ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Subject: **Report of Methane Soil Gas Testing**
Proposed Mixed-Use Development
1917- 2005 ½ W 3rd St., Los Angeles, CA 90057
Tract: Extension of Nob Hill Tract, Block: None, Lot: 1, 2, 3, 4, 5, 6

Terra-Petra is pleased to submit this report to summarize the methane soil gas investigation services conducted at the subject site referenced above. The purpose of this investigation was to determine the methane soil gas mitigation requirements, in connection with the proposed development. The project site has been determined to be located within a City of Los Angeles Designated Methane Zone (See **Exhibit 1, Site Location Map**).

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the professional advice included in this report. This report has been prepared for Jonathan Rose Companies and any pertinent consultants to be used solely for the design of the proposed project. This report has not been prepared for use by other parties, and may not contain sufficient information for purposes of other parties or other uses.

PROJECT INFORMATION

Terra-Petra was contracted to perform a soil gas investigation at the approximately 30,432 sq. ft. project site under our LADBS Testing License #10224. The proposed development will consist of the construction of a new building having a basement and seven stories above grade. The building footprint is approximately 15,000 SF. The purpose of this investigation was to detect the presence of any elevated levels of methane gas in the in-situ soils underlying the foundation of the proposed structure.

SOIL GAS PROBE INSTALLATION & TESTING

The methane soil gas testing at the site was performed based on the procedures conforming to the Los Angeles Department of Building and Safety (LADBS) Information Bulletin Ref. No. LABC 7104.1, P/BC 2014-101. City guidelines require that one shallow-depth probe, at a depth of not less than 4 feet below ground surface, be installed for every 10,000 square feet of site area where the highest concentration of soil gas is most likely to be found. A minimum of two shallow-depth probes are required per project site. A total of seven (7) shallow probe locations were selected based on the total site testing area of 30,432 sq. ft. (See **Exhibit 2, Probe Locations Map**). Predicated on the soil gas testing results at the shallow probes, an additional four (4) deep gas probe locations were selected. City guidelines require one deep-depth gas probe for every 20,000 square feet or at a minimum of two gas probe sets regardless of area. Each deep-depth gas probe set shall consist of three probes, installed at approximate sampling depths of 5 feet, 10 feet and 20 feet below the elevation of the lowest building slab or footing.

On 5/18/20 shallow borings were drilled using a 3.25-inch diameter hand-auger. Shallow borings were drilled to a depth of 4 feet, with gas probes installed at approximately 4 ft bsg. On 5/19/20 deep-probe borings were drilled using a direct-push GeoProbe 5410. Terra-Petra was obligated by City guidelines to attempt to install the deepest soil gas probes a minimum of 20 ft below the lowest level of the proposed building.

As such, the deepest gas probes were set at 20 ft bsg in DP-1, DP-2, DP-3, and DP-4. Nested gas probes were also set at 5 ft and 10 ft in each of the deep borings. Gas probes were constructed as shown in **Exhibit 3, Probe Construction Diagrams**. Groundwater was not encountered in any of the soil borings during the course of the investigation and the historic groundwater level at the site is unknown.

The current investigation was performed in accordance with LADBS standards. Soil gas samples were collected during two rounds of monitoring on 5/19/20 and 5/20/20 from each of the probes. Each sampling period was separated by a minimum time period of 24 hours. As required by the LADBS, all probes were monitored for detectable combustible gas and soil gas pressures using a calibrated CES/Landtec GEM 5000 portable 4-gas detector with a lower limit for reporting methane levels of 1,000 ppmv (parts per million by volume). The results of the soil gas testing measurements are presented in the attached **Exhibit 4: Field Data Sheets.**

TEST RESULTS

Methane soil gas was measured at elevated levels for the Landtec GEM 5000 portable 4-gas detector in two deep gas probes during both days of monitoring. Due to the detection in our field instruments we were obligated to collect samples and submit them to a City of Los Angeles registered methane testing laboratory for 3rd party verification. The results of the soil gas testing measurements and 3rd party lab verification were recorded in an approved format as presented in the attached **Exhibit 5: Form 01 – Certificate of Compliance for Methane Test Data** and **Exhibit 6: Registered Methane Testing Laboratory results.**

CONCLUSIONS

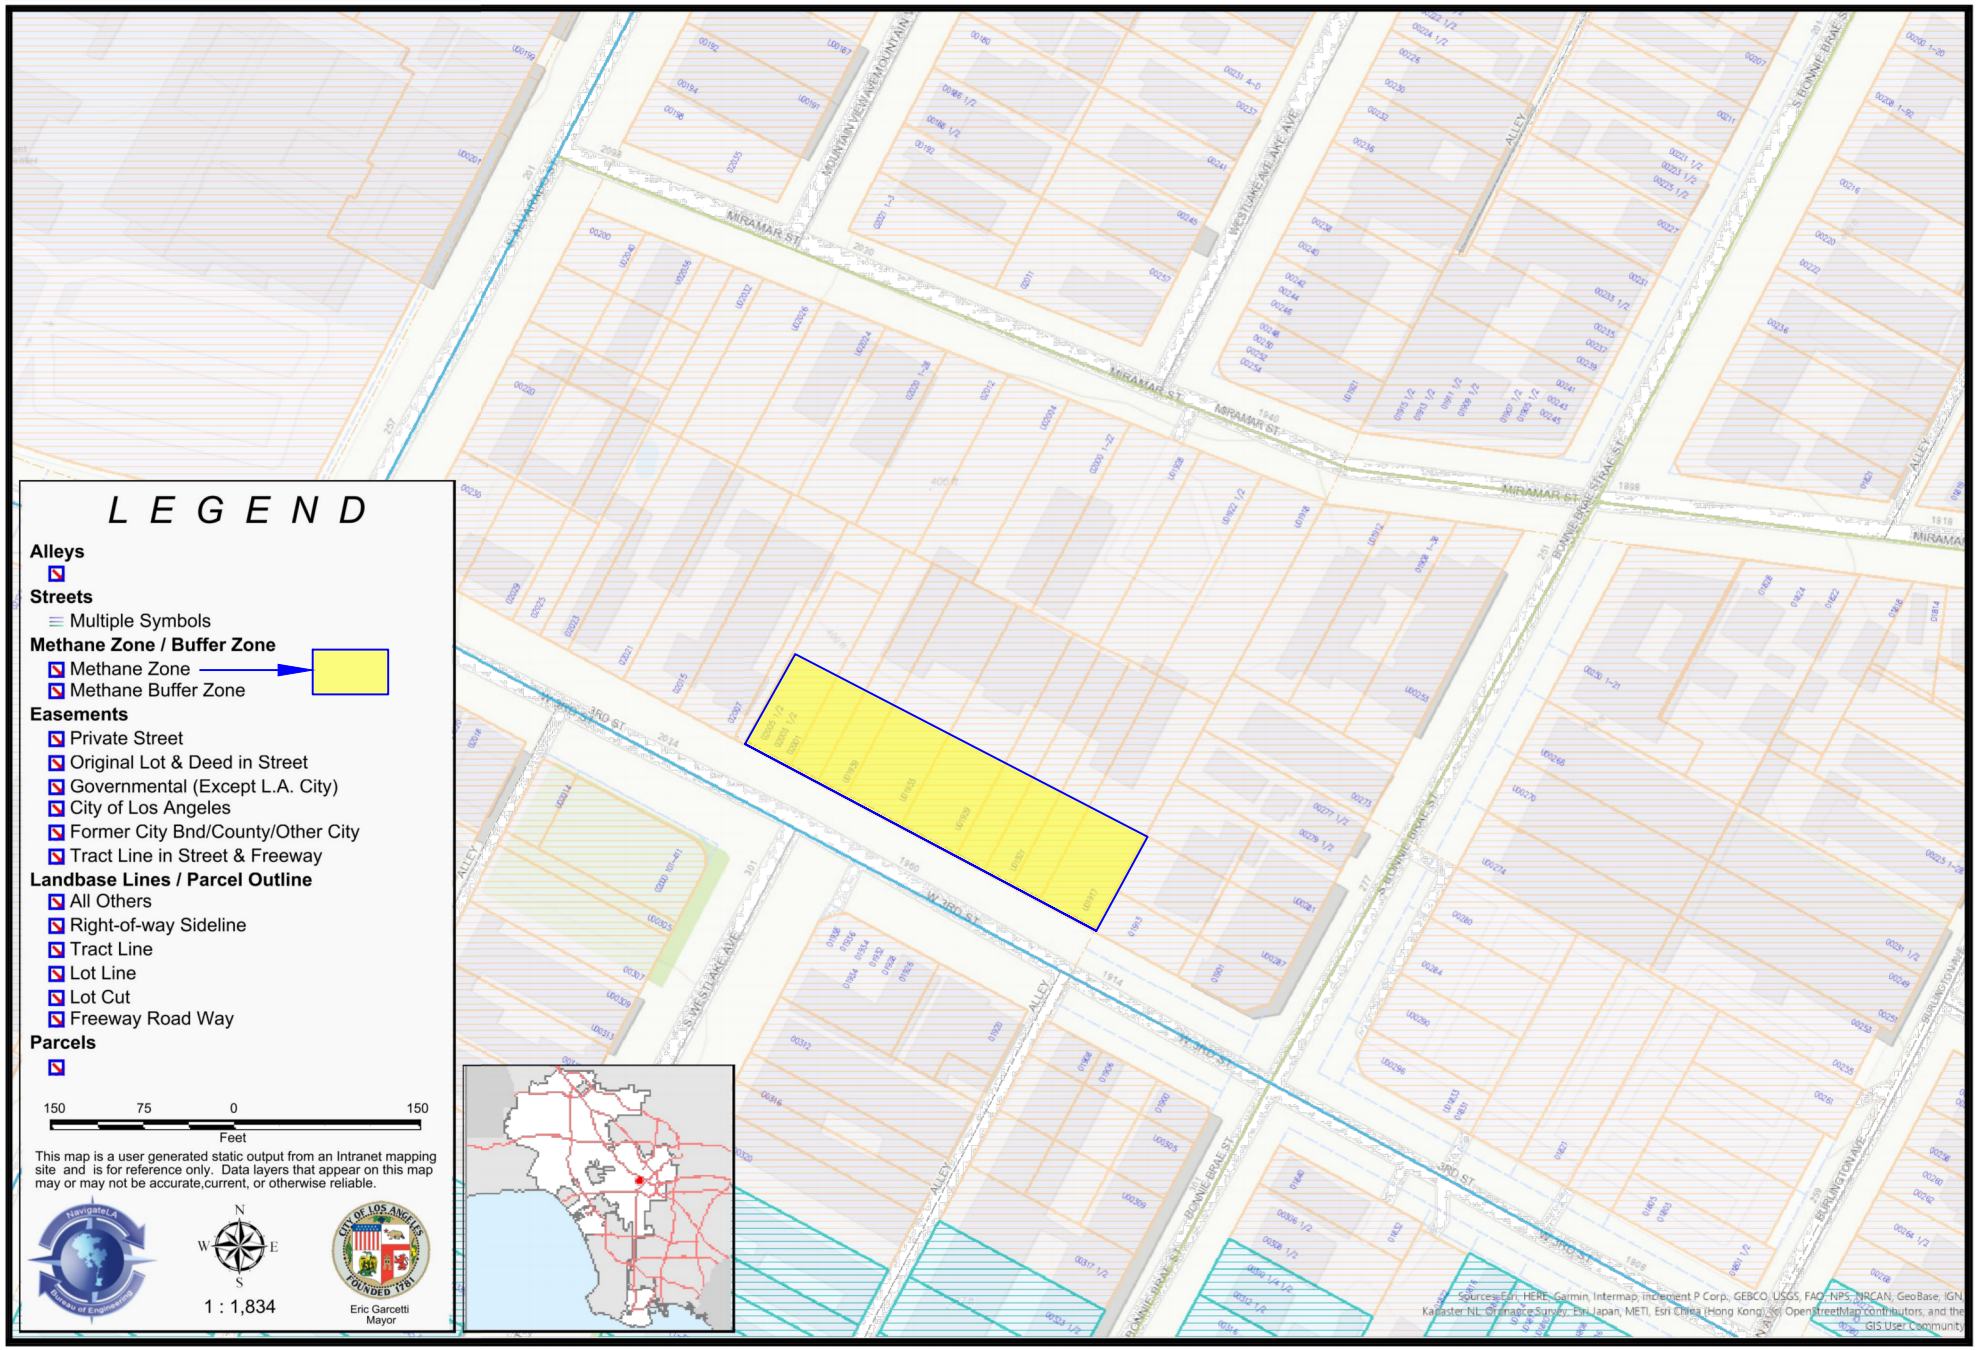
Methane gas is combustible with a lower explosive limit (LEL) of approximately 5%,v/v in air. In structures, regulatory agencies commonly consider methane concentrations above 25% of the LEL (1.25%,v/v) to be action levels above which gas concentrations must be mitigated. The City of Los Angeles Department of Building and Safety considers methane soil gas concentrations at 0.0%,v/v to be the action level at which soil gas concentrations must be mitigated for buildings to be constructed in a methane zone. For the methane buffer zone, this same action level applies only if the water column pressure is greater than 2 inches.

LEVEL V: Due to the elevated methane concentrations detected on the site (which were confirmed through laboratory analysis), we recommend that the methane mitigation measures for the proposed structure adhere to design requirements for a **Methane Zone – Level V, All Pressures** design. As such, we would typically recommend that the mitigation system incorporate all components listed for a Design Level V on the attached **Table 1A**, including: an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4" gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. In addition, a methane gas detection system incorporating gas sensors and alarms shall be required.

DWP: Please note based on the City of Los Angeles Department of Water and Power issued Guidelines for Underground Electrical Distribution Construction in Areas where Soil Gas is Present Requirements for Vaults and Maintenance Holes for this site may be as follows: Coating Structures with Zebron or Equal (Impermeable Gas Membrane), 60 mil HDPE Membrane Under Structures, Casting Restraining System, 4 Architectural Stand Pipes per Structure, Waterproofing grout around ground rods, blank duct plugs in all conduits in the structures. Other General Requirements include: Metal grating access cover for pad-mounts, Surface Mounted Pull Box for Small Services, Outside Pull Sections for Customer's Switchboard, Trench Dam for direct buried conduit every 300' and 5' concrete anchor next to any Underground Structure.

I am a registered California civil engineer with experience in methane gas mitigation systems. Should you have any questions regarding this report, please contact Justin Conaway at 213-458-0494. We appreciate the opportunity to assist you with your project.

Sincerely,



John Conaway, PE

Exhibit 5:
Form 01 Certificate of Compliance for Methane Test Data

FORM 1 - CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

Part 1: Certification Sheet

Site Address: 1917- 2005 W. 3rd St., Los Angeles, CA 90057

Legal Description: Tract: Extension of Nob Hill Tract Lot: 1,2,3,4,5, Block: none

Building Use: Mixed-Use Development

Architect's, Engineer's or Geologist's Stamp:

Name of Architect, Engineer, or Geologist:
John Conaway

Mailing Address:
700 S Flower St., Suite 2580
Los Angeles CA 90017

Telephone: **213.458.0494**

Name of Testing Laboratory:
Terra-Petra

City Test Lab License #: **10224**

Telephone: **213.458.0494**

I hereby certify that I have tested the above site for the purpose of methane mitigation and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2002-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the architect, engineer or geologist whose signature is affixed thereon.

Signed: John C Conaway date May 28, 2020

Required Data:

- Project is in the (Methane Zone) or (~~Methane Buffer Zone~~).
- Depth of ground water observed during testing: _____ feet below the Impervious Membrane.
- Depth of Historical High Ground Water Table Elevation*: **UKN** feet below the Impervious Membrane.
- Design Methane Concentration**: **>12,500** parts per million in volume (ppmv).
- Design Methane Pressure***: **All Pressure** inches of water column.
- Site Design Level: (~~Level I, Level II, Level III, Level IV~~, Level V) with **All Pressure** inches of water column.

De-watering:

- De-watering (~~ is ~~) (is not) required per Section 91.7104.3.7.
- Pump discharge rate _____ cubic feet per minute per reference geology or soil report: _____ dated _____.

Additional Investigation:

- Additional investigation (~~ was ~~) (was not) conducted.

Latest Grading on Site:

- Date of last grading on site (was) (~~was not~~) more than 30 days before Site Testing.
- See Attached explanation of the effect on soil gas survey results by grading operations.

Notes:

* Historical High Ground Water Table Elevation shall mean the highest recorded elevation of ground water table based on historical records and field investigations as determined by the engineer for the methane mitigation system.

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either Shallow Soil Gas Test or any Gas Probe Set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. For efficient handling of information internally and in the internet, conversion to this new format of code related and administrative information bulletins including MGD and RGA that were previously issued will allow flexibility and timely distribution of information to the public.

	Additional Vent Risers (See note 5)										X

NOTES FOR TABLES 1A AND 1B:

"x" = Indicates a required mitigation component

1. De-watering is not required when the maximum Historical High Ground Water Table Elevation, or projecterd post-construction ground water level, is more than 12 inches below the bottom of the Perforated Horizontal Pipes.
2. The Mechanical Extraction System shall be capabale of providing an equivalent of a complete change of air 20 minutes of the total volume of the Gravel Blanket.
3. The mechanical ventilation system shall be capable of providing an equivalent of one complete change of the lowest occupied space every 15 minutes.
4. Vent openings to comply with Item IV.B.4 on sheet 1 may be used in lieu of mechanical ventilation.
5. The total quantity of the installed Vent Risers shall be increased to twice the rate for the Passive System.

Comments
No additional comments.

Receipt
The samples were received on 5/20/2020 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 22.0º C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	True	

Exhibit 7:
Mitigation Strategy

Mitigation Strategy

Subterranean basement area and slab on grade areas shall be constructed with an active sub-slab vent system with an impervious methane/waterproofing membrane below the slab, beneath elevator pits and at all subterranean walls. 4" dia. perforated collection pipes will be installed within a 4" gravel blanket. The pipes require a 4" thickness surrounding the pipes. Four 3" dia. cast iron vent risers shall be routed through the building to the roof. Vent risers will be fitted with a mechanical extraction fan activated by a methane gas detection sensor in the vent riser.

A methane gas detection system incorporating gas sensors and alarms will be installed throughout the lowest level basement within any enclosed spaces including at elevator pits and stairwells. The methane gas detectors shall tie into the lowest mechanical ventilation system so as to activate upon elevated readings to provide 4 air changes per hour within any enclosed rooms or spaces. Electrical seal-offs are required on all dry utility lines. Trench dams are required along the exterior of the building at utility trenches where they feed into the building.

In accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal-offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.

EXECUTIVE SUMMARY

Ramboll US Corporation (Ramboll) has prepared this Preliminary Endangerment Assessment (PEA) on behalf of Sheppard Mullin Richter & Hampton LLP and its client, Miramar Development, LP, in connection with the property known as the "Miramar Development" located at 1917-2005 ½ West Third Street in Los Angeles, California (herein referred to as the "Site"). Miramar Development, LP plans to develop the Site with a new seven-story multi-family affordable housing building, which will have basement-level resident amenities. This PEA is being prepared for submittal to the City of Los Angeles to satisfy the requirements of Sustainable Communities and Climate Protection Act of 2008 (SB 375).

This PEA provides basic information for assessing if there has been a release of a hazardous substance that presents a risk to human health or the environment and is intended to be the first step in identifying whether release or threatened release of a hazardous material has occurred, estimating the potential risk to public health and the environment, evaluating whether immediate response is needed to reduce the risk, and evaluating if further action or investigation is needed. In order to achieve these objectives, Ramboll reviewed information and records for the Site (including but not limited to historical documents, agency records, an environmental database report, historical site assessments, a geotechnical report, a recent Limited Soil Sampling and Analysis report, and a methane soil gas investigation report), conducted a Site visit, and performed a telephone interview with personnel familiar with the Site.

Historically, the Site was used for residential purposes and occupied by five dwellings since at least 1906. The residential dwellings were demolished starting in 1958. By the mid-1970s, the Site was vacant land and it remained vacant until developed with the current improvements, as part of the Miramar Towers Apartments property located adjacent to the north of the Site, sometime between 1979 and 1980.

Based on the information reviewed for the Site, as described herein and including a review of information as listed above, the localized presence of total petroleum hydrocarbons (TPH) and certain metals (lead and arsenic) was identified in soil at the Site within the areas that will be excavated as part of the redevelopment of the Site. Ramboll compared the concentrations of metals and TPH in the soil samples from the prior investigation to agency screening levels in a residential land use scenario, in this case to Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) Note 3 DTSC-Modified Screening Levels (DTSC-SLs) or United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs). It should be noted that although Ramboll compared the dataset to residential land uses, this is an overly conservative comparison for the Site as under its current uses as landscaped and parking areas of the adjacent larger Miramar Towers Apartments property, potentially exposed populations are likely limited to intermittent visitors, if any, from the nearby apartment complex although such exposure would be limited. In such limited cases, the route of exposure would be expected to be dermal contact or ingestion. Given that there are plans for the Site to be redeveloped, this would be a short-term potential exposure scenario until such time as the construction activities begin in the near future.

Based on Ramboll's evaluation, the following conclusions and recommendations are made.

- The limited presence of TPH in soil within the redevelopment footprint is at concentrations below agency screening criteria for residential land use. No further work is necessary and this soil will be taken off-site for appropriate disposal in accordance with its profile as part of the redevelopment of the site.

- With the exception of one soil sample, B6-2.0, lead is present at concentrations below agency screening criteria for residential land use. At sample B6-2.0, the lead concentration exceeds the residential DTSC-SL. Given that there are plans for the Site to be redeveloped, this would be a short-term exposure scenario until such time as the construction activities begin in the near future.
- Given that sample B6-2.0 is located within the basement area of the proposed building footprint, the soil will be excavated as part of the redevelopment of the Site. As part of the process, the presence of lead will be removed during the excavation and, accordingly, there will not be an exposure pathway to future occupants of the Site. Further, given that the concentration of lead at soil sample B6-2.0 exceeds its Soluble Threshold Limit Concentration (STLC), soil around this sample would be characterized as a California hazardous waste for disposal purposes. Prior to earthwork activities, further shallow soil sampling is recommended in the vicinity of Boring B6, as part of a general soil management plan (SMP) for the Site. The purpose of the additional sampling is to delineate the lead-impacted soil that requires disposal as a California hazardous waste so that it will be properly characterized and disposed off-site during construction activities. Further, the information from the additional sampling effort will be incorporated into a SMP to outline a framework for the contractor to follow during excavation activities.

According to City of Los Angeles NavigateLA website,[1] the Site and surrounding area is located in a City of Los Angeles Methane Zone. In accordance with City of Los Angeles Ordinance Number 175790, all new buildings and paved areas located within the Methane Zone or along the Methane Buffer Zone are required to provide a methane mitigation system based on the appropriate site design level. Methane testing was conducted at the Site in 2020 and based on the findings of the testing, Terra-Petra recommended that the methane mitigation measures for the proposed building adhere to design requirements for a "Methane Zone – Level V, All Pressures" design (methane concentrations above 12,500 parts per million by volume [ppmv]), which will include an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4-inch gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. In addition, a methane gas detection system incorporating gas sensors and alarms will be required.

The methane report also states that in accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal-offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.

1. INTRODUCTION

Ramboll was retained by Sheppard Mullin Richter & Hampton LLP and its client, Miramar Development, LP, to perform a PEA of the Site known as the Miramar Development located at 1917-2005 ½ West Third Street in Los Angeles, California (see Figures 1 and 2).

Miramar Development, LP plans to develop the Site with a new seven-story multi-family affordable housing building, which will have basement-level resident amenities. This PEA is being prepared for submittal to the City of Los Angeles to satisfy the requirements of Sustainable Communities and Climate Protection Act of 2008 (SB 375).

1.1 Objective

According to the *Preliminary Endangerment Assessment Guidance Manual* ("PEA Guidance Manual") issued by California Department of Toxic Substances Control (DTSC) in January 1994 (Revised October 2015):

> "*The Preliminary Endangerment Assessment provides basic information for determining if there has been a release of a hazardous substance that presents a risk to human health or the environment. The PEA is a formal step in the DTSC cleanup program. The PEA is intended to be the initial investigation of a site or property(ies) and is the first step in identifying whether a release or threatened release of a hazardous waste/substance/material has occurred, estimating the potential risk to public health and the environment, evaluating whether immediate response is needed to reduce the risk, and determining if further action/investigation is needed."*

1.2 Scope of Work

To achieve the stated objective above, specifically, to evaluate if a release has or likely has occurred at the Site and if additional actions are necessary and appropriate to further evaluate the environmental condition of the Site, Ramboll performed the following scope of work:

- Reviewed information and records for the Site, including: (i) historical documents (aerial photographs, Sanborn Fire Insurance maps, city directories, topographic maps); (ii) agency records; (iii) an environmental database report (for the Site and surrounding properties); (iv) historical site assessments; (v) a Limited Soil Sampling and Analysis report, a methane soil gas sampling report, and a geotechnical investigation report; and (vi) a NEPASearch™ Map Report ("NEPASearch report") and related information pertaining to biological characterization of the Site (as provided by Miramar Development, LP).
- Conducted a site visit on June 9, 2010 to observe conditions at the Site. Ramboll also observed the adjoining properties from the Site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- Conducted a telephone interview with Pamela Roberson ("facility personnel"), Property Manager for Rose Community Management, on June 10, 2020 regarding general Site conditions and Site history.

1.3 Information Obtained from User

In preparing this PEA, Ramboll has relied on information provided by the client, including prior Phase I environmental site assessment (ESA) reports, subsurface investigation reports

(a Limited Soil Sampling and Analysis report, a methane sampling report, and a geotechnical report), historical documents, agency records, and information pertaining to biological characterization of the Site, as listed above and described in the ensuing sections of this document.

2. SITE DESCRIPTION

2.1 Site Setting

The approximately 0.69-acre Site comprises the southern portion of an approximately 2.73-acre parcel (portion of assessor parcel number [APN] 5154-020-030) occupied by Miramar Towers Apartments, located at 2000 Miramar Street, Los Angeles, California (the "Property" or the "larger property").

The Site consists of a limited surface parking area, landscaped areas, a concrete paved driveway, a sitting area with tables and chairs, concrete curbing, concrete sidewalks, concrete stairs connecting the various areas of the Site located at different elevations, two concrete storm drainage channels, and an enclosure for a pad-mounted transformer, associated with Miramar Towers Apartments.

The Site is bordered to the north by Miramar Towers Apartments; to the east by residential dwellings; to the south by West 3rd Street beyond which are residential apartments and a commercial retail building; and to the west by residential apartments (see Figure 2). The nearest residential areas are located immediately to the north, east, and west of the Site.

The Site elevation ranges from approximately 383 to 400 feet above mean sea level (msl), according to the site Alta Survey. The topography of the Site slopes steeply to the south; regional topography slopes to the south/southwest.

2.2 Site Description

As stated above, and observed during the Site visit, the Site is improved with a parking lot, landscaping, outdoor seating, hardscape, and a pad-mounted transformer, all associated with the Miramar Towers Apartments. No buildings are located on the Site.

Vehicular and pedestrian access to the Site is provided via West 3rd Street located to the south of the Site. The Site is accessed from a concrete-paved driveway located on the southeastern portion of the Site that leads to a small concrete-paved parking lot near the north-central portion of the Site. Concrete sidewalks and concrete stairs (connecting the sidewalks to the Miramar Towers Apartment building to the north) are located along the southern and central portions of the Site. A pad-mounted transformer and associated electrical vault are located within a chain-link fenced enclosure, which is located in the southwestern portion of the parking lot area (central portion of the Site). Landscaped areas occupy a majority of the remainder of the Site and include grass lawns, trees, low lying shrubs, and flowering plants.

A storm water drainage system located at the Site includes concrete storm drainage channels and storm drains located within landscaped and parking lot areas. Facility personnel were not aware where the drains discharged but speculated they likely drain to the municipal storm drain system.

No obvious visual indications of environmental concern were noted during the Site visit.

2.3 Regional Geology

The Site is located within the Lower Californian physiographic province, which consists of coastal mountain ranges underlain by severely folded, faulted, commonly metamorphosed marine and continental sediments. The Los Angeles area occupies part of a structural valley and coastal plain lying south of the Santa Monica Mountains and the San Rafael and Puente

Hills. According to the *Soil Survey of the Los Angeles County Area* (United States Department of Agriculture, 1916), the dominant natural soil type in the vicinity of the Site is classified as Diablo-Altamont Association, with 2 to 9 percent slopes. This soil type consists of deep, well-drained soils comprised of dark gray clay and dark grayish-brown clay. The Diablo soil horizon extends to a depth of approximately 52 inches below ground surface (bgs) and the Altamont soil horizon extends to a depth of approximately 36 inches bgs.

2.4 Regional Hydrogeology

The Los Angeles-Orange County coastal plain aquifer system is contained in a coastal plain basin that extends over an area of approximately 860 square miles. The Los Angeles-Orange County coastal plain basin is bounded on the north and east by the Santa Monica Mountains and the Puente Hills, on the south by the San Joaquin Hills, and on the west by the Pacific Ocean. The mountains are underlain by consolidated rocks of igneous, metamorphic, and marine-sedimentary origin. These consolidated rocks surround and underlie thick unconsolidated alluvial deposits. The major drainages in the basin are the Los Angeles, the San Gabriel, and the Santa Ana Rivers. Marine sediments deposited during periodic encroachment of the Pacific Ocean and alluvium derived from weathering and erosion of the rocks in the surrounding mountains filled the basin with a sequence of deposits as thick as 30,000 feet in some areas. The coastal plain aquifer system is made up of as many as 11 locally named aquifers. Each consists of a distinct layer of water-yielding sand and gravel usually separated from other sand and gravel beds by clay and silt confining units. In many places, however, either the water-yielding sediments are in direct hydraulic contact or the intervening confining units contain sufficient sand and gravel to allow water to pass between adjacent aquifers.

2.5 Local Geology and Hydrogeology

The Site is located within the Los Angeles Forebay Area of the Central Basin. Recent alluvium in the area includes parts of the Semiperched aquifer and Bellflower aquiclude, and western arm of the Gaspur aquifer. The sand- and gravel-containing Semiperched aquifer, where present, contains little or no water. The Bellflower aquiclude consists of clay and sandy clay and ranges in thickness from 0 to 90 feet. The Gaspur aquifer, which consists primarily of sand and gravel, underlies the Bellflower aquiclude and ranges in thickness from 10 feet to more than 80 feet.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow in the Site vicinity is anticipated to flow to the west/southwest. Although no site-specific information was available for review, based on information obtained from the California State Water Resources Control Board GeoTracker database for a property located approximately 200 feet to the southwest of the Site, groundwater at that property was encountered in 2013 at depths ranging from approximately 8.27 to 26.54 feet and was calculated to flow to the southwest.

No natural surface water bodies were identified on or adjacent to the Site. The nearest downgradient surface water bodies are MacArthur Park Lake, located approximately ½ mile to the southwest of the Site and Ballona Creek, located approximately five miles southwest of the Site.

3. BACKGROUND

3.1 Site History and Historical Chemical Use

The Site was used for residential purposes and occupied by five dwellings since at least 1906. The residential dwellings were demolished starting in 1958. By the mid-1970s, the Site was vacant land and it remained vacant until developed with the current improvements, as part of the Miramar Towers Apartments, sometime between 1979 and 1980. The Site is owned by Miramar Tower, a California limited Partnership.

No specific information was available regarding historical chemical use at the Site; however, based on the former use of the Site for residential purposes and the current use of the Site for parking, and the lack of agency records and other documentation indicating evidence of spills and/or releases, it is unlikely that there was significant chemical use at the Site. Such chemical usage likely was limited to household janitorial and cleaning supplies and potentially retail-sized containers of other miscellaneous household use chemicals, such as paint, automotive fluids, and/or yard maintenance chemicals.

3.2 Current Site Use

The eastern portion of the Site currently serves as surface parking areas for the adjacent Miramar Towers Building, while the western portion of the Site is vacant land landscaped with grass, trees, shrubs, and flowers. During the site visit, Ramboll observed five storage (shipping) containers reportedly containing building and construction materials (e.g., doors, windows, glasses) and two roll-off bins containing what appeared to be waste construction debris. Facility personnel indicated that the waste construction debris was being generated during the remodeling of the Miramar Towers Apartments building. Ramboll did not observe visual evidence of releases or spills in the vicinities of any of the storage or waste construction debris containers.

3.3 Historical and Current Use of Surrounding Properties

The properties in the vicinity of the Site have primarily been used for residential purposes (north and east) since the early 1900s and for commercial purposes (south and west) since the early 1920s. Ramboll did not observe obvious indications of environmental concern on the historical sources reviewed.

3.4 Records Review

Ramboll reviewed readily available local agency records for information relating to the Site, as provided in the previous Phase I ESA reports unless otherwise noted. An overview of the findings of this review is presented in Table 1.

Table 1: Local and Agency Information for the Site

Agency Contacted	Information Obtained
City of Los Angeles Building and Safety Department (Building Department)	Building Department records are available for the larger property, which includes the Site, included a 1980 Certificate of Occupancy issued to Realtech, Inc. for an eight-story apartment building, a building application for an apartment building dated 1979, and a permit application to demolish hotel buildings dated 1974 (all of which were located on the adjacent parcel to the north of the Site).
Los Angeles City Fire Department (Fire Department) – UST Division	According to prior 2016 and 2019 Phase I ESA reports, the Fire Department – UST Division did not have any information pertaining to the larger property, which includes the Site.
City of Los Angeles Fire Department-Hazardous Materials Management Division (Fire Department – HMMD)	According to prior 2016 and 2019 Phase I ESA reports, the Fire Department – HMMD did not have any information pertaining to the larger property, which includes the Site.
South Coast Air Quality Management District – Facility Information Detail (FIND database)	The larger property (including the Site) is not listed on the FIND database.
California Geologic Energy Management Division (CalGEM)	No oil or gas wells are located on the Site; however, three plugged and abandoned oil and gas wells are located on the northern portion of the larger property (APN 5154-020-030). Two of the oil and gas wells, located approximately 230 feet to the north/northeast and 250 feet to the northeast of the Site respectively, are listed as being leased and operated by Union Consolidated Crude Oil Co., while the other oil and gas well, located approximately 250 feet to the northeast of the Site, is listed as being leased and operated by Off & Campbell.

Table 1: Local and Agency Information for the Site

Agency Contacted	Information Obtained
Los Angeles County Solid Waste Information Management System (SWIMS)	According to information provided on SWIMS, the Site is located within the City of Los Angeles and therefore subject to the City's methane code. According to City of Los Angeles NavigateLA website,[2] the site and surrounding area is located in a City of Los Angeles Methane Zone. In accordance with the City of Los Angeles Ordinance Number 175790, all new buildings and paved areas located within the Methane Zone or along the Methane Buffer Zone are required to provide a methane mitigation system based on the appropriate site design level. Methane testing in accordance with LADBS standards was performed at the Site in May 2020 and is discussed in the ensuing sections of this document. Based on the results of that testing, the consultant performing the methane evaluation recommended that the methane mitigation measures for the proposed building adhere to design requirements for a "Methane Zone – Level V, All Pressures" design including an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4-inch gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. In addition, a methane gas detection system incorporating gas sensors and alarms will be required. The methane report also states that in accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal-offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.
Geotracker and EnviroStor databases	The larger property, which includes the Site, is not listed on the Geotracker or EnviroStor databases.

3.5 Previous Phase I Environmental Site Assessments

Phase I ESAs were prepared for a larger property including the Site in 2016 and 2019 and for the Site in 2020 and subsurface investigations were performed at the Site in 2020; copies of the prior Phase I ESAs and subsurface investigations are included in Appendix B and are summarized below. No other reports were provided for Ramboll's review.

3.5.1 *DRAFT Phase I Environmental Site Assessment, Miramar Towers, 2000 Miramar Street, Los Angeles, California*, prepared by EBI Consulting (EBI), dated March 15, 2016 (the "2016 Phase I ESA report")

The 2016 Phase I ESA was performed for a larger approximately 2.77-acre property that included the parcel to the adjacent north of the Site and the Site. The larger property is occupied by Miramar Towers, a senior-occupied 8-story apartment building. At the time of EBI's site visit in February 2016, no buildings were present on the Site.

Historically, the larger property, including the Site, was developed for residential use from at least 1894 until 1907 and for hotel and residential use from 1907 until 1974. Between 1975 and 1979, the larger property (and Site) was undeveloped land on the south side and

[2] https://navigatela.lacity.org/navigatela/

occupied by residences on the north side. The Miramar Towers Apartments were constructed in 1979-1980 and the Site has remained vacant since then.

The larger property (and Site) was not listed in the Environmental Data Resources, Inc. (EDR) database report reviewed as part of the 2016 Phase I ESA. EBI did not identify any offsite properties of significant environmental concern to the Site.

EBI did not identify any recognized environmental conditions (RECs)[3] for the larger property or the Site.

3.5.2 *Phase I Environmental Assessment, Miramar Towers, 2000 Miramar Street, Los Angeles, California*, prepared by Surveys Inc. (Surveys) dated July 18, 2019 (the "2019 Phase I ESA report")

The 2019 Phase I ESA was performed for a larger approximately 2.77-acre[4] property that included the parcel to the adjacent north of the Site, and the Site. The larger property was occupied by the Miramar Towers, a senior-occupied 8-story apartment building. At the time of Surveys' site visits in April and November 2018 and July 2019,[5] no buildings were present on the Site.

Historically, the larger property, including the Site, was developed for residential use by the early 1900s. By the 1920s, the larger property was developed with multiple hotel buildings comprising the Barker Hotel, as well as apartments and residences. By the late 1970s, the larger property (including the Site) was vacant. The Miramar Towers Apartments were constructed in 1979-1980.

The larger property was listed in the EDR database report on the Facility and Manifest (HAZNET) database as generating unspecified sludge waste in 2000. The generator is listed as 4 City Residential Management, 2000 Miramar Street. The process generating the waste is not provided. However, listing on this database alone is not indicative of a contamination concern to the larger property or the Site. Surveys did not identify any offsite properties with the potential to impact the Site.

Surveys reviewed the 2016 Phase I ESA report as part of the 2020 Phase I ESA report.

Surveys did not identify any RECs for the larger property or the Site.

3.5.3 *Phase I Environmental Site Assessment, Miramar Development South Lot, 1917- 2005 ½ W. 3rd Street, Los Angeles, California*, prepared by Surveys Inc., dated June 2, 2020 (the "2020 Phase I ESA report")

At the time of Surveys' site visit in May 2020, no buildings were present on the Site, which is approximately 0.69 acre in size. Site improvements included landscaping; concrete-paved sidewalks, driveways, and parking lot; concrete-lined storm drainage channels; an enclosure for a transformer; and, an electrical vault.

---

[3] ASTM International Standard Practice for ESAs: Phase I Environmental Site Assessment Process E1527-13 (the "2013 ASTM standard") defines a recognized environmental condition as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment."

[4] According to the 2019 Phase I ESA, the larger property is identified as being 2.737-acres in size.

[5] It is noted that this report appears originally appears to have been prepared in April 2018, with an update performed in November 2018, and a second complete Phase I ESA completed in July 2019.

Historically, the Site was developed with five residences by the early 1900s. According to the 2020 Phase I ESA report, the Site appeared to be associated with the adjacent property to the north (former Barker Motel, now Miramar Towers Apartments) by the 1920s; however, that association was not clearly stated. The residences were removed between the late 1950s and the early 1970s and the Site was vacant until the current Site improvements were constructed contemporaneously with the adjacent associated Miramar Towers Apartments in 1979-1980.

The Site was not listed in the EDR database report on any of the databases searched. Surveys did not identify any offsite properties with the potential to impact the Site.

Surveys reviewed the 2016 Phase I ESA, the 2018 Phase I ESA/Phase I ESA update reports, and the 2019 Phase I ESA report as part of the 2020 Phase I ESA report.

Surveys did not identify any RECs for the Site although it appears that Surveys was completing its report concurrently with the geotechnical report and soil sampling report that are further described below and the findings from those reports were not incorporated into its Phase I ESA.

3.5.4 *Report of Methane Soil Gas Investigation, Proposed Residential Development, 2000 Third Street, 1917 – 2005 ½ W. 3rd Street, Los Angeles, California*, prepared by Terra-Petra, dated July 13, 2020 (the "methane sampling report")

In May 2020, Terra-Petra performed a methane soil gas investigation at the Site to evaluate methane soil gas mitigation requirements in association with the proposed development of the Site, due to the Site's location within a City of Los Angeles Designated Methane Zone. Specifically, the purpose of conducting the methane sampling was to assess the presence of elevated concentrations of methane in soils underlying the foundation of the proposed structure. Based on City of Los Angeles requirements, as specified in the Los Angeles Department of Building and Safety (LADBS) Information Bulletin Ref. No. LABC 7104.1, P/BC 2014-101, seven shallow soil gas probes were installed at the Site to depths of approximately 4 feet bgs and, predicated on the sampling results of the seven shallow soil gas probes, an additional four deep soil gas probe "sets" were selected. The deep soil gas probe sets comprised three multi-depth soil gas probes installed at depths of 5, 10, and 20 feet below the elevation of the lowest level of the proposed building. Groundwater was not encountered during installation of the soil gas probes.

Two rounds of soil gas sampling were conducted, one each on May 19, 2020 and on May 20, 2020, during which each gas probe was monitored for detectable combustible gas and soil vapor pressures using a calibrated CES/Landtec GEM 5000 portable 4-gas detector with a lower reporting limit of 1,000 parts per million by volume (ppmv) for methane. Methane was not measured above the instrument reporting limit in any of the shallow soil gas probes. However, methane was measured at elevated concentrations (concentrations above the instrument reporting limit, or %, v/v) in two deep gas probes, DP-2 and DP-3, during both days of monitoring, ranging in concentrations from 0.1 to 5.0%, v/v in DP-2 (equivalent to 1,000 to 50,000 ppmv) and 0.4 to 93.3%, v/v in DP-4 (equivalent to 4,000 to 933,000 ppmv). As such, two confirmation samples (one from each of the two deep gas probes) were submitted to an analytical laboratory for verification. The laboratory results confirmed the presence of methane in the samples, DP-2 at 20 feet and DP-4 at 10 feet, at concentrations of 6,300 ppmv (0.63%, v/v) and 270,000 ppmv (27.0%, v/v), respectively.

Based on these findings, Terra-Petra recommended that the methane mitigation measures for the proposed building adhere to design requirements for a "Methane Zone – Level V, All Pressures" design (methane concentrations greater than 12,500 ppmv), to include an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4-inch gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. In addition, a methane gas detection system incorporating gas sensors and alarms will be required.

The methane report also states that in accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal-offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.

3.5.5 *Limited Soil Sampling and Analysis, Proposed Multi-Family Residential Development, 1917 ½ - 2005 ½ West 3rd Street, Los Angeles, California, Tract: Extension of the Nob Hill Tract, Lots: 1-6; Parcels 2-5*, prepared by Geocon West, Inc. (Geocon), dated July 7, 2020

In May 2020, Geocon advanced four hand-augered soil borings at the Site during a geotechnical investigation (described in Section 3.5.6 below) to "*aid in developing a preliminary waste profile for export soil*" (the proposed structure will be partially constructed into an existing slope). Two soil samples were collected from each of the four soil borings at depths of 2 and 10 feet bgs; samples were analyzed for Title 22 metals, total petroleum hydrocarbons (TPH)(full-range), and volatile organic compounds (VOCs), in accordance with United States Environmental Protection Agency (USEPA) Methods 6010B/7000, 8015B, and 8260B, respectively.

Metals and TPH were detected in some of the soil samples analyzed (further described below). VOCs were not detected in any of the soil samples analyzed at concentrations exceeding the respective laboratory reporting limits (RLs).

For metals, Geocon compared the results to hazardous waste characterization thresholds (Total Threshold Limit Concentrations [TTLCs] and Soluble Threshold Limit Concentrations [STLCs]); none of the sample results exceeded the associated TTLC concentration. One sample (B6-2.0) contained with lead at a concentration of 16 milligrams per liter (mg/L), which is greater than the STLC for lead of 5.0 mg/L, indicating that soil in the vicinity of B6-2.0 (in a spatial area not currently defined) would classify as California hazardous waste (but not a Resource Conservation Recovery Act [RCRA] hazardous waste) if removed and disposed. Geocon indicated that "*classification of wastes based solely on the concentrations of TPH have not yet been promulgated*."

Further discussion of TPH and metals concentrations is included in Section 6. Geocon concluded that the area of lead-impacted soil around Boring B6 is not defined and recommended that a soil management plan (SMP) be prepared prior to the start of grading.

3.5.6 *Geotechnical Investigation, Proposed Multi-family Residential Development, 1917 ½ - 2005 ½ West 3rd Street, Los Angeles, California, Tract: Extension of the Nob Hill Tract, Lots: 1-6; Parcels: 2-5*, prepared by Geocon, dated July 7, 2020

Geocon performed a geotechnical investigation of the Site in May 2020 to "*evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction*," and during which seven exploratory soil borings were drilled and sampled for geotechnical analysis. Boring logs indicate the Site is underlain by artificial fill (to a maximum depth of approximately 6.5 feet), colluvium (ranging in thickness from approximately 1 to 5 feet), and Miocene-age sedimentary bedrock of the Puente Formation (present from approximately 1 to 7 feet below the existing ground surface). Fill soils were described as comprising sandy clay, sandy silt, and silty sand containing bedrock fragments and construction debris. Colluvium soils were described as sandy silt and clay with trace amounts of bedrock fragments and bedrock was described as sandstone and siltstone with localized diatomaceous-rich beds. Groundwater was not encountered during geotechnical drilling activities.

4. APPARENT PROBLEM

Based on the information reviewed for the Site, as described above and including a review of historical documents (aerial photographs, Sanborn Fire Insurance maps, city directories, topographic maps), agency records, an environmental database report, historical site assessments, subsurface investigation reports (a Limited Soil Sampling and Analysis report, a methane soil gas sampling report, and a geotechnical investigation report), performance of a site visit, and completion of an interview with personnel familiar with the Site, the localized presence of TPH and certain metals (lead and arsenic) was identified in soil at the Site within the areas that will be excavated as part of the redevelopment of the Site.

The TPH and metals concentrations in soil are discussed further in the following sections.

5. ENVIRONMENTAL SETTING

5.1 Conceptual Site Model

Exposure pathways are the means by which a population comes into contact with environmental contamination and includes a source of chemicals, a release and transport mechanism from the source to a population, and a route(s) of exposure (i.e., inhalation, ingestion, dermal contact). TPH and metals were reported in soil samples collected from soil borings at the Site.

- Under current uses of the Site as landscaped and parking areas of the adjacent larger Miramar Towers Apartments property, potentially exposed populations could include visitors from the nearby apartment complex although such potential exposure would be expected to be limited. In such limited cases, the route of exposure would be expected to be dermal contact or ingestion. Given that there are plans for the Site to be redeveloped, this would be a short-term potential exposure scenario until such time as the construction activities begin in the near future and the soil is removed.
- During construction of the new residential building on the Site, soil will be excavated and construction workers may be exposed to soil via dermal contact. This process will be handled via a soil management plan during the construction process.
- Under future uses, the Site will be redeveloped with a residential building with a basement and slab covering the entire Site. As part of the construction process, chemicals will be removed during the excavation such that either (a) there will not be an exposure pathway to future occupants of the Site or (b) chemicals remaining in place will meet agency criteria for future residential uses of the Site.

6. HUMAN HEALTH SCREENING EVALUATION

Ramboll compared the concentrations of metals and TPH in the soil samples from the prior investigation to agency screening levels in a residential land use scenario, in this case to DTSC Human and Ecological Risk Office (HERO) Note 3 DTSC-Modified Screening Levels (DTSC-SLs) or USEPA Regional Screening Levels[6] (RSLs).

- TPH (C8-C40) was detected above laboratory RLs in four of the eight soil samples at concentrations ranging from 45 to 720 milligrams per kilogram (mg/kg). These concentrations are below the residential USEPA RSL of 2,500 mg/kg.
- Other than arsenic and lead, which are discussed below, other metals concentrations were below the DTSC-SLs for residential use scenario.
- Arsenic was detected in all eight samples at concentrations ranging from 1.1 mg/kg to 9.4 mg/kg. Although these concentrations exceed the associated residential DTSC-SL for arsenic of 0.11 mg/kg, they are below the background concentration of arsenic typical for California soils. An evaluation of arsenic soil data from school sites in Southern California found background arsenic concentrations ranging from 0.15 to 20 mg/kg, with an upper-bound background arsenic concentration of 12 mg/kg[7]. Instead of the DTSC/SL, arsenic concentrations in soil samples collected at the Site were conservatively screened against 12 mg/kg, which is an acceptable approach by California regulatory agencies.
- Lead was detected in all eight samples at concentrations ranging from 4.1 mg/kg to 250 mg/kg. Lead was detected at concentrations below the residential DTSC-SL in all soil samples except for the 2-foot soil sample collected from Boring B6 (B6-2.0). In this soil sample, which is also discussed in Section 3.5.5, the lead concentration was 250 mg/kg, which exceeds the residential DTSC-SL for lead of 80 mg/kg. In the 10-foot sample collected from Boring B6 (B6-10.0), lead was detected at a concentration of 6.8 mg/kg, a concentration below the DTSC-SL.

The presence of lead in sample B6-2.0 may be attributable to fill material at the Site, as the boring logs from this investigation describe fill at this location to be present from the surface to 2 feet bgs. Boring B6 is located within the basement area of the proposed building footprint and as such will be excavated as part of the development of the Site.

[6] In HERO Note 3, USEPA RSLs are provided for completeness when there is no DTSC-SL for a combination of receptor and endpoint.

[7] Chernoff G, Bosan W, Oudiz D. 2008. Determination of a Southern California Regional Background Arsenic Concentration in Soil

7. ECOLOGICAL SCREENING EVALUATION

In order to perform an ecological screening evaluation of the Site, Ramboll ordered and reviewed an EDR NEPASearch report (Appendix C) for the Site and reviewed other information regarding the proposed Site development provided by Miramar Development, LP. The NEPASearch report contained information pertaining to natural areas, historic sites, flood plains, wetlands, and federal communications commission (FCC) antenna/tower sites and federal aviation administration (FAA) markings and obstructions. Key information reviewed is summarized below. No issues of ecological concern were identified for the Site.

7.1 Site Characterization

The Site is located in a fully developed area. The Site historically was occupied by residences and is currently occupied by a parking lot; landscaped areas; concrete-paved driveways, curbing, sidewalks, and stairs; two concrete storm drainage channels; an enclosure for a pad-mounted transformer; and an enclosure for a diesel fuel-fired emergency generator.

7.2 Biological Characterization (Natural Areas)

According to the NEPASearch report, one plant (Davidson's saltscale) and three animals (American badger, burrowing owl, and southwestern willow flycatcher), are listed as California endangered species, and are listed within 1/8 mile of the Site but not on the Site. Davidson's saltscale, the American badger, and the burrowing owl are listed with both federal and state listing status as "none," while the southwestern willow flycatcher is listed with both federal and state listing status as "endangered."

According to information provided by Miramar Development, LP (as contained in the Sustainable Communities Project Exemption [SCPE] prepared by Environmental Science Associates), the Site currently contains 28 non-protected trees that will be replaced with 35 trees as part of the proposed building construction. However, the trees that are to be removed or pruned have the potential to support nesting birds that are protected under the Migratory Bird Treaty Act (MBTA), which prohibits take of all birds and their active nests, as well as the regulations of the California Fish and Game Code. The removal or pruning of trees will occur in accordance with the MBTA and state and local requirements. Thus, the planned development of the Site would not harm any species protected by the Federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of Division 2 of the Fish and Game Code), or the California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code).

7.3 Historic Property Listings

One property is listed on the National Register of Historic Places database within 1/8 mile of the Site but not on the Site. Filipe De Neve, a building located at 2820 W. Sixth Avenue, Los Angeles, California, is listed in the National Register with no other information provided. According to additional information provide by Miramar Development, LP (*Draft Historic Resources Technical Report*, prepared by Historic Resources Group, dated June 2020), a review of the National Register of Historic Places (NRHP) and California Register of Historical Resources (CRHR) databases and City of Los Angeles designation criteria, indicated that the Site is ineligible for listing on the NRHP and CRHR databases or for local designation as a Los Angeles Historic-Cultural Monument. In the immediate vicinity of the Site, one building (1913

West 3rd Street) and one commercial sign located near the Site previously were identified as eligible for historic listing.

7.4 Flood Plain and Wetlands Maps

The Site is not located in a Special Flood Hazard Area. The Site is not listed on federal National Wetlands Inventory (NWI) or California designated wetlands maps.

7.5 FCC/FAA Listings

A license application was submitted for a FCC antennae at 310 South Alvarado Street, Los Angeles, California, located approximately 360 feet to the west/southwest of the Site with no other information provided.

7.6 Pathway Assessment

Because no environmental contamination was identified at the Site, or is suspected to be present at the Site, no biological resources have been or will be exposed to environmental contamination.

7.7 Qualitative Summary

Based on the historical and current use of the Site and the lack of known or suspected contamination at the Site, there is no significant impact to biological resources at the Site.

8. COMMUNITY PROFILE/PUBLIC COMMENT

8.1 Community Profile

The following provides an initial description of the community of Los Angeles.

The Site is located in the City of Los Angeles, Los Angeles County, California. According to the 2010 United States Census Bureau (U.S. Census), the population is 3,792,621. The U.S. Census estimated the population to be 3,979,576 in 2019. Los Angeles is roughly 469 square miles in size with approximately 8,092.3 people per square mile. The racial and ethnic makeup as of April 2010 was 28.7% White (non-Hispanic or Latino), 48.5% Hispanic or Latino, 11.3% Asian (alone), 0.1% Pacific Islanders, 9.6% African American, 0.7% Native Americans, 23.8% Other, and 4.6% from two or more races. The age and gender demographics of the population are as follows: 874,525 people (23.1%) under 18; 434,478 people (11.5%) from 18 to 24; 1,209,367 people (31.9%) from 25 to 44; 877,555 people (23.1%) from 45 to 64; and 396,696 people (10.5%) who were 65 or older. The median age was 34.1 years. For every 100 females, there were 99.2 males. For every 100 females age 18 and over, there were 97.6 males.

According to the U.S. Census, there were 1,413,995 housing units—up from 1,298,350 during 2005–2009—at an average density of 2,812.8 households per square mile, of which 503,863 (38.2%) were owner-occupied, and 814,305 (61.8%) were occupied by renters. The homeowner vacancy rate was 2.1%; the rental vacancy rate was 6.1%. 1,535,444 people (40.5% of the population) lived in owner-occupied housing units and 2,172,576 people (57.3%) lived in rental housing units.

According to the 2010 U.S. Census, Los Angeles had a median household income of $49,497, with 22.0% of the population living below the federal poverty line.

8.2 Public Comment

Based on the information reviewed as part of this PEA, no community concerns are known or suspected related to chemical impacts at the Site. According to Miramar Development, LP, there are future plans to hold participation events for residents in the adjacent building Miramar Tower, as well as to perform communications with adjacent property owners, and meet with the Los Angeles City Council.

9. CONCLUSIONS AND RECOMMENDATIONS

9.1 Data Gaps

ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard") defines a data gap as "*a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information*." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. Although Ramboll relied on information provided by others in its assessment of Site conditions, Ramboll did not identify any significant data gaps in its review of the Site.

9.2 Summary and Conclusions

Based on the information reviewed for the Site, as described herein and including a review of historical documents, agency records, an environmental database report, historical site assessments, subsurface investigation reports, performance of a site visit, and completion of an interview with personnel familiar with the Site, the localized presence of TPH and certain metals (lead and arsenic) was identified in soil at the Site within the areas that will be excavated as part of the redevelopment of the Site. It should be noted that although Ramboll compared the dataset to residential land uses, this is an overly conservative comparison for the Site as under its current uses as landscaped and parking areas of the adjacent larger Miramar Towers Apartments property, potentially exposed populations are likely limited to intermittent visitors, if any, from the nearby apartment complex although such exposure would be limited. In such limited cases, the route of exposure would be expected to be dermal contact or ingestion. Given that there are plans for the Site to be redeveloped, this would be a short-term potential exposure scenario until such time as the construction activities begin in the near future. Based on Ramboll's evaluation, the following conclusions are made:

- The limited presence of TPH in soil within the redevelopment footprint is at concentrations below agency screening criteria for residential land use. No further work is necessary and this soil will be taken off-site for appropriate disposal in accordance with its profile as part of the redevelopment of the site.
- With the exception of one soil sample, B6-2.0, lead is present at concentrations below agency screening criteria for residential land use. At sample B6-2.0, the lead concentration exceeds the residential DTSC-SL. Given that there are plans for the Site to be redeveloped, this would be a short-term exposure scenario until such time as the construction activities begin in the near future.
- Given that sample B6-2.0 is located within the basement area of the proposed building footprint, the soil will be excavated as part of the redevelopment of the Site. As part of the process, the presence of lead will be removed during the excavation and, accordingly, there will not be an exposure pathway to future occupants of the Site. Further, given that the concentration of lead at soil sample B6-2.0 exceeds its STLC, soil around this sample would be characterized as a California hazardous waste for disposal purposes, per recommendations listed below.

In addition, the Site is located within a designated Methane Zone, and as such and based on recent methane sampling conducted at the Site, all new buildings and paved areas located within the Methane Zone are required to provide a methane mitigation system based on the appropriate site design level, which for the Site will be Methane Zone – Level V, All Pressures design criteria. Mitigation measures will include an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4-inch gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. A methane gas detection system incorporating gas sensors and alarms will also be required. The methane report also states that in accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal-offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.

9.3 Recommendations

In addition to implementation of the methane mitigation requirements, Ramboll recommends the following in relation to the lead-impacted soil found at the Site:

- Prior to earthwork activities, further shallow soil sampling is recommended in the vicinity of Boring B6, as part of a general SMP for the Site. The purpose of the additional sampling is to delineate the lead-impacted soil that requires disposal as a California hazardous waste so that it will be properly characterized and disposed off-site during construction activities. Further, the information from the additional sampling effort should be incorporated into a SMP to outline a framework for the contractor to follow during excavation activities.

Mr. Michael Daly
Jonathan Rose Companies
551 Fifth Avenue, 23rd floor
New York, NY 10176

Subject: **Phase I Environmental Site Assessment**
Miramar Towers
2000 Miramar Street, Los Angeles, California
EBI Project No. 1716000093

Dear Mr. Daly:

Attached please find our *Phase I Environmental Site Assessment* (the report) for the above-mentioned asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you. This report has been completed in general conformance with the ASTM Standard E 1527-13, as well as the requirements of the United States Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Chapter 9.

The purpose of this report is to acquire environmental information, observe the general condition and maintenance status of the Subject Property, to suggest remediation and/or maintenance practices considered customary for the Subject Property to continue in its current operation, compared to properties of similar age and condition, and to identify recognized environmental conditions in connection with the Subject Property described in this report.

Reliance on the report and the information contained herein shall mean (i) the report may be relied upon by a lender to be selected by *Jonathan Rose Companies*, in determining whether to make a loan evidenced by a note secured by the Subject Property ("the Mortgage Loan"); (ii) the report may be relied upon by any purchaser in determining whether to purchase the Mortgage Loan (but not the Subject Property) from that lender, or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan, and any rating agency rating securities representing an interest in the Mortgage Loan or backed or secured by the Mortgage Loan; (iii) the report may be referred to in and included, in whole or in part, with materials offering for sale the Mortgage Loan or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan; (iv) the report speaks only as of its date in the absence of a specific written update of the report signed and delivered by EBI Consulting.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you very much for the opportunity to provide environmental consulting services to *Jonathan Rose Companies*. Should you have any questions or require additional information, please do contact the undersigned.

Respectfully submitted,
EBI CONSULTING

HUD CERTIFICATION

I understand that my environmental review will be used by *Jonathan Rose Companies* ("MAP Lender") to document to the U.S. Department of Housing and Urban Development that the MAP Lender's application for FHA multifamily mortgage insurance was prepared and reviewed in accordance with HUD requirements. I certify that my review was in accordance with the HUD requirements applicable on the date of my review and that I have no financial interest or family relationship with the officers, directors, stockholders, or partners of the Borrower, the general contractor, any subcontractors, the buyer or seller of the proposed property or engage in any business that might present a conflict of interest.

I am under contract for this specific assignment and I have no other side deals, agreements, or financial considerations with the MAP Lender or others in connection with this transaction. This report is written to meet the Multifamily Accelerated Processing (MAP) guidelines pursuant to the HUD mortgage insurance program 223(f) as well as ASTM E 1527-13.

Signed: _____ **Date:** March 15, 2016

EXECUTIVE SUMMARY

At the request of *Jonathan Rose Companies*, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 2000 Miramar Street in Los Angeles, California, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM E 1527-13, as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM E 1527-13. In addition to ASTM E 1527-13, the report was completed in accordance with portions of the U.S. Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Chapter 9.

The Subject Property includes one irregular-shaped parcel, totaling approximately 2.77 acres. The Subject Property is currently improved with a 157-unit multifamily residential complex, including one eight-story, concrete slab-on-grade apartment building. Additional structures and amenities include the following: a one-story administrative leasing office and community recreation center, attached on the north exterior of the tower building. There are no basements present beneath the existing structures. The existing improvements were reportedly constructed in 1980.

At the time of inspection, the Subject Property was occupied by a 157-unit multifamily senior residential complex, including one eight-story, concrete slab-on-grade apartment building, attached to one-story leasing office/clubhouse building. With the exception of the administrative leasing office, there are currently no commercial or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

ASSESSMENT SUMMARY TABLE

Assessment Component	Section(s)	Recommended Actions	Estimated Cost
Historical Review	4.3	No Further Action	
Current Occupants / Operations	2.3, 5.0	No Further Action	
Hazardous Substances / Petroleum Products	5.2	No Further Action	
Waste Generation	5.3	No Further Action	
Storage Tanks	5.4	No Further Action	
PCBs	5.5	No Further Action	
Potential Off-site Sources	2.5, 4.1	No Further Action	
Regulatory Agency / Database Review	4.1	No Further Action	
Asbestos Containing Materials	7.1	Continue the implementation of the existing Asbestos Operations and Maintenance (O&M) Plan.	Action item

ASSESSMENT SUMMARY TABLE			
Assessment Component	**Section(s)**	**Recommended Actions**	**Estimated Cost**
Radon	7.2	No Further Action	
Lead-Based Paint	7.3	No Further Action	
Lead in Drinking Water	7.4	No Further Action	
Mold	7.5	No Further Action	
HUD Factors	7.6	No Further Action	
Vapor Encroachment	7.7	No Further Action	

DRAFT

1.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 2000 Miramar Street in Los Angeles, California.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), radon, lead-based paint (LBP), lead in drinking water, mold, additional HUD factors, and vapor encroachment.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This *Phase I Environmental Site Assessment* (the report) has been prepared for the use of *Jonathan Rose Companies* and the United States Department of Housing and Urban Development (HUD), in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by *Jonathan Rose Companies*, and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the EBI Consulting office in Burlington, Massachusetts.

DRAFT

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of *ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* as well as the requirements of the United States Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Revised August 18, 2011, pursuant to 223(f). This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This *Phase I Environmental Site Assessment* has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit *Jonathan Rose Companies* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The observations in this report are valid on the date of the investigation. Where access to portions of the Subject Property or to structures on the Subject Property was unavailable or limited, EBI renders no opinion as to the presence of hazardous substances or petroleum products in that portion of the Subject Property or structure. Inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of, or indirect evidence relating to, hazardous

DRAFT

substances or petroleum products where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

It is acknowledged that EBI judgments shall not be based on scientific or technical tests or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that EBI conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect or consequential damages whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The ASTM Standard E 1527-13 do not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Any analytical testing performed at the Subject Property has been conducted in accordance with the Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services and the client-specific Scope of Work. Unless otherwise specified herein, such testing involves screening methods intended to provide a broad and approximate evaluation of conditions at readily accessible portions of the Subject Property, limited by project constraints, and should not be construed as a comprehensive program designed to comply with a specific regulatory program. If a thorough and regulatory-compliant study is warranted based on the findings of the Phase I ESA, EBI will recommend the appropriate further investigation. In certain cases, quantitative laboratory testing is performed as part of the assessment and analyses have been conducted by an outside laboratory. EBI relies upon the data provided by the outside laboratory, and has not conducted an independent evaluation of the reliability of this data.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI.

Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost. This report has been prepared in accordance with our Standard Conditions for Engagement, which is an integral part of this report.

DRAFT

1.4 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment (the report) has been prepared to assist a lender to be selected by Jonathan Rose Companies in determining whether to make a loan evidenced by a note secured by the Subject Property. Reliance upon this report does not extend to entities or individuals interested in purchasing the Subject Property. Amendments to EBI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. EBI's liability to a purchaser wishing to use this report is limited to the cost of the report. Payment for the report is made by, and EBI's contract and report extends to Jonathan Rose Companies only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM E 1527-13, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

DRAFT

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the Los Angeles County Assessor's Office, the Subject Property is currently owned by Towers Miramar Real Tech.

The Subject Property is located at 2000 Miramar Street in the City and County of Los Angeles, California. The Subject Property includes one irregular-shaped parcel, identified by the Los Angeles, California Assessor's Office as 5154-020-030, totaling approximately 2.77 acres. The Subject Property is located approximately 300 feet east of the intersection of Miramar Street and Alvarado Street. Figure 1 - Location Map depicts the location of the Subject Property on a street map of Los Angeles, California. Figure 2 - Locus Map depicts the location of the Subject Property on the Hollywood, California United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is currently improved with a 157-unit multifamily residential complex, including one eight-story, concrete slab-on-grade apartment building. Additional structures and amenities include the following: a one-story administrative leasing office and community recreation center, attached on the north exterior of the tower building. There are no basements present beneath the existing structures. The existing improvements were reportedly constructed in 1980.

The existing buildings are located on the central portion of the property. Areas of the Subject Property surrounding the existing building include the following: asphalt-paved surface parking, located along the northeast side and south side of the tower building; concrete driveway, located at the southeast side of the property, concrete walkways, located throughout the Subject Property; and landscaping surrounding the building. Land and building areas are as follows:

SUBJECT PROPERTY IMPROVEMENTS					
Address	**Floors**	**Basement**	**Area (SF)**	**DOC**	**Lot Size (Acres)**
Miramar Towers	8	No	132,600	1980	2.77
Leasing office/clubhouse building attached to the north exterior of the tower building	1	No	4,028	1980	Inclusive

SF: Gross Square Feet
DOC: Date of Construction

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of inspection, the Subject Property was occupied by 157-unit multifamily senior residential complex, including one eight-story, concrete slab-on-grade apartment building, attached to one-story leasing office/clubhouse building. With the exception of the administrative leasing office, there are currently no commercial or industrial operations conducted at the Subject Property.

Please refer to Section 5.2 for further discussion regarding hazardous substances and petroleum products at the Subject Property.

DRAFT

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	**Provider/Source**
Potable Water Supply	Los Angeles Department of Water and Power
Sewage Disposal System	City of Los Angeles
Electrical Service	Los Angeles Department of Water and Power
Natural Gas Service	The Gas Company
Oil Service	Not applicable
Heating/Cooling Systems	Electric split system HVAC units for the leasing office/clubhouse. The tower building cooling system is comprised of a two-pipe chilled water system. Chilled water is produced by one 100-ton air-cooled chiller unit that is located on the roof.
Emergency Power	One 30 KW diesel fired emergency generator with a self-contained, 60-gallon fuel tank.

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by residential and retail/commercial development.

ADJOINING PROPERTIES	
North	The Subject Property is bound to the north by Miramar Street, beyond which is residential development.
South	The Subject Property is bound to the south by 3rd Street, beyond which are JJ Park Motel (1906 W. 3rd Street), office building (1920 W. 3rd Street), Westlake Plaza retail strip (1926 W. 3rd Street), and an undeveloped land to the south-southwest.
East	The Subject Property is bound to the east by residential development.
West	The Subject Property is bound to the west by eTown Inn (2020 Miramar Street) and apartment building (2007 W. 3rd Street).

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

DRAFT

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by *Jonathan Rose Companies* with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by *Jonathan Rose Companies*. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

Jonathan Rose Companies provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A detailed discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

Jonathan Rose Companies provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Jonathan Rose Companies provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Jonathan Rose Companies provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

Jonathan Rose Companies provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

Jonathan Rose Companies retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

DRAFT

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix F.

The database report identified eight "orphan sites." Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	**Approximate Minimum Search Distance**	**Subject Property Listed**	**Off-site Listings Within Search Distance**
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal CERCLIS Sites	0.5 mile	No	0
Federal CERCLIS NFRAP Sites	0.5 mile	No	0

4.1.1 Federal Agency Database Records

National Priority List (NPL)
The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Delisted NPL database.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
CERCLIS contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). CERCLIS contains sites that are included on the National Priority List (NPL), as well as sites which are in the screening and assessment phase for possible inclusion on the NPL. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the CERCLIS database.

DRAFT

CERCLIS – No Further Remedial Action Planned (CERCLIS-NFRAP)
As of February 1995, CERCLIS sites designated as No Further Remedial Action Planned (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the CERCLIS-NFRAP database.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities
RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

RCRA Hazardous Waste Generators
Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. Neither the Subject Property nor any adjoining properties were identified on the RCRA Generator database.

Federal Engineering Control / Institutional Control Registries
The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries.

Emergency Response Notification System (ERNS)
ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the

DRAFT

U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

4.1.2 State and Tribal Agency Database Records

Annual Workplan Sites (AWP)
The California Department of Toxic Substance Control (DTSC) Annual Workplan Sites (AWP) identifies known hazardous substance release sites targeted for cleanup. The data source is the California Environmental Protection Agency. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the AWP database.

California High-Priority Confirmed Release Sites (RESPONSE)
The California High-Priority Confirmed Release Sites (RESPONSE) database contains confirmed release sites where the California Department of Toxic Substance Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RESPONSE database.

California Hazardous Waste Sites (ENVIROSTOR)
The California Hazardous Waste Sites (ENVIROSTOR) database contains potential or confirmed hazardous substance release sites, or sites for which there may be reasons to investigate further, identified by the California DTSC. The database includes the following site types: Federal NPL; State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The Subject Property was not identified on the ENVIROSTOR database. However, 22 sites located within 1.0 mile of the Subject Property were identified on the ENVIROSTOR database. Of these site, 19 are located more than 0.50 miles from the Subject Property. Based on distance from the Subject Property, these 19 sites are not anticipated to impact the environmental integrity of the Subject Property. Information regarding the remaining three listed sites is presented in the following table:

ENVIROSTOR			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Central Los Angeles High School No.9 450 South Grand View Street Los Angeles, California	0.334 miles / West-northwest / Crossgradient	19730194	Notification Date: 02/10/2000 Contaminants: Total chromium, nickel, arsenic, others Media Impacted: Soil Status: No further action Date of Closure: 11/19/2004
Iglesia Ni Cristo 141 North Union Avenue Los Angeles, California	0.347 miles / East-northeast / Upgradient	60001080	Notification Date: 07/29/2009 Contaminants: Lead Media Impacted: Soil Status: No further action Date of Closure: 10/08/2009
West Fourth Street Site 2424 West 4th Street Los Angeles, California	0.359 miles / West / Downgradient	19490210	Notification Date: 09/20/1990 Contaminants: Not reported Media Impacted: Not reported Status: Refer to other agency Date of Closure: NA

* Presumed hydrogeologic gradient based upon regional topography

DRAFT

Based upon the current regulatory status and/or distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified ENVIROSTOR sites represent an environmental concern to the Subject Property.

Proposition 65 Notification Records

Proposition 65 Notification Records contain facility notifications regarding any release that could potentially impact drinking water and thereby expose the public to a potential health risk. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the Proposition 65 Notification database.

Toxic Pits Cleanup Act Sites (Toxic Pits)

The Toxic Pits Cleanup Act Sites (Toxic Pits) database contains sites identified by the California Water Resources Control Board that are suspected to contain hazardous substances where cleanup has not yet been completed. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the Toxic Pits database.

California Bond Expenditure Plan

The California Bond Expenditure Plan was developed by the California Department of Health Services as a site-specific expenditure plan for the appropriation of Hazardous Substance Cleanup Bond Act funds. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the California Bond Expenditure Plan database.

Hazardous Waste and Substances Sites List (Cortese)

The Hazardous Waste and Substance Site List (also known as the Cortese List) is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information regarding the location of hazardous materials releases. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The California Department of Toxic Substance Control (DTSC) is responsible for preparing a portion of the information that comprises the Cortese List, and other state and local government agencies are required to provide additional hazardous material release information for the Cortese List. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Cortese List.

Spill, Leaks, Investigations, and Cleanup (SLIC)

The Spills, Leaks, Investigations, and Cleanups (SLIC) database, maintained by the California Water Resources Control Board, includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites. The Subject Property was not identified on the SLIC database. However, one site located within 0.5 mile of the Subject Property was identified on the SLIC database. Information regarding the listed site is presented in the following table:

SLIC			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Furbert Property 2016 Temple Los Angeles, California	0.493 miles / North-northeast Crossgradient	SL204FM2481	Notification Date: Not reported Contaminants: TPH Media Impacted: Not reported Status: Case closed Date of Closure: 06/10/2002

* Presumed hydrogeologic gradient based upon regional topography

DRAFT

Based upon the current regulatory status and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified SLIC site represent an environmental concern to the Subject Property.

Voluntary Cleanup Program (VCP) Properties

The Voluntary Cleanup Program (VCP) Properties database identifies low threat level properties with either confirmed or unconfirmed releases, for which the project proponents have requested that Department of Toxic Substances Control (DTSC) oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. The Subject Property was not identified on the VCP database. However, one site located within 0.5 mile of the Subject Property was identified on the VCP database. Information regarding the listed site is presented in the following table:

VCP			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Ignesia Ni Cristo 401 North Union Avenue Los Angeles, California	0.52 miles / South / Upgradient	60001080	Responsible Party: Iglesia Ni Crsito Notification Date: 07/29/2009 Contaminants: Lead Media Impacted: Soil Status: No further action Date of Closure: 10/08/2009

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified VCP site represent an environmental concern to the Subject Property.

Regional Water Quality Control Board (RWQCB) – Leaking Underground Storage Tanks (LUST)

The Regional Water Quality Control Board (RWQCB) maintains a database of reported Leaking Underground Storage Tank (LUST) Sites. The Subject Property was not identified on the RWQCB – LUST database. However, 18 sites located within 0.5 mile of the Subject Property were identified on the RWQCB – LUST database. Of these sites, 13 are located more than 0.25 miles from the Subject Property. Three of the remaining five sites have case closed status and the nearest site is located approximately 0.218 miles from the Subject Property. Based on the current regulatory status and distance from the Subject Property, these 16 LUST sites are not anticipated to impact the environmental integrity of the Subject Property. Information regarding the remaining two listed sites is presented in the following table:

RWQCB – LUST			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
H & S Food & Gas 2000 West 3rd Street Los Angeles, California	Adjacent/ South- southwest Downgradient	T0603701135	Notification Date: 04/18/1990 Contaminants: Gasoline Media Impacted: GW Status: Case closed Date of Closure: 10/15/2015

DRAFT

RWQCB – LUST			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Shell #204-4532-4609 230 S. Alvarado Street Los Angeles, California	0.121 miles / West-southwest Downgradient	T060301130	Notification Date: 11/10/1986 Contaminants: Gasoline Media Impacted: GW Status: Case closed Date of Closure: 10/09/1996

* Presumed hydrogeologic gradient based upon regional topography

According to the 2015 closure report (obtained from the Geotracker) for the H & S facility, the groundwater flow direction is to the southwest. There are no monitoring wells installed along 3rd Street, south of the Subject Property. Based on the current regulatory status and actual groundwater flow direction, the H & S facility is not anticipated to impact the environmental integrity of the Subject Property.

Based upon the current regulatory status and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified remaining LUST site represent an environmental concern to the Subject Property.

Facility Inventory Database (FID UST)

The California Environmental Protection Agency maintains a Facility Inventory Database (FID), which contains a historical registry of active and inactive underground storage tank (UST) locations reported by the California Water Resource Control Board. The Subject Property was not identified on the FID UST database. However, two adjoining properties were identified on the FID UST database. Information regarding the listed sites is presented in the following table:

FID UST				
Location	**Distance / Direction / Gradient***	**Capacity / Contents**	**Year Installed**	**Status**
St. Vincent Medical Center 2021 Miramar Street Los Angeles, California	Adjacent / North-northwest Crossgradient	Not reported	Not reported	Inactive
Alvarado II Incorporated 2000 W. 3rd Street Los Angeles, California	Adjacent / South-southwest / Downgradient	Not reported	Not reported	Inactive

* Presumed hydrogeologic gradient based upon regional topography

The 2000 W. 3rd Street facility is listed in the LUST database under H & S Food & Gas with same site address and further discussed in the LUST section above.

Based upon the absence of reported releases and/or distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified the remaining FID UST site represent an environmental concern to the Subject Property.

Hazardous Substance Storage Container Database (HIST UST)

The Hazardous Substance Storage Container Database is a historical listing of UST sites maintained by the California Water Resources Control Board. Neither the Subject Property nor any adjoining properties were identified on the HIST UST database.

DRAFT

Statewide Environmental Evaluation and Planning System (SWEEPS)
The Statewide Environmental Evaluation and Planning System (SWEEPS) is an underground storage tank database that was updated and maintained by a company contacted by the State Water Resource Control Board in the early 1980s. The listing no longer updated or maintained. The Subject Property was not identified on the SWEEPS database. However, two adjoining properties were identified on the SWEEPS database. Information regarding the listed sites is presented in the following table:

SWEEPS				
Location	**Distance / Direction / Gradient***	**Capacity / Contents**	**Year Installed**	**Status**
St. Vincent Medical Center 2021 Miramar Street Los Angeles, California	Adjacent / North-northwest Crossgradient	Not reported	Not reported	Not reported
Alvarado II Incorporated 2000 W. 3rd Street Los Angeles, California	Adjacent / South-southwest / Downgradient	Not reported	Not reported	Not reported

* Presumed hydrogeologic gradient based upon regional topography

The 2000 W. 3rd Street facility is listed in the LUST database under H & S Food & Gas with same site address and further discussed in the LUST section above.

Based upon the absence of reported releases and/or distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified the remaining SWEEPS site represent an environmental concern to the Subject Property.

Solid Waste Information System (SWIS)
Solid Waste Information System (SWIS) records typically contain an inventory of solid waste facilities or landfills identified by the Integrated Waste Management Board. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the SWIS database.

Waste Management Unit Database / Solid Waste Assessment Test (WMUDS/SWAT)
The Waste Management Unit Database **(**WMUDS) is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the WMUDS/SWAT database.

California Hazardous Material Incident Report System (CHMIRS)
The California Hazardous Material Incident Report System (CHMIRS) contains information regarding reported hazardous material incidents (i.e. accidental releases or spills). The data source is the California Office of Emergency Services. The Subject Property was not identified on the CHMIRS database.

DRAFT

Hazardous Waste Information system (HAZNET)
The California Environmental Protection Agency maintains a list of facilities that issue hazardous waste manifests. The source of the manifest records is the California Department of Toxic Substance Control (DTSC). Inclusion on the HAZNET database does not necessarily indicate the existence of an environmental concern, such as a release or spill incident. The Subject Property was not identified on the HAZNET database.

Site Mitigation and Brownfields Reuse Program (SMBRP) Facility Sites with Deed Restrictions & Hazardous Waste Management Program (HWMP) Facility Sites with Deed / Land Use Restriction
The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under SMBRP's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. This list represents deed restrictions that are currently active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future property owners. The Subject Property was not identified on SMBRP or HWMP Deed Restriction or Land Use Restriction Registries. However, two sites located within 0.5 mile of the Subject Property were identified on SMBRP or HWMP Deed Restriction or Land Use Restriction Registries. Information regarding the listed sites is presented in the following table:

SMBRP / HWMP DEED RESTRICTION OR LAND USE RESTRICTION REGISTRIES			
Site	**Distance / Direction / Gradient**	**ID No.**	**Regulatory Status**
Burlington Gardens 409, 411, 415 S. Burlington Los Angeles, California	0.222 miles / South / Downgradient	11446	Notification Date: Not reported Contaminants: Not reported Media Impacted: Not reported Status: Not reported Date of Closure: Not reported
Burlington Park 456, 408 S. Burlington Los Angeles, California	0.284 miles / South / Downgradient	11447	Notification Date: Not reported Contaminants: Not reported Media Impacted: Not reported Status: Not reported Date of Closure: Not reported

* Presumed hydrogeologic gradient based upon regional topography

Based upon the distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

Tribal Environmental Databases
The United States Bureau of Indian Affairs (BIA) is responsible for the administration and management of 55.7 million acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 562 federally recognized tribal governments in the United States. The environmental database report identifies tribal administered lands of the United States that have any area equal to or greater than 640 acres. No tribal administered lands were identified within 1.0 mile of the Subject Property.

DRAFT

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following: City of Los Angeles Building and Safety Department and Fire Department - Fire Prevention Division. EBI did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property. EBI did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property.

City of Los Angeles Building and Safety Department
EBI reviewed available files regarding the Subject Property at the City of Los Angeles Building and Safety Department Records Division for information regarding past uses of the Subject Property. The original building permits and certificates of occupancy for the existing building indicates that the building was constructed in 1980. Building permits for general tenant improvments were additionally on file for the Subject Property. Building Department records indicate that the previous hotel buildings were demolished in 1974, prior to construction of the existing senior residential building. The review of Building Department records did not identify past uses of the Subject Property that would constitute a recognized environmental condition.

City of Los Angeles Fire Department - UST Section
EBI contacted Ms. Katie Rosas of the City of Los Angeles Fire Department, UST Section to request available information regarding the existing or historic USTs or ASTs associated with the Subject Property. Ms. Rosas reported that no records regarding USTs were on file for the Subject Property.

City of Los Angeles Fire Department Hazardous Materials Management Division
EBI contacted Ms. Angenee Reygadas of the City of Los Angeles Fire Department Hazardous Materials Management Division to request available information regarding the hazardous materials associated with the Subject Property. Ms. Reygadas reported that no records regarding hazardous substances or petroleum products, spills or releases, or violations were on file for the Subject Property.

4.2 PHYSICAL SETTING

4.2.1 Topography

The Subject Property is located at an elevation of approximately 395 feet above mean sea level (msl). The topography of the Subject Property slopes moderately to the south. The Subject Property is located in a moderately sloping area, and the general slope of the surrounding region is to the south-southwest (see Figure 2 - Locus Map, which depicts the location of the Subject Property on the Hollywood, California USGS 7.5 Minute Topographic Quadrangle).

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, California region (1995). The Subject Property is located within the Lower Californian physiographic province, which consists of coastal mountain ranges underlain by severely folded, faulted, commonly metamorphosed marine and continental sediments.

According to the Soil Survey of Los Angeles County, the dominant soil composition in the vicinity of the Subject Property is classified as Diablo-Altamont Association, 2 to 9 percent slopes (map 34). This soil consists of deep, well-drained soils consisting of dark gray clay and dark grayish-brown clay. The Diablo soil extends to a depth of 52 inches below ground surface (bgs) and 36 inches bgs for Altamont. Diablo-

DRAFT

Altamont soils are neutral. Permeability is slow, and the available water capacity is low to moderate. The depth to bedrock is not provided.

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Ballona Creek, located approximately five miles southwest of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the southwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

4.3 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	**Historical Uses**		**Source(s)**
	Subject Property	**Surrounding Area**	
At least 1894-1906	Undeveloped and single-family dwellings.	Primarily Undeveloped; limited single-family residential development.	Fire Insurance Maps Topographic Maps
1907-1974	Hotel and single-family dwellings.	Single and multi-family residential and commercial development.	Aerial Photographs Fire Insurance Maps Topographic Maps City Directories Municipal Records
1975-1979	Undeveloped land and single-family dwellings	Single and multi-family residential and commercial development.	Aerial Photographs City Directories Municipal Records
1980 to Present	Existing senior housing development.	Single and multi-family residential and commercial development.	Aerial Photographs City Directories Municipal Records

No environmentally significant conditions were identified on the Subject Property. However, two former gas stations were located to the south-southwest of the Subject Property. One of the gas stations was replaced by a retail strip center and the other former gas station was observed as undeveloped land. The H & S gas station is discussed in the LUST section. The other gas station is not listed in the UST or LUST databases. These gas stations are located across 3rd Street and topographically downgradient from the Subject Property.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table. Copies of the aerial photographs are presented in Appendix G.

DRAFT

AERIAL PHOTOGRAPH SUMMARY		
Year	**Issues Noted**	**Observations**
1923 1928	No	**Subject Property:** The Subject Property appears to consist of three large commercial structures located on the northern portion of the site. Five small residential structures are depicted on the southern portion of the Subject Property.
		Surrounding Area: Surrounding properties to the east, and west are residential structures. A public roadway, trending southeast to northwest, is visible to the north and south of the Subject Property, beyond which are residential buildings. An undeveloped land is depicted to the north-northeast of the Subject Property.
1938	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1923 and 1928 photographs.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1923 and 1928 photographs. Additionally, a gas station type structure is depicted to the south-southwest and undeveloped land to the south of the Subject Property.
1948	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1938 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1938 photograph. Additionally, a gas station type structure is depicted to the south of the Subject Property.
1952 1964	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1948 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1948 photograph. Additionally, apartment buildings are depicted to the north-northeast of the Subject Property.
1970	No	**Subject Property:** The southern portion of the Subject Property is depicted as undeveloped land. Three large commercial structures are depicted on the northern portion of the Subject Property.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1952 and 1964 photographs. An L-shaped commercial building is depicted to the south of the Subject Property, from a former site of a gas station.
1977	No	**Subject Property:** The majority of the site is depicted as undeveloped land. Two small residential buildings are depicted on the southeastern portion of the Subject Property.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1977 photograph.
1983 1989 1994 2002 2005 2009 2010 2012	No	**Subject Property:** Conditions on the Subject Property are depicted as they exist at the present day. The high-rise building is located on the central portion and the one-story leasing office/clubhouse building is depicted on the northern portion of the site.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1977 photograph.

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by EDR Sanborn Maps, Inc. Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix G.

FIRE INSURANCE MAP SUMMARY

DRAFT

Year	Issues Noted	Observations
1906	No	**Subject Property:** The Subject Property is occupied by five single-family dwellings, three detached garages, and undeveloped lots on the northwestern and northeastern portions of the Subject Property.
		Surrounding Properties: Features depicted on surrounding properties included Miramar Street and undeveloped land located on the northern adjacent property, two single-family dwellings with detached garages and undeveloped land located on the eastern adjacent property, Ocean View Avenue and a single-family dwelling located on the southern adjacent property, a single-family dwelling and a detached garage located on the western adjacent property.
1950 1953 1955 1958	**Yes**	**Subject Property:** The Subject Property is occupied by Barker Hotel and three single-family dwellings located on the eastern portion of the site.
		Surrounding Properties: Features depicted on surrounding properties included Miramar Street and single and multi-family residential dwellings located on the northern adjacent property; single and multi-family dwellings on the eastern adjacent property; single and multi-family dwellings, stores, and gas stations located on the southern adjacent property; Barker Hotel and a multi-family dwelling located on the western adjacent property.
1960 1962 1963	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1950 to 1958 maps, with missing two structures on the southern portion of the Subject Property. Barker Hotel occupies the eastern portion of the Hotel and New Miramar Hotel occupies the majority of the northern portion of the site.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1950 to 1958 maps.
1967	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1960 to 1963 maps.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1960 to 1963 maps. The gas station on the southern adjacent property was replaced by an L-shaped commercial building. One gas station still exist to the south-southwest of the Subject Property.
1968 1970	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1967 map. However, the Barker Hotel located on the southeastern of the site is no longer depicted.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1967 map.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the topographic maps are presented in Appendix G.

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1898	No	**Subject Property:** No structures or other notable features are depicted on the Subject

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1900		Property. A portion of the existing 3rd Street is depicted to the south of the Subject Property.
		Surrounding Properties: Surrounding properties to the north, east, south, and west are primarily small residential structures.
1921 1928	No	**Subject Property:** Eight small residential-type structures located on the northern and southern portion of the site.
		Surrounding Properties: Surrounding properties are primarily depicted as small residential structures. The existing Miramar Street, trending southeast to northwest, is depicted to the north. The existing 3rd Street, trending southeast to northwest, is depicted to the south of the Subject Property.
1953 1966 1972 1981 1991	No	**Subject Property:** The Subject Property is shaded to represent urban development; no distinct structures or other notable features are depicted.
		Surrounding Properties: The surrounding properties are shaded to represent urban development; no distinct structures or other notable features are depicted.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix G.

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1924	No	Subject Property is listed as Miramar Terrace Apartments and names of individuals. Surrounding properties are listed with names of individuals.
1929	No	Subject Property is listed as Miramar Terrace Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1933	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1937	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1942	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1951	No	Subject Property is listed as Miramar Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1958	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1962	No	Subject Property is listed as New Miramar Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1967	No	Subject Property is listed as New Miramar Hotel, New Miramar Hotel & Apartments, and names of individuals. Surrounding properties are listed with names of individuals.
1971	No	Subject Property is listed as New Miramar Hotel, New Miramar Hotel & Apartments, and names of individuals. Surrounding properties are listed with names of individuals.
1981	No	Subject Property is listed with names of individuals. Surrounding properties are listed with names of individuals.

DRAFT

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1986	No	Subject Property is listed as Forest City Management and names of individuals. Surrounding properties are listed with names of individuals.
1990	No	Subject Property is listed as Forest City Management and names of individuals. Surrounding properties are listed with names of individuals.
2000	No	Subject Property is listed as Miramar Towers and names of individuals. Surrounding properties are listed with names of individuals.
2006	No	Subject Property is listed as Miramar Towers and names of individuals. Surrounding properties are listed with names of individuals.
2013	No	Subject Property is listed as Miramar Towers. Surrounding properties are listed with names of individuals.

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

The property information for the Subject Property was obtained at the Los Angeles County Assessor's Office. The property information identifies the current owner as Towers Miramar Real Tech, which acquired the Subject Property in 1984. Assessor's Office records indicate that the existing building was constructed in 1979. A listing of the former Subject Property owners was not available for review.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

EBI was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property. EBI did not identify previous environmental reports for the Subject Property at local agencies or other sources contacted during this assessment.

DRAFT

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Renato Nalupa, EBI Field Assessor, on February 19, 2016. Mr. Nalupa was accompanied by Mr. Alfredo Torres, Maintenance Custodian and Mr. Jordan Moreno, Maintenance Supervisor and interviewed Ms. Pamela Roberson, the Subject Property Manager.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 75° Fahrenheit. During the survey, representative common areas, apartments units, mechanical spaces, and/or equipment and building components were observed, and approximately 26% of the units were surveyed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Material	**Approximate Quantity / Container / Material**	**Location**	**Storage Condition**
Cleaning Compounds and Janitorial Supplies	Various sized containers, ranging from aerosol cans to five-gallon pails	Storage room and apartment kitchens	Good: No leaks or spills

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL

DRAFT

Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	1 Solid Waste Dumpster (Placed at curb-side)	Republic
Non-regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	NA (Municipal Sanitary Sewer)	City of Los Angeles
Regulated Solid or Liquid Waste	None identified	NA	NA
Biomedical Waste	None identified	NA	NA

No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTS) & ABOVEGROUND STORAGE TANKS (ASTS)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI did not identify the presence of USTs and ASTs at the Subject Property. However, one 2,500-gallon and two 200-gallon hot water tanks are located on the roof adjacent to the hot water boilers.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of USTs or ASTs formerly having been located at the Subject Property.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter I - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

Based upon the date of construction and upgrades, no potential PCB-containing equipment was identified at the Subject Property. However, the following oil-containing equipment was identified at the Subject Property:

OIL-CONTAINING EQUIPMENT			
Classification	**Type of Equipment**	**Year Installed / Location**	**Staining / Releases Identified**
Transformers and Fluid-Containing Electrical Equipment	(1) Pad-mounted Electrical Transformer [Los Angeles Department of Water and Power]	In an enclosure at south parking lot	No

DRAFT

OIL-CONTAINING EQUIPMENT			
Classification	**Type of Equipment**	**Year Installed / Location**	**Staining / Releases Identified**
Hydraulic Equipment	(2) 3,500-pound passenger elevators	2008 (modernization) / Main lobby	No
	(1) 3,500-pound freight elevator	2008 (modernization)/ Main lobby	No
Other Oil-containing Equipment	None identified	NA	NA

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Interior Drains, Trenches, or Sumps	**Yes**
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	No
Stained Soil or Pavement	**Yes**
Stressed Vegetation	No
Indications of Solid Waste Disposal	No
Exterior Pits, Ponds, or Lagoons	No
Wastewater or Stormwater Discharge/Disposal	**Yes**
Oil-Water Separators or Clarifiers	No
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No
Sink Holes	No

Floor drains were observed in the laundry room and public restroom. The floor drains reportedly discharge to the municipal sewer system. No staining or other evidence of a release of hazardous substances or petroleum products was observed in the vicinity of the floor drains.

Minor staining was observed on the concrete floor of the emergency generator. The staining encompass an area of approximately one square foor. No floor drains, cracks, penetrations, or other potential pathways to the subsurface were observed at this location.

The ground surface outside the building is relatively flat and the north side and moderately sloping on the south side. Stormwater runoff from the asphalt-paved parking areas adjacent to the north and south sides of the existing building discharges to catch basins located throughout. The catch basins are associated with the municipal stormwater sewerage system, operated by the City of Los Angeles.

DRAFT

6.0 INTERVIEWS

The following persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation are presented in Appendix C.

Pertinent information from the interviews is presented in applicable sections of this report.

DRAFT

7.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM E 1527-13

The following sections address environmental issues or conditions at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM.

According to the property owner, an Asbestos Operations and Maintenance (O&M) Plan is currently in place at the Subject Property. EBI reviewed an Asbestos O&M Plan, prepared by Forest City Residential Management, dated September 2009. The O&M Plan identified the following presumed ACM at the Subject Property: vinyl floor tiles, acoustical ceiling material, and thermal system insulation.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building where the building structures contact underlying and surrounding soil. Radon is generally considered to pose the greatest potential health risk to residents of the lowest level of a building. But, radon can also migrate vertically within building structures to areas above the ground contact floors.

EBI conducted a radon screening at the Subject Property as part of this assessment including sampling and analysis in accordance with the Mortgagee Letter 2013-07 and conformance with HUD Office of Multifamily Development Radon Policy and ANSI/AARST MAMF-2012 (Protocol for Conducting Radon Decay Product Measurement in Multifamily Buildings). Per the referenced protocols, tests were placed in a minimum of 25% of the ground contact and 10% of upper floor apartments were tested in each building. The sampling was conducted and supervised by Radon Professionals.

The EPA Map of Radon Zones indicates that Los Angeles County is located within a Zone 2 radon area. Zone 2 is defined as an area that has a moderate potential for radon gas, with a predicted average indoor radon screening level between 2.0 picoCuries per liter (pCi/L) and 4.0 pCi/L. The EPA recommended Action Level for radon is 4.0 pCi/L.

Between February 23 and February 25, 2016, EBI conducted a limited short-term radon screening of the Subject Property by testing 19 residential units and 2 non-residential areas. The radon test canisters were exposed for a minimum of 48 hours and were sent to Air Chek, Inc in Mills River, North Carolina for analysis. The sampling locations and laboratory analytical results are presented in the following table:

DRAFT

Canister No.	Location	Floor	Radon Concentration (p/Ci/L)
7733280	Leasing Office	1	0.9
7733283			0.6 (D)
7733279	Community Room		0.6
7733278			<0.3 (D)
7733277	101		2.5
7733276	101		2.1 (D)
7733275	102		<0.3
7733274	107		0.8
7733272	112		0.6
7733271	118		0.8
7733270	204	2	<0.3
7733269	215		<0.3
7733232	307	3	<0.3
7733273	316		<0.3
7733284	402	4	<0.3
7733285	413		<0.3
7733282	501	5	<0.3
7733371	516		<0.3
7733365	604	6	<0.3
7733364	617		<0.3
7733366	707	7	<0.3
7733240	718		<0.3
7733236	805	8	<0.3
7733361	820		<0.3
Quality Control Blank Samples			
7733287	102	1	<0.3
7733228	107		<0.3

Laboratory analytical results identified radon concentrations less than the EPA Action Level of ≥4.0 pCi/L in all sample locations. The radon laboratory report is appended.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the date of construction of the existing building and in accordance with the scope of work of this assessment, a LBP survey was not conducted at the Subject Property.

DRAFT

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg /L).

Municipal water service is provided to the Subject Property by Los Angeles Department of Water and Power. Potable water is reportedly obtained from Northern California State Water Project, Colorado River, and groundwater wells. Based upon review of the utility's 2014 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

7.5 LIMITED MICROBIAL SURVEY

Microbial growth (e.g., mold or fungus) on building materials may occur when excess moisture is present. Porous building materials such as gypsum board, insulation in walls and ceilings, and carpeting retain moisture and become microbial growth sites if moisture sources are not controlled or mitigated. Potential sources of moisture include rainwater intrusion, groundwater intrusion, condensation on cold surfaces, and water leaks from building systems (e.g., plumbing leaks, HVAC system leaks, overflowing drains, etc.). Inadequate ventilation of clothes dryers and shower stalls may also result in excess moisture conditions. Microbial growth may be clearly visible (e.g., ceramic tile mortar in shower stalls) or may be concealed with no visible evidence of its existence (e.g., inside wall cavities).

Interior areas of the Subject Property building to which access was provided and in which building elements were readily observable were inspected for the presence of moisture and visible or olfactory evidence of microbial development. No disassembly of systems or building components or physical or invasive testing was performed. No observations were conducted within concealed locations (construction elements behind wall and ceiling finishes, and other building components, etc.). The scope of this inspection was limited to visual observations of accessible areas for microbial growth and water damaged materials and did not include the collection and laboratory analysis of bulk samples or air samples to confirm the presence of microbial elements.

Representative observations revealed no obvious visual or olfactory indications of the presence of active moisture or mold activity at the Subject Property. In addition to our observation efforts, a questionnaire provided to Subject Property personnel did not indicate the presence of mold, and Subject Property personnel were not aware of the presence of moisture or mold activity. Based on the interviews and conditions as observed at the time of inspection, mold does not appear to be a concern at the Subject Property.

7.6 HUD FACTORS

The following additional HUD Environmental Factors were reviewed at the Subject Property.

DRAFT

HUD ENVIRONMENTAL FACTOR	FINDINGS
Coastal Zone and Coastal Barrier Resources	The Subject Property is not located within a State Coastal Management Zone, or a coastal barrier designated on a current FEMA flood map or Department of Interior coastal barrier resource map. No further action or investigation is recommended regarding this factor.
Floodplain Management	EBI reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map, Community Map #060137, Panel #1610F, dated September 26, 2008. The Subject Property Flood Zone Determination appears to be Zone X, defined as an area outside the 100-year and 500-year floodplains. The Subject Property is not located within a Special Flood Hazard Area identified on the current FEMA Flood Insurance Rate Map (FIRM). No further action appears warranted regarding this factor.
Historic Preservation	This assessment is being completed for an existing HUD loan going through a Transfer of Physical Assets (TPA) loan assumption rather than a new HUD MAP 223f loan. As such, SHPO correspondence is not necessary. If it is subsequently determined that any substantial renovation work is required, then SHPO correspondence may need to be completed at a later date.
Noise Abatement	The Subject Property is not located within 1,000 feet of a freeway, major highway, or busy road, 5 miles of a civil airport, 15 miles of a military airport or 3,000 feet of a railroad. No further action appears warranted regarding this factor.
Explosive or Flammable Hazards	No industrial facilities handling explosive or fire-prone materials such as liquid propane, gasoline or other storage tanks are adjacent to or visible from the Subject Property. No further action or investigation is recommended regarding this factor.
Airport Hazards	The Subject Property is not located within 3,000 feet from the end of a runway at a civil airport or 2 ½ miles from the end of a runway at a military airport. No further action or investigation appears warranted regarding this factor.
Protection of Wetlands	There are no surface water bodies, marshy areas or other visible indications of potential wetlands areas on or adjacent to the Subject Property. According to the NWI Wetlands Map, there are no wetland areas in the vicinity of the Subject Property.
High Voltage Power Transmission or Other Towers	No High Voltage Power Transmission or Other Towers are located on-site or on adjacent properties. There are no structures that could fall on a subject building. No further action or investigation is recommended regarding this factor.
Landfills	No landfills are located within 3,000 feet of the Subject Property. As such, no further action or investigation is recommended regarding this factor.
Endangered or Threatened Species or Habitat	Based on the refinancing of an existing property or an existing development, impacts to endangered/threatened species or habitats are not anticipated and no further action is recommended regarding this factor.
Sole Source Aquifer Recharge Area	The Subject Property is connected to the public sewer system. As such, no further action or investigation is recommended regarding this factor.
Farmlands Protection	The Subject Property is not farmland. As such, no further action or investigation is recommended regarding this factor.
Rail Lines	The Subject Property is not located within 100 feet of the right of way of a railroad. As such, no further action or investigation is recommended regarding this factor.
Natural Gas or Petroleum Pipelines	None of the on-site structures are located within 10 feet of a natural gas or petroleum pipeline easement. As such, no further action or investigation is recommended regarding this factor.

DRAFT

7.7 TIER 1 VAPOR ENCROACHMENT SCREENING

EBI has conducted a Tier 1 Vapor Encroachment Screen (VES) in general conformance with the American Society for Testing Materials (ASTM) Standard E 2600-10, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, dated June 1, 2010.

7.7.1 Purpose and Scope-of-Services

The purpose of this Tier 1 VES is to conduct an initial screening to identify a vapor encroachment condition (VEC). A VEC is defined as the presence or likely presence of chemical(s) of concern (COC) vapors in the subsurface of the Subject Property, caused by the release of vapors from contaminated soil or groundwater either on or near the Subject Property, as identified by Tier I or Tier II procedures.

The VES process is a two-tiered screening process. The Tier 1 VES is based upon information typically collected during an ASTM Standard E 1527 Phase I ESA and is typically focused on known or suspect contaminated properties that may exist in the area of concern (AOC). The Tier 1 VES includes, but is not limited to, the following: review of Federal, state, local, and tribal government records, as reported in the regulatory database report; chemical use and historical records of prior uses on the Subject Property and within proximity of the Subject Property; soil characteristics; geological characteristics; contaminant characteristics and plume migration data (if this data is readily available); significant conduits that that might provide preferential pathways for vapor migration; and groundwater depth and groundwater flow data.

Search Distance Test and Chemicals of Concern Test

The Tier 1 screening includes the following: (1) a Search Distance Test to determine whether there are any known or suspect contaminated properties within the AOC; and (2) a Chemicals of Concern Test to determine for those known or suspect contaminated properties within the AOC whether COC are likely to be present.

Standard environmental record sources were reviewed pertaining to the Subject Property and to properties within the AOC (i.e., within the Approximate Minimum Search Distances, as defined by ASTM Standard E 2600-10 Guide). The Approximate Minimum Search Distance is based upon the type of COC known or suspected to exist in any release from a property, that is, non-petroleum hydrocarbon COC (such as chlorinated solvents) versus petroleum hydrocarbon chemicals of concern (PHCOC), and the location of the known or suspect source of contamination with respect to the Subject Property. The AOC is generally one-third of a mile (1,760 feet) around the Subject Property for COC and one-tenth of a mile (520 feet) around the Subject Property for PHCOC. Approximate minimum search distances surrounding the Subject Property to identify the AOC are specified below:

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE
Approximate Minimum Search Distances

Regulatory Database	COC	PHCOC
Federal NPL Sites	1/3 mile	1/10 mile
Federal CERCLIS Sites	1/3 mile	1/10 mile
Federal RCRA CORRACTS Sites	1/3 mile	1/10 mile
Federal RCRA non-CORRACTS TSD Sites	1/3 mile	1/10 mile
Federal RCRA Generators Sites	Subject Property Only	Subject Property Only
Federal Engineering / Institutional Control Sites	Subject Property Only	Subject Property Only
Federal ERNS Sites	Subject Property Only	Subject Property Only
State and Tribal equivalent NPL / CERCLIS Sites	1/3 mile	1/10 mile

DRAFT

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE Approximate Minimum Search Distances		
Regulatory Database	**COC**	**PHCOC**
State and Tribal Spills Sites	Subject Property Only	Subject Property Only
State and Tribal Landfill or Solid Waste Disposal Sites	1/3 mile	1/10 mile
State and Tribal Leaking Storage Tank Sites	1/3 mile	1/10 mile
State and Tribal Registered Storage Tank Sites	Subject Property Only	Subject Property Only
State and Tribal Engineering & Institutional Control Sites	Subject Property Only	Subject Property Only
State and Tribal Voluntary Cleanup Sites	1/3 mile	1/10 mile
State and Tribal Brownfield Sites	1/3 mile	1/10 mile

COC: Chemicals of Concern
PHCOC: Petroleum Hydrocarbon Chemicals of Concern

If there are known or suspect sources of contamination identified within the AOC, the data contained in the standard environmental record sources is further reviewed in order to evaluate the likelihood that a VEC exists at the Subject Property.

Critical Distance Determination

If information related to the boundaries of a contaminant plume from a known contaminated property is available, a Critical Distance test may be conducted. The Critical Distance is defined as the lineal distance between the nearest edge of the contaminant plume and the nearest Subject Property boundary. The Critical Distance is equal to 100 feet for COC or 30 feet for dissolved PHCOC. The Critical Distance for PHCOC as light non-aqueous phase liquid (LNAPL), such as gasoline product, is 100 feet.

If groundwater flow direction can be estimated, the AOC in the downgradient direction may be reduced to the area within the Critical Distance during the Tier 1 screening. Additionally, the crossgradient direction may be reduced 365 feet. It is not necessary to obtain information regarding the contaminant plume dimensions for downgradient and cross-gradient contaminated properties, as the Critical Distance is measured from the nearest Subject Property boundary directly to the source on the off-site downgradient property that is the origin of the contamination (with the contamination migrating away from the Subject Property).

For a contaminated property located upgradient of the Subject Property, the Critical Distance determination requires knowledge of the length and depth of the groundwater contaminant plume. Such information is required to determine the lineal distance from the groundwater contaminant plume edge to the nearest existing or planned structure on the Subject Property, or the nearest Subject Property boundary if there are no existing or planned structures on the Subject Property. Data related to contaminant plume characteristics and dimensions associated with off-site contaminated properties is not typically available during the Tier 1 screening process and is typically obtained during the Tier 2 screening process. If it is not possible to conservatively estimate contaminant plume dimensions, then the AOC cannot be reduced in upgradient directions during the Tier 1 screening process.

Data regarding site-specific soil characteristics may also be used to adjust the AOC. Low permeability in soil, such as soil high in clay and/or silt content, generally tends to restrict soil gas movement, as may soil with high moisture content. Conversely, high porosity in soil tends to enhance soil gas movement. If known, this data may be used as a basis to either expand or reduce the AOC.

Possible Conclusions of Tier 1 VES

DRAFT

The four possible conclusions of the Tier 1 screening are as follows: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in accordance with ASTM Standard E 2600-10 Guide. Vapor encroachment would unlikely be an issue of concern in connection with the subsurface of the Subject Property, vapor intrusion would unlikely be an issue of concern in connection with existing or planned structures on the Subject Property, and no further action or investigation would be recommended. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the Subject Property (a VEC exists, likely exists, or cannot be ruled out), then further action or investigation may be recommended, including a Tier 2 Screening and/or mitigation. Note that both Tier 2 Screening and mitigation are beyond the scope of the Tier 1 Screening process.

Tier 2 Vapor Encroachment Screening

If a VEC cannot be ruled out during the Tier 1 screening process, then a more refined Tier 2 VES may be completed in order to further evaluate the VEC. Tier 2 focuses on characteristics of the contaminant plume resulting from contaminated properties and the proximity of the contaminant plume to the Subject Property. This data is not typically available during the Tier 1 screening process and is typically obtained from state regulatory files and may also be obtained from other available documents and/or may be collected via sampling. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. A Tier 2 VES has two data collection components: one non-invasive and one invasive.

Non-Invasive Data Collection: If data regarding the source of contamination and its migration in the subsurface is available and accessible in regulatory files and/or from other available documents, then the Tier 2 investigation can be non-invasive. The non-invasive investigation includes review at the appropriate regulatory agency of available subsurface investigation reports and/or other available documents regarding known or suspect contaminated properties within the AOC. The objective of the non-invasive component of the Tier 2 screening process is to identify from existing subsurface investigation reports and/or other available information in regulatory agency files the extent of the contaminated plume and its behavior, the specific COC and their respective concentrations, and the status of remediation. Using this information, a Critical Distance Determination may be performed.

Invasive Data Collection: If data regarding the source of contamination and its migration in the subsurface is not available or accessible or if there are preferential pathways, then the Tier 2 screening process can be invasive. An invasive investigation may include sampling of soil, soil gas, and/or groundwater on the Subject Property, at the Subject Property boundary, or off-site.

Mitigation

If the vapor encroachment and/or vapor intrusion pathway is determined to be complete at the Subject Property, there are a variety of mitigation alternatives, including intrinsically safe building design, engineering controls (e.g., a vapor mitigation system such as a chemical vapor barrier, a sub-slab depressurization system, a methane control system, or a radon control system), institutional controls, and/or removal or remediation of the contaminated media causing the VEC. Selection, design, and implementation of appropriate mitigation alternatives is beyond the scope of this assessment.

DRAFT

7.7.2 Government Records Review

A Vapor Encroachment Screen Worksheet was completed through Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Standard environmental record sources were reviewed in order to identify whether there are known or suspected sources of contamination located within the AOC. The Approximate Minimum Search Distance is based upon the type of COC known or suspected to exist in any release from a property and the location of the known or suspect source of contamination with respect to the Subject Property.

The Subject Property was not identified as a listed site in the standard environmental record sources. However, the findings of the Vapor Encroachment Screen Worksheet identified one off-site property in the standard environmental record sources that cannot be ruled out as a VEC in connection with the Subject Property. H&S Food & Gas at 2000 West 3rd Street is adjacent to the south of the Subject Property across 3rd Street. This former facility is approximately 75 feet south and slightly down-gradient from the Subject Property. According to the database a release of gasoline occurred that impacted groundwater. The case was closed on October 14, 2015. No additional information was provided in the regulatory database report regarding the extent of the groundwater contaminant plume. This site is located within the AOC for PHCOC (1/10 mile / 520 feet). As such, without data related to contaminant plume characteristics and dimensions, this site cannot be ruled out as a VEC in connection with the Subject Property. However, EBI was able to review a 2015 closure report (obtained from the Geotracker) for the H & S facility. According to the report the groundwater flow direction is to the southwest and away from the Subject Property. There are no monitoring wells installed along 3rd Street, south of the Subject Property. Based on the current regulatory status and actual groundwater flow direction, the H & S facility does not appear to be a VEC to the Subject Property.

The remaining off-site properties listed in the standard environmental record sources were determined to not likely represent a VEC to the Subject Property based on one or more of the following factors: COC are not likely to be present at the site; the site is located outside of the AOC and/or Critical Distance; hydrologic characteristics and/or soil characteristics suggests that contaminant vapors would not migrate from the site to the Subject Property; and/or reported sampling data indicates that the site does not represent a VEC. A copy of the Vapor Encroachment Screen Worksheet is presented in Appendix F.

7.7.3 Current and Historical Use of the Subject Property and Adjoining Properties

EBI did not identify current or historical conditions on the Subject Property or adjoining properties that may be considered likely to represent a VEC to the Subject Property. Refer to Sections 2.0, 4.3, and 5.0 for information regarding current and historical use of the Subject Property and adjoining properties.

7.7.4 Tier I Vapor Encroachment Screening Conclusions

The findings of the Vapor Encroachment Screen Worksheet did not identify VECs in connection with the Subject Property. EBI did not identify current or historical conditions on the Subject Property or adjoining properties that may be considered likely to represent a VEC to the Subject Property. Based upon the findings of this Tier I Vapor Encroachment Screen, the VES process is considered complete in accordance with ASTM Standard E 2600-10 Guide, vapor intrusion is unlikely to be an issue of concern in connection with existing or planned structures on the Subject Property, and no further action or investigation is recommended.

DRAFT

It should be noted that this Tier 1 Vapor Encroachment Screen is not a formal assessment of indoor air quality and did not include review of regulatory agency files, calculations, testing or sampling, or evaluation of mitigation alternatives.

DRAFT

8.0 FINDINGS AND OPINIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property. However, the following *de minimis condition and conditions outside the scope of ASTM E 1527-13* were identified:

- EBI identified surficial oil staining on the concrete floor beneath emergency generator. No cracks, penetrations, or other potential pathways to the subsurface were observed in proximity to the identified staining. This condition is not generally subject to enforcement action if known by a governing agency and is considered a *de minimis condition*.

- Based upon the date of construction and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM. Pressumed asbestos-containing vinyl floor tiles, acoustical ceiling material, and thermal system insulation were included in the existing Asbestos Operations and Maintenance (O & M) program at the Subject Property. Asbestos is a condition outside the scope of ASTM E 1527-13 and is not considered a recognized environmental condition (REC).

- EBI conducted a limited short-term radon screening of the Subject Property testing 19 residential units and 2 non-residential areas. Laboratory analysis indicated that none of the test locations exhibited radon concentrations equal to or greater than the EPA recommended Action Level of 4.0 pCi/L. The overall quality assurance plan for the project was determined to be within normal tolerances. No further action is recommended at this time regarding this Radon assessment. Radon is a condition outside the scope of ASTM Practice E 1527-05 and is not considered a recognized environmental condition (REC).

DRAFT

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following recommendations:

- EBI recommends the continued implementation of the existing Asbestos Operations and Maintenance (O&M) Plan for the Subject Property. This O&M Plan provides the procedures and guidelines that, when used during facility cleaning, maintenance, and general operations, will minimize human exposure to lead and minimize release of lead to the environment. This O&M Plan is a long term management approach.

Re: Property Condition Report & Environmental Site Assessment Questionnaire for property known as or located at

1716000048 Forest City-Jonathan Rose Multifamily Portfolio

1. **Please read these instructions and those on the following page carefully.**
2. **Please fill out this questionnaire to the best of your knowledge and email or fax it back to us within three business days.**
3. **The Engineer and/or Scientist will contact you directly to schedule the site visit.**
4. **This information is extremely time sensitive and necessary to provide your lender with accurate and timely reports.**

Please fill out and sign this questionnaire to the best of your knowledge for the Engineer's/Scientist's site visit. Email to Meghan Grogan at mgrogan@ebiconsulting.com or fax to 781-418-2302, for our report files, and keep the original to provide to the Engineer or Scientist.

Subject Property Name: Miramar Towers **EBI Project #:**

Address: 2000 Miramar Street, Los Angeles, California 90057

Subject Property Owner: Miramar Tower, a California Limited Partnership **Purchase Date:** 1979

On-Site Property Contact: Pamela Roberson **Telephone:** 213-483-1069

Fax: 213-483-9515 **Email:** pamelaroberson@forestcity.net

Your Name and title **Signature** **Date**

PROJECT CAPITAL NEEDS ASSESSMENT PRE-SURVEY QUESTIONNAIRE

Additional plans and documentation (see page 4) must be forwarded to the site for the Engineer during the survey. For questions not applicable please respond "N/A." Attach additional pages if necessary. This questionnaire and your responses will be included as an exhibit in the Engineer's report. Accurate and full completion is critical to a timely completion of our reports, and timely loan closing.

LOCAL JURISDICTIONAL INFORMATION

1. What is the property ID #, Lot and Block, or Township/Range ID #?
2. What is the legal Municipality or County that has jurisdiction over the property? Los Angeles

PROPERTY INFORMATION

3. What is the size of the subject property lot or lots, in acres? 2.73
4. How many parking spaces (and HCP parking spaces) are present at the property? 32 Reg, 7 HC, 1 Employee
5. How many buildings comprise the subject property? 1
6. What is the gross and net rentable square footage of the building(s)? Gross 132,384; Rentable 35,030
7. Was the property federally subsidized during new construction or substantial rehabilitation, or does it currently receive federal assistance under one of the following programs?

Yes	No	
☐	☐	Section221(d)(3) BMIR Program
☐	☐	Section 236 Loan
☐	☐	Section 202 or Section 811 property
☐	☐	HUD HOPE VI
☐	☐	HUD HOME Investment Partnership Program
☐	☐	Community Development Block Grant (CDBG) Assistance
☐	☐	Neighborhood Stabilization Program (NSP)
☐	☐	Housing Opportunities for Persons With AIDS (HOPWA)
☒	☐	Project-based Section 8 Assistance

   a. **If property receives other federal assistance, or additional detail is warranted, please describe:**

8. What is the date of construction of the building(s)? When was the building(s) first occupied? 1979; 4/9/1980
9. How many resident rooms or dwelling units are at the Subject Property? 157
10. Please list, to the best of your knowledge, any deficiencies or problems with the site, parking area, amenities or utilities. Appliance upgrades, limited parking, roof replacement
11. Please list, to the best of your knowledge, any structural, water infiltration, mold, roof, plumbing, HVAC, Fire Alarm or electrical deficiencies or problems. None

12. Please list any major capital improvements made to the site or building(s) within the last 10 years. This information will be used in the analysis of the Remaining Economic Life of the property. Please describe scope, cost, and date of each work item. Chillers - $101,894 (2015); Boilers - $53,319 (2015); Carpet Replaced Common area - $59,886 (2013); Appliance upgrades – $18,628 (2015); Patios - $34,650 (2014); ADA Entrance Doors - $18,000 (2013); Elevator Cab upgrade - $38,398 (2014); Shower enclosures - $18,139; Kitchen cabinets & counters - $659,700 (2013)

Does the property have	Y or N	Does the property have	Y or N
Polybutylene piping	N	Compressed wood or composite board siding	N
Galvanized steel water lines	Y	EIFS exterior finishes	N
ABS sanitary lines	N	Fire Retardant Treated plywood	
Aluminum branch wiring	N	Cadet/Encore electric heaters installed 1982-99	N
Omega (Central or CSC) brand sprinkler heads		GE or Hotpoint dishwashers installed 1983-89	N

13. Please list any deficiencies noted during any Building, Fire or Health Department inspections in the last three years. 2015, Erosion 3rd Street parking lot & Storage Shed, Unlocked electrical boxes (2), damaged sprinkler head, Resident blocked pull cords (2), Resident Trip hazard. 2013 REAC Inspection – 3 deficiencies (Bldg. Exterior door Deteriorating Seal, Common door damaged surface, Common door Chute damaged. 2015 Fire Dept. Inspection – 1st Floor Equip Mechanical Room (Panel room not free of combustibles, rubbish, material, and storage due to fire hazard.)

14. When were the fire alarm systems and/or sprinkler system (if any) last tested? 1/29/2015

15. Are all swimming pools and/or spas at the property in compliance with the *Virginia Graeme Baker Pool and Spa Safety Act,* which requires installation of safety equipment designed to prevent entrapment? ☐ **Yes** ☐ **No** ☐ **NA**

16. Do you sell memberships for the use of your swimming pool to non-residents? ☐ **Yes** ☐ **No** ☐ **NA**

17. **Carbon monoxide detectors**

a) Are carbon monoxide (CO) detectors present in each dwelling unit? ☐ **Yes** ☐ **No** ☐ **NA**

b) If CO detectors are present, are they either hard-wired or plug-in type devices? ☐ **Yes** ☐ **No** ☐ **NA**

18. **Bedbugs:**

a) Is there known bedbug activity at the property? ☐ **Yes** ☐ **No**

(If Yes, describe)

b) Is there a bedbug Integrated Pest Management Plan in place at the property? ☐ **Yes** ☐ **No**

19. Please list the following utility providers:

Electricity: Los Angeles Department of Water & Power

Water: Los Angeles Department of Water & Power

Storm Drainage: Los Angeles Department of Water & Power

Sanitary Sewer: Los Angeles Department of Water & Power

Natural Gas or Oil: Southern California Gas

Trash Hauler: Olympic and,

Frequency of Pick-ups: Three times per week

20. If you are performing or planning any repairs or replacement work to the property that will exceed an aggregate cost of $2,000 please explain, with the approximate cost and provide copies of bids. Jockey pump replacement $25,000 and Roof Replacement $160,000, Re-Key Building $ 6,207, Exterior Building $225,000, HVAC Replacement $16,000, Elevator Cab $8,000, Appliance replacement $30,004, Kitchen Counters $60,000, Flag pole $6,000, Landscaping Enhancements $9,000, Storage Tank Seal Coat $7,000, Backflow Preventer repairs $6,000, Bedbug treatment $5,000.00

21. Please list the responsible party for tenant improvements and maintenance of major systems (if applicable).

Forest City Enterprises

22. Please list any energy efficiency upgrades that have been completed at your property (i.e., *Energy Star* appliances, HVAC equipment with improved SEER ratings, higher R-value insulation, etc.)

23. Please complete the unit breakdown table for your property as accurately as possible:

Unit Designation (if any)	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	Total # Units at Site
1 BR	1 BR/1 Bath	580	141
1 BR	1 BR/1 Bath	615	14
1 BR HC	1 BR/1 Bath	896	16

24. Does the property have designated **handicap-accessible** units? ☐ **Yes** ☐ **No**

a) If yes, list in the table below all designated **handicap-accessible units.**

LIST ALL HANDICAP-ACCESSIBLE UNITS			
107	507		
117	517		
207	607		
217	617		
307	707		
317	717		
407	807		
417	817		

25. Please complete a unit distribution table for each building at your property. You may list multiple buildings in the "Building ID" field using one table if those buildings share identical unit distributions. Copy the following pages as necessary to complete.

Building Name / Number	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	# Units in Bldg.
Highrise	1 BR/1 Bath	580	141
	1 BR HC/1 Bath	897	16

Building Name / Number	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	# Units in Bldg.

Building Name / Number	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	# Units in Bldg.

Building Name / Number	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	# Units in Bldg.

Building Name / Number	Unit Layout (bedrooms/baths)	Unit Size (Sq. ft.)	# Units in Bldg.

26. REPLACEMENT COST DATA. Please provide typical average per unit replacement cost data for the following items at your property. This information should be based on recent cost data (i.e., from within the last 3 years).

Appliances and Components (per unit costs)

$370	Refrigerators	N/A	Condenser units/heat pumps
$500	Ranges	N/A	Apartment unit furnaces/air handlers
N/A	Microwave ovens	N/A	PTAC Units
N/A	Dishwashers	$60,000	Water heaters
N/A	Washers	N/A	Dryers
N/A	Boilers	N/A	Window AC

Interior Finishes

$500	Carpet (per unit)	$1,500	Kitchen cabinet replacement refurbishment (per unit)
$375	Vinyl floor (per unit)	$450	Countertop refurbishment / replacement (per unit)

Exterior Components

$250,000	Roofing (per building)	$900	Doors (each per type: sliding, wood, metal, etc.)
$250	Windows (each)	$120,000	Paving/Asphalt (sealcoat/stripe & overlay price)
$600	Siding (SF price or per bldg)		Other (per unit price)

REPAIRS AND REPLACEMENTS AT YOUR PROPERTY

EBI's Replacements for Reserves schedule by default will include replacement/repair costs for a wide array of building and site systems and components at your property. However, HUD acknowledges that the replacement or repair of some components may be treated as an expense, rather than a capital replacement, and could therefore be excluded from the Replacements for Reserves.

If you wish to specify components that are repaired and/or replaced as part of your operating expenses, then you must provide evidence that the property has an established, clear policy distinguishing between repairs and replacements that are or will be treated as operating expense, and similar or related items classified as capital replacements for which reserves must be escrowed. At a minimum, evidence of such a policy must include, at a minimum:

- General ledgers or other documentation from at least the past three (3) years that clearly shows yearly replacement/repair budget line items categorized as operational expenditures;

- A brief letter from the owner summarizing the item(s) in question and providing a statement that such items are included in the property's operational expense budget and therefore do not require escrowed reserves.

Examples of items that are more commonly handled as yearly budgeted operational expense line items include:

- Flooring replacement (carpeting, vinyl flooring, etc.);
- Appliance replacement;
- Water heater replacement.

ENVIRONMENTAL SITE ASSESSMENT PRE- SURVEY QUESTIONNAIRE

1. Describe the current uses of the property noting tenant names and oil/chemical usage. Rental Units

2. Describe the past uses of the property noting tenant names and oil/chemical usage. Rental Units

3. (Y) (N) Has a previous environmental site assessment report been prepared for the property? If yes, for what reason? Can EBI have a copy?

4. (Y) (N) Has a subsurface investigation (Phase II) ever been conducted on the property, including soil sampling, groundwater sampling, or installation of groundwater monitoring wells? If yes, for what reason? What were the results? Can EBI have a copy of the report? Are there any groundwater monitoring wells currently located on the property?

5. (Y) (N) Has contamination been identified at the Subject Property? Describe the nature of the contamination (i.e., source, media impacted, location, sampling, cleanup activities, regulatory status, etc.). Can EBI have copies of related documentation?

6. (Y) (N) Has a spill or surficial release occurred at the Subject Property? Describe the nature of the spill/surficial release (i.e., source, location, response/cleanup actions, regulatory status, etc.). Can EBI have copies of related documentation? ___

7. (Y) (N) Is the Subject Property listed with the USEPA and/or the state environmental regulatory agency as a contaminated site? If yes, please describe. Can EBI have copies of related documentation?

8. (Y) (N) Has there ever been previous sampling for Asbestos, Lead-Based Paint, Lead in Water, or Radon? If yes, please describe. Can EBI have copies of related documentation?

9. (Y) (N) Has there been any Asbestos or Lead-Based Paint abatement or Radon mitigation conducted at the Subject Property? Are there Asbestos and/or Lead-Based Paint Operations and Maintenance Plans for the Subject Property? If yes, please describe. Can EBI have copies of related documentation?

10. (Y) (N) Any known environmental liens, deed restrictions, or use limitations for the Property? If yes, please describe. Can EBI have copies of related documentation?

11. (Y) (N) Any permitted or regulated activities (Hazardous waste generator, air) on the Property? If yes, please describe.

12. (Y) (N) Are there any transformers or other electrical equipment, which may contain PCBs? If yes, please describe. Where are they? Who owns the transformer(s)? Who services them?

13. (Y) (N) Has an industrial or manufacturing operation, gas station, motor repair facility, commercial printing facility, dry cleaners, photo-developing laboratory, junk yard, landfill or waste, treatment, storage, disposal processing or recycling facility ever been located at **or** adjacent to the property? If yes, please describe.

14. (Y) (N) Are there any discarded drums, barrels or containers, construction debris, damaged or discarded automobile or industrial batteries, or pesticides, paints or other chemicals in individual containers or drums of greater than five gallons or fifty gallons in aggregate located on the property? If yes, please describe.

15. (Y) (N) Have there ever been any waste storage or treatment lagoons, pits, ponds, or surface impoundments on the property? If yes, please describe.

16. (Y) (N) Does the property have floor drains not discharging to a sewer? Septic System? If yes, please describe.

17. (Y) (N) Are there currently aboveground or underground storage tanks at the property? If yes, complete table.

Type of Tank	Size	Content	Installation Date	Spill/Leak Detection? Y or N
Above or Underground	gal			
Above or Underground	gal			
Above or Underground	gal			
Above or Underground	gal			

18. Are you aware of any information to indicate that the Subject Property was sold for substantially below its fair market value? If so, please provide an explanation: _____

19. Additional comments and/or pertinent information relevant to this Phase I ESA:_____

_____

DOCUMENT AND INFORMATION CHECKLIST

Please provide the following information for each property (as much as possible in electronic format) so the Engineer or Scientist can proceed with the survey of the property. **Asterisk (*) items are critical to report completion.** The documents will become exhibits in the Consultant's report.

A. Plans

- ☐ ALTA Survey or site plan*
- ☐ Architectural Building Plans* -(plans, elevations, wall section, foundation, MEP, etc.)
- ☐ Reduced scale Site and Building Plans

B. Municipal Documents

- ☐ Certificate of Occupancy*
- ☐ Building Permit*
- ☐ Facility licensing information*
- ☐ Façade inspection compliance (if applicable in your municipality)*
- ☐ Copy of tax cards
- ☐ Copy of violations
- ☐ Most recent fire inspection
- ☐ Most recent building code inspection

C. Additional Information

- ☐ Facility license*
- ☐ Most recent state health survey (SNF and/or ALF properties) **and associated plan of correction***
- ☐ Most recent REAC inspection / HUD Fund Authorization Forms*
- ☐ **Completed REAC Repair Certification Form (attached), for existing HUD loans only***
- ☐ Certificate of Occupancy*
- ☐ **Significant capital improvement and/or repairs completed during the last 10 years***
- ☐ Tenant Rent Roll or Census Report*
- ☐ Roof warranty
- ☐ Bedbug Integrated Pest Management Plan
- ☐ History of recent improvements
- ☐ Schedule of floor area measurements (Gross and Rentable Square Feet per building)
- ☐ Copy of most recent appraisal
- ☐ **232 LEAN projects only:** Verification that existing sprinkler system installed per NFPA 13. Verification can be in the form of as-builts referencing this standard, or other written format.
- ☐ Previous Due Diligence or Building Component Reports, including, but not limited to façade, roof, MEP, elevators, sprinklers, fire alarm, or life safety equipment, and pavement
- ☐ Furnishings, fixtures, and equipment inventory or depreciation schedule (if major movables inventory being performed)
- ☐ Detailed list of owner-proposed repairs/improvements, including unit description, location, quantity, and cost

EBI ACCESS REQUIREMENTS

At the time of the site visit the Consultant is required to gain access to all areas of the property. This includes:

- **All building roofs, unless pitched asphalt shingles. This may require you to obtain and provide a ladder.**
- All building perimeters
- All site amenities
- **All vacant, down, and handicap-accessible units**
- All building interiors, including as applicable, common areas, lobbies, a representative sampling of offices, retail spaces, manufacturing or assembly areas, or apartments, community rooms, exercise rooms, pool areas, storage rooms, attics and basements, garages.
- All mechanical, electric, sprinkler, HVAC, utility, service, elevator, storage and equipment rooms

Address of Building: 2000 Miramar Street

CITY OF LOS ANGELES

CERTIFICATE OF OCCUPANCY

NOTE: Any change of use or occupancy must be approved by the Department of Building and Safety.

This certifies that, so far as ascertained by or made known to the undersigned, the building at the above address complies with the applicable requirements of the Municipal Code, as follows: Ch. 1, as to permitted uses, Ch. 9, Arts. 1, 3, 4, and 5; and with applicable requirements of State Housing Law—for following occupancies:

Issued 3/24/80 Permit No. and Year LA 82016/79

8 story, type I, 197' x 221' 156 unit apartment building, B-2, G-1 & H-2 occupancy. Maximum occupants in B-2 - 78. 42 required parking spaces provided.

STATEMENT OF RESPONSIBILITY

I certify that in doing the work authorized hereby I will not employ any person in violation of the Labor Code of the State of California relating to workmen's compensation insurance.

"This permit is an application for inspection, the issuance of which is not an approval or an authorization of the work specified herein. This permit does not authorize or permit, nor shall it be construed as authorizing or permitting the violation or failure to comply with any applicable law. Neither the City of Los Angeles, nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein, or the condition of the property or soil upon which such work is performed." (See Sec. 91.0202 L.A.M.C.)

1.0 STATEMENT OF PURPOSE

This Asbestos O&M Program describes policies, procedures, work practices, and locations of known or presumed asbestos. The O&M Program addresses maintenance or other activities that may contact or disturb asbestos-containing materials (ACM) or presumed asbestos-containing materials (PACM). In accordance with Forest City Residential's Asbestos Policy (Appendix A), employees will not handle ACM or PACM. Proper implementation of this program will enable this property to protect workers and building occupants from potential health hazards associated with asbestos exposure.

This Asbestos O&M Program includes detailed information on training requirements and outlines specific work practices to prevent or control disturbance of PACM. This Program addresses aspects of routine building maintenance and emergencies involving PACM, and provides an ongoing system to evaluate the condition of PACM. This O&M Program shall remain in effect until further notice.

The presence of asbestos in a building does not automatically mean that building occupants or staff are at risk. As long as ACM remains in good condition and is not disturbed, asbestos exposure is unlikely. The purpose of this O&M program is to describe the notification, training and work practice requirements which will be implemented to reduce the possibility of disturbance or improper handling of this material.

2.0 GENERAL INFORMATION ABOUT ASBESTOS USES & HAZARDS

2.1 Physical Characteristics and Uses of Asbestos

Asbestos is a naturally-occurring mineral which is mined from the earth. Early Greek and Roman civilizations recognized its valuable fireproofing, strengthening, and insulating properties. After extensive asbestos deposits were discovered in Canada in the late 1800s, commercial use in the United States became widespread. The manufacture of asbestos products peaked between World War II and the early 1970's, then tapered off when it became evident that tiny asbestos fibers could present a serious health hazard when airborne and inhaled. The EPA took steps in 1989 and 1994 to curtail its use in the United States.

There are six types of asbestos.

Chrysotile, the type of asbestos most commonly found in building materials, has a layered crystalline structure. It is very resistant to heat and was often sprayed onto various building components as insulation and fireproofing. It's long, flexible fibers can be woven into fireproof clothing and other textiles. Over 90% of asbestos-containing materials (ACM) were manufactured using chrysotile, also known as "white asbestos" because of its light color.

Amosite, or "brown asbestos," has a chain-like crystalline structure with lower tensile strength than chrysotile. Because it can resist heat up to 480 degrees Celsius, it's principle uses were insulation on pipes, boilers, and mechanical systems. Amosite sheds water quickly

and is difficult to keep wet. Dry fibers readily become airborne, posing particular problems during maintenance, repair, and abatement operations.

Crocidolite, or "blue asbestos," was often mixed into cement products. It has very high tensile strength and excellent chemical resistance. Long fiber types could be woven into heat insulating fabrics such as boiler blankets. Like amosite, crocidolite is difficult to keep wet.

Tremolite, Actinolite, and **Anthrophyllite** are other forms of asbestos, but they have seldom been used in manufactured products.

Before the dangers of asbestos were recognized, at least 3,000 different asbestos-containing products were manufactured. Many were used in building construction. The presence of asbestos in a building does not necessarily mean that the health of building occupants is endangered. As long as the ACM remains in good condition and is not disturbed, exposure is unlikely. When building maintenance, repair, renovation or other activities disturb PACM, asbestos fibers can be released, creating a potential hazard to building occupants. By definition, ACM contains 1 percent or more of asbestos by area as determined by polarized light microscopy sampling.

Common asbestos-containing building materials (ACBM) include:

- Sprayed-on fireproofing, soundproofing, or insulation surfacing materials.
- Flooring products such as vinyl floor covering
- Acoustical plaster
- Sprayed or troweled plaster, textured paint
- Transite siding shingles/board
- Roofing
- Cements, vibration joint cloth, gaskets, mortars, and other coatings

The potential for it to become airborne is a key factor in hazard assessment. Fibers which are microscopic in size present the largest health hazard because they can become lodged deep in the lungs. Even if relatively long fibers are embedded in the manufactured product, disturbance or damage to the product may break fibers and release them into the air.

The term "friable" is used to describe PACM that can easily be crumbled and release fibers. Friable ACM is defined as material that contains greater than one percent asbestos and can be crumbled, pulverized, or reduced to powder by hand pressure. Friable materials are more likely than non-friable to release fibers when disturbed. However, materials traditionally considered non-friable (such as asbestos cement pipe, vinyl asbestos floor tiles, mastic or linoleum), may also release fibers if disturbed or mishandled.

ACM in buildings is found in three forms:

1. Sprayed or troweled on ceilings and walls such as acoustical or decorative plaster (surfacing material).

2. In insulation around hot or cold pipes, ducts, boilers, and tanks (thermal system insulation).

3. In a variety of other products such as ceiling and floor tiles and wall boards, siding, textiles and roofing products (miscellaneous materials).

In general, ACM in the first two categories is of greatest concern, especially if friable.

2.2 Presumed Asbestos

As required in OSHA CFR 1926.1101 Section (k) (1) under "Communication of Hazards," the following materials must be presumed to contain asbestos if they were installed prior to 1980:

- Sprayed or troweled-on surfacing materials
- TSI (Thermal System Insulation)
- Asphalt or vinyl flooring material

In an exercise of "due diligence" as required by the regulation, Forest City Residential directs its properties constructed prior to 1981 to presume the presence of asbestos in these materials.

OSHA 1926.1101 Section (k) (5) provides instructions for refuting the presence of PACM through sample collection and laboratory analysis by certified personnel and facilities. Laboratory results of any sampling shall be added to this O&M Program Manual. Only laboratory analysis can confirm or refute the actual presence of asbestos. Polarized Light Microscopy is the currently recognized method of identifying asbestos fibers in bulk samples.

2.3 Health Effects of Asbestos Exposure

The lower the amount of exposure and the lower the frequency of exposure, the less chance there is of developing asbestos-related diseases. The latency period — the time between initial exposure and the onset of disease symptoms — can be thirty years or more. Smokers are more at risk than non-smokers to be affected by inhaled asbestos because smoking inhibits the body's ability to trap and expel foreign particles from the respiratory system. Asbestos can also be harmful if it settles on food and is ingested.

Asbestosis (scarring of the lungs due to embedded asbestos fibers) was first recognized in workers exposed to high asbestos dust levels for long periods of time. Although rare, Mesothelioma is a form of cancer which can occur without long term asbestos exposure. Some lung and gastrointestinal cancers are linked to asbestos exposure.

3.0 GENERAL RESPONSIBILITIES OF ALL O&M PROGRAM PARTICIPANTS

The Asbestos O&M Program is structured around the cooperation of building occupants, maintenance staff, consultants and outside contractors who service the building. The roles and responsibilities of personnel involved in administering and implementing the program are detailed below.

3.1 General Responsibilities of the Asbestos Program Manager

The Asbestos Program Manager (usually the Maintenance Supervisor) will administer this program. Responsibilities include:

- Alerting the Corporate Director of Engineering to emergencies or repairs which could disturb PACM.
- Participating in annual asbestos training. For Maintenance Supervisors at most properties, this will be bc 2-hr. Awareness training plus the Forest City Custom Course developed by EA Group. At a few properties with past or current asbestos issues, the initial 40-hr. AHERA Contractor/Supervisor training and annual refreshers are required.
- Leading the on-site Asbestos Awareness training program.
- In cooperation with the Corporate Engineering Department, ensuring that outside vendors and contractors are informed regarding the presence of known and presumed ACM.
- Maintaining documentation of asbestos projects.
- Supervising and evaluating emergency procedures followed by Maintenance Personnel for any major or minor fiber release.
- Conducting periodic inspections of known or presumed ACM.

3.2 Recordkeeping and Policies and Procedures

The asbestos program manager is responsible for recordkeeping requirements.

- Keep current training records (Data sheets and quizzes) from 2-hr. Asbestos Awareness in the Asbestos O&M Plan Manual (3-ring binder).
- Keep results of periodic inspection reports Asbestos O&M Plan Manual
- Keep detailed records of any asbestos work in progress or completed by outside contractors. Send a copy to the Engineering Department.

  When any asbestos activity is performed, whether small-scale, short-duration or a major removal/repair activity, the following must be documented:
  - Name of contractor
  - Signature of contractor
  - State of accreditation and certificate number of each person performing the activity
  - Start and completion dates of the activity
  - Location where the activity occurred
  - A description of the activity, including preventative measures used
  - If ACM was removed, name and location of storage or disposal site

- Keep copies of any asbestos lab reports with the O&M Plan Manual. Send a copy to the Corporate Engineering Department.
- If ACM or PACM were removed, record the name and location of the storage or disposal site.

3.3 Responsibilites of On-Site Staff

- Participate annually in 2-hr. Asbestos Awareness program (unless exempt through signing a self-affidavit).
- Do not disturb any PACM.
- Promptly report observed disturbance or damage to PACM to the on-site Asbestos Program Manager. Also report any observed deterioration in condition of PACM.

4.0 TRAINING FOR PARTICIPANTS IN ASBESTOS O&M PROGRAM

The Asbestos Program Manager shall ensure that all initial and ongoing training requirements for building maintenance personnel are met. The Asbestos Program Manager shall keep each employee's current Asbestos Awareness Data Sheets and Quizzes in the property's Asbestos O&M Plan Manual.

4.1 2-hr. Annual Asbestos Awareness Training for On-Site Staff

The Asbestos Awareness training is intended for staff who do not disturb asbestos-containing materials, but who work in areas containing asbestos, or who clean asbestos-containing materials such as floor tiles.

- Maintenance Supervisors will use an Asbestos Awareness video to train on-site staff.
- New maintenance, custodial, and housekeeping staff must be trained during their **first week on the job.**
- Other new staff, including Property Managers, need to be trained during their **first month on the job.**
- Existing staff need to be trained **every 12 months.** Group training is encouraged.
- If there is no Maintenance Supervisor on staff to conduct training, the Property Manager will lead the Asbestos Awareness program.

Who must receive 2-hr. Asbestos Awareness training:

- Maintenance technicians
- Custodians

- Housekeepers
- Property Managers

We take the position that all property staff shall receive the 2-hr. annual training unless the staff member is in no potential danger from exposure to asbestos. Signing a self-affidavit will exempt the individual from the asbestos training program. If there is doubt concerning potential exposure, it is better to train than not to train.

4.2 Conducting the Asbestos Awareness program

Locate your video(s) originally sent to properties from The Environmental Information Association (EIA) in June 2000. If you are a new property or need to order a replacement, use order form 14.400C, which is part of Forest City Policy 14.400. The form is also included in your O&M Plan Manual or can be e-mailed to you from the Engineering Department.

The Engineering Department will issue a new quiz each year.

Reserve two hours for the Asbestos Awareness training program (this is the minimum mandated by OSHA). View the video during the first hour and answer any questions from staff. The second hour begins with a guided tour of the property with the Maintenance Supervisor pointing out on-site locations of asbestos or presumed asbestos-containing materials. Each trainee then takes a quiz. Fax quizzes and Acknowledgment Sheets to the Forest City Engineering Department:

Fax: **(216) 263-4802**

File current training records in the training section of the Asbestos O&M Plan Manual. Old training records can be discarded (the Corporate office will retain copies of prior year Acknowledgment Forms).

4.3 Training for the Maintenance Supervisor

Annually:

Participate in the 2-hr. Asbestos Awareness program by watching the EIA video and taking the quiz. This can be done while leading the group training for on-site staff.

Take the Asbestos Custom Course developed by EA Group for Forest City (introduced in March 2003). This ***replaces*** a previous requirement to take the 16-hr. Asbestos O&M (OSHA Class III) initial class and 8-hr. annual refresher classes. The Custom Course will normally be presented by EA Group during the annual meeting for Maintenance Supervisors in Cleveland. Videotapes of the class will be available to those who could not attend the meeting or who are hired between meetings.

Exceptions are Maintenance Supervisors at The Drake, Colony Woods, and The Knolls, who are required to take the 40-hr. AHERA level training and annual refresher courses because of current or past asbestos issues at those properties. These three properties should continue to use a local training

provider. They are not required to take the Asbestos Custom Course or the 2-hr. Asbestos Awareness quiz.

4.4 Training for Regional Managers

Regional Managers should participate in the 2-hr. Asbestos Awareness program at least once, but can also elect to take advanced training. Videotapes of the Asbestos Custom Course will be available to them.

4.5 Training Qualifications of Outside Asbestos Consultants

All outside contractors and workers who remove asbestos or perform asbestos abatement work shall be licensed and certified to perform asbestos abatement work. Contractors must be competent in state-of-the-art removal procedures, appropriate procedures for operations and maintenance activities involving asbestos, respiratory protection for asbestos, and emergency procedures for fiber release episodes.

Consultant personnel conducting asbestos inspections and periodic surveillance shall complete an initial EPA accredited building inspector training course and attend annual refreshers.

Consultant personnel conducting asbestos air monitoring shall have completed NIOSH 582 or equivalent training.

Asbestos Consultants should be well versed in the following areas:

- History of Asbestos Uses
- Health Effects of Asbestos Exposure
- Legal and Liability Considerations Related to Asbestos
- Criteria for Hazard Assessment of Asbestos
- Building Survey Results
- Personal Protective Equipment for Asbestos
- Regulatory Requirements Pertinent to Asbestos
- Recordkeeping and Report Preparation Concerning Asbestos Activities
- Forest City Policies on Asbestos
- Hands-on training in the proper use of respiratory protection, other personal protection measures and current accepted work practices.

4.6 Training Qualifications of General Contractors

General contractors or outside vendors that may disturb PACM during their work must show evidence of at least 16 hours (two days) of training (OSHA Class III operation training requirements) in asbestos control. It is the contractor's responsibility to provide training records and to ensure that their employees have proper training and documentation to verify it.

General contractors or outside vendors who will come into contact with asbestos, but will not disturb the PACM during their work, must show evidence of at least 2 hours of training in Asbestos Awareness (OSHA Class IV operation training requirements). It is the contractor's responsibility to provide training records and to ensure that their employees have proper training and documentation to verify it.

5.0 EMERGENCY PROCEDURES

1. Immediately inform the on-site Asbestos Program Manager (usually the Maintenance Supervisor).
2. Maintenance Supervisor immediately contact the Corporate Director of Engineering: Cell phone **216-496-7384.** Office phone 216-416-3121.
3. Restrict entry to the area. Post signs and erect barriers as needed.
4. Shut off airflow from the area to confine the asbestos hazard.
5. Certified Contractor proceeds with the work.

6.0 PERIODIC SURVEILLANCE ACTIVITIES

Periodic Inspections: At least once each year the Maintenance Supervisor will conduct a formal inspection of all known or presumed asbestos in the building(s). Approximately 6 months thereafter, and at least annually, a Forest City Engineering Department Representative will also conduct a formal inspection. A copy of these reports will be filed with the O&M Plan as an ongoing record.

7.0 INFORMING BUILDING OCCUPANTS REGARDING PACM

Notification. The presence of known or presumed asbestos must be communicated to property staff, subcontractors, and building tenants. Subcontractors shall be notified through a written clause in job specifications. Tenants shall be notified through their lease, and shall be given the opportunity to view an Asbestos Awareness video upon request. If a mechanical room contains known or presumed asbestos materials, a sign at the entrance of the room(s) shall identify the potential hazard. Staff who could come in contact with PACM will receive Asbestos Awareness training.

7.1 Sign Posting, Labels

Under 29 CFR 1926.1001, OSHA requires that where feasible, all installed asbestos is to carry a visible label. See Appendix C. Labels are to be printed in large, bold letters on a contrasting background, and must contain the following information:

DANGER, CONTAINS ASBESTOS FIBERS,
AVOID CREATING DUST,
CANCER AND LUNG DISEASE HAZARD,
AVOID BREATHING ASBESTOS.

8.0 PROGRAM PRACTICES

For Forest City's Asbestos Policy, see Appendix A or the Property's Policies & Procedures Manual.

Forest City Residential's policy regarding asbestos restricts employees from performing any OSHA Class I, II, III or IV work. All activities regarding the disturbance or potential disturbance of asbestos-containing materials shall he performed by licensed, credentialed asbestos abatement contractors and industrial hygienists. Employees shall not repair any asbestos-containing material (ACM) or presumed asbestos-containing material (PACM), and will not engage in clean-up of asbestos-containing dust, waste or debris. Contact the Director of Engineering when an asbestos contractor is needed.

Any staff who could potentially have contact with ACM or PACM shall participate in a 2-hr. Asbestos Awareness program annually. 2-hr. Asbestos Awareness training shall include: viewing an EIA video covering all required topics for this program; touring the property with the Maintenance Supervisor pointing out locations of ACM and PACM; and taking a written quiz, a copy of which will be kept with the Asbestos O&M Plan as proof of training and comprehension.

Any employee who notices deterioration or damage to ACM or PACM should immediately report it to the on-site Asbestos Program Manager (the Maintenance Supervisor). The Maintenance Supervisor, in turn, will immediately notify the Director of Engineering at the Forest City Corporate office, who will assist in hiring a licensed contractor to correct the problem.

Maintenance staff shall avoid bumping pipes and walls or other surfaces with brooms, mops, vacuum cleaners and other cleaning equipment. These disturbances are likely to cause the release of asbestos fibers, even if the PACM has been encapsulated. Dry brooms, mops and dust cloths and standard vacuum machines will simply re-suspend fibers. All dusting and mopping in buildings with exposed sprayed-on or troweled-on PACM shall be conducted using wet cleaning techniques (mops or cloths dampened with water or a dust suppressant) or with vacuum cleaners equipped with HEPA filters.

9.0 WORK PRACTICES

9.1 Stripping, Sealing and Refinishing Vinyl Asbestos Floor Coverings

Asbestos floor coverings shall NOT be dry-stripped, dry-leveled, or sanded. Stripping shall only be performed wet, and only as necessary for proper maintenance. The following procedure shall be followed:

- Use a water mop to wet down a small area in front of the floor machine with a solution of all-purpose cleaner or wax stripper.
- Leave cleaning solution on the floor for less than a minute.
- Use a putty knife to remove gum or other material, but be careful not to damage the floor covering. Avoid harsh scrubbing which may damage floor (do not use steel wool).
- For buffing, use only fiber or polish brush. Low RPM buffing and stripping machines (less than 300 RPM) only may be used on asbestos-containing flooring materials. Wet methods must be used.

9.1.1 Storage and Disposal of Waste

Any cloths, mop-heads, sponges, and other cleaning materials used to clean up asbestos debris shall be assumed to be asbestos-contaminated and sealed in leak-tight containers for disposal as asbestos waste. Asbestos-containing waste shall not be stored at the property.

9.2 Asbestos-Contaminated Ceiling Tile Removal/ Replacement and Cleaning Procedure

Removal of contaminated tiles should be done by an asbestos abatement contractor.

9.2.1 Equipment Needed for Cleaning of Asbestos-Contaminated Ceiling Tile

a. Disposable Coveralls

b. Respiratory Protection

c. Ladder

d. HEPA vacuum

e. 6-mil Polyethylene Drop Cloth (large enough to extend six feet in each direction beyond the floor space under the ceiling tile).

f. 6-mil Polyethylene Waste Disposal Bags (with proper "Danger" warning label for asbestos)

g. Clean, Disposable Rags (dampened with amended water)

9.2.2 Preparation for Cleaning and Removal of Asbestos-Contaminated Ceiling Tile

a. Secure the work area. Ceiling tile is to be cleaned and/or removed only when the HVAC system is shut off in the work area, preferably during non-business hours. The work area should then be secured by shutting all access points (doors and windows), and posting signs (for example: "Asbestos Danger" signs and "Contact Building Management" signs).

b. Air sampling will be conducted during ceiling tile cleaning/removal jobs to document exposure levels. The area must be clean and free of contamination before the warning signs and barriers may be removed and unprotected personnel may enter the area.

c. Remove (and HEPA vacuum, if necessary) all moveable objects that are within eight feet of the perimeter of the ceiling tile to be removed.

d. Place one layer of 6-mil poly-drop cloth on the work area floor extending six feet in each direction of the ceiling tile to be removed.

e. The HEPA air filtration machine should then be set up and operating in the work area.

f. All equipment necessary for the removal should be placed in the work area. Worker should don, at a minimum, a half-face negative-pressure respirator and full body disposable suit.

9.2.3 Procedure for Cleaning and Removal of Asbestos-Contaminated Ceiling Tile

a. Carefully slide the ceiling tile two inches in one direction and vacuum the top of exposed metal grid, which supports the ceiling tile.

b. Carefully move ceiling tile so it is completely resting on one of the four adjacent ceiling tiles and HEPA vacuum on the top of the removed tile and all above-ceiling surfaces within reach.

c. After performing the required maintenance activity, replace ceiling tile (if it is in good condition) to its original position. If any of the ceiling tiles are damaged, place in 6-mil poly-disposable bags and replace with new tile.

9.2.4 Decontamination Procedures for Cleaning of Asbestos-Contaminated Ceiling Tile

a. Vacuum and wet wipe ladders and all other equipment.

b. Vacuum the surface of each disposable suit before removing. Carefully remove the disposable suits by rolling down the suits from top to bottom to avoid touching the contaminated surface of the suit.

c. Place contaminated suits, wet rags and poly-drop cloth in proper disposal bag.

d. Once out of the work area; each person should wet wipe the outside of the respirator before removing them.

9.3 Thermal System Insulation (TSI)

Repairs or removal of TSI shall be done by a certified asbestos abatement contractor following current accepted work practices.

9.4 Special Work Practices

Special work practices are only required where disturbance or contact with PACM is likely. Work around non-friable PACM is not likely to cause fiber release unless the PACM is directly manipulated such as by drilling or cutting. However, if in doubt about the possibility of disturbing PACM during maintenance activities, precautions must taken to protect workers and the building environment.

10.0 DEFINITIONS & TERMS

ACM: (ACBM) Asbestos-Containing Material (Asbestos-containing Building Material). Any material containing more than one percent asbestos.

AHERA: Asbestos Hazard Emergency Response Act.

Air Monitoring: The process of measuring the fiber content of a specific volume of air.

APM: Asbestos Program Manager.

Asbestos: Chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos and any of these minerals that have been chemically treated and/or altered.

Asbestos-Containing Waste Material: Mill tailings or any waste that contains commercial asbestos and is generated by a source regulated under NESHAP. This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing waste and materials contaminated with asbestos including disposable equipment and clothing.

Asbestos Debris: Pieces of ACBM that can be identified by color, texture, or composition, or dust, if the dust is determined by an accredited inspector to be ACM.

Asbestos Hazard Emergency Response Act (AHERA): An EPA regulation published in the October 30, 1987 Federal Register covering asbestos-containing materials in schools. AHERA

requires local education agencies to identify ACM in their school buildings, develop an asbestos management plan and implement this plan. An O&M program is one permitted response action, where appropriate.

Asbestos O&M Work: Cleaning, maintenance, repair or renovation work involving asbestos containing materials where the intent of the activity is not to remove asbestos. NESHAP requires that the owner or operator of a demolition or renovation activity conduct a thorough inspection of the affected facility or part of the facility where demolition or renovation will occur.

Asbestos Program Manager (APM): A building owner or designated representative who supervises all aspects of the facility asbestos management and control program.

Competent Person: In addition to the definition in 29 CFR 1926.32 (f), one who is capable of identifying existing asbestos hazards in the workplace and selecting the appropriate control strategy for asbestos exposure, and who has the authority to take prompt corrective measures to eliminate them, as specified in 29 CFR 1926.32(f). In addition, for Class I and Class II work, one who is specially trained in a training course which meets the criteria of EPA's Model Accreditation Plan (40 CFR part 763) for supervisor, or its equivalent. For Class III and Class IV work, one who is trained in a manner consistent with EPA requirements for training of local education agency maintenance and custodial staff as set forth at 40 CFR 763.92 (a)(2).

Category I Nonfriable Asbestos-Containing Material (ACM): Asbestos-containing packings, gaskets, resilient floor covering and asphalt roofing products containing more than one percent asbestos as determined using the method specified under AHERA.

Category II Nonfriable ACM: Any material, excluding Category I nonfriable ACM. containing more than one percent asbestos as determined using the methods specified under AHERA, when dry, cannot he crumbled, pulverized, or reduced to powder by hand pressure.

EPA: U.S. Environmental Protection Agency.

Excursion Limit (EL): The OSHA term used to define a maximum airborne concentration of asbestos in fibers per cubic centimeter as averaged over a sampling period of thirty minutes.

Fiber Release: Any uncontrolled or unintentional disturbance of ACBM resulting in visible emission.

Friable Asbestos Material: Any material containing more than one percent asbestos as determined using the method specified under AHERA (40 CFR Part 763, Sub-part F, Appendix A section 1, Polarized Light Microscopy) that, when dry, can be crumbled, pulverized, or reduced to powder by hand pressure. If the asbestos content is less than 10 percent as determined by a method other than point counting by polarized light microscopy (PLM), verify the asbestos content by point counting using PLM.

Medical Surveillance: A periodic comprehensive review of a worker's health status, The required elements of an acceptable medical surveillance program are listed in the Occupational Safety and Health Administration standards for asbestos.

Miscellaneous ACM: Interior asbestos-containing building material on structural components, structural members or fixtures, such as floor and ceiling tiles; does not include surfacing material or

thermal system insulation.

Negative Exposure Assessment: A demonstration by the employer which complies with criteria in paragraph (f)(2)(iii) of 29 CFR 1926.1101, that employee exposure during an operation is expected to be consistently below the PEL.

NESHAP: National Emission Standard for Hazardous Air Pollutants .EPA Rules under the Clean Air Act (40 CFR Part 61).

NIOSH: The National Institute for Occupational Safety and Health, which was established by the Occupational Safety and Health Act of 1970. Primary functions of NIOSH are to conduct research, issue technical information, and certify respirators.

O&M: Operations & Maintenance (O&M) Program. A program of work practices to maintain ACM in good condition, ensure clean up of asbestos fibers previously released, and prevent further release by minimizing and controlling ACM disturbance or damage.

Occupied Area: An area where personnel are present and are performing their normal activities intended for the area (such as in a typical office area from 8:00 to 5:00 p.m., Monday through Friday.)

OSHA: Occupational Health & Safety Administration.

PEL: Permissible Exposure Limit.

Personal Air Samples: An air sample taken with a sampling pump directly attached to the worker with the collecting filter and cassette placed in the worker's breathing zone. The OSHA Asbestos Standards and the EPA Worker Protection Rule require these samples.

PCM: Phase Contrast Microscopy (PCM) A method of analysis using a light microscope to find the concentration of airborne fibers. Does not distinguish among asbestos and other fibers. Used by OSHA to find personal exposures, and by EPA to find area levels for AHERA project clearance.

PLM: Polarized Light Microscopy.

Polarized Light Microscopy (PLM): A method of analysis using a light microscope to find the chemical or mineral types of samples, including the concentration of asbestos in bulk materials. Used by EPA for AHERA and NESHAP, and by OSHA to see if asbestos is involved in a project.

RCRA: Resource Conservation and Recovery Act.

Regulated ACM (RACM): As defined by NESHAP in the November 20, 1990 Federal Register, regulated asbestos-containing material (RACM) means (a) Friable asbestos material, (b) Category I nonfriable ACM that has become friable, (c) Category I nonfriable ACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II nonfriable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations regulated by this subpart.

> **Note:** Regulated ACM is an EPA NESHAP concept. OSHA makes no distinction between friable and non-friable asbestos.

"Cutting" means to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing or punching.

"Grinding" means to reduce to powder or small fragments and includes mechanical clipping or drilling.

Remove: For Operations and Maintenance work on ACM, "remove" refers to the removal of ACM as needed to perform a maintenance or repair O & M activity.

Survey: An asbestos survey is what EPA calls an inspection in the AHERA regulation. It consists of a visual and tactile inspection of a building to identify, quantify and assess the accessibility and condition of the ACM and suspected ACM present.

Thermal System Insulation (TSI): Asbestos-containing material applied to pipes, fittings, boilers, breeching, tanks, ducts or other interior structural components to prevent heat loss or gain or water condensation.

Time Weighted Average (TWA): In air sampling, this refers to the average air concentration of contaminants during a particular time period.

TSI: Thermal System Insulation.

Transmission Electron Microscopy (TEM): A method of analysis using an electron microscope, to find and analyze the concentration of airborne or bulk asbestos fibers and structures. Distinguishes among asbestos and other materials; can detect smaller asbestos fibers than does PCM. Used by EPA to find area concentrations for large AHERA project clearance.

TSCA: Toxic Substances Control Act.

TWA: Time Weighted Average.

Work Area: The area where asbestos-related work or removal operations are performed which is defined and/or isolated to prevent the spread of asbestos dust, fibers or debris, and entry by unauthorized personnel.

Work Practices: Procedures designed to be followed to avoid or minimize fiber release during activities affecting ACM.

11.0 STATUTORY AND REGULATORY REFERENCES

There are a number of federal regulations that must be complied with, or are related to, O&M operations. State and local regulations, which might be the same as, equivalent to, or more stringent than federal regulations, might also apply. These will influence the design of the O&M program and the O&M work procedures. The major federal regulations that affect O&M work are listed below:

Occupational Exposure to Asbestos, Tremolite,

Anthophyllite, and Actinolite; Final Rules
Title 29, Part 1910, Section 1001 and
Part 1926, Section *58* of the *Code of Federal Regulations*

Respiratory Protection
Title 29, Part 1910, Section 134 of the
Code of Federal Regulations, Construction Industry
Title 29, Part 1926, of the *Code of Federal Regulations*

Access to Employee Exposure and Medical Records
Title 29, Part 1910, Section 2 of the *Code of Federal Regulations*

Hazard Communication
Title 29, Part 1910, Section 1200 of the *Code of Federal Regulations*

Specifications for Accident Prevention Signs and Tags
Title 29, Part 1910, Section 145 of the *Code of Federal Regulations*

DOT: U. S. Department of Transportation, including but not limited to:

Hazardous Substances
Title 29, Part 171 and 172 of the *Code of Federal Regulations*

EPA: U. S. Environmental Protection Agency (EPA), including but not limited to:

Asbestos Abatement Projects; Worker Protection Rule
Title 40 Part 763, Sub-part G of the *Code of Federal Regulations*

Asbestos Hazard Emergency Response Act (AHERA) Regulation
Asbestos Containing Materials in Schools Final Rule & Notice
Title 40, Part 763, Sub-part E of the *Code of Federal Regulations*

Training Requirements of (AHERA) Regulation
Asbestos Containing Materials in Schools Final Rule & Notice
Title 40, Part 763, Sub-part E, Appendix C of the *Code of Federal Regulations*

National Emission Standard for Hazardous Air Pollutants (NESHAP)
National Emission Standard for Asbestos
Title 40, Part 61, Sub-part A, and Sub-part M (Revised Sub-part B) of the
Code of Federal Regulations

APPENDIX A

FOREST CITY RESIDENTIAL
ASBESTOS POLICY

DATE: October 2013 REF. NO.: 14.400
NEW ( ) REVISION (X) PAGE: 1 of 4

ASBESTOS AND ASBESTOS TRAINING

POLICY: Asbestos-safe work practices and Asbestos Awareness training are required of all associates at communities with known or presumed to have Asbestos Containing Building Materials (ACBM) and in accordance with the site-specific Asbestos O&M Manual.

Asbestos O&M Manual may specify additional associate and/or contractor training requirements designated by Federal/State/Municipal entities, including but not limited to refresher, Asbestos Contractor/Supervisor, or Asbestos Operations & Maintenance courses, advanced courses, etc. Maintenance Manager/Supervisor* is responsible for knowing the additional requirements and ensuring timely compliance.

Associates may ONLY perform asbestos related work, renovation, repairs, and/or clean-up as described within the site-specific Asbestos O&M Manual **and** MUST be pre-approved by Residential Maintenance & Engineering/Environmental Services. Associates are responsible for reporting any damaged ACBM to the Manager and/or Maintenance Manager.

This policy does not apply to communities built after 1981 or that are otherwise deemed exempt by Residential Maintenance & Engineering/Environmental Services. This policy may apply regardless of date built if it has been tested and found to contain ACBM. Some building materials manufactured after 1981 may contain ACBM.

*"Maintenance Manager" refers to any of the following positions depending on housing type: Maintenance Manager, Operations Manager, Maintenance Supervisor, or other position designated by site-specific Asbestos O&M Manual. General/Property Manager is responsible in the event of vacant Maintenance Manager position.

PROCEDURE:

1. A site-specific Asbestos O&M Manual is maintained at the community.
2. All associates are trained on asbestos/ACBM work practices and Asbestos Awareness at time of on-boarding and annually thereafter.
3. Maintenance Manager is responsible for:
   A. Maintaining Asbestos O&M Manual as current and accurate.

B. Training associates.

C. Ensuring training is completed in a timely manner.

1) On-boarding: Prior to 30th day after hire.

2) Annually: By BTAD-specified deadline.

D. Documenting all associate training.

E. Inspecting the condition of known or presumed ACBM at least once each year and filing such inspection report(s) in the community's Asbestos O&M Manual. The inspection form is provided within the Asbestos O&M Manual.

F. Accurately and appropriately handling inquiries regarding site asbestos/ACBM work practices, training, record keeping, and O&M Manual from associates, contractors, and/or inspectors.

G. Communicating, as early in the process as possible, all asbestos/ACBM issues to Residential Maintenance & Engineering/Environmental Services.

4. Notification Requirements

A. The presence of known or presumed asbestos must be communicated to associates, contractors, and residents.

1) Residents are notified at move-in.

B. Contractors are notified through a written clause in job specifications and by use of Uses the Disclosure to Contractor form provided in the Asbestos O&M Manual.

1) Associates are informed during on-boarding and annual asbestos training.

2) Post a warning sign (form F14.400A) at the entrance of mechanical room(s).

3) In the event of renovation or repairs to ACBM, additional resident and regulatory agency notifications are/may be required. All communications are to be coordinated, in advance, with Residential Maintenance & Engineering/Environmental Services.

5. Training Requirements

A. SkillPort Asbestos Awareness Course

1) Provide associate with SkillPort Quick Reference Guide (see Residential BTAD team site).

2) Assist with logging into SkillPort and locating the course.

3) Instruct associate to complete the course.

4) Verify successful completion of course and assessment.

B. Forest City Asbestos Policies

1) Review all asbestos policies with associate; ensure understanding of associate's job-specific roles related to asbestos/ACBM practices at the community (policies include, but are not limited to, those governing leasing/relocation, maintenance, vendors, and resident Lease Agreement, addenda, and notification).

2) Instruct that all persons and/or inquiries regarding asbestos, ACBM, asbestos work practices, asbestos policies, and/or Asbestos O&M Manual be directed to Manager or Maintenance Manager.

C. Site-Specifics

1) Discuss with the associate the site-specific known or presumed asbestos/ACBM risk(s) and related expectations of safe work practices.

2) Identify the specific location of known or presumed asbestos/ACBM.

3) Identify the specific location of the site-specific Asbestos O&M Manual.

4) Review the site-specific Asbestos O&M Manual.

D. Documentation

1) Provide and ensure all associates sign, date, and acknowledge completion of training on Training Log form 14.400B.

2) Compile ALL other asbestos-related training completed by all other associates within prior 12 months; will include all other required training specified in site-specific Asbestos O&M Manual.

3) Scan and email Training Log and other details prepared per the above to Residential BTAD. Residential Maintenance & Engineering/Environmental Services will review and approve.

4) Retain original documents with Asbestos O&M Manual.

5) Each associate who completes ANY training beyond the SkillPort Asbestos Awareness course MUST:

a. Enter the details of their training/certification into the ADP program (via ESS) as part of their career profile.

b. Print their career profile and add to on-site personnel file and Asbestos O&M Manual.

6. Questions

Manager and/or Maintenance Manager/Supervisor provide clarification and answers to associate questions during training.

Direct all asbestos/ACBM work-related inspections, claims, etc., site-specific Asbestos O&M Manual specified additional training requirements, and other questions, comments, and concerns to Residential Maintenance & Engineering/Environmental Services.

Direct all Awareness Training questions to Residential BTAD.

APPENDIX C

FORMS

Asbestos

DISCLOSURE TO CONTRACTORS & SUBCONTRACTORS

Name of Property: _____

Construction Date: _____

Asbestos Status: Known/Presumed

Pleased be advised that some building materials at this property are known or presumed to contain asbestos. It is the responsibility of the contractor or subcontractor to ensure proper training certification of employees at whatever level is needed for the work that will be done.

This property has a Asbestos O&M Program Manual which identifies locations of known or presumed asbestos and specifies that work practices be in accordance with applicable current state and federal regulations, including OSHA and EPA.

By signing below, the contractor or subcontractor acknowledges that:

- I have been informed of this property's asbestos status.
- I have been given access to the Asbestos O&M Program Manual noting locations of ACM or PACM.
- It is my company's responsibility to ensure proper training certification of our workers.
- My company will follow current applicable state and federal regulations.

_____

COMPANY NAME of contractor or subcontractor. PLEASE PRINT.

_____

AUTHORIZED REPRESENTATIVE of contractor or subcontractor. PLEASE PRINT.

_____

NOTIFICATION OF INTENTION TO DEMOLISH, REMOVE OR RENOVATE STRUCTURE(S) OR EQUIPMENT HAVING ASBESTOS-CONTAINING MATERIAL

Any owner or operator of a demolition or removal operation who intends to demolish any institutional, commercial, or industrial building or structure containing 260 or more linear feet of pipe covered with asbestos material or 160 or more square feet of asbestos material used on any duct, boiler, tank, reactor, turbine, furnace, or any surface must provide the appropriate regulatory agency with written notification prior to the start of work.

The notification consisting of the information outlined below should be submitted at least 10 days prior to the beginning of the demolition.

In cases where the asbestos material is **less than 160 square feet or less than 260 linear feet,** the notification will consist of the asterisk (*) items below and should be submitted at least 20 days in advance.

An owner or operator (contractor) must submit a complete notification postmarked as early as possible before a renovation operation begins if the amount of asbestos-containing material **is 160 or more square feet or 260 or more linear feet.** PLEASE ENCLOSE A COPY OF THE SPECIFICATIONS WITH THIS NOTIFICATION.

* *NOTE: Items preceded by an asterisk (*) must be reported when* ***less*** *than 160 square feet or 260 linear feet of material are to be removed.*

APPENDIX D

ASBESTOS REGULATIONS

..1926.1101(j)(3)

1926.1101(j)(3)

Requirements for Class IV work. Employers shall ensure that employees performing Class IV work within a regulated area comply with the hygiene practice required of employees performing work which has a higher classification within that regulated area. Otherwise employers of employees cleaning up debris and material which is TSI or surfacing ACM or identified as PACM shall provide decontamination facilities for such employees which are required by paragraph (j)(2) of this section.

1926.1101(j)(4)

Smoking in work areas. The employer shall ensure that employees do not smoke in work areas where they are occupationally exposed to asbestos because of activities in that work area.

1926.1101(k)

Communication of hazards.

1926.1101(k)(1)

This section applies to the communication of information concerning asbestos hazards in construction activities to facilitate compliance with this standard. Most asbestos-related construction activities involve previously installed building materials. Building owners often are the only and/or best sources of information concerning them. Therefore, they, along with employers of potentially exposed employees, are assigned specific information conveying and retention duties under this section. Installed Asbestos Containing Building Material. Employers and building owners shall identify TSI and sprayed or troweled on surfacing materials in buildings as asbestos-containing, unless they determine in compliance with paragraph (k)(5) of this section that the material is not asbestos-containing. Asphalt and vinyl flooring material installed no later than 1980 must also be considered as asbestos containing unless the employer, pursuant to paragraph (g)(8)(i)(I) of this section determines that it is not asbestos-containing. If the employer/building owner has actual knowledge, or should have known through the exercise of due diligence, that other materials are asbestos-containing, they too must be treated as such. When communicating information to employees pursuant to this standard, owners and employers shall identify "PACM" as ACM. Additional requirements relating to communication of asbestos work on multi-employer worksites are set out in paragraph (d) of this section.

1926.1101(k)(2)

Duties of building and facility owners.

1926.1101(k)(2)(i)

Before work subject to this standard is begun, building and facility owners shall determine the presence, location, and quantity of ACM and/or PACM at the work site pursuant to paragraph (k)(1) of this section.

1926.1101(k)(2)(ii)

Building and/or facility owners shall notify the following persons of the presence, location and quantity of ACM or PACM, at the work sites in their

buildings and facilities. Notification either shall be in writing, or shall consist of a personal communication between the owner and the person to whom notification must be given or their authorized representatives:

1926.1101(k)(2)(ii)(A)

Prospective employers applying or bidding for work whose employees reasonably can be expected to work in or adjacent to areas containing such material;

1926.1101(k)(2)(ii)(B)

Employees of the owner who will work in or adjacent to areas containing such material:

1926.1101(k)(2)(ii)(C)

On multi-employer worksites, all employers of employees who will be performing work within or adjacent to areas containing such materials;

1926.1101(k)(2)(ii)(D)

Tenants who will occupy areas containing such material.

1926.1101(k)(3)

Duties of employers whose employees perform work subject to this standard in or adjacent to areas containing ACM and PACM. Building/facility owners whose employees perform such work shall comply with these provisions to the extent applicable.

1926.1101(k)(3)(i)

Before work in areas containing ACM and PACM is begun; employers shall identify the presence, location, and quantity of ACM, and/or PACM therein pursuant to paragraph (k)(1) of this section.

1926.1101(k)(3)(ii)

Before work under this standard is performed employers of employees who will perform such work shall inform the following persons of the location and quantity of ACM and/or PACM present in the area and the precautions to be taken to insure that airborne asbestos is confined to the area.

1926.1101(k)(3)(ii)(A)

Owners of the building/facility;

1926.1101(k)(3)(ii)(B)

Employees who will perform such work and employers of employees who work and/or will be working in adjacent areas.

.1926.1101(k)(3)(iii)

1926.1101(k)(3)(iii)

Within 10 days of the completion of such work, the employer whose employees

have performed work subject to this standard, shall inform the building/facility owner and employers of employees who will be working in the area of the current location and quantity of PACM and/or ACM remaining in the area and final monitoring results, if any.

1926.1101(k)(4)

In addition to the above requirements, all employers who discover ACM and/or PACM on a worksite shall convey information concerning the presence, location and quantity of such newly discovered ACM and/or PACM to the owner and to other employers of employees working at the work site, within 24 hours of the discovery.

1926.1101(k)(5)

Criteria to rebut the designation of installed material as PACM.

1926.1101(k)(5)(i)

At any time, an employer and/or building owner may demonstrate, for purposes of this standard, that PACM does not contain asbestos. Building owners and/or employers are not required to communicate information about the presence of building material for which such a demonstration pursuant to the requirements of paragraph (k)(5)(ii) of this section has been made. However, in all such cases, the information, data and analysis supporting the determination that PACM does not contain asbestos, shall be retained pursuant to paragraph (n) of this section.

1926.1101(k)(5)(ii)

An employer or owner may demonstrate that PACM does not contain more than 1 percent asbestos by the following:

1926.1101(k)(5)(ii)(A)

Having a completed inspection conducted pursuant to the requirements of AHERA (40 CFR Part 763, Subpart E) which demonstrates that the material is not ACM; or

1926.1101(k)(5)(ii)(B)

1926.1101(k)(5)(ii)(B)

Performing tests of the material containing PACM which demonstrate that no ACM is present in the material. Such tests shall include analysis of bulk samples collected in the manner described in 40 CFR 763.86. The tests, evaluation and sample collection shall be conducted by an accredited inspector or by a CIH. Analysis of samples shall be performed by persons or laboratories with proficiency demonstrated by current successful participation in a nationally recognized testing program such as the National Voluntary Laboratory Accreditation Program (NVLAP) or the National Institute for Standards and Technology (NIST) or the Round Robin for bulk samples administered by the American Industrial Hygiene Association (AIHA) or an equivalent nationally-recognized round robin testing program.

1926.1101(k)(5)(iii)

The employer and/or building owner may demonstrate that flooring material including associated mastic and backing does not contain asbestos, by a

determination of an industrial hygienist based upon recognized analytical techniques showing that the material is not ACM.

1926.1101(k)(6)

At the entrance to mechanical rooms/areas in which employees reasonably can be expected to enter and which contain ACM and/or PACM, the building owner shall post signs which identify the material which is present, its location, and appropriate work practices which, if followed, will ensure that ACM and/or PACM will not be disturbed. The employer shall ensure, to the extent feasible, that employees who come in contact with these signs can comprehend them. Means to ensure employee comprehension may include the use of foreign languages, pictographs, graphics, and awareness training.

1926.1101(k)(7)

Signs.

1926.1101(k)(7)(i)

Warning signs that demarcate the regulated area shall be provided and displayed at each location where a regulated area is required to be established by paragraph (e) of this section. Signs shall be posted at such a distance from such a location that an employee may read the signs and take necessary protective steps before entering the area marked by the signs.

1926.1101(k)(7)(ii)(A)

The warning signs required by paragraph (k)(7) of this section shall bear the following information.

DANGER

ASBESTOS

CANCER AND LUNG DISEASE HAZARD

AUTHORIZED PERSONNEL ONLY

1926.1101(k)(7)(ii)(B)

In addition, where the use of respirators and protective clothing is required in the regulated area under this section, the warning signs shall include the following:

RESPIRATORS AND PROTECTION CLOTHING ARE REQUIRED IN THIS AREA

1926.1101(k)(7)(iii)

The employer shall ensure that employees working in and contiguous to regulated areas comprehend the warning signs required to be posted by paragraph (k)(7)(i) of this section. Means to ensure employee comprehension may include the use of foreign languages, pictographs and graphics.

1926.1101(k)(8)

Labels.

1926.1101(k)(8)(i)

Labels shall be affixed to all products containing asbestos and to all containers containing such products, including waste containers. Where feasible, installed asbestos products shall contain a visible label.

1926.1101(k)(8)(ii)

Labels shall be printed in large, bold letters on a contrasting background.

1926.1101(k)(8)(iii)

Labels shall be used in accordance with the requirements of 29 CFR 1910.1200 (f) of OSHA's Hazard Communication standard, and shall contain the following information:

DANGER
CONTAINS ASBESTOS FIBERS
AVOID CREATING DUST
CANCER AND LUNG DISEASE HAZARD

1926.1101(k)(8)(iv)

1926.1101(k)(8)(iv)

[Reserved]

1926.1101(k)(8)(v)

Labels shall contain a warning statement against breathing asbestos fibers.

1926.1101(k)(8)(vi)

The provisions for labels required by paragraphs (k)(8)(i) through (k)(8)(iii) of this section do not apply where:

1926.1101(k)(8)(vi)(A)

Asbestos fibers have been modified by a bonding agent, coating, binder, or other material, provided that the manufacturer can demonstrate that, during any reasonably foreseeable use, handling, storage, disposal, processing, or transportation, no airborne concentrations of asbestos fibers in excess of the permissible exposure limit and/or excursion limit will be released, or

1926.1101(k)(8)(vi)(B)

Asbestos is present in a product in concentrations less than 1.0 percent.

1926.1101(k)(8)(vii)

When a building owner or employer identifies previously installed PACM and/or ACM, labels or signs shall be affixed or posted so that employees will be notified of what materials contain PACM and/or ACM. The employer shall attach such labels in areas where they will clearly be noticed by employees who are likely to be exposed, such as at the entrance to mechanical room/areas. Signs required by paragraph (k)(6) of this section may be posted in lieu of labels so long as they contain information required for labelling. The employer shall ensure, to the extent feasible, that employees who come in contact with these signs or labels can comprehend them. Means to ensure employee comprehension may include the use of foreign languages, pictographs, graphics, and awareness

training.

1926.1101(k)(9)

Employee Information and Training.

1926.1101(k)(9)(i)

The employer shall, at no cost to the employee, institute a training program for all employees who are likely to be exposed in excess of a PEL and for all employees who perform Class I through IV asbestos operations, and shall ensure their participation in the program.

1926.1101(k)(9)(ii)

Training shall be provided prior to or at the time of initial assignment and at least annually thereafter.

1926.1101(k)(9)(iii)

Training for Class I operations and for Class II operations that require the use of critical barriers (or equivalent isolation methods) and/or negative pressure enclosures under this section shall be the equivalent in curriculum, training method and length to the EPA Model Accreditation Plan (MAP) asbestos abatement workers training (40 CFR Part 763, subpart E, appendix C).

1926.1101(k)(9)(iv)

Training for other Class II work.

..1926.1101(k)(9)(iv)(A)

1926.1101(k)(9)(iv)(A)

For work with asbestos containing roofing materials, flooring materials, siding materials, ceiling tiles, or transite panels, training shall include at a minimum all the elements included in paragraph (k)(9)(viii) of this section and in addition, the specific work practices and engineering controls set forth in paragraph (g) of this section which specifically relate to that category. Such course shall include "hands-on" training and shall take at least 8 hours.

1926.1101(k)(9)(iv)(B)

An employee who works with more than one of the categories of material specified in paragraph (k)(9)(iv)(A) of this section shall receive training in the work practices applicable to each category of material that the employee removes and each removal method that the employee uses.

1926.1101(k)(9)(iv)(C)

For Class II operations not involving the categories of material specified in paragraph (k)(9)(iv)(A) of this section, training shall be provided which shall include at a minimum all the elements included in paragraph (k)(9)(viii) of this section and in addition, the specific work practices and engineering controls set forth in paragraph (g) of this section which specifically relate to the category of material being removed, and shall include "hands-on" training in the work practices applicable to each category of material that the employee removes and each removal method that the employee uses.

1926.1101(k)(9)(v)

Training for Class III employees shall be consistent with EPA requirements for training of local education agency maintenance and custodial staff as set forth at 40 CFR 763.92(a)(2). Such a course shall also include "hands-on" training and shall take at least 16 hours. Exception: For Class III operations for which the competent person determines that the EPA curriculum does not adequately cover the training needed to perform that activity, training shall include as a minimum all the elements included in paragraph (k)(9)(viii) of this section and in addition, the specific work practices and engineering controls set forth in paragraph (g) of this section which specifically relate to that activity, and shall include "hands-on" training in the work practices applicable to each category of material that the employee disturbs.

1926.1101(k)(9)(vi)

Training for employees performing Class IV operations shall be consistent with EPA requirements for training of local education agency maintenance and custodial staff as set forth at 40 CFR 763.92(a)(1). Such a course shall include available information concerning the locations of thermal system insulation and surfacing ACM/PACM, and asbestos-containing flooring material, or flooring material where the absence of asbestos has not yet been certified; and instruction in recognition of damage, deterioration, and delamination of asbestos containing building materials. Such course shall take at least 2 hours.

1926.1101(k)(9)(vii)

Training for employees who are likely to be exposed in excess of the PEL and who are not otherwise required to be trained under paragraph (k)(9)(iii) through (vi) of this section, shall meet the requirements of paragraph (k)(9)(viii) of this section.

1926.1101(k)(9)(viii)

The training program shall be conducted in a manner that the employee is able to understand. In addition to the content required by provisions in paragraphs (k)(9)(iii) through (vi) of this section, the employer shall ensure that each such employee is informed of the following:

1926.1101(k)(9)(viii)(A)

Methods of recognizing asbestos, including the requirement in paragraph (k)(1) of this section to presume that certain building materials contain asbestos;

1926.1101(k)(9)(viii)(B)

The health effects associated with asbestos exposure;

1926.1101(k)(9)(viii)(C)

The relationship between smoking and asbestos in producing lung cancer;

1926.1101(k)(9)(viii)(D)

The nature of operations that could result in exposure to asbestos, the importance of necessary protective controls to minimize exposure including, as applicable, engineering controls, work practices, respirators, housekeeping procedures, hygiene facilities, protective clothing, decontamination procedures, emergency procedures, and waste disposal procedures, and any necessary

Instruction in the use of these controls and procedures; where Class III and IV work will be or is performed, the contents of EPA 20T-2003, "Managing Asbestos In-Place" July 1990 or its equivalent in content;

1926.1101(k)(9)(viii)(E)

The purpose, proper use, fitting instructions, and limitations of respirators as required by 29 CFR 1910.134;

1926.1101(k)(9)(viii)(F)

The appropriate work practices for performing the asbestos job;

1926.1101(k)(9)(viii)(G)

Medical surveillance program requirements;

1926.1101(k)(9)(viii)(H)

The content of this standard including appendices;

1926.1101(k)(9)(viii)(I)

1926.1101(k)(9)(viii)(I)

The names, addresses and phone numbers of public health organizations which provide information, materials and/or conduct programs concerning smoking cessation. The employer may distribute the list of such organizations contained in Appendix J to this section, to comply with this requirement; and

1926.1101(k)(9)(viii)(J)

The requirements for posting signs and affixing labels and the meaning of the required legends for such signs and labels.

1926.1101(k)(10)

Access to training materials.

1926.1101(k)(10)(i)

The employer shall make readily available to affected employees without cost, written materials relating to the employee training program, including a copy of this regulation.

1926.1101(k)(10)(ii)

The employer shall provide to the Assistant Secretary and the Director, upon request, all information and training materials relating to the employee information and training program.

1926.1101(k)(10)(iii)

The employer shall inform all employees concerning the availability of self-help smoking cessation program material. Upon employee request, the employer shall distribute such material, consisting of NIH Publication No, 89-1647, or equivalent self-help material, which is approved or published by a public health organization listed in Appendix J to this section.

1926.1101(l)

Housekeeping --

1926.1101(l)(1)

Vacuuming. Where vacuuming methods are selected, HEPA filtered vacuuming equipment must be used. The equipment shall be used and emptied in a manner that minimizes the reentry of asbestos into the workplace.

1926.1101(l)(2)

Waste disposal. Asbestos waste, scrap, debris, bags, containers, equipment, and contaminated clothing consigned for disposal shall be collected and disposed of in sealed, labeled, impermeable bags or other closed, labeled, impermeable containers except in roofing operations where the procedures specified in paragraph (g)(8)(ii) of this section apply.

1926.1101(l)(3)

Care of asbestos-containing flooring material.

1926.1101(l)(3)(i)

All vinyl and asphalt flooring material shall be maintained in accordance with this paragraph unless the building/facility owner demonstrates, pursuant to paragraph (g)(8)(i)(I) of this section that the flooring does not contain asbestos.

1926.1101(l)(3)(ii)

Sanding of flooring material is prohibited.

1926.1101(l)(3)(iii)

Stripping of finishes shall be conducted using low abrasion pads at speeds lower than 300 rpm and wet methods.

1926.1101(l)(3)(iv)

Burnishing or dry buffing may be performed only on flooring which has sufficient finish so that the pad cannot contact the flooring material.

.1926.1101(l)(4)

1926.1101(l)(4)

Waste and debris and accompanying dust in an area containing accessible thermal system insulation or surfacing ACM/PACM or visibly deteriorated ACM:

1926.1101(l)(4)(i)

shall not be dusted or swept dry, or vacuumed without using a HEPA filter;

1926.1101(l)(4)(ii)

shall be promptly cleaned up and disposed of in leak tight containers.

1926.1101(m)

Medical surveillance.

1926.1101(m)(1)

General --

1926.1101(m)(1)(i)

Employees covered.

1926.1101(m)(1)(i)(A)

The employer shall institute a medical surveillance program for all employees who for a combined total of 30 or more days per year are engaged in Class I, II and III work or are exposed at or above a permissible exposure limit. For purposes of this paragraph, any day in which a worker engages in Class II or Class III operations or a combination thereof on intact material for one hour or less (taking into account the entire time spent on the removal operation, including cleanup) and, while doing so, adheres fully to the work practices specified in this standard, shall not be counted.

1926.1101(m)(1)(i)(B)

For employees otherwise required by this standard to wear a negative pressure respirator, employers shall ensure employees are physically able to perform the work and use the equipment. This determination shall be made under the supervision of a physician.

1926.1101(m)(1)(ii)

Examination.

1926.1101(m)(1)(ii)(A)

The employer shall ensure that all medical examinations and procedures are performed by or under the supervision of a licensed physician, and are provided at no cost to the employee and at a reasonable time and place.

1926.1101(m)(1)(ii)(B)

Persons other than such licensed physicians who administer the pulmonary function testing required by this section shall complete a training course in spirometry sponsored by an appropriate academic or professional institution.

1926.1101(m)(2)

Medical examinations and consultations.

1926.1101(m)(2)(i)

Frequency. The employer shall make available medical examinations and consultations to each employee covered under paragraph (m)(1)(i) of this section on the following schedules:

1926.1101(m)(2)(i)(A)

Due to magnification limitations inherent in PLM, asbestos fibers in dimensions below the resolution capability of PLM may not be detected. Samples reported as <1% or none detected may require additional testing by TEM to confirm asbestos quantities. The above test report relates only to the items tested and may not be reproduced in any form without the express written approval of EMSL Analytical, Inc. EMSL's liability is limited to the cost of analysis. EMSL bears no responsibility for sample collection activities or analytical method limitations. Interpretation and use of test results are the responsibility of the client.

Re: Phase I ESA AAI User Questionnaire for property known as or located at:

1716000048 - Jonathan Rose Multifamily Portfolio

EBI Project #:
TBD

PHASE I ESA AAI USER QUESTIONNAIRE (ASTM E1527)

Dear User (Client),
Presented below is the User Questionnaire as cited in the Appendix X3 of ASTM Standard E 1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. This questionnaire is designed to address one of the requirements to satisfy the intent of the Standard, as noted in Section 1.1 of ASTM E 1527. Specifically, in order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownsfields Revitalization Act of 2001 (the "Brownfields Amendments"), the *User (the Client)* must provide the information addressed below (if available) to EBI. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete.

Thank you,

EBI Consulting

Subject Property Name: **1716000048 - Jonathan Rose Multifamily Portfolio**

1. Are you aware of any environmental cleanup liens against the Subject Property that are filed or recorded under federal, tribal, state or local law?

   Yes / No / Unknown / Not Applicable

   If yes, please attach a copy.

2. Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   Yes / No / Unknown / Not Applicable

   If yes, please attach a copy.

3. As the user of this ESA do you have any specialized knowledge or experience related to the Subject Property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Subject Property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? Or, do you have documentation (i.e., Phase I ESAs, Phase II subsurface investigations, Tank Removal reports, remedial reports, asbestos sampling and/or abatement reports, lead-based paint sampling and/or abatement reports, etc.) for the Subject Property that may be relevant to the Phase I ESA?

   Yes / No / Unknown / Not Applicable

   Comments: NO

4. Does the purchase price being paid for this Subject Property reasonably reflect the fair market value of the Subject Property?

   Yes / No / Unknown / Not Applicable

   If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Subject Property?

   Yes / No

   Comments: NO

5. Are you aware of commonly known or reasonably ascertainable information about the Subject Property that would help the environmental professional to identify conditions indicative of release or threatened releases? For example, as user,

   a. Do you know the past uses of the Subject Property?
   b. Do you know the specific chemicals that are present or once were present at the Subject Property?
   c. Do you know of spills or other chemical releases that have taken place at the Subject Property?
   d. Do you know of any environmental cleanups that have taken place at the Subject Property?

   Comments: NO

   Please attach copies of previous environmental reports prepared for the Subject Property.

6. As the user of this ESA, based on your knowledge and experience related to the Subject Property are there any obvious indicators that point to the presence or likely presence of contamination at the Subject Property?

   Yes / No / Unknown / Not Applicable

   Comments: No

Please be sure to attach copies of documentation, as available.

DRAFT

Part A. Compliance Findings for §50.4 Related Laws and Authorities.			
§ 50.4 Laws and Authorities	**Project is in Compliance**		**Source Documentation and Requirements for Approval**
	Yes	No	
16. Coastal Barrier Resources	✓		The Subject Property is not located within a State Coastal Management Zone, or a coastal barrier designated on a current FEMA flood map or Department of Interior coastal barrier resource map. No further action or investigation is recommended regarding this factor.
17. Floodplain Management (24 CFR Part 55)	✓		EBI reviewed the FEMA Flood Insurance Rate Map, Community Map #060137, Panel #1610F, dated September 26, 2008. According to this map, the Subject Property Flood Zone Determination appears to be Zone X, defined as an area outside the 100 and 500-year floodplains. No further action or investigation is recommended regarding this factor.
18. Historic Preservation (36 CFR Part 800)	✓		This assessment is being completed for an existing HUD loan going through a Transfer of Physical Assets (TPA) loan assumption rather than a new HUD MAP 223f loan. As such, SHPO correspondence is not necessary. If it is subsequently determined that any substantial renovation work is required, then SHPO correspondence may need to be completed at a later date.
19. Noise Abatement (24 CFR Part 51 Subpart B)	✓		The Subject Property is not located within 1,000 feet of a freeway, major highway, or busy road, 5 miles of a civil airport, 15 miles of a military airport or 3,000 feet of a railroad. No further action appears warranted regarding this factor.
20. Hazardous Operations (24 CFR Part 51 Subpart C)	✓		No current hazardous operations were observed during the site visit. No manufacturing, fabrication or assembly operations are conducted on site.
21. Airport Hazards (24 CFR Part 51 Subpart D)	✓		The Subject Property is not located within 3,000 feet from the end of a runway at a civil airport or 2-½ miles from the end of a runway at a military airport. No further action or investigation appears warranted regarding this factor.
22. Protection of Wetlands (E. O. 11990)	✓		There are no other surface water bodies, marshy areas or other visible indications of potential wetlands areas on the Subject Property. In addition, according to the NWI Wetlands Map, there are no wetland areas in the vicinity of the Subject Property. No further action or investigation appears warranted regarding this factor.
23. Toxic Chemicals and Radio-active Materials (§ 50.3(l))	✓		Within a one mile radius of the Project, there is no direct line of sight from any part of the Project to any hazard, nor is there a hazard in the near vicinity, which is not shielded from the Project by topography. No further action or investigation is recommended regarding this factor
24. Other § 50.4 authorities (e.g. endangered species, sole source aquifers, farmlands protection, flood insurance, environmental justice)	✓		Based on the urban nature of the surrounding properties and the developed nature of the subject property, EBI does not believe that the proposed refinancing of the Subject Property will adversely affect any endangered or threatened species or habitat. Therefore, no further action or investigation is recommended for this factor. The Subject Property is connected to the public sewer system. As such, no further action or investigation is recommended regarding this factor.

DRAFT

Part B. Environmental/Program Factors

Factors	Anticipated Impact/Deficiencies			Comments
	None	Minor	Major	
25. Unique Natural Features and Areas	✓			There are no unique or natural features associated with the Subject Property
26. Site Suitability, Access, and Compatability with surrounding development	✓			Neighboring properties include residential, hotel, and commercial development. EBI did not identify activities at the neighboring properties that would indicate a significant potential for recognized environmental conditions.
27. Soil Stability, Erosion, and Drainage	✓			The Subject Property is located within the Lower Californian physiographic province, which consists of coastal mountain ranges underlain by severely folded, faulted, commonly metamorphosed marine and continental sediments.
28. Nuisances and Hazards (natural and built)	✓			There is no direct line of sight from any part of the Subject Property to any hazard within a one-mile radius. Nor is there an off-site hazard in the near vicinity which is not shielded from the subject property by topography. Visual observations did not identify any surface markings indicating the existence of natural gas or petroleum pipelines at the Subject Property or adjacent properties.
29. Water Supply/Sanitary Sewers	✓			Municipal water service is provided to the Subject Property by the City of Los Angeles Department of Water and Power. Potable water is reportedly obtained from receives potable drinking water from Northern California, Colorado River, groundwater wells. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.
30. Solid Waste Disposal	✓			No improper solid waste storage was noted.
31. Schools, Parks, Recreation, And Social Services	✓			Educational and recreational and social service facilities are readily accessible.
32. Emergency Health Care, Fire and Police Services	✓			All emergency services are provided by the City of Los Angeles.
33. Commercial/Retail and Transportation	✓			The Subject Property is easily available to public transportation and retail centers.
34. Other		✓		The Subject Property is located with Seismic Zone 4 with a very high risk of seismic activity.

DRAFT

SAMPLE FIELD NOTES CHECKLIST

Project Number:	HUD Program: 223(f)
Project Name: Miramar Towers	
Location: 2000 Miramar Street, Los Angeles, California 90057	
Number of Dwelling Units: 157 ☐ New Construction ☐ Rehabilitation ☒ Other (Refinancing)	Project site is in a location described as: ☐ Central City ☐ Infill urban development ☒ In developed area ☐ Suburban ☐ In developing rural area
Note to Reader: An Environmental Assessment (EA) is a concise public document that a Federal agency must prepare in order to comply with the National Environmental Policy Act (NEPA) and the related Federal environmental laws and authorities. The EA must support decision making process and provide a clear rationale, justification, and documentation for ratings assigned.	

Instructions

It is recommended that this checklist be used be HUD staff who prepares the Environmental Assessment (EA; form HUD-4128). It will constitute full documentation for many factors on the EA, and partial documentation for others. It will avoid narrative reports and expedite the environmental review process. This checklist, which is a slightly revised version of Appendix C of Handbook 1390.2, should be used pending revision of Handbook 1390.2.

- The number for each checksheet topic is the number that appears on form HUD-4128. Also, each checklist title/heading is followed be a reference to where the topic appears in the current Handbook 1390.2.

Before the site visit, review the Phase I and all background information submitted with the application (if applicable). During the site visit, the preparers of form HUD-4128 are to: (i) answer all relevant questions on this checklist; (ii) use the spaces provided for comments to include supplemental information as well as to record any recommended mitigation measures or requirements for project approval; (iii) key your answers to the relevant questions (using additional sheets of paper to provide more detailed information); and (iv) use the spaces provided for source documentation to cite the information source used (e.g., title of a technical report, map, or special study; site inspection/field observation; name and location of the qualified data source(s) that provided the information, for example, the local planning agency, the local housing and/or community development agency, the State environmental protection agency, the State Historic Preservation Officer, or other qualified data source.)

Preparers are to obtain and use, as appropriate, any environmental report (Federal, State, or local) that may have already been prepared for the property or area in which the property is located.

Several different types of maps will be useful in completing the review, such as the project plan or plot map, a location map showing major features and facilities in the vicinity, the USGS topographic map and FEMA flood map for the site area, and zoning/land use maps. ***Many of the conditions can and should be recorded directly on the project plan.*** Distances to major features and facilities (e.g., schools and fire stations) and a description of the surrounding area are examples. The plan can then be referenced as "source documentation" on form HUD-4128.

9. Environmental Report

List the Federal, State, and local agencies contacted to obtain their existing environmental reports and other data for the HUD environmental review for the proposed project:

List the major reports obtained: (attach the report(s) or otherwise list the title, author, publication date)

10. Planning Findings

Is the project in compliance or conformance with the local zoning?
☒ Yes ☐ No ☐ Not Applicable (If no or not applicable, explain)

Is the project located within a coastal zone management zone (CZM)?
☐ Yes ☒ No ☐ Not Applicable
If your answer is YES, the State Coastal Zone Management (CZM) Agency must make a finding that the project is consistent with the approved State CZM program Is the State's finding attached to this checksheet?

DRAFT

☐ Yes ☐ No
Comments: The Subject Property is not located within a State Coastal Management Zone, or a coastal barrier designated on a current FEMA flood map or Department of Interior coastal barrier resource map. No further action or investigation is recommended regarding this factor.

Is the project in compliance with the air quality State Implementation Plan (SIP)?
☐ Yes ☐ No ☒ Not Applicable

Comments: _____

Source Documentation: _____

Are there any unresolved conflicts concerning the use of the site?
☐ Yes ☒ No
If your answer is YES, briefly explain: _____

16. Coastal Barrier Resources

Is the project located within a coastal barrier designated on a current FEMA flood map or Department of Interior coastal barrier resources map?
☐ Yes ☒ No
If your answer is YES, the law prohibits Federal funding of projects in designated coastal barriers.
Comments: None

17. Flood Management (24 CFR Part 55) (see CF 3 and 4 of Handbook 1390.2)

Is the project located within a floodplain designated on a current FEMA flood map?
☐ Yes ☒No Identify FEMA flood map used to make this finding:
Community Name and Number: City of Los Angeles, Community Map #060137
Map Panel Number and Date of Map Panel: Panel #1610F, dated September 26, 2008
If you answer is YES, use § 55.12 and the floodplain management Decision making process (§ 55.20) to comply with 24 CFR Part 55.
Comments: _____
Source documentation: (attach § 55.20 analysis) _____

18. Historic Preservation (see CF 2 of Handbook 1390.2)

Has the SHPO been notified of the project and requested to provide comments?
☐ Yes ☒ No
Is the property listed on or eligible for listing on the National Register of Historic Places?
☐ Yes ☒ No
Is the property located within or directly adjacent to an historic district?
☐ Yes ☒ No
Does the property's area of potential effects include an historic district or property?
☐ Yes ☒ No
If your answer is Yes to any of the above questions, consult with the State Historic Preservation Officer (SHPO) and comply with 36 CFR part 800.
Has the SHPO been or is being advised of HUD's finding?
☐ Yes ☒ No
Comments: This assessment is being completed for an existing HUD loan going through a Transfer of Physical Assets (TPA) loan assumption rather than a new HUD MAP 223f loan. As such, SHPO correspondence is not necessary. If it is subsequently

DRAFT

determined that any substantial renovation work is required, then SHPO correspondence may need to be completed at a later date.
Source documentation

19. Noise Abatement (see CF 1 of Handbook 1390.2)

Is the project located near a major noise source, i.e., civil airports (within 5 miles), military airfields (15 miles), major highways or busy roads (within 1000 feet), or railroads (within 3000 feet)?

☐ Yes ☒ No
If your answer is YES, comply with 24 CFR 51, Subpart B which requires a noise assessment for proposed new construction. Use adopted DNL contours if the noise source is an airport.
Comments: None
Source documentation: Visual observations and area maps

20. Hazardous Industrial Operations (see CF 5 of Handbook 1390.2)

Are industrial facilities handling explosive or fire-prone materials such as liquid propane, gasoline or other storage tanks adjacent to or visible from the project site?
☐ Yes ☒ No
If your answer is YES, use HUD Hazards Guide and comply with 24 CFR Part 51, Subpart C.
Comments: No industrial facilities handling explosive or fire-prone materials such as liquid propane, gasoline or other storage tanks are adjacent to or visible from the Subject Property. No further action or investigation is recommended regarding this factor.

21. Airport Hazards (see CF 5 of Handbook 1390.2)

Is the project within 3,000 feet from the end of a runway at a civil airport?
☐ Yes ☒ No
Is the project within 2-1/2 miles from the end of a runway at a military airfield?
☐ Yes ☒ No
If your answer is YES to either of the above questions, comply with 24 CFR Part 51, Subpart D.
Comments:

Source documentation: Visual and Map Observations

22. Protection of Wetlands (E.O. 11990) (see CF 3 and 4 of Handbook 1390.2)

Are there drainage ways, streams, rivers, or coastlines on or near the site?
☐ Yes ☒ No
Are there ponds, marshes, bogs, swamps or other wetlands on or near the site?
☐ Yes ☒ No
For projects proposing new construction and/or filling, the following applies:
Is the project located within a wetland designated on a National Wetlands Inventory map of the Department of the Interior (DOI)?
☐ Yes ☐ No
If your answer is YES, E.O. 11990, Protection of Wetlands, discourages Federal funding of new construction or filling in wetlands and compliance is required with the wetlands decision-making process (§ 55.20 of 24 CFR Part 55. Use proposed Part 55 published in the Federal Register on January 1, 1990 for wetland procedures).
Comments: None

Source documentation: (attach § 55.20 analysis for new construction and/or filling) NWI Inventory Maps and site observations

DRAFT

23. Toxic Chemicals and Radioactive Materials (see CF 5 of Handbook 1390.2)

Has a Phase I (ASTM) Report been submitted and reviewed?
☒ Yes ☐ No
If your answer is NO, is a Phase I (ASTM) report needed?
☐ Yes ☐ No
Are there issues that require a special/specific Phase II report before completing the environmental assessment?
☐ Yes ☒ No
Is the project site near an industry disposing of chemicals or hazardous wastes?
☐ Yes ☒ No
Is the site listed on an EPA Superfund National Priorities or CERCLA, or equivalent State list?
☐ Yes ☒ No
Is the site located within 3,000 feet of a toxic or solid waste landfill site?
☐ Yes ☒ No
Does the site have an underground storage tank?
☐ Yes ☒ No
If your answer is YES to any of the above questions, use current techniques by qualified professionals to undertake investigations determined necessary and comply with § 50.3(i).

Are there any unresolved concerns that could lead to HUD being determined to be a Potential Responsible Party (PRP)?
☐ Yes ☒ No
Comments: None
Source documentation: (attach § 55.20 analysis for new construction and/or filling) Visual observations

24. Other

a. Endangered Species (see EF 3.4 of Handbook 1390.2)
Has the Department of Interior list of Endangered Species and Critical Habitats been reviewed?
☐ Yes ☒ No
Is the project likely to affect any listed or proposed endangered or threatened species or critical habitats?
☐ Yes ☒ No
If your answer is YES, compliance is required with Section 7 of the Endangered Species Act, which mandates consultation with the Fish and Wildlife Service in order to preserve the species.
Comments: Based on the refinancing of an existing property or an existing development, impacts to endangered/threatened species or habitats are not anticipated and no further action is recommended regarding this factor.
Source documentation: Site observations

b. Sole Source aquifers

Will the proposed project affect a sole source or other aquifer?
☐ Yes ☒ No
Comments: The Subject Property is connected to the public sewer system and therefore no vicinity or local aquifers will be affected.
Source documentation: Site interviews

c. Farmlands Protection (see EF 3.3 of Handbook 1390.2)
If the site or area is presently being farmed, does the project conform with the Farmland Protection Policy Act and HUD policy memo?
☐ Yes ☒ No
If your answer is YES, compliance is required with 7 CFR Part 658, Department of Agriculture regulations implementing the Act.

Comments: N/A – Not farmland
Source documentation:

DRAFT

d. Flood Insurance

Is the building located or to be located within a Special Flood Hazard Area identified on a current Flood Insurance Rate Map (FIRM)?

☐ Yes ☒ No

If your answer is YES, flood insurance protection is required for buildings located or to be located within a Special Flood Hazard Area as a condition of approval of the project. In addition, compliance with § 55.12 and the floodplain management decisionmaking process (§ 55.20) is required (refer to item #17 above). Document the map used to determine Special Flood Hazard Area in above item #17 pertaining to community name and number, map panel number and date of map panel.

e. Environmental Justice

Is the project located in a predominantly minority and low-income neighborhood?

☐ Yes ☒ No

Does the project site or neighborhood suffer from disproportionately adverse environmental effects on minority and low-income populations relative to the community-at-large?

☐ Yes ☒ No

If your answer is YES, compliance is required with E.O. 12898, Federal Actions to Address Environmental Justice.

Comments: _____

_____

_____

Source documentation: _____

25. Unique Natural Features and Areas (see EF 3.2 of Handbook 1390.2)

Is the site near natural features (i.e., bluffs or cliffs) or near public or private scenic areas?

☐ Yes ☒ No

Are other natural resources visible on site or in vicinity? Will any such resources be adversely affected or will they adversely affect the project?

☐ Yes ☒ No

Comments: _____

_____

_____

26. Site Suitability, Access, and Compatibility with Surrounding Development (see EF 1.1 and 1.3 of Handbook 1390.2)

Has the site has been used as a dump, sanitary landfill or mine waste disposal area?

☐ Yes ☒ No

Is there paved access to the site?

☒ Yes ☐ No

Are there other unusual conditions on site?

☐ Yes ☒ No

Is there indication of:

distressed vegetation	☐ Yes ☒ No	oil/chemical spills	☐ Yes ☒ No
waste material/containers	☐ Yes ☒ No	abandoned machinery, cars, refrigerators, etc.	☐ Yes ☒ No
soil staining, pools of liquid	☐ Yes ☒ No		
loose/empty drums, barrels	☐ Yes ☒ No	transformers, fill/vent pipes, pipelines, drainage structures	☒ Yes ☐ No

Is the project compatible with surrounding area in terms of:

Land use	☒ Yes ☐ No	Building type (low/high-rise)	☒ Yes ☐ No
Height, bulk, mass	☒ Yes ☐ No	Building density	☒ Yes ☐ No

Will the project be unduly influenced by:

Building deterioration	☐ Yes ☒ No	Transition of land uses	☐ Yes ☒ No

DRAFT

Postponed maintenance	☐ Yes ☒ No	Incompatible land uses	☐ Yes ☒ No
Obsolete public facilities	☐ Yes ☒ No	Inadequate off-street parking	☐ Yes ☒ No

Are there air pollution generators nearby which would adversely affect the site:

Heavy industry	☐ Yes ☒ No	Large parking facilities, (1000 or more cars).	☐ Yes ☒ No
Incinerators	☐ Yes ☒ No		
Power generating plants	☐ Yes ☒ No	Heavy traveled highway (6 or more lanes)	☐ Yes ☒ No
Oil refineries	☐ Yes ☒ No		
Cement plants	☐ Yes ☒ No	Other	☐ Yes ☒ No

Comments: Utility-owned transformer – no leaks or stains.

27. Soil Stability, Erosion, and Drainage (see EF 1.2 of Handbook 1390.2)

Slopes: ☐ Not Applicable ☐ Steep ☒ Moderate ☐ Slight

Is there evidence of slope erosion or unstable slope conditions on or near the site?
☐ Yes ☒ No

Is there evidence of ground subsidence, high water table, or other unusual conditions on the site?
☐ Yes ☒ No

Is there any visible evidence of soil problems (foundations cracking or settling, basement flooding, etc.) in the neighborhood of the site?
☐ Yes ☒ No

Have soil studies or borings been made for the project site or the area?
☐ Yes ☐ No ☒ Unknown

Do the soil studies or borings indicate marginal or unsatisfactory soil conditions?
☐ Yes ☐ No

Is there indication of cross-lot runoff, swales, drainage flows on the property?
☐ Yes ☒ No

Are there visual indications of filled ground?
☐ Yes ☒ No

If your answer is YES, was a 79(g) report/analysis submitted?
☐ Yes ☐ No

Are there active rills and gullies on site?
☐ Yes ☒ No

If the site is not to be served by a municipal waste water disposal system, has a report of the soil conditions suitable for on-site septic systems been submitted?
☐ Yes ☐ No ☒ N.A.

Is a soils report (other than structural) needed?
☐ Yes ☒ No

Are structural borings or a dynamic soil analysis/geological study needed?
☐ Yes ☒ No

Comments: _____
Source documentation: _____
_____

DRAFT

28. Nuisances and Hazards (see EF 1.3 and 1.4 of Handbook 1390.2)

Will the project be affected by natural hazards:

Faults, fracture	☐ Yes ☒ No	Fire hazard materials	☐ Yes ☒ No
Cliffs, bluffs, crevices	☐ Yes ☒ No	Wind/sand storm concerns	☐ Yes ☒ No
Slope-failures from rains	☐ Yes ☒ No	Poisonous plants, insects, animals	☐ Yes ☒ No
Unprotected water bodies	☐ Yes ☒ No	Hazardous terrain features	☐ Yes ☒ No

Will the project be affected by built hazards and nuisances:

Hazardous street	☐ Yes ☒ No	Inadequate screened	☐ Yes ☒ No
Dangerous intersection	☐ Yes ☒ No	drainage catchments	
Through traffic	☐ Yes ☒ No	Hazards in vacant lots	☐ Yes ☒ No
Inadequate separation of	☐ Yes ☒ No	Chemical tank-car terminals	☐ Yes ☒ No
pedestrian/vehicle traffic		Other hazardous chemical storage	☐ Yes ☒ No
Children's play areas located next to freeway or other high traffic way	☐ Yes ☒ No	High-pressure gas or liquid petroleum transmission lines on site	☐ Yes ☒ No
Inadequate street lighting	☐ Yes ☒ No	Overhead transmission lines	☐ Yes ☒ No
Quarries or other excavations	☐ Yes ☒ No	Hazardous cargo transportation routes	☐ Yes ☒ No
Dumps/sanitary landfills or mining	☐ Yes ☒ No	Oil or gas wells	☐ Yes ☒ No
Railroad crossing	☐ Yes ☒ No	Industrial operations	☐ Yes ☒ No

Will the project be affected by nuisances:

Gas, smoke, fumes	☐ Yes ☒ No	Unsightly land uses	☐ Yes ☒ No
Odors	☐ Yes ☒ No	Front-lawn parking	☐ Yes ☒ No
Vibration	☐ Yes ☒ No	Abandoned vehicle	☐ Yes ☒ No
Glare from parking area	☐ Yes ☒ No	Vermin infestation	☐ Yes ☒ No
Vacant/boarded-up	☐ Yes ☒ No	Industrial nuisances	☐ Yes ☒ No
Buildings		Other _____	☐ Yes ☒ No

Comments: _____

Source documentation: _____

29. Water, Supply, Sanitary Sewers, and Solid Waste Disposal (see EF 2.1, 2.2, and 2.4 of Handbook 1390.2)

Is the site served by an adequate and acceptable:
water supply
☒ Yes ☐ No ☒ Municipal ☐ Private;

sanitary sewers and waste water disposal systems
☒ Yes ☐ No ☒ Municipal ☐ Private;

and trash collection and solid waste disposal
☒ Yes ☐ No ☐ Municipal ☒ Private.

If the water supply is non-municipal, has an acceptable "system" been approved by appropriate authorities and agencies?
☐ Yes ☐ No

If the sanitary sewers and waste water disposal systems are non-municipal, has an acceptable "system" been approved by appropriate authorities and agencies?
☐ Yes ☐ No
Comments: _____

DRAFT

Source documentation: _____

31. Schools, Parks, Recreation, and Social Services (see U/EF 4, 5, and 6 of Handbook 1390.2)

Will the local school system have the capability to service the potential school age children from the project?
☒ Yes ☐ No

Are parks and play spaces available on site or nearby?
☒ Yes ☐ No

Will social services be available on site or nearby for residents of the proposed project?
☒ Yes ☐ No
Comments: _____

Source documentation: _____

32. Emergency Health Care, Fire and Police Services (see U/EF 7, 8, and 9 of Handbook 1390.2)

Are emergency health care providers located within reasonable proximity to the proposed project?
☒ Yes ☐ No Approximate response time: less than 5 min.

Are police services located within reasonable proximity to the proposed project?
☒ Yes ☐ No Approximate response time: less than 3 min.

Is fire fighting protection (X) municipal ( ) volunteer adequate and equipped to service the project?
☒ Yes ☐ No Approximate/estimated response time: less than 5 min.
Comments: _____

Source documentation _____

33. Commercial/Retail and Transportation (see U/EF 10 and 11 of Handbook 1390.2)

Are commercial/retail shopping services nearby?
☒ Yes ☐ No

Is the project accessible to employment, shopping and services by
☒ public transportation or ☒ private vehicle?

Is adequate public transportation available from the project to these facilities?
☒ Yes ☐ No

Are the approaches to the project convenient, safe and attractive?
☒ Yes ☐ No

11. Conditions and Requirements for Approval:

Are mitigation measures required?
☒ Yes ☐ No

If your answer is YES, list and describe: Continue implementation of existing asbestos O&M plan.

DRAFT

Brief Description of the Project: The Subject Property includes one irregular-shaped parcel, totaling approximately 2.77 acres. The Subject Property is currently improved with a 157-unit multifamily residential complex, including one eight-story, concrete slab-on-grade apartment building known as Miramar Towers. Additional structures and amenities include the following: one-story leasing office/clubhouse building with a library, a billiard room, and recreation room and laundry room located in the ground floor of the tower building. There are no basements present beneath the existing structures. The existing improvements were reportedly constructed in 1980.

Field Inspection on: February 19, 2016

Home: 562.947.9413

SUMMARY OF EXPERIENCE

Mr. Renato a. Nalupa, P.E. has over 25 years extensive experience in conducting property condition assessments, physical needs assessment, phase i environmental site assessments, and energy audits for property owners, property management groups, mortgages bankers, and other consultants. He is registered mechanical engineer in the state of California and AHERA asbestos building inspector.

RELEVANT PROJECT EXPERIENCE

Mr. Nalupa has extensive experience on property condition assessments and evaluations of a variety of properties ranging from complicated properties such as high-rise office buildings (up to 72-stories), high-rise luxury hotels (up to 990 rooms), high-rise apartment buildings (up to 1,500 units), and retail shopping malls up to 2 million square feet. Experience with other property types includes nursing homes, mobile home parks, self, storage facilities, and light and heavy industrial facilities. Mr. Nalupa also has experience conducting energy audits and designs of HVAC and commercial refrigeration for commercial properties. His property condition assessment experience also includes the preparation of multi-year projection of anticipated immediate, short term, and capital expenditures. Mr. Nalupa has assisted with estimating probable maximum loss in seismic sensitive zones. During the property condition assessment process Mr. Nalupa has conducted studies and consultations integrated with various lenders and client requirements including: project capital needs assessments (PCNAS), HUD, ASTM, CMBS, Freddie Mac, Fannie Mae protocols; and CAL FHA load inspections with 35 to 55-year reserve analysis. Other property condition systems evaluated include ancillary items such as site drainage, pavement, sidewalks, landscaping, swimming pools, and appurtenant structures. He has worked on property acquisition or other real estate transactions located throughout the continental U.S. And from Guam to St. Lucia, west indies.

Mr. Nalupa's is an environmental professional, exceptionally qualified to execute a complete range of environmental services consisting of environmental site assessments (ESAS), and quality assurance reviews of documents prepared by other environmental consulting firms. He has managed and personally performed ESA, for work scopes including housing and urban development (HUD) ASTM, CMBS, Freddie Mac; and Fannie Mae protocol studies associated with commercial and residential development, and multi-site portfolios for national wireless communication companies including various tribal authorities.

Michael S. Ryniak
Program Manager
465 Shadow Mountain Dr.
Prescott, AZ 86301
Office: 928.227.4669 Mobile: 928.925.4173

SUMMARY OF EXPERIENCE

Michael S. Ryniak is an environmental scientist with more than 25 years of environmental industry experience specializing in environmental investigations and site assessments. Mr. Ryniak also has experience conducting NEPA assessments, subsurface investigations, as well as performing indoor air quality, asbestos, radon, lead paint, and lead water surveys. He has also prepared asbestos and lead paint operations and maintenance plans and moisture management plans.

Mr. Ryniak has conducted over 1,000 environmental site-acquisition assessments/due diligence assignments for a wide range of properties throughout the United States. These assessments have been performed to evaluate site conditions, potential off-site liabilities, environmental control systems, and site remediation costs in order to advise prospective buyers, current operators, and owners of potential and existing environmental concerns. Furthermore, as a supervisor, Mr. Ryniak has been responsible for the review and client technical relations for over 4,000 additional Phase I Environmental Site Assessments. Mr. Ryniak has worked with corporate environmental officers, numerous Wall Street lending institutions, legal counsel, governmental agencies, rating agencies, investment companies and real estate brokers to develop strategies for managing properties with environmental concerns.

At EBI Consulting, Mr. Ryniak provides Senior Level review and quality control of Phase I Site Assessments and Environmental Screening reports, as well as client support, managing selected client accounts. Mr. Ryniak has over five years experience concentrating on providing these services to HUD Lender clients. Additionally, Mr. Ryniak is involved in marketing outreach activities with local Arizona banks.

RELEVANT PROJECT EXPERIENCE

ENVIRONMENTAL SITE ASSESSMENTS: Mr. Ryniak has conducted ASTM Phase I Environmental Site Assessments, Environmental Site Screenings, and soil and groundwater sampling for various clients and has prepared Phase I and Phase II reports for a variety of properties located in the United States. These properties have included industrial, commercial, retail, and multi-family residential properties, as well as telecommunications sites. Mr. Ryniak has conducted assessments at numerous senior living facilities, including all levels of senior care. Mr. Ryniak has also conducted indoor air quality, radon, asbestos-containing materials, lead-based paint and lead water surveys. Mr. Ryniak participated in remedial investigation and feasibility studies for four Arizona "Superfund" sites in Phoenix and Tucson.

OPERATIONS & MAINTENANCE PLANS: Mr. Ryniak has prepared asbestos and lead paint operations and maintenance plans, and moisture management plans for a variety of commercial and multi-family residential facilities throughout the United States.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

BONNIE BRAE VILLAGE	208 S BONNIE BRAE ST	ENE 0 - 1/8 (0.120 mi.)	D18	27

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 06/22/2015 has revealed that there is 1 ERNS site within approximately 0.125 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 11/07/2015 has revealed that there are 22 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 11 EDR Hist Cleaner sites within approximately 0.25 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 23 RGA LUST sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	Caller states four 1-gallon containers of hydrochloric acid was abandoned on the sidewalk right above a dry storm drain catch basin. 1 gallon of the substance spilled and went into the dry storm drain, where it is contained. An outside contractor is responding for clean up. In addition, a 1 ft by 6 ft grass area was impacted and burned up.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

HOOVER STREET ELEMENTARY (Continued) **1005415540**

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/30/2015

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/30/2015

Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/12/2015
Date Data Arrived at EDR: 09/04/2015

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health

UTM Y (Meters):	3769711.2
Elevation:	399 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

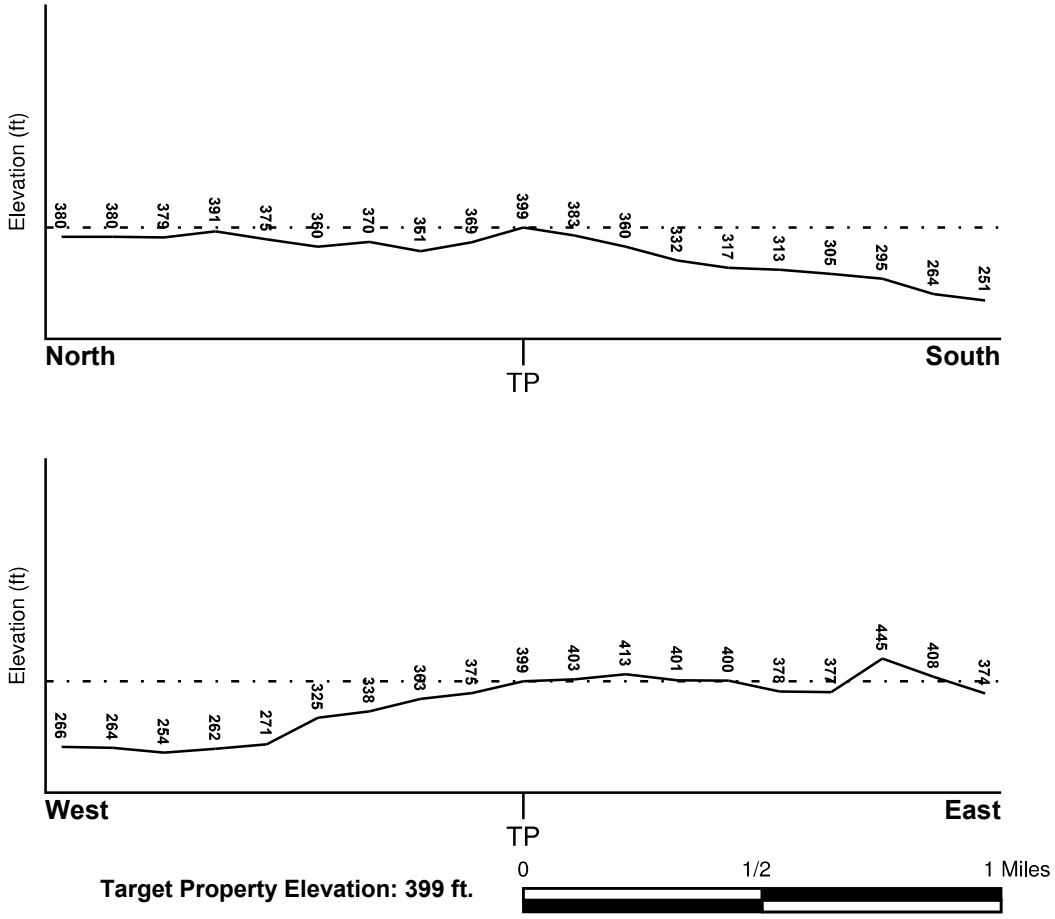
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
A1	0 - 1/8 Mile WNW	Not Reported
A2	0 - 1/8 Mile WNW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	HAMBRIGHT
Soil Surface Texture:	gravelly - loam
Hydrologic Group:	Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.
Soil Drainage Class:	Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 10 inches
Depth to Bedrock Max:	> 20 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
2	7 inches	16 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel. COARSE-GRAINED SOILS, Gravels, Gravels with fines, Clayey Gravel.	Max: 2.00 Min: 0.60	Max: 7.30 Min: 6.10
3	16 inches	20 inches	unweathered bedrock	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam
silty clay loam
shaly - clay loam
sandy loam
clay
loamy sand
clay loam

Surficial Soil Types: loam
silty clay loam
shaly - clay loam
sandy loam
clay
loamy sand
clay loam

Shallow Soil Types: silty clay

Deeper Soil Types: weathered bedrock
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

This Report contains certain products owned by or licensed by Tele Atlas North America, Inc. ("TANA") and licensed to EDR pursuant to an agreement between EDR and TANA (the "TANA Agreement"). Such products include the Dynamap®/2000 (commencing with the most current version, nationwide coverage, ArcInfo™format, tiled by county, with semi–annual Updates) and are referred to in this Report as the "Licensed Products".

The use of the Licensed Products with a non–TANA map may result in increased variance between the location displayed on the map and ground truth location.

The recipient of the Report (hereinafter referred to as an "End User") shall use such Report solely for its internal purposes and not for resale.

U.S. GOVERNMENT RIGHTS. If End User is an agency, department, or other entity of the United States Government, or funded in whole or in part by the United States Government, then use, duplication, reproduction, release, modification, disclosure or transfer of this commercial product and accompanying documentation, is restricted in accordance with the LIMITED or RESTRICTED rights as described in DFARS 252.227–7014(a)(1) (JUN 1995) (DOD commercial computer software definition), DFARS 227.7202–1 (DOD policy on commercial computer software), FAR 52.227–19 (JUN 1987) (commercial computer software clause for civilian agencies), DFARS 252.227–7015 (NOV 1995) (DOD technical data – commercial items clause); FAR 52.227–14 Alternates I, II, and III (JUN 1987) (civilian agency technical data and noncommercial computer software clause); and/or FAR 12.211 and FAR 12.212 (commercial item acquisitions), as applicable. In case of conflict between any of the FAR and DFARS provisions listed herein, the construction that provides greater limitations on the Government's rights shall control. Contractor/manufacturer is Tele Atlas North America, Inc., 11 Lafayette Street, Lebanon, NH 03766–1445. Phone: 603.643. 0330. The Licensed Products are ©1984–2008 by Tele Atlas North America, Inc. ALL RIGHTS RESERVED. For purpose of any public disclosure provision under any federal, state or local law, it is agreed that the Licensed Products are a trade secret and a proprietary commercial product and not subject to disclosure.

If End User is an agency, department, or other entity of any State government, the United States Government or any other public entity or funded in whole or in part by the United States Government, such End User agrees to protect the Licensed Products from public disclosure and to consider the Licensed Products exempt from any statute, law, regulation, or code, including any Sunshine Act, Public Records Act, Freedom of Information Act, or equivalent, which permits public access and/or reproduction or use of the Licensed Products. In the event that such exemption is challenged under any such laws, any and all right to retain any copies or to use of the Licensed Products shall be terminated and considered immediately null and void. Any copies of the Licensed Products held by End User shall immediately be destroyed. If any court of competent jurisdiction considers this clause void and unenforceable, in whole or in part, for any reason, then all Licensed Products previously delivered to End User will be destroyed.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

EXECUTIVE SUMMARY

Soil Component Name: HAMBRIGHT

Soil Surface Texture: gravelly - loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 20 inches

Soil Layer Information

	Boundary			Classification			
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**	**Permeability Rate (in/hr)**	**Soil Reaction (pH)**

RECORD SOURCES AND CURRENCY

To maintain currency of the following databases, EDR contacts the appropriate agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

PRP: Potentially Responsible Parties
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

A listing of verified Potentially Responsible Parties

Date of Government Version: 10/25/2013
Number of Days to Update: 3
Last EDR Contact :02/12/2016
Source: EPA
Telephone: 202-564-6023

RMP: Risk Management Plans
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

ENVIROSTOR: EnviroStor Database

Standard Environmental Record Source: State and tribal - equivalent CERCLIS

Search Distance: 0.333 Mile

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

HAZNET: Facility and Manifest Data

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Telephone: 530-666-8646

2020 COR ACTION: 2020 Corrective Action Program List
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Number of Days to Update: 94 Telephone: 703-412-9810
Last EDR Contact :02/19/2016

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

EPA WATCH LIST: EPA WATCH LIST
Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: Property

RECORD SOURCES AND CURRENCY

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

RECORD SOURCES AND CURRENCY

HISTORICAL USE RECORDS

RGA LF: Recovered Government Archive Solid Waste Facilities List

Standard Environmental Record Source: Exclusive Recovered Govt. Archives

Search Distance: Property

The EDR Recovered Government Archive Landfill database provides a list of landfills derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Resources Recycling and Recovery in California.

Date of Government Version: Not Reported
Number of Days to Update: 196
Last EDR Contact :06/01/2012

EDR Hist Auto: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.25 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: 02/20/2007

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

Standard Environmental Record Source: Historical Dry Cleaners

Search Distance: 0.25 Mile

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Date of Government Version: 02/20/2007

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

RECORD SOURCES AND CURRENCY

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW® Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

Preparation Date: March 9, 2016

This report was developed specifically for the radon assessment conducted at Miramar Towers, 2000 Miramar Street, Los Angeles, CA. This assessment was conducted in accordance with the American National Standards Institute (ANSI) document *Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings (ANSI/AARST MAMF-2012)* by Daniel Prater, a radon measurement professional credentialed by the National Radon Proficiency Program (NRPP).

5.0 Appendix E: Notification Documentation

Section 1.0 – Introduction and Summary

Protect Environmental was engaged to conduct a radon assessment of the multifamily property located at Miramar Towers, 2000 Miramar Street, Los Angeles, CA. The assessment was requested as part of a due diligence project being conducted by the client. The property is located within an EPA Zone 2 county, which indicates a moderate potential for radon.

The assessment was conducted between February 23, 2016 and February 25, 2016. A total of 21 measurement devices deployed in 19 residential units and 2 non-residential areas were included in the measurement and quality assurance project plan. For quality assurance purposes, 3 duplicate measurement devices and 2 field blank measurement devices were deployed. All devices were sent under appropriate chain of custody to a qualified analytical laboratory for analysis.

Based upon the analytical lab results, none of the residential units or non-residential areas contained radon concentrations above the EPA action level of $\geq$ 4.0 pCi/L. One device in 1 residential unit was not analyzed by the laboratory because of damage. The overall quality assurance plan for the project was determined to be within normal tolerances. Additional action is not required.

As part of a long-term monitoring plan, a follow up assessment is recommended every 5 years, or whenever significant changes to a building's structure or HVAC system occurs, to verify radon concentrations remain below the action level.

Section 2.0 – Scope of Work

The radon assessment included the following scope of work components:

1. Conducting an initial planning meeting with the client to review the project scope, information necessary to build the measurement and quality assurance project plan, required conditions and on-site logistics.

2. Preparing and implementing a measurement and quality assurance project plan for the assessment in accordance with the required measurement protocol.

3. Placing and retrieving the measurement devices, preparation of chain of custody documentation and shipping of the devices to a qualified analytical laboratory for analysis, and interpretation of the analytical laboratory data.

4. Providing the client with a written report of the assessment findings and recommendations.

Section 3.0 – Measurement Protocol and Quality Assurance

The assessment was conducted in accordance with the American National Standards Institute (ANSI) document *Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings (ANSI/AARST MAMF-2012)* by Daniel Prater, a radon measurement professional credentialed by the National Radon Proficiency Program (NRPP). Quality assurance measures included a minimum of 10% duplicate devices, a minimum of 5% field blank devices, and spiking of a minimum of 3% of the device batch utilized for the assessment.

Section 4.0 – Measurement Devices

Activated charcoal adsorption measurement devices manufactured and analyzed by Air Chek, Inc. were utilized for the assessment. All devices were forwarded under appropriate chain of custody for analysis by Air Chek, an analytical laboratory credentialed by the NRPP (#101138). Each device was deployed in accordance with the instructions provided by the manufacturer.

Section 5.0 – Measurement Conditions

Compliance with the measurement conditions and non-interference controls contained within the measurement protocol was verified by the field professional placing and retrieving the measurement devices. At the time of the assessment, violations of the required measurement conditions or evidence of device tampering were not observed by the field professional, unless noted within this report. Modifications to the measurement and quality assurance project plan were not made by the field professional, unless noted within this report.

Section 6.0 – Findings and Recommendations

The sole purpose of this assessment is to provide the client with information regarding the radon concentrations at the property at the time of the assessment. An uncertainty with any test result due to statistical variations and other factors, such as daily and seasonal variations in radon concentrations, does exist. Variations may occur due to changes in weather conditions, building usage or possible unobserved interference with the required measurement conditions. The findings and recommendations contained within this report are derived from information obtained from the client and property management, the on-site activities and analytical services provided under the scope of work performed. This assessment report was prepared solely for the use of the client. Use of this report by any party other than the client is prohibited without prior written consent from Protect Environmental.

The assessment was conducted between February 23, 2016 and February 25, 2016. A total of 21 measurement devices deployed in 19 residential units and 2 non-residential areas were included in the measurement and quality assurance project plan. For quality assurance purposes, 3 duplicate measurement devices and 2 field blank measurement devices were deployed. All devices were sent under appropriate chain of custody to a qualified analytical laboratory for analysis.

Based upon the analytical lab results, none of the residential units or non-residential areas contained radon concentrations above the EPA action level of $\geq$ 4.0 pCi/L. One device in 1 residential unit was not analyzed by the laboratory because of damage. The overall quality assurance plan for the project was determined to be within normal tolerances. Additional action is not required.

As part of a long-term monitoring plan, a follow up assessment is recommended every 5 years, or whenever significant changes to a building's structure or HVAC system occurs, to verify radon concentrations remain below the action level.

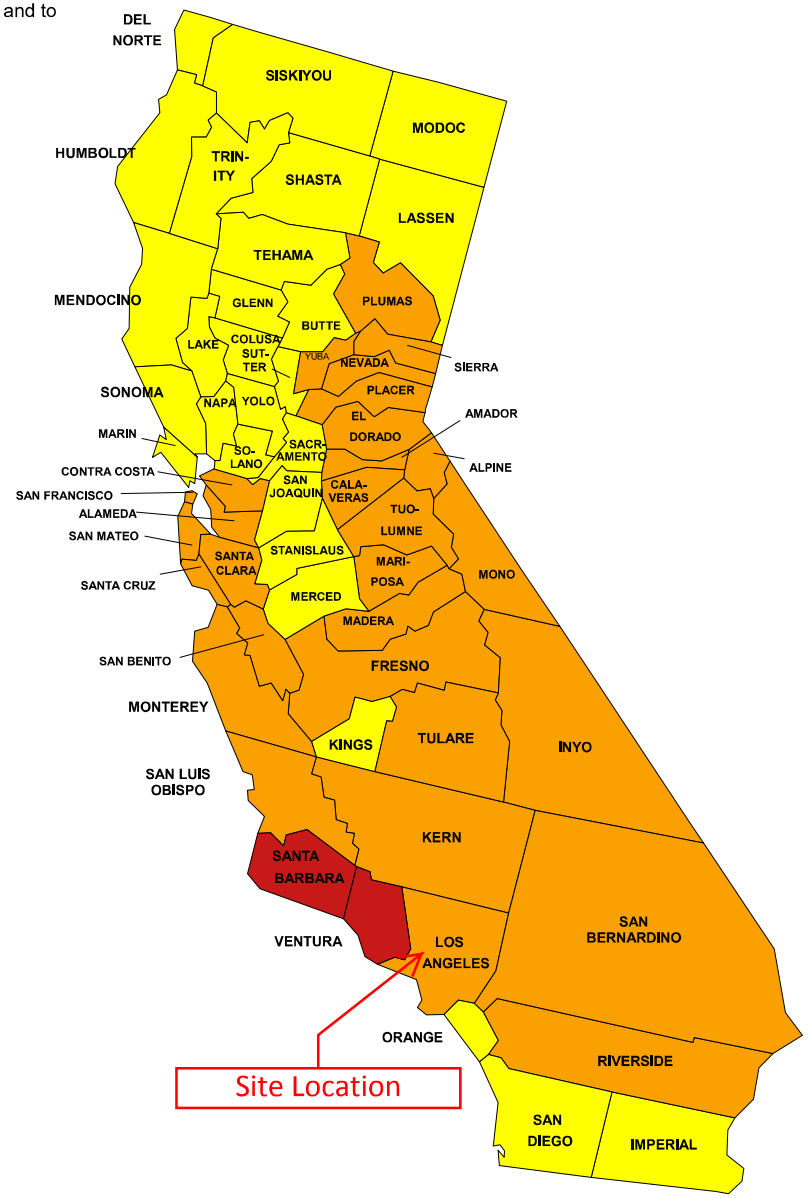
EPA Radon Zone Map

CALIFORNIA - EPA Map of Radon Zones



http://www.epa.gov/radon/zonemap.html

The purpose of this map is to assist National, State and local organizations to target their resources and to implement radon-resistant building codes.

This map is not intended to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones.

All homes should be tested, regardless of zone designation.

IMPORTANT: Consult the publication entitled "Preliminary Geologic Radon Potential Assessment of California" (USGS Open-file Report 93-292-I) before using this map. See http://energy.cr.usgs.gov/radon/grpinfo.html This document contains information on radon potential variations within counties. EPA also recommends that this map be supplemented with any available local data in order to further understand and predict the radon potential of a specific area.

Notification Documentation

Radon Measurement – Resident Notification (ST)

We will be conducting a radon assessment in your community. Your residence may be selected for placement of a measurement device. Access to your residence for purposes of placing and retrieving the measurement device may be necessary on the following dates:

Device Placement: **Tuesday, February 23, 2016**

Device Retrieval: **Thursday, February 25, 2016**

During the measurement period, regardless of whether or not a measurement device is placed in your residence, you are required to maintain the following conditions to ensure a valid measurement:

- All windows must be kept closed. All exterior doors must be kept closed, except for normal entry and exit. **Windows and doors must be kept closed for a period of 12 hours prior to the device placement date and remain closed effect until the devices are retrieved.**

- Whole house fans must not be operated. Window air conditioning units may only be operated in recirculation mode. Portable window fans must be removed from the window or sealed in place.

- Fireplaces or combustion appliances, other than water heaters and cooking appliances, must not be operated unless they are your primary heat source.

- Ceiling fans, portable air filters, portable de-humidifiers, portable humidifiers or window air conditioning units operating in recirculation mode must not be operated within 20' of the measurement device.

- If a device is placed in your unit, the measurement device must not be touched, tampered with, covered, removed or altered, and the location of the device must not be changed. Your HVAC system must be operated in the normal range – your thermostat should not be adjusted drastically and your fan should be set in normal mode.

The technician placing and retrieving the devices is required to report any failure to maintain closed-building conditions. Failure to maintain these conditions could result in an invalid measurement and require the measurement to be repeated.

Your assistance in helping to ensure a valid measurement in greatly appreciated! Contact your management office with questions regarding this notification.

Thank you.

PROTECT™
ENVIRONMENTAL

Radon Measurement – Responsible Party Notification (ST)

Date: February 19, 2016
Measurement Location: Miramar Towers 2000 Miramar Street, Los Angeles, CA
Measurement Period: 2/23/2016 through 2/25/2016

During the measurement period, the following conditions must be maintained in each residence (regardless of whether or not the unit contains a measurement device) and all common areas in the building to ensure a valid measurement:

- All windows must be kept closed. All exterior doors must be kept closed, except for normal entry and exit. **Windows and doors must be kept closed for a minimum period of 12 hours prior to device placement and remain closed until device retrieval.**
- Whole house fans must not be operated. Window air conditioning units may only be operated in recirculation mode. Portable window fans must be removed from the window or sealed in place.
- Fireplaces or combustion appliances, other than water heaters and cooking appliances, must not be operated unless they are the primary heat source.
- Ceiling fans, portable air filters, portable de-humidifiers, portable humidifiers or window air conditioning units operating in recirculation mode must not be operated within 20' measurement devices.
- The measurement device must not be touched, tampered with, covered, removed or altered, and the location of the device must not be changed. HVAC systems must be operated in the normal range – thermostats should not be adjusted drastically and air handlers should be set in normal mode.
- Unusual occurrences that could affect the measurement, such as power outages or extreme weather conditions, must be reported to Protect Environmental.

The technician placing and retrieving the devices is required to report any failure to maintain measurement conditions. Failure to maintain measurement conditions may result in an invalid measurement and require the measurement to be repeated.

As the responsible party for the measurement location listed above, I hereby acknowledge receipt of this Measurement Conditions Notification and agree to make reasonable efforts to ensure the conditions outlined herein are maintained throughout the measurement period.

Responsible Party

APPENDIX I

TERMINOLOGY

DRAFT

TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM E 1527-13. The Standard Practice should be referenced for further detail related definitions or additional explanation regarding the meaning of terms.

Recognized environmental condition (REC): The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment, 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment. De Minimis conditions are not recognized environmental conditions.

De Minimis conditions: Conditions that generally do not present threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de Minimis are not recognized environmental conditions or controlled recognized conditions.

Historical recognized environmental condition(s) (HER): A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time of the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time of the Phase I ESA, the condition shall be included in the conclusions section of the report as a recognized environmental condition,

Controlled recognized environmental condition(s) (CRECY): A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized condition shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report. NOTE: A condition identified as a controlled recognized environmental condition does not imply that the environmental professional has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be, implemented.

Material threat: A physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional, is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

Material impact to public health or environment: A substantial risk of harm to public health or the environment resulting from the presence or likely presence of an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. An example might include a release of a hazardous substance in concentrations exceeding applicable governmental agency standards under conditions that could reasonably and foreseeably result in substantial exposure to humans or substantial damage to natural resources. The risk of that exposure or damage would represent a material impact to public health or environment.

DRAFT

General risk of enforcement action: The likelihood that an environmental condition would be subject to enforcement action if brought to the attention of appropriate governmental agencies. If the circumstances suggest an enforcement action would be more likely than not, then the condition is considered a general risk of enforcement action.

Data failure: A failure to achieve the historical research objectives, even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. Data failure is one type of data gap.

Data gap: A lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by this practice, including, but not limited to site reconnaissance (for example, an inability to conduct the site visit), and interviews (for example, an inability to interview the key site manager, regulatory officials, etc.).

PHASE I ENVIRONMENTAL SITE ASSESSMENT
MIRAMAR TOWERS

EXECUTIVE SUMMARY

Surveys Inc. performed a Phase I Environmental Site Assessment of the Miramar Towers project located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The site inspections were conducted on April 27 & 30, 2018; November 1, 2018 and July 9, 2019. The site inspection consisted of a visual evaluation of the project site, building exteriors, interior common areas and typical resident units in the building. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed. A review of the pertinent readily available records of local, state and federal agencies, historical information, interviews with people knowledgeable and prior environmental reports was conducted.

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon. No potential vapor encroachment conditions were identified in connection with the subject property.

Interviews with people knowledgeable, aerial photograph studies, historical map reviews, prior environmental reports and regulatory database reviews did not indicate any evidence of hazardous materials being improperly used or disposed of at the site. There was no evidence of any chemical misuse, unlawful dumping or other sources of contamination to the site. There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground storage tanks were observed during the site reconnaissance.

The site inspection indicated there was no evidence of any soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, leaking equipment, unidentified hazardous materials or other unidentified substances were observed during the site reconnaissance. The stormwater catch basins appeared to be free of contaminants.

ENVIRONMENTAL SUMMARY CONTINUED:

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing. Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

Based on our review of the development and site use history, along with an examination of existing conditions at the site, we found no hazardous or toxic substances were identified as being improperly generated, used, stored or disposed of on the property. This includes materials defined under the Resource Conservation and Recovery Act (RCRA), and the information and data we have reviewed and documented in this report. No recognized environmental conditions were identified in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

ENVIRONMENTAL SUMMARY GRID

ENVIRONMENTAL STATUS	RESEARCH RESULTS	RECOMMENDS	ESTIMATES
Onsite Underground Storage Tanks	None Detected	None	$0.00
Stained or Discolored Surfaces	None Detected	None	$0.00

PHASE II REQUIREMENTS	**NONE**	**NONE**	**$0.00**

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon.

1.0 INTRODUCTION

PURPOSE

This Phase I Environmental Site Assessment of the Miramar Towers project is intended to determine whether there is a potential for significant environmental contamination based on readily available information about the site and a walk-through inspection. If this potential does exist, the Phase I Environmental Site Assessment indicates additional activity necessary to confirm evidence of significant environmental contamination.

This report presents the results of a Phase I Environmental Site Assessment of the Miramar Towers project at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Tower Preservation, LP., retained Surveys Inc. to perform the Phase I Environmental Site Assessment in order to determine if a potential for significant contamination exists at the subject property.

The assessment consisted of a visual and olfactory inspection of the site, interviews with people knowledgeable about the site, an historical review and a review of all pertinent records from local, state and federal agencies. The results of our Phase I Investigation are described in the following sections of this report.

LIMITATIONS, EXCEPTIONS, AND SIGNIFICANT ASSUMPTIONS

It should be noted when an assessment is completed without subsurface exploration or chemical screening of soils and groundwater beneath the site, as in this study, no statement of scientific certainty can be made regarding the latent subsurface conditions which may be the result of onsite or off-site sources. Thus, this report is not a definitive study of contamination at the site. An evaluation of the subsurface soils and groundwater was not included in this report.

The scope of the onsite assessment consisted of a visual evaluation of the project site, building exteriors, interior common areas and typical resident units in the buildings. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed.

This report has been prepared following the requirements outlined in ASTM E-1527-13 Standard Practice for Environmental Site Assessments. This report does not offer to be a legal opinion, representation, or interpretation of environmental laws, regulations or policies of the state, federal or local governmental agencies.

The environmental study conclusions, contained in this report, are professional opinions largely based upon third party data received and reviewed. While efforts have been made to substantiate the third party data, Surveys Inc. cannot guarantee its completeness or accuracy.

USER RELIANCE

This report has been prepared for, and can be relied upon by the Client, Miramar Tower Preservation, LP.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

The Miramar Towers project is located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The subject site lies at a slight angle to the north south lines of longitude therefore for the purposes of this report we consider Miramar Street to lie along the north side of the site. The site consists of an irregular rectangular shaped parcel. The building occupies the central portions of the site. The site topography is mostly level in the central portion of the site with down slopes toward 3rd Street to the south and Miramar Street towards the northwest. The site topography varies from +/- El. 100' in the central portions of site down to +/- El. 85' at the south side and northwest corner of the site.

The single-story Community Room is located on the north side of the building. There is an outside concrete patio and courtyard located along the west side of the Community Room. The Community Room includes a social room, kitchen, a game room area, rental offices, main entrance lobby, and the maintenance office and storage rooms.

The main vehicle entrance is from Miramar Street at the north central portion of the site where a controlled access gate is provided for the tenant parking lot area. Another main visitor vehicle entrance extends into the site from 3rd Street at the southeast portion of the site. The main tenant parking lot contains 38 parking stalls including seven (7) handicap stalls. The visitor parking lot contains seven parking stalls including one (1) handicap stall. All together there are 45 parking stalls including eight (8) handicap parking stalls provided. The main electrical transformer and emergency generator are located along the south side of the building. The building includes a trash chute and a trash room where steel dumpsters are provided. The dumpsters are rolled out to an area off of the south side of the building where the local refuse service empties the dumpsters at least weekly.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

The main building structure consists of precast and poured in place reinforced concrete platform frame construction. The building is located over a series of order cast pilings and reinforced concrete grade beams that extend in both directions beneath the first floor level reinforced concrete slab on grade. There are no basement areas. The 2nd to 8th floor structures consist of 4 inch reinforced precast concrete slabs with 4 inch reinforced concrete topping slabs creating 8" thick reinforced concrete flat plate structural slabs. Above the grade beams, the apartment building exterior walls and all bearing walls consist of 8" prestressed reinforced concrete construction. The typical wall panels consist of cellular core construction. The precast cells have field installed vertical reinforcing steel bars with poured in place concrete. The flat plate roof structure is of similar concrete construction as the flat plate concrete floor structures. The roofing systems consist of a modern TPO (thermal polyolefin) white reflective membrane provided. The flat roof deck slopes to a series of interior roof drains and there are also perimeter overflow scuppers provided. The original single pane, aluminum framed windows and sliding glass doors are still in service.

The typical building exterior walls consist of painted smooth surfaced and vertically grooved formed and poured precast concrete. The remaining exterior walls include steel studs and stucco exterior finish. All interior walls utilize metal studs. The landscaping on site includes large open grass lawn areas, medium to large shrubbery, large deciduous and evergreen trees, and with ground covers provided. The grass lawn areas are provided in the north and south courtyards. An automated irrigation system serves the landscape areas.

Hydronic hot water for the heating system is provided from a pair of rooftop mounted Raypak gas fired hot water boilers. The hot water recirculates via pumps provided to air handling units located in the unit ceilings. During the warmer summer season, chilled water to the units is from a pair of Carrier chillers that include two (2) high-efficiency screw compressors and an integral set of four air-coolers. Recirculating pumps are provided for the hydronic system. The hydronic system can either be heating or cooling. The common laundry room, rental office, community room and elevator equipment room utilize include split system A/C with interior evaporators and exterior condensing units. The split A/C systems remain in above average to good condition. The typical corridors are served by a rooftop gas fired forced air heating unit. Vertical transportation within the building has been provided by two (2) 8-stop 3,500-pound hydraulic elevators. The elevators were renovated in 2009.

Utilities and services provided to the property include water, sewer, electrical, natural gas trash and telephone. Electrical Power is provided City of Los Angeles Department of Water and Power, natural gas is provided by The Gas Company, Water is supplied by the City of Los Angeles. The City of Los Angeles provides the sanitary sewer services and storm water services. Electrical service is provided underground from a pad-mounted electrical transformer. Common dumpsters are provided for garbage and recycling service. A storm water drainage system has been provided for the site which includes concrete valley drains within landscaped areas and storm water catch basins located within the asphalt paved driveway and parking lot areas. The underground storm water piping and runoff discharge to a City of Los Angeles storm water main off the south side of the site.

2.0 SITE DESCRIPTION

ADJACENT PROPERTIES

North: Miramar Street followed by apartments and single family dwellings.

East: Apartments.

South: W 3rd Street followed by apartments, a motel and a retail strip center.

West: Apartments followed by eTown Inn.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

PHYSICAL SETTING

According to the USGS Topographical Map of the area (Hollywood, CA Quadrangle), the subject site is located at an average elevation of approximately 85 to 100 feet above sea level. The regional topography is relatively hilly and undulating. The local topography near the site slopes down moderately to the west and well as to the northwest and southwest. Local surficial and shallow groundwater, if present, would generally be expected to mimic the local topography and flow in a general westerly direction. Deeper, regional groundwater flow may vary significantly from the local topography. MacArthur Park Lake is located approximately ½ miles to the southwest.

According to the USDA Soil Conservation Service, Web Soil Survey, the dominant soil type in the vicinity of the subject site consists of Urban Land-Dapplegray complex, 5 to 20% slopes. Urban Land consists of areas that have been so greatly modified by urban works and structures that identification of the native soils is impractical. The Dapplegray series consists of very deep, well drained soils that formed in human-transported materials (HTM) on engineered hillslopes terraces in areas weathered from calcareous shale bedrock and other calcareous sedimentary rocks. The mean annual precipitation is about 383 mm and the mean annual temperature is about 17 degrees C.

According to the FEMA Flood Insurance Rate Map, Map #06037C1610F, with an effective date of September 26, 2008, the site is located within flood Zone X, outside the 100 and 500 year flood zone. A review of the National Wetlands Inventory Map did not reveal any designated wetlands on or directly adjacent to the subject property.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by the user, Miramar Tower Preservation, LP., with regard to this report.

TITLE RECORDS

We reviewed a Chain of Title Guarantee issued by Commonwealth Land Title Insurance Company, dated September 28, 2018, which identified the insured as Miramar Tower.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATION

No information regarding environmental liens or land use limitations was provided. Interviews with the property contacts indicated they were unaware of environmental liens or usage limitations related to environmental issues. A review of the available regulatory databases did not reveal any information related to environmental liens, land use or activity use limitations for the property related to environmental issues.

SPECIALIZED KNOWLEDGE

No specialized knowledge of environmental conditions associated with the property was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing or past environmental conditions associated with the subject property.

COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

No specialized knowledge of environmental conditions or similar relevant information was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing environmental conditions associated with the subject property. Interviews with local government officials also did not reveal any relevant information.

OWNER, PROPERTY MANAGER

Property contacts included Scott Frye with Jonathan Rose Company, the property ownership representative and the onsite property manager, Pam Roberson and the assistant property manager, Beverly Oh.

OTHER USER PROVIDED INFORMATION

A Phase I ESA Draft prepared by EBI Consulting dated March 2016, Asbestos Operations & Maintenance Plan dated October 2016, Asbestos Operations & Maintenance Program Manual dated April 2017, Rent Roll dated February 2018, and some of the original construction drawings were provided for review.

4.0 RECORDS REVIEW

STANDARD AND ADDITIONAL ENVIRONMENTAL RECORD SOURCES

As a part of our due-diligence, we retained Environmental Data Resources, Inc. (EDR) to provide a review of all major governmental databases for listings of potentially hazardous sites within the ASTM required search distances from the property. See the attached EDR Radius Map Report.

NPL

The National Priority List (NPL) includes sites reviewed (e.g., under CERCLIS) and considered as potential Superfund sites for the Environmental Protection Agency (EPA) Region 10. These sites have necessarily failed some aspect of EPA's CERCLA criteria regarding hazardous materials. Only sites with high enough health and environmental risk are proposed as NPL sites. There are **no** listed NPL sites located within a one-mile distance from the subject property.

Based upon the information reviewed, we conclude the potential for significant impact to the site from any NPL site is low.

DELISTED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria the EPA uses to delete sites from the NPL.

There are no Delisted NPL sites within a one-mile radius of the site. Based on the information reviewed, we conclude the potential for significant impact to the site from any Delisted NPL site is low.

CERCLIS

The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List is a management database which lists all current and past sites that qualify, or are being considered, for further investigation under the EPA Superfund Assessment Program. According to the EPA, the fact a site is on the CERCLIS list does not necessarily mean it is contaminated and because a site is not on the list does not necessarily mean it is contaminant free. There are **no** listed CERCLIS sites located within a 1/2 miles distance from the subject property.

Based on the information reviewed, we conclude the potential for significant impact to the site from any CERCLIS site is low.

4.0 RECORDS REVIEW

SEMS-ARCHIVE/CERC-NFRAP

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was former known as CERCLIS No Further Remedial Action Planned (CERC-NFRAP) renamed SEMS-ARCHIVE by the EPA in 2015. There are **no** listed SEMS-ARCHIVE/CERC-NFRAP sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SEMS-ARCHIVE/CERC-NFRAP site is low.

RCRIS

The EPA Resource Conservation and Recovery Information System (RCRIS) includes all current and past sites storing, transporting, treating, generating or disposing of hazardous materials or waste. This list will include anything from chemical industry to small businesses like dry cleaners and gasoline stations. See EDR Report LQG (Large Quantity Generator), SQG (Small Quantity Generator), TSD (Transport, Storage, Disposal), and CORRACTS (Corrective Action Sites). There are **no** listed RCRIS TSD sites within a 1/2-mile radius of the site. There are **no** listed CORRACTS sites within a one-mile radius of the subject site. There are **two** listed RCRIS LQG sites and **seven** SQG sites within a 1/4-mile radius of the subject site. Four of the listed SQG sites are located greater than 1/8 miles distance from the subject property. There are only five listed site located within a 1/8 miles distance from the subject property.

Bonnie Brae Village, 208 S Bonnie Brae St, Map ID# 49
Location: 1/8 miles east/northeast
Status: Large quantity generator, no listed violations

CHLA Center for Personalized Medicine, 2100 W 3rd St, Map ID# G51
Location: Less than 1/8 miles west
Status: Small quantity generator, no listed violations

CT Partners, 329 201 S Alvarado ST, Map ID# D40
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

LMS Medical Service, 311 201 S Alvarado, Map ID# C11
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

Mid-Wilshire Medical, 201 S Alvarado St, Map ID# C12
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

Based upon the information reviewed, and considering the separation distance and intervening construction, we conclude the potential for significant impact to the site from any listed RCRIS site is low.

4.0 RECORDS REVIEW

ERNS

The Emergency Response Notification System (ERNS) records and stores information on reported releases of oil and hazardous substances.

The subject property was not identified as an ERNS site. Based on the information reviewed, we conclude the potential for significant impact to the site from any listed ERNS site is low.

CAL-SITES

The Cal-Sites AWP (Annual Work Plan, State Environmental Protection Agency), known hazardous waste sites, and Cal-Sites ASPIS (Department of Substance Control) Data Bases, contains potential or confirmed hazardous substance release properties. There are **no** listed CAL-SITES within a one-mile radius of the site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed CAL-SITES.

CHMIRS/CORTESE/NOTIFY 65/TOXIC PITS

The California Hazardous Materials Incident Report System contains information on reported hazardous materials incidents (accidental release or spills). There are **no** listed CHMIRS sites within a 1/8-mile radius of the site.

CORTESE identifies public drinking wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. There are **11** listed CORTESE sites within a 1/2-mile radius of the site. Ten of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Shell Station, 230 Alvarado St, Map ID# C13
Location: Less than 1/8 miles west, topographically cross gradient
Status: LUST site with case closure granted

Proposition 65 (NOTIFY 65) contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk. There are **no** listed NOTIFY 65 sites within a one-mile radius of the site.

TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. There are **no** listed TOXIC PITS sites within a one-mile radius of the site.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the site from any of these listed sites is low.

4.0 RECORDS REVIEW

SWF/LF

The State of California Integrated Waste Management Board's Solid Waste Information System (SWIS) database list. The list indicates there are **no** Landfill/Solid Waste Facility (SWF/LF) sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SWF/LF site to be low.

WMUDS/SWAT

The Waste Management Unit Database System (WMUDS) is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. There are **no** listed WMUDS/SWAT sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed WMUDS/SWAT site is low.

LUST

The California Water Quality Control Board, Leaking Underground Storage Tank (LUST) Registration list was reviewed. The list indicates there are **22** LUST sites within a 1/2-mile radius of the site, several of which are duplicate listings. There are only two listed sites located within a 1/8 miles distance from the subject property.

H&S Food & Gas, 2000 W 3rd Street, Map ID# A4
Location: Less than 1/8 miles southwest, topographically cross gradient
Status: Case closure granted

Shell Station, 230 S Alvarado St, Map ID# B7
Location: Less than 1/8 miles west, topographically cross gradient
Status: Case closure granted

Based upon the information reviewed, and considering the separation distances, intervening construction, topographical differences and current status of the nearest listed sites, we conclude the potential for significant impact to the site from any listed LUST site to be low.

4.0 RECORDS REVIEW

UST

The California Water Quality Control Board, Underground Storage Tank (UST) Registration list was reviewed. There are **31** listed UST sites within a 1/4-mile radius of the site. Many of these sites are duplicate listings for the same site. There are only eight listed site located within a 1/8 miles distance from the subject property.

St Vincent Dialysis (multiple listings), 201 S Alvarado St, Map ID# D20,D22-26, D28, D30, D36-38 & D44
Location: Less than 1/8 miles northwest
Status: Inactive site

2004 W 3rd Street, Map ID #A3
Location: Less than 1/8 miles southwest
Status: Historic UST site

Shell Station, 230 S Alvarado Street, Map ID# C16
Location: Less than 1/8 miles west
Status: Inactive UST Site

192 S Alvarado St, Map ID# B18
Location: Less than 1/8 miles north/northwest
Status: Active UST site

301 S Alvarado Street, Map ID# C19
Location: Less than 1/8 miles west
Status: Historical UST site

1841 W 3rd Street, Map ID# E45
Location: Less than 1/8 miles southeast
Status: Historical UST site

Country Villa Nursing Center, 340 S Alvarado St, Map ID# F45
Location: Less than 1/8 miles west/southwest
Status: Inactive UST site

341 S Alvarado St, Map ID# F56
Location: Less than 1/8 miles west/southwest
Status: Historic UST site

Based upon the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion the potential for significant impact to the site from any listed UST site to be low.

4.0 RECORDS REVIEW

HISTORICAL UST

The California Water Quality Control Board, Hazardous Substance Storage Container Database is a historical listing of UST sites. There are **nine** listed HISTORICAL UST sites within a 1/4-mile radius of the site. Eight of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Otto CRVanes/Shell Station, 230 S Alvarado St, Map ID# C15
Location: Less than 1/8 miles west
Status: Previously identified as an UST and LUST site with case closure granted

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed HISTORICAL UST site.

SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) listed underground storage tanks and was updated and maintained in the early 1980s. This listing is no longer updated or maintained. There are **ten** listed SWEEPS sites within a 1/4-mile radius of the site. Six of the listed sites are located greater than 1/8 miles distance from the subject property. There are only four listed sites located within a 1 /8 miles distance from the subject site.

Alvarado II Incorporated, 2000 W 3rd St, Map ID# A5
Location: Less than 1/8 miles southwest
Status: Inactive site

St Vincent Medical, 2021 Miramar St, Map ID# B6
Location: Less than 1/8 miles north/northwest
Status: Inactive site

Juan Cornejo/Arshag, 230 S Alvarado St, Map ID# C14
Location: Less than 1/8 miles west
Status: Previously identified as an UST and LUST site with case closure granted

Serm-Darin Saelak, 174 S Alvarado St, Map ID# D21
Location: Less than 1/8 miles north/northwest
Status: Inactive site

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed SWEEPS site.

4.0 RECORDS REVIEW

AST

The California Water Quality Control Board, Aboveground Storage Tank (AST) Registration list was reviewed. There are **no** listed AST sites within a 1/4-mile radius of the site.

Based upon the information reviewed, it is our opinion the potential for significant impact to the site from any listed AST site to be low.

BEP/FID

Bond Expenditure Plan (BEP). California Department of Health Services developed a site specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act Funds. There are **no** listed BEP sites within a one-mile radius of the site.

The California Environmental Protection Agency Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control board. There are **ten** listed FID UST sites within a 1/4-mile radius of the site. All ten listed sites were previously identified as UST, SWEEPS or HISTORIC UST sites.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, we conclude the potential for significant impact to the site from any listed BEP/FID site is low.

ENVIROSTOR

The DTSC's Site Mitigation and Brownfields Reuse Program's Envirostor database identifies sites that have known contamination or sites where there may be reasons to investigate further. The database includes Federal Superfund sites, State Response, including Military Facilities and State Superfund, Voluntary Cleanup, and School sites. There are **27** listed ENVIROSTOR sites within a one-mile radius of the site. All 27 listed sites are located greater than 1/4 miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is low potential for significant impact to the site from any listed ENVIROSTOR sites.

CA CPS-SLIC

The California Regional Water Quality Control Board (RWQCB) Cleanup Program Sites (CPS) formerly known as Spills, Leaks, Investigation and Cleanup Cost Recovery (SLIC) Listing was reviewed. There is **one** listed CA CPS-SLIC site within a 1/2-mile radius of the site. The listed site is located greater than ¼ miles distance from the subject property

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed CA CPS-SLIC site.

4.0 RECORDS REVIEW

VCP

The California Department of Toxic Substance Control Volunteer Cleanup Program (VCP) Properties database contains low threat level properties with either confirmed or unconfirmed releases, and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. There are **two** listed VCP sites within a 1/2-mile radius of the site. Both listed sites are located greater than ¼ miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed VCP site.

ENG/INST CONTROLS & DEEDS

The Engineering/Institutional Controls & Deed Restriction Database (ENG/INST CONTROLS & DEEDS) contains a listed of sites where engineering, institutional controls or deed restrictions have been implemented. Engineering controls are physical measures selected for the purpose of preventing or minimizing exposure to hazardous substances. These may include, but are not limited to, fencing, capping, horizontal or vertical barriers, hydraulic controls, or alternative water supplies. Institutional Controls are non-engineered instruments such as administrative or legal controls that help minimize the potential for human exposure. The review indicates there is **one** listed ENG/INST CONTROLS & DEEDS site within a 1/2-mile radius of the site. The listed site is located greater than ¼ miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude there is a low potential for significant impact to the site from any listed ENG CONTROLS site.

HAZNET

The HAZNET data is extracted from the copies of hazardous waste manifests received each year by the DTSC (Department of Toxic Substance Control). The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. The subject property was identified as a HAZNET site.

4 City Residential Management, 2000 Miramar St, Map ID# A1
Location: Subject property
Status: In 2000, unspecified sludge waste was disposed of at a transfer station.
Comments: Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed HAZNET site.

4.0 RECORDS REVIEW

BROWNFIELDS

Brownfields are abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. There are **four** listed BROWNFIELDS sites within a 1/2-mile of the subject property. All four listed sites are located greater than 1/8 miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the subject site from any listed BROWNFIELDS site is low.

ORPHAN SUMMARY

A review of the unmapped or "orphan" sites did not reveal any additional sites of potential environmental concern to the subject property.

ENVIRONMENTAL RECORDS SOURCES SUMMARY

Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any of these off-site "listed" sources.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

PRIOR ENVIRONMENTAL REPORTS

We reviewed a prior Phase I Environmental Site Assessment for the subject property prepared by EBI Consulting dated March 15, 2016. At the time of the report, the subject property was fully developed with the existing Miramar Towers apartment project. No recognized environmental conditions were identified in connection with the subject property. The historical review indicated that the site was undeveloped or developed with a few single family residences dating back to the late 1800s and was later developed with a hotel and single family residences from the early 1900s to the 1970s. The site was then developed with the existing apartment project in approximately 1980. The report indicated that, based upon the dates of construction, an asbestos survey was not conducted. The report did indicate that an Asbestos O&M Plan was in place at the subject property and recommended maintaining the O&M program.

We reviewed a limited asbestos bulk sampling report for the subject property prepared LA Testing, dated May 13, 2005. A sample of pipe insulation was submitted for laboratory analysis and was found not to contain asbestos.

We reviewed a Limited Asbestos Survey for the subject property prepared by Envirocheck Inc., dated May 9, 2011. A total of 20 bulk asbestos samples were collected and submitted for laboratory analysis including 8 samples of acoustical ceiling spray, 8 samples of dry wall mud and 4 samples of drywall & mud composition. All 20 samples were found not to contain asbestos.

We reviewed an Asbestos O&M Plan prepared for the subject property by EBI dated October 28, 2016. No sampling was conducted, however, suspect asbestos containing materials identified included textured ceiling and wall texture, sheet rock & joint compound, ceiling tiles, pipe insulation, vinyl flooring materials and construction mastics and caulking.

We reviewed an ACM Program Manual prepared for the subject property dated April 2017. Materials confirmed as non-asbestos included pipe insulation, ceiling texture and dry wall and mud composition. Presumed asbestos containing materials included vinyl flooring materials.

We reviewed a Limited Asbestos Survey prepared by Envirocheck dated September 13, 2018. A total of 108 bulk samples were collected and submitted for laboratory analysis. Materials sampled included acoustical ceiling spray, drywall mud & composition, various vinyl sheet flooring & vinyl composition title, vinyl flooring adhesive, vinyl cove base & adhesive, ceiling tile, thin set, grout, and ceramic title. Asbestos containing materials were confirmed to be present in four of the vinyl tile flooring and vinyl floor mastic samples.

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY

As a part of our due-diligence we reviewed aerial photographs included as part of a prior report by EBI Consulting (2016) and aerial photographs obtained from the USGS Earth Explorer, Historic Aerials, and Google Earth internet sites. Our review of the available photographs indicates the following activity on the site:

1923 The subject property appears to be occupied by several single family dwellings and small commercial buildings. Miramar St borders to the north followed by several dwellings. Dwellings and small commercial or apartment buildings appear to be present to the east. W 3rd Street borders to the south followed by single family dwellings. Several dwellings and small commercial buildings appear to be present to the west.

1938 The subject site and adjacent sites appear little changed except additional small commercial buildings are present to the south and southeast across W 3rd Street.

1948 The subject site and adjacent sites appear little changed.

1952 The subject site and adjacent sites appear little changed except apartments or similar commercial buildings are present to the north.

1960 The subject site and adjacent sites appear little changed.

1964 The subject site appear little changed except several of the residential dwellings have been removed from the southern portion of the site. The adjacent sites appear little changed.

1970 The subject site and adjacent sites appear little changed except additional dwellings appear to have been cleared from the subject property and new small commercial buildings appear to be present across W 3rd Street to the south.

1972 The subject site and adjacent sites remain little changed.

1976 Low resolution photograph. Most of the site appears to have been cleared of buildings and structures and the site appears to be vacant. The adjacent sites appear little changed.

1979 Low resolution photograph. The subject property appears to be under developed with the existing apartment project. The shell of the main building appears to be largely complete. The adjacent sites appear little changed.

1980 The subject property now appears to be fully developed with the existing apartment project. The adjacent sites remain little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY CONTINUED:

1983 The subject site and adjacent sites appear little changed.

1985 Low resolution photograph. The subject site and adjacent sites appear little changed.

1989 The subject site and adjacent sites appear little changed.

1994 The subject site and adjacent sites appear little changed except the adjacent site to the southwest now appear to be vacant.

1995 The subject site and adjacent sites appear little changed.

2002 The subject site and adjacent sites appear little changed.

2003 The subject site and adjacent sites appear little changed.

2004 The subject site and adjacent sites appear little changed.

2005 The subject site and adjacent sites appear little changed.

2007 The subject site and adjacent sites appear little changed.

2009 The subject site and adjacent sites appear little changed except a new commercial building project is under construction to the northeast.

2010 The subject site and adjacent sites appear little changed except the new commercial building has been completed to the northeast.

2011 The subject site and adjacent sites appear little changed.

2012 The subject site and adjacent sites appear little changed.

2014 The subject site and adjacent sites remain little changed.

2017 The subject site and adjacent sites appear little changed except a new commercial building is present to the southwest.

2018 The subject site and adjacent sites remain little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

USGS TOPOGRAPHIC MAPS

1894 Santa Monica 15' Quadrangle. The subject site appears to be vacant. The adjacent sites also appear to be mostly vacant with a few nearby scattered dwellings.

1896 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1898 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1900 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1902 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1921 Santa Monica 15' Quadrangle. The subject site now appears to be occupied by several single family dwellings. Residential or small commercial buildings also appear to be present on the adjacent sites.

1928 Los Angeles 7.5' Quadrangle. The subject site and adjacent sites appear little changed. Miramar Street is present to the north and W 3rd Street is present to the south.

1953 Hollywood 7.5' Quadrangle. The subject site and adjacent sites are located within a shaded region where only landmark structures are identified. No landmark structures are depicted on the subject property or immediate adjacent sites.

1966 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1972 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1981 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1991 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1994 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

SANBORN MAP

1906 The subject property appears to be occupied by approximately 7 or 8 single family dwellings and associated out buildings. Miramar Street borders to the north followed by vacant land and single family dwellings. Single family dwellings are present to the east. Ocean View Ave (W 3rd St) borders to the south followed by single family dwellings. Single family dwellings are present to the west.

1950 The majority of the site now appears to be occupied by multiple buildings comprising the Barker Motel. Several single family dwellings are also present on the eastern portion of the site. Miramar St borders to the north followed by apartments and single family dwellings. Apartments and residential dwellings are present to the east. W 3rd Street borders to the south followed by several residential dwellings and small commercial buildings including two gas and oil stations to the south and southwest. Apartments appear to be present to the east.

1958 The subject site and adjacent sites appear basically similar to 1958.

1963 The subject site appears little changed except several of the small hotel buildings have been removed from the southern portion of the site. The adjacent sites appear little changed.

1970 The site remains little changed except additional small structures have been cleared from the southern portion of the site. The adjacent sites appear little changed except a new small commercial building is present to the south across W 3rd Street.

CITY DIRECTORY REVIEW

City directories were reviewed as part of a prior environmental assessment for the subject property by EBI Consulting (2016). City directories were reviewed between the years 1924 and 2013 at approximately 5 year intervals. In 1924 and 1929 listings included Miramar Terrace Apartments and Hotel and multiple residences. From 1933 through 1958 listings included Barker Hotel and multiple residences. From 1962 through 1971 listings included New Miramar Hotel & Apartments and multiple residences. From 1981 through 2013 listings included multiple residences, Miramar Towers and Forest City Management.

CHAIN OF TITLE REVIEW

We reviewed a Chain of Title Guarantee issued by Commonwealth Land Title Insurance Company dated September 28, 2018. The name of the assured was Miramar Tower. The report indicated that on February 13, 1979, the property was transferred from Realtech to Miramar Tower, a Limited Partnership.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

INTERVIEWS

Fire Department

We contacted Los Angeles Fire Department regarding potential records for the property. They indicated that they had no records of underground storage tanks or hazardous materials incidents for the subject property.

Water Department

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

Property Owner/Management

Interviews with property ownership representative and the onsite property management indicated they were unaware of any environmental liens, activity or land use restrictions related to environmental issues. They were also unaware of any underground storage tanks or other environmental concerns associated with the property.

HISTORICAL REVIEW SUMMARY

Based upon the aerial photograph reviews, historic map reviews, city directory reviews, prior environmental reports and personal interviews, it appears the property was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses. There is no historical evidence of any chemical misuse, unlawful dumping or landfilling, or other sources of contamination to the property.

5.0 SITE RECONNAISSANCE

METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted on April 27 & 30, 2018; November 1, 2018 and July 9, 2019. The scope of the onsite assessment consisted of a visual evaluation of the project site, building exteriors, interior common areas, and typical resident units in the buildings. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed. Items of potential or recognized environmental significance to the property, if any, were noted.

GENERAL SITE SETTING

The Miramar Towers project is located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD. The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The site is located in an area containing primarily multifamily residential and commercial development.

INTERIOR AND EXTERIOR OBSERVATIONS

Our exterior inspection and area reconnaissance revealed no evidence of any significant soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, hazardous materials or other unidentified substances were observed during the site reconnaissance. The onsite stormwater catch basins appeared to be free of any contaminants. Typical paint, maintenance supplies, and cleaning chemicals appeared to be properly stored and handled. A flame-safe metal cabinet is provided for small containers of paints and flammable liquids.

USTs/ASTs

There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground storage tanks were observed during the site reconnaissance. The building is served by an emergency electrical generator. The generator is fueled from an integrated aboveground diesel storage tank. The tank appeared to be approximately 50 gallon capacity. The generator and associated tank were newer and appeared to remain in good condition.

5.0 SITE RECONNAISSANCE

ADJACENT PROPERTIES

North: Miramar Street followed by apartments and single family dwellings.

East: Apartments.

South: W 3rd Street followed by apartments, a motel and a retail strip center.

West: Apartments followed by eTown Inn.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

ADDITIONAL HAZARDS/SERVICES

PCBs

PCBs have commonly been used as dielectric (insulating) fluids in transformers and capacitors and in fluorescent light ballasts. PCB-containing fluids were used mainly in indoor locations to minimize the possibility of fire if electrical equipment overheated. The potential hazard occurs when PCBs vaporize and convert chemically to dioxins and furans (two toxic substances). A secondary potential hazard is from spills and leaks that could contaminate the groundwater, soil or buildings with PCB fluids.

PCB-containing fluorescent light ballasts and air conditioning unit capacitors are considered a minor hazard as long as they are not leaking. However, it should be noted certain states regulate disposal of PCB-containing ballasts and capacitors, regardless of unit quantity or size.

Electrical service is provided underground from a pad-mounted electrical transformer. The transformers are owned by the local electric utility. We did not observe any leaking, staining, soil discoloration or stressed vegetation around the transformer vaults. Any future leakage would be the responsibility of the utility. The building is served by two hydraulic elevators. We did not observe evidence of leaking or significant staining around the elevator equipment.

Based upon our visual observations of the onsite transformers, it is our opinion the potential for PCB contamination at the site is low.

5.0 SITE RECONNAISSANCE

ASBESTOS

Asbestos can be found in almost any building material and is routinely found in insulation, spray applied acoustic ceiling finishes, flooring and roofing materials. Asbestos-containing material (ACM), defined by the Environmental Protection Agency as any material that contains more than 1% asbestos by weight, is most hazardous when friable - i.e., material which, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure. Friable asbestos is considered more hazardous than non-friable asbestos because it can become more easily airborne, and thus is more likely to enter the respiratory system where it can lead to serious health problems. Inhalation of airborne fibers is believed potentially to lead to lung diseases and cancer. Chrysotile is the most common form of asbestos accounting for 95% of asbestos used in the United States. Less common is amphiboles asbestos group, which includes such forms of asbestos as amosite and crocidolite.

An assessment for potential asbestos containing materials was conducted as part of our inspection. The scope of the assessment was conducted based upon the general requirements outlined in ASTM E2356-10 for baseline surveys. The assessment was limited to a visual evaluation of the accessible structural areas within the buildings. Suspect asbestos containing materials were identified included acoustical ceiling texture, wallboard/joint compounds, acoustical ceiling tiles, various vinyl flooring and associated mastics, cove base and mastics, pipe insulation, and building penetration mastics and caulking compounds. We reviewed a limited asbestos bulk sampling report for the subject property prepared LA Testing, dated May 13, 2005. A sample of pipe insulation was submitted for laboratory analysis and was found not to contain asbestos. We reviewed a Limited Asbestos Survey for the subject property prepared by Envirocheck Inc., dated May 9, 2011. A total of 20 bulk asbestos samples were collected and submitted for laboratory analysis including 8 samples of acoustical ceiling spray, 8 samples of dry wall mud and 4 samples of drywall & mud composition. All 20 samples were found not to contain asbestos. We reviewed a Limited Asbestos Survey prepared by Envirocheck dated September 13, 2018. A total of 108 bulk samples were collected and submitted for laboratory analysis. Materials sampled included acoustical ceiling spray, drywall mud & composition, various vinyl sheet flooring & vinyl composition title, vinyl flooring adhesive, vinyl cove base & adhesive, ceiling tile, thin set, grout, and ceramic title. Asbestos containing materials were confirmed to be present in four of the vinyl tile flooring and vinyl floor mastic samples.

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. **Materials observed generally remained in good condition.** ***An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started.***

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

LEAD IN PAINT

In 1977, the Consumer Products Safety Commission banned for consumer use paint products that contain lead in excess of 0.06%. If ingested, lead in substances such as water, paint chips or dust can lead to colic, weakened muscle response and a variety of other adverse health effects. Ingestion of lead in paint is particularly a concern in young children, pregnant women and fetuses. Excessive blood-lead levels can seriously impair a child's brain and central nervous system, causing impaired reading and learning disabilities, delayed cognitive development, mental retardation, seizures, convulsions, coma, and death.

A lead-based paint hazard is defined - by the Department of Housing and Urban Development (HUD), and by many state regulatory agencies - as paint containing 0.5% lead by weight/or 1.0 milligram per square centimeter (mg/cm^2). In 1978, the Consumer Product Safety Commission (CPCS) prohibited the sale of paint containing more than 0.06% lead by weight. Since that time, many state, county, or city agencies have adopted lead regulations/ordinances designed to protect children from a lead-based paint hazard: evaluating the health hazard for children may involve medical confirmation of blood-lead levels in children exposed to the surface. It should be noted the area of lead-based paint control and maintenance is evolving rapidly, particularly with respect to legal and medical aspects. As a result, local, state and federal lead prevention programs or health departments should be periodically consulted as to standard and accepted practices and procedures for handling lead-based paint hazards.

The subject project was constructed in 1979-1980, therefore, there is a low potential for lead-based paints. Since the project is designated as housing exclusively for the elderly or persons with disabilities, and no children are present as residents, Lead-Based Paint requirements are not applicable.

DOMESTIC WATER

Drinking water may be contaminated with lead, petroleum products, solvents and other chemical substance allowed to enter groundwater. Public water departments are required to analyze and treat water prior to public consumption to assure it meets current government standards.

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

It is our opinion the human health risks associated with the water supply at the project is very low.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

RADON

Radon is a naturally occurring, highly mobile, chemically inert radioactive gas created through radioactive decay of uranium and thorium. The potential for occurrence of radon varies widely and is dependent upon (1) the concentration of radioactive materials in the underlying bedrock; (2) the relative permeability of soils with respect to gases; and (3) the amount of fracturing or faulting in surficial materials (EPA, 1987). The concern regarding radon and its potential effects upon humans arises from the results of studies (EPA 1987) which suggest approximately 15% of all lung cancer mortalities in the United States may be attributable to exposure to radon.

The EPA has established a concentration of radon of 4 picocuries per liter as a maximum permissible concentration "action level". Concentrations above this value would signal a potential health threat. According to studies, an average concentration in homes across the United States is on the order of 1.4 picocuries per liter. Our conversations with the Regional office of the EPA indicate radon has not been a problem in areas underlain by thick sequences of glacial and alluvial soils. The site is underlain with alluvial type soil deposits. The primary concern with radon is over accumulation in poorly ventilated basement areas.

The EPA Radon Zone for Los Angeles County is Zone 2. Zone 2 households have an average indoor level of greater than 2 but less than 4 pCi/L. Short-term radon testing was conducted in general accordance with the protocols outlined in AARST MAMF-2010 Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings, Section III. An exception to this protocol was the number of units to be tested. The minimum number of units to be tested shall be at least twenty-five percent of randomly selected ground level units in the building. A total of twenty (20) resident rooms and two (2) non-resident rooms were selected for testing. The testing was conducted using an activated charcoal device manufactured by Aircheck Inc.

306	3	9003639	0.3
307	3	9003642	0.3
417	4	9003633	0.3
418	4	9003647	0.3
508	5	9003640	0.3
509	5	9003643	0.3
606	6	9003645	0.3
607	6	9003641	0.3
707	7	9003635	0.3
708	7	9003648	0.3
817	8	9003634	0.3
818	8	9003638	0.3
Community & Game Room	1	9003632 9003627	0.3 0.3 (Duplicate)
Manager Office	1	9003612 9003649	0.3 0.3 (Duplicate)
Blank	N/A	9003629	0.3

Onsite short term radon test results were all well below the EPA recommended action level of 4.0 pCi/L. Based upon the results of the onsite short-term radon testing, no additional actions are recommended.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

VAPOR ENCROACHMENT

Vapor Encroachment Condition (VEC) is the presence or likely presence of Chemicals of Concern (COC) vapors in the subsurface of the target property caused by the release of vapors from contaminated soils and/or groundwater either on or near the target property. A Vapor Encroachment Screen is a screening process designed to determine the potential for chemicals of concern vapors released from contaminated soil or groundwater to impact a property.

A limited Vapor Encroachment Screen for the subject was conducted utilizing ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The standard uses a two tiered methodology designed to quickly and cost effectively screen out properties with a low risk of Vapor Encroachment. Per HUD Map Chapter 9 Requirement, Tier 1 Screening has been conducted as part of this assessment.

Tier 1 – Initial Screening for potential Vapor Encroachment Conditions (VEC) was designed as a screening step to supplement a Phase I Environmental Assessment and relies on information already collected in a Phase I Investigation. Tier 1 methodology utilizes two primary tools for screening, search distance and chemicals of concern. Search distance includes the primary area of concern surrounding the target property and secondary area of concern for sites potentially upgradient of the target property. Chemicals of concern review addresses whether or not potential chemicals of concern, those chemicals that have the potential to volatize and become vapor, are likely to be present.

Based upon the information reviewed and documented during this assessment, which included a review of all major governmental environmental regulatory databases (see attached EDR Radius Map Report) and an historical review of the site and surrounding properties, and taking into consideration the separation distances, topographical differences, presumed groundwater flow, and local soils conditions, no potential vapor encroachment conditions were identified in connection with the subject property.

6.0 FINDINGS, OPINIONS, CONCLUSIONS AND DEVIATIONS

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon. No potential vapor encroachment conditions were identified in connection with the subject property.

No significant data gaps were encountered during preparation of this report. Full site access was provided during our site inspection. Sanborn Fire Insurance Map coverage was available for the property area and sufficient other historical sources were available to develop the site history for the property.

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing. Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of Miramar Towers project located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

DEVIATIONS

Surveys Inc. has performed this Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Standard Practice for Environmental Site Assessments with no conscious exceptions to or deletions from the standard.

ENVIRONMENTAL PROFESSIONALS' CERTIFICATION AND SIGNATURE

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in section 312.10 of 40 CFR 312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXPERIENCE

SURVEYS INC. **1998 – Present**

Consultant Engineer/Environmental Coordinator: Responsibilities include conducting engineering and environmental assessments for Lender's, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects across the U.S. Experience includes conducting over 1000 various Engineering Assessments and Phase I and Phase II Environmental Site Assessments.

The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. The assessments are conducted for the purpose of evaluating the construction of the overall development and identifying any possible deficiencies that could affect its current market value or resale potential. The assessment reports are prepared to meet or exceed the requirements of the Lender or Government Agency. These reviews normally include an existing facilities compliance with ADA Title III and can include a Seismic PML study.

The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review; interviews with people knowledgeable and a review of government environmental regulatory databases. Environmental Assessments typically include a review for potential Lead-Based Paints, suspect Asbestos Containing Materials and Radon Gas. Responsible for preparing site specific Asbestos, Lead-Based Paint and Mold and Moisture Operations and Maintenance Plans.

PAUL H. DALTAS, P.E.
PRINCIPAL – SURVEYS INC.

EDUCATION:

BCE, Civil/Structural Engineering
University of Minnesota, Institute of Technology

EXPERIENCE:

SURVEYS INC. **1990 - Present**

Principal Consultant Engineer. Responsible for providing independent, third party, engineering, environmental and seismic assessment services to Lenders, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects throughout the United States. The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. Our Engineering Assessment Reports are prepared to meet or exceed the requirements of the Mortgage Lender, Fannie Mae, Freddie Mac, ASTM, or other agencies. These reviews normally include a review for compliance with ADA Title III provisions and may, if required, include a Seismic PML study for projects in UBC Seismic Zones 3 or 4. The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review and interviews with people knowledgeable about the property. Phase II Environmental work is provided only as required by the Phase I Assessment to determine if suspected hazardous contamination exists. Over 2,000 Engineering/Environmental Assessments completed.

INDUSTRY - FANNIE MAE/HUD **2002-2003**

Fannie Mae, Property Condition Standards, Technical Advisory Panel 2002/2003. Western Regional MAP Lenders Conference PCNA Committee Member 2003.

WEYERHAEUSER BUILDING SYSTEMS **1988 - 1990**

Design Engineer/Project Manager/Regional Sales Manager. Designed, engineered and marketed to the construction industry a wide variety of commercial, industrial and residential structural systems for projects throughout the western United States. Weyerhaeuser industry representative and team member for the Weyerhaeuser PBDM (Probabilistic Beam Design Methodology) advanced reliability based product manufacturing and lumber grading system. Construction Project Manager for Weyerhaeuser structural systems installed in the Northwest.

WEYERHAEUSER-TIMBERLAND INDUSTRIES **1984 - 1988**

Project Manager/Engineer. Overseas construction materials packages specializing in interior and exterior finished wood products such as architectural doors, fire doors, sound doors, builders' hardware, plastic laminate casework, wood cabinetry, commercial and residential millwork, specialty hardware, custom manufactured windows, panel products and lumber. Involved in designing, engineering, estimating, manufacturing and shipping these multi-million dollar material packages from various mills around the world to the Middle East.
