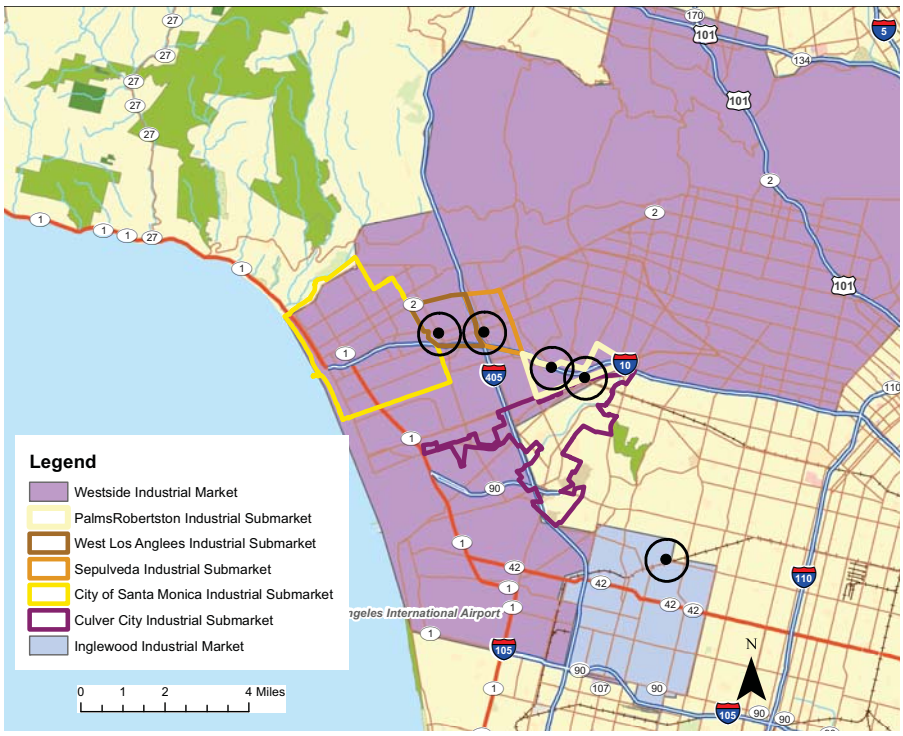
both the east and west side of the I-405 freeway. In close proximity to UCLA and good freeway access, the Sepulveda Station has potential for further office development.



Source: Costar and Pro Forma Advisors

Industrial

To better understand the industrial market, we reviewed a number of markets and submarkets. The industrial markets represent competitive areas defined by CoStar. Submarkets were customized to understand the industrial performance of the station areas. These geographies are shown in the map below.



Source: Pro Forma Advisors and CoStar

Los Angeles County has a strong transportation and distribution industrial market related to trade in the Ports of Los Angeles and Long Beach. Key industrial areas are concentrated around the Alameda Corridor. The Westside Industrial Market has less than 2 percent of Los Angeles' industrial stock. It is not well located relative to the Alameda Corridor and the high land prices in West Los Angeles make the area unattractive for traditional industrial uses. The Inglewood Industrial Market has more affordable space, but the West Station Area is "land locked" by residential. In both market areas, traditional industrial uses, such as manufacturing and distribution, may be limited but industrial-zoned properties are utilized by other industrial-using businesses that require substantial amounts of affordable space.

Expo LRT Market Area

In the Westside Industrial market and the submarkets, there is limited industrial space and existing space has relatively low vacancy rates, largely below 5 percent. However, absorption has been negative across the last decade, primarily due to businesses vacating industrial spaces that are then transformed into higher-performing uses such as creative office. The low vacancy rate demonstrates demand for industrial space (though in part due to the limited availability), but removal of product from the market demonstrates that there are more profitable uses of the land than industrial. Westside Industrial properties' lease rates average $13.00 per square foot, which may be burdensome for many traditional industrial users.

- The West Los Angeles submarket has had negative absorption across the last decade as a result of properties removal from the inventory for non-industrial use. The Bundy Station, located in this submarket, has the second largest amount of existing industrial space of all the half-mile station study areas, but due to the high cost of land and interest in other office uses, much of this space, particularly closer to the Bundy and Olympic intersection, is likely to be redeveloped for other uses.

- The City of Los Angeles Industrial Land Use Policy encourages the maintenance of industrial land in certain areas of the City. It is helpful to note that in the West Los Angeles industrial submarket, relatively less industrial space is located within a ¼ mile of the Bundy Station. The majority of industrial spaces are located beyond the ¼ mile, with most beyond the half-mile of the station area.

- The Sepulveda submarket has had neutral absorption and maintained its rentable space across the last decade, which suggests there is limited demand for new space. The Sepulveda Station has the third largest amount of industrial space but the lowest vacancy of all the half-mile station areas. It may be helpful to maintain some level of industrial, but many spaces, particularly those fronting Sepulveda, are likely to turn over into other uses with time.

- The Palms/Robertson submarket (near Culver City Station) has very low vacancies with barely any increase in vacancy during the recession. The Palms/Robertson submarket, as well as the Santa Monica submarket, are the only submarkets studied that have filled additional industrial space in the last decade. The Culver City Station has the largest amount of industrial space of all the station areas. The Culver City Station has the highest vacancy (still low at 4 percent) but also has the highest average lease rate. Industrial spaces in the

station area are active. Until there is a reconfiguration of the I-10 freeway Robertson exit on/off ramps, this area is likely to continue as industrial with only piecemeal redevelopment and intensification of use.

3Q2012	# Bldgs	Total RBA	Total Vacant %	Total Average Rate
Westside Industrial Market	884	20,555,245	2.9%	$13.07
West Los Angeles Submarket	44	1,110,323	1.0%	$18.09
Sepulveda Submarket	40	390,019	6.0%	$19.80
Palms /Robertson Submarket	46	542,147	1.0%	$19.81
1/2 Mile Station Areas

Sepuvleda Station	34	616,247	0.1%	$16.80
Palms Station	4	207,101	0.0%	NA
Culver City Station	93	792,383	4.2%	$17.87

NA= Not Available.

Source: CoStar and Pro Forma Advisors

Crenshaw LRT Market Area

In the Inglewood industrial market there is 5 million square feet of space, but it is clustered away from the West Station along the Crenshaw/LAX Line, along Florence Avenue between Centinela Avenue and Aviation Boulevard. This market was substantially impacted by the recession. Vacancy rates increased and lease rates dropped from approximately $13.00 in 2008 to $10.00 per square foot per month in 3Q2012.

The West Station has 28 industrial properties within a half-mile of the station area, the station area's largest commercial use. Industrial spaces have a relatively high vacancy rate of 9.3 percent, likely due to the distance of the area from the freeway and a monthly lease rate of $9.00 which is substantially lower than industrial space in the Westside Market, but is inline with industrial rents in the Inglewood market and are actually higher than the LA market average rent of $6.50 per square foot. With minimal pressure from other land uses, this industrial space is likely to remain, and vacancy will likely improve with the economy.

3Q2012	# Bldgs	Total RBA	Total Vacant %	Total Average Rate
Inglewood Industrial Market	306	5,130,129	4.2%	$9.79
1/2 Mile Station Area				
West Station	28	396,932	9.3%	$9.00

Source: CoStar and Pro Forma Advisors

Retail

The recent recession has had an ongoing impact on the retail market in Los Angeles and across the nation. As a result of current high levels of unemployment and underemployment, households severely restricted their spending. Los Angeles shopping center vacancies doubled during the recession, moving from approximately 3 percent to their current 6 percent level.

Given the development opportunity areas in the station areas, new retail in the study areas is likely to be community and neighborhood-serving in nature. Proposed development should be pedestrian-friendly and is not likely to be physically configured as a traditional community or neighborhood retail center. Development will either be developed at a scale, and with a retail mix, likely to compete with existing community or neighborhood serving retail centers or, if limited in scale, will be developed to complement and expand existing general retail destinations.

Expo LRT Market Area

The Expo LRT Market Area is a premium shopping center retail market. While the area faced its fair share of business closures during the recession, the area fared better than the overall Los Angeles Market.

Community, neighborhood, power, and theme shopping centers had extremely low vacancies before 2008. Recessionary business closures impacted the market, generating higher vacancies and negative absorption, but are not likely to have long lasting effect in this market. High rents point to demand for additional neighborhood and community-serving retail.

It should be noted that shopping centers make up only one-third of the retail market. General, non-shopping center retail is the largest share of retail. It includes freestanding businesses, storefront commercial, and other retail types. While general retail is the largest share of retail space, this space varies in quality and use. General retail found in areas with a critical mass of retail, such as Westwood Village and along Pico Boulevard and Westwood Boulevard near the Westside Pavilion, create attractive retail destinations and promote further investment. However, retail in non-retail destinations tend to be used for specialty retail such as mattress sales, furniture, kitchen and bath stores, or for service uses, such as auto repair, and properties may be of lower quality.

Vacancies within the general retail category are substantially higher than the non-strip shopping center categories. This is likely due to the fact that small businesses are more likely to locate in this space and they are more likely to be severely impacted with reduced consumer spending, and, secondly, this category also contains the least attractive space.

Expo LRT Retail Market Area	No. of Centers	RBA	Vacancy Rate	Lease Rate
Super regional & Regional	6	4,508,002	2.0%	$54.84
Neighborhood, Community, Theme,& Power	66	5,881,217	4.1%	$40.00
Strip Centers	231	2,355,856	5.0%	$34.48
Non-Shopping Center Retail	3,462	24,853,319	5.4%	$40.19

Source: Costar, Pro Forma Advisors

Crenshaw LRT Market Area

The Crenshaw LRT market area contains 4.2 million square feet of shopping center retail. Though there are neighborhood centers and a community center within a mile of the West Station, there are no shopping centers within the West Station half-mile area.

Shopping center vacancies have inched up slowly across the last six years, but the Crenshaw LRT market has performed better than the Los Angeles average. Vacancy rates remain fairly low, perhaps due to the limited nature of the retail available in the market.

South LA is underserved by national chain merchandisers. Instead, residents rely on a network of small-scale freestanding and storefront retailers that can vary in quality. General, non-shopping center, retail makes up approximately 52 percent of all retail in the Crenshaw LRT area.

Vacancy rates for general retail are only slightly higher than shopping center retail. Low vacancy rates in both shopping center and non-shopping center retail, along with the positive absorption across the last decade, suggest existing demand for retail. It should be noted that new retail will be most successful if part of a retail destination.

Crenshaw LRT Retail Market Area	No. of Bldgs.	RBA	Vacancy Rate	Lease Rate
Shopping Center Retail	168	4,240,569	3.2%	$ 22.35
Non-Shopping Center Retail	841	4,575,547	3.6%	$ 15.43

Source: Costar, Pro Forma Advisors

Residential

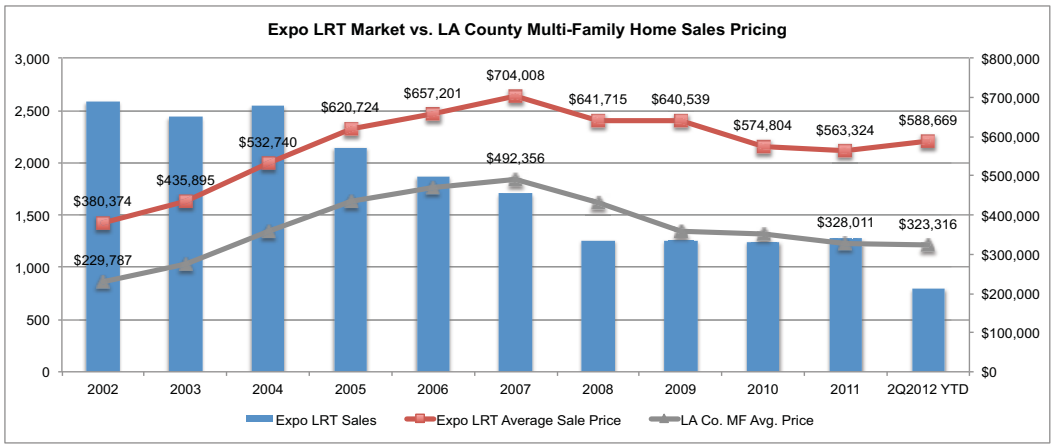
For-Sale Residential

Los Angeles, as well as most of the US, experienced a major housing boom at the beginning of the last decade. Fueled in part by easy access to credit, home sales were at an all time high in 2004 in Los Angeles County and housing prices doubled between 2002 and 2006. During the recession, 2007 to 2009, prices fell by approximately 30 percent. While prices have stabilized, 2012 was the first year with any increase in home prices.

Building permits for new construction provide a measure of future home development. In line with home sales and price trends, building permits peaked at 14,000 units in 2006 and fell to a low of 2,600 in 2009. Permitted units are currently at 6,000 units a year. It is interesting to note that, with limited available land for development, 82 percent of City of Los Angeles building permits are multifamily.

The Expo LRT Residential Market is a premium residential market. Home sale prices, across all types, are more than 50 percent higher than the Los Angeles County average. The market has seen many similar trends as the rest of the Southern California market. However, there has been somewhat less variation in pricing in the Expo LRT Market relative to the County. Within the Expo LRT Market, the City of Los Angeles' average unit price is $560,000, or $381 per square foot.

There are approximately 23 active for-sale projects (currently being sold or recently sold) in the Expo LRT area. The majority are condominium projects. These projects are priced from $545,000 to $815,000.



Source: Dataquick and Pro Forma Advisors

The Crenshaw LRT region's residential market followed the general Southern California housing trends as well. Sales peaked in 2005 and fell significantly in 2007, reaching a low in 2008. Between 2002 and the peak in 2006, homes sales prices grew by 230 percent. Across the recession, prices fell more than 50 percent, bringing home prices inline with 2003 figures.

In the Crenshaw LRT region, multifamily units only make up 20 percent of all homes sold in the last 10 years. Multi-family units reached peak pricing of $360,000 in 2006. Average pricing fell 40 percent to their current level of $154,000, half the Los Angeles average multi-family home price.

While current data paints the picture of a challenging residential market in the greater Crenshaw LRT area, it is worth noting that there has been very limited new or renovated residential product in the market across the last 20 years. There is only one current project in the area, Bedford Park, near the Baldwin Hills Mall, and it has average pricing of $250,000 to $450,000 per unit.

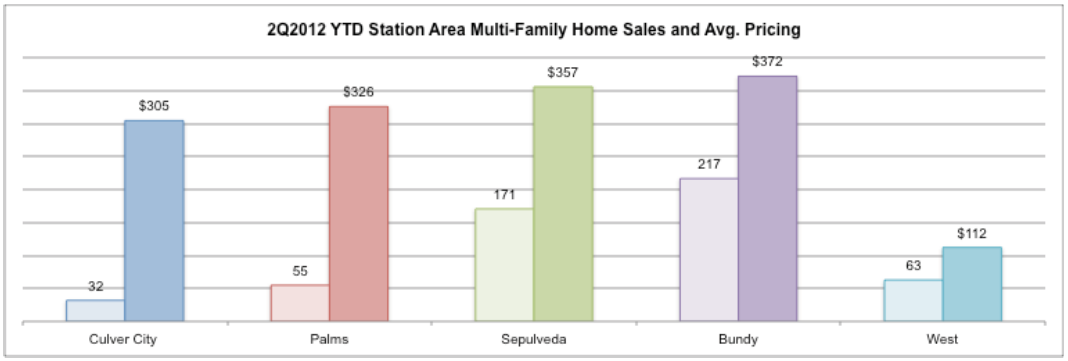
The following figure presents the 2Q2012 sales and average price per square foot in the station areas.



Source: Dataquick and Pro Forma Advisors

Rental Residential Market

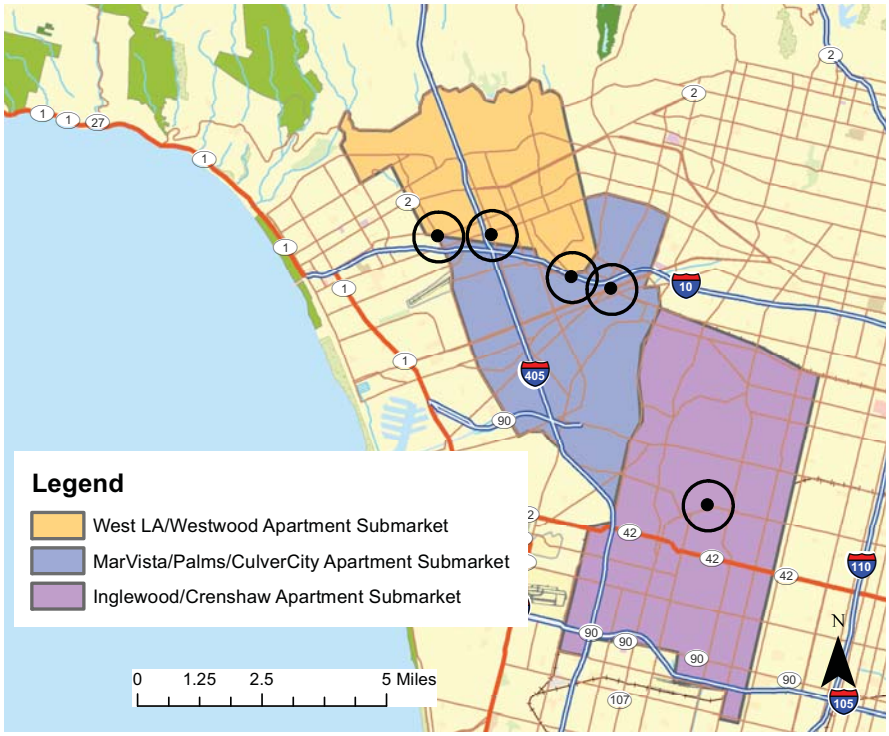
The multi-family rental market has been one of the most successful land use investments since the recession. The market has seen high demand based on demographic changes, as Generation Y, the second largest US cohort, moves from college or living with friends or family to their own units, as well as households moving from foreclosed homes to rental units. Rental rates are at or above their levels at the start of the recession and vacancy rates have improved in most markets. REIS data, survey data for apartment buildings with 4 or more units, was used to analyze the rental market.

As shown in the map on the next page, the study Expo LRT stations are split across two rental submarkets, the Palms/Mar Vista/Culver City submarket (Palms and Culver City Stations) and the West LA/Westwood submarket (Sepulveda and Bundy Stations). The West Station is located within the Inglewood/Crenshaw submarket.

- The Palms/Mar Vista/Culver City subumarket has an average monthly effective rent of $1,470 slightly above the Los Angeles metro monthly average of $1,410. Units are in older buildings; 70 percent of the stock was built before 1970. Newer units achieve higher rents of $2,200 - $2,600. Palms/Mar Vista/Culver City area is one of the more affordable areas in the westside of Los Angeles and units are in high demand in the area; the area has a low vacancy of 1 percent.

- The West LA/Westwood submarket has monthly rents of $2,200, 55 percent above the Los Angeles metro area average. This area has a younger stock of buildings; 50 percent of units were built in 1980 are after. Units in the area have a fairly low vacancy of 4 percent. Newer units achieve rents of $3,300 - $3,600.

- The Inglewood/Crenshaw market has an average rent of $1,020, 30 percent below the Los Angeles metro rent of $1,410. This low rent is likely due to the quality of the buildngs as well as the market location; 70 percent of buildings were built before 1980. Units built after 2000 have achieved rents above $1,700 per month.



Source: REIS and Pro Forma Advisors

Industry and Creative Office Analysis

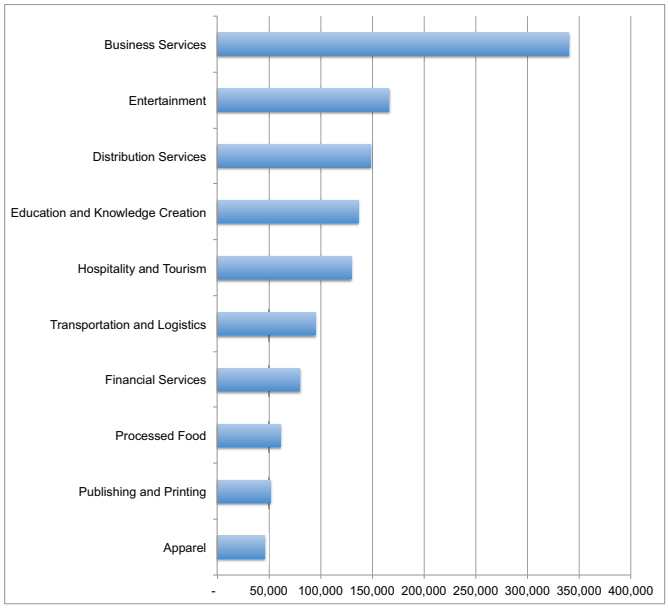
The creative and media industries are a substantial and growing employment sector within Los Angeles, particularly on the westside. Associated with entertainment as well as digital technology in West Los Angeles, the creative and media industries span a number of industry clusters and categories and have spawned their own genre of commercial space, deemed “creative office space”.

Regional Industry Clusters

Cluster analysis considers clusters of industries that are related within a region and share the same product or service. By improving the environment for key clusters, i.e. the regions’ strengths, the economy will grow more effectively and efficiently than broad based efforts to improve the general business climate.

As presented below, Business Services (e.g. management consultants, professional services, marketing, etc) is the largest cluster by far in Los Angeles and Orange County, followed by Entertainment and Distribution Services (e.g. transportation, wholesaling and warehousing).

2010 Employment in Top 10 Traded Clusters in the Los Angeles and Orange County Regions



Source: Prof. Michael E. Porter, Cluster Mapping Project, Institute for Strategy and Competitiveness, Harvard Business School; Richard Bryden, Project Director.

Only nine of the 41 traded clusters created jobs in the Los Angeles-Long Beach-Santa Ana Metropolitan between 1998 and 2010. The top six growing and contracting clusters are shown in the table below. It should be noted that the impacts of the Great Recession are still being felt and that some categories may have otherwise performed better.

Los Angeles and Orange County Traded Cluster Change in Jobs 1998-2010

Growing Clusters	**1998 -2010 Job Creation**
Entertainment	45,134
Education and Knowledge Creation	41,899
Distribution Services	20,595
Hospitality and Tourism	19,543
Transportation and Logistics	1,862
Publishing and Printing	275
Contracting Clusters	**1998 -2010 Job Creation**
Business Services	(12,630)
Information Technology	(13,177)
Financial Services	(19,408)
Metal Manufacturing	(36,953)
Aerospace Vehicles and Defense	(62,649)
Apparel	(64,034)

Source: Prof. Michael E. Porter, Cluster Mapping Project, Institute for Strategy and Competitiveness, Harvard Business School; Richard Bryden, Project Director and Pro Forma Advisors

The Business Services cluster may have the greatest number of employees, but, as shown above, the Entertainment industry cluster and Education and Knowledge Creation cluster had the greatest growth during the period.

Key Industry Sectors in the Expo LRT Market Area

The Expo LRT Market Area's major employment industries fall under the Education and Knowledge Creation cluster, the Business Services cluster and the Entertainment cluster. Cluster information is not available at smaller geographies so 2-Digit NAICS information is used to approximate the clusters.

Expo LRT Market Area Employment

Greater West Los Angeles Jobs by NAICS Industry Sector	2002	2004	2006	2008	2010	*2002-2010 Nominal Growth*

Source: US Census LEHD On the Map Data

Distribution is a major industry cluster throughout most of Los Angeles, but is very limited in the Expo LRT Market Area. Business Services and the Entertainment cluster industries, on the other hand, are attracted to the Expo LRT Market Area for the professional and specialized labor force living in the area and amenities, such as close proximity to the beach, restaurants and retail.

Creative and Media Industries

The creative economy is defined as "the market impact of businesses and individuals involved in producing cultural, artistic, and design goods and services.[2]" Our analysis focuses on those industries that are most prevalent in Expo LRT Market Area, specifically the Entertainment, Digital Media, and Communication Arts industries.

- Entertainment. Entertainment is one of Southern California's key sectors. Hollywood is the historical home of entertainment, but with Sony Pictures Studios and Culver City Studios in Culver City, Fox in Century City, and

[2] Los Angeles Economic Development Corporation. 2012 Otis Report on the Creative Economy of the Los Angeles Region

MTV and Lionsgate in Santa Monica, among others, the greater West Los Angeles area has become a major center of entertainment.

- Digital Media. The digital media industry is difficult to define. For purposes of this study we use digital media as a term to describe economic activities that include the transmission of information and content through the Internet.
- Communication Arts. For purposes of this analysis, the communication arts include the industries of graphic design services and advertising, as well as public relations agencies, media buying agencies and media representatives.

Future Trends

The quick rise of digital media and Internet technologies is both a challenge and opportunity for the Southern California economy. As described by the Los Angeles Economic Development Center (LAEDC), improvements in technology and the rise of digital media are causing two major problems for traditional media industries: (1) traditional media industries have to compete with free online content; and (2) traditional media must compete with these numerous new media platforms for limited advertising dollars.

With these challenges, the LAEDC expects to see a contraction in traditional advertising industries across the next five years in Los Angeles County, such as:

- Broadcast Television
- Radio

And growth in digital and media entertainment industries, such as:

- Internet Media
- Direct Marketing
- Event Marketing
- Word-of-Mouth Marketing
- Subscription Television
- Mobile Advertising and Content
- Video Games
- Business to Business eMedia

Based on the current issues in the sector, the structure of the entertainment sector is changing, but is still expected to be strong in the Expo LRT Market Area. Digital media growth should also continue to grow in West Los Angeles as entertainment and digital media continue to evolve together.

Expo LRT Market Area Future Trends

Pro Forma Advisors anticipates strong growth in the motion picture production and distribution industries and digital industries.

The lines between the entertainment industry and digital technology have already blurred. As the connection between these two clusters continues to grow stronger, we expect to see continued expansion of digital media firms and supporting firms in the area.

Creative Office Space

Creative office space has been growing in Santa Monica and West Los Angeles since the early 1990's with the first wave of pre-dot.com technology firms. With the dot.com bust in 2002, the office and creative office market slumped before reviving in middle of the last decade.

Many report that Santa Monica is the first choice for many creative firms. Industry Partners, one of the leading creative office brokerage firms, reports that there is almost 18 million square feet of creative office space in West Los Angeles and almost half of this creative office space is located in Santa Monica[3]. The space is reported to have a low vacancy of 6.8 percent and rents that range from $3.00 to $5.00 per square foot for premium properties.

In the past, Culver City has been a spillover market for Santa Monica creative office. However, brokers mention that some businesses are no longer looking in Santa Monica first, but will look in Culver City because it is more cost effective and is in a more central location relative to Downtown, Hollywood, and Miracle Mile. Culver City creative office is centered around the Hayden Tract.

There are a growing number of large campus developments in the Playa Vista and Marina Del Rey area of Los Angeles. The area is being touted by Industry Partners for its ability to offer companies 100,000 square feet or more of creative office space and at rates $2.00 per square foot less than Santa Monica[4].

West Los Angeles, specifically west of the I-405 Freeway, has benefited from its proximity to the Santa Monica creative office market. Technology and media firms looking for space in Santa Monica have increased demand in West Los Angeles. The majority of listed creative office space reported by CoStar is located adjacent to Santa Monica near the Bundy Station area.

The following matrix describes creative office users and key characteristics of creative office space.

---

[3] Rent TV.com. "2011 Sees Greatest Net Absorption of Creative Office Space on the Westside in Five Years". March 6, 2012.

Creative Office Matrix

Creative Office Users	•Digital technology •Media professionals •Post production •Advertising agencies •Artists, galleries •Talent agencies and public relations firms •Architects •Entertainment professionals •Other firms looking for a distinct culture
Design Characteristics	•Open floor plans •Larger floor plans •Skylights / Natural light •Less space per employee (as low as 100 SF – 200 SF per employee) •Preference for "funky spaces" and custom details •Elements that embody "Live, Work, Play" •Integration of indoor and outdoor •Unique landscaping, water features •1-3 buildings in campus style •Maximum of 3 stories •Oversized kitchens •Showers for those biking to work
Location Factors	•Areas with attractive lifestyle amenities •Beach/Restaurants/Retail/Night life •Interesting, edgy architecture •Areas with large share of young professionals •Proximity to the executive housing available on the west side and LAX •Public transit alternatives / Bike alternatives •Proximity to movie studios
Infrastructure Requirements	•Often need 4 to 5 parking space per 1,000 SF •Alternative parking for bikes, mopeds and electrical vehicles •Fiber optic connectivity •Buildings with high ceilings (required to run AC and electrical) •Buildings with operable windows •Preference for low rise buildings •Preference for street level parking •Access to outside spaces •Individual package air conditioners

Regional Demand Analysis

The Regional Demand Analysis uses projected employment and household growth along with appropriate market factors to understand potential support for major land uses in the Expo LRT Market Area. Regional demand is evaluated for commercial office, industrial, retail, and hotel real estate. In addition, station-level demand is evaluated for multi-family residential real estate. For commercial uses, station level demand is presented in the Station Specific Market Analysis.

Office and Industrial Real Estate Demand

Both demand for commercial office and industrial space are evaluated based on anticipated employment growth within the Expo LRT Area. Employment growth in the Expo LRT Market Area is estimated using adjusted California Employment Development Department (CA EDD) projections for Los Angeles County and applying anticipated growth rates to employment within the Expo LRT Market Area. Looking closely at industry distributions, the share of employees of office-using and industrial-using industries are estimated.

Using the above methodology, we estimate that there will be almost 45,000 new employees added to the Expo LRT Market Area between 2012 and 2035. Using an average square feet per office employee estimate of 375, new employees are projected to support 16.7 million square feet of new office space. Adjusting the figure to account for the absorption of current vacancies and assuming the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) captures approximately 50 to 75 percent of this new growth, we estimate that the regional West LA CPAs area (which includes the Westwood, West Los Angeles, and Palm-Mar Vista-Del Rey community plan areas) will capture approximately 7 to 10 million new square feet of new office space between 2012 and 2035.

Using a similar methodology, the Expo LRT Market Area is estimated to add 7,500 new industrial employees. (Many industrial space-using industries are expected to contract rather than grow.) At an estimated 400 square foot per industrial employee, the Expo LRT Market Area industrial-using employees are anticipated to support 3 million square feet of new office space. Assuming West LA CPAs capture 30 to 50 percent of this new growth, the West LA CPAs region is projected to capture between 900,000 and 1.5 million square feet of industrial space between 2012 and 2035.

Retail Demand

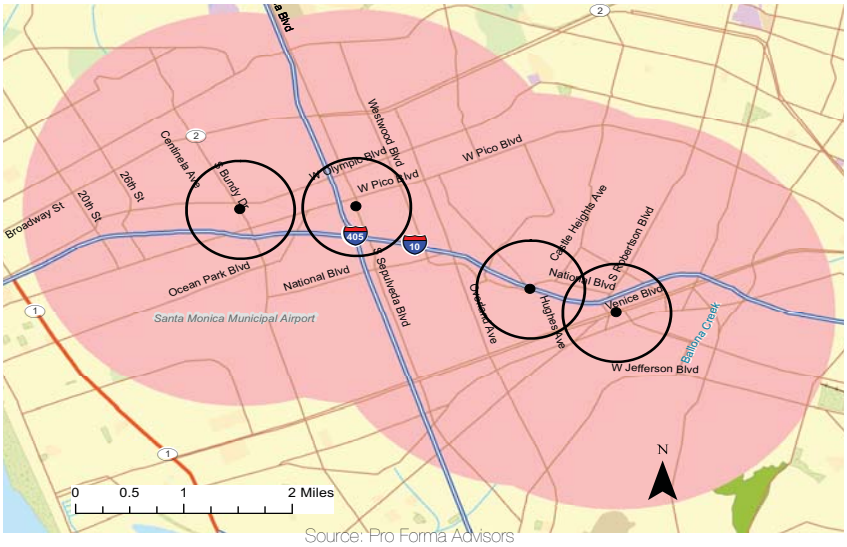
Retail demand is generated by household consumer spending and employee retail spending. The main retail projections represent retail demand from anticipated new residents within the Expo LRT Corridor. A second metric evaluates additional retail demand from the recapture of existing households' spending that may be occurring outside of the City of Los Angeles. The final metric estimates retail spending by employees working in the area.

Retail from New Residents

Retail demand from new residents is evaluated within a two-mile combined corridor, as shown in the map on the next page. An average retail spending per household figure is estimated for the area using California Equalization Board data. Applying average household spending to projected new households, total new retail dollar support is estimated. Retail sales are translated into retail square feet. Using this methodology, new residents in the station two-mile corridor are projected to support 1.2 million square feet of retail. The Expo LRT station half-mile areas currently make up 40 percent

of households within the two-mile corridor. Assuming that the station areas capture approximately 40 to 60 percent of retail support, the study Expo LRT station areas are expected to capture a total 460,000 to 700,000 square feet of retail.

Retail Two-Mile Market Area Corridor



Source: Pro Forma Advisors

Recapture of General and Strip Retail

Typically a retail leakage analysis would be performed to understand residents' retail demand that was not being captured within the City boundaries. A broad-level leakage analysis that compared total estimated resident spending to total retail space in the West Los Angeles CPAs areas found that there is sufficient overall retail space to service demand. However, it did reflect that approximately 60 percent of demand is being met by strip and general retail. Strip and general retail include standalone retail stores, such as the Best Buy, and popular local boutiques and restaurants, but likely also include a number of stores that are older and limited in selection, such as liquor stores and kitchen and bath stores. While total retail square feet exceeds retail spending in the West LA CPAs; it is very likely that residents are shopping outside of the City for many needs and these specialty stores are catering to a larger regional clientele. Thus, this analysis also includes a recapture of these existing strip and general retail stores.

To measure this recapture, total retail square feet demand for existing residents in the West Los Angeles CDP area is calculated in a similar fashion to the new resident demand. Existing super regional, regional, community, neighborhood, power and festival shopping center space is subtracted from the existing West Los Angeles CDP residents' retail demand, resulting in the demand that is supposedly captured by strip and general retail. Based on the current distribution of households, the station area demand serviced by general and strip retail is estimated. Finally, a recapture range of 10 to 20 percent provides a benchmark for the amount of retail that can be supported by in the place of undesirable general and strip retail.

Using this methodology, the West LA CPAs are expected to recapture between 220,000 and 450,000 square feet of existing general and strip retail space.

Employee Spending

To estimate employee spending during the workday, average office worker retail spending data from a recent ICSC survey was applied to the estimates of office employees calculated in the Office Demand section. New West LA CPAs

employees are projected to support 340,000 square feet of additional retail space. Other non-office employees may generate additional retail spending in addition to this figure.

Multi-Family Residential Demand

Residential demand projections were generated based on the comparison of two demand metrics, anticipated household growth and an estimate of households who desire move up units in the area. The projections represent demand for both for-sale and rental multifamily residential units.

SCAG household projections were used as a base to understand the expected new households in the area. Due to the overlap in the markets and based on the assumption that the target demographic for homes would similarly be willing to locate in either area, projections were reviewed for the Culver City and Palms stations combined and the Sepulveda and Bundy stations combined.

To estimate demand from new households, projected new households were analyzed for each of the combined area and an estimate of their willingness to locate in multi-family housing was applied. New households willing to locate in a multi-family unit are then distributed to each individual station area based on their share of the combined area and then an estimate of the concentration of new households in the half-mile station area is applied.

To estimate the move up market, we determined a move-up factor using (1) the annual share of households that move in Los Angeles County, (2) the willingness to locate in a multi-family unit, (3) an income qualification (for households that can afford a new unit) and (4) an estimate that 10 percent of households would want to stay in the combined area. This move up ratio is applied to total households and the resultant move up market is added to the projected new household demand.

Combined, we project demand for 2,100 to 3,100 units in the Culver City and Palms Station Areas between 2012 and 2035 and 1,600 to 3,100 units in the Sepulveda and Bundy Station Areas between 2012 and 2035.

Hotel Demand

Hotel demand is generated from two major sources, leisure tourism and business, but also can be generated by local residents (typically from visiting friends and relatives). The hotel demand analysis projects demand for Sepulveda Station hotel based on business and local residents.

To estimate hotel demand, tourism data was reviewed to determine an average room night factor for employees and residents. The room night factor was applied to the projected employees (determined in the Office Demand section) and anticipated household growth to estimate total hotel room demand between 2012 and 2035. Using this methodology, new West LA CPA employees are projected to support 520 hotel rooms while new residents are expected to support an additional 63 new rooms.

Station-Specific Market Analysis

The Station-Specific Market Analysis provides a comprehensive overview of the key market aspects of the Expo LRT station areas and an analysis of existing businesses, and presents projected demand for major land uses at each of the study station areas.

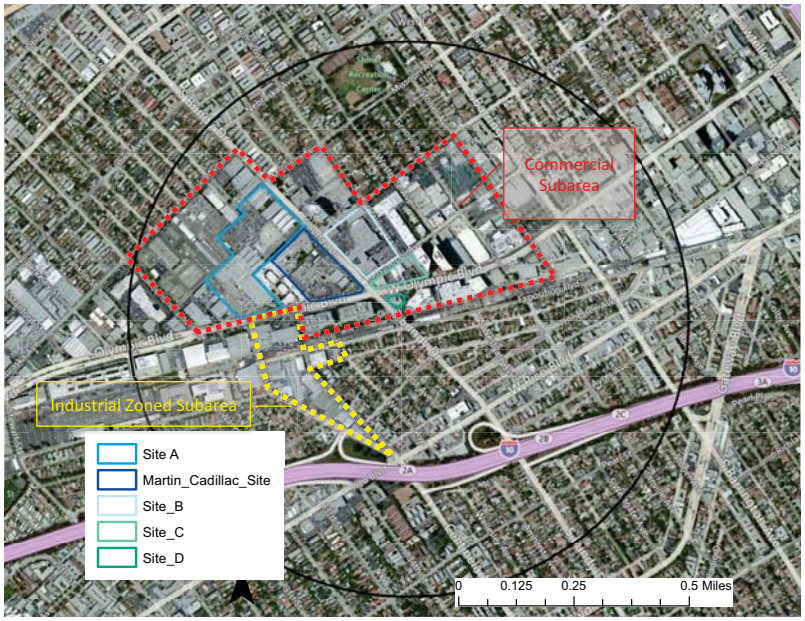
A summary of demand by land use is presented for each station. This represents the demand that may be captured in the half-mile area. It should be noted that planned and proposed projects, such as the Casden West project and Bergamot Village project, will reduce demand by the amount of the proposed units, if developed.

Bundy Station

The Bundy Station area sits on the edge of a major entertainment and creative industry-related employment corridor that is centered within Santa Monica. Within the station area, approximately one third of the half-mile area is zoned for manufacturing industrial uses, but the majority of this space, particularly within a quarter mile of the station, is being used for office-type commercial uses.

In addition to commercial uses, the half-mile area also includes a significant share of residential uses. Single family and multi-family residential north of Nebraska Avenue and La Grange Avenue connect to larger West Los Angeles and Santa Monica neighborhoods. Immediately south of Exposition Boulevard there are two single-family neighborhoods that are somewhat isolated by the I-10 freeway.

The main opportunity area, Site A, is approximately 12 acres and is one of the largest areas available for redevelopment in the Expo LRT Market Area west of the 405.



Source: ESRI, Bing, City of Los Angeles, Pro Forma Advisors

Existing Businesses

The leading industries in the Bundy half-mile station area are Professional, Scientific and Technical, Retail, Other Services, and Information. While one out of five jobs within the area are in the Professional, Scientific, and Technical industry, such as attorneys offices, accountants and engineers, many of the industries in the area are directly connected to and servicing the entertainment and digital fields. With the Martin Cadillac dealership as well as smaller Saab, Ferrari, and Jaguar-Land Rover dealerships in the Bundy Station area, retail is the second largest employer.

In the industrial-zoned subarea located adjacent to Centinela Avenue, highlighted on the Bundy Station area map above, there were no traditional manufacturing uses. However, 60 percent of this area's 230 workers were employed in businesses that require industrial land. These businesses included self-storage, auto repair, and vehicle and equipment repair. In the larger Bundy commercial subarea, north of Exposition Boulevard, less than 10 percent of the area's 5,400 workers, were employed at businesses that require industrial zoned land.

Planned and Proposed Development

- On the main opportunity site, Site A, the now shelved Bundy Village and Medical Park project, which included 500,000 square feet of commercial space and 385 residential units, was replaced with Hudson Pacific's 230,000 square foot creative office campus, the Olympic Media Campus.
- Owners of the Martin Cadillac site are currently working on plans to develop a mixed-use project on the site that would maintain the current dealership and add housing.
- Hines Development has been pursuing the Bergamot Transit Village project, which currently includes approximately 500,000 square feet of creative office, 47,000 square feet of retail, and 200,000 square feet of residential. The project may be further revised to include more housing and less office.
- The City of Santa Monica is currently preparing the Bergamot Station Area Plan which will includes the Hines project, the Bergamot Arts Center, and a mixed-use creative district.

Challenges and Opportunities

Challenges

- Traffic on Bundy Drive impacts access to properties and makes the area less attractive for residents and businesses.
- Residents are concerned with higher density and the addition of new employment-based uses, primarily due to traffic concerns.
- There is a shortage of parking in the area and current commercial properties have difficulty parking all the tenant employees in their buildings.
- Future parking challenges: How do we balance today's parking needs while promoting the best transit-oriented development in the future?

Opportunities

- Santa Monica is Los Angeles County's top office market (in terms of rent) and is the first choice of the growing digital media and entertainment industries in Southern California. The Bundy Station has a great opportunity to capture a cluster of the region's creative and technology industries in Class A office.

- Opportunity to encourage additional housing development that will help to create an active, mixed-use environment around the station.
- Given that the Bundy Station area is a prime real estate market, there is strong demand in the area for all uses and the station area will be able to support a strong level of public benefits through new development.
- Opportunity to consider a number of parking solutions, such as:
    - Parking policies that encourage shared parking, including sharing between different private properties.
    - Consider robotic stacked parking and other new parking technologies.
    - Public parking structures that allow for shared parking between various properties within the station area would be very beneficial to new development.
    - Encourage parking that can be repurposed into other uses in the future.

Demand Analysis

Bundy Station is well located in close proximity to a core cluster of Santa Monica office. Office uses are likely to play an important role in development in the area. In addition, there is also a significant need for additional residential in the area, as well as supportive uses.

Bundy Station	2012-2025	2025-2035	Total
Office	420,000 to 840,000 SF	600,000 to 1.2 million SF	1.0 million to 2.1 million SF
Industrial	45,000 to 75,000 SF	45,000 to 75,000 SF	90,000 to 150,000 SF
Residential	300 Units to 700 Units (40 to 50 units annually)	400 to 700 Units (40 to 75 units annually)	800 to 1,500 Units
Retail *	70,000 to 90,000 SF	80,000 to 110,000 SF	150,000 to 200,000 SF
Additional Existing Retail Recapture	40,000 to 90,000 SF		40,000 to 90,000 SF

*New resident and employee supported.

Sepulveda Station

The Sepulveda Station is located near the intersection of Exposition Boulevard and Sepulveda Boulevard. The northwest quadrant of the half-mile area, including the opportunity area, is zoned for light manufacturing use, but a variety of uses including retail, creative office, as well as manufacturing, wholesale, and construction, are also located in the area. The Westside Pavilion is partially located within the half-mile area of the Sepulveda station. The mall anchors a larger cluster of small-scale retail and restaurants. Immediately north of the station area are two mega blocks that have been identified as the opportunity areas for the study.

Source: ESRI, Bing, City of Los Angeles, Pro Forma Advisors

Existing Businesses

There are approximately 8,000 employees located within a half-mile of the Sepulveda Station. The largest employment category is Retail, followed by Professional, Scientific, and Technical, Accommodations and Food Service, Information, and Health Services. Retail includes employees in the Westside Pavilion. Ten percent of jobs are in building materials dealers and hardware stores.

The largest employment category in the area, described as the opportunity area in the map above, is Professional, Scientific, and Technical Services. Almost half of the Professional, Scientific and Technical industry jobs are located in the existing creative office space at 2440 S. Sepulveda Boulevard. The second largest employment category is retail. This includes building and materials retailers such as Anawalt Lumber, as well as a number of home and furniture-oriented businesses, such as Euro Design Kitchen and Bath. Only 148 of the area's 820 jobs would be considered industrial-users.

Planned and Proposed

Casden Properties has proposed a new development that includes 267,000 square feet of retail with 538 residential units on the west block of the opportunity site area. This project is currently seeking entitlements.

Challenges and Opportunities

Challenges

- There are a number of financially high-performing uses currently located on the opportunity site, including the public storage facility and County building on the west block, and the fully-occupied 2440 S. Sepulveda building, that will make it more challenging to redevelop the opportunity site.

- The Sepulveda half-mile area is bisected by two freeways, the I-405 Freeway and I-10 Freeway, which negatively impact residential opportunities, but may positively impact retail opportunities in the station area.
- The Sepulveda Station area has an eclectic mix of uses that make the area less attractive for high performing employment-uses.
- Currently the station area is not very pedestrian friendly.

Opportunities

- With transit access and a growing creative industry sector in the greater West Los Angeles region, there is an opportunity to create a critical mass of premium office in the Sepulveda Station area.
- In addition to the opportunity sites, the City may want to consider intensifying the uses on all sides of the Pico and Sepulveda intersection with retail, office, and residential.
- In line with the City of Los Angeles' Industrial Land Use Policy, industrially-zoned land north of Tennessee Avenue and closer to the freeway (west of Pontius or Cotner Avenue) can be maintained, allowing industrial uses to be maintained and to transform organically.

Demand Analysis

This Sepulveda Station area is promising for a number of commercial and residential uses.

Sepulveda Station	2012-2025	2025-2035	Total
Office	280,000 to 630,000 SF	400,000 to 900,000 SF	680,000 to 1,500,000 SF
Industrial	50,000 to 110,000 SF	60,000 to 110,000 SF	110,000 to 220,000 SF

Palms Station

Approximately 78 percent of the Palms Station half-mile area is residential, with almost two-thirds multi-family and one-third single family. Along the Expo LRT Phase II network of stations, the Palms Station is expected to function primarily as a residential node.

The station will be located adjacent to the I-10 Freeway, which cuts the half-mile station area in half, creating two somewhat separate communities. To the north of the I-10 freeway is the Cheviot Hills neighborhood, a primarily single-family neighborhood. The area south of the I-10 freeway is the Palms neighborhood, a primarily multi-family neighborhood. The Palms neighborhood's apartment rents are fairly high relative to the Los Angeles County average, but are lower than other portions of the greater West Los Angeles area.

Source: ESRI, Bing, Pro Forma Advisors

Areas of interest within the Palms Station half-mile area include the Motor Avenue commercial area and downtown Culver City, just south of the Palms half-mile radius. The key opportunity area for redevelopment is the existing Vons shopping center site on National Boulevard immediately north of the I-10 Freeway. This site includes a 60,000 square foot neighborhood shopping center on an approximately 3.5 acre property.

Recent Projects and Planned and Proposed Projects

- The Regent Lofts is a multi-family building constructed in 2011 in the Palms Station area. Rents range from $2,150 to $3,200 for 1 bedroom units and 1 bedroom loft units.
- The Victor is a four-story luxury multifamily complex located on Venice Avenue built in 2006. Apartments rent for $2,200 to $3,000 for 1 to 2 bedroom units.
- A 7-story building is currently under construction on the corner of Palms Boulevard and Motor Avenue. The project includes 7,000 square feet of retail and 31 luxury apartments.
- 3425 Motor Avenue is a proposed 5-story mixed-use building, containing 115 apartment units (69 one bedrooms, 46 studio units) and 975 square feet of retail space.

Challenges and Opportunities

Challenges

- The I-10 Freeway bisects the community, creating a physical barrier within the market and generating air pollution concerns.
    - Given the location of the station along the freeway and the nature of the Palms station as a residential node, the freeway constrains the areas where residential intensification may be encouraged.
    - The freeway also creates barriers for retail located in the area.
- National/Exposition Boulevard needs infrastructure improvements to make the area more pedestrian friendly.
- The Palms Station area has an existing parking problem that residents are concerned will be exacerbated with the incoming station riders.

Opportunities

- Opportunity for dense residential developments to help support transit ridership.
- There is strong demand for retail within the Palms Station area. With the current population and anticipated household growth, demand for neighborhood-serving retail will grow.
- A parking structure in the Motor Avenue area could be an opportunity to help this area flourish as a retail destination.
- Opportunity to better connect the north and south portions of the half-mile station area and an opportunity to improve the infrastructure challenges through capturing of public benefits from new development.

Demand Analysis

The Palms Station area is primarily residential in nature and has a large area that is currently zoned as multi-family which lends itself well to additional residential development and neighborhood-serving retail uses.

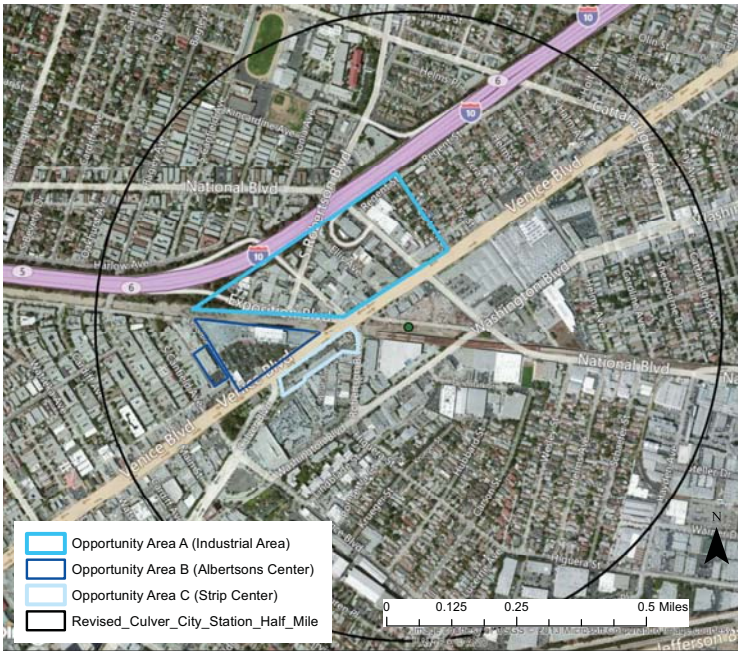
Palms Station	2012-2025	2025-2035	Total
Office	20,000 to 30,000 SF	30,000 to 40,000 SF	50,000 to 70,000 SF
Residential	670 Units to 1,000 Units (45 to 70 units annually)	600 to 900 Units (60 to 90 units annually)	1,300 to 2,000 Units
Retail*	60,000 SF to 90,000 SF	60,000 to 80,000 SF	120,000 to 170,000 SF
Additional Existing Retail Recapture	70,000 to 140,000 SF		70,000 to 140,000 SF

*New resident and employee supported.

Culver City Station

Approximately half of the Culver City Station area is located in the City of Los Angeles and the other half of the station area is located in Culver City.

Culver City retail, dining, and employment centers in close proximity to the station area include Downtown Culver City, the Hayden Tract creative office cluster, the Culver City Arts District and the Helms Bakery complex. In the Los Angeles portion of the station half-mile area there is a well-performing neighborhood retail center, anchored by an Albertson's, but the Los Angeles portion is otherwise limited in terms of employment or retail destinations. In addition to these key commercial elements, the station area also includes a number of single-family and multi-family residential neighborhoods.



Source: ESRI, Bing, City of Los Angeles, Pro Forma Advisors

The project team has identified the industrial parcels located north of Venice between Curts Avenue and Robertson Boulevard as a potential opportunity area for development. Additional redevelopment opportunities include the Albertson's Center at Venice Boulevard and Robertson and the strip center on the southwest corner of Venice Boulevard and Robertson Boulevard.

Existing Businesses

There are approximately 8,000 jobs in the Culver City Station half-mile area. 60 percent of this employment is located in Culver City.

When looking only at the businesses in the City of Los Angeles, Retail, Manufacturing, and then Educational Services are the largest employment industry categories. An estimated 450 employees work in Manufacturing in the Los Angeles portion of the half-mile area, including the AAA Banner sign manufacturer and the Culver City Meat Company. It is also worth noting that approximately 900 employees in the City of Los Angeles portion of the half-mile area are employed by industrial-using businesses, a third of the total employment.

Opportunity Area A includes 820 employees, the majority of which (580 employees) are employed by industrial-using businesses.

Planned and Proposed

- Lowe Enterprises has proposed a 500,000 square foot development on the northwest corner of National Boulevard and Washington Boulevard in Culver City, adjacent to the Culver City Station. The project is to include a mix of housing, office, retail, and restaurants.
- Located at the southeast corner of Washington Boulevard and National Boulevard in Culver City, Legado Crossing will include four floors of residential (115 units) above 31,000 square feet of ground floor retail.
- The Platform is a retail project located immediately south of the station, in Culver City, on the former auto dealership property. The project will include 40,000 square feet of retail across 5 buildings.

Challenges and Opportunities

Challenges

- Access to the Los Angeles portion of the half-mile area is hampered; crossing Venice at the corner of Exposition/Robertson and crossing Robertson along Venice are challenging for pedestrians.
- The Opportunity Area A is isolated from its surrounding communities by the I-10 Robertson Boulevard on ramps and off ramps, which does not make it attractive for more intense business uses.
- One of the key challenges of the redevelopment of the Opportunity Area A is the lack of parking within the area.
- In addition to the street and on/off ramp issues, the overall environment of the area north of Venice Avenue is challenging. Small sidewalks and lack of streetscape, as well as the shadow of the freeway, make the environment unpleasant.
- It should be noted that the Opportunity Area B, which includes the Albertsons Shopping Center and the public storage facility across the street, would be a good location for mixed-use residential development but the high performance of current land uses will inhibit redevelopment in the short to mid-term.

Opportunities

- The Culver City Station is located within walking distance to a number of Culver City destinations and there is the opportunity to extend and draw the energy in Culver City up to Venice Boulevard through new developments. With infrastructure improvements, there may be the potential to create employment and restaurant retail destinations north of Venice Boulevard. Also, the area amenities and proximity to major creative industry employers would make the station area an attractive location for creative office.
- With a reconfiguration of the I-10 Robertson on/off ramps, there is greater opportunity for a developer to aggregate parcels in a manner to be able to create sufficient onsite parking for a larger and more comprehensive development.

- Without the reconfiguration of the I-10 Roberson on/off ramps, there may be small scale redevelopment in Opportunity Area A in the long term, but redevelopment will still be dependent on the availability of public parking.
- There is strong demand for residential uses throughout the area, but residential uses are constrained by the presence of the I-10 freeway at Opportunity Site A.
- With the development of the planned Culver City developments and an improved Robertson and Venice Boulevard intersection, there may be interest for a mixed-use retail/office and residential development at Opportunity Site C.

Demand Analysis

There is strong demand for a variety of uses within the Culver City Station Area. Actual development is contingent on the availability of parcels and the financial feasibility of redevelopment.

Culver City Station	2012-2025	2025-2035	Total
Office	110,000 to 250,000 SF	160,000 to 360,000 SF	270,000 to 610,000 SF
Industrial	45,000 to 90,000 SF	45,000 to 90,000 SF	90,000 to 180,000 SF
Residential	400 Units to 600 Units (30 to 45 units annually)	400 to 500 Units (40 to 55 units annually)	800 to 1,200 Units
Retail *	70,000 to 100,000 SF	70,000 to 90,000 SF	140,000 to 190,000 SF
Additional Existing Retail Recapture	45,000 to 90,000 SF		45,000 to 90,000 SF

Introduction

The City of Los Angeles Department of City Planning (DCP) is undertaking a two-year project focused on station area planning around ten future light rail stations along the Exposition Light Rail Transit Line and Crenshaw/LAX Light Rail Transit Line. The project is in part supported through a grant from Metro. DCP and Metro recognizes the importance of supporting pedestrian-friendly, vibrant neighborhoods around transit stations and aim to support a number of transit-oriented district policy goals, including:

- Incentivizing an appropriate mix of uses, scale, and intensity at each station area;
- Fostering economic development and job creation;
- Encouraging transit ridership and expanding mobility options;
- Improving urban design, walkability, and the quality of the built form; and
- Providing and/or maintaining housing for a wide range of income levels.

DCP has engaged the project consulting team, led by Terry A. Hayes Associates (TAHA), to provide environmental, transportation, economic, and other technical planning support in this endeavor. Pro Forma Advisors, a land use economics consulting firm, has been retained, as part of the project consultant team, to provide market and pro forma analyses support. Pro Forma Advisors' tasks include a baseline demographic and real estate market overview, station-specific market analyses, pro forma analysis, and recommendation of public benefits.

Organization of the Report

The Market Analysis evaluates the demographic context and real estate performance in both the Exposition Light Rail Transit and Crenshaw/LAX Light Rail Transit market areas and further evaluates the market support for new land uses in the Exposition Light Rail Transit area. The report consists of five key sections:

1. The Demographic and Socio-Economic Context reviews the current and projected resident and employee markets that will utilize proposed station area developments.
2. The Real Estate Market Overview reviews regional real estate trends.
3. The Industry Analysis reviews major industries in Los Angeles, focusing on media and creative industry employment growth and creative office real estate in the Exposition Light Rail Transit market area.
4. The Regional Demand Analysis provides the methodology for estimating demand and evaluates demand for office, industrial, retail, hotel, and multi-family residential land uses for the Exposition Light Rail Transit region.
5. The Station Specific Market Analyses focuses on the economic nature of each of the Exposition Light Rail Transit station areas and the appropriate future mix of uses. The station-specific market studies include an analysis of existing businesses within station areas, an assessment of key opportunities and challenges, and high-level demand and absorption estimates for the study station areas.

Project

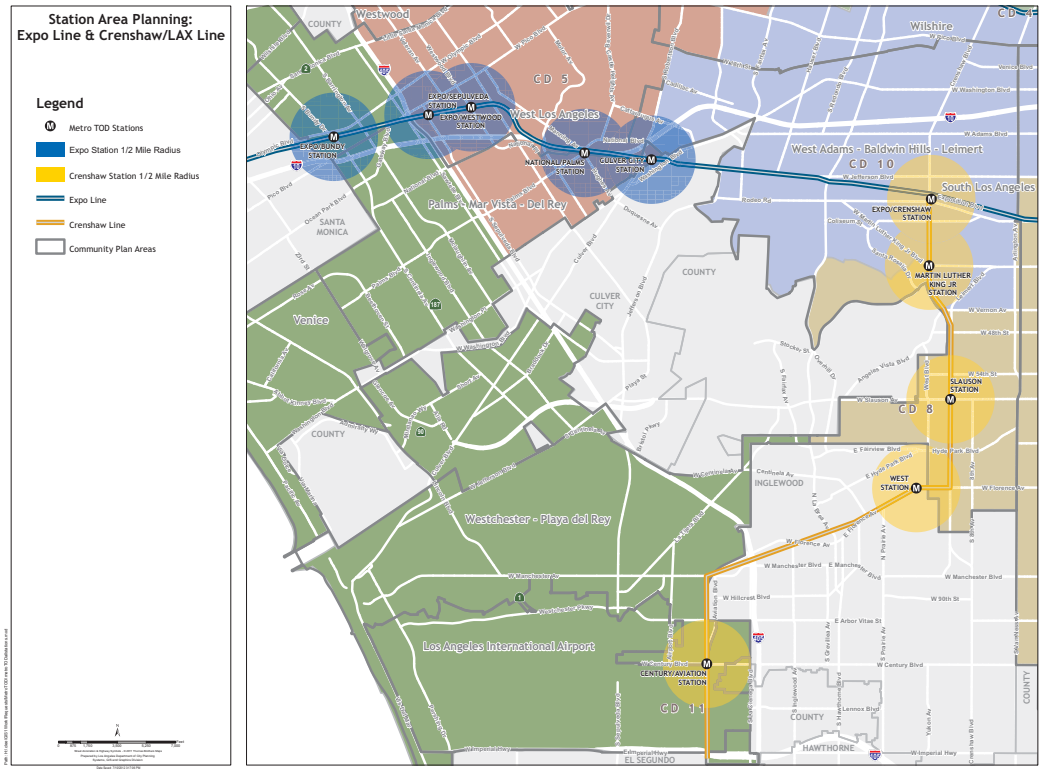
Figure 1 displays the future Crenshaw/LAX Light Rail Transit Line (Crenshaw LRT) and Exposition Light Rail Transit Line (Expo LRT) Phase II City of Los Angeles station areas.

The market analysis focuses on five study station areas:

1. Culver City Station – Exposition and Venice Boulevard (Expo LRT)
2. Palms Station – National Avenue and Palms Boulevard (Expo LRT)
3. Sepulveda Station – Exposition Boulevard and Sepulveda Boulevard (Expo LRT)
4. Bundy Station – Bundy and Exposition Boulevard (Expo LRT)
5. West Station- West Boulevard and Florence Avenue (Crenshaw LRT)

The Station Area is generally considered a half-mile radius of the light rail station, a 10-minute walking distance.

Figure 1: Expo LRT Line and Crenshaw LRT Line Station Area Planning Map



Source: City of Los Angeles Department of City Planning

Regional Demographic and Socio-Economic Context

The following section contains background information relating to the characteristics of the regional market areas for the Expo LRT and Crenshaw LRT station areas, including historical, current and projected demographic and socio-economic trends in the market. DCP has put together detailed demographic and socio-economic information for each of the station areas in a previous report. The information in this report, derived from various secondary sources, is intended to provide a larger regional context for assessing the station area markets.

Analysis Geographies

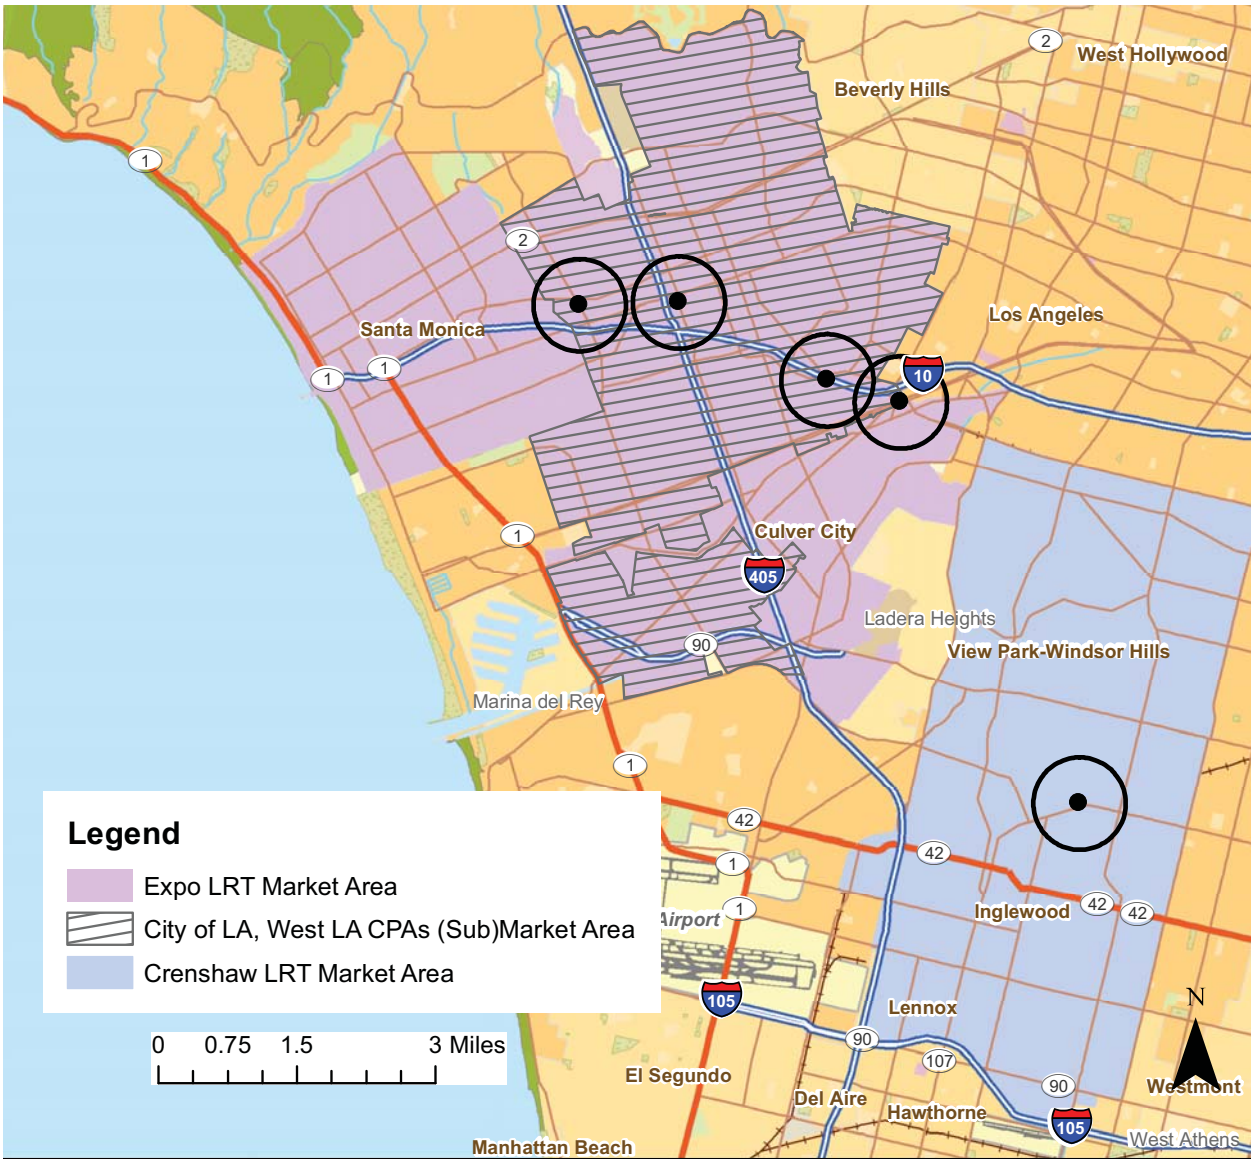
The relevant market area in which each station area will compete varies according to the specific land use. For the Expo LRT study stations, employment-based office, industrial, and other commercial uses will compete within the Expo LRT Market Area. Figure 2, on the next page, shows the areas defined as the Expo LRT Market Area for the purposes of this study. The Expo LRT Market Area includes the City of Los Angeles community plan areas (CPAs) of Westwood, West Los Angeles, Palms-Mar Vista-Del Rey, as well as the cities of Culver City and Santa Monica. Other uses, such as community and neighborhood retail, may compete within a localized area of each station. Demographics are presented selectively for the Expo LRT Market Area as well as for the portion of the market within the City of Los Angeles, the West LA CPAs. The West LA CPAs is an agglomeration of the Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey community plan areas.

For the Crenshaw LRT study station, industrial and other employment-based uses will compete in the South Los Angeles/Inglewood region. Retail uses will likely compete within a localized area of the station. Demographics are presented for the Crenshaw LRT Market Area, which includes the areas south of Jefferson Boulevard, east of La Cienega, west of Arlington Avenue, and north of the 105 Freeway.

Station Areas

The project will evaluate the land use plans within a half-mile radius of five study Expo LRT and Crenshaw LRT stations. For demographic and socio-economic context, census tracts were used to approximate a half-mile station area. The census tract approximations, presented in the Appendix, extend beyond the half-mile radius. Census tract approximation data is utilized rather than the half-mile demographics to provide greater context for the true resident characteristics of the station areas.

Figure 2: Expo LRT and Crenshaw LRT Market Area Map



Source: ESRI, Pro Forma Advisors

Population and Households

Population and household data provides useful information about the current nature of the markets and station areas. In addition, population and household growth is a major market driver of residential and retail developments and plays an important role in the location of local office and industrial commercial uses, such as health care professionals and contractors. The following section provides historical, current, and projected population and household data.

Historic Regional Population and Households

Historic demographic trends provide a good benchmark for future population trends. Figure 3 presents annual regional population growth between 2000 and 2012.

- The City of Los Angeles currently has a population of 3.83 million and makes up almost 40 percent of Los Angeles County. The westside cities of Culver City and Santa Monica make up a total of 1.3 percent of Los Angeles County. The City of Inglewood makes up 1.1 percent of Los Angeles County.
- Both the City and County had notable contractions in population, somewhat preempting the recession, beginning in 2005. Population growth began to rebound in 2007, coming fully in line with 2004 figures in 2010. Despite the recession, the City of LA added an average of 10,400 residents annually between 2000 and 2012.
- Santa Monica and Culver City had slightly higher population growth rates than the City of Los Angeles across the last 12 years. However, as small cities, this equates to a total addition of 6,000 new residents, or approximately 500 new residents a year between Santa Monica and Culver City.

Figure 3: Regional Historical Population

Population	2000	2002	2004	2006	2008	2010	2012	CAGR '00-'12
Los Angeles	3,701,062	3,762,432	3,792,650	3,767,960	3,763,566	3,792,621	3,825,297	0.28%
Culver City	38,856	39,309	39,434	38,980	38,743	38,883	39,004	0.03%

Market Area Historic Population and Households

Figure 4 shows the Expo LRT and the Crenshaw LRT Market Areas' population and households relative to the City of Los Angeles population.

Expo LRT Market Area

- The Expo LRT Market Area, which includes the West LA Community Plan Areas (CPAs) and the cities of Santa Monica and Culver City, has a total population of 370,000 in 170,000 households. The population of the Expo LRT Market Area is approximately 10 percent of the City of Los Angeles' population.
    - Approximately 240,000 of the market area's population, 65 percent, are located within the City of Los Angeles.
    - The Expo LRT market area has 2.2 persons per household, approximately 25 percent lower than the City of Los Angeles' 2.9 persons per household average.
- Demonstrating the interest in the westside, annual population growth rates were approximately 50 percent higher in the Expo LRT Market Area relative to the City of Los Angeles across the last decade.
- 13,000 residents in 5,000 households were added across the Expo LRT Market Area between 2000 and 2010.

Crenshaw LRT Market Area

- The Crenshaw LRT Market Area includes 230,000 residents in approximately 80,000 households. The area, which includes the West Adams-Baldwin Hills-Leimert Park CPA, parts of unincorporated County of Los Angeles, and the City of Inglewood, has a population equivalent to approximately 6 percent of the City of Los Angeles population.
    - Household sizes are in line with the City of Los Angeles.
- The Crenshaw LRT Market Area had a slight decrease in population between 2000 and 2010, losing 1,900 residents.

Figure 4: Market Population and Households

	Expo LRT		Crenshaw LRT	City of LA	City of LA Comparison	
	Market Area	West LA CPA Subset	Market Area		Expo LRT Mkt as % of LA	Crenshaw LRT Mkt as % of LA

Station Areas

Population and households were reviewed within a half-mile radius of the station area, but, as mentioned earlier, the study focuses primarily on a larger station area approximated by census tracts because they provide a better context for the station land uses.

Population and household data for census tract approximations of each station area are presented in Figure 6. For comparative purposes, Figure 5 also represents the population and household data immediately within a half-mile radius of the station area.

Half-Mile Radius Population and Households

- With large single-family and multi-family neighborhoods surrounding the station, the Palms Station has by far the greatest population and number of households immediately within a half-mile of the station. There are 18,000 residents and 8,500 households within a half-mile of the Palms Station.
- With 9,800 and 9,400 residents, the Culver City Station and the West Station, respectively, have the next highest population and number of households within a half-mile radius of the station.
- The Sepulveda and Bundy Stations have limited populations directly within the half-mile area.

Figure 5: Population and Households within 1/2 Mile of the Stations

	Expo LRT				Crenshaw LRT
	Culver City	National/ Palms	Expo/ Sepulveda	Expo/ Bundy	West
2010 Population	9,797	17,458	5,644	4,576	9,431
2010 Households	4,131	8,531	2,509	1,954	2,853

Source: US Census, ESRI, Pro Forma Advisors

Station Area Population and Households

While some of the station areas have limited populations within the immediate ½ mile area, the populations in the census tract approximations of the station areas are more proportionate.

- The Palms Station Area has a population of 32,500 and 15,800 households. The Palms Station Area contains a large multi-family neighborhood zoned primarily R-3 and R-4 residential (medium and high density) south of the freeway and a large single-family neighborhood north of the freeway.
    - With 2.0 persons per household, the Palms Station Area has the smallest household size of all the station areas.

- The Sepulveda Station Area, which includes primarily single-family neighborhoods within the half-mile area, but also several multi-family neighborhoods beyond the half-mile area, has the next greatest population and number of households. The Sepulveda Station Area has a population of 31,300 and 14,400 households.
- Both the Bundy and Culver City Station Areas have 20,000-25,000 residents. The Bundy Station Area has approximately 40 percent commercial uses and 40 percent residential uses. The Culver City Station Area also has a large share of commercial uses.
    - With 2.4 persons per household, the Culver City Station Area has the largest household size of the Expo LRT study stations.
- The West Station has a population of 20,176 and 6,900 households. This station has the lowest population and household count and the largest household size of all the station areas.

Projected Population and Household Growth

Market Area Projected Population and Household Growth

SCAG population and household projections (2012) were analyzed to understand the anticipated growth of population and households in the region. **The County of Los Angeles is expected to add 1.5 million new residents and 400,000 new households between 2010 and 2035.** The City of Los Angeles is expected to absorb approximately a third of that growth.

- **The Expo LRT Market Area is expected to add 29,000 new households (38,600 new residents) across a 25-year period**, an average of 1,100 new households annually. Approximately 83 percent of these new households will be located in the City of Los Angeles.
- **The Crenshaw LRT Market Area is expected to add 13,000 new households (27,000 new residents) across a 25-year period,** an average of 500 new households annually.

Figure 7: Market Area Projected Population and Household Growth

Projected Population and Household Growth in the Station Areas

SCAG population and household estimates were used to analyze expected population and household growth in station areas[5]. It should be noted that SCAG projections are established using the input of SCAG cities who consider current planned and proposed developments and build out capacity according to current planning documents in the evaluation of projected growth.

The projected growth by station area gives a benchmark understanding for proposed growth under the planning status quo. Transit access has been proven as a means to increase the density and development around station areas. With the development of the light rail lines, household and employment growth in the station areas may intensify.

- The Sepulveda Station Area has the greatest expected growth based on current plans. The station area is expected to add 3,300 new households and 4,500 new residents between 2010 and 2035, a little over 130 new households a year.
- The Palms Station, surrounded by large single family and multi-family neighborhoods, has the second greatest expected growth. Between 2010 and 2035, the Palms Station Area is expected to add 3,100 new households and 4,200 new residents, approximately 125 new households a year.
- The Bundy Station and the Culver City Stations have the greatest share of commercial uses of the study Expo LRT stations and the lowest anticipated resident growth. The Bundy Station Area is expected to add 2,600 new households and 3,300 new residents between 2010 and 2035. The Culver City Station Area is expected to add 2,000 new households and 2,500 new residents. Each station's household growth still equates to between 80 and 110 new households a year.
- The West Station Area is projected to add 3,100 new residents in 1,200 households between 2010 and 2035. With larger household sizes, more in line with the City of Los Angeles average, this equates to only 47 new households a year.

[5] Tier 2 transportation analysis zone (TAZ) shapes were used to approximate a half-mile area surrounding the stations. Boundaries are not exact.

Figure 8: Station Area Projected Population and Households

Household Income

Regional Household Incomes

The City of Los Angeles' median household income is $48,000 and average household income is $71,000. Figure 9 presents 2010 household income information for the areas surrounding the Expo LRT and the Crenshaw LRT area.

- The Expo LRT Market Area has a median income of $62,000 and an average income of $90,000 per household. Both the median and average income are approximately 30 percent higher than the City of Los Angeles' median income.
    - The Expo LRT Market Area has a similar proportion of middle-income households making between $35,000 to $100,000, relative to the City of Los Angeles (approximately 46 percent of the population) but in the Expo LRT Market Area 27 percent of households made above $100,000 annually, relative to only 18 percent throughout the City.
- The Crenshaw LRT Market Area has median household income of $43,000 and an average household income of $56,000. The median income is approximately 90 percent of the City of Los Angeles' while the average income is 80 percent of the City of Los Angeles' income, almost $14,000 lower.
    - Approximately 47 percent of households in the Crenshaw LRT Market Area are middle income households making between $35,000 to $100,000 annually, slightly higher than the City of Los Angeles total households, but, in the Crenshaw LRT Market Area, a greater share make less than $35,000 relative to the City of Los Angeles, bringing down the area's median and average incomes.

Station Areas' Household Incomes

Figure 10 represents household income data for the station areas.

- The Expo LRT station areas have median household incomes 20 to 40 percent higher than the City of Los Angeles' median household income.
    - Within the immediate half-mile of the Expo LRT station areas, existing household incomes are lower relative to the Expo LRT Market Area, but when comparing the larger station areas, household incomes are more inline with the Expo LRT Market Area's.
    - With a median income of $66,000, the Palms Station Area, which includes census tracts encompassing Cheviot Hills, has the highest median income of the five study station areas.
    - The Sepulveda Station Area, which includes single family and multi-family neighborhoods of Westwood, has the next highest median income at $61,000, followed by the Culver City Station Area, which has a household median income of $58,000, and the Bundy Station Area, which has a household median income of $55,000.
- The West Station Area has a median income of $34,000. The station area's median income is lower than the median income for the Crenshaw LRT Market Area's median income and is approximately 30 percent lower than the City of Los Angeles' median income.
    - More than 50 percent of households within the station area make below $35,000, relative to only 30 percent within the greater Crenshaw LRT Market Area.

Age

Age distribution provides useful information on the make up of the population. Areas with more population between the ages of 18 and 34, such as the Expo LRT area, may be more interested in rental multi-family residential, while a greater share of children may represent more interest in larger residential units.

Market Area Age Profile

The City of Los Angeles has a median age of 32.4. 26 percent of the population is under 18 years of age and approximately 10 percent of the population is over the age of 65. Approximately 64 percent of the population is 18 to 65 years old.

- In the Expo LRT Market Area the average age is 36.9, 14 percent higher than the City of Los Angeles' average age.
    - With more single urban professionals, the Expo LRT Market Area has almost half the share of population under the age of 18 relative to the City of Los Angeles. Only 12.7 percent of the population is under the age of 15, relative to 21.6 percent in the City of Los Angeles.
    - Focusing in on the West LA CPA subset there is a substantially larger share of residents aged 15 to 34, likely due to the proximity to UCLA. Those aged 15 to 34 make up almost 40 percent of the population.
- The Crenshaw LRT Market Area has a median age of 31.6, slightly younger than the City of Los Angeles' median age. The area has a higher share of population under the age of 25 relative to the City of Los Angeles, but the distribution of population ages is otherwise similar.

Figure 11: Market Age

Age (2010)	Expo LRT Market Area	Expo LRT West LA CPA Subset	Crenshaw LRT Market Area	City of LA

Station Area Age Profile

- The Expo LRT stations areas have older populations than the City of Los Angeles, but a slightly younger population, on average, relative to the Expo LRT Market Area.
    - The Expo LRT station areas have approximately 30 percent less population under the age of 15, relative to the City of Los Angeles, and have a greater share of population between 15 and 64 years of age. The Sepulveda Station Area has the greatest median age of all of the Expo LRT stations at 35.7.
- The West Station's median age, 33.0, and age distribution is inline with the City of Los Angeles' age distribution.

Los Angeles County Employment

Figure 13 presents California Employment Development Department Los Angeles County historical civilian employment and unemployment rates (not seasonally adjusted).

- Similar to trends across the country, the Los Angeles County unemployment rate increased in the beginning of the last decade due to the dot.com bust. Unemployment moved up from a low 5.4 percent in 2000 to 7.0 percent in 2003.
- With a substantial boom in residential construction and record consumer spending levels due to the easy availability of home equity loans, the Southern California, as well as the nation's, economy was expanding. In Los Angeles County unemployment fell from 7 percent in 2003 to 4.8 percent in 2006.
- The recession, which officially began in December of 2007, was triggered by a slowdown in housing sales and prices through 2006 and 2007 and the subsequent financial crisis. Between 2006 and 2009, unemployment moved from 4.8 percent to 11.6 percent.
- While US economic activity has improved and the recession officially ended in June of 2009, economic improvements are only translating into employment gains this year in Southern California. Between 2008 and 2010, Los Angeles County lost 330,000 jobs and the unemployment rate continued to rise. In October 2012, employment was 4,339,200; only 50,000 jobs have been regained.

Real Estate Overview

Businesses' real estate decisions are often based on a number of factors, including location, cost, and space characteristics. Typically users will consider a number of spaces within a competitive market area. To estimate the potential for future development within the Expo LRT and Crenshaw LRT station areas, it is important to understand both the regional real estate trends as well as the real estate that currently exists within the station area.

The Real Estate Overview section reviews the current and historical market performance of the Los Angeles office, industrial, retail, and residential markets and the relevant Expo LRT and Crenshaw LRT station area submarkets.

CoStar data is used to evaluate the performance of office, industrial and retail real estate. CoStar maintains one of the largest and most comprehensive databases of commercial properties. It should be noted that CoStar's data corresponds to buildings and properties rather than zoning or business user data. While CoStar's data is more comprehensive than other real estate sources it is based on surveys and may be less reliable for smaller geographies, such as the station half mile area. In addition, data is often limited in areas where there are fewer real estate transactions (sales or leases). This is, likely, not a considerable issue for the Expo LRT market area where there is an active real estate market, but should be considered when evaluating the West Station[6].

Beyond the amount of existing leasable space, key metrics explored in this analysis include vacancy and absorption. The vacancy rate is an estimate of the share of rentable space that is vacant. Vacancy rates differ across markets and across land uses, but 10 percent and above is often used as a broad benchmark for a high vacancy rate. Generally a higher vacancy rate means that less space is occupied and there is less demand for this type of space. However, it should be noted that all performance metrics should be considered together. A higher vacancy rate can be the result of a large new project added to the market that takes a few months to be absorbed.

Absorption is a measure of how much space is being leased in the market. Total net absorption accounts for businesses vacating existing space and businesses that are occupying new space. When net absorption is positive more businesses are occupying additional space then giving up space. Negative net absorption means more businesses are vacating space than leasing space. Negative net absorption generally means less demand for the space. However, there are cases when negative absorption may not be an indication of less demand such as in the case that businesses are forced to vacate a space for renovation or if the building is being sold for another land use.

Office

The following section analyzes general office market property trends. The section begins with a brief review of the greater Los Angeles County office market then focuses on the office property trends within three key Expo LRT submarkets: West LA CPAs (West Los Angeles), Culver City, Santa Monica, and the Crenshaw LRT area.

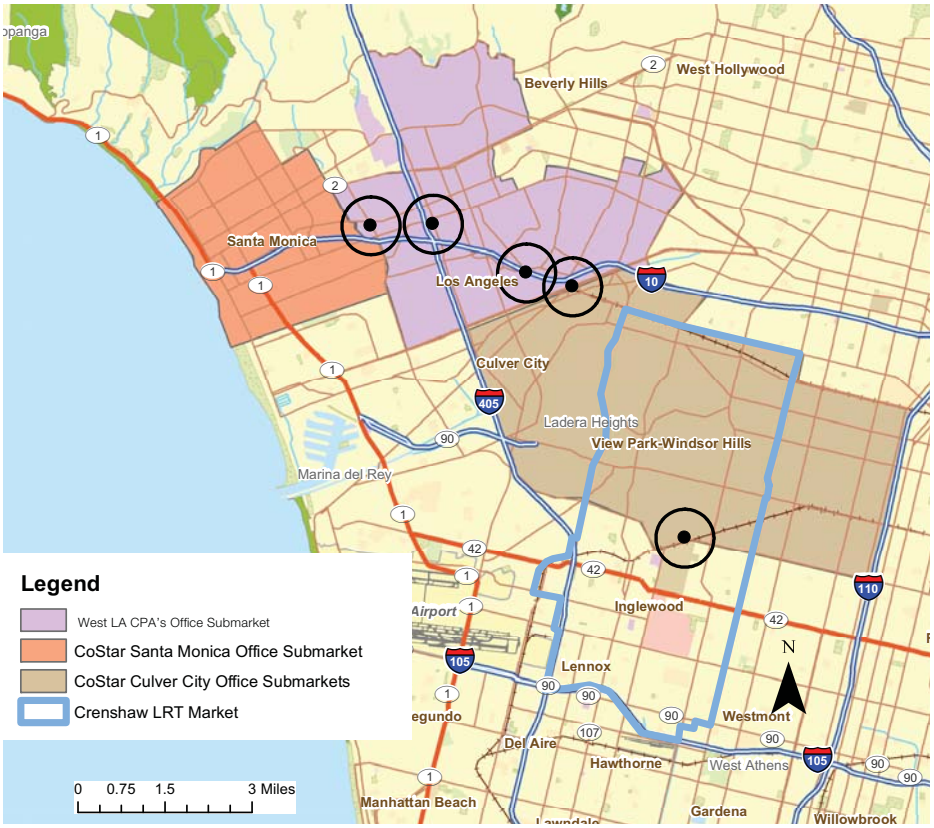
---

[6] CoStar may be underreporting certain categories of real estate, such as the office and industrial properties, in the West Station Area.

Office Geographies

Submarkets are defined to represent an area that is competitive for office product, i.e. businesses are likely to equally consider locating in the market. The West LA CPAs office submarket is made up of geographies defined by CoStar[7]. The Culver City and Santa Monica submarkets are geographies defined by Costar. The Crenshaw LRT area is an area defined for this project analysis[8]. The Crenshaw LRT area and the Culver City area overlap.

Figure 14: Office Submarket Areas



Source: CoStar and Pro Forma Advisors

[7] The West LA CPAs submarket used for the office analysis is an agglomeration of the CoStar defined Westwood, West Los Angeles, and Olympic Corridor submarkets. It should be noted that it does not cover all of the Palms-Mar Vista-Del Rey CPA.

[8] The PFA-defined Crenshaw LRT Office Submarket is bounded by Jefferson Avenue to the North, La Cienega Boulevard to the West, Arlington Avenue to the East, and the 105 Freeway to the south.

Los Angeles Office Market

The Los Angeles office market includes approximately 17,400 buildings, comprising over 420 million square feet of rentable building area (RBA). Overbuilt in the 1980's, the Los Angeles office market has had only fair fundamentals relative to other land use types. The Los Angeles office market tightened as a result of the booming economy in the first half of the last decade and, subsequently, was severely impacted as the housing bust and financial crisis initiated the recession that began in 2007. Unemployment jumped from 5.1 percent to 11.6 percent from 2007 to 2009 in Los Angeles County and companies looked to cut costs on all levels, including offloading high-cost office space. While the recession officially ended in the fourth quarter of 2009, unemployment remains high and office metrics are improving, but remain weak.

- In most markets an average office vacancy rate is approximately 7 to 10 percent. Los Angeles market vacancy rates were fairly high at the start of the last decade, averaging approximately 11 percent between 2000 and 2004. When the economy was in high gear from the housing boom, office vacancy lowered to the 7 to 8 percent range. With the housing bust and financial crisis, vacancy rates moved upward again and are currently at a 15-year high of 12.6 percent.

- Net absorption has also decreased significantly. Between 2000 and 2004, 14.5 million square feet of space was absorbed in the market. Between 2005 and 2012, net absorption has been a negative 4.3 million square feet.

- Both the number of buildings and the total rentable building area have increased by less than half a percent a year, while the average rental rate has tracked inflation, increasing at just over 2 percent a year for the last 15 years. The average annual rental rate for office product in Los Angeles, across all types and classes, is $27.00 to $28.00 a square foot per year.

- As to be expected with the contraction in the office market, construction of office product has come down significantly from the 5 to 6 million square feet under construction during 2007 and 2008 to closer to 2 million square feet, annually, for the past three years.

Figure 15: Los Angeles Office Trends

Period	# Bldgs	Total RBA	Total Vacant %	Total Net Absorption	RBA Delivered	RBA Under Const	Total Average Rate

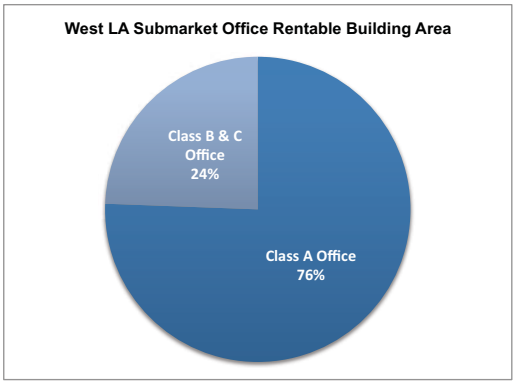
West LA CPAs Office Submarket

The West LA CPAs Office submarket includes West LA, Westwood, and Palms as well as parts of the Mid-City Wilshire communities. As shown in the map below, office product in the West LA CPAs submarket is concentrated in Century City, West Los Angeles near Bundy and Olympic, Westwood along Wilshire, as well as along major corridors, such as Olympic Boulevard, Venice Boulevard, Robertson Boulevard and La Brea Avenue.

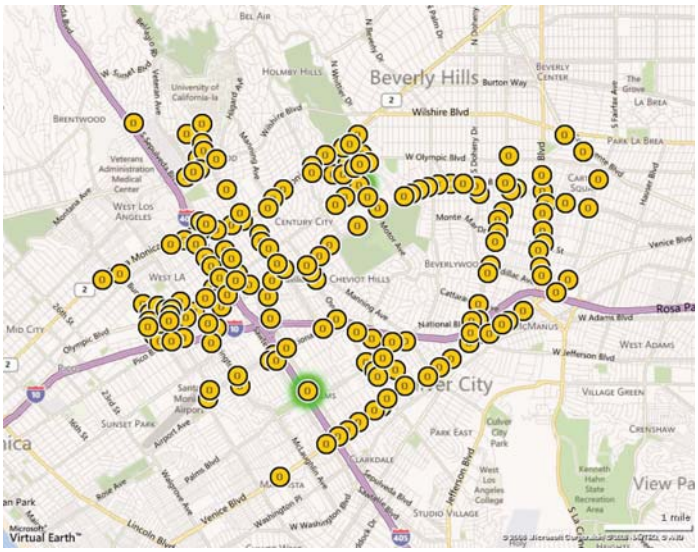


There is a total of 26.5 million square feet of office space within the West LA CPAs submarket, approximately 6 percent of the total Los Angeles market. The submarket is primarily a Class A market. Class A space is typically mid to high rise buildings occupied by mid to large companies, such as buildings found along Avenue of the Stars in Century City.

- There is 20.1 million square feet of Class A product in the West LA CPAs submarket, approximately 10 percent of total Los Angeles Class A product.

- Both vacancy rates and average rents for Class A product have been higher than that of Class B and C product. Class A vacancy rates averaged 14.1 percent between 2000 and 2004. Vacancies fell to their lowest point in 2006, at 7.5 percent, but climbed back up during the recession. Current Class A vacancy is 13.9 percent.

Figure 16: Map of West LA CPAs Office



Source: CoStar, Pro Forma Advisors

- Class A office had strong absorption between 2000 and 2005, with positive net absorption of almost 600,000 square feet. However, with tenant losses during the recession, net absorption was a negative 120,000 square feet.
- The rental rate premium for Class A over Class B and C product has historically ranged between 30 to 40 percent. In recent years this premium has increased to nearly 50 percent which reflects higher demand for Class A over Class B product. The area has a current average lease rate of $42.00 per square foot.
- There are 2.9 million square feet of Class B and C office product in West LA CPAs. Class B and C buildings are much smaller than Class A buildings. The larger, institutional Class A buildings have an average RBA of 270,000 square feet while, Class B and C buildings have an average rentable building area of 12,000 square feet.
- Class B and C product have an average lease rate of $29.00.
- Much more affordable than Class A space, Class B and C spaces have an overall lower vacancy rate than Class A space. Vacancy rates averaged 8.4 percent between 2000 and 2004. As the economy heated up, vacancies fell to their lower point of 3.6 percent in 2007. Vacancy rates increased with the recession, but still remained below 10 percent. The current Class B and C property vacancy rate is 7.7 percent.
- Almost 200,000 square feet of new Class B and C office buildings have been added to the market since 2006.

Culver City Office Submarket

The Culver City submarket, defined by CoStar, extends from Culver City east to the 110 Freeway. Major clusters of office product are located in the Hayden Avenue area, in the Fox Hills area, along Crenshaw Boulevard between Vernon Avenue and 54th Street, Florence Boulevard and the La Brea area as well as along the length of major corridors, such as Venice Boulevard and Jefferson Boulevard.

There is a total of 8.1 million square feet of office space within the Culver City submarket. While there is almost 3 million square feet of Class A office space, it makes up only 36 percent of the market.

- The average rental premium for Class A product above Class B and C product was approximately 16 percent since 2006, but it has narrowed in recent years and currently the premium is almost negligible. Class A office rental rates had grown during the last decade, but in the last two years has fallen below the 2000 reported lease rate level. Rental rates for Class B AND C space, on the other hand, have increased almost 30 percent since 2000.

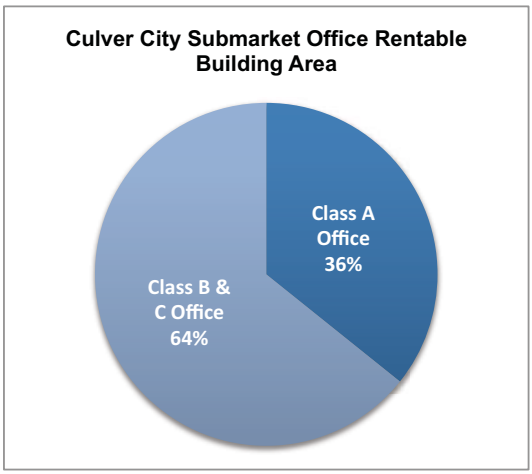

Figure 18: Culver City Office Map

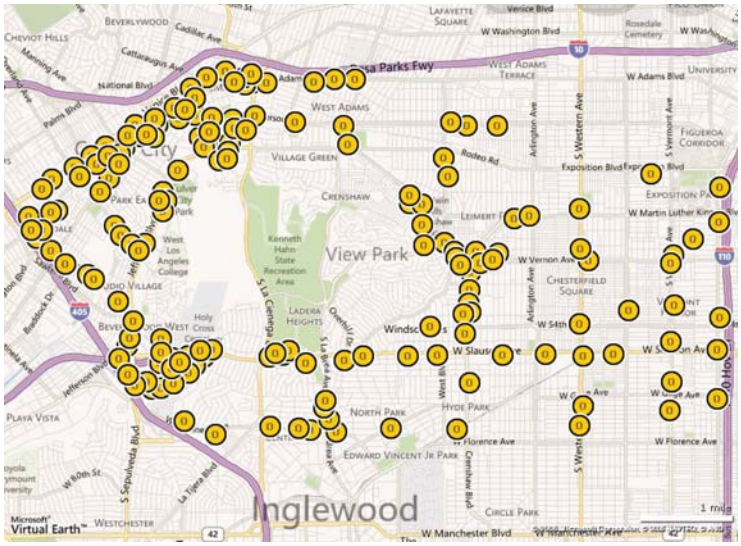

Source: CoStar, Pro Forma Advisors

- This increase in Class B and C office rental rates may be due to the redevelopment and addition of creative office space in the market. Creative office space is typically located in Class B and C buildings.

- There were three Class A buildings, containing 730,000 square feet of space, added to the market since 2000. These deliveries created spikes in the vacancy rate. The last two buildings delivered in 2007 have yet to be fully absorbed. With additional vacancies due to the economy, vacancies moved up to 18 percent in 2009. Current Class A vacancy rate is a high 15 percent. This high vacancy rate reflects lower demand for Class A product type in the area.

- A smaller amount of new Class B and C office product has been delivered to the market since 2000. Net absorption has not fared well in this market; between 2000 and 2005 net absorption was only a positive 60,000 square feet. Since 2005, net absorption has been a negative 300,000 square feet.

- Vacancy rates for Class B and C product moved from lows of 6 and 7 percent during the years immediately following the financial crisis, to rates north of 11 percent in the last two years.

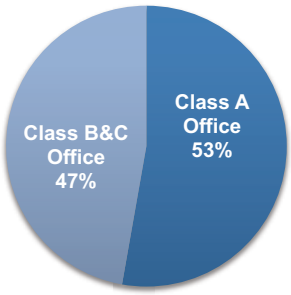
Santa Monica Office Submarket

Office product in Santa Monica is almost uniformly distributed north of the I-10 Freeway within the Santa Monica, with the exception of a cluster of office buildings proximate to the Santa Monica Airport.

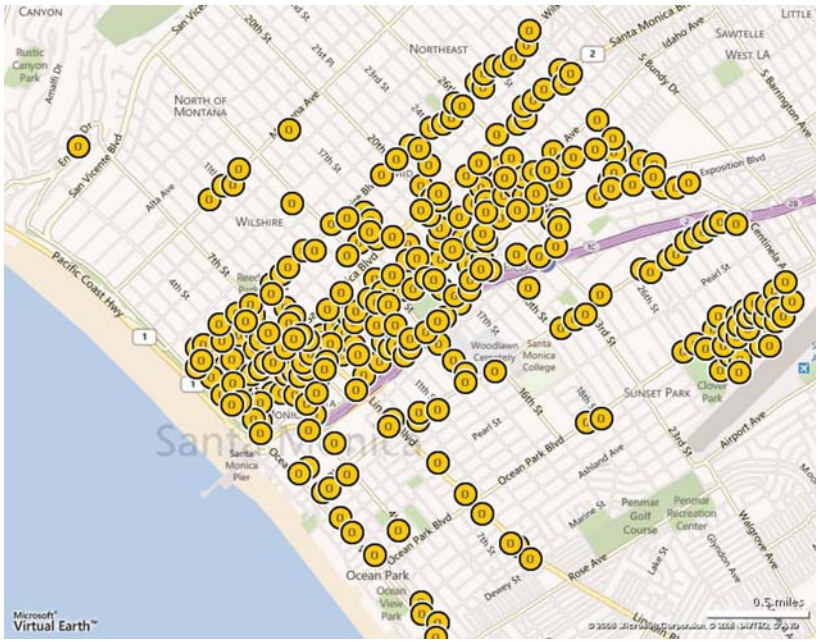
There is a total of 15 million square feet of office space within the Santa Monica Submarket, approximately 4 percent of the City of Los Angeles office space. There is approximately 8.0 million square feet of Class A office space and 7.1 million square feet of Class B AND C office.

Santa Monica Submarket Rentable Building Area by Class



- The Santa Monica office market includes a substantial amount of technology, as well as media entertainment companies. Both Class A and Class B AND C office vacancy rates peaked during the dot.com bust in the beginning of the last decade. Vacancies fell dramatically during the height of the market in 2005 and grew to a second peak between 2009. Class A product has a current vacancy rate of 11.4 percent. Class B AND C office product have low current vacancy rate of 5.9 percent.

Figure 20: Santa Monica Office Map



Source: CoStar, Pro Forma Advisors

- Both vacancy rates and rental rates are higher for Class A product in Santa Monica, compared to Class B and C product. Aside from a convergence during the boom years of 2005 to 2007, vacancy rates for Class A product have nearly always been double that for Class B and C product in Santa Monica.
- Class A office space has an average lease rate of $47.00 per square foot. Class A rent premiums are nearly 20 percent above Class B AND C product, and have ranged between 10 and 30 percent during the last 15 years.
- Class B AND C office space has an average lease rate of $39.00 per square foot.
- Across the last decade, 1.4 million square feet of Class A office space has been constructed and delivered and the submarket has had net absorption of approximately 920,000 square feet. This strong absorption figure reflects expansion and high demand in the Santa Monica office submarket.
- 580,000 square feet of Class B AND C office space has been added to the market since 2000. Net absorption was 330,000 during that same period.

As reflected by the relatively lower vacancy rates and strong absorption, Santa Monica has a strong Class A and Class B AND C office market.

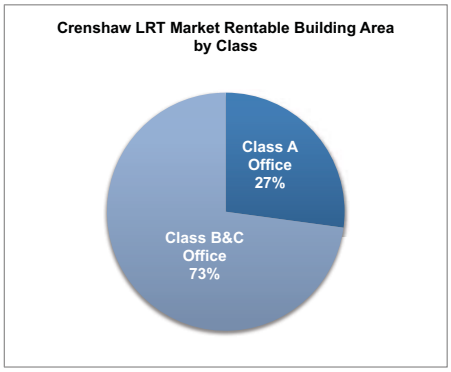
Crenshaw LRT Office Submarket

The Crenshaw LRT office submarket includes major clusters of office product on La Brea Avenue and Manchester Avenue in the City of Inglewood and, in the City of Los Angeles, on Crenshaw Avenue between Martin Luther King Boulevard and Vernon Avenue, the Leimert Park area.

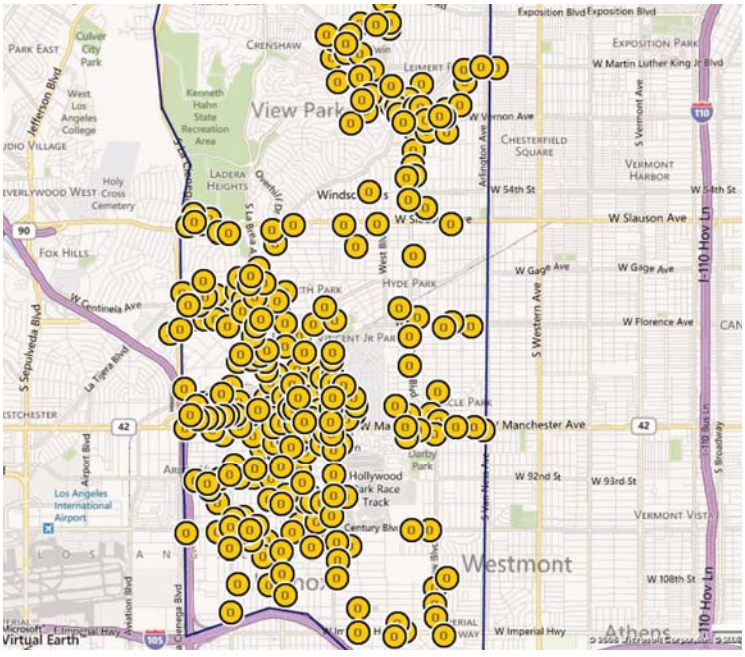
The submarket includes a total of 3.4 million square feet of office. Not a major employment-based office market, the area includes less than a million square feet of Class A space and 2.5 million square feet of Class B and C space.



- The performance of Class A office is lagging. A 200,000 square foot building was delivered to the market in 2001, but across the decade only 60,000 square feet of additional space was leased. In result, the area has an extremely high Class A vacancy rate of 28 percent and a lease rate below Class B and C product.

Figure 22: Crenshaw LRT Office Submarket Map

- Class B and C space has also had a challenging decade. Between 2007 and 3Q2012, businesses had vacated more than 250,000 square feet of space. However, overall the office market is in a better state than Class A space and has a vacancy rate below the Los Angeles average, at 11 percent.



These metrics suggest that there is sufficient Class A space available in the market to meet any new demand, but that there may be limited demand for Class B and C office space in the future.

Station Area Overview

Figure 24 presents a summary of office properties within a half-mile of each of the study station areas. The Culver City, Sepulveda, and Bundy Stations are the three study Expo LRT stations located in general commercial zones. The Palms Station Area is primarily residential and this is reflected in the low amount of office space within a half-mile of the station. The West Station Area is located within a commercial zone that is ringed by residential uses. However, as reflected below, little of the existing commercial is being used as office space.

- The Bundy Station Area has the strongest performing, and greatest amount of, office product within a half mile. There is currently 2.3 million square feet of rentable building area (RBA) around the Bundy Station with an average annual lease rate of $35.00 per square foot and a lower than market average vacancy of 6.7 percent.

- With 870,000 square feet of RBA, the Culver City Station Area has the second highest amount of office space. The Culver City spaces are much smaller, on average, than Bundy and Sepulveda Station office space. Culver City properties average 11,400 square feet of RBA, relative to 28,000 square feet for Sepulveda office space and almost 40,000 square feet for Bundy office properties. Culver City office properties have an average rental rate of $29.00.

- The Sepulveda Station Area has 776,000 square feet of office space within a half mile. This area has the highest vacancy rate of 11.3 percent.

- Only 4 office properties, consisting of almost 20,000 square feet, are reported in a half-mile radius of Crenshaw LRT West Station. These properties are reported to not have any vacancy and do not reflect a lease rate for the spaces.

Figure 24: Station Area Office Property Summary

Submarket	# Bldgs	Total RBA	Total Vacant %	Total Average Rate
Culver City	76	867,695	10.7%	$28.66
Palms	30	194,993	9.0%	$20.87
Sepulveda	29	775,806	11.3%	$27.38
Bundy	59	2,331,627	6.7%	$34.97

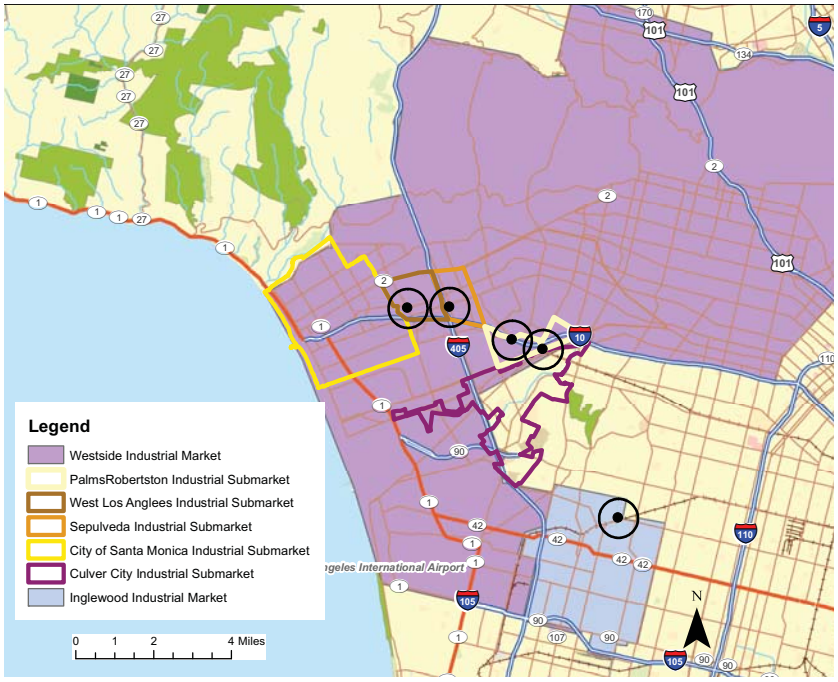
Industrial

The following section evaluates the existing industrial markets in the Expo LRT and Crenshaw LRT area. Industrial uses are often built as "inexpensively"[9] constructed basic warehouse-type buildings to be used for warehouse and distribution, manufacturing, and storage. However, it should be noted that, as manufacturing and other heavy industrial uses declined as a share of economic activity, industrial buildings, particularly in West Los Angeles, are increasingly used for a variety of other activities, such as furniture showrooms, office space, gallery spaces and other uses that require substantial amounts of affordable space.

The section begins with a brief overview of the performance of all industrial in the Los Angeles County market and Westside market[10], then looks more closely at the industrial property performance in Culver City, Santa Monica, Inglewood and three City of Los Angeles PFA-defined submarkets—West Los Angeles, Sepulveda, and Palms/Robertson.

Figure 28: Industrial Market and Submarket Areas



Source: Pro Forma Advisors and CoStar

[9] Relative to retail and office uses.

[10] A map of the Westside Industrial Costar Submarket is shown in the Appendix.

Los Angeles Industrial Market

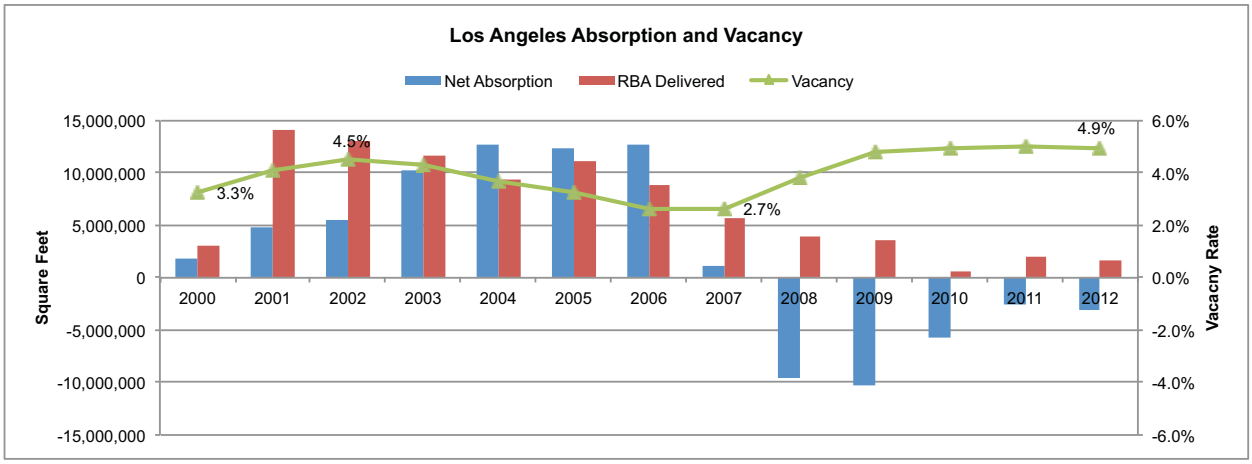
The Los Angeles and Long Beach Ports are key distribution points for imports and exports between the Asia Pacific Rim and the US. Due to this link, Los Angeles has a relatively strong industrial market. The performance of the Los Angeles industrial market is linked to the success of the ports and the level of foreign trade. Major concentrations of warehouse distribution industrial are centered on the Alameda Corridor, in the areas of Carson, Central Los Angeles, Commerce, and Vernon areas.

The comprehensive Los Angeles industrial market includes almost 1.0 billion square feet of rentable space in over 35,000 buildings.

- Vacancies have been remarkably low in the aggregate market. Vacancy rates were as low as 3.3 percent in 2001, but moved to 4.5 percent as 30 million square feet of new space was added. Between 2002 and 2007 almost 50 million square feet of space was added to the market while vacancy rates dropped to 2.7 percent.

- With the recession in 2007, there were major losses in absorption. While losses are improving, absorption has been negative for the past four years and vacancy rates have moved up to 4.9 percent.

Figure 29: Los Angeles Absorption and Vacancy



Source: CoStar, Pro Forma Advisors

Westside Industrial Market

The Westside Industrial market contains 21 million square feet of industrial space, less than 2 percent of Los Angeles' industrial stock. The Westside Industrial market is not well located relative to the Alameda Corridor or other centers of manufacturing in Los Angeles. The industrial product on the westside is less likely to be used as industrial distribution.

- The lease rates for industrial product in the Westside Industrial market have performed better than the aggregate Los Angeles market, with rental rates nearly double the Los Angeles average. These high lease rates are likely due to the limited supply of available industrial space within the market, but also may be due to non-industrial users, such as office and retail, within industrial spaces.

- **Absorption of industrial space has been poor in the Westside Industrial market, even pre-dating the recession.** According to Costar, there has not been a positive year of industrial space absorption since 2003. On a net basis, industrial users have vacated almost 1.1 million square feet of space.

- **Despite these absorption trends, vacancy rates are also outperforming that of the aggregate Los Angeles market**, with current rates close to 3 percent, levels that are historically low.

- **Low vacancy rates and negative absorption are occurring due to the removal of industrial buildings from the market.** In 2000, 924 industrial buildings containing 20.9 million square feet of rentable building area were reported. In 2010, only 884 buildings containing 20.6 million square feet of rentable building area were reported.

West Los Angeles Submarkets

West LA Submarket

The West LA submarket comprises 1.1 million square feet of industrial space in 44 buildings. Of the Los Angeles submarkets, the West LA Submarket contains the greatest amount of industrial space.

- The majority of existing industrial product in the West LA submarket is located south of Olympic and north of Pico Boulevard, between Barrington Avenue and Sepulveda Boulevard. Other industrial properties are located along Centinela Avenue south of Exposition Boulevard and clustered around Granville Avenue and Mississippi Avenue.
- Current vacancies are very low in the West LA submarket; vacancy rates have remained below 2 percent since 2005, with the exception of 2009. In 2009, a building appears to have been vacated and was removed from the industrial inventory in 2010.
- While annual net absorption figures have not been positive, the low vacancy rates reflect the high demand for real estate in the area. The current trends may reflect demand for non-industrial uses.
- Across the last two years the West LA submarket has achieved rents between $18.00 and $19.00, approximately 40 percent above the Westside market average.

Sepulveda Submarket

Figure 33 presents a map of the Sepulveda Industrial submarket. Industrial properties in the Sepulveda submarket are clustered between Sepulveda Boulevard and the I-405 Freeway, south of Santa Monica Boulevard and north of Pico Boulevard. The Sepulveda submarket contains 400,000 square feet of rentable building area, in 40 buildings.

- Between 2000 and 2005, vacancy rates were approximately 4 percent. With the onset of the recession, rates climbed only in 2007 and then fell back further than pre-recession levels. At the end of the third quarter, vacancy rates were at 6.0 percent.
- Absorption has been fairly neutral across the last five years.
- Rental rates have ranged between $18.00 and $20.00 per square foot in the last two years, approximately 40 to 50 percent above the overall Westside market average.

Palms/Robertson Submarket

In the Palms/Robertson submarket, industrial properties are primarily concentrated between Curts Avenue and Exposition Boulevard just south of the I-10 freeway, and north of Venice Boulevard. There are 46 properties with 540,000 square feet of rentable building area in the Palms/Robertson area, the smallest of the study submarkets.

- Vacancy rates in this submarket are also quite low, at around 1 percent. Vacancy has ranged between 1 and 2 percent in the post-financial crisis period, after reaching a historical low of 0.3 percent in 2008.
- Average rent rates have decreased only slightly from 2009 levels of $21.00 per square foot, to $19.00 per square foot during the third quarter of 2012, a 46 percent premium above the Westside average.
- An 81,000 square foot building was delivered to market in 2001 and a 160,000 square foot building was delivered to market in 2004. Nothing has been constructed or delivered since 2004.

Culver City

The Culver City submarket has 2.4 million square feet of industrial space, almost 12 percent of the space in the Westside Industrial market. One cluster of industrial is located along Slauson Avenue and the 90 Freeway, but the majority of industrial space is located in the northeast area of the city. There are major industrial clusters in the Hayden Avenue area, and La Cienega Boulevard area with smaller clusters along Washington Boulevard between Higuera Street and Robertson Boulevard, and along Jefferson Boulevard

- Vacancies are currently at the Los Angeles market average of 5 percent; much higher than the 1 percent level the market broached in 2007.
- Absorption has been negative in recent years. Since 2005, tenants have vacated a net of 360,000 square feet of industrial space.
- Similar to the trend throughout the Westside, the rentable building space has contracted from 2.7 million square feet in 2005 to 2.4 million square feet in 2012. A growing bastion of creative office. Industrial properties in the area are being transformed into creative office.

Santa Monica

Figure 39 presents a map of Santa Monica industrial properties. Industrial product in the Santa Monica submarket is clustered heavily north of the I-10 Freeway, and south of Santa Monica Boulevard between Centinela Avenue and Lincoln Boulevard. The Santa Monica submarket includes approximately 2 million square feet of available space, and space is at a premium.

- Vacancy rates were high, at 7.7 percent in 2005, but have actually declined since 2007, to the current rate of 1.4 percent.
- The submarket has had positive absorption of 160,000 square feet of industrial space since 2005.
- Rental rates have also held steady during the past five years, at levels between $19.00 and $20.00 per square foot.

Inglewood Industrial Market

The West Station lies on the northeast edge of the Inglewood Industrial Market. The majority of industrial in the market is clustered around the Exposition rail line along Florence Avenue between Centinela Avenue and Aviation Boulevard. Industrial properties, particularly near Aviation Boulevard and the I-405, likely serve airport-related uses.

There are 307 industrial properties in the Inglewood market, containing 5.1 million square feet of rentable building area.

- Vacancies in the market had dropped significantly during the years up to the recession, but rose quickly in 2008 with major negative absorption of 311,000 square feet. The market has reabsorbed some of this space, but has not reached pre-recession occupancy levels.

- Rental rates also declined since the recession, but at a current average annual rent of $9.80 per square foot, industrial rents are well above the Los Angeles average.

Figure 41: Inglewood Industrial Market Trends

Period	# Bldgs	Total RBA	Total Vacant SF	Total Vacant %	Total Net Absorption	RBA Delivered	RBA Under Const	Total Average Rate

Station Area Overview

The following table presents a summary of properties within a half-mile of the station areas. It should be noted that, given the small number of properties included, the average rental rates might not be accurate. However, average rental rates are shown to present a benchmark between station areas.

- The Culver City Station Area has 93 industrial properties, containing 790,000 square feet of space. The station area has the most rentable building area, but has the second highest vacancy rate of all the station areas. The station area has the highest reported rental rates of $17.87
- The Palms Station Area has the least amount of rentable building area at 200,000 square feet, but has a reported zero vacancy.
- The Sepulveda Station Area has approximately 34 industrial buildings, containing 620,000 square feet of space. Vacancy and absorption have remained fairly stable in this market. The area has a very low current vacancy rate of 0.1 percent.
- The Bundy Station Area has the second largest amount of industrial property within a half-mile area. Properties have an average rentable area of 23,000 square feet. The Bundy Station Area's vacancy rates seem driven by the presence of either one or several very large spaces, which occasionally become vacant and intermittently drive rates to high levels. The area has a current low vacancy rate of 1.1 percent and comparable rental rate relative to other stations.
- The West Station Area has 28 industrial properties within a half-mile of the station, containing 400,000 square feet of industrial space. This station area has a high vacancy rate of 9.3 percent. Rents are almost half the amount of those in the Expo LRT station areas.

Figure 43: Summary of Industrial within Station 1/2 Mile Areas

Station	Bldgs	RBA	Vacancy	Average Rental Rate
Culver City	93	792,383	4.2%	$17.87
Palms	4	207,101	0.0%	NA
Sepulveda	34	616,247	0.1%	$16.80*
Bundy	34	782,319	1.1%	$16.08
West	28	396,932	9.3%	$9.00

Retail

The following section reviews the shopping center and non-shopping center retail markets in the Expo LRT and Crenshaw LRT areas.

There are a number of successful retail areas within the West Los Angeles market, these include super-regional shopping centers such as Santa Monica Place, Century City Mall, Westfield Culver City, and the Westside Pavilion, however there are also a number of retail destinations that include a critical mass of storefront retailers, such as the Santa Monica Promenade, Westwood Village, Westwood Boulevard, and Pico Boulevard.

Given the development opportunity areas in the station areas, proposed retail in the study areas is likely to be community and neighborhood-serving in nature. Future retail in the study areas is likely to be developed at a scale and with a retail mix that competes with existing community or neighborhood -serving retail centers or, if limited in scale, will be developed to compliment and expand existing general retail destinations. The retail analysis looks at all types of shopping centers and general retail, but focuses on properties that are neighborhood and community-serving in nature.

For the Expo LRT Line, the analysis reviews aggregate shopping center trends in the CoStar defined West Los Angeles retail market[11] and then focuses in on community-serving, neighborhood-serving, and strip shopping centers and general retail within the relevant Los Angeles community plan areas, and Santa Monica and Culver City submarkets.

To understand the retail around the Crenshaw LRT West Station, the analysis explores the existing supply of retail within the Crenshaw LRT area east of La Cienega Boulevard, south of Jefferson Boulevard, west of Arlington Avenue, and north of the 105 freeway.

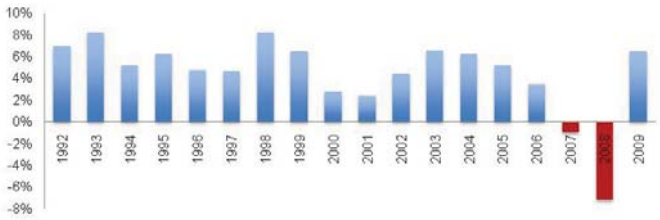
[11] The CoStar West Los Angeles market includes the Los Angeles community plan areas, Santa Monica, Culver City, as well as the Olympic Corriodr, Beverly Hills, Marina Del Rey/Venice, Brentwood, Pacific Palisades/Malibu.

Los Angeles Retail Market

With a growing population base and limited vacant land for retail development, the Los Angeles region had a fairly strong retail market at the beginning of the decade. As shown in Figure 45, vacancy rates for all shopping centers were below 3 percent in 2006 and below 2 percent in the case of malls, power centers and shopping center. However, the recent recession has left a lasting impact on retail market metrics. Shopping center vacancy rates, while still below 10 percent, more than doubled during the recession.

- Between 2006 and 2009, unemployment jumped from 4.8 percent in 2006 to approximately 12 percent in the Los Angeles market and though there have been some improvements in employment, the unemployment rate is still above 10 percent and many remain under-employed.

Figure 44: Retail and Food Sales Trends

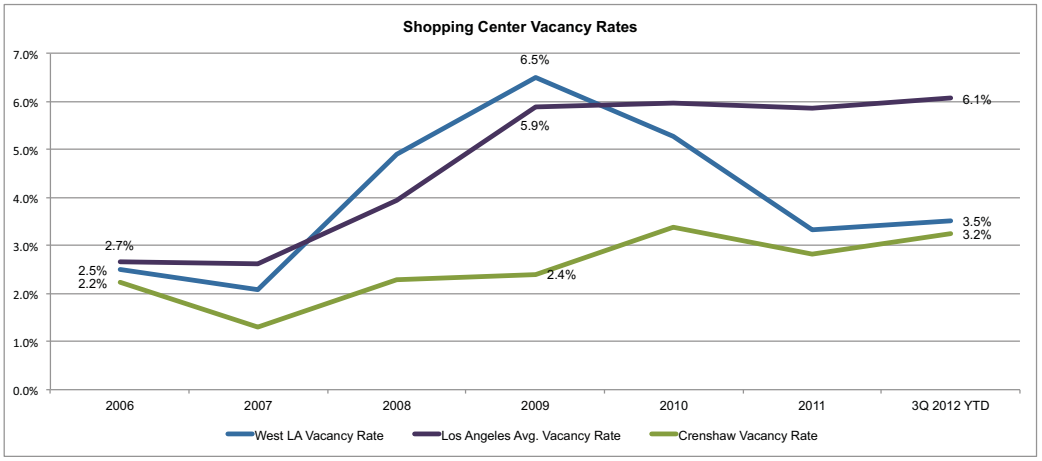


Source: US Census Monthly Retail Sales Estimates

- As shown in Figure 44, households severely restricted their spending during the recession and many believe that this change in consumer behavior will not return to the pre-recession levels in the near term.

Since 2009, the overall economy has improved, but there have yet to be major improvements in the retail market.

Figure 45: Market Area Shopping Center Vacancy Rates



Source: CoStar, Pro Forma Advisors

West Los Angeles Retail Submarket

West Los Angeles shopping center gross leasable area (GLA) makes up approximately 6 percent of the overall Los Angeles retail shopping center market. Though the West Los Angeles submarket has faced its fair share of business closures, West Los Angeles is a premium shopping center market and the market's retail performance has generally fared better than the overall Los Angeles Market.

- Shopping center lease rates in West Los Angeles are double the amount of Los Angeles market average rates.
- In the West Los Angeles submarket, vacancies hit their peak in 2009 and much has been absorbed back by the market. However, even in West Los Angeles, vacancy rates remain higher than their pre-recession levels.

Figure 46: West Los Angeles Shopping Center Trends

Period	Bldgs	RBA	Avg. Vacancy	Total Net Absorption	# Delivered	RBA Delivered	# Under Construction	RBA Under Construction	Avg. Rate (NNN)

Super Regional and Regional Shopping Centers

Figure 47 presents the super regional and regional shopping centers within the West Los Angeles submarket. There are six super regional and regional shopping center properties in 38 buildings, containing 4.5 million square feet of retail space. Vacancy peaked at 11 percent in 2009 primarily due to the vacating of the Santa Monica Place Mall during renovation. Super regional and regional shopping centers have a low current vacancy rate of 2 percent.

- The West Los Angeles area has several high-performing malls that attract local shoppers within the standard 5 to 20-mile reach of a super-regional center, such as the Westside Pavilion and West Culver City Mall. In addition, centers, such as Santa Monica Place Mall, capture tourist visitors and (more than typical) resident visitors from beyond a 20-mile radius.

- The Westfield Century City mall, as well as the Santa Monica Place Mall and Westside Pavilion Mall, caters to the strong concentration of households with above average annual household incomes living in the greater West Los Angeles region.

- Major renovations have recently been completed on several of the shopping centers on the westside, including Santa Monica Place in 2010, Westfield Culver City in 2009, Westfield Century City in 2004- 2007. The Baldwin Hills Crenshaw Plaza is also currently under renovation.

The Westside Pavilion is partially located in the Sepulveda Station half-mile area. The Westfield Century City Mall is located in the City of Los Angeles portion of the market area, but is not in a half-mile radius of any of the stations.

Community and Neighborhood Shopping Center

This section reviews community shopping centers, neighborhood shopping centers and power centers. All of these types of shopping centers are usually frequented by local residents.

Community Shopping Centers include stores such as Michael's, Marshall's, and Ross and draw from 3 to 6-mile resident market. Power Centers include several big box retailers such as Home Depot, Costco, Walmart, and they draw from a slightly larger 5 to 10-mile resident market. Neighborhood Shopping Centers include grocery stores and other convenience retail and draw from a smaller 1 to 3-mile resident market. Theme/festival centers are a variant of Community Centers/Regional Centers and typically draw from a resident base between 3 to 10-miles.

There is approximately 5.9 million square feet of community, power, neighborhood and theme shopping center space in the greater West Los Angeles area. Figure 49 presents the performance trends of community, power, neighborhood, and theme shopping centers.

- 3Q2012 year-to-date, the market had an average vacancy rate of 4.1 percent. While this is a fairly low vacancy rate, the area had an extremely tight market with 98 percent to 99 percent space occupied until the recession. In 2007 and 2009, business closures, such as the departure of Linen N' Things in One Westside Place Shopping Center, near Olympic Boulevard and Sawtelle Boulevard, doubled and almost tripled vacancy rates in the area.
- As shown, absorption has been fairly negative for the last six years. Vacancy rates leveled off in 2009, but have increased slightly in the past year.
- Community shopping centers have a current vacancy of less than 1 percent. The Linen' N Things space still remains vacant in One Westside Place, resulting in a vacancy of approximately 16 percent for power centers. The Promenade at Howard Hughes, the sole theme center, has a reported 12.8 percent vacancy rate. Neighborhood centers have a vacancy rate of almost 3.6 percent.
- Despite the increase in vacancy, rental rates are reported to have increased from an average of $31.00 per square foot (PSF) a year, triple net, in 2006 to $40.00 PSF a year, triplet net, in 2012.

Submarket and Station Area Community, Power, Neighborhood and Theme Shopping Centers

Figure 50 presents a listing of community, power, and theme shopping centers in the greater West Los Angeles retail submarket. Figure 51 presents a listing of neighborhood centers located specifically within the West LA CPAs[12], Culver City, and Santa Monica.

Approximately 30 percent of the West Los Angeles community, power, and neighborhood shopping center space is located in the West LA CPAs, almost 40 percent is located in the Culver City market, and 3 percent in Santa Monica.

- There is approximately 1.9 million square feet of community, power, and neighborhood shopping center retail located within the West LA CPAs.
    - There are two community centers located in the West LA CPAs: Venice Crossroads in Palms, and the Weybourne Market place, in Westwood near UCLA. The Venice Crossroads community shopping center is located within the Culver City Station half-mile area.
    - The West LA CPA contains one power center, One Westside Place, located on Sawtelle. The One Westside Place power center is within the Sepulveda Station half-mile area.
    - There are 17 neighborhood centers located within the West Los Angeles CPAs and 7 located specifically within Expo LRT station areas.
        - The Palms Station half-mile area includes the Vons Cheviot Hills Shopping Center on National Avenue and a strip/neighborhood center, the Cheviot Plaza, on Motor Avenue.
        - The Sepulveda Station has four neighborhood centers within a half-mile. The area has two neighborhood serving centers, Sawtelle Place and the Olympic Collection, across the street from One Westside Place, at the corner of Sawtelle Boulevard and Olympic Boulevard. The Westside Center is located at the corner of Westwood and Pico Boulevard and the La Mancha strip/neighborhood center is located at the corner of Olympic Boulevard and Sepulveda.
        - The Bundy Station includes one neighborhood center with a Ralphs grocery within the half-mile area.

[12] The West LA CPAs include the Westwood, West Los Angeles, and the Palms-Mar Vista-Del Rey Community Plan Areas.

Source: CoStar, Pro Forma Advisors

- West LA CPAs shopping center retail has fairly expensive lease rates, averaging $40.00 in 3Q2012, and a fairly high vacancy rate of 7.3 percent.
- The Culver City retail market has 2.2 million square feet of community and neighborhood shopping centers.
    - Culver City's retail is performing well and has a low vacancy rate of 1.8 percent and average annual triple net rents of $33.00 PSF.
    - Culver City has 8 community centers and 11 neighborhood centers.
- The Santa Monica market has only four neighborhood centers, containing 150,000 square feet of gross leasable area. Santa Monica does not have any centers categorized as community centers or power centers.
    - This space is fairly expensive, at an average annual triple net rent of almost $50.00, and also has a low vacancy of 1.7 percent.

Strip Retail

There is approximately 2.3 million square feet of strip retail throughout the West Los Angeles submarket. Strip retail is fairly evenly spread throughout the market. It is often found on major thoroughfares, such as Santa Monica, Olympic, Sepulveda, and Venice Boulevards, as well as Overland Avenue, in the Los Angeles portion of the study area.

- Like other types of shopping centers, strip retail vacancy rates were low in 2006, but began to rise after the recession. Current strip retail vacancy rates are at 5.0 percent.
- Lease rates are 14 percent lower for strip retail than community and neighborhood retail.

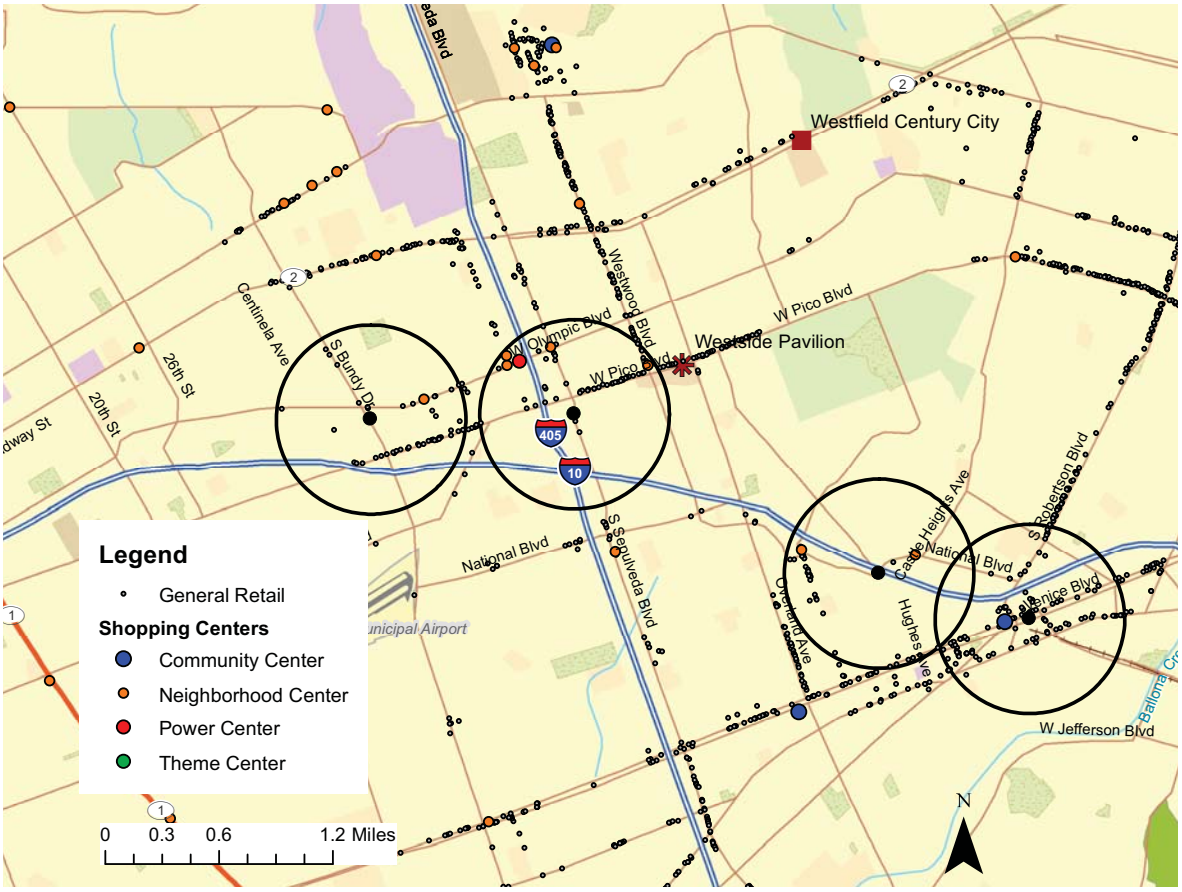
General Retail

Unlike most suburban locations, the amount of shopping center retail is exceeded by non-shopping center retail in West Los Angeles. Non-shopping center retail makes up two-thirds of all retail space within West Los Angeles.

Non-shopping center retail in the City of Los Angeles portion of the Expo LRT Market Area retail is shown in Figure 57. Major general retail areas in the City of Los Angeles include Westwood Village, Downtown Culver City, Westwood Boulevard from Wilshire Boulevard to the Westside Pavilion Mall, the length of Pico Boulevard through the study area, Venice Boulevard, Sawtelle Boulevard between Santa Monica Boulevard and Pico Boulevard, and Santa Monica Boulevard. More limited retail exists along sections of Wilshire Boulevard and Overland Boulevard. However, as reflected in the map, general retail exists throughout the study area.

Figure 57: West Los Angeles CPAs General Retail Map



Source: CoStar, ESRI, and Pro Forma Advisors

There are almost 3,500 general retail properties in the Expo LRT Market. General retail includes all retail not in a shopping center and includes a wide variety of retail property types. General retail includes more traditional storefront retail and freestanding big box retail, but also includes auto service properties and retail/office-type properties. The type of general retail is not reported for all properties in the CoStar database, so there is limited capacity to document the exact share of each type. The figure below presents some examples of general retail properties within the Bundy Station. The general retail can include quality freestanding and storefront properties, but this category also includes subpar retail spaces, particularly in areas that are not retail destinations, and spaces that may not be used for traditional consumer retail.

Figure 59 shows the performance of general retail in the West Los Angeles submarket area.

- Absorption of general retail has been negative since the start of the recession in 2007. Tenant losses have decreased since the end of the recession in 2009, but absorption is still negative. Since 2007, there has been a negative net absorption of almost 700,000 square feet.
- Vacancy has increased from 3.7 percent to 5.6 percent, peaking at 6.3 percent in 2010. General retail has consistently had a vacancy rate approximately double that of the shopping centers. This is likely due to the subpar quality of some of these spaces.
- Current annual triplet net lease rates are approximately $40.00 PSF. Lease rates have fallen across the last 6 years and are approximately 8 percent lower than in 2006.

General retail was impacted more in the recession than shopping center retail. Start up retailers and small businesses are more likely to locate in general retail properties. These businesses often have lower financial reserves than national chain retailers and are often more likely to vacate space in tough economic climates.

Figure 59: West Los Angeles Non-Shopping Center Retail

Period	Bldgs	RBA	Avg. Vacancy	Total Net Absorption	# Delivered	RBA Delivered	# Under Construction	RBA Under Construction	Avg. Rate (NNN)

Crenshaw LRT Retail Submarket

The Crenshaw LRT submarket area contains 4.2 million square feet of shopping center retail. Figure 60 presents a list of super regional, community, power and neighborhood shopping centers. There are 21 of these shopping centers within the study area.

- The Crenshaw LRT area includes one super regional center, the Baldwin Hills Crenshaw Plaza. The center is currently under renovation.
- There are six community centers within the Crenshaw LRT area, half in Inglewood, half in the City of Los Angeles.
- Power centers include the 380,000 square foot Marketplace at Hollywood Park in Inglewood.
- 13 neighborhood centers are located in the market area. Of these, five are located in the City of Los Angeles.
- There are no shopping centers within the Crenshaw LRT West Station half-mile area.

Shopping Center Retail Trends

Figure 62 presents the performance trends of retail within shopping centers in the Crenshaw LRT submarket area.

- The Crenshaw area has average shopping center lease rates of $22.00, inline with the Los Angeles' average shopping center lease rate of $23.00.

- Shopping center vacancies have inched up slowly across the last six years, but the market has performed better than the Los Angeles average. The area did not have a major peak in vacancies during the recession, but rates have grown from 2.2 percent in 2006 to 3.2 percent at the end of third quarter 2012. Rates remain fairly low, perhaps due to the limited nature of the retail available.

- Absorption has been a positive 300,000 square feet across the last six years.

Figure 62: Crenshaw LRT Submarket Area Shopping Center Trends

Period	Bldgs	RBA	Avg. Vacancy	Total Net Absorption	# Delivered	RBA Delivered	# Under Construction	RBA Under Construction	Avg. Rate (NNN)

Non-Shopping Center

The South LA area is underserved by national chain general merchandisers. Instead, residents in the area rely on a network of small-scale freestanding and storefront retailers. Non-shopping center retail makes up approximately 52 percent of all retail in the Crenshaw LRT area. There is 4.6 million square feet of existing general retail space.

Similar to the Expo LRT area, storefront and freestanding retail can be desirable, particularly in key shopping destinations, such as Leimert Park, Downtown Inglewood, and portions of Crenshaw Boulevard, but this category also includes subpar retail spaces as well.

General Retail has performed well in the area, even through the recession. Vacancy rates for Crenshaw LRT area general retail are slightly higher than shopping center retail, with rates currently at 3.6 percent. The market has absorbed approximately 80,000 square feet of additional space since 2006 and this is one category of retail in which vacancy rates have trended downward since 2006.

However, positive absorption has been supported by lower retail lease rates. General retail lease rates are 30 percent lower than shopping center retail.

Figure 63: Crenshaw LRT Submarket Area Non-Shopping Center Retail Trends

Residential Market

This section reviews the Expo LRT and Crenshaw LRT for-sale and rental residential markets.

For Sale Residential Market

The first half of the last decade saw tremendous expansion in the Los Angeles County housing market. Housing prices doubled across the County between 2002 and 2006. The housing boom was in part fueled by easy access to financing and, indicative of the crisis to come, rising housing prices. When housing sales and rising prices began to slow in 2006, it tipped the start of the financial crisis and the following recession in 2007.

Sales peaked in Los Angeles' County in 2004, while prices continued to rise until 2007. Between 2007 and 2009, prices fell by approximately 30 percent. With lingering high unemployment and interested homebuyers having difficulty qualifying for loans since mortgage lenders created more stringent loan requirements, home prices have continued to fall. However, the housing market seems to have stabilized somewhat in 2012. 2012 home sales have increased 10 percent over the same period in 2011.

Building Permits

At the height of the housing boom, 2004 – 2006, there were building permits for 24,000 units a year authorized throughout the County of Los Angeles. With the housing bust, financial crisis, and subsequent recession, countywide building permits fell to a low of 5,000 in 2009. In the last year the housing market has started to recover somewhat and countywide building permit levels are inching back up.

- In the City of Los Angeles, annual building permits peaked at 14,000 units in 2006 and fell to a low of 2,600 annually in 2009. Permitted units are currently at 6,000 units a year. With limited available land for development, 82 percent of building permits in the City of Los Angeles are for multi-family units.
- A smaller city, Santa Monica, has authorized 2,700 new residential units across the last decade. While there was some drop in the annual building permits authorized with the recession, Santa Monica recovered quickly to pre-recession building permit levels. Approximately 87 percent of building permits in Santa Monica are for multi-family units.
- Culver City has authorized very limited development across the last decade. The City has only authorized a total of 90 new units across the last decade, 35 percent of them multi-family units.
- The City of Inglewood has authorized building permits for 700 units across the last decade, the majority issued before 2007. Only a third of the building permits were issued 2007 or after. Approximately 30 percent of the building permits issued across the last decade were for multi-family residential units.

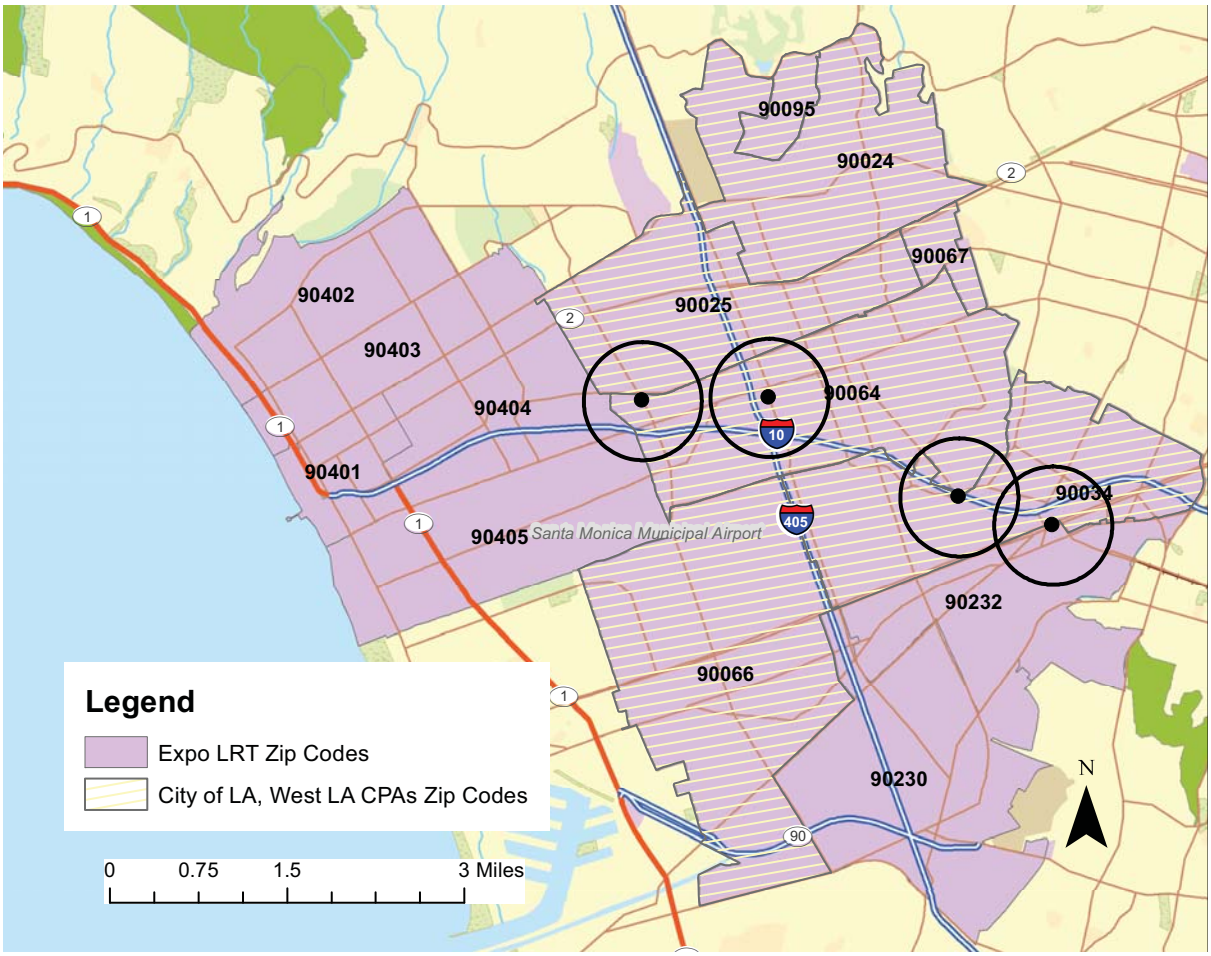
Expo LRT Market Area For-Sale Housing Market

Dataquick home sale and pricing data by zip code was used to analyze the Expo LRT residential market, which includes the West LA CPAs[13], Culver City and the City of Santa Monica. This market makes up approximately 4 percent of Los Angeles County home sales across the last 10 years.

Figure 66: Expo LRT Residential Market Area Zip Codes



Source: ESRI, Pro Forma Advisors

[13] West LA CPAs include the Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey community plan areas.

The Expo LRT Residential Market Area is a premium residential market. Home sale prices, across all types, are more than 50 percent higher than the Los Angeles County average. The market has experienced similar trends relative to the rest of the Southern California market. However, the number of home sales actually peaked in the Expo LRT market at the beginning of the last decade and have been declining since 2004. Also, there was somewhat less variation in pricing in the Expo LRT market. Home prices did not quite double between 2002 and 2006 and pricing was reduced by less than 20 percent between the peak in 2007 and the recent 2011 trough, rather than the Los Angeles county average of 30 percent.

Figure 67 and Figure 68 presents single family and multi-family data for the Expo LRT market. Figure 69 presents a summary of multi-family residential within the City of Los Angeles West LA CPAs, Culver City, and the City of Santa Monica.

- Multi-family sales have been approximately 50 percent of all sales across the last 10 years.
- The average size of multi-family units in the Expo LRT Market is approximately 1,400 square feet, but the size of units is larger within the City of Los Angeles.
- The City of Santa Monica has the highest average price of approximately $800,000 per unit. Within the City of Los Angeles, the average unit price was $560,000 3Q2012 year-to-date.
- Prices per square foot are 50 percent higher in the City of Santa Monica over the average price per square foot of units sold in the City of Los Angeles.

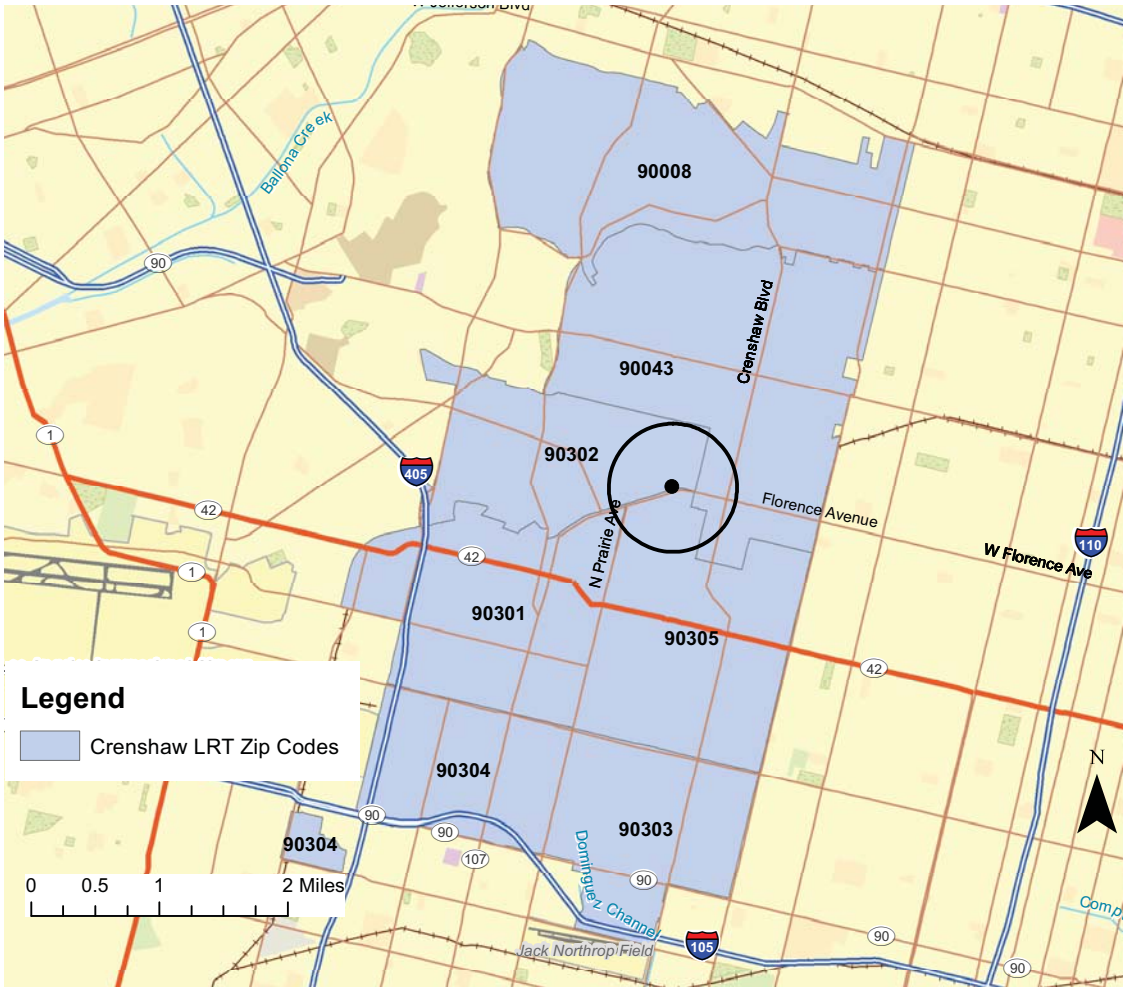
Crenshaw LRT Area Residential Market

Dataquick home sales and pricing data by zip code was used to analyze the residential market within the south Crenshaw LRT area[14].

Figure 70: Crenshaw LRT Residential Market Zip Codes

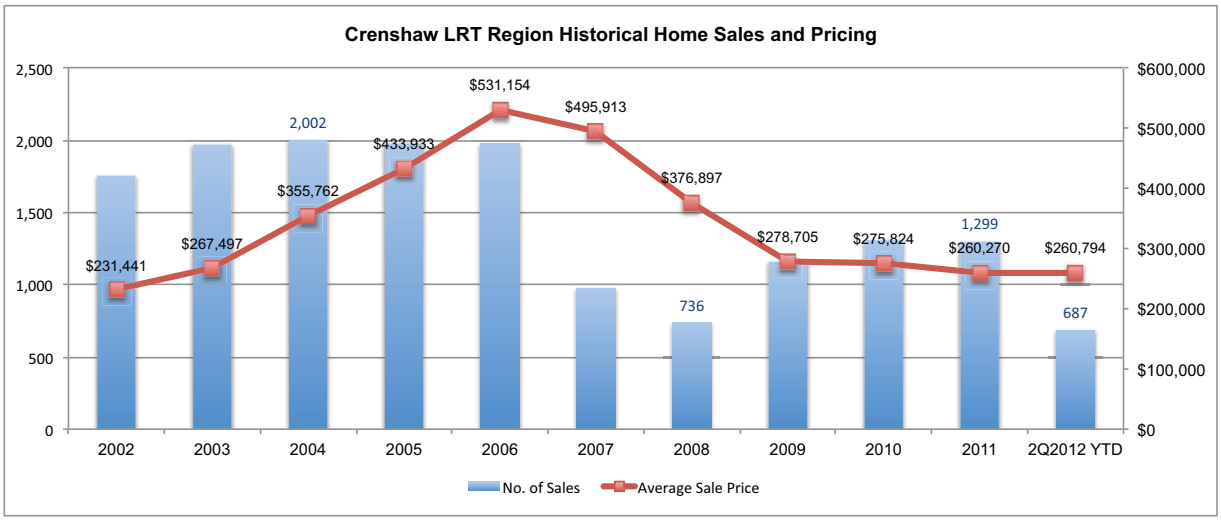


Source: ESRI, Pro Forma Advisors

[14] Crenshaw LRT zipcodes include 90008, 90043,90056,90301,90302,90303,90304,90305.

Figure 71 presents the number of homes sold and average pricing of homes across both single-family and multi-family units in the Crenshaw LRT area.

Figure 71: Crenshaw LRT Area Historical Home Data - SF and MF



Source: Dataquick, Pro Forma Advisors

The Crenshaw LRT Region's residential market also followed the general Southern California housing trends. At the beginning of the last decade approximately 2,000 units were being sold in the area annually. Sales peaked in 2005 and fell significantly in 2007, reaching a low of 740 homes sold in 2008. Between 2002 and the peak in 2006, home sale prices grew by 230 percent. Across the recession, prices fell more than 50 percent, bringing home pricing inline with 2003 figures.

Figure 72 presents single family and multi-family data for the Crenshaw LRT market.

- Multi-family units make up only 20 percent of all homes sold across the last 10 years.
- Multi-family units reached peak pricing of $360,000 in 2006. Average pricing fell 40 percent to current the current level low of $154,000. Current multi-family pricing is 48 percent of the Los Angeles Average.
- While current data paints the picture of a challenging residential market in the greater Crenshaw LRT area, it is worth noting that there has not been much new or renovated residential product within the market across the last 20 to 30 years.
    - Newer product may command higher prices. The one new product in the area recently, Bedford Parc, achieved pricing of between $230,000 to $450,000 (though the developer had some difficulty selling the units post-2007).

Station Area Residential Market

Dataquick home pricing and sales data by zip code was used to estimate the residential market within the immediate station areas. It should be noted that zip codes overlap for many of the Expo LRT stations[15].

- The zip codes around the Bundy Station have the highest amount of multi-family units sold and the highest average price per square foot.
- At a multi-family home sale price of approximately $520,000, the Sepulveda and Bundy Stations have the two highest total average sales price.

Active Projects

Figure 74 presents recent and active new home developments within the Expo LRT and Crenshaw LRT market areas.

- There are approximately 23 active projects in the Expo LRT area. The figure also includes developments in Marina Del Rey, Playa Vista, Venice, and Westchester.
- The majority of projects are condominiums, though active projects also include luxury condos along the Wilshire Corridor in Westwood and Century City and one townhouse project in Westchester.
- Condo projects, specifically in the Expo LRT market area, are priced from $545,000 to $815,000.
- There is only one current project listed within the Crenshaw LRT area. The existing condo project in the Crenshaw LRT area is priced between $250,000 and $450,000.

Rental Residential Market

The multi-family rental market has been one of the most successful land uses since the recession. The market has seen high demand based on demographic changes, as Generation Y, the second largest US age cohort, moves from college or living with friends or family to their own units. The housing crisis has also increased the demand for rental units. Some households have been forced to move from owner-occupied to rental units, and other households, despite low interest rates, have not been able to qualify for homes based on strict loan underwriting criteria that tightened after the housing bust.

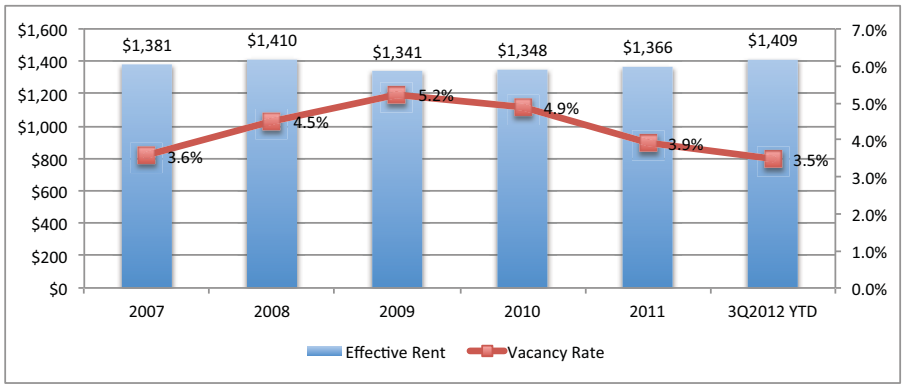
The following section uses data from REIS, a collection firm that specializes in residential property, to evaluate the Los Angeles rental residential market. REIS apartment data includes information on apartment buildings with more than four units. Our analysis includes a review of the Los Angeles Metro areas as well as the submarkets encompassing the Expo LRT Line – Palms/Mar Vista/Culver City, West LA/Westwood, and Santa Monica submarkets—and the Crenshaw LRT Line—Inglewood/Crenshaw submarket.

Los Angeles Rental Market

Across the Los Angeles Metro area there are over 750,000 rental units in 5+ unit apartment buildings.

- 17,000 units have been added since 2006.
- Vacancies are currently 3.6 percent and have remained fairly low and stable across the last 5 years.
- Effective rents[16] grew slightly, from an average of $1,380, to $1,410.

Figure 75: Los Angeles Metro Rents and Vacancy Rates



Source: REIS, Pro Forma Advisors

[16] Effective rent has been reduced to account for rent concessions.

Expo LRT Submarkets

Palms/Mar Vista/Culver City

The Culver City and Palms Stations fall within the Palms/Mar Vista/Culver City apartment submarket. The Palms/Mar Vista/ Culver City market has 27,700 rental units. The area has an older building stock and low vacancy rates.

- Rents are approximately $1,470, 4 percent above the LA Metro average. Rental rates fell by approximately 7 percent during the recession, but have recovered. Newer units, built after 2000, have asking rents of $2,200 to $2,600 a month.
- Vacancy rates grew during the recession and peaked in 2009 at 3.8 percent, returning to the low 2 percent range by 2011.
- Approximately 70 percent of the stock was built before 1980. A limited amount of new rental units have been added since 2006.
- Approximately 60 percent of the market are one-bedroom or studio units.

West Los Angeles/Westwood Submarket

The Sepulveda Station and Bundy Stations are located in the West Los Angeles/Westwood Apartment Submarket. The submarket has 36,100 units and has a number of buildings with premium rents.

- Rents in West LA/Westwood Submarket are $2,200, 55 percent above the LA Metro average. Newer units, built after 2000, rent on average for $3,300 - $3,600 a month.
    - Rental rates have decreased somewhat from their peak in 2008.
    - The area has a vacancy rate inline, but slightly higher, than the LA Metro average. The current vacancy rate is 3.7 percent.

Crenshaw LRT Submarket

Inglewood/Crenshaw Submarket

The West Station is located within the Inglewood/Crenshaw Apartment Submarket. The submarket includes 20,000 rental units, primarily in older buildings.

- Over 70 percent of the units in the submarket are in buildings that were built before 1970's. 8 percent of buildings were built after 2000.
- There was a significant jump in the vacancy rate of rental units between 2008 and 2009, likely due to the recession. However, vacancy has since improved and is currently at 3.3 percent.
- Average rents have increased by 8 percent since 2006, moving from $950 to $1,020 in third quarter 2012.
    - Similar to the West LA submarkets, prices are substantially higher for newer units. Units built after 2000 have average asking rents above $1,700 a month.

Figure 84: Inglewood/Crenshaw Submarket Apartment Trends

Period	Inventory	Completions	Vacant Stock	Vacancy Rate	Net Absorption	Asking Rent	Effective Rent

Industry and Creative Office Analysis

Introduction

The creative and media industries are a substantial and growing employment sector within Los Angeles, particularly on the westside. Associated with entertainment as well as digital technology in West Los Angeles, the creative and media industries span a number of industry clusters and categories and have spawned their own genre of commercial space, deemed "creative office space". The Industry Analysis section of the report explores the regional industry trends in Los Angeles and focuses on the role played by the entertainment and digital media industries in the Expo LRT Market Area.

The following section (1) reviews Southern California regional industry clusters and their connections to West Los Angeles (2) reviews the creative and media businesses most prevalent in the Expo LRT Market Area; and (3) provides a real estate profile of creative office space in the Expo LRT Market Area and evaluates the location considerations for creative office space users.

Regional Industry Clusters

As presented in the Employment Section of the report, there are approximately 4.3 million workers across Los Angeles County. Employment data is typically reported using business SIC or NAIC industrial classification codes. These classification codes provide detailed information about the primary function of each business, but often provide limited information on how businesses relate to various sectors of the economy. Cluster analysis[17] can be used to understand the key market sectors within a region.

Cluster analysis considers clusters of industries that are related within a region and share the same product or service. Industries within the same cluster may have similar infrastructure needs, demand for specialized labor and supplier industries. By improving the environment for key clusters, i.e. the regions' strengths, the economy will grow more effectively and efficiently than broad based efforts to improve the general business climate.

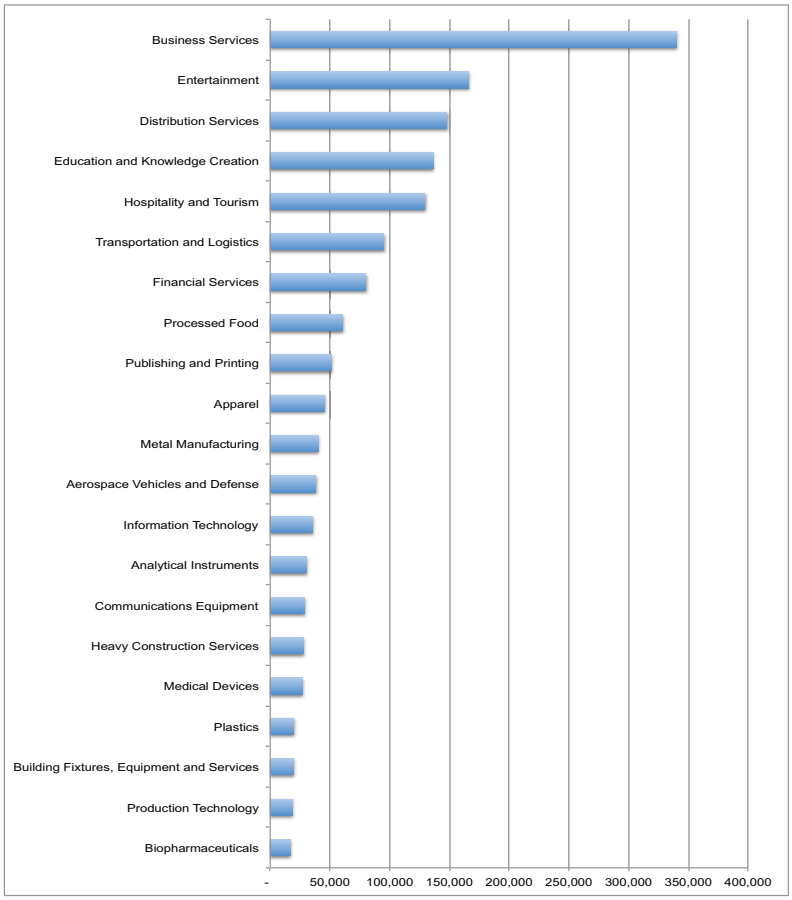
Clusters are further delineated into traded clusters and local clusters. Traded clusters are those clusters that generate products and services that are sold in different regions, while local clusters are generally commensurate in size with the region's population, i.e. in a traded cluster, such as entertainment a product, such as a film, gets distributed across the nation and globe, while a local cluster, such as food service, typically only serves the local region.

Figure 88 shows the top 21 traded clusters by employment in Los Angeles and Orange County. As presented, Business Services (e.g. management consultants, professional services, marketing, computer services, etc.) is the largest cluster by far in Los Angeles and Orange County, followed by Entertainment and Distribution Services (e.g. transportation, wholesaling and warehousing).

---

[17] Cluster analysis is an economic analysis approach refined by Harvard Professor Michael E. Porter, as a tool to help increase the competitiveness of a region.

Figure 88: Top 21 Traded Clusters in the Los Angeles and Orange County Regions

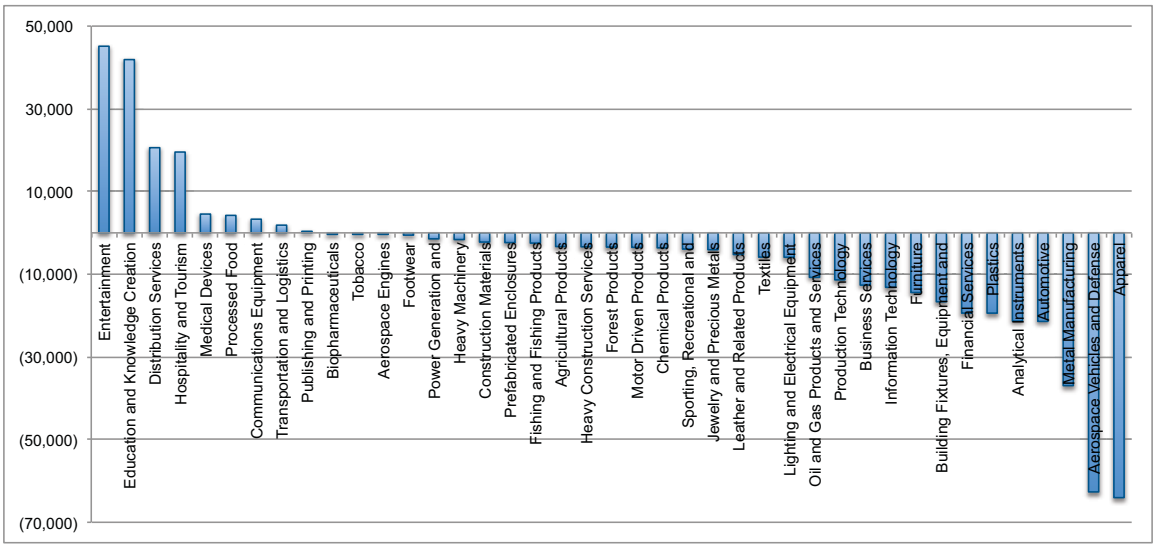


Source: Prof. Michael E. Porter, Cluster Mapping Project, Institute for Strategy and Competitiveness, Harvard Business School; Richard Bryden, Project Director.

Figure 89 shows the job creation between 1998 and 2010 across all traded clusters in Los Angeles and Orange County. Only nine of the 41 traded clusters created jobs in the Los Angeles-Long Beach-Santa Ana Metropolitan between 1998 and 2010. It should be noted that the impacts of the Great Recession are still being felt and that some of these categories may have otherwise performed better, but overall, the figure provides a benchmark of the relative strength of each of the clusters in the metropolitan area.

As shown across these two figures, the Business Services cluster has the greatest number of employees, but the Entertainment industry cluster and Education and Knowledge Creation cluster had the greatest strength during the period.

Figure 89: 1998 - 2010 Traded Cluster Change in Jobs



Source: Prof. Michael E. Porter, Cluster Mapping Project, Institute for Strategy and Competitiveness, Harvard Business School; Richard Bryden, Project Director.

Key Industry Sectors in Expo LRT Market Area

Inline with regional cluster analysis, the Expo LRT Market Area's major employment industries fall under the Education and Knowledge Creation cluster, the Business Services cluster and the Entertainment cluster.

Detailed employment data at smaller geographies than the county level is not publicly available. However, to get a better understanding of the cluster in the Expo LRT Market Area the major 2-digit NAICS industry categories that include significant numbers of workers in each of the clusters can be analyzed. Figure 90 presents historical employment in the Expo LRT Market Area[18]. The Education and Knowledge Creation cluster is approximated by the Educational Services industry. The Business Services cluster is approximated by the Professional, Scientific, and Technical Services, Administration & Support, Finance and Insurance, and Real Estate and Rental and Leasing industries. The Entertainment cluster is approximated by the Information industry. Health Care is a local cluster and is approximated by the Health Care and Social Assistance industry. The top industry categories are highlighted in Figure 90.

[18] This includes employment in the West Los Angeles CPAs (West Los Angeles, Westwood, Marina Del-Rey-Mar Vista, Palms Community Plan Areas) and the City of Santa Monica and Culver City.

Figure 90: Expo LRT Area Employment

Source: US Census LEHD On the Map Data

Educational Services is the top employing industry in the area with 37,000 employees. It also added the most employees between 2002 and 2010. The prominence of education employment is likely due to the number of higher education institutions in the area. UCLA employs approximately 30,000 people alone, and additional employees work at other area institutions such as Santa Monica College and West Los Angeles College.

Distribution is a major industry cluster throughout most of Los Angeles, but is very limited in the Expo LRT Market Area. West Los Angeles is not well situated relative to important logistics transportation nodes and corridors, such as the Port of Los Angeles and Long Beach, and the Alameda Corridor. High land values and West Los Angeles traffic have created an economic environment that is unattractive for typical Southern California industrial uses. Transportation and Warehousing is one of the lowest employing industry categories in Expo LRT Market Area.

Business Services and the Entertainment cluster industries, on the other hand, are attracted to the Expo LRT Market Area for the professional and specialized labor force living in the area and amenities, such as close proximity to the beach, restaurants and retail.

With approximately 37,000 employees, the Professional, Scientific, and Technical industry almost employs as many as Educational Services. Information is the third largest category and also employs almost as many as Professional Scientific and Technical Industry and Educational Services. Information, which includes motion picture production and distribution as well as some of the digital media categories, employed 36,000 in Expo LRT Market Area in 2010. While information was the third largest category it had the second largest amount of growth between 2002 and 2010, adding 6,000 new jobs.

Given the relative importance of the creative industries, such as entertainment, digital media and others, in West Los Angeles, we have prepared a comprehensive analysis of the creative and media industries and their real estate requirements in the next section.

Creative and Media Industries

The Los Angeles Economic Development Corporation (LAEDC) estimates that the creative industries directly employ 304,000 in Los Angeles County and that if it were one industry cluster (rather than an aggregation of industries across a number of industry clusters) that it would rank 4th of all Los Angeles County industry clusters[19]. The "creative economy" is a broad moniker that typically includes a number of creative, arts, and design -related industries.

The creative economy is defined as "the market impact of businesses and individuals involved in producing cultural, artistic, and design goods and services.[20]" The creative economy includes industries from the traditional arts to fashion and toy manufacturing to architecture and movie production.

While the creative economy includes this wide variety of industries, our analysis focuses on those industries that are most prevalent in Expo LRT Market Area. Based on review of existing industries in West Los Angeles, the following key industry categories were identified as the most relevant industries:

- Entertainment
- Digital Media
- Communication Arts

Other creative industries that are prevalent in Expo LRT Market Area include Architecture and Interior Design and Product and Industrial Design.

Otis College of Arts commissions an annual report on the current state of creative economy across Los Angeles County[21]. This section includes some of the most relevant information on the industry sectors, but further expands on this information to understand the relevant industry sectors in the Expo LRT study area.

Entertainment

Entertainment is one of Southern California's key sectors. The sector not only generates direct economic benefits in the region in terms of the movie and TV production industries and their suppliers (food service, security, lawyers, agents, and other creative businesses), but entertainment is also one of the main visitor attractions for the Southern California tourism

and hospitality industry. Hollywood is the historical home of entertainment, but with Sony Pictures Studios and Culver City Studios in Culver City, MTV, Fox, Lionsgate, and many others, the greater West Los Angeles area has become a major center of entertainment.

Entertainment includes a broad range of activities. For this report we include the motion picture and video industry, broadcast and cable television industry, and sound recording, as well as independent artists, writers and performers industry, agents and managers of artists.

Figure 91 below shows 2010 jobs by entertainment industry in Los Angeles County. Motion picture production and distribution and post production makes up the 85 percent of the reported entertainment cluster employment in Los Angeles County. It should be noted that official records of employees often undercount entertainment workers who often work on a contract basis in editing and filming. Figure 92 presents examples of entertainment cluster industries and businesses in the Expo LRT study station area.

Digital Media

The digital media industry is difficult to define. Broadly, digital media can include activities in other industries such as the development of special effects in the motion picture industry as well as the development of a the website for a station within the TV industry.

For purposes of this study we use digital media as a term to describe economic activities that include the transmission of information and content through the Internet. To account for digital media as an industry we include businesses that have the transmission of information and content through the Internet as their primary business. This would include social media businesses such as Facebook and Yelp, as well as information and content media business such as Google and Hulu.

As described above, it is difficult to account for digital media with existing industry NAICs codes. For purposes of this report, we consider software publishing and Internet publishing and broadcasting and web search portals industries under digital media. It should be noted that Figure 93 likely undercounts actual digital media employees because of the issues of categorization of the field.

Figure 93: Los Angeles County Digital Media Employment

Digital Media Cluster	2010 Employment

Communication Arts

For purposes of this analysis, the communication arts include the industries of graphic design services and advertising, as well as public relations agencies, media buying agencies and media representatives. According to the Otis Report, graphic designers "create 'visual solutions to communications problems' using both digital and print media", while advertising firms employ creative staff to design the content and visual elements of client ad campaigns.[22]" Public relations firms and media buying and media representations are not as directly involved with the "creation" side as with the graphic designers and advertising agencies, but in West Los Angeles, these firms are likely to be heavily involved with the entertainment industries and the communication activities of the entertainment players.

Advertising agencies are the greatest employer within this group in Los Angeles County, as shown in Figure 95. Figure 96 presents examples of entertainment cluster industries and businesses in the Expo LRT study station area.

Figure 95: Los Angeles County Communication Arts Cluster Employment

[22] Los Angeles Economic Development Corporation. 2012 Otis Report on the Creative Economy of the Los Angeles Region.

Future Trends

The quick rise of digital media and Internet technologies is both a challenge and opportunity to the Southern California economy. Digital media and the Internet made a broad array of communication platforms available to individuals that did not exist just 15 years ago. Individuals are no longer tethered to traditional forms of media, such as physical newspaper publications or the "prime time" television slots, to obtain the news and entertainment they are seeking. For example, the Pew Center reports that in 2008, for the first time ever, more people obtained their news online vs. a newspaper[23] and with the advent of DVR and integration of television broadcasting with the internet, a person can watch the season premier of Game of Thrones on their iPad through HBO Go at their leisure.

As described in the LAEDC's report on the entertainment and media sectors, improvements in technology and the rise of digital media are causing two major problems for traditional media industries. Traditional media industries have to compete with free online content for viewers. Internet technology is changing how content is received and traditional media industries such as TV and motion pictures are in a race to remain relevant as a media platform. Secondly, traditional media must compete with these numerous new media platforms for limited advertising dollars. Commercial advertising is the main revenue source for broadcast and cable television. With the recent recession, traditional media was severely impacted by the reduced advertising dollars from their typical advertisers-- consumer products and the auto industry, but also are dealing with a structural issue of less dollars being funneled toward television and greater dollars being captured by online advertising.

With these challenges, the Los Angeles Economic Development Corporation (LAEDC) expects to see a contraction in traditional advertising industries across the next five years in Los Angeles County, such as:

- Broadcast Television
- Radio

However, the challenge to one industry is opportunity to another. According to LAEDC, the growing integration of the digital media and entertainment is expected to generate growth in other non-traditional formats, such as:

- Internet Media
- Direct Marketing
- Event Marketing
- Word-of-Mouth Marketing
- Subscription Television
- Mobile Advertising and Content
- Video Games
- Business to Business eMedia[24]

---

[23] LAEDC Keyser Center for Economic Research. Entertainment & the Media in Los Angeles, 2010.

[24] LAEDC Keyser Center for Economic Research. Entertainment & the Media in Los Angeles, 2010.

Based on the current issues in the sector, the structure of the entertainment sector is changing, but is still expected to be strong in West Los Angeles. Digital media growth should also continue to grow in West Los Angeles as entertainment and digital media continue to evolve together.

Expo LRT Market Area Future Trends

In the Expo LRT Market Area, employment data is only available on the 2-digit NAICS level. Both the entertainment and digital media categories are included within the Information 2-digit NAIC industry category. As mentioned above this industry is the third largest employment sector in the Expo LRT Market Area and the second highest growing industry category, just below educational services, between 2002 and 2010.

The Information industry grew by 20 percent across the last eight years, an average compound annual average growth rate of 2.28 percent. It should be noted that this industry category also includes telecommunications and the publishing industries[25] If it was possible to isolate the entertainment and digital industries in the Expo LRT Market Area from publishing, the growth of the entertainment and digital industry categories would likely be higher. Pro Forma Advisors anticipates strong growth in the motion picture production and distribution industries and digital industries.

The digital media industries are closely connected with entertainment. With social media, such as You Tube distributing user-made content, technology companies such as Apple distributing music, movie and TV content through iTunes, and up-and-coming internet media providers such as Hulu distributing broadcast television, as well as the continued advances in interactive multimedia technology, the lines between the entertainment industry and digital technology have already blurred. The growth in digital media in Santa Monica and Venice, the "Silicon Beach" is a direct result of this evolution in entertainment and digital media. As the connections continue to grow stronger, we will see continued expansion of digital media firms and supporting firms in West Los Angeles.

Based on the historical growth in the Expo LRT Market Area and Los Angeles County CA Employment Development Division (EDD) projections, the Information industry category, which includes many entertainment and digital media industries, is projected to grow by 2 percent annually across the next twenty-five years. Communication arts, as well as architecture and interior design and product and industrial design, fall primarily under the Professional, Scientific, and Technical Services 2-digit NAICS category. Between 2002 and 2010 this category grew by a total of 1 percent. We estimate that this sector will have annual growth of 1 percent.

As mentioned above, many of the businesses in the Expo LRT Market Area are connected to the entertainment and digital media industries directly or indirectly, for example lawyers and public relations firms that service studios and actors. The expansion of entertainment and digital medial will fuel continued growth in other industry categories in West Los Angeles.

---

[25] The publishing industries, which includes newspapers, magazines, and other publishing industries, had severe contractions across Los Angeles County over the last decade and are expected to continue to contract, such as newspapers and other traditional publishing industries.

Creative Office Space

Creative industries, particularly digital media, technology, and entertainment firms have pioneered a new form of office space in Southern California, the creative office.

Creative office space has been growing in Santa Monica and West Los Angeles since the early 1990's with the first wave of pre-dot.com technology firms. With the dot.com bust in 2002, the office and creative office market slumped before revving up again in middle of the last decade.

The following section describes the characteristics of creative office space, creative office space users, and the real estate performance of current creative office space clusters. A matrix provides additional detail on the requirements and characteristics of creative office.

What is Creative Office?

Creative office space is characterized by design and features that break from the neutrally colored, cubicle/perimeter-office design of traditional mid-rise or high-rise corporate office space.

Creative office takes many forms. It is often considered to have an open lay out and/or other design features that are conducive to collaboration and co-working. In Santa Monica and Culver City, older industrial and commercial buildings have been renovated to create architecturally interesting creative office spaces. There is also new construction creative office.

"Creative space is generally characterized by an adaptive reuse of existing commercial or industrial buildings predating 1970, a use of environmentally-conscious building materials and systems, and the use of design features that foster collaboration, free-flowing discussions, and sharing of ideas."

-HQ Development

Source: http://hqdevelopment.net

The ability to promote creative activities is the key element of creative office. Technically innovative ideas and their implementation are described as the essence of the creative economy. Creative office spaces are designed to allow for the free flow of conversations and sharing of ideas.

Creative offices are designed as interesting and attractive spaces that provide a level of both work and play for its users. Creative office space is often integrated with the environment, Michael Geller, an active Culver City creative office space broker, describes a creative office space with roll up doors (often a vestige of the previous industrial space) that allows the indoor space to be integrated with an outdoor garden and fire pit. He describes other spaces with over-sized kitchens and outdoor conference rooms and, even, company provided catering. With such internal amenities, employers will often work longer hours and employers often achieve greater productivity in creative office spaces relative to general office space.

Overall, creative office spaces help companies maintain a culture of creativity. TrueCar.com exec describes how 'One of the things that defines a successful tech company is the company culture.' He believes that creative workers 'feel constrained' in standard offices[26]. Entertainment and digital media firms require employees to be creative thinkers who think "outside of the box" and they desire a space that reflects who they are.

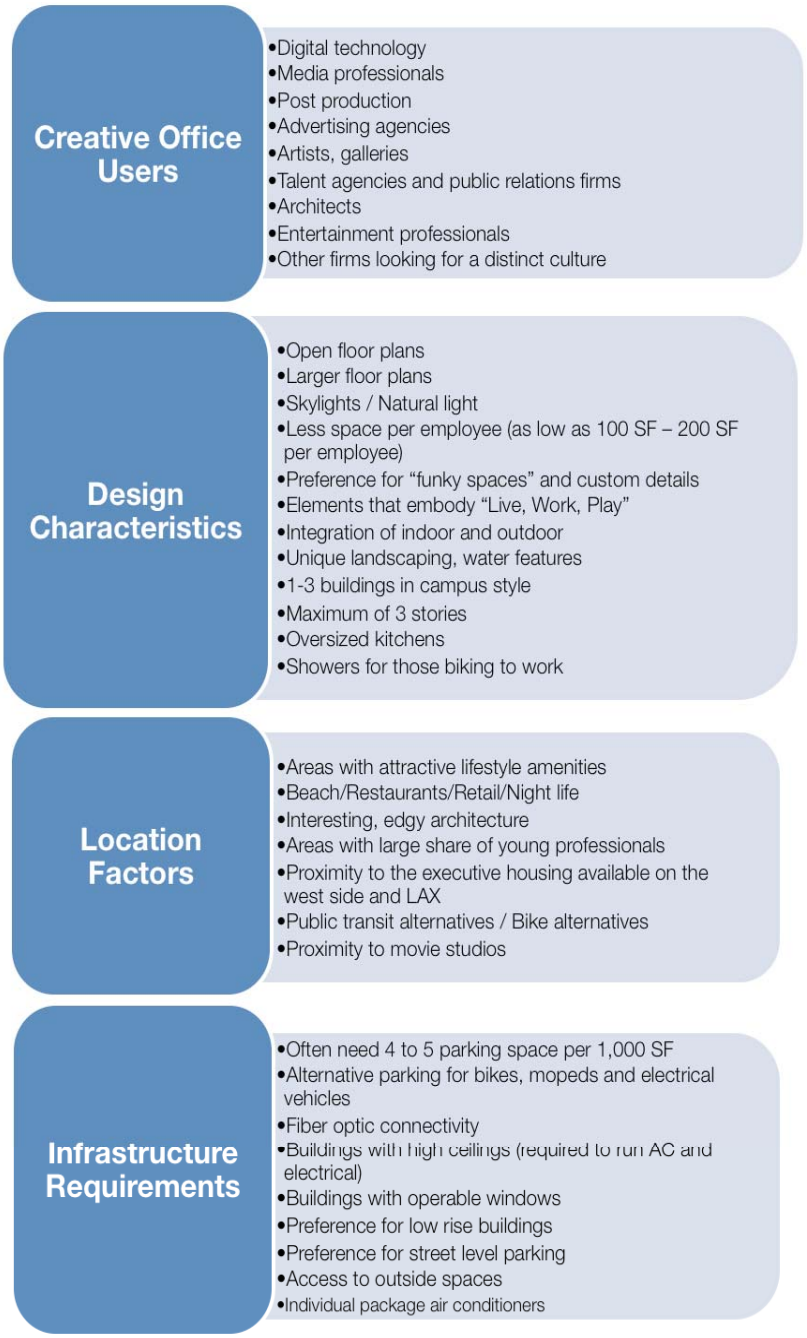
Creative Office Users

While entertainment and digital-related businesses are often described as the main creative office space users, creative office space attracts a wide variety of creative industry firms. In addition to digital technology and entertainment, creative office space users in West Los Angeles include photographers, talent agencies, public relations firms, artists and galleries, fashion and make up professionals, in addition to many others.

Additionally, as the benefits of creative office, the compelling design and increased productivity, are becoming clear to more traditional office users, Geller describes seeing increased interest in creative office space from other types of users as well, such as lawyers and other non-creative professionals.

[26] Vincent, Roger. "Five Santa Monica Office Buildings Sell for $90 Million." New York Times,13 December 2011.

Figure 97: Creative Office Matrix

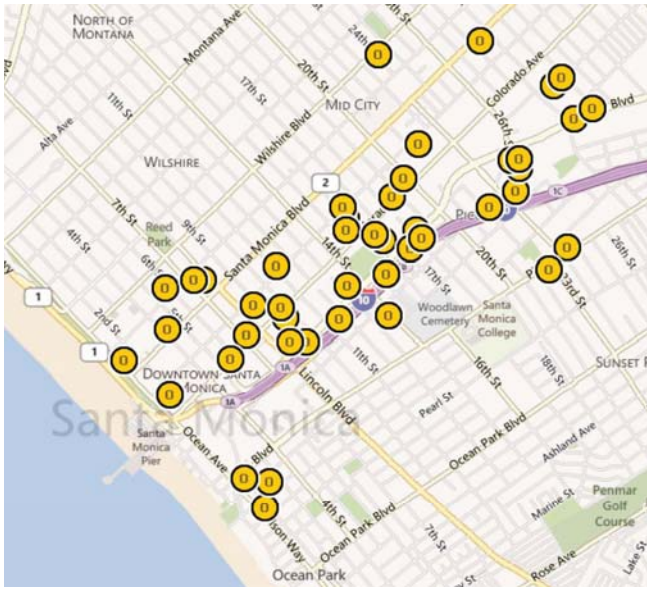


Creative Office Real Estate

On the westside, many of the creative firms described above have clustered in Santa Monica, Culver City, Playa Del Rey/Venice. Creative office space has not been well documented by traditional real estate data providers, such as CoStar. Rent information and location information for CoStar reported properties is reviewed in this analysis, but the reader must note that it should be considered as a sample of existing creative office space, rather than comprehensive data. In addition, we rely on reports from industry brokers and review comparables to better understand the market.

Santa Monica

Figure 98: CoStar Santa Monica Creative Office Space



Source: Costar and Pro Forma Advisors

Many report that Santa Monica is the first choice for many creative firms. Industry Partners, one of the leading creative office brokerage firms, reports that there is almost 18 million square feet of creative office space in West Los Angeles and almost half of this creative office space is located in Santa Monica. They also report a vacancy rate of 6.8 percent for this space, which is inline with Costar data on Class B and C office properties in the market[27]. Available creative office listings reported in Costar Santa Monica reflect an average full service lease rates of $3.30 per square foot. A brief survey of rents reflect asking rents from $3.00 to $4.25 per square foot. Other sources report rents of up to $5.50 and $6.00 per square foot in premium Santa Monica locations.

Creative office developer Lawry Meister, from Steaven Jones Development and Management Company, describes how firms are attracted to Santa Monica and Venice because the number of amenities such as restaurants and retail, but also due to its proximity to executive level housing available in Santa Monica, Pacific Palisades, Malibu, and in the South Bay. Technology firms want to cluster for recruiting and networking purposes. Clustering puts them closer to their key labor pools and, often, clients as well. Both Santa Monica and Venice highly appeal to technology companies and the areas have earned the nickname "Silicon Beach".[28]

---

[27] Rent TV.com. "2011 Sees Greatest Net Absorption of Creative Office Space on the Westside in Five Years". March 6, 2012.

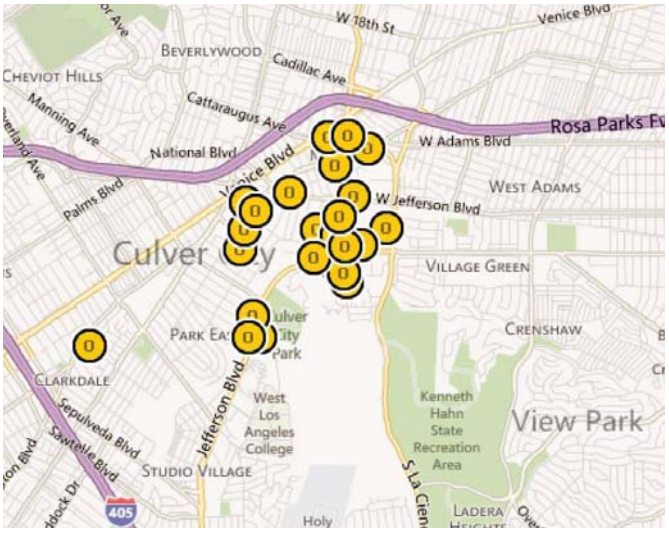
[28] Vincent, Roger. "Five Santa Monica Office Buildings Sell for $90 Million." New York Times,13 December 2011.

The Santa Monica and Venice creative office market has performed well above the Los Angeles County market and it is now difficult for interested companies to find creative office spaces larger than 10,000 square feet in the area. Growth has spilled over to Culver City, Playa Vista and West Los Angeles.

Culver City Creative Office

Culver City, in the past, has been a spillover markets for Santa Monica creative office. However, broker Michael Geller mentions how some businesses are no longer looking in Santa Monica first, but will look in Culver City because its more cost effective and a more central location, relative to Downtown, Hollywood, and Miracle Mile. Culver City creative office is centered around the Hayden Avenue Tract, an area approximately a half-mile from the Culver City Station, as well as along Jefferson Avenue and Rodeo Road. CoStar reported creative office spaces have an average full service lease rate of $2.70 per square foot, $0.50 less than Santa Monica. Surveyed current listings' rents range from $2.30 to $2.90 per square foot.

Figure 99: Culver City Creative Office



Source: CoStar and Pro Forma Advisors

Playa Vista/Marina Del Rey Creative Office

There are a growing number of large campus developments in the Playa Vista and Marina Del Rey area. The area is being touted by Industry Partners for its ability to offer companies 100,000 square feet or more of creative office space

and at rates $2.00 less than Santa Monica[29]. Large new projects recently built or proposed in the area include the 28-acre, 540,000 square foot Hercules Campus, which includes the historic hangar building built by Howard Hughes to house the Spruce Goose, the 2-building 250,000 square foot Waters Edge built in 2002, and "The Reserve" that will convert a former US Postal Building into a 380,000 square foot creative office space.

West Los Angeles CPAs Creative Office

West Los Angeles, specifically west of the I-405, has benefited from its proximity to the Santa Monica market and the spill over of technology and media firms looking for space close to Santa Monica. CoStar reported creative office in this area has an average full service lease rate of $2.60 per square foot. The majority of listed creative office space reported by CoStar is located adjacent to Santa Monica near the Bundy Station area.

Building Square Feet (SF): 540,000

Recent Monthly Asking Rate: $4.25/SF

Source: Loopnet

1548 9th Street, Santa Monica

Features: Modern construction with efficient design and custom details throughout; High ceilings and floor-to-ceiling operable windows; Combination of open spaces with built-in work stations, large executive office, and conference room; Balcony & patio area; Kitchenette & Individual bathrooms; Private on-site parking lot with available street parking

Building Square Feet (SF): 5,400

Recent Monthly Asking Rate: $3.00/SF

Parking: $150 per month per space

The Samitaur Building - 5780 W. Jefferson Blvd, Culver City

Description: World class architecture Built by Samitaur Constructs (Frederick and Laurie Smith) Designed by Eric Owen Moss

Building Square Feet (SF): 21,582

Recent Monthly Asking Rate: $2.50/SF

Parking: 3 per 1000/$100 per month per space

bLAckwelder - 3101 La Cienega Blvd., Culver City

Description: This project contains 23 individual creative buildings in an authentic adaptive reuse campus setting on approximately 8.5 acres. Current tenants include ADK Advertising, Bandito Brothers, Hungry Man, jumP Editorial, Kordansky Gallery, Mihai Nicodim Gallery, The Mill, Mossimo/Modern Amusement, OnBoard Entertainment, Playing for Change, Soap Creative, Thomas Wylde, and soon to be announced Restaurant.

Site Area: 8.5 Acres

Building Square Feet (SF)*: 160,600

Recent Monthly Asking Rate*: $2.85/SF

*Reflects property currently for rent (not full campus)

Parking: 3 per 1000/$75 to $125 per month per space

Regional Demand Analysis

The Regional Demand Analysis uses projected employment and resident growth along with appropriate market factors to understand potential support for major land uses in the Expo LRT market area. The following section evaluates regional demand for commercial office industrial, retail, and hotel real estate, as well as multi-family residential real estate.

Demand is first explored on a larger geographical level that reflects the competitive real estate market area for each land use and, secondly, the capture of regional demand is explored for each Expo LRT study station area. The station area capture of regional demand is presented in the Station Specific Market Analysis section for each land use except for residential. Residential demand is explored by combined station areas; this section evaluates demand at the combined station level and within the half-mile station area.

Commercial Office and Industrial Real Estate Demand

Both demand for commercial office and industrial space is evaluated based on anticipated employment growth within the Expo LRT Area. This area includes the West Los Angeles, Westwood, Palms-Mar Vista-Del Rey Community Plan Areas, Culver City and the City of Santa Monica. Future office and industrial employees will create demand for new office and industrial space within the market.

Methodology

US Census LEHD On the Map employment information, only available at the 2-digit NAICS level, is used to explore employment within the Expo LRT Area.

Employment growth is based on California Employment Development Department (CA EDD) Los Angeles County 2010-2020 Employment Forecasts with adjustments made based on historical performance of industries in the Expo LRT area. Employment growth rates were applied to 2010 Expo LRT Area employment to estimate total 2012 to 2035 employment. Additional information on the determination of the employment growth rates and total anticipated employment growth in the Expo LRT Area are included within the Appendix.

To estimate the demand for office and industrial space from employment growth, the share of employees that are office-using vs. industrial-using are estimated. Figure 101 presents the share of employees that are office and industrial -using. These estimates are based on finer distribution data of employees at the County level as well as within the Expo LRT region. For instance, 80 percent of employment in the Administration and Support, Waste Management and Remediation is categorized as office-using because the majority of employment in the area is in Administration and Support, rather than Waste Management and Remediation. Information is another key industry. Conservatively, only 60 percent of this industry's employment was categorized as office-using because there are still many subindustries in this category, such as Publishing and Telecommunications, that may require more industrial-type space.

Figure 101: Expo LRT Share Office-Using vs. Industrial-Using Employment

	Comm'l Office-Using Employment	Industrial-Using Employment
Agriculture, Forestry, Fishing and Hunting	5%	40%
Mining, Quarrying, and Oil and Gas Extraction	5%	25%
Utilities	10%	40%
Construction	15%	60%
Manufacturing	10%	90%
Wholesale Trade	10%	90%
Retail Trade	5%	10%
Transportation and Warehousing	10%	80%
Information	60%	20%
Finance and Insurance	100%	0%
Real Estate and Rental and Leasing	90%	10%
Professional, Scientific, and Technical Services	95%	5%
Management of Companies and Enterprises	100%	0%
Administration & Support, Waste Management and Remediation	80%	20%
Educational Services	5%	0%
Health Care and Social Assistance	35%	5%
Arts, Entertainment, and Recreation	5%	5%
Accommodation and Food Services	1%	5%
Other Services (excluding Public Administration)	10%	5%
Public Administration	10%	1%

Source: Pro Forma Advisors

The office-using and employment-using shares are applied to the respective industry categories to estimate projected new office and industrial employment.

An average square foot-per-employee figure is then applied to the incremental new employment to estimate demand for office and industrial space. In the case of office, an office space-per-employee figure of 375 was used. The current ratio of office-using employment to existing occupied office space is approximately 410. However the office space figure accounts for some areas beyond the Expo LRT Area. The model estimates of space-per-employee were adjusted downward to account for the office space outside of the Expo LRT boundaries and to account for the downsizing trend in the West Los Angeles market. For industrial, an average of industrial space-per-employee figure of 400 was applied. This figure is much lower than typical 500 to 800 square feet per employee standards for industrial, but reflects the ratio of estimated industrial employees to industrial space in the Expo LRT area.

Figure 102: Estimated Office Space Per Employee

2010 Est. Expo LRT Office Employees	107,527
2010 Office Space (A, B, & C)	
West Los Angeles Submarket	24,831,356
Santa Monica Submarket	13,620,591
City of Culver City	5,632,750
Total	44,084,696
Office Space per Employee	410
West LA Share of Office Space	56%

Source: CoStar and Pro Forma Advisors

The demand for office space is next adjusted to account for existing vacant office space that is available to be filled. The model only accounts for the absorption of space above a 5 percent vacancy based on the assumption that there is a structural vacancy of approximately 5 percent of office space that may remain vacant due to the quality of the space and mismatch in tenants. The industrial demand model does not include an adjustment for vacancy because the Westside industrial market is already at a low vacancy, of 2.9 percent, below a typical structural vacancy rate.

Office Demand

Figure 103 presents the office demand estimates using the methodology above. As shown in the table, Information, which includes most of the entertainment cluster categories and a portion of digital media categories, is anticipated to produce the greatest amount of office-using employment between 2012 and 2035. Professional, Scientific, and Technical Services industry category is supposed to add the next greatest amount of office employment, followed by Administrative Management and Support and Health Care and Social Services.

In total, the West Los Angeles area is expected to add to almost 50,000 new office jobs across the next 25 years. At 375 square feet per employee this translates into demand for 16.7 million square feet of office space in the Expo LRT Area. Accounting for existing vacant space, there is demand for approximately 13.7 million square feet of new office space in the Expo LRT Area.

The West Los Angeles CPAs office market accounts for 56 percent of the office market, relative to the City of Santa Monica and Culver City. To benchmark the capacity of the West Los Angeles CPAs (which include the Westwood, West Los Angeles, Palms-Mar Vista-Del Rey community plan areas) to capture new office demand, we have used a low estimate of 50 percent. Understanding that the Santa Monica is built out and very expensive, we anticipate that there will be more businesses looking to locate in the West Los Angeles area. The West Los Angeles CPAs have the capacity to obtain up to 75 percent of the new development within the Expo LRT on the high end of the range.

Demand for office space in the West Los Angles CPAs area is projected to be between 6.9 million and 10.3 million square feet of new space across the next 25 years. Approximately 30 percent of that space will be for creative industries such as entertainment and digital media, approximately 15 percent will be for health care and social service businesses, and the bulk of the space will be for more standard professional, technical, and scientific businesses and administrative support businesses.

Industrial Demand

Figure 104 presents the industrial demand analysis. As described in the industry analysis, employment in many of the industry categories that would have significant demand for industrial-using spaces, such as manufacturing, transportation and warehousing, are expected to contract across the next 20 years. The greatest growth in industrial-using employment is expected in the Administration & Support, Waste Management and Remediation category, primarily allocated to the Waste Management and Remediation industries, Information, and Wholesale Trade. Much of the industrial-using office demand in the West Los Angeles area is expected as a byproduct of growth in industries that are not primarily industrial using, such as the Information industry category. Some portion of entertainment industries may utilize industrial space for their operations, in addition to telecommunication and other industries such as periodical printing, which may use industrial space.

The Expo LRT is expected to add a net total of 7,500 industrial jobs between 2012 and 2035. At an estimated 400 square feet per employee, there will be demand for approximately 3 million square feet of industrial space in the Expo LRT area. Given that the existing industrial market is very tight, there is limited vacant space to fill, so vacant space is not subtracted from the demand estimates.

Relative to the Santa Monica and Culver City markets, the West Los Angeles industrial submarkets currently make up approximately 32 percent of the industrial space in the Expo LRT area. To understand the industrial space that will be demanded in the West Los Angeles CPAs (Westwood, West Los Angeles, Palms-Mar Vista-Del Rey community plan areas), we use a low high to range between 30 and 50 percent to represent the capture of industrial demand within the West Los Angeles CPAs.

Between 2012 and 2035, there will be demand for approximately 900,000 to 1.5 million square feet of industrial space in the West Los Angeles CPA area.

Figure 104: West LA CPAs Industrial Demand

Retail Demand

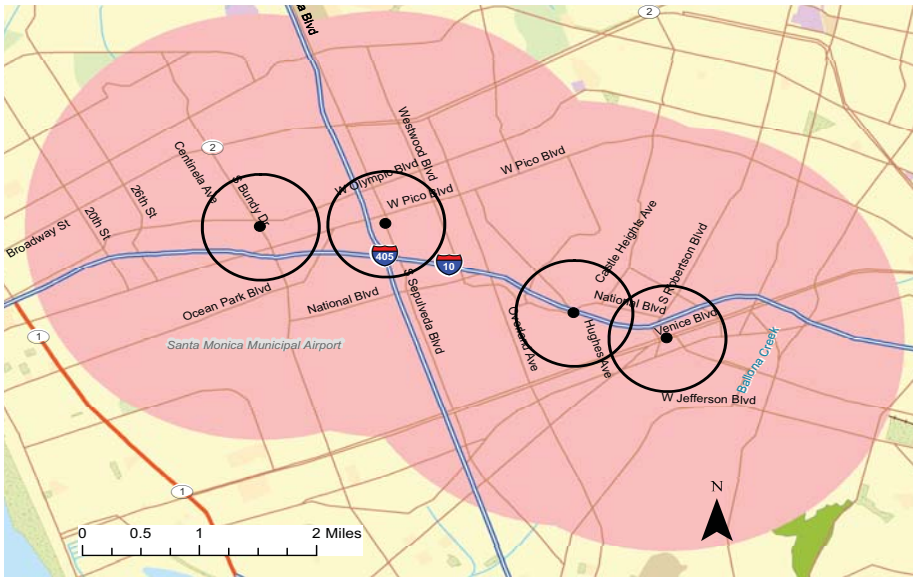
Retail demand is generated by household consumer spending and employee retail spending. The main retail projections represent retail demand from anticipated new residents within the Expo LRT Corridor. A second metric evaluates additional retail demand from existing households that are not currently spending their available retail dollars within the City of Los Angeles. The final metric estimates retail spending by employees working in the area.

Methodology

Retail Demand Model for New Residents

New residents within the station areas are expected to generate demand for new retailers. To estimate new resident demand we must project the market area and the household growth in that area and also estimate the per household spending.

Based on the opportunity sites and resident interest, the retail being considered within most station areas is primarily neighborhood-serving and community-serving. Given the overlap between station areas, the report evaluates a combined corridor market area that includes households within 2 miles of each station area (the general market area for neighborhood and community-serving retail in West Los Angeles[3031]). SCAG projections were used to estimate the incremental household growth between 2012 and 2035 within the 2-mile market corridor. An average of each station area's existing population



[30] In most locations a typical market area for a neighborhood service retail center is approximately 3 miles and the market area for a community center would be 3 – 6 miles. However, the density (as well as congestion) of West Los Angeles makes the market area of neighborhood and community retail closer to 2 miles.

[3031] It should be noted that there may be additional household support for regional retail. A regional retail market has a larger market area and would include additional households and their spending.

and household growth was used to determine the share of the 2-mile corridor attributed to each station. Figure 105 presents the 2-mile corridor households and the station area household shares.

Figure 105: Two-Mile Market Area Demographics and Station Area Distributions

Two-Mile Market Corridor	2010	2012	2015	2020	2025	2030	2035
Households	128,130	129,726	132,121	136,112	141,557	147,003	152,449

Station Areas	2010 Households (HH)	Distribution of Station Areas Relative to Corridor	2010 - 2035 HH Growth	HH Growth Distribution Among Station Areas	Average of Existing HH and New HH Distr.

Station Area HH	50,222	100%	11,143	100%	100%

Source: SCAG 2012 Projections and Pro Forma Advisors

Per household spending is estimated based on average household spending in Los Angeles County. Taxable sales, reported by the State of California Board of Equalizations, is used to determine average household spending. On an a per household basis, the City of Los Angeles has the lowest taxable sales of all the cities within the Expo Phase II and Crenshaw LRT lines. Smaller cities like Santa Monica and Culver City have substantially greater per household sales. This is likely due to the capture of spending of regional residents beyond their borders such as Los Angeles residents. With the availability of good quality retail options, the station areas may capture a greater share of sales per household. Assuming that the Los Angeles County, as larger region, is more inline with average regional spending, the County average spending per household is used to estimate per household spending in the model.

Total household sales are estimated from per household County taxable sales in Figure 106. These estimates are further adjusted by spending category to account for the variation in income between West Los Angeles CDP area and the County. Certain retail spending that does not occur in retail stores, such as gasoline sales, and the share of sales for vehicle purchases, and the category “All Other Outlets” have been removed from the model.

Figure 106: Per Household Spending Estimates

	LA County			West LA CPAs
2010 Income	$74,879			$89,134
Per HH Spending by Type of Business	**Taxable Sales per HH**	**Taxable Share**	**Est.Total HH Sales**	**Income Adj. Est. Total HH Sales**

Total Retail and Food Services	**$17,755**		**$21,304**	**$22,700**

Source: Source: CA Board of Equalization, BLS Consumer Expenditure Data, Pro Forma Advisors

The adjusted per household spending figure is applied to the incremental growth each period to estimate projected retail sales. Using average sales per square foot estimates, sales are translated into the retail space supported within the area.

Not all of the new retail spending is likely to be captured within the station areas, particularly since we are assuming that the station areas include primarily neighborhood-serving and community-serving retail, but our station areas do include a number of the key commercial areas within West Los Angeles. Assuming that good quality retail is developed within the station areas, we estimate that the station areas could capture 40 to 60 percent of the new spending.

Station area captures are presented in the station specific market analyses. The retail capture rates are based on the distribution of households within the two-mile corridor area.

Additional Residential Retail Support Model

Typically a retail leakage analysis would be performed to understand residents' retail demand that was not being captured within the City boundaries. A broad-level leakage analysis[32] that compared total estimated resident spending to total retail space in the West Los Angeles CPAs areas found that there is sufficient overall retail space to service demand, i.e. that when comparing total household spending (as calculated above) for existing residents to retail space for all categories (regional, neighborhood, community, strip, and general), there was more retail space than demand. However, it did reflect that approximately 60 percent of demand is being met by strip and general retail.

[32] The necessary taxable sales information for the West Los Angeles geography is not available to do a detailed analysis of retail leakage by store/industry.

Strip and general retail may include standalone retail stores, such as the Best Buy on Sepulveda Boulevard, popular boutiques and restaurants such as Giant Robot on Sepulveda Boulevard and Natalie Thai on Venice Boulevard, but likely also includes a number of stores that are older and limited in selection, such as liquor stores, that may meet specialty needs, but not the full spectrum of needs of the residents. While total retail square feet exceeds retail spending; it is very likely that residents are shopping outside of the City for many needs and these specialty stores are catering to a larger regional clientele. Thus, this analysis also includes a recapture of these existing strip and general retail stores.

To measure this recapture, the total retail square feet demand for existing residents in the West Los Angeles CDP area (Westwood, West Los Angeles, & Palms-Mar Vista- Del Rey CDPs) is calculated in a similar fashion to the new resident demand. Existing super regional, regional, community, neighborhood, power and festival shopping center space is subtracted from the existing West Los Angeles CDP residents' retail demand, resulting in the demand that is supposedly captured by strip and general retail. Based on the current distribution of households, the station area demand serviced by general and strip retail is estimated. Finally, a recapture range of 10 to 20 percent provides a benchmark for the amount of retail that can be supported by in the place of undesirable general and strip retail.

Employees Spending Retail Demand Model

Employee spending during the workday also will support additional retail in the study station areas. All employees tend to spend money for food and retail during their workday, but, for purposes of this study, we only include retail supported by office workers (who tend to spend more than other non-office employees and are the majority of workers) for the Expo LRT area. The 2012 ICSC Employee Worker Survey reports that nationally, urban office workers spend a weekly average of $26.00 on food service (both full service restaurants and fast food) and almost $90.00 on retail. Figure 107 estimates the average retail square feet supported based on this assumption, assuming 52 workweeks with 2 weeks holiday.

Figure 107: Employee Supported Retail Factor

Office Worker Expenditure	Weekly Spending	Annual Spending	Sales per SF	SF Supported
Full-Service Restaurants and Fast Food	$26.29	$1,314.50	$450	2.92
Goods and Services	$89.31	$4,465.50	$375	11.91
Total	$115.60	$5,780.00		**14.83**

Source: ICSC 2012 Employee-Worker Survey and Pro Forma Advisors

Using the projected office data developed in the office demand section, the per employee retail square feet are applied to estimated employees to determine the employee demand for retail. This section first looks at the office square feet projections for office square feet in the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) and then translates the estimates back into employees. The employee retail square feet support factor is applied to average employees for an average local estimate of employees spending.

Station specific captures of employee retail spending are shown in the station specific market analysis sections. The average of the estimated low and high projected office square feet is translated into employees based on an average 375

square feet per employee. The per employee retail square foot factor is then applied to estimate the average square feet supported in each station area.

Retail Demand from New Residents

Figure 108 shows estimated incremental household growth in the two-mile market corridor and the projected revenues and per square feet they will support. New households in the two-mile market area are expected to generate $515 million in annual retail sales that will support a total of 1.16 million square feet in retail space.

Figure 108: New Resident Sales and Retail SF Support

	Estimated Total HH Sales	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total

With a low capture of 40 percent, the station areas will support up to 460,000 square feet of new retail space. A high capture rate of 60 percent will support up to 700,000 square feet of new retail space across all the station areas.

Figure 109: Station Area New Resident Support Capture

Additional Retail Support

Using the same methodology used for new resident spending, Figure 110 presents the estimate of retail demand generated within the West Los Angeles CPAs area (Westwood CPA, West Los Angeles CPA, and Palms-Mar Vista-Del Rey CPA). This area supports approximately $2.4 billion in retail spending, which translates into approximately 5.4 million square feet of retail space.

Figure 110: West Los Angeles CPAs Existing Demand

	Estimated Total HH Sales	West Los Angeles CPAs

Total Retail and Food Service Demand SF		**5,362,657**

Source: CA BOE, SCAG, Pro Forma Advisors

Figure 111 compares the West Los Angeles CPAs demand estimate to the existing retail supply of non-strip shopping centers. From this comparison, we estimate that approximately 2.2 million square feet of demand is being met through strip retail centers and other general retail. Next, the station distribution of this space is calculated based on the number of households in each station area.

Finally, the amount of existing demand that can be captured is estimated at 10 percent to 25 percent of the existing strip and general retail serviced demand. For all of the West LA CPA areas this sums to 220,000 to 450,000 square feet.

Figure 111: Capture of Strip and General Retail Serviced Demand

Employee Spending Retail Demand

The office demand section projects that the West LA CPAs, which includes the community plan areas of Westwood, West Los Angeles, and Palms-Mar Vista-Del Rey, may capture between 7 to 10 million square feet of office between 2012 and 2035. At an assumed office square foot per employee factor of 375, this equates to between 18,000 and 27,000 employees. Using the average employee estimate for each period, the West LA CPAs area employees are estimated to support a total of 340,000 square feet of additional retail space.

Figure 112: Regional Employee Retail Demand

	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total

Multi-Family Residential Demand

Residential demand projections were generated based on the comparison of two demand metrics, anticipated household growth and an estimate of households who desire move up units in the area. The projections represent demand for both for-sale and rental multi-family residential units.

Methodology

SCAG household projections were used as a base to understand the expected new households in the area. Due to the overlap in the markets and based on the assumption that the target demographic for homes would similarly be willing to locate in either area, projections were reviewed for the Culver City and Palms Stations combined and the Sepulveda and Bundy Stations combined.

For each of the two areas the proportion of households living in multi-family vs. single-family units were compared. Within the Culver City and Palms Stations and Sepulveda and Bundy Station areas the share of residents living in multi-family units is relatively high, at 70 percent and 82 percent, respectively.

To estimate demand from new households, households in the combined area willing to locate in multi-family housing are distributed to each station based on the existing share of households within the two station areas. Finally, a capture rate is applied for the number of households willing to locate within the half-mile area. This is based on the existing share of households within the half-mile radius of the station relative to total station area households[33], but is adjusted based on

[33] As described in the demographic section, census tracts are used to approximate the station areas. The census tract areas extend beyond the half-mile radius of the station.

the assumption that more households will be interested in living closer to the station. Household counts and distributions for individual stations and the combined areas are shown in Figure 113.

Figure 113: Station Area Household Distributions

Station Areas	Census Tract Approximation Households	Station Share of Combined Area	1/2 Mile Radius Households	1/2 Mile HH Share of Census Tracts HH
Combined Culver City and Palms Station Area

Source: ESRI and Pro Forma Advisors

As mentioned in the Demographic section, the SCAG projected new residents is based on current plans. The inclusion of the light rail transit systems is likely to attract additional new residents and employees. The move-up market demand represents the greater demand for units in the area. Thus, the first metric of new resident demand will be our low range estimate of demand and the move-up market will be the high range estimate of multi-family demand.

To estimate move-up demand, a ratio that represents current residents wanting to move up within the community is applied to 2012 households within each of the combined station areas. The move up ratio, shown in Figure 114, was determined starting with the average share of residents who reported they moved within the last year in the City of Los Angeles, as reported by the US Census 2011 American Community Survey. This figure is adjusted to account for those within the area who are interested in living multi-family housing based on the existing distribution between multi-family units and single-family units. This share is then adjusted by the proportion of households who are income-qualified to purchase new homes[34]. Lastly, an estimate that one in 10 income-qualified residents are interested in staying within the combined station area is applied.

[34] The income qualification table is shown in the Appendix. This broad benchmark reflects households earning that can afford new home prices, roughly a monthly rent of $1,600 and above or home price of $341,000 or above in the Expo LRT area and $1,000 monthly rent or $230,000 home price in the Crenshaw LRT area.

Culver City and Palms Station Area Demand

Figure 115 presents the projections for the Culver City and Palms Station areas. As described in the methodology section, two metrics are considered, demand from new residents and demand from the move-up market.

Households are expected to grow by 4,100 between 2012 and 2035 in the combined area. Distributed based on the existing share of households in each station area and accounting for multi-family demand, the Culver City Station Area is expected to add 1,100 households while the Palms Station Area is expected to add 1,700 household. Much of this growth is expected to be captured within a half-mile of the station. The Culver City station half-mile area is projected to capture 800 new units and the Palms station area is anticipated to capture almost 1,300 units from new resident demand.

Using the move-up ratio calculated for the combined area, 5,000 households are income-qualified new move-up units in the area. Within the station areas, the Culver City Station Area is projected to capture up to 1,700 move up households and the Palms Station Area is expected to capture up to 2,600 move-up households. Within an immediate half-mile radius of the station, the Culver City station projected to capture demand for up to 1,200 move-up households, while the Palms Station area is projected to capture demand for up to 1,900 move-up units.

In all, multi-family demand within the Culver City half-mile area is expected to range from 800 to 1,200 units between 2012 and 2035. Multi-family demand in the Palms Station half-mile area is expected to range from 1,300 to 1,900 units. However, it should be noted that most households would be equally willing to locate in either the Palms Station or Culver City station areas. Between the two areas there is demand for 2,100 to 3,100 units between 2012 and 2035.

Sepulveda and Bundy Station Area Demand

Figure 116, on the next page, presents the multi-family residential demand for the Sepulveda and Bundy Station areas. The analysis looks at demand from projected new households and estimates of residents who want to move to better housing, the move-up market.

The combined Sepulveda and Bundy Station area is expected to add 4,000 households between 2012 and 2035. Distributed based on the existing share of households in each station area and accounting for multi-family demand, the Sepulveda Station area is expected to add 2,400 households while the Bundy Station area is expected to add 1,700 household. Assuming that this growth will be focused within a half-mile of the station, the Sepulveda station half-mile area is projected to capture almost 900 new units and the Bundy station area is anticipated to capture almost 800 units from new resident demand.

Using the move-up ratio calculated for the combined area, an estimated 8,000 households are income-qualified for new move-up units in the area. Within the station areas, households will create demand for 4,800 move up units in the

Sepulveda Station Area and 3,300 move-up units in the Bundy Station Area. Within an immediate half-mile radius of the station, the Sepulveda station is projected to capture demand for 1,700 move-up households, while the Bundy Station area is projected to capture demand for 1,500 move-up units.

In all, multi-family residential demand is projected to range from 900 to 1,700 units within a half-mile of the Sepulveda station between 2012 and 2035. Multi-family residential demand is projected to range from 800 to 1,500 within a half-mile of the Bundy station between 2012 and 2035.

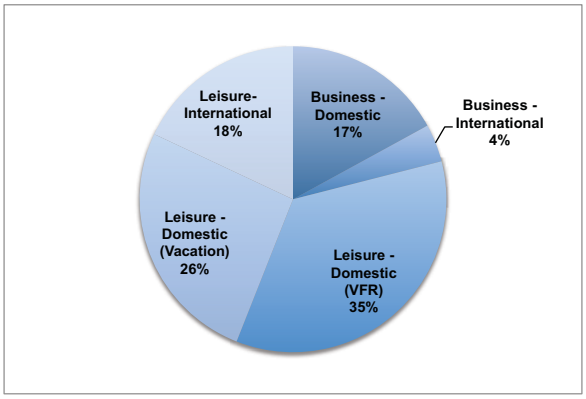
Hotel Demand

Hotel demand is generated from two major sources, leisure tourism and business, but also can be generated by local residents (typically from visiting friends and relatives). Considering a hotel, specifically, at the Sepulveda Station, hotel rooms are anticipated to be generated by both business and local residents. An additional layer of demand (that has not been included for this analysis) is demand from UCLA. Graduations, conferences, and other university activities are likely to generate additional hotel room demand in the area.

Methodology

To project demand generated from business and local residents, tourism data was used to estimate the room nights supported by employees and residents. In 2011, the Los Angeles Tourism and Convention Board reported there were approximately 25,578,000 room nights sold throughout the Los Angeles County hotel market[35]. As shown in Figure 117, 21 percent of all LA visitors are for business and 79 percent of visitors are leisure. Approximately 44 percent of leisure visitors are visiting family and relatives.

Figure 117: LA County Overnight Visitor Distribution



Source: Los Angeles Convention and Visitors Bureau

Survey data of California travel behavior prepared by TNS TravelsAmerica, was used to estimate the weighted share of room nights used by each visitor category in Figure 118. Business visitors are estimated to account for 31 percent of room nights. As shown in Figure 117, domestic leisure visitors account for approximately 40 percent of room nights. Approximately 57 percent of all domestic leisure visitors are visiting friends and relative, so they proportionally would account for 23 percent of room nights, but assuming that less of those visiting family and relatives are staying in a hotel we estimate that 20 percent of room nights are generated by residents' visiting friends and family.

[35] Smith Travel Research data reported in the LA Tourism & Convention Board's Los Angeles Tourism Statistics 2011

Figure 118: Calculation of Share of Room Nights

	Overnight Visitor Distribution X	Est. Staying in hotel X	Est. Avg Nights (in hotel) =	Weights	Est. Share of Room Nights
Business	21.00%	87%	3.9	0.71	**31%**
Domestic Leisure	61.00%	40%	3.8	0.93	**40%**
International Leisure	18.00%	77%	5	0.69	**30%**
Total	100.00%			2.33	**100%**

Source: Los Angeles Tourism and Convention Board, TNS TravelsAmerica, 2011

In Figure 119, these shares are applied to total room nights and divided by residents or employees to estimate the pro rata resident and employee factors. For business, the analysis assumes hotel rooms are primarily used by office employees and the total business room night is divided by a Los Angeles County office-using employee estimate[36]. Resident supported rooms are estimated based on a population factor.

Figure 119: Room Night Demand Factors

Room Night per Employee and Resident Estimates				
Estimated Business Room Nights	**Share of Room Nights**	**Est. Room Nights**	**Office Using Employees**	**Room Nights per Employee**
Business	31%	7,812,774.02	1,512,000	5.2
Estimated Resident Supported Room Nights	**Share of Room Nights**	**Est. Room Nights**	**LA County Population**	**Room Nights per Resident**
Visiting Friends and Relatives (VFR)	20%	5,115,600	9,884,000	0.52

Source: Pro Forma Advisors

[36] Based on findings in the office demand section, office-using employees were estimated at 35 percent of all employees.

Hotel Demand

As shown in Figure 120, employees anticipated in the Los Angeles portion of the Expo LRT Market Area (the West LA CPA) are applied to the room nights per employee to estimate total room nights supported by business. Between 2012 and 2035, businesses are projected to support demand for approximately 520 hotel rooms.

Incremental new residents are projected to support an additional 60 new hotel rooms.

Station-Specific Market Analysis

The Station-Specific Market Analysis provides a comprehensive overview of the key market aspects of the Expo LRT station areas and presents projected demand for major land uses at each of the Expo LRT study station areas. The Station-Specific Market Analysis currently includes five elements:

- **Station Overview.** Each section begins with a station overview that highlights the physical and market context of the half-mile area surrounding the study stations and highlights the areas identified as possible "opportunity sites". Opportunity sites were broadly identified as areas with the potential for redevelopment in the short to mid-term (approximately the next 5 – 15 years). It should be noted that owners of some of the identified opportunities areas, particularly in the Sepulveda Station area and Bundy Station area, are already considering redevelopment of these properties. While these planned and proposed projects are noted in the section, the analysis has not been constrained to current plans.

- **Existing Businesses.** For commercial-oriented station areas, such as the Bundy, Sepulveda, and Culver City Stations, an analysis of existing businesses in the half-mile area is presented. The City of Los Angeles has a policy to protect industrial-zoned land in certain areas with the intent to retain and expand existing jobs. This analysis provides useful information on the business activities taking place within the half-mile area and specific sub areas. By understanding the location of industrial-users and other non-industrial employers, the City can better understand what types of industries are located in the area and better support future job growth.

- **Planned and Proposed or Recent Comparable Projects**. For many of the stations, the market analysis presents major planned and proposed projects in the area and/or recent comparable projects.

- **Challenges and Opportunities.** This section broadly describes the key market challenges and opportunities within the half-mile area and opportunity sites.

- **Demand Analysis.** Using the regional demand estimates for the City of Los Angeles portion of the Expo LRT Market Area, this section drills down to the demand for each land use that may be generally supported within the half-mile station area. For commercial-oriented station areas, such as Bundy, Sepulveda, and Culver City, we project the amount of office, industrial, and retail, as well as residential that can be supported in the half-mile area. In addition, the Sepulveda Station was identified as a potential location for hotel uses. Hotel demand is explored for this station. For the more residential-oriented Palms Station, demand is evaluated for residential, retail, and neighborhood-serving office.

Bundy Station Area

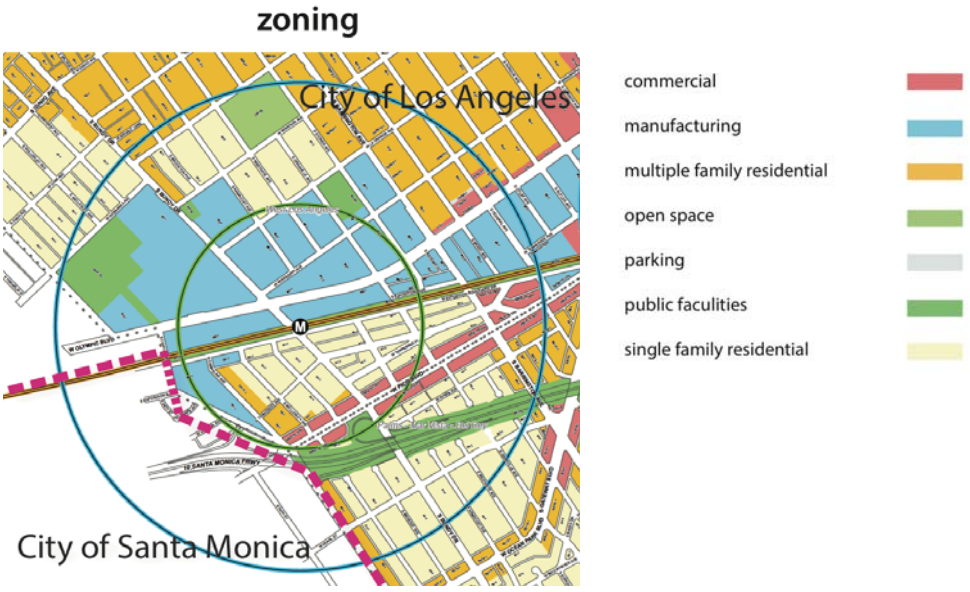
Located adjacent to a strong and growing cluster of creative businesses, the Bundy Station has strong near term opportunities for commercial, as well as residential development.

Station Overview

The Bundy Station area sits on the edge of a major entertainment and creative industry-related employment corridor that is centered within Santa Monica and extends down Olympic Boulevard. The Water Gardens complex, Yahoo, MGM Plaza, Revolution Studios, Interscope Music, Lionsgate, HBO, MTV, Universal Music, Sony Music and Geffen Records are all located within a mile of the Bundy Station. Office properties in Santa Monica have some of the highest office rents in the Los Angeles region. With this major cluster of entertainment businesses and increasing demand, properties along Olympic Boulevard that were historically industrial have redeveloped into office and creative office, such as the 12-acre Lantana. Within the station area, approximately a third of the half-mile area is zoned for manufacturing industrial uses, but the majority of this space, particularly within a quarter mile of the station, is being used for office-type commercial uses.

In addition to commercial uses, the half-mile area also includes a significant share of residential uses. The areas north of Nebraska Avenue to the west of Bundy Drive and north of La Grange Avenue on the east of Bundy Drive include single-family and multi-family residential neighborhoods. These areas connect to larger West Los Angeles and Santa Monica residential neighborhoods. Immediately to the south of Exposition Boulevard there are two single-family neighborhoods. These neighborhoods are somewhat isolated by the I-10 Freeway.

Figure 121: Bundy Station Zoning Map



Source: City of Los Angeles

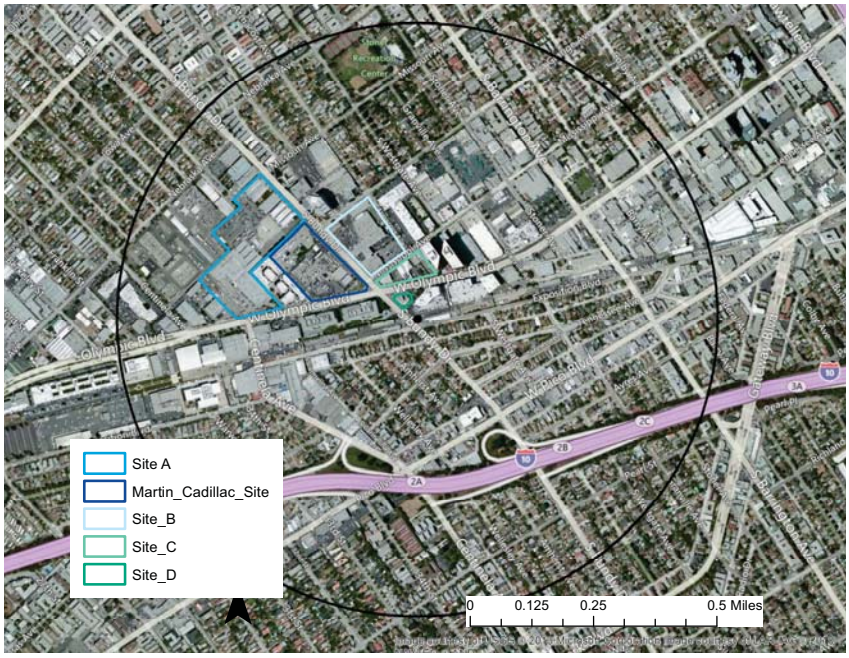
Figure 122: Bundy Station Existing Land Use Map

Source: City of Los Angeles

Opportunity Areas

The main opportunity area, Site A, is approximately 12 acres and is one of the largest areas available for redevelopment in the Expo LRT Market Area west of the I-405. The acreage is on par with the 17-acre Water Garden. This site was previously planned with the Bundy Village, but that plan was scrapped by the new owners who plan to use the existing buildings for creative office (See the Planned and Proposed section).

The Martin Cadillac site is currently under development for a mixed-use retail and residential building (See



Source: DCP and Pro Forma Advisors

more in the Planned and Proposed section).

Site B currently holds an Orchard Supply Hardware (OSH), a Lamps Plus, a Staples and other larger format retail. Site C includes a Chevron gas station and a small strip mall with a Coffee Bean. Site D includes a Shell Station.

Existing Businesses

There are approximately 10,000 jobs within the Bundy Station half-mile area. As shown in Figure 123, the leading industries in the Bundy half-mile station area are Professional, Scientific and Technical, Retail, Other Services, and Information. While there are a number of standard professional fields such as attorneys offices, accountants and engineers, many of the industries in the area are directly connected to and servicing the entertainment and digital fields.

- Professional, Scientific and Technical– 2,000 jobs, 1 out of 5 jobs, are within the Professional, Scientific and Technical industry category. Within this category, marketing firms, both traditional marketing consultant and research firms as well as online firms such as online shopping sites such as Shopzilla (300 employees), make up a third of the employment in this category, other major employers include Attorneys, Architects, and Accountants.
- Retail is the second largest employer in the area. With the Martin Cadillac dealership as well as smaller Saab, Ferrari, and Jaguar-Land Rover dealerships in the area, New Vehicle Dealers are the largest retail employer (500 employees) and one of the largest employers in the station area, Supermarkets and Grocery Stores (200 employees) are the next major retail employers, then Pet and Pet Supplies (160 employees).
- Other Services is the third largest industry in this station area. This category includes a variety of businesses. The firm Beach Bodies, which makes the P90X workout videos, is the single largest employer in the Bundy Station area and makes up more than half of the employment in this category. Other major employers in this category or automotive repair and other personal services.
- Information, which includes motion picture broadcasting and other entertainment industries, is the fourth largest category. Radio and Television Broadcasting and the Motion Picture and Video Industries make up the bulk of employment in this category, employing 660 in the Bundy Station area. As described in the Industry Analysis this is a major area of growth as well.

Source: InfoUSA, Pro Forma Advisors

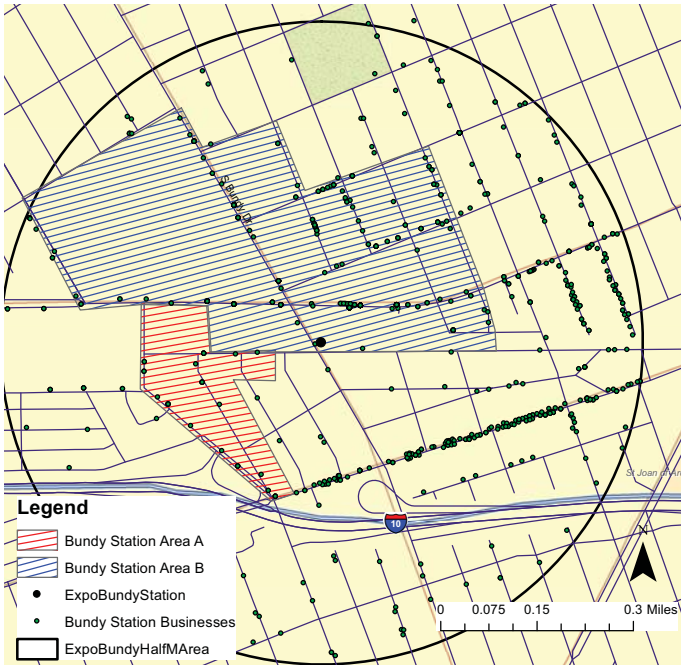
Business listings are evaluated for two subareas shown in Figure 124. It should be noted that while the figure maps business listings it does not well reflect the density of businesses because many businesses are located at the same address and are only represented with one dot.

Area A - South of Expo Area

Area A was analyzed to better understand the make up of businesses in an area zoned for manufacturing. Approximately 34 businesses in the area employ approximately 230 persons. It is worth noting that no traditional manufacturing exists in the area. However, 60 percent of employment is in businesses that generally require industrial land. These industrial users include two construction firms, one auto wholesaler, self-storage firms, equipment and vehicle leasing businesses, and several auto repair and vehicle towing shops. Non-industrial users include retail firms, wine storage, art galleries, photography and video editing firms.

Currently the industrial users generate more employment within the area than non-industrial users. The two automotive repair and five equipment rental firms generate almost half of the areas employees.

Figure 124: Bundy Business Listing Sub Area Map



Source: InfoUSA, ESRI, Pro Forma Advisors

Area B – North of Expo Area

The study also looked closely at the quarter mile area from the station North of Exposition/Olympic to get a better sense of the business located here. There are approximately 5,800 employees in 470 businesses in Area B. According to InfoUSA data, area employment includes primarily Professional, Scientific and Technical Services, Information, and Retail Trade. Other key industries include, Real Estate Rental and Leasing, Administrative Support, and Finance and Insurance, as well as Arts, Recreation and Entertainment. While a number of professional industry businesses are located in the area, many appear to be oriented towards the entertainment and media market. There are the headquarters for a number of growing companies, VCA Antech (animal hospitals), Hulu, Fandango.com, Shopzilla.com and office and facilities for a number of media companies, such as Fox, Duck Soup Studios, LA Arena Football.

Approximately 400 employees work in industrial-user business, less than 10 percent. The majority of these employees are in the wholesale retail trade and building and equipment material retail stores.

Planned and Proposed Development

The Santa Monica and West Los Angeles markets have some of the highest performing real estate in the Los Angeles region and development is very active. With the construction of the Expo LRT there is strong interest in redevelopment of underutilized parcels. Several developments have recently been proposed on the northwest corner of Olympic and Bundy Boulevard. Additionally, we highlight major developments in the Bergamot Station area, which is approximately one mile from the Bundy Station, as these developments may impact the scale of future development.

Bundy Village/Olympic Media Campus

Proposed developments include the now shelved Bundy Village and Medical Park, which included 500,000 square feet of commercial space and 385 residential units, on the properties just behind the Martin Cadillac site that is at the immediate corner. Residents were concerned that the Bundy Village and Medical Park project would compound existing traffic impacts on Bundy Drive and were interested in more residential, rather than commercial, to help better balance the live-jobs imbalance that brings the rush hour traffic impacts to the area.

Hudson Pacific Properties purchased this site in September of 2012 for $89 million and has current plans for a creative office media center campus. Hudson Pacific plans to keep the existing 4 buildings, totaling 230,000 square feet, renovating the buildings into best-in class creative office space and providing internal open space/recreation space for tenants.

Martin Cadillac Site

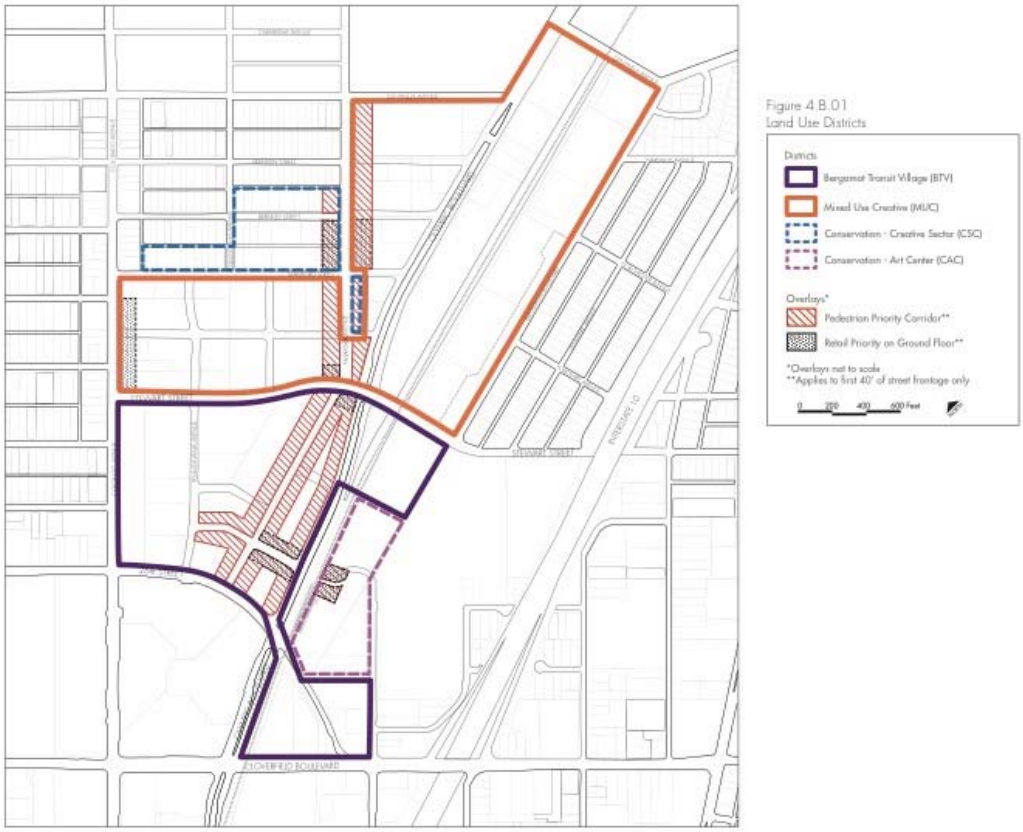
Owners of the Martin Cadillac site are currently working on plans to redevelop the site. The property is located on the northwest corner of Bundy Drive and Olympic Boulevard and contains the Martin Cadillac dealership and service center. Current proposals include a mixed-use project that would maintain the current car dealership in a new configuration and add housing.

Bergamot Transit Village

Hines Development has been pursuing the Bergamot Transit Village, located on the old Papermate industrial site on Olympic Boulevard between Stewart and 26th Street. Based on input from the Santa Monica city council, the scale of the project was reduced from initial plans of almost 1 millions square feet of development to approximately 750,000 square feet. The current project includes approximately 500,000 square feet of creative office, 47,000 square feet of retail, and 200,000 square feet of residential. However, current plan may change, as there is pressure to add more housing and reduce the office space within the project.

Bergamot Area Plan

The City of Santa Monica is currently preparing a plan for the larger Bergamot Station area. The area will include Hines Developments' Bergamot Village Project, the Bergamot Arts Center, and a mixed-use creative district.



Source: City of Santa Monica

Other Projects

With the advent of the train station, other projects are gearing up. Developer ADC Realty Group is planning a 95 unit building near Pico Boulevard and Centinela within the station area with a proposed 95 units.

Challenges and Opportunities

Challenges

1) Traffic along Bundy. There are major traffic problems on Bundy Drive from the I-10 north to Wilshire Avenue. Traffic issues impact access to properties and make the area less attractive for residents and businesses. Traffic arises due to the large number of employees who live outside of the area coming to the cluster of employment-based uses in the area. The new Expo LRT will help to alleviate some of these issues.

2) Residents are concerned with higher density and the addition of new employment-based uses. It should be noted that most of these concerns are related to the traffic impacts of increased density and new office uses.

3) Current Parking Challenges. There is a shortage of parking in the area and current commercial properties have difficulty parking all the tenant employees in their buildings. Limited land availability and the high cost of that land also make developing additional parking expensive.

4) Future Parking Challenges. With the coming of the new Expo LRT there is an interest to reduce parking requirements, but with the limits of the existing Los Angeles transit system it is difficult to build successful developments with less parking. However, as the Los Angeles transit system expands across the next 5 to 20 years, parking built today's standards will be underutilized. How do we balance today's needs while promoting the best development in the future?

Opportunities

1) Santa Monica is Los Angeles County's top office market (in terms of rent) and is the first choice of the growing digital media and entertainment industries in Southern California. Proximity to Santa Monica's main core of

office development provides the Bundy Station area with a major advantage over other City of Los Angeles office areas to draw a cluster of the region's creative and technology industries within the City of Los Angeles. It is very important that the City capture a share of this Class A office market in the Bundy Station Area.

a. ILUP says to maintain industrial lands, but, as shown in the Existing Business Section, there is little to no manufacturing within the quarter mile of the station area and few businesses that are industrial users. DCP should focus on maintaining employment-based uses in the area, but allow for more density within a quarter mile of the station area.

b. One outstanding question will be the scale of the development within the area. Creative office is the most recent office development trend, but typically creative office is developed in low to mid-rise formats. Given the interest in pursuing density around the transit station, mid to high-rise office formats may also be a consideration.

2) Balancing the mix of uses in the Bundy Station area could help to improve the current traffic problems. With the scale of employment-based uses in the area, there is strong demand for housing units in the area. It is possible that areas south of Exposition Boulevard could be up-zoned for higher multi-family uses and there is also potential for residential uses within the opportunity sites. PFA notes that multi-family uses could be in the Los Angeles standard mid-rise buildings, but given the demographics and income of households in the area, the opportunity site may also be able to support a high-rise luxury building, such as those found on the Wilshire Corridor.

3) It is worth noting given that the Bundy Station area is a prime real estate market, there is strong demand in the area for all uses and the station area will be able to support a strong level of public benefits. As this station area is planned, the City should consider how to best capture and allocate public benefits.

4) As part of the public benefits conversation, DCP should and is considering what parking solutions can be implemented within the area. As will be shown in the Demand Analysis, the Bundy station has strong demand for all land uses. Feasibility of project will be the major factor in the capacity of the City to capture public benefits from the projects and at this point a certain level of parking is required for a development to attract tenants, but reduced parking, otherwise, can help the project bottom line. This is an opportunity to consider a number of parking solutions, such as:

a. Shared Parking - Private. Parking policies that encourage shared parking, between different properties. One developer mentions that other cities allow developers to identify and make agreements with other property owners to use stalls and have these stalls count towards parking requirements.

b. Stacked Parking. Another developer mentioned that robotic stacked parking stalls should be considered. This is new technology that uses hydraulics systems to allow a large number of cars to be stacked and stored in compact space.

c. Pooled Parking/Parking District/Parking Fee – Public parking structures that allow for shared parking between various properties within the station area would be very beneficial to new development. In many jurisdictions, it has been most expedient to have the municipality build a shared parking structure that is partially repaid from a parking fee. Though more challenging, the City may consider approaches that incentivize private developers to build shared parking facilities as a public benefit.

d. Parking Structures that can be Repurposed – Another solution may be to encourage the separation of parking facilities from other land uses and requiring parking facilities that can be repurposed into other uses in the future. Parking facilities may be required to have flat parking floors, rather than slanted, include wrap around retail, and have attractive facades.

5) Bundy Drive has major traffic issues and, even with no entitlement changes, traffic will likely get worse. The City should look to how policy can encourage transit use. Depending on the parking solution considered, perhaps the City should consider making parking maximums in some areas in the future (phased parking maximums) to encourage more transit use and the sharing of parking.

Demand Analysis

As mentioned above, the Bundy Station is well located in close proximity to a core cluster of Santa Monica office. Office uses are likely to play an important role in development in the area. In addition, due to the cluster of employment uses, there is also need for additional residential in the area. Both the transit line and new residential units, hopefully occupied by people who work in the area, may help to improve the mix of uses and mitigate increasing peak hour traffic concerns.

Office

In the Regional Demand Analysis we estimate that the Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) may capture office demand of almost 7 – 10 million square feet between 2012 and 2035. Much of this demand is likely to be captured by the Century City area. Currently Bundy makes up approximately 10 percent of the West LA CPAs office. However, Bundy also has a strong office market that will only continue to grow as Santa Monica becomes more expensive.

Estimating that the Bundy Station area could capture between 15 to 20 percent of office growth, Bundy is projected to capture between 1.0 million and 2.1 million square feet across the next 25 years.

Figure 126: Bundy Station Area Office Demand

Estimated Station Area Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
West Los Angeles CPAs Market Capture							
Low		368,683	658,857	1,772,118	1,935,255	2,114,772	6,849,684
High		553,024	988,286	2,658,177	2,902,883	3,172,157	10,274,527

Bundy	20.0%	111,000	198,000	532,000	581,000	634,000	2,056,000

Source: Pro Forma Advisors

Industrial

The Bundy Station has the second largest amount of industrial among the study stations, but industrial space is being removed from the inventory as owners find higher performing uses for their property. Based on ongoing contractions in industries that typically use industrial, such as manufacturing, and the lack of distribution uses in the area, the Regional Demand Analysis estimated demand of only 900,000 to 1.5 million for industrial in the Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) between 2012 and 2035.

Bundy currently makes up approximately 12 percent of the industrial space. Given that there are higher performing uses, demand for new industrial is estimated at 10 percent of the West LA CPAs demand, 90,000 to 115,000 square feet. This is fairly minimal at only 4,000 to 5,000 square feet a year (equivalent to approx.one small retail storefront).

Figure 127: Bundy Station Industrial Demand

Station Area Industrial Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
City of Los Angeles West LA CPA Demand							
Low	30%	89,958	167,507	190,125	213,657	238,297	899,544
High	50%	149,931	279,178	316,874	356,095	397,162	1,499,240

Bundy	10.0%	15,000	28,000	32,000	36,000	40,000	151,000

Source: Pro Forma Advisors

Retail

As described in the Regional Demand Analysis section, retail support is expected to come from three factors (1) demand from new residents (2) recapture of existing demand in subpar strip and general retailers, and (3) employee spending.

The Regional Demand Analysis section estimates new residents' demand for retail within a two-mile corridor of the five station areas and then estimates the share of retail that could be absorbed within all station areas. The Regional Demand Analysis section estimates that all the station areas can absorb between 460,000 and 700,000 square feet of

retail demand between 2012 and 2035. Using the station distributions of existing and expected growth, the Bundy station is expected to capture approximately 20 percent of the demand within the corridor from new residents, or 100,000 to 140,000 retail square feet.

Figure 128: Bundy Station New Resident Retail Demand

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Total Retail and Food Services Square Feet Support		122,237	203,728	277,996	277,996	277,996	1,159,955
Capture Within All Station Areas - Low	40%	48,895	81,491	111,199	111,199	111,199	463,982
Low Station Area Capture of New Resident Support Bundy	20%	9,779	16,298	22,240	22,240	22,240	92,796
Capture Within All Station Areas - High	60%	73,342	122,237	166,798	166,798	166,798	695,973
High Station Area Capture of New Resident Support Bundy	20%	14,668	24,447	33,360	33,360	33,360	139,195

Source: Pro Forma Advisors

Recapture of strip and general retail is calculated directly from the West LA CPAs portion as a straight share between the station areas in the Regional Demand section. This recapture of existing retail demand is expected to range from 40,000 to 90,000 square feet for the Bundy Station.

A substantial share of retail demand is anticipated from employee spending in the Bundy Station area. Translating the low and high office square feet estimates in the Office Demand analysis into employees, average new office employees in the area are estimated at 4,100. Applying the average retail SF supported per employee figure estimated in the Regional Demand section, the Bundy Station half-mile area employees are expected to support approximately 60,000 square feet of retail.

Figure 129: Bundy Station Employee Retail Demand

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Range Avg. Station Area Office Employees Bundy		221	396	1,064	1,161	1,268	4,111
Retail SF Support from Office Employees Bundy	Retail SF per Worker 14.83	3,282	5,872	15,778	17,222	18,803	60,958

Source: Pro Forma Advisors

With all three retail support metrics, the Bundy Station is expected to support demand for 190,000 to 290,000 square feet of retail between 2012 and 2035.

Figure 130: Bundy Station Retail Summary

	2012-2025	2025-2035	Total
Existing Demand Recapture	40,000- 90,000 SF		
Demand from New Residents	50,000 - 70,000 SF	40,000 - 70,000 SF	
Avg. Demand from New Employees	20,000 SF	40,000 SF	
Total	**110,000 - 180,000 SF**	**80,000 - 110,000 SF**	**190,000 - 290,000 SF**

Source: Pro Forma Advisors

Residential

Given the amount of people who work in the area, there is strong demand for residential in the West Los Angeles area. The Regional Demand Analysis section finds that there are 4,000 new households anticipated in the combined Bundy and Sepulveda Station areas between 2012 and 2035. With the income qualified move-up market, demand in the area is a total of 8,000 households. Also in the Regional Demand Analysis, the distribution of the new household and move up growth between each station area is estimated based on the Bundy Station Area's households vs. the Sepulveda Station Area's households, 41 percent and 59 percent respectively. This is further refined down to the half-mile area.

Currently households in the immediate half-mile radius of the Bundy station make up 20 percent of the larger census approximated station areas. Assuming that as much as 45 percent of the new household growth and move-up market is centered in the half-mile station areas we anticipate, multi-family residential demand is projected to range from 800 to 1,500 within a half-mile of the Bundy station between 2012 and 2035.

Figure 131: Bundy Station Residential Demand

	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Demand from New Households (Half-Mile Area)						
Bundy Station	49	82	208	208	208	**756**
Demand from New Households and Move Up Households (Half-Mile Area)						
Bundy Station	145	242	369	369	369	**1,493**

Source: Pro Forma Advisors

Based on the jobs in the area, there is strong demand for residential units in the area, including luxury units. Based on the small family size and younger nature of the area, higher density 6+ story residential towers may also work in the area.

Comparables

The following section briefly describes notable office projects within the Bundy Station vicinity.

Water Garden

The Water Garden office campus is located on the 17 acre-block between 26th Avenue and Cloverfield north of Olympic, approximately 1 mile west of Bundy Station. The Class A office campus has six 6-story glass towers and two 5-story

glass tower buildings totaling 1.27 million square feet with three levels of subterranean parking. A premier Santa Monica office address, recent listings for available space reflect a lease rate of approximately $5.00 per square foot per month.

Lantana

Located at 3000 West Olympic Boulevard, less than a half-mile mile away from the Bundy Station, the Lantana Media Entertainment Campus is a film/TV studio campus that encompasses 12 acres and includes approximately 540,000 square feet of rentable building area in four low-rise buildings. The complex houses IMAX and Revolution Studios.

Source: Hines

Monthly lease rates are approximately $4.25 per square foot.

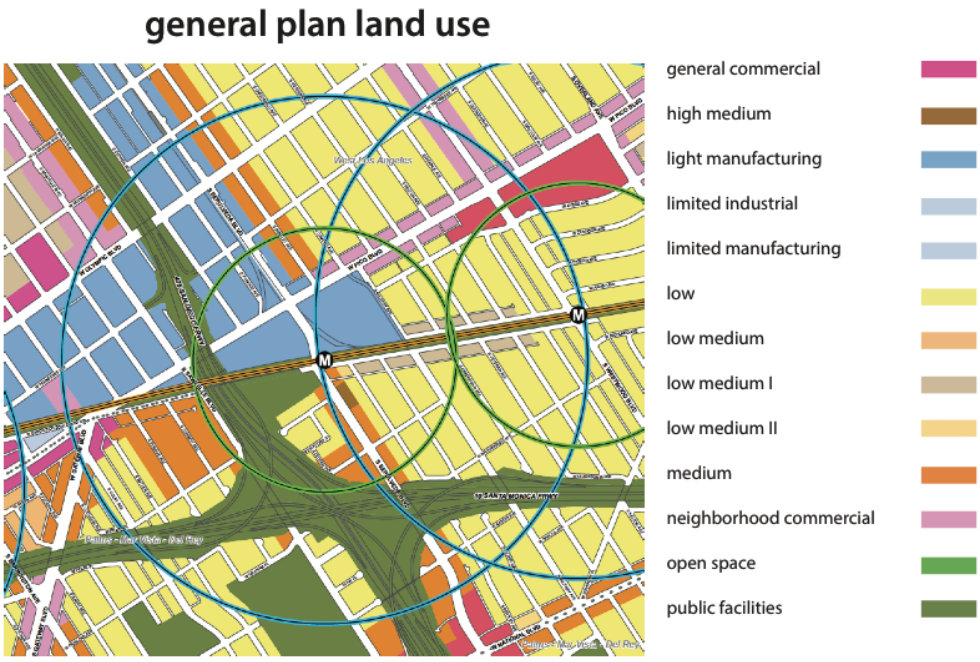
Sepulveda Station Area

Station Overview

The Sepulveda Station is located near the intersection of Exposition Boulevard and Sepulveda Boulevard. Both the I-405 Freeway and I-10 Freeway intersect the half-mile radius area of the station.

The northwest quadrant of the half-mile area is zoned for light manufacturing use, but, as detailed later in this section, a variety of uses including retail, creative office, as well as manufacturing, wholesale, and construction, are located in the station area.

Figure 132: Sepulveda Station Land Use



Source: City of Los Angeles

As shown in Figure 133, immediately north of the station area are two mega blocks that have been identified as the opportunity areas for the study. These westerly block includes a cement factory, public storage facility, a building materials retailer, and a County operated office building, while the easterly block includes the popular Anawalt building materials store, Party City, and 2440 S. Sepulveda, an 140,000 square foot Class C building being used for creative office.

Figure 133: Sepulveda Station Opportunity Site

Source: ESRI, Bing, City of Los Angeles, Pro Forma Advisors

The Westside Pavilion is partially located within the half-mile area of the Sepulveda station. The Westside Pavilion, located in two buildings, is a 740,000 square feet super-regional center, anchored by a Nordstrom's, Macy's, Landmark Theatre and Urban Home. The mall anchors a larger cluster of small-scale retail and restaurants that extend from Westwood Avenue toward Sepulveda Boulevard on Pico Boulevard.

West of the I-405, there is 300,000 square feet power center, anchored by a Marshalls, at the corner of Olympic and Sawtelle Boulevard, and a Best Buy, as well as a cluster of mid-rise office buildings. Also west of the I-405, but just beyond the half-mile area is the Japantown area, a cluster of small-scale retail and dining storefronts along Sawtelle Boulevard.

Existing Businesses

Using business data from InfoUSA, this analysis reviews the existing businesses within the half-mile area. Business listings within smaller areas of the half-mile are also explored to provide a better understanding of the opportunity area as well as other the industrially zoned land within the half-mile area.

Half-Mile Businesses

There are approximately 8,000 employees located within a half-mile of the Sepulveda Station. The half-mile area includes a portion of the Westside Pavilion Mall, the adjacent local dining destination hub with a strip of restaurants located along Pico, as well as the retail areas located along Sawtelle Boulevard in the Japantown area. Unsurprising the largest employment category is in Retail and the third largest is Accommodations and Food Service. The second largest employment industry category is Professional, Scientific, and Technical. The Information category and Health Services are tied for the fourth largest employment category.

- Retail. Retail supports 1,600 jobs in the Sepulveda Station Area. Westside Pavilion is one the major retail employers in the area and department stores, such as Nordstrom's, are a major employer. However, it should be noted that approximately half of the mall is within the half-mile station area and only the employees within the half-mile are included in this analysis. There are 10 building materials dealers, such as Anawalt Lumber and

Best Little Door House in Town, and a number of glass door and other hardware that support a total of 160 jobs. Electronics, car dealers, supermarkets and furniture's stores also support a number of retail jobs in the area.

- Professional, Scientific, and Technology industries support 1,300 jobs in the area. Major employers include medical testing laboratories, specifically the National Genetics Institute, offices of lawyers, advertising agencies, such as the creative agency M Ocean, and certified public accountants. Almost half of the Professional, Scientific and Technology industry jobs are located in the existing creative office space in the 2440 S. Sepulveda building.

- Accommodations and Food Service support 1,100 jobs in the station area. In the Sepulveda station area the Accommodations and Food Service industry is made up of primarily limited-service food restaurants, such as Apple Pan, Norm's Restaurant along Pico Boulevard and Hurry Curry of Tokyo and Crepe to Go on Sawtelle Boulevard. The area includes two limited-service hotels, the Best Western Royal Palace on Pico Boulevard, and the boutique Sky Hotel on Westwood Boulevard.

- Health Care and Social Services employ 600 workers. Approximately half of the health care services are offices of medical practitioners. Other health businesses include service offices such as home health care services, ambulatory services.

- The Information industry category also employs 600 workers. Major employers in this industry include magazine publishing, such as the magazine European Medical Device MFR, motion picture production and distribution, and entertainment-related internet media firms, such as ShowFax, and other communication firms.

To better understand the nature of the half-mile station area, business listings are evaluated for three commercial subareas shown in Figure 135.

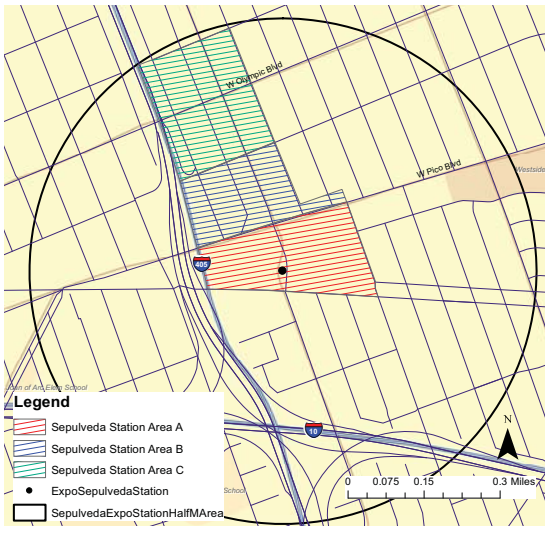
Sepulveda Area A – Opportunity Area

There are 800 jobs reported within the Sepulveda Station Area A, the opportunity area. The largest employment category in the area is Professional, Scientific, and Technical services.

Most of the Professional, Scientific, and Technical service jobs, more than half of the reported Area A jobs, are located in 2440 S. Sepulveda, highlighted on the next page.

The second largest employment category is retail. These include building and materials retailers such

Figure 135: Sepulveda Business Listing Sub Areas



as Anawalt Lumber, West Los Angeles Building, across the street, as well as a number of home and furniture-oriented businesses, such as Euro Design Kitchen and Bath.

This area also includes a large Public Storage facility and the California Portland Cement Company, two industrial-users, occupying a large portion of the block west of Sepulveda. In total, approximately 148 of the 820 jobs would be considered industrial-users.

It should be noted that 11110 W. Pico Boulevard, the large office building on block west of Sepulveda Boulevard, is occupied by the Los Angeles County Department of Public Social Services.

Sepulveda Area B

There are 700 jobs located between Pico Boulevard and Tennessee Avenue between Sepulveda Boulevard and the 405 Freeway. Retail trade employs the largest number in the area. Retail employment is led by Food and Beverage Stores (Food 4 Less), Building Materials & Garden Supplies stores, then Sporting Goods Stores.

Beyond Retail, Information and Administrative Services are the next largest categories. Information includes publishing and motion picture-related firms. Veterinarian clinics and hospitals make up the majority of the Administrative Services employment in the area.

Approximately 130 out of 700 businesses are industrial-users. This includes building materials and garden supply stores mentioned before, a number of construction contractors, and wholesalers. Most of the buildings are home-related, such as wall paper stores, one furniture upholstery company considered manufacturing, and kitchen and tile stores.

Sepulveda Area C

Area C looks at the area within a half-mile of the station area north of Tennessee Avenue. There are approximately 1,200 jobs located in this area. The area has a strong diversity of businesses.

The largest industry employer is the Professional, Scientific, and Technical category, which is made up primarily of lawyers offices, an advertising agent, and a variety of other smaller offices. The Finance and Insurance industry category is a close second. Information and Retail make up the next largest categories. Information only includes one business, Showfax, an online casting website, mentioned above, while retail is made up of a number of different retail stores.

Approximately 220 of the 1,200 employees in the area work in industrial-user type businesses. This includes freight and warehousing businesses, a number of wholesale trade businesses, as well as 11 auto care and repair businesses employing almost 70 workers.

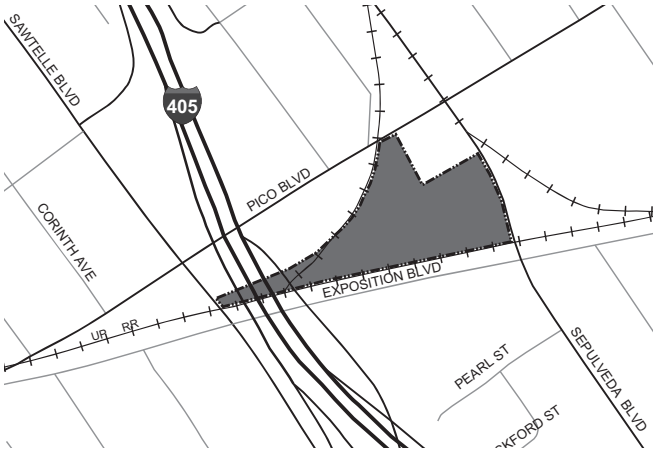
Planned and Proposed Development

Casden Property Company is seeking entitlement changes for a proposed mixed-use project on the westerly block in the opportunity area identified in Figure 138 ("Casden Project"). The Casden Project includes 267,000 square feet of retail with 538 residential units (total of approx. 520,000 SF), 59 of which are to be senior affordable units. The project will include ground-floor retail across most of the parcel and will include residential above in four buildings. Buildings range from approximately 9 to 17 stories. The project will also provide pedestrian access from the light rail station to the project.

This project is currently under consideration by the City of Los Angeles, but has garnered criticism from resident groups, such as the West Los Angeles Neighborhood Council. Criticisms include concerns about traffic impacts, the proximity of residential to the I-405 and I-10 freeways, the scale of residential and retail proposed. Critics have stated a preference for employment-based uses, a downsized physical presence of the building, greater mitigations for traffic, maintaining small businesses in the area, and the provision of greater open space for the project.

Figure 138: Proposed Casden Project



Source: Casden Sepulveda Project DEIR

Challenges and Opportunities

Challenges

1) There are a number of financially high-performing uses currently located on the opportunity site, including the public storage facility and County building on the west block, and the full occupied 2440 S. Sepulveda building, that will make it more challenging to redevelop the opportunity site. New development has to be of a sufficient density and profit to make the property owner interested in redeveloping or selling these properties.

2) The Sepulveda half-mile area is bisected by two freeways, the I-405 Freeway and I-10 Freeway. Pollution concerns from freeway traffic may restrict housing to the more easterly portions of the half-mile area and opportunity site. However, it should be noted that the freeway access will make the area of higher interest for both residential and retail developments.

3) The area has an eclectic mix of uses—lumber yards, theatre, kitchen and bath store, furniture stores, veterinarian offices—that make the area less attractive for high performing employment-uses. The half-mile area, specifically subsets of the area, would benefit from the clustering of uses and development of a clear identity.

4) Currently the station area is not very pedestrian friendly. Sidewalk enhancements and better connections between the blocks and to the areas of interest (Pico Boulevard and Sawtelle Boulevard) would improve the market for all uses.

Opportunities

1) With transit access and a growing creative industry sector in the greater West Los Angeles region, there is an opportunity to create an office cluster in the Sepulveda station area. The easterly block of the opportunity site already includes one creative office building and the property has a larger parking lot that could potentially be redeveloped into another office building with reduced parking and subterranean or structured parking. Or, to create a critical mass of premium office space, property owners could work together to fully redevelop the block.

2) In addition to the opportunity sites, the City may want to consider intensifying the uses on all sides of the Pico and Sepulveda intersection. Pico Boulevard includes the Westside Pavilion and retail storefronts extend from the mall towards Sepulveda Boulevard. Between Pico Boulevard and south of Tennessee, there may be an opportunity to develop a mixed-use development, with a mix of large-scale retail, office, and residential (east of Sepulveda). Quality retail space is lacking throughout the westside and, as shown by the Casden Project, big box retailers are interested in siting in the area. Also there is need for additional housing, particularly affordable and student housing in the area.

3) It is the objective of the City of Los Angeles to maintain industrial land for employment-based uses, inline with the City's Industrial Land Use Policy. The business analysis demonstrates that only a limited amount of the

industrial-zoned land is being utilized by businesses who require industrial lands. If areas around the intersection of Pico and Sepulveda are intensified, industrial land north of Tennessee Avenue and closer to the freeway (west of Pontius or Cotner Avenue) can be maintained, allowing industrial uses to be maintained and to transform organically.

4) As reflected in the business analysis, there is a large share of kitchen and bath and furniture stores in the Sepulveda half-mile station area. The City may consider branding the area, similar to Helm's Bakery, to allow this niche to grow further.

5) Finally, a transit hub has been mentioned as a possible use in the area. This may be an important function that this station could play in the overall Phase II Expo network.

Demand Analysis

This immediate Sepulveda station area is promising for a number of commercial and residential uses.

Office

There are well performing office properties within the Sepulveda Station area. These developments are fairly piecemeal developments (i.e. an office behind a retail building, an office building adjacent to a strip mall, the office cluster west of Sawtelle Boulevard). There is potential for development of more concentrated office in the area.

In the Regional Demand Analysis we estimate that the Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) may capture office demand of almost 7 – 10 million square feet between 2012 and 2035. Much of this demand is likely to be captured by the Century City area as well as the Bundy Station area.

The Sepulveda Station area currently has approximately 3 percent of the West Los Angeles CPAs office space, but this station area has more available land to develop office campus properties and strong freeway and public transit access. Thus, it is projected to capture greater than its fair share of office between 2012 and 2035.

Estimating that the Sepulveda Station area could capture between 10 to 15 percent of office growth, the Sepulveda Station area is projected to capture between 700,000 and 1.6 million square feet across the next 25 years.

Figure 139: Sepulveda Station Office Demand

Estimated Station Area Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
West Los Angeles CPAs Market Capture							
Low		368,683	658,857	1,772,118	1,935,255	2,114,772	6,849,684
High		553,024	988,286	2,658,177	2,902,883	3,172,157	10,274,527
Station Area Capture (Low)

Station Area Capture (High)							
Sepulveda	15.0%	83,000	148,000	399,000	435,000	476,000	1,541,000

Source: Pro Forma Advisors

Industrial

Noting that industrial-using employment growth is expected to be fairly limited, the Sepulveda Station area is one of the better areas to maintain some level of industrial. The Sepulveda Station area has the lowest industrial vacancy rate of all the areas and had the highest amount of additional space absorbed since 2000, at 110,000 square feet.

It is worth noting that only 18 percent of jobs, approximately 500, within the industrial areas east of the I-405 require industrial spaces. 110 of the 500 jobs in the opportunity site require industrial-zoned land. Land maintained as industrial can be located north of Pico Boulevard closer to the freeway.

The Regional Demand Analysis estimated demand of only 900,000 to 1.5 million for industrial in the Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) between 2012 and 2035. The Sepulveda Station area currently makes up approximately 10 percent of existing industrial space. Demand for new industrial is estimated at 12 - 15 percent of the West LA CPAs demand, 110,000 to 225,000 square feet.

Figure 140: Sepulveda Station Industrial Demand

Station Area Industrial Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
City of Los Angeles West LA CPA Demand							
Low	30%	89,958	167,507	190,125	213,657	238,297	899,544
High	50%	149,931	279,178	316,874	356,095	397,162	1,499,240

Station Area Capture (High)							
Sepulveda	15.0%	22,000	42,000	48,000	53,000	60,000	225,000

Source: Pro Forma Advisors

Retail

Retail development is strong within this station area. There is good support from projected new residents and strong capacity from existing residents. With the freeway access from the I-405 and the I-10, the station area is well suited for community and regional-serving retail.

In addition, building a connection between the Westside Pavilion and retail located within the station area could help to make the Westside Pavilion and Pico Boulevard a stronger retail destination.

As described in the Regional Demand Analysis section, retail support is expected to come from three factors (1) demand from new residents (2) recapture of existing demand in subpar strip and general retailers, and (3) employee spending.

The Regional Demand Analysis section estimates new residents' demand for retail within a two-mile corridor of the five station areas and then estimates the share of retail that can be absorbed within all station areas. The Regional Demand Analysis section estimates that the station areas can absorb between 460,000 and 700,000 square feet of retail demand between 2012 and 2035.

Using the station distributions of existing and expected household growth, the Sepulveda Station is expected to capture approximately 30 percent of the demand within the corridor from new residents, or 140,000 to 210,000 retail square feet.

Figure 141: Sepulveda Station New Resident Retail Support

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Total Retail and Food Services Square Feet Support		122,237	203,728	277,996	277,996	277,996	1,159,955
Capture Within All Station Areas - Low	40%	48,895	81,491	111,199	111,199	111,199	463,982
Low Station Area Capture of New Resident Support Sepulveda	30%	14,668	24,447	33,360	33,360	33,360	139,195
Capture Within All Station Areas - High	60%	73,342	122,237	166,798	166,798	166,798	695,973
High Station Area Capture of New Resident Support Sepulveda	30%	22,003	36,671	50,039	50,039	50,039	208,792

Source: Pro Forma Advisors

The Regional Demand section estimates that almost 220,000 to 450,000 square feet of strip and general retail may be recaptured in the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPAs). Station area recapture of strip and general retail is calculated directly from the regional recapture as a straight share between the station areas in the Regional Demand section. This recapture of existing retail demand is expected to range from 60,000 to 130,000 square feet for the Sepulveda Station.

Translating the low and high office square feet estimates in the Office Demand analysis into employees, Sepulveda Station average new office employees are estimated at 3,000. Applying the average retail SF supported per employee figure estimated in the Regional Demand section, the Sepulveda Station half-mile area employees are expected to support approximately 40,000 square feet of new retail.

Figure 142: Sepulveda Station Employee Retail Support

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Range Avg. Station Area Office Employees							
Sepulveda		160	285	768	839	916	**2,968**
	Retail SF per Worker						
Retail SF Support from Office Employees							
Sepulveda	14.83	2,373	4,231	11,389	12,437	13,583	**44,013**

Source: Pro Forma Advisors

With all three retail support metrics, the Sepulveda Station is expected to support demand for 245,000 to 385,000 square feet of retail between 2012 and 2035.

Figure 143: Sepulveda Station Retail Demand Summary

	2012-2025	2025-2035	Total
Existing Demand Recapture	60,000- 130,000 SF		
Demand from New Residents	70,000 - 110,000 SF	70,000 - 100,000 SF	
Avg. Demand from New Employees	20,000 SF	25,000 SF	
Total	**150,000 - 260,000 SF**	**95,000 - 125,000 SF**	**245,000 - 385,000 SF**

Source: Pro Forma Advisors

Residential

Strong growth in households is reflected in the SCAG projections for the combined Sepulveda and Bundy Station areas and in the possible move-up market in the Sepulveda area. The Sepulveda Station area has strong demand for multi-family residential units, but, with the close proximity to the 405 and I-10 interchange and existing single-family neighborhoods, as well as the traffic along Sepulveda Boulevard, allowing residential developments in the vicinity should be carefully considered.

The Regional Demand Analysis section finds that there are 4,000 new households anticipated in the combined Bundy and Sepulveda Station areas between 2012 and 2035. Including income qualified move-up market demand, there is a total of 8,000 projected households. Also in the Regional Demand Analysis, the distribution of the new household and move up growth between each station area is estimated based on the Bundy Station Area's households vs. the Sepulveda Station Area's households, 41 percent and 59 percent respectively.

Currently households in the immediate half-mile radius of the Sepulveda Station make up 17 percent of the larger census approximated station areas. Assuming that as much as 40 percent of the new household growth and move-up market is centered in the half-mile station areas we anticipate, rental and for-sale multi-family residential demand is projected to range from 900 to 1,700 within a half-mile of the Sepulveda Station between 2012 and 2035.

It should be noted that (1) any planned and proposed projects that are developed, such as the Casden Project, will reduce demand by the amount of the proposed units, and (2), as described in the Regional Demand Section, Bundy and Sepulveda Station demand was evaluated together because households may be equally willing to locate at either and demand between the two areas may shift.

Figure 144: Sepulveda Station Residential Demand

	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Demand from New Households (Half-Mile Area)						
Sepulveda Station	56	93	236	236	236	**856**
Demand from New Households and Move Up Households (Half-Mile Area)						
Sepulveda Station	164	274	417	417	417	**1,689**

Source: Pro Forma Advisors

Hotel

Given the freeway access and proximity to major West Los Angeles employment areas and UCLA, the Sepulveda Station opportunity area is well suited for a hotel. The Regional Demand analysis shows support for approximately 580 hotel rooms between 2012 and 2035 from businesses and residents in the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPA's).

As shown in Figure 145, a possible 110 to 200-room hotel or hotels would need to penetrate approximately 34 to 37 percent of the market. Given the limited availability of land in the greater West Los Angeles area these market penetrations are achievable with a national limited or full-service hospitality brand, such as Westin, Marriott, (or Courtyard by Marriott) or Hilton/Double Tree.

Figure 145: Sepulveda Station Hotel Market Penetration

Sepulveda Station Hotel	2012-2025	2025-2035
Total New Room Demand (Business and Residents)	298	583
Estimated Sepulveda Hotel Rooms	110	200
Requirement Market Penetration	**37%**	**34%**

Source: Pro Forma Advisors

Palms Station

Station Overview

The Palms Station is located near the intersection of National and Exposition Boulevards in the Palms Community Plan Area of Los Angeles. The Palms Station is approximately 0.8 miles from the Culver City Station and the two stations' half-mile areas overlap.

As reflected in Figure 146, approximately 78 percent of the Palms Station half-mile area is residential, with almost two-thirds multi-family and one-third single family. A well functioning transit line will have station areas with specialized functions, such as employment nodes, residential nodes, shopping nodes, and entertainment nodes. Along the Expo LRT Phase II network of stations, the Palms Station is expected to function primarily as a residential node.

Figure 146: Palms Station Area Land Use

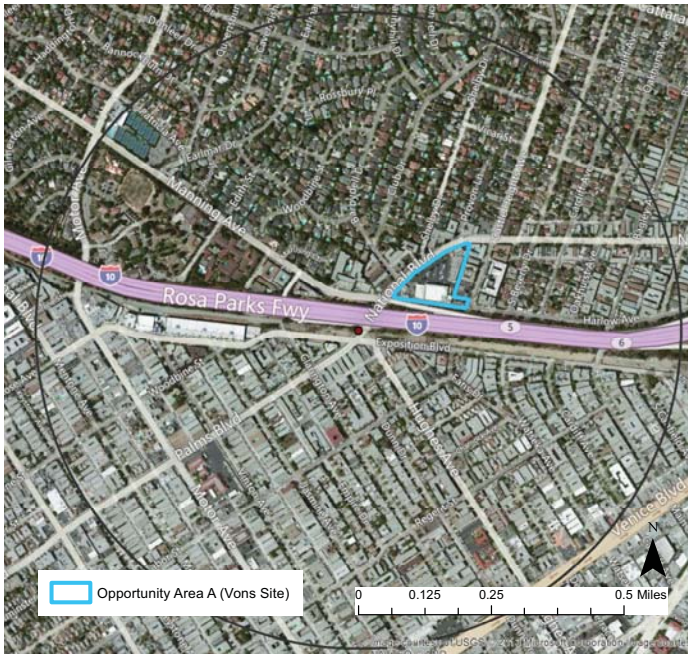
Source: City of Los Angeles

The station will be located adjacent to the I-10 freeway, which cuts the half-mile station area in half, creating two, somewhat separate communities. To the north of the I-10 freeway is the Cheviot Hills neighborhood, which includes some multi-family development immediately adjacent to the freeway, but is primarily a single-family neighborhood. Given the limited amount of single-family homes in Los Angeles and the area's proximity to Century City and Beverly Hills, the larger single-family homes in Cheviot Hills are expensive. The average of current listings of homes in the area is $1.6 million, with an average price per square foot of $578.00.

The area south of the I-10 freeway is the Palms neighborhood. The half-mile area south of the I-10 has the majority of households in the half-mile area. The area includes primarily multi-family units and more than 70 percent of these units are in buildings with 10+ units. Almost 85 percent of residents are renters in the area. The area's rents are fairly high relative to the Los Angeles County average, but are lower than other portions of the greater West Los Angeles area.

Areas of interest within the Palms Station half-mile area include the Motor Avenue commercial area. Centered around Motor Avenue and National Boulevard, this area has a number of neighborhood-serving storefront shops, restaurants, and bars. Along National Boulevard, between Motor Avenue and Hughes Avenue, are a number of self-storage facilities. It is worth noting that downtown Culver City is just outside of the Palms half-mile area to the south.

Figure 147: Palms Station Area Opportunity Site



Source: ESRI, Bing, Pro Forma Advisors

The key opportunity areas for redevelopment is the existing Vons shopping center site on National Boulevard, the Cheviot Hills Shopping Center, immediately north of the I-10 Freeway. This site includes a 60,000 square foot neighborhood shopping center with a Vons, Rite Aid, Papa Johns, Starbucks, and other neighborhood-serving retail. Built in 1967, the grocery store property is aging and the existing parcel configuration may be under utilized adjacent to a new LRT station. It is a prime location for redevelopment. However, both residents and the demand analysis show the need for the neighborhood-serving retail that exists on the site. The project team will explore options to reconfigure the site to maintain similar type uses, but also intensify the site.

Recent Projects and Planned and Proposed Developments

The Regent Lofts

The Regent Lofts is a new multi-family building constructed in the Palms Station area. The 28,000 square foot building was constructed in 2011 on 0.382 acres.

Regent Lofts

Use: Multi-Family Residential - Rental

Address: 10000 Regent Street

28 Units

1 Bedroom, 1 Bath (900 SF) – Starting at $2,150

Loft, 1 Bath (1,100 SF) – From $2,850 to $3,200

The Victor

The Victor is a four-story multi-family apartment complex located on Venice Avenue Between Clarington and Dunn Avenue. Built in 2006, the 131,000 square foot building was constructed on 1.43 acres.

Source: Equity Apartments.com

The Victor

Use: Multi-Family Residential - Rental

Address: 10001 Venice Boulevard

116 Units

1 Bedroom, 1 Bath (592 – 1,426 SF) – $2,200 - $2,700 per month

2 Bedroom, 2 Bath (1,200 SF) – Approx. $3,000 per month

Intersection of Palms Boulevard and Motor Avenue

A 7-story building is currently under construction on the corner of Palms Boulevard and Motor Avenue. The project is to include 7,000 square feet of retail and 31 luxury apartments.

3425 Motor Avenue

Between Woodbine Avenue and Palms Boulevard on Motor Avenue, this proposed development will be a 5-story mixed-use building, containing 115 apartment units (69 one bedrooms, 46 studio units) and 975 square feet of retail space. The building will contain 119 parking spaces.

Source: Killefer Flammang Architects

Challenges and Opportunities

Challenges

1) I-10 Freeway bisects the community, creating a physical barrier within the market and generating pollution concerns.

    a. Due to pollution concerns, City of Los Angeles policy discourages the development of residential within 500 to 1,000 feet of a major freeway. Given the location of the station along the freeway and the nature of the Palms Station as a residential node, this constrains the areas where residential intensification may be encouraged.

    b. The freeway also creates barriers for retail located in the area. The freeway may inhibit the movement of potential retail patrons between the north and south portions of the half-mile area.

2) National/Exposition Boulevard needs infrastructure improvements to make the area more pedestrian friendly. Streetscape, sidewalks, and street lights are needed in many areas. Also, the streets themselves are very narrow between Durango and Hughes Avenue, with sidewalks missing on the north portions of the street. Sidewalks are missing in some portions of National Boulevard between Palms Boulevard and Motor Avenue and the National Boulevard freeway underpass also needs improvements.

3) Existing Parking Issues. The Palms Station area has an existing parking problem that residents are concerned will be exacerbated with the incoming station riders. 70 percent of the apartment buildings were built before 1980 and these buildings were generally under-parked compared to current standards.

Opportunities

1) Opportunity for dense residential developments to help support transit ridership. Redevelopment is already being seen on Motor Avenue were older commercial and residential units are being replaced with more intense development (3425 Motor Avenue and the development at the intersection of Motor Avenue and Palms Boulevard).

    a. It should be noted that redevelopment is likely to occur with or without any proposed changes to the station area entitlements, but the with the Station Area Plan, DCP may better direct redevelopment.

2) As will be shown in the Demand Analysis, there is strong demand for retail within the Palms Station areas. There are limited retail options within the Palms area and, with the current population and anticipated household growth, demand for neighborhood-serving retail will grow.

3) The Opportunity Site provides an opportunity to intensify an existing shopping center and capture a greater amount of retail, while adding residential, in a pedestrian friendly configuration. Residents described the current Von's anchored Cheviot Hills Shopping Center as a gathering place for the community. Redevelopment also offers the opportunity to create a better neighborhood gathering space and local destination for the community.

4) Motor Avenue is in the quarter to half-mile area from the station. It is an existing local destination and could be a stronger retail destination, but the lack of parking makes it difficult for retail of any large scale to be located in the area. A parking structure in the Motor Avenue area could be an opportunity to help this area flourish.

    a. Perhaps encouraging a development, such as the one located at the corner of Palms and Motor to allow for sufficient public parking to support the district can be a parking solution or the development of a city-owned parking facility (in the case of Motor Ave. the facility could also be a surface lot parking for the short to mid-term).

5) The Station Area Plans are an opportunity to better connect the north and south portions of the half-mile station area and improve on the infrastructure challenges mentioned above through public benefits.

Demand Analysis

The Palms Station area is primarily residential in nature and has a large area that is currently zoned as multi-family which lends itself well to additional residential development and neighborhood-serving retail uses.

Residential

There is strong demand for residential units in the Palms Station area. The amount of actual demand captured will be limited primarily by the amount of affordable development and redevelopment sites.

The current residential area is largely built out, but, as mentioned in the Residential section, 70 percent of the stock was built before 1980 and 30 percent of the stock was built before 1970. Many multi-family properties are smaller four to six-unit buildings with tuck under car parking. Existing multi-family properties are likely to be redeveloped as housing prices rise with the development of the transit station.

The Regional Demand Analysis section finds that there are 2,900 new households anticipated in the combined Palms and Culver City Station areas between 2012 and 2035. With the income qualified move-up market demand in the area, there are a total of 4,200 households. The distribution of the new household and move up growth between each station area is estimated based on the Palms Station Area's households vs. the Culver City Station Area's households, 61 percent and 39 percent respectively.

Currently households in the immediate half-mile radius of the Palms Station make up 54 percent of the larger census approximated station area. Assuming that as much as 75 percent of the new household growth and move-up market is focused in the half-mile station area, we anticipate rental and for-sale multi-family residential demand from 1,300 to 1,900 units within a half-mile of the Palms Station between 2012 and 2035.

It should be noted that (1) any planned and proposed projects that are developed will reduce demand by the amount of the proposed units, and (2) as described in the Regional Demand Section, Palms and the Culver City Station demand was evaluated together because households may be equally willing to locate at either and demand between the two areas may shift.

Figure 148: Palms Station Multi-Family Residential Demand

	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Demand from New Households (Half-Mile Area)						
Palms Station	134	224	318	318	318	**1,311**
Demand from New Households and Move Up Households (Half-Mile Area)						
Palms Station	214	356	450	450	450	**1,919**

Source: Pro Forma Advisors

Retail

As a residential node, the Palms Station area will support primarily neighborhood-serving uses. Given the density of the residential areas, the station area could support one to two retail centers in the future and existing residents could even support an additional retail center. Support for Palms Station retail is expected from new residents and the recapture of existing resident demand. Limited new employees are anticipated in this area and the addition of employee-supported retail is not included for this station.

The Regional Demand Analysis section estimates new residents' demand for retail within a two-mile corridor of the five station areas and then estimates the share of retail that could be absorbed within all station areas. The Regional Demand Analysis section estimates that the Expo LRT study station areas can absorb between 460,000 and 700,000 square feet of retail demand between 2012 and 2035.

Using the station distributions of existing and expected household growth, the Palms Station is expected to capture approximately 25 percent of the demand within the corridor from new residents, or 115,000 to 170,000 retail square feet.

Figure 149: Palms Station New Resident Retail Support

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Total Retail and Food Services Square Feet Support		122,237	203,728	277,996	277,996	277,996	1,159,955
Capture Within All Station Areas - Low	40%	48,895	81,491	111,199	111,199	111,199	463,982
Low Station Area Capture of New Resident Support Palms	25%	12,124	20,207	27,574	27,574	27,574	115,054
Capture Within All Station Areas - High	60%	73,342	122,237	166,798	166,798	166,798	695,973
High Station Area Capture of New Resident Support Palms	25%	18,336	30,559	41,699	41,699	41,699	173,993

Source: Pro Forma Advisors

The Regional Demand section estimates that almost 220,000 to 450,000 square feet of strip and general retail may be recaptured in the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPAs). Station area recapture of strip and general retail is calculated directly from the regional recapture as a straight share between the station areas in the Regional Demand section. With the highest number of existing households, this recapture of existing retail demand is expected to range from 70,000 to 140,000 square feet for the Palms Station.

The figure below summarizes retail demand from new residents and recapture of a share of existing residents strip and general retial spending. The Palms Station is expected to support demand for 190,000 to 310,000 square feet of retail between 2012 and 2035.

Figure 150: Palms Station Retail Demand Summary

	2012-2025	2025-2035	Total
Existing Demand Recapture	70,000- 140,000 SF		
Demand from New Residents	60,000 - 90,000 SF	60,000 - 80,000 SF	
Total	**130,000 - 230,000 SF**	**60,000 - 80,000 SF**	**190,000 - 310,000 SF**

Source: Pro Forma Advisors

While the demand exists for a substantial share of retail in the Palms Station area, there are two major challenges for the actual development of retail: the freeway and again, the lack of land availability. The I-10 acts as a barrier, particularly for neighborhood serving retail. It is challenging to attract residents from both sides of the I-10 freeway. The station and underpass improvements may help to decrease the impact of the freeway. Secondly, there are limited locations in the station area where a retail center with a desirable critical mass of retail stores may be developed.

Additional small footprint convenience retail may be located throughout the station area, but this is unlikely to meet the scale of existing and future retail demand.

Office

There will be limited development of employment-based office uses within the Palms station area. However, additional neighborhood-serving office can be anticipated within the area. This neighborhood-serving office may be located with retail either on upper floors or within retail centers.

In the Regional Demand Analysis we estimate that the Los Angeles portion of the Expo LRT Market Area (the West LA CPAs) may capture office demand of almost 7 – 10 million square feet between 2012 and 2035. Much of this demand is likely to be captured by the Century City area as well as the Bundy and Sepulveda Station areas.

The Palms Station area currently contains approximately 0.7 percent of the West Los Angeles CPAs office space. Estimating that the Sepulveda Station area continues to capture 0.7 percent of office growth, the Palms Station area is projected to capture between 50,000 and 70,000 square feet of office between 2012 and 2035.

Figure 151: Palms Station Office Demand

Estimated Station Area Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
West Los Angeles CPAs Market Capture							
Low		368,683	658,857	1,772,118	1,935,255	2,114,772	6,849,684
High		553,024	988,286	2,658,177	2,902,883	3,172,157	10,274,527

Culver City Station Area

Station Overview

The Culver City Station is located at the intersection of the Exposition Boulevard and Venice Boulevard on the edge of Culver City and the City of Los Angeles. Approximately half of the station area is located in the City of Los Angeles and the other half of the station area is located in Culver City. There are a number of growing commercial destinations near the Culver City Station, but the commercial areas within the immediate vicinity of the station are relatively lower performing[37], aging commercial and industrial space that may be ripe for redevelopment.

Several Culver City retail, dining, and employment centers are in close proximity to the station area. Downtown Culver City, located west of the station within the half-mile, is a historic downtown that has become a popular dining and entertainment destination within the last 15 years. To the east, there are major concentrations of creative office space, starting a little over a half mile from the station in Culver City, focused along Hayden Avenue. This cluster of creative space is known as the Hayden Tract (See the Creative Office Section for more information). The Culver City Arts District which includes 40 art galleries primarily along La Cienaga is approximately a half-mile away from the station. The Helms Bakery complex is a historic building that has also recently been redeveloped into a popular destination. The site includes a mix of upscale furniture stores and dining options.

Figure 152: Culver City Station Opportunity Site

Source: ESRI, Bing, City of Los Angeles, Pro Forma Advisors

In the Los Angeles portion of the station half-mile area there is a well-performing neighborhood retail center, anchored by an Albertson's, Ross, CVS, and Office Max, but the Los Angeles portion is otherwise limited in terms of employment or retail destinations.

In addition to these key commercial elements, the station area also includes a number of single-family neighborhoods, north of Venice west of National and south of Venice near the Helms Bakery area. The station area also extends into portions of the multi-family Palms neighborhood.

[37] On a residual land value basis.

As shown in Figure 152, the project team has identified the industrial parcels located north of Venice between Curtis Avenue and Robertson as a potential opportunity area for development. With physical constraints--small parcel size and isolation between the freeway and the major thoroughfare of Venice Boulevard, these parcels are currently very pedestrian un-friendly and may be better utilized. Specific businesses located in the area are evaluated within the next section.

Other opportunity areas include the Albertsons Center and an existing strip center between Culver Boulevard and Robertson Boulevard.

Existing Businesses

There are approximately 8,000 jobs in the half-mile area. The Culver City Station half-mile area proportionately extends into both the City of Los Angeles and Culver City. However, 60 percent of the employment is located in Culver City. For analytic purposes, we isolated the businesses located in the City of Los Angeles.

Within the half-mile area, Retail, followed by Information, and Educational Services are the largest industry employment categories. When looking only at the businesses in the City of Los Angeles, Retail, Manufacturing, and then Educational Services are the largest employment industry categories.

- Retail businesses (in the Los Angeles portion of the half-mile area) employ 500 workers. The largest retail employers include the grocery store Albertsons, nine furniture stores, and Ross.
- An estimated 450 employees work in Manufacturing in the Los Angeles portion of the half-mile area. Major employers include the sign manufacturer AAA Banner, the Culver City Meat Company, and other miscellaneous manufacturers.
- It is also worth noting that approximately 900 employees in the City of Los Angeles portion of the half-mile area are employed by industrial-using businesses, a third of employment.
- The Educational Services industry, which includes public and private schools, employs 900 workers in the Los Angeles portion of the half-mile area. Hamilton High is the major educational employer in the area though the area also includes a number of educational service providers and other schools, such as Everest College.
- As mentioned above, Information is the second largest employment industry category in the half-mile area. Information includes industries such as movie production and distribution, publishing and sound recording studios and telecommunications. In the Los Angeles portion of the study area, Information only employs 150 workers, but it is the largest employment category in the Culver City portion of the study area. The Information industry category employs 770 employees in Culver City. This includes Sony Pictures Studios, Culver City Studios, Metro Networks, and several radio stations.

Culver City – Sub Area A – Robertson Ramp Area

There are almost 100 businesses and 820 jobs located in this sub area. The majority of which, 580, are employed by industrial-using businesses. Similar to the larger City of Los Angeles portion of the study area, the largest employment industries are Manufacturing, Retail, and Other Services. As described above the two major employers in the area are AAA Banner and the Culver City Meat Company. These two companies employ more than 40 percent of the workers in the area. Retail trade is the next largest employer, but this includes companies such as Laser Care Technologies, a printer servicer and supplier, and Multimedia Systems, a digital sign company. The Other Services industry category is made up primarily of auto service and repair businesses.

Planned and Proposed

There are a number of proposed projects in the immediate vicinity of the station. These projects will help to jumpstart private investment in the area, but all of the currently proposed projects are located in Culver City. In the Los Angeles portion of the Station area there is little vacant land currently available.

Lowe Enterprises Culver City Station Development

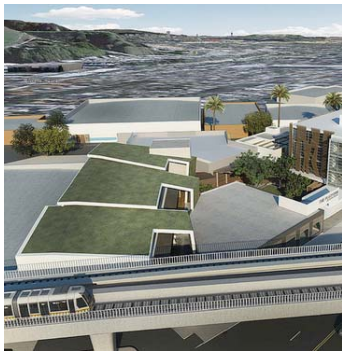
Lowe Enterprises paid $23.8 million for the parcel adjacent to the station. The project includes a mix of housing, office, retail and restaurant uses surrounding a large central open space amenity. The project will include 500,000 square feet and 1,500 parking spaces on 5.2 acres and will be designed to connect seamlessly with the new station.

Legado Crossing / Developer: The Legado Companies

Located at the southeast corner of Washington Boulevard and National Boulevard, Legado Crossing will include 4 floors of residential (115 units) above 31,000 square feet of ground floor retail. Retail may include a small grocer, drugstore, and restaurants and the complete project will include 2 levels of subterranean parking.

The Platform/Developer: Runyon Capital

The Platform is a retail project located immediately south of the station on the former auto dealership property. The project is planned as a hip, urban retail similar to Space 1520 in Hollywood or the Lab in Costa Mesa and will include 40,000 square feet of retail across 5 buildings.



Source: Curbed LA

Challenges & Opportunities

Challenges

1) Access to the Los Angeles portion of the half-mile area is hampered; crossing Venice Boulevard at the corner of Exposition/Robertson Boulevard and crossing Robertson along Venice Boulevard is challenging for pedestrians. Difficult access hampers the economic opportunities for areas north of Venice.

2) Opportunity Area A, specifically, is isolated from its surrounding communities by the I-10 Robertson on ramps and off ramps. Currently, the area is choked by these on ramps, which does not make it attractive to more intense business uses that need to attract employees or patrons.

3) One of the key challenges of the redevelopment of the Opportunity Area A is the lack of parking within the area. As described by Laura Weiss, a creative office developer, the existing buildings go all the way to the current lot lines and currently there is limited parking in the area. A parking structure, even if supported by the businesses in the area, would be the essential element in the redevelopment of the area.

4) In addition to the street and on/off ramp issues, the overall environment of the area north of Venice Avenue is challenging. Small sidewalks and lack of streetscape, as well as the shadow of the freeway, make the environment unpleasant. A larger scale redevelopment could help in reconfiguring the area and "hiding" the freeway, but land uses north of Venice are less likely to include residential due to the proximity of the freeway.

5) It should be noted that the Opportunity Area B, which includes the Albertsons Shopping Center and the public storage facility across the street, would be a good location for mixed-use residential development but the high performance of current land uses will inhibit redevelopment in the short to mid-term. A mixed-use development may occur in the long term.

Opportunities

1) Extending Existing Destinations. The Culver City Station is located within walking distance to a number of dining and shopping destinations and also benefits from a diverse mix of stores along Venice Boulevard. There is the opportunity to extend and draw the energy in Culver City up to the Venice Boulevard area.

    a. Currently there are several planned and proposed projects in the Culver City portion of the station, with improvements north of Venice Boulevard and potential reconfiguration of the Robertson freeway on/off ramps, there will be potential to create employment and restaurant retail destinations in the City of Los Angeles portion of the station as well.

    b. In addition, the area is also located approximately a half mile from significant creative industry businesses, such as Sony Studios and Culver Studios, and the Hayden Tract. The area amenities and proximity to major creative industry employers would make the station area an attractive location for creative office.

2) Reconfiguring the On/Off Ramps. Reconfiguring the I-10 on ramps and off ramps at Roberston Boulevard is a key element of redeveloping Opportunity Site A with the highest performing uses. With a reconfiguration of the I-10 Robertson Boulevard on/off ramps, there is greater opportunity for a developer to aggregate parcels in a manner to be able to create sufficient onsite parking for a larger and more comprehensive development. Proposed redevelopment may be a mid-rise office with a mix of retail. With improved access and parking, possible alternative development opportunities include a restaurant row or larger scale retail.

    a. DCP should consider allowing greater density on larger parcels, which may encourage property owners to consolidate their properties across time.

3) Development with Existing On/Off Ramps. Without the reconfiguration of the I-10 Robertson on and off ramps, the Opportunity Area A is not likely to see more intensive redevelopment in the near future. It is possible that within the next 10 to 20 years, as more ideal creative office spaces in Culver City and West Los Angeles are filled up, that there will be redevelopment of the area on a small scale, but the intensity of redevelopment will depend on whether public parking is made available within the area or until public transit use grows four-fold within the Los Angeles region.

- Residential Uses. There is strong demand for residential uses throughout the area, but residential uses are constrained by the presence of the I-10 freeway at Opportunity Site A. With the development of the planned Culver City developments and an improved Robertson and Venice Boulevard intersection, there may be interest for a mixed-use retail/office and residential development at Opportunity Site C.

Demand Analysis

Office

The Regional Demand Analysis estimated that the West LA CPAs may capture between 7 and 10 million square feet of office space. The Culver City station currently makes up approximately 3 percent of the office located in the West LA CPAs, but with the currently proposed developments in the Culver City portion of the station area and the growing creative office market in the Hayden Tract area, the identified opportunity areas have the potential to capture a greater share of office uses.

If there are no changes made to the existing Robertson on/off ramps, office development will likely be limited to local serving-office within larger retail developments or the redevelopment of a few industrial buildings in the opportunity area. However, if major changes are made to the Roberson on/off ramps and the property owners are able to consolidate parcels, there is the potential for the redevelopment of current industrial buildings to large-scale employment-based office buildings in Opportunity Area A.

Figure 156: Culver City Station Area Office Demand

Estimated Station Area Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
West Los Angeles CPAs Market Capture

Source: Pro Forma Advisors

Industrial

As described in the Existing Businesses section, Opportunity Area A, located north of Venice between Curtis Avenue and Robertson Boulevard, includes primarily industrial buildings. These buildings are occupied and have a fairly high lease rate, relative to other industrial space in the Expo LRT area. Without intervention, this area will continue to function as a location for businesses looking for affordable space. The station area currently contains 12 percent of the West LA CPAs area industrial. Given that there is limited vacant space for development and that existing industrial is not likely to be replaced with new industrial, the station area is anticipated to capture between 10 percent of projected industrial demand on the low end and 12 percent on the high end.

Figure 157: Culver City Station Area Industrial Demand

Station Area Industrial Capture		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total

Station Area Capture (High)							
Culver City	12.0%	18,000	34,000	38,000	43,000	48,000	181,000

Source: Pro Forma Advisors

Retail

There is fairly strong demand for additional retail in the Culver City Station area. As described in the Regional Demand Analysis section, retail support is expected to come from three factors (1) demand from new residents (2) recapture of existing demand in subpar strip and general retailers, and (3) employee spending.

The Regional Demand Analysis section estimates new residents' demand for retail within a two-mile corridor of the five station areas and then estimates the share of retail that could be absorbed within all station areas. The Regional Demand Analysis section estimates that the station areas can absorb between 460,000 and 700,000 square feet of retail demand between 2012 and 2035.

Using the station distributions of existing and expected household growth, the Culver City Station is expected to capture approximately 25 percent of the demand within the corridor from new residents, or 120,000 to 170,000 retail square feet.

Figure 158: Culver City Station Area New Resident Retail Support

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Total Retail and Food Services Square Feet Support		122,237	203,728	277,996	277,996	277,996	1,159,955
Capture Within All Station Areas - Low	40%	48,895	81,491	111,199	111,199	111,199	463,982
Low Station Area Capture of New Resident Support Culver City	25%	12,224	20,373	27,800	27,800	27,800	115,995
Capture Within All Station Areas - High	60%	73,342	122,237	166,798	166,798	166,798	695,973
High Station Area Capture of New Resident Support Culver City	25%	18,336	30,559	41,699	41,699	41,699	173,993

Source: Pro Forma Advisors

The Regional Demand section estimates that almost 220,000 to 450,000 square feet of strip and general retail may be recaptured in the City of Los Angeles portion of the Expo LRT Market Area (the West LA CPAs). Station area recapture of strip and general retail is calculated directly from the regional recapture as a straight share between the station areas in

the Regional Demand section. This recapture of existing retail demand is expected to range from 45,000 to 90,000 square feet for the Culver City Station.

Translating the low and high office square feet estimates in the Office Demand Analysis into employees, Culver City Station average new office employees are estimated at 1,200. Applying the average retail SF supported per employee figure estimated in the Regional Demand section, the Culver City Station half-mile area employees are expected to support approximately 18,000 square feet of new retail.

Figure 159: Culver City Station Area Employee Retail Support

		2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Range Avg. Station Area Office Employees							
Culver City		64	113	307	335	367	**1,185**
	Retail SF per Worker						
Retail SF Support from Office Employees							
Culver City	14.83	949	1,681	4,548	4,963	5,437	**17,577**

Source: Pro Forma Advisors

With all three retail support metrics, the Culver City Station is expected to support demand for 180,000 to 280,000 square feet of retail between 2012 and 2035.

Figure 160: Culver City Station Area Retail Demand Summary

	2012-2025	2025-2035	Total
Existing Demand Recapture	45,000 - 90,0000 SF		
Demand from New Residents	60,000 - 90,000 SF	60,000 - 80,000 SF	
Avg. Demand from New Employees	7,000 SF	10,000 SF	
Total	**110,000 - 190,000 SF**	**70,000 - 90,000 SF**	**180,000 SF - 280,000 SF**

Residential

With the new station and proximity to Downtown Culver City there will be strong demand for residential at the Culver City Station Area.

The Regional Demand Analysis section finds that there are 2,900 new households anticipated in the combined Palms and Culver City Station areas between 2012 and 2035. With the income qualified move-up market demand, there is a total of 4,200 households. Also in the Regional Demand Analysis, the distribution of the new household and move up growth between each station area is estimated based on the Palms Station Area's households vs. the Culver City Station Area's households, 61 percent and 39 percent respectively.

Currently households in the immediate half-mile radius of the Culver City Station make up 41 percent of the larger census approximated station area. Assuming that as much as 70 percent of the new household growth and move-up market is

focused in the half-mile station area, we anticipate, rental and for-sale multi-family residential demand is projected to range from 800 to 1,200 within a half-mile of the Culver City Station between 2012 and 2035.

It should be noted that (1) any planned and proposed projects that are planned, such as Legado Crossing, will reduce demand by the amount of the proposed units, and (2) as described in the Regional Demand Section, Palms and the Culver City Station demand was evaluated together because households may be equally willing to locate at either and demand between the two areas may shift.

Figure 161: Culver City Station Multi-Family Residential Demand

	2012-2015	2015-2020	2020-2025	2025-2030	2030-2035	Total
Demand from New Households (Half-Mile Area)						
Culver City Station	81	135	192	192	192	**792**
Demand from New Households and Move Up Households (Half-Mile Area)						
Culver City Station	129	215	271	271	271	**1,158**

Hotel

The Culver City Station area may be able to capture a reasonable share of the 580-room hotel demand in the City of Los Angeles portion of the Expo LRT Market Area. However, we have not evaluated the hotel use for this station because a hotel is not likely to locate within the Los Angeles portion of this station area.

Residential Demand

Income Qualification

The following chart evaluates the affordability of rental units and home purchases based on the assumption that households pay approximately 25 percent of their income for housing and, in the case, of a home purchase that households make a 20 percent downpayment.

Households that can broadly afford new market-rate rental units or homes are highlighted.

Appendix Figure 10: Residential Income Qualification

Household Income	Est. Affordable Monthly Rents	Est. Affordable Home	Culver City Station	Palms Station	Sepulveda Station	Bundy Station	West Station
<$15,000	< $300	< $68,000	12%	11%	9%	10%	22%

MARKET STUDY CONSULTANT TEAM CREDENTIALS

JUDITH TAYLOR
PARTNER, PRINCIPAL
Judith Taylor will be the project manager for the PFA team. As Project Manager, Ms. Taylor will be the main point of contact for the client group. With a depth of knowledge of the Los Angeles market, Ms. Taylor will lead the market analysis of each of the station areas. Ms. Taylor has prepared a number of transit-oriented and industrial focused economic analysis, including the preliminary economic analysis of the Crenshaw/LAX Transit Corridor station area planning, fiscal analysis of proposed developments at the Berga mot Expo line station and the market analysis of the Fashion District in Downtown Los Angeles that centered around growth of the fashion industry and its impacts on industrial space in the district. With 10 years of experience in the fields of land use consulting, redevelopment, and community development, Judith Taylor has broad experience providing land use economic analyses to inform community plans, specific plans, revitalization and land use strategies, and the entitlement process.

Formerly a Senior Associate with Economics Research Associates (ERA) and the Economics practice at AECOM, Ms. Taylor's specialties include fiscal impact analysis, economic impact analysis, real estate market analysis, and economic strategy and funding strategy development. Ms. Taylor has a breadth of experience providing customized analysis for her clients and has worked with public agencies such as the City of San Diego, the City of Los Angeles Redevelopment Agency (CRA/LA), and the City of Corona, and private developers, such as Sudberry Properties, Pardee Homes and Hines. Judith is also an industry expert in economic impact analysis and led the economic impact analysis for several high profile sports and entertainment events, projects, and firms, such as the proposed City of Industry Stadium, Cirque du Soleil KOOZA, and Disney.

Ms. Taylor holds a Bachelor of Arts in Economics from Stanford University and a Master of Public Policy and Urban Planning from Harvard University.

WILLIAM W. LEE
PRINCIPAL
As Principal-in-Charge for the PFA team, William "Bill" Lee will advise the methodology for the market analysis and will develop the financial analysis models and the determination of public benefits of the station areas. Mr. Lee has led the economic analysis of a number of transit-oriented developments across the nation, including TOD analysis in under-utilized industrial areas. His projects include joint development assistance for the Pleasant Hill BART Station and San Jose BART station areas, rail station area development strategies for the cities of San Mateo, Burlingame, and San Carlos, and preliminary economic analysis for the Crenshaw/LAX Transit Corridor and the Los Angeles Regional connector.

William "Bill" Lee has been in land planning economics and economic development consulting since the 1970s and served as the Managing Principal of ERA' San Francisco Office. He was with AECOM Economics from 2007 until 2012 because of the acquisition of Economics Research Associates A by AECOM. During his 30 years of practice, Mr. Lee has specialized in services to local government agencies, transit authorities, land planning/urban design firms, property owners, real estate developers and financial institutions.

Mr. Lee holds a Bachelor of Science in Economics with a minor in mathematics from Stanford University and Master of Business Administration from Columbia University.

GENE P. KREKORIAN
PRINCIPAL
Mr. Krekorian, Partner, will provide support as needed to the PFA team. He has over 30 years in market and pro forma analysis throughout Southern California including the historic redevelopment of several previous army bases, financial analysis for the El Monte Transit station and the initial industrial surveys for the Irvine Company. Mr. Krekorian has conducted a broad range of valuation, appraisal, and analysis assignments relative to recreation, commercial recreation, and large-scale landholdings during his 35-year consulting career. Formerly a Senior Vice President at Economics Research Associates and now a principal with PFA, Gene has specialized in analyzing acquisition/disposition analysis, development feasibility, economic master planning, and valuation.

Mr. Krekorian has also conducted a large number of consulting assignments relating to the development feasibility of single-use and mixed-use residential, commercial, industrial and recreational land uses. His experience in market research and financial analysis relates to the development of planned residential communities, office parks, regional and neighborhood shopping centers, hotels, recreation land projects, and golf resorts.

For many of the most successful large-scale, multiuse developments in Southern California, Mr. Krekorian had a major role in analyzing development potentials, evaluating alternative business strategies, or providing master plan input. Over the years he has been involved with The Irvine Ranch, Rancho Bernardo, Rancho Penasquitos, Laguna Niguel, Rancho California, Coto de Caza, Playa Vista, Santa Fe Valley, La Costa, Aptos Seascape, and Rancho Murrieta, among others.

Mr. Krekorian holds a Bachelor of Art in Mathematics and Economics from Pomona College and a Master of Science in Business Economics from the University of California, Los Angeles. Mr. Krekorian is a Certified General Real Estate Appraiser as licensed by the State of California.

AUSTIN ANDERSON
SENIOR CONSULTANT
Austin Anderson will provide support as needed to the PFA team. Austin Anderson has over 25 years in market and pro forma analysis throughout Southern California including the historic redevelopment of several previous army bases, financial analysis for the El Monte Transit station and the initial industrial surveys for the Irvine Company. Mr. Anderson has a consulting background across a broad range of assignments in land use economics, development, and related disciplines.

Formerly Vice Chairman and President of ERA between 1988 and 2000, Mr. Anderson has conducted market analyses, marketing plans, valuations, industrial development studies, site location studies, and business strategy formulation studies for all major commercial, residential, industrial, recreational, and public land uses, for both private and public sector clients.

Mr. Anderson's public sector experience includes local and regional economic impact studies; new county government formation strategies for Peninsula, Canyon, and Fresno Counties; and numerous general plan economics and transportation economics assignments. He prepared a detailed market and financial plan for the reuse of Lowry Air Force Base in Denver, and was a long-term consultant to major redevelopment projects in Pasadena, Los Angeles, and other cities. Mr. Anderson holds a Bachelor of Science in Industrial Engineering and a Master of Business Administration from Stanford University.

SECTION 1

ADMINISTRATION

1.1. ADMINISTRATION

1.1.1. Establishment of the Plan

The Exposition Corridor Transit Neighborhood Plan ("Specific Plan") is established for all properties located entirely or partially within the boundaries indicated on the Plan Boundary Map (see **Map A**).

1.1.2. Purposes

A. This Specific Plan intends to:

1. Direct growth and accommodate new residential, mixed-use, commercial, and industrial development near transit stations.

2. Retain existing industrial land around transit stations for job-generating uses to accommodate future demand for jobs.

3. Expand and strengthen the economic base of the City and generate tax revenue to fund key City services.

4. Accommodate emerging industrial sectors and encourage the clustering of creative, clean industry uses, including high tech jobs, within the transit corridor.

5. Allow limited residential development in select industrial areas to promote a mix of uses and increase housing capacity in close proximity to transit stations.

6. Implement the West Adams-Baldwin Hills-Leimert, Palms-Mar Vista-Del Rey, and West Los Angeles Community Plans.

7. Create opportunities for the development of new housing that meets the diverse needs and income levels of City residents.

8. Implement the policies of the General Plan Framework, which include conserving stable single family neighborhoods and directing growth toward transit corridors.

9. Reduce greenhouse gas emissions by reducing automobile dependence and encouraging alternative modes of transportation.

10. Promote transit ridership on the Exposition Light Rail and other transit systems.

11. Improve the configuration and condition of public rights of way to better promote pedestrian, bicycle, and vehicular circulation.

12. Encourage walking and bicycling as a means to safely and conveniently circulate within and between neighborhoods and to access transit.

13. Ensure new development is pedestrian-oriented, acknowledges the transit stations and remains compatible with surrounding neighborhoods through building design and site planning.

14. Provide a network of active street frontages, Publicly Accessible Open Spaces, and other community facilities for socializing, place-making and community-building.

1.1.3. Relationship to Other Zoning Regulations

A. The regulations of this Specific Plan are in addition to those set forth in the Planning and Zoning code provisions of Chapter 1 of the Los Angeles Municipal Code (LAMC), as amended, and any other relevant ordinances, and do not convey any rights not otherwise granted under the provisions and procedures contained in the LAMC or other ordinances, except as specifically provided for here.

The ECTNP serves to establish the zoning for the properties located within its boundaries. It is intended, therefore, to serve as a zoning designation for purposes of Public Resources Code, section 21083.3.

B. **Conflicting Regulations.** Wherever this Specific Plan contains regulations (including, but not limited to, standards such as heights, uses, parking, open space, and landscape requirements), that are different from, more restrictive, or more permissive than would be allowed or required pursuant to the provisions contained in the LAMC, or any other relevant ordinances, this Specific Plan shall prevail and supersede the applicable provisions of the LAMC and those relevant ordinances.

C. **Westwood/Pico Neighborhood Oriented District.** The regulations found in the Westwood/Pico Neighborhood Oriented District (NOD), Ordinance No. 171,859, including use prohibitions and signage regulations, apply to properties that are located within both the boundaries of the NOD and this Specific Plan.

D. **Specific Plan Procedures.** The application requirements and procedures of LAMC Section 11.5.7 shall apply to all Project applications in this Specific Plan area unless otherwise stated in the procedures described below.

E. **Site Plan Review Approvals.** Approvals pursuant to LAMC Section 16.05 are not required for Projects within this Specific Plan area.

F. **Mixed Commercial/Residential Use Development Approvals.** Approvals pursuant to LAMC Sections 12.22 A.18 and 12.24 V are not required for Projects within this Specific Plan area.

G. **Major Development Project Approvals.** Approvals pursuant to LAMC Section 12.24 U.14 are not required for Projects within this Specific Plan area.

H. **Conditional Use Permit for Hotels.** Approvals pursuant to LAMC Section 12.24 W.24 are not required for Projects within this Specific Plan area for the following zones: New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, and Mixed Use: Commercial/Residential.

1.1.4. Uses and Buildings Made Non-Conforming by This Plan

Any legally existing uses, buildings, or structures that are made nonconforming by establishment of this Specific Plan shall be deemed to be legal, nonconforming uses and may continue to exist, in accordance with LAMC Section 12.23.

1.1.5. Interpretation

If there is any conflict between the text of this Specific Plan and the tables, maps, or illustrations provided herein, the written language shall control. Whenever any ambiguity or uncertainty exists related to this Specific Plan or the application of this Specific Plan so that it is difficult to determine the precise application of these provisions, the Director shall, upon application by an owner, operator, or lessee, issue written interpretations on the requirements of the Specific Plan consistent with the purpose and intent of this Specific Plan, pursuant to LAMC Section 11.5.7 H.

1.1.6. Severability

If any provision of this Specific Plan or its application to any person or circumstance is held to be unconstitutional or otherwise invalid by any court of competent jurisdiction, the invalidity shall not affect other Specific Plan provisions, clauses, or applications which can be implemented without the invalid provision, clause, or application, and to this end the provisions and clauses of this Specific Plan are declared to be severable.

1.2. APPLICABILITY OF THE PLAN

1.2.1. Definition of a Project

A. A Project in this Specific Plan is defined as the construction, erection, demolition, addition to, or exterior alteration (greater than 50 percent of a building's value) of any building or structure on a lot located entirely or partially within the Plan Boundary (see **Map A**) which requires the issuance of a demolition, grading, foundation, or building permit; use of land permit; or change of use permit.

B. **West Pico Design District.** Within the West Pico Design District, which generally includes the properties along Pico Boulevard between Centinela Avenue and the I-405 Freeway (see **Map B**), a Project also includes the construction, erection, alteration, or addition to any sign.

Note: The review of sign permits within the West Pico Design District is due to existing sign regulations in the adopted West Pico Community Design Overlay encompassed by this Plan.

1.2.2. Exemptions

The provisions of this Specific Plan shall not apply to:

A. **Single- and Two-Family Residential Zoned Properties.** Any Project in the "R1" One-Family Zone or "R2" Two-Family Zone;

B. **Projects Approved Prior to Plan Adoption.** Any Project that has obtained a discretionary land use approval, that is still valid, from the City prior to the effective date of this Specific Plan;

C. **Underground Tanks and Seismic Retrofitting.** Underground tank removal/remediation, and/or seismic reinforcement/retrofitting;

D. **Vested Development Plans.** Projects with vested rights pursuant to LAMC Section 12.26 A.3;

E. **Repairs of Unsafe or Substandard Conditions.** Any Project complying with an order issued by the Department of Building and Safety for the repair of an unsafe or substandard condition;

F. **Completed Applications Prior to Plan Adoption.** Any Project that has an application that has been deemed complete by the Department of City Planning prior to the adoption of this Specific Plan;

G. **Interior Improvements.** Interior tenant improvements or interior remodeling of any existing building or structure that does not affect the exterior building.

MAP A: PLAN BOUNDARY

1.2.3. Plan Subareas

Within the Plan Area, properties are located either within one of the Expo Corridor Subareas ("Subareas") identified on **Map B** or outside the Subareas. **Table A** below summarizes how the sections of this Specific Plan apply to Projects located in the Subareas versus Projects outside the Subareas.

TABLE A: APPLICABILITY OF SPECIFIC PLAN REGULATIONS

SECTION 2

ZONING & DEVELOPMENT STANDARDS

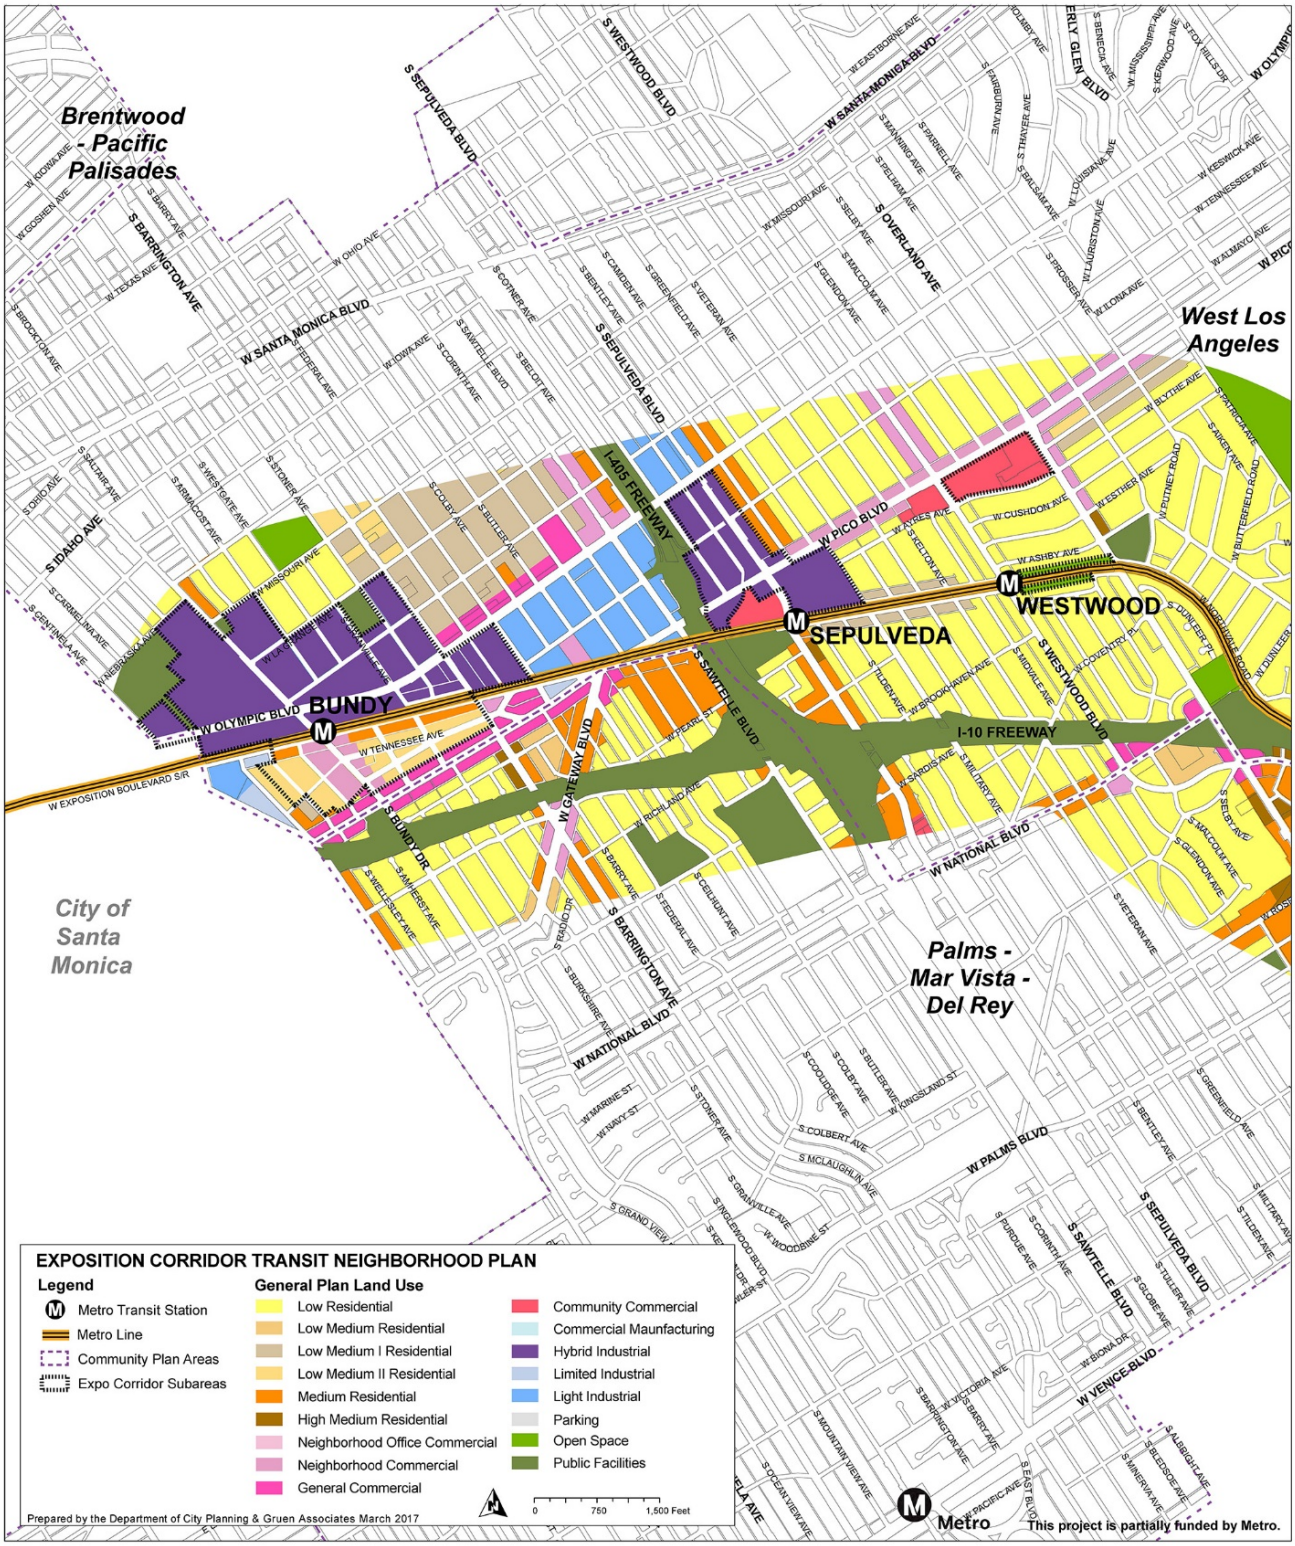
2.1. LAND USE AND ZONING

2.1.1. Land Use Designations

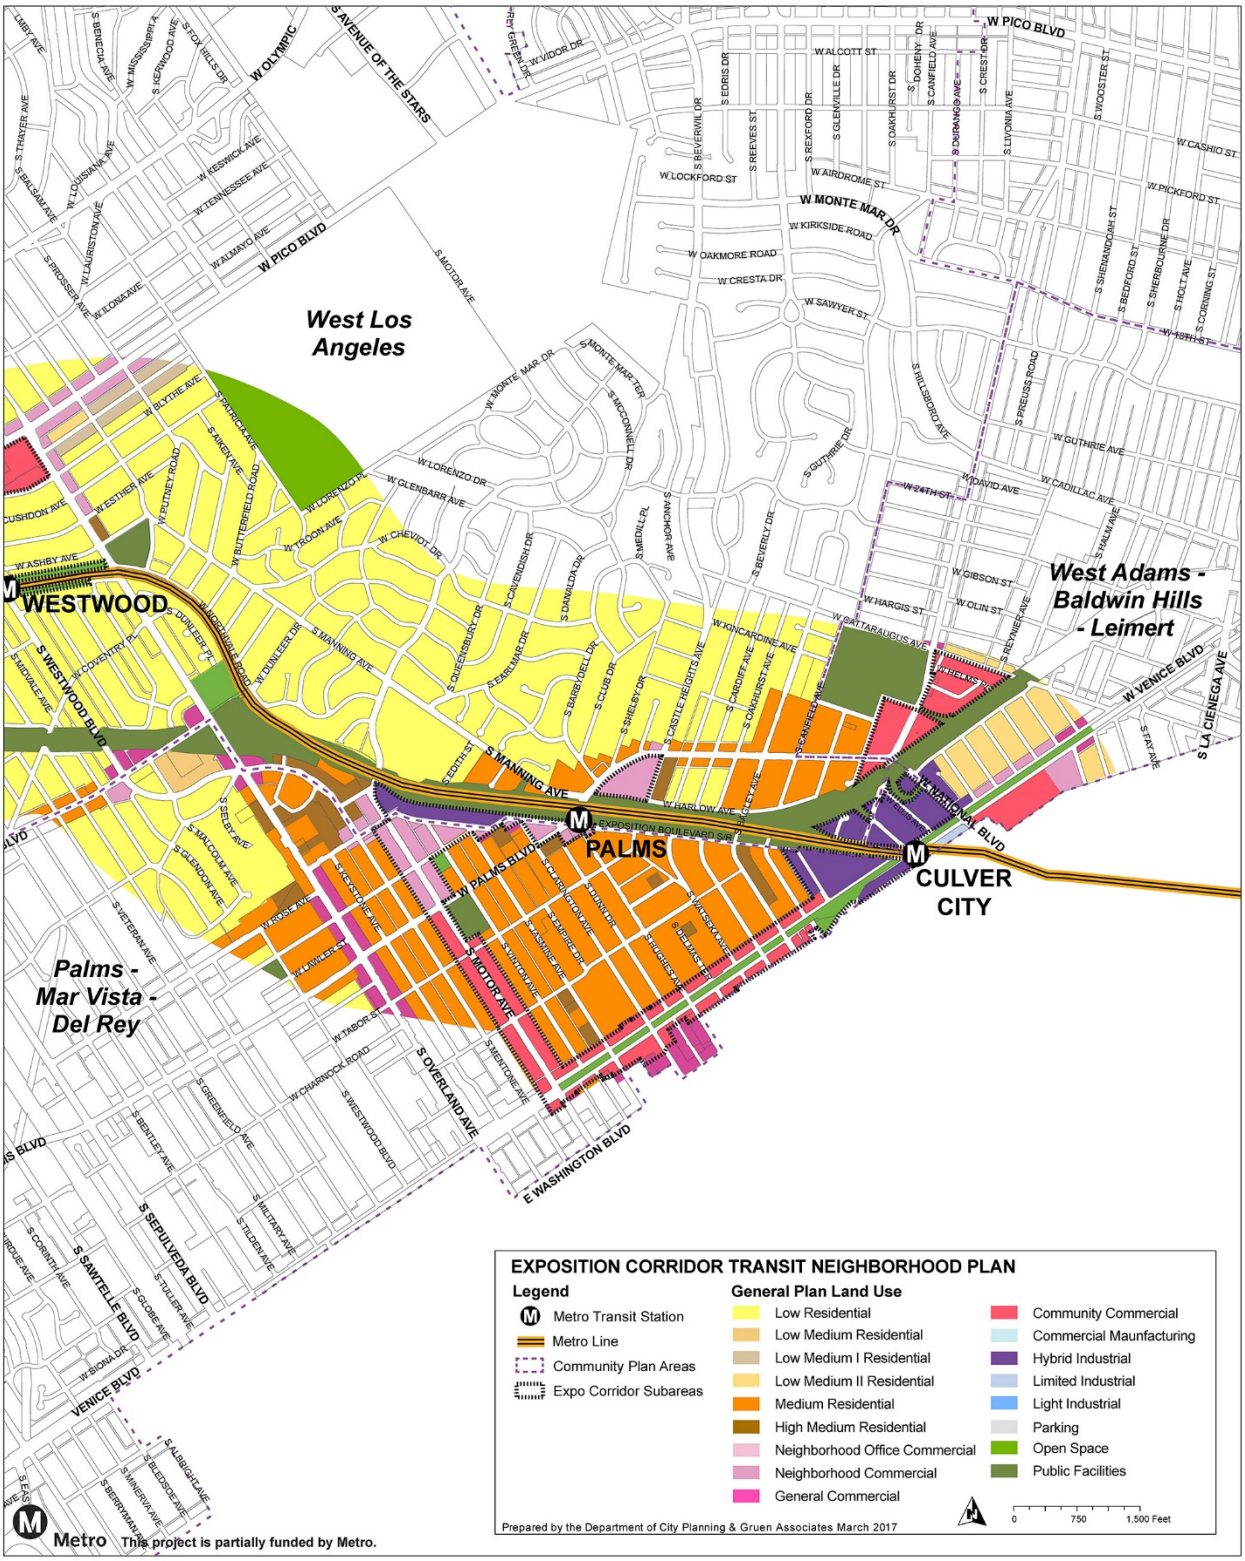
A. The Plan area includes the following General Plan land use designations (see **Map C**):

- Low Residential
- Low Medium Residential
- Low Medium I Residential
- Low Medium II Residential
- Medium Residential
- High Medium Residential
- Neighborhood Office Commercial
- Neighborhood Commercial
- General Commercial
- Community Commercial
- Commercial Manufacturing
- Hybrid Industrial
- Limited Industrial
- Light Industrial
- Parking
- Open Space
- Public Facilities
- Public Facilities - Freeway

MAP C: GENERAL PLAN LAND USE



MAP C: GENERAL PLAN LAND USE



2.1.2. Zoning Designations

A. The Plan area includes the following zoning designations (see **Map D**):

Single Family Residential
- R1

Multiple Family Residential
- R2, RD1.5, RD2, RD3, RD4, R3, R4, RAS4

Commercial
- CR, C1, C2, C4
- MU(EC) -- Mixed Use: Commercial/Residential

Hybrid Industrial
- NI(EC) -- New Industry
- HJ(EC) -- Hybrid Industrial: Jobs Emphasis
- HR(EC) -- Hybrid Industrial: Residential Emphasis

Industrial
- CM, MR1, M1, M2

Parking
- P

Open Space
- OS

Public Facilities
- PF

B. The following zones are established as part of this Specific Plan:

1. **New Industry – NI(EC).** The New Industry zone is an employment zone with uses tailored to 21st century and creative industries such as digital technology, research and development, media, design, publishing, motion pictures, and broadcasting. Supporting uses associated with these industries, such as light manufacturing, assembly, and limited retail or restaurants, are also appropriate. Residential uses are prohibited, with the exception of limited Live/Work Units, in order to preserve employment opportunity.

2. **Hybrid Industrial: Jobs Emphasis – HJ(EC).** The Hybrid Industrial: Jobs Emphasis zone is an employment-focused zone with a limited amount of residential uses. Employment uses permitted in this zone are primarily 21st century and creative industries, but can include an increased presence of retail, restaurant, and entertainment uses.

3. **Hybrid Industrial: Residential Emphasis – HR(EC).** The Hybrid Industrial: Residential Emphasis zone transitions areas between residential-only neighborhoods and jobs centers. Housing and a variety of neighborhood-serving commercial uses are allowed, though a minimum level of other employment uses is required.

4. **Mixed Use: Commercial/Residential – MU(EC).** The Mixed Use: Commercial/Residential zone is intended to allow neighborhood and community commercial uses and institutional uses, either alone or in combination with multi-family residential. This zone activates commercial corridors with a variety of uses that serve the local community while also providing housing.

2.2. ALLOWABLE USES

Permitted uses are set forth in **Table B** for the following zones: New Industry; Hybrid Industrial: Jobs Emphasis; Hybrid Industrial: Residential Emphasis; and Mixed Use: Commercial/Residential. Uses that are substantially similar to those listed here, as determined by the Director of Planning at the time of Administrative Clearance, are also permitted.

Permitted uses for all other zones are as set forth in the LAMC.

2.2.1. Use Limitations

A. **Limited Uses.** Uses identified as "Limited" within a zone (see **Table B**) shall not exceed the indicated percentage of a Project's total floor area.

1. For the purposes of calculating total floor area of a Project, any new floor area as well as existing floor area that will remain shall be counted.

2. When multiple non-residential Limited Uses exist within a Project, the cumulative floor area dedicated to such non-residential Limited Uses shall not exceed 40 percent of the total floor area of the Project.

B. **Multi-Family Residential.**

1. There is no limit on the number of dwelling units based on lot size. However, individual dwelling units within a Project shall have a minimum size of 350 square feet.

C. **Live/Work Units.**

1. Live/Work Units within a Project shall have an average size of at least 750 square feet.

2. Each Live/Work Unit shall be open with no fixed interior separation walls, excluding area used for bathrooms and storage, for a minimum of 70 percent of the floor area.

3. Workspace.

a. Each Live/Work Unit shall have at least one continuous workspace that is a minimum of 150 square feet and measures not less than 15 feet in at least one dimension and no less than 10 feet in any dimension. The required workspace shall be clearly demarcated on the approved building plans.

b. Workspaces shall be assigned to uses first permitted in the CM, MR1, M1, MR2, or M2 zones.

TABLE B: ALLOWABLE USES AND LIMITATIONS

Legend:
- Not Permitted
Allowed Permitted
Limited Permitted with Limitations

1. Limitations for residential uses, including Live/Work Units and Multi-Family Residential, are dependent on total Project FAR (see **Table D)**.
2. Parking uses are permitted only in combination with other uses within a Project, and such other uses must comprise no less than 0.7:1 FAR on the Project site.
3. Individual retail tenant spaces are limited to the following maximum sizes:
   - 5,000 square feet in the New Industry zone;
   - 20,000 square feet in the Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, and Mixed Use: Commercial/Residential zones, with the exception of grocery stores in Subareas 7 and 11 (see **Map B**).
4. Childcare facilities are permitted only in combination with other uses.

INTENTIONALLY BLANK

2.3. FLOOR AREA RATIO

2.3.1. Maximum Floor Area

Projects in the following zones are permitted either a Base Floor Area Ratio (Base FAR) or Bonus Floor Area Ratio (Bonus FAR): New Industry; Hybrid Industrial: Jobs Emphasis; Hybrid Industrial: Residential Emphasis; and Mixed Use: Commercial/Residential (see **Table C**).

Permitted Floor Area Ratios for all other zones are as set forth in the LAMC.

A. **Base FAR.** Projects that do not provide Public Benefits through this Specific Plan are permitted a maximum base floor area ratio (Base FAR).

B. **Bonus FAR.** Projects that provide Public Benefits through this Specific Plan are permitted a maximum bonus floor area ratio (Bonus FAR).

C. **Calculation of Maximum Floor Area.** Land area subject to easements and dedications shall be counted as buildable area for the purposes of determining the maximum allowable floor area.

TABLE C: MAXIMUM FLOOR AREA RATIOS

Zone	Base FAR	Bonus FAR
New Industry	2.5:1	4.0:1
Hybrid Industrial: Jobs Emphasis[1]	2.0:1	4.0:1
Hybrid Industrial: Residential Emphasis[1]	2.0:1	4.0:1
Mixed Use: Commercial/Residential	2.0:1	3.6:1

1. Projects in the Hybrid Industrial: Jobs Emphasis and Hybrid Industrial: Residential Emphasis zones that are comprised entirely of Non-Residential Uses are subject to the Base FAR and Bonus FAR levels of the New Industry zone.

2.3.2. Minimum Non-Residential Use

A. **Applicability.** Projects in the New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, or Mixed Use zones are required to include a minimum amount of Non-Residential Uses on the Project site. The minimum amount of Non-Residential Uses required is based on the zone and total FAR of the Project, and is represented as either a percentage of the total floor area or as a fixed FAR of the Project site (see **Table D** and **Figure A**).

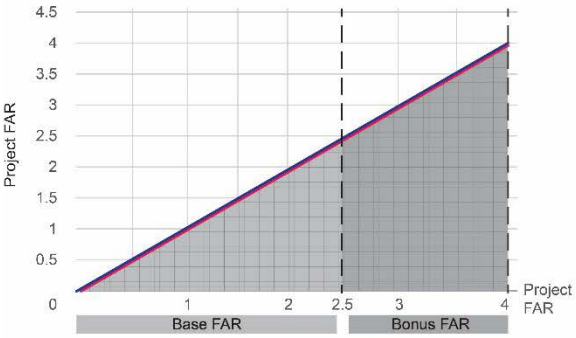
TABLE D: MINIMUM NON-RESIDENTIAL USE

Zone	Total Project FAR	Minimum Required Non-Residential Use
New Industry	≤ 2.5:1	100%[1]
	> 2.5:1 up to 4.0:1	100%[2]
Hybrid Industrial: Jobs Emphasis	≤ 2.0:1	70%
	>2.0:1 up to 2.5:1	70%
	> 2.5:1 up to 4.0:1	FAR 2.0:1
Hybrid Industrial: Residential Emphasis	≤ 2.0:1	30%
	>2.0:1 up to 2.3:1	30%
	> 2.3:1 up to 4.0:1	25%
Mixed Use: Commercial/Residential	≤ 2.0:1	10%
	>2.0:1 up to 2.3:1	10%
	> 2.3:1 up to 3.6:1	20%

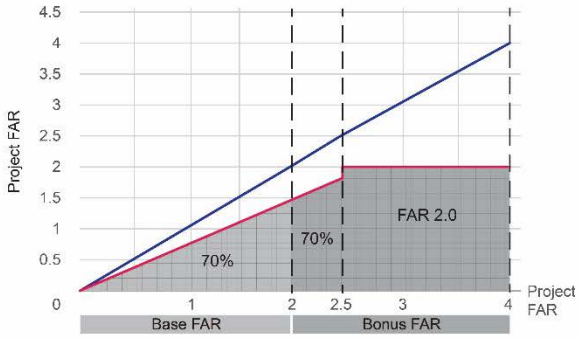
1. Projects in New Industry zone with Total FAR less than or equal to 2.5:1 may dedicate a maximum of 30% of total floor area to Live/Work Units.
2. Projects in New Industry zone with Total FAR greater than 2.5:1 may dedicate a maximum of 50% of total floor area to Live/Work Units.

FIGURE A: NON-RESIDENTIAL/RESIDENTIAL USE MIX

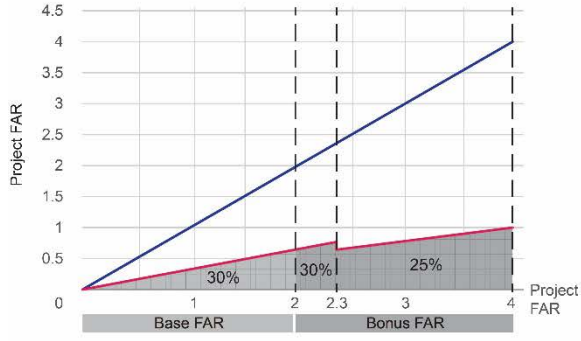
NEW INDUSTRY



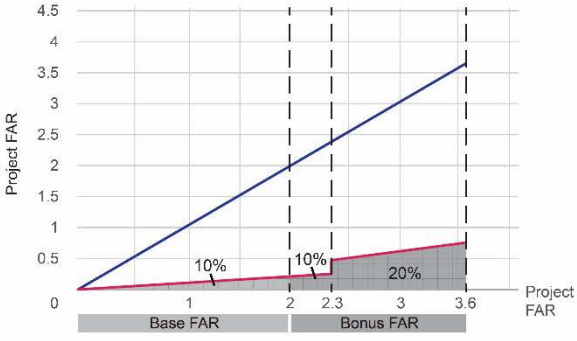
HYBRID INDUSTRIAL: JOBS EMPHASIS



HYBRID INDUSTRIAL: RESIDENTIAL EMPHASIS



MIXED USE: COMMERCIAL/RESIDENTIAL



B. **Alternative Compliance.**

1. Projects located entirely or partially on properties eligible for Alternative Compliance (see **Map E**) which cannot meet the minimum Non-Residential Use requirements (see **Table D**) may comply with this Specific Plan by obtaining a Director's Determination for Alternative Compliance (**Section 6.1.4**).

2. Alternative Compliance Projects are subject to the allowable uses and use limitations of this Specific Plan (see **Table B**), with the exception of the use limitations on multi-family residential.

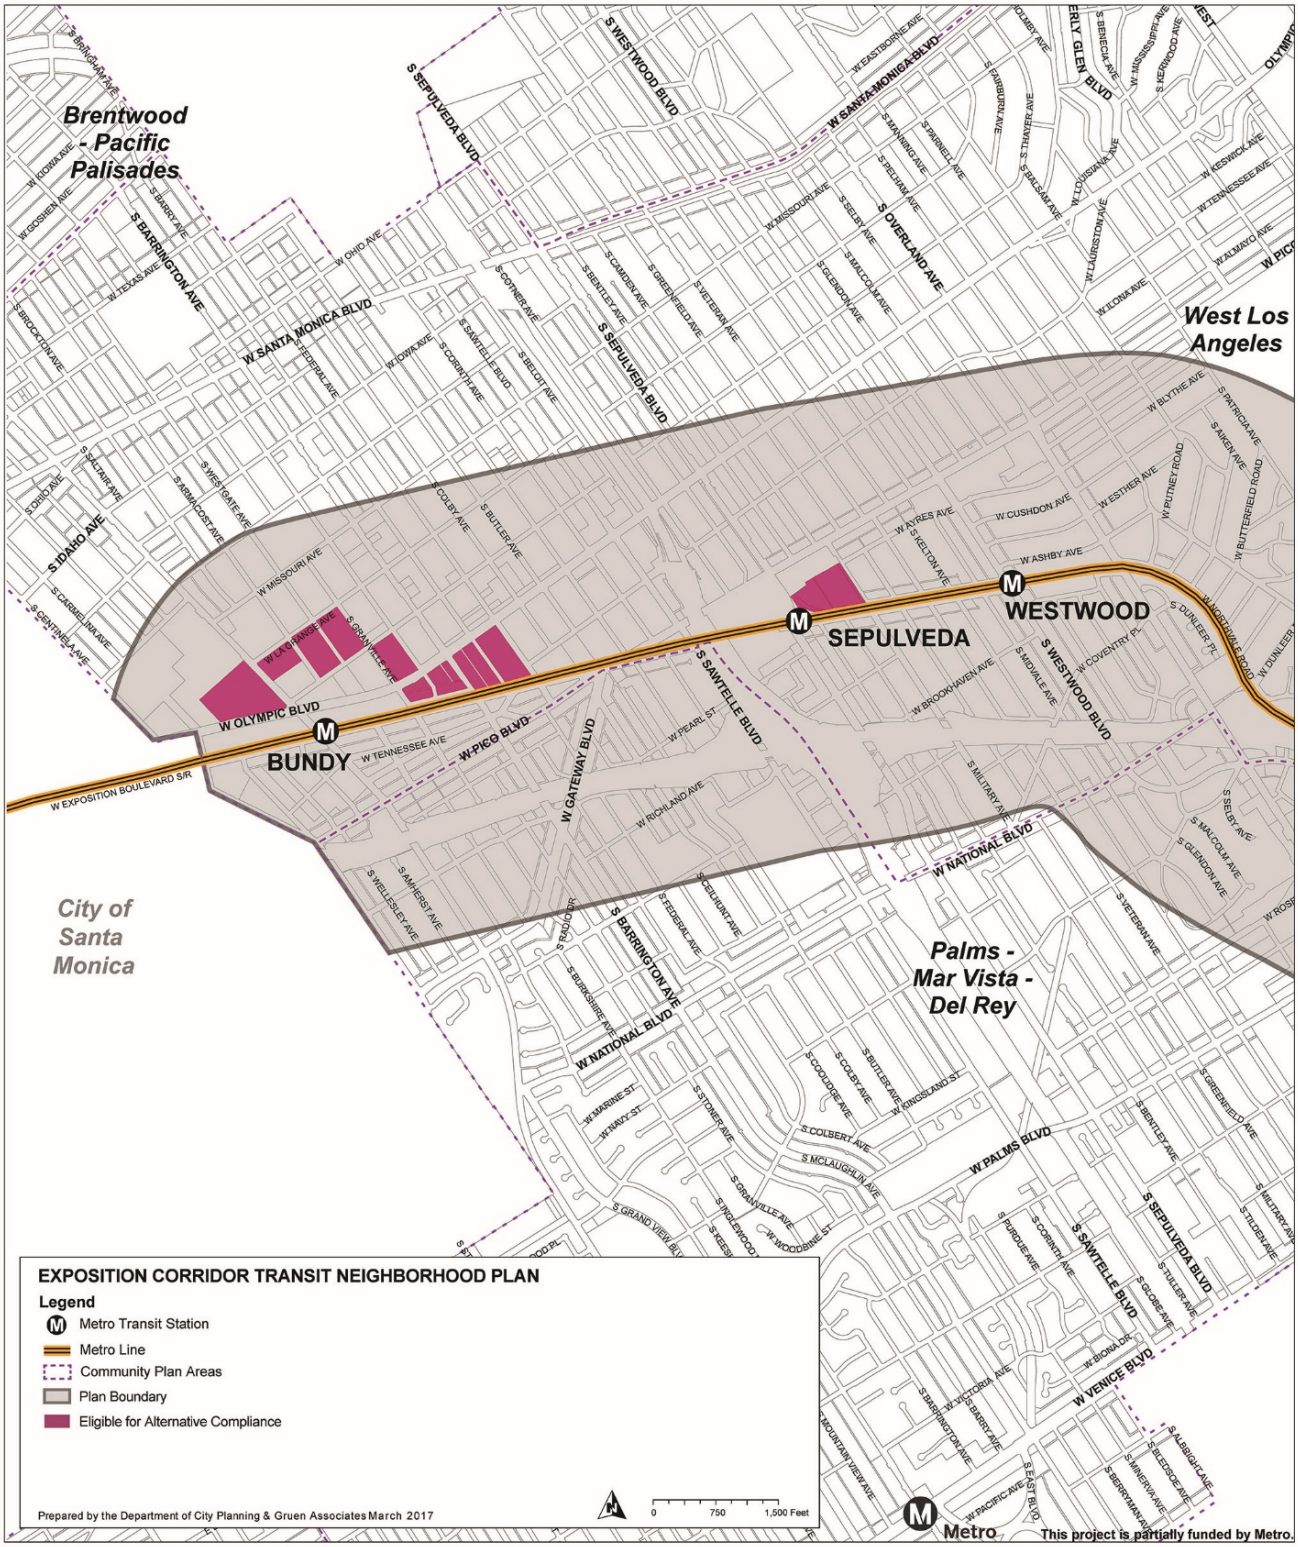
3. Alternative Compliance Projects are limited to the maximum FAR (Bonus FAR) allowed by the zone of the property.

4. Alternative Compliance Projects, including those that do not exceed the Base FAR, must provide Public Benefits pursuant to **Section 3** of this Specific Plan.

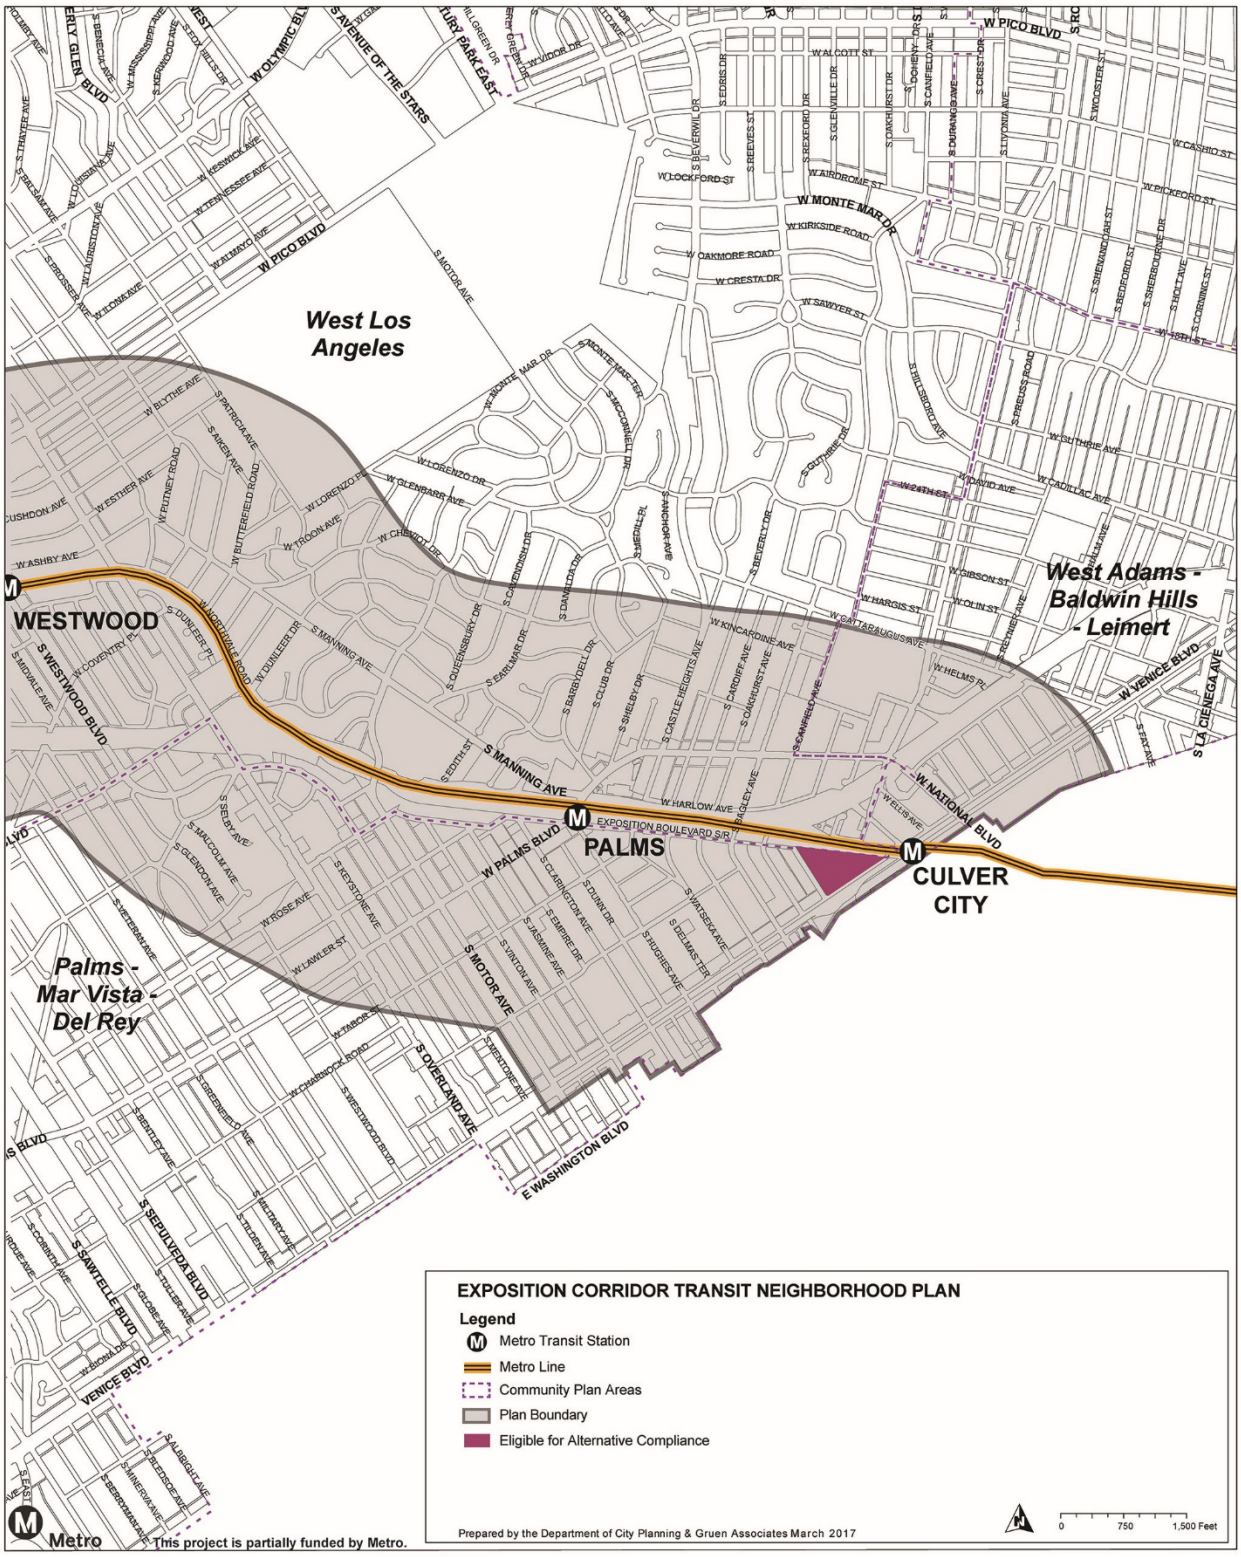
5. Alternative Compliance Projects shall comply with all relevant Urban Design Standards (**Section 4**) as well as the Urban Design Guidelines (**Appendix C**) of this Specific Plan.

6. Projects in the New Industry zone that include up to the allowable amount of Live/Work Units per this Specific Plan are not considered Alternative Compliance Projects and are therefore not subject to the above requirements and process.

MAP E: ALTERNATIVE COMPLIANCE ELIGIBILITY



MAP E: ALTERNATIVE COMPLIANCE ELIGIBILITY



INTENTIONALLY BLANK

2.4. HEIGHT

2.4.1. Maximum Building Height

A. Projects shall not exceed the maximum height set forth in **Table E** and **Map F**. Where the maximum height is not specified, the height requirements in LAMC Section 12.21.1 apply.

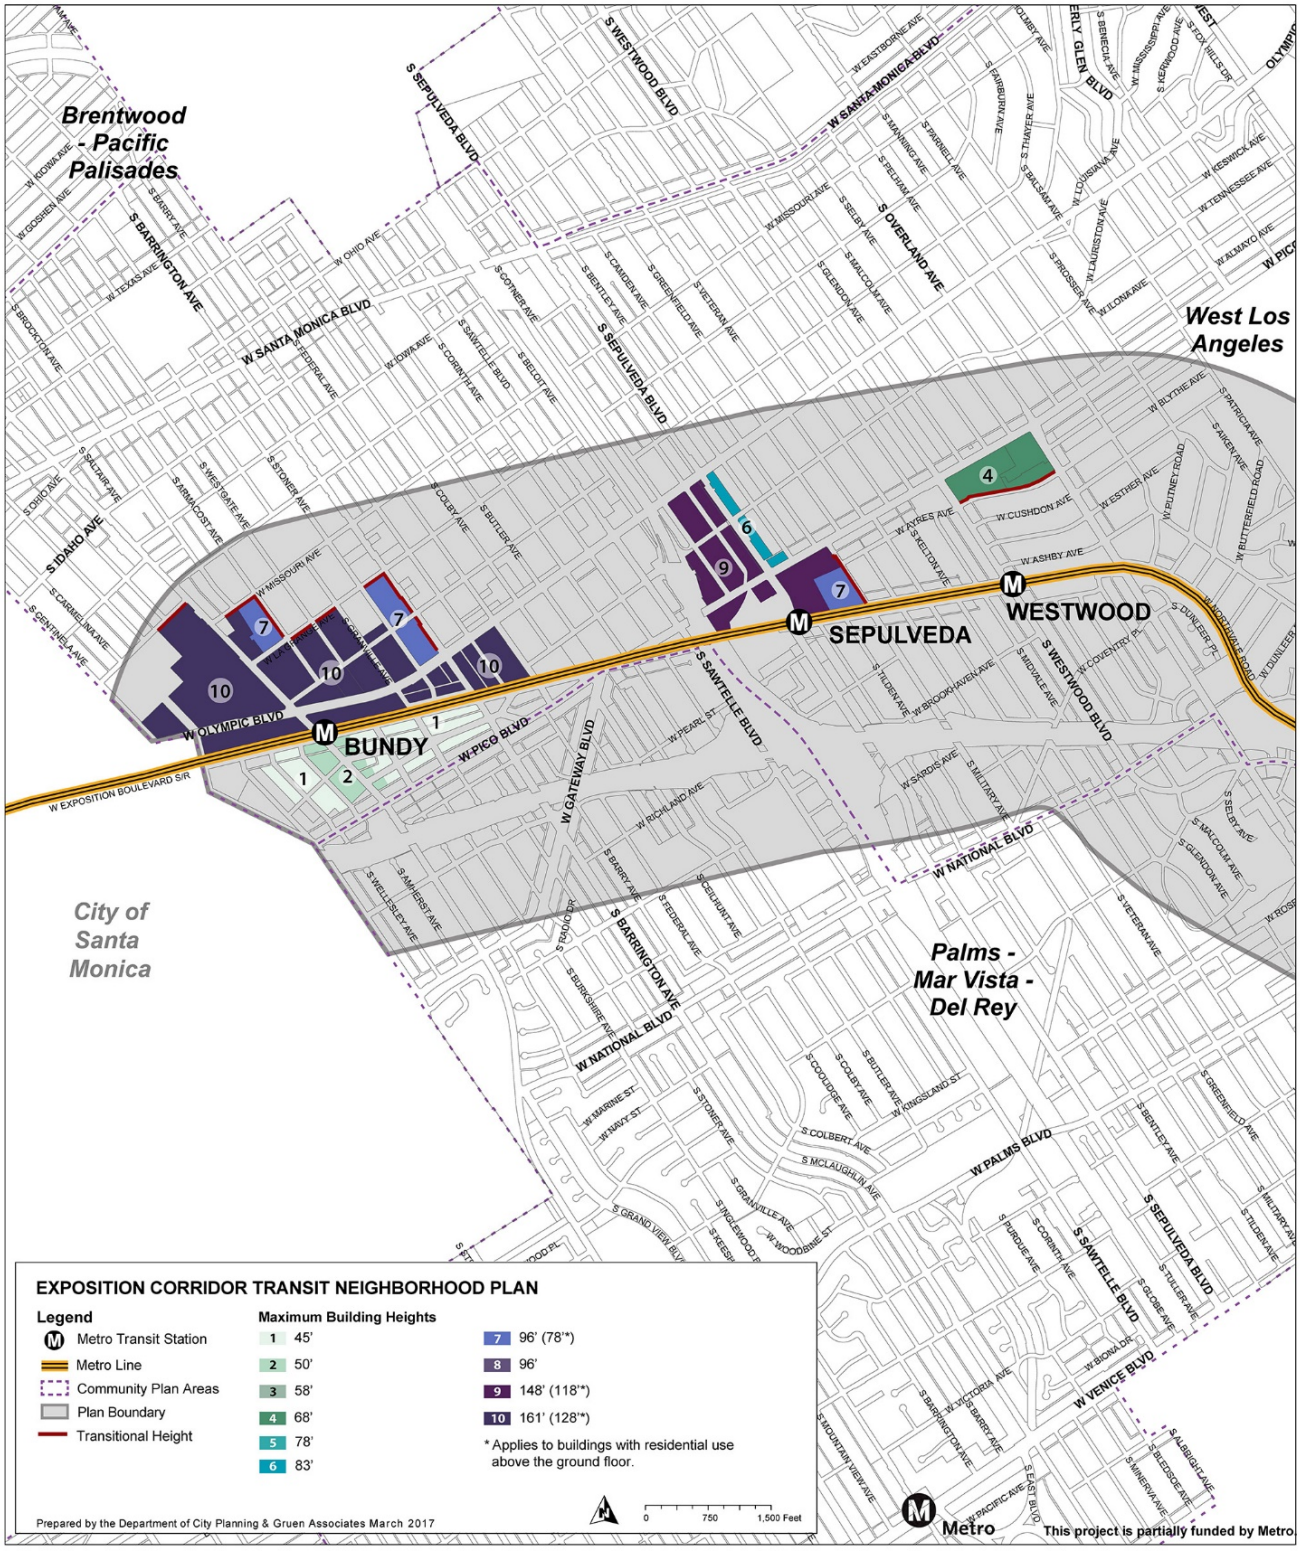
B. **Additional Ground Floor and Top Floor Height.** Additional height up to five feet greater than the limits set forth in **Table E** and **Map F** is permitted for Projects in the New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, or Mixed Use: Commercial/Residential zones. This additional height is allowed in order to accommodate a taller ground floor and/or top floor, and may only be applied to the ground floor where the resulting height of the ground floor exceeds 15 feet or the top residential floor where the resulting height of that floor exceeds 12 feet.

TABLE E: MAXIMUM BUILDING HEIGHTS

Height Area (See Map F)	Maximum Height	Typical Number of Stories[1]
1	45 feet	2 to 4 stories
2	50 feet	3 to 4 stories
3	58 feet	3 to 5 stories
4	68 feet	3 to 6 stories
5	78 feet	3 to 7 stories
6	83 feet	4 to 6 stories
7	96 feet (78 feet[2])	3 to 7 stories
8	96 feet (78 feet[2])	3 to 7 stories
9	148 feet (118 feet[2])	4 to 11 stories
10	161 feet (128 feet[2])	6 to 12 stories

1. Typical Number of Stories is shown for illustrative purposes only and represents a range of building heights that could occur on a Project site.
2. The height noted in parentheses applies to buildings with residential uses above the ground floor, with the exception of Live/Work Units.

MAP F: MAXIMUM BUILDING HEIGHTS



MAP F: MAXIMUM BUILDING HEIGHTS

2.4.2. Transitional Height

Transitional height requirements address the potential adjacency of new non-residential or mixed-use buildings to single- or two-family residential areas.

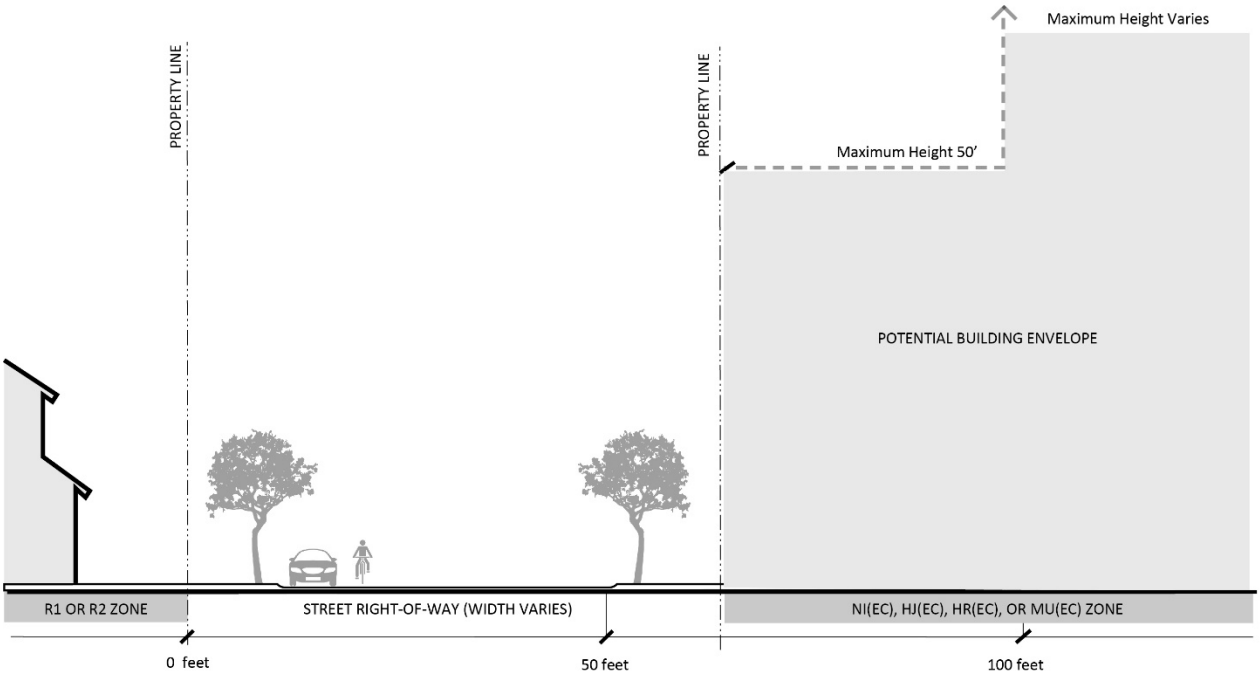
A. **Applicability.** Transitional height requirements apply to Projects in the New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, or Mixed Use: Commercial/Residential zones.

B. **Requirements.**

1. Portions of Projects in applicable zones that are less than 50 feet from R2 or more restrictive residential zones shall not exceed 25 feet in height.

2. Portions of Projects in applicable zones that are equal to or greater than 50 feet and less than 100 feet from R2 or more restrictive residential zones shall not exceed 50 feet in height.

FIGURE B: TRANSITIONAL HEIGHT



2.5. OPEN SPACE

2.5.1. Area Requirements

A. **Residential Uses.** Projects incorporating six or more residential dwelling units shall provide open space pursuant to LAMC Section 12.21 G for multifamily residential units.

1. Live/Work Units shall provide on-site open space, in any combination of common and private open space, at a minimum of 100 square feet per Live/Work Unit.

B. **Non-Residential Uses.** Projects in the following zones shall provide a minimum of one square foot of common open space for every 25 square feet of Non-Residential Uses: New Industry; Hybrid Industrial: Jobs Emphasis; Hybrid Industrial: Residential Emphasis; Mixed Use: Commercial/Residential. This open space shall meet the following requirements:

1. Be open to the sky and have no structures that project into the common open space area, as provided in LAMC Section 12.22 C.20(b).

2. Be readily accessible to all employees and visitors to the site during business hours.

3. Have a minimum of 400 square feet with no horizontal dimension less than 15 feet when measured perpendicular from any point on each of the boundaries of the open space area.

4. Have a minimum of 25 percent of the area planted with ground cover, shrubs, or trees.

C. **Mixed-Use Projects.** Projects with a combination of Residential Uses and Non-Residential Uses shall apply the relevant open space requirements to each type of use.

D. **Open Space in Excess of 25,000 Square Feet.** Projects that require open space in excess of 25,000 square feet shall dedicate a portion of the area for active recreational use. Permitted active recreational uses include, but are not limited to, the following: basketball courts, tennis courts, badminton courts, bocce courts, playgrounds, tot lots, exercise/fitness areas, swimming pools, and community gardens.

E. **Design Standards.** All open space shall comply with all relevant Urban Design Standards in **Section 4.2.4.** of this Specific Plan and the Urban Design Guidelines (**Appendix C**).

2.5.2. Publicly Accessible Open Space

A. **Reduction of Open Space.** Projects may provide up to 25 percent less open space than the total open space required by LAMC Section 12.21 G and/or this Specific Plan if the open space is provided as Publicly Accessible Open Space.

B. **PAOS Standards.** Publicly Accessible Open Space must conform to the following criteria:

1. Spaces shall be open to the public seven days a week, at minimum from 6 a.m. to 10 p.m.

2. Spaces must be sufficiently maintained and operated by the property owner, with ongoing public access maintained.

3. Spaces must conform to all relevant Urban Design Standards in **Section 4.2.4** of this Specific Plan.

4. The following uses shall not be counted as a Publicly Accessible Open Space: surface parking areas, open storage areas, swimming pools and spas unless open to the general public, loading docks and parking, driveway entrance/exit areas, sidewalks and parkways in the public right-of-way as of the date of adoption of this Specific Plan, and utility areas/pads.

5. The following uses may be counted as a Publicly Accessible Open Space: parklets or other pedestrian spaces in the public right-of-way; new public streets and alleyways.

C. **PAOS as Public Benefit Requirement.** Publicly Accessible Open Space provided in order to satisfy a public benefit requirement per **Section 3** of this Specific Plan cannot be counted toward the open space area required in **Section 2.5.1**.

2.6. PARKING

2.6.1. General Requirements

A. **Required Automobile and Bicycle Parking.** Projects shall comply with LAMC Section 12.21 A.4 Off-Street Automobile Requirements for number of required parking spaces and shall comply with LAMC Section 12.21 A.16 Bicycle Parking and Shower Facilities requirements. Where this Specific Plan contains language or standards that require more parking or permit less parking than LAMC Section 12.21 A, this Specific Plan shall supersede the LAMC.

B. **Live/Work Units.** A minimum of 1 automobile parking space per Live/Work Unit is required.

C. **Electric Vehicle Charging Stations.** A minimum of 10 percent of automobile parking spaces provided in a Project shall include electric vehicle (EV) charging stations.

D. **Unbundled Parking.** Projects within the Subareas in the Plan area, excluding Projects in R3 or more restrictive zones, shall unbundle automobile parking charges from the rents, sale price, or other fees charged for occupying living space, commercial space, or industrial space. Automobile parking spaces shall be leased or sold separately from the rental or purchase fees, such that potential renters or buyers have the option of renting or buying a residential unit or commercial space at a price lower than if the automobile parking was included.

1. The owner or owners of a property on which the parking is to be provided shall record an agreement in the Office of the County Recorder of Los Angeles County, California, as a covenant running with the land for the benefit of the City of Los Angeles, providing that such owner or owners shall continue to segregate parking fees from rents, sales or other fees charged for occupying Project space so long as the building or use that the parking is intended to serve is maintained.

2. The owner(s) of the property shall have the option to offer any unused parking spaces to other residential or non-residential tenants or the general public.

3. This Specific Plan does not prohibit landlords from leasing or licensing parking spaces to third parties who do not lease living, employment, commercial, or industrial spaces within the Project.

E. **Design Standards.** All parking provided as part of a Project shall comply with the parking design standards in **Sections 4.2.5.** or **4.3.5.** of this Specific Plan as well substantially conform to the relevant Urban Design Guidelines (**Appendix C**).

2.6.2. Exemptions

A. **Change of Use.** If an application for a change of use in a building permitted after the adoption date of this Specific Plan results in an increased number of parking spaces required, then the Project is not required to provide the additional parking.

B. **Neighborhood Serving Uses.** Neighborhood-Serving Uses, as defined in this Specific Plan, are exempt from minimum automobile parking requirements in LAMC Section 12.21 A.4 if they conform to the following criteria:

1. Are located within a mixed-use Project within Subareas 2 or 9; and

2. Occupy less than 1,500 square feet each.

3. The parking exemption for Neighborhood-Serving Uses may be applied to restaurants and cafes only up to a maximum of 50 percent of the total square footage of Neighborhood-Serving Uses in the Project. Any additional square footage of restaurant or café use beyond this maximum is subject to the minimum automobile parking requirements in LAMC Section 12.21 A.4.

2.6.3. Reductions

A. **Car Share Vehicle Spaces.** For each automobile parking space reserved for a car share vehicle, the minimum number of required automobile parking spaces may be reduced by 5 spaces.

1. Projects seeking a reduction in required parking as a result of car share vehicle spaces must submit a copy of the car-sharing agreement prior to Project approval.

B. **Shared Parking.** Parking may be shared among different uses within a Project to take advantage of different peak periods, account for users accessing multiple destinations within a single Project, and ensure the most efficient use of parking spaces.

1. Projects seeking a reduction in required parking as a result of shared parking shall submit a parking demand analysis at the time of application showing peak utilization based on a Project's proposed uses. If it is determined by the Director, in consultation with the Los Angeles Department of Transportation (LADOT), that a lower total number of parking spaces than would otherwise be required by LAMC Section 12.21 A.4 will provide adequate parking for the Project's uses, then that lower number of parking spaces shall be permitted.

2. Shared parking spaces shall not be reserved or otherwise restricted to particular users, whether through physical design or through signage.

3. Projects may not use the reduction in minimum parking available through this shared parking provision in combination with the reduction associated with Neighborhood-Serving Uses in **Section 2.6.2**.

C. **Projects that Include Affordable Housing.** Projects that include restricted affordable units as part of the Density Bonus Ordinance (LAMC Section 12.22 A.25) may choose to use either Parking Option 1 or Parking Option 2 found in that ordinance.

1. Projects that include restricted affordable units as part of the Density Bonus Ordinance and that are located within ½ mile of a major transit stop (as defined by Section 21155 of the Public Resources Code) may use the following reduced parking ratios:

a. For 100% affordable rental projects, exclusive of a manager's unit or units, the ratio shall be 0.5 spaces per unit.

b. For mixed-income projects consisting of the maximum number of very low- or low-income units provided for in the Density Bonus Ordinance, the ratio shall be 0.5 spaces per bedroom.

2. Projects that include restricted affordable units as part of the Public Benefits requirement for Bonus FAR in this Specific Plan may use any of the parking options found in the Density Bonus Ordinance, or the reduced ratios noted in this section.

2.6.4. Transit Benefits

Projects within the Subareas in the Plan area, excluding Projects in R3 or more restrictive zones, are required to provide transit benefits to residents and/or employees. This is intended to complement the parking requirements, which discourage automobile ownership and/or encourage residents and employees not to drive to the site.

A. **Residential Uses.** In Projects that incorporate residential uses, owners shall:

1. Offer a Metro Business Transit Access Pass (B-TAP) or approved equivalent to residents who choose not to rent or buy a parking space(s) with their residential or Live/Work Unit. Transit passes shall be offered at no additional cost to the resident as long as the resident resides within the development and continues to not rent parking spaces with their residential unit and have documented their non-ownership of a car.

2. The minimum number of passes per residential or Live/Work Unit that is required to be offered is equal to the minimum number of parking spaces required for that residential or Live/Work Unit per LAMC Section 12.21 A.4 or this Specific Plan.

B. **Non-Residential Uses.** In Projects that incorporate Non-Residential Uses, employers with at least 50 employees shall either:

1. Offer an employer-paid Metro Business Transit Access Pass (B-TAP) to employees who choose to use parking cash-out, or

2. Operate a reimbursement program allowing employees to pay for other transit passes or employer reimbursement for equivalent vanpool charges.

INTENTIONALLY BLANK

SECTION 3

PUBLIC BENEFITS

INTENTIONALLY BLANK

3.1. PUBLIC BENEFITS REQUIREMENTS

3.1.1. Purpose

A. Projects in the Plan area are allowed additional floor area in exchange for providing Public Benefits in the form of on-site project features or off-site improvements. These Public Benefits are intended to be proportional to the Project size.

B. The Public Benefits in this Specific Plan aim to address core community needs in the Exposition Corridor, especially as they relate to creating transit neighborhoods. A primary focus of the Public Benefits is to expand housing options through the provision of affordable housing. In addition, Public Benefits aim to enhance accessibility to the Expo Line transit stations, including connections between stations and surrounding neighborhoods for pedestrians, cyclists, and transit riders. Open space, shared community facilities, and other public benefits and amenities that serve the neighborhood and help elevate the quality of life in the area are also a priority.

3.1.2. Applicability

A. Projects are required to provide Public Benefits as shown in **Table F**.

TABLE F: PUBLIC BENEFITS APPLICABILITY

Project FAR	Project Use Mix	Public Benefits Required
Base FAR	Any	None
Bonus FAR	Less than 70% Non-Residential	Affordable Housing (**Section 3.2**) *and* Community Amenities (**Section 3.3**)
	70% or more Non-Residential	Vehicle Trip Reduction (**Section 3.4**)

B. **Exceptions.**

1. **100% Affordable Housing Projects.** Projects where the entirety of the residential component consists of restricted affordable units, exclusive of a manager's unit or units, are not required to provide additional Public Benefits, regardless of total Project FAR.

2. **Alternative Compliance Projects.** All Alternative Compliance Projects (**Section 2.3.2.B**) are required to provide both Affordable Housing and Community Amenities, regardless of whether Projects exceed the Base FAR.

3.2. AFFORDABLE HOUSING

3.2.1. Relationship to Citywide Density Bonus

A. Projects may utilize the Citywide Density Bonus Ordinance ("Density Bonus") pursuant to LAMC Section 12.22 A.25.

B. Projects shall apply the Density Bonus to the Base FAR for that zone. The Density Bonus cannot be applied in conjunction with the Bonus FAR.

C. **Base Residential Densities.** Base residential densities (see **Table G**) are used to calculate the number of restricted affordable units required for Projects in the Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, or Mixed Use: Commercial/Residential zones. Note that the base residential density does not limit the overall number of units allowed in these zones; these zones are not subject to residential density limits.

D. **Minimum Non-Residential Use Requirements.** Projects utilizing Density Bonus must continue to comply with the minimum Non-Residential Use requirements in **Section 2.3.2** according to the total Project FAR.

TABLE G: BASE RESIDENTIAL DENSITIES

Zone	Base Residential Density
Hybrid Industrial: Jobs Emphasis	1 DU for every 1,500 SF of lot area
Hybrid Industrial: Residential Emphasis	1 DU for every 800 SF of lot area
Mixed Use: Commercial/Residential	1 DU for every 400 SF of lot area

3.2.2. Affordable Housing Requirements for Bonus FAR Projects

Projects using the Bonus FAR available through this Specific Plan (**Section 2.3**) are subject to the following requirements:

A. **Minimum Number of Affordable Units.** Projects must provide a minimum percentage of the total units as on-site restricted affordable units at one of the following rates depending on income category. Any number resulting in a fraction shall be rounded up to next whole number.

1. 7 percent for Extremely Low Income Households

2. 11 percent for Very Low Income Households

3. 20 percent for Low Income Households

B. **Affordable Rent Requirements.** Affordable rents for restricted affordable units designated for Low-Income Households shall not exceed 30 percent of 60 percent of the Area Median Income established by the California Department of Housing and Community Development (HCD). However, for Low-Income Households with gross incomes exceeding 60 percent of the Area Median Income, affordable rents shall not exceed 30 percent of the gross income of the household.

C. **Certificate of Occupancy.** No certificate of occupancy may be issued for a Project required to provide affordable housing per this Specific Plan unless a certificate of occupancy is concurrently, or has already been, issued for all restricted affordable units.

D. **Covenant on Affordability.** A covenant acceptable to the Los Angeles Housing and Community Investment Department (HCID) shall be recorded with the Los Angeles County Recorder, guaranteeing that the affordability criteria will be observed for at least 55 years from the issuance of the Certificate of Occupancy or a longer period of time if required by the construction or mortgage financing assistance program, mortgage assistance program, or rental subsidy program.

1. If the duration of affordability covenants provided for in this subdivision conflicts with the duration for any other government requirement, the longest duration shall control.

2. Any covenant described in this subdivision must provide for a private right of enforcement by the City, any tenant, or owner of any building to which a covenant and agreement applies.

3.2.3. Design Standards for Affordable Units Within Mixed-Income Projects

A. Restricted affordable units shall be generally comparable to market rate dwelling units, including total square footage, bedroom size, closet space amenities, number of bathrooms, etc. (but not including interior finish materials).

B. **Unit Size.** Restricted affordable units shall be no less than 90 percent of the average square footage of the market rate units with the same number of bedrooms.

C. **Unit Mix.** The design of the restricted affordable units shall generally reflect the average number of bedrooms per dwelling unit in the overall Project.

D. **Location of Units.** Restricted affordable units must be reasonably interspersed among market-rate dwelling units within the same building.

E. **Equal Distribution of Amenities.** Residents of Restricted affordable units shall not be charged for amenities that are provided at no cost to other residents, including, but not limited to, access to recreational facilities, parking, cable TV, and interior amenities. Optional services provided must be optional for all residents, and available under the same terms and conditions. Tenants of Restricted affordable units cannot be required to purchase additional services.

3.2.4. Parking for Affordable Housing

A. Projects utilizing the Density Bonus per LAMC Section 12.22 A.25 or the Bonus FAR per this Specific Plan are subject to the parking regulations in **Section 2.6.3** of this Specific Plan.

3.3. COMMUNITY AMENITIES

3.3.1. Procedure

Community Amenities are assigned in accordance with the following procedure:

A. **Point Values.** Projects are given a point value according to the square footage of Residential Use and Non-Residential Use using the schedule in **Table H**. **Figure C** shows two examples of point value calculations. Total point values shall be rounded to the nearest whole number.

TABLE H: COMMUNITY AMENITIES POINTS SCHEDULE

	Bundy and Sepulveda Station Areas[3]	Palms and Culver City Station Areas[4]
Non-Residential Use, per 1,000 GSF[1]		
All Projects	0.050 pts.	0.010 pts.
Residential Use, per 1,000 NSF[2]		
Restricted Affordable Units, including Affordable Live/Work Units	--	--
Market-rate units and Live/Work Units	0.105 pts.	0.011 pts.
Market-rate units and Live/Work Units in Alternative Compliance Projects	0.315 pts.	0.035 pts.
Live/Work Units in the New Industry zone with more than 30% Live/Work Units	0.315 pts.	0.035 pts.

1. GSF (gross square footage) includes all building floor area, including common areas.
2. NSF (net square footage) excludes square footage of common areas within residential buildings, and includes only square footage of individual dwelling units.
3. The Bundy and Sepulveda Station areas include properties within Subareas 1, 4, 5, and 6.
4. The Palms and Culver City Station areas include properties within Subareas 7 through 13.

FIGURE C: SAMPLE PUBLIC BENEFITS POINTS CALCULATION

<Revised figure to come>

B. The total number of points calculated for a Project shall be submitted at the time of application. Based on the Project's total point value, the Director of Planning will assign specific Community Amenities from those listed in the Public Benefits Menu (**Appendix A**) equivalent to the point value of the Project.

    1. Note that consideration is given as to the project location and scale as well as Community Amenities that have already been assigned to projects in the area.

C. **Alternative Community Amenities.** An applicant may propose Community Amenities that are not listed in the Public Benefits Menu (**Appendix A**) for consideration by the Director. Such amenities must satisfy the intent of the Public Benefits program (**Section 3.1.1**) and contribute to the objectives of this Specific Plan (**Section 1.1.2**). These may include streetscape improvements on streets in this Specific Plan area beyond those listed in **Appendix A**, mobility amenities, or community facilities.

    1. Community Amenities submitted to the Director for consideration must be accompanied by a tabulation of the estimated cost of providing the benefit, prepared or validated by a third party that is an expert in their field.

D. **Covenant Agreement.** Prior to issuance of a building permit, the property owner of the lot or lots where the Community Amenity is located shall record a Covenant and Agreement, which shall be required to run with the land, agreeing that the Community Amenities assigned to the Project will be maintained by the property owner for the life of the Project.

E. **West Los Angeles TIMP Fees.** Projects located within the boundaries of the West Los Angeles TIMP (WLA TIMP) Specific Plan Area are subject to the applicable Transportation Impact Assessment (TIA) fees in that plan. In lieu credits toward the TIA fee may be available for Projects that provide Community Amenities per this Specific Plan that are also found on the WLA TIMP list of transportation improvement projects. See the WLA TIMP for details.

3.3.2. Updates

A. To reflect changing economic conditions and ensure that Public Benefits objectives are still relevant, the point schedule and Public Benefits Menu (**Appendix A**) shall be regularly reviewed and updated as necessary.

1. Updates to the point schedule shall be reviewed and approved by the Director of Planning.

2. Updates to the Public Benefits Menu shall be recommended by the Director of Planning and approved by the City Planning Commission.

3.3.3. Compliance Review

A. **Annual Inspections.** Projects which provide Community Amenities per **Section 3.3** of this Specific Plan are subject to annual inspections to ensure that benefits assigned to the Project have been implemented and are maintained in good condition.

B. **Fees.** In addition to the Department of City Planning's fees for review and approval of Projects found in LAMC Section 19.01, Projects under this Specific Plan are subject to an additional fee directed towards field inspections and monitoring of Community Amenity requirements, in accordance with LAMC Section 12.24 F.

3.3.4. Streetscape Improvements

Streetscape improvements are intended to implement the Exposition Corridor Streetscape Plan and other streetscape plans and to enhance the pedestrian environment throughout the Plan Area. These improvements may include elements such as sidewalk paving, landscaping, street trees, curb extensions, crosswalks, medians, lighting, and street furniture.

A. **Location.** Streetscape improvements must be located beyond the property frontage of a Project in order to satisfy the Community Amenities requirement.

B. Streetscape improvements shall adhere to the relevant standards established by LADOT and the Department of Public Works.

C. **Projects Along Streetscape Plan Segments.** Streetscape improvements for the street segments that are part of the Exposition Corridor Streetscape Plan or Livable Boulevard Streetscape Plan (see **Map H**), or any other adopted streetscape plan, must be consistent with the provisions of the corresponding streetscape plan.

D. **Projects Not Along Streetscape Plan Segments.** Streetscape improvements for streets that do not have an adopted streetscape plan may also be proposed as Community Amenities, particularly when the segments identified on **Map H** have already been improved.

1. Improvements shall be consistent with the Mobility Plan 2035 and the corresponding street classification, with a focus on providing sufficient sidewalk widths, landscaping and shade trees, street furniture, bicycle facilities, and transit facilities.

E. **Point Value.** The amount and location of streetscape improvements required is based on a Project's point value and the corresponding point value of a streetscape project or individual streetscape elements listed in the Public Benefits Menu (**Appendix A**).

3.3.5. Publicly Accessible Open Space

Publicly Accessible Open Space (PAOS) is privately owned and maintained open space that is made open and accessible to the general public. Types of PAOS may include, but are not limited to, the following:

- PAOS on private property (such as plazas, courtyards, parks, paseos and walkways, outdoor sports areas, and playgrounds)
- PAOS within the public right-of-way (such as parklets or traffic islands).

A. **Area Requirements.** The amount (square footage) of PAOS required for a project is based on a Project's point value and the corresponding point value of PAOS shown in the Public Benefits Menu (**Appendix A**).

B. **General Standards.** All PAOS provided as a Public Benefit must conform to the standards outlined in **Section 2.5.2** of this Specific Plan.

C. **Design Standards and Guidelines.** PAOS shall also be designed in compliance with the relevant Urban Design Standards (**Section 4.2.4**) and substantially conform to the Urban Design Guidelines (**Appendix C**) of this Specific Plan.

3.3.6. Mobility Amenities

Mobility amenities provide and enhance public access between transit stations and the surrounding neighborhood via a variety of transportation modes. They enable safe, comfortable, and efficient travel to/from transit stations and local destinations. Mobility amenities may include, but are not limited to, the following:

- Mobility Hubs
- Bicycle Hubs
- Bicycle Storage Stations
- Enhanced Bus Shelters
- Bicycle Corrals

A. **Point Value.** The type and amount of mobility amenities required to satisfy Public Benefit requirements is based on the Project's point value and the corresponding point value of the amenities in the Public Benefits Menu (**Appendix A**).

B. **Requirements.** Mobility Amenities provided as Community Amenities shall conform to the following:

1. Mobility Hubs and Bicycle Hubs may be constructed on-site as part of a Project, or off-site.

2. Mobility Hubs and Bicycle Hubs must be located within 500 feet of a transit station.

3. Mobility amenities shall provide, at minimum, space for the following:

a. Mobility Hub: 30 bicycle share docks; 30 secured bicycle parking spaces; 5 car share spaces

b. Bicycle Hub: 100 secured bicycle parking spaces

c. Bicycle Storage Station: 30 secured bicycle parking spaces

4. Mobility amenities must be sufficiently identified with signage and fully accessible to the general public at all hours.

5. For improvements to be made within the public right-of-way, such as bus shelters, applicants must coordinate with the Department of Public Works for applicable standards and requirements.

6. Maintenance of mobility amenities is the responsibility of the property owner.

3.3.7. Community Facilities

Community Facilities are uses whose primary purpose is to provide services and amenities to the general public, and can include any of the following, or similar:

- Childcare centers
- Adult day cares
- Youth centers
- Health clinics
- Museums
- Cultural centers
- Recreation centers

A. **Point Value.** The type and amount of community facilities required to satisfy the Community Amenities requirement is based on the Project's point value and the corresponding point value of the facility in the Public Benefits Menu (**Appendix A**).

B. **Requirements.** Community Facilities provided as Community Amenities shall conform to the following:

1. Community Facilities must contain a minimum building area of 5,000 square feet.

2. Community Facilities may be provided on same lot as the Project or off-site but within the Plan area.

3. If the use of a Community Facility is discontinued, it must be replaced with another Community Facility of similar scale and scope by the property owner or subsequent owner for the life of the Project.

3.4. VEHICLE TRIP REDUCTION

3.4.1. Purpose

The purpose of the Vehicle Trip Reduction requirement is to help reduce the impact of new vehicular trips generated by new non-residential development in the Plan area on the transportation infrastructure during the most congested times of the day through the use of transportation demand management (TDM) strategies. Employer-based TDM strategies have been shown to be effective in achieving reductions in single-occupancy vehicle travel during peak hours, especially when high-quality transit options are available.

3.4.2. Applicability

A. Projects which meet all of the following criteria are subject to the Vehicle Trip Reduction requirement:

1. Located in the New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial: Residential Emphasis, or Mixed Use: Commercial/Residential zones;

2. Exceed the Base FAR; and,

3. Comprised of 70 percent or more Non-Residential Use, determined by Project square footage.

3.4.3. Vehicle Trip Reduction

A. Projects must demonstrate either a 10 percent reduction in AM or PM peak-hour weekday vehicle trips from baseline vehicle trip levels, or an Average Vehicle Ridership (AVR) of 1.75 for AM peak-hour weekday vehicle trips.

1. Baseline vehicle trip levels are based on a Vehicle Trip Generation Study, which is required of all Projects at the time of application. See **Section 6.2.1.** of this Specific Plan.

2. Peak-hour weekday vehicle trips are determined by an average count of vehicle trips that enter or exit the project site during the peak-hour period. The average count should be based on counts taken for four days, across two weeks, on Tuesdays through Thursdays.

    a. Peak-hour period is defined as the 60-minute weekday period with the highest traffic volume between 6 a.m. and 10 a.m. or between 4 p.m. and 7 p.m.

3. AVR is calculated as the total number of employees at a work site during the peak hour period (between 6 a.m. and 10 a.m.) divided by the total vehicle trips made to or from the site during that same period.

B. Applicants that wish to propose an alternative method of demonstrating compliance with this requirement must receive approval from the Department of City Planning, in consultation with LADOT.

3.4.4. Application Submittal

Projects subject to the Vehicle Trip Reduction requirement shall submit the following items with the project application:

A. **Vehicle Trip Generation Study.** A Vehicle Trip Generation Study, which estimates baseline peak-hour weekday vehicle trips that will be generated by the Project. If AVR is being used to demonstrate the trip reduction, then a Vehicle Trip Generation Study is not required.

B. **Transportation Demand Management Plan.** A Transportation Demand Management (TDM) Plan, including the following elements:

1. A list of TDM strategies that will be used in an effort to meet the Vehicle Trip Reduction requirement. These strategies may include, but are not limited to, those found in **Section 3.4.7** of this Specific Plan.

2. A schedule and enumeration of responsibilities for implementation.

C. **Fees.** Applicants are subject to any applicable fees per LAMC Section 19.15, including LADOT Development Review fees.

3.4.5. Reporting Procedure

A. Beginning one year after a Certificate of Occupancy is obtained, the property owner must submit annual reports to the Department of City Planning, documenting counts of peak-hour weekday vehicle trips beginning and ending at the property. The property owner may deduct additional vehicle trips that result from shared parking arrangements with other users from the total vehicle trips for the purposes of the Vehicle Trip Reduction requirement.

B. The annual Vehicle Trip Reduction reports will be reviewed by the Department of City Planning, in consultation with LADOT as needed.

C. Reporting must continue annually until the project establishes compliance with the Vehicle Trip Reduction requirement for five consecutive years.

3.4.6. Non-Compliance Assessment Fee

A. Projects that do not comply with the Vehicle Trip Reduction requirement, either by failing to submit the required TDM Plan or annual reports, or by failing to meet the target Vehicle Trip Reduction amounts for two consecutive years, are subject to a fee for non-compliance. Penalties will continue for each subsequent year of non-compliance until compliance is achieved.

1. The fee is calculated using the Transportation Impact Assessment (TIA) fee in the West Los Angeles Transportation Improvement and Mitigation Specific Plan (WLA TIMP), assessed for each trip the Project is over the total number of trips needed to meet the Vehicle Trip Reduction target of 10 percent.

2. The fee shall be paid into the WLA TIMP Fund, which funds transportation improvements in the West LA area.

3.4.7. Transportation Demand Management (TDM) Strategies

A. TDM strategies that may be used to achieve the Vehicle Trip Reduction include, but are not limited to, the following:

1. A TDM coordinator;

2. Area-wide Transportation Management Association (TMA);

3. Commute Trip Reduction (CTR) Marketing, including a Transportation Information Center (TIC) and promotional activities, such as posters, prizes, and events promoting ridesharing;

4. Transit fare subsidy;

5. On-site sale of monthly transit passes;

6. Pre-tax transit commute expense accounts (pursuant to Internal Revenue Code Section 132(f));

7. Bicycle facilities (e.g. bicycle storage, showers and lockers, on-site self-service bicycle repair areas) beyond the requirements of the Bicycle Parking Ordinance (LAMC Section 12.21 A.16)

8. Integrated mobility hubs (as part of Citywide program)

9. On-site car share and/or bicycle share programs.

10. Pedestrian network improvements
11. Wayfinding and multi-modal navigation tools.
12. Flexible work hours
13. Telecommuting
14. Employer-sponsored vanpools
15. Employer-sponsored shuttles
16. Use of company vehicles for daytime business trips.
17. Ridesharing services
18. Guaranteed ride home programs.
19. Campus shuttle program
20. Parking cash out
21. Unbundled parking
22. Workplace parking pricing
23. Limit parking supply

B. **Citywide TDM Requirements.** The TDM requirements in this Specific Plan are in addition to the requirements of the Citywide Ordinance on TDM and Trip Reduction Measures (LAMC Section 12.26 J).

C. **Other Plan Requirements.** TDM strategies provided to satisfy other requirements of this Specific Plan (such as unbundled parking or transit benefit programs) or provided as Community Amenities (such as streetscape improvements or mobility amenities) may be incorporated into a Project's TDM strategy to reduce trips.

SECTION 4

URBAN DESIGN STANDARDS

INTENTIONALLY BLANK

4.1. APPLICABILITY

4.2.1. Urban Design Standards

A. **Applicability of Multi-Family Residential Design Standards.** Projects located in a Residential (R) zone, except for the Residential/Accessory Services (RAS) zone, shall comply with the Multi-Family Residential Design Standards in **Section 4.3**.

B. **Applicability of Mixed Use/Commercial/Industrial Design Standards.** Projects located in all other zones, including the RAS zone, shall comply with the Mixed Use/Commercial/Industrial Design Standards in **Section 4.2**.

C. **Signs.**

1. Projects located in the West Pico Design District (see **Map B**) shall comply with the design standards for signs in **Section 4.2.6**.

    a. For industrial Projects, the standards for wall signs, monument signs, projecting signs, awning signs, and information signs in **Section 4.2.6** are applicable only to signs placed on their Pico Boulevard/Southern Pacific Railroad Right-of-Way frontage.

2. Projects in all other areas shall comply with the City's Sign Regulations as defined in LAMC Section 14.4.

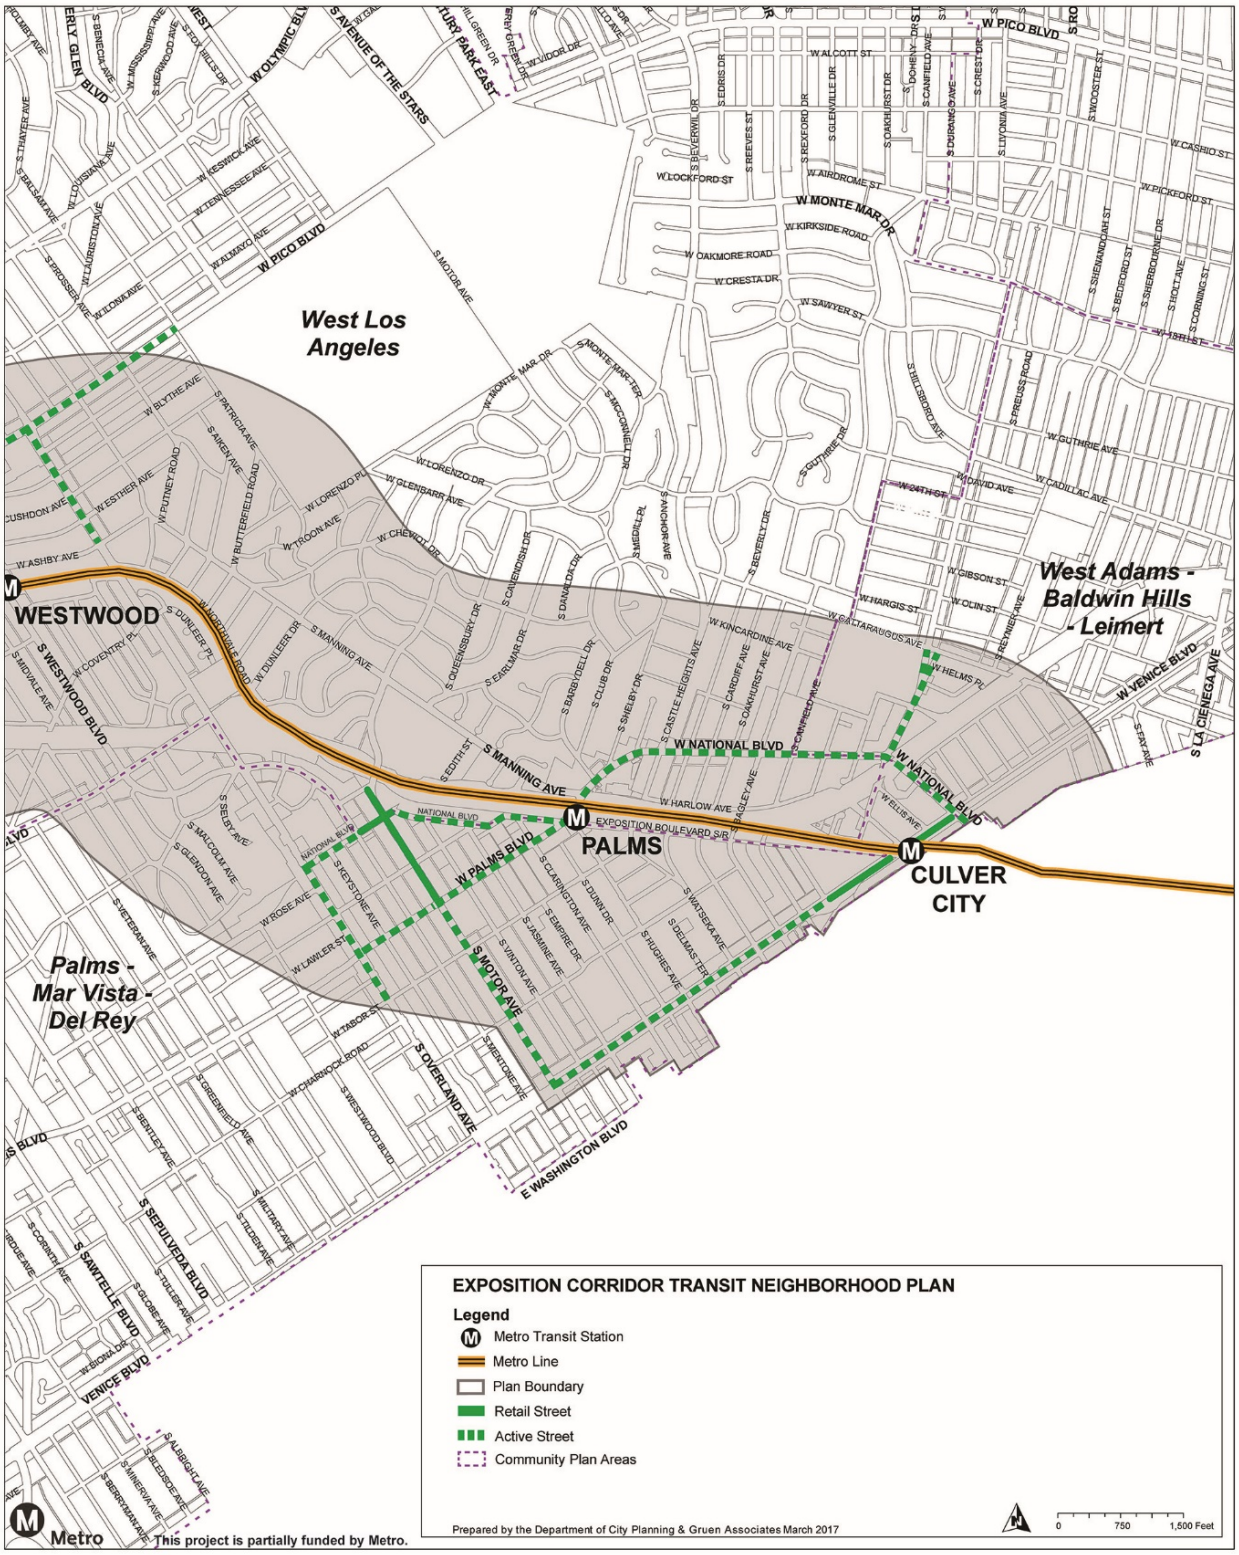
4.2.2. Urban Design Guidelines

A. **Applicability.** All Projects requiring discretionary approval by the Department of City Planning shall substantially comply with the Exposition Corridor Urban Design Guidelines (**Appendix C**).

B. **Findings.** For an application involving a Director's Determination for Alternative Compliance, decision makers shall make a written finding of substantial compliance with the Urban Design Guidelines.

MAP G: RETAIL AND ACTIVE STREETS

MAP G: RETAIL AND ACTIVE STREETS



4.2. MIXED USE, COMMERCIAL, AND INDUSTRIAL DESIGN STANDARDS

4.2.1. Building Form

A. Setbacks and Yards.

1. Projects must comply with the standards for front yard setbacks as set forth in **Table I**, determined by the proposed ground floor use abutting the sidewalk and street type (see **Map G**), as applicable.

TABLE I: FRONT YARD SETBACKS

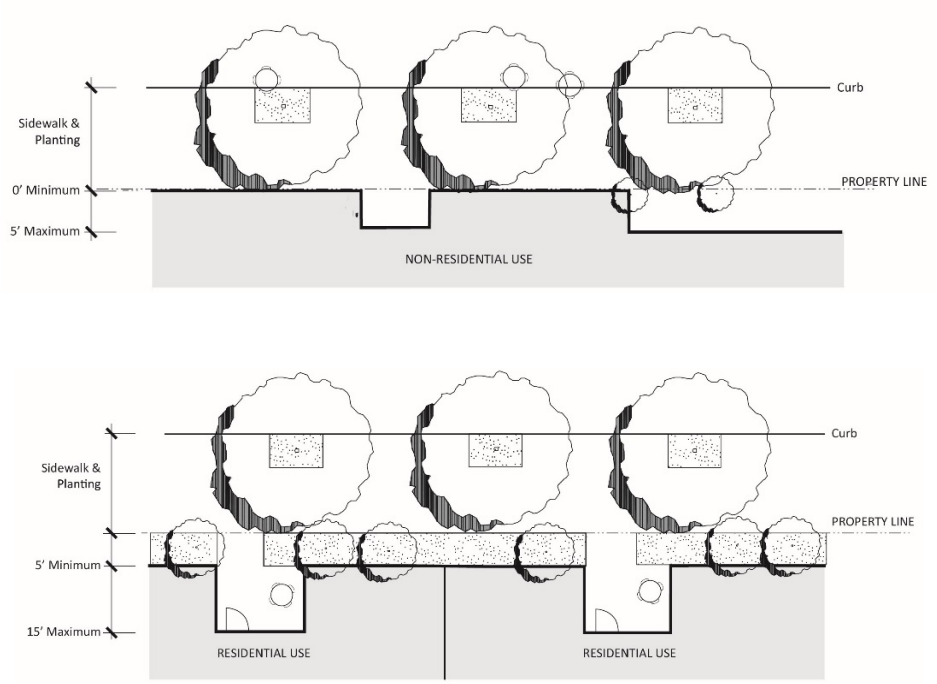
Ground Floor Use	Retail Street or Active Street	All Other Streets
Retail or Restaurant	0 feet minimum 5 feet maximum	0 feet minimum 10 feet maximum
Office, Industrial, or Live/Work	0 feet minimum 5 feet maximum	5 feet minimum 10 feet maximum
Residential[1]	5 feet minimum 10 feet maximum	10 feet minimum 15 feet maximum

1. On Retail or Active Streets, residential lobbies, community rooms, and other common areas in residential buildings shall follow the range of permitted setbacks for Office, Industrial, or Live/Work use.

a. Distances shall be calculated from the front property line, after any required dedications and/or easements are provided.

b. If a ground floor use is changed in the future, the new use may continue to be subject to the setback required at the time of initial construction.

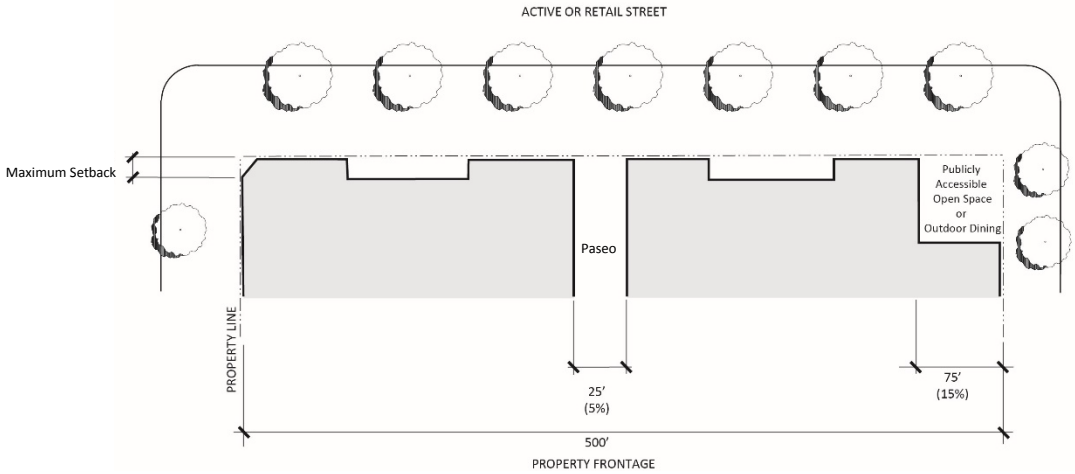
FIGURE D: SETBACKS ON ACTIVE OR RETAIL STREETS



2. Projects may exceed the maximum setback requirements in **Table I** in order to accommodate outdoor dining areas, Publicly Accessible Open Space, and/or Paseos, up to the following percentages of the property frontage:

    - Along Retail or Active Streets: 20%
    - Along Other Streets: 30%

FIGURE E: FRONT YARD SETBACK EXCEPTIONS



3. Fences and walls in the front yard are prohibited, except for those enclosing outdoor dining areas or in front of residential uses.

    a. Outdoor dining enclosures are permitted up to 42 inches in height.

    b. Fences and walls in front of residential uses are permitted up to 42 inches in height. Where solid walls are used, there shall be a landscape buffer at least 18 inches wide between the wall and the front property line.

4. Side yards are not required for the ground floor portion of a building where the ground floor is used exclusively for commercial purposes.

5. For portions of buildings used for residential purposes, side yards up to 5 feet in depth may be maintained at the first story used in whole or part for residential purposes.

    a. If the ground floor of a building is used for residential purposes, the maximum 5 foot side yard may be exceeded to accommodate a vehicular driveway or Publicly Accessible Open Space, but only to the depth of the driveway or open space.

6. Rear yards of a minimum of 5 feet in depth shall be maintained on properties that directly abut a residential (R) zone.

B. **Streetwall.**

1. Along Retail and Active Streets, at least 80 percent of the length of a building's Streetwall shall adhere to the minimum height set forth in **Table J**.

2. Where utility poles over 30 feet in height exist along a street, no portion of a building above 30 feet in height may be constructed within 5 feet from the front property line along that street.

FIGURE F: MINIMUM STREETWALL

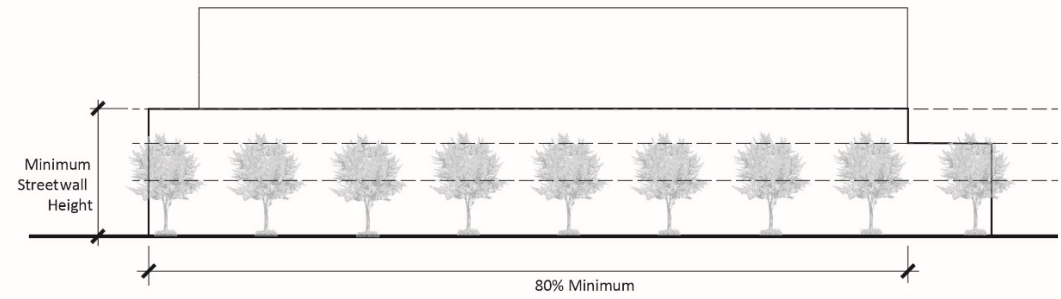


TABLE J: MINIMUM STREETWALL HEIGHTS

Street	Minimum Height
Barrington Ave	2 stories
Bundy Drive	3 stories
Motor Ave	2 stories
National Blvd	2 stories
Olympic Blvd	4 stories
Overland Ave	2 stories
Palms Blvd	2 stories
Pico Blvd	3 stories
Robertson Blvd	2 stories
Sawtelle Blvd	3 stories
Sepulveda Blvd (north of Exposition Blvd)	4 stories
Sepulveda Blvd (south of Exposition Blvd)	3 stories
Venice Blvd	4 stories
Westwood Blvd	2 stories

C. **Massing and Lot Coverage.**

1. No individual building shall have more than 250 feet of linear street frontage.

2. A midblock passageway through a Project site shall be provided in the following situations:

   a. The Project is located on a block longer than 500 feet, and includes more than 300 feet of street frontage, or

   b. The Project is located in the middle of a block longer than 500 feet, and includes at least 200 feet of street frontage.

3. A mid-block passageway shall be either a paseo or a new shared street, and shall link a street to another street, alley, or paseo, or enable linkage to a future street, alley, or paseo where one currently does not exist.

4. A Project's building footprint shall be a maximum of 85 percent of the buildable lot area.

5. A Project's building footprint shall be a minimum of 50 percent of the buildable lot area.

6. Projects involving the alteration, rehabilitation, or reuse of existing building(s), not including any additions or new construction, are exempt from lot coverage standards.

7. Pedestrian bridges across public rights-of-way, with the exception of alleys, are prohibited.

8. Buildings within a 100-year flood plain shall be constructed a minimum of one foot above the 100-year flood water surface elevation.

4.2.2. Building Orientation

A. **Entrances.**

1. A minimum of one building entrance shall be provided along each public street frontage.

2. The primary entrance for all commercial tenants and residential components fronting an Active or Retail Street shall be accessed from that street. The primary entrance shall not be accessed from a parking area.

3. Building entrances shall be at grade level or a maximum of three feet above grade level and shall be visible from the public right-of-way. Entrances below grade level are prohibited.

B. **Ground Floor Frontage.**

1. At least 75 percent of the ground floor frontage of a building on a Retail Street shall be designed to accommodate one or more Active Uses.

2. At least 50 percent of the ground floor frontage of a building on an Active Street shall be designed to accommodate one or more Active Uses and/or residential units with individual entries.

3. Active Uses located on the ground floor of buildings on Retail and Active Streets (with the exception of residential units) shall comprise a minimum depth of 25 feet from the front façade and shall have a minimum floor-to-ceiling height of 15 feet.

C. **Transparency.**

1. Transparent wall openings, such as storefront windows and doors with clear glass, along Retail Streets shall comprise at least 75 percent of a building's ground floor street-facing façade between two feet and eight feet from the finished floor level of the ground floor.

    a. On corner lots where one side fronts a Retail Street, the ground floor transparency requirements for Retail Streets shall also apply to the first 20 linear feet of ground floor frontage along the intersecting street.

2. Transparent wall openings, such as storefront windows and doors with clear glass, along Active Streets shall comprise at least 50 percent of a building's ground floor street-facing façade(s) between two feet and eight feet from the finished floor level of the ground floor.

3. A minimum of 30 percent of the exterior wall of all upper floors facing a public street shall consist of transparent windows and openings.

4. Structures being renovated as part of a Project that have been identified as a historic resource are exempt from transparency requirements if they would render the building structurally infeasible or would compromise the historical integrity or original character of the building, as determined by the Office of Historic Resources.

4.2.3. Architectural Treatment

A. **Windows and Doors.**

1. Clear glass shall be used for wall openings (i.e. doors and windows) along all street-level façades containing Non-Residential Uses. Dark tinted, reflective or opaque glazing is prohibited.

2. Solid exterior security grilles and permanently affixed security bars are prohibited. Exterior and interior security grilles are permitted provided they are at least 75 percent transparent and are retractable and designed to be fully screened from view during business.

3. Where a property containing a sensitive land use abuts a freeway right-of-way, no operable windows, balconies, or patios are allowed on the side of the building that faces the freeway. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

B. **Materials.**

1. The use of heavily textured (16/20) stucco finishes, i.e. heavy dash, heavy lace, or heavy sand float, as a facade material is prohibited.

2. When stucco is used, it shall be limited to 75 percent of a building façade and applied in combination with at least one other material on the façade, not including materials used in windows, doors, balconies, or railings.

3. Fences made of chain link or barbed wire are prohibited.

4. Building materials shall be comprised of non-reflective materials, such as concrete, wood, composite materials, coated metal, non-reflective glass, and stone.

5. The exterior finish on balconies shall be a material that is different from the primary finish material on the body of the building.

C. **Lighting.**

1. Exterior lighting shall be provided along all vehicular access ways, pedestrian walkways, parking areas, open spaces, and building entrances.

2. Exterior building and landscape lighting shall be directed away from adjacent properties. In addition no light shall be directed at the windows of a residential unit located either within or adjacent to a project.

3. Exterior lighting shall be shielded to reduce glare and nighttime spillover light.

4. Lighting that uses flashing, strobe, motion, or multi-color elements is prohibited.

D. **Mechanical Equipment and Utilities.**

1. All exterior mechanical equipment, including HVAC equipment, electrical transformers, and exhaust fans, shall be screened from public view or integrated into the architectural design of the building.

2. Mechanical equipment in window or door openings is prohibited.

3. Service areas and loading docks shall not be visible on the ground floor of any building façade that faces the street. Such areas shall be located along an alley and/or at the rear of a building or otherwise screened from public view.

4. Recycling and trash facilities shall be located at the rear of the building or otherwise screened from public view through gated, covered enclosures.

5. For Projects located within 500 feet of a freeway and containing sensitive land uses, locate air intakes for ventilation equipment as far from freeway sources as possible. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

4.2.4. Open Space Design

A. **Paseos.**

1. Paseos shall be a minimum of 15 feet wide, and an average of at least 20 feet wide.

2. Paseos shall be at least 50 percent open to the sky or covered with translucent material. Alternatively, paseos may be covered with habitable floor area if the interior height of the paseo is at least 30 feet.

3. Paseos shall be accessible to the public at minimum from 6 a.m. to 10 p.m. seven days per week.

B. **Publicly Accessible Open Space.**

1. Publicly Accessible Open Space shall have a minimum area of 650 square feet with no horizontal dimension less than 15 feet when measured perpendicularly from any point on each of the boundaries.

2. Publicly Accessible Open Space shall not be more than three feet above or below street curb level.

3. Publicly Accessible Open Space shall be accessible to the public at minimum from 6 a.m. to 10 p.m. seven days per week.

4. Fences or walls enclosing Publicly Accessible Open Space shall be a maximum height of 6 feet and designed so that the fence is at least 75 percent transparent.

5. New shared streets that accommodate both pedestrians and slow-moving vehicles must include street trees and landscaping for a minimum of 15 percent of the street area in order to qualify as Publicly Accessible Open Space.

C. **Landscape and Hardscape.**

1. Where Projects include new landscaping, a minimum of 80 percent of the landscaped area shall be planted with drought tolerant shrubs and groundcover identified as “California Friendly” by the Metropolitan Water District’s Be Water Wise program (www.bewaterwise.com). If turf is installed, a water-conserving species appropriate for the climate in Los Angles shall be selected.

2. Hardscape areas shall include permeable paving for at least 50 percent of the area, except where not feasible due to water table levels, contamination, or permeability of the soil.

D. **Open Space Location.**

1. Projects that are 500 feet or less from a freeway and containing sensitive land uses shall locate on-site open spaces and recreation areas as far from freeways as possible. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

2. Projects containing a sensitive land use abutting a freeway right-of-way shall provide a 10-foot-wide densely landscaped buffer between the project and the freeway. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

4.2.5. Vehicle Access and Parking

A. **Driveways.**

1. Vehicular access to parking shall be from an alley or a local street where feasible. Vehicular access from Retail or Active Streets is prohibited unless access from an alley or local street is not feasible.

2. When access from an alley or local street is not feasible, vehicular access to parking shall be placed towards one side of the building or along the side lot line, not in the center of a property frontage.

3. On corner lots, vehicular access shall be located on the side of the property farthest from the corner.

4. Projects shall limit the number and width of driveways as set forth in **Table K**, unless otherwise required by LADOT.

TABLE K: MIXED USE, COMMERCIAL, AND INDUSTRIAL DRIVEWAY LIMITATIONS

Length of Building Frontage Along Public Street	Maximum Number and Width of Driveways	Maximum Driveway Width
Less Than or Equal to 200 Feet	1	20 feet
	2	10 feet
Greater Than 200 Feet	2	20 feet

5. Driveways shall be located at least 50 feet apart.

6. A vehicular exit from a parking structure located five feet or less from a sidewalk or paseo shall feature a visual/audible alarm to warn pedestrians and cyclists of exiting vehicles.

7. Porte-cocheres and vehicular drop-off areas between the front of a building and the street are prohibited. Drop-off areas shall be located along the curb where there is a full-time curbside parking lane or within parking facilities.

B. **Surface Parking.**

1. Surface parking lots shall not be located between the front property line and the building frontage but rather at the rear of a building.

2. Where a surface parking lot abuts a public street, the lot shall be screened using a minimum 2-foot-wide landscaped strip between the property line and the parking lot.

a. The landscaped strip shall contain densely planted hedges or shrubs, installed in the ground or in containers, at least 2 feet high at the time of planting. The planting shall be of a type that may be expected to form, within three years after time of planting, a continuous, unbroken, year round visual screen. Such planting, including any planting containers, shall not exceed 42 inches in height.

b. If the landscaped strip contains in-ground planting, it shall be surrounded by a 6-inch-high concrete curb.

c. A wall, barrier, or fence up to 42 inches high and of uniform appearance may be placed between the required landscaped strip and the parking lot. Such wall, barrier, or fence may be opaque or perforated provided that not more than 50 percent of the face is open.

3. Parking lots shall contain a minimum of one 24-inch box tree for every four new surface parking spaces, in accordance with the City of Los Angeles Landscape Ordinance (Ord. No. 170,978), Guidelines K – Vehicular Use Areas.

4. At least 50 percent of parking lot and driveway surfaces shall utilize light-colored materials, such as concrete, white asphalt or light-colored pavers with a Solar Reflectance Index (SRI) of at least 29 to reduce surface temperatures.

C. **Parking Structures.**

1. No parking or loading areas shall be visible on the ground floor of any building façade that faces a public street, except for the minimum ground-level frontage required for pedestrian and vehicular access to parking and loading.

2. Parking, loading or circulation located above the ground floor shall be lined by habitable floor area along all street frontages.

3. If a Project demonstrates that it is not feasible to line above-ground parking with habitable space along all street frontages, then the following must be observed:

a. A maximum of three parking levels fronting on a public street are allowed.

b. At least one habitable floor must be provided directly above the un-lined parking levels.

c. The parking shall be screened and integrated into the architectural design of the building façade.

4. Parking structures that are within 200 feet of any residential use shall:

   a. Contain solid decorative walls to block vehicular lights and deflect noise along the sides closest to the residential use;

   b. Contain solid spandrel panels at a minimum of 3 feet 6 inches in height, installed at the ramps of the structure, to minimize glare;

   c. Construct garage floors and ramps using textured surfaces to minimize tire squeal;

   d. Locate exhaust vents away from residential uses; and

   e. Eliminate light source glare falling on the adjacent residential units.

5. Parking stalls and driveways of a parking structure that are exposed to the sky shall be finished with a light-colored surface material such as concrete with a Solar Reflectance Index (SRI) of at least 29. Alternatively, a minimum of 50 percent of the total area of the exposed stalls and driveways shall be covered by vine-covered pergola, canopy, trellis, or solar panels and their related support structures.

4.2.6. Signs

A. **Wall Signs.**

1. Each building or premise is allowed one wall sign containing the name, and/or address, or logo of the building on the site, or any other message allowed on an on-site sign. The sign area of this wall sign shall not be more than four square feet.

2. Any business is permitted one wall sign containing the name of the business, logo, and/or any other message allowed on an on-site sign for each face of each building that has frontage on a public street and has a public entrance from the street frontage.

3. The total sign area of a wall sign, with the exception of business identification signs, shall not exceed 1.5 square feet for each linear foot of store or building frontage, or 75 square feet in area, whichever is less.

4. The overall height of wall signs made of channel or individual letters/logo shall not exceed two feet, and the height of the letters shall not exceed 18 inches.

5. Wall signs shall not project more than 12 inches from a wall.

6. No portion of a wall sign shall extend above a building wall or above a roofline.

7. Wall signs in a multi-tenant building shall be placed at the same uniform elevation to create visual continuity (applicable to each level of a multi-tenant retail/office building).

8. Wall signs shall be constructed of channel or individual letters/logos or metal, stone, wood or other non-illuminated, non-plastic material.

9. Canister wall signs are permitted only if they have opaque, or translucent, non-illuminated face panels with only individual letters and/or logos back-lit, and not the entire surface of the sign. Internally illuminated letters maybe plastic, but the face panels should not have glossy, reflective surfaces.

B. **Monument Signs.**

1. There shall be only one monument sign per multi-tenant business or building.

2. The maximum size of a monument sign shall be 24 square feet per side.

3. Monument signs shall be constructed of metal, stone, wood or other non-illuminated, non-plastic material.

4. Plastic canister signs are permitted only if the sign has opaque, or translucent, non-illuminated face panels with only individual letters and/or logos back-lit, and not the entire surface of the sign. Internally illuminated letters maybe plastic, but the face panels should not have glossy, reflective surfaces.

C. **Projecting Signs.**

1. The number of projecting signs shall not exceed one per business.

2. The area of a projecting sign shall be limited to four square feet per sign face.

3. Projecting signs shall be constructed of metal, stone, wood or other non-illuminated, non-plastic material.

4. Plastic canister signs are permitted only if the sign has opaque, or translucent, non-illuminated face panels with only individual letters and/or logos back-lit, and not the entire surface of the sign. Internally illuminated letters maybe plastic, but the face panels should not have glossy, reflective surfaces.

5. No projecting sign shall project more than 30 inches from the building wall to where it is attached or extend above parapet line of the roof.

D. **Awning Signs.**

1. Each building / business is allowed one awning sign to be located on the awning over the building / business entrance.

2. Letters, numbers, or symbols on an awning sign shall not exceed 10 inches in height and cover no more than 70 percent of the valence area.
3. The name, occupation, and/or address of the business is permitted on the awning signs, or any other message allowed on an on-site sign.

E. **Window Signs.**

1. Only one window sign per business is allowed.

2. Window signs, consisting of text, graphics or images, either permanent or temporary, shall not exceed four square feet or 10 percent of the total window area, whichever is less.

F. **Information Signs.**

1. Signs which direct vehicular and pedestrian traffic to parking areas or other onsite destinations or explain parking fees should not exceed nine square feet or a vertical or horizontal dimension of 36 inches.

2. Information signs shall be consistent in design with the signage for the rest of the project.

3. Information signs are to be used for on-site directional information only and not for advertising.

4. Information signs shall be constructed of metal, stone, wood or other non-illuminated, non-plastic material.

5. Plastic canister signs are permitted only if the sign has opaque, or translucent, non-illuminated face panels with only individual letters and/or logos back-lit, and not the entire surface of the sign. Internally illuminated letters maybe plastic, but the face panels should not have glossy, reflective surfaces.

G. **Prohibited Signs.**

1. Pole signs and Illuminated architectural canopy signs are prohibited.

4.3. MULTI-FAMILY RESIDENTIAL DESIGN STANDARDS

4.3.1. Building Form

A. **Setbacks and Yards.**

1. For Projects fronting an Active Street, the front yard setback for shall be a minimum of 5 feet and a maximum of 10 feet, measured from the front property line, after accounting for dedications and easements.

2. Projects fronting all other streets shall be set back within 5 feet of the prevailing front yard setback of the block face on which the property is located as defined in the Definitions section (**Section 7**) of this Plan. This setback requirement supersedes the front yard provisions in LAMC Section 12.22 C.27(e) for small lot subdivisions.

3. Fences and walls in the front yard are permitted up to 42 inches in height along Active Streets. When solid walls are used, they must incorporate a minimum 18 inch-wide landscaped buffer area between the wall and the front property line.

4. Fences are permitted up to 42 inches in height along all other streets. However, walls are prohibited.

B. **Massing.**

1. No individual building shall have more than 200 feet of linear street frontage.

2. Pedestrian bridges across public rights-of-way, with the exception of alleys, are prohibited.

3. Buildings within a 100-year flood plain shall be constructed a minimum of one foot above the 100-year flood water surface elevation.

4.3.2. Building Orientation

A. **Entrances.**

1. Street-fronting residential units shall have their primary entrance facing the street. Buildings without ground floor entrances for individual units shall have the primary building entrance, such as a lobby or atrium, oriented towards the street.

2. Primary building entrances shall be emphasized through architectural features such as front porches, awnings, canopies, columns and/or prominent walkways.

3. Building entrances shall be placed at grade level or a maximum of three feet above grade level and unobstructed from view from the public right-of-way. Entrances below grade level are prohibited.

4. Access for pedestrians from the sidewalk to residential entrances shall be provided via a separated walkway, and not exclusively through parking areas or driveways.

B. **Ground Floor Frontage.**

1. Where a building fronts an Active Street, at least 50 percent of the ground floor frontage of a Project shall be designed to accommodate one or more Active Uses.

   a. Active Uses (with the exception of residential units) shall be constructed to a minimum depth of 25 feet from the front façade and shall be constructed to a minimum floor-to-ceiling height of 15 feet.

C. **Transparency.**

1. Where a building fronts an Active Street, transparent wall openings, such as storefront windows and doors with clear glass shall comprise at least 50 percent of a building's ground floor street-facing façade(s) between two feet and eight feet from the finished floor level of the ground floor.

2. A minimum of 30 percent of the exterior wall of all upper floors facing the street shall consist of transparent windows and openings.

3. Structures being renovated as part of a Project that have been identified as a historic resource are exempt from transparency requirements if they would render the building structurally infeasible or would compromise the historical integrity or original character of the building, as determined by the Office of Historic Resources.

4.3.3. Architectural Treatment

A. **Windows and Doors.**

1. Flush finish installations are prohibited. Windows and doors visible from the street shall be recessed at least two inches from the building façade. The recess shall not be accomplished by the use of plant-on moldings around the window.

2. Exterior security bars or grills on windows and doors are prohibited.

3. Where a property containing a sensitive land use abuts freeway right-of-way, no operable windows or balconies are allowed on the side of the building that faces the freeway. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

B. **Materials.**

1. The use of heavily textured (16/20) stucco finishes, i.e. heavy dash, heavy lace, or heavy sand float, as a façade material is prohibited.

2. When stucco is used, it shall be limited to 75 percent of a building façade and applied in combination with at least one additional building material on the façade, not including materials used in windows, doors, balconies, and railings. More than one color of stucco shall be used.

3. The exterior finish on balconies shall be a material that is different from the primary finish material on the body of the building.

4. Fences made of chain link or barbed wire are prohibited.

5. Building materials shall be comprised of non-reflective materials, such as concrete, wood, composite materials, coated metal, non-reflective glass, and stone.

6. A maximum of three complementary building materials shall be incorporated into the exterior façade of buildings, including but not limited to tile, terracotta, brick, stucco, or stone.

C. **Lighting.**

1. Exterior building and landscape lighting shall be directed away from adjacent properties. In addition no light shall be directed at the windows of a residential unit located either within or adjacent to a project.

2. Exterior lighting shall be provided along all vehicular access ways, pedestrian walkways, parking areas, open spaces, and building entrances.

3. Exterior lighting shall be shielded to reduce glare and nighttime spillover light.

4. Lighting that uses flashing, motion, or multi-colored elements is prohibited.

D. **Mechanical Equipment and Utilities.**

1. All exterior mechanical equipment, including HVAC equipment, electrical transformers, and exhaust fans, shall be screened from public view or integrated into the architectural design of the building.

2. Mechanical equipment in window or door openings is prohibited.

3. Recycling, trash facilities, and other service areas shall be located at the rear of the building, within parking areas, or otherwise screened from public view through gated, covered enclosures.

4. For Projects located within 500 feet of a freeway and containing sensitive land uses, locate air intakes for ventilation equipment as far from freeway sources as possible. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

4.3.4. Open Space Design

A. **Landscape, Hardscape, and Irrigation.**

1. A minimum of 80 percent of a Project's newly landscaped area shall be planted with drought tolerant shrubs and groundcover identified as "California Friendly" by the Metropolitan Water District's Be Water Wise program (www.bewaterwise.com). If turf is installed, a water-conserving species appropriate for the climate in Los Angles shall be selected.

2. Hardscape areas shall include permeable paving for at least 50 percent of the area, except where not feasible due to water table levels, contamination, or permeability of the soil.

3. Hardscape materials shall have a Solar Reflectance Index (SRI) of at least 29.

B. **Open Space Location.**

1. Projects that are 500 feet or less from a freeway and containing sensitive land uses shall locate on-site open spaces and recreation areas as far from freeways as possible. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

2. Projects containing a sensitive land use abutting a freeway right-of-way shall provide a 10-foot-wide densely landscaped buffer between the project and the freeway. Sensitive land uses include residences, schools, playgrounds, athletic facilities, and long-term health facilities.

4.3.5. Vehicle Access and Parking Area Design

A. **Vehicle Access.**

1. Vehicular access to parking shall be from an alley where feasible. When no alley is available, vehicular access to parking shall be from a local street. When neither alley nor local street is available, the driveway shall be placed along the side lot line of the property, not in the center of the property frontage. Vehicular access from Retail or Active Streets is prohibited unless access from an alley or local street is not possible.

2. On corner lots, vehicular access shall be located as far from the corner as possible and on a non-arterial street whenever feasible.

3. Projects shall limit the number and width of driveways as set forth in **Table L**, unless otherwise required by LADOT.

TABLE L: MULTI-FAMILY RESIDENTIAL DRIVEWAY LIMITATIONS

Length of Building Frontage Along Public Street	Maximum Number and Width of Driveways	Maximum Driveway Width
Less Than or Equal to 150 Feet	1	10 feet
Between 150 and 200 Feet	1	20 feet
	2	10 feet
Greater Than 200 Feet	2	20 feet

4. Driveways shall be located a minimum of 50 feet apart.

5. Porte-cocheres and other vehicular drop-off areas between the front of a building and the street are prohibited. Drop-off areas shall be located along the curb where there is a full-time curbside parking lane or within parking facilities.

B. **Parking Areas.**

1. Parking areas shall be located underground or at the rear of the property, as feasible.

2. Parking located at grade or partially below grade shall be screened from the public right-of-way by architectural elements and/or densely planted trees or shrubs that are minimum of 2 feet in height.

3. Multiple garage bays or carports along the front of a building or surface parking areas and driveway “back-up” space between a structure and the public right-of-way (regardless of setback requirements) are prohibited.

4. At least 50 percent of surface parking lot and driveway surfaces shall utilize light-colored materials (such as concrete, white asphalt, or light-colored pavers) with a Solar Reflective Index (SRI) of at least 29 to reduce surface temperatures.

INTENTIONALLY BLANK

SECTION 5

STREETS

INTENTIONALLY BLANK

5.1. STREET STANDARDS

5.1.1. General Requirements

A. Projects fronting street segments that are included as part of the Exposition Corridor Streetscape Plan or Livable Boulevards Streetscape Plan (see **Map H**) shall refer to the Street Standards table (**Appendix B**) for the relevant street designations, dimensions, dedications, and easements.

5.2. STREETSCAPE IMPROVEMENTS

5.2.1. General Requirements

A. All Projects must comply with the requirements per LAMC Section 12.37 for street improvements on the street(s) adjacent to the Project site, including but not limited to the provision of applicable dedications, curbs and gutters, sidewalks, and street trees.

5.2.2. Streetscape Plan Segments

A. When right-of-way improvements are required of any Project in the Specific Plan area, pursuant to LAMC Section 12.37, LAMC Chapter 1, Articles 2 or 7, or other City ordinance, for a right-of-way included as part of the Exposition Corridor Streetscape Plan or Livable Boulevards Streetscape Plan (see **Map H**), the improvements shall be consistent with the streetscape plan unless the LADOT General Manager or the City Engineer finds either of the following:

1. Consistency with the streetscape plan is not feasible or practical;

2. The cost of making the improvement consistent with the streetscape plan is greatly in excess of the cost to other property owners who are required to make improvements consistent with the streetscape plan in the streetscape plan area.

B. **Non-Conforming Improvements**. Notwithstanding anything to the contrary in LAMC Section 12.37.A.3 or other adopted City ordinance, improvement requirements shall not be waived or excused for a Project on the basis that the existing improvements currently meet existing City standards and requirements, unless the improvement also conforms to any streetscape plan for the right-of-way. If existing improvements do not conform to the streetscape plan, they will need to be improved to meet the streetscape plan standards unless the City Engineer or General Manager make the findings in Subsection A, above, or the improvement requirement is otherwise successfully appealed under Section D, below.

C. **Consistency Determination.** Consistency with the streetscape plan shall be determined by the LADOT General Manager, after consultation with the Director of Planning and the City Engineer.

D. **Appeal.** An applicant may appeal any streetscape improvement requirement in Sections A and B, including the findings under Subsections A.1. or A.2., through any appeal process that would be available for the imposition of the underlying right-of-way improvement requirement. For example, if the underlying improvement is being imposed under LAMC Section 12.37, the requirement to improve the right-of-way consistent with the streetscape plan, may be appealed under LAMC Section 12.37.I. If the underlying improvement is being imposed under LAMC Section 17.08 on a parcel map, the requirement to improve the right-of-way consistent with the streetscape plan, may be appealed under LAMC 17.54.

E. **Subsequent Ordinance.** If after the latest update to this Specific Plan the City Council adopts an ordinance to regulate streetscape plan improvements and the ordinance is applicable to the Specific Plan Area, this Section shall be of no further force and effect.

MAP H: STREETSCAPE PLAN SEGMENTS

INTENTIONALLY BLANK

SECTION 6

PROCESS

INTENTIONALLY BLANK

6.1 DEVELOPMENT REVIEW PROCEDURES

6.1.1. General Requirements

A. **Authority.** No permit shall be issued by the Department of Building and Safety for any Project unless the Project has been reviewed and approved in accordance with this Specific Plan.

B. **Prohibition on Demolition.** No permit for demolition in the Plan area shall be issued unless an approval has been obtained for new construction on the site per this Specific Plan.

C. **Application Requirements and Procedures.** The application requirements and procedures of LAMC Section 11.5.7 shall apply to all Projects (as defined in **Section 1.2.1**) applications in the Plan area unless otherwise stated in this Specific Plan.

D. **Environmental.** Prior to issuance of an approval per this Specific Plan, Projects must comply with all applicable Environmental Standards as set forth in **Appendix E**, subject to the following rules.

1. A Project does not need to comply with any Environmental Standard that is not relevant to the scope of activities involved with the Project. For example, a Project that proposes only minor façade alterations and no grading, shall not be subject to Environmental Standards that apply to grading activities (such as noise and vibration standards). The Director, in his or her reasonable discretion, shall determine the applicability of Environmental Standards to a Project.

2. Compliance with all applicable Environmental Standards listed in **Appendix E** shall be demonstrated on the plans as Project features (that is, features that are physically built into the Project) or as operational features listed on a sheet within the plans (that is, features that are carried out either during construction of the Project, or over the life of the Project).

3. The Director (or appeal body on appeal) may modify or not require an Environmental Standard listed in **Appendix E** for any Project when: (1) the Director finds in writing, based on substantial evidence, that the Environmental Standard is infeasible and the Director has adopted a new equally or more effective measure and the new measure will not result in any new significant impact; (2) the Director finds in writing, based upon substantial evidence, the Environmental Standard is not necessary to mitigate an impact, including because of the existence of a similar or more effective regulation that applies to the Project; (3) the City complies with CEQA Guidelines, Section 15162, including by preparing an addendum or subsequent environmental clearance to the ECTNP EIR to analyze the impacts from the modifications to the Environmental Standards; or (4) the City prepares a new CEQA clearance for the Project.

E. **Mitigation Measures.** Prior to issuance of an approval per this Specific Plan, the Project shall also demonstrate compliance with all applicable mitigation measures listed in the Mitigation Monitoring Plan (**Appendix F**).

6.1.2. Application Process

A. All Projects proposed within the Plan area shall file an application with the Department of City Planning, on a form provided by the Department, and shall include all information required by the instructions on the application and the guidelines adopted by the Director of Planning.

B. **Content of Application.** In order to be deemed complete, applications must include the following, as applicable:

1. Vehicle Trip Generation Study pursuant to **Section 6.2.1**.

2. For Projects that require Community Amenities pursuant to **Section 3.3.1.**:

a. The Project's total point calculation and a description of the Community Amenities provided with their associated point values.

b. Where a Community Amenity is a physical improvement, the improvement shall be shown on the Project site plan (or a separate site plan, if the improvement is located off-site) or other relevant drawing(s).

c. Where a Community Amenity is a streetscape improvement, construction drawings of those improvements, to the satisfaction of the Department of Public Works.

d. If a Project is proposing a Community Amenity that is not listed in the Public Benefits Menu (**Appendix A**), the Project application shall include a validated cost estimate (**Section 3.3.1. C.1**).

3. **Additional Materials.** Projects shall submit any additional materials required by this Specific Plan, as relevant to the Project. This may include, but is not limited to, a parking demand analysis, Transportation Demand Management plan, or applicable environmental technical studies (see **Section 6.2**).

6.1.3. Administrative Clearance

A. A permit for a Project may be issued with an Administrative Clearance, which is approved with a sign-off by the Director, if the Project complies with all applicable regulations of the Specific Plan. However, if a Project is utilizing the Alternative Compliance procedure, a Director's Determination for Alternative Compliance is required in accordance with **Section 6.1.4**.

6.1.4. Director's Determination for Alternative Compliance

A. **Applicability.** Projects located on properties eligible for Alternative Compliance (see **Map E**) that do not comply with the minimum Non-Residential Use requirements for the zone of the property, per **Section 2.3.2** of this Specific Plan, must obtain a Director's Determination for Alternative Compliance. Such Projects must comply with all other requirements of this Specific Plan.

B. **Procedure.** The Director of Planning will review and approve, conditionally approve, or disapprove an application for a Director's Determination for Alternative Compliance, following the discretionary review procedure in LAMC Section 11.5.7 C (Project Permit Compliance Review).

C. **Findings.** In order for a Director's Determination for Alternative Compliance to be granted, the following findings must be made, in addition to the findings in LAMC Section 11.5.7 C.2:

1. That there are special circumstances applicable to the Project or Project site which make the strict application of the minimum Non-Residential Use requirements in the Specific Plan impractical;

2. That the Project nonetheless conforms to the purpose and intent of the Specific Plan and the intent and provisions of the General Plan and applicable Community Plan; and

3. That the Director has considered and found no detrimental effects of the Project on surrounding properties and public rights-of-way.

D. **Appeals.** The written determination on Alternative Compliance is subject to appeal following the procedures in LAMC Section 11.5.7 C.6.

E. **Residential Dwelling Unit Limit.** Under the Alternative Compliance procedure, a cumulative maximum of 1,200 dwelling units may be approved within the Plan area in excess of what is allowed by the zoning.

1. The number of dwelling units in a Project that are counted towards this cap is calculated from the square footage of residential use in the Project above what is allowed according to the zoning, divided by the Project's average square footage per dwelling unit.

2. No Project that results in dwelling units that exceed the 1,200 Alternative Compliance dwelling units cap may be approved unless a Specific Plan Amendment has been obtained pursuant to LAMC Section 11.5.7 G. Such Projects are also required to conduct Project-specific environmental review.

6.1.5. Specific Plan Adjustments

A. **Director's Authority.** The Director shall have authority to grant a Specific Plan Adjustment for minor deviations from the following Specific Plan regulations, up to the percentage indicated:

1. Adjustments to required minimum or maximum lot coverage (up to 10 percent);

2. Adjustments to ground floor frontage and/or ground floor transparency requirements (up to 20 percent);

3. Adjustments to open space area requirements (up to 20 percent);

4. Adjustments to required amount of landscaped area or landscaping type within open space (up to 20 percent);

5. Adjustments to minimum parking spaces (up to 10 percent);

6. Adjustments to permit Alternative Compliance on sites not identified on **Map E**;

7. Minor adjustments from other Specific Plan development regulations, which do not substantially alter the execution or intent of those regulations to the proposed Project, and which do not change the permitted floor area ratio, density or intensity, height or bulk, or setbacks or yards regulated by the Specific Plan.

B. **Findings.** The Director shall make the findings in LAMC Section 11.5.7 E.3 for a Specific Plan Adjustment.

6.1.6. Other Specific Plan Procedures

A. **Modifications to a Project.** Modifications to a Project after a Director's Determination for Alternative Compliance becomes effective shall be reviewed by the Director according to the procedure in LAMC Section 11.5.7 D.

B. **Exceptions to the Specific Plan.** Exceptions to the Specific Plan shall be reviewed by the Director according to the procedure in LAMC Section 11.5.7 F.

C. **Specific Plan Amendments.** Amendments to this Specific Plan may be recommended by the City Planning Commission to the City Council. Amendments shall be considered according to the procedure in LAMC Section 11.5.7 G.

6.2. ENVIRONMENTAL REVIEW PROCEDURES

Projects may be required to complete additional studies to determine whether they exceed certain environmental thresholds, which may lead to the need for further Project-specific environmental review.

6.2.1. Transportation

A. **Applicability.** Projects that result in net new square footage must submit a Vehicle Trip Generation Study.

1. The Vehicle Trip Generation Study must be prepared in partnership with LADOT using the City's traffic model, which was used in preparation of the EIR for this Specific Plan. Project applicants shall pay a cost-recovery fee to the City to run this model.

B. **Environmental Threshold.** The number of trips generated by a Project shall not cause the cumulative total number of AM or PM peak hour trips in the corresponding station segment (see **Map I**) to exceed the number analyzed in the EIR (see **Table M**).

TABLE M: TRIPS BY STATION SEGMENT

Station Segment	AM Peak Hour Trips	PM Peak Hour Trips
Bundy	7,524	8,213
Sepulveda	6,501	8,003
Westwood	1,880	3,298
Palms	5,168	7,263
Culver City	3,434	4,366

1. The Director of Planning will review each Project's trip generation in comparison to the cumulative number of trips resulting from Projects within the Specific Plan area that have been approved since adoption of this Specific Plan to determine if the Project's trip generation is within the number of trips analyzed in **Table M**.

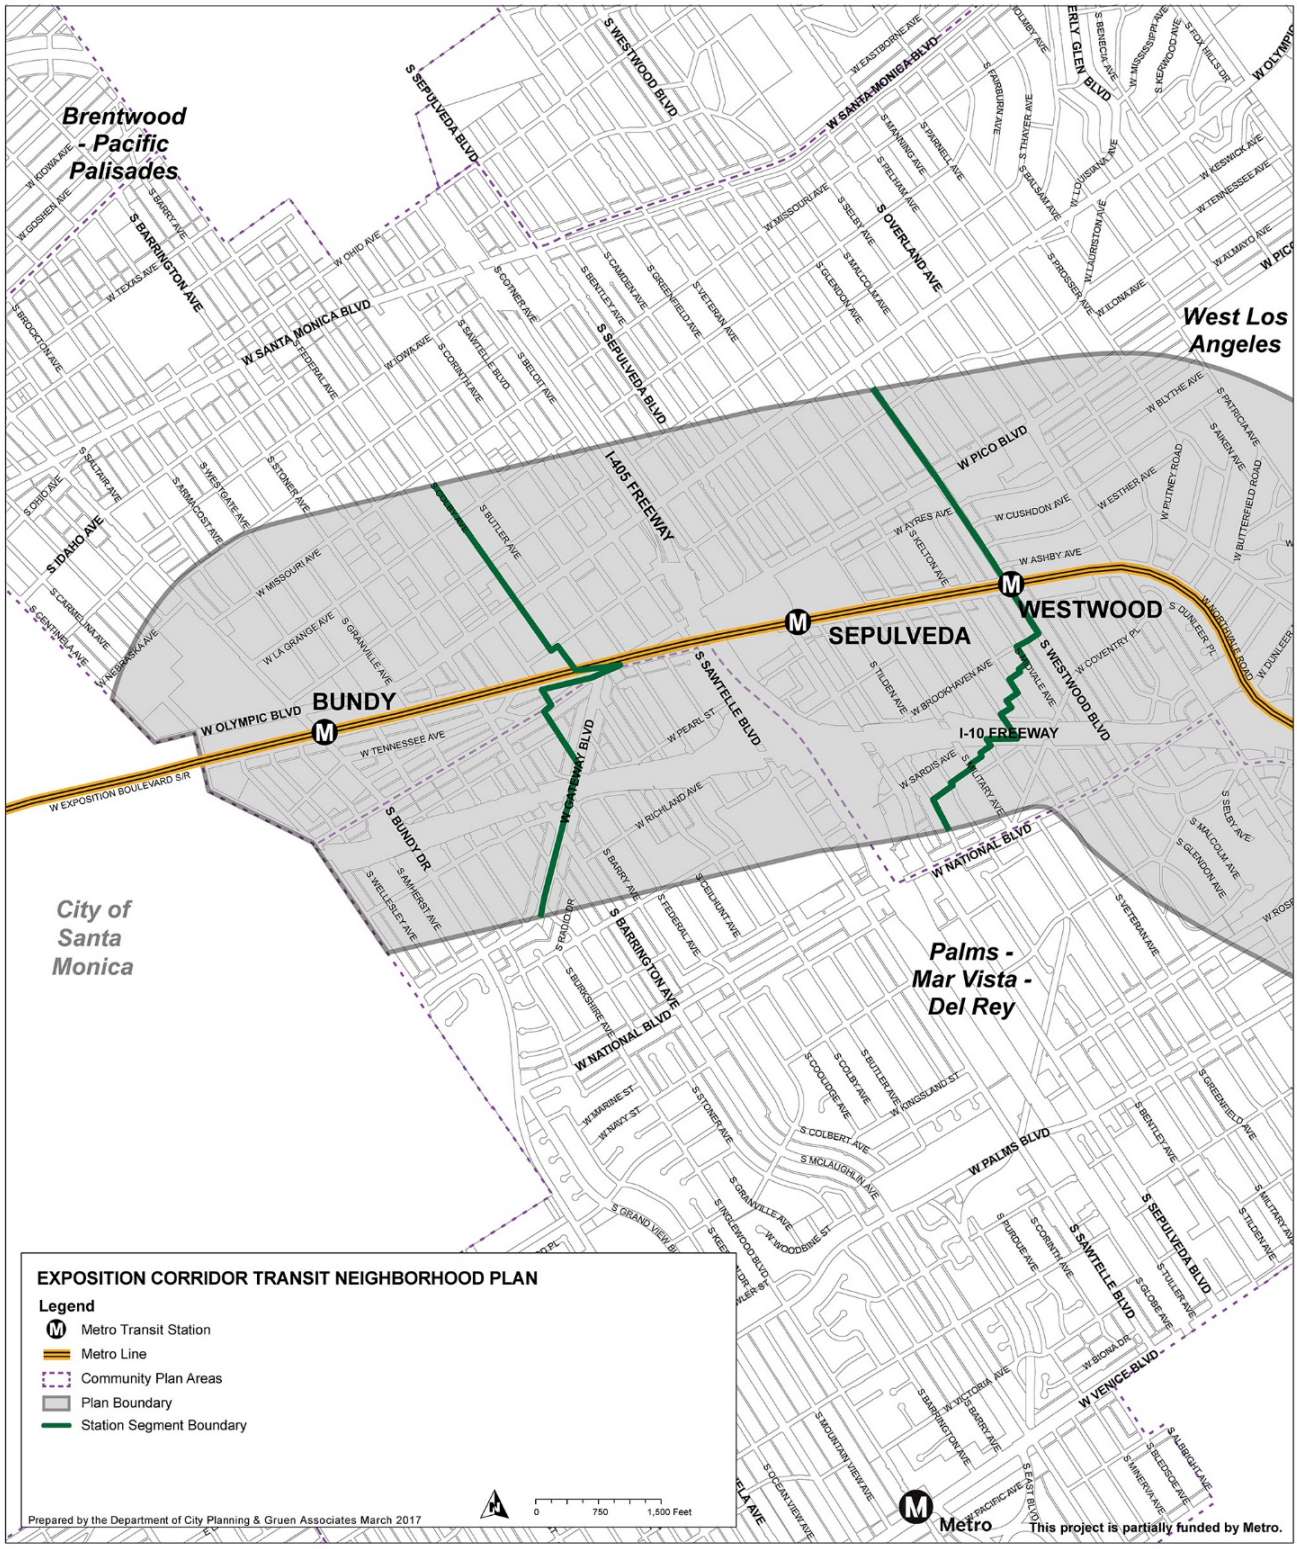
2. Projects that do not exceed the number of trips analyzed may obtain Administrative Clearance or a Director's Determination for Alternative Compliance without any additional transportation-related environmental review.

   a. For such Projects, a full traffic study by LADOT is not required, though all Projects are still subject to access and circulation review.

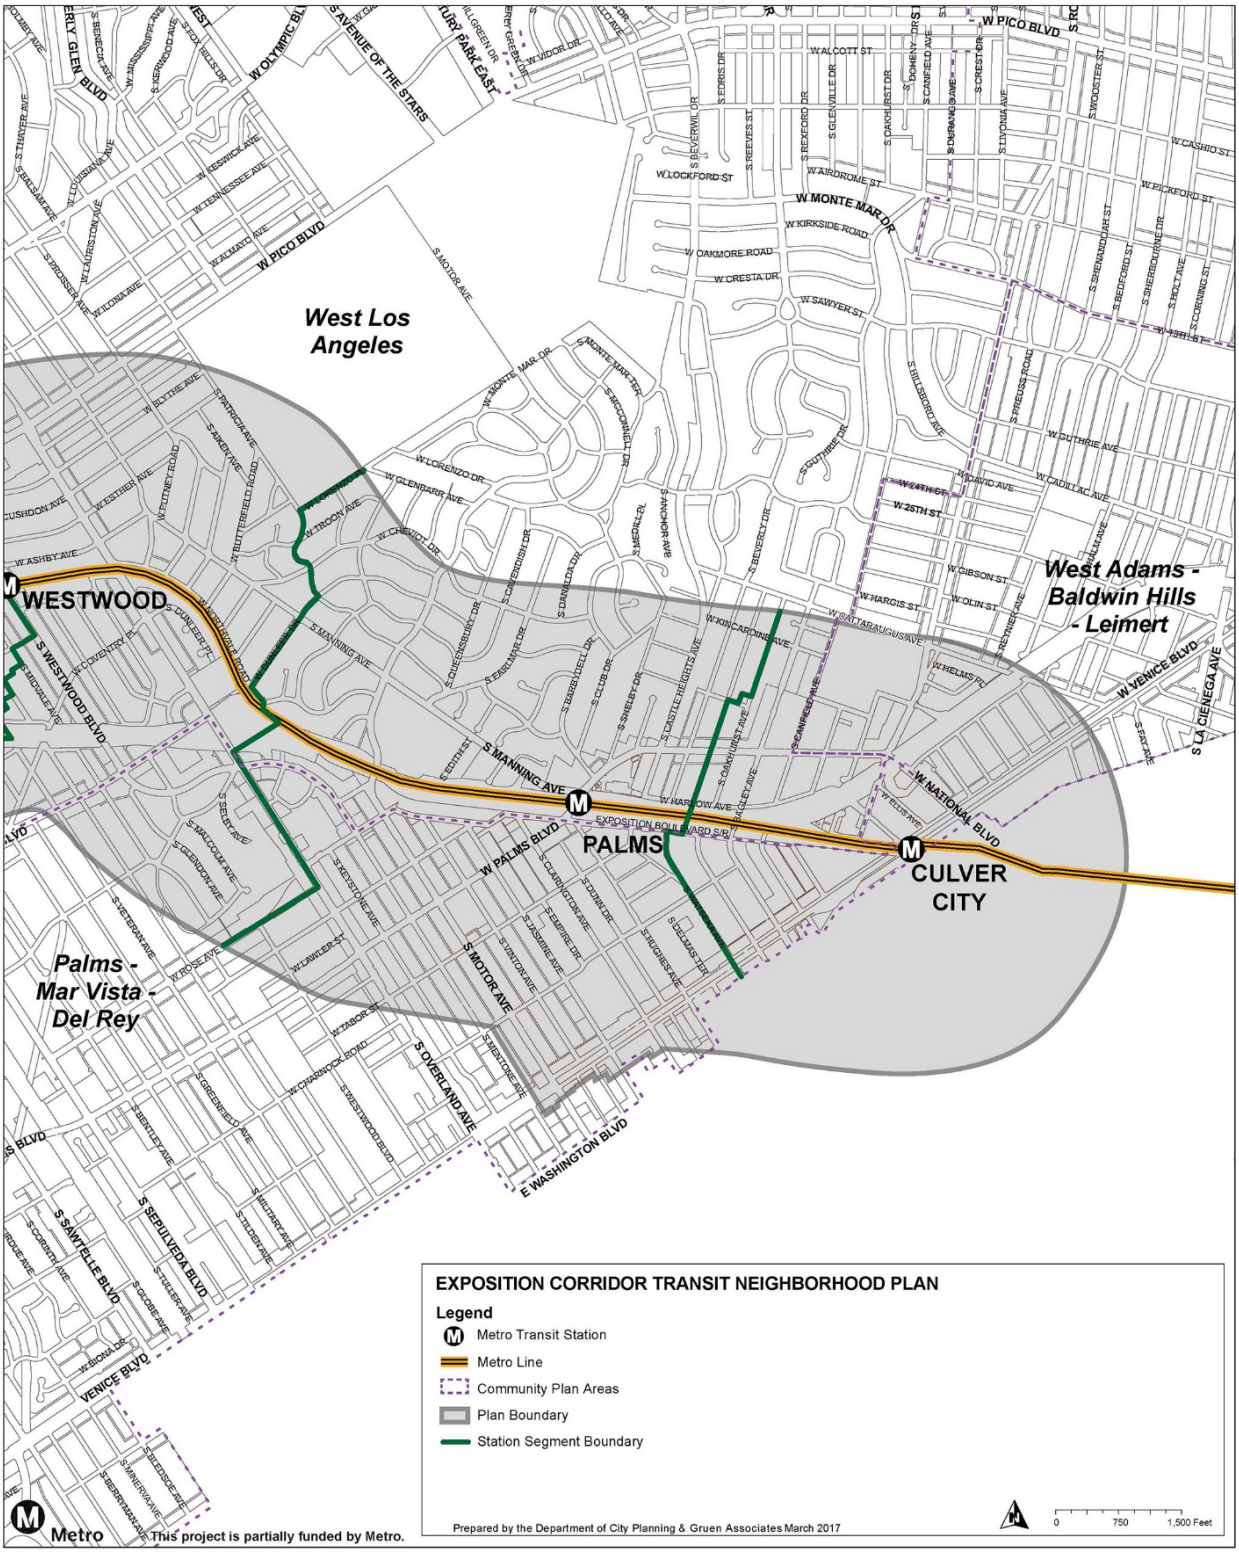
3. Projects that exceed the number of trips analyzed are required to conduct a Project-specific traffic study per LADOT guidelines, as amended.

C. **Expiration of Permits.** If a building permit for a Project expires without having been used, and no extension of such permit is granted within that time frame, then the Department shall delete the Project's trips from the official accounting of the cumulative number of trips.

MAP I: STATION SEGMENT BOUNDARIES



MAP I: STATION SEGMENT BOUNDARIES



6.2.2. Aesthetics

A. **Applicability.** Projects that meet all of the following criteria must prepare a shade and shadow study:

1. Project is not located within a Transit Priority Area as defined by the California Public Resources Code Section 21099 (a);

2. Project includes light-blocking structures in excess of 60 feet in height above the ground elevation; and

3. Project is located within a distance less than or equal to three times the height of the Proposed Project to a shadow-sensitive use on the north, northwest, or northeast.

    a. Shadow-sensitive uses are land uses where sunlight is important to function, physical comfort, or commerce; this includes, but is not limited to, routinely usable outdoor spaces associated with residential, recreational, or institutional (e.g., schools, convalescent homes) land uses; commercial uses such as pedestrian-oriented outdoor spaces or outdoor eating areas; nurseries; and existing solar collectors.

B. **Environmental Threshold.** Projects shall not create a shadow on nearby shadow-sensitive uses for more than three hours between the hours of 9:00 a.m. and 3:00 p.m. Pacific Standard Time (between late October and early April), or between the hours of 9:00 a.m. and 5:00 p.m. Pacific Daylight Time (between early April and late October).

1. For purposes of determining maximum shadow length, the shade and shadow study shall calculate and diagram hourly shadows during extreme conditions, as represented by the Winter Solstice (December 22) and Summer Solstice (June 21); this diagram shall show adjacent lot lines and approximate location of shadow-sensitive uses.

2. Projects that exceed this environmental standard may have a significant impact and may require additional Project-specific environmental review.

6.2.3. Cultural Resources

A. Projects that are located on properties designated as Historic-Cultural Monuments or resources designated by the State or Federal governments shall be reviewed by the Cultural Heritage Commission, per the Cultural Heritage Ordinance.

1. Projects shall include any modifications identified by the Cultural Heritage Commission, or a historic assessment prepared by a qualified architectural historian as deemed necessary, that will retain eligibility of the historic resource, and may still be considered for Administrative Clearance.

B. Projects that are located on properties that have been identified by SurveyLA as potentially historic resources shall be reviewed by the Office of Historic Resources (OHR).

1. If OHR finds the structure(s) to be potentially historically or culturally significant, a historic assessment shall be prepared by a qualified architectural historian to determine if it is a historical resource.

2. Projects shall include any modifications identified by OHR, or a qualified architectural historian as deemed necessary, that will retain eligibility of the historic resource, and may still be considered for Administrative Clearance.

3. If the identified Project modification are not included as Project features, then the Project shall be evaluated to determine the applicable environmental review process.

6.2.4. Hazards and Hazardous Materials

A. **Applicability.** Projects that involve new construction and soil disturbance must submit a historical environmental report to determine whether the Project is located on a site identified on any government list of sites containing hazardous waste of hazardous materials.

B. **Environmental Threshold.** Projects located within ¼ mile of a site identified on any government list as having the potential to be contaminated with hazardous waste or hazardous materials for any reason must prepare a Phase I Environmental Site Assessment (ESA).

1. Any potential hazards identified by the Phase I Environmental Site Assessment shall be evaluated and mitigated as recommended by an appropriately qualified individual (with experience in the identification and mitigation of hazardous materials and wastes).

2. Prior to the Department of Building and Safety's issuance of any permits that allow for grading or construction on the project sites that were on a government list or within one-quarter mile of a site on a government list, the appropriately qualified individual or relevant agency shall provide written confirmation to the City that any necessary remediation has been completed to the satisfaction of the lead agency responsible for cleanup including confirmation that required site remediation was completed consistent with the relevant federal, state, or local requirements.

6.2.5. Water Supply

A. **Applicability.** Projects located within the Subareas of the Specific Plan Area that meet the SB 610 criteria (California Water Code sections 10910 to 10915) must submit coordinate with LADWP to determine the Project's net increase water demand.

B. **Environmental Threshold.** The net increase in water demand generated the Project shall not cause the cumulative total water demand in the Subareas to exceed 2,493,102 gallons per day (equivalent to 2,793 acre-feet per year), which represents the total demand analyzed by the Water Supply Assessment (WSA) in the Environmental Impact Report (EIR) associated with this Specific Plan.

1. In calculating the net increase in water demand from a Project, water demand from existing uses on a site that will be removed as part of the Project shall be subtracted from the water demand from the new uses proposed for the site.

2. For purposes of calculating water demand, demand for recycled water shall not be included.

3. Projects found to exceed the cumulative total water demand in the Subareas shall prepare a Project-specific Water Supply Assessment per the requirements in SB 610.

4. In coordination with LADWP, the Project must identify and implement specific on- and off-site improvements needed to ensure that impacts related to water conveyance and demand/pressure requirements are addressed prior to issuance of a certificate of occupancy.

SECTION 7

DEFINITIONS

INTENTIONALLY BLANK

DEFINITIONS

Whenever the following terms are used in this Specific Plan, they shall be construed as defined in this section. Words and phrases not defined here shall be construed as defined in the Los Angeles Municipal Code.

Active Street. A street where the ground floor street frontage is required to contain a minimum amount of Active Uses or residential units with individual entries, as identified on **Map G**.

Active Uses. Uses such as retail, personal services, community or cultural facilities, restaurants or bars, sales areas, professional offices, creative offices, Live/Work Units, residential lobbies, recreation and meeting rooms.

Administrative Clearance. A ministerial approval issued by the Director of Planning for Projects that comply with all applicable Specific Plan regulations.

Affordable Housing. Rental housing units restricted to households earning Very Low, Low, or Moderate Incomes as defined by the California Department of Housing and Community Development (HCD) or successor agency.

Alternative Compliance. A process by which a Project that does not meet the Specific Plan requirements for minimum Non-Residential Use per the zoning complies with this Specific Plan through a Director's Determination for Alternative Compliance (see **Sections 6.1.4.** and **2.3.2.B**).

Animal Services and Care / Veterinary Clinics. A facility designed or arranged to provide services or retail products for the care of animals.

Animal Hospitals / Kennels. Uses where animals and pets are cared for and boarded overnight.

Area Median Income (AMI). The median income in Los Angeles County, as determined annually by the California Department of Housing and Community Development (HCD) or successor agency adjusted by household size.

Automobile-Related Uses. Fueling and service stations, including those that supply incidental services such as tube and tire repair, battery servicing, automotive lubrication, mechanical adjustments, changing of spark plugs and other similar maintenance activities; businesses that involve the purchasing and selling of new or used automobiles; automobile repair; and automobile wrecking, salvage, and tow yards.

Average Vehicle Ridership (AVR). The total number of employees at a work site during a peak period divided by the total number of vehicle trips made to and from that site during the same period.

Base Floor Area Ratio (Base FAR). The maximum floor area ratio permitted to be built on a site without any available FAR bonuses.

Bicycle Hub. Facilities which provide secure indoor and/or outdoor bicycle parking, repair stands, lockers and showers, and other tools and resources.

Bicycle Corral. Any on-street public parking space in which multiple short-term bicycle parking racks have been installed.

Bicycle Storage Station. Facilities which provide secure indoor and/or outdoor bicycle parking, and may include other tools and resources.

Bonus Floor Area Ratio (Bonus FAR). The maximum floor area ratio permitted to be built on a site if additional FAR is earned through the provision of Public Benefits (**Section 3**).

Building Frontage. The full length of a building measured alongside the street, open space, or other feature on which the property fronts.

Colleges and Vocational / Technical Schools or Programs. Uses that include public and private schools as well as institutions offering courses of general or specialized study leading to a degree or certificate.

Commercial Hotels. Buildings that accommodate the general and traveling public for a typical fee, generally limited to stays of less than 31 days.

Commercial Offices. Uses that provide space for professional and creative services, including offices for the digital technology, media, post-production, advertising, public relations, architecture, and entertainment industries.

Community Facilities. Uses whose primary purpose is to provide services and amenities to the general public in the Plan area. Examples include child care centers, libraries, schools, adult day care, and related administrative office uses; health clinics; museums; cultural centers; telecommuting centers; gyms or recreation centers; public restrooms; and rooms available to the general public for community meetings.

Drive-Through Establishments. Uses that permit a customer to order and/or obtain a purchase without leaving the confines of his or her car.

Entertainment, Exhibits and Cultural Facilities. Uses designed to host public or private gatherings for an audience.

Enhanced Bus Shelter. A bus shelter designed as a unique structure with amenities that help reinforce community identity and serve as a source for local information and the creative application of newer technologies meant to serve the transit rider and to improve their experience. Amenities may include real-time arrival information, additional lighting, charging outlets, etc.

Free-Standing Fast Food Establishment. A type of fast-food establishment, as defined in LAMC Section 16.05.B.3, that is comprised of a building designed for a restaurant use by a single tenant, or multiple tenants that share the same kitchen, and which stands alone on its own lot or is free-standing within a shopping center.

Heavy Manufacturing. The manufacture or compounding process of raw materials. These activities or processes necessitate the storage of large volumes of highly flammable, toxic matter or explosive materials needed for the manufacturing process. These activities may involve outdoor operations as part of their manufacturing process.

Hospitals, Nursing and Residential Care Facilities. Uses involved in providing medical, surgical, or assisted living care to patients and offering short- and long-term overnight care.

Live/Work Unit. A residential occupancy of one or more rooms or floors used as a dwelling unit with adequate work space reserved for and regularly used by one or more persons residing there and nonresidential employees. A Live/Work Unit combines both residential and nonresidential uses within a single unit. For purposes of this Plan, Live/Work Units shall be considered a residential use, except where expressly stated otherwise.

Light Manufacturing and Assembly. Uses that process, fabricate, assemble, treat, or package finished parts or products and/or whose noise, odor, dust, hazardous materials or other pollutants/nuisances can be contained on site.

Lot Coverage. The portion of a lot occupied by the footprint of one or more building(s).

Low Income. Annual income of a household that does not exceed the amounts designated for this income category as determined by HCD or any successor agency. The income amount for this category as of the adoption of this Plan is 80 percent of Area Median Income.

Maximum Floor Area Ratio (Maximum FAR). The maximum floor area permitted on a site including any available FAR bonuses.

Mobility Hub. Mobility hubs support first–last mile solutions by providing multimodal transportation services and activities around transit stations to maximize connectivity and access for transit riders. Hubs include bicycle share facilities, secure bicycle parking, and car share spaces, and may also include amenities such as bus stop and layover zones, transit shelters with real-time arrival information, taxi or rideshare waiting/ call areas, WI-FI service, repair facilities, retail, and open space.

Neighborhood-Serving Uses. The retail sale of goods or services needed by local residents on a regular basis, including: Apparel; Art gallery; Art supplies; Athletic/sporting goods; Bakery; Barber shop or beauty parlor; Bars; Books or cards; Bicycle sales and repairs; Cafes; Clock or watch sales and/or repair; Computer sales and repair; Copying services; Drug store; Dry cleaner; Fabrics or dry goods; Financial services; Fitness studio; Florist; Food/grocery store, including supermarket, produce, cheese and meat market and delicatessen; Hardware; Household goods and small appliances; Laundry or self-service laundromat; Learning center; Locksmith; Newsstand; Optician; Photographer; Photographic equipment and repair; Restaurants; Shoe repair; Stationery; Tailor; Toys; and other similar retail and services as determined by the Director of Planning.

Non-Residential Uses. Uses that do not contain dwelling units, including Commercial Hotels or similar uses (motel, lodge, motor inn, etc.).

Parking Demand Analysis. An estimate of the peak number of parking spaces demanded by each of the land uses in a Project during different times of day and days of the week.

Paseo. A pedestrian walkway that is generally open to the sky and provides pedestrian passage between structures or through landscaping or parking lots, and that is distinguished by ground surface treatments that provide for pedestrian safety and ease of movement.

Peak Utilization. The greatest cumulative parking demand that occurs between two or more uses within a Project.

Personal Services. Uses involved in personal service-oriented sales to the general public, such as hair salons, dry cleaners, financial services, and repair and service of consumer goods.

Plan. The Exposition Corridor Transit Neighborhood Plan (Specific Plan).

Property Frontage. The length of the property along the street.

Prevailing Front Yard Setback. The average depth of the front yards of lots on a block face where such lots have front yards that vary in depth by not more than 10 feet and comprise 40 percent or more of the frontage on the block face (See LAMC Section 12.08. C.1).

Publishing, Motion Picture, and Broadcasting. Uses engaged in the production of film, video, audio, print, and other media, but excluding movie houses and theatres.

Public Benefit. A Project feature that serves a public purpose benefitting the Plan area, particularly to improve mobility, accessibility, affordability, and quality of life in a neighborhood.

Publicly Accessible Open Space (PAOS). Privately owned and maintained open space that is accessible to the public at a minimum from 6 a.m. to 10 p.m. daily.

Recreation Facilities and Gyms. Facilities used for indoor and/or outdoor recreational activities.

Religious Assembly. Uses located in a permanent building and providing regular organized religious worship and related incidental activities, excluding primary or secondary schools and day care facilities.

Repair and Maintenance Facilities. Facilities used for the repair or servicing of industrial, business, or consumer machinery, equipment, products or by-products. The repair and service of consumer goods falls into the Retail and Personal Services category.

Research and Development. Uses related to scientific and technical research, including development/testing activities and prototype fabrication.

Residential Use. Uses that contain dwelling units, including Live/Work Units except where expressed stated otherwise.

Restaurants and Bars. Uses involving food and beverage sales to the general public, excluding adult entertainment.

Restricted Affordable Unit. A residential unit for which rental prices are restricted so as to be affordable to, and occupied by, Very Low, Low, or Moderate Income households as defined by the California Department of Housing and Community Development (HCD) or successor agency

Retail and Personal Services. Uses involving the sale and/or lease of new or used products or services to the general public.

Retail Street. A street where the ground floor street frontage is required to contain a minimum amount of Active Uses, as identified on **Map G**.

Schools, Elementary and High. An institution of learning which offers instruction in several branches of learning and study required to be taught in the public schools by the Education Code of the State of California. High schools include Junior and Senior.

Server Farms. Uses established for the exclusive purpose of providing operational facilities for, but not limited to, the storage of phone equipment, computers, and internet data.

Setback. The distance of a structure or other feature measured from the back of sidewalk after any required dedications and/or easements are provided.

Shared Street. Street that provides a slow-speed environment where cars, scooters, motorcycles, bicycles, and pedestrians are able to all comfortably utilize the same space.

Spectator Sports Facilities. Facilities such as a stadium used for a sport that is characterized by the presence of an audience at its games or events.

Streetscape. Elements in the public right-of-way that form a street's character, including the roadway paving and striping, curbs, sidewalks, street trees and other landscaping, medians, lighting, benches, trash cans, etc.

Streetwall. The vertical face of one or more buildings parallel to the public right-of-way, including upper floors, that are recessed a maximum of five feet from the ground floor facade.

Subarea. Designated areas within the Plan area that are subject to particular regulations found in this Specific Plan (see **Map B**).

Transportation Demand Management (TDM). The alteration of travel behavior through physical improvements or programs of incentives, services, and policies, including encouraging the use of alternatives to single-occupant vehicles such as public transit, cycling, walking, carpooling/vanpooling and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks).

Trucking and Transportation Terminals. Uses related to the dispatching, maintenance and long-term or short-term storage of large vehicles such as tractor-trailers, catering trucks, shipping vessels, helicopters, locomotives, and airplanes.

Utilities. Uses that provide the transfer or delivery of power, water, natural gas, sewage, stormwater runoff, or telephone and related communication services.

Vehicle Trip Reduction. A requirement in this Specific Plan for particular Projects to reduce their vehicle trip generation during the peak period beyond standard expected trip generation levels.

Vocation / Technical Schools or Programs. Uses related to the provision of vocational and/or technical training to students entering into a vocation or technical field.

Warehousing, Distribution and Storage. Uses that package, provide, hold, and/or distribute goods in large quantities, especially to retail sales establishments. Long-term and short-term storage of commercial goods and personal items are included.

Waste Management and Remediation Services. Uses that receive solid or liquid wastes (including hazardous wastes) for on-site disposal, recycling, or transfer to another location, including uses that manufacture or produce goods or energy from the biological decomposition of organic material.

Wholesale. Uses engaged in the sale, lease, or rental of products primarily intended for industrial, institutional, or commercial businesses. The uses may include on-site sales or order taking and may include display areas.

DRAFT EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN

APPENDIX A

PUBLIC BENEFITS MENU

Los Angeles Department of City Planning
March 2017

INTENTIONALLY BLANK

STREETSCAPE PROJECTS

The following streetscape improvement projects implement the Exposition Corridor Streetscape Plan and the Livable Boulevards Streetscape Plan (see **Map H**). The table below shows the point values for providing the improvements along each street segment indicated. Improvements are to be installed on both sides of the street, and may include curbs, sidewalk paving, street trees and landscaping, medians, street furniture, and restriping of roadways, as specified in the corresponding streetscape plan.

	Points
BUNDY DRIVE	
Missouri Ave to Exposition Blvd[d]	**30**
- Relocate and reconstruct curbs[a], relocate utility poles[b], and restripe roadway	
- Install street trees and street furniture	
Exposition Blvd to Pico Blvd	**3**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Total Bundy Drive Points	**33**
OLYMPIC BOULEVARD	
Centinela Ave to Bundy Dr	**3**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Bundy Dr to Barrington Ave	**5**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Centinela Ave to Barrington Ave	**20**
- Construct new landscaped median[a]	
Total Olympic Boulevard Points	**28**
SEPULVEDA BOULEVARD[e]	
Olympic Blvd to Exposition Blvd	**35**
- Relocate and reconstruct curbs[a], relocate utility poles[b], and restripe roadway	
- Install street trees and street furniture	
Exposition Blvd to National Blvd	**55**
- Relocate and reconstruct curbs[a], relocate utility poles[b], and restripe roadway	
- Install street trees and street furniture	
Total Sepulveda Boulevard Points	**90**
NATIONAL BOULEVARD	
Castle Heights Ave to Manning Ave	**3**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Palms Blvd to Mentone Ave	**7**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Total National Boulevard Points	**10**

STREETSCAPE PROJECTS, continued

PALMS BOULEVARD	
Motor Ave to National Blvd	**8**
- Install curb extensions and parking lane planters[a]	
Total Palms Boulevard Points	**8**
PICO BOULEVARD	
I-405 to Patricia Ave	**19**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Centinela Ave to I-405	**14**
- Repave sidewalks [c]	
- Install street trees and street furniture	
Total Pico Boulevard Points	**33**
MOTOR AVENUE	
I-10 to Venice Blvd	**12**
- Repave sidewalks[c]	
- Install street trees and street furniture	
Total Motor Avenue Points	**12**

a. Where new curbs or medians are to be constructed, streetscape project includes the preparation of necessary engineering plans.
b. Utility poles assumed to be relocated above ground, but may be relocated underground if feasible.
c. Sidewalks to be repaved where needed depending on the current condition.
d. These improvements cannot be made until dedications from individual properties fronting Bundy Dr between Missouri Ave. and Exposition Blvd. are provided.
e. These improvements cannot be made until dedications from individual properties fronting Sepulveda Blvd are provided. If a new center-running transit line along Sepulveda Blvd. is approved, Metro will be responsible for making these improvements.

STREETSCAPE ELEMENTS

The following streetscape elements may be provided alone or to supplement the streetscape projects above, and may be proposed for any location within the Plan Area. The quantities shown represent the minimum amount of each improvement that must be provided; points are scalable as quantities are increased. Refer to the corresponding streetscape plan (see **Map H**) for details, standards, and maintenance requirements for these streetscape elements. Streetscape elements that are not part of an adopted streetscape plan will require additional review and approval from the Department of Public Works, Department of Transportation, and/or other relevant public agency.

Streetscape Elements	Quantity	Points
Freeway underpass improvements	1	**1**
Enhanced bus shelter	1	**15**
Pedestrian lights[a]	20	**1**
Crosswalks (4-way intersection)	1	**1**
Special sidewalk paving	7,500 SF	**1**
Street trees	20	**1**
Repair/repave sidewalks (one side of street)	1,500 LF	**1**
Landscaped curb extensions on corners	2	**2**

a. In order to install new street lighting, a street lighting maintenance assessment district must be established. This requires a majority of property owners to agree to be assessed for electricity costs. Public Benefit points may not be awarded until the district is established.

COMMUNITY AMENITIES

The following Community Amenities and their corresponding point values include open space, mobility amenities, and community facilities. The quantities shown represent the minimum amount of each improvement that must be provided; points are scalable as quantities are increased.

	Quantity	Points
Publicly Accessible Open Space		
Publicly Accessible Open Space on Private Property	1,500 SF	**1**
Parklet	2 parking stalls	**1**
Mobility Amenities		
Mobility Hub	1 hub	**13**
Bicycle Hub	1 hub	**20**
Bicycle Storage Station	1 station	**1**
Bicycle Corral	1 corral	**1**
Community Facilities		
Childcare Center (off-site)	60 children	**28**
Childcare Center (on-site)	60 children	**9**
All other (i.e. Youth/Senior Center; Museum; Recreation Center)	5,000 SF	**30**

DRAFT EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN

Street	Boundaries	Street Classification	Required Dimensions			Dedication Required[1, 4]	Easement Required[1]
			Sidewalk[1]	Roadway	ROW		
Bundy Dr	Missouri Ave to La Grange Blvd	Avenue I	15’	70’	100’	13’-6”	None
Bundy Dr	La Grange Blvd to Olympic Blvd	Avenue I	15’	70’	100’	7’	None
Bundy Dr	Olympic Blvd to Pico Blvd	Avenue I	15’	70’	100’	8’	None
Olympic Blvd	Centinela Ave to Barrington Ave	Boulevard II	15’	86’[3]	110’	None	3’
Sepulveda Blvd	Olympic Blvd to Pico Blvd	Boulevard II	15’	80’	110’	5’	None
Sepulveda Blvd	Pico Blvd to National Blvd	Boulevard II	15’	80’	110’	5’	None
National Blvd	Castle Heights Ave To Palms Blvd	Avenue II	12’ to 15’[2]	63’[3]	86’	3’ to 5’[2]	0’-6” to 8’-6”[2]
National Blvd	Palms Blvd to Mentone Ave	Avenue II	14’ (south side) 15’ (north side)	57’[3]	86’	2’	None
Palms Blvd	National Blvd to Motor Ave	Avenue II	12’	62’[3]	86’	5’	None
Pico Blvd	I-405 to Patricia Ave	Avenue I	15’	70’	100’	None	None
Pico Blvd	Centinela Ave to I-405	Avenue I	15’	70’	100’	None	None
Motor Ave	I-10 to Venice Blvd	Avenue II (modified)	12’	62’[3]	86’	3’	None

1. Unless otherwise noted, the sidewalk dimensions, dedications, and easements listed here apply to both sides of the street.
2. See the Exposition Corridor Streetscape Plan (**Appendix D**) for details on where specific sidewalk widths, dedications, and easements apply.
3. The proposed right-of-way for this street segment is consistent with the Mobility Plan street designation. The roadway width does not need to comply with the Mobility Plan street designation and shall be constructed to the dimensions shown here.
4. The dedications required reflect typical conditions along a street segment and are not from an official survey. In the event that a portion of a street has atypical existing conditions, more or less dedication than shown here may be required in order to meet the required ROW dimension.

- C. Paseos
- D. Landscape, Hardscape, and Irrigation

5. PARKING
- A. Vehicular Access and Circulation
- B. Surface Parking
- C. Parking Structures

6. DEFINITIONS

1. BUILDING FORM

GOALS

1. Avoid bulk and visual monotony through appropriate building massing and arrangement.

2. Define a continuous streetwall while ensuring new buildings respect the character of surrounding neighborhoods.

3. Create a built environment that engages with the pedestrian realm, while providing a buffer between the sidewalk and adjacent uses where needed.

GUIDELINES

All Projects

1. Break up large projects into multiple buildings of various sizes and heights.

Mixed Use/Commercial/Industrial Projects

2. Create a strong streetwall by locating buildings at or close to the front property line where possible.

3. Where buildings are set back from the front property line, provide the following landscaping and other features within the setback area, depending on the adjacent ground floor use:

    a. When adjacent to retail, setback areas should contain primarily hardscape and may be used for outdoor dining and other commercial activity.

    b. When adjacent to office or industrial space, setback areas should contain landscaping (e.g. pots and/or planters).

    c. When adjacent to ground-floor residential units with individual entries on the street, setback areas should contain landscaping and may also include walkways, ramps, porches, steps, or similar uses.

4. Where there are multiple ground floor uses within a Project, vary front yard setbacks to create visual interest.

5. Limit publicly accessible open spaces and outdoor dining along the street to key locations so as not to significantly interrupt the pedestrian experience created by ground floors built close to or at the back of the sidewalk.

Multifamily Residential Projects

6. The height and scale of new buildings should be compatible with adjacent buildings. If new buildings are taller, step down the massing to transition to lower heights.

7. Maintain continuity of the setback with adjacent buildings.

8. Integrate usable open spaces within a project, avoiding excess lot coverage.

9. Avoid negative shade/shadow and privacy impacts to single-family zones through such methods as stepping back upper floors and avoiding direct views into neighboring yards, as appropriate.

Breaking up a large project into buildings with different heights, forms, and setbacks creates visual interest.

A continuous streetwall frames and defines the street.

Setbacks on the ground floor allow for some outdoor dining space while maintaining continuity on the street.

New residential buildings that respect the scale and massing of neighboring buildings unifies old and new development along a block.

2. BUILDING ORIENTATION

GOALS

1. Provide convenient access to commercial and residential buildings for pedestrians and transit riders.

2. Enhance public safety by promoting pedestrian traffic and placing “eyes on the street.”

GUIDELINES

All Projects

1. The major architectural features of a building should face a public street, or a publicly accessible paseo, courtyard, or plaza that opens onto the public street.

2. Orient windows toward public streets, rather than inward, to contribute to neighborhood safety and provide design interest.

3. Create well-articulated, inviting building entrances that emphasize pedestrian orientation.

4. Design entrances in proportion to the size and scale of the building.

5. Use canopies, awnings, or recesses at entrances to provide cover for tenants and guests.

6. Ensure that the main entrance and entry approach for a building can accommodate persons of all mobility levels by adhering to ADA requirements.

7. Provide direct paths of travel for pedestrians within large sites.

8. Automobile entrances to buildings should be less prominent than pedestrian entrances.

Windows in residential units that face the street contribute to public safety.

A simple canopy, lighting, and recessed door lead pedestrians to the primary entrance of a building.

Mixed Use/Commercial/Industrial Projects

9. Line the ground floor of buildings with retail, restaurants, office, and/or individual residential units to create a lively street frontage.

10. Provide entries to ground-floor individual units or tenants directly from the street.

Ground floor retail with abundant windows contributes to a vibrant street experience and promote public safety.

Retail spaces that directly open to the sidewalk create convenient access to a nearby Metro station.

Multifamily Residential Projects

11. Incorporate transitions such as landscaping, walkways, porches, stoops, steps, and/or canopies at the entrance to individual residences, connecting primary entrances and the public right of way.

12. Where there are residential units on the ground floor, provide entries directly from the street. If residential entries cannot be placed on the ground floor facing the street, create a prominent ground floor or first floor common entry, such as an atrium or lobby.

13. Locate gathering spaces such as gyms, recreation rooms, and community space at the ground level and accessible to the street.

14. Stairs leading up to common entry ways or individual units should be highly visible and integrated into the architectural design of the building.

Stairs from the sidewalk leading up to the common entry of a residential building invite pedestrian access.

Residences with entrances directly on the street use landscaping and distinct paving to separate private space from the public realm.

3. ARCHITECTURAL TREATMENT

GOALS

1. Break down building massing using varied and meaningful articulation in façades and rooflines.

2. Add depth and scale to a building's façade using well-detailed windows and doors.

3. Create visual interest while contributing to the definition of the street through the use of durable materials and high-quality design details.

4. Provide sufficient illumination for safety and visibility without negatively impacting surrounding areas.

5. Minimize visual clutter by screening mechanical equipment and utilities from public view.

GUIDELINES

A. **Articulation**

All Projects

1. Break down large building façades using vertical articulation achieved through recessed walls, change in materials, windows, balconies, columns, or other architectural details.

2. Use horizontal architectural treatments such as entry porticos, cornices, friezes, awnings, canopies, or other features to add visual interest at the pedestrian level.

3. Vary rooflines through the use of sloping roofs, modulated building heights, stepbacks, or innovative architectural solutions.

4. Layer building architectural elements to emphasize certain features of the building such as entries, corners, and organization of units.

5. Emphasize the corner of buildings located at the intersection of two arterial streets by using one of the following techniques or similar: vertical massing or tower at the corner, diagonal setback and/or corner plaza at the intersection, or a recessed building entrance at the corner.

Mixed Use/Commercial/Industrial Projects

6. Provide an identifiable visual break between a building's retail floors (ground level and in some cases, second and third floors) and upper floors. This break may be achieved through a change in material, change in fenestration pattern, or similar means.

7. Set apart the primary building entrances from the main façade and distinguish from retail storefronts and other entrances through architectural treatments such as recesses,

canopies or awnings, material, or color. The size and scale of these features should be proportional to the overall height and width of the building.

8. Design storefronts to convey an individual expression of each tenant's identity while adhering to a common architectural theme and rhythm.

Multifamily Residential Projects

9. Articulate facades and group windows to reflect individual residential units. Modulated façades can prevent the appearance of monolithic buildings.

10. Design balconies such that their size and location maximize their intended use for open space. Avoid "tacked on" balconies with limited purpose or function.

11. Use architectural features, such as decorative gates and pergolas, in combination with landscaping to provide a continuous visual presence at the street level where openings occur due to driveways or other breaks in the building wall.

Variations in color, material, wall plane, and window patterns on the façade provide visual relief and help an infill project blend into an established context.

An identifiable change in materials and articulation defines the base of multi-story buildings.

A modulated façade and varied rooflines prevent a large residential project from appearing overwhelming and out of scale.

B. Windows and Doors

All Projects

1. Buildings should have meaningful fenestration that establishes a clear pattern on the façade and provides depth and articulation.

2. The shape, style, and arrangement of windows and doors should not conflict with the architectural style of the building.

3. Door and window frames should be detailed to achieve a depth and shadow reading.

Mixed Use/Commercial/Industrial Projects

4. Flush finish window installations may be permitted on non-residential buildings when a glass curtain wall, spandrel glass, or other similar design approaches are used.

C. Materials

All Projects

1. Building materials should be varied to add texture, depth, and visual interest to a façade.

2. Durable, high quality and authentic materials that have a long life, age well, and reflect a high level of craftsmanship are encouraged.

3. Incorporate no more than three complementary building materials into the exterior façade of buildings, including but not limited to glass, tile, terracotta, brick, stucco or stone.

4. Infill projects should utilize materials that are consistent with or complement the neighboring buildings.

5. Apply changes in material purposefully and in a manner corresponding to variations in building mass.

6. Materials and details, including windows, doors, and roof details, should be reflective of the architectural style utilized.

7. All building fixtures, awnings, security gates, parking garage doors, etc., shall complement and be architecturally integrated to the design of the building.

Mixed Use/Commercial/Industrial Projects

8. Use high quality, durable materials on ground floor facades that add scale, color, and texture, to create variety at the pedestrian level. Avoid using stucco, glass fiber reinforced concrete (GFRC), or similar materials on the ground floor.

D. Shade Treatments

All Projects

1. Incorporate awnings, overhangs, canopies, or exterior window shelves along the southeast, south, and southwest building faces to provide shade.

2. The size and scale of awnings, overhangs, canopies, and exterior window shelves should be compatible with rest of the building and should be designed as an integral part of the building architecture.

3. Awnings should be of woven fabric (and not vinyl), fade resistant, and be maintained in good condition and replaced periodically.

4. Canopies constructed of metal, glass, or other materials should be compatible in scale and design of the building.

E. Fencing

All Projects

1. Minimize visual barriers and the enclosure of outside space to maintain an open and accessible physical environment.

2. Locate and design any necessary fencing in a manner so as not to detract from the quality of the pedestrian experience.

3. Long expanses of fences should incorporate openings, changes in materials, texture, and/or landscaping.

Awnings made of high-quality fabric are integrated into the architecture and shade the building façade.

The use of high-quality, durable materials at the base of a building help protect the building while providing visual interest at the pedestrian level.

F. Lighting

All Projects

1. Provide lights on sidewalks, pedestrian walkways, and open spaces to encourage and extend safe pedestrian activities into the evening.

2. Use ornamental low-level lighting to highlight and provide security for pedestrian paths, parking areas, and entrances.

3. Integrate security lighting into the architectural and landscape lighting system. Security lighting should not be distinguishable from the project's overall lighting system.

4. Install light fixtures that accent and animate a building's architectural features at night.

5. Use adequate, uniform, and glare-free lighting, such as dark-sky compliant fixtures, to avoid uneven light distribution, harsh shadows, and light spillage.

6. Integrate solar-powered lighting to increase energy efficiency.

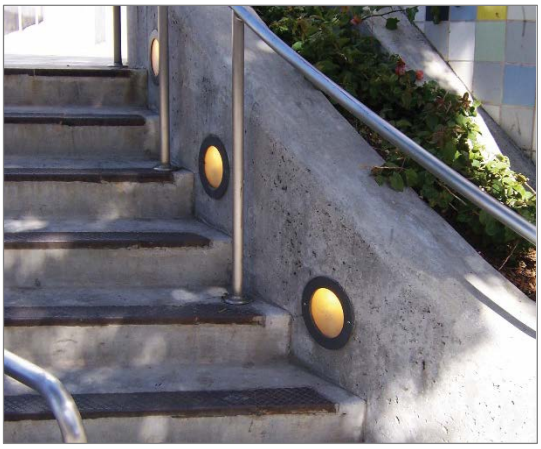
Mixed Use/Commercial/Industrial Projects

7. Illuminate ground floor retail uses along arterial streets from within, both during and after business hours.

8. Orient commercial and industrial buildings on the site to maximize natural light within interior work spaces.

9. Provide operable clerestory windows where feasible to allow for ventilation and indirect lighting.

Exterior building lighting is directed away from adjacent properties and roadways while highlighting the architecture of the building at night.



Integrating security lighting into a project's architecture and landscape design subtly promotes safety.

G. Mechanical Equipment and Utilities

All Projects

1. Place utilities such as gas, electric, and water meters in side yards or in landscaped areas out of view from the public right-of-way.

2. Mechanical and electrical equipment such as transformers, wireless facilities, air conditioning units, vents, and antenna should be placed underground, on a rooftop, or otherwise screened from public view.

3. Screen rooftop mechanical equipment from the public right-of-way using parapets and other architectural features.

4. Equipment at the ground level should be concealed by planting materials in a manner that contributes to the quality of the existing landscaping on the property and the public streetscape.

5. Where possible, hide trash enclosures within parking garages so that they are not visible from the street.

6. Screen outdoor stand-alone trash enclosures using walls consistent with the architectural character of the main building and locate them so that they are not visible from the public right-of-way.

7. Locate noise and odor-generating functions in enclosed structures so as not to create a nuisance for building residents or adjacent neighbors.

8. Relocate utility poles underground wherever possible.

Enclosing trash facilities in structures that blend in with the architecture of the building helps minimize the appearance of these uses.

Rooftop mechanical equipment should be placed behind a parapet to screen it from public view.

4. OPEN SPACE

GOALS

1. Design outdoor open spaces as communal rooms for gathering, social interaction, and recreation.

2. Provide a variety of open spaces that are accessible to and may be shared among users within the neighborhood.

3. Create safe, inviting passageways between buildings that contribute to an interconnected pedestrian network.

4. Promote environmental sustainability by conserving water and reducing the heat island effect.

GUIDELINES

A. **Common Open Space**

All Projects

1. Design buildings to focus on public spaces such as courtyards, plazas, entry forecourts, paseos, parks, squares and roof terraces, with a balance of landscaped and paved areas.

2. Provide amenities in common open space such as seating, trees for shade, active and passive recreational uses, tot lots, community gardens, shading devices, and bicycle facilities.

3. Define courtyards as outdoor rooms, using buildings and/or landscape elements to create a sense of enclosure and provide quiet areas while maintaining safety.

4. Design open spaces to be easily accessible and comfortable for a substantial part of the year.

5. Provide a clear hierarchy and network of common open spaces within a large site, distinguishing each space by design and function to create a connected public realm conducive to both active and passive uses.

6. For small projects, cluster code-required common open space areas in a central location, rather than dispersing smaller less usable areas throughout the site.

B. Publicly Accessible Open Space

Mixed Use/Commercial/Industrial Projects

1. Locate publicly accessible open space where it will be visible and can easily be accessed from a public street.

2. Design publicly accessible open space so that it can be occupied and is functional for all users, with sufficient size, accessible grading, and a mix of hardscape and landscape materials.

3. Incorporate a mix of passive and active recreational facilities within an open space to serve residents, employees and visitors, such as basketball courts, community garden space, a Farmer's market, off-leash dog park, open air café, picnic area or other seating, tennis courts, and exercise areas.

4. Publicly accessible open space should include approximately one seat for every 500 square feet of open space provided, with a minimum of four seats. Seating may be in a variety of forms such as benches, chairs, and planter walls, and may be permanent or movable.

A mix of active and passive uses draw neighbors and visitors to publicly accessible open space.

Adequate shade and seating in an open space creates a unique identity, and encourages users to rest and socialize.

C. Paseos

All Projects

1. Use paseos to break up large blocks and connect the streets and alley network.

2. Paseos should have a clear line of sight to the back of the paseo or a gathering place or focal element.

3. Activate paseos using water features, pedestrian lighting, artwork, benches, landscaping, or special paving so that they are safe and visually interesting spaces

Mixed Use/Commercial/Industrial Projects

4. Line the ground floor facing paseos with spaces designed for active uses such as retail, personal services, community or cultural facilities, restaurants or bars, offices, lobbies, or residential units with individual entries.

A well-landscaped paseo offers an attractive route for pedestrian circulation through a large site.

Retail entries and display windows along a paseo activate the space.

D. Landscape, Hardscape, and Irrigation

All Projects

1. Attractively landscape and maintain all open areas not used for buildings, driveways, parking areas, recreational facilities or pedestrian walkways in accordance with a landscape plan and an automatic irrigation plan, prepared by a licensed Landscape Architect.

2. Design landscaping to be architecturally integrated with the building and suitable to the functions of the space, selecting plant materials that complement the architectural style and form of the building.

3. Use trees and other landscaping to create a buffer between new development and adjacent lower-intensity uses, and to soften the appearance of larger massing along a street.

4. Provide canopy trees in planting areas for shade and energy efficiency, especially on south and southwest-facing facades.

5. Harvest rainwater and reuse on site where possible.

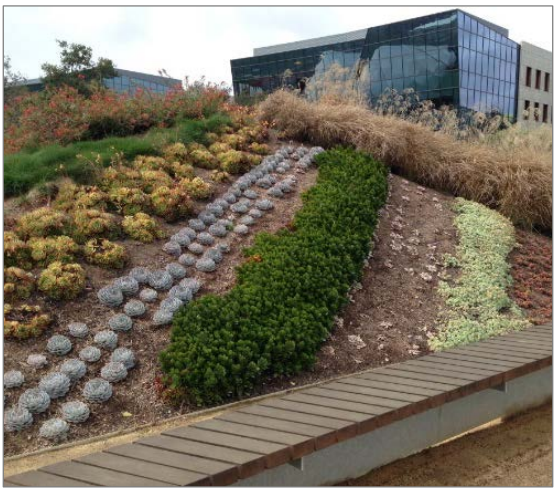
6. Use landscape contouring to minimize precipitation runoff.

7. Irrigation systems should be plumbed with a purple pipe to enable a connection to a recycled or gray water system once it is available.

8. Select drought-tolerant and/or native landscaping to limit irrigation needs and conserve water.

9. Group plants with similar water requirements together into hydro-zones, which allow for a zoned irrigation system to meet the unique water needs of different areas of the landscape.

Drought tolerant trees, shrubs, and groundcover provide attractive landscaping while conserving water.



Landscape contouring minimizes precipitation runoff.

5. PARKING

GOALS

1. Promote streetwall continuity, avoid interruptions to the pedestrian realm, and enhance pedestrian safety by strategically locating parking, loading, and vehicular circulation.

2. Conceal surface parking lots from view and minimize their contributions to the urban heat island effect.

3. Minimize the appearance of parking structures within a project while promoting accessibility and ease of use.

GUIDELINES

A. Vehicular Access and Circulation

All Projects

1. Prioritize pedestrian access first and automobile access second.

2. Orient parking toward the rear or side of buildings and away from the public right-of-way.

3. Maintain continuity of the sidewalk by minimizing the number of curb cuts for driveways, instead utilizing alleys for access where possible.

4. When a driveway in the front of a property cannot be avoided, locate the driveway at the side of the property to allow ample room for landscaping and entrances in the front.

5. Locate curb cuts in a manner that maximizes on-street parking and replace any unused curb cuts and driveways with standard sidewalks.

6. Maintain existing alleys for access and circulation. Avoid vacating alleys or streets in order to address project-specific design challenges.

B. Surface Parking

All Projects

1. Locate parking lots in the interior of the block, not at the corner or front of the site.

2. Where a parking lot abuts a public street, provide a visual screen or landscaped buffer between the sidewalk and the parking lot.

3. Install canopy trees or shade structures, such as canopies, trellises, or solar panels, throughout surface parking lots to provide sufficient shade.

Mixed Use/ Commercial/Industrial Projects

4. Where possible, link new surface parking areas with parking in adjacent development to facilitate vehicular and pedestrian movements.

C. Parking Structures

Mixed Use/Commercial/Industrial Projects

1. Minimize the appearance of parking structures along a street by lining them with habitable space, or using planting and other screens to conceal parking areas and headlights.

2. Where upper levels of parking structures are not lined by habitable space, they should be designed to blend in with the project using architectural treatments such as fenestration patterns and materials.

3. Parking structures should incorporate a façade or external skin to improve the building's appearance over the basic concrete structure of ramps, walls and columns. This can include heavy gauge metal screen, precast concrete panels, laminated glass, or photovoltaic panels.

4. On corner lots, locate parking structures as far from the corner as possible.

5. Parking areas for the uses on a site should be physically connected to and accessible from public parking areas so that spaces may be reallocated and/or shared between private uses and the public in the future as demand for parking changes.

6. Elevator and stairs for parking structures should be located adjacent to public streets or pedestrian passageways and be highlighted architecturally so visitors can easily find and access these entry points.

7. Integrate signage and wayfinding with the architecture of a parking structure.

A parking structure "wrapped" by commercial and residential space conceals the parking and allows for windows and active uses to face the street.

An external skin made of colored glass panels adds visual interest to concrete parking structures.

6. DEFINTIONS

Common Open Space. Open space, as required by LAMC 12.21.G and/or the Exposition Corridor Transit Neighborhood Plan, that is shared among users on a site, including residents, employees, and visitors. Common open space is not necessarily publicly-accessible.

Paseo. A pedestrian walkway that is generally open to the sky and provides pedestrian passage between structures or through landscaping or parking lots, and that is distinguished by ground surface treatments that provide for pedestrian safety and ease of movement.

Publicly Accessible Open Space (PAOS). Privately owned and maintained open space that is accessible to the public at a minimum from 6 a.m. to 10 p.m., seven days a week.

Setback. The distance of a structure or other feature measured from the back of sidewalk after any required dedications or easements are provided.

Streetwall. The vertical face of one or more buildings parallel to the public right-of-way, including upper floors that are stepped back a maximum of five feet from the ground floor façade.

Stepback. The distance that a portion of a building is stepped back above the ground floor height before the total height of the building is achieved.

APPENDIX E

ENVIRONMENTAL STANDARDS

Los Angeles Department of City Planning
March 2017

INTENTIONALLY BLANK

AIR QUALITY

Include the following best management practices in contract specifications and print on plans:

- Use properly tuned and maintained equipment.
- Contractors shall enforce the idling limit of five minutes as set forth in the California Code of Regulations.
- Use diesel-fueled construction equipment to be retrofitted with after treatment products (e.g., engine catalysts) to the extent they are readily available and feasible.
- Use heavy duty diesel-fueled equipment that uses low NO_X diesel fuel to the extent it is readily available and feasible.
- Use construction equipment that uses low polluting fuels (i.e., compressed natural gas, liquid petroleum gas, and unleaded gasoline) to the extent available and feasible.
- Maintain construction equipment in good operating condition to minimize air pollutants.
- Project applicants shall ensure that all construction equipment meets or exceeds equivalent emissions performance to that of U.S. Environmental Protection Agency (USEPA) Tier 4 standards for non-road engines. In the event that Tier 4 engines are not available for any off-road equipment larger than 100 horsepower, that equipment shall be equipped with a Tier 3 engine, or an engine that is equipped with retrofit controls to reduce exhaust emissions of nitrogen oxides and diesel particulate matter to no more than Tier 3 levels unless certified by engine manufacturers or the on-site air quality construction mitigation manager that the use of such devices is not practical for specific engine types. For purposes of this condition, the use of such devices is "not practical" for the following, as well as other, reasons:
  - There is no available retrofit control device that has been verified by either the CARB or USEPA to control the engine in question to Tier 3;
  - The construction equipment is intended to be on site for five days or less; or
  - Relief may be granted from this requirement if a good faith effort has been made to comply with this requirement and that compliance is not practical.
- The use of a retrofit control device may be terminated immediately, provided that a replacement for the equipment item in question meeting the required controls occurs within ten days of termination of the use, if the equipment would be needed to continue working at this site for more than 15 days after the use of the retrofit control device is terminated, if one of the following conditions exists:
  - The use of the retrofit control device is excessively reducing the normal availability of the construction equipment due to increased down time for maintenance, and/or reduced power output due to an excessive increase in back pressure;
  - The retrofit control device is causing or is reasonably expected to cause engine damage;
  - The retrofit control device is causing or is reasonably expected to cause a substantial risk to workers or the public; or
  - Any other seriously detrimental cause which has the approval of the project manager prior to implementation of the termination.
- Construction contractors shall use electricity from power poles rather than temporary gasoline or diesel power generators, as feasible.

- Use building materials, paints, sealants, mechanical equipment, and other materials that yield low air pollutants and are nontoxic.
- Construction contractors shall utilize super-compliant architectural coatings as defined by the South Coast Air Quality Management District (Volatile Organic Compound standard of less than ten grams per liter).
- Construction contractors shall utilize materials that do not require painting, as feasible.
- Construction contractors shall use pre-painted construction materials, as feasible.

CULTURAL RESOURCES

Include the following requirements in contract specifications and print on plans:

- A qualified archaeologist is required to monitor excavation and grading activities in soils that have not been previously disturbed, to identify, record, and evaluate the significance of any archaeological finds during construction. If archaeological resources are uncovered (in either a previously disturbed or undisturbed area), the City Department of Building and Safety shall be notified immediately, and all work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, state, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Personnel of the project shall not collect or move any archaeological materials or associated materials. Construction activity may continue unimpeded on other portions of the project site. The found deposits shall be treated in accordance with federal, state, and local guidelines, including those set forth in California Public Resources Code Section 21083.2. Construction activities in the area where resources were found may commence once the identified resources are properly assessed and processed by a qualified archeologist.

- All cultural resources identified on a site must be assessed and treated in a manner determined appropriate by a qualified archeologist in consultation with the City's Office of Historic Resources. A report shall be prepared according to current professional standards that describes the resource, how it was assessed, and disposition.

- A qualified paleontologist is required to monitor excavation and grading activities in soils that have not been previously disturbed. If paleontological resources are uncovered (in either a previously disturbed or undisturbed area), the City Department of Building and Safety shall be notified immediately, and all work on the project site shall cease until a qualified paleontologist evaluates the find. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. Halted construction activities on the project site may commence once the identified resources are properly assessed and processed by a qualified paleontologist.

- All paleontological resources identified on a project site must be assessed and treated in a manner determined by a qualified paleontologist in consultation with the City's Office of Historic Resources. A report shall be prepared according to current professional standards that describes the resource, how it was assessed, and

disposition. Any reports and surveys shall be submitted to the City's Office of Historic Resources and the Natural History Museum of Los Angeles County.

NOISE

Include the following best management practices in contract specifications and print on plans:

- Construction haul truck and materials delivery traffic shall avoid residential areas whenever feasible. If no alternatives are available, truck traffic shall be routed on streets with the fewest residences.
- The construction contractor shall locate construction staging areas away from sensitive uses.
- When construction activities are located within 500 feet of noise-sensitive land uses, noise barriers (e.g., temporary walls or piles of excavated material) shall be constructed between activities and noise sensitive uses.
- Impact pile drivers shall be avoided where possible in noise-sensitive areas. Drilled piles or the use of a sonic vibratory pile driver are quieter alternatives that shall be utilized where geological conditions permit their use. Noise shrouds shall be used when necessary to reduce noise of pile drilling/driving.
- Construction equipment shall be equipped with mufflers that comply with manufacturers' requirements.
- The construction contractor shall use on-site electrical sources to power equipment rather than diesel generators where feasible.

For development within New Industry, Hybrid Industrial: Jobs Emphasis, Hybrid Industrial-Residential Emphasis, and Mixed Use: Commercial/Residential zones with direct line-of-site to adjacent residential and other sensitive land uses:

- Industrial activity yards that include the operation of heavy equipment shall be shielded by sound barriers that block line-of-sight to sensitive receptors.
- Mechanical equipment (e.g., HVAC Systems) shall be enclosed with sound buffering materials.
- Truck loading/unloading activity shall be prohibited between the hours of 10:00 p.m. and 7:00 a.m. when located within 200 feet of a residential land use.
- Parking structures located within 200 feet of any residential use shall be constructed with a solid wall abutting the residences and utilize textured surfaces on garage floors and ramps to minimize tire squeal.

TRANSPORTATION

Include the following in contract specifications and print on plans:

- Projects that require a worksite traffic control plan per current LADOT guidelines shall submit to LADOT for review and approval a plan that mitigates the impact of traffic disruption and ensures the safety of all users of the affected roadway. The plan shall address construction duration and activities and include measures, such as operating a temporary traffic signal, using flagmen adjacent to construction activities, or providing a dedicated pedestrian walkway, as appropriate.

WATER SUPPLY

Include the following conservation measures in contract specifications and print on plans:

Plumbing

- Residential shower stalls shall have no more than one shower head per stall, with a maximum flow rate per City Ordinance.
- Toilets shall have a flush volume no more than 1.0 gallons of water per flush.
- All urinals shall be waterless.
- With the exception of those governed by City Ordinance No. 181480, all faucets shall be limited to a flow of 1.5 gallons per minute.
- Residential clothes washers shall be high-efficiency and have a water factor of 5.0 or less. Commercial clothes washers shall be high-efficiency and have a water factor of 7.5 or less.
- Domestic water heaters shall be located in close proximity to the point(s) of use, and all water heaters should be tankless and on-demand, where possible.
- Cooling towers shall have conductivity controllers or pH conductivity controllers.
- All residential units shall be either individually metered or sub-metered such that each unit is billed individually for its water use.
- All projects that involve the installation of a new internal rough plumbing system shall install a dual plumbing system such that toilets and industrial uses can be served by recycled water, if authorized by applicable law.

Landscaping and Pools

- The project applicant shall provide a landscape irrigation plan that indicates the location and size of each drip outlet, the specification for the weather-based irrigation controller, and the location and specification of the purple pipe that will service the system.
- All irrigation systems shall be either drip, microspray, or subsurface depending on the type and number of plants the irrigation is servicing.
- Where rotating sprinklers are needed for landscaping irrigation, they shall use a maximum of 0.5 gallons per minute.
- Irrigation systems shall have a weather-based controller such that the system does not turn on during a storm event or when the soil has a moisture level sufficient to support the plant species.
- Irrigation systems shall be designed to meet the water needs of different parts of the landscape (zoned irrigation).
- Plants with similar water requirements shall be grouped together (hydro-zoning).
- Where possible, landscaping contouring shall be used to minimize precipitation runoff.
- All landscaping in the public right-of-way shall be drought tolerant. For landscaping on private property, a minimum of 70% shall be drought-tolerant.
- All pools shall include a water-saving pool filter.
- A leak detection system shall be installed on all swimming pools and jacuzzis.
- Projects shall harvest rainwater and reuse on site where possible.
- All irrigation systems shall be plumbed with a purple pipe to enable a connection to a recycled or gray water system once it is available.

Note this list does not include items currently required by the City per ordinance.

DRAFT EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN

APPENDIX F

MITIGATION MONITORING PLAN

TO BE RELEASED SEPARATELY

Los Angeles Department of City Planning
March 2017

APPENDIX N

Revisions to the Specific Plan Technical Memo

REVISIONS TO THE PLAN

As a result of comments received through the Proposed Project's community engagement process, a policy decision was made to remove two Subareas (areas of proposed change) from and add one new Subarea to the Proposed Project. These revisions have been incorporated into the current draft of the Exposition Corridor Transit Neighborhood Plan (ECTNP). However, because this decision was made during the development of the Draft EIR, the Subarea changes were not incorporated into the main text of the Draft EIR analysis and are not shown on the Draft EIR maps. Hence, the two Subareas that have been removed are still shown on the Draft EIR maps, while the added Subarea is not indicated as a subarea on Draft EIR maps. For the reasons set forth below, the City has determined the revisions to the zoning and land use for these Subareas represent minor modifications to the Proposed Plan which would not substantially affect the analysis or conclusions of any of the analyzed impact categories of the ECTNP Draft EIR.

The Department of City Planning's revisions to the Proposed Project are summarized as follows:

1. Eliminated the Subarea along the north side of Pico Boulevard from Bentley Avenue to Overland Avenue and the south side of Pico Boulevard from Military Avenue to the alley westerly of Westwood Boulevard, which would have rezoned parcels from C2-1VL-POD to RAS4-1VL (which retains the same residential density and only changes the height limitation from 45 feet to 50 feet and the allowable floor area ratio from 1.5:1 to 3:1).
2. Eliminated the Subarea along the north side of Exposition Boulevard from Military Avenue to Midvale Avenue and the south side of Exposition Boulevard from Sepulveda Boulevard to Midvale Avenue, which would have rezoned parcels from R2-1 to R3-1 (resulting in a change in density from 2 units per lot to a density of 1 unit per 800 square feet of lot area and a change in the height limitation from 33 feet to 45 feet; no change in allowable floor area ratio would have occurred).
3. Added the Subarea along the south side of Pico Boulevard from Westwood Boulevard to Overland Avenue, which would rezone parcels from [Q]C2-1D, C2-1VL, and PB-1-O to MU(EC) and MU(EC)-O generally resulting in a change in allowable height from a range (2 stories to unlimited) to a single height limit of 68 feet; it would also change the maximum allowable floor area ratio from 1.5:1 to 3.6:1, contingent upon the provision of public benefits).

The analysis in **Table A** summarizes the net change in the 2035 reasonable expected population, housing, and employment in the above Subareas when accounting for the proposed revisions. **Table B** compares the total 2035 reasonable expected population, housing, and employment in 2035 for the Project Area as whole with those of the Proposed Project when incorporating the revisions described above.

TABLE A: SUBAREA REVISIONS/a/

	Subareas Removed (2035 with Project)	Subarea Added (2035 with Project)	Net Change
Acres	14	12.45	-1.55
Population	635	921	+286
Housing (Dwelling Units)	319	463	+144
Employment (Jobs)	646	720	+74

/a/ The 2035 reasonable expected population, housing, and employment anticipated in these Subareas, with the zone changes described above, was calculated following the methodology described in **Appendix F** of this DEIR.

TABLE B: PROPOSED PROJECT/a/

	Proposed Project (2035)	Proposed Project (2035) with Revisions	Net Change (%)
Population	59,571	59,857	+286 (0.5%)
Housing (Dwelling Units)	29,441	29,585	+144 (0.5%)
Employment (Jobs)	48,296	48,370	+74 (0.15%)

/a/ The 2035 reasonable expected population, housing, and employment anticipated in these Subareas, with the zone changes described above, was calculated following the methodology described in **Appendix F** of this DEIR.

The Proposed Project with revisions represent a total 2035 reasonable expected population, housing and employment that is comparable to that of the Proposed Project without the revisions. Given the minimal increase in total plan capacity, the fact that the types of land uses and the scale of buildings would be similar to those contemplated in the EIR analysis, and that the geographic location of the added Subarea is proximate to the eliminated Subareas, the revisions would not alter the impact analysis contained in the Draft EIR, necessitate any additional analysis or change any of the conclusions in any of the impact areas. The removal of the two Subareas described above would retain existing zoning and generally would reduce height, development density and intensity when compared to the previously proposed zoning. The addition of the new Subarea would increase the height, development, and intensity on the subject properties. However, those increases are largely offset by the reductions resulting from the eliminated Subareas.

In sum, the revisions reflect refinements to the Proposed Project addressing concerns expressed by the community, and result in relatively minor changes to the total development anticipated in the Project Area as a whole. Thus, the revisions would not substantially alter the reasonably expected population, housing, and employment anticipated in 2035 in the Project Area and is consequently consistent with the analysis in the Draft EIR and would not generate substantial adverse environmental impacts.

ERRATA TO THE DRAFT EIR

The City of Los Angeles has prepared this Errata sheet to correct information in the Draft Environmental Impact Report (Draft EIR) for the Exposition Corridor Transit Neighborhood Plan (ECTNP).

In Chapter 1.0, Introduction (Page 1-6) of the Draft EIR, the postmark deadline for written comments on the Draft EIR noted as May 30, 2017 is hereby corrected to June 5, 2017. The corrected date provides for a 60-day comment period beginning with the publication date of April 6, 2017.

NOTICE OF AVAILABILITY OF A DRAFT ENVIRONMENTAL IMPACT REPORT

Exposition Corridor Transit Neighborhood Plan
City EIR No. ENV-2013-622-EIR
CPC-2013-621-ZC-GPA-SP
State Clearinghouse No. 2013031038

TO: Affected Agencies, Organizations, and Other Interested Parties

PROJECT NAME: Exposition Corridor Transit Neighborhood Plan

PROJECT LOCATION: The Project Area is located entirely within the incorporated City of Los Angeles and is comprised of an approximately five-mile-long, one-mile-wide corridor along the Expo Phase 2 Light Rail Transit (LRT) Corridor. The Project Area generally includes the half-mile radii around five stations: Exposition/Bundy (Bundy), Exposition/Sepulveda (Sepulveda), Westwood/Rancho Park (Westwood), National/Palms (Palms), and Culver City. The Project Area falls within portions of the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams, Baldwin Hills-Leimert Community Plan areas.

COUNCIL DISTRICTS: 5, 10 and 11

COMMENT REVIEW PERIOD: April 6, 2017 to June 5, 2017

The City of Los Angeles Department of City Planning (DCP) has prepared this Draft Environmental Impact Report (EIR) in compliance with Section 15121(a) of the State Guidelines and the City of Los Angeles Guidelines for the implementation of the California Environmental Quality Act (CEQA) California Code of Regulations (CCR), Title 14, Division 6 in order to inform the general public, the local community, and responsible and interested public agencies of the nature of the Proposed Project, the possible environmental effects, possible measures to mitigate those effects, and alternatives to the Proposed Project. Comments from interested parties are requested as to the content of the environmental information that is pertinent to each agency's statutory responsibilities in connection with the Proposed Project.

PROJECT DESCRIPTION

The Exposition Corridor Transit Neighborhood Plan (ECTNP, Proposed Plan or Proposed Project) would establish a Specific Plan to guide future development within the Exposition Corridor. Specifically, the underlying purpose of the Proposed Project is to plan for development in a manner consistent with state, regional and local policies to encourage infill around transit stations as a means to accommodate growth. Thus, the Proposed Project includes a variety of land use regulatory changes around the following five Expo Phase 2 LRT station areas within the City of Los Angeles: Bundy, Sepulveda, Westwood, Palms, and Culver City.

The Specific Plan would include General Plan amendments and zone changes that encourage infill development and a mix of uses within identified areas to promote transit ridership, reduce automobile dependence, and create vibrant neighborhoods around the transit stations. The ECTNP would: (1) create four new zones and one new land use designation, and change zoning and land use designations within specified portions of the Project Area; (2) include public benefit requirements associated with tiered floor area ratios in the new zones; (3) create streetscape plans for identified street segments in the Project Area; and (4) require design standards for new development within the Project Area (excluding R1 and R2 zones). The Proposed Project would also include new open space regulations and parking regulations for select properties within the Project Area.

REQUIRED APPROVALS

Approval of the following actions would be required by the Planning Commission and City Council in order to implement the Proposed ECTNP:

- General Plan Amendments
- Zone Changes
- Exposition Corridor Transit Neighborhood Plan Specific Plan (Ordinance)
- Specific Plan Amendments
- Urban Design Guidelines
- Modified Street Classifications and Standards
- Streetscape Plans
- Other Ordinances, including modification of existing overlays, as appropriate
- Amendments to the General Plan Framework, Transportation (Mobility) Element, and other General Plan Elements, as appropriate.

ANTICIPATED SIGNIFICANT ENVIRONMENTAL EFFECTS

Based on the analysis contained in the Draft EIR, the Proposed ECTNP would result in unavoidable significant environmental impacts with regard to: Aesthetics (Visual Character and Shade); Air Quality (Standards during construction and sensitive receptors during construction); Cultural Resources (Historical Resources); Noise (Construction Noise Standards and Vibration; Operational Noise); Public Services (Parks and Recreation Facilities); and Transportation and Traffic (Circulation System; Neighborhood Intrusion; Congestion Management Plan Arterial Intersection Analysis).

DOCUMENT REVIEW AND COMMENT

The Draft EIR is available for public review for a 60-day period from April 6, 2017 to June 5, 2017. If you wish to review a copy of the Draft EIR or the documents referenced in the Draft EIR, you may do so at the City of Los Angeles Department of City Planning at: 200 North Spring Street, Room 667, Los Angeles. Copies of the Draft EIR are also available for general public review at the following City of Los Angeles Public Library branches:

Richard J. Riordan Central Library
630 W. 5th Street
Los Angeles, CA 90071

Mar Vista Library – Branch 38
12006 Venice Boulevard
Los Angeles, CA 90066

Robertson Branch Library – Branch 42
1719 S. Robertson Boulevard
Los Angeles, CA 90035

Palms-Rancho Park Library – Branch 22
2920 Overland Avenue
Los Angeles, CA 90064

Westwood Branch Library – Branch 71
1246 Glendon Avenue
Los Angeles, CA 90024

West Los Angeles Regional Library – Branch 27
11360 Santa Monica Boulevard
Los Angeles CA, 90025

The Draft EIR can be downloaded or reviewed at DCP's website [http://planning.lacity.org/ (click on "Environmental Review" and then "Draft EIR")]. The Draft EIR can be purchased on CD-ROM for $7.50 per copy. Contact **Lameese Chang** of the City of Los Angeles at lameese.chang@lacity.org for purchase. Interested parties may send written or typed comments (including name, contact information, and file number ENV-2013-622-EIR) on the Draft EIR to the following:

Lameese Chang
Los Angeles Department of City Planning
200 N. Spring Street, Room 667
Los Angeles, California 90012

(213) 978-1178 (phone)
(213) 978-1477 (fax)
lameese.chang@lacity.org (e-mail)

Because of time limits mandated by state law, written comments must be provided to the City at the earliest possible date, but no later than **5:00 PM on June 5, 2017**.

A Public Hearing will be held on May 23, 2017 from 6:00 PM to 8:00 PM at the IMAN Foundation located at 3376 Motor Ave., Los Angeles, CA 90034.
