Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN

THE GLIDDEN CO DBA ICI PAINTS (Continued) **1009216544**

OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F001
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR

DREAMWORKS THE SOLOIST (Continued) **1010562167**

MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075

CVS PHARMACY NO 8879 (Continued) **1015753116**

Waste name: NICOTINE, & SALTS

Waste code: P081
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Hazardous Waste Summary:
- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

- Waste code: D018
- Waste name: BENZENE

- Waste code: D039
- Waste name: TETRACHLOROETHYLENE

- Waste code: D040
- Waste name: TRICHLOROETHYLENE

- Violation Status: No violations found

Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:
Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Waste code: D040
Waste name: TRICHLOROETHYLENE

Violation Status: No violations found

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

CHEVRON STA 92324 (Continued) **1005441297**

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

42 **FORMER PIERCE SERVICE STATION** **CA WDS** **S105255154**
2868 S ROBERTSON BLVD **N/A**
LOS ANGELES, CA 90034

CA WDS:

Facility ID:	Los Angeles River 197200025
Facility Type:	Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	Not reported
Subregion:	4
Facility Telephone:	7145608200
Facility Contact:	Neal Beatty
Agency Name:	BERNARD COHEN
Agency Address:	Not reported
Agency City,St,Zip:	0
Agency Contact:	Not reported
Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	5541
SIC Code 2:	Not reported
Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D016

Lead Agency Case Number:	Not reported
Latitude:	34.031329
Longitude:	-118.398927
Case Type:	Cleanup Program Site
Case Worker:	SSH
Local Agency:	Not reported
RB Case Number:	0794
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Not reported
Site History:	The site is a 10-unit retail shopping center and Dynasty Cleaners, a retail dry-cleaning facility, occupies the northernmost unit in the building at the site. Dry cleaning operations have been conducted at the site since approximately the 1960s. After a preliminary site assessment, coducted for a bank for a refinicing request, found out impact to the site, extensive site investigations were conducted from 1998 to 2007 and indicated that the soil, soil vapor and groundwater were contaminated with perchloroethyelene (PCE), trichloroethylene (TCE) and other volatile organic compounds (VOCs) as a result of release of chemicals used in the dry cleaning operations. A soil vapor extraction (SVE) system and an air-sparge system (AS) have been operating at the site since February 16, 2007 and December 28, 2007, respectively to clean up the site. A quarterly remediation status report together with a semi-annual groundwater monitoring report is being submitted by the site owner. In April 2011, approximately 23,535 gallons of sodium permanganate solution was injected into the core zone of the PCE plume to enhance the groundwater remediation. Further rounds of injection will continue based on the outcome of the completed injection.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 08/29/1994
Comments: Site Screening conducted. It had been reported that the City of Santa Monica was the lead on this site and that RWQCB was involved, but neither agency has overseen the remediation. The developer said they had a letter from Alternative Technology approving the solidification technology used at this site, but DTSC, Region 3 has no file on this site. The developer has self directed the cleanup of 85,000 cubic yards of lead contaminated soil. Staff recommends a site inspection and a PEA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: 134

Registry ID: 110018970933

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

PIPERS BODY SHOP (Continued) **1000217877**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

91 **COLORADO PLACE** **CA BOND EXP. PLAN** **S100833508**
BROADWAY AND CLOVERFIELD **CA RESPONSE** **N/A**
SANTA MONICA, CA 90404 **CA ENVIROSTOR**

CA BOND EXP. PLAN:

Reponsible Party:	BACKLOG SITE CLEANUP PLANNING REPORT
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	This site is projected for cleanup by responsible parties with reimbursement to DHS for staff and related costs. However, if the responsible parties fail to provide funding for cleanup, another source of funds will need to be established.
Site Description:	This site is a former "burn dump", which operated until the early 1950's. In later years, the facility apparently accepted inert materials.
Hazardous Waste Desc:	During core drilling prior to construction at the former "burn dump" site, elevated levels of organic material and lead were encountered in the soil and in the upper saturated zone. It is believed most of the contaminated soil has been removed from the site and properly disposed of, in accordance with State regulations.
Threat To Public Health & Env:	The threat from this site is believed to be minimal. It is believed that most of the contamination has already been removed from the site. The upper aquifer in the area is generally contaminated by organic solvents and is not used as a public water supply.
Site Activity Status:	DHS has required and the developer has provided a waste management plan for dealing with hazardous substances during excavation. The proposed depth of the excavation would remove the majority of residual wastes from the landfill. Materials exceedingDHS's standards are hazardous wastes and will be handled as Class 1 wastes; marginally contaminated waste will be taken to an appropriate landfill.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NU LIFE CLEANER (Continued) **1000284877**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Waste code: D039

RB Case Number: 0130C
File Location: Regional Board
Potential Media Affected: Aquifer used for drinking water supply, Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation, Well used for drinking water supply
Potential Contaminants of Concern: Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Gasoline
Site History: Until 1947 the site was vacant. In 1947, Douglas Aircraft built facilities. They manufactured aircraft assemblies at the site until 1972. Douglas merged with McDonnell Aircaft. McDonnell/Douglas was later bought by The Boeing Corporation. General Telephone and Electronics (GTE), a phone company, bought the site in 1972 for use as a vehicle maintenance yard. Verizon bought GTE in 2002, acquiring the site. The site is currently used by Verizon as a warehouse and vehicle staging area, where light maintenance and vehicle washing also occurs. VOCs are present in soil, soil vapor, and shallow groundwater beneath the site. These may be associated with painting and other manufacturing activities conducted by Douglas, as there are no other known sources in the immediate vicinity of the site that appear capable of contaminating shallow groundwater with VOCs at the concentrations currently observed. However, as any VOC source associated with aircraft manufacturing is more than 40 years old no well defined source has been clearly identified by the numerous soil and soil vapor sampled collected to date. Regional aquifer contamination is also present. As of 2010, VOC assessment is ongoing at the site. While owned by GTE/Verizon, a gasoline UST released fuel to soil and groundwater. Some soil was excavated and removed. Goundwater was pumped and treated to control the spread of the dissolved gasoline and to remediate groundwater. The gasoline case was given regulatory closure in 1996. Dissolved benzene remains in groundwater.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name:	291
Waste code:	331
Waste name:	331
Waste code:	352
Waste name:	352
Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Waste code:	D008
Waste name:	LEAD
Waste code:	D019

Description:	This release occurred while recycling a water pressure meter, an old device from an old pump room, an employee was placing the pipe into a recycling bin when mercury came out of the pipe. Product is contained with an emergency team performing the clean up and the amount released has reached the reportable quantity of one pound. RP believes further release will be minimal and well below two pounds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002677933

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075
Waste name: NICOTINE, & SALTS

Waste code: P081
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No

CRYSTAL CLEAN ENT INC (Continued) **1007879220**

Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

CA WDS:
Facility ID: 4 19I004033
Facility Type: Other - Does not fall into the category of Municipal/Domestic,

SPRAYLAT CORP CA (Continued) **1000161182**

	Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	4
Facility Telephone:	Not reported
Facility Contact:	Not reported
Agency Name:	SPRAYLAT CORP
Agency Address:	Not reported
Agency City,St,Zip:	0
Agency Contact:	Not reported
Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	2851
SIC Code 2:	Not reported
Primary Waste:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

LA CIENEGA INDUSTRIAL PARK (Continued) **S102564446**

Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/17/1997
Comments: DTSC and Household Finance Corp. signed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment for the site. Household Finance is owner of the property by foreclosure.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/26/1997
Comments: The Phase I and II Site Assessments detected volatile organic compounds (VOCs) such as perchloroethylene (PCE), trichloro- ethene (TCE), and metals such as total chromium, nickel and lead. Additoinal sampling was conducted, and soils contami- nated with higher concentrations of contaminants were excavated and transported for off-site disposal.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Voluntary Cleanup Agreement
Completed Date: 02/17/1997
Comments: DTSC and Household Finance Corp. signed a Voluntary Cleanup Agreement for a Preliminary Endangerment Assessment for the site. Household Finance is owner of the property by foreclosure.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 12/26/1997
Comments: The Phase I and II Site Assessments detected volatile organic compounds (VOCs) such as perchloroethylene (PCE), trichloro- ethene (TCE), and metals such as total chromium, nickel and lead. Additoinal sampling was conducted, and soils contami- nated with higher concentrations of contaminants were excavated and transported for off-site disposal.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CA WDS:

Facility ID:	4 19I009533
Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status:	Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number:	CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion:	4
Facility Telephone:	3105594400
Facility Contact:	DANIEL BRANDLER
Agency Name:	OHMEGA TECHNOLOGIES INC

Primary Waste:	Not reported
Primary Waste Type:	Not reported
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/09/2013
Date Made Active in Reports: 07/10/2013
Number of Days to Update: 62

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/09/2013
Date Made Active in Reports: 07/10/2013

Next Scheduled EDR Contact: 10/21/2013
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Next Scheduled EDR Contact: 11/28/2011
Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/29/2013
Date Made Active in Reports: 08/09/2013
Number of Days to Update: 72

Last EDR Contact: 09/27/2013
Next Scheduled EDR Contact: 12/09/2013
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/29/2013

Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/06/2013

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013
Date Made Active in Reports: 09/13/2013

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 07/11/2013
Date Data Arrived at EDR: 08/08/2013
Date Made Active in Reports: 09/13/2013

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 06/10/2013

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/20/2013
Date Data Arrived at EDR: 05/21/2013
Date Made Active in Reports: 06/27/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

APPENDIX F

Population, Housing, and Employment Methodology

POPULATION, HOUSING, AND EMPLOYMENT METHODOLOGY

This section describes the data sources and methodologies employed in the identification of the EIR Existing Conditions (or Baseline Conditions) and Future Projections, which are used to assess potential impacts of the Proposed Plan. The section also explains how the Proposed Plan's reasonable expected development is derived and how the Proposed Plan addresses anticipated growth.

The EIR evaluates the potential environmental impacts related to anticipated changes in population, housing, and employment based upon information from a variety of sources, including: the United States Census (U.S. Census), the California Department of Finance (DOF), the California Employment Development Department (EDD), the Southern California Association of Governments (SCAG), the City of Los Angeles Department of City Planning (DCP), the City of Los Angeles General Plan Framework Element (Framework), and associated documents. Since each of these sources may use different methods of data collection and analysis and/or different time frames, the data do not always arrive at precisely the same results. Accordingly, the demographic data used in this analysis may vary somewhat, depending on the source cited. Despite the variations, the data used in this EIR represent the best data sources available at the time the City conducted the environmental analysis and provide a reasonable description of the population, housing, and employment characteristics of the Plan Area.

During the preparation of the ECTNP Draft EIR the 2012-2035 RTP/SCS was the most recent adopted RTP/SCS available. The 2016-2040 RTP/SCS was adopted April 7, 2016, after the analysis in the ECTNP Draft EIR was completed. The 2016-2040 RTP/SCS has been reviewed to determine if there are any substantial differences in policy and/or growth trends associated with the socioeconomic data as compared to the 2012-2035 RTP/SCS. Based on this review it has been determined that the minor refinements in policy and associated updated socioeconomic data in the 2016-2040 RTP/SCS would not substantially affect the analyses or conclusions of this ECTNP EIR. While the SCAG transportation model itself is still not available, SCAG staff indicates that changes to the network and associated calculations are minor. Additionally, SCAG staff indicates that the methodology used in both the 2012-2035 and 2016-2040 RTP/SCS reports are generally consistent. Please see **Appendix K** for a more detailed discussion.

EXISTING CONDITIONS

Existing conditions, or Baseline Conditions for the purposes of environmental analysis, can be described in demographic terms (population, housing, and employment) or in terms of development characteristics (square feet of development, height of structures, or number of housing units). As the lead agency, DCP has the discretion to determine the best data source for Existing Conditions. DCP primarily represents Existing Conditions as demographic data that is published and is referenced public data that is used by multiple agencies in planning for the city and region. Where possible, DCP also uses development characteristics, such as square feet of development, for the Plan Area as another baseline for the purposes of environmental analysis. Per CEQA, the demographics and physical characteristics at the time that an EIR for a plan is commenced – usually the year the Notice of Preparation is published and distributed – constitute the baseline conditions.

The leading source for demographic data is the U.S. Census. While Census data is typically the most reliable representation of socio economic data for discrete geographic areas, it is only available on a decennial basis, i.e. 2000, 2010, 2020. Census data is the most accurate source for demographic data,

however it is subject to sampling variability. While it is preferable to use Census data for analysis, it is not always possible to align the timing of planning processes with the release of census data.

As the regional demographer for the six-county region that includes LA County, SCAG publishes demographic estimates and projections through a long range transportation plan (RTP), developed and updated every four years. SCAG has an established methodology for estimating the baseline regional population, households, and employment for the region as well as projecting future population, housing, and employment at a citywide level. SCAG uses Census data which it adjusts using California Department of Finance (DOF) data to determine existing or baseline population, households, and employment. This method is used to derive annual estimates of population, households, and employment for years that are not a Census year.

At the city level, SCAG estimates households, utilizing past trends of occupied housing units from a number of different data sources. SCAG then estimates persons per household (PPH) and multiplies the occupied housing units by the PPH (which is tailored by geography) to get a subtotal of the population. The proportion of group-quartered population to total population of prior Census years are added to get the total population.

In the case of the ECTNP, the base year for environmental analysis purposes is 2013, three years after the most recent Census year of 2010. At the time of the preparation of the EIR, the 2012 SCAG RTP/SCS, which has a base year of 2008, was the most recent RTP/SCS available. Because the base year of the ECTNP did not coincide with either the Census or the SCAG RTP base year, an alternate method described below was used to estimate the base year data for population, housing, and employment.

To obtain the base year data for population and housing in the Project Area, the data from the 2010 U.S. Census was adjusted to account for growth that was estimated to have occurred in the Project Area during the years between 2010 and 2013. First, the average annual growth rate in population and housing for four neighboring cities (Beverly Hills, Culver City, Santa Monica, and West Hollywood) and the City of Los Angeles as a whole was obtained using information from the Department of Finance for the years 2010-2013. Assuming that the population and housing in the Project Area grew at approximately the same rate as the surrounding areas during those years, this average annual growth rate was applied to U.S. Census data from 2010 for the Project Area to obtain the baseline population and housing for 2013.

To estimate the existing employment, U.S. Census-based employment data for the Project Area from 2011 was adjusted to 2013 using a method similar to that used for population and housing. “On the Map,” an application of the U.S. Census based on Longitudinal-Employer Household Dynamics (LEHD) Origin Designation Employment Statistics, makes available employment data on an annual basis. At the time the EIR was being prepared, 2011 was the most recent year available. The 2011 data was adjusted to 2013 using the average annual growth rate for employment for the four neighboring cities noted above and the City of Los Angeles. The growth rates for these cities was obtained from the California Employment Development Department (EDD) Monthly Labor Force Data for the years 2010 to 2012 (2012 being the most recent year available from EDD at the time). Assuming that employment in the Project Area grew at approximately the same rate as the surrounding areas during those years, this average annual growth rate was applied to employment in the Plan Area in 2011 to obtain the baseline employment for 2013.

In addition to demographic data, non-residential square footage was also estimated for the base year. Existing non-residential square footage for a plan area can typically be obtained through the Los Angeles County Assessor database, which contains square footage information at a parcel level. However, this

information is not always comprehensive, as square footage information is collected for tax assessment purposes and therefore does not necessarily reflect all habitable structures on a property. Additionally, numerous parcels in the ECTNP Area were found to not have any square footage data recorded by the assessor. With a large geography such as the ECTNP, which contains thousands of parcels, ensuring the accuracy of the assessor data and manually filling in gaps in information is not practical.

Therefore, for the ECTNP it was determined that a more accurate and reasonable estimate could be obtained using employment data (derived from the U.S. Census, as described above) and square feet per employee (SF/Emp) ratios, assuming that all employees occupy some type of non-residential space. DCP uses standard SF/Emp ratios that vary according to land use – for example, retail uses typically have approximately 400 SF/Emp, while industrial uses range from 500 SF/Emp (for light industrial) to 1,000 SF/Emp (for heavy industrial). Each parcel in the ECTNP was assigned a SF/Emp ratio based on the current land use designation (or in some cases based on the actual land use where it was known to be different than the designation). To reflect the distinct mix of the types of land uses in each portion of the Plan Area, the ECTNP Area was broken down into multiple "station segments," and the average SF/Emp for the parcels within each station area was calculated. This average SF/Emp was then multiplied by the base year (2013) employment number in each station area to determine the non-residential square footage. Finally, the station area square footages were summed to obtain the total non-residential square footage for the entire Project Area.

FUTURE PROJECTIONS

The City plans for and aims to accommodate Southern California Association of Governments (SCAG) population projections for a plan's horizon year. In the case of ECTNP, the City also prepared a market study to better understand and accommodate localized demand for housing and jobs. Both of these data sets are discussed below.

SCAG Projections

SCAG growth projections for the Project Area are intended to be a target that is derived from forecasts made for the entire six-county region and allocated to cities within the region.

SCAG projects sub-county demographic trend projections using the housing unit method, which is one of the most widely used methods for estimating and projecting local area households and population for planning purposes. Projections are completed using the cohort-component model for the regional level; for the sub-county the following apply:

- **Population projection methodology**—The model computes the population at a future point in time by adding to the existing population the number of group quartered population, births and persons moving into the region during a projection period, and by subtracting the number of deaths and the number of persons moving out of the area in 5-year intervals.

- **Housing projection methodology**—SCAG projects households (occupied housing units) by multiplying the population projection (minus the group-quartered population) by the headship rate or the proportion of that population that is expected to form a household (projected in 5-year intervals).

■ **Employment projection methodology**—SCAG links population dynamics to economic trends, examining labor force supply and demand to develop employment projections. Supply is derived by multiplying population by projected labor force participation rates. Demand is developed by converting the jobs to workers using the double job rate and applying the ideal unemployment rate and factoring out the number of people holding two or more jobs.

After deriving the regional projections using its published methodology, SCAG allocates to each city its share of the regional growth, providing each city with a citywide projection for population, housing, and employment. At the citywide level, these projections are largely based on past trends. SCAG and DCP then distribute the total citywide number among all of the City's census tracts and Transportation Analysis Zones (TAZ), again derived from past trends and building upon TAZ projections of previous adopted Regional Transportation Plans. Local feedback provides further input based on the effects of local policymaking, such as General Plan or Community Plan updates, and the mandates of federal and state regulations, and results in a refinement of the demographic projections by census tract/TAZ.

In order to estimate the SCAG projected population, housing, and employment in the Project Area, the proportion of each SCAG TAZ within the Project Area was calculated using GIS software. The projected population, housing, and employment in the portions of TAZs that comprise the Project Area were summed to obtain the total for the entire area. The resulting numbers serve as a benchmark or reference point that guides the planning process.

The long-standing policy of the City of Los Angeles is to accommodate SCAG projections in its long-range planning efforts. Plans created by the City of Los Angeles aim at minimum to meet SCAG projections for the corresponding area, and in some cases may exceed those projections depending on changed circumstances such as market demand, trends, the introduction of transit or other infrastructure, etc. In this respect, SCAG projections are viewed as targets, and DCP ultimately determines the distribution of Citywide growth through adherence to the General Plan Framework and Community Plans while the Citywide projections are being accommodated.

Market Study

To supplement the SCAG growth forecasts, a market study was prepared for the ECTNP area to determine the market demand for jobs and housing within the Project Area. The market study reviewed demographics and the regional real estate market performance to provide context for the study area, which included four stations along the Expo Line Phase 2: Culver City, Palms, Expo/Sepulveda, and Expo/Bundy. The market study was prepared to provide an additional lens for understanding future demand for housing and jobs (i.e. "growth") at a more fine-grained level than is achieved through the SCAG regional methodology. Together, the two sets of numbers inform anticipated growth in 2035 and guide plan recommendations.

In particular, the market study assessed the demand for residential and retail development by estimating population and household growth. Age, income, and employment data further informed the estimated demand for commercial and residential development. The market study also evaluated expected growth in various industries in the region with a focus on the creative office market in order to understand the number and type of jobs anticipated in the future. The station-specific market analyses looked closely at the real estate market in each of the station areas and included the demand for key land uses within each of the station's half-mile radii. Using these methods of analysis, the market study provided an estimated

demand for housing and jobs for 2035 within the ECTNP area. The demand estimates are provided as a range of housing units and jobs, accounting for potential variability in the amount of the regional growth that might occur in each station area and the ECTNP area as a whole. Like the SCAG forecasts, the market demand estimates serve as a benchmark that inform proposed changes in the ECTNP. The market study analysis helps augment the SCAG forecasts as it is more geographically specific and thus sensitive to the unique conditions within the ECTNP area. Please see **Appendix L** for the Market Study.

CALCULATING FUTURE PLAN EXPECTED DEVELOPMENT

The ability of the Proposed Specific Plan to accommodate population and jobs is based on assumptions about what level of development can reasonably be expected to occur during the life of the plan (2035). This estimate of future development is known as the "reasonable expected development," which for purposes of discussion may also be referred to as "capacity," though it is not intended to represent maximum build out. The estimates for population, housing, and jobs are based on the acreage of land designated for each type of land use (by General Plan Land Use designation); allowable densities and intensities in each designation; and the anticipated level of development by the horizon year of the plan (2035).

The assumption for average levels of development is based on a number of factors that affect development. The Exposition Corridor Transit Neighborhood Plan (ECTNP) area, like many urban areas within the City, is largely built out and sometimes is built out at densities and intensities that are below the maximum permitted by the current zoning. Moreover, redevelopment of properties within the ECTNP is likely to occur in only a fraction of the total Plan Area during the life of the plan and, based on historical evidence, redevelopment typically does not occur at the maximum allowable densities and intensities. Economic conditions, market trends, financial lending practices and construction and land acquisition costs affect marketplace decisions relating to proposed development. Additionally, past building data demonstrates that a number of City policies and regulations place further limitations on development densities.

Considering these factors, it is reasonable to assume that:

1. All sites that are developed will not necessarily be developed to the maximum densities and intensities permitted because of other General Plan policies, zoning requirements, physical site constraints, market forces and local conditions.

2. Not all properties within the Plan Area will be redeveloped during the life of the plan.

For the reasons stated above, the methodology effectively assumes a level of development that is less than the maximum allowable density (e.g., dwelling units per acre) and intensity (e.g., height and floor area) of development. A 100% build out scenario is implausible, and therefore is not analyzed. Rather a more "realistic" reasonable expected capacity is used to both guide proposed land use changes and analyze the potential environmental impacts of those changes.

Estimating Housing and Population in the Proposed Plan

The State of California requires that cities plan for growth and that each city accommodate a share of anticipated regional growth. The ECTNP is intended to accommodate the population projected by SCAG

in 2035, the horizon year of this plan. A primary objective of the Plan is to ensure that the capacity of the Plan can accommodate that projected growth. The Environmental Impact Report analyzes the potential impact on the environment of this anticipated growth.

The methodology of using average levels of development (discussed above) was applied to estimate the reasonable expected population that the Plan could accommodate through 2035. That reasonable expected population should meet or exceed the Plan area's 2035 SCAG projected population to ensure that the plan can accommodate the anticipated population growth during that horizon year, in accordance with state law.

The reasonable expected number of dwelling units is based on the average number of dwelling units that can be developed for each land use designation. Recent trends indicate a substantial amount of residential dwelling units are constructed on commercial land. Thus, the calculations assume both commercial and residential (i.e. mixed use) development will occur on commercially designated properties. The reasonable expected population results from multiplying the reasonable expected number of dwelling units by an average household size for 2035, found in the SCAG 2012 RTP. Given that the ECTNP spans three separate Community Plan areas, the average household size for each individual Community Plan area was applied to properties within that Community Plan area.

Estimating Future Employment for the Proposed Plan

Future employment was estimated on land designated to generate employment: Commercial, Industrial, Public Facilities and Open Space. For Commercial and Industrial land use designations, assumptions about the amount of square footage to be used for employment-generating uses is based on the percentage of land that can be expected to be used for employment generating uses, incorporating existing conditions and anticipated employment trends. A smaller percentage of employment-generating uses were assumed for Public Facilities and Open Space, since typical development patterns in those land use designations reflect reduced lot coverage and floor area ratios for such uses. Portions of commercial land allocated for residential uses were excluded from the employment land calculations.

The resulting square footage of job-generating uses was divided by the typical average square feet per employee for different job types, depending on the land use designation of each property. For example, retail and office jobs typically have less square footage per employee than industrial, research and development, or warehouse jobs. These square-feet-per-employee factors were used to estimate the number of jobs that can reasonably be expected to be developed in the Plan Area.

Note: Home occupations were not factored into the analysis.

HOW GROWTH IS ADDRESSED THROUGH PLANNING AND ZONING

During the planning process, technical land use analysis, including the study of trends and consideration of General Plan policies, is conducted to identify appropriate locations and levels of future development. In places where new growth is anticipated and planned to occur, corresponding zoning is applied to implement updated land use policy. Where zoning is changed to reflect new land use objectives, further development standards are applied to address potential impacts of planned growth. These standards can include urban design, general development standards, and/or environmental standards.

Consistent with Framework and Community Plan land use policies reflected in the Proposed Plan, zone changes are applied in limited instances (e.g., around transit stations or along major commercial corridors). In selected areas of the Proposed Plan where upzones or zoning changes have been introduced that allow more development than currently exists, potential impacts of proposed changes have been analyzed by the ECTNP EIR, and where potential impacts are anticipated, additional design standards, development standards, and/or environmental standards apply. These standards are applied to all applicable projects; a new project must meet these development standards or include certain measures in the project's construction to receive approval.

For example, urban design standards in the Proposed Plan include requirements for buildings to be built to the sidewalk to create a more pedestrian environment. Other development standards include a transitional height requirement to improve the compatibility between new structures and those of adjacent lower scaled residential zones. Environmental standards require projects located within a certain distance of shadow-sensitive uses to prepare a shade and shadow study. These examples of project features in the Proposed Plan represent the types and range of regulations in the Proposed Plan that are applied to reduce potential impacts of new development.

EXCERPTS FROM SCAG'S METHODOLOGY REPORT

More detailed information on methodology used to forecast growth in the SCAG 2012-2035 RTP is available at the following site.
http://rtpscs.scag.ca.gov/Documents/2012/final/SR/2012fRTP_GrowthForecast.pdf
Relevant sections regarding forecasting methodology and key assumptions are excerpted below.

Forecasting Methodology and Assumptions

The regional growth forecast for the 2012–2035 RTP/SCS was developed using the regional forecast methodology used in the development of the 2008 RTP growth forecast (see SCAG's growth forecast report for 2008 RTP: http://www.scag.ca.gov/rtp2008/pdfs/ finalrtp/reports/fGrowthForecast.pdf). The following is an overall approach toward developing the regional growth forecast for the 2012–2035 RTP/SCS.

Forecasting Methodology

SCAG projects regional population using the cohort-component model. The model computes population at a future point in time by adding to the existing population the number of group quarters population, births, and persons moving into the region during a projection period, and by subtracting the number of deaths and the number of persons moving out of the region. The patterns of migration into and out of the region are influenced by the availability of jobs. The preliminary regional and county growth forecast of population and households for the 2012–2035 RTP/SCS was derived using the updated economic and demographic trends and perspectives. The preliminary city population and household forecast was derived by multiplying the 2008 RTP jurisdiction's share of the county growth delta during the forecast horizon by the updated county household growth delta during the same period. The jurisdiction's relative growth pattern in the 2008 RTP growth forecast remained constant. The jurisdiction level household size and the group quarters population from the recent DOF estimates were incorporated into the new database. Regional employment is projected using a shift-share model. The shift-share model computes employment at a future point in time using a regional share of the nation's

employment. The preliminary regional and county growth forecast of employment for the 2012–2035 RTP/SCS was derived using updated economic and demographic trends and perspectives. The preliminary jurisdiction employment forecast was derived by using a constant-share method. The jurisdiction's share of county jobs for each sector for the base year is assumed to remain constant during the forecast years. By using the constant share method, the jurisdiction's job growth by sector will be determined by the different growth of the specific sector by county. If a city in Los Angeles County is specialized in a specific industry (e.g., manufacturing), its future job growth will be severely affected by a declining pattern of manufacturing sector in Los Angeles County. The initial job forecasts became a basis for the future local input process.

Key Regional Assumptions

Demographic and economic assumptions play a decisive role in determining the size of population, households, and employment in the future. Population size is projected by identifying the demographic rates (e.g., fertility rate, survival rate, migration rate) of the population cohort. The region's total fertility rate remains at 2.2, which is slightly higher than the replacement level of 2.1, during the projection period. The total fertility rate of Hispanic women gradually declines from 2.64 in 2010 to 2.49 in 2035, while other racial/ ethnic groups' rates tend to remain constant during the projection period. The total fertility rate of recent Asian and Hispanic immigrants is assumed to be at a higher level than the long-term residents of the same ethnic origin. The region's life expectancy at birth improves at the same rate as that of the nation's life expectancy improvement as determined by the US Census Bureau's 2008 Projection during the projection horizon.

Domestic migration is fluctuating and is directly influenced by labor demand derived from regional employment projections. International net immigration is kept constant at 104,000, which is an annual average of international net immigration of the region during the 1990–2010 period. The share of racial/ethnic domestic (from within the nation) migrants changes along with the changing population size of the racial/ethnic group. For example, the share of Hispanic migrants increases while that of the non-Hispanic Whites decreases. In addition to demographic assumptions, three additional translation factors are needed to link employment projections to population projections. They are labor force participation rates, the implied unemployment rates, and double jobbing rates. First, labor force participation rates play an important role in translating the labor force demand into labor force supply or vice versa. The labor force participation rates projected in the latest U.S. Bureau of Labor Statistics (BLS) projections for 2016 were used as the starting point for projecting labor force participation rates for 2020 and 2035. The projected labor force participation rates for the population over 55 are especially important as a large share of labor force growth will be in this age group. SCAG kept the projected 2016 labor force participation rates for the population under 55 for the years 2020 and 2035. SCAG increased the projected labor force participation rates for population groups age 55 and above for 2020 and 2035. These increases reflect a continuation of the large increases seen in recent years and projected by BLS to 2016. They reflect the better health and life expectancy of the workforce and the tendency for people to work longer for financial reasons. As a result of the projected increases in age-related labor force participation rates, the overall labor force participation rate is projected to slightly decline from 60.4 percent in 2010 to 59.4 percent in 2035. Second, some workers might keep two or more jobs. The double jobbing rate is assumed to be around 4.5 percent, and remain constant during the projection period. Third, the implied unemployment rate is derived by matching labor supply estimated from population projections with workers estimated from job projections. The panel of experts suggested that the acceptable implied unemployment rate ranges from 5 percent to 8 percent. The current projection assumes a 5 percent unemployment rate during the projection period (2015–

2035). Finally, the most important consideration is the reasonable regional share of national jobs. Currently the SCAG region's share of the national jobs is assumed to be 5.2 percent, and remains constant during the projection period.

The region's households are projected by using projected headship rate. The projected households at a future point in time are computed by multiplying the projected residential population by projected headship rates. Headship rate is the proportion of a population cohort that forms the household. Age-gender-racial/ethnic specific household formation level was applied to the projected population to estimate households. It is specified by age, gender, and race/ethnicity. Headship rate is projected in 5 year intervals for seven age groups (e.g., 15–24, 25–34, 35–44, 45–54, 55–64, 65–74, 75+), both genders (male and female), and four racial/ethnic groups.

The draft headship rate projections were developed using the extrapolation of the recent trends between 2005 and 2010 with different assumptions about the assimilation of Hispanic and Asian headship rates. The two plausible sets of headship rate assumptions were (1) age-sex-racial/ethnic specific household formation trends without assimilation and (2) age-sex-racial/ethnic specific household formation trends with assimilation.

In fact, there has been a gradual decline in the overall headship rates of the SCAG region from 43.7 percent in 1990 to 42.2 percent in 2010, with a sharp decrease by 3 percent from 46.7 percent in 1980 to 43.7 percent in 1990. The region's Hispanic headship rates generally did not converge toward the White headship rates between 1980 and 2000, but the gap of the White and Hispanic headship rates was growing over time and across generations, after controlling for socioeconomic factors. Although Hispanic immigrants experience a linear assimilation toward the Non-Hispanic White headship rates over time, U.S. born Hispanic residents do not show a linear assimilation toward the Non-Hispanic White headship rates (Choi, 2008). There was generally a stronger effect of the economic recession on headship rates of the minorities or immigrants than that of the native-born White. As a result, the gap in headship rates between minorities or immigrants and the White group is larger (Min & Choi, 2011).

Since there is a potential overestimate of the projected households due to assimilation assumption, SCAG produces an acceptable range of the projected households by using headship rates with/without assimilation assumption. The final projected households will be within the acceptable range.

APPENDIX G

Public Service Response Letters

0FORM. GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

April 30, 2013

To: Department of City Planning
200 N. Spring Street, Room 750
Los Angeles, CA 90012
Attention: Lameese Elqura

From: Fire Department

Subject: **EXPOSITION CORRIDOR TRANSIT NEIHBORHOOD PLAN**
ENV 2013-0622-EIR

PROJECT LOCATION

Corridor along Exposition Light Rail Line (LRT) between the Culver City and Exposition/Bundy transit stations.

PROJECT DESCRIPTION

The City of Los Angeles is preparing a Specific Plan and other regulatory changes for the Exposition Light Rail corridor, which would guide the future development of the area within the boundaries indicated in Figure 1. The Project Area is located within City Council Districts 5, 10, and 11, and comprises portions of the West Los Angeles, Palms-Mar Vista-Del Rey, and West Adams-Baldwin Hills-Leimert Community Plan areas. The Project Area is located entirely within the incorporated City of Los Angeles, and abuts the City of Culver City and the City of Santa Monica. Note that not all properties show in the Project Area will be affected.

Background

The Metro Exposition Light Rail Line is a 15.2-mile-long transit line running between Downtown Los Angeles and the City of Santa Monica. The majority of the line runs along the Exposition Right-of-Way, roughly parallel to the Santa Monica Freeway. Phase I of the line was completed in 2012. Phase II, extending 6.6 miles from the Phase I terminus in Culver City to the planned Colorado/4th Street station in Santa Monica, is currently under construction and scheduled for completion in 2015/2016.

The Project includes a variety of regulatory changes in the areas along the Exposition LRT corridor encompassing the five stations within the City of Los Angeles boundaries. The station areas to be studied are Culver City; National/Palms; Exposition/Westwood; Exposition/Sepulveda; and Exposition/Bundy.

Within a half-mile radius of each station there is a mix of zoning. Around the National/Palms and Westwood/Exposition stations the zoning is primarily residential. The Westwood/Exposition station area is comprised almost entirely of R1 (single-family residential) zoned properties. Around the Culver City, Sepulveda, and Bundy stations, there is a concentration of industrially zoned land in the immediate vicinity of the transit stations, with a mix of residential, commercial, and public facility zoning nearby,

The following comments are furnished in response to your request for this Department to review the proposed development:

A. Fire Flow

The adequacy of fire protection for a given area is based on required fire-flow, response distance from existing fire stations, and this Department's judgment for needs in the area. In general, the required fire-flow is closely related to land use. The quantity of water necessary for fire protection varies with the type of development, life hazard, occupancy, and the degree of fire hazard.

Fire-flow requirements vary from 2,000 gallons per minute (G.P.M.) in low density residential areas to 12,000 G.P.M. in high-density commercial or industrial areas. A minimum residual water pressure of 20 pounds per square inch (P.S.I.) is to remain in the water system, with the required gallons per minute flowing.

Improvements to the water system in this area may be required. The cost of improving the water system may be charged to the developer. For more detailed information regarding water main improvements, the developer shall contact the Water Services Section of the Department of Water and Power.

All water systems and roadways are to be improved to the satisfaction of the Fire Department prior to the issuance of any building permits.

B. Response Distance, Apparatus, and Personnel

The Fire Department has existing fire stations at the following locations for initial response into the area of the proposed development:

Fire Station No. 68
5023 W. Washington Blvd.
Los Angeles, CA 90019
Engine,
Paramedic Rescue Ambulance,

Fire Station No. 58
1556 S. Robertson Blvd.
Los Angeles, CA 90035
Assessment Engine,
Paramedic Rescue Ambulance,
BLS Rescue Ambulance

Fire Station No. 43
3690 S. Motor Ave.
Los Angeles, CA 90034
Engine,
Paramedic Rescue Ambulance

Fire Station No. 92
10556 W. Pico Blvd.
Los Angeles, CA 90064
Assessment Light Force,
Paramedic Rescue Ambulance,

Fire Station No. 59
11505 W. Olympic Blvd.
Los Angeles, CA 90064
Assessment Engine,
Paramedic Rescue Ambulance,
EMS Battalion Caption
Rehab Air Tender,

Fire Station No. 62
11970 W. Venice Blvd.
Los Angeles, CA 90066
Assessment Engine,
Paramedic Rescue Ambulance,

Fire Station No. 63
1930 Shell Avenue
Los Angeles, CA 90291
Task Force,
Paramedic Rescue Ambulance,

Fire Station No. 37
1090 S. Veteran Ave.
Los Angeles, CA 90024
Task Force,
Paramedic Rescue Ambulance,

Based on these criteria (response distance from existing fire stations), fire protection would be considered (**adequate)**.

The proposed project would have a cumulative impact on fire protection services.

The width of private roadways for general access use and fire lanes shall not be less than 20 feet, and the fire lane must be clear to the sky.

C. Firefighting Personnel Access

No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.

D. Firefighting Apparatus Access

Access for Fire Department apparatus and personnel to and into all structures shall be required.

The width of private roadways for general access use and fire lanes shall not be less than 20 feet, and the fire lane must be clear to the sky.

Fire lanes, where required and dead ending streets shall terminate in a cul-de-sac or other approved turning area. No dead ending street or fire lane shall be greater than 700 feet in length or secondary access shall be required.

Fire lane width shall not be less than 20 feet. When a fire lane must accommodate the operation of Fire Department aerial ladder apparatus or where fire hydrants are installed, those portions shall not be less than 28 feet in width.

Where access for a given development requires accommodation of Fire Department apparatus, overhead clearance shall not be less than 14 feet.

All access roads, including fire lanes, shall be maintained in an unobstructed manner, removal of obstructions shall be at the owner's expense. The entrance to all required fire lanes or required private driveways shall be posted with a sign no less than three square feet in area in accordance with Section 57.09.05 of the Los Angeles Municipal Code.

No building or portion of a building shall be constructed more than 300 feet from an approved fire hydrant. Distance shall be computed along path of travel.

Those plot plans be approved by the Fire Department showing fire hydrants and access for each phase of the project prior to the recording of the final map for that phase. Each phase shall comply independently with code requirements.

All street intersections with a level of service of "E" or "F" decreases the level or service of fire protection and emergency medical services provided by this Department.

CONCLUSION

Definitive plans and specifications shall be submitted to this Department and requirements for necessary permits satisfied prior to commencement of any portion of this project.

The Los Angeles Fire Department continually evaluates fire station placement and overall Department services for the entire City, as well as specific areas. The development of this proposed project, along with other approved and planned projects in the immediate area, may result in the need for the following:

1. Increased staffing for existing facilities.
2. Additional fire protection facilities.
3. Relocation of present fire protection facilities.

For additional information and comments contact Metro Rail Project Coordinator Mike Thomas (Battalion Chief) at (213) 922-7269 or Inspector Steve Douglas at (213) 922-7193.

July 10, 2013

Ms. Robin Gilliam
Assistant Project Manager
Terry A. Hayes Associates Inc. (TAHA)
8522 National Boulevard, Suite 102
Culver City, California 90232

Dear Ms. Gillman:

The proposed ENV-2013-622-EIR, Exposition Corridor Transit Neighborhood Plan, involves the Los Angeles Police Department's West Los Angeles, and Pacific Areas. A project of this size would have minimal effect to the overall operations of the Los Angeles Police Department.

Upon completion of the project, you are encouraged to provide both West Los Angeles Area and Pacific Area with a diagram of each portion of the property. The diagram should include access routes and any additional information that might facilitate police response.

Planning and Research Division is available for any further questions pertaining to this project. Should you have any questions regarding this response, please contact Sergeant II Edan D'Angelo, Officer in Charge, Manuals and Orders Unit, Special Project Section, Planning and Research Division, at (213) 486-0481.

Very truly yours,

BRIAN THOMAS, Lieutenant II
Acting Commanding Officer
Planning and Research Division

QUESTIONS 4 - 12 ADDRESSED BELOW

4. WHAT IS THE IDEAL RATIO OF OFFICERS TO POPULATION, AS IDENTIFIED BY THE CITY GENERAL PLAN AND/OR THE LAPD?

IDEAL RATIO OF OFFICERS TO POPULATION (CITY OF GENERAL PLAN)	IDEAL RATIO OF OFFICERS POPULATION (LAPD)
None	None

5. DOES LAPD HAVE AN IDEAL RESPONSE TIME FOR EMERGENCY AND NON-EMERGENCY CALLS?

IDEAL RESPOSNE TIME FOR EMERGENCY CALLS	IDEAL RESPONSE TIME FOR NON-EMERGENCY CALLS
7 minutes	No ideal response time

6. WOULD INCREASED STAFFING BE REQUIRED AT THE STATION(S) AS A RESULT OF THE PROPOSED PROJECT?

No

7. WOULD AN INCREASE IN EQUIPMENT OR NEW FACILITIES BE REQUIRED [AT THE STATIO(S)] AS A RESULT OF THE PROPOSED PROJECT?

No

TABLE 1; EXISTING CHARACTERISTICS OF LAPD POLICE STATIONS SERVING PROJECT AREA
QUESTIONS 1 2 3

8. What are the criteria for establishing new police stations?

A bond measure would be presented to the voters of the City of Los Angeles, and once approved Facility Management Division –201 N. Figueroa Street, Los Angeles 90012, Sgt. II Patrick Mc Aree, Serial No. 26236, (213) 482-7303, would be the contact to facilitate the project.

9. Does the LAPD have any plans related to future population and/or department growth?

Mayor Villaraigosa established a goal of 10,000 Police Officers for the city of Los Angeles, LAPD. As of July, 2013 the Department has met that goal of 10,000 officers, and 3,000 non-sworn officers.

10. How might the proposed project affect LAPD?

This project will have minimal effect to the overall operations of the LAPD. The Los Angeles County Sheriff's Department has jurisdiction over the Transit rails in the City of Los Angeles. The Los Angeles Police Department would provide mutual aide in the event additional assistance is needed.

11. Does the LAPD have any concerns that should be considered in the environmental analysis?

None at this point

12. What other agencies (if any) would the LAPD Planning and Research Division recommend TAHA contact to assist in the preparation of the police services portion of the environmental analysis?

The Los Angeles County Sheriff's Department at www.lasd.org and the Los Angeles City Planning Department at www.planning.lacity.org.

LOS ANGELES UNIFIED SCHOOL DISTRICT

Facilities Services Division

Date: May 6, 2013

TO: Deborah Roberts, Planner
TAHA Environmental Planners
8522 National Boulevard, Suite 102
Culver City, CA 90232-2400

FROM: Rena Perez, Director
Master Planning & Demographics

SUBJECT: Environmental Impact Report Information Requested for: ***EXPOSITION CORRIDOR TRANSIT NEIGHBORHOOD PLAN,*** *the project is located in the City of Los Angeles, along Exposition Light Rail Transit (LRT) Line corridor. Station areas to be studied are: Culver City, National/Palms, Exposition/Westwood, Exposition/Sepulveda & Exposition/Bundy.*

Included please find a ***LAUSD Schools Enrollments and Capacities Report*** for the schools that may be impacted by the development project(s) in question. **Schools listed include those who's attendance boundaries are partially or fully located within a 0.5 mile radius of each station.** This report contains data on each school's current and projected capacities, enrollments, and school calendars, and is designed to address any questions pertaining to overcrowding and factors related to school capacity.

Please note that the data in this report *already take into account* portable classrooms on site, additions being built onto existing schools, student permits and transfers, specific educational programs running at the schools, and any other operational activities or educational programming that affects the capacities and enrollments of LAUSD's schools. **Enrollment and capacity data are updated annually and become available after February 1 of each year.**

Additional information can be found in LAUSD's 2012 "Strategic Execution Plan" at www.laschools.org/sep/, on LAUSD's Facilities main webpage at www.laschools.org/, or on LAUSD's general website, at www.lausd.net.

MASTER PLANNING AND DEMOGRAPHICS RESPONSE TO SPECIFIC QUESTIONS

Questions: 1 & 2	Please see LAUSD Schools Enrollments and Capacities Report details;
Questions: 3,4 & 5	Please refer to the Enrollments and Capacities Report for identification of any new schools planned to relieve known overcrowding. LAUSD is currently using the 2012 Strategic Execution Plan (SEP) for long-range planning and implementation of the school construction program;
Questions: 7	The school fee justification study is updated annually. Please contact the LAUSD Developer Fee Program Office (DFPO) at (213) 241-0715 for more information regarding fees and student generation rates.

ATTACHMENTS

1. LAUSD SCHOOLS ENROLLMENTS AND CAPACITIES REPORT

2. BOUNDARY DESCRIPTIONS FOR SCHOOLS SERVING PROPOSED PROJECT
   Attendance area boundary descriptions for existing schools identified as serving the proposed project.

Sincerely,

Rena Perez, Director

Schools Planned to Relieve Known Overcrowding

NONE

DISCLAIMER: CURRENT AND PROJECTED DATA ARE UPDATED ANNUALLY AND BECOME AVAILABLE AFTER FEBRUARY 1ST OF EACH CALENDAR YEAR.

NOTES:

[1] School's ID code.

[2] School's name

[3] The current calendar the school is operating on. Schools operate on a 'multi-track' calendar (listed as 3 TRK or 4 TRK), because of overcrowded conditions.

[4] School's current operating capacity, or the maximum number of students the school can serve while operating on its current calendar. Excludes capacity allocated to charter co-locations. Includes capacity for magnet program.

[5] The total number of students living in the school's attendance area and who are eligible to attend the school. Includes magnet students.
-Multi-track calendars are utilized as one method of providing relief to overcrowded schools by increasing enrollment capacities.
-A key goal of the Superintendent and Board of Education is to return all schools to a traditional 2-semester calendar (1 TRK).

[6] The number of students actually attending the school now, including magnet students.

[7] Current seating overage or (shortage): equal to (current capacity) - (resident enrollment).

[8] Current overcrowding status of school. The school is currently overcrowded if any of these conditions exist:
-School is currently on a multi-track calendar.
-There is currently a seating shortage.
-There is currently a seating overage of LESS THAN or EQUAL TO a 'safety margin' of 30 seats.

[9] School planning capacity. Formulated from a baseline calculation of the number of eligible classrooms after implementing LAUSD operational goals and shifting to a 2-semester (1 TRK) calendar. Includes capacity allocated to by charter co-locations. Includes capacity for magnet programs.

[10] Projected 5-year total number of students living in the school's attendance area and who are eligible to attend the school. Includes magnet students.

[11] Projected seating overage or (shortage): equal to (projected capacity) - (projected enrollment).

[12] Projected overcrowding status of school. The school will be considered overcrowded in the future if any of these conditions exist:
-School remains on a multi-track calendar.
-There is a seating shortage in the future.
-There is a seating overage of LESS THAN or EQUAL TO a 'safety margin' of 30 seats in the future.

* Independent Charter: Capacity and/or enrollment information may not be reported for some independent charters.

^ Current capacity shown for QEIA (Quality Education Investment Act) schools includes class-size reduction due to QEIA. Excludes capacity used by charter co-locations. Projected capacity excludes class-size reduction due to QEIA.

‡ Magnet Schools with Resident Kindergarten Enrollment: Resident enrollment is reported for Kindergarten only. Actual enrollment is reported for all grades in school. Projected capacities and enrollments not reported.

Schools Planned to Relieve Known Overcrowding

NONE

DISCLAIMER: CURRENT AND PROJECTED DATA ARE UPDATED ANNUALLY AND BECOME AVAILABLE AFTER FEBRUARY 1ST OF EACH CALENDAR YEAR.

NOTES:

[1] School's ID code.

[2] School's name

[3] The current calendar the school is operating on. Schools operate on a 'multi-track' calendar (listed as 3 TRK or 4 TRK), because of overcrowded conditions.

[4] School's current operating capacity, or the maximum number of students the school can serve while operating on its current calendar. Excludes capacity allocated to charter co-locations. Includes capacity for magnet program.

[5] The total number of students living in the school's attendance area and who are eligible to attend the school. Includes magnet students.
-Multi-track calendars are utilized as one method of providing relief to overcrowded schools by increasing enrollment capacities.
-A key goal of the Superintendent and Board of Education is to return all schools to a traditional 2-semester calendar (1 TRK).

[6] The number of students actually attending the school now, including magnet students.

[7] Current seating overage or (shortage): equal to (current capacity) - (resident enrollment).

[8] Current overcrowding status of school. The school is currently overcrowded if any of these conditions exist:
-School is currently on a multi-track calendar.
-There is currently a seating shortage.
-There is currently a seating overage of LESS THAN or EQUAL TO a 'safety margin' of 30 seats.

[9] School planning capacity. Formulated from a baseline calculation of the number of eligible classrooms after implementing LAUSD operational goals and shifting to a 2-semester (1 TRK) calendar. Includes capacity allocated to by charter co-locations. Includes capacity for magnet programs.

[10] Projected 5-year total number of students living in the school's attendance area and who are eligible to attend the school. Includes magnet students.

[11] Projected seating overage or (shortage): equal to (projected capacity) - (projected enrollment).

[12] Projected overcrowding status of school. The school will be considered overcrowded in the future if any of these conditions exist:
-School remains on a multi-track calendar.
-There is a seating shortage in the future.
-There is a seating overage of LESS THAN or EQUAL TO a 'safety margin' of 30 seats in the future.

* Independent Charter: Capacity and/or enrollment information may not be reported for some independent charters.

^ Current capacity shown for QEIA (Quality Education Investment Act) schools includes class-size reduction due to QEIA. Excludes capacity used by charter co-locations. Projected capacity excludes class-size reduction due to QEIA.

‡ Magnet Schools with Resident Kindergarten Enrollment: Resident enrollment is reported for Kindergarten only. Actual enrollment is reported for all grades in school. Projected capacities and enrollments not reported.
