Society of Architectural Historians

Experience Profile

Christine Lazzaretto is an Architectural Historian who has been working in historic preservation in Southern California since 2003 and at Historic Resources Group since 2008. At HRG, Christine works on environmental review, policy development, historic resources surveys, historic context statements, and federal tax credit projects. She has worked on numerous large-scale historic resources surveys, authored a wide range of historic context statements and successful National Register nominations. Her deep understanding of CEQA principles, significance, context and environmental impacts make her a leading expert in cultural resources analysis for environmental review and she is a frequent guest speaker at USC on CEQA. Christine also manages teams of professional colleagues on large-scale planning and mitigation efforts.

Prior to joining HRG, Christine worked at Pasadena Heritage as Preservation Director and Program Director, where her responsibilities included administering the Preservation Easement Program; assisting with advocacy efforts; attending local hearings and advising neighborhood groups on preservation issues; conceiving, organizing and implementing all of the organization's highly successful educational tours and programs; conducting historic research; producing written architectural descriptions and detailed histories.

Christine Lazzaretto meets the *Secretary of the Interior's Professional Qualifications Standards* in History and Architectural History.

- President, 2008-2011

Experience Profile

A licensed, practicing architect since 1991, John has been involved with historic preservation since 2002 and working at HRG since 2011.

John's areas of focus at HRG include historic architecture and technology, building conservation, historic structure reports and federal historic rehabilitation tax credit projects. He provides technical assistance for construction documents, advises on compliance with the Secretary of the Interior's Standards and the use of the State Historic Building Code, provides construction monitoring, and paint and materials sampling and analysis services.

John has worked on a wide variety of projects involving historic buildings and structures in Southern California, including CBS Columbia Square, Grand Central Air Terminal in Glendale, the Academy of Motion Pictures Museum, Los Angeles International Airport, Hotel Constance, Los Angeles Forum, University of Southern California, numerous LAUSD campus modernization projects, and the 28th Street YMCA.

Prior to joining HRG, John served as Executive Director of Claremont Heritage, including reviewing environmental documents and advising the City of Claremont on planning and design issues. John also worked for 14 years as a project architect in private practice, specializing in custom residential projects.

John LoCascio meets the *Secretary of the Interior's Professional Qualifications Standards* in Architecture and Historic Architecture.

Selected Projects

MOLLY IKER-JOHNSON
ARCHITECTURAL HISTORIAN/ STAFF PHOTOGRAPHER

Experience Profile

Molly Iker-Johnson joined Historic Resources Group in 2014. She holds a Master of Arts in Historic Preservation from the University of Delaware, a Bachelor of Arts in History and a Bachelor of Music in Instrumental Performance from Chapman University, and a Certificate in Photography from Glendale Community College.

At Historic Resources Group, Molly works on historic resources surveys, historic context statements, historic resource assessments, historic resources technical reports, National Register nominations, Historic American Building Survey documentation, and landmark photography.

Prior to joining HRG, Molly worked at the Center for Historic Architecture and Design, a historic preservation organization located at the University of Delaware, as a Graduate Research Assistant. Her responsibilities included assisting with large format re-photography of early 20th century glass plate photographs taken by Delaware seed analyst Roydon Hammond, aiding in the compilation of inventories of historically significant sites along Delaware's Byways, and creating photographic databases of historic sites along Delaware's Byways and Newark, Delaware's Main Street.

Molly Iker-Johnson meets the *Secretary of the Interior's Professional Qualifications Standards* in History and Architectural History.

Operational Energy Analysis

Estimated Electricity demand from Electric Vehicle Supply Equipment (EVSE)

Land Use Type	Number of EVSE Charging Spaces	Percent of Electric Vehicles	Average Charge (kWh/day) [a]	Days/Year	Electricity Demand (kWh/yr)	Electricity Demand (MWh/yr)
For Immediate Use[b]	47	100.0%	4.4	365	75,482	75.48
Future Use[c]	94	100.0%	4.4	365	150,964	150.96
Total	**141**	**100.0%**	**4.4**	**365**	226,446	226.45

Notes:

a. Estimated based on reference sources listed below.

b. Project would install EV charing spaces for 10 percent of its parking capacity for immediate use

c. Project would install pre-wiring for EV charging spaces for 30 percent of its parking capacity for future use (so 20% in addition to the immediate use).

CURRENT REFERENCE REPORT/LETTER	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Update Report	21666	10/19/20	Geotechnologies, Inc.
Oversized Doc(s).	``	``	``

PREVIOUS REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Dept. Approval Letter	103798-01	09/11/2018	LADBS
Preliminary Soil Report	21503	08/03/2018	Geotechnologies, Inc.
Geology/Soils Report	``	11/22/2017	``

The Grading Division of the Department of Building and Safety has reviewed the current reference update report dated 10/14/2020 updated 10/19/2020 that provides recommendations for the proposed construction of a 42-level above grade and 4-level below grade mixed-use high-rise development.

The earth materials at the subsurface exploration locations consist of up to 7 feet of uncertified fill underlain by old alluvium and Puente Formation siltstone and claystone bedrock that dips 14 to 33 degrees to the southeast. According to the CDMG Seismic Hazard Zone Report 026 the historic high groundwater level is between the 10 and 20 foot contour levels based upon nearby wells depicted on the map. The consultants recommend to support the proposed structure on mat-type foundations bearing on competent bedrock and a hydrostatic design for the subsurface retaining walls.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

AN EQUAL EMPLOYMENT OPPORTUNITY - AFFIRMATIVE ACTION EMPLOYER

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. All conditions of the above referenced Department approval letter shall apply except condition No. 1, which has been satisfied by the update report.

2. This letter approves exclusively the option in which the structure is designed to withstand hydrostatic pressures to the ground surface, as a measure to control groundwater under permanent conditions.

3. Whenever a new principal building is constructed on a site, the entire site shall be made to conform to the provisions of Chapters 18 and 70 of the LABC (7005.9).

4. Approval shall be obtained from the Department of Public Works, Bureau of Engineering, Development Services and Permits Program for the proposed removal of support and/or retaining of slopes adjoining to public way (3307.3.2).

   201 N. Figueroa Street 3rd Floor, LA (213) 482-7045

5. Secure the notarized written consent from all owners upon whose property proposed grading/construction access is to extend, in the event off-site grading and/or access for construction purposes is required (7006.6). The consent shall be included as part of the final plans.

6. Provide a notarized letter from all adjoining property owners allowing tie-back anchors, for shoring purposes, on their property (7006.6).

7. The geologist and soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans that clearly indicates the geologist and soils engineer have reviewed the plans prepared by the design engineer; and, that the plans include the recommendations contained in their reports (7006.1).

8. All recommendations of the reports that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

9. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans (7006.1). Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit.

10. A grading permit shall be obtained for all structural fill and retaining wall backfill (106.1.2).

11. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density. Placement of gravel in lieu of compacted fill is only allowed if complying with LAMC Section 91.7011.3.

12. Prior to the issuance of any permit, an accurate volume determination shall be made and included in the final plans, with regard to the amount of earth material to be exported from the site. For grading involving import or export of more than 1000 cubic yards of earth materials within the grading hillside area, approval is required by the Board of Building and Safety. Application for approval of the haul route must be filed with the Board of Building and Safety Commission Office. Processing time for application is approximately 8 weeks to hearing plus 10-day appeal period.

13. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill (1809.2, 7011.3).

14. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction (7013.12).

15. Grading shall be scheduled for completion prior to the start of the rainy season, or detailed temporary erosion control plans shall be filed in a manner satisfactory to the Grading Division of the Department and the Department of Public Works, Bureau of Engineering, B-Permit Section, for any grading work in excess of 200 cubic yards (7007.1).

201 N. Figueroa Street 3rd Floor, LA (213) 482-7045

16. All loose foundation excavation material shall be removed prior to commencement of framing (7005.3).

17. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the General Safety Orders of the California Department of Industrial Relations (3301.1).

18. Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring, as recommended. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)

19. Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).

20. The soils engineer shall review and approve the shoring plans prior to issuance of the permit (3307.3.2).

21. Controlled Low Strength Material, CLSM (slurry) proposed to be used for backfill shall satisfy the requirements specified in P/BC 2020-121.

22. Prior to the issuance of the permits, the soils engineer and the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.

23. Unsurcharged temporary excavations exposing unsupported geology and/or unsupported bedding planes shall be trimmed back along the lowest unsupported plane or shored, as recommended.

24. Unsurcharged temporary excavation may be cut vertical up to 5 feet, as recommended. Excavations over 5 feet up to 10 feet shall be trimmed back at a uniform gradient not exceeding 1:1, from top to bottom of excavation, as recommended.

25. Shoring shall be designed for the lateral earth pressures specified in the section titled "Shoring Design" starting on page 27 of the 10/19/20 update report; all surcharge loads shall be included into the design.

26. Shoring shall be designed for a maximum lateral deflection of 1 inch, provided there are no structures within a 1:1 plane projected up from the base of the excavation. Where a structure is within a 1:1 plane projected up from the base of the excavation, shoring shall be designed for a maximum lateral deflection of ½ inch, or to a lower deflection determined by the consultant that does not present any potential hazard to the adjacent structure.

27. A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.

28. All foundations shall derive entire support from competent bedrock, as recommended and approved by the geologist and soils engineer by inspection.

29. The structure shall be supported on a mat foundation designed to resist uplift hydrostatic pressures that would develop up to the ground surface, as recommended on page 11 of the 10/14/2020 report. The below-grade building walls shall be designed to resist the hydrostatic pressure that would develop if the groundwater level rose to the ground surface, as recommended on page 11 of the 10/19/2020 updated report.

30. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 5 inches thick, as recommended, and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

31. The seismic design shall be based on a Site Class D, as recommended. All other seismic design parameters shall be reviewed by LADBS building plan check. According to ASCE 7-16 Section 11.4.8, the long period coefficient (Fv) may be selected per Table 11.4-2 in ASCE 7-16, provided that the value of the Seismic Response Coefficient (Cs) is determined by Equation 12.8-2 for values of the fundamental period of the building (T) less than or equal to 1.5Ts, and taken as 1.5 times the value computed in accordance with either Equation 12.8-3 for T greater than 1.5Ts and less than or equal to TL or Equation 12.8-4 for T greater than TL. Alternatively, a supplemental report containing a site-specific ground motion hazard analysis in accordance with ASCE 7-16 Section 21.2 shall be submitted for review and approval.

32. Retaining walls up to 70 feet in height shall be designed for full depth hydrostatic design and the lateral earth pressures specified on page 23 of the 10/19/2020 updated report. All surcharge loads shall be included into the design.

33. Retaining walls higher than 6 feet shall be designed for lateral earth pressure due to earthquake motions as specified on page 24 of the 10/19/2020 report (1803.5.12).

Note: Lateral earth pressure due to earthquake motions shall be in addition to static lateral earth pressures and other surcharge pressures.

34. All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted in a non-erosive device to the street in an acceptable manner (7013.11).

35. With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soils report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record (1805.4).

36. Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector (108.9).

37. Basement walls and floors shall be waterproofed/damp-proofed with an LA City approved "Below-grade" waterproofing/damp-proofing material with a research report number (104.2.6).

38. Prefabricated drainage composites (Miradrain, Geotextiles) may be only used in addition to traditionally accepted methods of draining retained earth.

39. The structure shall be connected to the public sewer system per P/BC 2020-027.

40. An on-site storm water infiltration system at the subject site shall not be implemented, as recommended.

41. All concentrated drainage shall be conducted in an approved device and disposed of in a manner approved by the LADBS (7013.10).

42. Any recommendations prepared by the geologist and/or the soils engineer for correction of geological hazards found during grading shall be submitted to the Grading Division of the Department for approval prior to use in the field (7008.2, 7008.3).

43. The geologist and soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading (7008, 1705.6 & 1705.8).

44. Prior to pouring concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the work inspected meets the conditions of the report. No concrete shall be poured until the LADBS Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)

45. Prior to excavation an initial inspection shall be called with the LADBS Inspector. During the initial inspection, the sequence of construction; shoring; protection fences; and, dust and traffic control will be scheduled (108.9.1).

46. Installation of shoring shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).

47. The installation and testing of tie-back anchors shall comply with the recommendations included in the report or the standard sheets titled "Requirement for Tie-back Earth Anchors", whichever is more restrictive. Research Report #23835

48. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the soil inspected meets the conditions of the report. No fill shall be placed until the LADBS Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included (7011.3).

49. No footing/slab shall be poured until the compaction report is submitted and approved by the Grading Division of the Department.

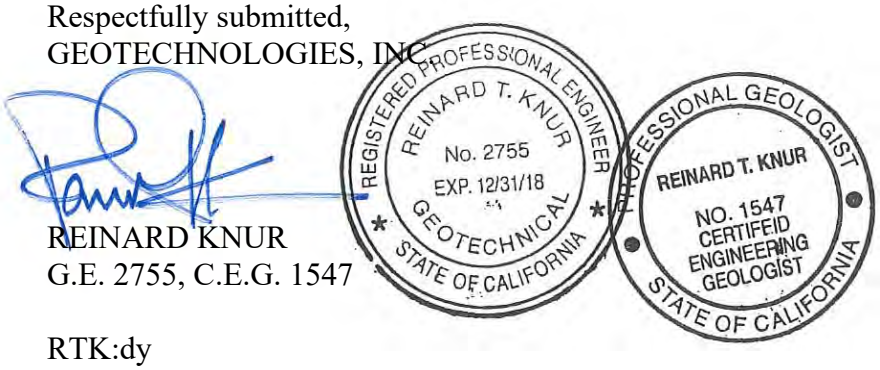
Ladies and Gentlemen:



This letter transmits the Geotechnical Engineering Investigation for the subject site prepared by Geotechnologies, Inc. This report provides geotechnical recommendations for the development of the site, including earthwork, seismic design, retaining walls, excavations, shoring and foundation design. Engineering for the proposed project should not begin until approval of the geotechnical investigation is granted by the local building official. Significant changes in the geotechnical recommendations may result due to the building department review process.

The validity of the recommendations presented herein is dependent upon review of the geotechnical aspects of the project during construction by this firm. The subsurface conditions described herein have been projected from limited subsurface exploration and laboratory testing. The exploration and testing presented in this report should in no way be construed to reflect any variations which may occur between the exploration locations or which may result from changes in subsurface conditions

UPDATED GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED MIXED USE DEVELOPMENT
514-530 SHATTO PLACE
LOS ANGELES, CALIFORNIA

INTRODUCTION

This report presents the results of the updated geotechnical engineering investigation performed on the subject site. The purpose of this investigation was to identify the distribution and engineering properties of the geologic materials underlying the site, and to provide geotechnical recommendations for the design of the proposed development.

The property to the north (514 Shatto Place) has been added to the proposed development. The newly proposed development will include the sites 514 to 530 Shatto Place. The newly proposed structure will be enlarged to incorporate the new address and will be 42 stories in height with 4 levels of subterranean parking. The finish floor elevation will be approximately 220 feet above mean sea level. Excavations may also extend as much as 65 feet for elevator shafts and foundations. The existing church located to south is not addressed in this report.

This firm originally prepared a Geotechnical Engineering Investigation for the proposed development dated November 22, 2017 for the site (File No. 21503). That report addressed a tower that was 20 stories in height with 3 levels of subterranean parking. The finish floor elevation was at elevation 238 feet above mean sea level.

Subsequently, the building was enlarged to 31 stories with 4 levels of subterranean parking. The finish floor elevation was lowered to 217 feet above mean sea level. In addition, the existing church located to the south was added to the scope of work. The church will be repurposed into a restaurant. The report was dated January 24, 2019 (File Number 21666).

A report was prepared that addressed only the repurposing of the church located at 550 Shatto Place dated June 2, 2020 (File No. 21666). The investigation included drilling two exploratory borings and excavation of three test pits, a percolation test, collection of representative samples, laboratory testing.

PROPOSED DEVELOPMENT

Proposed Mixed-use Tower

Information concerning the proposed development was furnished by the client team. The proposed project is 42 stories in height with 4 levels of subterranean parking. The finish floor elevation 220 feet above mean sea level with elevator and footing excavations extending to elevation 205 feet. Grading will consist of excavations as much as 65 feet deep. Column loads are estimated to be between 1,100 and 4,600 kips. The average pressures from the structure will be 4,600 psf.

Any changes in the design of the project or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained in this report should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.

SITE CONDITIONS

The site is located at 514-530 Shatto Place, in the City of Los Angeles, California. The site is bounded by an at-grade, 3-story office building to the north, 2-story residential and office buildings to the east, a 1 story church with a partial basement to the south, and Shatto Place to the west. The site is rectangular in shape and is approximately 0.80 acres in area. Elevations range from 272 feet above mean sea level on the east to 264 feet along Shatto Place on the west. The site generally slopes at a 25 to 1 gradient to the west. The site is shown relative to nearby topographic features on the attached Vicinity Map.

The site is currently developed with 1- and 2-story school classroom buildings, several canvas canopies, an asphalt-paved parking lot, and a 3-story, at-grade office building. The neighboring development consists of residential, office, commercial structures.

LOCAL GEOLOGY

The site is located in the Elysian Park Hills west of downtown Los Angeles. The Elysian Park Hills are composed primarily of Upper Miocene, sedimentary rocks of the Puente Formation and the Fernando Formation. The site is underlain by well bedded siltstone and clayey siltstone of the Puente Formation. Bedding to the north of the site dips gently to the south at inclinations of 3 to 10 degrees (Lamar, 1970). Lamar has mapped a series of minor northwest-southeast trending fold axes in the vicinity of the site to account for bedding variations in the site vicinity.

The Elysian Hills are located on the southern limb of the Elysian Park Anticline. This anticline is considered an active geologic feature by some geologists, citing recent seismic activity in the area. The geology of the site vicinity is presented on the Geologic Map-Lamar and the Geologic Map-Dibblee, included in this report.

CITY OF LOS ANGELES OIL FIELD

The site is located within the City of Los Angeles Oil Field. Based on a geologic map by Lamar (1970), the field is approximately 18,500 feet long and 1,000 feet wide and is elongated in an east-west direction. The oil is contained in the Puente Formation and seeps at the ground surface at the northern edge of the field. Several hundred wells have been drilled in the field since the 1890s. Based on a review of the Well Location Map the California Division of Oil and Gas and Geothermal Resources (2014), no oil wells have been drilled on the subject site. A copy of this map is attached to this report, as the Oil Well Location Map.

GEOTECHNICAL EXPLORATION

FIELD EXPLORATION

The site was recently explored on September 8, 2020 by drilling one boring with a truck-mounted drilling rig equipped with 8-inch diameter hollowstem augers. The boring was drilled to a depth of 110 feet. The boring was sampled with a California-modified, split spoon sampler lined with 2.5-inch diameter brass rings which was advanced using a 140-pound, automatic trip hammer dropped from a height of 30 inches. At alternating 2-1/2-foot depth intervals, the boring was also sampled with Standard Penetration Test equipment. The boring location is shown on the Plot Plan and the geologic materials encountered are logged on Plate A-6.

Drilling was also performed on the site on November 19, 2018 when two borings were drilled to depths of 30 feet and 110 feet using a truck-mounted drilling rig equipped with hollowstem augers. Test pits were excavated adjacent to the Church using hand tools. This work was performed for File No. 21666.

Drilling was performed on September 23, 2017 when two borings were drilled to a depth of 60 feet using a truck-mounted drilling rig equipped with hollowstem augers. This work was performed for File No 21503.

The boring and test pit locations are shown on the Plot Plan and the Geologic Materials encountered are logged on Plates A-1 through A-6.

Percolation Testing

Percolation testing was performed on the Church site (550 Shatto Place) in Boring B-2 on November 19, 2018. Stormwater infiltration is being considered for that site. However, due to the depth of the proposed structure into the siltstone bedrock of the Puente Formation, stormwater infiltration will not be performed on the subject site (514-530 Shatto Place).

Geologic Materials

The site is underlain by fill soil, Old Alluvium and sedimentary bedrock of the Puente Formation. The subsurface distribution of the geologic materials is shown on Cross Section A-A' and B-B'.

Fill

The fill soil consists of silty sand and sandy silt that is dark brown to slight gray slightly moist, and stiff or dense. The fill extends to a depth of 3 to 5 feet in the new building area.

Old Alluvium

The Old Alluvium consists of interlayered mixtures of sand, silt and clay. The Old Alluvium is brown to gray in color, moist to very moist, and very dense to stiff in consistency. Near the base of the Old Alluvium, clean, very dense sand was encountered. The Old Alluvium extends to a depths 25 to 34 feet which correlate with elevations of 234 to 241 feet above mean sea level.

Bedrock (Puente Formation)

Sedimentary bedrock of the Puente Formation underlies the Old Alluvium. The bedrock consists of clayey siltstone, silty claystone and siltstone. The rock is orange brown, dark brown and grayish brown in color, slightly moist to very moist, and moderately hard in consistency. The rock is generally well bedded but poorly fissile as observed in the samples. The surface of the bedrock appears to be descending shallowly to the south. Bedding was identified in Borings 1 and 3 and dip inclinations were measured from the ring samples. The dip ranges from 14 to 33 degrees dipping to the southeast. Based on the geologic mapping of Lamar (1970) and Dibblee, bedding in the site vicinity slope to the south and south-southwest which is similar to that identified in the borings.

Groundwater

This Investigation (File No. 21666)

Water was encountered in Boring B-1 at a depth of 33 feet (elevation 235 feet) and was not encountered in Boring B-2, which was drilled to a depth of 30 feet (elevation 238 feet). Water was identified in Bring B-3 at a depth of 23 feet (elevation 243 feet). The water level corresponds closely with the Old Alluvium-bedrock contact. This observation suggests that water is perched on the bedrock surface. It is the experience of this firm that such perched water is limited in quantity and does not require dewatering prior to construction. The water flow direction is to the south, following the bedrock surface.

Previous Investigation (File No. 21503)

Water was encountered in Boring B-1 at a depth of 31 feet (elevation 237 feet) and in Boring B-2 at a depth of 31½ feet (elevation 236½ feet). In both borings, the water was encountered slightly above the alluvium-bedrock contact in the clean sand of the Old Alluvium.

Historically Highest Groundwater Level

Based on review of California Geological Survey Seismic Hazard Zone Report of the Hollywood Quadrangle (1998, revised 2006), groundwater level contours are not indicated nearby the site. The nearest contour is shown nearly 1 mile to the south of the site and is indicated to be 20 feet below the ground surface. Typically, such notation is shown if non-water bearing rock occurs a shallower depth than the water. For design purposes, it is recommended that a historically highest groundwater level elevation of 248 feet above mean sea level be utilized for the proposed development.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

Caving

Caving could not be directly observed during exploration due to the type of excavation equipment utilized. Based on the experience of this firm, large diameter excavations, excavations that encounter granular, cohesionless soils and excavations below the groundwater table will most likely experience caving. Caving is not anticipated in the bedrock.

SEISMIC EVALUATION

REGIONAL GEOLOGIC SETTING

The subject site is located in the northern portion of the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-trending reverse faults that form the southern margin of the Transverse Ranges.

REGIONAL FAULTING

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey (CGS), faults may be categorized as active, potentially active, or inactive. Active faults are those which show evidence of surface displacement within the last 11,000 years (Holocene-age). Potentially-active faults are those that show evidence of most recent surface displacement within the last 1.6 million years (Quaternary-age). Faults showing no

evidence of surface displacement within the last 1.6 million years are considered inactive for most purposes, with the exception of design of some critical structures.

Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

SEISMIC HAZARDS AND DESIGN CONSIDERATIONS

The primary geologic hazard at the site is moderate to strong ground motion (acceleration) caused by an earthquake on any of the local or regional faults. The potential for other earthquake-induced hazards was also evaluated including surface rupture, liquefaction, dynamic settlement, inundation and landsliding.

Surface Rupture

Surface rupture is defined as fault displacement that occurs at the ground surface, along the trace of the causative fault during an earthquake. Based on research of available literature, the surface trace of any active or potentially active faults do not underlie the subject site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered low.

Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures. The Seismic Hazards Maps of the State of California (CDMG, 1999), does not classify the site as part of the potentially "Liquefiable" area. This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake.

The Old Alluvium consists of sand and silty sand. The upper 15 feet id moderately dense, however, from a depth of 15 feet to the bedrock contact, the soil is dense to very dense. SPT blow counts are in excess of 70 blows per foot for the deeper Old Alluvium. Based on these observations, the Old Alluvium is not considered liquefiable.

The proposed development will extend to a depth of approximately 65 feet below the ground surface and bear on the siltstone bedrock. Based on the long tectonic history and moderately hard consistency of the bedrock, the Puente Formation siltstone bedrock is not considered liquefiable.

Dynamic Dry Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

Some seismically-induced settlement of the proposed structures should be expected as a result of strong ground-shaking. Due to the moderately dense consistency of the upper Old Alluvium, such settlements will be on order of ¼ inch.

Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the County of Los Angeles Flood and Inundation Hazards Map, (Leighton, 1990), the site does not lie within the mapped tsunami inundation boundaries.

Seiches are oscillations generated in enclosed bodies of water which can be caused by ground shaking associated with an earthquake. According to the County of Los Angeles General Plan, the site is within the potential inundation boundary of Silver Lake Reservoir. A determination of whether a higher site elevation would remove the site from the potential inundation zones is beyond the scope of this investigation.

Landsliding

The probability of seismically-induced landslides occurring on the site is considered to be low due to the lack of elevation difference across or adjacent to the site.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the finding of Geotechnologies, Inc. that construction of the proposed mixed-use building is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

The site is underlain by up to 5 feet of fill soil that consists of silty sand and sandy silt. Old Alluvium consisting of interlayered mixtures of sand, silt and clay that is moist and dense to stiff extends to depths of 23 to 34 feet below the ground surface, which coincides with elevations of 234 and 243 feet above mean sea level. Sedimentary bedrock of the Puente Formation occurs

below the Old Alluvium and is moderately hard and well bedded. Perched water was identified as a thin zone above the bedrock surface. However, the historically highest groundwater level is at depth of 20 feet, interpreted as elevation of 248 feet above mean sea level.

Proposed Mixed-Use Structure

The proposed structure will have a 4-level underground parking structure that will have a finish floor elevation of 220 feet with foundations and elevator pits extending to 205 feet. Due to the high loads anticipated for the proposed structure, a mat foundation is recommended. The proposed foundations must derive supported from the Puente Formation bedrock.

During construction, water will be encountered at the Old Alluvium/bedrock contact near elevation 234 feet. The quantity of the water is not considered sufficient to install dewatering wells. It is recommended that as construction proceeds, that water is collected in trenches and directed to a sump pit where it may be pumped to an appropriate location for treatment (if necessary) and disposal. Appropriate water disposal permits will be required.

The historically highest groundwater level is at 248 feet. It is recommended that the proposed development be designed to resist vertical hydrostatic forces commensurate with this elevation. The proposed structure should be designed for hydrostatic force, equivalent to the ground surface (elevation 268 feet). If the structure is designed without wall drainage, then the retaining wall must be designed for a later hydrostatic pressure up to the ground surface.

Due to the depth of the proposed basement excavations, and the proximity of property lines, shoring will be necessary in order to maintain a stable excavation.

On-site stormwater disposal is not considered feasible for the proposed structure due to the basement extending into the non-water-bearing bedrock.

SEISMIC DESIGN CONSIDERATIONS

2019 California Building Code Seismic Parameters

The existing church is supported on the Old Alluvium which is classified as Site Class D and corresponds to a "Very Dense Soil and Soft Rock" Profile, according to Table 20.3-1 of ASCE 7-10. This information and the site coordinates were input into the USGS U.S. Seismic Design Maps tool (Version 3.1.0) to calculate the ground motions for the site.

2019 CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	1.994g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	1.994g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.33g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.710g
Site Coefficient (F_v)	1.7*
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.207g*
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.805g*

* *According to ASCE 7-16, a Long Period Site Coefficient (F_v) of 1.7 may be utilized provided that the value of the Seismic Response Coefficient (C_s) is determined by Equation 12.8-2 for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Equation 12.8-3 for $T_L \geq T > 1.5T_s$ or equation 12.8-4 for $T > T_L$. Alternatively, a site-specific ground motion hazard analysis may be performed in accordance with ASCE 7-16 Section 21.1 and/or a ground motion hazard analysis in accordance with ASCE 7-16 Section 21.2 to determine ground motions for any structure.*

FILL SOILS

The maximum depth of fill encountered in the proposed building area on the site was 5 feet. All of the fill soils will be removed as part of the excavation for the proposed 4-level basement.

EXPANSIVE SOILS

The old alluvium is in the very low to high expansion range. The Expansion Index was found to range between 13 and 94 for bulk samples remolded to 90 percent of the laboratory maximum density.

METHANE ZONES

This office has reviewed the City of Los Angeles Methane and Methane Buffer Zones map. Based on this review it appears that the subject site is located within a Methane Zone as designated by the City. A qualified methane consultant should be retained to consider the requirements and implications of the City's Methane Zone designation. A copy of the portion of the map covering the Project Site is included herein.

WATER-SOLUBLE SULFATES

The Portland cement portion of concrete is subject to attack when exposed to water-soluble sulfates. Usually the two most common sources of exposure are from soil and marine environments. The source of natural sulfate minerals in soils include the sulfates of calcium, magnesium, sodium, and potassium. When these minerals interact and dissolve in subsurface water, a sulfate concentration is created, which will react with exposed concrete. Over time sulfate attack will destroy improperly proportioned concrete well before the end of its intended service life.

Alluvium

The water-soluble sulfate content of the onsite geologic materials was tested by California Test 417. The water-soluble sulfate content was determined to be less than 0.1% percentage by weight for the Old Alluvium and greater than 0.2% for the bedrock. Based on American Concrete Institute (ACI) Standard 318-08, the sulfate exposure is considered to be negligible for geologic materials with less than 0.1% and Type I cement may be utilized for concrete foundations in contact with the alluvium.

Bedrock

Bedrock samples were tested and identified sulfate concentrations above 0.2%. Based on American Concrete Institute (ACI) Standard 318-08, the sulfate exposure is considered to be high for geologic materials above 0.2% and Type V cement should be utilized for concrete foundations in contact with the bedrock.

GRADING GUIDELINES

The following grading guidelines may be utilized for any miscellaneous site grading which may be required as part of the proposed development.

Site Preparation

- A thorough search should be made for possible underground utilities and/or structures. Any existing or abandoned utilities or structures located within the footprint of the proposed grading should be removed or relocated as appropriate.

- All vegetation and soft or disturbed geologic materials should be removed from the areas to receive controlled fill. All existing fill materials and any disturbed geologic materials resulting from grading operations shall be completely removed and properly recompacted prior to foundation excavation.

- Any vegetation or associated root system located within the footprint of the proposed structures should be removed during grading.

- Subsequent to the indicated removals, the exposed grade shall be scarified to a depth of six inches, moistened to optimum moisture content, and recompacted in excess of the minimum required comparative density.

- The excavated areas shall be observed by the geotechnical engineer prior to placing compacted fill.

Compaction

All fill should be mechanically compacted in layers not more than 8 inches thick. All fill shall be compacted to at least 90 percent of the maximum laboratory density for the materials used. The maximum density shall be determined by the laboratory operated by Geotechnologies, Inc. using the test method described in the most recent revision of ASTM D 1557.

Field observation and testing shall be performed by a representative of the geotechnical engineer during grading to assist the contractor in obtaining the required degree of compaction and the proper moisture content. Where compaction is less than required, additional compactive effort shall be made with adjustment of the moisture content, as necessary, until a minimum of 90 percent compaction is obtained.

Acceptable Materials

The excavated onsite materials are considered satisfactory for reuse in the controlled fills as long as any debris and/or organic matter is removed. Any imported materials shall be observed and tested by the representative of the geotechnical engineer prior to use in fill areas. Imported materials should contain sufficient fines so as to be relatively impermeable and result in a stable subgrade when compacted. Any required import materials should consist of geologic materials with an expansion index of less than 20. The water-soluble sulfate content of the import materials should be less than 0.1% percentage by weight.

Imported materials should be free from chemical or organic substances which could affect the proposed development. A competent professional should be retained in order to test imported materials and address environmental issues and organic substances which might affect the proposed development.

Utility Trench Backfill

Utility trenches should be backfilled with controlled fill. The utility should be bedded with clean sands at least one foot over the crown. The remainder of the backfill may be onsite soil compacted to 90 percent of the laboratory maximum density. Utility trench backfill should be tested by representatives of this firm in accordance with the most recent revision of ASTM D-1557.

Shrinkage

Shrinkage results when a volume of soil removed at one density is compacted to a higher density. A shrinkage factor of 5 percent should be anticipated when excavating and recompacting the existing fill and underlying Old Alluvium on the site to an average comparative compaction of 92 percent.

Weather Related Grading Considerations

When rain is forecast all fill that has been spread and awaits compaction shall be properly compacted prior to stopping work for the day or prior to stopping due to inclement weather. These fills, once compacted, shall have the surface sloped to drain to an area where water can be removed.

Temporary drainage devices should be installed to collect and transfer excess water to the street in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope.

Work may start again, after a period of rainfall, once the site has been reviewed by a representative of this office. Any soils saturated by the rain shall be removed and aerated so that the moisture content will fall within three percent of the optimum moisture content.

Surface materials previously compacted before the rain shall be scarified, brought to the proper moisture content and recompacted prior to placing additional fill, if considered necessary by a representative of this firm.

Geotechnical Observations and Testing During Grading

Geotechnical observations and testing during grading are considered to be a continuation of the geotechnical investigation. It is critical that the geotechnical aspects of the project be reviewed by representatives of Geotechnologies, Inc. during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

FOUNDATION DESIGN

Mat Foundation

A mat foundation is recommended to distribute loads to the underlying bedrock. In addition, a mat foundation will be required to resist buoyancy pressure. The bottom of the mat foundation should be a minimum of 24 inches in depth below the bedrock surface into undisturbed and competent bedrock. An allowable bearing pressure 8,000 pounds per square foot may be utilized in the design of the proposed mat foundation. The mat foundation may be designed utilizing a modulus of subgrade reaction of 400 pounds per cubic inch. This value should be multiplied by a reduction factor of:

$$K_{\mathrm{R}} = K\left[\frac{B+1}{2B}\right]^2$$

Where:

K = Unit subgrade Modulus

K_R = Reduced Subgrade Modulus

B = Equivalent Foundation width

Lateral Design for Mat Foundation

Resistance to lateral loading may be provided by soil friction, and by the passive resistance of the soils. A coefficient of friction of 0.3 may be used with the dead load forces between footings and the underlying supporting soils.

Passive earth pressure for the sides of footings poured against undisturbed soil may be computed as an equivalent fluid having a density of 400 pounds per cubic foot, with a maximum earth pressure of 4,000 pounds per square foot. When combining passive and friction for lateral resistance, the passive component should be reduced by one third. A one-third increase in the passive value may be used for wind or seismic loads. A minimum safety factor of 2 has been utilized in determining the allowable passive pressure.

Foundation Settlement

The majority of the foundation settlement is expected to occur on initial application of loading. The maximum settlement is not expected to exceed approximately 1-1/2 inches and will occur below the most heavily loaded area of the mat foundation. Differential settlement is not expected to exceed ½ inch between columns spaced at 30-foot centers.

Miscellaneous Structures

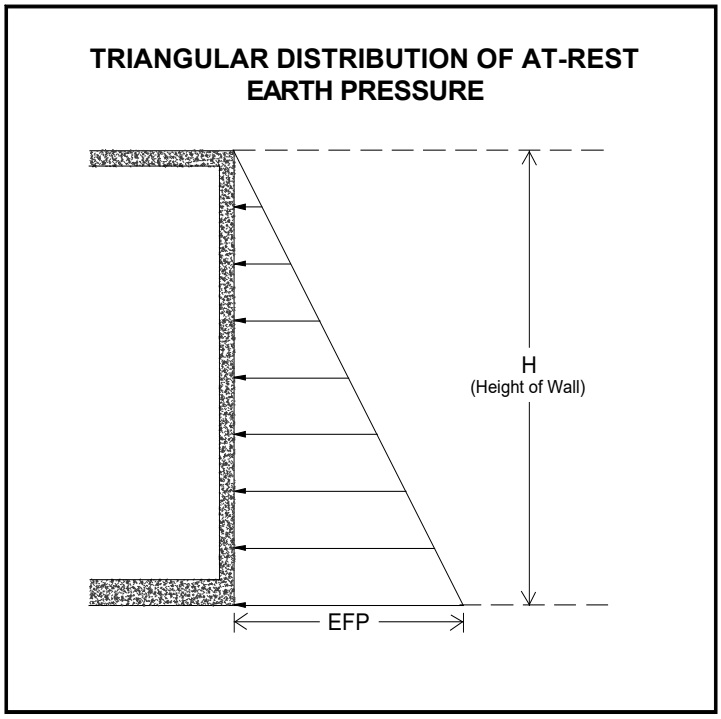
Foundations for small outlying structures, such as property line walls and trash enclosures, which will not be tied-in to the proposed building may be supported on conventional foundations bearing in native soils, and/or properly placed compacted fill. A bearing capacity of 2,000 psf may be used when bearing into the natural, Old Alluvium.

FOUNDATION OBSERVATIONS

It is critical that all foundation excavations are observed by a representative of this firm to verify penetration into the recommended bearing materials. The observation should be performed prior to the placement of reinforcement. Foundations should be deepened to extend into satisfactory geologic materials, if necessary.

Foundation excavations should be cleaned of all loose soils prior to placing steel and concrete. Any required foundation backfill should be mechanically compacted, flooding is not permitted.

RETAINING WALL DESIGN



The retain wall excavations will expose fill soil stiff to very dense Old Alluvium. The siltstone bedrock is anticipated to be exposed as much as 20 feet in the excavation. As a result, a bedding surcharge will be applied to the north and east walls.

Restrained Drained Retaining Walls

Restrained retaining walls may be designed to resist a triangular pressure distribution of at-rest earth pressure as indicated in the diagram below. The at-rest pressure is highly dependent on the type of geologic material exposed in the wall. The pressures shown below assume a drained condition do not include hydrostatic pressures. Drained conditions are possible only to a depth 20 feet from the ground surface (elevation 248 feet). For the pressures in the upper 20 feet to be valid, a drain must be installed above the historically highest groundwater level.

RESTRAINED WALL PRESSURES ASSUMING A DRAINED CONDITION (AT-REST PRESSURE) TRIANGULAR DISTRIBUTION (psf)		
HEIGHT OF WALL (feet)	**GEOLOGICMATERIAL**	**WALL PRESSURE (psf)**
UP to 30	Old Alluvium	70
30 to 70	Bedrock-Favorable Oriented (East and South Sides)	76
30 to 70	Bedrock – Daylighted (North and West Sides)	90

It should be noted that this pressure applied only to walls higher than elevation 248 feet. Additional earth pressure should be added for a surcharge condition due to hydrostatic pressure, sloping ground, vehicular traffic or adjacent structures.

In addition to the recommended earth pressure, the upper ten feet of the retaining wall adjacent to streets, driveways or parking areas should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the walls due to normal street traffic. If the traffic is kept back at least ten feet from the retaining walls, the traffic surcharge may be neglected.

The lateral earth pressures recommended above for retaining walls assume that a permanent drainage system will be installed so that external water pressure will not be developed against the walls. Also, where necessary, the retaining walls should be designed to accommodate any surcharge pressures that may be imposed by existing buildings on the adjacent property.

Retaining Wall Drainage

A subdrain can be installed only above the historically highest groundwater level, which is equivalent to a depth of 20 feet or elevation 248 feet.

Subdrains may consist of 4-inch diameter perforated pipes, places with perforated facing down. The pipe shall be encased in at least one-foot of gravel around the pipe. The gravel shall be wrapped in filter fabric. The gravel may consist of three-quarter inch to one-inch crushed rocks. As an alternative, the use of gravel pockets and weepholes is an acceptable drainage method. Weepholes shall be a minimum of 2 inches in diameter, placed at 8 feet on center along the base of the wall. Gravel pockets shall be a minimum of 1 cubic foot in dimension, and may consist of three-quarter inch to once inch crushed rocks, wrapped in filter fabric.

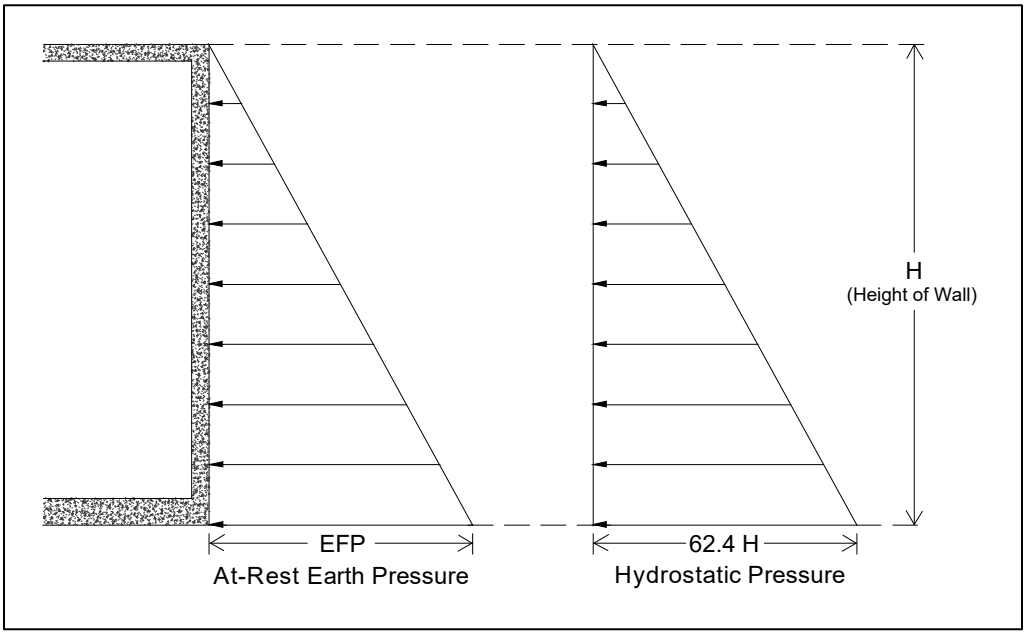
Certain types of subdrain pipe are not acceptable to the various municipal agencies, it is recommended that prior to purchasing subdrainage pipe, the type and brand is cleared with the proper municipal agencies. Subdrainage pipes should outlet to an acceptable location.

Where retaining walls are to be constructed adjacent to property lines there is usually not enough space for emplacement of a standard pipe and gravel drainage system. Under these circumstances, the use of a flat drainage produce is acceptable.

Some municipalities do not allow the use of flat-drainage products. The use of such a product should be researched with the building official. As an alternative, omission of one-half of a block at the back of the wall on eight-foot centers is an acceptable method of draining the walls. The resulting void should be filled with gravel. A collector is placed within the gravel which directs collected waters through the wall to a sump or standard pipe and gravel system constructed under the slab. This method should be approved by the retaining wall designer prior to implementation.

Where shoring will not allow the installation of a standard subdrainage system outside the wall rock pockets may be utilized. The rock pockets with should drain through the wall. The pockets should be a minimum of 12 inches in length, width and depth. The pocket should be filled with gravel. The rock pockets should be no more than 8 feet on center.

Sump Pump Design



The purpose of the recommended retaining wall backdrainage system is to relieve hydrostatic pressure. Groundwater was encountered during exploration at a depth of 31 to 31 ½ feet below the ground surface (correlating to elevation 237 to 236 ½ feet above mean sea level.) However, the historically highest groundwater elevation is indicated to be at a depth of 20 feet below the ground surface which equates to elevation 248 feet. It is the policy of the City of Los Angeles, Department of Building and Safety that the historically highest groundwater elevation be used for the design of the subterranean levels. Therefore, a hydrostatic design should be used for the proposed structure.

Based on these considerations the retaining wall backdrainage system is not expected to experience an appreciable flow of water, and in particular, no groundwater will affect it. However, for the purposes of design, a flow of 5 gallons per minute may be assumed.

Restrained Undrained Retaining Walls

Restrained retaining walls may be designed to resist a triangular pressure distribution of at-rest earth pressure and hydrostatic pressure as indicated in the diagram below. The at-rest soils pressure for design purposes can be identified in the following table. The following pressure is appropriate for all undrained retaining walls or for undrained walls below the historically highest groundwater level.

RESTRAINED WALL PRESSURES ASSUMING A UDRAINED CONDITION (AT-REST PRESSURE) TRIANGULAR DISTRIBUTION (psf)		
HEIGHT OF WALL (feet)	**GEOLOGICMATERIAL**	**WALL PRESSURE (psf)**
Up to 30	Old Alluvium	(35+63) = 98
30 to 70	Bedrock-Favorable Oriented (East and South Sides)	(35+63) = 98
30 to 70	Bedrock – Daylighted (North and West Sides)	(41+63)=104

In addition to the recommended earth pressure, the upper ten feet of the retaining wall adjacent to streets, driveways or parking areas should be designed to resist a uniform lateral pressure of 100 pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the walls due to normal street traffic. If the traffic is kept back at least ten feet from the retaining walls, the traffic surcharge may be neglected.

The lateral earth pressures recommended above for undrained retaining walls assume that permanent drainage system will not be provided. Where necessary, the retaining walls should be

designed to accommodate any surcharge pressures that may be imposed by existing buildings on the adjacent property.

Dynamic (Seismic) Earth Pressure

Retaining walls exceeding 6 feet in height shall be designed to resist the additional earth pressure caused by seismic ground shaking. A triangular pressure distribution should be utilized for the additional seismic loads, with an equivalent fluid pressure of 26 pounds per cubic foot. When using the load combination, the greater of the seismic earth pressure and the active pressure or the At-rest pressure should be used for that depth interval. The comparison is made in the following table:

SEISMIC WALL PRESSURE (All Pressure Distributions are Triangular)				
Wall Height (feet)	**Active pressure (pcf)**	**Active + Seismic (pcf)**	**At-Rest with No Hydrostatic Load (pcf)**	**At-Rest with Hydrostatic Load (pcf)**
Up to 20	30	(30 + 25) = 55	70*	98*
20 to 30	44	70	-	98*
30 to 70	47	73	-	98* (South and East Walls) 104* (North and West Walls)

Note: * denotes value to be used in design

Based on the values shown, the at-rest values are greater for all cases. Therefore, the at rest values will govern without the need for the addition of the seismic wall pressure.

Waterproofing

Moisture effecting retaining walls is one of the most common post construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water inside the building. Efflorescence is a process in which a powdery substance is produced on the surface of the concrete by the evaporation of water. The white powder usually consists of soluble salts such as gypsum,

calcite, or common salt. Efflorescence is common to retaining walls and does not affect their strength or integrity.

It is recommended that retaining walls be waterproofed. Waterproofing design and inspection of its installation is not the responsibility of the geotechnical engineer. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection to below grade walls.

Surcharge from Adjacent Structures

As indicated herein, additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures for retaining walls and shoring design.

The following surcharge equation provided in the LADBS Information Bulletin Document No. P/BC 2008-83, may be utilized to determine the surcharge loads on basement walls and shoring system for existing structures located within the 1:1 (h:v) surcharge influence zone of the excavation and basement.

Resultant lateral force: $R = (0.3*P*h^2)/(x^2+h^2)$

Location of lateral resultant: $d = x*[(x^2/h^2+1)*\tan^{-1}(h/x)-(x/h)]$

where:

R	=	resultant lateral force measured in pounds per foot of wall width.
P	=	resultant surcharge loads of continuous or isolated footings measured in pounds per foot of length parallel to the wall.
x	=	distance of resultant load from back face of wall measured in feet.
h	=	depth below point of application of surcharge loading to top of wall footing measured in feet.
d	=	depth of lateral resultant below point of application of surcharge loading measure in feet.
$\tan^{-1}(h/x)$	=	the angle in radians whose tangent is equal to h/x.

The structural engineer and shoring engineer may use this equation to determine the surcharge loads based on the loading of the adjacent structures located within the surcharge influence zone.

TEMPORARY EXCAVATIONS

It is anticipated that excavations on the order of 65 feet in vertical height will be required for the basement levels and the proposed mat foundation. The excavations are expected to expose fill, dense Old Alluvium soil, and well bedded siltstone of the Puente Formation which are suitable for vertical excavations up to 5 feet where not surcharged by adjacent traffic or structures. It should be noted however, that where bedrock is encountered, cuts in the bedrock should be made no steeper than the angle of bedding where the bedding will be daylighted.

Should the design or location of any structures, as outlined in this report, be changed or altered, the recommendations contained herein should not be considered valid until reviewed and modified or reaffirmed subsequent to such review.

Where sufficient space is available, temporary unsurcharged embankments could be sloped back without shoring. Excavations over 5 in height should be excavated at a uniform 1:1 (h:v) slope gradient in its entirety to a maximum height of 10 feet. A uniform sloped excavation does not have a vertical component.

Where sloped embankments are utilized, the tops of the slopes should be barricaded to prevent vehicles and storage loads within seven feet of the tops of the slopes. If the temporary construction embankments are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. The soils exposed in the cut slopes should be inspected during excavation by personnel from this office so that modifications of the slopes can be made if variations in the soil conditions occur.

Excavation Observations

It is critical that the soils exposed in the cut slopes are observed by a representative of Geotechnologies, Inc. during excavation so that modifications of the slopes can be made if variations in the geologic material conditions occur. Many building officials require that temporary

excavations should be made during the continuous observations of the geotechnical engineer. All excavations should be stabilized within 30 days of initial excavation.

SHORING DESIGN

The following information on the design and installation of the shoring is as complete as possible at this time. It is suggested that Geotechnologies, Inc. review the final shoring plans and specifications prior to bidding or negotiating with a shoring contractor.

One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. The soldier piles may be designed as cantilevers or laterally braced utilizing drilled tied-back anchors or raker braces.

Soldier Piles

Drilled cast-in-place soldier piles should be placed no closer than 2 diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the geologic materials. For design purposes, an allowable passive value for the geologic materials below the bottom plane of excavation may be assumed to be 600 pounds per square foot per foot. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed geologic materials.

Groundwater was encountered during exploration at a depth of 23 to 31 feet below grade, approximately 2 feet above the bedrock surface. Proposed piles may exceed 75 feet in depth and may therefore encounter water. Piles placed below the water level require the use of a tremie to place the concrete into the bottom of the hole. A tremie shall consist of a water-tight tube having

a diameter of not less than 4 inches and connected to a concrete pump. The tube shall be equipped with a valve that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie shall be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end shall be closed at the start of the work to prevent water entering the tube and shall be entirely sealed at all times, except when the concrete is being placed. The tremie tube shall be kept full of concrete. The flow shall be continuous until the work is completed and the resulting concrete seal shall be monolithic and homogeneous. The tip of the tremie tube shall always be kept about five feet below the surface of the concrete and definite steps and safeguards should be taken to insure that the tip of the tremie tube is never raised above the surface of the concrete.

A special concrete mix should be used for concrete to be placed below water. The design shall provide for concrete with a strength p.s.i. of 1,000 over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste shall be included. The slump shall be commensurate to any research report for the admixture, provided that it shall also be the minimum for a reasonable consistency for placing when water is present.

Casing may be required should caving be experienced in the granular (saturated) geologic materials. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet.

The frictional resistance between the soldier piles and retained geologic material may be used to resist the vertical component of the anchor load. The coefficient of friction may be taken as 0.4 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 600 pounds per square foot. The minimum depth of embedment for shoring piles is 5 feet below the bottom of the

footing excavation or 7 feet below the bottom of excavated plane whichever is deeper. These values assumed that the shoring piles will not be vibrated into place.

Lagging

Soldier piles and anchors should be designed for the full anticipated pressures. Due to arching in the geologic materials, the pressure on the lagging will be less. It is recommended that the lagging should be designed for the full design pressure but be limited to a maximum of 400 pounds per square foot. It is recommended that a representative of this firm observe the installation of lagging to insure uniform support of the excavated embankment.

Tied-Back Anchors

Tied-back anchors may be used to resist lateral loads. Friction anchors are recommended. For design purposes, it may be assumed that the active wedge adjacent to the shoring is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge.

Drilled friction anchors may be designed for a skin friction of 650 pounds per square foot. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. This skin friction is based on 15-foot-high shoring, a tied back anchor elevation 6 feet below grade and a minimum twenty-foot embedment beyond the potentially active wedge yielding an overburden of 12½ feet below ground surface. Where belled anchors are utilized, the capacity of belled anchors may be designed by applying the skin friction over the surface area of the bonded anchor shaft. The diameter of the bell may be utilized as the diameter of the bonded anchor shaft when determining the surface area. This implies that in order for the belled anchor to fail, the entire parallel soil column must also fail.

Depending on the techniques utilized, and the experience of the contractor performing the installation, it is anticipated that a skin friction of 2,000 pounds per square foot could be utilized

for post-grouted anchors. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads.

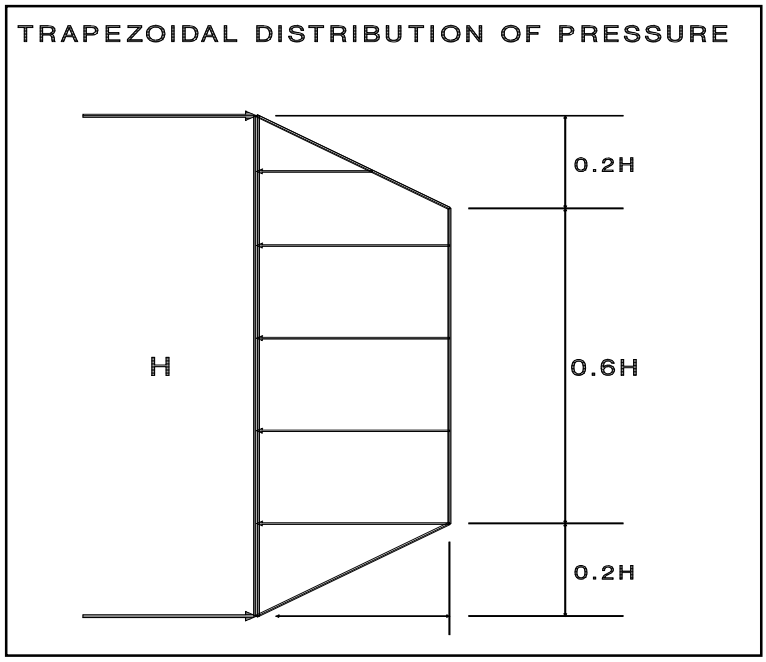
Anchors should be placed at least 6 feet on center to be considered isolated. It is recommended that at least 5 percent of the initial anchors have their capacities tested to 200 percent of their design capacities for a 24-hour period to verify their design capacity.

The total deflection during this test should not exceed 12 inches. The anchor deflection should not exceed 0.75 inches during the 24-hour period, measured after the 200 percent load has been applied. All anchors should be tested to at least 150 percent of design load. The total deflection during this test should not exceed 12 inches.

The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design loading. After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. Where satisfactory tests are not attained, the anchor diameter and/or length should be increased or additional anchors installed until satisfactory test results are obtained. The installation and testing of the anchors should be observed by the geotechnical engineer. Minor caving during drilling of the anchors should be anticipated.

Anchor Installation

Tied-back anchors may be installed between 20 and 40 degrees below the horizontal. Caving of the anchor shafts, particularly within sand deposits, should be anticipated and the following provisions should be implemented in order to minimize such caving. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation.



The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

Lateral Pressures

Cantilevered shoring supporting a level backslope may be designed utilizing a triangular distribution of pressure as indicated in the following table:

HEIGHT OF SHORING "H" (feet)	EQUIVALENT FLUID PRESSURE (Active Pressure) (pcf)	
	Old Alluvium and Bedrock-Favorable Bedding (South and East Sides)	Adverse Bedding (North and West Sides)
Up to 20	28	57

A trapezoidal distribution of lateral earth pressure would be appropriate where shoring is to be restrained at the top by bracing or tie backs, with the trapezoidal distribution as shown in the diagram below.

Restrained shoring supporting a level backslope may be designed utilizing a trapezoidal distribution of pressure as indicated in the following table:

HEIGHT OF SHORING (feet)	DESIGN SHORING FOR (Where H is the height of the wall)		
	Alluvium	Bedrock- Favorable Bedding (East and South Walls)	Bedrock-Adverse Bedding (North and West Walls)
Up to 30	18H	-	-
30 to 40	-	28H	46H
40 to 50	-	31H	48H
50 to 60	-	32H	49H
60 to 70	-	33H	50H

Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be applied where the shoring will be surcharged by adjacent traffic or structures. Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination.

Deflection

It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is estimated that the deflection could be on the order of one inch at the top of the shored embankment. If greater deflection occurs during construction, additional bracing may be necessary to minimize settlement of adjacent buildings and utilities in adjacent street and alleys. If desired to reduce the deflection, a greater active pressure could be used in the shoring design. Where internal bracing is used, the rakers should be tightly wedged to minimize deflection. The proper installation of the raker braces and the wedging will be critical to the performance of the shoring.

The City of Los Angeles Department of Building and Safety requires limiting shoring deflection to ½ inch at the top of the shored embankment where a structure is within a 1:1 plane projected up from the base of the excavation. A maximum deflection of 1-inch has been allowed provided there are no structures within a 1:1 plane drawn upward from the base of the excavation.

Monitoring

Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles. Also, some means of periodically checking the load on selected anchors will be necessary, where applicable.

Some movement of the shored embankments should be anticipated as a result of the relatively deep excavation. It is recommended that photographs of the existing buildings on the adjacent properties be made during construction to record any movements for use in the event of a dispute.

Shoring Observations

It is critical that the installation of shoring is observed by a representative of Geotechnologies, Inc. Many building officials require that shoring installation should be performed during continuous observation of a representative of the geotechnical engineer. The observations insure that the recommendations of the geotechnical report are implemented and so that modifications of the recommendations can be made if variations in the geologic material or groundwater conditions warrant. The observations will allow for a report to be prepared on the installation of shoring for the use of the local building official, where necessary.

SLABS ON GRADE

Concrete Slabs-on Grade

Concrete floor slabs should be a minimum of 5 inches in thickness. Slabs-on-grade should be cast over undisturbed natural geologic materials or properly controlled fill materials. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 or 95 percent of the maximum dry density.

Outdoor concrete flatwork should be a minimum of 4 inches in thickness, and should be reinforced with a minimum of #3 steel bars on 24-inch centers each way. Outdoor concrete flatwork should be cast over undisturbed natural geologic materials or properly controlled fill materials. Any geologic materials loosened or over-excavated should be wasted from the site or properly compacted to 90 percent of the maximum dry density.

Design of Slabs That Receive Moisture-Sensitive Floor Coverings

Geotechnologies, Inc. does not practice in the field of moisture vapor transmission evaluation and mitigation. Therefore, it is recommended that a qualified consultant be engaged to evaluate the general and specific moisture vapor transmission paths and any impact on the proposed construction. The qualified consultant should provide recommendations for mitigation of potential adverse impacts of moisture vapor transmission on various components of the structure.

Where dampness would be objectionable, it is recommended that the floor slabs should be waterproofed. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection for concrete slabs-on-grade.

All concrete slabs-on-grade should be supported on vapor retarder. The design of the slab and the installation of the vapor retarder should comply with the most recent revisions of ASTM E1643

and ASTM E1745. The vapor retarder should comply with ASTM E1745 Class A requirements. Where a vapor retarder is used, a low-slump concrete should be used to minimize possible curling of the slabs. The barrier can be covered with a layer of trimmable, compactible, granular fill, where it is thought to be beneficial. See ACI 302.2R-32, Chapter 7 for information on the placement of vapor retarders and the use of a fill layer.

Concrete Crack Control

The recommendations presented in this report are intended to reduce the potential for cracking of concrete slabs-on-grade due to settlement. However even where these recommendations have been implemented, foundations, stucco walls and concrete slabs-on-grade may display some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete cracking may be reduced and/or controlled by limiting the slump of the concrete used, proper concrete placement and curing, and by placement of crack control joints at reasonable intervals, in particular, where re-entrant slab corners occur.

For standard control of concrete cracking, a maximum crack control joint spacing of 15 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. The crack control joints should be installed as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by a structural engineer.

Complete removal of the existing fill soils beneath outdoor flatwork such as walkways or patio areas, is not required, however, due to the rigid nature of concrete, some cracking, a shorter design life and increased maintenance costs should be anticipated. In order to provide uniform support beneath the flatwork it is recommended that a minimum of 12 inches of the exposed subgrade beneath the flatwork be scarified and recompacted to 90 percent relative compaction.

PAVEMENTS

Prior to placing paving, the existing grade should be scarified to a depth of 12 inches, moistened as required to obtain optimum moisture content, and recompacted to 95 percent of the maximum density as determined by the most recent revision of ASTM D 1557. The client should be aware that removal of all existing fill in the area of new paving is not required, however, pavement constructed in this manner will most likely have a shorter design life and increased maintenance costs. The following pavement sections are recommended:

Service	Asphalt Pavement Thickness Inches	Base Course Inches
Passenger Cars	3	4
Moderate Truck	4	6
Heavy Truck	6	9

A subgrade modulus of 100 pounds per cubic inch may be assumed for design of concrete paving. Concrete paving for passenger cars and moderate truck traffic shall be a minimum of 6 inches in thickness, and shall be underlain by 4 inches of aggregate base. Concrete paving for heavy truck traffic shall be a minimum of 7½ inches in thickness, and shall be underlain by 6 inches of aggregate base. For standard crack control maximum expansion joint spacing of 15 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended.

Aggregate base should be compacted to a minimum of 95 percent of the most recent revision of ASTM D 1557 laboratory maximum dry density. Base materials should conform to Sections 200-2.2 or 200-2.4 of the "Standard Specifications for Public Works Construction", (Green Book), latest edition.

SITE DRAINAGE

Proper surface drainage is critical to the future performance of the project. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Proper site drainage should be maintained at all times.

All site drainage should be collected and transferred to the street in non-erosive drainage devices. The proposed structure should be provided with roof drainage. Discharge from downspouts, roof drains and scuppers should not be permitted on unprotected soils within five feet of the building perimeter. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope. Planters which are located within a distance equal to the depth of a retaining wall should be sealed to prevent moisture adversely affecting the wall. Planters which are located within five feet of a foundation should be sealed to prevent moisture affecting the earth materials supporting the foundation.

STORMWATER DISPOSAL

On-site stormwater disposal is not recommended within the proposed tower footprint due to the fine-grained composition (and associated low permeability) of the underlying bedrock geologic materials. Some other means of stormwater disposal will be necessary for the tower.

DESIGN REVIEW

Engineering of the proposed project should not begin until approval of the geotechnical report by the Building Official is obtained in writing. Significant changes in the geotechnical recommendations may result during the building department review process.

It is recommended that the geotechnical aspects of the project be reviewed by this firm during the design process. This review provides assistance to the design team by providing specific

recommendations for particular cases, as well as review of the proposed construction to evaluate whether the intent of the recommendations presented herein are satisfied.

CONSTRUCTION MONITORING

Geotechnical observations and testing during construction are considered to be a continuation of the geotechnical investigation. It is critical that this firm review the geotechnical aspects of the project during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. All foundations should be observed by a representative of this firm prior to placing concrete or steel. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise Geotechnologies, Inc. at least twenty-four hours prior to any required site visit.

If conditions encountered during construction appear to differ from those disclosed herein, notify Geotechnologies, Inc. immediately so the need for modifications may be considered in a timely manner.

It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped or shored. All temporary excavations should be cut and maintained in accordance with applicable OSHA rules and regulations.

EXCAVATION CHARACTERISTICS

The exploration performed for this investigation is limited to the geotechnical excavations described. Direct exploration of the entire site would not be economically feasible. The owner, design team and contractor must understand that differing excavation and drilling conditions may be encountered based on boulders, gravel, oversize materials, groundwater and many other conditions. Fill materials, especially when they were placed without benefit of modern grading

codes, regularly contain materials which could impede efficient grading and drilling. Southern California sedimentary bedrock is known to contain variable layers which reflect differences in depositional environment. Such layers may include abundant gravel, cobbles and boulders. Similarly, bedrock can contain concretions. Concretions are typically lenticular and follow the bedding. They are formed by mineral deposits. Concretions can be very hard. Excavation and drilling in these areas may require full size equipment and coring capability. The contractor should be familiar with the site and the geologic materials in the vicinity.

CLOSURE AND LIMITATIONS

The purpose of this report is to aid in the design and completion of the described project. Implementation of the advice presented in this report is intended to reduce certain risks associated with construction projects. The professional opinions and geotechnical advice contained in this report are sought because of special skill in engineering and geology and were prepared in accordance with generally accepted geotechnical engineering practice. Geotechnologies, Inc. has a duty to exercise the ordinary skill and competence of members of the engineering profession. Those who hire Geotechnologies, Inc. are not justified in expecting infallibility, but can expect reasonable professional care and competence.

The scope of the geotechnical services provided did not include any environmental site assessment for the presence or absence of organic substances, hazardous/toxic materials in the soil, surface water, groundwater, or atmosphere, or the presence of wetlands.

Proper compaction is necessary to reduce settlement of overlying improvements. Some settlement of compacted fill should be anticipated. Any utilities supported therein should be designed to accept differential settlement. Differential settlement should also be considered at the points of entry to the structure.

GEOTECHNICAL TESTING

Classification and Sampling

The soil is continuously logged by a representative of this firm and classified by visual examination in accordance with the Unified Soil Classification system. The field classification is verified in the laboratory, also in accordance with the Unified Soil Classification System. Laboratory classification may include visual examination, Atterberg Limit Tests and grain size distribution. The final classification is shown on the excavation logs.

Samples of the geologic materials encountered in the exploratory excavations were collected and transported to the laboratory. Undisturbed samples of soil are obtained at frequent intervals. Unless noted on the excavation logs as an SPT sample, samples acquired while utilizing a hollow-stem auger drill rig are obtained by driving a thin-walled, California Modified Sampler with successive 30-inch drops of a 140-pound hammer. The soil is retained in brass rings of 2.50 inches outside diameter and 1.00 inch in height. The central portion of the samples are stored in close fitting, waterproof containers for transportation to the laboratory. Samples noted on the excavation logs as SPT samples are obtained in accordance with the most recent revision of ASTM D 1586. Samples are retained for 30 days after the date of the geotechnical report.

Moisture and Density Relationships

The field moisture content and dry unit weight are determined for each of the undisturbed soil samples, and the moisture content is determined for SPT samples by the most recent revision of ASTM D 4959 or ASTM D 4643. This information is useful in providing a gross picture of the soil consistency between exploration locations and any local variations. The dry unit weight is determined in pounds per cubic foot and shown on the "Excavation Logs", A-Plates. The field moisture content is determined as a percentage of the dry unit weight.

Direct Shear Testing

Shear tests are performed by the most recent revision of ASTM D 3080 with a strain controlled, direct shear machine manufactured by Soil Test, Inc. or a Direct Shear Apparatus manufactured by GeoMatic, Inc. The rate of deformation is approximately 0.005 inches per minute. Each sample is sheared under varying confining pressures in order to determine the Mohr-Coulomb shear strength parameters of the cohesion intercept and the angle of internal friction. Samples are generally tested in an artificially saturated condition. Depending upon the sample location and future site conditions, samples may be tested at field moisture content. The results are plotted on the "Shear Test Diagram," B-Plates.

The most recent revision of ASTM 3080 limits the particle size to 10 percent of the diameter of the direct shear test specimen. The sheared sample is inspected by the laboratory technician running the test. The inspection is performed by splitting the sample along the sheared plane and observing the soils exposed on both sides. Where oversize particles are observed in the shear plane, the results are discarded and the test run again with a fresh sample.

Consolidation Testing

Settlement predictions of the soil's behavior under load are made on the basis of the consolidation tests using the most recent revision of ASTM D 2435. The consolidation apparatus is designed to receive a single one-inch high ring. Loads are applied in several increments in a geometric progression, and the resulting deformations are recorded at selected time intervals. Porous stones are placed in contact with the top and bottom of each specimen to permit addition and release of pore fluid. Samples are generally tested at increased moisture content to determine the effects of water on the bearing soil. The normal pressure at which the water is added is noted on the drawing. Results are plotted on the "Consolidation Test," C-Plates.

Expansion Index Testing

The expansion tests performed on the remolded samples are in accordance with the Expansion Index testing procedures, as described in the most recent revision of ASTM D4829. The soil sample is compacted into a metal ring at a saturation degree of 50 percent. The ring sample is then placed in a consolidometer, under a vertical confining pressure of 1 lbf/square inch and inundated with distilled water. The deformation of the specimen is recorded for a period of 24 hour or until the rate of deformation becomes less than 0.0002 inches/hour, whichever occurs first. The expansion index, EI, is determined by dividing the difference between final and initial height of the ring sample by the initial height, and multiplied by 1,000.

Laboratory Compaction Characteristics

The maximum dry unit weight and optimum moisture content of a soil are determined by use of the most recent revision of ASTM D 1557. A soil at a selected moisture content is placed in five layers into a mold of given dimensions, with each layer compacted by 25 blows of a 10 pound hammer dropped from a distance of 18 inches subjecting the soil to a total compactive effort of about 56,000 pounds per cubic foot. The resulting dry unit weight is determined. The procedure is repeated for a sufficient number of moisture contents to establish a relationship between the dry unit weight and the water content of the soil. The data when plotted represent a curvilinear relationship known as the compaction curve. The values of optimum moisture content and modified maximum dry unit weight are determined from the compaction curve.

Grain Size Distribution

These tests cover the quantitative determination of the distribution of particle sizes in soils. Sieve analysis is used to determine the grain size distribution of the soil larger than the Number 200 sieve. The most recent revision of ASTM D 422 is used to determine particle sizes smaller than the Number 200 sieve. A hydrometer is used to determine the distribution of particle sizes by a sedimentation process. The grain size distributions are plotted on the E-Plates presented in the Appendix of this report.

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

PRELIMINARY SOIL REPORT APPROVAL LETTER

September 11, 2018

LOG # 103798-01
SOILS/GEOLOGY FILE - 2

To: Vincent P. Bertoni, AICP, Deputy Advisory Agency
c/o planning.expedited@lacity.org
Department of City Planning
200 N. Spring Street, 7th Floor, Room 750

From: Jesus Adolfo Acosta, Grading Division Chief
Department of Building and Safety

PROPOSED LEGAL: Vesting Tentative Tract VTT-82171, Lot 1 with 4 airspace lots 2 through 5
CURRENT LEGAL: Lots 10, 11, and 12 of Block 3 of the SHATTO PLACE TRACT (MP 6/86)
LOCATION: 3119 W. 6th Street (aka 522, 530 & 550 S. Shatto Place)

CURRENT REFERENCE REPORT/LETTER	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Preliminary Soil Report	21503	08/03/2018	Geotechnologies, Inc.

PREVIOUS REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Dept. Review Letter	103798	06/26/2018	LADBS
Geology/Soils Report	21503	11/22/2017	Geotechnologies, Inc.

The Grading Division of the Department of Building and Safety has reviewed Vesting Tentative Tract VTT-82171 for a 35-story mixed use structure with 4 levels of subterranean parking and the referenced preliminary soil report that provides a preliminary geotechnical engineering investigation to satisfy the requirements for filing a vesting tentative tract map with the Department of City Planning.

The proposed project consists of repurposing an existing church into a restaurant and construction of a 35-story (31-story above grade and 4 subterranean parking levels) mixed-use structure. According to the CDMG Seismic Hazard Zone Report 026 the historic high groundwater level is between the 10 and 20 foot contour levels based upon nearby wells depicted on the map.

The earth materials at the subsurface exploration locations consist of up to 5 feet of uncertified fill underlain by older alluvium and Puente Formation siltstone and claystone bedrock. The consultants recommend to support the proposed structure on mat-type foundations bearing in bedrock and a hydrostatic design for the subsurface retaining walls.

Vesting Tentative Tract VTT-82171 and the referenced reports are acceptable for allowing the Department of City Planning process to continue, provided the following conditions are included in the tract requirements:

1. Prior to issuance of any building permits, a site specific geology and soils investigation and recommendations for the future proposed structures and grading shall be submitted to the Grading Division for review and approval.

2. All foundations shall derive entire support from competent bedrock, as recommended.

3. This letter approves exclusively the option in which the structure is designed to withstand hydrostatic pressures, as a measure to control groundwater under permanent conditions.

4. The structure shall be connected to the public sewer system.

$EFP = 2*P_A/H^2$

Maximum Active Pressure Resultant

$P_{A,\,max}$ 127407.8 lbs/lineal foot

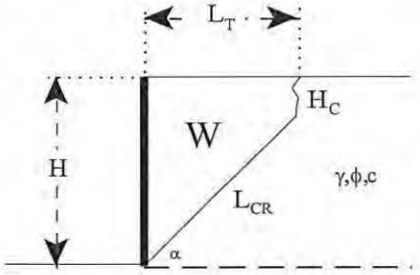
Equivalent Fluid Pressure (per lineal foot of shoring)

$EFP = 2*P_A/H^2$

EFP 52.0 pcf

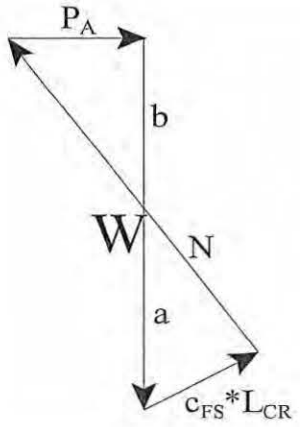
Design Shoring for an Equivalent Fluid Pressure: 52 pcf

Geotechnologies, Inc.



Project: TF Shatto, LP
File No.: 21666
Description: Bedrock - Adverse Oriented

Shoring Design with Level Backfill
(Vector Analysis)



Input:

Shoring Height	(H)	40.00 feet
Unit Weight of Retained Soils	(γ)	125.0 pcf
Friction Angle of Retained Soils	(ϕ)	13.0 degrees
Cohesion of Retained Soils	(c)	180.0 psf
Factor of Safety	(FS)	1.25
Factored Parameters:	(ϕ_{FS})	10.5 degrees
	(c_{FS})	144.0 psf

28

Failure Angle (α) degrees	Height of Tension Crack (H_C) feet	Area of Wedge (A) $feet^2$	Weight of Wedge (W) lbs/lineal foot	Length of Failure Plane (L_{CR}) feet	a lbs/lineal foot	b lbs/lineal foot	Active Pressure (P_A) lbs/lineal foot

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	27.84	1000sqft	1.00	27,843.00	0
Elementary School	170.00	Student	0.52	14,212.57	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	11			**Operational Year**	2018
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	802.68	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted to account for RPS of year 2018.

Land Use - Updated to reflect existing project office building and pre-dedicated lot acreage

Vehicle Trips - Operational mobile for existing office building is calculated externally

Energy Use - Elementray school and General Office Building utilize historical data for energy intensity

Greenhouse Gases – Modified Project Operational Emission Calculation Worksheets

ESA

514-550 Shatto Place - Operations

South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	32.77	1000sqft	0.10	32,774.00	0
Enclosed Parking with Elevator	470.00	Space	0.49	188,000.00	0
Other Non-Asphalt Surfaces	96.97	1000sqft	0.20	96,971.00	0
City Park	0.75	Acre	0.10	32,855.00	0
Health Club	5.15	1000sqft	0.10	5,153.00	0
High Turnover (Sit Down Restaurant)	24.43	1000sqft	0.10	24,435.00	0
Recreational Swimming Pool	4.64	1000sqft	0.10	4,642.00	0
Apartments High Rise	422.00	Dwelling Unit	0.50	449,330.00	1190

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	11			**Operational Year**	2024
Utility Company	Los Angeles Department of Water & Power				
CO2 Intensity (lb/MWhr)	626.48	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 intensity factor linearly adjusted to account for RPS of year 2024.

Land Use - Updated based on Project specifications

Construction Phase - Updated based on Project specifications

Off-road Equipment - Operations run

Off-road Equipment - Operations run

Off-road Equipment - Operations Run

Off-road Equipment - Operations run

Off-road Equipment - Operations run

Off-road Equipment - Operations run

Off-road Equipment - Operations run

Off-road Equipment - Operations run

Trips and VMT - Calculated externally

Demolition -

Grading - Updated based on Project specifications

Architectural Coating - Operations run

Vehicle Trips - calculated externally

Woodstoves - Site plans do not designate any woodstoves. It is assumed that emissions from BBQ pits and community fireplaces are accounted for already in the residential emissions (i.e., cooking on bbq replaces cooking at home).

Energy Use - Added lighting energy intensity equivalent to the parking lot defaults from Appendix D since these are covered outdoor spaces presumed to have lighting. Conservative assumption.

Water And Wastewater - Updated with Project specifications

Construction Off-road Equipment Mitigation - Operations run

Energy Mitigation -

Water Mitigation - Updated per Project specifications

Waste Mitigation - Based on City's Sustainability Plan

Subject: Mitigation Monitoring Program Addendum
514 and 550 Shatto Place
Los Angeles, California 90020
AEI Project No. 422435

Dear Ms. Tang:

AEI Consultants (AEI) was retained by TF Shatto LP ("the Client") to conduct a review of prior environmental reports prepared for 514 and 550 Shatto Place in Los Angeles, California ("the Site") and to assess whether the approved Mitigation Monitoring Program is adequate for the Site. This review has been conducted in general accordance with the scope of services presented in AEI's authorized proposal number 70488.

The Site is currently occupied by a four-story office building located on the east side of Shatto Place. It is AEI's understanding that the Site will be redeveloped into a mixed-use commercial and residential development with a four-level subterranean parking garage.

DOCUMENT REVIEW

AEI was provided with the following documents, which were prepared for the Site:

- *Master Conditional Use Permit, Transit Oriented Communities Affordable Housing Incentive Project Approval, Waiver of Dedication and Improvements, Site Plan Review*, dated December 18, 2019, prepared by the City of Los Angeles, California.
- *Mitigation Monitoring Program (MMP)* for the Site, prepared by the City of Los Angeles.
- *Phase I Environmental Site* Assessment (ESA) for the Site, dated November 14, 2019, prepared by AEI, under AEI Project Number 411477.
- *Phase I Environmental Site Assessment* for the Site, dated October 2, 2017, prepared by Hazard Management Consulting (HMC).
- *Subsurface Investigation Report* for the Site, dated September 20, 2018, prepared by HMC.
- *Sustainable Communities Environmental Assessment* for the Site, dated May 2019, prepared by ICF and Environmental Science Associates.

Case No. ZA-2018-3985-MCUP-TOC-WDI-SPR Master Conditional Use Permit, 522, 530, 550 South Shatto Place, 3119 West 6th Street, Los Angeles, CA, dated December 18, 2019. The November 19, 2019 Phase I ESA completed by AEI identified the Site as located in the City of Los Angeles Department of Building and Safety (LADBS) and Department of Planning's "Methane Zone". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the LADBS. AEI recommended that a methane assessment be conducted for the Site prior to any future redevelopment activities.

Based on the results of the subsurface investigation completed by HMC in 2018, HMC identified the following recommendations:

- Prior to redevelopment, a Soil and Groundwater Management Plan should be prepared to guide the removal of potentially volatile organic compounds (VOC) impacted soil and groundwater during redevelopment activities.
- Prior to redevelopment, a South Coast Air Quality Management Distric (SCAQMD) Site Specific Mitigation Plan should be obtained. Soil monitoring should be completed during excavation in accordance with SCAQMD's Rule 1166 and the Site Specific Mitigation Plan. If soils with elevated PID readings are encountered, these soils should be profiled for appropriate off-Site disposal.
- Prior to dewatering activities, a National Pollutant Discharge Elimination System (NPDES) permit should be obtained from the Los Angeles California Regional Water Quality Control Board (LARWQCB) to discharge treated water to the municipal sewer and/or stormwater systems. If the subterranean parking garage is designed with a waterproofing envelop to forego a permanent dewatering system and for permit requirements, a waterproofing/building envelope contractor should be consulted to determine the feasibility of such a design and for permit requirements.
- Since methane gas was detected in soil gas at concentrations exceeding the lower explosion limit (LEL) for methane and the Sites location in the LADBS Methane Zone, a methane mitigation system is required for the new building. The LADBS should be consulted to determine whether a Site-specific methane gas mitigation system will be required based on the concentrations detected and planned construction design. Given the construction anticipated to convert the church building to a restaurant including the likely installation of subsurface piping for future water, sewer and other utilities, HMC recommends as a protective measure that all concrete cuts and utility penetrations on the slab be sealed to add an additional measure of protection against potential vapor intrusion.

The MMP has been prepared to ensure that the mitigation measures identified in the Sustainable Communities Environmental Assessment (SCEA) are implemented, thereby minimizing identified environmental effects. The following Mitigation Measures (MM) have been identified:

- MM HAZ-1: A Site Specific Soil Mitigation Plan (SMP) will be prepared that will provide guidance to contractors for appropriate handling, screening, and management of potentially impacted or impacted soils that may be encountered at the Project Site during grading and excavation activities. These procedures will include training for construction personnel on the

appropriate procedures for identification of suspected impacted soils; requirements for testing and collection of potentially contaminated soils; segregation of potentially impacted soils; and applicable soil handling and disposal procedures.

- MM HAZ-2: A Groundwater Management Plan (GWMP) will be prepared that includes training and protocol procedures to contractors for avoiding contact with groundwater during excavation and construction of the Project and appropriate disposal protocols of contaminated groundwater.
- MM HAZ-3: All concrete cuts and utility penetrations into the building pad(s) or concrete slab(s) that underlie the former church building that may occur during the remodeling/repurposing of the existing school building will be sealed to add an additional measure of protection against potential vapor intrusion.

CONCLUSIONS

Based upon review of the provided documents listed above, AEI concurs the MMP is adequate for the new, expanded Project Site, except for the following:

The Site is located in the City of Los Angeles designated Methane Zone. Since the *Subsurface Investigation Report* (HMC, 2018) indicated methane gas was detected in soil gas at concentrations exceeding the lower explosion limit (LEL) for methane, the LADBS should be consulted to confirm if a Site-specific methane gas mitigation system will be required based on the concentrations detected and planned construction design.

- As part of the MMP HAZ-3, AEI recommends conducting a pathway assessment/visual monitoring of the sealing of penetrations after construction. An environmental professional should be on-site to monitor the sealing process. The use of a vapor-barrier type wrap is recommended.
- In addition to implementing a GWMP during construction activities, AEI recommends the inclusion of adequate design measures to manage the potential for groundwater infiltration. Design measures may include: waterproofing the entire subgrade area, use of waterproofing that is compatible with the Site constituents of concern, and sealing of electrical conduits, piping, etc. to close off preferential pathways.

REPORT LIMITATIONS

AEI's conclusions, and/or recommendations, stated in this document are based on the data and information obtained or provided as part of this Addendum. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location when and where this Addendum was completed.

CLOSING

AEI appreciated the opportunity to support this important project. If there are any questions regarding our review, please do not hesitate to contact Mr. Gene Belli at (732) 414-2720.

Sincerely,
AEI Consultants

Valerie Marshall

Subject: Methane Mitigation System Design Intent at 514-550 S. Shatto Place, Los Angeles, CA 90020.

Development at the project is to include the remodeling of an existing school building, formerly a church, built entirely on grade and the construction of a new mixed-use tower with 40 stories, including apartment units, commercial on L1 and L2, and 4 levels of subterranean parking. The total pre-dedicated parcel area is reported to be approximately 66,441 square feet, and the post-dedicated lot area is approximately 73,407 square feet. Per the environmental report provided by the client, depth of groundwater is approximately 23-33 feet bsg.

The site lies within the methane zone as defined by the City of Los Angeles Department of Building and Safety. Per the Phase II Environmental report provided by the client, this site is a Methane Zone Design Level 5.

Due to the nature of the project site having a high water table as well as methane concerns, the standard methane mitigation system may not be practical for the proposed development. In lieu of the standard requirements for projects in the methane zone with a design level 5, the design intent of this project is as follows:

Methane Specialists will coordinate with the waterproofing/building envelope consultant to choose a membrane that performs well as a waterproofing membrane and is an LA City approved methane barrier. Methane Specialists will also pursue a modification to eliminate the permanent dewatering requirement and vent piping requirement. In lieu of the dewatering and vent piping systems that are required per the Methane Ordinance, Methane Specialists will propose through the modification, to slope the bottom of the mat slab 1%. This, along with the waterproofing/methane membrane, will allow potential methane and vapor to move outside the building limits. In order for this system to function properly, the structural mat slab and subterranean walls need to be designed hydrostatically. Methane Specialists will coordinate this with the project's Structural Engineer.

Due to the methane levels found on this site, an active system will also need to be included. Methane Specialists will design the methane gas detection system for the lowest level of the proposed building. Due to the proposed modification eliminating the vent piping, dewatering and mechanical extraction systems, there will be no need for vent riser methane detectors. This detection system will need to be tied into the mechanical system designed by your MEP engineer which will be coordinated by Methane Specialists.

I look forward to answering any questions you may have.

Sincerely,

Jay Kasondra

514 Shatto Place, Los Angeles, California 90020
AEI Project No. 411477

Dear Mr. John Donlan:

AEI Consultants is pleased to provide the results of the Phase I Environmental Site Assessment (Phase I ESA) report of the above referenced address (the "subject property"). This assessment was authorized and performed in accordance with the scope of services outlined in the contract, the scope and limitations of ASTM Standard Practice E1527-13, and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (732) 414-2720 or gbelli@aeiconsultants.com.

Sincerely,

Eugene A. Belli, REPA, CHMM

Other	• Based on a prior asbestos survey conducted by others (September 11,2019), asbestos was identified at the property. The building materials were in good condition and can be effectively managed as part of an asbestos Operations and Maintenance (O&M) Plan until such time as renovation or demolition activities necessitate their removal. An O&M Plan was not in place at the Property. • According to the City of Los Angeles Department of Building & Safety and Department of Planning, the subject property is located near significant oil production areas known as "Methane Zones". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Due to the potential environmental risk associated with construction in Methane Zones, the property owner is required to conduct a methane assessment prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code). AEI recommends that a methane assessment be conducted for the subject property prior to any future redevelopment activities.

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Rimkus Building Consultants to conduct a Phase I ESA in conformance with the contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 514 Shatto Place, Los Angeles, Los Angeles County, California. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

PROPERTY DESCRIPTION

PROPERTY INFORMATION	
Subject Property Name	Office Building
Street Address(es)	514 Shatto Place
City	Los Angeles
State	California
Location	east side of Shatto Place
Vicinity Characteristics	Commercial
Approximate Site Acreage/Source	0.35/Los Angeles County Assessor's Office (LACAO)
Subject Property Type	Office
Subject Property Use(s)	Office
Assessor Parcel Number(s)	5077-004-025
SITE AND BUILDING INFORMATION	
Number of Buildings	1
Year(s) of Construction	1962
Number of Floors/Stories	4
Basement or Subgrade Area(s)	None identified
Number of Units	1
Building Area (SF)/Source	27,843/LACAO
Building Description(s)	Four-story, brick- and metal-frame, rectangular commercial building on a concrete slab foundation with composite roof
Building Occupant(s)	American Federation of State and County Municipal Employees (AFSCME) Union, as well as associated affiliates/ subsidiaries
Additional Improvements	None identified
Current On-site Operations	Administrative/office activities
Current Use of Hazardous Substances	None identified
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	Southern California Gas
Electricity Provider	Los Angeles Department of Water and Power (LADWP)
Heating System Fuel Source	Natural gas
Cooling System Power Source	Electricity
Potable Water Provider or Source	LADWP
Sewage Disposal Provider or Treatment System	City of Los Angeles
REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified

Engineering Controls	None identified
Environmental Liens	None identified

Based on a review of historical sources, the subject property was originally developed with a single-family residence from 1910 to 1962, and was redeveloped with the current office building in 1962. The building has been used solely for office/administrative activities since construction. AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	World Mission University (500 Shatto Place)	None
East	Multi-family residence and parking lot (511-519 Westmoreland Avenue)	None
South	New Covenant Academy (3119 West 6th Street)	532 Shatto (presumed-adjacent): UST
West	Shatto Place followed by offices (515 Shatto Place) and parking garage (523 Shatto Place)	523 Shatto: Los Angeles HAZMAT

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

Based upon topographic map interpretation, the direction of groundwater flow beneath the subject property is inferred to be to the west. Based on groundwater monitoring data for a nearby Shatto Investment Co. site at 3151 West 6th Street (located approximately 200 feet southwest of the subject property) obtained from the Regional Water Quality Control Board (RWQCB) GeoTracker database, groundwater is presumed to be present at an estimated depth of 20 to 30 feet bgs.

CONCLUSIONS

AEI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 514 Shatto Place, Los Angeles, Los Angeles County, California, the Property. Any exceptions to or deletions from this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) or Controlled Recognized Environmental Conditions (CRECs) in connection with the subject property.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment also included Other Environmental Considerations identified at Section 8.0. The following related issues of concern were identified:

- Based on a prior asbestos survey conducted by others (September 11,2019), asbestos was identified at the property. The building materials were in good condition and can be effectively managed as part of an asbestos Operations and Maintenance (O&M) Plan until such time as renovation or demolition activities necessitate their removal. An O&M Plan was not in place at the Property.
- According to the City of Los Angeles Department of Building & Safety and Department of Planning, the subject property is located near significant oil production areas known as "Methane Zones". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Due to the potential environmental risk associated with construction in Methane Zones, the property owner is required to conduct a methane assessment prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

- Given the good condition of the identified ACM, these materials can be effectively managed as part of an asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. The objective of an O&M Plan is to implement a practical management approach to controlling identified ACM within the subject property. The O&M Plan is designed to cleanup existing contamination, minimize future fiber release by controlling disturbance of ACM, and monitor the condition of the ACM until it is removed.
- AEI recommends that a methane assessment be conducted for the subject property prior to any future redevelopment activities.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 514 Shatto Place, Los Angeles, Los Angeles County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the subject property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the subject property. If such conditions were identified, they would be characterized as one of the following:

Recognized Environmental Condition (REC) - is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Historical Recognized Environmental Condition (HREC) - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

Controlled Recognized Environmental Condition (CREC) - A past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

De minimis Conditions - Are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions nor controlled recognized environmental conditions.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or business environmental risks (BERs) such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

1.2 Additional Services

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 Significant Assumptions

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the subject property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 Limitations

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably

representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property

conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 Limiting Conditions/Deviations

Limiting conditions were not identified during the course of this assessment, except for the following:

- AEI observed a representative sample of floors within the interior of the building. In addition, AEI observed common and exterior areas of the property, including list the common and exterior areas inspected. Based on the nature of property occupancy, this method of assessment is presumed to be appropriate due to the size of the subject property..

1.6 Data Gaps and Data Failure

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 Data Failure

AEI did not identify evidence of data failure during the course of this assessment.

1.6.2 Data Gaps

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 Reliance

All reports, both verbal and written, are for the benefit of Rimkus Building Consultants. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors, or assigns. Reliance is provided in accordance with AEI's Proposal and Standard Terms and Conditions executed by Rimkus Building Consultants on September 5, 2019. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

2.0 SITE AND VICINITY DESCRIPTION

2.1 SITE LOCATION AND DESCRIPTION

PROPERTY INFORMATION	
Subject Property Name	Office Building
Street Address(es)	514 Shatto Place
City	Los Angeles
State	California
Location	east side of Shatto Place
Vicinity Characteristics	Commercial
Approximate Site Acreage/Source	0.35/Los Angeles County Assessor's Office (LACAO)
Subject Property Type	Office
Subject Property Use(s)	Office
Assessor Parcel Number(s)	5077-004-025
SITE AND BUILDING INFORMATION	
Number of Buildings	1
Year(s) of Construction	1962
Number of Floors/Stories	4
Basement or Subgrade Area(s)	None identified
Number of Units	1
Building Area (SF)/Source	27,843/LACAO
Building Description(s)	Four-story, brick- and metal-frame, rectangular commercial building on a concrete slab foundation with composite roof
Building Occupant(s)	American Federation of State and County Municipal Employees (AFSCME) Union, as well as associated affiliates/ subsidiaries
Additional Improvements	None identified
Current On-site Operations	Administrative/office activities
Current Use of Hazardous Substances	None identified
UTILITY PROVIDER INFORMATION	
Natural Gas Provider	Southern California Gas
Electricity Provider	Los Angeles Department of Water and Power (LADWP)
Heating System Fuel Source	Natural gas
Cooling System Power Source	Electricity
Potable Water Provider or Source	LADWP
Sewage Disposal Provider or Treatment System	City of Los Angeles
REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Refer to Appendix A: Figures and Appendix B: Property Photographs for site location and description.

2.2 Site and Vicinity Characteristics

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	World Mission University (500 Shatto Place)	None
East	Multi-family residence and parking lot (511-519 Westmoreland Avenue)	None
South	New Covenant Academy (3119 West 6th Street)	532 Shatto (presumed-adjacent): UST
West	Shatto Place followed by offices (515 Shatto Place) and parking garage (523 Shatto Place)	523 Shatto: Los Angeles HAZMAT

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.3 Physical Setting

Geology: According to information obtained from the USGS, the area surrounding the subject property is underlain by nonmarine deposits of the Pleistocene era.

According to the United States Department of Agriculture's Report and General Soil Map for Los Angeles County, the area surrounding the subject property is underlain by soils of the Ramona-Placentia association. The soils of this association occur only in the Los Angeles basin. They are on gently sloping terraces between elevations from near sea level and 1,300 feet.

Ramona soils in the Los Angeles basin are over 60 inches deep, are well drained and have slow subsoil permeability. They are characterized by brown to reddish-brown, heavy loam, loam, or sandy loam surface layers about 18 inches thick. Subsoils are brown to reddish-brown, dense clay loam or clay about 30 inches thick. The substratum is brown to reddish-brown loam or light clay loam. Some subsoils may be stratified beds of silt to sand. Areas with up to 60 percent by volume stones and cobbles also occur. Available water holding capacity is 8.0 to 10.0 inches for 60 inches of soil depth. Water holding capacity is reduced by the percentage of coarse fragments in those areas containing stones and cobbles.

Placentia soils are over 18 inches deep, are moderately well drained and have very slow subsoil permeability. They are characterized by brown to reddish-brown loam or sandy loam surface layers abruptly underlain by a dense, dark reddish-brown, clay loam subsoil at about 18 inches. The substratum occurs at about 48 inches and is brown loam. The dense subsoil restricts the movement of air and water and the development of roots and is therefore considered limiting for effective soil depth. Occasional areas have subsoils composed mainly of gravelly deposits and some have an iron-cemented hardpan. Available water-holding capacity is about 2.0 to 2.5 inches for 18 inches of effective soil depth.

USGS Topographic Map:	Hollywood, CA, California Quadrangle
Nearest surface water to subject property:	MacArthur Lake Park/0.7 miles southeast
Gradient Direction/Source:	West/topographic map interpretation

Estimated Depth to Groundwater/Source:	20-30 feet bgs/groundwater monitoring data for nearby Shatto Investment Company site at 3151 West 6th Street, located approximately 200 feet southwest of the subject property
Wetlands:	No / National Wetlands Inventory
Flood Zone Information:	Zone X / Fema Map 06037C1610F dated September 26, 2008

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description/Use	Source(s)
1894-1907	Undeveloped	Sanborn Map, Historical Topographic Maps
1910-1962	Single-family residence (514 Shatto Place)	Aerial Photographs, Building Records, City Directories, Sanborn Maps
1962-Present	Office building (514 Shatto Place)	Aerial Photographs, Assessor's Record, Building Records, City Directories, Sanborn Maps, Interviews, Onsite Observations

Based on a review of historical sources, the subject property was originally developed with a single-family residence from 1910 to 1962, and was redeveloped with the current office building in 1962. The building has been used solely for office/administrative activities since construction. AEI did not identify potential environmental concerns in association with the current or historical use of the subject property.

3.2 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1923, 1928, 1938, 1948, 1952, 1954	Appears developed with a single-family residence	NORTH: Appears developed with a single-family residence EAST: Appears developed with single-family residences SOUTH: Appears developed with a single-family residence WEST: Appears developed with single-family residences beyond Shatto Place

Year(s)	Subject Property Description	Adjacent Site Descriptions
1964	The present-day office building is visible	NORTH: No significant changes visible EAST: No significant changes visible SOUTH: The present-day commercial building is visible WEST: The present-day commercial building is visible at 515 Shatto Place, as well as a parking lot
1972, 1977, 1981	No significant changes visible	NORTH: The present-day office building is visible EAST: No significant changes visible SOUTH: No significant changes visible WEST: The present-day commercial building and parking garage are visible
1989	No significant changes visible	NORTH: No significant changes visible EAST: The present-day commercial building and parking lot are visible SOUTH: No significant changes visible WEST: No significant changes visible
1994, 2002, 2005, 2009, 2012, 2016	No significant changes visible	No significant changes visible

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the aerial photograph review.

Copies of historical aerial photographs are provided in the report appendices.

3.3 Sanborn Fire Insurance Maps

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

The following maps were reviewed:

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Descriptions
1907	Depicted as a vacant lot	NORTH: Depicted as a vacant lot EAST: Depicted with a single-family dwelling and a vacant lot SOUTH: Depicted as a vacant lot WEST: Depicted with Shatto Place, followed by vacant lots

Year(s)	Subject Property Description (Listed Address)	Adjacent Site Descriptions
1921, 1950, 1954, 1955, 1961	Depicted with a single-family dwelling and freestanding garage (514 Shatto Place)	NORTH: Depicted with a single-family dwelling EAST: Depicted with single-family dwellings SOUTH: Depicted with a single-family dwelling WEST: Depicted with single-family dwellings
1968, 1970	Depicted with an office building (514 Shatto Place)	NORTH: Depicted with an office building EAST: No significant changes depicted SOUTH: Depicted with the First English Lutheran Church and Elementary School WEST: Depicted with offices and an open-deck garage

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the Sanborn map review.

Copies of historical Sanborn maps are provided in the report appendices.

3.4 City Directories

A search of historical city directories was conducted for the subject property utilizing EDR. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1924, 1929, 1933, 1937, 1942, 1951, 1958	Residential listings
1962	Phi Theta Pi International Fraternity
1964, 1970	Peck CL Contractor
1967, 1971, 1976, 1981, 1986, 1990, 1991, 1995, 2000, 2006, 2010, 2014	Office listings

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

Copies of historical city directories are provided in the report appendices.

3.5 HISTORICAL TOPOGRAPHIC MAPS

A search of historical topographic maps was conducted for the subject property utilizing NETR Online (www.historicaerials.com). Topographic maps were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1894, 1896, 1898, 1900, 1902, 1904, 1906, 1908, 1910, 1913, 1915	No structures or features depicted	NORTH: No structures or features depicted EAST: No structures or features depicted SOUTH: No structures or features depicted WEST: A road is shown in the current location of Shatto Place, followed by an area with no structures or features depicted
1921, 1928, 1931, 1932	Depicted with a structure resembling a residence	Depicted with structures resembling residences
1955, 1963, 1968, 1975, 1982, 1995	Shaded to indicate an area of urban development	NORTH: Shaded to indicate an area of urban development EAST: Shaded to indicate an area of urban development SOUTH: Depicted with a church WEST: Shaded to indicate an area of urban developmentstructures or features depicted

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the historic topographic map review.

Due to copyright considerations, historical topographic maps are not provided in the report appendices.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 Local Environmental Health Department and/or State Environmental Agency

On September 10, 2019, AEI accessed the Los Angeles County Fire Department (LACFD) website for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

Review of information on file for the subject property at the Los Angeles County Fire Department (LACFD) did not reveal current or prior use or storage of hazardous substances on site.

4.2 Fire Department

On September 10, 2019, AEI accessed the Los Angeles City Fire Department (LAFD) Hazardous Materials Unit (HMU) and Underground Storage Tank (UST) Division for information on the subject property to identify any evidence of previous or current hazardous substance usage and/ or for any historical information available for the subject property.

No records were on file for the subject property with the Los Angeles City Fire Department (LAFD).

Review of information on file for the subject property at the Los Angeles City Fire Department (LAFD) did not reveal current or prior use or storage of hazardous substances on site.

4.3 Building Department

On September 10, 2019, AEI accessed the Los Angeles Department of Building and Safety (LADBS) website for information on the subject property in order to identify historical tenants, features of concern and property use.

Please refer to the following table for a listing of permits reviewed:

Year(s)	Owner/Applicant	Description of Permit and Building Use
1910	WGS Hammond	Construct Class "D", nine-room residence
1949	Mrs. FT Woodman	Alter dwelling
1962	Frank Dutra Co.	Demolish dwelling
	Sanderling Equipment Co.	Construct four-story, 12,900-square-foot office building with brick and metal exterior, concrete slab, and composite roof

Year(s)	Owner/Applicant	Description of Permit and Building Use
1963	Sanderling Equipment Co.	Interior office partitions / office building
1971	Dow Jones	Alterations / office
1988	United Title Co.	Reroof Class B / office
2003	California District Council 36	Reroof / office

Evidence indicating current or prior use or storage of hazardous substances was not on file for the subject property with the Los Angeles Department of Building and Safety (LADBS).

According to the City of Los Angeles Department of Building & Safety and Department of Planning, the subject property is located near significant oil production areas known as "Methane Zones". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Due to the potential environmental risk associated with construction in Methane Zones, the property owner is required to conduct a methane assessment prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code). AEI recommends that a methane assessment be conducted for the subject property prior to any future redevelopment activities.

4.4 Planning Department

On September 10, 2019, AEI accessed the Los Angeles Planning Department (LAPD) website for information on the subject property in order to identify AULs associated with the subject property.

Evidence indicating the existence of AULs was not on file for the subject property with the Los Angeles Planning Department (LAPD).

4.5 County Assessor Office

On September 10, 2019, AEI accessed the Los Angeles County Assessor's Office (LACAO) website for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Los Angeles County assessor's office, the current building is associated with Assessor's Parcel Number (APN) 5077-004-025. The building totals 27,843 square feet on a 0.35 acre lot. The construction year is reported as 1962.

4.6 Oil and Gas Wells/Pipelines

On September 10, 2019, AEI reviewed the California Department of Oil, Gas and Geothermal Resources (DOGGR) maps and the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas development.

According to the California Department of Oil, Gas and Geothermal Resources (DOGGR) map, oil or gas wells are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

According to the NPMS Public Map Viewer, pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.7 Other Agencies Searched

On September 10, 2019 AEI accessed the California State Water Resources Control Board (SWRCB) GeoTracker database, a data management system for managing sites that impact groundwater, especially those requiring groundwater cleanup [USTs, Department of Defense, Site Cleanup Program] as well as permitted facilities such as operating USTs and land disposal sites. No information indicating any release of hazardous materials from the subject property was found on the GeoTracker website.

On September 10, 2019, AEI accessed the California Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information of investigation, cleanup, permitting, and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight. No information indicating any release of hazardous materials from the subject property was found on the EnviroStor website.

On September 10, 2019, AEI accessed the California Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS) online database for information pertaining to hazardous waste disposal associated with the subject property. The HWTS generates reports on hazardous waste shipments for generators, transporters, and treatment, storage or disposal facilities (TSDFs). No information indicating the generation of hazardous wastes was on file for the subject property with the DTSC HWTS.

On September 10, 2019 AEI contacted the South Coast Air Quality Management District (SCAQMD) for information regarding any records of PTO, NOV, or NTC issued to occupants of the subject property and associated with air emission equipment primarily related to stationary sources of air pollution, such as dry cleaning machines, boiler, and/or underground storage tanks. No information indicating the existence of any PTOs, NOVs, or NTCs was on file for the subject property with the SCAQMD.

On September 10, 2019, AEI contacted Los Angeles County Department of Public Works (LACDPW) for information on the subject property. No information was on record for the subject property with the LACDPW.

4.8 State Environmental Superliens and Property Transfer Laws

The NETR Online Environmental Lien and AUL State Statuses website was visited to determine if the State of California has environmental superlien and/or property transfer laws which would allow environmental authorities the right to place a first priority lien on the subject property.

According to the NETR Online Environmental Lien and AUL State Statuses website, the State of California does not have environmental superlien and/or property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources, Inc. (EDR) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix C of this report.

The subject property was not identified in the databases reviewed.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
SEMS (formerly CERCLIS)	0.5	No	0	
SEMS-ARCHIVE (formerly CERCLIS NFRAP)	0.5	No	1	No; based on the relative distance, inferred direction of groundwater flow, and the Archived status, the SEMS listing is not expected to constitute a significant environmental concern
RCRA CORRACTS	1	No	0	
RCRA-TSDF	0.5	No	0	
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	0	
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
STATE/TRIBAL HWS	1	No	32	No; based on the relative distance, the regulatory status, and/or the inferred direction of groundwater flow, these listings are not expected to constitute a significant environmental concern.
STATE/TRIBAL SWLF	0.5	No	0	
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	1	A listing for the south-adjacent site is discussed below
STATE/TRIBAL LUST	0.5	No	23	No; based on the relative distance, the regulatory status, and/or the inferred direction of groundwater flow, these listings are not expected to constitute a significant environmental concern.
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	2	No; none of the identified orphan sites are located in the immediate vicinity (500-feet) of the subject property, and/or based upon the distance and relative gradient, the sites are not expected to represent a significant environmental concern.
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	1	The west-adjacent site at 523 Shatto Place is identified as a Los Angeles Co. HAZMAT site, as discussed below.

Facility Name: La County - Facilities Management
Database(s): Los Angeles Co. HAZMAT Address: 523 Shatto Place Distance: Adjacent Direction: West (hydrologically downgradient)
Comments: This facility is registered with the LAFD for the storage and/or use of hazardous substances or the generation of hazardous wastes (Facility ID FA0009322). No hazardous releases have been reported from this site. No releases have been reported. Prior reports prepared for the south adjacent property and provided to AEI by the client indicate that one 10,000-gallon gasoline tank was formally located approximately 80 feet from the property, along the eastern portion of 523 Shatto Place, and no contamination was reported at the time of removal of the UST. Based on this information, this listing is not expected to constitute a significant environmental concern.

Facility Name: Not listed
Database(s): CA UST Address: 532 Shatto Place Distance: Adjacent Direction: South (hydrologically cross-gradient)
Comments: This address refers to the south-adjacent property, also addressed as 3119 West 6th Street and 550 Shatto Place. According to listing details, at least one UST was historically located on this property. No releases from the tank have been reported. No evidence of a UST was noted during the site inspection at this adjacent property. AEI was provided a copy of a Phase I ESA and Phase II ESA conducted at this adjacent property by the client. The Phase I ESA (dated October 3, 2017) did not identify this UST. However, the Phase I identified that the site is located within a methane zone as defined by the LA DBS. The Phase II ESA was prepared by HMC on September 20, 2018 to address issues identified in a subsequent Phase I ESA performed at the 532 Shatto Place property by AEI for others. The Phase II ESA was completed to assess whether elevated concentrations of volatile organic compounds (VOCs) and methane gas were present beneath the 532 Shatto site, to evaluate the chemical composition of soil that would be excavated for disposal purposes, and to assess the concentrations of gasoline contaminants that might be present in groundwater from a former west adjacent filling station at 3151 West 6th Street, located over 190 feet southwest and downgradient of the current property. The soil investigation included the advancement of six soil borings throughout the adjacent site. Laboratory results of soil samples collected at 10 and 20 feet bgs indicated no detectable concentrations of petroleum hydrocarbons and VOCs, and no detectable to low concentrations of metals. Based on these results, these soils would be considered non-hazardous waste when excavated and disposed of during construction activities. Groundwater samples were collected from two soil borings in the southern portion of the adjacent property and one soil boring advanced in the northern portion, closest to the current subject property location. Laboratory results of groundwater samples indicated elevated concentrations of gasoline and gasoline constituents, such as benzene and toluene, with lesser concentrations in the northern portion of the adjacent property. AEI compared the groundwater results in the well closest to the current subject property (location AB6), with the current CA Environmental Screening Levels (ESLs) (January 2019). The levels of constitutions identified in groundwater (ethyl benzene, toluene, 1,2,4-TMB and total xylenes) were not reported above the current ESLs for commercial use or MCLs. This includes the groundwater vapor intrusion human health risk levels. Based upon this information, the constituents in groundwater reported at the south adjacent property are not considered a REC to the current subject property. Please note, if the use if the property changes from commercial to residential, then additional assessment may be warranted. Based on this information, the former presence of the UST(s) is considered a significant environmental concern.

5.2 Vapor Migration

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner, represented by Ms. Mirabel Alvaringa of AFSCME, was interviewed during the site inspection on September 12, 2019. Ms. Alvaringa has been associated with the subject property since 2010. Ms. Alvaringa stated that the building had been constructed in 1962 for its present office use. Ms. Alvaringa was asked if she was aware of any of the following:

	Yes	No
Any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features.		✔
Any knowledge of previous environmental investigations conducted on site.		✔
Any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products.		✔
Any known plans for site redevelopment or change in site use.		✔
Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		✔
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		✔
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		✔

6.1.2 INTERVIEW WITH KEY SITE MANAGER

Ms. Mirabel Alvaringa, the representative for the subject property owner, was also the key site manager. Refer to Section 6.1.1 for discussion of the interview with Ms. Alvaringa.

6.1.3 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 User Provided Information

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.2.1 Environmental Liens

In accordance with our approved scope of services, AEI contracted EDR (EDR) to perform an environmental lien search for the subject property. According to EDR, environmental liens were not identified during the review of historical ownership documentation. EDR identified the current site owner as American Federation of State County & Muni Employees Dist Council 36, who obtained ownership on June 15, 2010 from CA Dist Council 36 of the Am Fed of St CO & Muni E. Historical owners of potential environmental concern were not identified during the review of the EDR report. A copy of the EDR report is provided in the appendices.

6.3 Previous Reports and Other Provided Documentation

Documentation was provided to AEI during this assessment. A summary of this information follows:

Limited Asbestos & Lead Based Paint Assessment, 514 Shatto Place, Los Angeles, CA 90020, prepared by EFI Global (September 11, 2019)

A total of 60 bulk samples of suspect asbestos-containing materials (ACMs) were collected and submitted for PLM analysis. Sampling was conducted on the roof, exterior, ground floor parking garage, 50% of the 2nd floor, 95% of the 3rd floor, and all of the 4th floor. Interior access was limited to due rooms/offices being locked by their tenants.

The following materials were found to contain asbestos above 1% and are to be treated as ACMs:

- Thermal pipe insulation in the parking garage;
- 9" x 9" beige vinyl floor tiles and associated mastic in the 3rd floor storage area and north and south stairwells; and,
- White penetration/parapet mastic on the roof.

It should be noted that the exterior stucco was reported with race amounts of ACM (not greater than 1%). Although not considered an ACM, in California, this material meets the definition of ACCM and should be handled in accordance with applicable CalOSHA regulations. EFI stated

that due to the occupancy of the property during the site inspection, a follow-up inspection may be warranted to inspect inaccessible areas if materials not covered in the assessment are identified in those areas.

A total of 157 XRF readings were collected to test painted and coated surfaces for lead-based paint (LBP). None of the painted components tested by XRF were found to contain lead at levels at or above the respective limits considered to be LBP.

A demolition-level lead survey was recommended prior to major renovation or demolition activities. It was also noted that if materials found to contain asbestos or presumed to contain asbestos may be impacted during renovation or demolition activities, the work must be performed by a licensed asbestos abatement contractor to properly remove said materials prior to such work.

Limited Mold Assessment and Sampling Letter, 514 Shatto Place, Los Angeles, CA 90020, EFI Global (September 13, 2019)

EFI Global made visual assessments and collected moisture readings at the subject property. Water damage was observed in multiple areas of the property, including on 2-foot by 4-foot drop ceiling panels, around windows, along exterior walls, and in areas where roof drainage down-spouts were located. No elevated moisture readings were detected.

The report conclusions state that water intrusion issues were noted in various areas of the property, specifically on the 3rd and 4th floors. The cause of the water intrusion was unknown, but was thought most likely to be due to roof leaks or roof drainage issues. It was recommended that care be taken during any renovation/demolition activities in the areas noted to ensure that construction employees be protected from potential exposure to mold spores. Of note, AEI did not observe the areas of water damage reported in the EFI report. Regardless, since no visual mold was identified and no elevated moisture readings were noted, the areas observed are not immediate health concerns and can be repaired during routine building operations. The source of the water infiltration should also be ascertained and repaired during routine maintenance.

Copies of the reports are included in the appendices.

Note: If the above documentation was not prepared by AEI, the information obtained was not verified for accuracy and a critique of the information contained therein is beyond the scope of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	September 12, 2019
AEI Site Assessor(s)	Brant Rotnem
Property Escort(s)/Relationship(s) to Property	Ms. Mirabel Alvaringa
Units/Areas Observed	All accessible interior and exterior areas
Area(s) not accessed and reason(s)	N/A
Weather	Sunny and clear

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
✔		Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground Hazardous Substance or Petroleum Product Storage Tanks (ASTs)
	✔	Underground Hazardous Substance or Petroleum Product Storage Tanks (USTs)
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
✔		Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Interior Stains or Corrosion
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
	✔	Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
	✔	Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Biomedical Wastes
	✔	Dry Cleaners
✔		Other

The subject property is currently occupied by the American Federation of State and County Municipal Employees (AFSCME) On-site operations consist of administrative/office activities.

REGULATED HAZARDOUS SUBSTANCES/WASTES AND/OR PETROLEUM PRODUCTS IN CONNECTION WITH PROPERTY USE

Regulated Hazardous Substances/Wastes(size/ quantity)	Location	Operations Associated with Material	Secondary Containment	Staining/ Spills

Hydraulic oil (five-gallon/1)	Elevator equipment room	Elevator maintenance	No	No

Based on the lack of a documented release, and the lack of evidence of the mismanagement, these materials are not expected to represent a significant environmental concern.

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

Type	Quantity	Owner	Presumed Date of Installation	Spills or Stains Observed (Yes/No)	Non-PCB Label (Yes/No)
Interior	1	LADWP	1962	No	No

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Transformers installed prior to 1977 may be PCB containing while transformers installed after 1977 are unlikely to be PCB containing. Federal Regulations (40 CFR 761 Subpart G) require any release of material containing >50 ppm PCB and occurring after May 4, 1987, be cleaned up by the transformer owner following the United States EPA's PCB spill cleanup policy.

The transformer observed was a dry-type transformer with no dielectric fluids. Therefore, it is not an environmental concern.

Elevators

The subject property building is equipped with a hydraulic elevator. The hydraulic fluid contained within elevator systems can potentially contain toxic PCBs. Based on the construction date of the building (pre-1978), the potential exists that hydraulic fluid within the equipment may have contained PCBs. No evidence of stains or leaks was observed at the base of the equipment during the site reconnaissance. The elevator pit was not observed. Based on the good condition and regular maintenance of the elevator, it is not expected to represent a significant environmental concern.

OTHER

Cleaning supplies are stored in a maintenance storage closet within the building. All chemicals were packaged in consumer quantities. Based on the nature of these materials, the presence of cleaning supplies at the subject property is not expected to represent a significant environmental concern.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✔	Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✔	Aboveground Hazardous Substance or Petroleum Product Storage Tanks (ASTs)
	✔	Underground Hazardous Substance or Petroleum Product Storage Tanks (USTs)
	✔	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✔	Unidentified Substance Containers
	✔	Electrical or Mechanical Equipment Likely to Contain Fluids
	✔	Strong, Pungent, or Noxious Odors
	✔	Pools of Liquid
	✔	Drains, Sumps, and Clarifiers
	✔	Pits, Ponds, and Lagoons
	✔	Stained Soil or Pavement
	✔	Stressed Vegetation
	✔	Solid Waste Disposal or Evidence of Fill Materials
	✔	Waste Water Discharges
	✔	Wells
	✔	Septic Systems
	✔	Dry Cleaners
	✔	Other

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Asbestos is the name for a group of naturally occurring silicate minerals that can be separated into fibers. The fibers are strong, durable, and resistant to heat and fire. They are also long, thin and flexible, so they can even be woven into cloth. Because of these qualities, asbestos has been used in thousands of consumer, industrial, maritime, automotive, scientific and building products. During the 20th century, some 30 million tons of asbestos have been used in industrial sites, homes, schools, shipyards and commercial buildings in the United States. Commercial use of ACM began in the early 1900s and peaked in the period between 1940 and into the 1970's. Common ACMs include pipe-covering, insulating cement, insulating block, refactory and boiler insulation materials, transite board, fireproofing spray, joint compound, vinyl floor tile, ceiling tile, mastics, roofing products, and duct insulation for HVAC applications. Inhalation of asbestos fibers can result in deleterious health effects.

The potential for ACM was evaluated based the United States EPA Guidance Document: *Managing Asbestos in Place - A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials* ("Green Book"). In 1973, NESHAPS banned the use of most spray-applied surfacing ACM, specifically asbestos containing spray-on fireproofing and insulation. Subsequent revisions to this regulation in 1975 and 1978 effectively eliminated the use of friable pre-molded pipe, boiler, turbine, and duct insulation; and the spray application of friable asbestos-containing materials for all uses in buildings. In 1989, the EPA issued regulations to ban some asbestos-containing products and phase out most others over a multi-year period. The "Ban and Phase-Down" rule was challenged in court and the regulation remanded to the agency. As a result, any asbestos-containing products then "in commerce" would not be banned. Those not in commerce would be banned. Those materials "banned" could not be sold. It did not affect such materials already installed, or in use. Most United States firms voluntarily ceased production of asbestos containing building materials not covered by the aforementioned Federal bans by the mid-1980s. In 1994, the OSHA determined that employers and building owners are required to treat installed thermal system installation and sprayed on and troweled-on surfacing materials, as well as vinyl or asphalt flooring material, as ACM in buildings constructed no later than 1980 until tested by laboratory analysis to prove otherwise.

The information below is for general informational purposes only and does not constitute an asbestos survey. In addition, the information is not intended to comply with federal, state or local regulations in regards to ACM.

An asbestos survey was completed for the subject property by EFI Global on September 11, 2019. A total of 60 samples of suspect ACM were collected and submitted for analysis. Refer to Section 6.3 for additional discussion.

8.2 LEAD-BASED PAINT

Lead-based Paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has ≥1 mg/cm² (5,000 µg/g or 5,000 ppm) or more of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm² to 2.0 mg/cm². Section 1017 of the Housing and Urban Development (HUD) Guidelines, Residential

Lead-Based Paint Hazard Reduction Act of 1992, otherwise known as "Title X", defines a LBP hazard as "any condition that causes exposure to lead that would result in adverse human health effects" resulting from lead-contaminated dust, bare, lead-contaminated soil, and/or lead-contaminated paint that is deteriorated or present on accessible, friction, or impact surfaces. Therefore, under Title X, intact LBP on most walls and ceilings would not be considered a "hazard", although the paint should be maintained and its condition monitored to ensure that it does not deteriorate and become a hazard. Additionally, Section 1018 of this law directed HUD and EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978. Most private housing, public housing, or federally owned or subsidized housing is affected by this rule.

LBP is defined as any paint with any detectable amount of lead present in it. It is important to note that LBP may create a lead hazard when being removed. The condition of these materials must be monitored when they are being disturbed. In the event LBP is subject to abrading, sanding, torching, and/or cutting during demolition or renovation activities, there may be regulatory issues that must be addressed.

The information below is for general informational purposes only and does not constitute a lead hazard evaluation. In addition, the information is not intended to comply with federal, state, or local regulations in regards to LBP.

In buildings constructed after 1978, it is unlikely that LBP is present. Structures built prior to 1978 and especially prior to the 1960s should be expected to contain LBP.

Due to the date of construction (pre-1978), LBP may be present. All painted surfaces were observed to be in good condition with no chalking, peeling or flaking. Since the subject property is not used for residential use, lead-based paint is not considered to be a significant concern.

In addition, on September 11, 2019, EFI Global performed a lead survey at the subject property.

A total of 157 XRF readings were collected to test painted and coated surfaces for lead-based paint (LBP). None of the painted components tested by XRF were found to contain lead at levels at or above the respective limits considered to be LBP. Based on the results of the survey, LBP is not expected to constitute a significant environmental concern. Refer to Section 6.3 for additional discussion.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three

zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA. Based upon the non-residential nature of the non-residential nature of the site, radon is not an issue.

8.4 Drinking Water Sources and Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. The subject property is located within the Central Los Angeles Communities, which obtains water from several sources. Sources include the Metropolitan Water District (MWD) State Water Project, which distributes water purchased from the Sacramento-San Joaquin River Delta; the Los Angeles Aqueduct, which transports water from the Owens River in the Eastern Sierra Nevada Mountains, and local groundwater sources. According to the City of Los Angeles and the 2016 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards. Samples of uranium and arsenic exceeded state Preliminary Health Goals (PRGs); however, all samples were within the State Primary Standard (MCL). Of 110 samples analyzed for copper and lead, four were above the Action Limit (AL) for lead, and none was above for copper. Water sampling was not conducted to verify water quality.

8.5 Mold

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property building to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage; however, on September 13, 2019, EFI Global performed a Limited Mold Assessment on the subject property which identified areas of water damage. It is likely these areas of the building were not specifically part of the building observed by AEI. Refer to Section 6.3 for additional discussion.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems, and behind enclosed walls and ceilings, may be present on the subject property

9.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

9.1 FINDINGS

9.1.1 RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of RECs in connection with the subject property.

9.1.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

This assessment has revealed no evidence of CRECs in connection with the subject property.

9.1.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

This assessment has revealed no evidence of HRECs in connection with the subject property.

9.1.4 OTHER ENVIRONMENTAL CONSIDERATIONS (NON-ASTM SCOPE)

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment also included Other Environmental Considerations identified at Section 8.0. The following related Issues of concern were identified:

- Based on a prior asbestos survey conducted by others (September 11,2019), asbestos was identified at the property. The building materials were in good condition and can be effectively managed as part of an asbestos Operations and Maintenance (O&M) Plan until such time as renovation or demolition activities necessitate their removal. An O&M Plan was not in place at the Property.
- According to the City of Los Angeles Department of Building & Safety and Department of Planning, the subject property is located near significant oil production areas known as "Methane Zones". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Due to the potential environmental risk associated with construction in Methane Zones, the property owner is required to conduct a methane assessment prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code). AEI recommends that a methane assessment be conducted for the subject property prior to any future redevelopment activities.

9.2 Conclusions

AEI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 514 Shatto Place, Los Angeles, Los Angeles County, California, the Property. Any exceptions to or deletions from this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the subject property.

Other Environmental Considerations include, but are not limited to, de minimis conditions and/ or business environmental risks such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in the ASTM Standard. These may also affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment also included Other Environmental Considerations identified at Section 8.0. The following related Issues of concern were identified:

- Based on a prior asbestos survey conducted by others (September 11,2019), asbestos was identified at the property. The building materials were in good condition and can be effectively managed as part of an asbestos Operations and Maintenance (O&M) Plan until such time as renovation or demolition activities necessitate their removal. An O&M Plan was not in place at the Property.
- According to the City of Los Angeles Department of Building & Safety and Department of Planning, the subject property is located near significant oil production areas known as "Methane Zones". Methane Zone sites include properties immediately surrounding gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Due to the potential environmental risk associated

with construction in Methane Zones, the property owner is required to conduct a methane assessment prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

9.3 RECOMMENDATIONS

Based on this assessment, AEI recommends the following:

- Given the good condition of the identified OR suspect ACM, these materials can be effectively managed as part of an asbestos O&M Plan until such time as renovation or demolition activities necessitate their removal. The objective of an O&M Plan is to implement a practical management approach to controlling identified ACM within the subject property. The O&M Plan is designed to cleanup existing contamination, minimize future fiber release by controlling disturbance of ACM, and monitor the condition of the ACM until it is removed.
- AEI recommends that a methane assessment be conducted for the subject property prior to any future redevelopment activities.

10.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 28 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 23 CA LUST sites within

approximately 0.5 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 17 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 17 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto

sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 3 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002852976

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002899187

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Date: 05-04-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by KYLING KWAN - MANAGER. CONTACT INFORMATION: MGR.05879@STORE.WALGREENS.COM Observed

WALGREENS #5879 (Continued) **S113149168**

the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D024
. Waste name: M-CRESOL

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

. Waste code: U034
. Waste name: ACETALDEHYDE, TRICHLORO- (OR) CHLORAL

WALGREENS #5879 (Continued) **1016954313**

. Waste code: U165
. Waste name: NAPHTHALENE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 602

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 217

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 70

Waste code: D009
Waste name: MERCURY
Amount (Lbs): 29

Waste code: D010
Waste name: SELENIUM
Amount (Lbs): 70

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Amount (Lbs): 10

Waste code: P075
Waste name: NICOTINE, & SALTS
Amount (Lbs): 5

Waste code: U165
Waste name: NAPHTHALENE
Amount (Lbs): 1

Evaluation:

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	02-23-2018
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	Inspection Report Consent to enter, inspect and take photographs was given by: Ernesto Martinez Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. No violations found at time of inspection 2. Thank you for providing your 2018 CERS submittal NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. For new CERS users, please follow the procedures below: 1. Log in to [Truncated]

FINDS:

Registry ID: 110002870509

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002633801

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air

UNITED STATES BORAX & CHEM CORP (Continued) **1000399305**

pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002710095

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

RITE AID NO 5425 (Continued) **1016955100**

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 07/30/2014
Site name: RITE AID NO 5425
Classification: Large Quantity Generator

Hazardous Waste Summary:

. Waste code: 122
. Waste name: Alkaline solution without metals (pH > 12.5)

. Waste code: 131
. Waste name: Aqueous solution (2 < pH < 12.5) containing reactive anions (azide, bromate, chlorate, cyanide, fluoride, hypochlorite, nitrite, perchlorate, and sulfide anions)

. Waste code: 141
. Waste name: Off-specification, aged, or surplus inorganics

. Waste code: 214
. Waste name: Unspecified solvent mixture

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 232
. Waste name: Pesticides and other waste associated with pesticide production

. Waste code: 261
. Waste name: Polychlorinated biphenyls and material containing PCB’s

. Waste code: 291
. Waste name: Latex waste

. Waste code: 311
. Waste name: Pharmaceutical waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

RITE AID NO 5425 (Continued) **1016955100**

. Waste code: 343
. Waste name: Unspecified organic liquid mixture

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 541
. Waste name: Photochemicals / photo processing waste

. Waste code: 561
. Waste name: Detergent and soap

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D009
. Waste name: MERCURY

. Waste code: D010
. Waste name: SELENIUM

. Waste code: D011
. Waste name: SILVER

. Waste code: D024
. Waste name: M-CRESOL

. Waste code: D026
. Waste name: CRESOL

. Waste code: P001
. Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3% (OR) WARFARIN, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

. Waste code: P075
. Waste name: NICOTINE, & SALTS (OR) PYRIDINE, 3-(1-METHYL-2-PYRROLIDINYL)-,(S)-, & SALTS

. Waste code: U165
. Waste name: NAPHTHALENE

. Waste code: U188
. Waste name: PHENOL

. Waste code: U279
. Waste name: CARBARYL (OR) 1-NAPHTHALENOL, METHYLCARBAMATE

FINDS:

Registry ID: 110002715553

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

CERS Description: Hazardous Waste Generator

Violations:
Site ID: 153300
Site Name: Geneva Cho, LLC
Violation Date: 03-29-2018
Citation: 23 CCR 16 2715(c) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)
Violation Description: Failure to comply with one or more of the following designated operator (DO) monthly inspection requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(f)(2).
Violation Notes: Returned to compliance on 04/18/2018.

- Classification: Large Quantity Generator

- Date form received by agency: 01/19/1981
- Site name: PACIFIC BELL
- Classification: Large Quantity Generator

- Violation Status: No violations found

FINDS:

- Registry ID: 110002951226

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type: Operations and Maintenance Report
Completed Date: 04/02/2014
Comments: DTSC provided comments on the Report and requested such be addressed during field work and/or in monitoring reports. DTSC also concurred with the recommendations to continue O&M activities on an annual basis (with the next event to be conducted during winter recess at the end of 2014).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/25/2015
Comments: DTSC reiterated previous comments that were not addressed in the Report and requested a response to comments be provided by March 9, 2015. DTSC also concurred with the recommendations to service the supplied air system in the electrical room and to continue O&M activities on an annual basis (with the next event to be conducted during winter recess in January 2016).

FINDS:

Registry ID: 110012247899

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Document Type:	* Discovery
Completed Date:	06/20/1991
Comments:	From EPA CERCLA PA fit report. Site is located in three lots. 1) 218 N. Juanita Avenue: the site currently leased by Lynde-Ordnay Co., Inc. Carroll Trust has owned since 1940s and LOC leased it since then. 1990 geophysical surveys located three underground tanks on the

TRUST SERVICES OF AMERICA (Continued) **1000387420**

property. 2) 220 N. Juanita Avenue: it is currently a vacant lot. The Parker Judge owned in 1938. Paint Engineers owned and operated in 1946. Carroll Trust since 1953. 3) 222 N. Juanita Avenue: Hansen's Juices leased it since 1989. The Los Angeles unified school district conducted Phase I & II investigations to purchase the property. Revealed petroleum contamination in the soil. Stoddard solvent was detected in the soil. The highest level was 4500 mg/kg volatile organics and chlorinated hydrocarbons were also detected in the soil. Contamina- tion has also been detected in the groundwater. FIT recommended NFA for EPA. Medium priority PEA required.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/19/2019

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 06/11/2019

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:
Source: American Hospital Association, Inc.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

411477 - LOS ANGELES, CA
514 SHATTO PLACE
LOS ANGELES, CA 90020

TARGET PROPERTY COORDINATES

Latitude (North):	34.064655 - 34° 3' 52.76''
Longitude (West):	118.289445 - 118° 17' 22.00''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	381006.4
UTM Y (Meters):	3769880.2
Elevation:	267 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

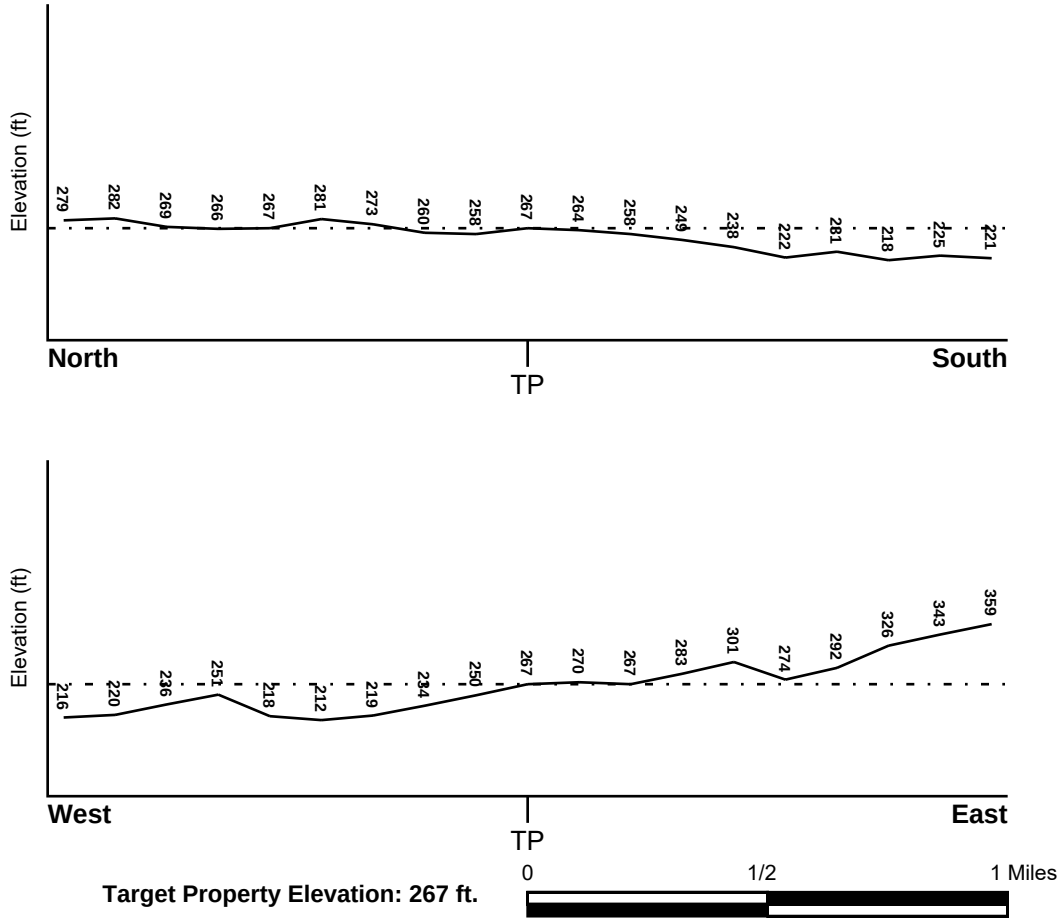
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1610F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1620F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/4 - 1/2 Mile NNW	SW
A2	1/4 - 1/2 Mile NW	Varies
A3	1/4 - 1/2 Mile NW	Not Reported
4	1/2 - 1 Mile SW	SW
5	1/2 - 1 Mile North	Not Reported
B6	1/2 - 1 Mile East	Not Reported
B7	1/2 - 1 Mile East	Not Reported
1G	1/2 - 1 Mile North	Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2G	1/4 - 1/2 Mile NNW	SW
3G	1/4 - 1/2 Mile NW	Varies
4G	1/4 - 1/2 Mile NW	Not Reported
5G	1/2 - 1 Mile East	Not Reported
6G	1/2 - 1 Mile East	Not Reported
7G	1/2 - 1 Mile SW	SW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam

silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

WELL SEARCH DISTANCE INFORMATION

DATABASE	SEARCH DISTANCE (miles)
Federal USGS	1.000
Federal FRDS PWS	Nearest PWS within 1 mile
State Database	1.000

FEDERAL USGS WELL INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No Wells Found		

FEDERAL FRDS PUBLIC WATER SUPPLY SYSTEM INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No PWS System Found		

Note: PWS System location is not always the same as well location.

STATE DATABASE WELL INFORMATION

MAP ID	WELL ID	LOCATION FROM TP
No Wells Found

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

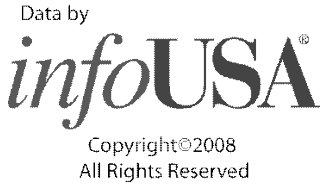
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

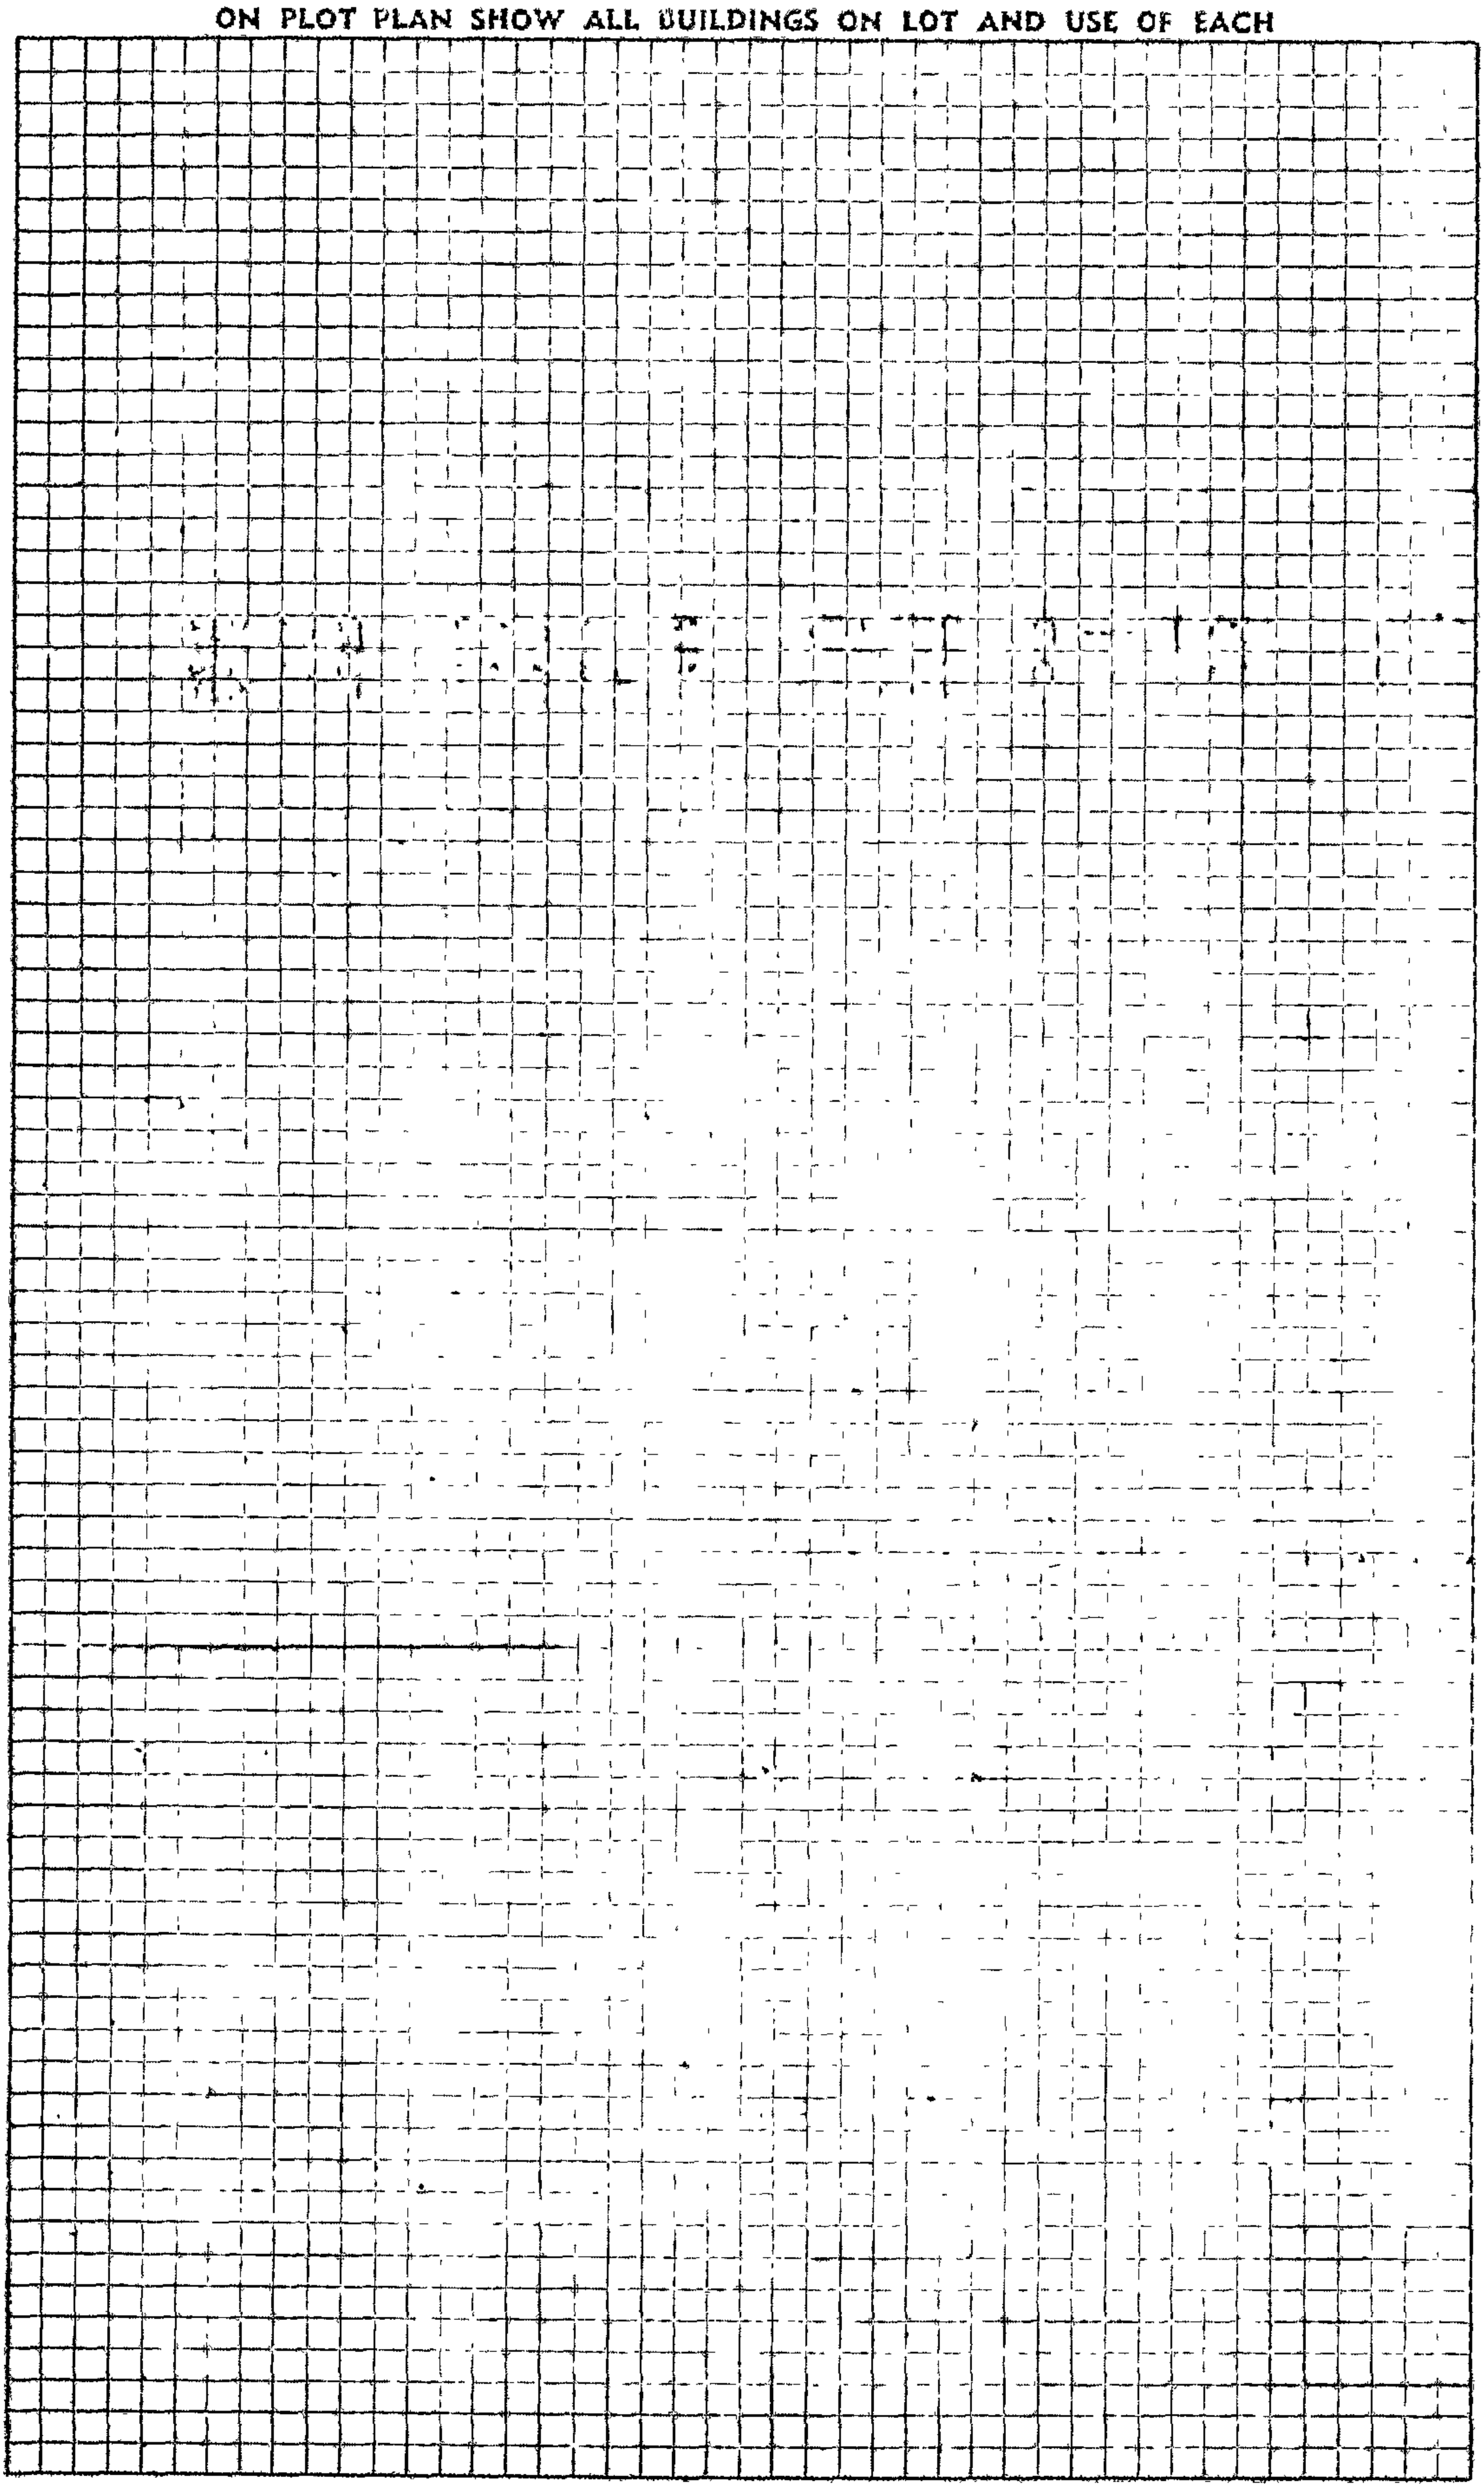
STATEMENT OF RESPONSIBILITY

I certify that in doing the work authorized hereby I will not employ any person in violation of the Labor Code of the State of California relating to workmen's compensation insurance.



"This permit is an application for inspection, the issuance of which is not an approval or an authorization of the work specified herein. This permit does not authorize or permit, nor shall it be construed as authorizing or permitting the violation or failure to comply with any applicable law. Neither the City of Los Angeles, nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein, or the condition of the property or soil upon which such work is performed." (See Sec. 91.0202 L.A.M.C.)

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 10 27 Lic Class C53 Lic. Number 478585 Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner's Signature _____

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No 07 5 / 1954-88 Insurance Company ST. FUND

☒ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date 10/27/88 Applicant's Signature _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant's Signature _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. PERMIT EXPIRATION

This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by the Dept. of Building & Safety (Sec. 22.12 & 22.13 LAMC).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. If doing work on a residential property, I certify that I hold a valid certification as a Home Improvement contractor per Business and Professions Code, Section 7150.2c. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **C39** Lic. No.: **653239** Contractor: **AMERI TECH CONSTRUCTION, INC.**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(__) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(**X**) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **STATE COMPENSATION INSURANCE** Policy Number: **1703749-2002**

(__) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION

I certify that notification of asbestos removal is either not applicable or was sent to the AQMD or EPA as per section 19827.5 of the Health and Safety Code.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).

Lender's name (if any):_____ Lender's address:_____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration, Construction Lending Agency Declaration and Final Declaration; and

(2) This permit is being obtained with the consent of the legal owner of the property.

SUPPLEMENTAL NOTES: _____

IMPORTANT NOTICE

* **Prior to the start of any construction work adjacent to any public way, pedestrian protection shall be provided (Sec. 91.3303 L.A.M.C.).**
* Inspection(s) may be requested anytime via the Internet or touch tone phone. To request an inspection via the Internet, go to www.ladbs.org and click the "Inspection" link. To request an inspection via touch tone phone, call toll free (888) LA4BUILD (888-524-2845) and select option 1 for the Automated Inspection Request System. To request an inspection via the Customer Call Center between 7:00 a.m. and 5:00 p.m., select option 2. Outside LA County, call (213) 482-0000.
* When requesting an inspection, the following information may be requested: job address, type of inspection, use of building, 15 digit permit number and a contact phone number of the person who can be reached on the day of the inspection. Inspection request(s) received by the Customer Call Center before 2:00 p.m. or Internet or Automated Inspection Request System before 3:00 p.m. can be requested for the following business day. An automated system will attempt to telephone the contact phone number before 10:00 a.m. on the day of the inspection.
* Permit fees provide for a limited number of inspections. A re-inspection fee may be assessed when the work for which an inspection was requested is not ready, when inspection records are not available, or where no site access is made available.
* **No person shall perform any construction or repair work between the hours of 9:00 p.m. (6:00 p.m. grading) and 7:00 a.m. the following day which results in loud noises to the disturbance of persons occupying sleeping quarters in any dwelling, hotel, motel, apartment, or other place of residence (Sec. 41.40 L.A.M.C.).**
* No person, other than an individual homeowner engaged in the repair or construction of his/her single-family dwelling, shall perform any construction or repair work of any kind upon any building or structure located on land developed with residential buildings or perform work within 500 feet of land so occupied, before 8:00 a.m. or after 6:00 p.m. on any Saturday or at any time on Sunday (Sec. 41.40 L.A.M.C.).
* Dust control measures to prevent dust from being blown or deposited over or upon any private property in any residential area must be implemented during any excavation or earth-moving phase of construction, sand blasting, or demolition.
* Building permits are valid for two years or expire on the 180th day from the date of issuance if the work permitted has not commenced. The Department reserves the right to expire any permit where work has been suspended for a period of 180 days.
* Inspection services will not be provided when there is an unleashed dog on the premises.

Additional action required (i.e.: additional site assessment, remediation, monitoring): **NO**		

IX. COMMENTS AND JUSTIFICATION FOR RECOMMENDED ACTION

SITE HISTORY:

The Shatto Investment site is located at 3151 West Sixth Street in the City of Los Angeles. The site is currently occupied by an automobile repair shop. The site is located in a mixed residential and retail area.

In November 1989, three underground storage tanks of unknown size and contents, dispensers, and associated piping were removed. There are no records indicating that soil samples were collected.

In 1990, two soil borings (B-1 and B-2) were advanced and four groundwater monitoring wells (MW-1 through MW-4) were installed. The maximum depth sampled was 25.0 feet bgs. The maximum TPH_G and benzene concentrations reported were 810 mg/kg (TPH_G – 20.0 feet bgs) and 3.2 mg/kg (benzene – 25.0 feet bgs), respectively. Soil samples were not analyzed for MTBE or TBA.

Between October 1996 and May 1997, eight soil borings (GP-1 through GP-8) were advanced and five groundwater monitoring wells (MW-5, MW-6, and MW-8 through MW-10) were installed. The maximum depth sampled was 25.0 feet bgs. The maximum TPH_G, benzene, and MTBE concentrations reported were 5,400 mg/kg (TPH_G – 25.0 feet bgs), 1.4 mg/kg (benzene - 25.0 feet bgs), and 1.6 mg/kg (MTBE – 25.0 feet bgs), respectively. Soil samples were not analyzed for TBA.

Between December 2001 and May 2002, a dual phase extraction (DPE) system was operating at the site. Approximately 741 pounds of petroleum hydrocarbons and 134,450 gallons of petroleum hydrocarbon impacted groundwater were removed from beneath the site.

In November 2002, six confirmation soil borings (LE-1 through LE-6) were advanced. The maximum depth sampled was 20.0 feet bgs. The maximum TPH_G and TBA concentrations reported were 24.0 mg/kg (TPH_G – 5.0 feet bgs) and 0.136 mg/kg (TBA - 15.0 feet bgs), respectively. All soil samples reported non-detect concentrations for benzene and MTBE.

In December 2003, two groundwater monitoring wells (MW-11 and MW-12) were installed. The maximum depth sampled was 25.0 feet bgs. All soil samples reported non-detect concentrations for TPH_G, benzene, MTBE, and TBA.

In April 2006, six ozone sparge wells (OZ-1 through OZ-6) were installed. The maximum depth sampled was 34.0 feet bgs. The maximum TPH_G, benzene, MTBE, and TBA concentrations reported were 5,000 mg/kg (TPH_G – 65.0 feet bgs), 0.95 mg/kg (benzene – 24.0 feet bgs), 0.005 mg/kg (MTBE – 29.0 feet bgs), and 0.216 mg/kg (TBA – 29.0 feet bgs), respectively.

Between June 2006 and April 2007, site remediation consisted of ozone sparging.

The groundwater flow direction is westerly. The depth to groundwater is approximately 19.65 feet bgs to 27.22 feet bgs. There are twelve groundwater monitoring wells associated with the site. Quarterly groundwater monitoring began in April 1990 (Second Quarter 1990) and continued through December 2008 (Fourth Quarter 2008). Historically, the maximum TPH_G, benzene, MTBE, and TBA concentrations reported were 130,000 µg/L (TPH_G), 4,060 µg/L (benzene), 520 µg/L (MTBE), and 12,000 µg/L (TBA), respectively. Currently, the maximum TPH_G, benzene, MTBE, and TBA concentrations reported are 5,680 µg/L (TPH_G), 22.6 µg/L (benzene), 9.06 µg/L (MTBE), and 1,740 µg/L (TBA), respectively.

Historically, free product was reported in groundwater monitoring wells MW-3 and MW-9. The maximum free product reported was 0.47 feet in groundwater monitoring well MW-3 (September 1996). Free product was last reported in September 2001.

In addition, all groundwater samples were analyzed for the full suite of volatile organic compounds (VOCs). Test results reported low to non-detect concentrations for all VOCs with a maximum 1,2-DCA concentration of 17.5 µg/L reported in groundwater monitoring well MW-7. Groundwater monitoring well MW-7 is located on-site, up-gradient to the former underground storage tanks.

There are no schools within 1,000 feet of the site.

There are no production wells within a one-mile radius of the site.

CONTAMINANT EXPOSURE PATHWAYS EVALUATION:

Direct Contact:
The residual petroleum hydrocarbon concentrations in the soil beneath the site should not cause direct contact concerns because all soil sample results were below their respective EPA Screening Levels with the exception of one sample (OZ-2 at 24.0 feet bgs) with a reported ethylbenzene concentration of 68 mg/kg.

Protection of Drinking Water Aquifer:
Although the residual petroleum hydrocarbon concentrations in the groundwater beneath the site exceed the MCL for benzene (the current maximum benzene concentration of 22.6 µg/L was reported in groundwater monitoring well MW-12 located up-gradient to the site) and the notification level for TBA (the current maximum TBA concentration of 1,740 µg/L was reported in groundwater monitoring well MW-8), the plumes are expected to further attenuate. In addition, the drinking aquifer beneath the site is approximately 200.0 feet bgs.

Plume Migration:
The extent of the contamination appears to be limited to on-site groundwater monitoring wells MW-3, MW-4, and MW-8 and off-site, up-gradient groundwater monitoring wells MW-11 and MW-12. In both areas of concern, the plumes appear to be stable, decreasing, and are expected to further attenuate. In addition, an analysis was used to evaluate the potential threat of the residual TBA concentration in groundwater that was reported above the notification level of 12 µg/L. The analysis assumes an imaginary down-gradient pumping well with a pumping rate of 10 gpm and default values for hydraulic conductivity, gradient, and effective porosity based on the site lithology. Based on an average site-specific TBA concentration of 1160 µg/L, the estimated TBA concentration at the down-gradient pumping well is 10.2 µg/L (less than the notification level of 12.0 µg/L).

Vapor Intrusion:
Vapor intrusion is not a concern because benzene concentrations were below the interim screening level of 0.180 mg/kg at five feet bgs.

FACTORS SUPPORTING LOW RISK CLOSURE:

- Soil samples reported elevated to non-detect petroleum hydrocarbon concentrations.
- DPE removed approximately 741 pounds of petroleum hydrocarbons of petroleum hydrocarbon impacted soil from beneath the site.
- Confirmation soil samples reported a maximum TPH_G and TBA concentrations of 24.0 mg/kg (TPH_G) and 0.136 mg/kg (TBA), respectively, and non-detect concentrations for benzene and MTBE.
- The maximum groundwater TPH_G, benzene, MTBE, and TBA concentrations reported were 130,000 µg/L (TPH_G), 4,060 µg/L (benzene), 520 µg/L (MTBE), and 12,000 µg/L (TBA), respectively. Currently, the maximum TPH_G, benzene, MTBE, and TBA concentrations reported are 5,680 µg/L (TPH_G), 22.6 µg/L (benzene), 9.06 µg/L (MTBE), and 1,740 µg/L (TBA), respectively.
- The extent of the benzene, MTBE, and TBA dissolved phase plumes are delineated.
- DPE removed approximately 134,450 gallons of petroleum hydrocarbon impacted groundwater from beneath the site.
- Ozone sparging further aided in the remediation of the dissolved phase petroleum hydrocarbon plume.
- Free product has not been reported since September 2001.
- Groundwater samples reported low to non-detect concentrations for all VOCs.
- The residual soil and groundwater contamination are unlikely to cause significant human health and environmental risks via major pathways, such as direct contact, drinking water ingestion, and vapor intrusion.
- There are no schools within 1,000 feet of the site.
- There are no production wells within a one-mile radius of the site.
- Addition soil and groundwater, characterization, remediation, and/or monitoring are no longer required.

The site is on the State Board 5-Year recommendation for case closure list.

X. MTBE/TBA FATE & TRANSPORT PLUME LENGTH MODELING ANALYSIS

The MTBE Plume Model Analysis could not be applied because the site specific data does not meet the model parameters. However, based on the most current data (Fourth Quarter 2008), the MTBE plume extends at least to the most down-gradient groundwater monitoring well MW-5 (MTBE = 2.54 µg/L) which is located approximately 62.0 feet down-gradient from the site.

Based on the data set that meets the model parameters (Third Quarter 2008) for groundwater monitoring wells MW-4 (TBA = 1,400 µg/L) and MW-5 (TBA = 137 µg/L), the transport model estimates that a TBA concentration of 12.0 µg/L will be detected approximately 139 feet down-gradient from groundwater monitoring well MW-4, approximately 128.0 feet down-gradient from the site, and/or approximately 67.0 feet down-gradient from groundwater monitoring well MW-5.

There are no production wells within a one-mile radius of the site.

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

TF Shatto LP	**EFI Global, Inc.** **Engineering, Fire and Environmental Services**
517-1177 West Hastings Street **Vancouver, BC V6E 2K**	**5261 West Imperial Highway** **Los Angeles, CA 90045**

Subject: **Limited Mold Assessment and Sampling Letter**
514 Shatto Place, Los Angeles, CA 90020
Andersen Environmental Job No.: 045.01519

On September 5, 2019, EFI Global visited the above referenced property to conduct a Limited Mold Inspection.

During the inspection EFI Global made visual assessments and collected moisture meter readings. No surface or ambient air samples were collected during the assessment.

At the time of the assessment, all ares of the building was occupied. At the direction of the property manager, access was limited to the roof, exterior, ground floor parking garage, 50% of the 2nd floor, 95% the 3rd floor and all of the 4th floor. Interior access was limited due to rooms/offices being locked by their their occupats.

Due to the occupancy of the subject property at the time of the assessment, a follow-up inspection may be warranted to inspect inaccessible areas if materials not sampled during this assessment are found to be located in these areas.

The following are observations and sample results.

VISUAL OBSERVATIONS:

General:

- Water damage was observed in multiple areas of the property, including on 2'x4' drop ceiling panels, around windows, along exterior walls, and in areas where roof drainage down-spouts are located (see attached floor plan)

FINDINGS:

Elevated moisture readings (*above 17-20% on the wood scale (WS) and 50% on the reference scale (RS)) were identified in the following areas:

- No elevated moisture readings were detected at the time the assessment.

* Moisture survey was performed using a *Delmhorst BD-10*

No surface / ambient air samples were collected during the assessment.

No visible mold growth was observed during the assessment; however, it is thought that all areas where water damage / staining was observed may also be impacted by mold growth.

CONCLUSIONS:

During the assessment, water intrusion issues were noted in various areas of the property, specifically on the 3rd floor and in the 4th floor penthouse areas. The cause of the water intrusion is unknown, but is most likely due to roof leaks or roof drainage issues.

Based on the results of this assessment, it is recommended that care be taken during any renovation / demolition activities in the areas noted to have visible water damage to ensure that construction employees be protected from potential exposure to mold spores. These precautions should include, but not be limited to respiratory protection and general work area containment measures.

RECOMMENDATIONS:

If mold growth is detected during the renovation / demolition activities, the following recommendations are provided:

Questions regarding the occupancy of the facility and/or health concerns of any of its occupants should be directed to a physician.

EFI Environmental recommends a contractor that is knowledgeable and trained in conducting the required work perform all mold related services during renovation activities. The selected contractor should use appropriate engineering controls (pre-cleaning, containment, air filtration devices, etc.) and personal protective equipment while providing the services.

- The contractor should be made aware that the subject property may contain asbestos and/or lead-containing building materials.
- Any asbestos, lead or hazardous materials survey documentation should be provided to the contractor at the time of the bid solicitation.
- Photo documentation of remedial activities is recommended to document containment integrity, destructive testing findings and verification of complete removal of mold-impacted materials.

All construction activities should be isolated and controlled to restrict dust and debris from entering occupied areas or the HVAC system.

It is advisable that occupants not have access to the work area during the mold-related work.

Air scrubbing should be performed in the work areas and areas immediately outside of the containment for at least twenty-four hours after the completion of remediation and cleaning activities. The air scrubbers should be sealed and turned off 8-12 hours prior to the post remediation assessment.

HVAC systems filter media should be inspected and replaced if necessary following remediation and renovation activities.

LIMITATIONS

EFI Global has prepared this report for the exclusive use of its client. EFI Global in performing its professional services has applied scientific judgment that it believes is consistent with industry standards. EFI Global inspected structures and/or contents in a good faith effort to observe pertinent detail. Due to the limitations of time, access, and other variables, certain details may have been overlooked. EFI Global has relied in good faith upon the information and representations of others in the preparation of this report and

the opinions expressed herein. Accordingly, EFI Global accepts no responsibility for deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

It is always possible that chemical and/or biological agents may be in a building that have not been targeted for assay, have not been identified by science as a potential health threat, or are present in such small quantities or low levels that they were not detected by the sampling and/or analytical methods employed. Accordingly, it cannot be determined with absolute certainty that there is no risk of exposure to some chemical and/or biological agent.

Reliance or use by any such third party without explicit authorization in the report does not make said third party a third party beneficiary to EFI Global's contract with the Client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at third party's risk. For the same reasons, no warranties or representations, expressed or implied in this report, are made to any such third party.

In matters involving indoor air quality, health, and safety, there is no substitute for sound medical advice. Persons experiencing adverse health effects of any kind should seek a medical diagnosis; symptoms could be related to the onset of a serious illness and delay of any kind should be avoided.

EFI Global assumes no liability for any loss, injury, claim, or damage arising directly or indirectly from any use or reliance on this report or the opinions expressed herein. EFI Global makes no warranty, express or implied. This report is limited only to the samples taken and locations sampled. Additional sampling may be needed to further identify other pollutants, or other mold/ fungus affected areas inside the property.

This report was prepared pursuant to the contract EFI Global has with the Client. That contractual relationship included an exchange of information about the subject site that was unique and between EFI Global and its client and serves as the basis upon which this report was prepared. Because of the importance of the communication between EFI Global and its client, reliance or any use of this report by anyone other than the Client, for whom it was prepared, is prohibited and therefore not foreseeable to EFI Global.

Thank you for the opportunity to work with you on this project. Please call the undersigned at (310) 854-6300, if you have questions.

Call with any questions,

Michael Pinkerton
Environmental, Health & Safety Services
EFI Global

TF Shatto LP	**EFI Global, Inc.** **Engineering, Fire and Environmental Services**
517-1177 West Hastings Street **Vancouver, BC V6E 2K**	**5261 West Imperial Highway** **Los Angeles, CA 90045**

Subject: **Limited Asbestos & Lead Based Paint Assessment**
514 Shatto Place, Los Angeles, CA 90020
EFI Job No.: 045.01519

1. Introduction

EFI Global was retained by TF Shatto LP (referred to hereunder as the client) to perform sampling of suspect asbestos containing materials (ACM) and suspect lead-based coatings (LBP) within the above referenced subject property.

The assessment was performed on September 5, 2019, by Alfredo Torres, a California Department of Public Health Lead Inspector / Risk Assessor (Cert. No. 17424) and a California DOSH Certified Asbestos Consultant (Cert. No. 10-4593).

At the time of the assessment, all ares of the building was occupied. At the direction of the property manager, access was limited to the roof, exterior, ground floor parking garage, 50% of the 2nd floor, 95% the 3rd floor and all of the 4th floor. Interior access was limited due to rooms/offices being locked by their their occupats.

Due to the occupancy of the subject property at the time of the assessment, a follow-up inspection may be warranted to inspect inaccessible areas if materials not sampled during this assessment are found to be located in these areas.

2. Asbestos Assessment

The purpose of this assessment was to conduct bulk sampling in order to determine the presence or absence of ACM at the above referenced property.

The scope of this assessment included reviewing any provided building records and/or previous investigation records, visually identifying homogeneous sample areas, collecting bulk samples of suspect ACM, recording the friability and condition of suspect ACM, interpreting the laboratory results and producing a written report of findings and recommendations.

The sampling was performed in accordance with requirements of the following regulations:

- Asbestos Hazard Emergency Response Act (AHERA); 40 CFR 763 Subpart E
- Asbestos School Hazard Abatement Reauthorization Act (ASHARA); Section 206 of the Toxic Substance Control Act
- National Emissions Standards for Hazardous Air Pollutants (NESHAPS); 40 CFR 61 Subpart M.
- South Coast Air Quality Management District (SCAQMD) Rule 1403

This report is a record of activities, observations, analytical results and recommendations performed to date.

2.1 Asbestos Results Summary

The laboratory results indicate that the following materials contain asbestos above the threshold limit of 1% and are to be treated as ACM:

- Thermal System Pipe Insulation
  - Parking Garage
- 9"x9" Beige Vinyl Floor Tiles and Associated Mastic
  - 3rd Floor Storage
  - North & South Stairwells
- White Penetration / Parapet Mastic
  - Roof

All of the above materials were found to be in good condition at the time of the assessment.

All other materials sampled in this assessment tested negative for asbestos. No other materials were sampled as part of this limited assessment.

Please refer to the below Homogenous table for a list of ACM / ACCM Homogeneous Materials, their locations and approximate quantities. Analytical data can be found in Appendix II.

2.2 Methodology

All samples were collected using a clean knife, chisel or the appropriate tools. Each sample was extracted carefully so as not to disturb adjacent materials while still penetrating through all layers of the material sampled. Each sample was sealed in the appropriate sized plastic zip lock bag and the bag then labeled with a unique identification number. The sample number, description and location was then recorded on a log and plotted on a floor plan of the structure or area. Sampling tools were cleaned after collecting each sample. Any excess dust or debris from the sample location was cleaned using a moistened cloth. Whenever possible, samples were collected from previously damaged portions of the material in order to minimize damage to the material.

A total of sixty (60) samples were submitted to EMSL Analytical, Inc. (EMSL) in Cinnaminson, New Jersey. EMSL is accredited under the NIST/NVLAP program for asbestos in bulk material by polarized light microscopy for asbestos analysis (NIST/NVLAP lab code 101048-0, NJ DEP 03036).

The analyses of the samples in this report were performed using polarized light microscopy using the EPA method 600/R-93/116. The phase abundances provided are visually estimated and expressed as percent area. Total percentage of sample constituents may total greater than 100 due to trace amounts. The limit of detection for this analytical method is less than one percent. In multilayer samples, unless otherwise specified, the asbestos concentration is reported for the layer where asbestos is found. These results lie within the statistical limits of variability calculated for standard reference samples routinely analyzed in the laboratory. On a per sample basis, the accuracy and precision of the results depend on the type of sample and its asbestos content.

Some of the samples in this report were further analyzed using the point count method. These analyses were performed using gravimetric matrix reduction and polarized light microscopy (PLM) in accordance with the EPA method 600/R-93/116 July 1993. The asbestos concentration was determined using the semi-quantitative point count method. On a per sample basis, the accuracy and precision of point count results are not known. The result should lie within the statistical limits of variability calculated for standard reference samples routinely analyzed in the laboratory using the point count method. The limit of detection for this analytical method is 0.25 percent using 400 points and 0.10 percent using 1000 points (visual area estimates).

2.3 Regulatory Limits

Government agencies have promulgated different regulatory threshold levels to classify materials containing asbestos. The levels of asbestos content and the terms used to classify them differ. Listed below are the current regulatory agencies that have defined materials containing asbestos, along with the respective action levels, regulatory terminology and applicability:

Agency / Regulation	Regulatory Code	Action Level (% Weight)	Terminology	Applicability
CAL OSHA	Title 8 CCR Section 1529(q)	> 0.1% - 1%	Asbestos-Containing Construction Material (ACCM)	Asbestos Exposure in California
Fed OSHA	29 CFR Section 1926.1101 & 1910.1001	> 1.0%	Asbestos-Containing Material (ACM)	Asbestos Exposure in the United States
NESHAP	40 CFR Part 61, Subpart M	> 1.0%	Category 1 No friable ACM, Category 2 No friable ACM and Regulated Asbestos-Containing Materials (RACM)	Asbestos Emission During Demolition, Renovation, Manufacturing and Waste Disposal in United States

2.4 Homogeneous Sample Materials Table/Results

The below table presents the homogenous materials identified during the assessment and the asbestos content of those identified materials. The homogenous materials found to contain asbestos are listed in bold type.

Homogenous Material Number	Material Description	Location	Asbestos Content (% weight)	Material Quantity *	Friability **	Condition
1	Drywall and Joint Compound / Tape	Interior Throughout	None Detected	------	Non-Friable	Good
2	Plaster	Interior Throughout	None Detected	------	Non-Friable	Good
3	2'x4' Acoustic Ceiling Panels	2nd Floor Meeting Room 3rd Floor Meeting Room 3rd Floor Lunch Room	None Detected	------	Friable	Good
4	1'x1' Acoustic Ceiling Tiles & Mastic	2nd Floor Storage Room 3rd Floor Storage Room	None Detected	------	Friable	Good

Homogenous Material Number	Material Description	Location	Asbestos Content (% weight)	Material Quantity *	Friability **	Condition
5	**Thermal System Pipe Insulation**	**1st Floor Parking Garage**	**20-40% Chrysotile**	**------**	**Friable**	**Good**
6	Fiberglass Heating Duct Insulation	4th Floor HVAC Room	None Detected	------	Friable	Good
7	**9"x9" Beige Vinyl Floor Tiles**	**3rd Floor Storage**	**2% Chrysotile**	**------**	**Non-Friable**	**Good**
7	**Mastic for 9"x9:" Beige Vinyl Floor Tiles**	**3rd Floor Storage Room North Stairwell South Stairwell**	**3% Chrysotile**	------	**Non-Friable**	**Good**
8	12"x12" Black w/ White Spec Vinyl Floor Tiles and Mastic	2nd Floor Conference Room	None Detected	------	Non-Friable	Good
9	12"x12" Black Vinyl Floor Tiles	3rd Floor Copy Room	None Detected	------	Non-Friable	Good
9	Mastic for 12"x12" Black Vinyl Floor Tiles	3rd Floor Copy Room	<0.1% Chrysotile	------	Non-Friable	Good
10	12"x12" Gray Vinyl Floor Tiles and Mastic	3rd Floor Lunch Room 3rd Floor Meeting Room	None Detected	------	Non-Friable	Good
11	12"x12" Beige Vinyl Floor Tiles	2nd Floor Server Room	<0.1% Chrysotile	------	Non-Friable	Good
11	Mastic for 12"x12" Beige Vinyl Floor Tiles	2nd Floor Storage Room	None Detected	------	Non-Friable	Good
12	4" Black Cove Base and Mastic	3rd Floor Copy Room	None Detected	------	Non-Friable	Good
13	4" Beige Cove Base and Mastic	2nd Floor Hallway 2nd Floor Reception 2nd Floor Storage	None Detected	------	Non-Friable	Good
14	Stucco	Exterior Parking Garage	0.1% Chrysotile	------	Non-Friable	Good
15	**White Penetration / Parapet Mastic**	**Roof**	**4-8% Chrysotile**	**575 LF**	**Non-Friable**	**Good**
16	White Rolled-On Roofing	Roof	None Detected	------	Non-Friable	Good

*** All above quantities are rough approximations and will need to be verified by the abatement contractor.**
**** Non-friable materials may be rendered friable during removal by mechanical or other aggressive methods.**

Homogeneous materials are defined as surfacing materials, thermal system insulation materials or miscellaneous materials that are uniform in color and texture. Homogenous sample areas are the areas where homogenous materials are located. Multiple sample locations are selected within each homogenous sample area so as to be a true representation of each homogenous material. Typically, a minimum of three (3) samples must be collected from each homogeneous area when sampling materials that may have variable asbestos content because it was batch mixed or applied by different contractors. High asbestos content variability is especially true of surfacing materials (sprayed-on and troweled on materials like plaster, fireproofing, acoustic ceiling, plaster) and thermal system insulation (TSI) used to insulate pipes, boilers, tanks or ducts to prevent heat loss. As many as 9 samples may be collected of surfacing materials when they cover large surface areas.

It should be pointed out that materials appear to be homogeneous may in fact be different materials, installed at different times and have different material content in terms of asbestos; only laboratory testing can determine whether they are really the same homogeneous area.

2.5 Asbestos Recommendations

If materials found to contain asbestos and/or presumed to contain asbestos may be impacted during renovation or demolition activities, that work must be performed by a licensed asbestos abatement contractor to properly remove said materials prior to such work. Contractors are licensed for asbestos-related work by the California Department of Industrial Relations (DIR) Department of Occupational Safety and Health (DOSH). A list of contractors with current licenses may be found at https://www.dir.ca.gov/databases/doshacru/acrusearch.html.

Due to the occupancy of the subject property at the time of the assessment, a follow-up inspection may be warranted to inspect inaccessible areas if materials not sampled during this assessment are found to be located in these areas.

Any suspect materials, that are not identified above and may be impacted during work activities, must be presumed to contain asbestos until laboratory analysis of an adequate number of samples proves otherwise.

3. Lead-Based Paint Assessment

A total of one hundred fifty-seven (157) XRF readings were collected to test painted and coated surfaces for lead-based paint (LBP). The results are summarized in Section 3.3 and the table of results attached in Appendix III.

3.1 Methodology

Testing of the painted surfaces was patterned after the inspection protocol in Chapter 7 of the HUD Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing. In every "room equivalent" within the tested property, one representative surface of each "testing combination" was tested. Multiple readings were collected to resolve inconsistencies in the test results.

The method employed was X-ray fluorescence (XRF) using a Heuresis PE 200i Cobalt 57. The instrument was operated in "Quick Mode," where the duration for each test result is determined by a combination of:

- the actual reading relative to the designated action level;
- the age of the radioactive source; and
- the substrate on which the test was taken.

The instrument's calibration was verified according to the manufacturer's specifications in compliance with the Performance Characteristic Sheet (PCS) developed for this instrument.

The readings from this instrument produce a 95% confidence level that the "lead" reading accurately reflects the actual level of lead in the tested surfaces, relative to the federal action level.

3.2 Regulatory Limits

Government agencies have promulgated different regulatory threshold levels to classify Lead-Based Paint. Some of the established "levels" are quantified in different units of measurement. Listed below are the current regulatory agencies that have defined LBP, along with the respective action level:

Agency	Ordinance #	Action level (mg / cm^2)	Action level (ppm)
HUD / EPA	24 CFR 35.86 & 40 CFR 745.103	1.0 mg / cm^2	5,000 ppm
L.A. County	Title 11, 11.28.010	0.7 mg / cm^2	Not Specified

OSHA / CAL OSHA	29 CFR 1926.62 & Title 8, 1532.1	Not Specified	600 ppm

In recognition of the various action levels the testing results are classified as follows for this report:

- Painted surfaces with readings at or above 0.7 mg / cm^2 are considered Positive
- Painted surfaces with readings below 0.7 mg / cm^2 are considered Negative

The individual readings have been provided on all field data sheets. Any future change in action levels by one of the regulating agencies may affect the classification of results.

For purposes of this survey, any material containing any detectable level of lead is subject to OSHA's Lead Exposure in Construction Rule (29 CFR Part 1926.62) and CAL/ OSHA Lead in Construction Standard (Title 8 CCR 1532.1). Any work that impacts these materials must be performed in accordance with these and any other applicable standards.

3.3 Lead Results Summary

None of the painted components tested by XRF were found to contain lead levels at or above the respective levels considered to be lead-based paint (LBP); however, paint may contain detectable levels of lead in the coatings which make work impacting those surfaces subject to the Cal / OSHA Lead in Construction Standard (Title 8 CCR 1532.1).

Sampling for this inspection was representative and any components that were not tested, but similar to those components that tested positive for LBP, should be considered and treated as lead laden.

3.4 Recommendations

Paint found not to contain lead levels considered to be LBP may still contain detectable levels of lead in the coatings which make work impacting those surfaces subject to Cal / OSHA Lead in Construction Standard 1532.1. This standard requires that respiratory protection and containment is used when performing "trigger tasks" until results of personal air monitoring indicate that workers are not exposed to lead above the action level or permissible exposure level. Additionally, the demolition or removal of lead or components with lead coatings is subject to Title 17, Division 1, Chapter 8 of the California Code of Regulations.

Should the contractor choose not to remove the lead-based paint materials and demolish the structure in its entirety with the lead-paint components in place, it is recommended that the contractor stabilize the LBP components prior to demolition and then collect samples representative of the entire mass of the prospective waste stream be collected by the contractor. These samples should then be analyzed according to the United States Environmental Protection Agency (EPA) and the California Department of Toxic Substances Control (DTSC) prior to disposal facility acceptance.

Due to the occupancy of the subject property at the time of the assessment, a follow-up inspection may be warranted to inspect inaccessible areas if materials not sampled during this assessment are found to be located in these areas.

4.0 Definitions

See Appendix V

5.0 Limitations

The inspection and testing report is based on the condition of the subject property existing and apparent on the precise time and exact date of the inspection. Not all conditions may be apparent on the inspection and testing date due to weather conditions, inoperable systems, inaccessibility of areas of the subject property, or for other reasons.

EFI Global has prepared this report for the exclusive use of its client. EFI Global, in performing its professional services, has applied scientific judgment that it believes is consistent with industry standards. EFI Global inspected structures and/or contents in a good faith effort to observe pertinent detail. Due to the limitations of time, access, and other variables, certain details may have been overlooked. EFI Global has relied in good faith upon the information and representations of others in the preparation of this report and the opinions expressed herein. Accordingly, EFI Global accepts no responsibility for deficiencies, omissions, misrepresentations, or fraudulent acts of persons interviewed.

EFI Global assumes no liability for any loss, injury, claim, or damage arising directly or indirectly from any use or reliance on this report or the opinions expressed herein. EFI Global makes no warranty, express or implied. This report is limited only to the samples taken and locations sampled. Additional sampling may be needed to further identify other pollutants or asbestos affected areas inside the property.

In as such that no destructive investigation has been performed during the survey, the report may not reveal concealed asbestos-containing materials. Subsequently, additional investigation including construction documents review and/or destructive investigation is recommended as a precaution to prevent accidental exposure when construction or demolition is planned for this facility.

Thank you for the opportunity to work with you on this project. Please contact the undersigned at (310) 854-6300, if you have questions or if additional services are necessary.

EMSL maintains liability limited to cost of analysis. The above analyses were performed in general compliance with Appendix E to Subpart E of 40 CFR (previously EPA 600/M4-82-020 "Interim Method"), but augmented with procedures outlined in the 1993 ("final") version of the method. This report relates only to the samples reported above, and may not be reproduced, except in full, without written approval by EMSL. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client. All samples received in acceptable condition unless otherwise noted. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST or any agency of the federal government. EMSL recommends gravimetric reduction for all non-friable organically bound materials prior to analysis. Estimation of uncertainty is available on request.

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits.The limit of detection as stated in the method is 0.1%. EMSL Analytical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government . EMSL Analytical Inc. bears no responsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis.The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted. Unless requested by the client, building materials manufactured with multiple layers (i.e. linoleum, wallboard, etc.) are reported as a single sample.

Some samples may contain asbestos fibers present in dimensions below PLM resolution limits.The limit of detection as stated in the method is 0.1%. EMSL Analytyical Inc suggests that samples reported as <0.1% or none detected undergo additional analysis via TEM. The above test report relates only to the items tested. This report may not be reproduced, except in full, without written approval EMSL Analytical Inc. This test report must not be used by the client to claim product endorsement by NVLAP or any agency of the United States Government. EMSL Analytical Inc. bears no esponsibility for sample collection activities, analytical method limitations, or the accuracy of results when requested to separate layered samples. EMSL Analytical Inc liability is limited to the cost of sample analysis. The test results contained within this report meet the requirements of NELAC unless otherwise noted. Samples received in good condition unless otherwise noted.

LEAD HAZARD EVALUATION REPORT

Section 1 — Date of Lead Hazard Evaluation 9/5/2019

Section 2 — Type of Lead Hazard Evaluation (Check one box only)

☑ Lead Inspection ☐ Risk assessment ☐ Clearance Inspection ☐ Other (specify) _____

Section 3 — Structure Where Lead Hazard Evaluation Was Conducted

Address [number, street, apartment (if applicable)]	City	County	Zip Code
514 Shatto Pl	Los Angeles	Los Angeles	90020

Construction date (year) of structure	Type of structure	Children living in structure?
	☐ Multi-unit building ☐ School or daycare ☐ Single family dwelling ☑ Other Commercial	☐ Yes ☑ No ☐ Don't Know

Section 4 — Owner of Structure (if business/agency, list contact person)

Name	Telephone number

Address [number, street, apartment (if applicable)]	City	State	Zip Code

Section 5 — Results of Lead Hazard Evaluation (check all that apply)

☑ No lead-based paint detected ☐ Intact lead-based paint detected ☐ Deteriorated lead-based paint detected
☐ No lead hazards detected ☐ Lead-contaminated dust found ☐ Lead-contaminated soil found ☐ Other _____

Section 6 — Individual Conducting Lead Hazard Evaluation

Name	Telephone number
Alfredo Torres	310-200-4006

Address [number, street, apartment (if applicable)]	City	State	Zip Code
1027 Oakdale Street	Corona	Ca	92880

CDPH certification number	Signature	Date
17424		9-13-2019

Name and CDPH certification number of any other individuals conducting sampling or testing (if applicable)

Section 7 — Attachments

A. A foundation diagram or sketch of the structure indicating the specifc locations of each lead hazard or presence of lead-based paint;
B. Each testing method, device, and sampling procedure used;
C. All data collected, including quality control data, laboratory results, including laboratory name, address, and phone number.

First copy and attachments retained by inspector

Second copy and attachments retained by owner

Third copy only (no attachments) mailed or faxed to:

Michael W Pinkerton
14145 Almond Grove Court
Corona CA 92880

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address or email with any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Safety Engineer

Renewal – Card Attached (Revised 01/10/2019)

State of California
Division of Occupational Safety and Health
Certified Asbestos Consultant

Michael W Pinkerton
Name

Certification No. **07-4170**

Expires on **03/22/20**

This certification was issued by the Division of Occupational Safety and Health as authorized by Sections 7180 et seq. of the Business and Professions Code.

Appendix V – Definitions

Asbestos – includes Chrysotile (CH), Amosite (AM), Crocidolite (CR), Tremolite (TR), Anthophyllite (AN), Actinolite (AC) and any of these minerals that have been chemically treated and/or altered.

Asbestos Containing Material (ACM) – any material containing greater than one percent (>1%) asbestos. These materials are subject to all federal, state and local asbestos regulation.

Asbestos Containing Construction Material (ACCM) – any manufactured construction material containing greater than one tenth of one percent (>0.1%) asbestos by weight; as defined by California's Department of Occupational Safety and Health (Cal-OSHA). These materials are subject to all Cal-OSHA standards.

Bulk sample – a chunk of material which is sent to a laboratory to be tested for asbestos.

Damaged – a material that exhibits less than ten percent (10%) distributed damage or twenty five percent (25%) localized damage.

Demolition – wrecking or taking out of any load-supporting structural member and any related removing or stripping of asbestos material.

Disturbance – activities that disrupt the matrix of ACM, crumble or pulverize ACM or generate visible debris from ACM.

EPA – Environmental Protection Agency

Friable – a friable material is any material that can be crushed, crumbled or pulverized by hand pressure when dry.

Good condition – a material with no visible damage or deterioration, or exhibiting only very limited damage or deterioration.

Homogeneous area – an area of material that is uniform in color and texture.

Linear Feet – (LF) the length of a given material. Usually used to define a quantity of pipe insulation.

Moderate – (air) Erosion potential – noticeable movement of air such as an airshaft or ventilator air stream.

Non-friable – a non-friable material cannot be crushed, crumbled or pulverized by hand pressure.

OSHA – Occupational Safety and Health Administration

Polarized Light Microscopy (PLM) – the analysis used to determine the asbestos content of a material.

Presumed Asbestos Containing Material (PACM) – a material that is not analyzed but is presumed to contain asbestos, such as transite.

Significantly damaged – a material exhibiting over ten percent (10%) distributed damage or twenty five percent (25%) localized damage.

Square feet – (SF) Used to quantify building materials.

Category I Non-Friable Asbestos-Containing Material: Asbestos-containing material including but not limited to packings, gaskets, resilient floor coverings, and asphalt roofing products containing more than 1% asbestos

Category II Non-Friable Asbestos-Containing Material: asbestos-containing material excluding category I non-friable asbestos-containing material, that, when dry, and in its present form, cannot be crumbled, pulverized, or reduced to powder by hand pressure.

Regulated Asbestos-Containing Material (RACM): Friable asbestos-containing material; Category I Non-Friable asbestos-containing material that has or will become friable, or subjected to sanding, drilling, grinding, cutting, or abrading; or Category II Non-Friable asbestos-containing material that has a high probability of becoming crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation.

Subject: Subsurface Investigation Report
3119 West 6th Street
Los Angeles, California

Dear Messrs. Nucich and Chan:

Hazard Management Consulting, Inc. (HMC) is pleased to present the results of a subsurface investigation completed at the property located at 3119 West 6th Street in the city of Los Angeles, California (Site). TF Shatto, LP currently owns the Site and is considering redeveloping the property with a building which will include office use on the first floor and apartments on the subsequent floors. The existing church building that is currently used as a school would be converted to office and restaurant uses. As part of the redevelopment, a four-story subterranean parking structure will be constructed. During construction, dewatering activities are planned. The work presented herein was completed to assess whether elevated concentrations of volatile organic compounds (VOCs) and methane gas were present beneath the Site, to evaluate the chemical composition of soil that will be excavated for disposal purposes, and to assess the concentrations of gasoline contaminants that might be present in groundwater from an off-Site source. If there are any questions, please contact the undersigned at your convenience.

Sincerely,
Hazard Management Consulting, Inc.

EXECUTIVE SUMMARY

Hazard Management Consulting, Inc. (HMC) was retained by TF Shatto, LP (Shatto) to complete a subsurface investigation at the property located at 3119 West 6th Street in the city of Los Angeles, California (Site). The Site has been occupied by single-family residences during the 1910s and a church that was constructed in 1936. The Site is currently occupied by a church and associated school. The current owner is considering redeveloping the property with a mixed-use commercial and residential development with a four-level subterranean parking garage, as well as repurposing the church building on the southern portion of the Site into office and commercial space. Based on the groundwater depth encountered during the current investigation, 38 to 43 feet below the ground surface (bgs), dewatering will be required during construction of the subterranean parking garage. The subterranean parking garage may also be designed with a waterproofing envelop to forego a permanent dewatering system following construction.

A Phase I Environmental Site Assessment (ESA) was recently completed by AEI Consultants (AEI) to identify potential environmental concerns at the Site. Based on these results, AEI did not identify recognized environmental conditions (RECs) associated with past and present on-Site land uses. However, AEI did identify a leaking underground storage tank (LUST) case at a former gasoline station adjoining west of the Site (across Shatto Place). Based on its close proximity to the Site, AEI concluded that groundwater beneath the Site may be impacted as a result of the LUST at the former gasoline station that has since been closed by the Regional Water Quality Control Board (RWQCB) acting as lead regulatory agency for groundwater cleanup. Due to potential off-gassing of vapors from the impacted groundwater, AEI indicated that there is a potential vapor intrusion concern at the Site. Additionally, the Site is located within the Methane Zone as defined by the City of Los Angeles Department of Building and Safety (LADBS). As part of the planned redevelopment, soil will need to be profiled for off-Site disposal and an assessment on whether methane gas is present will need to be completed as per the LADBS guidelines.

To further address these issues, HMC collected soil samples throughout the Site for future disposal profiling, groundwater samples to assess potential contaminants and future dewatering needs, soil gas samples to assess whether a vapor intrusion issue might be present, and monitored for methane gas in accordance with LADBS guidelines. Based on the results, HMC completed a screening human health risk evaluation (HHRE) for potential vapor intrusion and based on the results, completed indoor air sampling.

The following presents the results of these investigations.

- The soil investigation included the advancement of six soil borings throughout the Site. Laboratory results of soil samples collected at 10 and 20 feet bgs indicated no detectable concentrations of petroleum hydrocarbons and VOCs, and no detectable to low concentrations of metals (i.e.

background). Based on these results, these soils would be considered non-hazardous waste when excavated and disposed of during construction activities. However, soils encountered at depths greater than approximately 20 feet bgs in the southern portion of the Site indicated a strong petroleum hydrocarbon odor and photoionization detector (PID) readings of greater than 50 parts per million (ppm) of VOCs. According to South Coast Air Quality Management District (SCAQMD) Rule 1166, during excavation these soils will need to be monitored using a SCAQMD Site Specific Mitigation Plan and disposed of appropriately at a Class II landfill. The source of these contaminants is likely due to the previously mentioned off-Site LUST case that has impacted groundwater beneath the southern portion of the Site resulting in vapor phase VOCs.

- Groundwater samples were collected from two soil borings in the southern portion of the property and one soil boring advanced in the northern portion of the Site. Laboratory results of groundwater samples indicated elevated concentrations of gasoline and gasoline constituents, such as benzene and toluene, with lesser concentrations in the northern portion of the Site consistent with the general distribution of gasoline products documented in the off-site LUST case. While you would not be required to mitigate the groundwater given that you are not the source of the impacts, based on these results, the groundwater generated during dewatering activities will likely require treatment prior to discharge to the municipal sewer or stormwater system.
- Elevated concentrations of select VOCs were detected in one sub-slab sample and two soil gas samples. These concentrations exceeded the very conservative screening levels for the protection of human health through possible vapor intrusion. Based on these results, HMC then conducted a screening HHRE to assess the potential health risk that could be present to current or future occupants. Potential human health risks to future occupants would be minimal to the new building due to the design of the proposed subterranean parking garage and associated ventilation system. However, a vapor intrusion issue may be present to current occupants of the classrooms and current and future occupants of the church building.
- To assess whether a human health risk is actually present to occupants of the church building and school through vapor intrusion, indoor air samples were collected. The indoor air sample results indicated no detectable concentrations of VOCs, with the exception of acetone detected in one sample below regulatory screening levels for residential and commercial indoor air. Based on these results, there is a low likelihood of a significant health risk to current and future occupants as a result of vapor intrusion.
- Methane gas was detected in soil gas at concentrations exceeding the lower explosive limit (LEL) for methane. Based on these concentrations and the Site's location in the LADBS Methane Zone, a methane mitigation system is required for the new building. However, since the proposed redevelopment includes the construction of a ventilated subterranean parking garage, the LADBS may wave this requirement. The LADBS guidelines do not require methane mitigation systems be retrofitted into existing buildings. The church building will remain in its current basic configuration, and therefore, no methane mitigation system will be required by the LADBS.

Based on the results of this assessment, HMC has the following recommendations.

- Prior to redevelopment, a Soil and Groundwater Management Plan should be prepared to guide the removal of potentially VOC-impacted soil and groundwater during redevelopment activities.

- Prior to redevelopment, a SCAQMD Site Specific Mitigation Plan should be obtained. Soil monitoring should be completed during excavation in accordance with SCAQMD's Rule 1166 and the Site Specific Mitigation Plan. If soils with elevated PID readings are encountered, these soils should be profiled for appropriate off-Site disposal.
- Prior to dewatering activities, a National Pollutant Discharge Elimination System (NPDES) permit should be obtained from the California Regional Water Quality Control Board, Los Angeles Region (RWQCB) to discharge treated water to the municipal sewer and/or stormwater systems. If the subterranean parking garage is designed with a waterproofing envelop to forego a permanent dewatering system and for permit requirements, a waterproofing/building envelope contractor should be consulted to determine the feasibility of such a design and for permit requirements.
- The LADBS should be consulted to determine whether a Site-specific methane gas mitigation system will be required based on the concentrations detected and planned construction design.
- Given the construction anticipated to convert the church building to a restaurant including the likely installation of subsurface piping for future water, sewer and other utilities, HMC recommends as a protective measure that all concrete cuts and utility penetrations on the slab be sealed to add an additional measure of protection against potential vapor intrusion.

1 INTRODUCTION

Hazard Management Consulting, Inc. (HMC) was retained by TF Shatto, LP (Shatto) to complete a subsurface investigation at the property located at 3119 West 6th Street in the city of Los Angeles, California (Site; Figure 1). The Site has been occupied by single-family residences during the 1910s and a church that was constructed in 1936. The Site is currently occupied by a church and associated school. The current owner is considering redeveloping the property with a mixed-use commercial and residential development with a four-level subterranean parking garage, as well as repurposing the church building on the southern portion of the Site into office and commercial space (Figure 2). The proposed redevelopment plans for the subterranean parking garage (level 1), ground floor, and second floor are also provided in Appendix F. Based on the groundwater depth encountered during the current investigation, 38 to 43 feet below the ground surface (bgs), dewatering will be required during construction of the subterranean parking garage. The subterranean parking garage may also be designed with a waterproofing envelop to forego a permanent dewatering system following construction.

A Phase I Environmental Site Assessment (ESA) was recently completed by AEI Consultants (AEI) to identify potential environmental concerns at the Site. Based on these results, AEI did not identify recognized environmental conditions (RECs) associated with past and present on-Site land uses. However, AEI did identify a leaking underground storage tank (LUST) case at a former gasoline station adjoining west of the Site (across Shatto Place). Based on its close proximity to the Site, AEI concluded that groundwater beneath the Site may be impacted as a result of the LUST at the former gasoline station that has since been closed by the Regional Water Quality Control Board (RWQCB) acting as lead regulatory agency for groundwater cleanup. Due to potential off-gassing of vapors from the impacted groundwater, AEI indicated that there is a potential vapor intrusion concern at the Site. Additionally, the Site is located within the Methane Zone as defined by the City of Los Angeles Department of Building and Safety (LADBS). As part of the planned redevelopment, soil will need to be profiled for off-Site disposal and an assessment on whether methane gas is present will need to be completed as per the LADBS guidelines.

2 BACKGROUND

The client provided HMC with a previous Phase I ESA completed by AEI to review and evaluate. Based on the results of the AEI Phase I ESA, the Site comprises approximately 1.17-acre. The Site was originally developed with single-family residences during the 1910s, and a church was then constructed in 1936. Additional classrooms were constructed during the 1950s and the single-family residences were demolished during the 1960s. By 1964, the Site was similar to present day configurations with minor

improvements to the Site buildings that continued until 2005. Based on the results of the Phase I ESA, AEI did not identify RECs associated with the on-Site land uses.

According to the AEI, a LUST release at a former gasoline station located immediately west of the Site across Shatto Place has possibly migrated and impacted groundwater currently beneath the Site. Although this adjoining LUST case is considered closed by the RWQCB, residual groundwater contaminants appear to be migrating onto the Site. Based on these possible contaminants, AEI concluded that a vapor intrusion issue might be present. AEI also determined that the Site was located within the Los Angeles City Oil Field and within the Methane Zone as defined by the LADBS.

3 OBJECTIVES

The objectives of the investigation described herein were to:

- Assess the concentrations of selected chemicals in soil for future disposal profiling;
- Assess whether elevated concentrations of potential contaminants were present in groundwater to evaluate future dewatering needs;
- Assess whether elevated concentrations of contaminants were present in soil gas to determine whether a possible vapor intrusion issue might be present; and
- Assess whether elevated concentrations of methane gas were present.

4 PHYSICAL SETTING

The following sections include discussions of geologic and hydrogeologic conditions in the vicinity of the Site, based upon current regulatory information or our experience at similar projects within the Site vicinity.

4.1 Site Geology

The Site is located along the northern edge of the Central Block of the Los Angeles Basin, bounded by the Rodeo Hills to the northeast and the Santa Monica Mountains to the northwest. Soils beneath the Site consist of quaternary alluvium, composed of a silty to sandy clay underlain by poorly and well graded sand. Beneath the sand, Miocene Puente Formation is located at depths greater than 40 feet bgs. Alluvial sediments at or near the surface are interbedded consisting of well graded, silty fine sands, clayey sands, and gravely clays.

4.2 Site Hydrology

The following sections discuss the Site hydrology in terms of both surface waters and groundwater.

4.2.1 Surface Waters

No natural water bodies or streams (rivers, streams, lakes, etc.) are located on the Site.

4.2.2 Groundwater

HMC is unaware of previous groundwater investigations conducted at the Site. According to AEI, a former gasoline station was historically located on the northwest corner of the intersection of West 6th Street and Shatto Place. This property is located approximately 130 feet west of the Site, across Shatto Place. Several groundwater monitoring wells were installed at this property as part of a LUST case for a release of gasoline in 1990. Based on the latest groundwater monitoring report completed for the former gasoline station, groundwater was reported at this adjoining facility in March 2009 at a depth of approximately 24 to 27 feet bgs with a northwesterly flow direction.

Based on the most recent groundwater monitoring results completed in March 2009, two groundwater monitoring wells (designated MW11 and MW12) were located directly west of the Site within the roadway (Shatto Place). Laboratory results from these wells indicated concentrations of gasoline up to 1,260 micrograms per liter (ug/l), as well as detectable concentrations of the fuel additives benzene (up to 11.4 ug/l), 1,2-dichloroethane (1,2-DCA, up to 6.9 ug/l), and fuel oxygenates methyl tert-butyl ether (MTBE, up to 7.32 ug/l), diisopropyl ether (DIPE, up to 56.7 ug/l), tert-butyl alcohol (TBA, up to 623 ug/l), and. Since the detected chemicals are typical petroleum hydrocarbon compounds, and the sampled wells were located crossgradient from the former gasoline station, the consultant completing the work concluded that these contaminants were likely from another off-Site source. The California Regional Water Quality Control Board, Los Angeles Region (RWQCB) issued a no further action (NFA) letter for the former gasoline station in April 2009.

5 CHEMICAL DATA EVALUATION

The subsurface investigation included the collection of soil, soil gas, and groundwater samples throughout the Site, as well as field monitoring of methane gas concentrations. Samples were analyzed by a State-certified laboratory. Soil samples were analyzed for petroleum hydrocarbons carbon chain C_6-C_{40}, VOCs (including fuel oxygenates), and Title 22 metals in general accordance with EPA Method Nos. 8015 (modified), 8260B, and 6010/7000. Groundwater samples were analyzed for gasoline range petroleum hydrocarbons (TPHg) and VOCs (including fuel oxygenates) in general accordance with EPA Method Nos. 8015 (modified) and 8260B. Soil gas samples were analyzed for VOCs in general accordance with EPA Method No. TO-15. Methane gas was monitored in the field using a Landtech GEM2000 field meter. These data were compared to regulatory guidelines for the protection of human health and for disposal purposes. The following presents the regulatory guidelines used to evaluate the data.

5.1 Soil

Based on the redevelopment plans, the area beneath the new building will be lowered by approximately 60 feet to accommodate a four-story subterranean parking structure (Figure 2). During redevelopment,

export of excess soil will be necessary. Therefore, laboratory results of soil samples collected during this investigation where compared to disposal criteria and human health guidelines for the protection of construction workers.

Disposal criteria were determined based on TPH and metal concentrations. Hazardous waste (varying concentrations of TPH and hazardous concentrations of metals) is required to be disposed of in a Class I landfill; regulated waste (TPH concentrations exceeding 100 mg/kg and non-hazardous metals) can be disposed of in a Class II landfill or recycled at a thermal treatment facility; and non-regulated waste (TPH concentrations less than 100 mg/kg with metal concentration below hazardous criteria) can be disposed of in a Class III landfill. Soils with low concentrations of TPH (less than 100 mg/kg) and low concentrations of metals can generally be used for fill on other construction projects. It should be noted that Class III landfills and soils for general off-Site use will not be accepted if the soils are odorous or stained.

To determine whether hazardous metal concentrations were present, one soil sample was analyzed for Title 22 metals. The soil sample was initially evaluated to determine the Total Threshold Limit Concentration (TTLC). Soil with metal concentrations exceeding the TTLC values are considered hazardous waste. If a given metal concentration is below the TTLC value, but greater than 10 to 20 times the Soluble Threshold limit Concentrations (STLC), the soil is considered potentially hazardous and additional soluble analyses are required. Soil with concentrations exceeding the soluble limit would be considered hazardous wastes.

The South Coast Air Quality Management District (SCAQMD) maintains excavation monitoring requirements for properties suspected as having elevated VOCs in soils, referred to as Rule 1166. If concentrations of VOCs exceed 50 parts per million (ppm), as measured with a photoionization detector (PID) meter calibrated to hexane, during excavation or grading activities, those soils cannot be reused on-Site, but rather need to be removed from the Site as VOC-Contaminated soil and transported to an appropriate disposal facility.

To assess whether excavated soils would be considered a possible human health risk to construction workers, laboratory analyses were compared to the Department of Toxic Substances Control (DTSC) Soil Screening Levels for industrial/commercial land use (DTSC-SLi), and the Environmental Protection Agency (EPA) Region 9, Regional Screening Levels for industrial/commercial land use (EPA-RSLi). The DTSC-SLi and EPA-RSLi values are human health based criteria.

Due to the naturally occurring concentrations of arsenic in California soils, the concentrations of arsenic typically exceed the DTSC-SLi and EPA-RSLi values. Therefore, concentrations of arsenic in soil were

compared to the published concentration of 12 milligrams per kilogram (mg/kg) as presented in the DTSC Final Report for Background Metals (Arsenic) at Los Angeles Unified School Sites, dated June 6, 2005.

5.2 Groundwater

Prior to dewatering activities, a National Pollutant Discharge Elimination System (NPDES) permit should be obtained from the RWQCB to discharge treated water to the municipal sewer and/or stormwater systems. To evaluate the chemical composition of groundwater beneath the Site, HMC collected groundwater samples. The laboratory results were compared to the State Water Resources Control Board, Division of Drinking Water, Maximum Contaminant Levels (MCLs) for drinking water. MCLs are drinking water standards set by the State for purveyors of potable water and are generally used as a guideline for discharged groundwater generated during dewatering. If elevated contaminant concentrations are discovered, the groundwater will need to be treated prior to discharge.

5.3 Soil Gas

Soil gas samples were collected to assess whether a possible human health risk is present to current or future occupants through vapor intrusion. To assess whether a possible human health risk is present to future occupants, the soil gas samples were compared to DTSC-SLi and EPA-RSLi for ambient air in future commercial properties. These concentrations were modified using the DTSC approved attenuation factor of 0.0005 for industrial/commercial property use. It should be noted, that due to the planned redevelopment of the Site which includes a four story subterranean ventilated parking structure that is designed to mitigate residual vapors, evaluating soil gas for possible future vapor intrusion is likely a moot point as such vapors would be removed during excavation and further minimized by future mitigation and design elements.

To assess current occupant safety, laboratory results of soil gas samples were compared to DTSC and EPA values for residential land use (referred to as DTSC-SLr and EPA-RSLr). The concentrations of ambient air for soil gas samples were modified using the DTSC and EPA attenuation factors of 0.002 and 0.03, respectively, for residential land use (i.e. non-restrictive). The concentrations of ambient air for sub-slab samples were modified using the DTSC and EPA attenuation factors of 0.05 and 0.03, respectively, for a residential land use (i.e. non-restrictive).

5.4 Methane Gas

Concentrations of methane gas as measured with a Landtech GEM 2000 methane gas field meter, were compared to the LADBS Ordinance No. 175790, for use in determining the required methane mitigation procedures for a proposed structure. As noted above, the planned subterranean parking structure would be designed to ventilate vapors produced from automobiles, and therefore, vapor intrusion would be mitigated and not occur at the Site during operations.

6 SUBSURFACE INVESTIGATION

The subsurface investigation was completed on May 23 and 24, 2018. On May 23, 2018, HMC advanced 6 soil borings (designated AB1 through AB6) for the collection of soil samples and groundwater samples, and for the installation of nested soil vapor monitoring points at 5, 10, and 20 feet. After installation, HMC monitored each soil vapor monitoring point for methane gas. Two sub-slab vapor points (designated SS1 and SS2) were also installed and sampled on May 23, 2018. On May 24, 2018, each of the 5-foot soil vapor monitoring points were sampled for VOCs and all nested soil vapor monitoring points were again monitored for methane gas. Selected soil samples were collected for possible laboratory analyses and screened in the field for stains, odors, and elevated PID readings. Soil lithology generally consisted of interbedded sands and silts/clays.

Work was completed under the direction and oversight of Mr. Paul Roberts, a California Professional Geologist from Ardent Environmental Group, Inc., an affiliate of HMC. Well logs are presented in Appendix B and laboratory reports are presented in Appendix C. The following presents a summary of the investigations and results. Tables 1 through 4 present the laboratory results.

6.1 Pre-Field Activities

Prior to beginning the subsurface investigation, HMC submitted a work plan/permit to the Los Angeles Department of Public Health (LADPH) for the collection of groundwater samples using a temporary casing. A copy of the approved work plan/permit is provided in Appendix A.

6.2 Soil Sampling

Based on the redevelopment plans, the area beneath the new building will be lowered by approximately 60 feet to accommodate a four-story subterranean parking structure (Figure 2). The parking structure would be designed to ventilate vapors produced from automobiles to the atmosphere. As discussed above, due to the depth of this structure, groundwater encountered would be dewatered during construction.

To obtain representative samples of the soils that will be excavated, HMC advanced six soil borings (designated AB1 through AB6) throughout the parking lot located in the central portion of the Site (Figure 3). The soil borings were advanced to depths of up to 45 feet bgs for the collection of soil samples, and also for the installation of soil vapor monitoring points. Some of the borings were also used to install a temporary casing for the collection of groundwater samples. The collection and analyses of soil gas and groundwater samples are discussed below.

Soil samples were collected at depths of approximately 10 and 20 feet bgs from each soil boring for chemical analyses. A total of six borings were used, in part, to meet the LADBS Site Testing Standards for

Methane requirement of one sample location per 10,000 square feet of property. The borings were drilled to better assess possible vapor intrusion issues to future commercial buildings and collect discrete soil samples to profile the Site soils for future disposal as part of redevelopment activities.

The soil samples collected at 10 and 20 feet bgs from each boring were chemically analyzed for TPHcc, VOCs, and Title 22 metals. No stained or odorous soil, or elevated PID readings were noted from surface to approximately 20 feet bgs throughout the Site. Laboratory results of the soil samples analyzed verified these field observations with no detectable concentrations of TPHcc and no detectable to low concentrations of VOCs and Title 22 metals (Table 1).

To further assess groundwater conditions, three of the six soil borings were advanced to depths deeper than 20 feet bgs. Boring AB1 and AB2 were located in the southern portion of the Site and AB6 was located in the northern portion of the Site (Figure 3). Boring AB1 was advanced to a depth of approximately 39 feet bgs (groundwater was first encountered at approximately 38 feet bgs), AB2 was advanced to approximately 40 feet bgs (groundwater was first encountered at approximately 40 feet bgs), and AB6 was drilled to approximately 45 feet bgs (groundwater was first encountered at approximately 45 feet bgs). Petroleum hydrocarbon odors were encountered in boring AB1 at depths of approximately 20 feet bgs and staining was noted in soil beginning at approximately 27.5 feet bgs. The odors and staining continued to the bottom of the borehole (39 feet bgs). Petroleum hydrocarbon odors, with no staining, was noted in boring AB2 from approximately 17 to 27 feet bgs (no soil samples were collected at depths greater than 27 feet bgs due to hard drilling conditions). In both of these soil borings, elevated PID readings were noted (up to 1,300 ppm) within these depth intervals. No stained or odorous soil, or elevated PID readings were noted in boring AB6.

Based on these results, the soils planned to be excavated from surface to approximately 20 feet throughout the Site would be considered non-hazardous waste when disturbed during construction activities. However, soils encountered at depths greater than approximately 20 feet bgs in the southern portion of the Site indicated a strong petroleum hydrocarbon odor and PID readings of greater than 50 ppm. According to SCAQMD Rule 1166, during excavation these soils will need to be monitored using a SCAQMD Site Specific Mitigation Plan and disposed of appropriately at an off-Site Class II landfill. The source of these contaminants is likely the off-Site gasoline release previously discussed that has impacted groundwater beneath the southern portion of the Site resulting in vapor phase VOCs.

6.3 Groundwater Sampling

As noted above, three select soil borings were advanced into groundwater at the Site (designated borings AB1, AB2, and AB6). Two of the soil borings were located in the southern portion of the Site and one boring was located in the northern portion of the Site (Figure 3). Following drilling, a 1-inch PVC

casing was used installed within the borehole to collect a groundwater sample. These temporary casings were allowed to generally equilibrate prior to obtaining a groundwater sample. Following collection of the samples, the casings were removed and the borehole backfilled, using hydrated granular bentonite to a depth of approximately 20 feet bgs where nested soil vapor monitoring points were installed (further discussed below).

Each groundwater sample was analyzed for TPHg and VOCs (including fuel oxygenates). Laboratory results indicated elevated concentrations of benzene (up to 35.3 ug/l) and toluene (up to 277 ug/l) exceeding the MCLs of 1 and 150 ug/l, respectively (Table 2). Although there are no MCLs for TPHg, the concentrations detected in AB1 and AB2 would, based on our experience, also be considered elevated (up to 9,780 ug/l). The concentrations of TPHg and VOCs reported in sample AB6 did not exceed the MCLs, and therefore, would be considered low. Based on these results, the groundwater generated during dewatering activities will likely require treatment prior to discharge to the municipal sewer or stormwater system.

It should be noted, that other gasoline additives, such as fuel oxygenates and 1,2-DCA detected in the wells located west of the Site and associated with the release from the off-Site gasoline station were not detected in the groundwater samples collected beneath the Site. Based on this information, these contaminants might be a result of another source.

6.4 Soil Gas and Sub-Slab Sampling

Following the collection of soil and groundwater samples, nested soil vapor monitoring points were installed in each location at depths of approximately 5, 10, and 20 feet bgs. Each soil gas monitoring point was constructed of new, 0.25-inch outside diameter, Nylaflow tubing. The soil gas monitoring point was placed midway within a minimum 1-foot zone of No. 2/12 sand pack, followed by approximately 0.5-foot of dry granular bentonite. The remaining borehole was filled with hydrated granular bentonite. The following day, each of the five foot soil gas monitoring points was purged of approximately three volumes of air using a low flow pump (approximately 200 milliliter per minute [ml/min]). Prior to sampling, the sample train was checked for leaks by completing a shut-in test. Soil gas samples were collected in a 1-liter stainless steel, individually certified, Summa canister equipped with a low flow regulator (approximately 150 ml/min). Installation and sampling of soil gas monitoring points were completed in general accordance with current DTSC guidelines (DTSC, 2011; DTSC, 2015).

Based on planned and current Site conditions, each soil gas sample was analyzed for VOCs and compared to industrial/commercial screening levels for future human occupancy and for residential screening levels for current human occupancy. Laboratory results indicated elevated concentrations of heptane, hexane, 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene, benzene, ethylbenzene, and xylenes

(common constituents in gasoline) that exceeded the residential screening levels (Table 3). Benzene and ethylbenzene exceeded both the industrial/commercial and residential screening levels (Table 3). Based on this information, there is a possible human health risk to future and current occupants through vapor intrusion.

To further assess current occupant health risks, two sub-slab sample points (SS1 and SS2) were installed in the concrete pad of the patio area immediately east of the classroom building (Figure 3). A 0.75-inch hole was drilled through the concrete (approximately 4-inches thick) and into the underlying soil another 2- inches. After cleaning the hole of dust, a brass Vapor Pin was installed at each location. Following installation, HMC evacuated approximately 3 volumes of air from each point using a plastic syringe and collected a sub-slab sample in individually certified Summa canisters equipped with a low flow regulatory (approximately 150 ml/min). Laboratory results indicated concentrations of tetrachloroethylene (PCE), trichloroethene (TCE), and benzene exceeding the screening levels for non-restrictive residential land use (Table 4). Benzene is a common additive to gasoline, and PCE is commonly used as a cleaning solvent by dry cleaners or machine shops. TCE is a breakdown product of PCE. Based on the reported on-Site historical land use, no on-Site sources are suspected as the origin of these contaminants which are likely associated with an off-Site source. Based on the laboratory results, the risk of a potential vapor intrusion condition was felt to be present at the Site and further analysis was necessary. Based on these results, HMC then conducted a screening HHRE to assess the potential health risk that could be present to current or future occupants. The results of the human health risk evaluation are discussed in Section 7.

6.5 Methane Gas Monitoring

An ordinance issued by the LADBS indicates properties proposed for redevelopment within the Methane Zone must be assessed for the presence of methane gas. The results are to be presented to the LADBS during plan check approval and a Certificate of Compliance for Methane Test Data must be prepared.

The LADBS ordinance requires methane gas samples to be collected at depths of approximately 5, 10, and 20 feet beneath the lowest proposed building floor, and at least one foot above groundwater. Since the floor of the proposed subterranean parking structure will be located within the groundwater table, collection of methane gas samples as per the LADBS ordinance is not possible. In addition, due to the structural design (a ventilated parking structure), methane gas, if present, would not be considered an explosion risk to the new building. As discussed above, this would also include other possible vapors, such as off-gassing VOCs from groundwater.

To satisfy the LADBS ordinance, the Site soil borings were used to install nested soil vapor monitoring points at 5, 10, and 20 feet. Following installation, and after the VOC sampling described above, each

soil vapor monitoring point was monitored for methane gas using a Landtech GEM 2000 field meter approximately two hours following installation of the soil gas points, and again approximately 24-hours later, as per LADBS Ordinance 175790.

The lower explosive limit (LEL) for methane gas is 50,000 ppm. Based on the LADBS ordinance for properties within a Methane Zone, mitigation for future buildings is required. The extent of which is determined based on a preliminary investigation. The higher the concentrations detected during these investigations determines the type of mitigation components required by the LADBS. The LADBS mitigation requirements are categorized in 5 different "levels" based on concentrations detected (referred to as "Level I" with the lowest concentrations to "Level V" with the highest concentrations).

Based on the results of the methane gas sampling, elevated concentrations of methane were detected exceeding the LEL of 50,000 ppm. Although these results would classify the Site within Level V of the LADBS ordinance, based on the proposed building design (four stories of ventilated subterranean parking structure), there is a low likelihood, in our professional judgement, that an explosion risk would be present. Since the proposed redevelopment includes the construction a ventilated subterranean parking structure, the LADBS may wave this requirement. A copy of the completed LADBS Certificate of Compliance for Methane Test Data is presented in Appendix D. This form can be submitted to the LADBS during future plan checks for negotiations.

Methane is not considered a toxic or carcinogenic compound. Although the concentrations of methane are considered elevated, the on-Site buildings have been "grandfathered" in and will not require methane gas mitigation measures based on current regulatory standards. However, if modifications to the existing buildings are completed, the LADBS will require methane engineering controls.

7 HUMAN HEALTH RISK EVALUATION

Due to several individual concentrations of VOCs detected at the Site being reported above the State and Federal screening levels, HMC completed a screening human health risk evaluation (HHRE) of the cumulative concentrations of VOCs to further evaluate whether a human health risk was present due to potential vapor intrusion to current and future occupants using the DTSC-modified EPA Johnson & Ettinger model (J&E model; DTSC, 2014). The J&E model estimates indoor air concentrations based on subsurface soil gas concentrations. Cumulative values were evaluated for both the concentrations of VOCs in sub-slab sample and for concentration detected in soil gas samples collected at 5 feet bgs. Copies of the HHRE calculations are provided in Appendix E and the results are discussed below.

The total non-cancer hazard for a typical receptor is presented as an estimated noncancer hazard index (HI) and the total cancer risk for a receptor is presented as an estimated incremental lifetime cancer risk

(ILCR). Regulatory agencies such as the Los Angeles County Fire Department and DTSC typically accept a target ILCR of 10^{-5} (approximately 1 in 100,000) and HI of 1 for industrial/commercial properties. For properties with sensitive uses, such as schools, the target ILCR of 10^{-6} (approximately 1 in 1,000,000) is typically used. The HHRE was completing using conservative assumptions, exposure parameters, and other default values that tend to overstate risk. These default values, provided in the J&E model include the following:

- Soil gas samples were collected at 5-foot below the building pad.
- Sub-slab samples were collected at 0.5-foot below the building pad.
- The building is 10 meters by 10 meters.
- The maximum VOC concentrations exist beneath the entire building pad.
- The current VOC concentrations are stable and not increasing.
- The air exchange rate was set to 1 air exchange per hour.
- The typical Site occupant will occupy the building 8 hours per day and 250 days per year for 25 years.

As shown on Table 5, the current estimated human health risks exceeded the target ILCR and HI based on both a commercial/industrial and sensitive use/residential building scenario. As discussed above, the subterranean parking garage and associated ventilation system would reduce the potential for vapor intrusion into the future building.

Since the HHRE results are an overestimation of risk, indoor air samples were collected to determine whether an actual health risk is present to current and future occupants of the church building and current occupants of the classroom. The results of the indoor air samples are discussed below.

8 INDOOR AIR SAMPLING

On July 20, 2018, indoor air samples were collected at the Site to determine whether an actual health risk is present to current and future occupants due to vapor intrusion as opposed to relying on estimates from conservative models. Seven indoor air samples, designated IA1-1 through IA7-1, were collected from inside of the Site buildings (Figure 4). To determine background concentrations, three outdoor air samples, designated OA1-1 and OA3-1, were also collected; OA1-1 and OA3-1 were collected from upwind locations and OA2-1 was collected from a downwind location (Figure 4). The indoor air samples were collected from a height of approximately 2-feet above the floor to represent the breathing zone of a small child. The outdoor air samples were collected from approximately 5-feet above the surface to represent ambient outdoor air. The air samples were collected in three-liter stainless steel Summa canisters. The canisters were individually-certified clean and provided by SunStar Laboratories, Inc. (SunStar) of Lake Forrest, California, a State-certified environmental laboratory. The canisters were fit-

ted with low-controllers calibrated to allow sampling over a typical eight-hour business period (approximately 8:00 am to 4:00 pm).

Following sample collection, the canisters were delivered to SunStar and analyzed for VOCs in general accordance with EPA Method No. TO-15. The concentration of these compounds were compared to the United States Environmental Protection Agency Region 9, Regional Screening Levels for residential (EPA-RSLr) and commercial/industrial air (EPA-RSLi) and the California Department of Toxic Substances Control, Human and Ecological Risk Office Note 3, Screening Levels for residential (DTSC-SLr) and industrial/commercial air (DTSC-SLi). These are very conservative regulatory screening levels for ambient indoor air at residential and industrial/commercial properties. A copy of the laboratory report is provided in Appendix C.

As shown on Table 6, the indoor air sample results indicated no detectable concentrations of VOCs, with the exception of acetone detected in indoor air sample IA-7. Acetone is a common chemical found in many household chemical products such as paint and nail polish. The detected acetone concentration of 0.058 micrograms per liter (ug/l) is well below the EPA-RSLr of 32 ug/l. The DTSC does not provide a screening level for acetone. Based on these results, there is a low likelihood of a health risk to current and future occupants of the Site as a result of vapor intrusion.

9 CONCLUSIONS

A Phase I ESA was recently completed by AEI to identify potential environmental concerns at the Site. Based on these results, AEI did not identify RECs associated with past and present on-Site land uses. However, AEI did identify a LUST case at a former gasoline station adjoining west of the Site (across Shatto Place) which has been closed by the RWQCB. Based on its close proximity to the Site, AEI concluded that groundwater beneath the Site may be impacted as a result of the LUST at the former gasoline station. Due to potential off-gassing of vapors from the impacted groundwater, AEI indicated that there is a potential vapor intrusion concern at the Site. Additionally, the Site is located within the Methane Zone as defined by the LADBS.

To further address these issues, HMC collected soil samples throughout the Site for future disposal profiling, groundwater samples to assess potential contaminants and future dewatering needs, soil gas samples to assess whether a vapor intrusion issue might be present, and monitored for methane gas in accordance with LADBS guidelines. Based on the results, HMC completed an HHRE for potential vapor intrusion and completed indoor air sampling.

The following presents the results of these investigations.

- The soil investigation included the advancement of six soil borings throughout the Site. Laboratory results of soil samples collected at 10 and 20 feet bgs indicated no detectable concentrations of petroleum hydrocarbons and VOCs, and no detectable to low concentrations of metals (i.e. background). Based on these results, these soils would be considered non-hazardous waste when excavated and disposed of during construction activities. However, soils encountered at depths greater than approximately 20 feet bgs in the southern portion of the Site indicated a strong petroleum hydrocarbon odor and PID readings of greater than 50 ppm of VOCs. According to SCAQMD Rule 1166, during excavation these soils will need to be monitored using a SCAQMD Site Specific Mitigation Plan and disposed of appropriately at a Class II landfill. The source of these contaminants is likely due to the previously mentioned off-Site LUST case that has impacted groundwater beneath the southern portion of the Site resulting in vapor phase VOCs.
- Groundwater samples were collected from two soil borings in the southern portion of the property and one soil boring advanced in the northern portion of the Site. Laboratory results of groundwater samples indicated elevated concentrations of gasoline and gasoline constituents, such as benzene and toluene, with lesser concentrations in the northern portion of the Site consistent with the general distribution of gasoline products documented in the off-Site LUST case. While you would not be required to mitigate the groundwater given that you are not the source of the impacts, based on these results, the groundwater generated during dewatering activities will likely require treatment prior to discharge to the municipal sewer or stormwater system.
- Elevated concentrations of select VOCs were detected in one sub-slab sample and two soil gas samples. These concentrations exceeded the very conservative screening levels for the protection of human health through possible vapor intrusion. Based on these results, HMC then conducted a screening HHRE to assess the potential health risk that could be present to current or future occupants. Potential human health risks to future occupants would be minimal to the new building due to the design of the proposed subterranean parking garage and associated ventilation system. However, a vapor intrusion issue may be present to current occupants of the classrooms and current and future occupants of the church building.
- To assess whether a human health risk is actually present to occupants of the church building and school through vapor intrusion, indoor air samples were collected. The indoor air sample results indicated no detectable concentrations of VOCs, with the exception of acetone detected in one sample below regulatory screening levels for residential and commercial indoor air. Based on these results, there is a low likelihood of a significant health risk to current and future occupants as a result of vapor intrusion.
- Methane gas was detected in soil gas at concentrations exceeding the LEL for methane. Based on these concentrations and the Site's location in the LADBS Methane Zone, a methane mitigation system is required for the new building. However, since the proposed redevelopment includes the construction of a ventilated subterranean parking garage, the LADBS may wave this requirement. The LADBS guidelines do not require methane mitigation systems be retrofitted into existing buildings. The church building will remain in its current basic configuration, and therefore, no methane mitigation system will be required by the LADBS.

10 RECOMMENDATIONS

Based on the results of this assessment, HMC has the following recommendations.

- Prior to redevelopment, a Soil and Groundwater Management Plan should be prepared to guide the removal of potentially VOC-impacted soil and groundwater during redevelopment activities.
- Prior to redevelopment, a SCAQMD Site Specific Mitigation Plan should be obtained. Soil monitoring should be completed during excavation in accordance with SCAQMD's Rule 1166 and the Site Specific Mitigation Plan. If soils with elevated PID readings are encountered, these soils should be profiled for appropriate off-Site disposal.
- Prior to dewatering activities, a National Pollutant Discharge Elimination System (NPDES) permit should be obtained from the California Regional Water Quality Control Board, Los Angeles Region (RWQCB) to discharge treated water to the municipal sewer and/or stormwater systems. If the subterranean parking garage is designed with a waterproofing envelop to forego a permanent dewatering system and for permit requirements, a waterproofing/building envelope contractor should be consulted to determine the feasibility of such a design and for permit requirements.
- The LADBS should be consulted to determine whether a Site-specific methane gas mitigation system will be required based on the concentrations detected and planned construction design.
- Given the construction anticipated to convert the church building to a restaurant including the likely installation of subsurface piping for future water, sewer and other utilities, HMC recommends as a protective measure that all concrete cuts and utility penetrations on the slab be sealed to add an additional measure of protection against potential vapor intrusion.

NOTES:

Boring ID - soil boring identification

feet bgs - feet below the ground surface

VOCs - volatile organic compounds analyzed in general accordance with EPA Method No. 8260B

ug/l - micrograms per liter

PCE - tetrachloroethylene

1,3,5-TMB - 1,3,5-trimethylbenzene

1,2,4-TMB - 1,2,4-trimethylbenzene

ND - not detected above laboratory reporting limits

EPA-RSLi - Environmental Protection Agency Regional Screening Levels for industrial/commercial land use, calculated using EPA's attenuation factor of 0.0005 for a future commercial development, dated May 2018

DTSC-SLi - Department of Toxic Substances Control, Note 3, Screening Levels, for industrial/commercial land use, calculated using the attenuation factor of 0.0005 for a future commercial development, dated January 2018

EPA-RSLr - Environmental Protection Agency Regional Screening Levels for residential land use, calculated using EPA's attenuation factor of 0.03 for an existing residential development (non-restrictive), dated May 2018

DTSC-SLr - Department of Toxic Substances Control, Note 3, Screening Levels, for residential land use, calculated using the attenuation factor of 0.0002 for an existing residential development (non-restrictive), dated January 2018

NA - not applicable/not available

A yellow highlighted cell indicates a concentration that exceeds a regulatory screening level for a current occupant through possible vapor intrusion.

A blue highlighted cell indicates a concentration that exceeds a regulatory screening level for both a current occupant and future occupant through possible vapor intrusion.

TABLE 4 - LABORATORY RESULTS OF SUB-SLAB SAMPLES

Boring ID	Sample Date	Sample Depth (feet bgs)	VOCs (ug/l)								
			Acetone	Carbon Disulfide	Isopropyl Alcohol	Heptane	PCE	TCE	Benzene	Toluene	Other VOCs
SS1	05/23/18	0.5	**0.26**	**0.017**	**0.16**	**0.0044**	**0.014**	**0.038**	**0.0070**	**0.0066**	ND<0.0026-0.042

DTSC-SLr			NA	NA	4.2	NA	0.009	NA	0.0019	6.2	Various

NOTES:

Boring ID - soil boring identification

feet bgs - feet below the ground surface

VOCs - volatile organic compounds analyzed in general accordance with EPA Method No. TO-15

ug/l - micrograms per liter

PCE - tetrachloroethylene

TCE - trichloroethene

ND - not detected above laboratory reporting limit

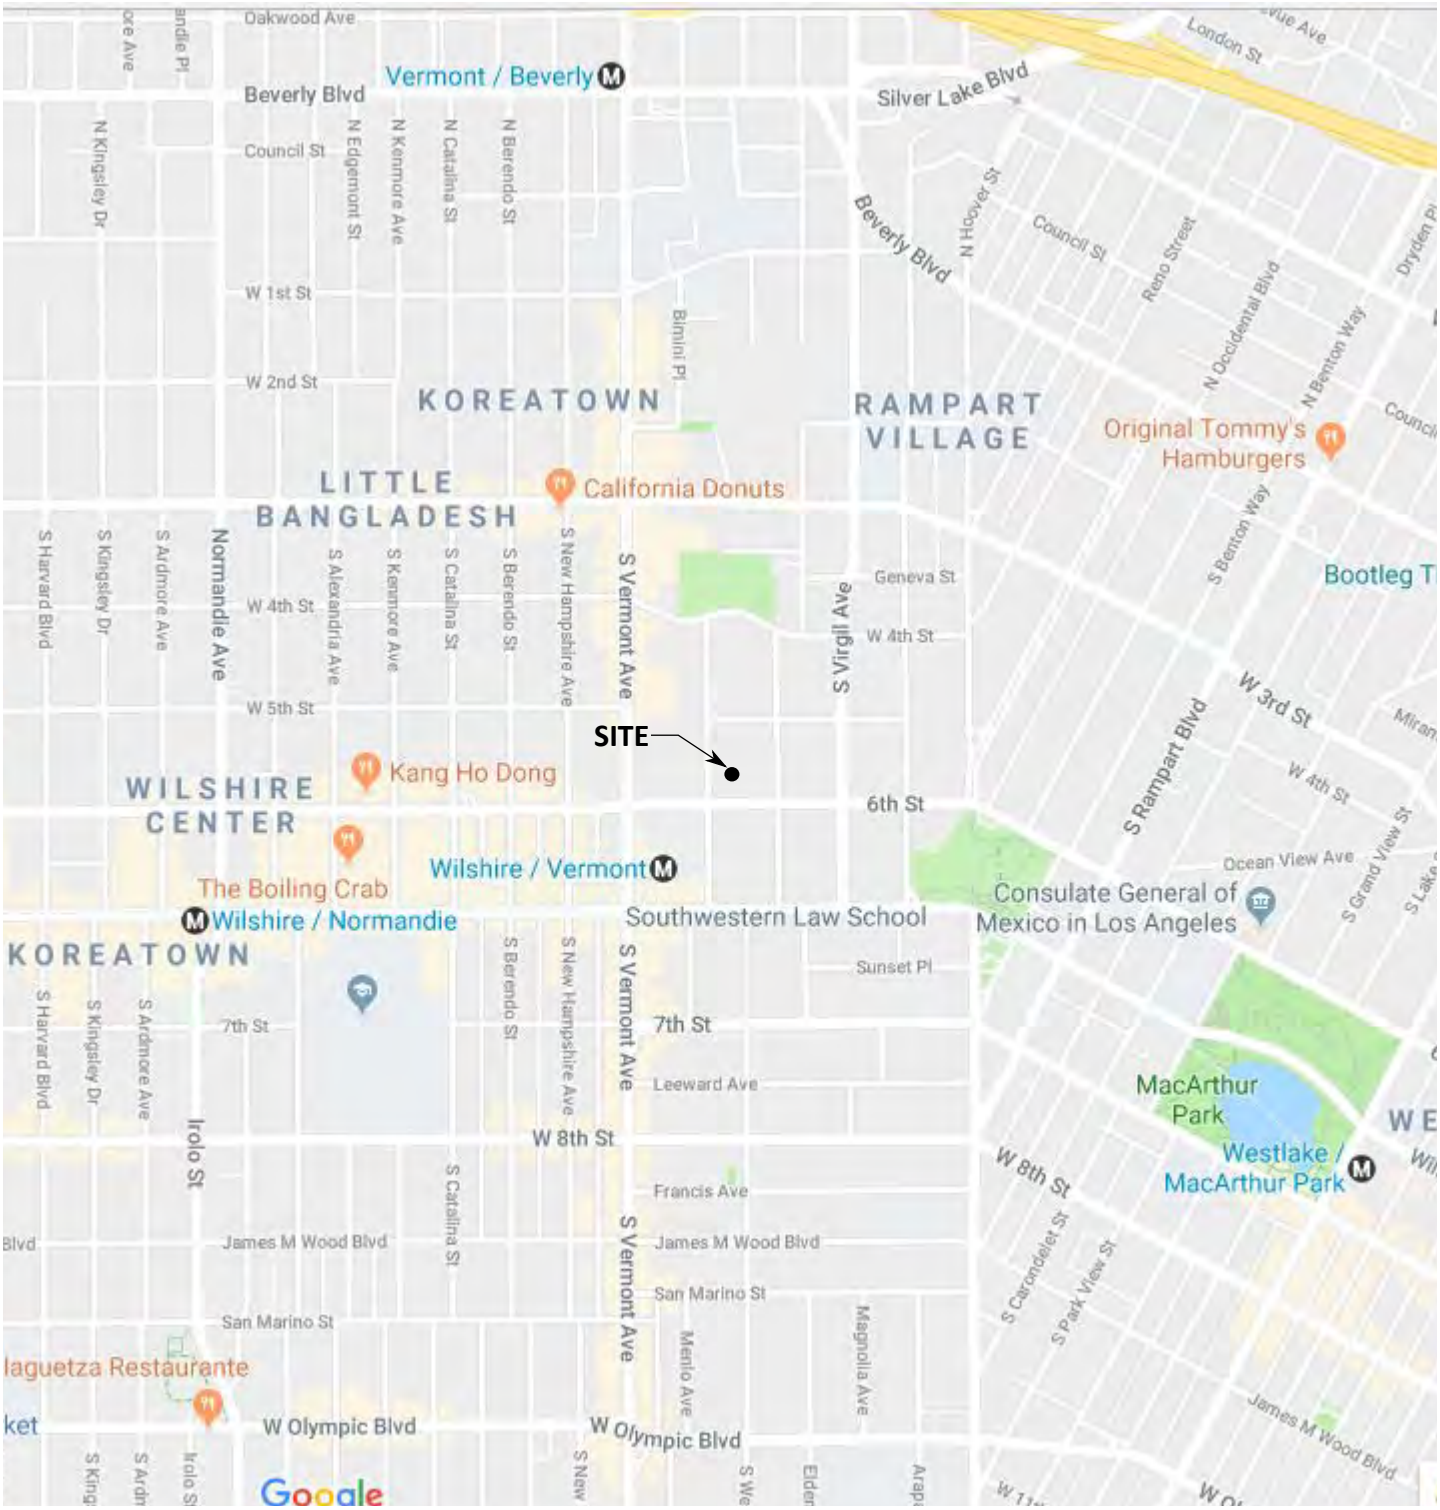
EPA RSLi - Environmental Protection Agency Regional Screening Levels for residential land use, calculated using EPA's attenuation factor of 0.03 for an existing residential development (non-restrictive), dated May 2018

DTSC-SLi - Department of Toxic Substances Control, Note 3, Screening Levels, for residential land use, calculated using the attenuation factor of 0.05 for an existing residential development (non-restrictive), dated January 2018

NA - not applicable/available

Highlighted cell indicates a concentration that exceeds a regulatory guideline

TABLE 5 - HUMAN HEALTH RISK EVALUATION CALCULATIONS



Detected VOC in Soil Gas Sample	Maximum Detected Sub-Slab Concentration (ug/l)	Maximum Detected Soil Gas Concentration (ug/l)	Incremental Lifetime Cancer Risk (ILCR)	Non-Cancer Hazard Index (HI)
Acetone	0.26	2.2	NA	9.6E-05
Chloroform	ND<0.005	0.0087	1.0E-08	1.3E-05
Carbon Disulfide	0.017	0.15	NA	2.8E-04
Styrene	ND<0.0043	0.096	NA	1.5E-05
Cyclohexane	ND<0.0035	3.7	NA	9.2E-05
Heptane	0.0044	95	NA	NA
Hexane	ND<0.0036	160	NA	3.3E-02
PCE	0.042	0.012	1.0E-06	1.4E-02
TCE	0.280	ND<0.27	4.7E-06	1.6E+00
1,3,5-TMB	ND<0.0050	8.5	NA	2.7E-02
1,2,4-TMB	ND<0.0050	24	NA	4.4E-01
Benzene	0.0073	40	6.5E-05	2.1E+00
Toluene	0.0073	170	NA	8.3E-02
Ethylbenzene	ND<0.0044	78	9.6E-06	1.1E-02
o-Xylene	ND<0.0044	120	NA	8.2E-02
m-Xylene	ND<0.0088	120	NA	1.7E-01
p-Xylene	ND<0.0088	59	NA	8.1E-02
Cumulative Risk Values			8.0E-05	4.6E+00
Target Risk Values for Residential/Sensitive Use Properties			1.0E-06	1.0E+00
Target Risk Values for Industrial/Commercial Properties			1.0E-05	1.0E+00
Exceeds / Does Not Exceed Target Risk			**Exceeds**	**Exceeds**

Notes:
VOC - volatile organic compound
ug/l - micrograms per liter
ILCR - Incremental Lifetime Cancer Risk from potential vapor intrusion to indoor air
HI - non-cancer Hazard Index from potential vapor intrusion to indoor air
PCE - tetrachloroethylene
TCE - trichloroethene
1,3,5-TMB - 1,3,5-Trimethylbenzene
1,2,4-TMB - 1,2,4-Trimethybenzene
ND - no detectable concentration above the laboratory reporting limit
NA - not applicable
DTSC - California Department of Toxic Substances Control
ILCR and HI values calculated using DTSC-modified EPA Johnson & Ettinger Soil Gas Screening Model (J&E Model) with commercial exposure parameters, dated February 2004
ILCR and HI values were calculated for soil gas and sub-slab concentrations. The higher value was used in the human health risk evaluation.
Yellow highlighted cell indicates an ILCR or HI value that exceeds the target risk value for residential/sensitive use properties
Blue highlighted cell indicates an ILCR or HI value that exceeds the target risk value for residential/sensitive use and industrial/commercial properties
The Soil Classification System (SCS) soil name "sand" with the SCS soil symbol of "S" was used in the J&E Model

APPENDIX A

LOS ANGELES COUNTY DEPARTMENT OF PUBLIC HEALTH APPROVED PERMIT

ENVIRONMENTAL HEALTH

Drinking Water Program

5050 Commerce Drive, Baldwin Park, CA 91706
Telephone: (626) 430-5420 • http://publichealth.lacounty.gov/eh/ep/dw/dw_main.htm

Work Plan Approval

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS
3119 West 6th St	Los Angeles	90012	janderson@ardentenv.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X	WORK PLAN APPROVED FOR: 4 Soil Borings	**PERMIT NUMBER:**	SR0144284	**DATE:**	5-14-2018

ADDITIONAL APPROVAL CONDITIONS:

- Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- Ensure the boring/exploration hole is backfilled within 24 hours of boring construction.
- Ensure to backfill using a tremie pipe under pressure or equivalent equipment with approved cement grout, proceeding upward from the bottom of the boring/exploration hole.
- Ensure soil borings are sealed per California Well Standards 74-90
  - Cement grout mix ratio of 5-6 gallons of water per 94-pound bag of Portland cement.
  - Up to 6% of Bentonite may be added to the cement-based mix.
  - No hydrated Bentonite chips
- Borings/Exploration holes must comply with all applicable requirements published in the California Well Standards (Bulletins 74-81 and 74-90) and the Los Angeles County Code, Title 11.

U.S.C.S. METHOD OF SOIL CLASSIFICATION

MAJOR DIVISIONS		SYMBOL		TYPICAL NAMES
COARSE-GRAINED SOILS (More than 1/2 of soil > No. 200 sieve size)	**GRAVELS** (More than 1/2 of coarse fraction > No. 4 sieve size)		GW	Well graded gravels or gravel-sand mixtures, little or no fines
			GP	Poorly graded gravels or gravel-sand mixtures, little or no fines
			GM	Silty gravels, gravel-sand-silt mixtures
			GC	Clayey gravels, gravel-sand-clay mixtures
	SANDS (More than 1/2 of coarse fraction < No. 4 sieve size)		SW	Well graded sands or gravelly sands, little or no fines
			SP	Poorly graded sands or gravelly sands, little or no fines
			SM	Silty sands, sand-silt mixtures
			SC	Clayey sands, sand-clay mixtures
FINE-GRAINED SOILS (More than 1/2 of soil < No. 200 sieve size)	**SILTS & CLAYS Liquid limit < 50**		ML	Inorganic silts and very fine sands, rock flour, silty or clayey fined sands or clayey silts
			CL	Inorganic clays of low to medium plasticity gravelly clays, sandy clays, silty clays, lean
			OL	Organic silts and organic silty clays of low plasticity
	SILTS & CLAYS Liquid limit > 50		MH	Inorganic silts, micaceous or diatomaceous fine sandy or silty soils, elastic silts
			CH	Inorganic clays of high plasticity, fat clays
			OH	Organic clays of medium to high plasticity, organic silty clays, organic silts
HIGHLY ORGANIC SOILS			PT	Peat and other highly organic soils

GRAIN SIZE CHART

CLASSIFICATION	RANGE OF GRAIN SIZE	
	U.S. Standard Sieve Size	Grain Size in Millimeters

Project: **3119 W 6th St / 101005002**
Lab I.D.: **180524-110, -111, -112**

Dear Mr. Anderson:

The **analytical results** for the water samples, received by our lab on May 24, 2018, are attached. The samples were received chilled, intact, and accompanying chain of custody.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manager

Notes and Definitions

TO-14	TO-15 analysis of sample was not performed due to high concentration of analyte(s). Sample was analyzed utilizing method TO-14 and reporting limit has been adjusted accordingly.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

COMMENTS
DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = PQL X DF
ND = Below the Actual Detection Limit or non-detected
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
@ = Must meet both the STLC Limit at 560 and EPA-TCLP Limit at 5
* = STLC analysis for the metal is recommended (if marked)
** = Additional Analysis required, please call to discuss (if marked)
*** = The concentration exceeds the TTLC Limit, and the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)
-- = Not analyzed/not requested

APPENDIX D

CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

FORM 1 - CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

Part 1: Certification Sheet

Site Address: 3119 WEST 6TH STREET, LOS ANGELES

Legal Description: Tract: 5077 Lot: 004 Block: 033

Building Use: PROPOSED COMMERCIAL/RES. DENTAL

Architect's, Engineer's or Geologist's Stamp:

PROFESSIONAL GEOLOGIST
PAUL A. ROBERTS
No. 6897
Exp. 06-20
STATE OF CALIFORNIA

Name of Architect, Engineer, or Geologist:
PAUL ROBERTS

Mailing Address:
1827 CAPITAL STREET, SUITE 103
CORONA, CALIFORNIA, 92880

Telephone: 951-736-5334

Name of Testing Laboratory:
NA

City Test Lab License #:

Telephone:

I hereby certify that I have tested the above site for the purpose of methane mitigation and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2014-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the architect, engineer or geologist whose signature is affixed thereon.

Signed: Paul Roberts date 6-14-18

Required Data:

- Project is in the (Methane Zone) or (Methane Buffer Zone).
- Depth of ground water observed during testing: 0 feet below the Impervious Membrane.
- Depth of Historical High Ground Water Table Elevation*: 0 feet below the Impervious Membrane.
- Design Methane Concentration**: 1,000,000 parts per million in volume (ppmv).
- Design Methane Pressure***: 0.0 inches of water column.
- Site Design Level: (Level I, Level II, Level III, Level IV, Level V) with 0.0 inches of water column.

De-watering:

- De-watering (is) (is not) required per Section 7104.3.7.
- Pump discharge rate TBD cubic feet per minute per reference geology or soil report: _____ dated _____.

Additional Investigation:

- Additional investigation (was) (was not) conducted.

Latest Grading on Site:

- Date of last grading on site (was) (was not) more than 30 days before Site Testing.
- See Attached explanation of the effect on soil gas survey results by grading operations.

Notes:

* Historical High Ground Water Table Elevation shall mean the highest recorded elevation of ground water table based on historical records and field investigations as determined by the engineer for the methane mitigation system.

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either Shallow Soil Gas Test or any Gas Probe Set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. For efficient handling of information internally and in the internet, conversion to this new format of code related and administrative information bulletins including MGD and RGA that were previously issued will allow flexibility and timely distribution of information to the public.

TABLE 1 - DATA COLLECTION EQUIPMENT

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. For efficient handling of information internally and in the internet, conversion to this new format of code related and administrative information bulletins including MGD and RGA that were previously issued will allow flexibility and timely distribution of information to the public.

Newmark Knight Frank

Newmark of Southern California, Inc., a California corporation doing business as Newmark Knight Frank (the "Agent") has been engaged as the exclusive sales representative for the sale of 514 Shatto Place, Los Angeles, CA 90020 (the "Property") by American Federation of State, County and Municipal Employees or 'Ownership' (the "Seller"). The Property is being offered for sale in an "as-is, where-is" condition, and the Seller and the Agent make no representations or warranties as to the accuracy of the information contained in this Offering Memorandum. The enclosed materials include confidential information and are being furnished solely for the purpose of review by prospective purchasers ("Purchasers") of the interest described herein for which it shall be fully and solely responsible. Neither the enclosed materials, nor any information contained herein, are to be used for any other purpose, or made available to any other person without the express written consent of the Seller. Each recipient, as a prerequisite to receiving the enclosed information, should be registered with the Agent as a "Registered Potential Investor" or as a "Buyer's Agent" for an identified "Registered Potential Investor". The use of this Offering Memorandum, and the information provided herein, is subject to the terms, provisions and limitations of the Confidentiality Agreement furnished by the Agent prior to delivery of this Offering Memorandum.

The material contained herein is based on information and sources deemed to be reliable, but no representation or warranty, express or implied, is being made by the Agent or the Seller or any of their respective representatives, affiliates, officers, employees, shareholders, partners, and directors, as to its accuracy or completeness. Summaries contained herein of any legal or other documents are not intended to be comprehensive statements of the terms of such documents, but rather only outlines of some of the principal provisions contained therein. Neither the Seller nor the Agent shall have any liability whatsoever for any other written or oral communication or information transmitted, or made available, or any action taken, or decision made by the recipient with respect to the Property.

The Seller reserves the right, at its sole and absolute discretion, to withdraw the Property from the market for sale at any time and for any reason without notice, to reject any and all expressions of interest or offers regarding the Property, and/or to terminate discussions with any entity at any time, with or without notice. This Offering Memorandum is made subject to omissions, correction of errors, change of price or other terms, prior sale or withdrawal from the market without notice. The Agent is not authorized to make any representations or agreements on behalf of the Seller. The Seller shall have no legal commitment or obligation to any recipient reviewing the enclosed materials, performing additional investigation, and/or making an offer to purchase the Property unless and until a binding written agreement for the purchase of the Property has been fully executed, delivered, and approved by Seller and any conditions required under the contract for title to pass from the Seller to the buyer have been satisfied or waived. By taking possession of and reviewing the information contained herein, the recipient agrees that (a) the enclosed materials and their contents will be held and treated in the strictest of confidence; and (b) the recipient shall not contact employees, contractors, sub-contractors or lien-holders of the Property directly or indirectly regarding any aspect of the enclosed materials or the Property without the prior written approval of the Seller or the Agent; and (c) no portion of the enclosed materials may be copied or otherwise reproduced without the prior written authorization of the Seller or the Agent or as otherwise provided in the Confidentiality Agreement executed and delivered by the recipient(s) to Agent.

The Seller will be responsible for any commission due to the Agent in connection with a sale of the Property. However, any broker engaged by Purchaser ("Buyer's Broker") shall seek its commission only from the Purchaser. Under no circumstances will the Agent or the Seller be liable for same and recipient will indemnify and hold the Agent and the Seller harmless from any claims by any brokers having dealt with recipient other than the Agent. Any Buyer's Broker must provide a registration signed by the recipient acknowledging said Buyer's Broker's authority to act on the recipient's behalf.

SHATTO PLACE

EXECUTIVE SUMMARY

A.F.S.C.M.E.
Council 36

As the exclusive agent for the owner, Newmark Knight Frank, in partnership with MGO Realty Advisors, is pleased to offer the opportunity to acquire 514 Shatto Place, a freestanding office building located in the heart of the densely populated Koreatown neighborhood of Los Angeles. This building presents itself as an excellent opportunity for investors and owner-users alike. Nearby neighbors include a variety of government services, foreign consulates, educational organizations, health care services and union/trade organizations, as well as a host of excellent amenities.

The 2.7 square mile Koreatown neighborhood has been a hotbed for residential and mixed-use development projects. The current developments in planning or under construction plan to contribute over 3,000 residential housing units, 450 hotel units, and over 400,000 square feet of retail and commercial space.

Located only one block from the Wilshire/Vermont Metro station, 514 Shatto is easily accessible from most parts of Los Angeles, and is only five stops from Union Station, which connects to a multitude of locations across Southern California and beyond.

PROPERTY OVERVIEW

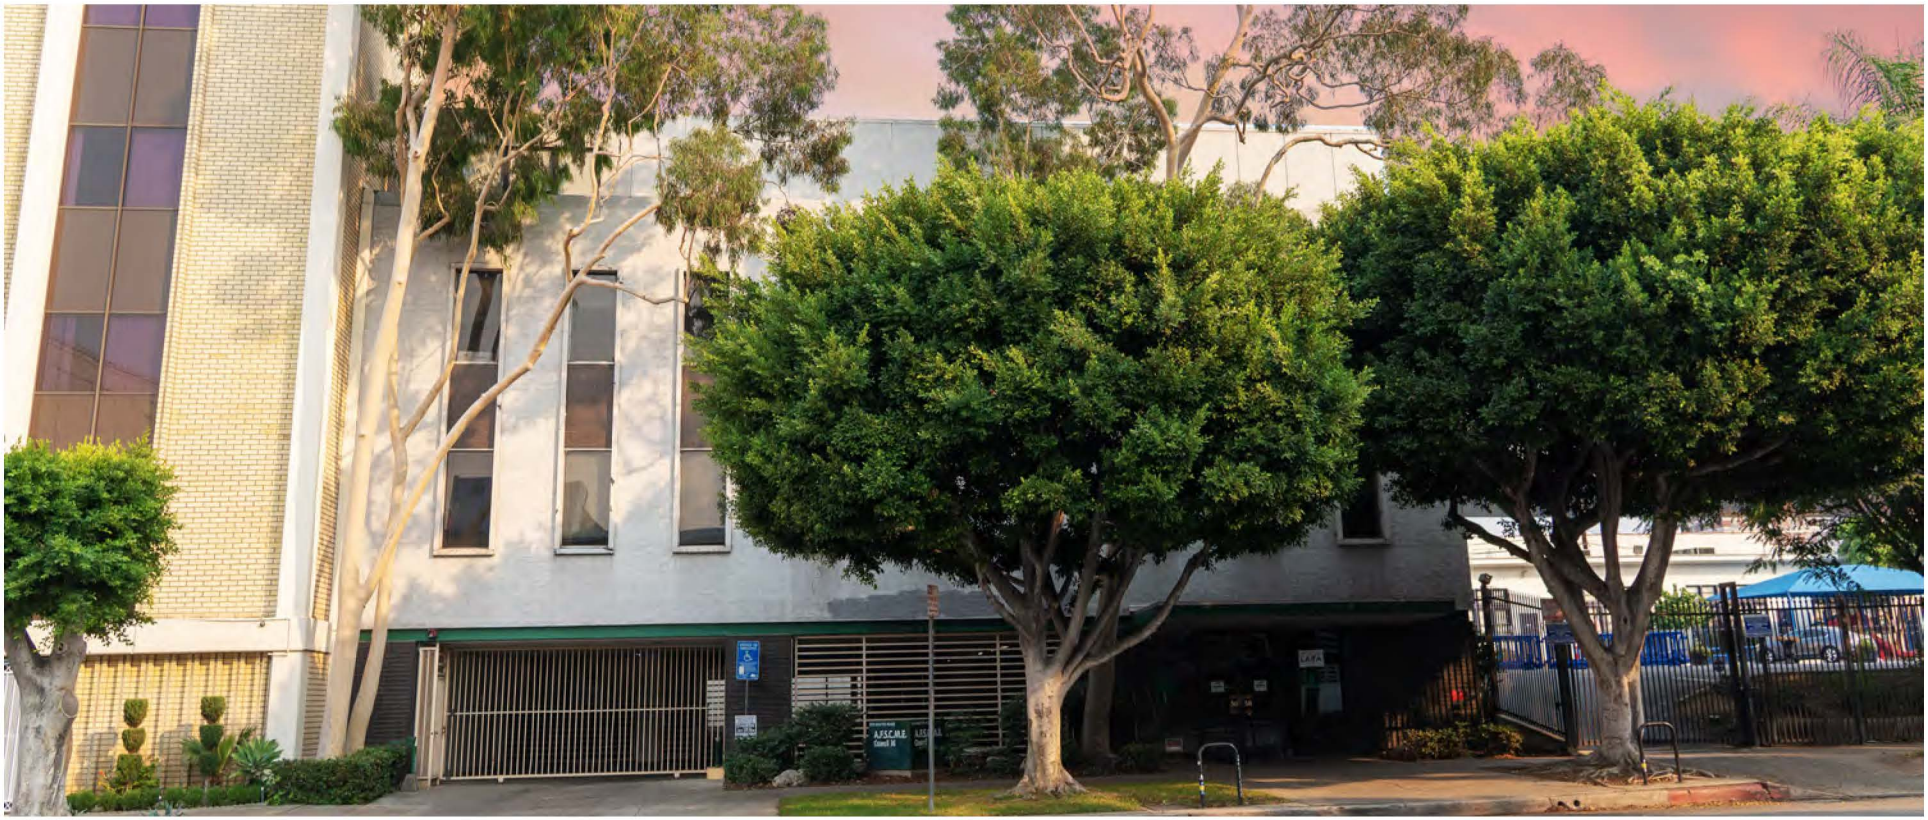
Just north of 6th Street in Los Angeles' Koreatown, 514 Shatto Place presents itself as an investment or owner-user opportunity in a densely populated and growing neighborhood. The 27,843 square foot masonry office building offers convenience of location, with a close proximity to the Metro Redline, 101 Freeway, 110 Freeway, and 10 Freeway, which easily connect Koreatown to other neighborhoods in the Greater Los Angeles Region.



514 Shatto is surrounded by an excellent amenity base, which includes Roll Call Sushi, Breakers Korean BBQ, Shiloh, Herbs + Greens, Pizza Rev, Chipotle, Buffalo Wild Wings, Starbucks, and Coffee Bean & Tea Leaf.

The property is located within a Designated Qualified Opportunity Zone Census Tract. The Opportunity Zone program was created to stimulate private investment in Opportunity Zone communities in exchange for capital gain tax incentives. In exchange for investing in communities within Qualified Opportunity Zones, investors can access capital gains tax incentives both immediately and over the long term.

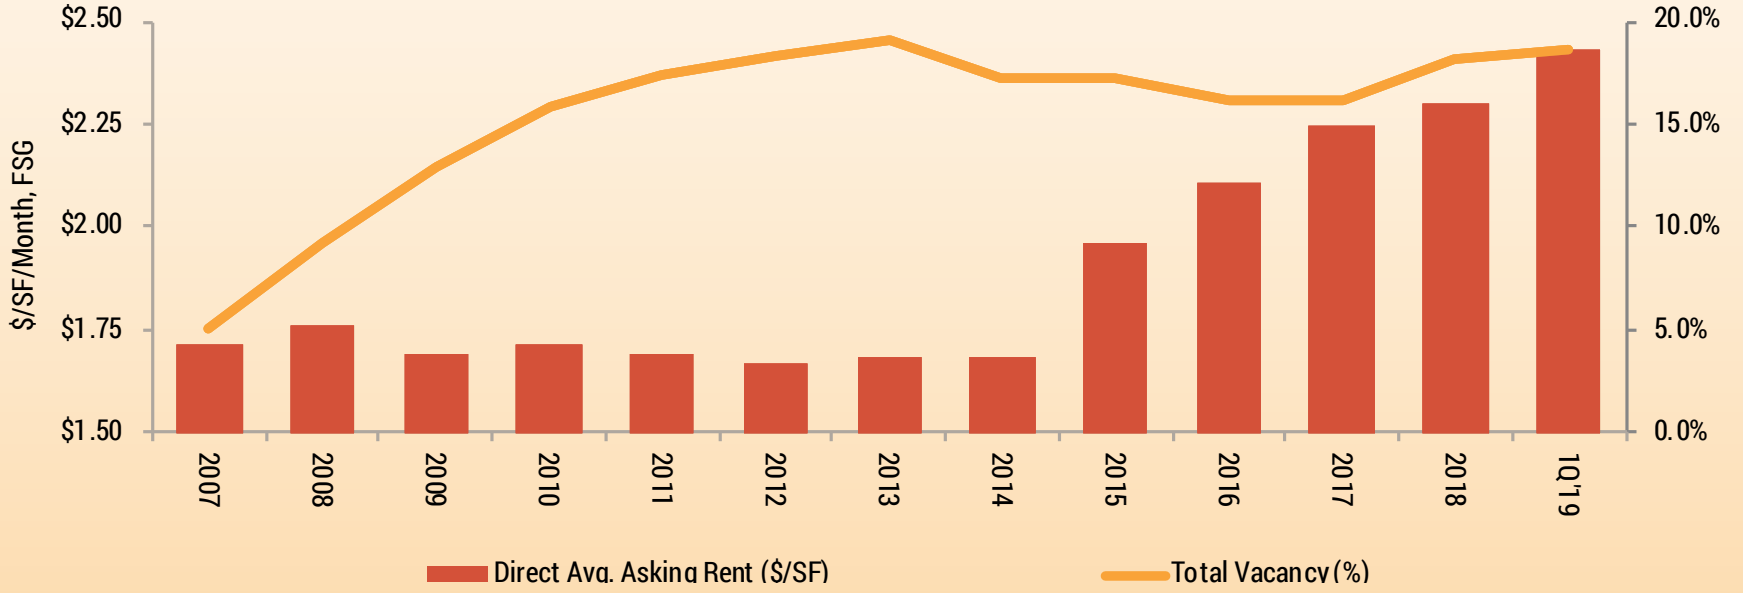
KOREATOWN, LOS ANGELES

Koreatown is a neighborhood in Central Los Angeles, centered near Eighth Street and Irolo Street, west of MacArthur Park. The rectangular area covers about 150 blocks, spanning 10 streets and 15 avenues (east-west). Many of the historic Art deco buildings with terra cotta facades have been preserved because the buildings remained economically viable for the new businesses. Today, Koreatown is quickly becoming one of LA's most popular neighborhoods; David Chang, world-renowned chef and founder of the Momofuku Restaurant Group, has called it the "most exciting place to eat in America."



Koreatown is the most-densely populated district by population in Los Angeles County, with 120,000 residents in 2.7 square miles. Despite the name evoking a traditional ethnic enclave, the community is complex and has an impact on areas outside the traditional boundaries.

PROFESSIONAL OFFICE MARKET OVERVIEW
KOREATOWN (1Q'19)

Net Absorption and Construction Deliveries

Direct Average Asking Rent & Vacancy

STATISTICS	1Q'19
# of Buildings	58
Total Inventory	8,348,562 SF
Total Vacancy Rate	18.7%
Direct Avg. Asking Rent	$2.43/SF FSG
Under Construction	468,000 SF
Construction Deliveries	0 SF
TTM Net Absorption	-120,859 SF

- Koreatown is 2.7 square miles with 42,611 residents per mile--among the highest densities in Los Angeles County. Walkable amenities, three metro rail stations, affordable housing, and competitive office rents are among the market's selling points. The neighborhood appeals to younger people and businesses priced out of other historically popular submarkets, such as Downtown.
- Fifty-nine properties comprise Koreatown's office inventory, with an average construction date of 1963. Only one project is under construction: a 21-story, 468,000-square-foot tower for the Los Angeles County Department of Mental Health, along with other county departments.
- Several government agencies have a presence in the market, including the Los Angeles Department of Children and Family Services (149,419 SF at 425 Shatto Place).
- Vacancy has been relatively flat, hovering in the 17 to 19% range since 2014. Available space is listed on the market for an average of 10 months before it is leased.
- Demand has been weak for most of this cycle (2009+), as the decades-old office towers, which comprise much of the market's inventory, have gone out of style with many tenants. Jamison Properties owns 68% of Koreatown's office inventory and has aggressively pivoted from office investment to multifamily developments.
- Approximately 2,090 apartment units are under construction. Last quarter, 3921 Wilshire Boulevard broke ground and will add 103 units and some retail space; Jamison is converting a 1959-built office building. More projects are planned.
- A declining supply of office inventory is exerting upward pressure on rents. Additionally, some low-rise product is ripe for conversion to creative space.
- Multiple tenants vacated large blocks of space in 2018, causing negative net absorption.

Summary of Professional Experience:

Mr. Rotnem began conducting Phase I Environmental Site Assessments (ESAs) in 2007. He has completed over 1,000 Phase I ESA studies on commercial, industrial, residential, and agricultural sites throughout the United States and Canada for clients including private individuals, developers, and lenders. He has experience with projects requiring special scope considerations and client guidelines, including national banks, SBA, Fannie Mae, and Freddie Mac.

Select Phase I ESA project experience for Mr. Rotnem includes:

- Gilmore Gasoline Plant – former refinery in Long Beach Oil Field, California
- Rain CII Carbon LLC – carbon coke processing plants in Chalmette and Gramercy, Louisiana
- Paramount Chemical Corporation – chemical and paper manufacturing plant in Montebello, California
- Hays Ready Mix – concrete batch plant in Hays, Kansas
- FXI, Inc. – foam product production plant in Orange, California
- Warner Center Towers - 21-acre office park with six high-rise towers and UST tank farm in Woodland Hills, California
- Union 76/Circle K – portfolio of eight service stations in Los Angeles, Riverside, and Orange Counties, California
- HM Holloway – gypsum mines in Lost Hills, California
- Siren Studios – film production studios in Hollywood, California
- Sutro Tower – 1,000-foot radio antenna tower in San Francisco, California
- Millennium Tower – 58-story residential structure in San Francisco, California
- Mare Island – former naval shipyard in Vallejo, California
- Hunter's Point NPL – brownfields adjacent to San Francisco Bay in San Francisco, California
- NAPA Truck Repair – service, engine washing, and degreasing facility in Redding, California
- W 36th Street – R&D building adjacent to Boeing HQ in Everett, Washington
- One Bush Plaza – office high-rise in San Francisco, California
- ML Macadamia Orchard, LP – 5,000-acre macadamia farm in Pahala, Hawaii

Edna M. Picciolini – National Client Manager

B.A. – Environmental Sciences, Northwestern University, 1995

Illinois Department of Public Health Asbestos Inspector
USEPA Accredited Asbestos Building Inspector

Ms. Picciolini has served as a National Client Manager, Senior Project Manager and Group Leader, overseeing all aspects of Environmental Due Diligence, including Phase I Environmental Site Assessments (ESAs), Phase II ESAs, and Regulatory Compliance Audits. Ms. Picciolini has 22 years of environmental consulting experience. Her responsibilities have included coordinating Phase I Environmental Site Assessments (ESA) and Industrial Hygiene operations and managing national client accounts for sites throughout the United States, Canada and Mexico. Ms. Picciolini has produced several national client report formats for Phase I ESAs, as well as NEPA reports. She has prepared a Quality Assurance/Quality Control (QA/QC) database to track the report writing performance of internal staff. Her experience includes writing proposals, overseeing project budgets, invoicing, and reviewing Health and Safety Plans, Phase I ESAs, Asbestos and Lead Survey Reports, reviewing and writing Federal Communications (FCC) NEPA Compliance Checklists and FCC Environmental Assessments (EAs), and performing Phase I ESAs, asbestos surveys, mold inspections, hazardous materials surveys and compliance audits. She has been responsible for overall QA/QC of Phase I ESAs, Phase II ESAs, and Asbestos Surveys for multiple clients and portfolios. Ms. Picciolini has performed and managed Phase I ESAs on varied property types including retail shopping centers, commercial office buildings, high-rise structures, medical clinics, medical office buildings, manufacturing sites, industrial/warehouse structures, gas stations, automotive service stations, marinas, retail strip malls, multi-family residential buildings, railroad yards, airports, bulk oil storage terminals, cemeteries, funeral homes, and vacant parcels.

Ms. Picciolini's experience also includes FESOP and Title V air permitting, air emissions inventories, and a thorough knowledge of Comprehensive Environmental Response, Compensation, and Liability Act issues and reform options; Illinois Responsible Property Transfer Act (IRPTA) applicability; Risk Management Planning (RMP); Resource Conservation and Recovery Act (RCRA); Emergency Prevention and Community Right-To-Know Act (EPCRA) regulations; asbestos surveys; mold surveys; hazardous materials surveys, and project management.

Ms. Picciolini has a thorough knowledge of health and safety issues and regulations. She has provided Occupational Safety and Health Administration (OSHA) Asbestos Awareness Training to clients and in-house personnel, and has provided mentoring and training to junior staff. She has successfully managed and/or completed numerous multi-site portfolios within project budgets and under strict deadlines.

Project experience for Ms. Picciolini includes:

- GMAC Commercial Mortgage Corporation - Managed many multi-site portfolios of Phase I ESAs including healthcare, and emissions testing facilities throughout the State of Illinois. These projects were performed for re-financing purposes and identified recognized environmental conditions (RECs) associated with these sites. Provided client consultation regarding next steps for Phase II ESAs.
- Confidential Client - Managed major telecommunications account that involved over 1,300 projects, including FCC Checklist reports, FCC EAs, Phase I ESAs, and Phase II investigations, including asbestos surveys.
- GuernseyBel - Conducted air emissions inventory and completed the Illinois Environmental Protection Agency annual emissions summary report for a regional food topping manufacturer.
- **Confidential Client - Completed desktop reviews of prior environmental reports, historical record reviews and database reports for 950 properties. Risk analysis of each property was performed, with information summarized in an access database. Calculated worst case environmental liability loss.**
- Confidential Client - Maintained monthly reporting requirements for an active site remediation system. Activities include submitting wastewater effluent reports in connection with the industrial waste permit for an on-site remediation system.
- Confidential Client - Performed compliance reviews for a national drugstore's distribution warehouse facilities and an equipment rental company in Illinois, Wisconsin, and Indiana. Responsibilities included determination of compliance status and developing company-wide compliance manual.
- Confidential Client - Prepared EAs pertaining to flood plain, wetland, archaeological, and historical issues. Acted as liaison between local telecommunications clients and United States Army Corps of Engineers, Natural Resources Conservation Service, State Historic Preservation Agency, and local agencies.
- LaSalle Investment Management: Managed multiple Phase I ESAs, Asbestos and Lead Surveys, and Phase II ESAs for various properties throughout the United States and Canada for purchase and sale. Inspections were performed to current ASTM Standards.
- Military Housing - Conducted Mold Surveys in the southeast to support the privatization of base housing.
- Client Management: Various - Managed multiple portfolios of Phase I ESAs, Asbestos and Lead Surveys, and Phase II ESAs for various properties throughout the United States, Mexico and Canada for purchase, sale and refinances. Inspections were performed to current ASTM Standards. Performed staff training, prepared report formats, project management, staff assignments, report reviews, and client communications throughout the projects. Ensured projects

were performed within budget and timelines. Communicated updates to the client and provided consultation regarding next steps. Oversaw Phase II proposals and completion of Phase II ESAs. Analyzed subsurface data to determine if a reported release had occurred and next steps. Prepared or reviewed Health and Safety Plans for each project determining whether various safety issues were adequately addressed for on-site staff performing assessments.

- Walgreen Co. **–** Oversaw Due Diligence Services for a National Retail Drug Chain Account. Duties included training staff, overseeing all reporting, tracking, maintaining, developing, and providing training to the account. Oversaw project proposals, budgets, client contacts and updates, as well as made sure client performance standards were met. Sites were located throughout the United States and Puerto Rico.
- Confidential Client **-** Performed a Visual Survey for suspect microbial growth on drywall, which included cuts to drywall throughout the structure. The Survey was performed for an insurance carrier to determine if the moisture infiltration was occurring in several areas, or was isolated to one portion of the building.
- Equity **-** Prepared an Asbestos and Hazardous Material Survey for a defunct power plant. Oversaw basement dewatering, hazardous material identification removal, and asbestos abatement contractors throughout the project, which spanned over one year and was valued at over $3 million in total cost. Oversaw obtaining de-watering permits from the local municipalities, as well as compliance with local, state and federal regulations throughout the project.
- Lillibridge Healthcare Services, Inc**.-** Provided OSHA Asbestos Awareness Training to maintenance personnel and established a Corporate Asbestos Management Plan for a healthcare property management company.
- Albertson's **-** Performed an Asbestos and Hazardous Material Survey for a defunct bakery building slated for demolition. Provided detailed reporting and drawings for asbestos removal cost estimates.

Civil Report Memorandum and Correspondence

FORM GEN. 160 (REV. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: December 3, 2020

TO: Shana M.M. Bonstin
Arthi L. Varma
Lisa M. Webber
Deputy Director of Planning
Department of City Planning

FROM: Gerald Watson, Acting Division Manager
Clean Water North Conveyance Division
LA Sanitation & Environment

SUBJECT: AA-2019-7098-PMLA — 7650 North Balboa Boulevard
AA-2020-4533-PMLA-HCA — 2119 South Federal Avenue
TRACT MAP No. 83213 — 550 South Shatto Place

Our office has reviewed the sewer/storm drain lines serving the subject tracts/areas, and found no potential problems to our structures and/or potential maintenance issues.

Note: This Approval is for the Tract Map only and represents the office of LA Sanitation/CWCDs. The applicant may be required to obtain other necessary Clearances/Permits from LA Sanitation and appropriate District office of the Bureau of Engineering.

If you have any questions, please contact Rafael Yanez at (323) 342-1563.

Civil Report Memorandum
October 15, 2020

BRANDOW & JOHNSTON
EST. 1945
STRUCTURAL + CIVIL ENGINEERS

Existing Conditions

Topography and Drainage – Approved Project

The existing site area consisting of three parcels (approximately 1.18 acres pre-dedication) generally slopes southwest toward the intersection of Shatto Place and 6th Street at a rate of about 1.2%. There are on-site inlets for drainage that currently curb drain to Shatto Place. The existing site is 98% impervious, resulting in a discharge volume of 3,758 cubic feet for an 85th Percentile storm. Based on a 50-year storm event the existing peak discharge is 3.11 cubic feet per second.

Topography and Drainage – Modified Project

One additional lot north of the approved project has been added to the project site, resulting in a total of four parcels (approximately 1.52 acres pre-dedication). The site general flow pattern is unchanged with southwesterly slopes at a rate of about 1.2%. The existing impervious increased slightly to 99%. The resultant existing 85th Percentile storm volume discharge is increased to 4,590 cubic feet, while the existing 50-year peak discharge is increased to 4.0 cubic feet per second. No existing inlets were observed and runoff appears to all sheet flow onto Shatto Place. Existing roof drains either discharge above-grade or are connected to curb drains discharging onto Shatto Place.

Storm Drain

Based on our existing utility research, there are no existing storm drain systems in the adjacent public streets abutting the site. The closest existing public storm drain main line is located one block westerly running northerly along Vermont Avenue.

Sanitary Sewer

The existing public sanitary sewer main lines near the project are owned and maintained by the City of Los Angeles Sanitation Department. An existing main line exists in each street adjacent to the subject property and their information is summarized below:

- Shatto Place – 8-inch vitrified clay pipe (VCP) running south towards 6th Street
- 6th Street – 8-inch vitrified clay pipe (VCP) running easterly

The City of Los Angeles Central District Sewer Wye Map 11789, 25635, and supplemental plan B-4551 cover the subject area and provide information regarding these existing main lines and profiles. Information related to the existing sewer capacity and flow has been provided by the Wastewater Engineering Services Division (WESD) via the Wastewater Service Information (WWSI) process and their response is attached separately (dated

September 23, 2020). The report indicates that the two existing 8-inch lines adjacent to the project site feed into a 20-inch mainline on Berendo Street, and that the existing design capacity of that main line is at 32%.

Domestic/Fire Water – Approved Project

The existing water main lines near the project area are owned and maintained by the Los Angeles Department of Water & Power. An existing main line exists in each street adjacent to the subject property and their information is summarized below:

- Shatto Place – 8-inch main line with a maximum pressure of 90 psi as of May 2, 2018.
- 6th Street – 24-inch main line with a maximum pressure of 83 psi as of October 10, 2018

One existing fire hydrant is located immediately adjacent to the project site at the southwestern corner of the intersection of Shatto Place and 6th Street. The Los Angeles Fire Department, in its Interdepartmental Memo dated August 3, 2018 did not require any additional hydrants for the Approval Project.

Telecommunications

Per City of Los Angeles Substructure Map 101-3 an existing 1-1/2” telecommunication conduit owned and maintained by AT&T (formerly PTT) runs along the property frontage on Shatto Place connecting to an existing underground vault near the southeastern corner of the project site. Considering the Approved Project’s proposed street improvements on Shatto Place the existing conduit will be protected in place unless it is required to be removed by AT&T during the design process. Per the City of Los Angeles’ online GIS system “Geohub” there are no existing cellular towers located adjacent to the project site.

Proposed Development

Storm Drain – Approved Project

The project would be designed to comply with the City of Los Angeles’s Low Impact Development (LID) design standards. To facilitate this, the proposed stormwater Best Management Practices (BMPs) that are to be considered are rainwater harvesting and/or bio-infiltration flow-through planters. The entirety of the roof drains for the new mixed-use building and the existing church building will be diverted to the proposed stormwater BMPs and the overflow discharge will be discharged to Shatto Place and 6th Street via a curb drain or parkway drain. Based on the Geotechnical Report provided by Geotechnologies, Inc., dated January 24, 2019, groundwater was encountered and infiltration is not feasible.

Post-dedication, the total site area is approximately 1.28 acres in size. To comply with the Bureau of Sanitation’s Low Impact Development Standards the greater runoff volume between a 0.75-inch storm event and the 85th percentile storm event will be treated. Based

on the proposed impervious area percentage of 94% the greater volume is generated by the 85th percentile storm: 3,936 cubic feet in volume. The section of the bio-infiltration flow-through planter would consist of 12" of ponding, 3' of soil, and 12" of permeable material.

Storm Drain – Modified Project

Due to the increased total site area of approximately 1.69 acres and revised imperviousness of 95%, the 85th percentile storm runoff volume is 5,057 cubic feet in volume. In order to comply with the Bureau of Sanitation's Low Impact Development standards, the project would implement several stormwater treatment options, such as a bio-filtration flow through planter system consisting of 12" of ponding, 3' of soil media, and 12" of permeable material, and a rainwater harvesting system. The required BMPs, such as a bio-filtration flow through planter system or a rainwater harvesting system, shall be sized to collect the 85th percentile storm runoff volume based on Bureau of Sanitation Low Impact Development Standards. The rainwater harvesting system would be connected to the buildings' irrigation system so that collected stormwater runoff would be re-used. The system is designed to capture runoff, store it within its chambers, and re-use it for irrigation.

	Approved Project	**Modified Project**
Proposed Site Area	1.28 acres	1.69 acres
85th Percentile Storm Volume	3,936 cubic feet	5,057 cubic feet
50-year peak discharge flow	3.37 cfs	4.29 cfs

Sanitary Sewer – Approved Project

Based on input from the project Applicant, a facility description was submitted to the City of Los Angeles for generation of a Sewer Capacity Availability Report. The Proposed Facility Description on the SCAR is summarized below:

Proposed Use Description	**Sewage Generation Rate (GPD)**	**Per Unit**	**Qty**	**GPD**
RESIDENTIAL: APT – BACHELOR	75	DU	2	150
RESIDENTIAL: APT – 1 BDRM	110	DU	150	16,500
RESIDENTIAL: APT – 2 BDRMS	150	DU	92	13,800
RESIDENTIAL: APT – 3 BDRMS	190	DU	8	1,520
RESTAURANT: FULL SERVICE INDOOR SEAT	30	SEAT	380	11,400

RESIDENTIAL: DUPLEX/TOWNHOUSE -2BDRMS	150	DU	4	600
OFFICE BUILDING	120	KGSF	2,507	301
PROPOSED TOTAL FLOW (Gross):			**44,271 GPD**	

The estimated proposed total flow based on the facility description is 44,271 gallons per day (gpd). This calculated flow does not net out existing uses that would be removed. The estimated existing sewer demand for the existing school to be removed is 1,360 gallons per day. The proposed points of connection to the existing public main lines will be determined by the Plumbing Engineer during design.

Sanitary Sewer – Modified Project

Based on revised input from the project Applicant, a facility description was submitted to the City of Los Angeles for generation of a Wastewater Service Information request (WWSI). The estimated proposed total flow based on the facility description is 80,986 gallons per day (gpd). This calculated flow does not net out existing uses that will be removed. The estimated existing sewer demand for the existing school to be removed is 1,360 gallons per day. The Modified Project would also remove the existing office building containing 27,843 square feet. The estimated existing sewer demand for the existing office building to be removed is 3,342 gpd. The calculated sewer demand of the school and office building uses to be removed is 4,702 gpd. The revised sanitary sewer demand is itemized below:

Proposed Use Description	**Sewage Generation Rate (GPD)**	**Unit**	**Quantity**	**GPD**
RESIDENTIAL: APT - 1 BDRM. *6	110	DU	200	22,000
RESIDENTIAL: APT - 2 BDRMS *6	150	DU	100	15,000
RESIDENTIAL: APT - 3 BDRMS *6	190	DU	13	2,470
RESIDENTIAL: APT - 5 BDRMS *6**	270	DU	54	14,580
OFFICE BUILDING	120	KGSF	11,965	1,436
RESTAURANT: FULL SERVICE INDOOR SEAT	30	SEAT	850	25,500
SWIMMING POOL ***	1	EA	4	4
Proposed Total Flow (Gross):				**80,990 GPD**

** The 5 Bedrooms are co-living units. As such, to be conservative, these dwelling units were modeled as 6 Bedroom units.

*** The proposed pool will be a closed loop circulation system with anticipated sewer discharge only when the filters are washed. Washing schedule is 6 times per year for 100 gallons each, resulting in an average of 4

GPD.

	Approved Project (Gross)	Modified Project (Gross)**	Existing Sewage Generation due to Removed Uses at Modified Project*	Modified Project (Net)
Estimated Sewer Max Allowable Capacity	44,271 gpd	80,990 gpd	4,702 gpd	76,288 gpd

* Existing Sewage Generation was calculated based on the sum of existing demands of removed uses, including the existing office building and school
**The project's infrastructure will be designed to accommodate the gross sewer max allowable capacity.

The WWSI states that the existing sewer system may be able to accommodate the total flow for the proposed project and that further detailed gauging and evaluation will be needed via the SCAR process. Per the SCAR received from the Bureau of Sanitation the determination is that there is capacity available to handle the anticipated discharge from the proposed project.

Domestic/Fire Water – Modified Project

Updated Pressure Flow Reports were procured from LADWP and are summarized below:

- Shatto Place – 8-inch main line with a maximum pressure of 83 psi as of June 10, 2020
- 6th Street – 24-inch main line with a maximum pressure of 81 psi as of June 10, 2020

The calculated demand provided by the project's Plumbing Engineer of the proposed building is approximately 1,000 gallons per minute. The locations of the double detector check assembly and Fire department connection will be determined based on feedback from the City of Los Angeles Fire Department. LADWP will be coordinated with accordingly based on the final location both domestic and fire water points of connection. The existing domestic water connection for the existing building to be protected-in-place located along 6th St will be considered to be reused for the repurposed building. All new domestic water and fire water connections will connect to the existing main line along Shatto Place.

There are two existing public fire hydrants located adjacent to the project site. One is located 150 feet to the west on the northwestern corner of Shatto & 6th St. The other is

located 100 feet to the north on the south eastern corner of Shatto & 5th St. The need for additional fire hydrants will be determined by the Los Angeles Fire Department based on LAMC 57.507.3.1 as summarized below:

SEC. 57.507.3.1. FIRE-FLOW REQUIREMENTS.

Fire-flows shall comply with Table 57.507.3.1 for any structures, group of structures or facilities by the type of land development, or as otherwise determined by the Chief.

1. Where street alignments mandate the installation of dead-end mains, the fire-flow in gallons per minute may be adjusted downward, depending on the type of land development.

2. A minimum residual water pressure of 20 pounds per square inch is to remain in the system with the required gallons per minute flowing.

EXCERPT OF TABLE 57.507.3.1
FIRE-FLOW BY TYPE OF LAND DEVELOPMENT

Type of Land Development	Fire-Flow in Gallons Per Minute
High Density Residential and Neighborhood Commercial	4,000 G.P.M. from four adjacent fire hydrants flowing simultaneously

Sewer Capacity Availability Request (SCAR)

To: Bureau of Sanitation
The following request is submitted to you on behalf of the applicant requesting to connect to the public sewer system. Please verify that the capacity exists at the requested location for the proposed developments shown below. The results are good for 180 days from the date the sewer capacity approval from the Bureau of Sanitation. Lateral connection of development shall adhere to Bureau of Engineering Sewer Design Manual Section F 480. **Sewer ejector use is prohibited.**

SEWER CAPACITY AVAILABILITY REVIEW FEE (SCARF) - Frequently Asked Questions

SCAR stands for Sewer Capacity Availability Review that is performed by the Department of Public Works, Bureau of Sanitation. This review evaluates the existing sewer system to determine if there is adequate capacity to safely convey sewage from proposed development projects, proposed construction projects, proposed groundwater dewatering projects and proposed increases of sewage from existing facilities. The SCAR Fee (SCARF) recovers the cost, incurred by the City, in performing the review for any SCAR request that is expected to generate 10,000 gallons per day (gpd) of sewage.

The SCARF is based on the effort required to perform data collection and engineering analysis in completing a SCAR. A brief summary of that effort includes, but is not limited to, the following:

1. Research and trace sewer flow levels upstream and downstream of the point of connection.
2. Conduct field surveys to observe and record flow levels. Coordinate with maintenance staff to inspect sewer maintenance holes and conduct smoke and dye testing if necessary.
3. Review recent gauging data and in some cases closed circuit TV inspection (CCTV) videos.
4. Perform gauging and CCTV inspection if recent data is not available.
5. Research the project location area for other recently approved SCARs to evaluate the cumulated impact of all known SCARs on the sewer system.
6. Calculate the impact of the proposed additional sewage discharge on the existing sewer system as it will be impacted from the approved SCARs from Item 6 above. This includes tracing the cumulative impacts of all known SCARs, along with the subject SCAR, downstream to insure sufficient capacity exist throughout the system.
7. Correspond with the applicant for additional information and project and clarification as necessary.
8. Work with the applicant to find alternative sewer connection points and solutions if sufficient capacity does not exist at the desired point of connection.

Questions and Answers:

1. **When is the SCARF applied, or charged?**
   It applies to all applicants seeking a Sewer Capacity Availability Review (SCAR). SCARs are generally required for Sewer Facility Certificate applications exceeding 10,000 gpd, or request from a property owner seeking to increase their discharge thru their existing connection by 10,000 gpd or more, or any groundwater related project that discharges 10,000 gpd or more, or any proposed or future development for a project that could result in a discharge of 10,000 gpd.
2. **Why is the SCARF being charged now when it has not been in the past?**
   The City has seen a dramatic increase in the number of SCARs over 10,000 gpd in the last few years and has needed to increase its resources, i.e., staff and gauging efforts, to respond to them. The funds collected thru SCARF will help the City pay for these additional resources and will be paid by developers and property owners that receive the benefit from the SCAR effort.
3. **Where does the SCARF get paid?**
   The Department of Public Works, Bureau of Engineering (BOE) collects the fee at its public counters. Once the fee is paid then BOE prepares a SCAR request and forwards it to the BOS where it is reviewed and then returned to BOE. BOE then informs the applicant of the result. In some cases, BOS works directly with the applicant during the review of the SCAR to seek additional information and work out alternative solutions

LOS ANGELES, CA, 90017

Dear Allan Lumidao, Brandow & Johnston,

SEWER AVAILABILITY: 514 S Shatto Pl

The Bureau of Sanitation has reviewed your request of 07/20/2020 for sewer availability at **514 S SHATTO PL**. Based on their analysis, it has been determined on 07/29/2020 that there is capacity available to handle the anticipated discharge from your proposed project(s) as indicated in the attached copy of the Sewer Capacity Availability Request (SCAR) .

This determination is valid for 180 days from the date shown on the Sewer Capacity Availability request (SCAR) approved by the Bureau of Sanitation.

While there is hydraulic capacity available in the local sewer system at this time, availability of sewer treatment capacity will be determined at the Bureau of Engineering Public Counter upon presentation of this letter. A Sewer Connection Permit may also be obtained at the same counter provided treatment capacity is available at the time of application.

A Sewerage Facilities Charge is due on all new buildings constructed within the City. The amount of this charge will be determined when application is made for your building permit and the Bureau of Engineering has the opportunity to review the building plans. To facilitate this determination a preliminary set of plans should be submitted to Bureau of Engineering District Office, Public Counter.

Provision for a clean out structure and/or a sewer trap satisfactory to the Department of Building and Safety may be required as part of the sewer connection permit.

Lateral connection of development shall adhere to Bureau of Engineering Sewer Design Manual Section F 480. **Sewer ejector use is prohibited.**

Scar Request Number: 3599

Sincerely,

AVALYN KAMACHI
CIVIL ENGINEERING ASSOCIATE III
Central District, Bureau of Engineering

City of Los Angeles
Bureau of Engineering

SEWER CAPACITY AVAILABILITY REVIEW FEE (SCARF) - Frequently Asked Questions

SCAR stands for Sewer Capacity Availability Review that is performed by the Department of Public Works, Bureau of Sanitation. This review evaluates the existing sewer system to determine if there is adequate capacity to safely convey sewage from proposed development projects, proposed construction projects, proposed groundwater dewatering projects and proposed increases of sewage from existing facilities. The SCAR Fee (SCARF) recovers the cost, incurred by the City, in performing the review for any SCAR request that is expected to generate 10,000 gallons per day (gpd) of sewage.

The SCARF is based on the effort required to perform data collection and engineering analysis in completing a SCAR. A brief summary of that effort includes, but is not limited to, the following:

1. Research and trace sewer flow levels upstream and downstream of the point of connection.
2. Conduct field surveys to observe and record flow levels. Coordinate with maintenance staff to inspect sewer maintenance holes and conduct smoke and dye testing if necessary.
3. Review recent gauging data and in some cases closed circuit TV inspection (CCTV) videos.
4. Perform gauging and CCTV inspection if recent data is not available.
5. Research the project location area for other recently approved SCARs to evaluate the cumulated impact of all known SCARs on the sewer system.
6. Calculate the impact of the proposed additional sewage discharge on the existing sewer system as it will be impacted from the approved SCARs from Item 6 above. This includes tracing the cumulative impacts of all known SCARs, along with the subject SCAR, downstream to insure sufficient capacity exist throughout the system.
7. Correspond with the applicant for additional information and project and clarification as necessary.
8. Work with the applicant to find alternative sewer connection points and solutions if sufficient capacity does not exist at the desired point of connection.

Questions and Answers:

1. **When is the SCARF applied, or charged?**
   It applies to all applicants seeking a Sewer Capacity Availability Review (SCAR). SCARs are generally required for Sewer Facility Certificate applications exceeding 10,000 gpd, or request from a property owner seeking to increase their discharge thru their existing connection by 10,000 gpd or more, or any groundwater related project that discharges 10,000 gpd or more, or any proposed or future development for a project that could result in a discharge of 10,000 gpd.
2. **Why is the SCARF being charged now when it has not been in the past?**
   The City has seen a dramatic increase in the number of SCARs over 10,000 gpd in the last few years and has needed to increase its resources, i.e., staff and gauging efforts, to respond to them. The funds collected thru SCARF will help the City pay for these additional resources and will be paid by developers and property owners that receive the benefit from the SCAR effort.
3. **Where does the SCARF get paid?**
   The Department of Public Works, Bureau of Engineering (BOE) collects the fee at its public counters. Once the fee is paid then BOE prepares a SCAR request and forwards it to the BOS where it is reviewed and then returned to BOE. BOE then informs the applicant of the result. In some cases, BOS works directly with the applicant during the review of the SCAR to seek additional information and work out alternative solutions

September 25, 2020

Mr. Ed Melo, PE
Brandow & Johnston
700 South Flower Street, Suite 1800
Los Angeles, CA 90017

Dear Mr. Melo,

514 SHATTO PLACE - REQUEST FOR WASTEWATER SERVICE INFORMATION

This is in response to your September 16, 2020 letter requesting a review of your proposed mixed-use project located at 514-550 S Shatto Place, Los Angeles, CA 90020. The project will consist of residential units, office building, and restaurant. LA Sanitation has conducted a preliminary evaluation of the potential impacts to the wastewater and stormwater systems for the proposed project.

WASTEWATER REQUIREMENT

LA Sanitation, Wastewater Engineering Services Division (WESD) is charged with the task of evaluating the local sewer conditions and to determine if available wastewater capacity exists for future developments. The evaluation will determine cumulative sewer impacts and guide the planning process for any future sewer improvement projects needed to provide future capacity as the City grows and develops.

Projected Wastewater Discharges for the Proposed Project:

Type Description	Average Daily Flow per Type Description (GPD/UNIT)	Proposed No. of Units	Average Daily Flow (GPD)
Proposed			
Residential: 1-BDRM	110 GPD/DU	200 DU	22,000
Residential: 2-BDRM	150 GPD/DU	100 DU	15,000
Residential: 3-BDRM	190 GPD/DU	13 DU	2,470
Residential: 5-BDRM	270 GPD/DU	54 DU	14,580
Office Building	120 GPD/1000 SQ.FT	11,965 SQ.FT	1,436

Restaurant	30 GPD/ 1 Seat	850 Seats	25,500
Total			**80,986**

SEWER AVAILABILITY

The sewer infrastructure in the vicinity of the proposed project includes two existing 8-inch lines on Shatto Place and on 6th St. The sewage from the two existing 8-inch lines join to feed into a 20-inch line on Berendo St before discharging into a 48-inch sewer line on Normandie Ave. Figure 1 and Figure 2 show the details of the sewer system within the vicinity of the project. The current flow level (d/D) in the 8-inch lines cannot be determined at this time without additional gauging.

The current approximate flow level (d/D) and the design capacities at d/D of 50% in the sewer system are as follows:

Pipe Diameter (in)	Pipe Location	Current Gauging d/D (%)	50% Design Capacity
8	Shatto Pl.	*	229,323 GPD
8	6TH St.	*	229,323 GPD
20	Berendo St.	32	2.05 MGD
48	Normandie Ave.	25	29.86 MGD

* No gauging available

Based on estimated flows, it appears the sewer system might be able to accommodate the total flow for your proposed project. Further detailed gauging and evaluation will be needed as part of the permit process to identify a specific sewer connection point. If the public sewer lacks sufficient capacity, then the developer will be required to build sewer lines to a point in the sewer system with sufficient capacity. A final approval for sewer capacity and connection permit will be made at the time. Ultimately, this sewage flow will be conveyed to the Hyperion Water Reclamation Plant, which has sufficient capacity for the project.

All sanitary wastewater ejectors and fire tank overflow ejectors shall be designed, operated, and maintained as separate systems. All sanitary wastewater ejectors with ejection rates greater than 30 GPM shall be reviewed and must be approved by LASAN WESD staff prior to other City plan check approvals. Lateral connection of development shall adhere to Bureau of Engineering Sewer Design Manual Section F 480.

If you have any questions, please call Christopher DeMonbrun at (323) 342-1567 or email at chris.demonbrun@lacity.org.

STORMWATER REQUIREMENTS

LA Sanitation, Stormwater Program is charged with the task of ensuring the implementation of the Municipal Stormwater Permit requirements within the City of Los Angeles. We anticipate the following requirements would apply for this project.

POST-CONSTRUCTION MITIGATION REQUIREMENTS

In accordance with the Municipal Separate Storm Sewer (MS4) National Pollutant Discharge Elimination System (NPDES) Permit (Order No. R4-2012-0175, NPDES No. CAS004001) and the City of Los Angeles Stormwater and Urban Runoff Pollution Control requirements (Chapter VI, Article 4.4, of the Los Angeles Municipal Code), the Project shall comply with all mandatory provisions to the Stormwater Pollution Control Measures for Development Planning (also known as

Low Impact Development [LID] Ordinance). Prior to issuance of grading or building permits, the applicant shall submit a LID Plan to the City of Los Angeles, Public Works, LA Sanitation, Stormwater Program for review and approval. The LID Plan shall be prepared consistent with the requirements of the Planning and Land Development Handbook for Low Impact Development.

Current regulations prioritize infiltration, capture/use, and then biofiltration as the preferred stormwater control measures. The relevant documents can be found at: www.lacitysan.org. It is advised that input regarding LID requirements be received in the preliminary design phases of the project from plan-checking staff. Additional information regarding LID requirements can be found at: www.lacitysan.org or by visiting the stormwater public counter at 201 N. Figueroa, 2nd Fl, Suite 280.

GREEN STREETS

The City is developing a Green Street Initiative that will require projects to implement Green Street elements in the parkway areas between the roadway and sidewalk of the public right-of-way to capture and retain stormwater and urban runoff to mitigate the impact of stormwater runoff and other environmental concerns. The goals of the Green Street elements are to improve the water quality of stormwater runoff, recharge local groundwater basins, improve air quality, reduce the heat island effect of street pavement, enhance pedestrian use of sidewalks, and encourage alternate means of transportation. The Green Street elements may include infiltration systems, biofiltration swales, and permeable pavements where stormwater can be easily directed from the streets into the parkways and can be implemented in conjunction with the LID requirements. Green Street standard plans can be found at: www.eng2.lacity.org/techdocs/stdplans/

CONSTRUCTION REQUIREMENTS

All construction sites are required to implement a minimum set of BMPs for erosion control, sediment control, non-stormwater management, and waste management. In addition, construction sites with active grading permits are required to prepare and implement a Wet Weather Erosion Control Plan during the rainy season between October 1 and April 15. Construction sites that disturb more than one-acre of land are subject to the NPDES Construction General Permit issued by the State of California, and are required to prepare, submit, and implement the Storm Water Pollution Prevention Plan (SWPPP).

If there are questions regarding the stormwater requirements, please call WPP's plan-checking counter at (213) 482-7066. WPD's plan-checking counter can also be visited at 201 N. Figueroa, 2nd Fl, Suite 280.

GROUNDWATER DEWATERING REUSE OPTIONS

The Los Angeles Department of Water and Power (LADWP) is charged with the task of supplying water and power to the residents and businesses in the City of Los Angeles. One of the sources of water includes groundwater. The majority of groundwater in the City of Los Angeles is adjudicated, and the rights of which are owned and managed by various parties. Extraction of groundwater within the City from any depth by law requires metering and regular reporting to the appropriate Court-appointed Watermaster. LADWP facilitates this reporting process, and may assess and collect associated fees for the usage of the City's water rights. The party performing the dewatering should inform the property owners about the reporting requirement and associated usage fees.

On April 22, 2016 the City of Los Angeles Council passed Ordinance 184248 amending the City of Los Angeles Building Code, requiring developers to consider beneficial reuse of groundwater as a

conservation measure and alternative to the common practice of discharging groundwater to the storm drain (SEC. 99.04.305.4). It reads as follows: "Where groundwater is being extracted and discharged, a system for onsite reuse of the groundwater, shall be developed and constructed. Alternatively, the groundwater may be discharged to the sewer."

Groundwater may be beneficially used as landscape irrigation, cooling tower make-up, and construction (dust control, concrete mixing, soil compaction, etc.). Different applications may require various levels of treatment ranging from chemical additives to filtration systems. When onsite reuse is not available the groundwater may be discharged to the sewer system. This allows the water to be potentially reused as recycled water once it has been treated at a water reclamation plant. If groundwater is discharged into the storm drain it offers no potential for reuse. The onsite beneficial reuse of groundwater can reduce or eliminate costs associated with sewer and storm drain permitting and monitoring. Opting for onsite reuse or discharge to the sewer system are the preferred methods for disposing of groundwater.

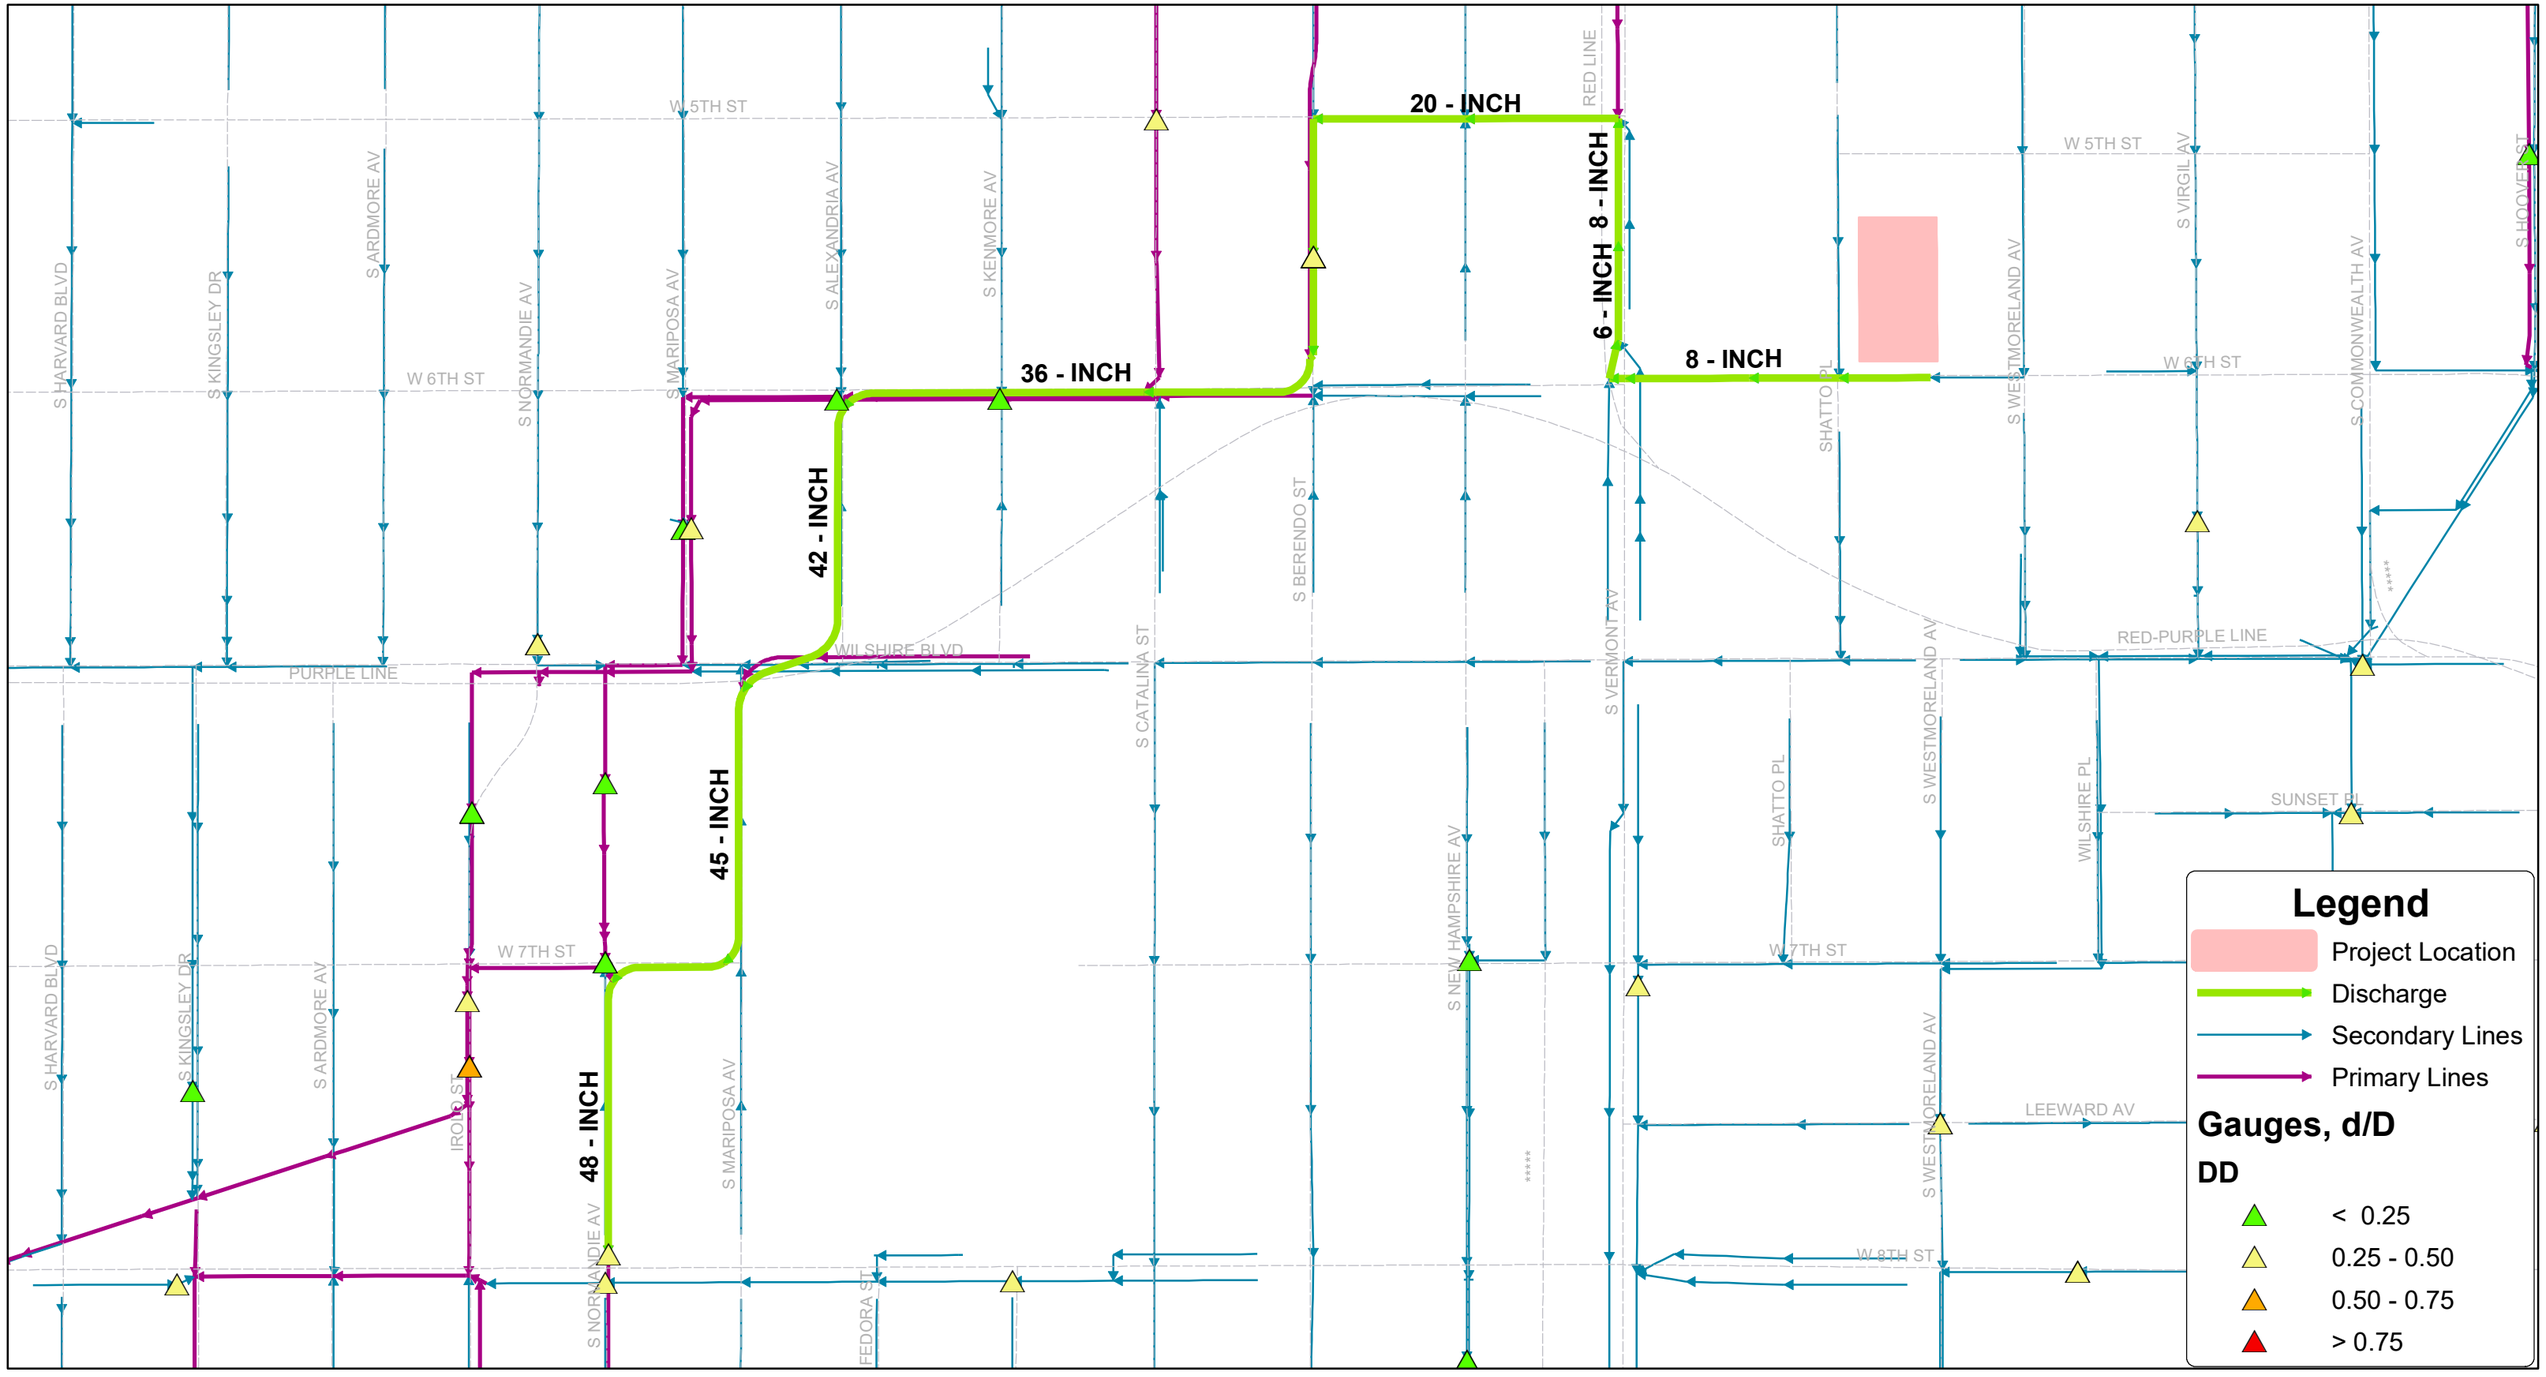
To help offset costs of water conservation and reuse systems, LADWP offers a Technical Assistance Program (TAP), which provides engineering and technical assistance for qualified projects. Financial incentives are also available. Currently, LADWP provides an incentive of $1.75 for every 1,000 gallons of water saved during the first two years of a five-year conservation project. Conservation projects that last 10 years are eligible to receive the incentive during the first four years. Other water conservation assistance programs may be available from the Metropolitan Water District of Southern California. To learn more about available water conservation assistance programs, please contact LADWP Rebate Programs 1-888-376-3314 and LADWP TAP 1-800-544-4498, selection "3".

For more information related to beneficial reuse of groundwater, please contact Greg Reed, Manager of Water Rights and Groundwater Management, at (213)367-2117 or greg.reed@ladwp.com.

SOLID RESOURCE REQUIREMENTS

The City has a standard requirement that applies to all proposed residential developments of four or more units or where the addition of floor areas is 25 percent or more, and all other development projects where the addition of floor area is 30 percent or more. Such developments must set aside a recycling area or room for onsite recycling activities. For more details of this requirement, please contact LA Sanitation Solid Resources Recycling hotline 213-922-8300.

Sincerely,



Ali Poosti, Division Manager
Wastewater Engineering Services Division
LA Sanitation and Environment

Model Notes:
The calculation is based on the methodology described in FHWA Traffic Noise Model Technical Manual (1998).
The peak hour noise level at 50 feet was validated with the results from FHWA Traffic Noise Model Version 2.5.
Accuracy of the calculation is within ±0.1 dB when comparing to TNM results.
Noise propagation greater than 50 feet is based on the following assumptions:
For hard ground, the propagation rate is 3 dB per doubling the distance.
For soft ground, the propagation rate is 4.5 dB per doubling the distance.
Vehicles are assumed to be on a long straight roadway with cruise speed.
Roadway grade is less than 1.5%.
CNEL levels were obtained based on Figure 2-19, on page 2-58 Caltran's TeNS 2013.

Model Notes:
The calculation is based on the methodology described in FHWA Traffic Noise Model Technical Manual (1998).
The peak hour noise level at 50 feet was validated with the results from FHWA Traffic Noise Model Version 2.5.
Accuracy of the calculation is within ±0.1 dB when comparing to TNM results.
Noise propagation greater than 50 feet is based on the following assumptions:
For hard ground, the propagation rate is 3 dB per doubling the distance.
For soft ground, the propagation rate is 4.5 dB per doubling the distance.
Vehicles are assumed to be on a long straight roadway with cruise speed.
Roadway grade is less than 1.5%.
CNEL levels were obtained based on Figure 2-19, on page 2-58 Caltran's TeNS 2013.

subject	Co Living Methodology Memorandum

Introduction

California's high cost of living and acute housing shortage make co-living developments particularly popular, especially with young professionals. Co-living is a modern form of housing where residents share living space in which residents: typically have an individual bedroom; likely have an individual bathroom; and are provided access to amenity spaces, such as a common kitchen, living room and other common space.[1] These shared living and amenity spaces provide greater opportunities for social connections than traditional apartment rentals. In addition, co-living rents are typically on average 15-40% less than market studio apartments. Developers around the state are eager to provide this type of housing in order to meet high-demands in areas like Los Angeles and the San Francisco Bay Area, and also to diversify the housing supply in their developments.

Many cities and counties struggle with how to process co-living development applications because they have yet to update their general plans and/or zoning ordinances to address the unique aspects of co-living developments by categorizing them as a specific use. A notable exception is the City of San Jose, which updated its zoning ordinance in February 2019 to add co-living facilities as a new category of use permitted in its downtown. In the interim, many jurisdictions have applied ad hoc controls to applications for apartment building developments or conversions to three-, four- and five-bedroom units. In addition to measures that do not find support in the local zoning ordinance or building code, local jurisdictions without clearly codified regulations for co-living units often treat these applications the same as for traditional apartments. This may lead to potentially skewed occupancy/density assumptions in impact analysis during environmental review if review is conducted at all.

[1] Some co-living developments may have multiple beds or "pods" in one room, similar to dormitory accommodations. This Memo does not address those multiple beds or "pods" within one room co-living developments.

Some project opponents have already seized on the issue and have raised arguments that under CEQA a co-living unit's environmental impacts are more intensive than a multi-family dwelling unit's impacts.

Due to the unique nature of co-living units, this technical memorandum presents a methodology for analyzing air quality, greenhouse gas, and population and housing impacts related to co-living units.

Population and Housing

Based on a review of recent environmental documents in the City, the standard methodology for calculating the average person per dwelling unit for population projections, including co-living units which may have five or more bedrooms per unit, is based on the Citywide average household size (owner and renter) based on the most recent Census data. According to U.S. Census population estimates from July 1, 2019,[2] the average household size in Los Angeles is 2.82. However, while this is a conservative estimate for standard rental apartment units, this methodology does not capture the unique configuration of co-living units.

ICF and ESA reviewed other CEQA documents that have been successfully approved that have also included a mixture of standard and co-living units. The most applicable document is an EIR Addendum for the Starcity Residential project adopted in May 2019 in the City of San Jose.[3] The originally approved project permitted the development of an 18-story tower with up to 302 standard apartment residential units (apartments with individual bedrooms, living rooms, kitchens and bathrooms) and approximately 9,300 square feet of ground floor commercial.

The modified project analyzed in the Starcity Addendum would construct an 18-story tower with up to 803 co-living residential beds, 3,800 square feet of retail/market, and three levels of underground parking. The Starcity co-living development would have private bedrooms and bathrooms with common kitchen and living space amenities. The Starcity Addendum classified each co-living bed as a co-living residential unit and examined a range of equivalency calculations for the 803 co-living units (i.e., all co-living beds) including a range of 1.0 person per bed to 1.5 persons per bed. To be conservative, the Starcity Addendum assumed that each co-living unit (i.e., each co-living bed) would include 1.5 persons per bed, which would result in an on-site population of 1,205 persons.

ICF and ESA examined local data for the City with respect to citywide housing and household population Census data provided in the 2017 American Housing Survey (AHS), which is the most recent AHS data available.[4] In order to determine occupancy/density rates applicable to co-living beds based on Census data, ICF and ESA filtered the AHS data for occupied residential units in the Los Angeles-Long Beach Metropolitan area. According to the AHS, a housing unit consisting of only one room, such as a one-room efficiency apartment, is classified by definition as having no bedroom.[5] Additionally, a room designed and used mainly for non-bedroom purposes, such as a den with a sleep sofa used mainly for watching television, is not considered a bedroom. It is noted that a housing unit with no bedrooms may have more than one room, such as a dining room, if an area is separated from an adjoining area by built-in

[2] https://www.census.gov/quickfacts/losangelescitycalifornia
[3] https://www.sanjoseca.gov/Home/ShowDocument?id=43469
[4] https://www.census.gov/programs-surveys/ahs/data.html
[5] https://www2.census.gov/programs-surveys/ahs/2017/2017%20AHS%20Definitions.pdf#

archways, walls, half-walls or bookcases that extend at least six inches from an intersecting wall (i.e., an area need not be fully walled off from an adjoining area to be considered a separate room). Since a co-living unit is a housing unit similar to an efficiency apartment, the AHS data was also filtered for housing units with no bedrooms.

The Census data, with the above filters applied, yielded AHS survey data that indicated 42 percent of the these units have one room and 58 percent of the units have two rooms, which is an average of 1.58 rooms per unit. The data also indicated 56 percent of the units have a population density of 0.5 persons per room and 44 percent of the units have a population density of 1 person per room, which is an average of 0.72 persons per room. Multiplying these averages together yields an average population density for units with no bedrooms, as defined by the AHS survey, of 1.14 persons per unit. In terms of population density, the individual bedrooms within the co-living units would closely resemble the population density of studio, efficiency, and bachelor units since they too generally consist of one or two rooms, as defined by the AHS survey, with an attached bathroom (the AHS survey does not count a bathroom as a room).

ICF and ESA also reached out to two co-living management companies to obtain recent data on occupancy statistics for existing co-living units. For these co-living spaces, the residents had their own bedroom and bathroom or there were two bedrooms with a shared bathroom with shared living spaces. A co-living operator who provided data based on its 58 co-living buildings nationwide, including four co-living buildings in the Los Angeles Metropolitan area, found that nationwide, approximately 14.1 percent of the total co-living units were available to be occupied by couples. The total number of bedrooms actually occupied by couples was 3.7 percent. This translates nationwide into an occupancy ratio of 1.037 per bedroom based on data from 58 co-living projects. For the Los Angeles co-living projects, the occupancy was slightly greater: there was an occupancy ratio of 1.054/room with 23 percent of the co-living bedrooms available to be occupied by two people.[6] The data from this operator is all from within the previous five years.[7]

For one co-living development, located in Long Island that has been in operation since 2018, the statistics indicated that 423 residents were occupied in 422 bedrooms for an occupancy ratio of 1.002 persons/bedroom.[8]

Based on the household size per bedroom for at least 59 co-living projects; the Census data for the Los Angeles Metropolitan area for housing units, such as bachelor units and studios; and the household size used in the co-living environmental document we reviewed for a different city (that did not present methodology to support its 1.5 persons per unit ratio), it can be conservatively assumed that 1.14 persons per bedroom would occupy the co-living units. For a project with five co-living bedrooms grouped into a co-living unit, each co-living unit would generate an average household size of 5.7 person per co-living unit (five co-living bedrooms grouped together) (see **Table 1**). For co-living units with three bedrooms or more per unit, the calculation of 1.14 persons per bedroom for co-living units would yield a larger household size compared to the Citywide average household size of 2.82 persons per dwelling unit. Therefore, this would represent a more conservative approach for conducting environmental analysis than

[6] Communication with Caleb Balbera Associate Director of Real Estate, Common. July 2, 2020 and August 20, 2020.
[7] *Id.*
[8] Communications with Ellen Parry, Director of Real Estate Partnerships. Ollie. July 1, 2020 and August 20, 2020

using the City's average household size, especially as it takes into account the characteristics of co-living units and is based on local census data and the experience of co-living operators.

For a hypothetical mixed-use project with high rise apartments containing 200 standard dwelling units and 50 co-living units with five bedrooms per co-living unit, the population demand would be as follows:

TABLE 1
ESTIMATED NUMBER OF RESIDENTS

	1.14 Persons per Bedroom/Co-Living Unit		
Parameter	**Units**	**Average HH Size**	**Number of Residents**
Standard Dwelling Units	200	2.82	564
Co-Living Units	50	1.14*5 bedrooms=5.7 person/unit	285
Total	**250**		**849**

Thus, in the City, for co-living units of three or more bedrooms, ICF currently recommends the use of 1.14 persons per bedroom per co-living unit ratio in lieu of the City's current average household size of 2.82 people/dwelling unit.

Air Quality and Greenhouse Gases

The California Emissions Estimator Model, Version 2016.3.2 (CalEEMod), is the standard model for calculating criteria air pollutant and greenhouse gas (GHG) emissions from land use development projects. It is assumed that each co-living bedroom would contain a bed and an attached private bathroom. However, unlike traditional apartment units, co-living beds typically have the common area living and kitchen spaces that are used by the residents of the co-living unit. CalEEMod does not include a co-living land use type as part of its default model input parameters and has not been updated to accommodate the unique configuration of co-living units. As a result, it is necessary to develop an appropriate methodology to ensure that emissions are estimated in an accurate and reasonably conservative manner to meet the environmental disclosure requirements of the California Environmental Quality Act. The sections that follow summarize the proposed CalEEMod methodology for estimating the emissions from the proposed co-living units.

Emissions Estimation Methodologies

Emissions estimated in CalEEMod are highly dependent upon the inputs in the model's Land Use input section. In this section, the model user selects the Land Use Types and Subtypes relevant to a project and enters the unit amount (e.g., dwelling units) to generate default lot acreage, square feet, and population values. The model user has the option to overwrite these values with project-specific data as available and supported by substantial evidence. The inputs in the Land Use input section establish much of the basis for the emissions generated from a project. Each section that follows the Land Use input section utilizes default assumptions based on the specified Land Use inputs. The proposed methodology for completing the Land Use input section of CalEEMod are discussed below.

Co-Living Unit to Dwelling Unit Equivalency

The hypothetic project in Table 1, would be a mixed-use project that would contain a residential high-rise apartment building with 50 co-living units containing five bedrooms within each unit. As shown in Table 1, for a hypothetical project with 200 standard dwelling units and 50 co-living units with five bedrooms, each co-living unit would house 1.14 persons per bedroom, which equates to 5.7 persons per co-living unit.

Utilizing the above assumptions and the estimated average household population size of 2.82 for the City of Los Angeles,[9] an expected count of co-living residents can be generated and converted into an equivalent number of traditional high rise apartment units providing for the number of dwelling units to input into the Land Use section of CalEEMod. The dwelling unit equivalency calculations and results are presented in further detail below in **Table 2**.

Equations:

Dwelling Units [#] = Total Residents [#] ÷ Average Household Population

Where, Total People = People Per Bed [#] x Beds Per Unit [#] x Co-Living Units [#]

TABLE 2
CO-LIVING UNITS TO DWELLING UNITS EQUIVALENT

Parameter	Persons per Co-Living Unit 1.14 persons / bed
People Per Bed	1.14
Beds Per Unit	X 5
Co-Living Units	X 50
Total Estimated Co-Living Residents	= 285
Average Household Population	÷ 2.82
Estimated CalEEMod Equivalent Standard Dwelling Units	101

Source: ESA, 2020.

Since CalEEMod contains assumptions for building energy consumption rates based on the type of dwelling unit, the methodology of converting to a high-rise apartment unit accounts for emissions generated from activities of a typical apartment, such as laundry, cooking, etc. While laundry and cooking uses are not provided within the co-living bedrooms, but rather as shared common spaces, the emissions generated from these uses would be captured based on the equivalent dwelling unit calculation above, which are based on the use of such spaces by the residential population.

Co-Living Dwelling Unit Square Feet

The default assumption in CalEEMod is 1,000 square feet per high rise apartment dwelling unit. This default assumption would be overridden with the actual square footage of a proposed residential

[9] United States Census Bureau, https://www.census.gov/quickfacts/losangelescitycalifornia. Accessed June 2020.

development. The total square footage would include both the residential and common space on each co-living floor.

Methodology for Common Spaces and Amenities

A hypothetical project with co-living units may also include other various types of amenity spaces, such as pools, gyms, game rooms, spas, wellness spaces, lounges, and other outdoor recreational areas.[10] These spaces would be shared by residents of all dwelling units. The methodology for estimating emissions from these typical common spaces and amenities are outlined in the sections that follow.

Pool

If a project includes a pool, it would be modeled separately in CalEEMod with a Land Use Type of Recreational and Land Use Subtype of Recreational Swimming Pool. Any buildings associated with the pool, including mechanical rooms, bathrooms, etc., would be included in the pool building square footage.

Gym, Indoor Game Spaces, Spa, and Wellness Spaces

If a project includes gym, indoor game, or wellness spaces, these facilities would be modeled separately in CalEEMod with a Land Use Type of Recreational and Land Use Subtype of Health Club, which typically provide services such as wellness, spa, fitness, etc.

Lounges and Flex Space

Any indoor lounges and flex spaces planned as part of a proposed project would be modeled together in CalEEMod with Land Use Type of Commercial and Land Use Subtype of General Office Building. Additionally, the total square footage of the hallways and common areas that connect the indoor spaces would be included with this Land Use Subtype.

Outdoor Game, Screening Spaces, Dog Runs

Any outdoor amenity spaces such as outdoor game, screening spaces, or dog runs would be modeled together in CalEEMod with Land Use Type of Recreational and Land Use Subtype of City Park and/or User Defined with appropriate electricity demand factors programmed as input values.

Outdoor Barbeque Areas and Hearths/Fireplaces

Any outdoor barbeque area or outdoor areas equipped with fireplaces would be accounted for in CalEEMod. While CalEEMod does not specifically provide inputs for barbeques or fireplaces for commercial or recreational Land Use Types, these uses would be programmed into the model under the Residential Land Use Types, which allows the user to enter the total number of fireplaces. Since current air quality regulations only allow for natural gas fireplaces and barbeques are generally natural gas-fueled, these uses would be programmed into CalEEMod as natural gas-fueled.

[10] Common laundry and kitchen areas are not included in this list because they are specifically accounted for as part of the co-living unit methodology discussed above.

Methodology for Standard Residential Units

All standard dwelling units would be modeled in CalEEMod with a Residential Land Use Type and the applicable Land Use Subtype, Apartment High Rise. As shown in Table 1, for a hypothetical project with 200 standard units and 50 co-living units with five bedrooms per co-living unit, the number of standard dwelling units would be 200 with an estimated population size of 564 (2.82 Average Household Population × 200 Standard Units).

Methodology for Commercial Office and Restaurant Spaces

Any commercial office spaces would be modeled in CalEEMod with a Land Use Type of Commercial and Land Use Subtype of General Office Building. Any commercial restaurant spaces would be modeled in CalEEMod with a Land Use Type consistent with the type of commercial or restaurant space proposed, such as Strip Mall, Supermarket, Food Restaurant without Drive Thru, High Turnover (Sit Down Restaurant), Quality Restaurant, etc.

Water

For water demand, the 1.14 persons per bedroom (or 5.7 person/co-living unit) would account for a larger water demand for co-living units than is typically assumed for the citywide average dwelling unit. As an additional data source, a project's civil engineer could potentially calculate the specific number of fixtures per co-living unit. This fixture count would provide more precise water calculations. Additionally, landscaped areas, pools, and spas would generally not be expected to increase water demand for co-living units as compared to standard dwelling units. However, in absence of fixture count data, the 5.7 persons/unit would very conservatively account for the higher water demand that co-living units would likely require due to a greater population density.

Summary

For co-living units only, we propose to model the population density as 1.14 per bedroom in lieu of the City's population density per "standard" apartment. The population density per co-living unit would be converted to an equivalency based on population density of standard dwelling unit. Though CalEEMod is not currently configured to accommodate the unique circumstances of co-living units, the methodology of converting the total co-living units to the number of residents and, ultimately, to the equivalent high rise apartment dwelling units provides a reasonable estimation of emissions. As with any typical multi-family complex, the common spaces and amenities are assumed to be shared by all residents with the exception of the communal laundry and kitchens, which are assumed to only be utilized by the residents of the co-living units since they do not have access to laundry or kitchen within their private bedrooms. These emissions and emissions generated from these residence-based activities (laundry and cooking) are accounted for through the conversion of the co-living units to a dwelling unit equivalent since CalEEMod assumes an energy consumption rate based on the residence type (in this case, high rise apartments). The dwelling unit equivalency combined with the typical residential dwelling units and various Land Use Types accounting for the common spaces and amenities would appropriately estimate the emissions resulting from a hypothetical project that includes co-living units.

REQUEST FOR INFORMATION REGARDING RECREATIONAL AND PARK SERVICES FOR THE 550 SHATTO PLACE PROJECT IN THE CITY OF LOS ANGELES

Dear Ms. Barkley:

The following has been prepared in response to your request for Recreation and Parks information relative to The 550 Shatto Place Project. This project proposes the development of a residential project with 367 residential dwelling units on a site generally located at 514 and 550 Shatto Place in the Wilshire Community Plan Area of the City of Los Angeles.

1. *Which parks and recreational facilities would serve the proposed project?*

The following Department of Recreation and Parks (RAP) facilities are classified as neighborhood parks and are located within a two-mile radius of the project site:

- Alvarado Terrace Park, located at 1342 S. Alvarado Terrace.
- Cahuenga Elementary Community School Park, located at 220 S. Hobart Boulevard.
- Country Club Heritage Park, located at 1015 S. Wilton Place.
- Francis Avenue Community Garden, located at 2909 W. Francis Avenue.
- Harvard Elementary Community School Park, located at 330 N. Harvard Boulevard.
- Hope and Peace Park, located at 843 S. Bonnie Brae Street.
- Laurel and Hardy Park, located at 3022 W. Del Monte Drive.
- Leo Politi Elementary Community School Park, located at 2481 W. 11th Street.
- Madison West Park, located at 464 N. Madison Avenue.
- Normandie and Cordova Park, located at 1903 W. Cordova Street.
- Patton Street Pocket Park, located at 303-305 and 317-327 N. Patton Street.
- Pico Union Park, located at 1827 S. Hoover Street.
- Robert F. Kennedy Inspiration Memorial Park, located at 3400 W. Wilshire Boulevard.
- Robert L. Burns Park, located at 4900 W. Beverly Boulevard.
- Rockwood Community Park, located at W. Rockwood Street.

- Unidad Park, located at 1644-1648 W. Beverly Boulevard.
- Valencia Triangle, located at 1425 W. 8th Street.

The following Department of Recreation and Parks facilities are classified as community parks and are located within a five-mile radius of the project site:

- 1st and Broadway Civic Center Park, located at 217 W. 1st Street.
- Alpine Recreation Center, located at 817 Yale Street.
- Baldwin Hills Recreation Center, located at 5401 W. Highlight Place.
- Barnsdall Park, located at 4800 W. Hollywood Boulevard.
- Bellevue Recreation Center, located at 826 N. Lucille Avenue.
- Boyle Heights Sports Center, located at 933 S. Mott Street.
- Central Recreation Center, located at 1357 E. 22nd Street.
- Challengers Boys and Girls Club Track and Field, located at 1046-1056 and 1047-1057 W. 51st Street.
- Chevy Chase Park, located at 4165 E. Chevy Chase Drive.
- Cypress Recreation Center, located at 2630 N. Pepper Avenue.
- Denker Recreation Center, located at 1550 W. 35th Place.
- Downey Pool, located at 7020 W. Franklin Avenue
- Downey Recreation Center, located at 1775 N. Spring Street.
- Echo Park, located at 751 Echo Park Boulevard.
- Echo Park Deep Pool, located at 1419 Colton Street.
- Eleanor Green Roberts Aquatic Center, located at 4526 W. Pico Boulevard.
- Elysian Valley Recreation Center, located at 1811 W. Ripple Street.
- EXPO Center, located at 3980 S. Bill Robertson Lane.
- Fairfax Senior Citizen Center, located at 7929 W. Melrose Avenue.
- Fred Roberts Recreation Center, located at 4700 S. Honduras Street.
- Gilbert W. Lindsay Community Center, located at 429 E. 42nd Place.
- Glassell Park Recreation Center and Youth Center, located at 3650 N. Verdugo Road.
- Hazard Recreation Center, located at 2230 E. Norfolk Street.
- Hollenbeck Park, located at 415 S. St. Louis Street.
- Hoover Recreation Center, located at 1010 W. 25th Street.
- Jim Gilliam Recreation Center, located at 4000 S. La Brea Avenue.
- Lafayette Park, located at 2830 W. 6th Street.
- Lake Street Community Center, located at 227 N. Lake Street.
- Las Palmas Senior Citizen Center, located at 1820 N. Las Palmas Avenue.
- Lemon Grove Recreation Center, 4959 W. Lemon Grove Avenue.
- Lincoln Heights Recreation Center, 2303 N. Workman Street.
- Lincoln Heights Youth Center, located at 2911 N. Altura Street.
- Lincoln Park, located at 3501 E. Valley Boulevard.
- Loren Miller Recreation Center, located at 2717 S. Halldale Avenue.
- MacArthur (Glen Douglas) Park, located at 2230 W. 6th Street.

- Laurel Canyon Mulholland Park, located at 8100 W. Mulholland Drive.
- Runyon Canyon Park, located at 2000 N. Fuller Avenue.
- Wattles Garden Park, located at 1824 N. Curson Avenue.

For additional information regarding facilities and features available in these parks visit our website: www.laparks.org.

2. What is the area's existing parkland acres-to-population ratio and what is the desired acres-to-population ratio?

The City of Los Angeles overall has a ratio of 0.84 acres of neighborhood or community parkland per 1,000 residents. The City's General Plan, sets a goal of a parkland acres-to population ratio of 10 acres of parkland per 1,000 residents.

3. What is the current capacity and level of use of parks and recreational facilities within a two-mile radius of the Project Site?

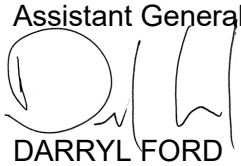
While data regarding the level of use for the recreational facilities that serve the project site is not available, parks within the surrounding community are heavily utilized and often overburdened.

4. Are there any planned or ongoing construction or expansion projects for the above-identified parks? If yes, please describe.

The City is planning to construct a new gymnasium building at Seoul International Park. The project is currently in the design phase.

5. Are there any City-adopted Recreation and Park standards and acreage goals to be used in analyzing the project?

Each project is required to mitigate the impacts of the development through either the dedication of land, the payment of in-lieu fees, or a combination thereof. The environmental analysis for the project should consider the possibility of a land dedication, in-lieu fee payment or a combination thereof.



6. Any other design features or special Recreation and Parks requirements due to specific attributes of the project?

As the project includes the construction of new dwelling units, the project will be subject to the requirements set forth by Los Angeles Municipal Code Section 12.33.

Thank you for the opportunity to provide information relative to the proposed project's impact on recreation and park services. Most subdivision projects that contain more than fifty residential dwelling units are required to meet with the Department of Recreation and Parks prior to filing in order to discuss any potential dedication requirements. If you have any questions or comments regarding this information please contact the RAP Park Staff at (213) 202-2682 or rap.parkfees@lacity.org.

EARLY CONSULTATION MEETING VERIFICATION (VTT-83123 – 514-550 South Shatto Place, 3119 West 6th Street)

Dear Applicant:

Los Angeles Municipal Code Section 12.33 C.1 requires that applicants participate in an early consultation with the Department of Recreation and Parks staff, and Department of City Planning staff, in advance of submitting a tract map application for a project of more than 50 residential dwelling units. The purpose of this early consultation is to discuss whether the City may require a land dedication for the project and/or to discuss credits available to the applicant, if any.

Los Angeles Municipal Code Section 12.33 D.1 requires the Department of Recreation and Parks provide written verification of this early consultation to the project applicant within ten (10) business days of the meeting. Written verification of the early consultation is required before the Department of City Planning may accept an application for a tentative tract map that is subject to the requirements of Los Angeles Municipal Code Section 12.33 D.1.

This letter serves as verification that, on **October 9, 2020**, the applicant/representative of a proposed residential project located at **514-550 South Shatto Place, 3119 West 6th Street** participated in an early consultation meeting with the Department of Recreation and Parks.

As currently conceptualized, the project located at **VTT-83123, 514-550 South Shatto Place, 3119 West 6th Street** proposed the demolition of a one-story and five-story structures and the construction of a 42-story mixed-use commercial and residential building with 367 dwelling units, 42 of which are affordable, with office and restaurant space. The existing church building will be repurposed for additional restaurant space. This project is located in the Koreatown area of Los Angeles.

Residential subdivision projects with more than 50 residential dwelling units that involve condominiums, a stock cooperative or a community apartment project may be required by the City to dedicate land, or pay a fee in-lieu, or provide a combination of land dedication and in-lieu fee payment for the purpose of acquiring, expanding and improving park and recreational facilities for new residents.

The amount of land to be dedicated is calculated pursuant to the formula detailed in Los Angeles Municipal Code Section 12.33 D.2. Based on the project description above, and the formula detailed in Los Angeles Municipal Code Section 12.33 D.2, **VTT-83123**, **514-550 South Shatto Place, 3119 West 6th Street** may be required by the City to dedicate a maximum of **2.65** acres of land to the City for park and recreational purposes. Per Los Angeles Municipal Code Section 12.33 D.3, a project that is required to make a land dedication to the City may make said land dedication, or any portion thereof, either on-site or off-site of the project location. Any off-site land dedication must be located within a certain radius of the project site.

Following the submission of Tract Map Application for this project to the City, the Advisory Agency will distribute a notification to the Department requesting the Department provide its report and recommendations on the project. Once the Department receives said notification, the Department will prepare a report, with its recommendations for how the project should be required to meet its obligations under Los Angeles Municipal Code Section 12.33 (either though a dedication of park land or the payment of fees in lieu). That report will then be submitted to the Board of Recreation and Park Commissioners for their review and approval. Meetings of the Board of Recreation and Park Commissioners are regularly scheduled and are open to the public (http://www.laparks.org/commission). Once the Board of Recreation and Park Commissioners has approved a recommendation for the project, the Department will prepare and submit its report and recommendations on the project to the Advisory Agency.

If you have any questions or comments regarding this information, please feel free to contact Darryl Ford, of my staff, at (213) 202-2682, at your convenience.

Sincerely,

MICHAEL A. SHULL
General Manager

Re: 550 Shatto Place (Soul Project)

Dear Ms. Barkley,

In response to your request for information, please find a ***LAUSD Schools Enrollments and Capacities Report*** for the schools and programs serving the 550 Shatto Place (Soul Project). The project is planned to contain 367 residential units, including retail/commercial use. At this time reporting is based on individual project address, without reporting on the combined impacts of other project addresses served by the same schools. This report contains the most recent data available on operating capacities and enrollments, and is designed to address any questions pertaining to overcrowding and factors related to school capacity. All schools operate on single track calendar.

Please note that no new school construction is planned and the data in this report *already take into account*: portable classrooms on site, additions being built onto existing schools, student permits and transfers, programs serving choice areas, and any other operational activities or educational programming affecting the operating capacities and enrollments among LAUSD schools.

Additional information on LAUSD's Capital Improvement programs can be found on the Facilities Services Division main webpage at http://www.laschools.org/new-site/. Listings of residential schools and other programs serving the project can be found using LAUSD's Residential School Finder at http://rsi.lausd.net/ResidentSchoolIdentifier/.

The Developer Fee Justification Study with student generation rates can be found online at https://achieve.lausd.net/domain/921.

MASTER PLANNING AND DEMOGRAPHICS RESPONSE TO SPECIFIC QUESTIONS

Questions: 1, 3-6 Please see LAUSD Schools Enrollments and Capacities Report details;

Question: 2 Please contact the LAUSD Developer Fee Program Office (DFPO) at (213) 241-0715 if more information regarding fees and student generation rates is needed.

ATTACHMENTS

[a] Schools & programs that are part of a "school choice area" pull enrollments from the area school(s) that have resident attendance boundaries.

Seating overage/shortage and overcrowding is calculated and reported for the school choice area as a whole; capacity and actual enrollment is reported for each individual school and/or program listed in the shaded cells.

Schools Planned to Relieve Known Overcrowding

NONE

see next page

NOTES:

[1] School's ID code.

[2] School's name

[3] School's operating capacity. The maximum number of students the school can serve with the school's classroom utilization. Excludes capacity allocated to charter co-locations. Includes capacity for dual language and magnet programs.

[4] The total number of students living in the school's attendance area and who are eligilble to be served by school programs as of the start of the school year. Includes resident students enrolled at any dual language or on-site magnet centers.

[5] The number of all students actually attending all programs at the school at the start of the reported school year. Includes all dual language and magnet students.

[6] Reported school year seating overage or (shortage): equal to (capacity) - (resident enrollment).

[7] Reported school year overcrowding status of school. The school is overcrowded if any of these conditions exist:
-There is a seating shortage.
-There is a seating overage of LESS THAN or EQUAL TO a margin of 20 seats.

[8] Projected 5-year total number of students living in the school's attendance area and who are eligible to be served by school programs as of the start of the school year. Includes resident students enrolled at any dual language or on-site magnet centers.

[9] Projected seating overage or (shortage): equal to (capacity) - (projected enrollment).

[10] Projected overcrowding status of school. The school will be considered overcrowded in the future if any of these conditions exist:
-There is a seating shortage in the future.
-There is a seating overage of LESS THAN or EQUAL TO a margin of 20 seats in the future.

° Magnet Schools with Resident Kindergarten Enrollment: Resident enrollment is reported for Kindergarten only. Actual enrollment is reported for all grades in school. Projected data not reported.

* Enrollment is by application only.

Subject: RE: Request for Information LAUSD 555 Shatto Place
Attachments: 550 Shatto Place (Soul) Project EIR Project #977.pdf

Hi Jessie,

Please see attached LAUSD Schools Enrollment and Capacities Report. Additionally, please note that Young Oak Kim Academy, a sensitive receptor, is located approximately 250 feet south from the project site. Given this school's proximity to the proposed site, we would typically submit the following comments on your CEQA document when it is published. However, I'd like to start taking the opportunity to send you our standard comments now for your consideration and possible inclusion in your environmental document as warranted. Let me know if you have any questions or concerns.

Air Quality
The proposed Project will share local roadways with the students and staff of Young Oak Kim Academy, which is located a short distance south of the proposed project site. This should be considered a sensitive receptor to air pollution impacts. Construction activities for the proposed project could result in short term impacts on ambient air quality in the area resulting from equipment emissions and fugitive dust. To ensure that effective mitigation is applied to reduce construction air pollutant impacts on the schools, we ask that the following language be included as a mitigation measure for air quality impacts:

- If the proposed mitigation measures do not reduce air quality impacts to a level of insignificance, the project applicant shall develop new and appropriate measures to effectively mitigate construction related air emissions at the affected schools. Provisions shall be made to allow the school and or designated representative(s) to notify the project applicant when such measures are warranted.

Noise and Vibration
Noise created by construction activities may affect Young Oak Kim Academy. These construction activities include grading, earth moving, hauling, and use of heavy equipment. The California Environmental Quality Act requires that such impacts be quantified and eliminated or reduced to a level of insignificance.

LAUSD established maximum allowable noise levels to protect students and staff from noise impacts. These standards were established based on regulations set forth by the California Department of Transportation and the City of Los Angeles. LAUSD's exterior noise standard is 67 dBA Leq and the interior noise standard is 45 dBA Leq. A noise level increase of 3 dBA or more over ambient noise levels is considered significant for existing schools and would require mitigation to achieve levels within 2 dBA of pre-project ambient level. To ensure that effective mitigations are employed to reduce construction related noise impacts on District sites, we ask that the following language be included in the mitigation measures for noise impacts:

- If the proposed mitigation measures do not reduce noise impacts to a level of insignificance, the project applicant shall develop new and appropriate measures to effectively mitigate construction related noise at the affected schools. Provisions shall be made to allow the school and or designated representative(s) to notify the project applicant when such measures are warranted.

Traffic/Transportation
LAUSD's Transportation Branch **must be contacted** at (213) 580-2950 regarding the potential impact upon existing school bus routes. The Project Manager or designee will have to notify the LAUSD Transportation Branch of the

expected start and ending dates for various portions of the project that may affect traffic within nearby school areas. To ensure that effective mitigations are employed to reduce construction and operation related transportation impacts on District sites, we ask that the following language be included in the mitigation measures for traffic impacts:

- During the construction phase, truck traffic and construction vehicles may not cause traffic delays for LAUSD transported students.
- During and after construction changed traffic patterns, lane adjustment, traffic light patterns, and altered bus stops may not affect school buses' on-time performance and passenger safety.
- Construction trucks and other vehicles are required to stop when encountering school buses using red-flashing-lights must-stop-indicators per the California Vehicle Code.
- Contractors must install and maintain appropriate traffic controls (signs and signals) to ensure vehicular safety.
- Contractors must maintain ongoing communication with LAUSD school administrators, providing sufficient notice to forewarn children and parents when existing vehicle routes to school may be impacted.

Pedestrian Safety

Construction activities that include street closures, the presence of heavy equipment and increased truck trips to haul materials on and off the project site can lead to safety hazards for people walking in the vicinity of the construction site. To ensure that effective mitigations are employed to reduce construction and operation related pedestrian safety impacts on District sites, we ask that the following language be included in the mitigation measures for pedestrian safety impacts:

- Contractors must maintain ongoing communication with LAUSD school administrators, providing sufficient notice to forewarn children and parents when existing pedestrian routes to school may be impacted.
- Contractors must maintain safe and convenient pedestrian routes to all nearby schools. The District will provide School Pedestrian Route Maps upon your request.
- Contractors must install and maintain appropriate traffic controls (signs and signals) to ensure pedestrian and vehicular safety.
- Haul routes are not to pass by ***any*** school, except when school is ***not*** in session.
- No staging or parking of construction-related vehicles, including worker-transport vehicles, will occur on or adjacent to a school property.
- Funding for crossing guards at the contractor's expense is required when safety of children may be compromised by construction-related activities at impacted school crossings.
- Barriers and/or fencing must be installed to secure construction equipment and to minimize trespassing, vandalism, short-cut attractions, and attractive nuisances.
- Contractors are required to provide security patrols (at their expense) to minimize trespassing, vandalism, and short-cut attractions.

Thank you,

Christy Wong

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

December 16, 2020

TO: Vincent Bertoni, AICP, Director of Planning
Department of City Planning
Attention: Nick Hendricks

FROM: Los Angeles Fire Department

SUBJECT: **TRACT MAP NO.: VTT-83213 (550 South Shatto Ave.) (EXPEDITED)**

Submit plot plans for Fire Department approval and review prior to recordation of Tract Map Action.

RECOMMENDATIONS:

The Fire Department has no objection to the Airspace Vacation.

The Fire Department has no objection to Merger and Re-subdivision.

The applicant is further advised that all subsequent contact regarding these conditions must be with the Hydrant and Access Unit. This would include clarification, verification of condition compliance and plans or building permit applications, etc., and shall be accomplished **BY APPOINTMENT ONLY**, in order to assure that you receive service with a minimum amount of waiting please email **lafdhydrants@lacity.org.** You should advise any consultant representing you of this requirement as well.

550 Shatto Place Project
Request for Information
Los Angeles Public Library Response
December 9, 2020

This Project would be served by the following branches:

Felipe de Neve
2820 W Sixth St
Los Angeles, 90057

Memorial Branch Library
4625 W. Olympic Blvd
Los Angeles, 90019

Pio Pico Branch Library
694 S. Oxford St
Los Angeles, 90005

Wilshire Branch Library
149 N. St Andrews Place
Los Angeles, 90004

Detailed information regarding each branch is attached.

There are no current plans to build new libraries that would serve this project area.

On February 8, 2007, The Board of Library Commissioners approved a new Branch Facilities Plan. This Plan includes criteria for new Libraries, which recommends new size standards for the provision of LAPL facilities — 12,500 Square feet for community with less than 45,000 population and 14,500 square feet for community with more than 45,000 population and up to 20,000 square feet for a Regional branch. It also recommends that when a community reaches a population of 90,000, an additional branch library should be considered for the area.

The Los Angeles Public Library recommends a mitigation fee of $200 per capita based upon the projected population of the development. The funds will be used for library materials, technology, and/or facilities improvement. It is recommended that mitigation fees be paid for by the developer

Appendix M
Transportation Study

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

550 S Shatto Pl
DOT Case No. CEN20-50399

Date: December 2, 2020

To: Milena Zasadzien, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION ASSESSMENT FOR THE PROPOSED MIXED-USE PROJECT LOCATED AT 550 SOUTH SHATTO PLACE (CPC-2020-6192-GPAJ-VZCJ-HD-CU-MCUP-SPR-HCA/ENV-2018-3986-SCEA/VTT-82171-CN/VTT-83213)**

On October 18, 2018, the Department of Transportation (DOT) issued a traffic assessment report to the Department of City Planning (City Planning) for the mixed-use project at 550 South Shatto Place, which was subject to a transportation analysis, dated October 2018, prepared by Gibson Transportation Consulting, Inc. (GTC). However, subsequent to the release of this report, the project has been modified and on July 30, 2019, pursuant to Senate Bill (SB) 743 and the recent changes to Section 15064.3 of the State's California Environmental Quality Act (CEQA) Guidelines, the City of Los Angeles adopted vehicle miles traveled (VMT) as the criteria by which to determine transportation impacts under CEQA. Therefore, in response to this action, GTC submitted a transportation assessment including a VMT analysis and freeway off-ramp evaluation, dated September 24, 2020 and November 18, 2020, for the proposed modified project. Please replace the previous DOT assessment report dated October 18, 2018, in its entirety, with this report, which addresses the totality of the transportation analysis.

DOT has reviewed the transportation assessment prepared by GTC, dated September 24, 2020 and November 18, 2020, for the proposed mixed-use project located at 550 South Shatto Place in the Wilshire Community Plan Area, the Central Area Planning Commission, and a Transit Oriented Community (TOC) Tier 4. In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a vehicle miles traveled (VMT) analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, the access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG), as described below.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to replace several school buildings with a 40-story building and repurpose a two-story building on the northeast corner of Shatto Place and 6th Street as illustrated in **Attachment A**. The development will include 367 residential units (including 42 affordable housing units and 54 co-living housing units), 11,965 square-feet of office use, and 24,435 square-feet of restaurant space. The project will provide 175 long-term and 25 short-term bicycle parking spaces and 470 vehicle parking spaces within a four-story subterranean parking structure, which will be accessed via a full-access driveway along Shatto Place. An ingress only driveway south of the main driveway will provide access to the primary passenger loading area onsite and will connect to the main driveway. A secondary passenger loading area will be

provided curbside further south along the southwestern edge of the project site. A right-turn in/out driveway along 6th Street will provide access to the loading dock. The project is expected to be completed by 2024.

B. Freeway Safety Analysis

Per the Interim Guidance for Freeway Safety Analysis memorandum issued by DOT on May 1, 2020 to address Caltrans safety concerns on freeways, the study addresses the project's effects on vehicle queuing on freeway off-ramps. Such an evaluation measures the project's potential to lengthen a forecasted off-ramp queue and create speed differentials between vehicles exiting the freeway off-ramps and vehicles operating on the freeway mainline.

The evaluation identified the number of project trips expected to be added to nearby freeway off-ramps serving the project site. It was determined that project traffic at any freeway off-ramp will not exceed 25 peak hour trips. Therefore, a freeway ramp analysis is not required.

C. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips screening threshold. Using the City of Los Angeles VMT Calculator tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project **does** exceed the net 250 daily vehicle trips threshold.

Additionally, the analysis included further discussion of the transportation impact thresholds:

T-1 Conflicting with plans, programs, ordinances, or policies
T-2.1 Causing substantial vehicle miles traveled
T-3 Substantially increasing hazards due to a geometric design feature or incompatible use.

The assessment determined that the project would **not** have a significant transportation impact under Thresholds T-1 and T-3. A project's impacts per Threshold T-2.1 is determined by using the VMT calculator and is discussed further below. A copy of the VMT Calculator summary report is provided as **Attachment B** to this report.

D. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.03 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as criteria in determining transportation impacts under CEQA. The new DOT TAG provide instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The DOT VMT Calculator tool measures project impact in terms of Household VMT per Capita, and Work VMT per Employee. DOT identified distinct thresholds for significant VMT impacts for each of the seven Area Planning Commission (APC) areas in the City. For the Central APC area, in which the project is located, the following thresholds have been established:

- Household VMT per Capita: 6.0
- Work VMT per Employee: 7.6

The proposed project is projected to have a Household VMT per capita of 3.7 and a Work VMT per employee of 6.5. Therefore, it is concluded that implementation of the project would result in no significant VMT impact. A copy of the VMT Calculator summary report is provided as **Attachment B**.

E. Access and Circulation

During preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the LAMC. Therefore, DOT continues to require and review a project's site access, circulation, and operational plan to determine if any access enhancements, transit amenities, intersection improvements, traffic signal upgrades, neighborhood traffic calming, or other improvements are needed. In accordance with this authority, the project has completed a circulation analysis using a "level of service" screening methodology that indicates that the trips generated by the proposed development will not likely result in adverse circulation conditions at several locations. Access to the project will be provided along Shatto Place and 6th Street. DOT has reviewed this analysis and determined that it adequately discloses operational concerns. A copy of the circulation analysis table that summarizes these potential deficiencies is provided as **Attachment C** to this report.

PROJECT REQUIREMENTS

Non-CEQA-Related Requirements and Considerations

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Parking Requirements

The project would provide parking for 470 vehicles and up to 200 bicycles. The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for this project within a TOC Tier 4.

2. Highway Dedication and Street Widening Requirements

Per the new Mobility Element of the General Plan, **Shatto Place**, a Local Street, would require an 18-foot half-width roadway within a 30-foot half-width right-of-way and **6th Street**, an Avenue II, would require a 28-foot half-width roadway within a 43-foot half-width right-of-way. The applicant should check with the Bureau of Engineering's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

3. Project Access and Circulation

The conceptual site plan for the project (see **Attachment A**) is acceptable to DOT. The project would be accessed via a full-access driveway along Shatto Place, an ingress driveway along Shatto Place for the on-site passenger loading area, and a right-turn in/out driveway along 6th Street for the on-site loading dock. South of the driveways, the project is proposing to repurpose the curbside frontage along Shatto Place as a full-time permanent Pedestrian Loading Zone (PLZ). Review and approval of the PLZ should be coordinated with DOT's Parking Meters Division, 555 Ramirez Street, Space 315 at 213-473-8270.

Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of the driveway should be coordinated with DOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design. The applicant should check with City Planning regarding the project's driveway placement and design.

4. Worksite Traffic Control Requirements

DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/businesses/temporary-traffic-control-plans to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

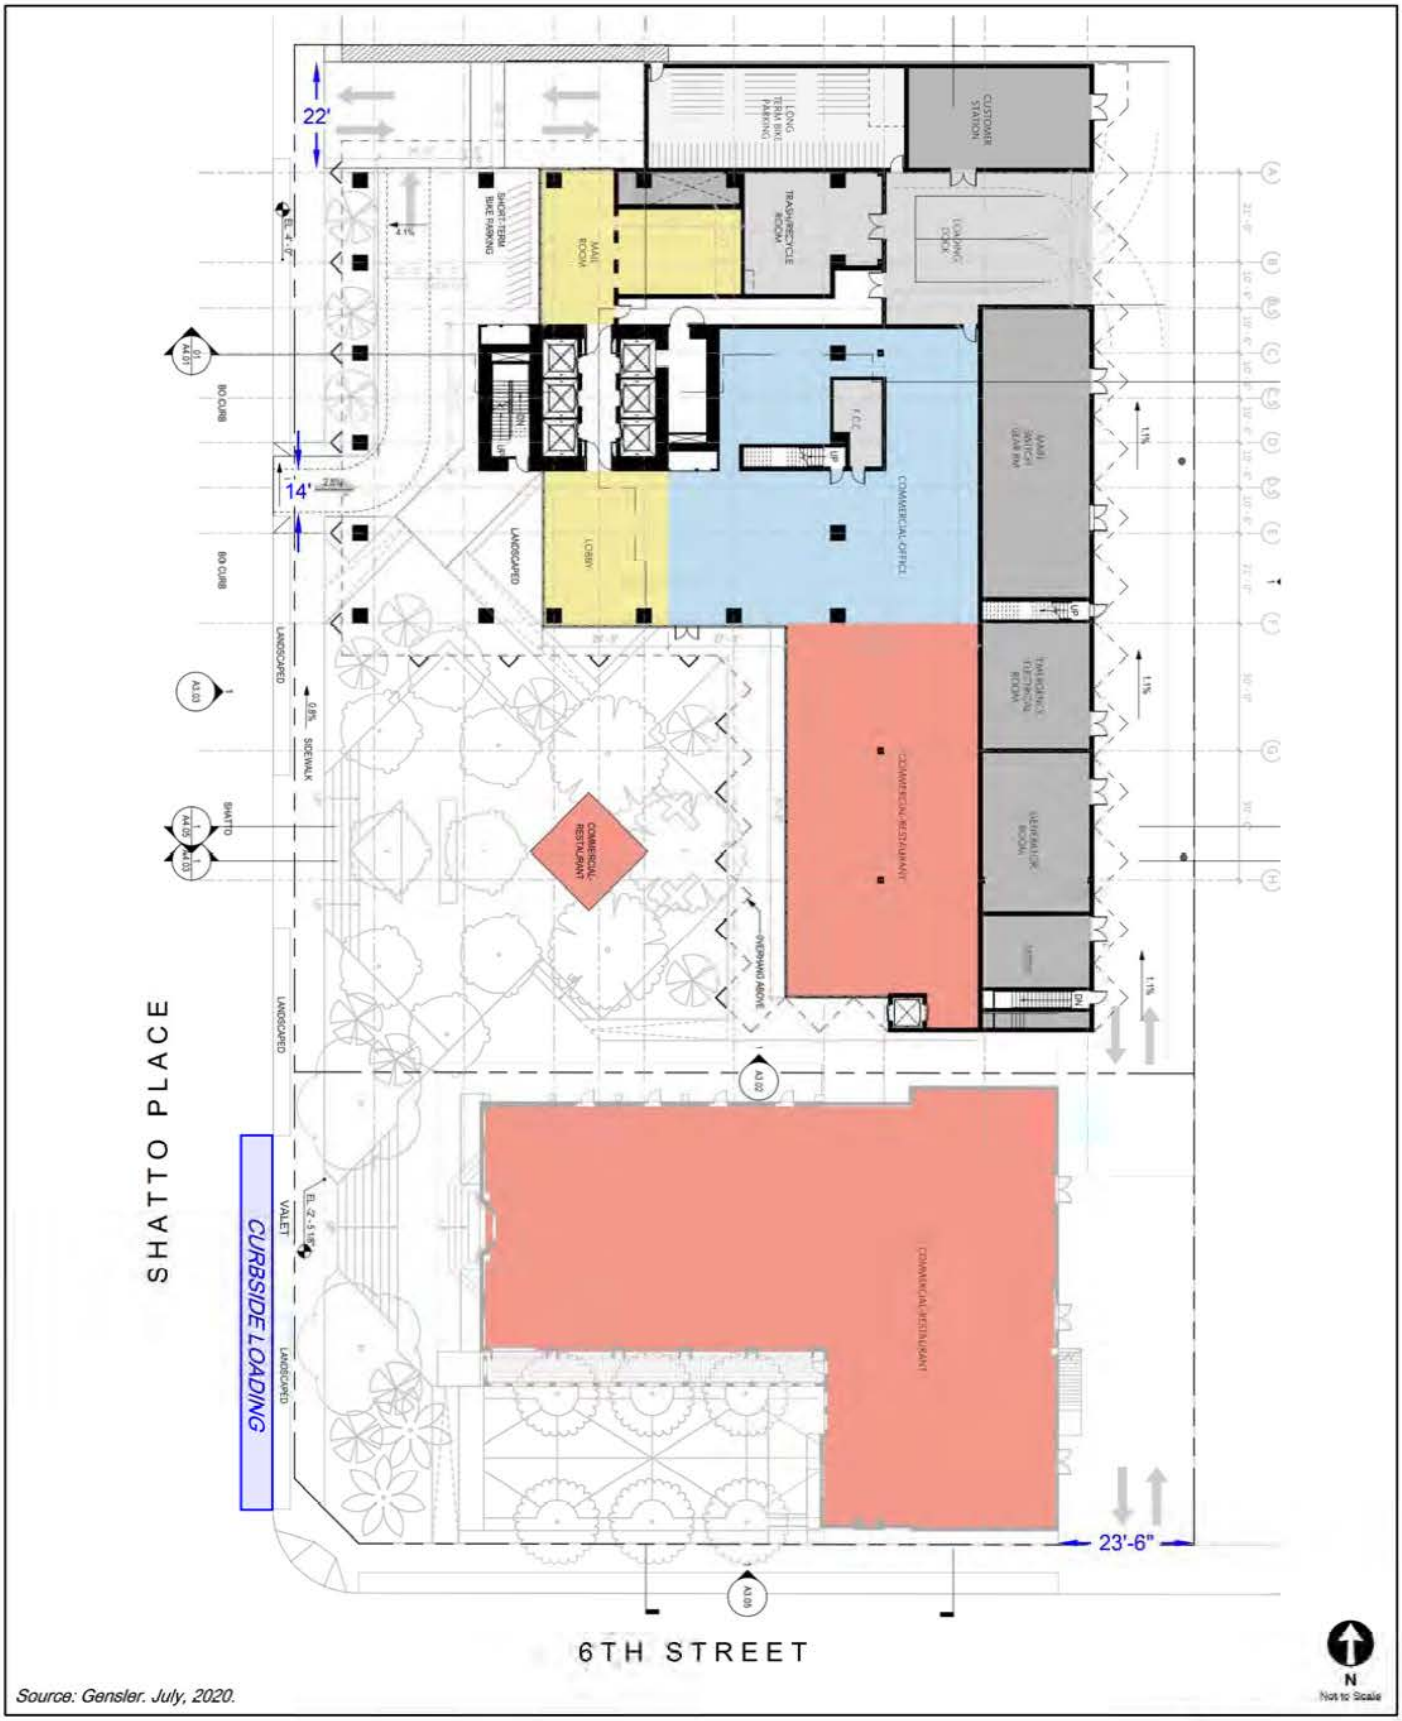
5. TDM Ordinance Requirements

The TDM Ordinance (LAMC 12.26 J) is currently being updated. The updated ordinance, which is currently progressing through the City's approval process, will:

- Expand the reach and application of TDM strategies to more land uses and neighborhoods,
- Rely on a broader range of strategies that can be updated to keep pace with technology,
- Provide flexibility for developments and communities to choose strategies that work best for their neighborhood context.

Although not yet adopted, DOT recommends that the applicant be subject to the terms of the proposed TDM Ordinance update expected in 2020 if applicable. The updated ordinance is expected to be completed prior to the anticipated construction of this project, if approved.

6. Development Review Fees



Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Jimmy Vivar of my staff at (213) 972-4993.

MEMORANDUM

TO: Wes Pringle, LADOT

CC: Damon Chan, Forme Development

FROM: Brian Hartshorn and Casey Le, P.E.

DATE: November 18, 2020

RE: CEQA Thresholds and Non-CEQA Transportation Analysis for the 550 S. Shatto Place Project
Los Angeles, California **Ref:** J1606

This memorandum summarizes our analysis of potential transportation impacts for the 550 S. Shatto Place Project (Project) in the Wilshire Center/Koreatown community of the City of Los Angeles, California (City) based on *Transportation Assessment Guidelines* (Los Angeles Department of Transportation [LADOT], July 2020) (TAG). The analysis applies the California Environmental Quality Act (CEQA) thresholds, as well as the non-CEQA transportation analysis, identified in the TAG.

The Project was previously analyzed for potential transportation impacts using the level of service (LOS) methodology formerly required by CEQA. *Transportation Impact Study for the 550 S. Shatto Place Project* (Gibson Transportation Consulting, Inc., October 2018) (Transportation Study) analyzed the original proposal to construct a 31-level mixed-use building comprised of 256 multi-family housing units, including 29 affordable housing units, approximately 2,507 square feet (sf) of office space, and approximately 12,800 sf of restaurant space (Approved Project). The Transportation Study was reviewed and approved by LADOT via an inter-departmental memorandum to the Los Angeles Department of City Planning (LADCP) on October 18, 2018 (Assessment Letter). The Assessment Letter is provided in Attachment A.

Since the approval of the Transportation Study, the Project Applicant has obtained an adjacent building to the north consisting of 27,843 sf of office space and incorporated it into the Project design. Thus, the Project has been modified to a larger mixed-use residential and commercial development (Modified Project) and is now being assessed using the new TAG.

MODIFIED PROJECT CONTEXT

Description

The Modified Project consists of a proposed mixed-use development within a new 40-story building and an existing two-story building to be repurposed. Upon completion, the Modified Project would include a total of 367 residential units, including 42 units of affordable housing

and 54 units of co-living housing[1], 11,965 sf office use, and 24,435 sf of restaurant use. The Modified Project also extends the Approved Project buildout from Year 2021 to Year 2024. The Modified Project would provide 470 vehicular parking spaces within four levels of subterranean parking and up to 200 bicycle parking spaces, including 25 short-term and 175 long-term bicycle spaces. Consistent with the Approved Project, parking would be provided via one full access driveway on Shatto Place. The Modified Project proposes an ingress-only secondary driveway to an internal passenger drop-off area that would connect on-site to the primary vehicular driveway lane leading to the parking garage. Additionally, access to the loading dock would be provided via a separate driveway along 6th Street, east of Shatto Place, with limited right-turn in/out access. The Project site plan is shown in Figure 1.

Location and Study Area

As shown in Figure 2, the Project Site is bounded by an office use to the north, residential and commercial uses to the east, 6th Street to the south, and Shatto Place to the west in the Wilshire Center/Koreatown community within City Council District 13.

Based on the factors identified in Section 3.3.4 of the TAG, the Study Area for the Modified Project includes intersections along Shatto Place and 6th Street. The following three study intersections, two signalized and one unsignalized, were identified for detailed analysis:

- Intersection 1. Shatto Place & 5th Street
- Intersection 2. Vermont Avenue & 6th Street
- Intersection 3. Shatto Place & 6th Street

Figure 3 illustrates the location of the Project Site in relation to the surrounding street system and the three study intersections. The existing lane configurations and mobility facilities at each of the analyzed study intersections are detailed in Figure 4A and 4B, respectively. Additionally, the street designations as defined in *Mobility Plan 2035: An Element of the General Plan* (LADCP, January 2016) (Mobility Plan) for the Study Area are shown in Figure 5.

Existing Transportation Conditions

As required in the TAG, an inventory was collected of facilities serving pedestrians, bicyclists, and transit riders within 0.25 miles of the Project Site. Figure 6 shows the local commercial and institutional facilities that could be considered as pedestrian destinations. Figures 7A and 7B show the existing transportation facilities and transit service, respectively, that would support pedestrian activity to and from the pedestrian destinations.

Existing Conditions Traffic Volumes. Intersection turning movement counts at the study intersections were collected during typical operating conditions, without large construction projects in the area, with schools and businesses in full operation, and in normal weather. To this end, a mix of historical counts were utilized and adjusted by 1% per year to represent Existing

[1] The Modified Project would provide 54 five-bedroom co-living housing units. Based on information provided by the Applicant, it is estimated that 1.14 persons would occupy each bed, or 5.7 persons per unit. In total, the co-living housing component would have approximately up to 308 residents.

Conditions in Year 2020. The existing intersection peak hour traffic volumes are illustrated in Figure 8. The traffic count worksheets are provided in Attachment B.

Future Cumulative Transportation Conditions

Future planned transportation facilities have been identified as part of the Vision Zero Vermont Avenue (7th to Beverly) Safety Improvements project and Young Oak Kim Academy Safer Routes to School (SRTS) Plan and are detailed in Figure 9A.

All components identified as part of the Vision Zero Vermont Avenue (7th to Beverly) Safety Improvements project have been installed within the Study Area and no additional improvements are currently proposed. As part of the Young Oak Kim Academy SRTS Plan, accessible pedestrian signals, continental crosswalks, curb extensions, leading pedestrian intervals, sidewalk repairs, and tree trimmings are planned improvements adjacent to the Project Site. While these improvements would provide better pedestrian connection and safer routes for pedestrian access, no changes to the physical configuration at the study intersections are expected.

Modifications along Shatto Place between 6th Street and Wilshire Boulevard have been proposed by Young Oak Kim Academy and include new roadway alignments, on-street parking provisions, and removal of on-street parking. Any modifications in the public right-of-way (ROW) will need to be considered within the context of the surrounding neighborhoods. The proposed modifications have not been approved by the City; therefore, no changes to intersection lane configurations or the pedestrian network were made as a result of the proposed modifications. Many of the approved SRTS improvements within the Study Area include continental crosswalk striping, curb extensions, and leading-pedestrian-interval phasing at existing signalized intersections. The design of the Project does not preclude any of these improvements.

Additionally, the Mobility Plan identifies key corridors as components of various “mobility-enhanced networks.” The specific improvements that may be implemented in those networks have not yet been identified, and there is no schedule for implementation; therefore, no changes to intersection lane configurations were made as a result of the Mobility Plan. The mobility-enhanced networks included corridors within the Study Area and are depicted in Figure 9B.

Future without Project Conditions Traffic Volumes. This analysis includes increases to existing traffic volumes expected from regional growth and from future projects. An ambient growth factor of 1% per year compounded annually was applied to the adjusted existing traffic volumes to reflect the effects of the regional growth and development by Year 2024. The total adjustment applied over the four-year period corresponding to the buildout year of the Modified Project was 4.06%.

This study also considered the effects of the Modified Project traffic on other developments either proposed, approved, or under construction (collectively, the Related Projects). The list of Related Projects is based on information provided by LADCP and LADOT in August 2020, as well as recent studies of development projects in the area within a radius of 0.5 miles. The Related Projects are detailed in Table 1 and their approximate locations are shown in Figure 10. Figure 11 shows the peak hour traffic volumes associated with these Related Projects at the study intersections.

The Related Projects volumes were added to the existing traffic volumes after adjustment for ambient growth through the projected Modified Project completion year of 2024. These volumes represent the Future without Project Conditions for Year 2024 and are shown in Figure 12 for the three study intersections.

Modified Project Traffic

Consistent with the Transportation Study, trip generation estimates for the Modified Project were developed using published rates from *Trip Generation Manual, 10th Edition* (Institute of Transportation Engineers, 2017). The rates for dense multi-use urban location type were used for the residential and office components and rates for general urban/suburban location type were used for the restaurant use, as no dense multi-use urban rates are available for this use. The number of trips expected to be generated by the residential component of the Modified Project was calculated using local trip generation rates developed by LADOT for multi-family, mid-rise residential land uses in "Dense Multi-Use Urban" areas, as provided in Table 3.3-1 of the TAG. Additionally, per the TAG, residential or mixed-use developments that include affordable housing units are eligible to use a City-specific trip generation rate based on vehicle trip count data collected at affordable housing sites in the City, as provided in Table 3.3-2 of the TAG. Consistent with the Transportation Study, trip generation reductions were applied to account for internal capture, public transit usage/walk-in trips, and pass-by trips, as well as the removal of the existing private school and office uses currently on-site.

As detailed in Table 2, after applying appropriate trip reductions and accounting for the removal of trips associated with the existing uses, the Modified Project was estimated to generate 146 morning peak hour trips (10 inbound, 136 outbound) and 240 afternoon peak hour trips (170 inbound, 70 outbound). When compared to the Approved Project, these volumes have increased by 123 morning trips and 131 afternoon trips. Both CEQA (vehicle miles traveled) and non-CEQA (operational) analyses were conducted of these traffic volume increases.

Consistent with the Transportation Study, the intersection-level trip distribution pattern shown in Figure 13 was used to assign the Modified Project-generated traffic through the three study intersections based on the trip generation estimates summarized in Table 2. Figure 14 illustrates the Modified Project-only traffic volumes at the study intersections during typical weekday morning and afternoon peak hours.

CEQA THRESHOLDS

The TAG identifies three CEQA thresholds applicable to the Modified Project[2]. Should a project exceed thresholds identified in the TAG, its impact would be considered significant under CEQA and would require any feasible mitigation measures be implemented to reduce the impact below the threshold of significance, to the extent feasible. The following CEQA thresholds identified in the TAG are consistent with City thresholds and with CEQA guidance:

[2] A fourth threshold, Threshold T-2.2: Substantially Inducing Additional Automobile Travel, is intended for transportation projects that would induce substantial VMT by increasing vehicular capacity on the roadway network. The Modified Project is not a transportation project that would induce automobile travel and does not meet the screening criteria for Threshold T-2.2. Thus, further evaluation is not required.

- Threshold T-1: Conflicting with Plans, Programs, Ordinances, or Policies
- Threshold T-2.1: Causing Substantial Vehicle Miles Traveled (VMT)
- Threshold T-3: Substantially Increasing Hazards Due to a Geometric Design Feature or Incompatible Use

The Modified Project meets the TAG screening criteria for analysis under each of these three thresholds.

In addition, LADOT issued *Interim Guidance for Freeway Safety Analysis* (LADOT, May 1, 2020) (City Freeway Guidance) identifying City requirements for a CEQA safety analysis for California Department of Transportation facilities as part of a transportation assessment. However, the Modified Project would not add 25 peak hour trips to any freeway off-ramp and, therefore, would not meet the screening criteria for further analysis under the City Freeway Guidance.

CEQA THRESHOLD T-1: CONFLICTING WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES

Threshold T-1 states that a project would result in a significant impact if it conflicts with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities. Table 2.1-1 of the TAG provides the City plans, policies, programs, ordinances, and standards relevant in determining project consistency. The TAG also requires that a project complete the *Plans, Policies, and Programs Consistency Worksheet* to help guide the consistency review. This worksheet is provided in Attachment C.

As summarized below, the Modified Project is consistent with the transportation-related elements of the City documents listed in Table 2.1-1 of the TAG; therefore, the Modified Project would not result in a significant impact under Threshold T-1.

Mobility Plan 2035

The Mobility Plan combines “complete street” principles with the following five goals that define the City’s mobility priorities:

1. Safety First
2. World Class Infrastructure
3. Access for all Angelenos
4. Collaboration, Communication, and Informed Choices
5. Clean Environments and Healthy Communities

A detailed analysis of the Modified Project’s consistency with the Mobility Plan is provided in Table 3. In summary, the Modified Project provides separate pedestrian access to the site via residential lobby and commercial entrances along Shatto Place and 6th Street to reduce conflicts with vehicles. The Modified Project does not propose modifying, removing, or otherwise affecting existing bicycle infrastructure nor will the Modified Project be in conflict with or preclude implementation of any identified neighborhood improvements. The Modified Project is not required to provide additional widening along Shatto Place. As later detailed, the Applicant is

requesting a Waiver of Dedication for a three-foot dedication along 6th Street. Consistent with the driveway location planning guidelines, primary vehicular access to the Modified Project would be placed on a non-arterial street, Shatto Place. The driveways and truck loading dock would be designed in accordance with the standards set forth in Section 321 of *Manual of Policies and Procedures* (LADOT, December 2008).

The Modified Project encourages non-motorized travel through provision of short- and long-term bicycle parking and promotes transit usage by developing a mixed-use development located within a 0.25-mile walking distance of the Los Angeles County Metropolitan Transportation Authority (Metro) B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops. All sidewalks and curb ramps along the Modified Project frontage would be designed in compliance with Americans with Disabilities Act (ADA) standards to achieve accessibility for all patrons of the Modified Project. In addition, the Modified Project includes a mix of land uses to encourage interaction between components within a walkable environment in close proximity to jobs, destinations, and the multitude of neighborhood services available in the immediate Wilshire/Koreatown area, thereby reducing the number of trips made by vehicle and reducing overall VMT.

The Modified Project would incorporate Transportation Demand Management (TDM) measures to reduce the dependency on single-occupancy vehicles by providing convenient bicycle parking and pedestrian network improvements within and connecting off-site. TDM measures help reduce VMT and vehicle trips to and from the Project Site consistent with City and State transportation and Greenhouse Gas (GHG) policies and objectives. The Modified Project would also provide sufficient off-street parking to accommodate the Modified Project's parking demand on-site.

The Modified Project would not interfere with any other policies or programs of the Mobility Plan and would, therefore, be consistent with it.

Plan for a Healthy Los Angeles

Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan (LADCP, March 2015) (Plan for a Healthy Los Angeles) introduces guidelines for the City to follow to enhance the City's position as a regional leader in health and equity, encourage healthy design and equitable access, and increase awareness of equity and environmental issues.

A detailed analysis of the Modified Project's consistency with Plan for a Healthy Los Angeles is provided in Table 4. The Modified Project prioritizes safety and access for all individuals utilizing the site by complying with all ADA requirements and providing direct connections to pedestrian amenities at the adjacent signalized intersection of Shatto Place & 6th Street. Further, the Modified Project supports healthy lifestyles by locating housing and jobs near transit, providing bicycle parking, and enhancing the pedestrian environment through new walkways, a courtyard, a public pedestrian plaza, and shade trees for a more comfortable and inviting environment for pedestrians. The Modified Project also includes affordable housing units to provide attainable opportunities for social mobility. Therefore, it is consistent with Plan for a Healthy Los Angeles.

Land Use Element of the General Plan (Wilshire Community Plan)

The City General Plan's Land Use Element contains 35 Community Plans that establish specific goals and strategies for the various neighborhoods across Los Angeles. The Modified Project falls within the boundaries of the *Wilshire Community Plan* (LADCP, September 2001) (the Community Plan).

A detailed analysis of the Modified Project's consistency with the Community Plan is provided in Table 5. The Modified Project would be consistent with the objectives of the Community Plan by furthering the development of the Wilshire Center/Koreatown community as a safe, secure, and high-quality residential and commercial environment. The Modified Project would be consistent with the Community Plan's objectives related to developing additional multi-family residential and commercial uses along mixed-use boulevards in appropriate locations and providing pedestrian enhancements and open space to meet anticipated demands. In line with these objectives, the Modified Project would increase housing and jobs in proximity to local and Rapid bus lines, as well as rail transit service. The Modified Project would also encourage pedestrian-oriented design by implementing activated street frontages that would improve and promote pedestrian travel and separating the vehicular and pedestrian accesses to reduce conflicts. Furthermore, the Modified Project would include bicycle parking spaces for residents, employees, and visitors consistent with Los Angeles Municipal Code (LAMC) requirements.

Specific Plans

The Modified Project is not located within a Specific Plan area.

LAMC Section 12.21.A.16 (Bicycle Parking)

LAMC Section 12.21.A.16 details the bicycle parking requirements for new developments. The Modified Project would provide short and long-term bicycle parking spaces to meet the minimum bicycle space requirement for on-site supply.

LAMC Section 12.26J TDM Ordinance

LAMC Section 12.26J, the TDM Ordinance (1993) establishes TDM requirements for non-residential projects, in addition to non-residential components of the mixed-use projects, in excess of 25,000 sf. Key requirements of the TDM Ordinance applicable to the Modified Project include providing carpool / vanpool loading areas, walkways between buildings and public sidewalks, and improving adjacent bus stops to the satisfaction of local transit agencies. Passenger loading would be primarily contained on-site, with secondary curbside loading along the southwestern edge of the Project Site on Shatto Place. The Modified Project provides extensive pedestrian connectivity and facilities within the site, including to the public sidewalks. There are no bus stops adjacent to the Project Site.

Pursuant to the requirements of the TDM Ordinance, the Modified Project design would implement TDM strategies such as providing reduced residential vehicle parking as an incentive in conjunction with the General Plan Amendment and Zone Change proposed. Additionally, the

Modified Project would provide on-site bicycle parking per LAMC requirements and pedestrian network improvements through new walkways, a courtyard, a public pedestrian plaza, and shade trees and landscaped areas within and along the frontages. The Modified Project is consistent with the current TDM Ordinance and is, therefore, consistent with LAMC Section 12.26J.

LAMC Section 12.37 (Waivers of Dedications and Improvement)

Under LAMC Section 12.37, a project must dedicate and improve adjacent streets to half-ROW standards consistent with street designations from the Mobility Plan or request a waiver of dedication or improvement supported by findings.

The Project Site has frontage on Shatto Place, a designated Local Street in the Mobility Plan with a ROW width of 60 feet, and on 6th Street, a designated Avenue II in the Mobility Plan with a ROW width of 86 feet. Shatto Place has a current ROW of 100 feet, with a half-width of 50 feet, including 25 feet of pavement width and 25 feet of sidewalk, on the east side of the street along the frontage. The Modified Project proposes a 20-foot merger to meet the minimum City standard of 30 feet half-ROW. Within the public ROW, Shatto Place would be proposed with a 25-foot half-roadway width and five-foot sidewalks on the east side of the street. Additionally, the Modified Project would provide a seven-foot easement into the Property Line to extend the sidewalk/parkway to 12 feet. The Project Applicant requests a Waiver of Dedication of three feet along 6th Street, which currently has a ROW of 80 feet, with a half-ROW width of 40 feet, including 28 feet of pavement width and 12 feet of sidewalk, on the north side of the street along the frontage.

Vision Zero Action Plan / Vision Zero Corridor Plans

The primary goal of Vision Zero is to eliminate traffic deaths in the City of Los Angeles by 2025. Vision Zero identifies the High Injury Network (HIN), a network of streets where strategic investments will have the biggest impact in reducing death and severe injury.

Adjacent to the Project Site, 6th Street is identified in the HIN. As of June 2019, LADOT installed basic safety improvements on Vermont Avenue between 7th Street and Beverly Boulevard as part of the Vermont Avenue (7th to Beverly) Safety Improvements project. Improvements on Vermont Avenue included continental crosswalks upgrades and protected left-turn signals at intersections. In partnership with Vision Zero, the SRTS program has also identified safety improvements to enhance pedestrian safety and comfort on routes to and from school. As part of the Young Oak Kim Academy SRTS Plan, planned improvements include accessible pedestrian signals, continental crosswalks, curb extensions, etc. within the Study Area and are detailed in Figure 9A.

The Modified Project improvements to the pedestrian environment would not preclude future Vision Zero Safety Improvements or related programs such as the SRTS program by the City. Thus, the Modified Project does not conflict with Vision Zero.

Streetscape Plans

There are no streetscape plans near the Project Site and, therefore, streetscape plans do not apply to the Modified Project.

Citywide Design Guidelines

Citywide Design Guidelines (LADCP Urban Design Studio, October 2019) (Design Guidelines) identifies urban design principles to guide architects and developers in designing high-quality projects that meet the City's functional, aesthetic, and policy objectives and help foster a sense of community. A detailed analysis of the Modified Project's consistency with the Pedestrian-First Design Guidelines is provided in Table 6.

In summary, the Modified Project design includes pedestrian facilities and amenities, such as walkways, a courtyard, a public pedestrian plaza, and street trees, to provide a more comfortable and inviting mobility environment for pedestrians. Furthermore, the orientation of the Modified Project design and active ground floor facilities ensures that the Modified Project actively engages with the street and its surrounding uses, aligning with the Design Guidelines' recommendations regarding the pedestrian experience and incorporating amenities that promote social connection.

Cumulative Analysis

In accordance with the TAG, the cumulative analysis must include consideration of any Related Projects within 0.5 miles of the Project Site and any transportation system improvements in the vicinity. Related Projects located within 0.5 miles of the Project Site are identified in Table 1.

The Related Projects would be separately reviewed and approved by the City and would comply with City design requirements and LAMC requirements relative to street standards and improvements, bike parking, and safety, and each such approval would include an analysis of the project's consistency with applicable plans and policies. Collectively, the Modified Project and the Related Projects add high-density development in a major commercial area with high-quality transit options and high levels of pedestrian activity and are, therefore, consistent with City VMT reduction-related plans and goals. The Modified Project and its Related Projects are served by adequate roads, pedestrian facilities, and access to various forms of transit such that it would not preclude but rather promote the City's ability to serve transportation user needs through the collective location of higher density, transit-oriented uses within a designated job and population center well-served by multiple forms of transit. Therefore, the Modified Project, together with the Related Project, would not create inconsistencies nor result in cumulative impacts with respect to the identified programs, plans, policies, and ordinances.

Approved Project Comparison

As detailed in *Addendum to the Approved Sustainable Communities Environmental Assessment for the Soul Project ZA-2018-3985-MCUP-TOC-WDI-SPR and VTT 82171-CN* (LADCP, May 2019*),* which was approved by the City on August 14, 2019, the Approved Project would not conflict with the transportation-related elements of the City documents nor would it result in a significant impact under Threshold T-1. Consistent with the Approved Project, the Modified Project would not result in a significant impact under Threshold T-1 as detailed above. Thus, the Modified Project does not result in any new significant impacts as compared to the Approved Project.

CEQA THRESHOLD T-2.1: CAUSING SUBSTANTIAL VMT

Threshold T-2.1 seeks to reduce VMT to promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses. It thereby encourages development that shortens the distance between housing, jobs, and services, increases the availability of affordable housing options proximal to public transit, offers attractive non-vehicular transportation alternatives, provides strong transportation demand management programs, and promotes walking and bicycling trips.

VMT Impact Thresholds

Consistent with CEQA guidance, TAG Threshold T-2.1 states that a residential project would result in a significant VMT impact if it would generate household VMT per capita more than 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which it is located. Similarly, an office project would result in a significant VMT impact if it would generate work VMT per employee more than 15% below the existing average work VMT per employee for the APC area in which it is located.

Residents contribute to household VMT while employees (including hotel, retail, and restaurant employees) contribute to work VMT. The TAG identifies a daily household VMT per capita impact criteria of 6.0 and a daily work VMT per employee impact criteria of 7.6 for the Central APC, in which the Project is located. Therefore, should the Modified Project's average household VMT per capita be equal to or lower than 6.0 and average work VMT per employee be equal to or lower than 7.6, the Modified Project's overall VMT impact would be less than significant.

VMT Analysis Methodology

LADOT prepared an analysis tool, *City of Los Angeles VMT Calculator Version 1.3* (July 2020) (VMT Calculator), designed to estimate project-specific daily household VMT per capita and daily work VMT per employee for developments within City limits. Some of the key factors built into the VMT Calculator include travel behavior zones, mixed-use development methodology, population, and employment assumptions, and TDM measures.

Travel Behavior Zones (TBZs). The City developed TBZs as part of a framework for determining the magnitude of VMT and vehicle trip reductions that could be achieved through TDM strategies. The Project Site is located in an Urban (Zone 4) TBZ.

Mixed-Use Development Methodology. As detailed in *City of Los Angeles VMT Calculator Documentation* (LADOT and LADCP, May 2020) (VMT Calculator Documentation), the VMT Calculator accounts for the interaction of land uses within a mixed-use development and considers sociodemographic, land use, and built environment factors for a project area.

Trip Lengths. The VMT Calculator estimates trip lengths to and from a Project site based on information from the City's Travel Demand Forecasting Model. The model considers the traffic analysis zones within 0.125 miles of a project to determine the average trip length and trip type, both of which factor into the calculation of a project's VMT.

Population and Employment Assumptions. The VMT Calculator contains population assumptions based on Census data and employment assumptions derived from multiple data sources. A summary of population and employment assumptions for various land uses is provided in Table 1 of the VMT Calculator Documentation.

TDM Measures. The VMT Calculator measures the reduction in VMT resulting from a project's incorporation of TDM strategies as project design features or mitigation measures. TDM strategies have been empirically demonstrated to reduce trip-making or travel mode choice in such a way as to reduce VMT, as documented in *Quantifying Greenhouse Gas Mitigation Measures* (California Air Pollution Control Officers Association, August 2010).

Modified Project VMT Analysis

The VMT Calculator was used to evaluate the Modified Project VMT and compare it to the VMT impact thresholds. The VMT Calculator utilized the Modified Project's land uses and their respective sizes as the primary input. The VMT Calculator does not include the co-living housing use as a land use option. Therefore, a custom land use input was developed based on published trip generation rates in *Trip Generation Manual, 10th Edition* for multi-family housing based on total residents, as well as one-way trip type splits in the VMT Calculator Documentation for multi-family housing.

Additionally, the Modified Project includes design features considered as TDM strategies to reduce the number of single occupancy vehicle trips to the Project Site, including provision of bicycle parking per LAMC requirements on-site and improving the pedestrian network system through new or improved public facilities, connectivity, and landscaped areas within and along the frontages. For purposes of providing a conservative analysis, the Modified Project design features were not taken into consideration in the VMT evaluation.

The VMT analysis results are shown in Table 7 and the detailed output from the VMT Calculator is provided in the Attachment D. As shown in Table 7, the VMT Calculator estimates that the Modified Project would generate 17,722 total daily VMT, 3,855 daily household VMT, and 944 daily work VMT. The Modified Project would generate 3.7 household VMT per capita and 6.5 work VMT per employee, neither of which exceed the impact threshold of 6.0 and 7.6, respectively. Therefore, the overall Modified Project would not result in a significant VMT impact and no mitigation measures would be required.

Cumulative VMT Analysis

A development project would have a cumulative VMT impact if it were deemed inconsistent with *The 2020-2045 Regional Transportation Plan / Sustainable Communities Strategy* (Southern California Association of Governments, May 2020) (RTP / SCS), the regional plan to reach state air quality and GHG reduction targets. However, based on the TAG, a project that does not result in a significant VMT impact using the City's methodology described above would be in alignment with the RTP / SCS and, therefore, would also have no cumulative VMT impact. The Modified Project would not result in a significant VMT impact, as described above. Further, the Modified Project would be designed to further reduce single occupancy trips to the Project Site through various TDM strategies that would be incorporated as design features, including provisions of

LAMC-required bicycle parking and pedestrian network improvements through new or improved public facilities, connectivity, and landscaped areas within and along the frontages. Therefore, the Modified Project is not anticipated to result in a cumulative VMT impact under Threshold T-2.1, and no further evaluation or mitigation measures would be required.

The Project is also located within 0.25 miles of the Metro B/D Line Wilshire/Vermont Station and is well-served by various local and rapid bus lines. The Project's specific location and mixed-use design in close proximity to transit and other off-site commercial and job destinations, along with its highly walkable environment, support the conclusion that the Modified Project would achieve a VMT reduction greater than the average for the area, as concluded in the Modified Project VMT analysis provided above.

Approved Project Comparison

At the time of the approval of the Transportation Study, LADOT was in the process of updating its travel demand model that forms the basis for the VMT Calculator. Thus, a qualitative analysis was conducted to show that the Approved Project would not result in significant VMT impacts as the Project Site is located in an urban/compact infill location and its characteristics (e.g., its location, proximity to transit, access to other nearby destinations, pedestrian connections, bicycle amenities, etc.) would encourage non-auto modes of transportation (walking, bicycling, carpool, vanpool, and transit).

For comparison purposes, the VMT Calculator was used to evaluate the Approved Project VMT in the same manner as the Modified Project described above. As detailed in Table 7, the VMT Calculator estimates that the Approved Project would generate 10,354 total daily VMT, 2,592 daily household VMT, and 376 daily work VMT. The Approved Project would generate 4.3 household VMT per capita and 6.1 work VMT per employee, neither of which exceed the impact threshold of 6.0 and 7.6, respectively. In comparison to the Approved Project, the Modified Project would generate similar VMT per capita output, but still below the APC thresholds. Consistent with the Approved Project, the proposed Project would not result in VMT significant impacts. Thus, the Modified Project does not result in any new significant impacts as compared to the Approved Project.

CEQA THRESHOLD T-3: SUBSTANTIALLY INCREASING HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR INCOMPATIBLE USE

Threshold T-3 requires that a project undergo further evaluation if it proposes new access points or modifications along the public ROW (i.e., street dedications). A review of a project access points, internal circulation, and parking access would determine if a project would substantially increase hazards due to geometric design features, including safety, operational, or capacity impacts.

Access Overview

Vehicular access to the Project Site would be provided via one full-access driveway on Shatto Place and an ingress-only secondary driveway to a passenger drop-off area that would connect to the primary vehicular driveway lane to the parking garage. Additionally, access to the loading dock would be provided via a separate driveway along 6th Street, east of Shatto Place, with limited right-turn in/out access.

Hazards Analysis

The driveways along Shatto Place and 6th Street provide adequate sight distance as the driveway designs do not locate street trees or other potential impediments in the sidewalk that would affect sight distance and visibility of approaching vehicles, pedestrians, or bicycles. Additionally, the driveways intersect the roadways at right angles to maximize sight distance. No unusual obstacles are presented in the design that would be considered hazardous to motorized vehicles, non-motorized vehicles, or pedestrians. The driveway designs do not present significant safety issues regarding traffic / pedestrian conflicts. The service entry along 6th Street would be limited to right-turn in/out access to further reduce vehicle/pedestrian conflicts and allow for safer turning maneuvers into and out of the driveway. The driveways and internal circulation of parking areas will be designed according to appropriate standards and will be further reviewed by the City Department of Building and Safety and Bureau of Engineering. The driveways and internal circulation of parking areas will also be reviewed by LADOT during site plan review to ensure code compliance and safe pedestrian and vehicular design.

As previously summarized, Shatto Place is a designated Local Street and the proposed half-ROW width of 30 feet meets the City standards. As such, the Applicant is not required to provide additional dedication or widening along Shatto Place. Nonetheless, the Applicant would provide a seven-foot easement within the 20-foot merger to widen the sidewalk/parkway to 12 feet. As described, 6th Street is a designated Avenue II and part of the Mobility Plan's HIN and Pedestrian Enhanced District. The proposed half-ROW width is 40 feet; due to the existing church building near the southerly property line along 6th Street, the Applicant would request a Waiver of Dedication of a three-foot dedication to meet City requirements. As stated above, Shatto Place and 6th Street meet the required street designations and the Modified Project proposes to maintain the sidewalk and roadway widths along all frontages, consistent with LAMC Section 12.37.

There are no bicycle facilities provided along Shatto Place or 6th Street adjacent to the Project Site. Metro Route 18 provides service along 6th Street adjacent to the Project Site but has no stops along the frontage. The driveways are not proposed along a street designated as part of the Bicycle Lane Network or Transit Enhanced Network and, thus, would not preclude or interfere with the implementation of future roadway improvements benefiting transit, pedestrians, or bicycles.

The Modified Project would result in an increase in both pedestrian and bicycle activity on Shatto Place and 6th Street, though not in sufficient quantities to result in a significant conflict with vehicles using the driveways. Further, pedestrians would have separate dedicated access points, as shown in Figure 1.

Based on this review, the Modified Project design and operation would not create any hazards that would significantly impact streets, sidewalks, or other mobility infrastructure.

Cumulative Analysis

In addition to potential Project-specific impacts, the TAG requires that a project be reviewed in combination with Related Projects with access points along the same block as the proposed project to determine if there may be a cumulatively significant impact. A future mixed-use development (Vermont Corridor Project) that is proposed by Los Angeles County Facilities, Inc. is currently under construction and is located directly opposite of the Project Site along Shatto Place. The Vermont Corridor Project will continue to utilize the two existing driveways that provide access to the parking structure located at 523 Shatto Place. Additional vehicular access to the Vermont Corridor Project would also be provided along Vermont Avenue.

As previously detailed, Shatto Place is a Local Street with two travel lanes and a center turn lane. The existing geometry of Shatto Place provides adequate spacing to avoid vehicle turn conflicts and would not impose additional safety issues. Similar to the Modified Project, the adjacent Related Project considered in this cumulative analysis would be individually responsible for complying with the City's design standards and the guidelines outlined in Threshold T-3 to address potential safety conflicts. The Modified Project, together with the adjacent Related Project, would not result in cumulative impacts that would substantially increase hazards due to geometric design features, including safety, operational, or capacity impacts.

Approved Project Comparison

As detailed in the Transportation Study and Assessment Letter, the Approved Project would provide one full-access driveway along Shatto Place. No additional access is provided along 6th Street. The Approved Project would not result in substantially increased hazards due to geometric design features, including safety, operational, or capacity impacts under Threshold T-3. As detailed above, the Modified Project design and operation would not create any hazards that would significantly impact streets, sidewalks, or other mobility infrastructure under Threshold T-3 and, thus, the Modified Project does not result in any new significant impacts as compared to the Approved Project.

NON-CEQA TRANSPORTATION ANALYSIS

Per Section 3.1 of the TAG, any deficiencies identified based on the non-CEQA transportation analysis is "not intended to be interpreted as thresholds of significance, or significance criteria for purposes of CEQA review unless otherwise specifically identified in Section 2." Section 3 of the TAG identifies the following four non-CEQA transportation analyses for reviewing potential transportation deficiencies that may result from a development project:

- Pedestrian, Bicycle, and Transit Access Assessment
- Project Access, Safety, and Circulation Evaluation
- Residential Street Cut-Through Analysis
- Project Construction

The four non-CEQA transportation analyses were reviewed in detail below.

PEDESTRIAN, BICYCLE, AND TRANSIT ASSESSMENT

GTC assessed the Modified Project's potential effect on pedestrian, bicycle, and transit facilities in the vicinity of the Project Site.

Factors to consider when assessing a project's potential effect on pedestrian, bicycle, and transit facilities, include the following:

- Would the project directly or indirectly result in a permanent removal or modification that would lead to the degradation of pedestrian, bicycle, or transit facilities?
- Would a project intensify use of existing pedestrian, bicycle, or transit facilities?

Existing Facilities

Figures 7A and 7B show the existing transportation facilities and transit service within walking distance of the Project Site. Adjacent to the Project Site, 25-foot wide sidewalks are provided along Shatto Place and 12-foot wide sidewalks are provided along 6th Street. There are some tactile warning strips for ADA accessibility, pedestrian push buttons, and continental crosswalks at the adjacent signalized intersection of Shatto Place & 6th Street. No bicycle facilities are provided adjacent to the Project Site. Although no bus stops are located adjacent to the Project Site, the bus stops in the vicinity of the Project Site are equipped with shelters (for rain or shade) and/or benches. For example, Metro Route 18 provides bus stops with shelters and benches along 6th Street in both directions at Vermont Avenue and in the westbound direction at Westmoreland Avenue and a bus stop with a bench in the eastbound direction at Westmoreland Avenue.

Intensification of Use

The Modified Project would result in additional pedestrian, bicycle, and transit activity in the vicinity of the Project Site. However, the Modified Project would provide a comfortable pedestrian experience with 12-foot sidewalks along Shatto Place and 6th Street, as well as providing new trees and maintaining accessible sidewalks along the frontages. The Modified Project would provide bicycle parking for residents, office employees, and patrons in accordance with the LAMC. Given the Project Site's proximity to active commercial uses in the Wilshire Center/Koreatown community, it is ideally located to encourage non-automobile trips to and from those destinations. Overall, the Modified Project would not result in the deterioration of any existing facilities serving pedestrians or bicyclists.

Although the Modified Project (and other Related Projects) will cumulatively add transit ridership, several established transit routes serve the immediate area, as shown in Figure 7B. The Project Site is served by multiple bus lines operated by Metro and LADOT Downtown Area Shuttle along Vermont Avenue and Wilshire Boulevard. Furthermore, the Project Site is located within a 0.25-mile walking distance of the Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and

720 bus stops along Vermont Avenue and Wilshire Boulevard, respectively, that expand the reach of public transit. The adjacent transit capacity can easily accommodate the intensification of transit usage attributable to the Modified Project without significantly absorbing excess capacity.

Conclusion

The Modified Project would result in some intensification of pedestrian, bicycle, and transit activity in the vicinity of the Project Site. However, given the Project Site's location near local bus and rail services in the Wilshire Center/Koreatown community and its proximity to active commercial centers, it is ideally located to encourage non-automobile trips to and from those destinations and reach additional public transit routes. The amount of additional pedestrian, bicycle, and transit activity generated by the Modified Project would not strain the capacity of facilities and operations dedicated to those modes.

MODIFIED PROJECT ACCESS AND CIRCULATION ASSESSMENT

This section summarizes the site access, safety, and circulation of the Project Site. It includes a quantitative evaluation of the Modified Project's access and circulation operations, as well as the anticipated LOS at the study intersections and anticipated traffic queues.

Access

As previously described, primary vehicular access to the Modified Project would be provided via one full access driveway on Shatto Place and a secondary entry-only driveway to a passenger drop-off area south of the primary driveway. Service access to the loading dock would be provided via a separate driveway along 6th Street, east of Shatto Place, with limited right-turn in/out access.

Operational Evaluation

Intersection operations were evaluated for typical weekday morning (7:00 AM to 10:00 AM) and afternoon (3:00 PM to 6:00 PM) peak periods. A total of three intersections, two signalized and one unsignalized, in the vicinity of the Project Site were selected for detailed transportation analysis and are shown in Figure 3.

The following traffic conditions were developed and analyzed as part of this study:

- Existing with Modified Project Conditions: This analysis condition estimates the potential intersection operating conditions that could be expected if the Modified Project were built under existing conditions.

- Future with Modified Project Conditions (Year 2024): This analysis condition estimates the potential intersection operating conditions that could be expected if the Modified Project were occupied in the projected buildout year. In this analysis, the Modified Project-generated traffic is added to Future without Project Conditions (Year 2024).

Methodology. In accordance with the TAG, the intersection delay and queue analyses for the operational evaluation were conducted using the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) (HCM) methodology, which was implemented using Synchro software with signal timing configurations provided by the City to analyze intersection operating conditions. The HCM signalized methodology calculates the average delay, in seconds, for each vehicle passing through the intersections, while the HCM two-way stop-control unsignalized methodology calculates the control delay, in seconds, for individual approaches of an intersection and does not account for traffic gaps created by adjacent traffic signals. Table 8 presents a description of the LOS categories, which range from excellent, nearly free-flow traffic at LOS A, to congested, stop-and-go conditions at LOS F, for signalized intersections.

Existing with Modified Project Conditions. The morning and afternoon peak hour traffic volumes generated by the Modified Project shown in Figure 14 were added to the Existing morning and afternoon peak hour traffic volumes shown in Figure 8. The resulting volumes are illustrated in Figure 15 and represent Existing with Modified Project Conditions, assuming Modified Project operation under Existing Conditions.

Table 9 summarizes the weekday morning and afternoon peak hour LOS results for each of the study intersections under Existing and Existing with Modified Project Conditions. As shown in Table 9, all three study intersections operate at LOS B or C during both the morning and afternoon peak hours.

Summary worksheets are provided in Attachment E.

Future with Project Modified Conditions. All future cumulative traffic growth (i.e., ambient and Related Project traffic growth) and any transportation infrastructure improvements are incorporated into this analysis.

The morning and afternoon peak hour traffic volumes generated by the Modified Project shown in Figure 14 were added to the Future without Project Conditions (Year 2024) morning and afternoon peak hour traffic volumes shown in Figure 12. The resulting volumes are illustrated in Figure 16 and represent Future with Modified Project Conditions after development of the Modified Project in Year 2024.

Table 10 summarizes the results of the Future without Project and Future with Modified Project Conditions (Year 2024) during the weekday morning and afternoon peak hours for the three study intersections. As shown in Table 10, all study intersections operate at LOS D or better during both the morning and afternoon peak hours.

Summary worksheets are provided in Attachment E.

Queuing Analysis

The study intersections and driveway were also analyzed to determine whether the lengths of intersection turning lanes could accommodate vehicle queue lengths. The queue lengths were estimated using Synchro software, which reports the 95th percentile queue length. Synchro queue

results that are reported in vehicle-length were converted to feet by multiplying each vehicle by 25 feet to account for the average length of a vehicle plus distance between vehicles in the queue.

Driveway Analysis. As illustrated in Figure 1, primary vehicular access to the Project Site is provided via one driveway along Shatto Place that would accommodate all turning movements. The driveway is located approximately 300 feet north of 6th Street. A drop-off entry-only driveway is also provided south of the primary driveway and a service-only driveway is provided along 6th Street.

As detailed in Table 2, the Modified Project would generate a maximum of 326 vehicles during a one-hour period (afternoon peak hour) that would primarily use the northern driveway on Shatto Place. Based on the LOS calculation worksheets provided in Attachment E, the driveway would operate at acceptable LOS C conditions during both the morning and afternoon peak hour and could accommodate peak Modified Project traffic demand. The queuing analysis estimates a queue of less than one vehicle-length (a maximum length of approximately five feet occurring in the afternoon peak hour) in either directional approach. Based on the estimated traffic volumes and configuration of this driveway, queuing would not extend as far as 5th Street or 6th Street and would not significantly affect through traffic movements along Shatto Place.

Based on the evaluation of the driveway and internal circulation, the driveway would be adequate to serve the demand of the Project Site and would not result in internal stacking that would spill into City arterials. The traffic expected at the driveway can be accommodated internally and within the existing infrastructure and lane striping at adjacent intersections. The Modified Project's internal circulation design and access provisions would not cause vehicle queues to extend beyond the driveway into the adjacent street system.

Detailed queuing analysis worksheets are provided in Attachment E.

6th Street Loading Driveway. Heavy truck activity is restricted to this driveway, which will accommodate loading activities completely on-site and be limited to right-turn in/out access. It is recommended that heavy vehicle activity be scheduled outside of the peak hours and that a loading area management plan be implemented so that trucks are not subject to dwell times on City streets in order to access the loading area. This plan should include a preferred truck route for use by all vendors when scheduling deliveries so that arrival patterns may be adequately controlled.

Passenger Loading Evaluation

The passenger loading evaluation determines if the Modified Project provides adequate on-site passenger loading facilities to accommodate the usage of transportation network companies (TNCs) and shared mobility services. Additionally, this evaluation included review of any potential conflicts with pedestrian and bicycle and potential curbside management options to reduce the need for curbside space in the public ROW.

The secondary driveway on Shatto Place is designed as one-way inbound and is anticipated for the majority of the pick-up/drop-off activity internal to the site. This drive aisle provides adequate width to allow vehicles to navigate around any stopped vehicles to avoid stacking to the sidewalk or spilling onto public streets.

Additionally, curbside loading is proposed in the public ROW within the first 100 feet north of 6th Street on Shatto Place. Currently within this section of approximately four vehicle spaces, the east curb is restricted to accommodate school activity from 7:00 AM – 10:00 AM and 2:00 PM – 6:00 PM for "Passenger Loading Only" (on school days, with a five-minute time limit). This section allows two-hour parking on the weekdays (10:00 AM – 2:00 PM) and Saturday (8:00 AM – 6:00 PM) and unrestricted parking outside of these hours affecting these four spaces. With the school replaced, the Modified Project proposes to repurpose this curbside frontage as full-time passenger loading zone (24-hour) within this 100 feet of linear curb. The net result of this application would affect approximately four on-street unmetered spaces, but does not require the removal of parking meters. The proposed drop-off zone would be coordinated with LADOT's Parking Meter Division, Los Angeles Police Department's Commissioner Investigation Division, and any other necessary agencies. Additionally, the curbside loading area would be designed according to City standards for installation of a permanent loading area in the public ROW.

As described previously, the Modified Project would generate a maximum of 326 vehicle trips to the primary driveway during any single peak hour, or an average of approximately five trips per minute. The majority of those vehicles would not be chauffeured trips and, therefore, would not result in a passenger loading stop. If as many as 20% of the trips were chauffeured trips, this would result in approximately 65 such trips per hour or one trip per minute on average. With a typical dwell time of less than 30 seconds for TNC pick-up or drop-off, there would be sufficient capacity within the designated passenger loading areas to accommodate the needs of the Modified Project.

Additionally, north of the proposed curbside loading area on Shatto Place, there is approximately 100 feet of linear curb marked for 30-minute parking (8:00 AM – 6:00 PM) and has capacity for approximately five vehicles. This section would be maintained to serve passenger loading purposes when not in use by parked vehicles.

The proposed driveways on Shatto Place would be located north of any existing available street parking, and, thus, the construction of the driveways would not affect on-street parking. No changes to the existing parking configuration are proposed on 6th Street along the frontage.

RESIDENTIAL STREET CUT-THROUGH ANALYSIS

The residential street cut-through analysis determines potential increases in average daily traffic volumes on designated Local Streets, as classified in the Mobility Plan, that can be identified as cut-through trips generated by the Modified Project and that can adversely affect the character and function of those streets.

Section 3.5.1 of the TAG states that it is the City's policy to locate new project driveways on lower-volume side streets and not on arterials. Therefore, trips to and from new development projects with driveways located on neighborhood streets are not considered "cut-through" traffic. The Project is providing primary access on a non-arterial street and trips through this corridor would not qualify as cut-through traffic.

Section 3.5.2 of the TAG provides a list of questions to assess whether the Modified Project would negatively affect residential streets and if further analysis is required. The net daily trips generated by the Modified Project is not projected to lead to trip diversion to parallel routes along residential

Local Streets. The Project is not located on a currently congested Arterial or Boulevard, nor is the Modified Project projected to add a substantial amount of automobile traffic to congested Arterial Streets that could potentially cause a shift to residential Local Streets. Based on the street configurations, traffic controls, and connectively potential from surrounding street corridors, no adjacent, parallel, or alternative route would provide a quicker, more attractive, or more viable route to the Modified Project Site, nor would these residential routes be more convenient for other commuter vehicles to be diverted due to the inclusion of Project traffic, as the adjacent Arterials provide direct access to primary destinations without significant congestion (as demonstrated in Table 10). Opportunities for Modified Project traffic to utilize other parallel or perpendicular streets as cut-through routes is negligible. Thus, the Modified Project is not required to conduct further analyses for potential cut-through traffic on residential streets.

CONSTRUCTION IMPACT ANALYSIS

The construction impact analysis relates to temporary impacts that may result from the construction activities associated with the Modified Project and was performed in accordance with Section 3.4 of the TAG. Section 3.4.3 of the TAG identifies three types of potential in-street construction impacts:

1. Temporary transportation constraints – potential impacts on the transportation system
2. Temporary loss of access – potential impacts on visitors entering and leaving sites
3. Temporary loss of bus stops or rerouting of bus lines – potential impacts on bus travelers

As detailed in Section 3.4.4 of the TAG, the proposed construction plans should be reviewed to determine whether construction activities would require any of the following actions:

- Street, sidewalk, or lane closures
- Blocking of existing vehicle, bicycle, or pedestrian access along a street or to parcels fronting the street
- Modification of access to transit stations, stops, or facilities during revenue hours
- Closure or movement of an existing bus stop or rerouting of an existing bus line
- Creation of transportation hazards

Proposed Construction Schedule

The Modified Project is anticipated to be constructed over a period of approximately 36 months, with an anticipated completion in Year 2024. The majority of construction workers will arrive before the morning peak hour and depart before the afternoon peak hour, as per typical construction day schedules. The construction period would include sub-phases of site demolition, excavation and grading, foundations, and building construction. Peak haul truck activity occurs during excavation and grading, and peak worker activity occurs during building construction. These two sub-phases of construction were studied in greater detail.

Excavation and Grading Phase

The peak period of truck activity during construction of the Modified Project would occur during the excavation and grading of the Modified Project Site. With the implementation of the Construction Management Plan, which is described in more detail below, it is anticipated that almost all haul truck activity to and from the Project Site would occur outside of the morning and afternoon peak hours. In addition, as discussed in more detail in the following section, worker trips to and from the Project Site would also occur outside of the peak hours. Therefore, no peak hour construction traffic impacts are expected during the demolition phase of construction.

Based on projections compiled for the Modified Project, approximately 98,000 cubic yards (CY) of material would be removed from the Project Site over a 87-work day period. That equates to approximately 1,125 CY of material exported each workday, requiring up to 81 haul trucks per workday based on an anticipated haul truck capacity of 14 CY each. Thus, up to 162 daily haul truck trips (81 inbound, 81 outbound) are forecast to occur during the excavation period.

Large trucks were converted into the equivalent value of passenger cars due to the slower headway and delay-creating effects of heavy vehicles. Table 8 of *Transportation Research Circular No. 212, Interim Materials on Highway Capacity* (Transportation Research Board, 1980) and Exhibit 12-25 of the HCM suggest that a passenger car equivalency (PCE) of one truck is equal to 2.0 commuter vehicles. Assuming a PCE factor of 2.0, the 146 truck trips would be equivalent to 292 daily PCE trips.

In addition, a maximum of nine construction workers would work at the Project Site during this phase. Assuming minimal carpooling amongst those workers, an average vehicle occupancy (AVO) of 1.135 persons per vehicle was applied, as provided in *CEQA Air Quality Handbook* (South Coast Air Quality Management District, 1993). Therefore, nine workers would result in a total of eight vehicles, or 16 trips (eight inbound and eight outbound) to and from the Project Site on a daily basis.

With implementation of the Construction Management Plan, it is anticipated that almost all haul truck activity and worker trips would occur outside of the peak hours. Therefore, no peak hour construction traffic impacts are expected during the excavation phase of construction.

Haul Route. The Modified Project will submit for approval an Application for Review of Import – Export with the Los Angeles Department of Building and Safety with the defined haul route as follows:

- Loaded Trucks: travel south on Shatto Place, west on 6th Street, north on Vermont Avenue to the Hollywood Freeway (US 101) Southbound, to Interstate 10 (I-10) East, to Interstate 605 (I-605) North, and exit Live Oak Avenue to Hanson disposal site.

- Empty Trucks: travel west on Live Oak Avenue to I-605 Southbound, to I-10 West to US 101 North, exit Vermont Avenue, south on Vermont Avenue, east on 6th Street, and north on Shatto Place to Project Site.

Building Construction Phase

The hours of construction typically require workers to be on-site before the weekday morning commuter peak period and allow them to leave before or after the afternoon commuter peak period (i.e., arrive at the site prior to 7:00 AM and depart before 4:00 PM or after 6:00 PM). Therefore, most, if not all, construction worker trips would occur outside of the typical weekday commuter peak periods.

According to construction projections prepared for the Modified Project, the building subphase of construction would employ the most construction workers, with a maximum of approximately 245 workers per day for all components of the building (i.e., framing, plumbing, elevators, inspections, finishing). However, since the different building components would not be constructed or installed simultaneously, this cumulative estimate likely overstates the number of workers that would be expected on the peak construction day. Furthermore, on most of the estimated workdays to complete the Modified Project, there would be far fewer workers than on the peak day. Therefore, the estimate of 245 workers per day used for the purposes of this analysis represents a conservative estimate.

Assuming an AVO of 1.135 persons per vehicle, 245 workers would result in a total of 216 vehicles that would arrive and depart from the Project Site each day. The estimated number of daily trips associated with the construction workers is approximately 432 (216 inbound and 216 outbound trips), but nearly all of those trips would occur outside of the peak hours, as described above. As such, the building phase of Modified Project construction is not expected to cause a significant traffic impact at any of the study intersections.

During construction, adequate parking for construction workers would be secured in local parking facilities or, if needed, a remote site with shuttle service provided. Restrictions against workers parking in the public ROW in the vicinity of (or adjacent to) the Project Site would be identified as part of the Construction Management Plan. All construction materials storage and truck staging would be contained on-site.

Potential Impacts on Access, Transit, And Parking

Construction is not expected to create hazards for roadway travelers, bus riders, or parkers, as long as commonly practiced safety procedures for construction are followed. Such procedures and other measures (e.g., to address temporary traffic control, lane closures, sidewalk closures, etc.) will be incorporated into the Construction Management Plan. The construction-related impacts associated with access and transit are anticipated to be less than significant, and the implementation of the Construction Management Plan described below would further reduce those impacts.

Construction activities are expected to be primarily contained within the Project Site boundary. However, it is expected that construction fences may encroach into the public ROW (e.g., sidewalk and roadways) adjacent to the Project Site. The curb lane on Shatto Place, which provides on-street parking, could be used intermittently throughout the construction period for equipment staging, concrete pumping, etc. Temporary traffic controls would be provided to direct traffic around any closures as required in the Construction Management Plan. Travel lanes would

be maintained in each direction on Shatto Place throughout the construction period, and emergency access would not be impeded.

The use of the public ROW along Shatto Place and 6th Street may require temporary rerouting of pedestrian traffic as the sidewalks fronting the Project Site would be closed. The Construction Management Plan would include measures to ensure pedestrian safety along the affected sidewalks and temporary walkways (e.g., use of directional signage, maintaining continuous and unobstructed pedestrian paths, and/or providing overhead covering).

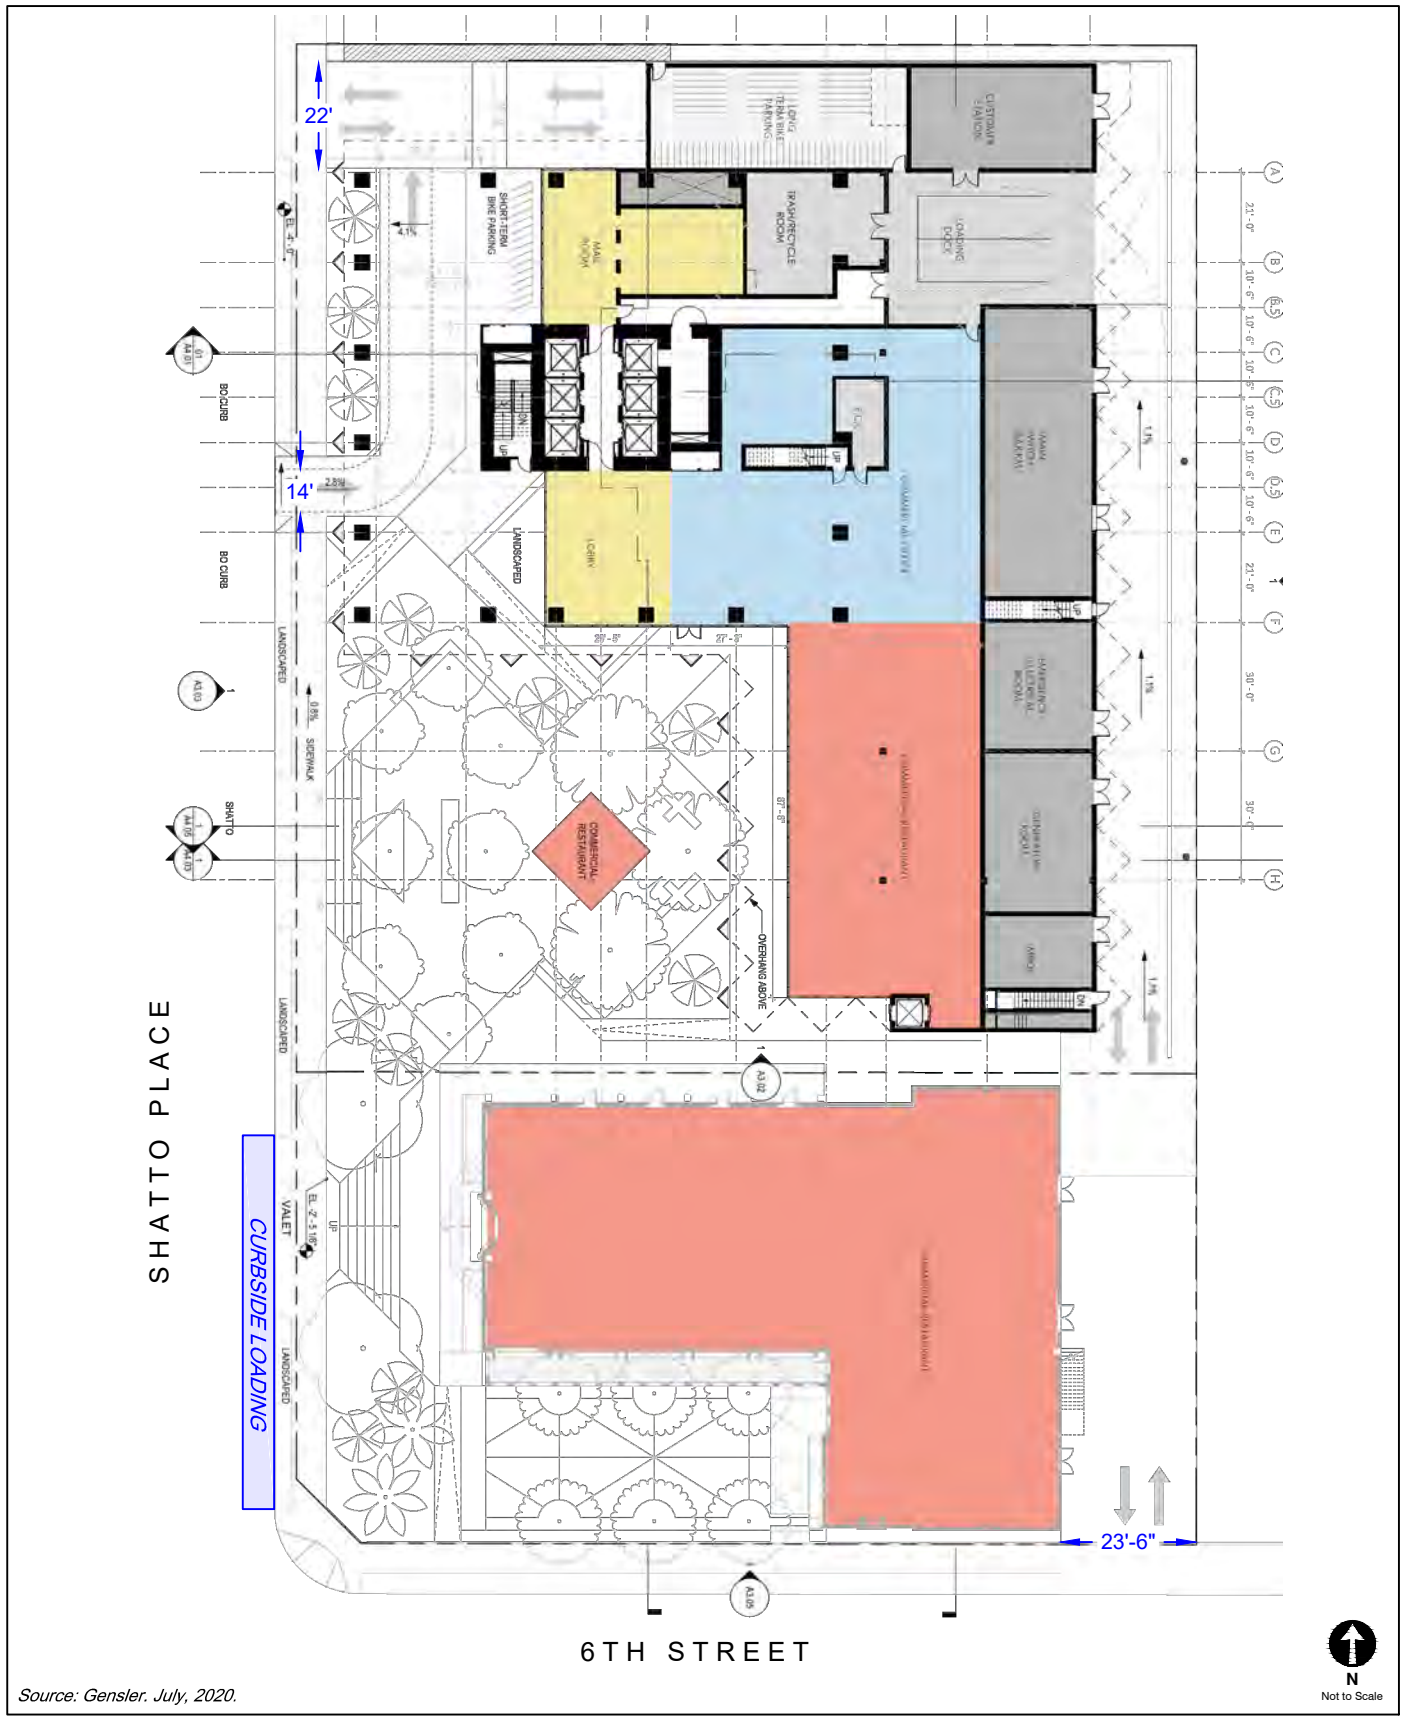
The construction activities of the Modified Project would not require a temporary transit stop relocation as no bus stop is currently located adjacent to the Project Site. On-street parking is allowed along Shatto Place, so construction fences could result in the temporary loss of approximately 200 linear feet of curb parking on the east side of Shatto Place.

Construction Management Plan

The following details the specific Construction Management Plan details which include the same Mitigation Measures (MM) identified for the Approved Project application. These include street closure information, a detour plan, and a staging plan, which would be submitted to the City for review and approval prior to commencing construction. The Construction Management Plan formalizes how construction would be carried out and identifies specific actions that would be required to reduce effects on the surrounding community. The Construction Management Plan is based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. The Construction Management Plan prepared for the Modified Project does not result in any new changes as compared to the Approved Project, and with the inclusion of these measures would result in construction impacts that are less than significant.

MM TRAF-1: The Applicant shall prepare a detailed Construction Management Plan that shall include, but not be limited to, the following elements, as appropriate:

- Requiring workers and construction trucks to generally travel outside of the peak hours
- Prohibition of construction worker parking on nearby residential streets
- Temporary traffic control during all construction activities encroaching on public rights-of-way to improve traffic flow and safety on public roadways
- Scheduling of construction activities to reduce the effect on traffic flow on surrounding arterial streets
- Safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers as appropriate
- Scheduling of construction-related deliveries so as to generally occur outside the commuter peak hours
- Installation of appropriate traffic signs around the Project Site to ensure pedestrian, bicycle, and vehicle safety.

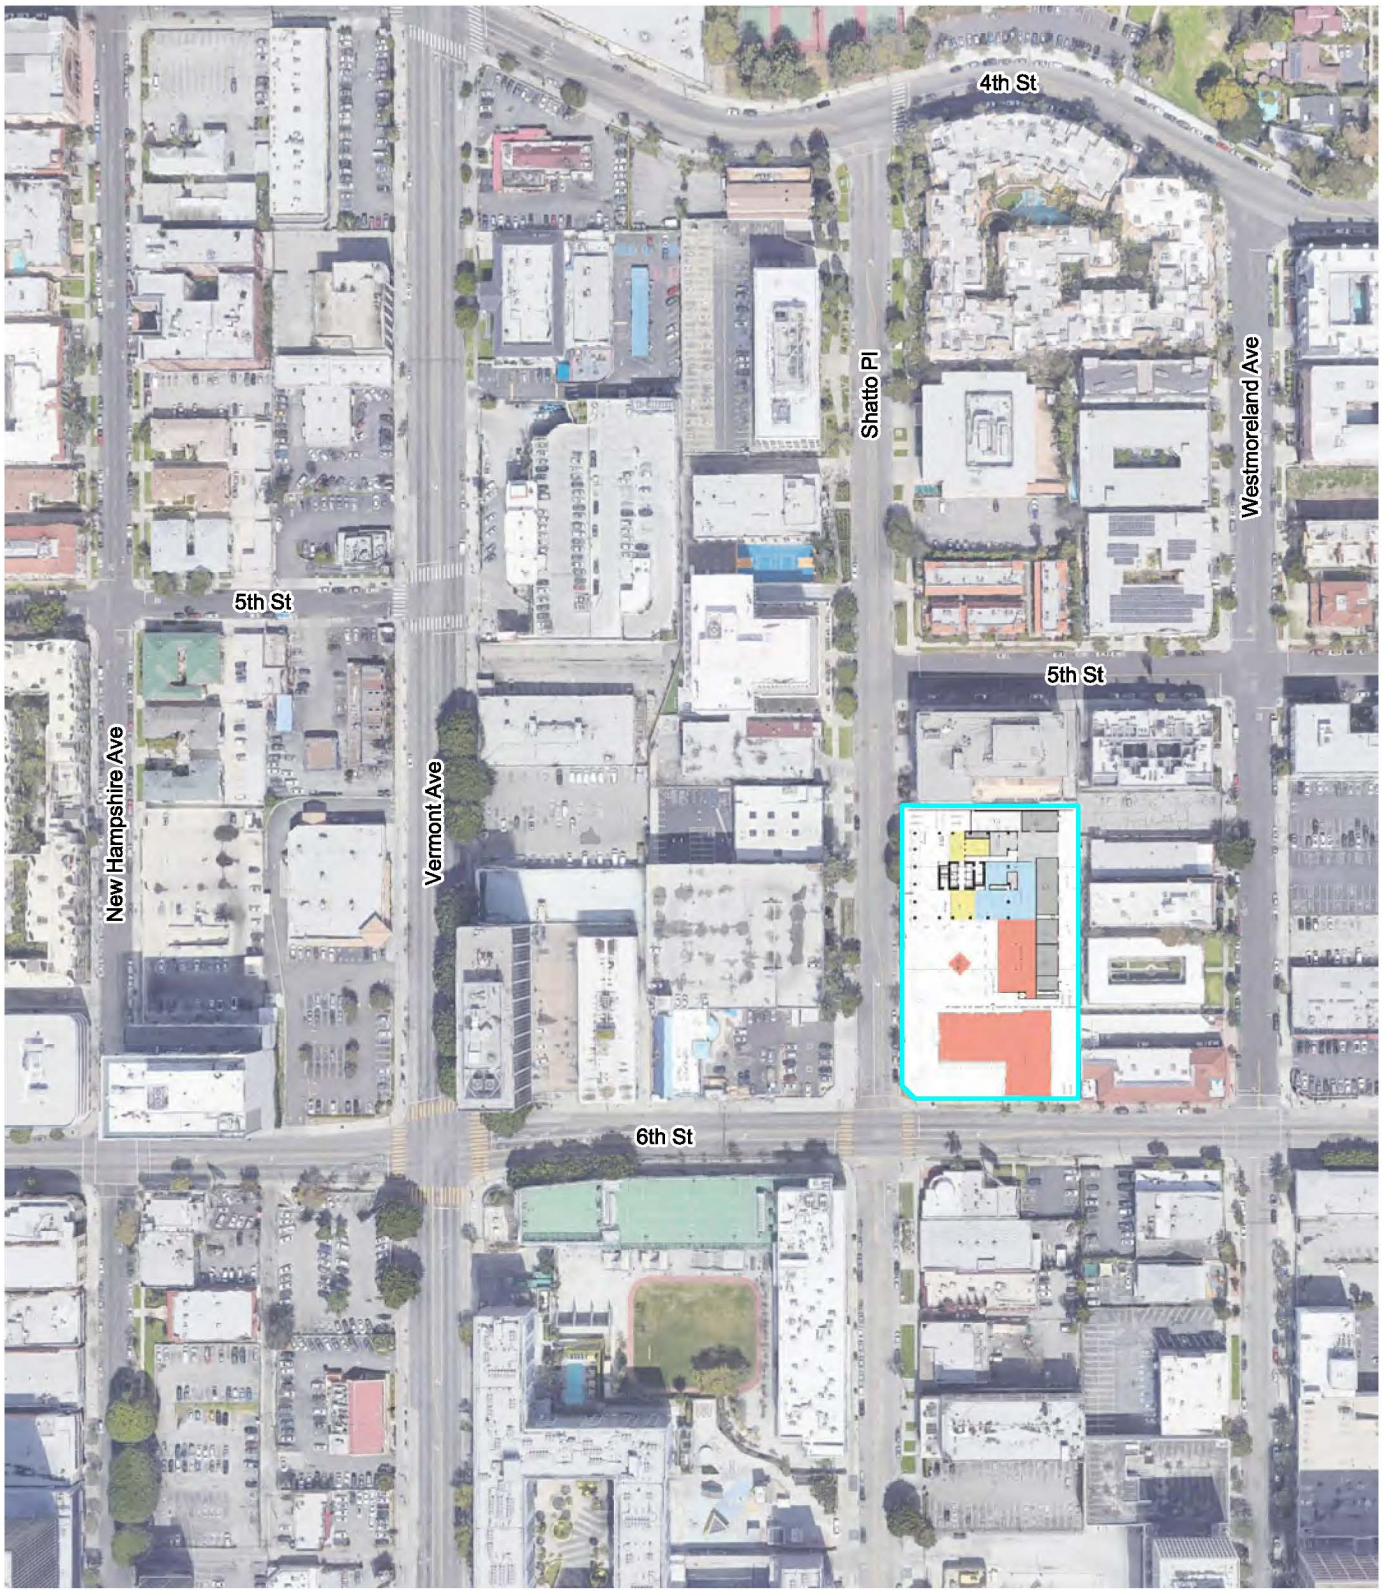


MM TRAF-2: There shall be no staging or parking of construction vehicles, including vehicles to transport workers on any of the streets adjacent to the school.

MM TRAF-3: LADBS shall assign specific haul route hours of operation based upon Young Oak Kim Academy's hours of operation.

MM TRAF-4: Haul route scheduling shall be sequenced to minimize conflicts with pedestrians, school buses and cars at the arrival and dismissal times of the school day. Haul route trucks shall not be routed past the school during periods when school is in session especially when students are arriving or departing from the campus.

MM TRAF-5: The Applicant shall plan construction and construction staging as to maintain pedestrian access on adjacent sidewalks throughout all construction phases. This requires the applicant to maintain adequate and safe pedestrian protection, including physical separation (including utilization of barriers such as K-Rails or scaffolding, etc.) from work space and vehicular traffic and overhead protection, due to sidewalk closure or blockage, at all times. Temporary pedestrian facilities shall be adjacent to the Project Site and provide safe, accessible routes that replicate as nearly as practical the most desirable characteristics of the existing facility. Covered walkways shall be provided where pedestrians are exposed to potential injury from falling objects. Applicant shall keep sidewalk open during construction until only when it is absolutely required to close or block sidewalk for construction staging. Sidewalk shall be reopened as soon as reasonably feasible taking construction and construction staging into account.



It is likely that Construction Management Plans would also be submitted for approval to the City by the Related Projects prior to the start of construction activities. As part of the LADOT and/or Los Angeles Department of Building and Safety established review process of Construction Management Plans, potential overlapping construction activities and proposed haul routes would be reviewed to minimize the impacts of cumulative construction activities on any particular roadway.

Notes:
du = dwelling unit; sf = square feet.
[a] Trip generation rates are from *Trip Generation Manual, 10th Edition* (Institute of Transportation Engineers, 2017) and are based on developments located in "General Urban/Suburban" area, unless otherwise noted.
[b] Morning and afternoon trip generation rates for multi-family housing (high-rise) are based on local rates developed by LADOT for developments located in "Dense Multi-Use Urban" area as detailed in Table 3.3-1 of LADOT's *Transportation Assessment Guidelines*. These rates are not subjected to transit/walk-in adjustments.
[c] Per LADOT's *Transportation Assessment Guidelines,* residential or mixed-use developments that include Affordable Housing Units are eligible to use a city specific trip generation rate based on vehicle trip count data collected at affordable housing in the City of Los Angeles in 2016. Rates were based on developments located inside a Transit Priority Area, as defined per Public Resources Code Section 21064.3. These rates are not subjected to any transit/walk-in adjustments.
[d] Morning and afternoon trip generation rates for general office are based on developments located in "Dense Multi-Use Urban" area as detailed in *Trip Generation Manual, 10th Edition.* These rates are not subjected to transit/walk-in adjustments.
[e] The Project would provide 54 five-bedroom co-living housing units. Based on information provided by the Applicant, it is estimated that 1.14 persons would occupy each bed, or 5.7 persons per unit. In total, the co-living housing component would have approximately up to 308 residents.
[f] Internal capture adjustments account for person trips made between distinct land uses within a mixed-use development (e.g. residents and office employees visiting the restaurant uses) without using an off-site road system.
[g] Per LADOT's *Transportation Assessment Guidelines*, the Project Site is located approximately 650 feet walking distance from a transit station (Metro B/D Line [formerly Red/Purple Line] Wilshire/Vermont Station), therefore a transit reduction is applied to account for transit usage and walking visitor arrivals from the surrounding neighborhoods and adjacent commercial developments.
[h] Per Attachment H of LADOT's *Transportation Assessment Guidelines*, a pass-by adjustment was applied to account for Project trips made as an intermediate stop on the way from an origin to a primary trip destination without route diversion.

TABLE 3
PROJECT CONSISTENCY WITH MOBILITY PLAN 2035

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Chapter 1 - Safety First	
Policy 1.1, Roadway User Vulnerability Design, plan, and operate streets to prioritize the safety of the most vulnerable roadway user.	**Consistent.** Primary vehicular access to the Project would be provided via one driveway along Shatto Place, a designated Local Street in the Mobility Plan. The Project also proposes an ingress-only secondary driveway to a passenger drop-off area that would connect to the primary vehicular driveway lane to the parking garage. Access to the loading dock would be provided via a separate driveway along 6th Street, east of Shatto Place, with limited right-turn in/out access. Separate pedestrian access to the Project Site would be provided via entrances along Shatto Place and 6th Street. Bicycle access would utilize the same pedestrian access points.
Policy 1.3 Safe Routes to Schools Prioritize the safety of school children on all streets regardless of highway classifications.	**Consistent.** Young Oak Kim Academy is located directly southwest of the Project Site, on the southwest corner of Shatto Place & 6th Street. The Young Oak Kim Academy SRTS Plan includes infrastructure improvement projects that will be implemented to enhance pedestrian safety and comfort of routes to and from school. The Project would not result in unsafe conditions for students.
Chapter 2 - World Class Infrastructure	
Policy 2.2 Complete Streets Design Guide Establish the Complete Streets Design Guide as the City's document to guide the operations and design of streets and other public rights-of-way.	**Consistent.** The Project would conform to all design element requirements which may affect public rights-of-way, including proper driveway alignment, adequate sidewalk widths, improved lighting elements, and landscaping design which does not hinder sight distance, mobility, or accessibility.
Policy 2.3 Pedestrian Infrastructure Recognize walking as a component of every trip, and ensure high-quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.	**Consistent.** The Project would enhance pedestrian access within and around the Project Site by providing a new landscaping and walkways, a public pedestrian plaza fronting Shatto Place, a courtyard fronting 6th Street. The Project would provide 12-foot sidewalks along Shatto Place and 6th Street. Additionally, the Project would retain existing and plant new street trees along the Project frontages to provide adequate shade and enhance the pedestrian environment. All driveways would be designed to provide an adequate pedestrian refuge area between the driveways where necessary.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Mobility Plan 2035: An Element of the General Plan* (Los Angeles Department of City Planning, January 2016).

TABLE 3 (CONT'D)
PROJECT CONSISTENCY WITH MOBILITY PLAN 2035

Objective, Policy, Program, or Plan [a]	Analysis of Project Consistency
Policy 2.4 Neighborhood Enhanced Network Provide a slow speed network of locally serving streets.	**Consistent.** No streets adjacent to the Project Site is part of the Neighborhood Enhanced Network, and thus vehicle access to the Project Site would not result in further traffic interference with the neighborhood character of the surrounding area.
Policy 2.5 Transit Network Improve the performance and reliability of existing and future bus service.	**Consistent.** The Project is located within a 0.25-mile walking distance to the Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops. The proximity to transit would encourage more transit usage and provides residents, employees, and visitors to the Project with alternative travel modes.
Policy 2.6 Bicycle Networks Provide safe, convenient, and comfortable local and regional bicycling facilities for people of all types and abilities. (includes scooters, skateboards, rollerblades, etc.)	**Consistent.** The Project does not propose modifying, removing, or otherwise affecting existing bicycle infrastructure, and the Project driveways are not proposed along a street with a bicycle facility. The Project provides infrastructure and services to encourage bicycling for residents, employees, and visitors to the Project Site. The Project will provide up to 200 bicycle parking spaces.
Policy 2.10 Loading Areas Facilitate the provision of adequate on and off-street loading areas.	**Consistent.** The Project provides a loading dock on-site and is accessed via right-turn in/out on 6th Street. The loading dock would be designed to meet the Project Site loading needs without disrupting operations within the public right-of-way. Passenger loading would occur primarily on-site with secondary loading along the parking lane on Shatto Place.
Policy 2.17 Street Widenings Carefully consider the overall implications (costs, character, safety, travel, infrastructure, environment) of widening a street before requiring the widening, even when the existing right of way does not include a curb and gutter or the resulting roadway would be less than the standard dimension.	**Consistent.** The Project does not propose modifications to widen streets beyond their required Mobility Plan classifications. The Project Applicant will request a three-foot Waiver of Dedication along 6th Street to meet City requirements.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Mobility Plan 2035: An Element of the General Plan* (Los Angeles Department of City Planning, January 2016).

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Chapter 3 - Access for All Angelenos	
Policy 3.1 Access for All Recognize all modes of travel, including pedestrian, bicycle, transit, and vehicular modes – including goods movement – as integral components of the City's transportation system.	**Consistent.** The Project encourages multi-modal transportation alternatives and access for all travel modes to and from the Project Site. The Project provides separate pedestrian entrances and bicycle parking to encourage walking and bicycling. The Project encourages transit usage by developing a mixed-use project located in proximity to transit. The Project would support those residents, employees, and visitors who choose to travel by automobile through the provision of primary access points along Shatto Place, on-site passenger loading and commercial loading, secondary curbside passenger loading, and adequate parking supply to serve demand.
Policy 3.2 People with Disabilities Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.	**Consistent.** The Project's vehicular and pedestrian entrances would be designed in accordance with LADOT standards and would comply with ADA requirements. The Project design would also be in compliance with all ADA requirements and would provide direct connections to pedestrian amenities at adjacent intersections.
Policy 3.3 Land Use Access and Mix Promote equitable land use decisions that result in fewer vehicle trips by providing greater proximity and access to jobs, destinations, and other neighborhood services.	**Consistent.** The Project's mix of high-density residential uses and local-serving restaurant space located within proximity to transit in an active commercial area of the Wilshire/Koreatown Community helps to minimize vehicle trips and enhance proximity and convenience of residences to jobs and services.
Policy 3.4 Transit Services Provide all residents, workers, and visitors with affordable, efficient, convenient, and attractive transit services.	**Consistent.** The Project is located within 0.25 miles of the Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops, providing residents, employees, and visitors to the Project with multiple public transit services.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Mobility Plan 2035: An Element of the General Plan* (Los Angeles Department of City Planning, January 2016).

TABLE 3 (CONT'D)
PROJECT CONSISTENCY WITH MOBILITY PLAN 2035

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Policy 3.5 Multi-Modal Features Support “first-mile, last-mile solutions” such as multi-modal transportation services, organizations, and activities in the areas around transit stations and major bus stops (transit stops) to maximize multi-modal connectivity and access for transit riders.	**Consistent.** The Project would support "first-mile, last-mile solutions" by developing a mixed-use project located in an active commercial area of the Wilshire/Koreatown Community and within 0.25 miles of the Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops. Additionally, the Project includes several design features as TDM measures, such as bicycle parking and pedestrian network improvements, that will encourage the use of transit and other alternative modes of transportation.
Policy 3.6 Regional Transportation & Union Station Continue to promote Union Station as the major regional transportation hub linking Amtrak, Metrolink, Metro Rail, and high-speed rail service.	**Consistent.** The Project is located within 0.25 miles of the Metro B/D Line Wilshire/Vermont Station which provides a direct subway connection to Union Station. The Project's development of residential units enhances the value of the connection to Union Station.
Policy 3.7 Regional Transit Connections Improve transit access and service to major regional destinations, job centers, and inter-modal facilities.	**Consistent.** The Project would improve access between transit and major regional destinations and employment centers by developing a mix of high-density residential uses and commercial uses located in an active commercial area of the Wilshire/Koreatown Community and within 0.25 miles of the Metro B/D Line Wilshire/Koreatown Station and Metro Rapid 754 and 720 bus stops.
Policy 3.8 Bicycle Parking Provide bicyclists with convenient, secure, and well-maintained bicycle parking facilities.	**Consistent.** The Project provides bicycle parking to encourage bicycling for residents, employees, and visitors to the Project Site.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Mobility Plan 2035: An Element of the General Plan* (Los Angeles Department of City Planning, January 2016).

TABLE 3 (CONT'D)
PROJECT CONSISTENCY WITH MOBILITY PLAN 2035

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Chapter 4 - Collaboration, Communication, & Informed Choices	
Policy 4.8 Transportation Demand Management Strategies Encourage greater utilization of Transportation Demand Management (TDM) strategies to reduce dependence on single-occupancy vehicles.	**Consistent.** The Project is located in proximity to transit and would provide TDM measures including bicycle parking per LAMC requirements and pedestrian network improvements. These measures would promote non-auto travel to improve personal fitness and reduce transportation-related impacts to the environment.
Policy 4.13 Parking and Land Use Management Balance on-street and off-street parking supply with other transportation and land use objectives.	**Consistent.** The Project would provide sufficient off-street parking to accommodate Project parking demand. Four on-street unmetered parking spaces would be removed along Shatto Place to accommodate the proposed curbside passenger loading zone. The proposed driveways would be located north of any available existing on-street parking and would not affect on-street parking.
Chapter 5 - Clean Environments & Healthy Communities	
Policy 5.1 Sustainable Transportation Encourage the development of a sustainable transportation system that promotes environmental and public health.	**Consistent.** As part of the Project, secured bicycle parking would be provided, which would promote active transportation modes such as biking and walking. Additionally, the Project is located within a 0.25-mile walking distance to the Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops, providing residents, employees, and visitors to the Project with public transportation alternatives.
Policy 5.2 Vehicle Miles Traveled (VMT) Support ways to reduce vehicle miles traveled (VMT) per capita.	**Consistent.** The Project is estimated to generate lower VMT per capita for residents and employees than the average for the area. Additionally, the Project incorporates several design features, which include TDM measures to reduce the number of single occupancy vehicle trips to the Project Site, including the following: • Include bike parking per LAMC, including short-term and long-term parking facilities • Pedestrian network improvements, within the Project site and connecting off-site

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Mobility Plan 2035: An Element of the General Plan* (Los Angeles Department of City Planning, January 2016).

TABLE 4
PROJECT CONSISTENCY WITH PLAN FOR A HEALTHY LOS ANGELES

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Chapter 1 - Los Angeles, a Leader in Health and Equity	
Policy 1.5 Plan for Health Improve Angelenos' health and well-being by incorporating a health perspective into land use, design, policy, and zoning decisions through existing tools, practices, and programs.	**Consistent.** The Project prioritizes safety and access for all individuals utilizing the site by complying with all ADA requirements and providing direct connections to pedestrian amenities at adjacent intersections. Further, the Project supports healthy lifestyles by locating housing and jobs near transit, providing bicycle parking, and enhancing the pedestrian environment with a pedestrian plaza and street trees.
Policy 1.6 Poverty and Health Reduce the debilitating impact that poverty has on individual, familial, and community health and well-being by: promoting cross-cutting efforts and partnerships to increase access to income; safe, healthy, and stable affordable housing options; and attainable opportunities for social mobility.	**Consistent.** The Project includes up to 42 affordable housing units.
Policy 1.7 Displacement and Health Reduce the harmful health impacts of displacement on individuals, families and communities by pursuing strategies to create opportunities for existing residents to benefit from local revitalization efforts by: creating local employment and economic opportunities for low-income residents and local small businesses; expanding and preserving existing housing opportunities available to low-income residents; preserving cultural and social resources; and creating and implementing tools to evaluate and mitigate the potential displacement caused by large-scale investment and development.	**Consistent.** In addition to affordable housing units, the Project provides employment and entrepreneurial opportunities through its provision of commercial office and local-serving restaurant space. The Project does not displace any existing housing.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan* (Los Angeles Department of City Planning, March 2015).

TABLE 4 (CONT'D)
PROJECT CONSISTENCY WITH PLAN FOR A HEALTHY LOS ANGELES

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Chapter 2 - A City Built for Health	
Policy 2.1 Access to Goods and Services Enhance opportunities for improved health and well-being for all Angelenos by increasing the availability of and access to affordable goods and services that promote health and healthy environments, with a priority on low-income neighborhoods.	**Consistent.** The Project would provide 24,435 sf of local-serving restaurant space on the ground level of the Project Site, easily accessed by foot from surrounding areas.
Chapter 5 - An Environment Where Life Thrives	
Policy 5.7 Land Use Planning for Public Health and GHG Emission Reduction Promote land use policies that reduce per capita greenhouse gas emissions, result in improved air quality and decreased air pollution, especially for children, seniors and others susceptible to respiratory diseases.	**Consistent.** The Project incorporates several TDM measures to reduce the number of single occupancy vehicle trips to the Project Site. The Project is estimated generate lower VMT per capita for residents and employees than the average for the area. VMT directly contributes to GHG emissions, so a reduced VMT per capita also reduces GHG per capita.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in *Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan* (Los Angeles Department of City Planning, March 2015).

TABLE 5
PROJECT CONSISTENCY WITH WILSHIRE COMMUNITY PLAN

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Objective 1-1 Provide for the preservation of existing quality housing, and for the development of new housing to meet the diverse economic and physical needs of the existing residents and expected new residents in the Wilshire Community Plan Area to the year 2010. **Policy 1-1.3:** Provide for adequate Multiple Family residential development. **Policy 1-1.4:** Provide for housing along mixed-use boulevards where appropriate.	**Consistent.** The Project proposes multi-family housing, co-living, and affordable housing to meet the diverse needs of the community and allows for expanding new residents into the area.
Objective 1-2 Reduce vehicular trips and congestion by developing new housing in close proximity to regional and community commercial centers, subway stations, and existing bus route stops. **Policy 1-2.1:** Encourage higher density residential uses near major public transportation centers.	**Consistent.** The Project proposes higher density residential within 0.25 miles of Metro B/D Line Wilshire/Vermont Station and Metro Rapid 754 and 720 bus stops.
Objective 1-4 Provide affordable housing and increased accessibility to more population segments, especially students, the handicapped, and senior citizens. **Policy 1-4.1:** Provide greater individual choice in type, quality, price, and location of housing. **Policy 1-4.2:** Ensure that new housing opportunities minimize displacement of residents. **Policy 1-4.3:** Encourage multiple family residential and mixed-use development in commercial zones.	**Consistent.** The Project does not displace any existing housing and includes up to 42 affordable housing units. The Project is located along 6th Street, a major commercial corridor, and much of the Project Site is zoned for commercial uses.
Objective 2-1 Preserve and strengthen viable commercial development and provide additional opportunities for new commercial development and services within existing commercial areas. **Policy 2-1.1:** New commercial uses should be located in existing established commercial areas or shopping centers. **Policy 2-1.2:** Protect existing and planned commercially zoned areas, especially in Regional Commercial Centers, from encroachment by stand alone residential development by adhering to the community plan land use designations. **Policy 2-1.3:** Enhance the viability of existing neighborhood stores and businesses which support the needs of local residents and are compatible with the neighborhood.	**Consistent.** The Project proposes commercial office and local-serving restaurant uses in an active commercial area of the Wilshire/Koreatown community.

TABLE 5 (CONT'D)
PROJECT CONSISTENCY WITH WILSHIRE COMMUNITY PLAN

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Objective 2-2 Promote distinctive commercial districts and pedestrian-oriented areas. **Policy 2-2.1:** Encourage pedestrian-oriented design in designated areas and in new development. **Policy 2-2.2:** Encourage large mixed use projects to incorporate facilities beneficial to the community such as libraries, child care facilities, community meeting rooms, senior centers, police sub-stations, and/or other appropriate human service facilities as part of the project. **Policy 2-2.3:** Encourage the incorporation of retail, restaurant, and other neighborhood serving uses in the first floor street frontage of structures, including mixed-use projects located in Neighborhood Districts.	**Consistent.** The Project is a large mixed-use development and proposes multi-family housing, commercial office uses, and local-serving restaurant uses. The orientation of the Project design and active ground floor facilities ensures that the Project actively engages with the street and its surrounding uses.
Objective 11-1 Promote an adequate system of Bikeways for commuter, school and recreational use. **Policy 11-1.4:** Support the provision of bicycle facilities in all new development.	**Consistent.** The Project provides infrastructure and services to encourage bicycling for residents, employees, and visitors to the Project Site. The Project will provide bicycle parking in compliance with the LAMC.
Objective 11-2 Promote pedestrian mobility, safety, amenities, and access between employment centers, residential areas, recreational areas, schools, and transit centers. **Policy 11-2.1:** Encourage the safe utilization of public utility easements and other public rights-of-way along streets wherever feasible for the use of pedestrians. **Policy 11-2.2:** Require sidewalks with new roadway construction and substantial reconstruction of existing roadways. **Policy 11-2.3:** Protect and improve existing pedestrian oriented street segments.	**Consistent.** The Project would enhance pedestrian access within and around the Project Site by providing a new landscaping and walkways, a public pedestrian plaza fronting Shatto Place, and a courtyard fronting 6th Street. The Project would also retain existing and plant new street trees along the Project frontages to provide adequate shade and enhance the pedestrian environment. The Project does not propose modifications to widen streets beyond their required Mobility Plan classifications. The Project Applicant will request a three-foot Waiver of Dedication along 6th Street to meet City requirements. Young Oak Kim Academy is located directly southwest of the Project Site, on the southwest corner of Shatto Place & 6th Street. The Project would not result in unsafe conditions for students. Furthermore, the Young Oak Kim Academy SRTS Plan identifies planned improvements to enhance pedestrian safety and connection.

TABLE 5 (CONT'D)
PROJECT CONSISTENCY WITH WILSHIRE COMMUNITY PLAN

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Objective 12-1 Pursue Transportation Demand Management Strategies that maximize vehicle occupancy, minimize average trip length, and reduce the number of vehicle trips. **Policy 12-1.1:** Encourage non-residential developments to provide employee incentives for using alternatives to the automobile (car pools, van pools, buses, shuttles, subways, bicycles, walking) and provide flexible work schedules. **Policy 12-1.2:** Encourage the use of Multiple-Occupancy Vehicle programs for shopping and other non-work activities to reduce midday, evening, and special event traffic. **Policy 12-1.3:** Require that proposals for major non-residential development projects include submission of a TDM Plan to the City. **Policy 12-1.4:** Promote the development of transportation facilities and services that encourage higher transit ridership, increased vehicle occupancy, and improved pedestrian and bicycle access.	**Consistent.** The Project is located in proximity to transit and would provide TDM measures including bicycle parking per LAMC requirements and pedestrian network improvements. These measures would promote non-auto travel to improve personal fitness and reduce transportation-related impacts to the environment.
Objective 14-1 Initiate and continue existing Residential Neighborhood Protection Plans to mitigate traffic and parking impacts throughout the Wilshire Community Plan Area. **Policy 14-1.1:** The City Planning Department and LADOT should continue to work closely with the Wilshire Community Plan Area residents to identify existing and anticipated “cut-through” traffic and spillover parking from adjacent commercial areas. Through neighborhood community meetings, traffic calming programs and strategies should be developed for effective Residential Neighborhood Protection Plans.	**Consistent.** The potential for cut-through traffic was analyzed in the non-CEQA analysis of this study. No cut-through traffic issues were identified from the completion of the Project.
Objective 15-1 Provide off-street parking in appropriate locations in accordance with Citywide standards and community needs. **Policy 15-1.1:** Minimize the number of ingress and egress points to and from all Boulevards II and Avenues in the Wilshire Community Plan Area. **Policy 15-1.2:** Develop off-street parking resources, including parking structures and underground parking in accordance with design standards. **Policy 15-1.3:** Manage the supply of on-street parking to provide convenient parking for customers of commercial land uses and to encourage employees to park in off-street lots or garages or use alternate modes of transportation.	**Consistent.** Primary access to the Project is provided along Shatto Place, a non-arterial street. The Project would provide sufficient off-street parking to accommodate Project parking demand. Some on-street metered parking adjacent to the Project Site require removal along Shatto Place to accommodate the new curb cuts and to improve the roadways to meet City standards. To the extent feasible, the Project would maintain existing on-street parking around Project frontage.

TABLE 5 (CONT'D)
PROJECT CONSISTENCY WITH WILSHIRE COMMUNITY PLAN

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Objective 16-1 To the extent feasible and consistent with the Mobility Plan 2035's and the Community Plans' policies promoting multi-modal transportation and safety, comply with Citywide performance standards for acceptable Levels of Service (LOS) and ensure that necessary Freeway and Street access and improvements are provided to accommodate additional traffic anticipated from Wilshire Community Plan land use changes and/or by new development. **Policy 16-1.1:** To the extent feasible and consistent with the Mobility Plan 2035's and the Community Plans' policies promoting multimodal transportation (e.g. walking, bicycling, driving and taking public transit) and safety, maintain a satisfactory Level of Service (LOS) above LOS "D" for Boulevards II s, especially those which serve Regional Commercial Centers and Community Commercial Centers; and above LOS "D" for Avenues and Collector Streets. **Policy 16-1.2:** Streets should be developed in accordance with standards and criteria contained in the Transportation Element of the General Plan and consistent with the City's Standard Street Dimensions.	**Consistent.** LOS operational evaluation was conducted for the Project and the minimum LOS D standard is maintained with or without the addition of Project traffic.
Design Policies for Individual Projects: A.1 Structures shall be oriented toward the main commercial street where a parcel is located and avoid pedestrian/vehicular conflicts by: a. Locate parking areas between commercial and residential uses, to provide a buffer. Parking must be separated from adjacent residential uses by a solid wall and/or landscaped setback. b. Minimize the number of driveways/curb cuts which provide access from Arterials. c. Maximize pedestrian oriented retail and commercial service uses along street grade level frontages along commercial boulevards. d. Provide front pedestrian entrances for businesses which front on main commercial streets, with building facades and uses designed to promote customer interest, such as outdoor restaurants, and inviting public way extensions. e. Prohibit driveway openings, or garage or parking lot entries in exterior frontage walls of buildings, or between frontage buildings, unless the Los Angeles Department of Transportation determines that driveways cannot be practically placed elsewhere. f. Encourage pedestrian-only walkway openings, or entries (require at least one ground floor pedestrian entry), in exterior frontage walls of buildings, or between frontage buildings to plazas or courtyards with outdoor dining, seating, water features, kiosks, paseos, open air vending, or craft display areas. g. Provide fully landscaped and maintained unused building setback areas, and strips between driveways and walkways which allow safe and inviting pedestrian access to the rear of properties.	**Consistent.** Primary vehicular access is provided along Shatto Place, a local street and all parking would be located underground. The Project provides a public pedestrian plaza fronting Shatto Place and a courtyard fronting 6th Street, and retains existing and plants new street trees along the Project frontages to provide adequate shade and enhance the pedestrian environment. Further, the orientation of the Project design and active ground floor facilities ensures that the Project actively engages with the street and its surrounding uses.

TABLE 5 (CONT'D)
PROJECT CONSISTENCY WITH WILSHIRE COMMUNITY PLAN

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Design Policies for Individual Projects: A.6 Maximize commercial uses on the ground floor by requiring 10% of commercial development to serve the needs of the residential portion of the building.	**Consistent.** The Project predominately orients the commercial space on the ground floors to capture at least 10% of residents as patrons for these uses (refer to Trip Generation table and assumptions)**.**
Design Policies for Individual Projects: B.1 Where feasible, Multiple Family Residential development of five or more units should be designed around a landscaped focal point or courtyard to serve as an amenity for residents. a. Provide a pedestrian entrance at the front of each project. b. Require useable open space for outdoor activities, especially for children.	**Consistent.** Separate pedestrian access to the Project Site would be provided via entrances along Shatto Place and 6th Street. The Project provides an open courtyard and a new public pedestrian plaza that contributes to useable open space.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in the *Wilshire Community Plan* (Los Angeles Department of City Planning, 2001).

TABLE 6
PROJECT CONSISTENCY WITH CITYWIDE DESIGN GUIDELINES

Objective, Policy, Program, or Plan [a]	**Analysis of Project Consistency**
Pedestrian-First Design	
Guideline 1: Promote a safe, comfortable, and accessible pedestrian experience for all Design projects to be safe and accessible and contribute to a better public right-of-way for people of all ages, genders, and abilities, especially the most vulnerable - children, seniors, and people with disabilities. **Guideline 2: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience** Design to avoid pedestrian and vehicular conflicts and to create an inviting and comfortable public right-of-way. A pleasant and welcoming public realm reinforces walkability and improves the quality of life for users. **Guideline 3: Design projects to actively engage with streets and public space and maintain human scale** New projects should be designed to contribute to a vibrant and attractive public realm that promotes a sense of civic pride. Better connections within the built environment contribute to a livable and accessible city and a healthier public realm.	**Consistent.** The Project design includes accessible sidewalks, pedestrian amenities, and vehicular access driveways in accordance with the City's design considerations. The Project design also includes pedestrian enhancements along the perimeter of the Project Site, a courtyard, and a public pedestrian plaza. In addition, adequate sidewalks along Shatto Place and 6th Street would be provided in accordance with the City's Living Streets design considerations. Thus, street trees and other landscaping elements would be incorporated to provide adequate shade and habitat to provide a more comfortable mobility environment for pedestrians. Further, the orientation of the Project design and active ground floor facilities ensures that the Project actively engages with the street and its surrounding uses.

Notes:

[a] Objectives, Policies, Programs, or Plans based on information provided in the Citywide Design Guidelines (Los Angeles Department of City Planning, 2019).

Impact Threshold	7.6	7.6
Significant Impact	**NO**	**NO**

Notes:

[a] Project Analysis based on the *City of Los Angeles VMT Calculator Version 1.3* (July 2020) output reports provided in Attachment D.

[b] "Urban" TBZs are characterized in *City of Los Angeles VMT Calculator Documentation* (LADOT and DCP, May 2020) as high-density neighborhoods characterized by multi-story buildings with a dense road network.

[c] The maximum allowable VMT reduction is based on the Project's designated TBZ.

[d] The Project includes several design features, such as bicycle parking and pedestrian network improvements, considered as TDM strategies to reduce the number of single occupancy vehicle trips. For the purposes of providing a conservative analysis, these design features were not taken into consideration in the VMT evaluation.

[e] Household VMT per Capita is based on the "home-based work production" trip types.

[f] Work VMT per Employee is based on the "home-based work attraction" trip types.

TABLE 8
INTERSECTION LEVEL OF SERVICE DEFINITIONS

Level of Service	Description	Delay [a] Signalized Intersections	Delay [a] Unsignalized Intersections
A	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.	≤ 10	≤ 10
B	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.	> 10 and ≤ 20	> 10 and ≤ 15
C	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.	> 20 and ≤ 35	> 15 and ≤ 25
D	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.	> 35 and ≤ 55	> 25 and ≤ 35
E	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.	> 55 and ≤ 80	> 35 and ≤ 50
F	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.	> 80	> 50

LADOT Assessment Letter

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

550 S. Shatto Pl
DOT Case No. CEN 18-46721

Date: October 18, 2018

To: Heather Bleemers, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION STUDY ASSESSMENT FOR THE PROPOSED MIXED-USE DEVELOPMENT LOCATED AT 550 SOUTH SHATTO PLACE**

The Department of Transportation (DOT) has reviewed the transportation impact study prepared by Gibson Transportation Consulting, Inc dated October 2018, for the proposed mixed-use development project at 550 South Shatto Place. In order to evaluate the effects of the project's traffic on the available transportation infrastructure, the significance of the project's traffic impacts is measured in terms of change to the volume-to-capacity (V/C) ratio between the "future no project" and the "future with project" scenarios. This change in the V/C ratio is compared to DOT's established threshold standards to assess the project-related traffic impacts. Based on DOT's current traffic impact criteria[1], the transportation study included the detailed analysis of 15 signalized intersections and determined that none of these study intersections would be significantly impacted by project-related traffic. The results of the traffic analysis, which accounted for other known development projects in evaluating potential cumulative impacts and adequately evaluated the project's traffic impacts on the surrounding community, are summarized in **Attachment 1**.

DISCUSSION AND FINDINGS

A. Project Description

The Project proposes to construct a 27-level mixed-use building over subterranean parking. The Project would be comprised of up to 256 apartment units, including 29 affordable housing units, approximately 2,507 square feet (sf) of office space and up to approximately 12,800 sf of restaurant space. The Project would provide approximately 329 vehicular parking spaces in an on-site parking structure, including one at-grade level and four below-grade levels. The Project would also provide approximately 158 bicycle parking spaces, including 141 long-term and 17 short-term spaces. Vehicular access would be provided via one full-access driveway on Shatto Place. The project is expected to be completed by 2021.

B. Trip Generation

The proposed project is expected to generate approximately 1136 net new daily trips, 23

[1] Per the DOT Traffic Study Policies and Procedures, a significant impact is identified as an increase in the Critical Movement Analysis (CMA) value, due to project-related traffic, of 0.01 or more when the final ("with project") Level of Service (LOS) is LOS E or F; an increase of 0.020 or more when the final LOS is LOS D; or an increase of 0.040 or more when the final LOS is LOS C.

net trips in the a.m. peak hour and 109 net new trips in the p.m. peak hour. These estimates were derived using trip generation rates from the Institute of Transportation Engineers (ITE) "Trip Generation Handbook, 10th Edition." A copy of the trip generation estimates table from the traffic study is attached and identified as **Attachment 2**.

C. Freeway Analysis

The traffic study included a freeway impact analysis that was prepared in accordance with the State-mandated Congestion Management Program (CMP) administered by the Los Angeles County Metropolitan Transportation Authority (MTA). According to this analysis, the project would not result in significant traffic impacts on any of the evaluated freeway mainline segments. To comply with the Freeway Analysis Agreement executed between Caltrans and DOT in December 2015, the study also included a screening analysis to determine if additional evaluation of freeway mainline and ramp segments was necessary beyond the CMP requirements. Exceeding one of the four screening criteria would require the applicant to work directly with Caltrans to prepare more detailed freeway analyses. However, the project did not meet or exceed any of the four thresholds defined in the agreement; therefore, no additional freeway analysis was required.

D. Construction Impacts

DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/what-we-do/plan-review to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related traffic be restricted to off-peak hours to the extent feasible.

PROJECT REQUIREMENTS

A. Highway Dedication and Street Widening Requirements

On January 20, 2016, the City Council adopted the Mobility Plan 2035 which represents the new Mobility Element of the General Plan. A key feature of the updated plan is to revise street standards in an effort to provide a more enhanced balance between traffic flow and other important street functions including transit routes and stops, pedestrian environments, bicycle routes, building design anued site access, etc. Per the new Mobility Element: **Shatto Place** has been designated as Local Street-Standard which would require an 18-foot half-width roadway within a 30-foot half-width right-of-way. **6th Street** has been designated as Avenue II (Secondary Highway) which would require a 28-foot half-width roadway within a 43-foot half-width right-of-way.The applicant should check with BOE's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

B. Parking Analysis

The Project would provide approximately 329 vehicular parking spaces in an on-site parking structure, including one at-grade level and four below-grade levels. The Project would also provide approximately 158 bicycle parking spaces, including 141 long-term and 17 short-

term spaces. Vehicular access would be provided via one full-access driveway on Shatto Place. The applicant should check with the Department of Building and Safety on the number of Code-required parking spaces needed for this project.

C. Site Access and Circulation Plan

The conceptual site plan is acceptable to DOT; however, the review of this study does not constitute approval of the driveway dimensions, access and circulation scheme. Those require separate review and approval and should be coordinated with DOT's Citywide Planning Coordination Section (201 N. Figueroa Street, 5th Floor, Station 3, @ 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT early in the design process for driveway width and internal circulation requirements so that such traffic flow considerations are designed and incorporated early into the building and parking layout plans. All driveways should be Case 2 driveways and 30 feet and 16 feet wide for two-way and one-way operations, respectively. All delivery truck loading and unloading should take place on site with no vehicles having to back into the project via any of the project driveways. A copy of the site plan from the traffic study is included as **Attachment 3**.

D. Development Review Fees

An ordinance adding Section 19.15 to the Los Angeles Municipal Code relative to application fees paid to DOT for permit issuance activities was adopted by the Los Angeles City Council in 2009. This ordinance identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Russell Hasan at (213) 972-8628.

Notes:
du = dwelling unit; sf = square feet.
[a] Trip generation rates are from *Trip Generation, 10th Edition* (Institute of Transportation Engineers, 2017) and are based on developments located in "General Urban/Suburban" area, unless otherwise noted.
[b] Trip generation rates for multi-family housing (high-rise) are based on developments located in "Dense Multi-Use Urban" area as detailed in *Trip Generation, 10th Edition*. These rates are not subjected to any transit/walk-in adjustment.
[c] Trip generation rates for general office are based on developments located in "Dense Multi-Use Urban" area as detailed in *Trip Generation, 10th Edition*. Daily trip rate is based on developments located in "General Urban/Suburban" area as no vehicle-rate is available for "Dense Multi-Use Urban" location. These rates are not subjected to any transit/walk-in adjustment.
[d] Internal capture adjustments account for person trips made between distinct land uses within a mixed-use development (e.g. residents and employees visiting the restaurant uses) without using an off-site road system.
[e] Per LADOT's *Transportation Impact Study Guidelines* (LADOT, 2016), the Project Site is located approximately 650 feet walking distance from a transit station (Metro Red/Purple Line Wilshire/Vermont Station), therefore a transit reduction is applied to account for transit usage and walking visitor arrivals from the surrounding neighborhoods and adjacent commercial developments.
[f] Per *Transportation Impact Study Guidelines*, a pass-by adjustment was applied to account for Project trips made as an intermediate stop on the way from an origin to a primary trip destination without route diversion.

Attachment C

Plan, Policy, and Program Consistency Worksheet

Plans, Policies and Programs Consistency Worksheet

The worksheet provides a structured approach to evaluate the threshold T-1 question below, that asks whether a project conflicts with a program, plan, ordinance or policy addressing the circulation system. The intention of the worksheet is to streamline the project review by highlighting the most relevant plans, policies and programs when assessing potential impacts to the City's circulation system.

> Threshold T-1: Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

This worksheet does not include an exhaustive list of City policies, and does not include community plans, specific plans, or any area-specific regulatory overlays. The Department of City Planning project planner will need to be consulted to determine if the project would obstruct the City from carrying out a policy or program in a community plan, specific plan, streetscape plan, or regulatory overlay that was adopted to support multimodal transportation options or public safety. LADOT staff should be consulted if a project would lead to a conflict with a mobility investment in the Public Right of Way (PROW) that is currently undergoing planning, design, or delivery. This worksheet must be completed for all projects that meet the Section I. Screening Criteria. For description of the relevant planning documents, **see Attachment D.1.**

For any response to the following questions that checks the box in bold text ((i.e. ☐ Yes or ☐ No), further analysis is needed to demonstrate that the project does not conflict with a plan, policy, or program.

I. SCREENING CRITERIA FOR POLICY ANALYSIS

If the answer is 'yes' to any of the following questions, further analysis will be required:

Does the project require a discretionary action that requires the decision maker to find that the project would substantially conform to the purpose, intent and provisions of the General Plan?

☑ Yes ☐ No

Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?

☐ Yes ☑ No

Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?

☑ Yes ☐ No

II. PLAN CONSISTENCY ANALYSIS

A. Mobility Plan 2035 PROW Classification Standards for Dedications and Improvements

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.1 *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*

Mobility Plan 2035 Policy 2.3 *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*

Mobility Plan 2035 Policy 3.2 – *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*

Mobility Plan 2035 Street Designations and Standard Roadway Dimensions

A.1 Does the project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone? ☑ Yes ☐ No

A.2 If **A.1 is yes**, is the project required to make additional dedications or improvements to the Public Right of Way as demonstrated by the street designation. ☑ Yes ☐ No ☐ N/A

A.3 If **A.2 is yes**, is the project making the dedications and improvements as necessary to meet the designated dimensions of the fronting street (Boulevard I, and II, or Avenue I, II, or III)?

☐ Yes ☑ No ☐ N/A

If the answer is to **A.1 or A.2 is NO, or to A.1, A.2 and A.3. is YES**, then the project does not conflict with the dedication and improvement requirements that are needed to comply with the Mobility Plan 2035 Street Designations and Standard Roadway Dimensions.

A.4 If the answer to **A.3. is NO**, is the project applicant asking to waive from the dedication standards?

☑ **Yes** ☐ **No** ☐ N/A

Lists any streets subject to dedications or voluntary dedications and include existing roadway and sidewalk widths, required roadway and sidewalk widths, and proposed roadway and sidewalk width or waivers.

See section CEQA THRESHOLD T-1: CONFLICTING WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES: LAMC Section 12.37 (Waivers of Dedications and Improvement)

Frontage 1 Existing PROW'/Curb' : Existing _____Required_____Proposed_____

Frontage 2 Existing PROW'/Curb' : Existing _____Required_____Proposed_____

Frontage 3 Existing PROW'/Curb' : Existing _____Required_____Proposed_____

Frontage 4 Existing PROW'/Curb' : Existing _____Required_____Proposed_____

If the answer to **A.4 is NO**, the project is inconsistent with Mobility Plan 2035 street designations and must file for a waiver of street dedication and improvement.

If the answer to **A.4 is YES**, additional analysis is necessary to determine if the dedication and/or improvements are necessary to meet the City's mobility needs for the next 20 years. The following factors may contribute to determine if the dedication or improvement is necessary:

Is the project site along any of the following networks identified in the City's Mobility Plan?

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[1]

Is the project within the service area of Metro Bike Share, or is there demonstrated demand for micro-mobility services?

If the project dedications and improvements asking to be waived are necessary to meet the City's mobility needs, the project may be found to conflict with a plan that is adopted to protect the environment.

B. Mobility Plan 2035 PROW Policy Alignment with Project-Initiated Changes

B.1 Project-Initiated Changes to the PROW Dimensions

These questions address potential conflict with:

> ***Mobility Plan 2035 Policy 2.1*** *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*
>
> ***Mobility Plan 2035 Policy 2.3*** *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*
>
> ***Mobility Plan 2035 Policy 3.2 –*** *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*
>
> ***Mobility Plan 2035 Policy 2.10*** *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*
>
> **Mobility Plan 2035 Street Designations and Standard Roadway Dimensions**

[1] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.1 Does the project physically modify the curb placement or turning radius and/or physically alter the sidewalk and parkways space that changes how people access a property?

Examples of physical changes to the public right-of-way include:

- widening the roadway,
- narrowing the sidewalk,
- adding space for vehicle turn outs or loading areas,
- removing bicycle lanes, bike share stations, or bicycle parking
- modifying existing bus stop, transit shelter, or other street furniture
- paving, narrowing, shifting or removing an existing parkway or tree well

☑ **Yes** ☐ No

B.2 Driveway Access

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.10 *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*

Mobility Plan 2035 Program PL.1. Driveway Access. *Require driveway access to buildings from non-arterial streets or alleys (where feasible) in order to minimize interference with pedestrian access and vehicular movement.*

Citywide Design Guidelines - Guideline 2*: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience.*

Site Planning Best Practices:

- *Prioritize pedestrian access first and automobile access second. Orient parking and driveways toward the rear or side of buildings and away from the public right-of-way. On corner lots, parking should be oriented as far from the corner as possible.*
- *Minimize both the number of driveway entrances and overall driveway widths.*
- *Do not locate drop-off/pick-up areas between principal building entrances and the adjoining sidewalks.*
- *Orient vehicular access as far from street intersections as possible.*
- *Place drive-thru elements away from intersections and avoid placing them so that they create a barrier between the sidewalk and building entrance(s).*
- *Ensure that loading areas do not interfere with on-site pedestrian and vehicular circulation by separating loading areas and larger commercial vehicles from areas that are used for public parking and public entrances.*

B.2 Does the project add new driveways along a street designated as an Avenue or a Boulevard that conflict with LADOT's Driveway Design Guidelines (See Sec. 321 in the Manual of Policies and Procedures) by any of the following:

- locating new driveways for residential properties on an Avenue or Boulevard, and access is otherwise possible using an alley or a collector/local street, or
- locating new driveways for industrial or commercial properties on an Avenue or Boulevard and access is possible along a collector/local street, or

- the total number of new driveways exceeds 1 driveway per every 200 feet[2] along on the Avenue or Boulevard frontage, or
- locating new driveways on an Avenue or Boulevard within 150 feet from the intersecting street, or
- locating new driveways on a collector or local street within 75 feet from the intersecting street, or
- locating new driveways near mid-block crosswalks, requiring relocation of the mid-block crosswalk

☐ **Yes** ☑ No

If the answer to **B.1 and B.2 are both NO**, then the project would not conflict with a plan or policies that govern the PROW as a result of the project-initiated changes to the PROW.

Impact Analysis

If the answer to either **B.1 or B.2 are YES**, City plans and policies should be reviewed in light of the proposed physical changes to determine if the City would be obstructed from carrying out the plans and policies. The analysis should pay special consideration to substantial changes to the Public Right of Way that may either degrade existing facilities for people walking and bicycling (e.g., removing a bicycle lane), or preclude the City from completing complete street infrastructure as identified in the Mobility Plan 2035, especially if the physical changes are along streets that are on the High Injury Network (HIN). The analysis should also consider if the project is in a Transit Oriented Community (TOC) area, and would degrade or inhibit trips made by biking, walking and/ or transit ridership. The streets that need special consideration are those that are included on the following networks identified in the Mobility Plan 2035, or the HIN:

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network
- High Injury Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[3]

Once the project is reviewed relevant to plans and policies, and existing facilities that may be impacted by the project, the analysis will need to answer the following two questions in concluding if there is an impact due to plan inconsistency.

B.2.1 Would the physical changes in the public right of way or new driveways that conflict with LADOT's Driveway Design Guidelines degrade the experience of vulnerable roadway users such as modify, remove, or otherwise negatively impact existing bicycle, transit, and/or pedestrian infrastructure?

☐ **Yes** ☑ No ☐ N/A

[2] for a project frontage that exceeds 400 feet along an Avenue or Boulevard, the incremental additional driveway above 2 is more than 1 driveway for every 400 additional feet.

[3] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.2.2 Would the physical modifications or new driveways that conflict with LADOT's Driveway Design Guidelines preclude the City from advancing the safety of vulnerable roadway users?

☐ **Yes** ☑ No ☐ N/A

If either of the answers to either **B.2.1 or B.2.2 are YES**, the project may conflict with the Mobility Plan 2035, and therefore conflict with a plan that is adopted to protect the environment. If either of the answers to both **B.2.1. or B.2.2. are NO**, then the project would not be shown to conflict with plans or policies that govern the Public Right-of-Way.

C. Network Access

C. 1 Alley, Street and Stairway Access

These questions address potential conflict with:

Mobility Plan Policy 3.9 *Increased Network Access: Discourage the vacation of public rights-of-way.*

C.1.1 Does the project propose to vacate or otherwise restrict public access to a street, alley, or public stairway?

☐ Yes ☑ No

C.1.2 If the answer to C.1.1 is Yes, will the project provide or maintain public access to people walking and biking on the street, alley or stairway?

☐ Yes ☐ **No** ☑ N/A

C.2 New Cul-de-sacs

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.10 *Cul-de-sacs: Discourage the use of cul-de-sacs that do not provide access for active transportation options.*

C.2.1 Does the project create a cul-de-sac or is the project located adjacent to an existing cul-de-sac?

☐ Yes ☑ No

C.2.2 If yes, will the cul-de-sac maintain convenient and direct public access to people walking and biking to the adjoining street network?

☐ Yes ☐ **No** ☑ N/A

If the answers to either C.1.2 or C.2.2 are YES, then the project would not conflict with a plan or policies that ensures access for all modes of travel. If the answer to either **C.1.2 or C.2.2 are NO**, the project may conflict with a plan or policies that governs multimodal access to a property. Further analysis must assess to the degree that pedestrians and bicyclists have sufficient public access to the transportation network.

D. Parking Supply and Transportation Demand Management

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.8 *– Bicycle Parking, Provide bicyclists with convenient, secure and well maintained bicycle parking facilities.*

Mobility Plan 2035 Policy 4.8 – *Transportation Demand Management Strategies. Encourage greater utilization of Transportation Demand Management Strategies to reduce dependence on single-occupancy vehicles.*

Mobility Plan 2035 Policy 4.13 *– Parking and Land Use Management: Balance on-street and off-street parking supply with other transportation and land use objectives.*

D.1 Would the project propose a supply of onsite parking that exceeds the baseline amount[4] as required in the Los Angeles Municipal Code or a Specific plan, whichever requirement prevails?

☐ Yes ☑ No

D.2 If the answer to D.1. is YES, would the project propose to actively manage the demand of parking by independently pricing the supply to all users (e.g. parking cash-out), or for residential properties, unbundle the supply from the lease or sale of residential units?

☐ Yes ☐ **No** ☑ N/A

If the answer to **D.2. is NO** the project may conflict with parking management policies. Further analysis is needed to demonstrate how the supply of parking above city requirements will not result in additional (induced) drive-alone trips as compared to an alternative that provided no more parking than the baseline required by the LAMC or Specific Plan. If there is potential for the supply of parking to result in induced demand for drive-alone trips, the project should further explore transportation demand management (TDM) measures to further off-set the induced demands of driving and vehicle miles travelled (VMT) that may result from higher amounts of on-site parking. The TDM measures should specifically focus on strategies that encourage dynamic and context-sensitive pricing solutions and ensure the parking is efficiently allocated, such as providing real time information. Research has demonstrated that charging a user cost for parking or providing a 'cash-out' option in return for not using it is the most effective strategy to reduce the instances of drive-alone trips and increase non-auto mode share to further reduce VMT. To ensure the parking is efficiently managed and reduce the need to build parking for future uses, further strategies should include sharing parking with other properties and/or the general public.

D.3. Would the project provide the minimum on and off-site bicycle parking spaces as required by Section 12.21 A.16 of the LAMC?

☑ Yes ☐ **No**

[4] The baseline parking is defined here as the default parking requirements in section 12.21 A.4 of the Los Angeles Municipal Code or any applicable Specific Plan, whichever prevails, for each applicable use not taking into consideration other parking incentives to reduce the amount of required parking.

D.4. Does the Project include more than 25,000 square feet of gross floor area construction of new non-residential gross floor?

☑ Yes ☐ No

D.5 If the answer to D.4. is YES, does the project comply with the City's TDM Ordinance in Section 12.26 J of the LAMC?

☑ Yes ☐ **No** ☐ N/A

If the answer to **D.3. or D.5. is NO** the project conflicts with LAMC code requirements of bicycle parking and TDM measures. If the project includes uses that require bicycle parking (Section 12.21 A.16) or TDM (Section 12.26 J), and the project does not comply with those Sections of the LAMC, further analysis is required to ensure that the project supports the intent of the two LAMC sections. To meet the intent of bicycle parking requirements, the analysis should identify how the project commits to providing safe access to those traveling by bicycle and accommodates storing their bicycle in locations that demonstrates priority over vehicle access.

Similarly, to meet the intent of the TDM requirements of Section 12.26 J of the LAMC, the analysis should identify how the project commits to providing effective strategies in either physical facilities or programs that encourage non-drive alone trips to and from the project site and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks).

E. Consistency with Regional Plans

This section addresses potential inconsistencies with greenhouse gas (GHG) reduction targets forecasted in the Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) / Sustainable Communities Strategy (SCS).

E.1 Does the Project or Plan apply one the City's efficiency-based impact thresholds (i.e. VMT per capita, VMT per employee, or VMT per service population) as discussed in Section 2.2.3 of the TAG?

☑ Yes ☐ No

E.2 If the Answer to E.1 is YES, does the Project or Plan result in a significant VMT impact?

☐ Yes ☑ No ☐ N/A

E.3 If the Answer to E.1 is NO, does the Project result in a net increase in VMT?

☑ Yes ☐ No ☐ N/A

If the Answer to E.2 or E.3 is NO, then the Project or Plan is shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS.

E.4 If the Answer to E.2 or E.3 is YES, then further evaluation would be necessary to determine whether such a project or land use plan would be shown to be consistent with VMT and GHG reduction goals of the SCAG RTP/SCS. For the purpose of making a finding that a project is consistent with the GHG reduction targets forecasted in the SCAG RTP/SCS, the project analyst should consult Section 2.2.4 of the Transportation Assessment Guidelines (TAG). Section 2.2.4 provides the methodology for evaluating a land use project's cumulative impacts to VMT, and the appropriate reliance on SCAG's most recently adopted RTP/SCS in reaching that conclusion.

The analysis methods therein can further support findings that the project is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy for which the State Air Resources Board, pursuant to Section 65080(b)(2)(H) of the Government Code, has accepted a metropolitan planning organization's determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.

ATTACHMENT D.1: CITY PLAN, POLICIES AND GUIDELINES

The Transportation Element of the City's General Plan, Mobility Plan 2035, established the "Complete Streets Design Guide" as the City's document to guide the operations and design of streets and other public rights-of-way. It lays out a vision for designing safer, more vibrant streets that are accessible to people, no matter what their mode choice. As a living document, it is intended to be frequently updated as City departments identify and implement street standards and experiment with different configurations to promote complete streets. The guide is meant to be a toolkit that provides numerous examples of what is possible in the public right-of-way and that provides guidance on context-sensitive design.

The Plan for A Healthy Los Angeles (March 2015) includes policies directing several City departments to develop plans that promote active transportation and safety.

The City of Los Angeles Community Plans, which make up the Land Use Element of the City's General Plan, guide the physical development of neighborhoods by establishing the goals and policies for land use. The 35 Community Plans provide specific, neighborhood-level detail for land uses and the transportation network, relevant policies, and implementation strategies necessary to achieve General Plan and community-specific objectives.

The stated goal of Vision Zero is to eliminate traffic-related deaths in Los Angeles by 2025 through a number of strategies, including modifying the design of streets to increase the safety of vulnerable road users. Extensive crash data analysis is conducted on an ongoing basis to prioritize intersections and corridors for implementation of projects that will have the greatest effect on overall fatality reduction. The City designs and deploys Vision Zero Corridor Plans as part of the implementation of Vision Zero. If a project is proposed whose site lies on the High Injury Network (HIN), the applicant should consult with LADOT to inform the project's site plan and to determine appropriate improvements, whether by funding their implementation in full or by making a contribution toward their implementation.

The Citywide Design Guidelines (October 24, 2019) includes sections relevant to development projects where improvements are proposed within the public realm. Specifically, Guidelines one through three provide building design strategies that support the pedestrian experience. The Guidelines provide best practices in designing that apply in three spatial categories of site planning, building design and public right of way. The Guidelines should be followed to ensure that the project design supports pedestrian safety, access and comfort as they access to and from the building and the immediate public right of way.

The City's Transportation Demand Management (TDM) Ordinance (LA Municipal Code 12.26.J) requires certain projects to incorporate strategies that reduce drive-alone vehicle trips and improve access to destinations and services. The ordinance is revised and updated periodically and should be reviewed for application to specific projects as they are reviewed.

The City's LAMC Section 12.37 (Waivers of Dedication and Improvement) requires certain projects to dedicate and/or implement improvements within the public right-of-way to meet the street designation standards of the Mobility Plan 2035.

The Bureau of Engineering (BOE) Street Standard Dimensions S-470-1 provides the specific street widths and public right of way dimensions associated with the City's street standards.

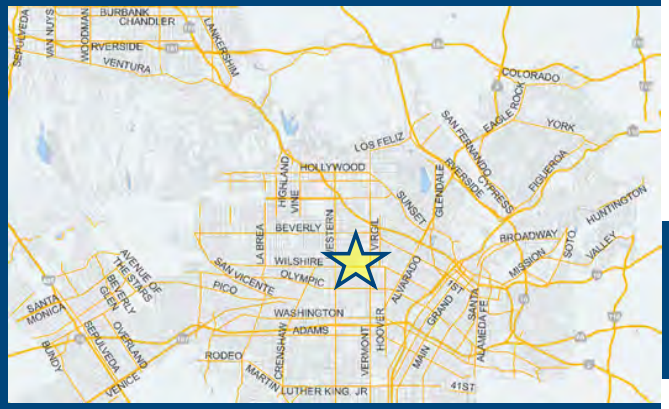
CITY OF LOS ANGELES VMT CALCULATOR Version 1.3



Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: 514-550 Shatto Place

Scenario:

Address: 550 S SHATTO PL, 90020

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
School | Private School (K-12)	170	Students
Office | General Office	15.179	ksf
School | Private School (K-12)	170	Students

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | High-Turnover Sit-Down Restaurant	24.435	ksf
Housing | Multi-Family	271	DU
Housing | Affordable Housing - Family	42	DU
Office | General Office	12.115	ksf
Retail | High-Turnover Sit-Down Restaurant	24.435	ksf
(custom) Housing | Co-Living | Retail/Non-Retail	Non-Retail	LU type
(custom) Housing | Co-Living | Residents	308	Person
(custom) Housing | Co-Living | Employees	0	Person
(custom) Housing | Co-Living | Daily	416	Trips
(custom) Housing | Co-Living | HBW-Attraction Sp	0	Percent
(custom) Housing | Co-Living | HBO-Attraction Sp	20	Percent
(custom) Housing | Co-Living | NHB-Attraction Spl	5	Percent
(custom) Housing | Co-Living | HBW-Production S	15	Percent
(custom) Housing | Co-Living | HBO-Production S	41	Percent

☑ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
342 Daily Vehicle Trips	2,788 Daily Vehicle Trips
2,024 Daily VMT	17,722 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	2,446 Net Daily Trips
The net increase in daily VMT ≤ 0	15,698 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	24.435 ksf

The proposed project is required to perform VMT analysis.

CITY OF LOS ANGELES VMT CALCULATOR

Report 4: MXD Methodology

Date: July 15, 2020
Project Name: 514-550 Shatto Place
Project Scenario:
Project Address: 550 S SHATTO PL, 90020

Version 1.3

MXD Methodology - Project Without TDM

	Unadjusted Trips	MXD Adjustment	MXD Trips	Average Trip Length	Unadjusted VMT	MXD VMT
Home Based Work Production	341	-30.8%	236	7.5	2,558	1,770
Home Based Other Production	942	-57.4%	401	5.2	4,898	2,085
Non-Home Based Other Production	907	-8.3%	832	7.8	7,075	6,490
Home-Based Work Attraction	212	-32.5%	143	6.6	1,399	944
Home-Based Other Attraction	1,521	-57.2%	651	4.8	7,301	3,125
Non-Home Based Other Attraction	576	-8.9%	525	6.3	3,629	3,308

MXD Methodology with TDM Measures

	Proposed Project			*Project with Mitigation Measures*		
	TDM Adjustment	Project Trips	Project VMT	TDM Adjustment	Mitigated Trips	Mitigated VMT
Home Based Work Production	0.0%	236	1,770	0.0%	236	1,770
Home Based Other Production	0.0%	401	2,085	0.0%	401	2,085
Non-Home Based Other Production	0.0%	832	6,490	0.0%	832	6,490

MXD VMT Methodology Per Capita & Per Employee

Total Population: 1,051
Total Employees: 146
APC: Central

	Proposed Project	*Project with Mitigation Measures*
Total Home Based Production VMT	**3,855**	**3,855**
Total Home Based Work Attraction VMT	**944**	**944**
Total Home Based VMT Per Capita	**3.7**	**3.7**
Total Work Based VMT Per Employee	**6.5**	**6.5**

VMT Calculator User Agreement

The Los Angeles Department of Transportation (LADOT), in partnership with the Department of City Planning and Fehr & Peers, has developed the City of Los Angeles Vehicle Miles Traveled (VMT) Calculator to estimate project-specific daily household VMT per capita and daily work VMT per employee for land use development projects. This application, the VMT Calculator, has been provided to You, the User, to assess vehicle miles traveled (VMT) outcomes of land use projects within the City of Los Angeles. The term "City" as used below shall refer to the City of Los Angeles. The terms "City" and "Fehr & Peers" as used below shall include their respective affiliates, subconsultants, employees, and representatives.

The City is pleased to be able to provide this information to the public. The City believes that the public is most effectively served when they are provided access to the technical tools that inform the public review process of private and public land use investments. However, in using the VMT Calculator, You agree to be bound by this VMT Calculator User Agreement (this Agreement).

VMT Calculator Application for the City of Los Angeles. The City's consultant calibrated the VMT Calculator's parameters in 2018 to estimate travel patterns of locations in the City, and validated those outcomes against empirical data. However, this calibration process is limited to locations within the City, and practitioners applying the VMT Calculator outside of the City boundaries should not apply these estimates without further calibration and validation of travel patterns to verify the VMT Calculator's accuracy in estimating VMT in such other locations.

Limited License to Use. This Agreement gives You a limited, non-transferrable, non-assignable, and non-exclusive license to use and execute a copy of the VMT Calculator on a computer system owned, leased or otherwise controlled by You in Your own facilities, as set out below, provided You do not use the VMT Calculator in an unauthorized manner, and that You do not republish, copy, distribute, reverse-engineer, modify, decompile, disassemble, transfer, or sell any part of the VMT Calculator, and provided that You know and follow the terms of this Agreement. Your failure to follow the terms of this Agreement shall automatically terminate this license and Your right to use the VMT Calculator.

Ownership. You understand and acknowledge that the City owns the VMT Calculator, and shall continue to own it through Your use of it, and that no transfer of ownership of any kind is intended in allowing You to use the VMT Calculator.

Warranty Disclaimer. In spite of the efforts of the City and Fehr & Peers, some information on the VMT Calculator may not be accurate. The VMT Calculator, OUTPUTS AND ASSOCIATED DATA ARE PROVIDED "as is" WITHOUT WARRANTY OF ANY KIND, whether expressed, implied, statutory, or otherwise including but not limited to, the implied warranties of merchantability and fitness for a particular purpose.

Limitation of Liability. It is understood that the VMT Calculator is provided without charge. Neither the City nor Fehr & Peers can be responsible or liable for any information derived from its use, or for any delays, inaccuracies, incompleteness, errors or omissions arising out of your use of the VMT Calculator or with respect to the material contained in the VMT Calculator. You understand and agree that Your sole remedy against the City or Fehr & Peers for loss or damage caused by any defect or failure of the

VMT Calculator, regardless of the form of action, whether in contract, tort, including negligence, strict liability or otherwise, shall be the repair or replacement of the VMT Calculator to the extent feasible as determined solely by the City. In no event shall the City or Fehr & Peers be responsible to You or anyone else for, or have liability for any special, indirect, incidental or consequential damages (including, without limitation, damages for loss of business profits or changes to businesses costs) or lost data or downtime, however caused, and on any theory of liability from the use of, or the inability to use, the VMT Calculator, whether the data, and/or formulas contained in the VMT Calculator are provided by the City or Fehr & Peers, or another third party, even if the City or Fehr & Peers have been advised of the possibility of such damages.

This Agreement and License shall be governed by the laws of the State of California without regard to their conflicts of law provisions, and shall be effective as of the date set forth below and, unless terminated in accordance with the above or extended by written amendment to this Agreement, shall terminate on the earlier of the date that You are not making use of the VMT Calculator or one year after the beginning of Your use of the VMT Calculator.

By using the VMT Calculator, You hereby waive and release all claims, responsibilities, liabilities, actions, damages, costs, and losses, known and unknown, against the City and Fehr & Peers for Your use of the VMT Calculator.

Before making decisions using the information provided in this application, contact City LADOT staff to confirm the validity of the data provided.

Print and sign below, and submit to LADOT along with the transportation assessment Memorandum of Understanding (MOU).

Hello Wanda,

This case was just assigned to Oliver Netburn. Thanks.

Courtney

Since there is no assigned planner, we need to know as soon as possible, so that we can let Creed know when they can review the file. Once they make their appointment we will have the file sent to us here at Records Management for them to review. Do you also have the tract case VTT-83213? Creed also needs to be added to the notification list.

I've copied Sarahi on this email in case additional coordination is needed. Thanks!

RE: Public Records Act Request and Request for Mailed Notice of Public Hearings and Actions - 550 South Shatto Place Los Angeles, CA 90020 (Case No. CPC-2020-6192-GPAJ-VZCJ-HD-CU-MCUP-SPR-HCA) (Case No. VTT-83213)

Dear Ms. Ortega,

CREED LA is writing to request a copy of any and all records related to the project at 550 South Shatto Place in Los Angeles. The project will be a 40-story tower with 367 apartment units and 36,400 sf of office and restaurant space. We are also writing to request copies of all communications and mailed notice of any and all hearings and/or actions related to the Project.

Our request for mailed notice of all hearings includes hearings, study sessions and community meetings related to the Project, certification of the MND (or recirculated DEIR), and approval of any Project entitlements. This request is made pursuant to Public Resources Code Sections 21092.2, 21080.4, 21083.9, 21092, 21108 and 21152 and Government Code Section 65092, which require local agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. Our request includes notice to any City actions, hearings or other proceedings regarding the Project, Project approvals and any actions taken, or additional documents released pursuant to the California Environmental Quality Act.

Our request for all records related to the Project is made pursuant to the California Public Records Act. (Government Code § 6250 et seq.) This request is also made pursuant to Article I, section 3(b) of the California Constitution, which provides a constitutional right of access to information concerning the conduct of government. Article I, section 3(b) provides that any statutory right to information shall be broadly

construed to provide the greatest access to government information and further requires that any statute that limits the right of access to information shall be narrowly construed.

We will pay for any direct costs of duplication associated with filling this request up to $200. However, please contact me at (877) 810-7473 with a cost estimate before copying/scanning the materials.

Pursuant to Government Code Section 6253.9, if the requested documents are in electronic format and are 10 MB or less (or can be easily broken into sections of 10 MB or less), please email them to me as attachments.

My contact information is:
