SUSTAINABLE COMMUNITIES PROJECT CEQA EXEMPTION

Miramar Development Project

Environmental Case: ENV-2020-3753-SCPE

Project Location: 1917-2005 1/2 W. 3rd Street, Los Angeles, California 90057

Community Plan Area: Westlake Community Plan

Council District: 13 – Mitch O'Farrell

Project Description: The Applicant proposes to develop the Miramar Development Project (Project) on an approximately 30,432 square foot property located at 1917-2005 1/2 W. 3rd Street (Project Site). The Project would consist of a 7-story residential building and 10,708 square feet of open space in the City of Los Angeles (City). The Project Site, located within the Westlake Community Plan area, is currently improved with a pedestrian walkway, landscaping, stairs, an outdoor seating area, and a surface parking lot with seven parking spaces and a driveway. The Project would include one basement lobby level with a bicycle storage area, mail room, and fitness and community rooms and seven residential levels above. The Project would include a total of 137 units, 136 of which would be restricted to Low Income households and 1 unit would be a non-restricted manager's unit. The Project would include 64 studios, 59 one-bedroom units, and 14 two-bedroom units. A total of 104 bicycle parking stalls (10 short-term stalls and 94 long-term stalls) would also be provided. The proposed building would be approximately 87 feet 9.5 inches in height as measured from the lowest adjacent ground level and contain approximately 106,386 square feet of floor area, resulting in a proposed floor area ratio (FAR) of 3.61:1.

MIRAMAR DEVELOPMENT PROJECT
SUSTAINABLE COMMUNITIES PROJECT
CEQA EXEMPTION

1.0 Project Description

Miramar Development, LP (the Applicant) proposes to develop the property located at 1917-2005 1/2 W. 3rd Street (Project Site) (portion of Assessor Parcel Number [APN] 5154-020-030) within the Westlake Community Plan area of the City of Los Angeles (City).[1] The Project Site is comprised of two legal lots and is currently improved with a pedestrian walkway, landscaping, stairs, an outdoor seating area, and a surface parking lot with seven parking spaces and a driveway. The driveway would be retained and repaved as part of the Project, while the seven parking spaces would be removed. The Project Site is 30,432 square feet (0.70 acre). The Project Site is bound by the Miramar Towers Site to the north, a single-family residence to the east, W. 3rd Street to the south, and a multi-family residential use to the west.

The Project Site has a General Plan land use designation of Highway Oriented Commercial and is within the Westlake Community Plan area. The Project Site is zoned C2-1, which allows a residential density of one dwelling unit per 400 square feet of lot area. At 30,432 square feet in size, the Project Site has a base density of 77 units (30,432 square feet of lot area divided by 400 square feet). The C2-1 zone allows a maximum FAR of 1.5:1. After dedications, the net lot area of the Project Site is 29,422 square feet, which yields a maximum buildable area of 44,133 square feet. The Project Site is located within a Methane Zone.[2]

The Project would construct a 106,386 square foot, 7-story residential building featuring a total of 137 residential units and 10,708 square feet of open space. The Project would include 64 studios, 59 one-bedroom units, and 14 two-bedroom units, 136 of which would be restricted to Low Income households and 1 unit would be a non-restricted manager's unit. Open space would be provided in the form of exterior areas, community recreation

[1] The Project Site was previously a part of an age-restricted (62 and older) Section 8 development site located at 2000 Miramar Street ("Miramar Towers"). In 2018, the property owner filed two lot line adjustment cases with the Department of City Planning to subdivide the property (Case Numbers AA-2018-7423-PMEX and AA-2018-7418-PMEX ["Approved Lot Line Adjustments"], which resulted in the separation of the 30,432 square foot Project Site from the Miramar Towers parcels to the north ("Miramar Towers Site"). In addition, while the Site and the Miramar Towers Site currently share the same APN, 5154-020-030, the County Assessor's Office is processing a request for new and separate APNs for the Project Site. As of June 29, 2020, the County has issued the new APNs in shell status as 5154-020-033 and 5154-020-034.

[2] City of Los Angeles, ZIMAS, 2020. Parcel information for 1917 W. 3rd St., APN 5525004023. Available at: http://zimas.lacity.org/, accessed June 2, 2020.

rooms, and landscaped areas. The Project Site currently contains 28 non-protected trees (including 6 street trees), that would be replaced with 35 trees (28 on-site trees and 7 street trees).[3] The sidewalk on 3rd Street is currently upheaved by the existing street tree roots and will require the tree roots to be cut so that a new, ADA-compliant sidewalk can be constructed. The removal and replacement of any trees within the public right-of-way would require consultation with the City of Los Angeles Division of Urban Forestry and approval by the Board of Public Works. The Project would develop seven residential levels above one level of a basement lobby level.

Surrounding uses are developed with residential and commercial structures. The property to the north, at the Miramar Towers Site, is developed with an eight-story senior apartment building. The abutting property to the east is developed with a single-family home and a two-story multi-family residential building. The properties south of the Project Site, across 3rd Street, are improved with commercial, medical, and multi-family residential uses. The property to the west is developed with a four-story multi-family residential building.

The Project Site is also located within a City-designated Transit Oriented Communities (TOC) zone, which encourages the construction of affordable housing near bus and train stations.[4] The Project Site is within a TOC Tier 3 Affordable Housing Incentive Program area. The TOC program is available to all housing developments located within a one-half mile radius of a Major Transit Stop. As defined in the TOC Affordable Housing Incentive Program Guidelines, a Major Transit Stop is a site containing a rail station or the intersection of two or more bus routes with a service interval of 15 minutes or less during the morning and afternoon peak commute periods.[5] The Los Angeles County Metropolitan Transportation Authority (Metro) B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station is 0.48-mile southwest of the Project Site. Additionally, the Project Site is also adjacent to Metro Local 16/17 and 200 routes, and the Pico Union/Echo Park bus loop.

Furthermore, the Project is eligible for Tier 4 incentives because it is a 100-percent affordable housing development. Pursuant to the TOC Guidelines, a project is considered 100-percent affordable if it consists of 100-percent on-site restricted affordable units, exclusive of a building manager's unit or units. The Project will provide 136 restricted affordable units and one manager's unit. Thus, the Project is eligible for three Base Incentives (Residential Density, Floor Area Ratio, and Automobile Parking), and two Additional Incentives (Setbacks and Open Space). The Project seeks to use all three Base Incentives and two Additional Incentives, as described below.

---

3 One tree is required for every four residential units. The Project's 137 units would require 34.25, or 35 trees. The six street trees will be subject to final replacement requirements to the satisfaction of the Division of Urban Forestry.

4 City of Los Angeles, Department of City Planning, 2020. Transit Oriented Communities Incentive Program. Available at: https://planning.lacity.org/plans-policies/transit-oriented-communities-incentive-program, accessed June 12, 2020.

5 City of Los Angeles Department of City Planning, 2018. Transit Oriented Communities Affordable Housing Incentive Program Guidelines (TOC Guidelines). Available at: https://planning.lacity.org/ordinances/docs/toc/TOCGuidelines.pdf, accessed June 12, 2020.

Pursuant to the TOC Guidelines, the Project is eligible for the following three base incentives:

1. The Project would be permitted 1 dwelling unit per 400 square feet of space, for a maximum of 77 residential units. Pursuant to the TOC Guidelines, the Project is eligible for an 80-percent density increase from the base density for a maximum of 139 total units. The Project proposes development of up to 137 residential units, including 64 studios, 59 one-bedroom units, and 14 two-bedroom units.

2. The C2-1 zone allows a maximum FAR of 1.5:1. Using TOC Tier 4 Base Incentives, the Project is eligible for a FAR increase up to 4.25:1, or 129,336 square feet of buildable area. The building proposed would be 106,386 square feet for a FAR of 3.61:1, which is within the permitted development envelope.[6]

3. TOC Tier 4 projects are eligible for a Base Incentive to allow no required vehicular parking for residential units. The Project does not propose any other uses beyond the residential use. As such, no vehicular parking is required. Pursuant to Los Angeles Municipal Code (LAMC) Section 12.21.A.16, the Project would be required to provide 10 short-term and 94 long-term bicycle parking stalls. The Project would provide 10 short-term bicycle parking stalls and 94 long-term bicycle parking stalls and storage on the basement level, as well as a bicycle maintenance bench.

The Project is also eligible for and will utilize two additional incentives:

1. LAMC Section 12.14 would require a 0-foot front yard setback and 5-foot side and rear yard setbacks. The Project requests to use the side and rear yard requirements for the RAS3 Zone in lieu of the side and rear yard requirements otherwise required by LAMC Section 12.14. The RAS3 zone requires 5-foot side yard setbacks and 5-foot rear yard setbacks.

2. LAMC Section 12.21G.2 would require the Project to provide 14,050 square feet of open space. The Project requests a 25 percent reduction in the required minimum open space to permit 10,537 square feet. The Project proposes 10,708 square feet of open space, which is greater than the permitted development envelope.

6 The Project Site includes a three-foot street dedication along 3rd Street. Therefore, the calculation for the FAR is based on the buildable area of 29,322 square feet, which is the total net lot area excluding the dedication area.

2.0 Sustainable Communities Strategy Criteria

SUSTAINABLE COMMUNITIES STRATEGY CRITERIA – Public Resources Code (PRC) Section 21155		
PRC § 21155(a). Consistency with the general use designation, density, building intensity, and applicable policies specified for the project area in a sustainable communities strategy.	Consistent?	
	Yes	No
As described in Section 1, Project Description, the Project would develop a 137-unit affordable housing building at 1917-2005 1/2 W. 3rd Street in the City. The Project Site is comprised of 2 legal lots totaling approximately 30,342 square feet (0.70 acre) that is currently developed with a pedestrian walkway, landscaping, and a surface parking lot with seven parking spaces and a driveway. The Project would include a 7-storyresidential building with 137 dwelling units, including 64 studios, 59 one-bedroom units, and 14 two-bedroom units set aside for Low Income households, and 1 one-bedroom manager's unit at market-rate. The Project would include 104 bicycle parking stalls (94 long-term stalls and 10 short-term stalls). The proposed building would be approximately 87 feet 9.5 inches in height and contain approximately 106,386 square feet of floor area, resulting in a proposed FAR of 3.61:1. The Project is consistent with the general use designation, density, and building intensity outlined in the Southern California Association of Governments' (SCAG) 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS).[7] Based on Exhibit 13 and Exhibit 14 of SCAG's SCS Background Documentation, the Project Site and surrounding area are within the "Urban" Land Development Category.[8] The 2016 RTP/SCS provides the following definition for the "Urban" Land Development Category: These areas are often found within and directly adjacent to moderate and high density urban centers. Nearly all urban growth in these areas would be considered infill or redevelopment. The majority of housing is multi-family and attached single-family (townhome), which tend to consume less water and energy than the larger types found in greater proportion in less urban locations. These areas are supported by high levels of regional and local transit service. They have well-connected street networks, and the mix and intensity of uses result in a highly walkable environment. These areas offer enhanced access and connectivity for people who choose not to drive or do not have access to a vehicle.[9]	X	

7 The California Air Resources Board has accepted SCAG's determination that the 2016 RTP/SCS would achieve the identified greenhouse gas emission reduction targets (California Air Resources Board Executive Order G-16-066).

8 Southern California Associate of Governments (SCAG), 2016. 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS), pages 20-21. Available at: http://scagrtpscs.net/Documents/2016/draft/d2016RTPSCS.pdf, accessed June 5, 2020.

9 SCAG, 2016. 2016 RTP/SCS. Page 20.

The RTP/SCS defines 'Urban' areas as: "often found within and directly adjacent to moderate and high density urban centers. Nearly all urban growth in these areas would be considered infill or redevelopment. The majority of housing in these areas is multi-family and attached single-family (townhome), which tend to consume less water and energy than the large types found in greater proportion in less urban locations. These areas are supported by high levels of regional and local transit service. They have well-connected street networks, and the mix and intensity of uses result in a highly walkable environment. These areas offer enhanced access and connectivity for people who choose not to drive or do not have access to a vehicle".[10]

The 'Urban' Land Development Category comprises the following urban footprint scenario models.[11] The Project Site would be generally consistent with the City Residential place type within the Urban Land Use Development Category, as described further below.

- City Residential place type is "dominated by mid- and high-rise residential towers, with some ground-floor retail space. Parking is usually structured below or above ground. Residents are well served by transit, and can walk or bicycle for many of their daily needs." The land use mix for this place type is typically approximately 65 percent residential, four percent employment, 11 percent mixed use, and 20 percent open space/civic. The residential mix is typically 97 percent multi-family and 3 percent townhome. The average total net FAR is 2.9:1, height ranges from 5 to 40 stories, and the gross density ranges from 35 to 37 households per acre.[12]
- The Project's scale would be generally consistent with the City Residential place type as it would develop one 7-story multi-family residential building in a highly-urbanized part of the City that is well served by multiple regional and local transit lines, as well as other modes of transportation. While a typical FAR for the City Residential place type is 2.9:1, the Project would have a generally comparable FAR of 3.61:1 with multi-family residential uses. The typical gross density for the Urban Residential place type is 131 households per acre. The Project would have a generally comparable density of approximately 196 dwelling units per acre (137 units / 0.7 acres). It would also be consistent with the Urban Residential mix of 100-percent multi-family.

Given that the Project would develop Low Income residential uses within walking distance of multiple transit opportunities and facilitate bicycling through the provision of on-site bicycle parking spaces and a bicycle maintenance area on the ground floor, the Project would provide opportunities for residents to use public transit or bicycling for work trips, and walk or bike to retail businesses near the Project Site. The existing Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station

10 SCAG, 2016. 2016 RTP/SCS. Page 20.

11 SCAG, 2016. 2016 RTP/SCS. Background Documentation, Reference Document 6 and 9.

12 SCAG, 2016. 2016 RTP/SCS. Background Documentation, Reference Document 6.

is 0.48 mile southwest of the Project Site. Additionally, numerous local bus routes are located within one-half mile of the Project Site, including Metro Lines 14, 16/17, 18, 20, 200, 603, and 720. Thus, the Project will encourage the utilization of transit as a mode of transportation to and from the Project Site and contribute to the productivity and use of the regional transportation system by providing housing near transit. As such, due to the Project's proposed multi-family residential use, building height, density, and proposed FAR, the Project is generally consistent with the City Residential place type and the 'Urban' Land Development Category as well as the associated use, density, and building intensity projections specified in the RTP/SCS. The Project is also generally consistent with the goals and policies in the RTP/SCS, as outlined in Attachment B, Consistency with the Goals of the 2016-2040 RTP/SCS. As such, the Project meets this criterion.		
PRC § 21155(b). To be considered a Transit Priority Project (TPP), as defined by § 21155(b), the project must meet all of the following criteria. A TPP shall:	Consistent? Yes	No
(1) Contain at least 50 percent residential use, based on total building square footage and, if the project contains between 26 percent and 50 percent nonresidential uses, a floor area ratio of not less than 0.75; The Project would be comprised of a 7-story residential building with a total building area of 106,386 square feet that will consist of 137 residential units. No other uses would be present on-site besides the residential uses. Therefore, the Project would contain 100-percent residential use. Since the Project would not contain non-residential uses, the Project would not be subject to the FAR requirements outlined in this criterion. Nevertheless, the Project would have a FAR of 3.61:1, which is greater than 0.75:1. As such, the Project meets this criterion.	X	
(2) Provide a minimum net density of at least 20 dwelling units per acre; and The Project would develop the 30,342 square feet (0.70 acre) Project Site with a 7-story residential building that includes 137 dwelling units. The net housing density for the Project is approximately 196 dwelling units per acre (137 units / 0.7 acres), which is greater than the required minimum of 20 units per acre. As such, the Project meets this criterion.	X	
(3) Be within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan. A major transit stop is as defined in PRC Section 21064.3, except that, for purposes of this section, it also includes major transit stops that are included in the applicable regional transportation plan. For purposes of this section, a high quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.	X	

A project shall be considered to be within one-half mile of a major transit stop or high-quality transit corridor if all parcels within the project have no more than 25 percent of their area farther than one-half mile from the stop or corridor and if not more than 10 percent of the residential units or 100 units, whichever is less, in the project are farther than one half mile from the stop or corridor. The California Public Resources Code (PRC) Section 21064.3 defines a major transit stop as a site that contains any of the following: (a) an existing rail or bus rapid transit station; (b) a ferry terminal served by either a bus or rail transit service; or (c) the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. "High quality transit corridor," as used in the definition of "transit priority project," means a corridor with fixed-route bus service with service intervals no longer than 15 minutes during peak commute hours. Cal. Pub. Res. Code § 21155(b). Finally, a project shall be considered to be within one-half mile of a major transit stop or high-quality transit corridor if all parcels within the project have no more than 25 percent of their area farther than one-half mile from the stop or corridor and if not more than 10 percent of the residential units or 100 units, whichever is less, in the project are farther than one-half mile from the stop or corridor. Cal. Pub. Res. Code § 21155(b). The nearest existing Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station is located 0.48-mile southwest of the Project Site. As such, the Project Site is within one-half mile of a major transit stop. • The B Line runs between Downtown Los Angeles and North Hollywood.[13] • The D Line shares the Metro B Line (Red Line) track until Wilshire/Vermont (west of the Project Site) where it forks and ends with two stops in Koreatown. Within the next decade, several service expansions to the D Line are planned.[14] As such, the Project satisfies the CEQA exemption transit proximity requirement by being within one-half mile of a light rail station and is not required to further demonstrate proximity to intersecting bus routes or high quality transit corridors that provide bus service intervals of 15 minutes or less. Furthermore, the Project Site is in an area identified a High Quality Transit Area by SCAG.[15] As such, the Project is consistent with this criterion.		

13 Los Angeles Metro, 2020. Metro B Line (Red). Available at: https://www.metro.net/riding/guide/B-line/, accessed June 3, 2020.

14 Los Angeles Metro, 2020. Metro D Line (Purple). Available at: https://www.metro.net/riding/guide/D-line/, accessed June 3, 2020.

15 SCAG, 2016. 2016 RTP/SCS. Exhibit 5.1, High Quality Transit Areas in the SCAG Region for 2040 Plan.

PRC § 21155.1(a). The TPP complies with all of the following environmental criteria:	Consistent?	
	Yes	No
(1) The TPP and other projects approved prior to the approval of the TPP but not yet built can be adequately served by existing utilities, and the TPP applicant has paid, or has committed to pay, all applicable in-lieu or development fees. A considerable increase in demand for services or utilities would not be anticipated with the implementation of the proposed Project since it is located in an existing heavily-urbanized location served by existing public utilities and services. The Los Angeles Department of Water and Power (LADWP) provides electricity and water and City of Los Angeles Bureau of Sanitation (LASAN) provides sewer services and solid waste collection to the Project Site. LASAN also manages the City's storm drain infrastructure. The Southern California Gas Company (SoCalGas) provides natural gas services to the City and would be expected to serve the Project Site. Water: Based on the Utility Infrastructure Report prepared for the Project by VCA Engineers. Inc., and Dry Utility Experts dated July 7, 2020 and included as Attachment J, Utility Infrastructure Report, there is an existing 12-inch water main located along 3rd Street fronting the Project Site. In addition, the nearest fire hydrant to the Project Site is located across 3rd Street approximately 200 feet from the Project Site. As evaluated in the Utility Infrastructure Report, when analyzing a project for infrastructure capacity, the projected demands for both fire suppression and domestic water are considered. While domestic water demand is a project's main contributor to water consumption, fire flow demands have a much greater instantaneous impact on infrastructure and are therefore the primary means for analyzing infrastructure capacity. As provided in the Utility Report, in accordance with City policy, a Service Advisory Request (SAR) was submitted to LADWP to determine the availability of water service for the Project. Based on LADWP's review of the Project, LADWP has confirmed that there is sufficient capacity to provide water service to the Project. LADWP's 2015 Urban Water Management Plan (UWMP), which accounts for existing development within the City as well as projected growth through the year 2040, concludes that LADWP would meet all new domestic demand for water due to projected population growth through the year 2040. Wastewater: Regarding wastewater, as discussed in the Utility Infrastructure Report (Attachment J), the Project Site is served by an existing 8-inch sewer line which runs along 3rd Street fronting the Project Site. As discussed in the Utility Infrastructure Report, a Sewer Capacity Availability Review (SCAR) that identifies the Project's estimated total flow was submitted to the City	X	

of Los Angeles Bureau of Sanitation (LASAN) to verify capacity availability. Based on the approved SCAR, LASAN has confirmed that there is sufficient capacity to service the Project, with the installation of the new 8-inch sewer line. In addition, the Project's estimated total flow represents only 0.003 percent of the existing design capacity of 450 million gallons per day at the Hyperion Treatment Plant, and therefore the Hyperion Treatment Plan would be able to accommodate the Project. Stormwater: LASAN's review considers the Project demands on the infrastructure in conjunction with existing conditions and forecasted growth. In addition, the City's Integrated Resources Plan addresses the facility needs of the City's wastewater program, recycled water, and urban runoff/stormwater management through the year 2020, and for the next planning horizon, the City has developed the One Water Los Angeles 2040 Plan. The One Water LA 2040 Plan concludes that based on the design capacities and the projected future flows of each water reclamation plant within the City through year 2040, all existing water reclamation plants would have sufficient capacity to manage projected wastewater flows. As such, the Project as well as other projects within the City could be served by the existing sewer infrastructure. As previously described, LASAN also manages the City's storm drain infrastructure. In addition, per City requirements, the Project is required to comply with the Los Angeles County Department of Public Works Hydrology Manual and the City's LID Ordinance to treat stormwater for pollutants and control runoff at buildout. Therefore, the Project would not create or contribute runoff water which would exceed the capacity of the existing or planned stormwater drainage system. As such, the Project is consistent with this criterion. Electricity: Based on the Utility Infrastructure Report (Appendix J), an existing 4.8 kilovolt (kV) primary circuit is available in the alley south of the Project Site, between Westlake Avenue and Bonnie Brae Street, which currently feeds the existing adjacent Miramar Towers building. A 34.5 kV circuit is available on Alvarado Street and would be extended to the Project site if LADWP determines a higher voltage that 4.8 kV is necessary to service the Project. An off-site line extension would be needed to connect to the proposed building's Indoor Customer Station, which would then provide electricity for the Project. The existing transformer at the Project Site, utilized by the adjacent Miramar Towers development, would be relocated off-site to the Miramar Towers site to make space for the Project. The relocated transformer would only be utilized by Miramar Towers. LADWP's most recently adopted 2017 Power Strategic Long-Term Resources Plan identifies adequate resources (natural gas, coal) to support future generation capacity over the next 20 years. Projections for energy efficiency improvements and economic growth which includes construction projects are also provided within the Long-Term Resources Plan. Therefore, electricity usage resulting from the future operation of the		

Project is likely accounted for in the LADWP projections. As such, based on LADWP's 2017 Power Strategic Long-Term Resources Plan, the Project can be served by the existing and planned electrical service. Gas: SoCalGas would be the gas provider for the Project. An existing SoCalGas mainline is available on 3rd Street. There is a 3-inch gas line that runs on 3rd Street with a service line running north toward the existing 7-story Miramar Towers. It then splits into 3-inch and 6-inch gas lines before it reaches the adjacent Miramar Towers building. The 2018 California Gas Report presents a comprehensive outlook for natural gas requirements and supplies for California through the year 2035.[16] The natural gas usage resulting from future operation of the Project as well as other nearby transit projects is likely accounted for in the SoCalGas projections.. As such, based on the 2018 California Gas Report, the Project could be served by the existing and planned natural gas service. Solid Waste: As required by City Ordinance No. 181,519 (Waste Hauler Permit Program), Project construction waste would be hauled by permitted haulers and taken only to City-certified construction and demolition processing facilities that are monitored for compliance with recycling regulations. In addition, during operation, the Project would provide adequate storage areas in accordance with the City of Los Angeles Space Allocation Ordinance (Ordinance No. 171,687), which requires that development projects include an on-site recycling area or room of specified size. The Project would also comply with State and local solid waste reduction and recycling regulations including Assembly Bill (AB) 939, AB 341, AB 1826 and the City's RENEW LA waste diversion goals. Fees: The Project would be required to pay all applicable permit and development fees pursuant to code requirements and conditions of the Project. The applicable fees include but are not limited to the Los Angeles Unified School District fee in compliance with Senate Bill (SB) 50 and parks and recreation fees pursuant to LAMC Section 21.10.3(a)(1). Thus, the Project meets this criterion.		
(2) The site of the TPP does not contain wetlands or riparian areas, does not have significant value as a wildlife habitat, and implementation of the project would not harm protected species. The Project is situated in an established, fully-urbanized area within the City. The commercially/residentially-zoned Project Site is currently improved with a pedestrian walkway, landscaping, stairs, and outdoor seating area, and a surface parking lot.	X	

16 California Gas and Electric Utilities, 2018. 2018 California Gas Report. Available at: https://www.socalgas.com/regulatory/documents/cgr/2018_California_Gas_Report.pdf, accessed June 30, 2020.

Review of the United States Fish and Wildlife Service's National Wetlands Inventory identified no protected wetlands in the vicinity of the Project Site and the Project Site is not located within a riparian area.[17] The nearest bodies of water include the MacArthur Park Lake, approximately 0.44 miles southwest of the Project Site and the Echo Park Lake, approximately 0.85-mile northwest of the Project Site. Further, as the Project Site is fully developed, and there are no open spaces with water courses such as streams or lakes within or adjacent to the Project Site. The Project Site and vicinity do not support any riparian or wetland habitat, as defined by Section 404 of the Clean Water Act. Therefore, the Project would not have a substantial adverse effect on wetlands, riparian habitat, or other sensitive natural communities identified in federal, state, or local plans, policies, and regulations. Furthermore, the Project Site is not located in or adjacent to a Biological Resource Area as defined by the City.[18] Moreover, the Project Site and immediately surrounding area are not within or near a designated Significant Ecological Area.[19] The Project Site currently contains 28 non-protected trees (including 6 street trees) that would be replaced with 35 trees (28 on-site trees and 7 street trees).[20,21] The canopy of the existing six street trees is approximately 25 to 30 feet in diameter and the height is approximately 25 feet. The tree canopy would be impacted by the construction as the canopy encroaches approximately 12 to 15 feet over the property line. Additionally, the existing sidewalk on 3rd Street is currently upheaved by the street tree roots and will require the tree roots to be cut so that a new, ADA-compliant sidewalk can be constructed. This would likely damage the health and stability of the street trees, which would pose a hazard to public safety. For these reasons, preservation and/or relocation of the street trees is infeasible. The removal and replacement of any trees within the public right-of-way would require consultation with the City of Los Angeles Division of Urban Forestry and approval by the Board of Public Works. However, the trees that are to be removed or pruned have the potential to support nesting birds that are protected under the Migratory Bird Treaty Act (MBTA), which prohibits take of all birds and their active nests, as well as the regulations of the California Fish and Game Code. As discussed in Attachment C, Mitigation Measures from Prior EIR – 2016-2040 RTP/SCS, consistent with Mitigation Measures MM-BIO-1(b), MM-BIO-2(b), and MM-BIO-4(b) included in SCAG's 2016–2040 RTP/SCS Final Program EIR, the removal or pruning of trees would occur in accordance with the MBTA

21 One tree is required for every four residential units. The Project's 137 units would require 34.25, or 35 trees. The 6 street trees will be subject to final replacement requirements to the satisfaction of the Division of Urban Forestry.

and state and local requirements. Thus, the Project would not harm any species protected by the Federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of Division 2 of the Fish and Game Code), or the California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code) and therefore meets this criterion.		
(3) The site of the TPP site is not included on any list of facilities and sites compiled pursuant to Section 65962.5 of the Government Code. Government Code Section 65962.5, amended in 1992, requires the California Environmental Protection Agency (CalEPA) to compile list of hazardous materials sites, commonly referred to as the "Cortese List." While Government Code Section 65962.5 makes reference to the preparation of a list, many changes have occurred related to web-based information access since 1992, and information regarding the Cortese List is now compiled on the websites of different agencies. The California Department of Toxic Substances Control (DTSC) maintains a database (EnviroStor) that provides access to detailed information on hazardous waste permitted sites and corrective action, facilities, as well as existing site cleanup information. The Regional Water Quality Control Board (RWQCB) maintains a similar database (Geotracker).[22] EnviroStor and Geotracker each provide access to detailed information on hazardous waste permitted sites and corrective action facilities, as well as existing site cleanup information. EnviroStor and Geotracker also provide information on investigation, cleanup, permitting, and/or corrective actions that are permitted, planned, being conducted, or have been completed under DTSC's and the applicable Regional Water Quality Control Board's (RWQCB) respective oversight. A Phase I Environmental Site Assessment (ESA) was prepared by Surveys Inc. for the Project Site in 2020 (Attachment F).[23] As part of this Phase I ESA, a review of all major governmental databases was conducted to identify any information related to hazardous materials on, or in the immediate vicinity, of the Project Site. Responses to requests were received from the United States Environmental Protection Agency (USEPA), Cal-Sites AWP (Annual Work Plan, State Environmental Protection Agency), Cal-Sites ASPIS (Department of Substance Control), the California Hazardous Materials Incident Report System (CHMIRS), the State of California Integrated Waste Management Board's Solid Waste Information System (SWIS), Waste Management Unit Database System (WMUDS), California Water Quality Control Board Leaking Underground Storage Tank (LUST) and Underground Storage Tank (UST), California Water Quality Control Board Hazardous Substance Storage Container Database, Statewide	X	

22 California Environmental Protection Agency (CalEPA), 2019. Background and History, Cortese List. Available at: https://calepa.ca.gov/sitecleanup/corteselist/Background/, accessed May 26, 2020.

23 Surveys Inc., 2020. Phase I Environmental Site Assessment. June 2, 2020.

Environmental Evaluation and Planning System (SWEEPS), California Environmental Protection Agency (CalEPA) and California Water Quality Control Board Aboveground Storage Tank (AST) Registration lists, California Department of Health Services Bond Expenditure Plan (BEP), Department of Toxic Substance Control's EnviroStor Database, Los Angeles Regional Water Quality Control Board (RWQCB) Spills, Leaks, Investigation and Cleanup Cost Recovery Listing (SLIC), DTSC's Volunteer Cleanup Program (VCP), Engineering/Institutional Controls & Deed Restriction Database (ENG/INST CONTROLS & DEEDS), HAZNET, CalEPA CERS HAZ WASTE databases, Brownfields, and Orphan Summary. Accordingly, the Project Site is not located on any list of hazardous waste sites pursuant to Section 65962.5 and, therefore, meets this criterion.		
(4) The site of the TPP is subject to a preliminary endangerment assessment prepared by a registered environmental assessor to determine the existence of any release of a hazardous substance on the site and to determine the potential for exposure of future occupants to significant health hazards from any nearby property or activity. **(a) If a release of a hazardous substance is found to exist on the site, the release shall be removed or any significant effects of the release shall be mitigated to a level of insignificance in compliance with state and federal requirements;** **(b) If a potential for exposure to significant hazards from surrounding properties or activities is found to exist, the effects of the potential exposure shall be mitigated to a level of insignificance in compliance with state and federal requirements.** A PEA was prepared by Ramboll for the Project Site (Attachment H). As part of the PEA and prior site assessments, previous uses of the Project Site and nearby properties were evaluated to identify any historically recognized environmental conditions and to determine the existence of hazardous substance releases on the Project Site and also determine the potential for exposure of future occupants to significant health hazards from any nearby property or activity. The findings of these reports are summarized below.[24] Project Site The Project Site is currently developed with a pedestrian walkway, landscaping, and a surface parking lot with seven parking spaces and a driveway. The Project Site was developed with five dwelling units from 1906 until 1958, with the Project Site becoming vacant by the mid-1970s.	X	

[24] Note that the Sustainable Communities Project CEQA Exemption (specifically, Public Resources Code Section 21151.1(a)(4)) does not contemplate or require the preparation of a preliminary endangerment assessment pursuant to the requirements of Health & Safety Code Chapter 6.8, which is a distinct and unrelated statutory regime. This fact has been confirmed by the DTSC, which has noted that Public Resources Code Section 21151.1 does not envision any role or mandate any regulatory oversight by DTSC.

While results of the Phase I ESA showed that nearby properties were listed in the regulatory databases, the Project Site itself was not identified in any of the regulatory databases reviewed. Based upon the review of all pertinent regulatory documents (e.g., Cortese List documents listed above), the Phase I ESA concluded that there is only a low potential for any toxic or hazardous contamination to the Project Site from any of these off-site listed sources.[25] Based on the information reviewed for preparation of the PEA, no areas of environmental concern (AOCs) were identified for the Project Site. Since no environmental contamination was identified at the Project Site, there is no known or suspected source of chemical contaminants at the Project Site. [26] Soil Sampling As part of a geotechnical evaluation for the Project Site, soil samples were collected and submitted for laboratory analysis. A total of eight samples were collected from four boring locations. One soil sample (B6-2.0) exhibited a total lead concentration greater than 10 times the limit for lead of 5.0 milligrams per liter (mg/l) and 20 times the leaching limit for lead of 5.0 mg/l. Total petroleum hydrocarbon (TPH) was reported in 4 of the 8 samples analyzed at total concentrations ranging from 45 mg/kg to 720 mg/kg.[27] Soil excavated from the Project Site will be stockpiled and characterized for TPH content, and acceptance from the intended receiving facility should be obtained prior to shipping the soil off-site for disposal. For disposal purposes, and with the exception of the area in the vicinity of Boring B6, the soil would be classified as a non-hazardous waste based on TPH content.[28] Wet soluble lead was reported in sample B6-2.0 at a concentration of 16 mg/l which is greater than the 5.0 mg/l lead limit. Based on this analytical result, the soil in the vicinity of B6-2.0 would be characterized as a California Hazardous waste based on soluble lead content. The soil would not be characterized as a Resource Conservation and Recovery Act (RCRA) hazardous waste because the soluble lead content of 0.50 mg/l reported for the sample is less than the limit/standard of 5.0 mg/l. The extent of lead impacted soil in the vicinity of Boring B6 is undefined. A Soil Management Plan (SMP) will be prepared for the Project Site prior to the start of grading. Soil management procedures within the SMP shall be described so the hazardous soil can be separated from nonhazardous soil during excavation tasks. Soil management procedures outlined in the SMP will be followed during the Project's excavation and development phases to properly manage the various classes of soil and to minimize risk		

25 Ramboll, 2020. Draft Preliminary Endangerment Assessment, 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 14, 2020.

26 Ramboll, 2020. Draft Preliminary Endangerment Assessment, 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 14, 2020.

27 Geocon West, 2020. Limited Soil Sampling and Analysis. 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 7, 2020.

28 Geocon West, 2020. Limited Soil Sampling and Analysis. 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 7, 2020.

to workers and the public during construction.[29] Hence, since total metal is detected at a concentration greater than or equal to 10 times the respective limit, and assuming that 100-percent of the total metals are soluble, soluble metal analysis by the Waste Extraction Test (WET) is required. Compliance with regulatory requirements would reduce impacts from contamination to less than significant levels in compliance with state and federal requirements. Methane Buffer Zone The Project Site is located within a City designated Methane Buffer Zone.[30,31] Pursuant to City Ordinance No. 175,790 and Ordinance No. 180,619, standard measures to control exposure to methane, such as site testing detection systems, and venting, would be required pursuant to the LAMC as part of the City's required ministerial plan check and permit issuance process. Additionally, testing for the presence of methane and the installation of methane mitigation systems at the Project Site prior to construction activities may be necessary (Division 71 of the Los Angeles Building Code [LABC]). A methane soil gas investigation was conducted at the Project Site and determined that elevated methane concentrations were present on-site.[32] The Methane Soil Gas Investigation Report recommends measures will be incorporated into the design of the Project to alleviate methane concentrations. Required compliance with the LAMC and the LABC would ensure that the Project would not result in public health exposure to methane at a level that would exceed the standards established by any state or federal agency. Therefore, there would be no significant impact resulting from exposure to methane as a result of Project implementation. Asbestos Containing Materials (ACM) and Lead Based Paint (LBP) As discussed in Attachment B of the PEA, based on the absence of buildings on the Project Site, there is a low potential for ACM and LBP.[33] As discussed in Attachment C of this SCPE, consistent with SCAG mitigation measure MM-HAZ-4(b), an assessment to determine the presence of ACM and LBP on the Project Site prior to construction activities would be required. Since it was determined that there is a low potential for ACM and LBP, there would be no hazardous material risk resulting from exposure to ACM and/or LBP as a result of Project implementation. Therefore, with compliance with applicable regulatory requirements and Project measures, implementation of the Project would not result in

32 Terra-Petra Environmental Engineering, 2020. Report of Methane Soil Gas Investigation, Proposed Development, 2000 Third Street, 1917-2005 1/2 W. 3rd St., Los Angeles, CA 90057. July 13, 2020.

33 Ramboll, 2020. Draft Preliminary Endangerment Assessment, 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 14, 2020.

impacts pertaining to the release of or exposure to hazardous substances. Furthermore, the analysis and conclusions of the PEA and related Phase I ESA fully address and resolve the hazards-related analysis required by this criterion; namely, the existence of any release of a hazardous substance on the Project Site and to determine the potential for exposure of future occupants to significant health hazards from any nearby property or activity. Therefore, the Project meets this criterion.		
(5) The TPP does not have a significant effect on historical resources pursuant to Section 21084.1. A Historic Resources Technical Report (Attachment K) was prepared for the Project Site by the Historic Resources Group.[34] The Project Site is currently improved with landscaped areas, pedestrian walkway, stairs, an outdoor seating area, and a surface parking lot. These features that make up the Project Site were developed as part of the Miramar Towers apartment building complex located immediately north of the Project Site and constructed in 1979. The Project Site does not contain any historical resources.[35] Additionally, as stated in the Historic Resources Technical Report, the Miramar Towers building, for which the Project Site was developed, is not eligible for historic listing. Two resources in the Project vicinity have been identified by SurveyLA as eligible for local, state, and national listing or eligible for local listing as a City of Los Angeles Historic-Cultural Monument (HCM). The first resource is a single-family residence at 1913 West 3rd Street abutting the Project Site to the east, which has been identified by SurveyLA as eligible for the National Register, California Register, and as a City of Los Angeles HCM. The second resource is a Royal Viking Motel Pole Sign, a freestanding neon sign associated with the motel property located approximately 100 feet west of the Project Site and separated from the Project Site by the 4-story apartment building located at 2007 West 3rd Street. The Royal Viking Motel Pole Sign was identified by SurveyLA as eligible for local listing as a City of Los Angeles HCM. No other historic resources were identified on or in the immediate vicinity of the Project Site.[36] Since all new construction associated with the Project would be contained within the Project Site, and the Project Site does not contain any historic resources, the Project would not physically alter or demolish any historical resources located on or adjacent to the Project Site. Therefore, the Project would not result in significant direct impacts to any historic resources.[37]	X	

34 Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

35 Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

36 Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

37 Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

The Project does not include the demolition, relocation, rehabilitation, alteration, or conversion of the 1912 residence located at 1913 West 3rd Street. However, the proposed new construction would include substantial foundation work and the construction of a subterranean lobby level. The excavation work associated with the Project, however, would be located 33 feet or more from the 1913 West 3rd Street residence, and is not anticipated to cause a level of vibration that would result in damage to adjacent structures so that any potential for adverse indirect impacts from vibration associated with construction activity will be avoided and 1913 West 3rd Street will retain its eligibility for listing in the National Register, California Register and designation as a Los Angeles HCM. Given the distance of 100 feet, the Royal Viking Motel Pole Sign would remain unchanged and in its original location after implementation of the Project and the Project would not result in direct adverse impacts to the Royal Viking Motel Pole Sign. Significance and integrity of the Royal Viking Motel Pole Sign would not be materially impaired by the Project and the Royal Viking Motel Pole Sign would retain its eligibility for designation as a Los Angeles HCM. The Project would not result in significant indirect impacts to the Royal Viking Motel Pole Sign.[38] Therefore, no significant effects to historical resources would occur, and the Project meets this criterion.		
(6) The TPP site is not subject to any of the following: **(a) A wildland fire hazard, as determined by the Department of Forestry and Fire Protection, unless the applicable general plan or zoning ordinance contains provisions to mitigate the risk of a wildland fire hazard.** As described above and recognized in the 2016 RTP/SCS, the Project Site is located in a highly urbanized area of the City. The Project Site is not located within a Very High Fire Hazard Severity Zone pursuant to the City's ZIMAS system, nor is it located within a designated Fire Buffer Zone or Mountain Fire District by the 1996 City General Plan's Safety Element.[39,40] Therefore, the Project Site is not subject to a wildland fire hazard, and the Project meets this criterion. **(b) An unusually high risk of fire or explosion from materials stored or used on nearby properties;** The Phase I ESA prepared for the Project Site found that the Project Site is not included in any federal, state, or local environmental list that identifies the use, generation, storage, treatment or disposal of hazardous materials and chemicals, or release incidents of such materials which may	X	

38 Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

39 City of Los Angeles, ZIMAS, 2020. Parcel information for 1917 W. 3rd St., APN 5525004023. Available at: http://zimas.lacity.org/, accessed June 2, 2020.

40 City of Los Angeles, Department of City Planning, 1996. City of Los Angeles General Plan, Safety Element. Available at: https://planning.lacity.org/cwd/gnlpln/saftyelt.pdf, accessed June 3, 2020.

impact the Project Site.[41] Based upon the review of all pertinent Regulatory Documents, the Phase I ESA concluded that there is only a low potential for any toxic or hazardous contamination to the Project Site from off-site sources.[42] Accordingly, the Project Site is not subject to an unusually high risk of fire or explosion from materials stored or used on nearby properties or a risk of public health hazard in excess of federal or state standards. Therefore, the Project meets this criterion.

(c) Risk of a public health exposure at a level that would exceed the standards established by any state or federal agency.

The Project Site is located within the City's Methane Buffer Zone.[43,44] Pursuant to City Ordinance No. 175,790 and Ordinance No. 180,619, standard measures to control exposure to methane, such as site testing, detection systems, and venting, would be identified and implemented as part of the Project's required regulatory compliance with the LAMC. Additionally, testing for the presence of methane and the installation of methane mitigation systems at the Project Site prior to construction activities may be necessary (Division 71 of the LABC). A methane soil gas investigation was conducted at the Project Site and determined that elevated methane concentrations were present on-site.[45] The Methane Soil Gas Investigation Report recommends methane mitigation measures be incorporated into the design of the Project. These recommended design features would include an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection popes, a 4-inch gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines, and trench dams at utility trenches. Additionally, a methane gas detection system incorporating gas sensors and alarms shall be required. [46] Compliance with the LAMC and the LABC would ensure that the Project would not result in public health exposure to methane at a level that would exceed the standards established by any state or federal agency.

Therefore, the Project would not result in public health exposure, either to the public or to future tenants of the Project, at a level that would exceed the standards established by any state or federal agency. As such, the Project meets this criterion.

44 Terra-Petra Environmental Engineering, 2020. Report of Methane Soil Gas Investigation, Proposed Development, 2000 Third Street, 1917-2005 1/2 W. 3rd St., Los Angeles, CA 90057. July 13, 2020.

45 Terra-Petra Environmental Engineering, 2020. Report of Methane Soil Gas Investigation, Proposed Development, 2000 Third Street, 1917-2005 1/2 W. 3rd St., Los Angeles, CA 90057. July 13, 2020.

46 Terra-Petra Environmental Engineering, 2020. Report of Methane Soil Gas Investigation, Proposed Development, 2000 Third Street, 1917-2005 1/2 W. 3rd St., Los Angeles, CA 90057. July 13, 2020.

(d) Seismic risk as a result of being within a delineated earthquake fault zone, as determined pursuant to Section 2622, or a seismic hazard zone, as determined pursuant to Section 2696, unless the applicable general plan or zoning ordinance contains provisions to mitigate the risk of an earthquake fault or seismic hazard zone.

As discussed in the Geotechnical Investigation prepared for the Project (Attachment D), the Project Site is not located within a designated earthquake fault or seismic hazard zone. Specifically, it is not located within the established Alquist-Priolo Earthquake Fault Zone or a fault zone mapped by the State Geologist pursuant to the Seismic Hazard Mapping Act.[47,48] Additionally, the Project Site is not located within a City-designated Fault Rupture Study Area.[49,50,51] No active faults are known to pass through the immediate Project vicinity. The closest active fault to the Project Site, the Hollywood Fault, is located approximately 3.5 miles north of the Project Site.[52] The Project Site is underlain by the Los Angeles segment of the Puente Hills Blind Thrust and the Upper Elysian Bind Thrust.[53] While these blind thrust faults and others in the region do not present a potential surface rupture hazard at the Project Site, these faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the Project Site.[54]

The Project is required to comply with the existing building, grading, and seismic regulations of the LABC, which incorporates the Uniform Building Code (UBC) and California Building Code (CBC). Compliance with these regulations is required by LAMC Section 91.7006, which requires the Los Angeles Department of Building and Safety to review and approve a final design-level geotechnical report for the Project prior to the issuance of grading permits. Furthermore, the final geotechnical report would incorporate the building design recommendations contained in the existing Geotechnical Investigation prepared for the Project (Attachment D).

Because the Project Site is not located within a designated earthquake fault or seismic hazard zone, the Project would not result in seismic risk as a result of being within a delineated earthquake fault zone or a seismic hazard zone, and the Project meets this criterion.

(e) Landslide hazard, flood plain, flood way, or restriction zone unless the applicable general plan or zoning ordinance contains provisions to mitigate the risk of a landslide or flood.

The Project Site is not within a City-designated Hillside Area, a landslide zone, a liquefaction zone, a fault rupture study area, or a tsunami inundation zone.[55] [56] The Project Site is not located in a 100-year flood hazard area according to the Los Angeles General Plan Safety Element.[57] Additionally, according to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel #06037C1617G, the Project Site is located outside of any Special Flood Hazard Areas (SFHAs) and is identified as being in an Area of Minimal Flood Hazard. Furthermore, based on the Phase I ESA, no wetlands were identified at

the Project Site or adjoining/immediately surrounding properties and therefore, the risk of flooding from a seismically induced seiche is remote. Therefore, the Project would not result in landslide hazard, flood plain, flood way, or restriction zone impacts, and the Project meets this criterion.		
(7) The TPP site is not located on developed open space. **(a) For the purposes of this paragraph, "developed open space" means land that meets all of the following criteria:** **i. Is publicly owned, or financed in whole or in part by public funds.** **ii. Is generally open to, and available for use by, the public.** **iii. Is predominantly lacking in structural development other than structures associated with open spaces, including, but not limited to, playgrounds, swimming pools, ballfields, enclosed play areas, and picnic facilities.** The Project Site is privately owned and is currently developed with a pedestrian walkway, a landscaped area (with 28 non-protected trees), and a surface parking lot for the private use by the residents and staff of Miramar Towers. This area is solely used as an ingress and egress area for vehicle and pedestrian access to 3rd Street for occupants of the existing development. The Project Site has not been designated for acquisition by a public agency for use as open space, and is located in a	X

57 City of Los Angeles, Department of City Planning, 1996. City of Los Angeles General Plan, Safety Element. Available at: https://planning.lacity.org/cwd/gnlpln/saftyelt.pdf, accessed July 2, 2019.

highly urbanized area that includes a mixture of commercial, residential and institutional uses. The Project Site does not meet all of the "developed open space" criteria above, as it is privately owned, and not open to or available for use by the public. The Project Site is also designated and zoned for commercial and multi-family residential uses, and not designated or zoned for open space purposes.[58] Therefore, the Project Site is not located on developed open space, and the Project meets this criterion.		
(8) The buildings in the TPP are 15 percent more energy efficient than required by Chapter 6 of Title 24 of the California Code of Regulations, and the buildings and landscaping are designed to achieve 25 percent less water usage than the average household use in the region. As shown by the CEQA Exemption Energy and Water Efficiency Compliance Memorandum prepared for the Project (Attachment I), the Project's energy use would be 15.5 percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89 percent below the regional baseline. The Project would achieve its energy efficiency through the implementation of multiple measures including, but not limited to, enhanced exterior wall insulation, overhanging balconies for solar shading, high performance windows, and other forms of high-efficiency lighting, high-efficiency heating, ventilation, and air conditioning (HVAC) systems, and centralized hot water system and high-efficiency water fixtures. The Project would achieve its water efficiency through multiple measures including high efficiency water-using appliances such as clothes washers and dishwashers, and efficient irrigation systems. Furthermore, as specifically discussed in the 2018 California Gas Report, SoCalGas projects total gas demand to decline from 2018 to 2035 due to modest economic growth, the California Public Utilities Commission mandated energy efficiency standards and programs, tighter standards created by revised Title 24 Codes and Standards, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering Infrastructure. Consistent with this forecast, pursuant to City and state requirements, the Project would incorporate energy conservation features and comply with applicable regulations including CALGreen and State energy standards under Title 24 that would continue to reduce the use of natural gas Thus, the Project meets this criterion.	X	
PRC § 21155.1(b). The TPP complies with all of the following land use criteria:	Consistent?	
	Yes	No

58 City of Los Angeles, ZIMAS, 2020. Parcel information for 1917 W. 3rd St., APN 5525004023. Available at: http://zimas.lacity.org/, accessed June 2, 2020.

(1) The site of the TPP is not more than eight acres in total area. The Project is comprised of a 137-unit affordable housing building on a 30,432 square feet lot (0.70 acre). Therefore, the Project Site is less than 8 acres in total area, and the Project meets this criterion.	X	
(2) The TPP does not contain more than 200 residential units. The Project would include 137 residential units. Therefore, the Project would not contain more than 200 residential units, and meets this criterion.	X	
(3) The TPP does not result in any net loss in the number of affordable housing within the project area. The Project Site is currently improved with landscaped areas, pedestrian walkway, stairs, an outdoor seating area, and surface parking and, thus, development of the Project would not result in the loss of any affordable housing within the area. The proposed Project would provide 136 affordable housing units for Low Income households, subsequently resulting in a net increase in the number of affordable housing units in the Project area. Therefore, the Project meets this criterion.	X	
(4) The TPP does not include any single level building exceeding 75,000 square feet. The Project would construct a 7-story building with approximately 106,386 square feet of residential development. Therefore, the Project does not include any single-level building exceeding 75,000 square feet, and meets this criterion.	X	
(5) Any applicable mitigation measures or performance standards or criteria set forth in the prior environmental impacts, and adopted in findings, have been or will be incorporated into the TPP. There are no prior EIRs or other environmental documents prepared specifically for the Project Site. The 2016 RTP/SCS EIR, adopted April 2016, is relevant to the Project and includes a Mitigation Monitoring and Reporting Program (MMRP), which provides a list of mitigation measures SCAG determined a lead agency can and should consider, as applicable and feasible, where the lead agency has identified that a project has the potential for significant effects.[59] While the SCAG mitigation measures should only be applied to projects that have the potential for significant effects, a discussion of applicability of these measures is also contained in Attachment C. As described therein, many of the mitigation measures identified by SCAG would not apply to the Project and, therefore, would not be incorporated into the TPP (e.g., the Project). The 2016 RTP/SCS MMRP also includes various mitigation measures at the regional level that would be implemented by SCAG (not at the project-level) and are therefore not discussed in Attachment C.	X	

59 SCAG, 2016 RTP/SCS PEIR, Exhibit B Mitigation Monitoring and Reporting Program. Available at: http://scagrtpscs.net/Documents/2016/peir/final/2016fPEIR_ExhibitB_MMRP.pdf, 2016, accessed June 17, 2020.

Attachment C, Mitigation Measures from Prior EIR – SCAG 2016-2040 RTP/SCS, contains a full discourse of the Project's consistency with SCAG's MMRP. As such, the Project meets this criterion.		
(6) The TPP is determined not to conflict with nearby operating industrial uses. According to ZIMAS, there are no parcels near the Project Site that are zoned for industrial use. An aerial review of land uses on Google Maps revealed that this area is comprised of a mix of uses, including commercial development, residential uses, public open space, and institutional uses. As described above, surrounding uses are generally developed with residential and commercial structures. The property to the north, at the Miramar Towers Site, is zoned R4-1 and is developed with a 7-story senior apartment building (Miramar Towers). The abutting property to the east is zoned C2-1, and is developed with a single-family home and a 2-story multi-family residential building. The properties to the south, across 3rd Street, are zoned C2-1 and are improved with commercial and residential uses. The property to the west is zoned C2-1 and is developed with a 4-story multi-family residential building. The nearest industrial use zone is located 0.72 miles to the north of the Project Site, north of the Hollywood Freeway (US-101) in Echo Park. The area has a CM-1VL Zone with a Commercial Manufacturing land use designation. The area is currently developed with retail and institutional uses, and has several vacant lots. Given the mix of nearby uses, including commercial and both single- and multi-family residential uses, there is no significant potential for a land use or operational conflict occurring between the Project and nearby operating industrial uses. Accordingly, the Project would not conflict with any nearby operating industrial uses, and meets this criterion.	X	
(7) The TPP is located within one-half mile of a rail transit station or a ferry terminal included in a RTP or within one-quarter mile of a high-quality transit corridor included in a RTP. As noted above, PRC Section 21064.3(a) clarifies that a "major transit" stop can include an existing rail transit station. The existing Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station is located 0.48-mile southwest of the Project Site. Additionally, the Project Site is designated as being within a High Quality Transit Area within the SCAG 2016 RTP/SCS.[60] As such, and as described above, the Project Site is within one-half mile of a major transit stop. Therefore, the Project Site satisfies this criterion.	X	

60 Southern California Associate of Governments (SCAG), 2016. 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS), page 77. Available at: http://scagrtpscs.net/Documents/2016/draft/d2016RTPSCS.pdf, accessed June 30, 2020.

PRC § 21155.1(c). The TPP complies meets at least one of the following three criteria:	Consistent?	
	Yes	No
(1) The TPP meets both of the following: **(a) At least 20 percent of the housing would be sold to families of moderate income, or not less than 10 percent of the housing would be rented to families of Low Income, or not less than 5 percent of the housing is rented to families of very Low Income.** **(b) The TPP developer provides sufficient legal commitments to the appropriate local agency to ensure the continued availability and use of the housing units for very low, low-, and moderate-income households at monthly housing costs with an affordable housing cost or affordable rent, as defined in Section 50052.5 or 50053 of the Health and Safety Code, respectively, for the period required by the applicable financing. Rental units shall be affordable for at least 55 years. Ownership units shall be subject to resale restrictions or equity sharing requirements for at least 30 years.** **(2) The transit priority project developer has paid or will pay in-lieu fees pursuant to a local ordinance in an amount sufficient to result in the development of an equivalent number of units that would otherwise be required pursuant to paragraph (1).** **(3) The transit priority project provides public open space equal to or greater than five acres per 1,000 residents of the project.** The Project meets part (1) of this criterion. The Project would provide 100-percent of its total units (136 affordable units of 137 total units, with one unit being a non-restricted manager's unit) to families of Low Income for at least 55 years. Pursuant to LAMC Section 12.22 A.31 and the Project's conditions of approval, the Applicant shall record a covenant against the Project Site ensuring the continued availability and use of the Project's 136 Low Income units for a 55-year period. Therefore, the Project meets this criterion.	X

Attachment B

Consistency with the Goals of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

ESA

ATTACHMENT B

Consistency with the Goals of the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy

The following evaluates the Project's consistency with the goals and benefits of the 2016-2040 Regional Transportation Plan/ Sustainable Communities Strategy (2016 RTP/SCS). Only goals and benefits that are applicable to the Project are discussed below.

2016 RTP/SCS Goal 2: Maximize mobility and accessibility for all people and goods in the region.

The Project proposes the development of a 137-unit housing development, 136 of which would be restricted to low income households. The City of Los Angeles (City) has 35 established Community Plans that guide the physical development of neighborhoods in the City by establishing the goals and policies for land use and provide specific, neighborhood-level detail, relevant policies, and implementation strategies necessary to achieve the City's long-range overarching General Plan objectives. The Project Site, located at 1917-2005 1/2 W. 3rd Street, is approximately 30,432 sf and is within the Westlake Community Plan area.

The City has conducted a comprehensive study that describes the baseline health conditions in the City and provides a context for understanding the demographic conditions, social and economic factors, physical environment, access to health care, and health behaviors contributing to the health of City residents and workers. The findings are documented in the *Health Atlas for the City of Los Angeles* (Health Atlas), published in June 2013.[1] While the primary focus of the Health Atlas is on factors that affect the health behaviors and health status of residents and workers, much of the data is relevant to land use transportation and greenhouse gas (GHG) emissions reductions as those topics reflect similar issues regarding land use patterns, urban design, and transportation systems. Data in the Health Atlas is summarized by Community Plan area (CPA). According to City data in the Health Atlas, the Westlake CPA has the highest percentage (approximately 46-percent) of workers that commute to work by walking, biking, and public transportation out

[1] City of Los Angeles, 2013. The Health Atlas. Available at: http://healthyplan.la/the-health-atlas/, accessed June 5, 2020.

of the 35 CPAs in the City. The statewide percentage of workers that commute to work by public transportation is approximately 5.1-percent, based on 5-year estimate Census data from 2018.[2] The Project Site is located in a Transit Priority Area that provides opportunities for walking, biking, and public transportation. The Project Site is located within a transit-rich and pedestrian accessible location with connectivity to many areas within the City. Public transit access to and from the general Project Site area is provided by the Los Angeles County Metropolitan Transit Authority (Metro) and the Los Angeles Department of Transportation (LADOT). The Project Site is within one-half mile of other transportation opportunities, including the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station, and Metro Routes 14, 18, 20, 487, 489, 603, and 720.

Additional bus lines with a stop within at least 1,500 feet of the Project Site include the following:

- Metro Route 16, 16/17 – nearest stop at W. 3rd Street and S. Bonnie Brae Street, approximately 175 feet south of the Project Site; runs east-west between Downtown Los Angeles and Century City
- Metro Route 37 – nearest stop at S. Alvarado Street and Beverly Boulevard, approximately 1500 feet north of the Project Site; runs east-west throughout different areas of Los Angeles
- Metro Route 200 – nearest stop at W. 3rd Street and S. Alvarado Street, approximately 600 feet west of the Project Site; runs north-south between Echo Park and Downtown Los Angeles
- DASH Pico Union/Echo Park – nearest stop at W. 3rd Street between S. Alvarado Street and S. Westlake Avenue; runs north-south between Echo park and Downtown Los Angeles

There are currently existing bike lanes located in the general region surrounding the Project Site. There are existing bike lanes along N. and S. Rampart Boulevard, N. Union Avenue, W. 7th Street, and W. 2nd Street, W. 1st Street, S. Reno Street, and W. 4th Street. Several bike lanes are proposed in the region: Alvarado Street, Temple Street, Beverly Boulevard, W. 6th Street, Virgil Avenue, Bonnie Brae Street, Union Avenue, 11th Street, and 12th Street.[3]

The Project would encourage the utilization of transit due to its close proximity to these bus lines, the Metro B and D Line stations, and proposed bicycle routes.

[2] U.S. Census Bureau, Data Set S0804 (Means of Transportation to Work By Selected Characteristics for Workplace Geography, California, 2014-2018 American Community Survey 5-Year Estimates). Available at: https://data.census.gov/cedsci/table?q=S0804&g=0400000US06&tid=ACSST5Y2018.S0804&vintage=2018&hidePreview=false, accessed June 5, 2020.

[3] City of Los Angeles, Department of Public Works. 2020. LA County Bikeways Map. Available at: https://dpw.lacounty.gov/pdd/bike/map.cfm, accessed June 5, 2020.

The Project also includes design elements that would create bicycle and pedestrian-oriented amenities including 104 bicycle parking spaces for its residential uses (10 short-term and 94 long-term), which meets LAMC's requirements for bicycle parking spaces.

Given the fact that the Project would develop new low income residential units within walking distance of existing transit stops, the Project would provide opportunities for residents to use public transit for work and personal trips. Thus, the Project will encourage the utilization of transit, bicycling, and walking as modes of transportation to and from the Project Site and contribute to the productivity and use of the regional transportation system by providing housing near transit. The Project is consistent with this goal.

2016 RTP/SCS Goal 3: Ensure travel safety and reliability for all people and goods in the region.

The Project includes proposed improvements that will improve travel safety and reliability for those traveling to and from the Project Site. Given that residential units would replace the existing pedestrian walkway, landscaping, stairs, an outdoor seating area, and a surface parking lot consisting of seven stalls on-site, the Project is expected to bring more pedestrian activity to the Project Site. The Project would maintain dedications and improvements along W. 3rd Street to keep the sidewalk in conformance with current City standards, thereby enhancing pedestrian mobility. In addition, the Project would include on-site security features such as security lighting, and landscaping designs that will allow high visibility.

As described above under 2016 RTP/SCS Goal 2, the Project Site is located in proximity to public transit opportunities, which provide safe and reliable travel options for Project residents. The Project would also provide 104 bicycle parking spots (94 long-term and 10 short-term). The Code-compliant bicycle parking spaces would encourage use of alternative modes of reliable transportation and pedestrian activity in the Project vicinity. The Project Site is also centrally located to numerous proposed bicycle paths and lanes that will increase travel safety for bicyclists in the area. Thus, the proposed Project would promote travel safety and reliability for the people in the region that travel to and from the Project Site and through the surrounding area. The Project is consistent with this goal.

2016 RTP/SCS Goal 5: Maximize the productivity of our transportation system.

The proposed Project is located in a dense urban area, and would increase intensity on site above what currently exists on the Project Site. The Project Site is within a Transit Priority Area, Transit Oriented Communities (TOC) Affordable Housing Incentive Program (TOC Program) Tier 3 area, Ordinance No. 184,745. Since the Project would provide 100-percent affordable housing, the Project would be able to take advantage of TOC Tier 4 base incentives for an 80-percent density bonus (or an additional 62 residential units for a total of 139 units) and a 4.25:1

maximum FAR. In total, the Project would develop 137 residential units on 0.70 acres with a 3.61:1 FAR and would provide modified parking, setback, and open space requirements pursuant to TOC Tier 4 guidelines. Increased density provides a foundation for the implementation of other strategies such as enhanced transit services and facilitates the use of transit by more people. The Project would develop residential uses within walking and biking distance of several bus lines and a rail transit, the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station (0.48 mile away). The Project would provide a total of 104 long-term and short-term bicycle parking spaces. As such, the Project would result in opportunities for residents to use public transit for work trips, and walk to retail businesses near the Project Site. Thus, the Project will encourage the utilization of transit as a mode of transportation to and from the Project Site and contribute to the productivity and use of the regional transportation system by providing housing near transit. The Project is consistent with this goal.

2016 RTP/SCS Goal 6: Protect the environment and health of our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking).

The Project will encourage the use of multi-modal transportation options. The Project will facilitate the use of alternative modes of transportation which will aid in reducing car trips and reducing impacts to air quality. The Project would provide 104 bicycle parking spaces (94 long-term and 10 short-term) in compliance the number of spaces required by the LAMC. Pedestrian access to the Project Site would be provided via the sidewalks along W. 3rd Street. The Project would maintain dedications and improvements along W. 3rd Street to bring the sidewalk Thus, the Project is consistent with this goal.

2016 RTP/SCS Goal 7: Actively encourage and create incentives for energy efficiency, where possible.

As shown by the CEQA Exemption Energy and Water Efficiency Compliance Memorandum prepared for the Project (Attachment I), the Project's energy use would be 15.5-percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89-percent below the regional baseline. The Project would achieve its energy efficiency through the implementation of multiple measures including, but not limited to, enhanced exterior wall insulation, perforated rain screen for solar shading, high performance windows, LED light fixtures, high-efficiency heating, ventilation, and air conditioning (HVAC) systems, a centralized hot water system, and high-efficiency water fixtures. The Project would achieve its water efficiency through multiple measures including high efficiency water-using appliances such as tank water closets, and faucets, and efficient irrigation systems.

Furthermore, as specifically discussed in the 2018 California Gas Report, SoCalGas projects total gas demand to decline from 2018 to 2035 due to modest economic growth, the California Public Utilities Commission mandated energy

efficiency standards and programs, tighter standards created by revised Title 24 Codes and Standards, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering Infrastructure. Consistent with this forecast, pursuant to City and state requirements, the Project would incorporate energy conservation features and comply with applicable regulations including CALGreen and State energy standards under Title 24 that would continue to reduce the use of natural gas.

The Project would also allow for lower transportation costs for the Project's future residents by incorporating bicycle- and pedestrian-friendly elements, providing convenient access to existing and proposed bicycle paths and lanes in the vicinity of the Project Site, and being located nearby various multi-modal public transportation options, including walking and biking distance of several bus lines and a rail transit, the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station (0.48 mile away), as discussed previously. The Project's location would provide future Project residents with affordable multi-modal transportation options. The Project is consistent with achieving this goal.

2016 RTP/SCS Goal 8: Encourage land use and growth patterns that facilitate transit and active transportation.

The Project would encourage the use of transit, walking and bicycling, as the Project would locate residential development in an area within walking and biking distance of bus and rail transit stations, including the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station (0.48 mile away), and provide 104 bicycle parking spaces. The Project would also provide pedestrian access to the Project Site via the sidewalk on W. 3rd Street. The Project would maintain dedications and improvements along W. 3rd Street to upgrade and maintain the sidewalk in conformance with current City standards, thereby enhancing pedestrian mobility. The proposed open space and trees would enhance the existing streetscape environment, making pedestrian experiences more enjoyable for residents. The Project would take advantage of an 80-percent density bonus pursuant to the City's TOC Tier 4 Program. Utilizing this 80-percent density bonus, the Project would be permitted to build up to a total of 137 dwelling units as opposed to the otherwise allowable base density of 77 units. Increased density provides a foundation for the implementation of other strategies such as enhanced transit services and facilitates the use of transit by more people. In turn, as transit ridership in an area increases with density, local transit providers are justified in providing enhanced transit services for the area. As a result, the Project would encourage land use and growth patterns that facilitate transit and active transportation by: creating housing opportunities and choices for people at low income levels; creating walkable areas; providing infill development within existing communities; providing a variety of transportation choices; and providing opportunities for residents use public transit for work trips and walk/bike to retail businesses near the Project Site. The Project is consistent with this goal.

2016-2040 RTP/SCS Land Use Policy 3: Develop "Complete Communities."

SCAG describes the development of "complete communities" to provide areas that encourage households to be developed with a range of mobility options to complete short trips. The 2016-2040 RTP/SCS supports the creation of these districts through a concentration of activities with housing, employment, and a mix of retail and services, located in proximity to each other, where most daily needs can be met within a short distance of home, providing residents with the opportunity to patronize their local area and run daily errands by walking or cycling rather than traveling by automobile.[4]

As stated above, the Project would place residential uses in a transit-rich area. The Project Site's location near mass transit and in proximity to services, retail stores, and employment opportunities promotes the use of a variety of transportation options, which includes walking, biking, and the use of public transportation. Thus, the Project would be consistent with this land use policy to reduce vehicles-per-miles traveled.

2016-2040 RTP/SCS Land Use Policy 5: Plan for additional housing and jobs near transit.

The Project Site is located in a highly urbanized area in the City. The Project would provide 100-percent of its total units (136 affordable units of 137 total units, with one unit being a non-restricted manager's unit) to families of Low Income within an HQTA, as defined by SCAG, and a transit priority area as defined by SB 743. The Project Site is in proximity to existing bus lines, including Metro Routes 14, 18, 20, 487, 489, 603, and 720. Also, the Project Site is located approximately 0.48 miles north of the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station.

2016-2040 RTP/SCS Land Use Policy 6 Plan: for changing demand in types of housing.

Of the 137 residential dwelling units that would be developed, 136 units would be restricted affordable units for Low Income Households.

2016-2040 RTP/SCS Land Use Policy 8: Ensure adequate access to open space and preservation of habitat.

The Project Site is located within an urbanized area of the City. Development of the Project would not remove any existing open space areas or habitat, since the Project Site is fully developed. The Project would provide open space in accordance with Code requirements.

---

[4] Southern California Associate of Governments (SCAG), 2016. 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS), page 79. Available at: http://scagrtpscs.net/Documents/2016/draft/d2016RTPSCS.pdf, accessed August 5, 2020.

2016 RTP/SCS Benefit 1: The RTP/SCS will promote the development of better places to live and work through measures that encourage more compact development in certain areas of the region, varied housing options, bicycle and pedestrian improvements, and efficient transportation infrastructure.

The Project would provide multi-family housing in an existing, transit-accessible area. The Project would provide 64 studio units and 59 one-bedroom units, and 14 two-bedroom units set aside for low-income households. Furthermore, the Project would provide 104 bicycle parking spaces. Primary pedestrian access would be provided via sidewalks along W. 3rd Street fronting the Project Site. The Project would maintain dedications and improvements along W. 3rd Street to keep the sidewalk in conformance with current City standards, thereby enhancing pedestrian mobility.

The Project Site is located in transit-rich and pedestrian accessible locations with connectivity to many areas within the City. Transit opportunities in the Project Site include various light rail and bus routes operated by Metro and one bus route by LADOT. See consistency analysis for Goal 2, above, for a list of nearby transportation options. The Project would be within one-half mile of the existing Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station.

The Project is consistent with achieving this benefit.

2016 RTP/SCS Benefit 3: The RTP/SCS is expected to result in less energy and water consumption across the region, as well as lower transportation costs for households.

As shown by the CEQA Exemption Energy and Water Efficiency Compliance Memorandum prepared for the Project (Attachment I), the Project's energy use would be 15.5-percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89-percent below the regional baseline. The Project would achieve its energy efficiency through the implementation of multiple measures including, but not limited to, enhanced exterior wall insulation, perforated rain screen for solar shading, high performance windows, LED light fixtures, high-efficiency heating, ventilation, and air conditioning (HVAC) systems, a centralized hot water system, and high-efficiency water fixtures. The Project would achieve its water efficiency through multiple measures including high efficiency water-using appliances such as tank water closets, and faucets, and efficient irrigation systems.

Furthermore, as specifically discussed in the 2018 California Gas Report, SoCalGas projects total gas demand to decline from 2018 to 2035 due to modest economic growth, the California Public Utilities Commission mandated energy efficiency standards and programs, tighter standards created by revised Title 24 Codes and Standards, renewable electricity goals, the decline in commercial and industrial demand, and conservation savings linked to Advanced Metering

Infrastructure. Consistent with this forecast, pursuant to City and state requirements, the Project would incorporate energy conservation features and comply with applicable regulations including CALGreen and State energy standards under Title 24 that would continue to reduce the use of natural gas

The Project would also allow for lower transportation costs for the Project's future residents by incorporating bicycle- and pedestrian-friendly elements, providing convenient access to existing and proposed bicycle paths and lanes in the vicinity of the Project Site, and being located nearby various multi-modal public transportation options, including walking and biking distance of several bus lines and a rail transit, the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station (0.48 mile away), as discussed previously. The Project's location would provide future Project residents with affordable multi-modal transportation options. The Project is consistent with achieving this benefit.

2016 RTP/SCS Benefit 4: Improved placemaking and strategic transportation investments will help improve air quality; improve health as people have more opportunities to bicycle, walk and pursue other active alternatives to driving; and better protect natural lands as new growth is concentrated in existing urban and suburban areas.

The Project would encourage improved access and mobility by providing residential uses to enhance the pedestrian-orientation of the Project Site for people at low income levels within walking and biking distance of existing bus and rail lines. The Project would also provide long-term and short-term bicycle parking which would help people have more opportunities to bicycle, walk, and pursue other active alternatives to driving. In addition, the Project's access to various transit options will encourage the use of existing and proposed mass transit. The Project's location in an urban infill area would provide residents and visitors with shopping and dining options that are easily accessible on foot or by bicycle. The Project's design and location would help to improve air quality and the well-being of people as they would have greater opportunities for pedestrian and bicycling activity and to reduce their reliance on automobiles. Furthermore, there are no natural lands on the Project Site. The Project is consistent with achieving this benefit.

Attachment C

Mitigation Measures from Prior EIR – 2016-2040 RTP/SCS

ESA

ATTACHMENT C

Mitigation Measures from Prior EIR – SCAG 2016-2040 RTP/SCS

As described above, the Southern California Association of Governments' (SCAG) 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016 RTP/SCS) is applicable to the Project Site. A Program Environmental Impact Report (PEIR) was prepared to evaluate the potential environmental impacts of the proposed 2016 RTP/SCS. As part of that PEIR, mitigation measures were included that would reduce potentially significant impact identified in the PEIR. The complete list of the mitigation measures identified in the PEIR is included in Exhibit B, Mitigation Monitoring and Reporting Program (MMRP), of the Final PEIR.[1] The MMRP includes various mitigation measures, both at the regional level that would be implemented by SCAG and at the project level that would be implemented by the respective lead agency (here, the City of Los Angeles [City]). Regional mitigation measures would be implemented by SCAG and are therefore not discussed in this table. Project level mitigation measures are those mitigation measures that SCAG determined a lead agency can and should consider, as applicable and feasible, where the lead agency has identified that a project has the potential for significant effects. This table provides an analysis of the consistency of the Project with applicable mitigation measures included in the PEIR. As demonstrated by the table, the Project substantially conforms with the applicable mitigation measures set forth in SCAG's MMRP through compliance with regulatory requirements as well as implementation of the Project Measures as enforceable Conditions of Approval. As noted in the table, many of the mitigation measures are not applicable to the Project.

Impact	**SCAG 2016-2040 RTP/SCS Mitigation Measures** (Implemented by Lead Agency)	**Applicability to the Project**
Aesthetics (AES)		
AES-1: Potential to have a substantial adverse effect on a scenic vista.	MM-AES-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of visual intrusions on scenic vistas, or National Scenic Byways that are in the jurisdiction and responsibility of Caltrans, other public agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with regulations for Caltrans scenic	**No mitigation applies.** Public Resources Code (PRC) Section 21099, enacted by Senate Bill (SB) 743, provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment" for purposes of CEQA. According to Section 21155(b) of the PRC, a Transit Priority Area (TPA) is defined as an area within one-half mile of a major transit stop that is existing or planned. Section 21064.3 of the PRC defines a "major

[1] Southern California Association of Governments, 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy Mitigation Monitoring and Reporting Program, adopted April 2016. Available at: http://scagrtpscs.net/Documents/2016/peir/final/2016fPEIR_ExhibitB_MMRP.pdf, accessed July 7, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	vistas and goals and policies within county and city general plans, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Use a palette of colors, textures, building materials that are graffiti-resistant, and/or plant materials that complement the surrounding landscape and development. • Use contour grading to better match surrounding terrain. Contour edges of major cut-and-fill to provide a more natural looking finished profile. • Use alternating facades to “break up” large facades and provide visual interest. • Design new corridor landscaping to respect existing natural and man-made features and to complement the dominant landscaping of the surrounding areas. • Replace and renew landscaping along corridors with road widenings, interchange projects, and related improvements. • Retain or replace trees bordering highways, so that clear-cutting is not evident. • Provide new corridor landscaping that respects and provides appropriate transition to existing natural and man-made features and is complementary to the dominant landscaping or native habitats of surrounding areas. • Implement design guidelines, local policies, and programs aimed at protecting views of scenic corridors and avoiding visual intrusions in design of projects to minimize contrasts in scale and massing between the project and surrounding natural forms and developments. Avoid, if possible, large cuts and fills when the visual environment (natural or urban) would	transit stop" as a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. As described in this exemption document under the criterion identified by PRC Section 21155(b)(3), the Project Site is located within one-half mile of a major transit stop, and is therefore located within a TPA.[2] Accordingly, the Project’s potential aesthetic impacts shall not be considered significant impacts on the environment pursuant to PRC Section 21099.

Available at: http://zimas.lacity.org/, accessed June 2, 2020; City of Los Angeles Zoning Information (ZI) File No. 2452. The Los Angeles County Metropolitan Transportation Authority (Metro) B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station is 0.48-mile southwest of the Project Site.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	be substantially disrupted. Site or design of projects should minimize their intrusion into important viewsheds and use contour grading to better match surrounding terrain.	
AES-2: Potential to substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway	No mitigation required.	**No mitigation applies.** As described above under AES-1, PRC Section 21099, enacted by SB 743, provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment," and the Project meets these statutory criteria.
AES-3: Potential to substantially degrade the existing visual character or quality of the site and its surroundings.	MM-AES-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of degrading the existing public viewpoints, visual character, or quality of the site that are in the jurisdiction and responsibility of local jurisdictions and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the goals and policies within county and city general plans, as applicable and feasible. Such measures may include the following, or other comparable SCAG Lead Agency Ongoing over the life of the Plan Ongoing over the life of the Plan 2016 RTP/SCS Mitigation Monitoring and Reporting Program 12 TABLE 9-2 MITIGATION MEASURES Impact Mitigation Measures Implementing Agency Implementing Date measures identified by the Lead Agency: • Minimize contrasts in scale and massing between the projects and surrounding natural forms and development, minimize their intrusion into important viewsheds, and use contour grading to better match surrounding terrain in accordance with county and city hillside ordinances, where applicable.	**No mitigation applies.** As described above under AES-1, PRC Section 21099, enacted by SB 743, provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center Project on an infill site within a transit priority area shall not be considered significant impacts on the environment," and the Project meets these statutory criteria.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Design landscaping along highway corridors to add significant natural elements and visual interest to soften the hard-edged, linear transportation corridors. • Require development of design guidelines for projects that make elements of proposed buildings/facilities visually compatible, or minimize visibility of changes in visual quality or character through use of hardscape and softscape solutions. Specific measures to be addressed include setback buffers, landscaping, color, texture, signage, and lighting criteria. • Design projects consistent with design guidelines of applicable general plans. • Apply development standards and guidelines to maintain compatibility with surrounding natural areas, including site coverage, building height and massing, building materials and color, landscaping, site grading, and so forth in accordance with general plans and adopted design guidelines, where applicable. • Require that sites are kept in a blight/nuisance-free condition. Remove blight or nuisances that compromise visual character or visual quality of project areas including graffiti abatement, trash removal, landscape management, maintenance of signage and billboards in good condition, and replace compromised native vegetation and landscape.	
AES-4: Potential to create a new source of substantial light or glare which would adversely affect day or nighttime views in the area. Potential to result in shade and shadow impacts.	MM-AES-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or minimizing the effects of light and glare on routes of travel for motorists, cyclists, and pedestrians, or on adjacent properties, and limit expanded areas of shade and shadow to areas that would not adversely affect open space or outdoor recreation areas that are in the jurisdiction and responsibility of local jurisdictions and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the goals and policies within county and city general plans, as applicable and feasible. Such	**No mitigation applies.** As described above under AES-1, PRC Section 21099, enacted by SB 743, provides that "aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment," and as described above under AES-1, the Project meets these statutory criteria.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	measures may include the following, or other comparable measures identified by the Lead Agency: • Use lighting fixtures that are adequately shielded to a point below the light bulb and reflector and that prevent unnecessary glare onto adjacent properties. • Restrict the operation of outdoor lighting for construction and operation activities in accordance with local regulations. • Use high pressure sodium and/or cut-off fixtures instead of typical mercury-vapor fixtures for outdoor lighting • Use unidirectional lighting to avoid light trespass onto adjacent properties. • Design exterior lighting to confine illumination to the project site, and/or to areas which do not include light-sensitive uses. • Provide structural and/or vegetative screening from light-sensitive uses. • Shield and direct all new street and pedestrian lighting away from light-sensitive off-site uses. • Use non-reflective glass or glass treated with a non-reflective coating for all exterior windows and glass used on building surfaces. • Architectural lighting shall be directed onto the building surfaces and have low reflectivity to minimize glare and limit light onto adjacent properties	
Agricultural and Forestry Resources (AF)		
AF-1: Potential to convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the	MM-AF-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the conversion of Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to	**No mitigation applies.** This mitigation measure does not apply to the Project as no Prime Farmland, Unique Farmland, or Farmland of Statewide Importance exists on or in the vicinity of the Project Site.[3] The Project Site is located in an urbanized area of the City and is currently

3 California Department of Conservation, Farmland Mapping & Monitoring Program, 2016 Los Angeles County Map. Available at: ftp://ftp.consrv.ca.gov/pub/dlrp/FMMP/pdf/2016/los16.pdf, accessed May 27, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
California Resources Agency, to non-agricultural use.	non-agricultural uses that are within the jurisdiction and responsibility of the Natural Resources Conservation Service, the California Resources Agency, other public agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the Farmland Protection Act and implementing regulations, and the goals and policies established within the applicable adopted county and city general plans to protect agricultural resources consistent with the Farmland Mapping and Monitoring Program of the California Resources Agency. Such measures may include the following, or other comparable measures identified by the Lead Agency taking into account project and site-specific considerations as applicable and feasible: • For projects that require approval or funding by the USDOT, comply with Section 4(f) U.S. Department of Transportation Act of 1966 (USDOT Act). • Project relocation or corridor realignment to avoid Prime Farmland, Unique Farmland, or Farmland of Local or Statewide Importance. • Maintain and expand agricultural land protections such as urban growth boundaries. Support the acquisition or voluntary dedication of agriculture conservation easements and other programs that preserve agricultural lands, including the creation of farmland mitigation banks. Local governments would be responsible for encouraging the development of agriculture conservation easements or farmland mitigation banks, purchasing conservation agreements or farmland for mitigation, and ensuring that the terms of the conservation easement agreements are upheld. The California Department of Fish and Wildlife provides a definition for conservation or mitigation banks on their website (please see https://www.wildlife.ca.gov/Conservation/Planning/Banking) “A conservation or mitigation bank is privately or publicly owned land managed for its natural resource values. In	improved with a pedestrian walkway, landscaping, outdoor seating surface parking lot with seven surface parking spaces and driveway. Thus, none of the mitigation measures that pertain to agriculture and forestry resources are applicable to the Project.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	exchange for permanently protecting, managing, and monitoring the land, the bank sponsor is allowed to sell or transfer habitat credits to permitees who need to satisfy legal requirements and compensate for the environmental impacts of developmental projects. A privately owned conservation or mitigation bank is a free-market enterprise that: • Offers landowners economic incentives to protect natural resources; • Saves permitees time and money by providing them with the certainty of pre-approved compensation lands; • Consolidates small, fragmented wetland mitigation projects into large contiguous sites that have much higher wildlife habitat values; • Provides for long-term protection and management of habitat. A publicly owned conservation or mitigation bank: • Offers the sponsoring public agency advance mitigation for large projects or multiple years of operations and maintenance." In 2013, the University of California published an article entitled "Reforms could boost conservation banking by landowners" that speaks specifically to the use of agricultural lands for in conjunction with conservation banking programs. • Provide for mitigation fees to support a mitigation bank that invests in farmer education, agricultural infrastructure, water supply, marketing, etc. that enhance the commercial viability of retained agricultural lands. • Include underpasses and overpasses at reasonable intervals to maintain property access. • Use berms, buffer zones, setbacks, and fencing to reduce conflicts between new development and farming uses and protect the functions of farmland.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Ensure individual projects are consistent with federal, state, and local policies that preserve agricultural lands and support the economic viability of agricultural activities, as well as policies that provide compensation for property owners if preservation is not feasible. • Contact the California Department of Conservation and each county's Agricultural Commissioner's office to identify the location of prime farmlands and lands that support crops considered valuable to the local or regional economy and evaluate potential impacts to such lands using the land evaluation and site assessment (LESA) analysis method (CEQA Guidelines §21095), as appropriate. Use conservation easements or the payment of in-lieu fees to offset impacts.	
AF-2: Potential to conflict with existing zoning for agricultural use, or a Williamson Act contract.	MM-AF-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from conflict with existing zoning for agricultural use or a Williamson Act contract that are within the jurisdiction and responsibility of the California Department of Conservation, other public agencies, and Lead Agencies. Where the Lead Agency has identified that a project has potential for significant effects, the Lead Agency can and should consider mitigation measures to mitigate the significant effects of agriculture and forestry resources to ensure compliance with the goals and policies established within the applicable adopted county and city general plans to protect agricultural resources consistent with the California Land Conservation Act of 1965, the Farmland Security Zone Act, and county and city zoning codes, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking into account project and site-specific considerations as applicable and feasible:	**No mitigation applies.** The Project Site is not zoned for agricultural production, there is no farmland at the Project Site, and there are no Williamson Act contracts in effect for the Project Site.[4] The Project Site is located in an urbanized area of the City and is currently improved with a pedestrian walkway, landscaping, outdoor seating, and surface parking lot with seven surface parking spaces and driveway. Thus, none of the mitigation measures that pertain to agriculture and forestry resources are applicable to the Project.

4 California Department of Conservation, The Williamson Act Status Report, 2017. Available at: https://www.conservation.ca.gov/dlrp/wa/Documents/stats_reports/2018%20WA%20Status%20Report.pdf, accessed June 26, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Project relocation or corridor realignment to avoid lands in Williamson Act contracts. • Establish conservation easements consistent with the recommendations of the Department of Conservation, or 20-year Farmland Security Zone contracts (Government Code Section 51296 et seq.), 10-year Williamson Act contracts (Government Code Section 51200 et seq.), or use of other conservation tools available from the California Department of Conservation Division of Land Resource Protection. • Prior to final approval of each project, encourage enrollments of agricultural lands for counties that have Williamson Act programs, where applicable.	
AF-3: Potential to conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined in Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g)).	No mitigation required.	**No mitigation applies.**
AF-4: Potential to result in the loss of forest land or conversion of forest land to non-forest use.	MM-AF-1(b) and MM-GHG-3(b). See above and below.	**No mitigation applies.** The Project Site does not include forest land; therefore, no forest land will be lost or converted to non-forest uses. The Project Site is located in an urbanized area of the City and is currently improved with a pedestrian walkway, landscaping, outdoor seating and surface parking lot with seven surface parking spaces and driveway. Thus, none of the mitigation measures that pertain to agriculture and forestry resources are applicable to the Project. See discussion under AF-1 and GHG Cumulative Impacts for discussion of the Project's consistency with those mitigation measures.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
AF-5: Potential to involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use.	MM-AF-1(b) and MM-GHG-3(b). See above and below.	**No mitigation applies.** Since the Project Site is currently not used for any agricultural uses and is not forest land, no agricultural use or forest land will be converted. The Project Site is located in an urbanized area of the City and is currently improved with a pedestrian walkway, landscaping, outdoor seating and surface parking lot with seven surface parking spaces and driveway. Thus, none of the mitigation measures that pertain to agriculture and forestry resources are applicable to the Project. See discussion under AF-1 and GHG Cumulative Impacts for discussion of the Project's consistency with those mitigation measures.
Air Quality		
AIR-1: Potential to conflict with or obstruct implementation of the applicable air quality plan.	No mitigation required.	**No mitigation applies.**
AIR-2: Potential to violate any air quality standard or contribute substantially to an existing or projected air quality violation.	MM-AIR-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures that are within the jurisdiction and authority of the CARB, air quality management districts, and other regulatory agencies. Where the Lead Agency has identified that a project has the potential to violate an air quality standard or contribute substantially to an existing air quality violation, the Lead Agency can and should consider the measures that have been identified by CARB and air district(s) and other agencies as set forth below, or other comparable measures, to facilitate consistency with plans for attainment of the NAAQS and CAAQS, as applicable and feasible. CARB, South Coast AQMD, Antelope Valley AQMD, Imperial County APCD, Mojave Desert AQMD, Ventura County APCD, and Caltrans have identified project-level feasible measures to reduce construction emissions: • Minimize land disturbance.	The Project already **substantially conforms** with this mitigation measure as it will comply with existing regulations that have been identified and are required by the Southern California Air Quality Management District (SCAQMD) and the California Air Resources Board (CARB) to facilitate consistency with plans for attainment for the National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS), as applicable and feasible. Adherence to the following requirements by SCAQMD, CARB, the State of California, and the federal government would further ensure consistency with MM-AIR-2(b): Consistent with SCAQMD Rule 403, the following measures shall be incorporated into Project plans and specifications: • Water or a stabilizing agent shall be applied to exposed surfaces at least three times per day to prevent generation of dust plumes.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. • Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes. • Cover trucks when hauling dirt. • Stabilize the surface of dirt piles if not removed immediately. • Limit vehicular paths on unpaved surfaces and stabilize any temporary roads. • Minimize unnecessary vehicular and machinery activities. • Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities. • On Caltrans projects, Caltrans Standard Specifications 10-Dust Control, 17-Watering, and 18-Dust Palliative shall be incorporated into project specifications. • Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet. • Ensure that all construction equipment is properly tuned and maintained. • Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	• The construction contractor shall utilize at least one of the following measures at each vehicle egress to a paved public road: - Install a pad consisting of washed gravel maintained in clean condition to a depth of at least six inches and extending at least 30 feet wide and at least 50 feet long; - Pave the surface extending at least 100 feet and at least 20 feet wide; - Utilize shaker devices to remove bulk material from tires and vehicle undercarriages; or - Install a wheel washing system to remove bulk material from tires and vehicle undercarriages. • Construction activity on unpaved surfaces shall be suspended when wind speed exceeds 25 miles per hour (such as instantaneous gusts). • Ground cover in disturbed areas shall be replaced as quickly as possible. • Traffic speeds on all unpaved roads shall be reduced to 15 mph or less. • Streets shall be swept at the end of the day if visible soil is carried onto adjacent public paved roads. If feasible, use water sweepers with reclaimed water. • Large bulldozers and excavators shall be suspended during third smog alerts. Consistent with SCAQMD Rule 1113, the following measures shall be incorporated into Project plans and specifications: • The contractor shall use architectural coatings that average 50 grams (g)/ Liters of Volatile Organic Compound (L VOC) content or less. • The development shall utilize low VOC cleaning supplies.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Project sponsors should ensure to the extent possible that construction activities utilize grid-based electricity and/or onsite renewable electricity generation rather than diesel and/or gasoline powered generators. • Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites. • As appropriate, require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site. • Implement EPA's National Clean Diesel Program. • Diesel- or gasoline-powered equipment shall be replaced by lowest emitting feasible for each piece of equipment from among these options: electric equipment whenever feasible, gasoline-powered equipment if electric infeasible. • On-site electricity shall be used in all construction areas that are demonstrated to be served by electricity. • If cranes are required for construction, they shall be rated at 200 hp or greater equipped with Tier 4 or equivalent engines. • Use alternative diesel fuels, such as Clean Fuels Technology (water emulsified diesel fuel) or O2 diesel ethanol-diesel fuel (O2 Diesel) in existing engines. • Convert part of the construction truck fleet to natural gas.	Consistent with Section 2485 of Title 13 of the California Code of Regulations, the following measures shall be incorporated into Project plans and specifications: • Heavy-duty trucks shall be prohibited from idling in excess of five minutes, both on- and off-site. Consistent with SCAQMD Rule 401 and CARB's In-use Off-road Diesel-Fueled Fleets Regulation, the following measures shall be incorporated into Project plans and specifications: • Equipment and vehicle engines shall be maintained in good condition and in proper tune per manufacturers' specifications. • All diesel-powered off-road construction equipment greater than 50 horsepower shall meet United States Environmental Protection Agency (USEPA) Tier 4 or higher emissions standards. In addition, all construction equipment shall be outfitted with Best Available Control Technology (BACT) devices certified by CARB. Any emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a CARB-defined Level 3 diesel emissions control strategy for a similarly sized engine. • All diesel-powered construction equipment shall use CARB Level 2 or higher diesel particulate filters. • When possible, electricity shall be utilized from power supply sources rather than temporary gasoline or diesel power generators, as feasible. Compliance with these existing regulations would facilitate consistency with plans for attainment of air quality standards identified by SCAQMD, CARB, the State of California, and the federal government, and would be equal to or more effective than MM-AIR-2(b). Therefore, the Project would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Include “clean construction equipment fleet”, defined as a fleet mix cleaner than the state average, in all construction contracts. • Fuel all off-road and portable diesel powered equipment with ARB-certified motor vehicle diesel fuel (non-taxed version suitable for use off-road). • Use electric fleet or alternative fueled vehicles where feasible including methanol, propane, and compressed natural gas. • Use diesel construction equipment meeting ARB’s Tier 4 certified engines or cleaner offroad heavy-duty diesel engines and comply with State off-road regulation. • Use on-road, heavy-duty trucks that meet the ARB’s 2007 or cleaner certification standard for on-road diesel engines, and comply with the State on-road regulation. • Use idle reduction technology, defined as a device that is installed on the vehicle that automatically reduces main engine idling and/or is designed to provide services, e.g., heat, air conditioning, and/or electricity to the vehicle or equipment that would otherwise require the operation of the main drive engine while the vehicle or equipment is temporarily parked or is stationary • Minimize idling time either by shutting off equipment when not in use or limit idling time to 3 minutes. Signs shall be posted in the designated queuing areas and/or job sites to remind drivers and operators of the 3 minute idling limit. The construction contractor shall maintain a written idling policy and distribute it to all employees and subcontractors. The on-site construction manager shall enforce this limit. • Prohibit diesel idling within 1,000 feet of sensitive receptors. • Staging and queuing areas shall not be located within 1,000 feet of sensitive receptors. • The number of construction equipment operating simultaneously shall be minimized through efficient	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	management practices to ensure that the smallest practical number is operating at any one time. • The engine size of construction equipment shall be the minimum practical size. • Catalytic converters shall be installed on gasoline-powered equipment. • Signs shall be posted in designated queuing areas and job sites to remind drivers and operators of the idling limit. • Construction worker trips shall be minimized by providing options for carpooling and by providing for lunch onsite. • Use new or rebuilt equipment. • Maintain all construction equipment in proper working order, according to manufacturer's specifications. The equipment must be check by an ASE-certified mechanic and determined to be running in proper condition before it is operated. • Use low rolling resistance tires on long haul class 8 tractor-trailers. • Suspend all construction activities that generate air pollutant emissions during air alerts. • Install a CARB-verified, Level 3 emission control device, e.g., diesel particulate filters, on all diesel engines.	
AIR-3: Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under applicable NAAQS or CAAQS.	No mitigation required.	**No mitigation applies.**
AIR-4: Expose sensitive receptors to substantial pollutant concentrations and harm public health outcomes substantially.	MM-AIR-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures that are within the jurisdiction and authority of the air quality management district(s) where proposed 2016 RTP/SCS transportation projects would be located. Where the Lead Agency has identified that a project has the potential to expose sensitive receptors to	**No mitigation applies.** The Project does not involve a 2016-2040 RTP/SCS transportation project. As a residential development, the Project cannot establish new regulatory standards or requirements, such as setting new engine standards or making improvements and enhancements to California's Smog Check Program.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	substantial pollutant concentrations and harm public health outcomes substantially, the Lead Agency can and should consider the measures that have been identified by CARB and air district(s), or other comparable measures, to reduce cancer risk pursuant to the Air Toxics "Hot Spots" Act of 1987 (AB2588), as applicable and feasible. Such measures include those adopted by CARB designed to reduce substantial pollutant concentrations, specifically diesel, from mobile sources and equipment. CARB's strategy includes the following elements: • Set technology forcing new engine standards. • Reduce emissions from the in-use fleet. • Require clean fuels, and reduce petroleum dependency. • Work with US EPA to reduce emissions from federal and state sources. • Pursue long-term advanced technology measures. Proposed new transportation – related SIP measures include: ***On – Road Sources*** • Improvements and Enhancements to California's Smog Check Program • Expanded Passenger Vehicle Retirement • Modifications to Reformulated Gasoline Program • Cleaner In-Use Heavy-Duty Trucks • Ship Auxiliary Engine Cold Ironing and Other Clean Technology • Cleaner Ship Main Engines and Fuel • Port Truck Modernization • Accelerated Introduction of Cleaner Line-Haul Locomotives • Clean Up Existing Commercial Harbor Craft • Limited idling of diesel-powered trucks	Notwithstanding, the Project would be required to comply with the existing regulatory requirements of SCAQMD, CARB, the State of California, and the federal government, as described above under AIR-1 to reduce the Project's construction-related emissions. In addition, the Project would include multi-family residential units, which would not generate significant operational emissions, as an industrial or warehousing use could be expected to. Therefore, through compliance with the existing regulatory requirements described above, the Project would be consistent with this mitigation measure, to the extent applicable.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Consolidated truck trips and improve traffic flow • Late model engines, Low emission diesel products, engine retrofit technology • Alternative fuels for on-road vehicles ***Off – Road Sources*** • Cleaner Construction and Other Equipment • Cleaner In-Use Off-Road Equipment • Agricultural Equipment Fleet Modernization • New Emission Standards for Recreational Boats • Off-Road Recreational Vehicle Expanded Emission Standards	
AIR-5: Expose a substantial number of people to objectionable odors.	No mitigation required.	**No mitigation applies.**
Biological Resources		
BIO-1: Potential to have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.	MM-BIO-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on threatened and endangered species and other special status species that are in the jurisdiction and responsibility of U.S. Fish and Wildlife Service, National Marine Fisheries Service, California Department of Fish and Wildlife, other public agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with Sections 7, 9, and 10(a) of the federal Endangered Species Act; the California Endangered Species Act; the Native Plant Protection Act; the State Fish and Game Code; and the Desert Native Plant Act; and related applicable implementing regulations, as applicable and feasible. Additional compliance should adhere to applicable implementing regulations from the U.S. Fish and Wildlife Service, the National Marine Fisheries Service, and/or the California Department of Fish	**No mitigation applies.** This mitigation measure does not apply to the Project because the Project is located in a fully urbanized area. The Project would be developed on an existing residentially/commercially zoned Project Site that is currently improved with a pedestrian path, landscaping, outdoor seating and driveway with seven surface parking spaces. Review of the United States Fish and Wildlife Service's National Wetlands Inventory identified no protected wetlands in the vicinity of the Project Site and the Project Site is not located within a riparian area. The nearest bodies of water include the MacArthur Park Lake, approximately one-half mile southwest of the Project Site and the Echo Park Lake, approximately 0.85-mile northwest of the Project Site. Further, as the Project Site is fully developed, and there are no open spaces with water courses such as streams or lakes within or adjacent to the Project Site, the Project Site and vicinity do not support any riparian or wetland habitat, as defined by Section 404 of the Clean Water Act. Therefore, the Project would not have a substantial adverse effect on wetlands, riparian habitat,

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	and Wildlife. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Require project design to avoid occupied habitat, potentially suitable habitat, and designated critical habitat, wherever practicable and feasible. • Where avoidance is determined to be infeasible, provide conservation measures to fulfill the requirements of the applicable authorization for incidental take pursuant to Section 7 or 10(a) of the federal Endangered Species Act or Section 2081 of the California Endangered Species Act to support issuance of an Incidental take permit. A wide variety of conservation strategies have been successfully used in the SCAG region to protect the survival and recovery in the wild of federally and state-listed endangered species including the bald eagle: - Avoidance strategies - Contribution of in-lieu fees - Use of mitigation bank credits - Funding of research and recovery efforts - Habitat restoration - Conservation easements - Permanent dedication of habitat - Other comparable measures • Design projects to avoid desert native plants, salvage and relocate desert native plants, and/or pay in lieu fees to support off-site long-term conservation strategies. • Develop and implement a Worker Awareness Program (environmental education) to inform project workers of their responsibilities in regards to avoiding and minimizing impacts on sensitive biological resources. • Appoint an Environmental Inspector to monitor implementation of mitigation measures.	or other sensitive natural communities identified in federal, state, or local plans, policies, and regulations. Furthermore, the Project Site is not located in or adjacent to a Biological Resource Area as defined by the City. Moreover, the Project Site and immediately surrounding area are not within or near a designated Significant Ecological Area. The Project Site currently contains 28 non-protected trees that would be replaced with 35 trees. None of the trees are considered protected by the City's Tree Preservation Ordinance No. 177,044. However, the trees that are to be removed or pruned have the potential to support nesting birds that are protected under the Migratory Bird Treaty Act (MBTA), which prohibits take of all birds and their active nests, as well as the regulations of the California Fish and Game Code Consistent with Mitigation Measure MM-BIO-1(b). The removal or pruning of trees would occur in accordance with the MBTA and state and local requirements. Thus, the Project would not harm any species protected by the Federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), the Native Plant Protection Act (Chapter 10 (commencing with Section 1900) of Division 2 of the Fish and Game Code), or the California Endangered Species Act (Chapter 1.5 (commencing with Section 2050) of Division 3 of the Fish and Game Code). Specifically, in conformance with the MBTA, tree removal activities would take place outside of the nesting season (February 1 to September 1) to the greatest extent practicable. To the extent that vegetation removal activities must occur during the nesting season, a biological monitor would be present during the removal activities to ensure that no active nests would be impacted, or a nesting bird survey is to be completed prior to construction to document all active bird nests. If active nests are found, a 300-foot buffer (500 feet for raptors) would be established until the fledglings have left the nest. Therefore, while this mitigation measure does not apply due to the lack of existing habitat or special status species at the Project Site, compliance with existing regulatory

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Schedule construction activities to avoid sensitive times for biological resources (e.g., steelhead spawning periods during the winter and spring, nesting bird season) and to avoid the rainy season when erosion and sediment transport is increased. • Conduct pre-construction monitoring to delineate occupied sensitive species' habitat to facilitate avoidance. • Where projects are determined to be within suitable habitat of listed or sensitive species that have specific field survey protocols or guidelines outlined by the USFWS, CDFW, or other local agency, conduct preconstruction surveys that follow applicable protocols and guidelines and are conducted by qualified and/or certified personnel.	requirements would serve to reduce any potential impacts similar to this mitigation measure. Thus, the Project would be consistent with the intent of this mitigation measure.
BIO-2: Potential to have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations; or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service.	MM-BIO-1(b). See above. MM-BIO-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant impacts on state-designated sensitive habitats, including riparian habitats, that are in the jurisdiction and responsibility of U.S. Fish and Wildlife Service, the National Marine Fisheries Service, the California Department of Fish and Wildlife; and other public agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with Section 1600 of the State Fish and Game Code, USFS Land Management Plan for the four national forests in the six-county area: Angeles, Cleveland, Los Padres, and San Bernardino, implementing regulations for the U.S. Fish and Wildlife Service, the National Marine Fisheries Service, the California Department of Fish and Wildlife; and other related federal, state, and local regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consult with the USFWS and NMFS where such state-designated sensitive or riparian habitats provide	**No mitigation applies.** See consistency analysis under MM-BIO-1(b) above. This mitigation measure does not apply to the Project because the Project is located in a fully urbanized area. The Project would replace the existing pedestrian walkway and landscaped areas on the Project Site. The Project would not be developed on sensitive or riparian habitat. Therefore, development of the Project would not result in adverse effects to any sensitive or riparian habitat that could support any species identified or designated as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service. Moreover, as discussed above under the MM-BIO-1(b) consistency analysis, there are no protected trees at the Project Site, and all tree removals or pruning would take place in conformance with the MBTA and State and local regulations. Therefore, compliance with existing regulatory requirements would serve to reduce any potential impacts similar to this mitigation measure. Thus, the Project would be consistent with the intent of this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	potential or occupied habitat for federally listed rare, threatened, and endangered species afforded protection pursuant to the federal Endangered Species Act. • Consult with the USFS where such state-designated sensitive or riparian habitats provide potential or occupied habitat for federally listed rare, threatened, and endangered species afforded protection pursuant to the federal Endangered Species Act and any additional species afforded protection by an adopted Forest Land Management Plan or Resource Management Plan for the four national forests in the six-county area: Angeles, Cleveland, Los Padres, and San Bernardino. • Consult with the CDFW where such state-designated sensitive or riparian habitats provide potential or occupied habitat for state-listed rare, threatened, and endangered species afforded protection pursuant to the California Endangered Species Act, or Fully-Protected Species afforded protection pursuant to the State Fish and Game Code. • Consult with the CDFW pursuant to the provisions of Section 1600 of the State Fish and Game Code as they relate to lakes and streambeds. • Consult with the USFWS, USFS, CDFW, and counties and cities in the SCAG region, where state-designated sensitive or riparian habitats are occupied by birds afforded protection pursuant to the Migratory Bird Treaty Act during the breeding season. • Consult with the CDFW for state-designated sensitive or riparian habitats where fur-bearing mammals, afforded protection pursuant to the provisions of the State Fish and Game Code for fur-beaming mammals, are actively using the areas in conjunction with breeding activities. • Utilize applicable and CDFW approved plant community classification resources during delineation of sensitive communities and invasive plants including, but not limited to, the Manual of California Vegetation, the	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	California Invasive Plant Inventory Database, and the Orange County California Native Plant Society (OCCNPS) Emergent Invasive Plant Management Program, where appropriate. • Encourage project design to avoid sensitive natural communities and riparian habitats, wherever practicable and feasible. • Where avoidance is determined to be infeasible, develop sufficient conservation measures through coordination with local agencies and the regulatory agency (i.e., USFWS or CDFW) to protect sensitive natural communities and riparian habitats. • Install fencing and/or mark sensitive habitat to be avoided during construction activities. • Salvage and stockpile topsoil (the surface material from 6 to 12 inches deep) and perennial plants for use in restoring native vegetation to all areas of temporary disturbance within the project area. • Revegetate with appropriate native vegetation following the completion of construction activities. • Complete habitat enhancement (e.g., through removal of non-native invasive wetland species and replacement with more ecologically valuable native species). • Use Best Management Practices (BMPs) at construction sites to minimize erosion and sediment transport from the area. BMPs include encouraging growth of vegetation in disturbed areas, using straw bales or other silt-catching devices, and using settling basins to minimize soil transport.	
BIO-3: Potential to have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.	MM-BIO-1(b) and MM-BIO-2(b). See above MM-BIO-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant impacts on protected wetlands that are in the jurisdiction and responsibility of the U.S. Army Corps of Engineers, public agencies and/or Lead Agencies. Where	**No mitigation applies.** See consistency analysis for MM-BIO-1(b) and MM-BIO-2(b) under BIO-1 and BIO-2, respectively. This mitigation measure does not apply to the Project because the Project Site does not include any protected wetlands or water features that are in the jurisdiction and

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with Section 404 of the Clean Water Act and regulations of the U.S. Army Corps of Engineers (USACOE), and other applicable federal, state and local regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Require project design to avoid federally protected wetlands consistent with the provisions of Section 404 of the Clean Water Act, wherever practicable and feasible. • Where the Lead Agency has identified that a project, or other regionally significant project, has the potential to impact other wetlands or waters not protected under Section 404 of the Clean Water Act, seek comparable coverage for these wetlands and waters in consultation with the USACOE and applicable Regional Water Quality Control Boards (RWQCB). • Where avoidance is determined to be infeasible, develop sufficient conservation measures to fulfill the requirements of the applicable authorization for impacts to federally protected wetlands to support issuance of a permit under Section 404 of the Clean Water Act as administered by the USACOE. The use of an authorized Nationwide Permit or issuance of an individual permit requires the project applicant to demonstrate compliance with the USACOE's Final Compensatory Mitigation Rule. The USACOE reviews projects to ensure environmental impacts to aquatic resources are avoided or minimized as much as possible. Consistent with the administration's performance standard of "no net loss of wetlands" a USACOE permit may require a project proponent to restore, establish, enhance or preserve other aquatic resources in order to replace those affected by the	responsibility of the U.S. Army Corps of Engineers or any other public agencies and/or Lead Agencies.[5]

5 United States Fish and Wildlife Service, National Wetlands Inventory. Available at: www.fws.gov/wetlands/index.html, accessed June 2, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	proposed project. This compensatory mitigation process seeks to replace the loss of existing aquatic resource functions and area. Project proponents required to complete mitigation are encouraged to use a watershed approach and watershed planning information. The new rule establishes performance standards, sets timeframes for decision making, and to the extent possible, establishes equivalent requirements and standards for the three sources of compensatory mitigation: - Permittee-responsible mitigation - Contribution of in-lieu fees - Use of mitigation bank credits • Require review of construction drawings by a certified wetland delineator as part of each project-specific environmental analysis to determine whether wetlands will be affected and, if necessary, perform a formal wetland delineation.	
BIO-4: Potential to interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.	MM-BIO-1(b), MM-BIO-2(b), and MM-BIO-3(b). See above MM-BIO-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant impacts on migratory fish or wildlife species or within established native resident and/or migratory wildlife corridors, and native wildlife nursery sites that are in the jurisdiction and responsibility of U.S. Fish and Wildlife Service and the California Department of Fish and Wildlife, U.S. Forest Service, public agencies and/or Lead Agencies, as applicable and feasible. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with regulations of the USFWS, USFS, CDFW, and related regulations, goals and polices of counties and cities, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency:	See consistency analysis above for MM-BIO-1(b), MM-BIO-2(b), and MM-BIO-3(b) under BIO-1, BIO-2, and BIO-3, respectively. The Project would be in **substantial conformance** with these mitigation measures for the reasons stated below. The Project is located in a developed, urban area and would be replacing existing improvements at the Project Site including a pedestrian walkway and landscaped areas. The Project would not be developed on existing open space or sensitive habitat. However, the Project Site currently contains 28 non-protected trees that would be replaced with 35 trees. The trees that are to be removed or pruned have the potential to support nesting birds that are protected under the Migratory Bird Treaty Act (MBTA), which prohibits take of all birds and their active nests, as well as the regulations of the California Fish and Game Code Consistent with Mitigation Measure MM-BIO-4(b). The removal or pruning of trees would occur in accordance with the MBTA and state and local requirements. Thus, the Project would not harm any species protected by the

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Consult with the USFWS, USFS, CDFW, and counties and cities in the SCAG region, where impacts to birds afforded protection pursuant to the Migratory Bird Treaty Act during the breeding season may occur. • Consult with the USFS where impacts to migratory wildlife corridors may occur in an area afforded protection by an adopted Forest Land Management Plan or Resource Management Plan for the four national forests in the six-County area: Angeles, Cleveland, Los Padres, and San Bernardino. • Consult with counties, cities, and other local organizations when impacts may occur to open space areas that have been designated as important for wildlife movement. • Prohibit construction activities within 500 feet of occupied breeding areas for wildlife afforded protection pursuant to Title 14 § 460 of the California Code of Regulations protecting fur-bearing mammals, during the breeding season. • Prohibit clearing of vegetation and construction within the peak avian breeding season (February 1st through September 1st), where feasible. • Conduct weekly surveys to identify active raptor and other migratory nongame bird nests by a qualified biologist with experience in conducting breeding bird surveys within three days prior to the work in the area from February 1 through August 31. • Prohibit construction activities with 300 feet (500 feet for raptors) of occupied nests of birds afforded protection pursuant to the Migratory Bird Treaty Act, during the breeding season. Delineate the non-disturbance buffer by temporary fencing and keep the buffer in place until construction is complete or the nest is no longer active. No construction shall occur within the fenced nest zone until the young have fledged, are no longer being fed by the parents, have left the nest, and will no longer be impacted by the project. Reductions or expansions in the nest buffer distance may be appropriate depending on the avian species	Federal Endangered Species Act of 1973 (16 U.S.C. Sec. 1531 et seq.), the Native Plant Protection Act (Chapter 10 [commencing with Section 1900) of Division 2 of the Fish and Game Code), or the California Endangered Species Act (Chapter 1.5 [commencing with Section 2050) of Division 3 of the Fish and Game Code). Therefore, development of the Project will not conflict with any local policies or ordinances protecting biological resources, and would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	involved, ambient levels of human activity, screening vegetation, or possibly other factors. • Ensure that suitable nesting sites for migratory nongame native bird species protected under the Migratory Bird Treaty Act and/or trees with unoccupied raptor nests should only be removed prior to February 1, or following the nesting season. • Conduct site-specific analyses of opportunities to preserve or improve habitat linkages with areas on- and off-site. Analyze habitat linkages/wildlife movement corridors on a broader and cumulative impact analysis scale to avoid adverse impacts from linear projects that have potential for impacts on a broader scale or critical narrow choke points that could reduce function of recognized movement corridors on a larger scale. Require review of construction drawings and habitat connectivity mapping provided by the CDFW or CNDDB by a qualified biologist to determine the risk of habitat fragmentation. • Pursue mitigation banking to preserve habitat linkages and corridors (opportunities to purchase, maintain, and/or restore offsite habitat). • Demonstrate that proposed projects would not adversely affect movement of any native resident or migratory fish or wildlife species, wildlife movement corridors, or wildlife nursery sites through the incorporation of avoidance strategies into project design, wherever practicable and feasible. • Evaluate the potential for overpasses, underpasses, and culverts in cases where a roadway or other transportation project may interrupt the flow of species through their habitat. Provide wildlife crossings in accordance with proven standards, such as FHWA's Critter Crossings or Ventura County Mitigation Guidelines and in consultation with wildlife corridor authorities with sufficient knowledge of both regional and local wildlife corridors, and at locations useful and appropriate for the species of concern.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Install wildlife fencing where appropriate to minimize the probability of wildlife injury due to direct interaction between wildlife and roads or construction • Establish native vegetation and facilitate the enhancement and maintenance of biological diversity within existing habitat pockets in urban environments that provide connectivity to large-scale habitat areas. • Where avoidance is determined to be infeasible, design sufficient conservation measures through coordination with local agencies and the regulatory agency (i.e., USFWS or CDFW) and in accordance with the respective counties and cities general plans to establish plans to mitigate for the loss of fish and wildlife movement corridors and/or wildlife nursery sites. The consideration of conservation measures may include the following measures, in addition to the measures outlined in MM-BIO-1(b), where applicable: - Wildlife movement buffer zones - Corridor realignment - Appropriately spaced breaks in center barriers - Stream rerouting - Culverts - Creation of artificial movement corridors such as freeway under- or overpasses - Other comparable measures • Where the Lead Agency has identified that a RTP/SCS project, or other regionally significant project, has the potential to impact other open space or nursery site areas, seek comparable coverage for these areas in consultation with the USFWS, CDFW, NMFS, or other local jurisdictions. • Project sponsors should emphasize that urban habitats and the plant and wildlife species they support are indeed valuable, despite the fact they are located in urbanized (previously disturbed) areas. Established habitat connectivity and wildlife corridors in these urban ecosystems will likely be impacted with further	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	urbanization, as proposed in the Project. Appropriate mitigation measures should be proposed, developed, and implemented in these sensitive urban microhabitats to support or enhance the rich diversity of urban plant and wildlife species. • Establish native vegetation within habitat pockets or the "wildling of urbanized habitats" that facilitate the enhancement and maintenance of biological diversity in these areas. These habitat pockets, as the hopscotch across an urban environment, provide connectivity to large-scale habitat areas.	
BIO-5: Potential to conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.	MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), and MM-BIO-4(b). See above. MM-BIO-5(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant impacts related to conflicts with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, that are in the jurisdiction and responsibility of local jurisdictions and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to comply with county, city and local policies or ordinances, protecting biological resources, such as tree preservation policies or ordinances, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consult with the appropriate local agency responsible for the administration of the policy or ordinance protecting biological resources. • Prioritize retention of trees on-site consistent with local regulations. Provide adequate protection during the construction period for any trees that are to remain standing, as recommended by a certified arborist. • If specific project area trees are designated as "Protected Trees," "Landmark Trees," or "Heritage Trees," obtain approval for encroachment or removals	The Project would **substantially conform** to this mitigation measure. The Project is located in a developed, urban area and would construct 137 new multi-family residential uses. The Project would not be in developed open space. The Project does not contain any protected trees. The Project Site currently contains 28 non-protected trees that would be replaced with 35 trees. Since the Project would remove street trees, the Project would require an Urban Forestry tree removal permit. To the extent the development of the Project Site does involve the removal of vegetation, the Project already substantially conforms with this mitigation measure, as it would be required to comply with the MBTA (Title 33, United States Code, Section 703 et seq., see also Title 50, Code of Federal Regulations, Part 10) and Section 3503 of the California Department of Fish and Wildlife Code, which regulates vegetation removal during the nesting season (February 1 to September 1) to ensure that significant impacts to migratory birds would not occur. Furthermore, the Project is located in a developed, urban area and would be replacing a pedestrian walkway, landscaping, outdoor seating and driveway with seven surface parking spaces. Therefore, development of the Project will not conflict with any local policies or ordinances protecting biological resources, and would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	through the appropriate entity, and develop appropriate mitigation measures at that time, to ensure that the trees are replaced. Mitigation trees shall be locally collected native species. • Before the start of any clearing, excavation, construction or other work on the site, securely fence off every protected tree deemed to be potentially endangered by said site work. Keep such fences in place for duration of all such work. Clearly mark all trees to be removed. Establish a scheme for the removal and disposal of logs, brush, earth and other debris that will avoid injury to any protected tree. • Where proposed development or other site work could encroach upon the protected perimeter of any protected tree, incorporate special measures to allow the roots to breathe and obtain water and nutrients. Minimize any excavation, cutting, filing, or compaction of the existing ground surface within the protected perimeter. Require that no change in existing ground level occur from the base of any protected tree at any time. Require that no burning or use of equipment with an open flame occur near or within the protected perimeter of any protected tree. • Require that no storage or dumping of oil, gas, chemicals, or other substances that may be harmful to trees occur from the base of any protected trees, or any other location on the site from which such substances might enter the protected perimeter. Require that no heavy construction equipment or construction materials be operated or stored within a distance from the base of any protected trees. Require that wires, ropes, or other devices not be attached to any protected tree, except as needed for support of the tree. Require that no sign, other than a tag showing the botanical classification, be attached to any protected tree. • Thoroughly spray the leaves of protected trees with water periodically during construction to prevent buildup of dust and other pollution that would inhibit leaf transpiration.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• If any damage to a protected tree should occur during or as a result of work on the site, the appropriate local agency will be immediately notified of such damage. If, such tree cannot be preserved in a healthy state, require replacement of any tree removed with another tree or trees on the same site deemed adequate by the local agency to compensate for the loss of the tree that is removed. • Remove all debris created as a result of any tree removal work from the property within two weeks of debris creation, and such debris shall be properly disposed of in accordance with all applicable laws, ordinances, and regulations. • Design projects to avoid conflicts with local policies and ordinances protecting biological resources. • Where avoidance is determined to be infeasible, sufficient conservation measures to fulfill the requirements of the applicable policy or ordinance shall be developed, such as to support issuance of a tree removal permit. The consideration of conservation measures may include: – Avoidance strategies – Contribution of in-lieu fees – Planting of replacement trees at a minimum ratio of 2:1 – Re-landscaping areas with native vegetation post-construction	
BIO 6: Potential to conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.	See MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-BIO-4(b), and MM-BIO-5(b). MM-BIO-6(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant impacts on HCP and NCCPs that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to	**No mitigation applies.** This mitigation measure does not apply to the Project because the Project Site is not subject to any provisions of any Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Furthermore, the Project Site is not within or adjacent to an existing Significant Ecological Area. Therefore, these mitigation measures do not apply.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	ensure compliance with Section 7 or 10(a) of the federal Endangered Species Act or Section 2081 of the California Endangered Species Act; and implementing regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consult with the appropriate federal, state, and/or local agency responsible for the administration of HCPs, NCCPs or other conservation programs. • Wherever practicable and feasible, the project shall be designed to avoid through project design lands preserved under the conditions of an HCP, NCCP, or other conservation program. • Where avoidance is determined to be infeasible, sufficient conservation measures to fulfill the requirements of the HCP and/or NCCP or other conservation program, which would include but not be limited to applicable authorization for incidental take pursuant to Section 7 or 10(a) of the federal Endangered Species Act or Section 2081 of the California Endangered Species Act, shall be developed to support issuance of an Incidental take permit or any other permissions required for development within the HCP/NCCP boundaries. The consideration of additional conservation measures would include the measures outlined in MM-BIO-1(b), where applicable.	
Cultural Resources		
CUL-1: Potential to directly or indirectly destroy unique paleontological resources or sites or unique geological features.	MM-CUL-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on unique paleontological resources or sites and unique geologic features that are within the jurisdiction and responsibility of National Park Service, Office of Historic Preservation, and Native American Heritage Commission, other public agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures	**No mitigation applies.** Under PRC Section 21155.1, transit priority projects are not required to evaluate effects to paleontological resources. Nevertheless, the Project substantially conforms to this mitigation measure as the Project would be required to comply with existing regulations related to the discovery of unknown paleontological resources, should they be encountered during ground disturbing activities as outlined in SCAG MM-CUL-1(b). If paleontological resources are discovered during excavation, grading, or construction, the City of Los Angeles Department of Building and Safety (LADBS) shall

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	consistent with Section 15064.5 of the State CEQA Guidelines capable of avoiding or reducing significant impacts on unique paleontological resources or sites or unique geologic features. Ensure compliance with the National Historic Preservation Act, Section 5097.5 of the Public Resources Code (PRC), state programs pursuant to Sections 5024 and 5024.5 of the PRC, adopted county and city general plans, and other federal, state and local regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Obtain review by a qualified geologist or paleontologist to determine if the project has the potential to require excavation or blasting of parent material with a moderate to high potential to contain unique paleontological or resources, or to require the substantial alteration of a unique geologic feature. • Avoid exposure or displacement of parent material with a moderate to high potential to yield unique paleontological resources. • Where avoidance of parent material with a moderate to high potential to yield unique paleontological resources is not feasible: – All on-site construction personnel receive Worker Education and Awareness Program (WEAP) training to understand the regulatory framework that provides for protection of paleontological resources and become familiar with diagnostic characteristics of the materials with the potential to be encountered. – Prepare a Paleontological Resource Management Plan (PRMP) to guide the salvage, documentation and repository of representative samples of unique paleontological resources encountered during construction. If unique paleontological resources are encountered during excavation or blasting, use a qualified paleontologist to oversee the implementation of the PRMP.	be notified immediately, and all work shall cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project Site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in PRC Section 21083.2. Therefore, the Project would comply with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Monitor blasting and earth-moving activities in parent material, with a moderate to high potential to yield unique paleontological resources using a qualified paleontologist or archeologists cross-trained in paleontology to determine if unique paleontological resources are encountered during such activities, consistent with the specified or comparable protocols. – Identify where excavation and earthmoving activity is proposed in a geologic unit having a moderate or high potential for containing fossils and specify the need for a paleontological or archeological (cross-trained in paleontology) to be present during earth-moving activities or blasting in these areas. • Avoid routes and project designs that would permanently alter unique features with archaeological and/or paleontological significance. • Salvage and document adversely affected resources sufficient to support ongoing scientific research and education.	
CUL-2: Potential to cause a substantial adverse change in the significance of a historical resource, including tribal cultural resources, as defined in CEQA Guidelines Section 15064.5.	MM-CUL-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of on historical resources within the jurisdiction and responsibility of the Office of Historical Preservation, Native American Heritage Commission, other public agencies, and/or Local Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with Section 15064.5 of the State CEQA Guidelines capable of avoiding or reducing significant impacts on historical resources, to ensure compliance with the National Historic Preservation Act, Section 5097.5 of the Public Resources Code (PRC), state programs pursuant to Sections 5024 and 5024.5 of the PRC, adopted county and city general plans and other	The Project **substantially conforms** with this mitigation measure. The Project implemented relevant provisions of MM-CUL-2(b), and a Historic Resources Technical Report was prepared for the Project Site.[6] As discussed in the report, the Project Site does not contain any historical resources. Additionally, the Miramar Towers building, adjacent to the Project Site, is not eligible for historic listing. Two resources within the area have been identified by SurveyLA as eligible for local, state, and national listing or eligible for local listing as a City of Los Angeles Historic-Cultural Monument (HCM).[7] The first resource is a single-family residence at 1913 West 3rd Street located immediately east of the Project Site, which has been identified by SurveyLA as eligible for the National Register, California Register, and as a City of Los Angeles HCM. The second resource is a Royal Viking Motel Pole Sign, a

[6] Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.
[7] Historic Resources Group, 2020. Historic Resources Technical Report, 1917-2005 1/2 West 3rd Street, Los Angeles, California. August 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	federal, state and local regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Pursuant to CEQA Guidelines Section 15064.5, conduct a record search at the appropriate Information Center to determine whether the project area has been previously surveyed and whether historic resources were identified. • Obtain a qualified architectural historian to conduct historic architectural surveys as recommended by the Information Center. In the event the records indicate that no previous survey has been conducted, the Information Center will make a recommendation on whether a survey is warranted based on the sensitivity of the project area for historical resources within 1,000 feet of the project. • Comply with Section 106 of the National Historic Preservation Act including, but not limited to, projects for which federal funding or approval is required for the individual project. This law requires federal agencies to evaluate the impact of their actions on resources included in or eligible for listing in the National Register. Federal agencies must coordinate with the State Historic Preservation Officer in evaluating impacts and developing mitigation. These mitigation measures may include, but are not limited to the following: – Employ design measures to avoid historical resources and undertake adaptive reuse where appropriate and feasible. If resources are to be preserved, as feasible, carry out the maintenance, repair, stabilization, rehabilitation, restoration, preservation, conservation or reconstruction in a manner consistent with the Secretary of the Interior's Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings. If resources would be impacted, impacts should be minimized to the extent feasible. – Where feasible, noise buffers/walls and/or visual buffers/landscaping should be constructed to	freestanding neon sign associated with the motel property located approximately 100 feet west of the Project Site and separated from the Project Site by the apartment building located at 2007 West 3rd Street. The Royal Viking Motel Pole Sign was identified by SurveyLA as eligible for local listing as a City of Los Angeles HCM. Since all new construction associated with the Project would be contained within the Project Site, and the Project Site does not contain any historic resource or resources, the Project would not physically alter or demolish any historical resources located on or adjacent to the Project Site. The Project does not include the demolition, relocation, rehabilitation, alteration, or conversion of the 1912 residence located at 1913 West 3rd Street. However, the proposed new construction would include substantial foundation work and the construction of a subterranean lobby level. The excavation work associated with the Project, however, would be located 33 feet or more from the 1913 West 3rd Street residence, and is not anticipated to cause a level of vibration that would result in damage to adjacent structures so that any potential for adverse indirect impacts from vibration associated with construction activity will be avoided and 1913 West 3rd Street will retain its eligibility for listing in the National Register, California Register and designation as a Los Angeles HCM. Regarding archaeological resources, the Project shall comply with the requirements of PRC Section 21083.2. In the event archaeological resources are exposed during Project construction, work within 50 feet of the find shall stop until a professional archaeologist, meeting the standards of the Secretary of the Interior, can identify and evaluate the significance of the discovery and develop recommendations for treatment in conformance with PRC Section 21083.2. However, construction activities could continue in other areas of the Project Site. If archaeological resources are discovered during excavation, grading, or construction activities, work shall cease in the area of the find until a qualified archaeologist has evaluated the find in accordance with federal, State, and local guidelines, including those set forth in PRC

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	preserve the contextual setting of significant built resources. • Secure a qualified environmental agency and/or architectural historian, or other such qualified person to document any significant historical resource(s), by way of historic narrative, photographs, and architectural drawings, as mitigation for the effects of demolition of a resource. • Consult with the Native American Heritage Commission to determine whether known sacred sites are in the project area, and identify the Native American(s) to contact to obtain information about the project site. • Prior to construction activities, obtain a qualified archaeologist to conduct a record search at the appropriate Information Center of the California Archaeological Inventory to determine whether the project area has been previously surveyed and whether resources were identified. • Prior to construction activities, obtain a qualified archaeologist or architectural historian (depending on applicability) to conduct archaeological and/or historic architectural surveys as recommended by the Information Center. In the event the records indicate that no previous survey has been conducted, the Information Center will make a recommendation on whether a survey is warranted based on the sensitivity of the project area for archaeological resources. • If a record search indicates that the project is located in an area rich with cultural materials, retain a qualified archaeologist to monitor any subsurface operations, including but not limited to grading, excavation, trenching, or removal of existing features of the subject property. • Conduct construction activities and excavation to avoid cultural resources (if identified). If avoidance is not feasible, further work may be needed to determine the importance of a resource. Retain a qualified archaeologist familiar with the local archaeology, and/or as appropriate, an architectural historian who should	Section 21083.2. Personnel shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project Site. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in PRC Section 21083.2. • Distinctive features, finishes and construction techniques or examples of skilled craftsmanship which characterize an historic property shall be preserved. • Deteriorated historic features shall be repaired rather than replaced. Where the severity if deterioration requires replacement of a distinctive historic feature, the new feature shall match the old in design, color, texture, and other visual qualities, and where possible, materials. Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence. • Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible. • Significant archaeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken. • New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment. • New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	make recommendations regarding the work necessary to determine importance. If the cultural resource is determined to be important under state or federal guidelines, impacts on the cultural resource will need to be mitigated. • Stop construction activities and excavation in the area where cultural resources are found until a qualified archaeologist can determine the importance of these resources.	
CUL-3: Potential to cause a substantial adverse change in the significance of an archaeological resource, including tribal cultural resources, pursuant to CEQA Guidelines Section 15064.5.	See MM-CUL-2(b).	The Project **substantially conforms** with this mitigation measure. The Project is located within a highly developed urban area on a previously disturbed site and the potential for discovery of archaeological or tribal cultural resources is considered low. Nonetheless, to ensure there would be no impacts to archaeological resources or tribal cultural resources, the Project would implement the relevant provisions of MM-CUL-2(b) pertaining to archaeological resources. Notwithstanding the above, any information determined to be confidential in nature, by the City Attorney's office, shall be excluded from submission to the SCCIC or the general public under the applicable provisions of the California Public Records Act, PRC, and shall comply with the City's AB 52 Confidentiality Protocols.
CUL-4: Potential to disturb human remains, including those interred outside of formal cemeteries, including Native American Sacred Sites.	MM-CUL-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects to human remains that are within the jurisdiction and responsibility of the Native American Heritage Commission, other public agencies, and/or Local Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency should consider mitigation measures capable of avoiding or reducing significant impacts on human remains, to ensure compliance with the California Health and Safety Code, Section 7060 and Section 18950-18961 and Native American Heritage Commission, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency:	The Project **substantially complies** with this mitigation measure as described below. The Project Site is located within a highly developed urban area on a previously disturbed site and the potential for discovery of human remains is considered low. Nonetheless, compliance with existing regulatory requirements as described below, which the City has determined are equal to or more effective than MM-CUL-4(b), would ensure there would be no impacts pertaining to the unanticipated identification of human remains. Pursuant to State Health and Safety Code Section 7050.5, if human remains are encountered unexpectedly during construction demolition and/or grading activities, it is required that no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to California Public

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• In the event of discovery or recognition of any human remains during construction or excavation activities associated with the project, in any location other than a dedicated cemetery, cease further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until the coroner of the county in which the remains are discovered has been informed and has determined that no investigation of the cause of death is required. • If any discovered remains are of Native American origin: – Contact the County Coroner to contact the Native American Heritage Commission to ascertain the proper descendants from the deceased individual. The coroner should make a recommendation to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods. This may include obtaining a qualified archaeologist or team of archaeologists to properly excavate the human remains. – If the Native American Heritage Commission is unable to identify a descendant, or the descendant failed to make a recommendation within 24 hours after being notified by the commission, obtain a Native American monitor, and an archaeologist, if recommended by the Native American monitor, and rebury the Native American human remains and any associated grave goods, with appropriate dignity, on the property and in a location that is not subject to further subsurface disturbance where the following conditions occur: ▪ The Native American Heritage Commission is unable to identify a descendent; ▪ The descendant identified fails to make a recommendation; or ▪ The landowner or their authorized representative rejects the recommendation of	Resources Code Section 5097.98. In the event that human remains are discovered during excavation activities, the following procedure shall be observed: – Stop immediately and contact the County Coroner: 1104 N. Mission Road Los Angeles, CA 90033 323-343-0512 (8 AM to 5 PM Monday through Friday) or 323-343-0714 (after hours, Saturday, Sunday, and holidays) If the remains are determined to be of Native American descent, the Coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC will immediately notify the person it believes to be the most likely descendent of the deceased Native American. – The most likely descendent has 48 hours to make recommendations to the owner, or representative, for the treatment or disposition, with proper dignity, of the human remains and grave goods. If the owner does not accept the descendant's recommendations, the owner or the descendent may request mediation by the NAHC.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	the descendant, and the mediation by the NAHC fails to provide measures acceptable to the landowner.	
Energy		
EN-1: Potential to increase petroleum and nonrenewable fuel consumption in the regional transportation system.	No mitigation required.	**No mitigation applies.**
EN-2: Potential to increase residential energy consumption use.	MM-EN-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of increased residential energy consumption that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with CALGreen, local building codes, and other applicable laws and regulations governing residential building standards, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Integrate green building measures consistent with CALGreen (California Building Code Title 24) into project design including: – Use energy efficient materials in building design, construction, rehabilitation, and retrofit. – Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems. – Reduce lighting, heating, and cooling needs by taking advantage of light colored roofs, trees for shade, and sunlight. – Incorporate passive environmental control systems that account for the characteristics of the natural environment. – Use high-efficiency lighting and cooking devices.	The Project already **substantially conforms** with this mitigation measure as it would be required to comply with California Building Code (Title 24 of the California Code of Regulations [CCR]), which incorporates the requirements of CALGreen. To determine the Project's specific energy and water use, a CEQA Exemption Energy and Water Efficiency Compliance Memorandum was prepared by Budlong & Associates, Inc. on July 8, 2020 (Attachment I). As shown therein, the Project would be in compliance with the PRC's statutory requirements for a Transportation Priority Project (TPP) building to be designed to be 15 percent more energy efficient than the applicable Title 24 standards and to be designed to achieve 25 percent less water usage than the average household use in the region. Specifically, the Project's energy use would be 15.5 percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89 percent below the regional baseline. The Project would achieve its energy efficiency through the implementation of multiple measures including, but not limited to, enhanced exterior wall insulation, perforated rain screen for solar shading, high performance windows, LED light fixtures, high-efficiency heating, ventilation, and air conditioning (HVAC) systems, a centralized hot water system and high-efficiency water fixtures. The Project would achieve its water efficient through multiple measures including high efficiency water using appliances such as tank water closets and faucets, and efficient irrigation systems.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Incorporate passive solar design. – Use high-reflectivity building materials and multiple glazing. – Prohibit gas-powered landscape maintenance equipment. – Install electric vehicle charging stations. – Reduce wood burning stoves or fireplaces. – Provide bike lanes accessibility and parking at residential developments.	
EN-3: Potential to increase building energy consumption in anticipated development.	MM-EN-2(b). See above.	As described under EN-2, the Project already **substantially conforms** with this mitigation measure, because the Project would be required to comply with the City's Green Building Code as well as Title 24, which incorporates the requirements of the CALGreen Code. Moreover, as demonstrated by the CEQA Exemption Energy and Water Efficiency Compliance Memorandum prepared for the Project (Attachment I), the Project's energy use would be 15.5 percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89 percent below the regional baseline.
EN-4: Potential to increase water consumption and energy use related to water in anticipated development.	No mitigation required.	**No mitigation applies.**
Geology and Soils		
GEO-1: Potential to expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving (i) rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial	MM-GEO-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the potential for projects to result in the exposure of people and infrastructure to the effects of earthquakes, seismic related ground-failure, liquefaction, and seismically induced landslides, that are in the jurisdiction and responsibility of public agencies, regulatory	The Project already **substantially conforms** with this mitigation measure through compliance with existing regulatory requirements associated with the City of Los Angeles Building Code, which incorporates the Uniform Building Code (UBC) and California Building Code (CBC) A Geotechnical Investigation was conducted for the Project Site (Attachment D).[8] As indicated in the Geotechnical Investigation, no known active faults cross the Project Site,

[8] Geocon West, Inc., 2020. Geotechnical Investigation: Proposed Multi-Family Residential Development, 1917 1/2 - 2005 1/2 West 3rd Street, Angeles, California, Tract: Extension of the Nob Hill Tract, Lots: 1-6; Parcels: 2-5. July 7, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
evidence of a known fault; (ii) strong seismic ground shaking; (iii) seismic related ground-failure, including liquefaction; (iv) landslides.	agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with County and City Public Works and Building and Safety Department Standards, the Uniform Building Code (UBC) and the California Building Code (CBC), and other applicable laws and regulations governing building standards, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consistent with Section 4.7.2 of the Alquist-Priolo Earthquake Fault Zoning Act, conduct a geologic investigation to demonstrate that proposed buildings would not be constructed across active faults. An evaluation and written report of a specific site can and should be prepared by a licensed geologist. If an active fault is found and unfit for human occupancy over the fault, place a setback of 50 feet from the fault. • Use site-specific fault identification investigations conducted by licensed geotechnical professionals in accordance with the requirements of the Alquist-Priolo Act, as well as any applicable Caltrans regulations that exceed or reasonably replace the requirements of the Act to either determine that the anticipated risk to people and property is at or below acceptable levels or site-specific measures have been incorporated into the project design, consistent with the CBC and UBC. • Ensure that projects located within or across Alquist-Priolo Zones comply with design requirements provided in Special Publication 117, published by the California Geological Survey, as well as relevant local, regional, state, and federal design criteria for construction in seismic areas. • Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, ensure that projects are designed in accordance with county and city code requirements for seismic ground shaking. With respect to design, consider seismicity of	and the Project Site is not within a currently designated Alquist-Priolo Earthquake Fault Zone. Further, the Project Site is not located within an area of required liquefaction investigation. The Project Site is located in the seismically active region of Southern California, and is susceptible to ground shaking during a seismic event. As with any new development in the State of California, building design and construction are required to conform to the current seismic design provisions of the City's Building Code, which incorporates relevant provisions of the 2016 CBC. The 2016 CBC, as amended by the City's Building Code, incorporates the latest seismic design standards for structural loads and materials to provide for the latest in earthquake safety. Conformance with the 2016 CBC requirements would reduce the potential for structures on the Project Site to sustain damage during an earthquake event, and would ensure that the Project would not expose people or structures to substantial adverse effects associated with seismic ground shaking to any greater extent than other properties in the Southern California region.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	the site, soil response at the site, and dynamic characteristics of the structure, in compliance with the appropriate California Building Code and State of California design standards for construction in or near fault zones, as well as all standard design, grading, and construction practices in order to avoid or reduce geologic hazards. • Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, ensure that site-specific geotechnical investigations conducted by a qualified geotechnical expert be required prior to preparation of project designs. These investigations shall identify areas of potential expansive soils and recommend remedial geotechnical measures to eliminate any problems. Recommended corrective measures, such as structural reinforcement and replacing soil with engineered fill, shall be implemented in project designs. Geotechnical investigations identify areas of potential failure and recommend remedial geotechnical measures to eliminate any problems. • Adhere to design standards described in the CBC and all standard geotechnical investigation, design, grading, and construction practices to avoid or reduce impacts from earthquakes, ground shaking, ground failure, and landslides. • Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, design projects to avoid geologic units or soils that are unstable, expansive soils and soils prone to lateral spreading, subsidence, liquefaction, or collapse wherever feasible.	
GEO-2: Potential to result in substantial soil erosion or the loss of topsoil.	MM-GEO-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the potential for projects to result in substantial soil erosion or the loss of topsoil, that are in the jurisdiction and responsibility of public agencies, regulatory agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant	The Project already **substantially conforms** with this mitigation measure, because the Project would be required to comply with existing regulatory requirements pertaining to erosion and stormwater control, as well as the design and construction recommendations contained in the Geotechnical Investigation prepared for the Project (Attachment D). Specifically, as required by LAMC Section 91.7006, a design-level geotechnical report shall be

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	effects, the Lead Agency can and should consider mitigation measures to ensure compliance with County and City Public Works and Building and Safety Department Standards, the Uniform Building Code (UBC) and the California Building Code (CBC), and other applicable laws and regulations governing building standards, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, ensure that site-specific geotechnical investigations conducted by a qualified geotechnical expert are conducted to ascertain soil types prior to preparation of project designs. These investigations can and should identify areas of potential failure and recommend remedial geotechnical measures to eliminate any problems. • Consistent with the requirements of the State Water Resources Control Board (SWRCB) for projects over one acre in size, obtain coverage under the General Construction Activity Storm Water Permit (General Construction Permit) issued by the SWRCB and conduct the following: – File a Notice of Intent (NOI) with the SWRCB. – Prepare a stormwater pollution prevention plan (SWPPP) and submit the plan for review and approval by the Regional Water Quality Control Board (RWQCB). At a minimum, the SWPPP should include a description of construction materials, practices, and equipment storage and maintenance; a list of pollutants likely to contact stormwater; site-specific erosion and sedimentation control practices; a list of provisions to eliminate or reduce discharge of materials to stormwater; best management practices (BMPs); and an inspection and monitoring program. – Submit to the RWQCB a copy of the SWPPP and evidence of submittal of the NOI to the SWRCB.	reviewed and approved by LADBS that incorporates the recommendations of these existing reports and demonstrates compliance with the City's existing geology and soils requirements, including but not limited to LAMC Section 91.7013 pertaining to erosion control and drainage devices, Section 91.7014 regarding flood and mudflow protection, and Section 91.7016 regarding regulations for areas that are subject to slides and unstable soils. The Project would also be required to comply with the Construction General Permit Water Quality Order 2009-0009-DWQ as amended by Order No. 2010-0014-DWQ to prevent short-term construction water quality (including erosion and sedimentation issues) impacts. These mandatory requirements would minimize soil erosion and the transmission of sediment into the City's separate storm water sewer system. The Project's construction activities would require grading, excavation, and foundation permits or approvals from the City, which would include requirements and standards designed to limit potential impacts associated with erosion to permitted levels. The Project would also be designed to comply with the City of Los Angeles' Low Impact Development (LID) Ordinance. Therefore, the Project would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	Implementation of the SWPPP should start with the commencement of construction and continue through the completion of the project. – After construction is completed, the project sponsor can and should submit a notice of termination to the SWRCB. • Consistent with the requirements of the SWRCB and local regulatory agencies with oversight of development associated with the Plan, ensure that project designs provide adequate slope drainage and appropriate landscaping to minimize the occurrence of slope instability and erosion. Design features should include measures to reduce erosion caused by storm water. Road cuts should be designed to maximize the potential for revegetation. • Consistent with the CBC and local regulatory agencies with oversight of development associated with the Plan, ensure that, prior to preparing project designs, new and abandoned wells are identified within construction areas to ensure the stability of nearby soils.	
GEO-3: Potential to be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse.	MM-GEO-1(b). See above.	As described in GEO-1, the Project already **substantially conforms** with this mitigation measure. As described in the Geotechnical Investigation prepared for the Project (Attachment D), the Project Site is not located within a currently established Alquist-Priolo Earthquake Fault Zone or a fault zone mapped by the State Geologist pursuant to the Seismic Hazard Mapping Act. No active faults are known to pass through the immediate Project vicinity, and the Project Site is not within a landslide zone, a liquefaction zone, a fault rupture study area, or a tsunami inundation zone. The Project Site is located in the seismically active region of Southern California; however, through compliance with existing regulatory requirements as well as the measures identified above, and as described in the geotechnical report, the Project would not cause the geologic unit or soil to become unstable as a result of the proposed development, and the Project would thereby not result in an on- or off-site landslide, lateral spreading,

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		subsidence, liquefaction, or collapse. Therefore, the Project would be consistent with this mitigation measure.
GEO-4: Potential to be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property.	MM-GEO-1(b). See above.	The Project already **substantially conforms** with this mitigation measure. As described in the Geotechnical Investigation prepared for the Project (Attachment D), the development of the Project would not result in hazards from future landsliding, settlement, slippage, shrinkage, or expansion, as long as the recommendations presented in the reports are followed.[9] Moreover, pursuant to the City's existing codes and applicable regulations, design and construction of the Project would be required to incorporate any necessary measures to protect against risks associated with expansive soils. These measures include compliance with the LABC, the Rules of General Application of the Grading Division of LADBS, the City's building permit requirements, and site-specific engineering recommendations based upon the recommendations of a licensed geotechnical engineer and a required design-level geotechnical report containing the recommendations of the existing geotechnical report, which is to be approved by LADBS, as described above.
GEO-5: Potential to have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.	No mitigation required.	**No mitigation applies.**
Greenhouse Gas Emissions and Climate Change		
GHG-1: Potential to directly or indirectly result in an increase in GHG emissions compared to existing conditions (2015).	No mitigation required.	**No mitigation applies.**
GHG-2: Potential to conflict with SB 375 GHG Emission Reduction Targets.	No mitigation required.	**No mitigation applies.**

9 City of Los Angeles Department of City Planning. City of Los Angeles General Plan, Safety Element. 1996. Available at: https://planning.lacity.org/cwd/gnlpln/saftyelt.pdf, accessed June 23, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
GHG-3: Potential to conflict with AB 32 and or any applicable plan, policy or regulation adopted for the purpose of reducing emissions of GHGs.	No mitigation required.	**No mitigation applies.**
GHG Cumulative Impacts	MM-GHG-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential to conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emission of greenhouse gases that are within the jurisdiction and authority of California Air Resources Board, local air districts, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential to conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emission of greenhouse gases, the Lead Agency can and should consider mitigation measures to mitigate the significant effects of greenhouse gas impacts to ensure compliance with all applicable laws, regulations, governing CAPs, general plans, adopted policies and plans of local agencies, and standards set forth by responsible public agencies for the purpose of reducing emissions of greenhouse gases, as applicable and feasible. Consistent with Section 15126.4(c) of the State CEQA Guidelines, compliance can be achieved through adopting greenhouse gas mitigation measures that have been used for projects in the SCAG region as set forth below, or through comparable measures identified by Lead Agency: • Measures in an adopted plan or mitigation program for the reduction of emissions that are required as part of the Lead Agency's decision. • Reduction in emissions resulting from a project through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines. • Off-site measures to mitigate a project's emissions. • Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction	The Project **substantially conforms** with this mitigation measure as described below. The Project's generation of greenhouse gas (GHG) emissions would not be considered cumulatively considerable, as the Project would not conflict with an applicable plan, policy, or regulation for the purposes of reducing the emissions of GHGs. Specifically, as set forth in the PRC Section 21155 consistency findings for the Project as well as the RTP/SCS consistency findings under Attachment B, the Project is consistent with the 2016 RTP/SCS, which is SCAG's regional plan for reducing GHG emissions. Moreover, the Project would exceed Title 24 Building Energy Efficiency Standards requirements and will comply with applicable water and energy conservation measures under CALGreen as well as the City's Green Building Ordinance and Landscape Ordinance, thereby reducing consumption of these resources and reducing GHG emissions accordingly. Thus, the Project would be consistent with the intent of this mitigation measure. Additionally, as described in EN-2, the Project would be in compliance with the PRC's statutory requirements for a TPP building to be designed to be 15 percent more energy efficient than the applicable Title 24 standards and to be designed to achieve 25 percent less water usage than the average household use in the region. Specifically, as stated in the CEQA Exemption Energy and Water Efficiency Compliance Memorandum (Attachment I), the Project's energy use would be 15.5 percent less than the standards required by Title 24, Part 6 (2016). Moreover, the Project's water use would be 89 percent below the regional baseline. These Project features would result in reduced energy consumption and corresponding reduction in GHG emissions, consistent with the project-related mitigation suggested by SCAG.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	and operation of projects to minimize GHG emissions, including but not limited to: – Use energy and fuel efficient vehicles and equipment. Project proponents are encouraged to meet and exceed all EPA/NHTSA/CARB standards relating to fuel efficiency and emission reduction; – Use alternative (non-petroleum based) fuels; – Deployment of zero- and/or near zero emission technologies as defined by CARB; – Use lighting systems that are energy efficient, such as LED technology; – Use the minimum feasible amount of GHG-emitting construction materials that is feasible; – Use cement blended with the maximum feasible amount of fly ash or other materials that reduce GHG emissions from cement production; – Incorporate design measures to reduce GHG emissions from solid waste management through encouraging solid waste reduction, recycling, and reuse; – Incorporate passive solar and other design measures to reduce energy consumption and increase production and use of renewable energy; – Incorporate design measures like WaterSense fixtures and water capture to reduce water consumption; – Use lighter-colored pavement where feasible; – Recycle construction debris to maximum extent feasible; – Protect and plant shade trees in or near construction projects where feasible; and – Solicit bids that include concepts listed above. • Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to,	Collectively, these Project features and conditions as well as the Project's required regulatory compliance would result in reduced energy consumption, reduced VMT, and corresponding reduction in GHG emissions, consistent with the Project-related mitigation identified by SCAG.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	transit-active transportation coordinated strategies, increased bicycle carrying capacity on transit and rail vehicles. • Incorporating bicycle and pedestrian facilities into project designs, maintaining these facilities, and providing amenities incentivizing their use; providing adequate bicycle parking and planning for and building local bicycle projects that connect with the regional network. • Improving transit access to rail and bus routes by incentives for construction of transit facilities within developments, and/or providing dedicated shuttle service to transit stations. • Adopting employer trip reduction measures to reduce employee trips such as vanpool and carpool programs, providing end-of-trip facilities, and telecommuting programs. • Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles. • Land use siting and design measures that reduce GHG emissions, including: – Developing on infill and brownfields sites; – Building high density and mixed use developments near transit; – Retaining on-site mature trees and vegetation, and planting new canopy trees; – Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles; and	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Measures to reduce GHG emissions from solid waste management through encouraging solid waste recycling and reuse.	
Hazards and Hazardous Materials		
HAZ-1: Potential to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.	MM-HAZ-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects related to the routine transport, use or disposal of hazardous materials that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the provisions of the Hazardous Waste Control Act, the Unified Hazardous Waste and Hazardous Materials Management Regulatory Program, the Hazardous Waste Source Reduction and Management Review Act of 1989, the California Vehicle Code, and other applicable laws and regulations, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Where the construction or operation of projects involves the transport of hazardous material, provide a written plan of proposed routes of travel demonstrating use of roadways designated for the transport of such materials. • Where the construction or operation of projects involves the transport of hazardous materials, avoid transport of such materials within one-quarter mile of schools, when school is in session, wherever feasible. • Where it is not feasible to avoid transport of hazardous materials, within one-quarter mile of schools on local streets, provide notification of the anticipated schedule of transport of such materials. • Specify the need for interim storage and disposal of hazardous materials to be undertaken consistent with applicable federal, state, and local statutes and	The Project already **substantially conforms** with this mitigation measure. Project construction would involve the temporary transport, use, and disposal of potentially hazardous materials. These materials can include paints, adhesives, surface coatings, cleaning agents, fuels, and oils. All such materials would be transported, used, and disposed of in conformance with all applicable regulatory requirements, thereby eliminating the risk of potentially significant hazards. In addition, Project operation does not involve the routine transport, use, or disposal of potentially hazardous materials. Any potentially hazardous materials used would be similar to any other urban residential development, and may include cleaning solvents, paints, and pesticides for landscaping. These potentially hazardous materials would be in and stored in accordance with regulatory requirements and manufacturers' instructions. Furthermore, the Project would adhere to regulatory requirements concerning source hazardous waste reduction measures and all applicable City ordinances, including the following: • All potentially hazardous materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable federal, State, and local laws, • **I**n accordance with SCAQMD Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities), prior to demolition activities associated with the Project, the Applicant would conduct a survey of the existing areas where construction would occur to verify the presence or absence of any of these materials and conduct remediation or abatement before any disturbance occurs. Furthermore, the California Division of Occupational Safety and Health (Cal/OSHA) has established limits of exposure to lead contained in dusts and fumes through California Code of Regulations, Title

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	regulations in the plans and specifications of the transportation improvement project. • Submit a Hazardous Materials Business/Operations Plan for review and approval by the appropriate local agency. Once approved, keep the plan on file with the Lead Agency (or other appropriate government agency) and update, as applicable. The purpose of the Hazardous Materials Business/Operations Plan is to ensure that employees are adequately trained to handle the materials and provides information to the local fire protection agency should emergency response be required. The Hazardous Materials Business/Operations Plan should include the following: – The types of hazardous materials or chemicals stored and/or used on-site, such as petroleum fuel products, lubricants, solvents, and cleaning fluids. – The location of such hazardous materials. – An emergency response plan including employee training information. – A plan that describes the manner in which these materials are handled, transported and disposed. • Specify the appropriate procedures for interim storage and disposal of hazardous materials, anticipated to be required in support of operations and maintenance activities, in conformance with applicable federal, state, and local statutes and regulations, in the Operations Manual for projects. • Follow manufacturer's recommendations on use, storage, and disposal of chemical products used in construction. • Avoid overtopping construction equipment fuel gas tanks.	8, Section 1532.1, which provides for exposure limits, exposure monitoring, and respiratory protection, and mandates good working practices by workers exposed to lead, since demolition workers are at greatest risk of adverse health exposure. Lead-contaminated debris and other wastes must also be managed and disposed of in accordance with applicable provisions of the California Health and Safety Code. • During subsurface excavation activities, including borings, trenching and grading, OSHA worker safety measures shall be implemented as required to preclude any exposure of workers to unsafe levels of soil-gases, including, but not limited to, methane. Although the prior Phase I ESA (Attachment F) and preliminary endangerment assessment (PEA) prepared for the Project (see Attachment H) did not identify any recognized environmental conditions (RECs) or contaminants of potential concern (COPCs) at the Project Site, given the presence of lead and total petroleum hydrocarbon (TPH) in the soil encountered during soil sampling at the Project Site, as indicated in the Limited Soil Sampling and Analysis, a soils management plan is to be prepared in the event that contaminated soil may be identified during Project construction activities, as set forth in PM-HAZ-1.[10] **PM-HAZ-1**: Prior to grading, the Project Applicant shall prepare a Soil Management Plan (SMP) for the Project. Soil management procedures shall be described so that hazardous soil can be separated from nonhazardous soil during excavation tasks. Soil management procedures outlined in the SMP shall be followed during the Project's excavation and development phases to properly manage the various classes of soil and to minimize risk to workers and the public during construction.

[10] Geocon West, 2020. Limited Soil Sampling and Analysis. 1917-2005 1/2 West 3rd Street, Approximately 0.69-acre Southern Portion of Assessor's Parcel Number (APN) 5154-020-030, Los Angeles, CA. July 7, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• During routine maintenance of construction equipment, properly contain and remove grease and oils. • Properly dispose of discarded containers of fuels and other chemicals.	Therefore, the City has determined that the Project's compliance with existing regulatory requirements as well as implementation of the above Project measure is equal to or more effective than MM-HAZ-1(b).
HAZ-2: Potential to create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment.	MM-HAZ-1(b). See above.	As described above, under HAZ-1, the Project would **substantially comply** with MM-HAZ-1(b) through compliance with all applicable regulatory requirements and incorporation of identified Project measure. As part of the Phase I ESA, a review of all major governmental databases was conducted any information related to hazardous materials on, or in the immediate vicinity, of the Project Site. While results showed that nearby properties were listed in the regulatory databases, the Project Site itself was not identified in any of the regulatory databases reviewed. Based upon the review of all pertinent Regulatory Documents, the Phase I ESA concluded that there is only a low potential for any toxic or hazardous contamination to the Project Site from any of these off-site listed sources.[11] In addition, during construction, all potentially hazardous materials encountered and used at the Project Site would be used and stored in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations. This ensures that potential risks associated with construction related activities are minimized. Moreover, as described under MM-HAZ-1(b), the Project would incorporate Project Measure PM-HAZ-1, which would prevent the potential encountering of contaminated soils during construction activities. Therefore, the Project is consistent with this mitigation measure. With compliance with the applicable regulatory requirements and PM-HAZ-1 above, impacts pertaining to the release of or exposure to hazardous substances would be minimized and the Project would be consistent with this mitigation

[11] Surveys Inc., 2020. Phase I Environmental Site Assessment Report: Miramar Development, 1917-2005 1/2 W. 3rd Street, Los Angeles, CA, 90057.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		measure.
HAZ-4: Potential to be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment.	MM-HAZ-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines; SCAG has identified mitigation measures capable of avoiding or reducing the significant effects related to a project placed on a hazardous materials site, that are in the jurisdiction and responsibility of regulatory agencies, other public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the provisions of the Government Code Section 65962.5, Occupational Safety and Health Code of 197; the Response Conservation, and Recovery Act; the Comprehensive Environmental Response, Compensation, and Liability Act; the Hazardous Materials Release and Clean-up Act, and the Uniform Building Code, and County and City building standards, and all applicable federal, state, and local laws and regulations governing hazardous waste sites, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Complete a Phase I Environmental Site Assessment, including a review and consideration of data from all known databases of contaminated sites, during the process of planning, environmental clearance, and construction for projects. • Where warranted due to the known presence of contaminated materials, submit to the appropriate agency responsible for hazardous materials/wastes oversight a Phase II Environmental Site Assessment report if warranted by a Phase I report for the project site. The reports should make recommendations for remedial action, if appropriate, and be signed by a Registered Environmental Assessor, Professional Geologist, or Professional Engineer. • Implement the recommendations provided in the Phase II Environmental Site Assessment report, where such a report was determined to be necessary for the	In compliance with this mitigation measure, the Project applicant has prepared a Phase I ESA for the Project Site. As part of the Phase I ESA (Attachment F) prepared for the Project Site, regulatory databases such as those required by California Government Code Section 65962.5 were reviewed for the Project Site and properties within the standard search radii. The databases searched as a result of Government Code Section 65962.5 are known as the "Cortese List" and include EnviroStor, GeoTracker, and other lists compiled by the California Environmental Protection Agency. No hazardous materials that may pose a risk at or to the Project Site were listed in the databases, and the Project Site is not identified as hazardous materials sites. Moreover, as described under MM-HAZ-1(b), the Project would incorporate Project Measure PM-HAZ-1, which would prevent the potential encountering of contaminated soils during construction activities. While results showed that nearby properties were listed in the regulatory databases, the Project Site itself was not identified in any of the regulatory databases reviewed. Based upon the review of all pertinent Regulatory Documents, the Phase I ESA concluded that there is only a low potential for any toxic or hazardous contamination to the Project Site from any of these off-site listed sources. Therefore, construction and operation of the Project would not pose an environmental hazard to surrounding sensitive uses or the environment and the Project would be consistent with this mitigation.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	construction or operation of the project, for remedial action. • Submit a copy of all applicable documentation required by local, state, and federal environmental regulatory agencies, including but not limited to: permit applications, Phase I and II Environmental Site Assessments, human health and ecological risk assessments, remedial action plans, risk management plans, soil management plans, and groundwater management plans. • Conduct soil sampling and chemical analyses of samples, consistent with the protocols established by the U.S. EPA to determine the extent of potential contamination beneath all underground storage tanks (USTs), elevator shafts, clarifiers, and subsurface hydraulic lifts when on-site demolition or construction activities would potentially affect a particular development or building. • Consult with the appropriate local, state, and federal environmental regulatory agencies to ensure sufficient minimization of risk to human health and environmental resources, both during and after construction, posed by soil contamination, groundwater contamination, or other surface hazards including, but not limited to, underground storage tanks, fuel distribution lines, waste pits and sumps. • Obtain and submit written evidence of approval for any remedial action if required by a local, state, or federal environmental regulatory agency. • Cease work if soil, groundwater, or other environmental medium with suspected contamination is encountered unexpectedly during construction activities (e.g., identified by odor or visual staining, or if any underground storage tanks, abandoned drums, or other hazardous materials or wastes are encountered), in the vicinity of the suspect material. Secure the area as necessary and take all appropriate measures to protect human health and the environment, including but not limited to: notification of regulatory agencies and	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	identification of the nature and extent of contamination. Stop work in the areas affected until the measures have been implemented consistent with the guidance of the appropriate regulatory oversight authority. • Use best management practices (BMPs) regarding potential soil and groundwater hazards. • Soil generated by construction activities should be stockpiled on-site in a secure and safe manner. All contaminated soils determined to be hazardous or non-hazardous waste must be adequately profiled (sampled) prior to acceptable reuse or disposal at an appropriate off-site facility. Complete sampling and handling and transport procedures for reuse or disposal, in accordance with applicable local, state and federal laws and policies. • Groundwater pumped from the subsurface should be contained on-site in a secure and safe manner, prior to treatment and disposal, to ensure environmental and health issues are resolved pursuant to applicable laws and policies. Utilize engineering controls, which include impermeable barriers to prohibit groundwater and vapor intrusion into the building. • Prior to issuance of any demolition, grading, or building permit, submit for review and approval by the Lead Agency (or other appropriate government agency) written verification that the appropriate federal, state and/or local oversight authorities, including but not limited to the Regional Water Quality Control Board (RWQCB), have granted all required clearances and confirmed that the all applicable standards, regulations, and conditions have been met for previous contamination at the site. • Develop, train, and implement appropriate worker awareness and protective measures to assure that worker and public exposure is minimized to an acceptable level and to prevent any further environmental contamination as a result of construction. • If asbestos-containing materials (ACM) are found to be present in building materials to be removed, submit	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	specifications signed by a certified asbestos consultant for the removal, encapsulation, or enclosure of the identified ACM in accordance with all applicable laws and regulations, including but not necessarily limited to: California Code of Regulations, Title 8; Business and Professions Code; Division 3; California Health and Safety Code Section 25915- 25919.7; and other local regulations. • Where projects include the demolitions or modification of buildings constructed prior to 1968, complete an assessment for the potential presence or lack thereof of ACM, lead-based paint, and any other building materials or stored materials classified as hazardous waste by state or federal law. • Where the remediation of lead-based paint has been determined to be required, provide specifications to the appropriate agency, signed by a certified Lead Supervisor, Project Monitor, or Project Designer for the stabilization and/or removal of the identified lead paint in accordance with all applicable laws and regulations, including but not necessarily limited to: California Occupational Safety and Health Administration's (Cal OSHA's) Construction Lead Standard, Title 8 California Code of Regulations (CCR) Section 1532.1 and Department of Health Services (DHS) Regulation 17 CCR Sections 35001–36100, as may be amended. If other materials classified as hazardous waste by state or federal law are present, the project sponsor should submit written confirmation to the appropriate local agency that all state and federal laws and regulations should be followed when profiling, handling, treating, transporting, and/or disposing of such materials. • Where a project site is determined to contain materials classified as hazardous waste by state or federal law are present, submit written confirmation to appropriate agency that all state and federal laws and regulations should be followed when profiling, handling, treating, transporting, and/or disposing of such materials.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
HAZ-5: Potential for a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area.	No mitigation required.	**No mitigation applies.**
HAZ-6: Potential for a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area.	No mitigation required.	**No mitigation applies.**
HAZ-7: Potential to impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.	MM-TRA-5(b). See below.	The Project already **substantially conforms** with this mitigation measure through compliance with existing regulatory requirements as well as incorporation of the specific Project measure. Specifically, an emergency response plan would be submitted to the Los Angeles Fire Department (LAFD) during LAFD's review of the Project plans as part of the standard building permit review process per LAMC Section 57.118 (see PS-1). Moreover, the Project does not propose permanent alterations to vehicular circulation routes and patterns, or impede public access or travel upon public rights-of-way. Furthermore, no full road closures are anticipated during construction of the Project. Therefore, the Project would be consistent with this mitigation. measure
HAZ-8: Potential to expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands.	MM-HAZ-8(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the potential exposure of people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands; that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can	**No mitigation applies.** This mitigation measure does not apply to the Project, because the Project Site is located in a fully urbanized area and there are no wildlands in the vicinity, and is not near a wildland fire hazard area.[12] Furthermore, the Project is subject to regulatory requirements, such as adherence to Fire Code requirements and submitting a fire safety plan to the Lead Agency and local fire agency for their review and approval per LAMC Section 57.118.

[12] City of Los Angeles, ZIMAS, 2020. Parcel information for 1917 W. 3rd St., APN 5525004023. Available at: http://zimas.lacity.org/, accessed June 2, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	and should consider mitigation measures to ensure compliance with local general plans, specific plans, and regulations provided by County and City fire departments, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Adhere to fire code requirements, including ignition-resistant construction with exterior walls of noncombustible or ignition resistant material from the surface of the ground to the roof system. Other fire-resistant measures would be applied to eaves, vents, windows, and doors to avoid any gaps that would allow intrusion by flame or embers. • Adhere to the Multi-Jurisdictional Hazards Mitigation Plan, as well as local general plans, including policies and programs aimed at reducing the risk of wildland fires through land use compatibility, training, sustainable development, brush management, and public outreach. • Encourage the use of fire-resistant vegetation native to Southern California and/or to the local microclimate (e.g., vegetation that has high moisture content, low growth habits, ignition-resistant foliage, or evergreen growth), eliminate brush and chaparral, and discourage the use of fire-promoting species especially non-native, invasive species (e.g., pampas grass, fennel, mustard, or the giant reed) in the immediate vicinity of development in areas with high fire threat. • Encourage natural revegetation or seeding with local, native species after a fire and discourage reseeding of non-native, invasive species to promote healthy, natural ecosystem regrowth. Native vegetation is more likely to have deep root systems that prevent slope failure and erosion of burned areas than shallow-rooted non-natives. • Submit a fire safety plan (including phasing) to the Lead Agency and local fire agency for their review and approval. The fire safety plan shall include all of the fire safety features incorporated into the project and the	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	schedule for implementation of the features. The local fire protection agency may require changes to the plan or may reject the plan if it does not adequately address fire hazards associated with the project as a whole or the individual phase. • Utilize Fire-wise Land Management by encouraging the use of fire-resistant vegetation and the elimination of brush and chaparral in the immediate vicinity of development in areas with high fire threat. • Promote Fire Management Planning that would help reduce fire threats in the region as part of the Compass Blueprint process and other ongoing regional planning efforts. • Encourage the use of fire-resistant materials when constructing projects in areas with high fire threat	
Hydrology and Water Quality		
HYD-1: Potential to violate any water quality standards or waste discharge requirements.	MM-HYD-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential impacts on water quality on related waste discharge requirements that are within the jurisdiction and authority of the Regional Water Quality Control Boards and other regulatory agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with all applicable laws, regulations, and health and safety standards set forth by regulatory agencies responsible for regulating and enforcing water quality and waste discharge requirements in a manner that conforms with applicable water quality standards and/or waste discharge requirements, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency:	The Project already **substantially conforms** with this mitigation measure, because the Project would be required to comply with existing regulatory requirements pertaining to water quality standards and waste discharge requirements during construction and operation, as governed by the Los Angeles Regional Water Quality Control Board (LARWQCB) and the City. The Project would comply with LAMC Chapter IX, Division 70, which addresses erosion control during grading, excavations, and fills. Project construction activities would require grading, excavation, and foundation permits or approvals from the City, which would include requirements and standards designed to limit potential impacts associated with erosion to permitted levels. The Project would also be designed to comply with the City's LID Ordinance. Prior to the issuance of grading permits, the Applicant would submit a LID Plan to the City's Bureau of Sanitation (LASAN) Watershed Protection Division for review and approval. The LID Plan shall be prepared consistent with the requirements of the Development Best Management Practices Handbook.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Complete, and have approved, a Stormwater Pollution Prevention Plan (SWPPP) prior to initiation of construction. • Implement Best Management Practices to reduce the peak stormwater runoff from the project site to the maximum extent practicable. • Comply with the Caltrans storm water discharge permit as applicable; and identify and implement Best Management Practices to manage site erosion, wash water runoff, and spill control. • Complete, and have approved, a Standard Urban Stormwater Management Plan, prior to occupancy of residential or commercial structures. • Ensure adequate capacity of the surrounding stormwater system to support stormwater runoff from new or rehabilitated structures or buildings. • Prior to construction within an area subject to Section 404 of the Clean Water Act, obtain all required permit approvals and certifications for construction within the vicinity of a watercourse: – U.S. Army Corps of Engineers (Corps): Section 404. Permit approval from the Corps should be obtained for the placement of dredge or fill material in Waters of the U.S., if any, within the interior of the project site, pursuant to Section 404 of the federal Clean Water Act – Regional Water Quality Control Board (RWQCB): Section 401 Water Quality Certification. Certification that the project will not violate state water quality standards is required before the Corps can issue a 404 permit, above. – California Department of Fish and Wildlife (CDFW): Section 1602 Lake and Streambed Alteration Agreement. Work that will alter the bed or bank of a stream requires authorization from CDFW.	Specifically, pursuant to LAMC Section 91.7006, discussed above, a design-level geotechnical report shall be reviewed and approved by LADBS that incorporates the recommendations of the Project's existing geotechnical reports and demonstrates compliance with the City's existing geology and soils requirements, including but not limited to LAMC Section 91.7013 pertaining to erosion control and drainage devices, Section 91.7014 regarding flood and mudflow protection, and Section 91.7016 regarding regulations for areas that are subject to slides and unstable soils. In addition, the Project would be subject to the City's Stormwater and Urban Runoff Pollution Control regulations (Ordinance No. 172,176 and No. 173,494) to ensure pollutant loads from the Project Site would be minimized for downstream receiving waters. Compliance with the City's discharge requirements would ensure that construction stormwater runoff would not violate water quality and/or discharge requirements and minimize soil erosion and sedimentation from entering the storm drains during the construction period. In addition, given the fact that groundwater has previously been encountered at depths higher than the Project's proposed excavation depth for its subterranean basement level, it is possible that groundwater may be encountered during excavation and dewatering may be required. Any such required dewatering would be conducted in accordance with applicable regulatory requirements found within LARWQCB Order No. R4-2018-0125. During operation the Project would be required to comply with the City's LID Ordinance. The LID Ordinance applies to all development and redevelopment in the City that requires replace or creates more than 500 square feet of impervious area. LID Plans are required to include a site design approach and BMPs that address runoff and pollution at the source. Further, to comply with LID Ordinance the Project would be required to capture and treat the runoff volume produced by the 85th percentile storm event in accordance with established stormwater treatment priorities. Compliance with the LID Ordinance would reduce the amount of surface water runoff leaving the Project Site as compared to the current conditions.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Where feasible, restore or expand riparian areas such that there is no net loss of impervious surface as a result of the project. • Install structural water quality control features, such as drainage channels, detention basins, oil and grease traps, filter systems, and vegetated buffers to prevent pollution of adjacent water resources by polluted runoff where required by applicable urban storm water runoff discharge permits, on new facilities. • Provide structural storm water runoff treatment consistent with the applicable urban storm water runoff permit. Where Caltrans is the operator, the statewide permit applies. • Provide operational best management practices for street cleaning, litter control, and catch basin cleaning are implemented to prevent water quality degradation in compliance with applicable storm water runoff discharge permits; and ensure treatment controls are in place as early as possible, such as during the acquisition process for rights-of-way, not just later during the facilities design and construction phase. • Comply with applicable municipal separate storm sewer system discharge permits as well as Caltrans' storm water discharge permit including long-term sediment control and drainage of roadway runoff. • Incorporate as appropriate treatment and control features such as detention basins, infiltration strips, and porous paving, other features to control surface runoff and facilitate groundwater recharge into the design of new transportation projects early on in the process to ensure that adequate acreage and elevation contours are provided during the right-of-way acquisition process. • Design projects to maintain volume of runoff, where any downstream receiving water body has not been designed and maintained to accommodate the increase in flow velocity, rate, and volume without impacting the water's beneficial uses. Pre-project flow velocities, rates, and volumes must not be exceeded. This applies	Compliance with the LID Plan and Stormwater and Urban Runoff Pollution Control Ordinance, including the implementation of BMPs, would ensure that operation of the Project would not violate water quality standard and discharge requirements or otherwise substantially degrade water quality. Consistent with the City's Stormwater and Urban Runoff Pollution Control regulations (Ordinance No. 181,899and No. 183,833), the Project would be required to adhere to City discharge requirements and would implement BMPs meant to reduce stormwater pollution during demolition, grading, and construction activities If dewatering, treatment, and disposal of groundwater is required it would be conducted in accordance with the LARWQCB's Waste Discharge Requirements for Discharges of Groundwater from Construction and Project Dewatering to Surface Waters in Coastal Watersheds of Los Angeles and Ventura Counties (Order No. R4-2018-0125). If a Departing Plan is required, prior to the issuance of permit for excavation, the Applicant shall, in consultation with LADBS, submit a Dewatering Plan to LASAN for review and approval, which shall be implemented if it is determined by the LADBS that a dewatering system is necessary for the Project. Through compliance with existing regulatory requirements, the Project would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	not only to increases in storm water runoff from the project site, but also to hydrologic changes induced by flood plain encroachment. Projects should not cause or contribute to conditions that degrade the physical integrity or ecological function of any downstream receiving waters. • Provide culverts and facilities that do not increase the flow velocity, rate, or volume and/or acquiring sufficient storm drain easements that accommodate an appropriately vegetated earthen drainage channel. • Upgrade stormwater drainage facilities to accommodate any increased runoff volumes. These upgrades may include the construction of detention basins or structures that will delay peak flows and reduce flow velocities, including expansion and restoration of wetlands and riparian buffer areas. System designs shall be completed to eliminate increases in peak flow rates from current levels. • Encourage Low Impact Development (LID) and incorporation of natural spaces that reduce, treat, infiltrate and manage stormwater runoff flows in all new developments, where practical and feasible. • If a proposed project has the potential to create a major new stormwater discharge to a water body with an established Total Maximum Daily Load (TMDL), a quantitative analysis of the anticipated pollutant loads in the stormwater discharges to the receiving waters should be carried out.	
HYD-2: Potential to substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level that would not support existing land uses or planned uses for which permits have been granted).	MM-HYD-2(b): Consistent with the provisions of the Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential impacts to groundwater resources that are within the jurisdiction and authority of the State Water Resources Control Board, Regional Water Quality Control Boards, Water Districts, and other groundwater management agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with applicable	The Project already **substantially conforms** with this mitigation measure, because the Project will implement the requirements discussed above under HYD-1, pursuant to which the Project would comply with existing regulations regarding potential dewatering as well as low-impact development requirements. Compliance with these regulatory requirements would avoid or reduce potential impacts to groundwater resources that are within the jurisdiction and authority of the State Water Resources Control Board (SWRCB), Regional Water Quality Control

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	laws, regulations, and health and safety standards set forth by federal, state, regional, and local authorities that regulate groundwater management, consistent with the provisions of the Groundwater Management Act and implementing regulations, including recharge in a manner that conforms with federal, state, regional, and local standards for sustainable management of groundwater basins, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • For projects requiring continual dewatering facilities, implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of surface water and minimizes, to the greatest extent possible, adverse impacts on groundwater for the life of the project, Construction designs shall comply with appropriate building codes and standard practices including the Uniform Building Code. • Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimize to the greatest extent possible, new impervious surfaces, including the use of in-lieu fees and off-site mitigation. • Avoid designs that require continual dewatering where feasible. • Avoid construction and siting on groundwater recharge areas, to prevent conversion of those areas to impervious surface. • Reduce hardscape to the extent feasible to facilitate groundwater recharge as appropriate.	Boards (RWQCBs), Water Districts, and other groundwater management agencies.
HYD-3: Potential to substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner that would result in substantial erosion or siltation on or off site.	MM-HYD-1(b). See above.	As discussed under HYD-1, the Project already **substantially conforms** with this mitigation measure, because the Project would implement the regulatory requirements discussed above under HYD-1, which include stringent controls imposed via the City's LID Ordinance and SUSMP regulations. Runoff associated with the Project

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		would be either directed in non-erosive drainage devices to landscaped areas for evaporation and/or directed to the existing City storm drain system, captured in on-site below grade cisterns, and/or directed to the existing City storm drain system, and thus, would not encounter exposed soils. With the development of the Project, the Project Site's current largely impervious nature would be maintained, and the Project's drainage pattern would be generally similar to the existing pattern at the Project Site currently by conveying runoff to the City storm drain system. With compliance with the regulations described above, operation of the Project would not result in substantial hydrological changes or erosion or siltation on- or off-site, nor would the Project result in the alteration of the course of a stream or river.
HYD-4: Potential to substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner that would result in flooding on site or off site.	MM-HYD-1(b). See above.	As described above under HYD-1, the Project already **substantially conforms** with this mitigation measure, and through compliance with existing regulatory requirements, would not alter the existing drainage pattern of the area surrounding the Project Site. Furthermore, given that there are no waterbodies within or near the Project Site, flooding is not expected to occur on- or off-site. Therefore, consistent with this mitigation measure, impacts related to drainage pattern alteration and/or flooding would be minimal.
HYD-5: Potential to substantially create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or providing substantial additional sources of polluted runoff.	MM-HYD-1(b). See above.	As discussed under HYD-1, the Project already **substantially conforms** with this mitigation measure, because the Project would be subject to the provisions of the LID Ordinance, and runoff associated with the Project would be directed in non-erosive drainage devices to either landscaped areas for evaporation, captured and conveyed to on-site below grade cisterns, and/or directed to the existing City storm drain system. Pursuant to the City's review of the Project's compliance with existing regulations including applicable SUSMP requirements, the Project would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
HYD-6: Potential to otherwise substantially degrade water quality.	MM-HYD-1(b). See above.	As discussed under HYD-1, the Project already **substantially conforms** with this mitigation measure, because the Project is required to implement all applicable regulatory requirements to protect water quality discussed above under HYD-1 to ensure consistency with MM-HYD-1(b).
HYD-7: Potential to place housing within a 100-year flood hazard area as mapped on a federal flood hazard boundary or flood insurance rate map or other flood hazard delineation map.	No mitigation required.	**No mitigation applies.**
HYD-8: Potential to place within a 100-year flood hazard area structures that would impede or redirect flood flows.	MM-HYD-8(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential impacts of locating structures that would impede or redirect flood flows in a 100-year flood hazard area that are within the jurisdiction and authority of the Flood Control District, County Public Works Departments, local agencies, regulatory agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with all federal, state, and local floodplain regulations, consistent with the provisions of the National Flood Insurance Program, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Comply with Executive Order 11988 on Floodplain Management, which requires avoidance of incompatible floodplain development, restoration and preservation of the natural and beneficial floodplain values, and maintenance of consistency with the standards and criteria of the National Flood Insurance Program. • Ensure that all roadbeds for new highway and rail facilities be elevated at least one foot above the 100-year base flood elevation. Since alluvial fan flooding is not often identified on FEMA flood maps, the risk of alluvial fan flooding should be evaluated and projects	**No mitigation applies.** The Project Site is not located in a 100-year flood hazard area according to the Los Angeles General Plan Safety Element. Additionally, according to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Panel #06037C1617G, the Project Site is located within an Area of Minimal Flood Hazard. Furthermore, based on the Phase I ESA, no wetlands were identified at the property or adjoining/immediately surrounding properties and therefore, the risk of flooding from a seismically induced seiche is remote. Thus, the Project would not place structures in an area that would impede or redirect flood flows and this mitigation measure would not apply.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	should be sited to avoid alluvial fan flooding. Delineation of floodplains and alluvial fan boundaries should attempt to account for future hydrologic changes caused by global climate change.	
HYD-9: Potential to expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam.	MM-HYD-8(b). See above.	**No mitigation applies.** The Project would not interfere with existing regulations regarding dams and levees. The Project Site is located approximately 2.2 miles south of the Silver Lake Reservoir and approximately 5.2 miles southwest of the Hollywood Reservoir. The Project Site is not within a potential dam failure inundation area as shown in the City's General Plan Safety Element.[13] However, these dams, as with other reservoirs and dams in California, are continually being monitored by various governmental agencies (such as the State of California Division of Safety and Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam and reservoir failure. Current design and construction practices and ongoing programs of review, modification, or total reconstruction of existing dams and reservoirs are intended to ensure that all dams and reservoirs are capable of withstanding the maximum credible earthquake for the Project Site. Accordingly, given the project's distance from the dam, inspection and monitoring programs in place at the dam, and the dam's composure of concrete, risk posed with respect to dam failure and flooding would be minimal.
HYD-10: Potential for inundation by seiche, tsunami, or mudflow.	MM-HYD-8(b). See above.	**No mitigation applies.** The Project because the site has a very low potential for inundation by seiche, tsunami, or mudflow. Based on the Phase I ESA, no wetlands were identified at the Project Site or adjoining/immediately surrounding properties. The Project Site is located approximately 13 miles away from the Pacific Ocean, with no nearby major waterbodies. Therefore, risks associated with seiches or tsunamis would be considered extremely low at the Project Site. In addition, the Project Site is located in an urbanized portion of the City and is relatively flat, which limits the potential for inundation by mudflow.

[13] City of Los Angeles Department of City Planning. City of Los Angeles General Plan, Safety Element. 1996. Available at: https://planning.lacity.org/odocument/31b07c9a-7eea-4694-9899-f00265b2dc0d/Safety_Element.pdf, accessed June 5, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		Thus, the potential for inundation by seiche, tsunami, or mudflow is considered low.
Land Use and Planning		
LU-1: Potential to conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect.	MM-LU-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects regarding the potential to conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project that are within the jurisdiction and responsibility of local jurisdictions and Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the goals and policies established within the applicable adopted county and city general plans within the SCAG region to avoid conflicts with zoning and ordinance codes, general plans, land use plan, policy, or regulation of an agency with jurisdiction over the project, as applicable and feasible. Such measures may include the following, and/or other comparable measures identified by the Lead Agency: • Where an inconsistency with the adopted general plan is identified at the proposed project location, determine if the environmental, social, economic, and engineering benefits of the project warrant a variance from adopted zoning or an amendment to the general plan.	**No mitigation applies**, as the Project is consistent with applicable regional and local land use plans, policies, and regulations, as described below. As set forth in this exemption document, the Project is consistent with the general use designation, density, building intensity, and applicable policies of SCAG's 2016 RTP/SCS (see PRC Section 21155(a) consistency determination) as well as the RTP/SCS's goals and policies (see Attachment B). Moreover, as discussed under PHE-1, the Project is consistent with the growth projections contained in the RTP/SCS. Accordingly, the Project does not conflict with the 2016-2040 RTP/SCS. In addition, the Project is consistent with applicable policies in the Los Angeles General Plan, including Framework Element Objective 3.13 regarding the development of mixed-use multi-family residential developments along corridors that are well-served by transit. In addition, the Project's 136 Low Income affordable units and 1 manager's unit within one-half mile of the Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station will support Objective 2.2 of the General Plan's Housing Element by developing mixed-income housing and amenities near transit opportunities. The Project Site is also subject to the Westlake Community Plan, and the Project is consistent with its land use designation of Highway-Oriented Commercial as well as the existing zoning designation (C2-1), which allows for residential uses. Moreover, as a multi-family residential transit-oriented affordable housing project, the Project is consistent with the Community Plan's goals and objectives regarding the provision of housing to satisfy the needs of all low and medium income segments of the community (Residential Objectives 1 and 2) and encouraging alternative modes of transportation (Circulation Objectives 2 and 3).

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		Additionally, the Project's proposed density, floor area, and development envelope are consistent with the City's Transit Oriented Communities Affordable Housing Incentive Guidelines ("TOC Program"), which permits density increases and associated incentives in conjunction with the provision of affordable housing. The Project would be consistent with applicable regional and local land use plans, policies, and regulations, and, thus, no mitigation applies.
LU-2: Potential to physically divide an established community.	MM-LU-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects related to the physical division of an established community in a project area within the jurisdiction and responsibility of local jurisdictions and Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the goals and policies established within the applicable adopted county and city general plans within the SCAG region to avoid the creation of barriers that physically divide such communities, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Consider alignments within or adjacent to existing public rights-of-way. • Consider designs to include sections above- or below-grade to maintain viable vehicular, cycling, and pedestrian connections between portions of communities where existing connections are disrupted by the transportation project. • Wherever feasible incorporate direct crossings, overcrossings, or undercrossings at regular intervals for multiple modes of travel (e.g., pedestrians, bicyclists, vehicles). • Consider realigning roadway or interchange improvements to avoid the affected area of residential communities or cohesive neighborhoods.	**No mitigation applies.** The Project does not contain features or new infrastructure that would cause a permanent disruption in the physical arrangement of an established community.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Where it has been determined that it is infeasible to avoid creating a barrier in an established community, consider other measures to reduce impacts, including but not limited to: – Alignment shifts to minimize the area affected. – Reduction of the proposed right-of-way take to minimize the overall area of impact. – Provisions for bicycle, pedestrian, and vehicle access across improved roadways. • Design new transportation facilities that consider access to existing community facilities. Identify and consider during the design phase of the project, community amenities and facilities in the design of the project. • Design roadway improvements that minimize barriers to pedestrians and bicyclists. Determine during the design phase, pedestrian and bicycle routes that permit connections to nearby community facilities.	
LU-3: Potential to conflict with any applicable habitat conservation plan or natural community conservation plan.	See MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-BIO-4(b), MM-BIO-5(b), and MM-BIO-6(b).	**No mitigation applies.** The mitigation measures do not apply to the Project because, as discussed above, the Project would be developed on an existing residentially/commercially zoned parcel that is improved with landscaping, a pedestrian walkway, and surface parking. None of the on-site or off-site trees are considered protected by the City's Tree Preservation Ordinance. Furthermore, to avoid any potential impacts to nesting birds, the removal or pruning of trees in connection with the development of the Project would occur in accordance with the MBTA and state and local requirements. As described above under MM-BIO-3(b), the Project Site does not include any protected wetlands or water features that are in the jurisdiction and responsibility of the U.S. Army Corps of Engineers or any other public agencies and/or Lead Agencies, and therefore this mitigation measure does not apply.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		As described above under MM-BIO-6(b), the Project Site is not subject to provisions of any Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan. Furthermore, the Project Site is not within or adjacent to any existing Significant Ecological Area.
Mineral Resources		
MIN-1: Potential to result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.	MM-MIN-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the loss of availability of a known mineral resource that would be of value to the region and the residents of the state or a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan that are within the jurisdiction and responsibility of the California Department of Conservation, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with SMARA, California Department of Conservation regulations, local general plans, specific plans, and other laws and regulation governing mineral or aggregate resources, as applicable and feasible. Such measures may include the following, other comparable measures identified by the Lead Agency: • Provide for the efficient use of known aggregate and mineral resources or locally important mineral resource recovery sites, by ensuring that the consumptive use of aggregate resources is minimized and that access to recoverable sources of aggregate is not precluded, as a result of construction, operation and maintenance of projects. • Where avoidance is infeasible, minimize impacts to the efficient and effective use of recoverable sources of	**No mitigation applies.** The Project Site is fully developed and no oil wells are present. Although the Project Site is within a Major Oil Drilling Area as defined by the Los Angeles General Plan Safety Element, there are no oil extraction operations or drilling or mining of mineral resources at the Project Site.[14] Therefore, the Project would not affect ongoing extraction activities related existing or future regionally important mineral extraction sites and no mitigation applies.

[14] City of Los Angeles Department of City Planning. City of Los Angeles General Plan, Safety Element. 1996. Available at: https://planning.lacity.org/odocument/31b07c9a-7eea-4694-9899-f00265b2dc0d/Safety_Element.pdf, accessed June 5, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	aggregate through measures that have been identified in county and city general plans, or other comparable measures: – Recycle and reuse building materials resulting from demolition, particularly aggregate resources, to the maximum extent practicable. – Identify and use building materials, particularly aggregate materials, resulting from demolition at other construction sites in the SCAG region, or within a reasonable hauling distance of the project site. – Design transportation network improvements in a manner (such as buffer zones or the use of screening) that does not preclude adjacent or nearby extraction of known mineral and aggregate resources following completion of the improvement and during long-term operations. – Avoid or reduce impacts on known aggregate and mineral resources and mineral resource recovery sites through the evaluation and selection of Project site and design features (e.g., buffers) that minimize impacts on land suitable for aggregate and mineral resource extraction by maintaining portions of MRZ-2 areas in open space or other general plan land use categories and zoning that allow for mining of mineral resources.	
MIN-2: Potential to result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.	MM-MIN-1(b). See above.	**No mitigation applies.** No mitigation applies as described under MIN-1. Although the Project Site is within a Major Oil Drilling Area as defined by the Los Angeles General Plan Safety Element, there are no oil extraction operations or drilling or mining of mineral resources at the Project Site.[15] Thus, this mitigation does not apply.

[15] City of Los Angeles Department of City Planning. City of Los Angeles General Plan, Safety Element. 1996. Available at: https://planning.lacity.org/odocument/31b07c9a-7eea-4694-9899-f00265b2dc0d/Safety_Element.pdf, accessed June 5, 2020.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
Noise		
NOISE-1: Result in exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.	MM-NOISE-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of noise impacts that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure consistency with the Federal Noise Control Act, California Government Code Section 65302, the Governor's Office of Planning and Research Noise Element Guidelines, and the noise ordinances and general plan noise elements for the counties or cities where projects are undertaken, Federal Highway Administration and Caltrans guidance documents and other health and safety standards set forth by federal, state, and local authorities that regulate noise levels, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: • Install temporary noise barriers during construction. • Include permanent noise barriers and sound-attenuating features as part of the project design. • Schedule construction activities consistent with the allowable hours pursuant to applicable general plan noise element or noise ordinance Where construction activities are authorized outside the limits established by the noise element of the general plan or noise ordinance, notify affected sensitive noise receptors and all parties who will experience noise levels in excess of the allowable limits for the specified land use, of the level of exceedance and duration of exceedance; and provide a list of protective measures that can be undertaken by the individual, including temporary relocation or use of hearing protective devices. • Limit speed and/or hours of operation of rail and transit systems during the selected periods of time to reduce	**No mitigation applies.** Under PRC Section 21155.1, transit priority projects are not required to evaluate effects of noise. Nevertheless, the Project would be required to comply with LAMC Section 112.05(a), which institutes a maximum noise limit from powered construction equipment of 75 dBA at 50 feet of distance. The Project shall prohibit Project construction activities between the hours of 9:00 PM and 7:00 AM, Monday through Friday; before 8:00 AM or after 6:00 PM on any Saturday; and on any Sunday or national holiday, pursuant to LAMC Section 41.40(a). The Project shall prevent HVAC systems and other mechanical equipment from elevating ambient noise levels at neighboring residences by more than 5 dBA, pursuant to LAMC Section 112.02(a). Through compliance with existing regulatory requirements, the Project would be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	duration and frequency of conflict with adopted limits on noise levels. • Post procedures and phone numbers at the construction site for notifying the Lead Agency staff, local Police Department, and construction contractor (during regular construction hours and off-hours), along with permitted construction days and hours, complaint procedures, and who to notify in the event of a problem. • Notify neighbors and occupants within 300 feet of the project construction area at least 30 days in advance of anticipated times when noise levels are expected to exceed limits established in the noise element of the general plan or noise ordinance. • Hold a preconstruction meeting with the job inspectors and the general contractor/on-site project manager to confirm that noise measures and practices (including construction hours, neighborhood notification, posted signs, etc.) are completed. • Designate an on-site construction complaint and enforcement manager for the project. • Ensure that construction equipment are properly maintained per manufacturers' specifications and fitted with the best available noise suppression devices (e.g., mufflers, silencers, wraps). All intake and exhaust ports on power equipment shall be muffled or shielded. • Ensure that impact tools (e.g., jack hammers, pavement breakers, and rock drills) used for project construction are hydraulically or electrically powered to avoid noise associated with compressed air exhaust from pneumatically powered tools. However, where use of pneumatic tools is unavoidable, an exhaust muffler on the compressed air exhaust can and should be used. External jackets on the tools themselves can and should be used, if such jackets are commercially available and this could achieve a reduction of 5 dBA. Quieter procedures can and should be used, such as drills rather than impact equipment, whenever such	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	procedures are available and consistent with construction procedures. • Ensure that construction equipment are not idle for an extended time in the vicinity of noise-sensitive receptors. • Locate fixed/stationary equipment (such as generators, compressors, rock crushers, and cement mixers) as far as possible from noise-sensitive receptors. • Locate new roadway lanes, roadways, rail lines, transit-related passenger station and related facilities, park-and-ride lots, and other new noise-generating facilities away from sensitive receptors to the maximum extent feasible. • Where feasible, eliminate noise-sensitive receptors by acquiring freeway and rail rights-of-way. • Use noise barriers to protect sensitive receptors from excessive noise levels during construction. • Construct sound-reducing barriers between noise sources and noise-sensitive receptors to minimize exposure to excessive noise during operation of transportation improvement projects, including but not limited to earth-berms or sound walls. • Where feasible, design projects so that they are depressed below the grade of the existing noise-sensitive receptor, creating an effective barrier between the roadway and sensitive receptors. • Where feasible, improve the acoustical insulation of dwelling units where setbacks and sound barriers do not provide sufficient noise reduction. • Monitor the effectiveness of noise reduction measures by taking noise measurements and installing adaptive mitigation measures to achieve the standards for ambient noise levels established by the noise element of the general plan or noise ordinance.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
NOISE-2: Result in the exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.	MM-NOISE-1(b). See above MM-NOISE-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects of vibration impacts that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the Federal Transportation Authority and Caltrans guidance documents, county or city transportation commission, noise and vibration ordinances and general plan noise elements for the counties and cities where projects are undertaken and other health and safety regulations set forth by federal state, and local authorities that regulate vibration levels, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: • For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the potential vibration impacts to the structural integrity of the adjacent buildings within 50 feet of pile driving locations. • For projects that require pile driving or other construction techniques that result in excessive vibration, such as blasting, determine the threshold levels of vibration and cracking that could damage adjacent historic or other structure, and design means and construction methods to not exceed the thresholds. • For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as predrilling the piles to the maximum feasible depth, where feasible. Predrilling pile holes will reduce the number of blows required to completely seat the pile and will concentrate the pile driving activity closer to the ground where pile driving noise can be shielded more effectively by a noise barrier/curtain.	See above for discussion of consistency with MM-NOISE-1(b). The Project will **substantially conform** to MM-NOISE-2(b) due to its required compliance with existing regulations, including LAMC Section 91.3307.1, which requires adjoining public and private property to be protected from damage during construction, remodeling and demolition work. Furthermore, as described above and in the SCPE, the Project does not include the demolition, relocation, rehabilitation, alteration, or conversion of the 1912 residence located at 1913 West 3rd Street. However, the proposed new construction would include substantial foundation work and the construction of a subterranean lobby level. The excavation work associated with the Project, however, would be located 33 feet or more from the 1913 West 3rd Street residence and is not anticipated to cause a level of vibration that would result in damage to adjacent structures so that any potential for adverse indirect impacts from vibration associated with construction activity will be avoided and 1913 West 3rd Street will retain its eligibility for listing in the National Register, California Register and designation as a Los Angeles HCM. Therefore, no direct or indirect adverse effects would occur as a result of Project implementation. Through required compliance with regulatory requirements, the Project will be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• For projects where pile driving would be necessary for construction due to geological conditions, utilize quiet pile driving techniques such as the use of more than one pile driver to shorten the total pile driving duration.	
NOISE-3: Result in a substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project.	MM-NOISE-1(b). See above.	See above consistency analysis regarding MM-NOISE-1(b). The Project already **substantially conforms** with this mitigation measure through compliance with existing regulatory requirements. Specifically, Project-related operational noise sources such as roof-top air conditioning units and a ground-floor pad-mounted transformer will be required to comply with LAMC Section 112.02's noise level standards, which restrict noise level increases from exceeding 5 dBA over the existing or presumed ambient noise level at an adjacent property line. In addition, LAMC Section 114.02 prohibits the operation of any motor driven vehicles upon any property within the City such that the created noise would cause the noise level on the premises of any occupied residential property to exceed the ambient noise level by more than five dBA. LABC, Section 91.1207.14.2 outlines the allowable 45 dBA Community Noise Equivalent Level (CNEL) interior noise level standard. The Project shall provide sufficient noise attenuation measures to achieve compliance with the LABC, Section 91.1207.14.2 regarding the allowable 45 dBA CNEL interior noise level standard. Through adherence to LABC Section 91.1207.14.2 and LAMC Sections 112.02 and 114.02, the Project will satisfy the City's operational noise standards and be consistent with the mitigation measures identified by SCAG.
NOISE-4: Result in a substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project.	MM-NOISE-1(b). See above.	See above discussion of consistency with MM-NOISE-1(b). The Project already **substantially conforms** with this mitigation measure through compliance with existing regulatory requirements as well as implementation of the noise-related Project measures described under NOISE-1, above.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
NOISE-5: For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, result in the exposure of people residing or working in the project area to excessive noise levels.	No mitigation required.	**No mitigation applies.**
NOISE-6: For a project within the vicinity of a private airstrip, result in the exposure of people residing or working in the project area to excessive noise levels.	No mitigation required.	**No mitigation applies.**
Population, Housing, and Employment		
PHE-1: Potential to induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).	MM-LU-1(b). See above.	**No mitigation applies.** As discussed above under LU-1 and LU-2, no mitigation applies as the Project is consistent with the goals and policies of regional and local plans, and does not propose features or new infrastructure that would disrupt the physical arrangement of the established community or induce new growth in the vicinity of the Project Site. Accordingly, the Project's use and development envelope are consistent with SCAG's 2016 RTP/SCS, the Los Angeles General Plan, the City's zoning code, and City TOC program. The Project includes the construction of 137 multi-family residential units on the project site (including 136 units restricted to Low Income Households). This increase would not be considered a substantial increase in housing for the area as the addition of 137 new multi-family residential units is within the anticipated housing increases based on SCAG projections for housing. As such, housing growth associated with the proposed project would be minimal and no mitigation applies. Due to its consistency with these regional and local plans and policies, the Project would not induce significant growth or accelerate development in an undeveloped area that exceeds projected/planned levels. Furthermore, the Project would respond to the general need for more housing in the region, which would help accommodate the

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
		growth forecast for the City. Accordingly, these mitigation measures do not apply.
PHE-2: Potential to displace substantial amounts of existing housing, necessitating the construction of replacement housing elsewhere.	MM-PHE-2(b). Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects related to displacement that are within the jurisdiction and responsibility of Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to minimize the displacement of existing housing and people and to ensure compliance with local jurisdiction's housing elements of their general plans, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Evaluate alternate route alignments and transportation facilities that minimize the displacement of homes and businesses. Use an iterative design and impact analysis where impacts to homes or businesses are involved to minimize the potential of impacts on housing and displacement of people. • Prioritize the use existing ROWs, wherever feasible. • Develop a construction schedule that minimizes potential neighborhood deterioration from protracted waiting periods between right-of-way acquisition and construction.	**No mitigation applies.** This mitigation measure pertains to potential displacement effects associated with the acquisition of rights-of-way and subsequent construction of transportation projects, and therefore is not applicable to the Project. Notwithstanding, the Project would not displace any existing housing, as it would replace existing nonresidential uses at the Project Site. Furthermore, the Project would develop 137 new housing units at the Project Site, including 136 affordable housing units. Accordingly, development of the Project would not necessitate the construction of replacement housing and this mitigation does not apply.
PHE-3: Potential to displace substantial numbers of people, necessitating the construction of replacement housing elsewhere.	MM-PHE-2(b). See above.	**No mitigation applies.** As discussed above under PHE-2, this mitigation measure is not relevant to the Project. The Project would not displace any residential uses or and residents, and would therefore not necessitate the construction of any replacement housing.
Public Services		
PS-1: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the	Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MMCUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-	See consistency discussions above and below regarding MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MMCUL-3(b), MM-CUL-4(b),

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection and emergency response services.	1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b). MM-PS-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities in order to maintain acceptable response times for fire protection and emergency response services that are within the jurisdiction and responsibility of fire departments, law enforcement agencies, and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with the Community Facilities Act of 1982, the goals and policies established within the applicable adopted county and city general plans and the performance objectives established in the adopted county and city general plans, to provide sufficient structures and buildings to accommodate fire and emergency response, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking into account project and site-specific considerations as applicable and feasible: • Where the project has the potential to generate the need for expanded emergency response services which exceed the capacity of existing facilities, provide for the construction of new facilities directly as an element of the project or through dedicated fair share contributions toward infrastructure improvements. • During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MMGEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required	MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b). The Project already **substantially conforms** with MM-PS-1(b) through its required compliance with existing regulatory requirements. The Project would also be subject to compliance with fire protection design standards, as necessary, per the CBC, California Fire Code, LAMC, and the Los Angeles Fire Department (LAFD), to ensure adequate fire protection. Key components of the regulatory requirements (from the CBC, California Fire Code, and LAMC) that would be implemented as part of the Project pursuant to LAFD review and guidance include the following: • Building Design: Fire resistant doors and materials, as well as walkways, stairwell and elevator systems (including emergency and fire control elevators) that meet Code requirements. • Fire Safety Features: Installation of automatic sprinkler systems, smoke detectors, and appropriate signage and internal exit routes to facilitate a building evacuation if necessary. Installation of a fire alarm system, building emergency communication system, and smoke control system. • Emergency Safety Provisions: Implementation of an Emergency Plan in accordance with LAMC Section 57.33.19. The Emergency Plan would establish dedicated personnel and emergency procedures to assist the LAFD during an emergency incident. • LAFD Access: Access for LAFD apparatus and personnel would be provided to the Project Site in accordance with LAFD requirements, inclusive of standards regarding fire lane widths and weight capacities needed to support fire fighting vehicles. In addition, the City requires that plans for building construction, fire flow requirements, fire protection devices (e.g. sprinklers and alarms), fire hydrants and spacing, and fire access (including ingress/egress), turning radii, driveway width, and grading would be prepared for review and approval by the LAFD. The Project is not expected to

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.	result in a substantial increase in demand for additional fire protection services that would exceed the capability of the LAFD, such that it would require the construction of a new fire station. Further, even if a new fire station, or the expansion of an existing station, was determined to be warranted by LAFD, the Project area is highly developed, and the site of a new fire station or expansion of an existing station would likely be on an infill lot that would likely be less than one acre in size. Through compliance with existing regulatory requirements, the Project would be consistent with this mitigation measure.
PS-2: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for public protective security services.	Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MMCUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b). MM-PS-2(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities in order to maintain acceptable service ratios for police protection services that are within the jurisdiction and responsibility of law enforcement agencies and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with the Community Facilities Act of 1982, the goals and policies established within the applicable adopted county and city general plans and the standards established in the safety elements of county and city general plans to maintain police response performance objectives, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking in to account project and site-specific considerations as applicable and feasible, including: • Coordinate with public security agencies to ensure that there are adequate governmental facilities to maintain acceptable service ratios, response times, or other	See consistency discussions above and below regarding MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MMCUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b). The Project will **substantially conform** to this mitigation measure through incorporation of measures that comply with the City's public safety policies. The Project would implement appropriate temporary security features during construction (such as chain link fencing and security lighting). Further, during operation, the Project would provide perimeter lighting to provide increased visibility and security, parking access control, and residential units access control. These measures (formally provided in PDF-PS-1, below) would provide defensible spaces designed to reduce opportunity crime and ensure safety and security. Therefore, the Project is not anticipated to generate a demand for additional police protection services that could exceed LAPD's capability to serve the Project Site. As such, the Project would not require the addition of a new police facility or the expansion, consolidation, or relocation of an existing police station to maintain service ratios. The Project would include the following Project Measure: **PM-PS-1:** The Project would implement appropriate temporary security features during construction (such as chain link fencing and security lighting). Further, during operation, the Project would provide perimeter

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	performance objectives for public protective security services and that any required additional construction of buildings is incorporated into the project description. • Where current levels of services at the project site are found to be inadequate, provide fair share contributions towards infrastructure improvements and/or personnel. • During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MMGEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.	lighting to provide increased visibility and security, parking access control, and residential units access control.
PS-3: Potential to cause substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools services.	Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MMCUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b). MM-PS-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects from the need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives that are within the jurisdiction and responsibility of school districts and local jurisdictions. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures consistent with	This mitigation measure does not apply, because payment of school fees to LAUSD is required by law and is considered full and complete mitigation. However, the Project already **substantially conforms** with this mitigation measure due to its compliance with existing regulatory requirements. Specifically, payment of required school fees to Los Angeles Unified School District (LAUSD) is required by law and is considered full mitigation of all impacts to schools pursuant to Senate Bill (SB) 50 and California Government Code Section 65995. Therefore, pursuant to existing regulatory requirements, the Project would be consistent with MM-PS-3(b).

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	Community Facilities Act of 1982, the California Education Code, and the goals and policies established within the applicable adopted county and city general plans to ensure that the appropriate school district fees are paid in accordance with state law, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency, taking in to account project and site-specific considerations as applicable and feasible: • Where construction or expansion of school facilities is required to meet public school service ratios, require school district fees, as applicable. • During project-level review of government facilities projects, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MMGEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.	
Recreation		
REC-1: Potential to increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.	MM-REC-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on the integrity of recreation facilities, particularly neighborhood parks in the vicinity of HQTAs and other applicable development projects, that are within the jurisdiction and responsibility of other public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures capable of avoiding or reducing	The Project already **substantially conforms** with this mitigation measure due to its compliance with existing regulatory requirements. Specifically, any potential impacts to City recreational facilities by Project residents would be minimized through compliance with LAMC Section 12.21 (G), pursuant to which the Project would include on-site open space, which would reduce demand placed on local parks and recreational facilities by Project residents. The payment of Quimby Fees pursuant to LAMC 12.33 (G) would only be required for the 1 non-restricted manager's unit; all other affordable units would be exempt from the

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	significant impacts on the use of existing neighborhood and regional parks or other recreational facilities to ensure compliance with county and city general plans and the Quimby Act, as applicable and feasible. Such measures may include the following, or other comparable measures identified by the Lead Agency: • Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, consider increasing the accessibility to natural areas and lands for outdoor recreation from the proposed project area, in coordination with local and regional open space planning and/or responsible management agencies. • Prior to the issuance of permits, where projects require the construction or expansion of recreational facilities or the payment of equivalent Quimby fees, encourage patterns of urban development and land use which reduce costs on infrastructure and make better use of existing facilities, using strategies such as: – Increasing the accessibility to natural areas for outdoor recreation. – Promoting infill development and redevelopment to revitalize existing communities. – Utilizing “green” development techniques. – Promoting water-efficient land use and development. – Encouraging multiple uses. – Including trail systems and trail segments in General Plan recreation standards. • Prior to the issuance of permits, where construction and operation of projects would require the acquisition or development of protected open space or recreation lands, demonstrate that existing neighborhood parks can be expanded or new neighborhood parks developed such that there is no net decrease in acres of neighborhood park area available per capita in the HQTA.	payment of Quimby Fees. Therefore, pursuant to existing regulatory requirements, the Project would be consistent with this mitigation measure, would not require the addition of a new park or require the alteration or addition to an existing park or open space facility, and would not increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Where construction or expansion of recreational facilities is included in the project or required to meet public park service ratios, require implementation of Mitigation Measures MM-AES-1(b), MM-AES-3(b), MM-AES-4(b), MM-AF-1(b), MM-AF-2(b), MM-BIO-1(b), MM-BIO-2(b), MM-BIO-3(b), MM-CUL-1(b), MM-CUL-2(b), MM-CUL-3(b), MM-CUL-4(b), MM-GEO-1(b), MM-GEO-1(b), MM-HYD-1(b), MM-USS-3(b), MM-USS-4(b), and MM-USS-6(b) to avoid or reduce significant environmental impacts associated with the construction or expansion of such facilities, through the imposition of conditions required to be followed to avoid or reduce impacts associated with air quality, noise, traffic, biological resources, greenhouse gas emissions, hydrology and water quality, and others that apply to specific construction or expansion of new or expanded public service facilities.	
REC-2: Potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.	See MM-REC-1(b).	As described above under REC-1, the Project would **substantially comply** with MM-REC-1(b) through required compliance with the City's existing regulatory requirements pertaining to parkland and recreational facilities. Furthermore, the Project would not require the construction or expansion of recreational facilities because any potential impacts to City recreational facilities by Project residents would be minimized through compliance with LAMC Section 12.21 G, pursuant to which the Project would include on-site open space, which would reduce demand placed on local parks and recreational facilities by Project residents. Thus, the Project would be consistent with this mitigation measure.
Transportation, Traffic, and Safety		
TRA-1: Potential to conflict with the established measures of effectiveness for the performance of the circulation system, by increasing the daily VMT, taking into account all modes of transportation including mass transit and nonmotorized travel and relevant components of the circulation system, including but not limited to	MM-TRA-1(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the potential for conflicts with the established measures of effectiveness for the performance of the circulation system that are within the jurisdiction and responsibility of Lead Agencies. This measure need only be considered where it is found by the Lead Agency to be appropriate and	A number of the identified mitigation measures would apply to the City or to regional transportation agencies and are therefore not relevant to the Project. However, the Project would still **substantially conform** with MM-TRA-1(b). The Project qualifies as a TPP, meaning it is well served by local and regional transit opportunities, and is located within a TPA with access to alternative modes of

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit.	consistent with local transportation priorities. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the adopted Congestion Management Plan, and other adopted local plans and policies, as applicable and feasible. Compliance can be achieved through adopting transportation mitigation measures as set forth below, or through other comparable measures identified by the Lead Agency: • Institute teleconferencing, telecommute and/or flexible work hour programs to reduce unnecessary employee transportation. • Create a ride-sharing program by designating a certain percentage of parking spaces for ride sharing vehicles, designating adequate passenger loading and unloading for ride sharing vehicles, and providing a web site or message board for coordinating rides. • Provide a vanpool for employees. • Fund capital improvement projects to accommodate future traffic demand in the area. • Provide a Transportation Demand Management (TDM) plan containing strategies to reduce on-site parking demand and single occupancy vehicle travel. The TDM shall include strategies to increase bicycle, pedestrian, transit, and carpools/vanpool use, including: – Inclusion of additional bicycle parking, shower, and locker facilities that exceed the requirement. – Construction of bike lanes per the prevailing Bicycle Master Plan (or other similar document). – Signage and striping onsite to encourage bike safety. – Installation of pedestrian safety elements (such as cross walk striping, curb ramps, countdown signals, bulb outs, etc.) to encourage convenient crossing at arterials.	transportation including public transit, bicycling, and walking. The existing Metro B Line (Red) and D Line (Purple) Westlake/MacArthur Park Station is located 0.48-mile southwest of the Project Site. Therefore, the Project Site satisfies the CEQA exemption transit proximity requirement by being within one-half mile of a major transit stop (an existing rail station). The mitigation measure's reference to Congestion Management Plan (CMP) consistency is no longer relevant, as the CMP was established statewide in 1990 to implement Proposition 111, tying appropriation of new gas tax revenues to congestion reduction efforts. CMP is managed at the countywide level and primarily uses an LOS performance metric, which is inconsistent with more recent state efforts to transition to VMT-based performance metrics. California Government Code Section 65088.3 allows counties to opt out of CMP requirements without penalty, if a majority of local jurisdictions representing a majority of a county's population formally adopt resolutions requesting to opt out of the program. On June 20, 2018, Metro initiated a process to gauge the interest of local jurisdictions in opting out of State CMP requirements. On July 30, 2019, the Los Angeles City Council passed a resolution to opt out of the CMP program, and on August 28, 2019, Metro announced that the thresholds had been reached and the County of Los Angeles had opted to be exempt from CMP. As such, the provisions of CMP no longer apply to any of the 89 local jurisdictions in Los Angeles County. Accordingly, CMP analysis is no longer included in City environmental documents. During construction, the Project would be subject to PM-TRA-1, as described below, includes the submittal and implementation of a Construction Management Plan: **PM-TRAF-1:** A detailed Construction Management Plan, including street closure information, a detour plan, haul routes, and a staging plan, would be prepared and submitted to the City for review and approval, prior to commencing construction. The

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Installation of amenities such as lighting, street trees, trash and any applicable streetscape plan. – Direct transit sales or subsidized transit passes. – Guaranteed ride home program. – Pre-tax commuter benefits (checks). – On-site car-sharing program (such as City Car Share, Zip Car, etc.) – On-site carpooling program. – Distribution of information concerning alternative transportation options. – Parking spaces sold/leased separately. – Parking management strategies; including attendant/valet parking and shared parking spaces. • Promote ride sharing programs e.g., by designating a certain percentage of parking spaces for high-occupancy vehicles, providing larger parking spaces to accommodate vans used for ride-sharing, and designating adequate passenger loading and unloading and waiting areas. • Encourage bicycling to transit facilities by providing additional bicycle parking, locker facilities, and bike lane access to transit facilities when feasible. • Encourage the use of public transit systems by enhancing safety and cleanliness on vehicles and in and around stations, providing shuttle service to public transit, offering public transit incentives and providing public education and publicity about public transportation services. • Encourage bicycling and walking by incorporating bicycle lanes into street systems in regional transportation plans, new subdivisions, and large developments, creating bicycle lanes and walking paths directed to the location of schools and other logical points of destination and provide adequate bicycle parking, and encouraging commercial projects to	Construction Management Plan would formalize how construction would be carried out and identify specific actions that would be required to reduce effects on the surrounding community. The Construction Management Plan shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. During operation, the Project would encourage the utilization of transit due to its close proximity to the Metro B and D Line Westlake/MacArthur Park Station and the other local bus lines in the area as discussed in the SCPE. The redevelopment of the currently non-residential Project Site with new residential uses will enhance the pedestrian environment along W. 3rd Street and encourage additional foot traffic along this corridor. The Project would also include bicycle parking, as well as a bicycle maintenance area and bench, for its residents, further facilitating non-vehicular forms of travel to and from the Project Site. Implementation of Project Measure PM-TRAF-1 would be equal to or more effective than MM-TRA-1(b), and thus, would ensure consistency with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	include facilities on-site to encourage employees to bicycle or walk to work. • Build or fund a major transit stop within or near transit development upon consultation with applicable CTCs. • Work with the school districts to improve pedestrian and bike access to schools and to restore or expand school bus service using lower-emitting vehicles. • Provide information on alternative transportation options for consumers, residents, tenants and employees to reduce transportation-related emissions. • Educate consumers, residents, tenants and the public about options for reducing motor vehicle-related greenhouse gas emissions. Include information on trip reduction; trip linking; vehicle performance and efficiency (e.g., keeping tires inflated); and low or zero-emission vehicles. • Purchase, or create incentives for purchasing, low or zero-emission vehicles. • Create local "light vehicle" networks, such as neighborhood electric vehicle systems. • Enforce and follow limits idling time for commercial vehicles, including delivery and construction vehicles. • Provide the necessary facilities and infrastructure to encourage the use of low or zero-emission vehicles. • Reduce VMT-related emissions by encouraging the use of public transit through adoption of new development standards that would require improvements to the transit system and infrastructure, increase safety and accessibility, and provide other incentives. • Project Selection: – Give priority to transportation projects that would contribute to a reduction in vehicle miles traveled per capita, while maintaining economic vitality and sustainability. – Separate sidewalks whenever possible, on both sides of all new street improvement projects,	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	except where there are severe topographic or natural resource constraints • Public Involvement: – Carry out a comprehensive public involvement and input process that provides information about transportation issues, projects, and processes to community members and other stakeholders, especially to those traditionally underserved by transportation services. • Transit and Multimodal Impact Fees: – Assess transit and multimodal impact fees for new developments to fund public transportation infrastructure, bicycle infrastructure, pedestrian infrastructure and other multimodal accommodations. – Implement traffic and roadway management strategies to improve mobility and efficiency, and reduce associated emissions. • System Monitoring: – Monitor traffic and congestion to determine when and where new transportation facilities are needed in order to increase access and efficiency. • Arterial Traffic Management: – Modify arterial roadways to allow more efficient bus operation, including bus lanes and signal priority/preemption where necessary. • Signal Synchronization: – Expand signal timing programs where emissions reduction benefits can be demonstrated, including maintenance of the synchronization system, and will coordinate with adjoining jurisdictions as needed to optimize transit operation while maintaining a free flow of traffic.	

	• HOV Lanes: – Encourage the construction of high-occupancy vehicle (HOV) lanes or similar mechanisms whenever necessary to relieve congestion and reduce emissions. • Delivery Schedules: – Establish ordinances or land use permit conditions limiting the hours when deliveries can be made to off-peak hours in high traffic areas. – Implement and supporting trip reduction programs. – Support bicycle use as a mode of transportation by enhancing infrastructure to accommodate bicycles and riders, and providing incentives. • Establish standards for new development and redevelopment projects to support bicycle use, including amending the Development Code to include standards for safe pedestrian and bicyclist accommodations, and require new development and redevelopment projects to include bicycle facilities. • Bicycle and Pedestrian Trails: – Establish a network of multi-use trails to facilitate safe and direct off-street bicycle and pedestrian travel, and will provide bike racks along these trails at secure, lighted locations. • Bicycle Safety Program: – Develop and implement a bicycle safety educational program to teach drivers and riders the laws, riding protocols, routes, safety tips, and emergency maneuvers. • Bicycle and Pedestrian Project Funding: Pursue and provide enhanced funding for bicycle and pedestrian facilities and access projects. • Bicycle Parking: – Adopt bicycle parking standards that ensure bicycle parking sufficient to accommodate 5 to 10 percent of projected use at all public and commercial facilities, and at a rate of at least one per residential unit in multiple-family	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	developments (suggestion: check language with League of American Bicyclists). • Adopt a comprehensive parking policy to discourage private vehicle use and encourage the use of alternative transportation by incorporating the following: – Reduce the available parking spaces for private vehicles while increasing parking spaces for shared vehicles, bicycles, and other alternative modes of transportation; – Eliminate or reduce minimum parking requirements for new buildings; – "Unbundle" parking (require that parking is paid for separately and is not included in the base rent for residential and commercial space); – Use parking pricing to discourage private vehicle use, especially at peak times; – Create parking benefit districts, which invest meter revenues in pedestrian infrastructure and other public amenities; – Establish performance pricing of street parking, so that it is expensive enough to promote frequent turnover and keep 15 percent of spaces empty at all times; – Encourage shared parking programs in mixed-use and transit-oriented development areas. • Establish policies and programs to reduce onsite parking demand and promote ride-sharing and public transit at large events, including: – Promote the use of peripheral parking by increasing on-site parking rates and offering reduced rates for peripheral parking; – Encourage special event center operators to advertise and offer discounted transit passes with event tickets; – Encourage special event center operators to advertise and offer discount parking incentives to	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	carpooling patrons, with four or more persons per vehicle for on-site parking; – Promote the use of bicycles by providing space for the operation of valet bicycle parking service. • Parking "Cash-out" Program: – Require new office developments with more than 50 employees to offer a Parking "Cash-out" Program to discourage private vehicle use. • Pedestrian and Bicycle Promotion: – Work with local community groups and downtown business associations to organize and publicize walking tours and bicycle events, and to encourage pedestrian and bicycle modes of transportation. • Fleet Replacement: – Establish a replacement policy and schedule to replace fleet vehicles and equipment with the most fuel efficient vehicles practical, including gasoline hybrid and alternative fuel or electric models.	
TRA-2: Potential to conflict with an applicable congestion management program, including, but not limited to, VMT and travel demand measures, or other standards established by the County congestion management agency for designated roads or highways.	MM-TRA-2(b). Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding conflict with an applicable congestion management program that are within the jurisdictions of the lead agencies, including, but not limited to, VMT, VHD and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways. This measure need only be considered where it is found by the Lead Agency to be appropriate and consistent with local transportation priorities. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with the adopted Congestion Management Plan, and other adopted local plans and policies, as applicable and feasible. Compliance can be achieved through adopting	**Mitigation Measure does not apply.** As discussed under TRA-1, above, a number of the identified mitigation measures would pertain to the City or a regional transportation agency, and are therefore not relevant to the Project. Of the potential project-level mitigation, the Project already substantially conforms with the identified measures, as it is a TPP and is also located within a TPA with access to alternative modes of transportation, including public transit, bicycling, and walking. Pursuant to CEQA Guidelines Section 15064.3(b)(1), development projects within one-half mile of a major transit stop shall generally be presumed to have a less than significant impact pertaining to vehicle miles traveled (VMT). Notwithstanding this presumption, the Project will also directly encourage the utilization of transit due to its close proximity to the Westlake/MacArthur Los Angeles

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	transportation mitigation measures such as those set forth below, or through other relevant and feasible comparable measures identified by the Lead Agency. Not all measures and/or options within each measure may apply to all jurisdictions: • Encourage a comprehensive parking policy that prioritizes system management, increase rideshare, and telecommute opportunities, including investment in non-motorized transportation and discouragement against private vehicle use, and encouragement to maximize the use of alternative transportation: – Advocate for a regional, market-based system to price or charge for auto trips during peak hours. – Ensure that new developments incorporate both local and regional transit measures into the project design that promote the use of alternative modes of transportation. – Coordinate controlled intersections so that traffic passes more efficiently through congested areas. Where traffic signals or streetlights are installed, require the use of Light Emitting Diode (LED) technology or similar technology. – Encourage the use of car-sharing programs. Accommodations for such programs include providing parking spaces for the car-share vehicles at convenient locations accessible by public transportation. – Reduce VHDs, especially daily heavy-duty truck vehicle hours of delay, through goods movement capacity enhancements, system management, increasing rideshare and work-at-home opportunities to reduce demand on the transportation system, investments in non-motorized transportation, maximizing the benefits of the land use-transportation connection and key transportation investments targeted to reduce heavy-duty truck delay.	Metro B Line (Red) and D Line (Purple) Station and the other local bus lines in the area as discussed in the SCPE. In addition, as discussed under TRA-1, the provisions of the CMP program no longer apply to any of the 89 local jurisdictions in Los Angeles County. Accordingly, the Project will be consistent with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Determine traffic management strategies to reduce, to the maximum extent feasible, traffic congestion and the effects of parking demand by construction workers during construction of this project and other nearby projects that could be simultaneously under construction. Develop a construction management plan that include the following items and requirements, if determined feasible and applicable by the Lead Agency: – A set of comprehensive traffic control measures, including scheduling of major truck trips and deliveries to avoid peak traffic hours, detour signs if required, lane closure procedures, signs, cones for drivers, and designated construction access routes. – Notification procedures for adjacent property owners and public safety personnel regarding when major deliveries, detours, and lane closures will occur. – Location of construction staging areas for materials, equipment, and vehicles at an approved location. – A process for responding to, and tracking, complaints pertaining to construction activity, including identification of an onsite complaint manager. The manager shall determine the cause of the complaints and shall take prompt action to correct the problem. The Lead Agency shall be informed who the Manager is prior to the issuance of the first permit. – Provision for accommodation of pedestrian flow. – As necessary, provision for parking management and spaces for all construction workers to ensure that construction workers do not park in on street spaces. – Any damage to the street caused by heavy equipment, or as a result of this construction, shall be repaired, at the project sponsor's expense.,	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	within one week of the occurrence of the damage (or excessive wear), unless further damage/excessive wear may continue; in such case, r Repair shall occur prior to issuance of a final inspection of the building permit. All damage that is a threat to public health or safety shall be repaired immediately. The street shall be restored to its condition prior to the new construction as established by the Lead Agency (or other appropriate government agency) and/or photo documentation, at the sponsor's expense, before the issuance of a Certificate of Occupancy. – Any heavy equipment brought to the construction site shall be transported by truck, where feasible. – No materials or equipment shall be stored on the traveled roadway at any time. – Prior to construction, a portable toilet facility and a debris box shall be installed on the site, and properly maintained through project completion. – All equipment shall be equipped with mufflers. – Prior to the end of each work-day during construction, the contractor or contractors shall pick up and properly dispose of all litter resulting from or related to the project, whether located on the property, within the public rights-of-way, or properties of adjacent or nearby neighbors. – Promote “least polluting” ways to connect people and goods to their destinations. • Create an interconnected transportation system that allows a shift in travel from private passenger vehicles to alternative modes, including public transit, ride sharing, car sharing, bicycling and walking, by incorporating the following, if determined feasible and applicable by the Lead Agency: – Ensure transportation centers are multi-modal to allow transportation modes to intersect.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Provide adequate and affordable public transportation choices, including expanded bus routes and service, as well as other transit choices such as shuttles, light rail, and rail. – To the extent feasible, extend service and hours of operation to underserved arterials and population centers or destinations such as colleges. – Focus transit resources on high-volume corridors and high-boarding destinations such as colleges, employment centers and regional destinations. – Coordinate schedules and routes across service lines with neighboring transit authorities. – Support programs to provide “station cars” for short trips to and from transit nodes (e.g., neighborhood electric vehicles). – Study the feasibility of providing free transit to areas with residential densities of 15 dwelling units per acre or more, including options such as removing service from less dense, underutilized areas to do so. – Employ transit-preferential measures, such as signal priority and bypass lanes. Where compatible with adjacent land use designations, right-of-way acquisition or parking removal may occur to accommodate transit-preferential measures or improve access to transit. The use of access management shall be considered where needed to reduce conflicts between transit vehicles and other vehicles. – Provide safe and convenient access for pedestrians and bicyclists to, across, and along major transit priority streets. – Use park-and-ride facilities to access transit stations only at ends of regional transit ways or where adequate feeder bus service is not feasible.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Upgrade and maintain transit system infrastructure to enhance public use, if determined feasible and applicable by the Lead Agency, including: – Ensure transit stops and bus lanes are safe, convenient, clean and efficient. – Ensure transit stops have clearly marked street-level designation, and are accessible. – Ensure transit stops are safe, sheltered, benches are clean, and lighting is adequate. – Place transit stations along transit corridors within mixed-use or transit-oriented development areas at intervals of three to four blocks, or no less than one half mile. • Enhance customer service and system ease-of-use, if determined feasible and applicable by the Lead Agency, including: – Develop a Regional Pass system to reduce the number of different passes and tickets required of system users. – Implement “Smart Bus” technology, using GPS and electronic displays at transit stops to provide customers with “real-time” arrival and departure time information (and to allow the system operator to respond more quickly and effectively to disruptions in service). – Investigate the feasibility of an on-line trip-planning program. • Prioritize transportation funding to support a shift from private passenger vehicles to transit and other modes of transportation, if determined feasible and applicable by the Lead Agency, including: – Give funding preference to improvements in public transit over other new infrastructure for private automobile traffic. – Before funding transportation improvements that increase roadway capacity and VMT, evaluate the	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	feasibility and effectiveness of funding projects that support alternative modes of transportation and reduce VMT, including transit, and bicycle and pedestrian access. • Promote ride sharing programs, if determined feasible and applicable by the Lead Agency, including: – Designate a certain percentage of parking spaces for ride-sharing vehicles. – Designate adequate passenger loading, unloading, and waiting areas for ride-sharing vehicles. – Provide a web site or message board for coordinating shared rides. – Encourage private, for-profit community car-sharing, including parking spaces for car share vehicles at convenient locations accessible by public transit. – Hire or designate a rideshare coordinator to develop and implement ridesharing programs. • Support voluntary, employer-based trip reduction programs, if determined feasible and applicable by the Lead Agency, including: – Provide assistance to regional and local ridesharing organizations. – Advocate for legislation to maintain and expand incentives for employer ridesharing programs. – Require the development of Transportation Management Associations for large employers and commercial/ industrial complexes. – Provide public recognition of effective programs through awards, top ten lists, and other mechanisms. • Implement a “guaranteed ride home” program for those who commute by public transit, ride-sharing, or other modes of transportation, and encourage employers to subscribe to or support the program.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Encourage and utilize shuttles to serve neighborhoods, employment centers and major destinations. • Create a free or low-cost local area shuttle system that includes a fixed route to popular tourist destinations or shopping and business centers. • Work with existing shuttle service providers to coordinate their services. • Facilitate employment opportunities that minimize the need for private vehicle trips, including: – Amend zoning ordinances and the Development Code to include live/work sites and satellite work centers in appropriate locations. – Encourage telecommuting options with new and existing employers, through project review and incentives, as appropriate. • Enforce state idling laws for commercial vehicles, including delivery and construction vehicles. • Organize events and workshops to promote GHG-reducing activities. • Implement a Parking Management Program to discourage private vehicle use, including: – Encouraging carpools and vanpools with preferential parking and a reduced parking fee. – Institute a parking cash-out program. – Renegotiate employee contracts, where possible, to eliminate parking subsidies. – Install on-street parking meters with fee structures designed to discourage private vehicle use. – Establish a parking fee for all single-occupant vehicles. • Work with school districts to improve pedestrian and bicycle to schools and restore school bus service.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	• Encourage the use of bicycles to transit facilities by providing bicycle parking lockers facilities and bike land access to transit facilities. • Monitor traffic congestion to determine where and when new transportation facilities are needed to increase access and efficiency. • Develop and implement a bicycle and pedestrian safety educational program to teach drivers and riders the laws, riding protocols, safety tips, and emergency maneuvers. • Synchronize traffic signals to reduce congestion and air quality. • Work with community groups and business associations to organize and publicize walking tours and bicycle events. • Support legislative efforts to increase funding for local street repair.	
TRA-3: Potential to result in a significant change in air traffic patterns, including either an increase in air traffic levels or a change in location that results in substantial safety risks.	No mitigation required.	**No mitigation applies**
TRA-4: Potential to substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections), increased volumes or incompatible uses (e.g., farm equipment).	No mitigation required.	**Not mitigation applies**
TRA-5: Potential to result in inadequate emergency access.	MM-TRA-5(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing impacts to emergency access that are in the jurisdiction and responsibility of fire departments, local enforcement agencies, and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider improving emergency access and ensuring compliance with the provisions of the county and city general plan,	The Project already **substantially conforms** to this mitigation measure. Emergency access would be provided by the existing street system, and the Project would be subject to the City's existing regulations that require the Project to comply with the Fire Code and LAMC emergency access requirements. Additionally, the LAFD would require the Project Applicant to prepare an emergency response plan that would address the following: mapping of emergency exits, evacuation routes for vehicles and pedestrians, and locations of nearest hospitals and fire

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	Emergency Evacuation Plan, and other regional and local plans establishing access during emergencies, as applicable and feasible. Compliance can be achieved through adopting transportation mitigation measures as set forth below, or through other comparable measures identified by the Lead Agency: • Prior to construction, project implementation agencies can and should ensure that all necessary local and state road and railroad encroachment permits are obtained. The project implementation agency can and should also comply with all applicable conditions of approval. As deemed necessary by the governing jurisdiction, the road encroachment permits may require the contractor to prepare a traffic control plan in accordance with professional engineering standards prior to construction. Traffic control plans can and should include the following requirements: – Identification of all roadway locations where special construction techniques (e.g., directional drilling or night construction) would be used to minimize impacts to traffic flow. – Development of circulation and detour plans to minimize impacts to local street circulation. This may include the use of signing and flagging to guide vehicles through and/or around the construction zone. – Scheduling of truck trips outside of peak morning and evening commute hours. – Limiting of lane closures during peak hours to the extent possible. – Usage of haul routes minimizing truck traffic on local roadways to the extent possible. – Inclusion of detours for bicycles and pedestrians in all areas potentially affected by project construction. – Installation of traffic control devices as specified in the California Department of Transportation	departments. Therefore, no mitigation measures are required.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	Manual of Traffic Controls for Construction and Maintenance Work Zones. – Development and implementation of access plans for highly sensitive land uses such as police and fire stations, transit stations, hospitals, and schools. The access plans would be developed with the facility owner or administrator. To minimize disruption of emergency vehicle access, affected jurisdictions can and should be asked to identify detours for emergency vehicles, which will then be posted by the contractor. Notify in advance the facility owner or operator of the timing, location, and duration of construction activities and the locations of detours and lane closures. – Storage of construction materials only in designated areas. – Coordination with local transit agencies for temporary relocation of routes or bus stops in work zones, as necessary. • Ensure the rapid repair of transportation infrastructure in the event of an emergency through cooperation among public agencies and by identifying critical infrastructure needs necessary for: a) emergency responders to enter the region, b) evacuation of affected facilities, and c) restoration of utilities. • Enhance emergency preparedness awareness among public agencies and with the public at large. • Provision for collaboration in planning, communication, and information sharing before, during, or after a regional emergency through the following: – Incorporate strategies and actions pertaining to response and prevention of security incidents and events as part of the on-going regional planning activities.	

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Provide a regional repository of GIS data for use by local agencies in emergency planning, and response, in a standardized format. – Enter into mutual aid agreements with other local jurisdictions, in coordination with the California OES, in the event that an event disrupts the jurisdiction's ability to function.	
TRA-6: Potential to result in conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.	No mitigation required.	**No mitigation applies.**
Utilities and Service Systems		
USS-1: Potential to exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board.	No mitigation required.	**No mitigation applies.**
USS-2: Potential to require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.	No mitigation required.	**No mitigation applies.**
USS-3: Require or result in construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects.	MM-USS-3(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on utilities and service systems, particularly for construction of storm water drainage facilities including new transportation and land use projects that are within the responsibility of local jurisdictions including the Riverside, San Bernardino, Los Angeles, Ventura, and Orange Counties Flood Control District, and County of Imperial. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures, as applicable and feasible. These mitigation measures are within the responsibility of the Lead Agencies and Regional Water Quality Control Boards of (Regions 4, 6, 8, and 9) pursuant to the provisions of the	As described above under HYD-1, the Project already **substantially conforms** with this mitigation measure because the Project would adhere to all applicable controls imposed via existing City and State regulations, including compliance with the LID Ordinance and SUSMP regulations. Runoff from the Project Site would be either directed in non-erosive drainage devices to landscaped areas for evaporation and/or directed to the existing City storm drain system, captured in on-site below grade cisterns, and/or directed to the existing City storm drain system. Therefore, through compliance with these existing regulatory requirements, the Project would not result in a significant increase in site runoff or significant changes in local drainage patterns, would not create or contribute

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	National Flood Insurance Act, stormwater permitting requirements for stormwater discharges for new constructions, the flood control act, and Urban Waste Management Plan. Such mitigation measures, or other comparable measures, capable of avoiding or reducing significant impacts on the use of existing storm water drainage facilities and can and should be adopted where Lead Agencies identify significant impacts on new storm water drainage facilities. See MM-HYD-5(b).	runoff that would exceed the capacity of existing or planned stormwater drainage systems, and would not require or result in construction of new storm water drainage facilities or expansion of existing facilities. Thus, the Project would be consistent with this mitigation.
USS-4: Have sufficient water supplies available to serve the project from existing entitlements and resources or will require new or expanded entitlements.	MM-USS-4(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects on water supplies from existing entitlements requiring new or expanded services in the vicinity of HQTAs that are in the jurisdiction and responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance with EO B-29-15, provisions of the Porter – Cologne Water Quality Control Act, California Domestic Water Supply Permit requirements, and applicable County, City or other Local provisions. Such measures may include the following or other comparable measures identified by the Lead Agency: • Reduce exterior consumptive uses of water in public areas, and should promote reductions in private homes and businesses, by shifting to drought-tolerant native landscape plantings (xeriscaping), using weather-based irrigation systems, educating other public agencies about water use, and installing related water pricing incentives. • Promote the availability of drought-resistant landscaping options and provide information on where these can be purchased. Use of reclaimed water especially in median landscaping and hillside	The Project already **substantially conforms** with this mitigation measure through compliance with existing regulations as well as consistency with current regional population projections. To ensure that the Project reduces its projected water demand to the extent feasible, the Project would be required to comply with Ordinance No. 170,978 (Landscape Ordinance), which imposes numerous water conservation measures in landscaping, installation, and maintenance. Moreover, as described under EN-2, as a TPP project seeking a CEQA exemption pursuant to SB 743, the Project would be required to design building and landscaping to achieve 25 percent less water usage than the average household in the region as part of the CEQA exemption process. As demonstrated in the CEQA Compliance Energy and Water Efficiency Compliance Memorandum prepared for the Project (Attachment I), the Project's water use would be 89 percent below the regional baseline, which would be achieved through multiple measures including high efficiency water-using appliances such as low flow fixtures and faucets, and efficient irrigation systems in compliance with the Los Angeles Green Building Code. Thus, it is reasonably anticipated that the Project would not create any water system capacity issues, and sufficient reliable water supplies would be available to meet Project demands. To further ensure consistency with State, regional, and local water conservation regulations as well

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	landscaping can and should be implemented where feasible. • Implement water conservation best practices such as low-flow toilets, water-efficient clothes washers, water system audits, and leak detection and repair. • Ensure that projects requiring continual dewatering facilities implement monitoring systems and long-term administrative procedures to ensure proper water management that prevents degrading of surface water and minimizes, to the greatest extent possible, adverse impacts on groundwater for the life of the project. Comply with appropriate building codes and standard practices including the Uniform Building Code. • Maximize, where practical and feasible, permeable surface area in existing urbanized areas to protect water quality, reduce flooding, allow for groundwater recharge, and preserve wildlife habitat. Minimized new impervious surfaces to the greatest extent possible, including the use of in-lieu fees and off-site mitigation. • Avoid designs that require continual dewatering where feasible. • Where feasible, do not site transportation facilities in groundwater recharge areas, to prevent conversion of those areas to impervious surface.	as MM-USS-4(b), the Project would meet the requirements of the Los Angeles Green Building Code and the requirements of Title 24 Building Energy Efficiency Standards and would adhere to the regulatory requirements of the City's Landscape Ordinance. Through regulatory compliance and the implementation of the above Project measures, the Project will be consistent with this mitigation measure.
USS-5: Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's commitments.	No mitigation required.	**No mitigation applies.** Notwithstanding, as discussed in the Utility Infrastructure Report, a Sewer Capacity Availability Review (SCAR) that identifies the Project's estimated total flow was submitted to LASAN to verify capacity availability. Based on the approved SCAR, LASAN has confirmed that there is sufficient capacity to service the Project, with the installation of the new 8-inch sewer line. In addition, the Project's estimated total flow represents only 0.003 percent of the existing available treatment design capacity of 450 million gallons per day at the Hyperion Treatment Plant, and therefore there is adequate capacity to serve the Project's projected demand on wastewater service (Attachment J).

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
USS-6: Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs.	MM-USS-6(b): Consistent with the provisions of Section 15091 of the State CEQA Guidelines, SCAG has identified mitigation measures capable of avoiding or reducing the significant effects to serve landfills with sufficient permitted capacity to accommodate solid waste disposal needs, in which 75 percent of the waste stream be recycled and waste reduction goal by 50 percent that are within the responsibility of public agencies and/or Lead Agencies. Where the Lead Agency has identified that a project that has the potential for significant effects, the Lead Agency can and should consider mitigation measures to ensure compliance pursuant to the provisions of the Solid Waste Diversion Goals and Integrated Waste Management Plan, as applicable and feasible. Such measures may include the following or other comparable measures identified by the Lead Agency: • Integrate green building measures consistent with CALGreen (California Building Code Title 24) into project design including, but not limited to the following: – Reuse and minimization of construction and demolition (C&D) debris and diversion of C&D waste from landfills to recycling facilities. – Inclusion of a waste management plan that promotes maximum C&D diversion. – Source reduction through (1) use of materials that are more durable and easier to repair and maintain, (2) design to generate less scrap material through dimensional planning, (3) increased recycled content, (4) use of reclaimed materials, and (5) use of structural materials in a dual role as finish material (e.g., stained concrete flooring, unfinished ceilings, etc.). – Reuse of existing structure and shell in renovation projects.	The Project already **substantially conforms** with this mitigation measure through compliance with existing regulations. Specifically, at the State level, the California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939) seeks to improve solid waste disposal management with respect to (1) source reduction, (2) recycling and composting, and (3) environmentally safe transformation and land disposal. AB 939 mandates jurisdictions to meet a diversion goal of 25 percent by 1995 and 50 percent by 2000. Pursuant to AB 939, each County is required to prepare and administer a Countywide Integrated Waste Management Plan (CoIWMP), pursuant to which landfill disposal needs and capacity are continually evaluated as part of the preparation of the CoIWMP Annual Report that examines future landfill disposal needs over the next 15-year planning horizon. The most recent CoIWMP 2018 Annual Report for Los Angeles County states that no solid waste disposal capacity shortfall is anticipated within the next 15 years (i.e., until 2033) under current conditions.[16] The City's Solid Waste Management Policy Plan (CiSWMPP) is a long-range policy plan adopted in 1993 to provide direction for the solid waste management. The objective of the CiSWMPP is to promote source reduction or recycling for a minimum of 50 percent of the City's waste by 2000, or as soon as possible thereafter, and 70 percent of the waste by 2020. The Plan's goal has also been surpassed by the City, which achieved a diversion rate of 76.4 percent in 2012.[17] The City also adopted the Recovering Energy, Natural Resources and Economic Benefit from Waste for Los Angeles (RENEW LA) in 2006, which has the primary objective of achieving a zero waste goal through reducing, reusing, recycling, or converting the resources currently going to disposal. The Project would be required to reduce

16 County of Los Angeles Department of Public Works, CoIWMP 2018 Annual Report, December 2019, page 37.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	– Design for deconstruction without compromising safety. – Design for flexibility through the use of moveable walls, raised floors, modular furniture, moveable task lighting and other reusable building components. – Development of indoor recycling program and space. – Discourage the siting of new landfills unless all other waste reduction and prevention actions have been fully explored. If landfill siting or expansion is necessary, site landfills with an adequate landfill-owned, undeveloped land buffer to minimize the potential adverse impacts of the landfill in neighboring communities. – Locally generated waste should be disposed of regionally, considering distance to disposal site. Encourage disposal near where the waste originates as much as possible. Promote green technologies for long-distance transport of waste (e.g., clean engines and clean locomotives or electric rail for waste-by-rail disposal systems) and consistency with SCAQMD and 2016 RTP/SCS policies can and should be required. – Encourage waste reduction goals and practices and look for opportunities for voluntary actions to exceed the 50 percent waste diversion target. – Encourage the development of local markets for waste prevention, reduction, and recycling practices by supporting recycled content and green procurement policies, as well as other waste prevention, reduction and recycling practices. – Develop ordinances that promote waste prevention and recycling activities such as: requiring waste prevention and recycling efforts at all large events and venues; implementing recycled content procurement programs; and	the total estimated waste output through established City recycling programs, and would also be subject to the City's Recycling Space Allocation Ordinance (Ordinance No. 171,687), which establishes requirements for the inclusion of recycling areas or rooms within development projects. In addition, in compliance with existing City standards and regulations, the Project would be required to recycle construction and demolition (C&D) waste to the maximum extent possible pursuant to Ordinance No. 181,519 (Citywide Construction and Demolition Waste Recycling Ordinance) that requires all mixed C&D waste generated within City limits to be taken to City-certified C&D waste processors. Compliance with these regulations would ensure that construction waste is recycled and disposed of properly. Overall, compliance with existing regulations would ensure that the Project's waste disposal needs are reduced and can be sufficiently met by local landfills, thereby achieving consistency with this mitigation measure.

Impact	SCAG 2016-2040 RTP/SCS Mitigation Measures (Implemented by Lead Agency)	Applicability to the Project
	developing opportunities to divert food waste away from landfills and toward food banks and composting facilities. – Develop alternative waste management strategies such as composting, recycling, and conversion technologies. – Develop and site composting, recycling, and conversion technology facilities that have minimum environmental and health impacts. – Require the reuse and recycle construction and demolition waste (including, but not limited to, soil, vegetation, concrete, lumber, metal, and cardboard). – Integrate reuse and recycling into residential industrial, institutional and commercial projects. – Provide recycling opportunities for residents, the public, and tenant businesses. – Provide education and publicity about reducing waste and available recycling services. – Continue to adopt programs to comply with state solid waste diversion rate mandates and, where possible, encourage further recycling to exceed these rates. – Implement or expand city or county-wide recycling and composting programs for residents and businesses. This could include extending the types of recycling services offered (e.g., to include food and green waste recycling) and providing public education and publicity about recycling services.	
USS-7: Potential to comply with federal, state, and local statutes and regulations related to solid waste.	No mitigation required.	**No mitigation applies.**

Dear Ladies and Gentlemen:

In accordance with your authorization of our proposal dated May 1, 2020, we have performed a geotechnical investigation for the proposed multi-family residential development located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed multi-family residential development located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on May 14 and May 15, 2020. Site exploration included excavating seven 3-inch diameter hand auger borings and one 24-inch diameter bucket auger boring. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2A). A detailed discussion of the field investigation, including the boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analyses of the data obtained during our investigation, as well our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the List of References section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. The site consists of two legal lots and is currently occupied by a surface parking lot with seven parking spaces and a driveway and associated hardscape and landscaping. The site is bounded by an eight-story residential structure to the north, by a two-story single-family residential structure to the east, a four-story residential structure to the west, and by West 3rd Street to the south. The subject property slopes downward to the southwest with a topographic relief across the site of approximately 14 feet. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation on-site consists of lawn areas, trees, and shrubs typical of residential landscaping.

Based on the information provided by the Client, it is our understanding that the proposed development will consist of a seven-story structure with a partial basement level. Due to the sloping nature of the site, the proposed structure will be partially tucked into the existing slope (up to 14 feet below existing grade). The proposed development is depicted on the Site Plan and Geologic Cross-Sections (see Figures 2B through 2D).

Based on our correspondence with the project structural engineer, John Labib and Associates, column loads for the proposed structure are estimated to be up to 850 kips, and wall loads will be up to 10 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located along the south flank of the Elysian Hills at the north edge of the Los Angeles Basin. The Elysian Hills are composed of folded and faulted Miocene age sedimentary bedrock of the Puente Formation that has been uplifted and incised by local drainages. Subsequently, the incised channels have been infilled with alluvial sediments derived from the Elysian Hills.

Regionally, the site is located within the Peninsular Ranges geomorphic province that is characterized by elongate northwest-trending mountain ridges separated by straight-sided sediment-filled valleys. The northwest trend is further reflected in the direction of the dominant geologic structural features of the province that are northwest to west-northwest trending folds and faults including the nearby Newport-Inglewood Fault Zone located approximately 5.9 miles to the west-southwest.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain by artificial fill, colluvium, and Miocene age sedimentary bedrock of the Puente Formation (Lamar, 1970). Detailed stratigraphic profiles of the materials encountered in our borings are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered to a maximum depth of $6^{1}/_{2}$ feet below existing ground surface. The artificial fill generally consists of dark brown, yellowish brown, or olive brown sandy clay, sandy silt, and silty sand with some bedrock fragments and construction debris. The artificial fill is characterized as fine-grained, slightly moist to moist and medium dense or soft to stiff. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Colluvium

Colluvium was encountered in the explorations beneath the artificial fill in borings B1, B2, B3 and B5. The colluvial soils range in thickness from approximately 1 to 5½ feet and generally consist of dark grayish brown, olive brown or blackish brown sandy silt and clay with trace amounts of bedrock fragments (up to1-inch maximum dimension). The colluvium is characterized as slightly moist to moist and firm to hard.

4.3 Puente Formation

Miocene age sedimentary bedrock of the Puente Formation was in encountered beneath the fill and colluvial deposits at depths ranging from 1 foot to 7 feet beneath the existing ground surface. The bedrock generally consists of interbedded yellowish brown or olive brown sandstone and gray siltstone with some localized diatomaceous-rich beds. The bedrock is locally diatomaceous. The bedrock was generally characterized as moderately hard to hard, fine-grained, thinly bedded and highly weathered. Oxidation staining is common along bedding surfaces.

Bedding observed in the bucket auger boring (B7) generally strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south. This orientation is generally consistent with published geologic maps that indicate the bedding in the area strikes east-west to N75ºE and dips 33º to 68º to the southeast (Dibblee, 1991; Lamar, 1970).

5. GROUNDWATER

The site is underlain by shallow bedrock and is not located within the local groundwater basin. Consequently, historic high groundwater level information from groundwater monitoring wells is not available for the site or the immediately surrounding area from the California Geological Survey (CGS, formerly California Division of Mines and Geology, 1998).

Groundwater was not encountered in our explorations at the site However, the shallow bedrock in the area commonly results in a perched water condition, either on top of the bedrock or within the joints and fractures in the bedrock, that can be variable from year to year based on many local factors such as irrigation and precipitation. Therefore, the contractor should be prepared to encounter groundwater seepage during construction. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (See Section 7.20).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include Holocene-active, pre-Holocene, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, a Holocene-active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A pre-Holocene fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years), but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2020a; 2020b; 2014) nor a city-designated Preliminary Fault Rupture Study Area (City of Los Angeles, 2020) for surface fault rupture hazards. No Holocene-active or pre-Holocene faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest active fault to the site is the Hollywood Fault located approximately 3.5 miles to the north (CGS, 2014). Other nearby active faults are the Raymond Fault, the Newport-Inglewood Fault Zone, and the Santa Monica Fault located approximately 4.6 miles northeast, 5.9 miles west-southwest, and 7.2 miles west of the property, respectively (CGS, 2014; USGS, 2006; Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 35 miles northeast of the site (Ziony and Jones, 1989).

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Coastal Plain at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 M_w 5.9 Whittier Narrows earthquake and the January 17, 1994 M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The site is underlain at depth by the Los Angeles segment of the Puente Hills Blind Thrust and the Upper Elysian Park Blind Thrust. These blind thrust faults and others in the Los Angeles area do not present a potential surface fault rupture hazard at the site. However, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Near Redlands	July 23, 1923	6.3	59	E
Long Beach	March 10, 1933	6.4	35	SE
Tehachapi	July 21, 1952	7.5	77	NW
San Fernando	February 9, 1971	6.6	25	NNW
Whittier Narrows	October 1, 1987	5.9	11	E
Sierra Madre	June 28, 1991	5.8	21	NE
Landers	June 28, 1992	7.3	105	E
Big Bear	June 28, 1992	6.4	83	E
Northridge	January 17, 1994	6.7	18	WNW
Hector Mine	October 16, 1999	7.1	120	ENE
Ridgecrest	July 5, 2019	7.1	123	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes site-specific design criteria obtained from the 2019 California Building Code (CBC; Based on the 2018 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application *Seismic Design Maps*, provided by OSHPD. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2019 CBC and Table 20.3-1 of ASCE 7-16. The values presented on the following page are for the risk-targeted maximum considered earthquake (MCE_R).

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2019 CBC Reference
Site Class	C	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.997g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.711g	Figure 1613.2.1(2)
Site Coefficient, F_A	1.2	Table 1613.2.3(1)
Site Coefficient, F_V	1.4	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	2.397g	Section 1613.2.3 (Eqn 16-36)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	0.996g	Section 1613.2.3 (Eqn 16-37)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.598g	Section 1613.2.4 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.664g	Section 1613.2.4 (Eqn 16-39)

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.855g	Figure 22-7
Site Coefficient, F_{PGA}	1.2	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	1.026g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2019 California Building Code and ASCE 7-16, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 6.89 magnitude event occurring at a hypocentral distance of 8.46 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.75 magnitude event occurring at a hypocentral distance of 11.19 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The State of California Seismic Hazard Zone Map for the Hollywood Quadrangle (CDMG, 1999; CGS, 2014) indicates that the site is not located within an area identified as having a potential for liquefaction. The site is underlain shallow sedimentary bedrock of the Miocene age Puente Formation that is not susceptible to liquefaction. Based on these considerations, it is our opinion that the potential for liquefaction to occur beneath the site is considered very low.

6.5 Slope Stability

Topography at the site slopes gently to the southwest. The site is located within a City of Los Angeles Hillside Grading Area but is not located within a city-designated Hillside Ordinance Area (City of Los Angeles, 2020). According to the County of Los Angeles Safety Element (Leighton, 1990), the site is not located within an area identified as being susceptible to slope stability hazards. Additionally, the site is not within zone of required investigation for earthquake-induced landslides (CDMG, 1999; CGS, 2014, 2020b). There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low.

As previously described, Miocene age Puente Formation bedrock was encountered at depths of 1 foot to 7 feet beneath the existing ground surface. Bedding observed at the site generally strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south.

The planned excavation for the proposed development will be a maximum of 14 feet along the northern project boundary. The upper portion of the excavation will expose artificial fill and colluvium that are generally massive to horizontally stratified and lack any well-defined planar features or discontinuities (such as bedding planes or joints) which would act as planes of weakness. Bedrock is anticipated to be exposed in the lower portion of the planned excavation and, based on the orientation of the bedrock, is anticipated to expose adversely oriented bedrock along the project north and west excavation walls and will result in lateral surcharge loading on the proposed basement walls at these locations (see Figures 2B through 2D.

Where bedrock is exposed in the excavation, it is very important that a Professional Geologist (a representative of Geocon) observe the cuts during the grading process in order to confirm the bedrock orientation and identify any unforeseen variations within the bedrock. Any necessary recommendations to eliminate or support any unfavorably oriented bedding planes will be made at that time.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. The Los Angeles County Safety Element (Leighton, 1990) indicates that the site is not located within a designated dam inundation area. Therefore, the potential for inundation at the site, as a result of an earthquake-induced dam failure, is considered low.

6.7 Tsunamis, Seiches, and Flooding

The site is not located within a coastal area. Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding from a seismically induced seiche is considered unlikely.

The site is within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA, 2020; LACDPW, 2020b).

6.8 Oil Fields & Methane Potential

Based on a review of the California Geologic Energy Management Division (CalGEM) Well Finder Website (2020) the site is located within the limits of the Los Angeles City Oil Field. The majority of wells in this oil field are located to the north of the site. The nearest documented well to the site is the Conoco Inc. Well Number 1-C, an idle oil and gas well, located approximately 250 feet to the north. Due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not shown on the location map and undocumented wells could be encountered during construction. Any wells encountered will need to be properly abandoned in accordance with the current requirements of the CalGEM.

The site is located within the boundaries of a city-designated Methane Zone (City of Los Angeles, 2020). A methane study will be required by the city prior to site development. A methane specialist, Terra – Petra, has been contacted to perform a site-specific methane study. Their findings should be incorporated into the final design.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. As previously indicated, the site is located within the City of Los Angeles Oil Field. However, the limited oil production from this field has not resulted in regional or local subsidence. No known large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. Therefore, the potential for ground subsidence due to withdrawal of fluids or gases at the site is considered low.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 6½ feet of existing artificial fill was encountered during site exploration. The existing fill encountered is believed to be the result of past grading and construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. Demolition of the existing structure that occupies the site is anticipated to disturb the upper few feet of existing site soils. It is our opinion that the existing fill and colluvial soils, in their present condition, are not suitable for direct support of proposed foundations or slabs. The existing fill and colluvial soils are suitable for re-use as engineered fill provided the recommendations in the Grading section of this report are followed (see Section 7.5).

7.1.3 Based on these considerations, the proposed structure may be supported on a conventional foundation system deriving support exclusively in the undisturbed bedrock. Based on our discussions with the design team, it is our understanding that the preferred design is to excavate all existing artificial fill and colluvial soils in order to construct conventional foundations directly in competent bedrock. Subsequent to foundation construction, engineered fill will be placed and compacted in order to bring the site elevation back to the proposed finished floor elevations. At this time the team has not yet determined if excavations to remove the existing artificial fill and colluvium will be conducted through the use of sloping techniques, shoring measures, or a combination of both. For the purposes of this report, we have assumed that shoring techniques will be utilized, resulting in undisturbed soils being retained by proposed below grade walls.

7.1.4 It is anticipated that bedrock will be exposed throughout the basement area excavation bottom, and the bedrock is considered suitable for support of the concrete slab-on-grade. At the ground floor level, it is recommended that all existing artificial fill and/or soft colluvium be excavated and properly compacted for slab support. The limits of existing fill and/or soft colluvium removal will be confirmed by the Geocon representative during site grading activities.

7.1.5 If a methane mitigation system is required for this project, a mat foundation system may be a more cost-effective foundation system for this project. The mat foundation system allows for more efficient construction when performed in conjunction with a methane mitigation system. In addition, the bottom of the mat can be shaped to channel the methane simplifying the passive mitigation system. A qualified methane consultant should be retained for the design of the mitigation system.

7.1.6 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, such as adjacent to property lines, foundations may be deepened as necessary to maintain a minimum maintain a minimum 24-inch embedment below the ground surface, and a minimum 12-inch embedment into the undisturbed colluvium and/or bedrock. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.7 Although not encountered during site exploration, groundwater seepage conditions could develop on top of the bedrock or within the joints and fractures in the bedrock. If this occurs during construction, temporary dewatering activities may be necessary and recommendations are provided in Section 7.3 of this report.

7.1.8 Excavations on the order of 16 feet in vertical height are anticipated for construction of the proposed structure, including foundation depths. The proposed excavations will expose bedrock, with strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south. These conditions are considered unfavorable to the proposed excavations along the north and west property lines. The recommendations for shoring and retaining wall design presented herein incorporate the anticipated surcharge loads generated by out-of-slope bedding. Excavations must be conducted in a manner that maintains stability and must be observed and approved by the Project Geologist (a representative of Geocon West, Inc.). A geologist should periodically observe the excavation to confirm that the orientation of the exposed bedrock is consistent with the conditions observed during our investigation.

7.1.9 Due to the depth of the excavation and the proximity to the property lines, city streets, and adjacent on-site structures, as well as the unfavorable geologic conditions for proposed excavations along the south property line, excavation of the proposed subterranean levels will require sloping and/or shoring measures in order to provide a stable excavation. Where shoring is required it is recommended that a soldier pile shoring system be utilized. Where excavation depths exceed 12 feet or surcharges are imposed on the shoring system, raker braces or tie-back anchors may be required in conjunction with the soldier piles. The need for lateral bracing and the acceptable shoring deflection should be determined by the project shoring engineer.

7.1.10 Due to the nature of the proposed design and intent for a partial subterranean basement level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.1.11 Where new paving is to be placed, it is recommended that all existing fill soils and soft soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft soils in the area of new paving is not required, however, paving constructed over existing uncertified fill or unsuitable soils may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of soil should be scarified and properly compacted. Paving recommendations are provided in the *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.1.12 Based on the likely impermeable nature of the bedrock which underlies the site, infiltration of stormwater at this site is not considered feasible and would be considered detrimental to the project. It is recommended that stormwater be retained, filtered, and discharged in accordance with the requirements of the local governing agency.

7.1.13 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. If the final foundation loading configuration is greater than the assumed loading in this report, the potential for settlement should be re-evaluated by this office.

7.1.14 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Some caving should be anticipated in unshored excavations, especially if granular soils are encountered. The surficial bedrock is moderately to highly weathered and should be rippable with conventional equipment; however, concretions or well cemented layers may be encountered in the bedrock which could make excavation or drilling conditions difficult. Coring or jack-hammering may be required if concretions are encountered and the contractor should be prepared for these conditions.

7.2.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.

7.2.3 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping and shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.18).

7.2.4 The soils and bedrock encountered during this investigation are considered to have a "low" to "high" expansive potential (EI = 36 to 108) and are classified as "expansive" based on the 2019 California Building Code (CBC) Section 1803.5.3. Recommendations presented herein assume that the building foundations and slabs will derive support in these materials.

7.3 Minimum Resistivity, pH and Water-Soluble Sulfate Content

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "severely corrosive" with respect to corrosion of buried ferrous metals onsite. The results are presented in Appendix B (Figure B12) and should be considered for design of underground structures. Due to the corrosive potential of the soils, it is recommended that PVC, ABS or other approved plastic piping be utilized in lieu of cast-iron when in direct contact with the site soils.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B12) and indicate that the on-site materials possess a sulfate exposure class of "S2" to concrete structures as defined by 2019 CBC Section 1904 and ACI 318-14 Table 19.3.1.1. The table below presents a summary of concrete requirements set forth by 2019 CBC Section 1904 and ACI 318. The presence of water-soluble sulfates is not a visually discernible characteristic; therefore, other soil samples from the site could yield different concentrations. Additionally, over time landscaping activities (i.e., addition of fertilizers and other soil nutrients) may affect the concentration.

REQUIREMENTS FOR CONCRETE EXPOSED TO SULFATE-CONTAINING SOLUTIONS

Exposure Class	Water-Soluble Sulfate Percent by Weight	Cement Type (ASTM C150)	Maximum Water to Cement Ratio by Weight	Minimum Compressive Strength (psi)
S0	SO_4<0.10	--	--	2,500
S1	0.10≤SO_4<0.20	II	0.50	4,000
S2	0.20≤SO_4≤2.00	V	0.45	4,500
S3	SO_4>2.00	V+Pozzolan or Slag	0.45	4,500

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Temporary Dewatering

7.4.1 Groundwater seepage conditions could develop on top of the bedrock or within the joints and fractures in the bedrock. The presence of groundwater seepage can be further verified at the time of construction. If groundwater seepage occurs above the excavation bottom, temporary dewatering will be necessary to maintain a safe working environment during excavation and construction activities. Dewatering system design, operation, and proper discharge is the responsibility of the contractor.

7.4.2 Temporary dewatering may be accomplished by constructing gravel filled trenches (French drains) to collect and control any encountered seepage. The number and locations of the French drains can be adjusted during excavation activities as necessary. The French drains will then direct the collected seepage to a sump where it will be pumped out of the excavation. If a French drain is to remain on a permanent basis, it must be lined with filter fabric to prevent soil migration into the gravel. Alternative methods of temporary dewatering may be feasible, and it is recommended that the contractor meet with the Geotechnical Engineer to discuss dewatering procedures in more detail.

7.5 Grading

7.5.1 Grading is anticipated to include excavation of the site soils for the proposed structure, foundations, and utility trenches, as well as placement of backfill for ramps and trenches.

7.5.2 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing site soils and bedrock encountered during exploration are suitable for re-use as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed. If bedrock is to be utilized as an engineered fill, it may be blocky and may have to be crushed and moisture conditioned prior to utilization. The contractor should also be aware the bedrock has some localized diatomaceous-rich beds, which may make use of this material as engineered fill difficult.

7.5.3 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and, if applicable, building official in attendance. Special soil handling requirements can be discussed at that time.

7.5.4 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.) and the City of Los Angeles Inspector.

7.5.5 It is recommended that foundations for the proposed structure penetrate through the existing artificial fill and colluvium in order to derive support exclusively in the underlying competent bedrock. All excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.) prior to the placement of engineered fill.

7.5.6 It is anticipated that bedrock will be exposed throughout the basement area excavation bottom, and the bedrock is considered suitable for support of the concrete slab-on-grade. Any bedrock that is unintentionally disturbed should be compacted for slab support. At the ground floor level, it is recommended that all existing artificial fill and/or soft colluvium be excavated and properly compacted for slab support. The limits of existing fill and/or soft colluvium removal will be confirmed by the Geocon representative during site grading activities.

7.5.7 All imported fill shall be observed, tested and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. Imported soils should have an expansion index less than 50 and soils corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B12).

7.5.8 Prior to placing engineered fill over bedrock, the bedrock exposed at the excavation bottom must be cut or benched to create horizontal planes so that fill can be placed and compacted on horizontal surfaces.

7.5.9 The City of Los Angeles Department of Building and Safety requires a minimum compactive effort of 95 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition) where the soils to be utilized in the fill have less than 15 percent finer than 0.005 millimeters. Soils with more than 15 percent finer than 0.005 millimeters may be compacted to 90 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition). All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to near optimum moisture content, and properly compacted to the required degree of compaction in accordance with ASTM D 1557 (latest edition).

7.5.10 Where new paving is to be placed, it is recommended that all existing fill soils and soft soils be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to two percent above optimum moisture content, and compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.5.11 Utility trenches should be properly backfilled in accordance with the requirements of the Green Book (latest edition). The pipe should be bedded with clean sands (Sand Equivalent greater than 30), to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry is also acceptable as backfill (see Section 7.7). Prior to placing any bedding material or pipes, the trench excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.5.12 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding sands, fill, steel, gravel, or concrete.

7.6 Controlled Low Strength Material (CLSM)

7.6.1 Controlled Low Strength Material (CLSM) may be utilized in lieu of compacted soil as engineered fill where approved in writing by the Geotechnical Engineer. Where utilized within the City of Los Angeles use of CLSM is subject to the following requirements:

Standard Requirements

1. CLSM shall be ready-mixed by a City of Los Angeles approved batch plant;
2. CLSM shall not be placed on uncertified fill, on incompetent natural soil, nor below water;
3. CLSM shall not be placed on a sloping surface with a gradient steeper than 5:1 (horizontal to vertical);
4. Placement of the CLSM shall be under the continuous inspection of a concrete deputy inspector;
5. The excavation bottom shall be accepted by the soil engineer and the City Inspector prior to placing CLSM.

Requirements for CLSM that will be used for support of footings

1. The cement content of the CLSM shall not be less than 188 pounds per cubic yard (min. 2 sacks);
2. The excavation bottom must be level, cleaned of loose soils and approved in writing by Geocon prior to placement of the CLSM;
3. The ultimate compressive strength of the CLSM shall be no less than 100 pounds per square inch (psi) when tested on the 28th-day per ASTM D4832 (latest edition), Standard Test Method for Preparation and Testing of Controlled Low Strength Material Test Cylinders. Compression testing will be performed in accordance with ASTM C39 and City of Los Angeles requirements;
4. Samples of the CLSM will be collected during placement, a minimum of one test (two cylinders) for each 50 cubic yards or fraction thereof;
5. Overexcavation for CLSM placement shall extend laterally beyond the footprint of any proposed footings as required for placement of compacted fill, unless justified otherwise by the soil engineer that footings will have adequate vertical and horizontal bearing capacity.

7.7 Conventional Foundation Design

7.7.1 The proposed structure may be supported on a conventional foundation system deriving support in the competent bedrock. Proposed foundations should penetrate through the existing artificial fill, colluvium and any soft or highly weathered bedrock, in order to derive support exclusively in competent bedrock. Foundations excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.7.2 Continuous footings may be designed for an allowable bearing capacity of 3,000 pounds per square foot (psf), and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.3 Isolated spread foundations may be designed for an allowable bearing capacity of 3,700 psf, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.4 The allowable soil bearing pressure above may be increased by 100 psf and 380 psf for each additional foot of foundation width and depth, respectively, up to a maximum allowable soil bearing pressure of 6,200 psf.

7.7.5 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.7.6 If depth increases are utilized for the perimeter foundations, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.7.7 Continuous footings should be reinforced with four No. 4 steel reinforcing bars, two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.

7.7.8 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only, and are not intended to be used in lieu of those required for structural purposes.

7.7.9 Provided the foundation excavations and the concrete slab-on-grade subgrade exposes undisturbed bedrock, no special subgrade presaturation is required prior to placement of concrete. However, the slab and foundation subgrade should be sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement. Where engineered fill is placed as subgrade soils, due to the expansive nature of the soils, the moisture content in the slab and foundation subgrade should be maintained at 2 percent above optimum moisture content prior to and at the time of concrete placement.

7.7.10 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavation and exposed soil conditions are consistent with those anticipated. If unanticipated conditions are encountered, foundation modifications may be required.

7.7.11 This office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.8 Mat Foundation Design

7.8.1 The client should be aware that if a methane mitigation system is required for this project, a mat foundation system may be a more cost-effective foundation system for this project. The mat foundation system allows for more efficient construction when performed in conjunction with a methane mitigation system. The mat foundation may derive support in the competent bedrock, and foundations excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.8.2 The recommended maximum allowable bearing value is 6,200 pounds per square foot (psf). The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.8.3 It is recommended that a modulus of subgrade reaction of 200 pounds per cubic inch (pci) be utilized for the design of the mat foundation bearing in the undisturbed bedrock. The modulus should be reduced in accordance with the following equation when used with larger foundations:

$$K_R = K\left[\frac{B+1}{2B}\right]^2$$

where: K_R = reduced subgrade modulus
K = unit subgrade modulus
B = foundation width (in feet)

7.8.4 The thickness of and reinforcement for the mat foundation should be designed by the project structural engineer.

7.8.5 For seismic design purposes, a coefficient of friction of 0.30 may be utilized between the concrete mat and bedrock without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier or methane barrier.

7.8.6 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.8.7 Waterproofing of subterranean walls and slabs is suggested for this project. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer.

7.8.8 The client should be aware that if a methane barrier is installed to envelope the structure, the installation of a waterproofing barrier should not be necessary since it is a redundant system. A waterproofing consultant should be retained in order to recommend a product or method which would provide protection to subterranean walls, floor slabs and foundations.

7.8.9 This office should be provided a copy of the final construction plans so that the recommendations presented herein could be properly reviewed and revised if necessary.

7.9 Foundation Settlement

7.9.1 The maximum anticipated settlement for a conventional foundation system designed with the maximum allowable bearing value of 6,200 psf and deriving support in undisturbed bedrock is expected to be less than ¾ inch and occur below the heaviest loaded structural element. Differential settlement is not expected to exceed ½ inch over a distance of 20 feet or between adjacent foundations.

7.9.2 The maximum expected static settlement for structure supported on a mat foundation system deriving support in undisturbed bedrock is estimated to be less than ½ inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is expected to be less than ¼ inch between the center and corner of the mat foundation.

7.9.3 Once the design and foundation loading configurations for the proposed structure proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.10 Lateral Design

7.10.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.30 may be used with the dead load forces in the newly placed engineered fill, undisturbed colluvium, or undisturbed bedrock.

7.10.2 Passive earth pressure for the sides of foundations and slabs poured against competent bedrock may be computed as an equivalent fluid having a density of 900 pounds per cubic foot (pcf), with an increase of 190 psf for each additional foot of embedment, up to a maximum earth pressure of 2,600 pcf. Passive earth pressure for the sides of foundations poured against properly compacted engineered fill or undisturbed colluvium may be computed as an equivalent fluid having a density of 190 pounds per cubic foot with a maximum earth pressure of 1,900 pounds per square foot. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.11 Concrete Slabs-on-Grade

7.11.1 Concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Pavement Recommendations* section of this report (Section 7.12).

7.11.2 Unless specifically evaluated and designed by a qualified structural engineer, the slab-on-grade for the structure should be a minimum of 5 inches of concrete reinforced with No. 4 steel reinforcing bars placed 16 inches on center in both horizontal directions and positioned vertically near the slab midpoint. The concrete slab-on-grade may derive support in the bedrock or properly compacted engineered fill. Any bedrock that is unintentionally disturbed should be compacted for slab support. The finished subgrade must be approved in writing prior to placement of a vapor retarder, reinforcing steel, or concrete.

7.11.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder selection and design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) as well as ASTM E1745 and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning is recommended. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4-inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.11.4 Due to the nature of the proposed design and intent for a partial subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.11.5 For seismic design purposes, a coefficient of friction of 0.30 may be utilized between concrete slabs and bedrock without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.11.6 Exterior slabs for walkways or flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to two percent above optimum moisture content and properly compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.11.7 Due to the expansive potential of the anticipated subgrade soils, the moisture content of the slab subgrade should be maintained and sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement. Furthermore, consideration should be given to doweling slabs into adjacent curbs and foundations to minimize movements and offsets which could lead to a potential tripping hazard. As an alternative, the upper 18 inches of soil could be replaced with granular, non-expansive soils which will reduce the potential for movements and offsets.

7.11.8 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.12 Preliminary Pavement Recommendations

7.12.1 Where new paving is to be placed, it is recommended that all existing fill and soft materials be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable colluvium, material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to two percent above optimum moisture content, and properly compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.2 The following pavement sections are based on an assumed R-Value of 20. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.12.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking and Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	12.0

7.12.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base (CMB) in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.12.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 5 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.13 Retaining Wall Design

7.13.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 14 feet. In the event that walls significantly higher than 14 feet are planned, Geocon should be contacted for additional recommendations.

7.13.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Foundation Design* sections of this report (see Sections 7.7 and 7.8).

7.13.3 Based on the orientation of the proposed excavation with respect to the strike and dip of the bedrock, the apparent dips for north and west retaining walls are anticipated to range from approximately 26° to 36°. The retaining wall recommendations presented below include consideration of the surcharge due to out-of-slope bedding on the north and west retaining wall. Excavations into bedrock should be observed and approved in writing by the Project Geologist (a representative of Geocon West, Inc.) during excavation to check for the presence of jointing or bedding which may require revised retaining wall recommendations.

7.13.4 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure). Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure). The table below presents recommended pressures to be used in retaining wall design, assuming that proper drainage will be maintained. Calculation of the recommended wall pressures are provided on Figures 5 and 6.

RETAINING WALL WITH LEVEL BACKFILL SURFACE
(East and South Retaining Walls – Favorable Bedding)

HEIGHT OF RETAINING WALL (Feet)	ACTIVE PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)	AT-REST PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)
Up to 14	30	68

RETAINING WALL WITH SURCHARGE FROM JOINTING OR BEDDING
(North and West Retaining Walls – Adverse Bedding)

HEIGHT OF RETAINING WALL (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (AT-REST PRESSURE)
Up to 14	55	83

7.13.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed colluvial soils and bedrock. If sloping techniques are to be utilized for construction of proposed walls, which would result in a wedge of engineered fill behind the retaining walls, revised earth pressures may be required to account for the expansive potential of the soil placed as engineered fill. This should be evaluated once the use of sloping measures is established and once the geotechnical characteristics of the engineered backfill soils can be further evaluated.

7.13.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 95 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.13.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses.

7.13.8 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.13.9 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.13.10 In addition to the recommended earth pressure, the upper 10 feet of the subterranean wall adjacent to the street and parking lot should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the walls due to normal street traffic. If the traffic is kept back at least 10 feet from the subterranean walls, the traffic surcharge may be neglected.

7.13.11 Seismic lateral forces should be incorporated into the design as necessary, and recommendations for seismic lateral forces are presented below.

7.14 Dynamic (Seismic) Lateral Forces

7.14.1 The structural engineer should determine the seismic design category for the project in accordance with Section 1613 of the CBC. If the project possesses a seismic design category of D, E, or F, proposed retaining walls in excess of 6 feet in height should be designed with seismic lateral pressure (Section 1803.5.12 of the 2019 CBC).

7.14.2 A seismic load of 10 pcf should be used for design of walls that support more than 6 feet of backfill in accordance with Section 1803.5.12 of the 2019 CBC. The seismic load is applied as an equivalent fluid pressure along the height of the wall and the calculated loads result in a maximum load exerted at the base of the wall and zero at the top of the wall. This seismic load should be applied in addition to the active earth pressure. The earth pressure is based on half of two-thirds of PGA_M calculated from ASCE 7-16 Section 11.8.3.

7.15 Retaining Wall Drainage

7.15.1 Retaining walls should be provided with a drainage system. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 7). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.15.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 8). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.15.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures.

7.15.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.16 Elevator Pit Design

7.16.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.7, 7.8 and 7.13).

7.16.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.16.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.13).

7.16.4 It is suggested that the elevator pit walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.17 Elevator Piston

7.17.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation or shoring pile, or the drilled excavation could compromise the existing foundation or pile support, especially if the drilling is performed subsequent to the foundation or pile construction.

7.17.2 Although caving is not anticipated in the bedrock, casing may be required if groundwater seepage is encountered. The contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.17.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.18 Temporary Excavations

7.18.1 Excavations on the order of 16 feet in vertical height may be required for excavation and construction of the partial subterranean level, including foundation depths. Excavation is anticipated to expose artificial fill, colluvial soils and bedrock, which are considered suitable for vertical excavations up to 5 feet in height where loose soils or caving sands are not present, and where excavations are not surcharged by adjacent traffic or structures. Where bedrock with adverse bedding is exposed in excavations, vertical cuts should not exceed 3 feet in height.

7.18.2 Excavations into bedrock should be observed by the Project Geologist (a representative of Geocon West, Inc.) during excavation to check for the presence of jointing or bedding which

may require special recommendations for sloping and/or shoring. Any recommendations deemed necessary will be provided at that time.

7.18.3 Vertical excavations greater than the permissible heights outlined above will require sloping and/or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1.5:1 (H:V) slope gradient or flatter up to a maximum height of 10 feet. Temporary unsurcharged embankments may also be sloped back at a uniform 2:1 (H:V) slope gradient or flatter up to a maximum height of 20 feet. A uniform slope does not have a vertical portion. Where space is limited, shoring measures will be required. Shoring recommendations are provided in Section 7.19 of this report.

7.18.4 Where sloped embankments are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction embankments are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. The soils exposed in the cut slopes should be inspected during excavation by our personnel so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.19 Shoring – Soldier Pile Design and Installation

7.19.1 The following information on the design and installation of shoring is preliminary. Review of the final shoring plans and specifications should be made by this office prior to bidding or negotiating with a shoring contractor.

7.19.2 Installation of shoring on a sloping ground surface requires careful consideration of excavation sequencing. Prior to installation of shoring, grading to create a relatively flat pad for equipment access may be required. Excavation of unsupported vertical cuts into a sloping ground surface would remove support from the ascending portion of the slope and create a potentially unstable condition. Unsupported vertical excavation into a slope is not permitted. Equipment access can be created by placement of additional fill to build up a temporary equipment pad against the existing slope.

7.19.3 One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. Installation of shoring piles by vibration is not recommended at this site due to the dense nature of the underlying bedrock. Where maximum excavation heights are less than 12 feet the soldier piles are typically designed as cantilevers. Where excavations exceed 12 feet or are surcharged, soldier piles may require lateral bracing utilizing drilled tie-back anchors or raker braces to maintain an economical steel beam size and prevent excessive deflection. The size of the steel beam, the need for lateral bracing, and the acceptable shoring deflection should be determined by the project shoring engineer. Should it be determined that temporary tiebacks or rakers are necessary, additional recommendations can be provided under separate cover.

7.19.4 The design embedment of the shoring pile toes must be maintained during excavation activities. The toes of the perimeter shoring piles should be deepened to take into account any required excavations necessary for grading activities, foundations, and/or adjacent drainage systems.

7.19.5 The proposed soldier piles may also be designed as permanent piles. The required pile depth, dimension, spacing should be determined and designed by the project structural and shoring engineers. All piles utilized for shoring can also be incorporated into a permanent retaining wall system (shotcrete wall) and should be designed in accordance with the earth pressure provided in the *Retaining Walls* section of this report (see Section 7.13).

7.19.6 Drilled cast-in-place soldier piles should be placed no closer than three diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the soil. For design purposes, an allowable passive value for the bedrock below the bottom plane of excavation may be assumed to be 900 pcf, with an increase of 190 psf for each additional foot of embedment. The allowable passive value may be doubled for isolated piles, spaced a minimum of 3 times the pile diameter. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed bedrock.

7.19.7 Casing may be required if caving is experienced in the drilled excavation and the contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.19.8 The contractor should be aware that some difficult drilling conditions could be encountered in the bedrock which could require coring and jack-hammering. The contractor should be prepared for these conditions prior to commencement of drilling activities.

7.19.9 Groundwater seepage was not encountered at the time of the site exploration. However, the contractor should be prepared for groundwater during pile installation should the need arise. Piles placed below the water level require the use of a tremie to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to insure that the tip of the tremie tube is never raised above the surface of the concrete.

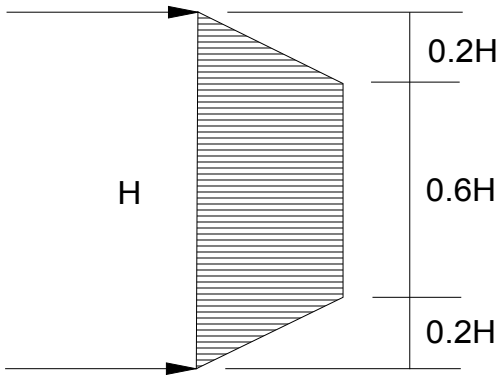
7.19.10 A special concrete mix should be used for concrete to be placed below water. The design should provide for concrete with an unconfined compressive strength psi of 1,000 pounds per square inch (psi) over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste should be included. The slump should be commensurate to any research report for the admixture, provided that it should also be the minimum for a reasonable consistency for placing when water is present.

7.19.11 The frictional resistance between the soldier piles and retained soil may be used to resist the vertical component of the anchor load. The coefficient of friction may be taken as 0.30 based on uniform contact between the steel beam and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 360 pounds per square foot.

7.19.12 Due to the nature of the site soils, it is expected that continuous lagging between soldier piles will be required. However, it is recommended that the exposed soils be observed by the Geotechnical Engineer (a representative of Geocon West, Inc.), to verify the presence of any cohesive soils and the areas where lagging may be omitted.

7.19.13 The time between lagging excavation and lagging placement should be as short as possible. Soldier piles should be designed for the full-anticipated pressures. Due to arching in the soils, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 pounds per square foot.

7.19.14 For the design of shoring, it is recommended that an equivalent fluid pressure based on the following tables, be utilized for design. A trapezoidal distribution of lateral earth pressure may be used where shoring will be restrained at the top by bracing or tie backs. The recommended active and trapezoidal pressure are provided in the following tables. A diagram depicting the trapezoidal pressure distribution of lateral earth pressure is provided below the table. Calculation of the recommended shoring pressures are provided on Figures 9 and 10.



SHORING WALL WITH LEVEL BACKFILL SURFACE
(East and South Shoring Walls – Favorable Bedding)

HEIGHT OF SHORING (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE) Triangular	EQUIVALENT FLUID PRESSURE (Pounds Per Square Foot per Foot) Trapezoidal (Where H is the height of the shoring in feet)
Up to 16	25	16H

SHORING WALL WITH LEVEL BACKFILL SURFACE
(North and West Shoring Walls – Adverse Bedding)

HEIGHT OF SHORING (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE) Triangular	EQUIVALENT FLUID PRESSURE (Pounds Per Square Foot per Foot) Trapezoidal (Where H is the height of the shoring in feet)
Up to 16	25	16H

Trapezoidal Distribution of Pressure

7.19.15 Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent structures and must be determined for each combination.

7.19.16 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.19.17 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.19.18 In addition to the recommended earth pressure, the upper 10 feet of the shoring adjacent to the street should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If the traffic is kept back at least ten feet from the shoring, the traffic surcharge may be neglected.

7.19.19 It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the deflection be minimized to prevent damage to existing structures and adjacent improvements. Where public right-of-ways are present or adjacent offsite structures do not surcharge the shoring excavation, the shoring deflection should be limited to less than 1 inch at the top of the shored embankment. Where offsite structures are within the shoring surcharge area it is recommended that the beam deflection be limited to less than ½ inch at the elevation of the adjacent offsite foundation, and no deflection at all if deflections will damage existing structures. The allowable deflection will be assessed and designed by the project shoring engineer.

7.19.20 Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

7.19.21 Due to the depth of the excavation and proximity to adjacent structures, it is suggested that prior to excavation the existing improvements be inspected to document the present condition. For documentation purposes, photographs should be taken of preconstruction distress conditions and level surveys of adjacent grade and pavement should be considered. During excavation activities, the adjacent structures and pavement should be periodically inspected for signs of distress. In the even that distress or settlement is noted, an investigation should be performed and corrective measures taken so that continued or worsened distress or settlement is mitigated. Documentation and monitoring of the offsite structures and improvements is not the responsibility of the geotechnical engineer.

7.20 Surface Drainage

7.20.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the foundation supporting soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage in building areas should be maintained at all times.

7.20.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2019 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. The proposed structure should be provided with roof gutters. Discharge from downspouts, roof drains and scuppers not recommended onto unprotected soils within five feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the engineered fill providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.20.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.20.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.21 Plan Review

7.21.1 Grading, foundation, and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of this scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

APPENDIX A

APPENDIX A

FIELD INVESTIGATION

The site was explored on May 14 and May 15, 2020. Site exploration included excavating seven 3-inch diameter hand auger borings to depths between 5½ and 16 feet below existing ground surface, and one 24-inch diameter bucket auger boring to a depth of 20 feet below existing ground surface.

The soil conditions encountered in the explorations were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A8. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing. The location of the borings are shown on Figure 2A.

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation and expansion characteristics, corrosivity, in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B12. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

Soil Sampling and Analysis Report

ESA

Project No. W1182-06-01
July 7, 2020

Miramar Development, LP
c/o Jonathan Rose Companies
551 Fifth Avenue, 23rd Floor
New York, NY 10176

Subject: LIMITED SOIL SAMPLING AND ANALYSIS
PROPOSED MULTI-FAMILY RESIDENTIAL DEVELOPMENT
1917 - 2005 ½ WEST 3rd STREET
LOS ANGELES, CALIFORNIA
TRACT: EXTENSION OF THE NOB HILL TRACT
LOTS: 1-6; PARCELS: 2-5

Dear Ladies and Gentlemen:

In accordance with the scope of services outlined in our proposal dated May 1, 2020, we have prepared this letter to document the soil sample collection and analysis from four hand auger borings advanced at the property located at 1917 - 2005 ½ West 3rd Street (the Site) in Los Angeles, California. The location of the Site is depicted on Figure 1.

PURPOSE AND SCOPE OF SERVICES

It is our understanding that the proposed development will consist of a 7-story multi-family residential structure constructed at the existing elevation of West 3rd St. Due to the sloping nature of the site, the proposed structure will be partially tucked into the existing slope (up to 12 feet below existing grade).

Geocon was retained to perform a geotechnical evaluation for the proposed new structure. At the Client's request, select soil samples were collected from borings advanced during the geotechnical investigation and submitted for laboratory analysis to aid in developing a preliminary waste profile for export soil.

BACKGROUND

Regulatory criteria to classify a waste as "California hazardous" for handling and disposal purposes are contained in the California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 11, Article 3, § 66261.24. Criteria to classify a waste as "Resource, Conservation, and Recovery Act (RCRA) hazardous" are contained in Chapter 40 of the Code of Federal Regulations (40 CFR), § 261.

For waste containing metals, the waste is classified as California hazardous when: 1) the representative total metal content equals or exceeds the respective Total Threshold Limit Concentration (TTLC); or 2) the representative soluble metal content equals or exceeds the respective Soluble Threshold Limit Concentration (STLC) based on the standard Waste Extraction Test (WET). A waste may have the potential of exceeding the STLC when the waste's total metal content is greater than or equal to ten times the respective STLC value, since the WET uses a 1:10 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to ten times the respective STLC, and assuming that 100 percent of the total metals are soluble, soluble metal analysis by the WET is required.

A material is classified as RCRA hazardous, or Federal hazardous, when the representative soluble metal content equals or exceeds the Federal regulatory level based on the Toxicity Characteristic Leaching Procedure (TCLP). A waste may have the potential of exceeding the TCLP when the waste's total metal content is greater than or equal to twenty times the respective TCLP value, since the TCLP uses a 1:20 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to twenty times the respective TCLP, and assuming that 100 percent of the total metals are soluble, soluble metal analysis by the TCLP is required.

The above regulatory criteria are based on chemical concentrations. Wastes may also be classified as hazardous based on other criteria such as ignitability and corrosivity; however, for the purposes of this investigation, toxicity (i.e., representative lead concentrations) is the primary factor considered for waste classification since waste generated during the construction activities would not likely warrant testing for ignitability or corrosivity. Waste that is classified as either California-hazardous or RCRA-hazardous requires management as a hazardous waste.

FIELD SAMPLING AND ANALYTICAL TESTING

On May 14 and May 15, 2020, Geocon's representative collected soil samples from four geotechnical borings (labeled B3, B4, B6, and B7) advanced using hand-auger methods at the Site. A total of eight soil samples were collected from the four boring locations. Samples were collected from depths of 2 and 10 feet within each boring. The approximate boring locations are shown on Figure 2.

The soil samples were labeled with a unique ID consisting of the boring location number followed by a dash and the depth (in feet) from which the sample was collected. For example, Sample ID B3-2.0 was collected from boring B3 at a depth of 2 feet.

Soil samples were collected with a stainless steel hand-auger. Soil was transferred directly from the hand-auger bucket into laboratory-provided 8-ounce glass containers. The containers were capped, labeled, and placed in a chilled cooler for transport to Advanced Technology Laboratories (ATL), a State certified laboratory located in Signal Hill, California, under chain-of-custody protocol. The sampling equipment was cleansed prior to each sampling effort by washing with an Alconox solution and double rinsing with distilled water.

The eight soil samples were submitted to ATL for analysis of Title 22 metals by Environmental Protection Agency (EPA) Method 6010B/7000, total petroleum hydrocarbons (TPH) (C6-C40) by modified EPA Method 8015B, and volatile organic compounds (VOCs) by EPA Method 8260B.

One soil sample (B6-2.0) exhibited a total lead concentration greater than ten times STLC for lead of 5.0 milligrams per liter (mg/l) and greater than twenty times the TCLP for lead of 5.0 mg/l and was further analyzed for the WET and TCLP soluble lead.

RESULTS

The analytical results are summarized below. Constituents of concern reported at concentrations above the laboratory detection limit are summarized on Table 1 for metals and on Table 2 for TPH and VOCs. Laboratory analytical reports and chain-of-custody documentation are attached.

Title 22 Metals

Analysis of soil samples for Title 22 metals did not indicate the presence of metals at or above their respective Total Threshold Limit Concentrations (TTLCs).

With the exception of the lead concentration of 250 milligrams per kilogram (mg/kg) reported for sample B6-2.0, concentrations of metals were lower than 10 times their respective Soluble Threshold Limit Concentrations (STLCs).

WET soluble lead was reported in the one sample analyzed (sample B6-2.0) at a concentration of 16 mg/l.

TCLP soluble lead was reported in the one sample analyzed (sample B6-2.0) at a concentration of 0.50 mg/l.

Total Petroleum Hydrocarbons

TPH was reported in four of the eight samples analyzed at total concentrations ranging from 45 mg/kg to 720 mg/kg. The reported concentrations of TPH fall predominately within the waste oil carbon chain range.

Volatile Organic Compounds

VOCs were not detected at concentrations equal to or greater than their respective laboratory detection limits.

CONCLUSIONS AND RECOMMENDATIONS

With the exception of lead in sample B6-2.0, none of the Title 22 metals reported for the soil samples collected from the hand-auger borings had concentrations exceeding the respective TTLC values or ten times the respective STLC values.

Wet soluble lead was reported in sample B6-2.0 at a concentration of 16 mg/l which is greater than the STLC for lead of 5.0 mg/l. Based on this analytical result, the soil in the vicinity of B6-2.0 would be characterized as a California Hazardous waste based on soluble lead content. The soil would not be characterized as a RCRA hazardous waste because the TCLP soluble lead content of 0.50 mg/l reported for the sample is less than the TCLP of 5.0 mg/l.

The extent of lead impacted soil in the vicinity of Boring B6 is undefined. We recommend that a Soil Management Plan (SMP) be prepared for the project prior to the start of grading. Soil management procedures shall be described so the hazardous soil can be separated from nonhazardous soil during excavation tasks. Soil management procedures outlined in the SMP should be followed during the project's excavation and development phases to properly manage the various classes of soil and to minimize risk to workers and the public during construction. .

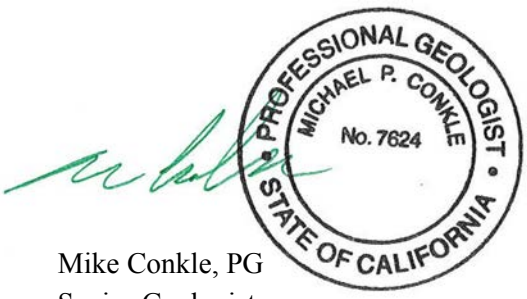
TPH was reported in four of the eight samples analyzed at total concentrations ranging from 45 mg/kg to 720 mg/kg.

Currently, regulatory criteria for the classification of wastes based solely on the concentrations of TPH have not yet been promulgated. Disposal of petroleum hydrocarbon-impacted soil is generally regulated by disposal facility permit and acceptance criteria. Client is advised that municipal landfills in Los Angeles County have a zero tolerance for TPH in soil. However, private landfills, such as the Republic Chiquita Canyon facility in Castaic, California, will accept TPH containing soil. Soil excavated from the site should be stockpiled and characterized for TPH content, and acceptance from the intended receiving facility should be obtained prior to shipping the soil off site for disposal. For disposal purposes, and with the exception of the area in the vicinity of Boring B6, the soil would be classified as a non-hazardous waste based on TPH content.

REPORT LIMITATIONS

This report has been prepared exclusively for the Client. The information obtained is only relevant as of the date of the latest site visit and will require an update to reflect additional information obtained.

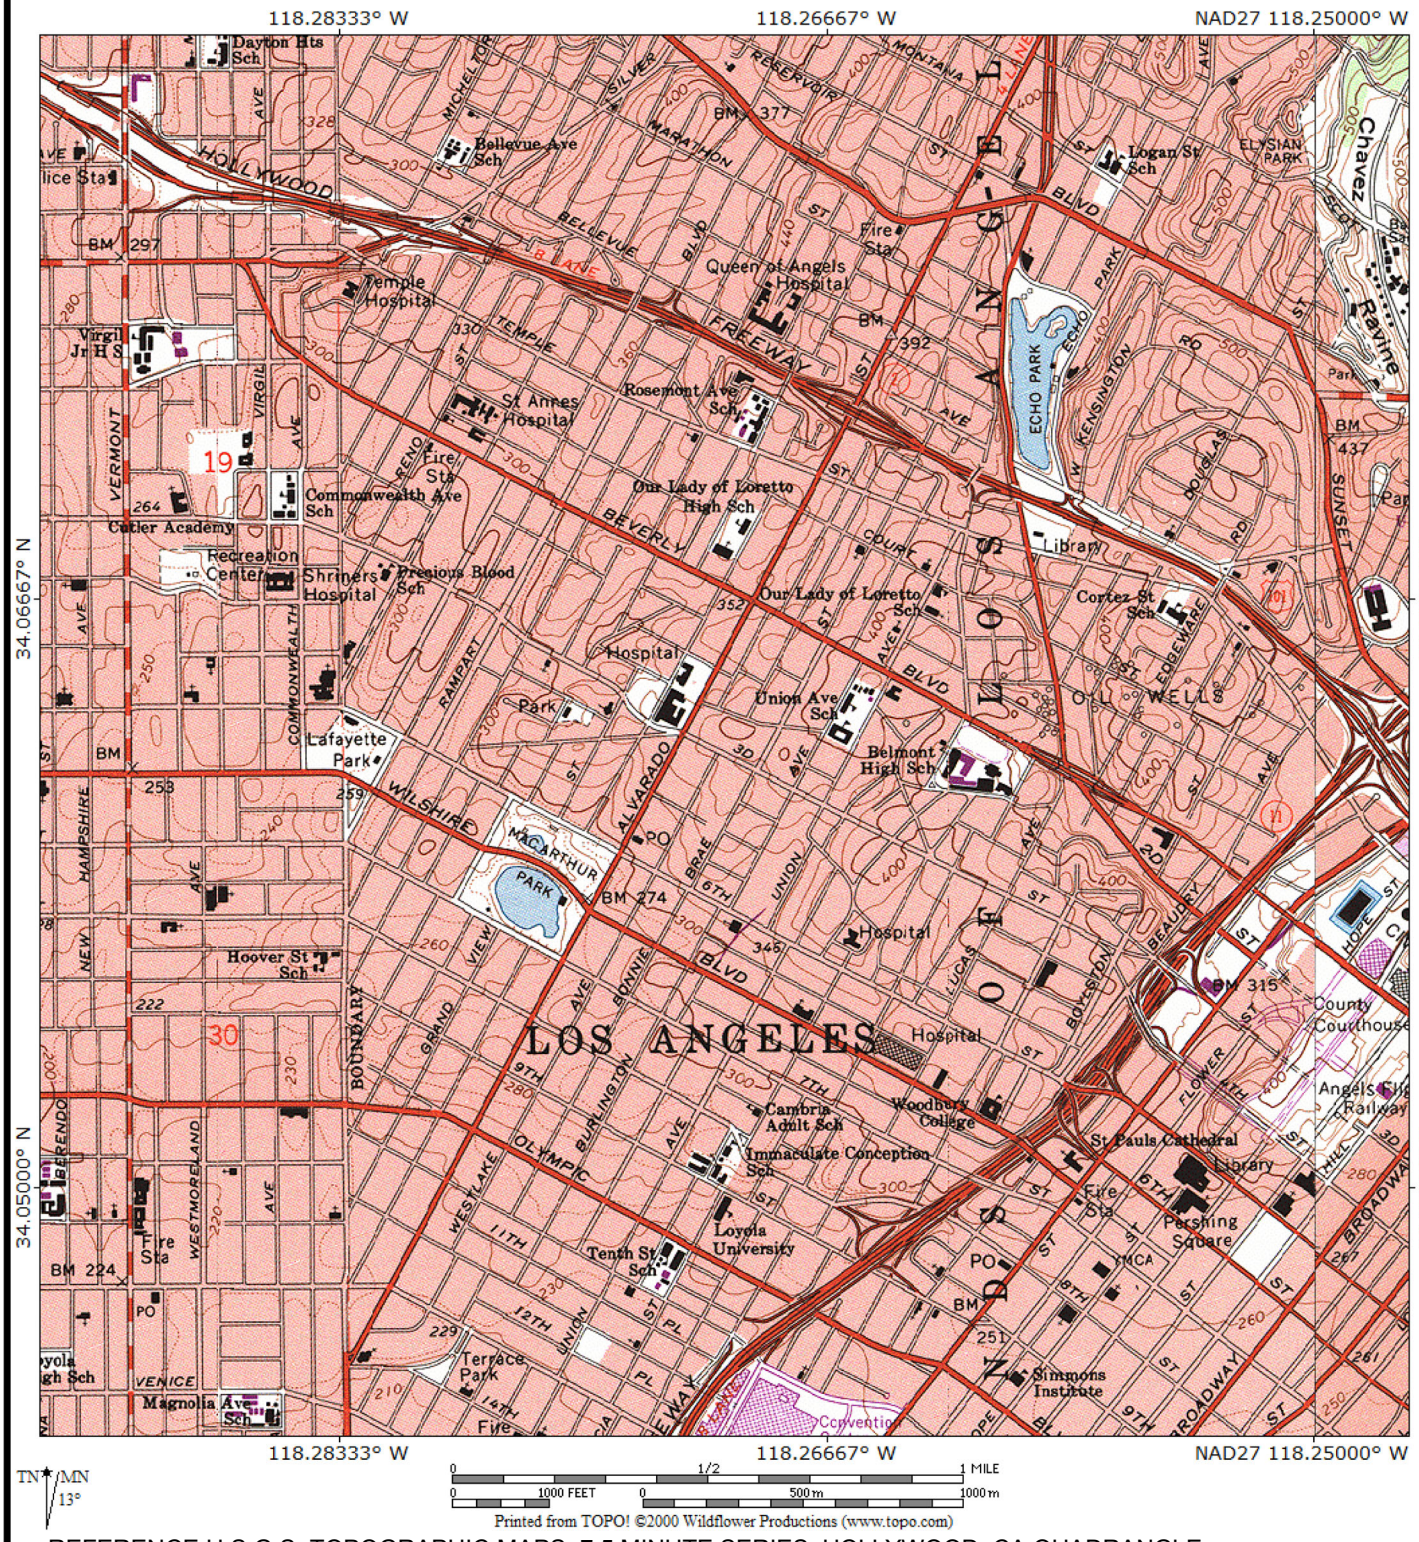
The results presented herein are based on a limited number of samples collected from widely spaced boring locations. The purpose of these sampling activities was to provide a preliminary evaluation of the potential presence of contaminants in the soil at the Site.



The Client should recognize that this report is not a comprehensive site characterization and should not be construed as such. Designated soil receiving facilities may require additional analytical results prior to accepting this soil, if applicable. The results as presented in this report are predicated on the limited soil sampling and laboratory analyses performed. In addition, the information obtained is not intended to address potential impacts related to sources other than those specified herein.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the report is implied within the intent of this report or any subsequent reports, correspondence, or consultation, either express or implied. Geocon strived to perform the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

Please call if you have any questions or desire additional information.



Very truly yours,

GEOCON WEST, INC.

Mike Conkle, PG
Senior Geologist

Re: ATL Work Order Number : 2001180
Client Reference : 2000 W. 3rd ST, W1182-06-01

Enclosed are the results for sample(s) received on May 15, 2020 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Dr. Reza Karimi
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

Notes and Definitions

S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2001180
Client Reference : 2000 W. 3rd ST, W1182-06-01

Enclosed are the results for sample(s) received on May 15, 2020 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Dr. Reza Karimi
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

Certificate of Analysis

Geocon West, Inc.		Project Number :	2000 W. 3rd ST, W1182-06-01
3303 N. San Fernando Blvd., Suite 100		Report To :	Mike Conkle
Burbank , CA 91504		Reported :	06/12/2020

Notes and Definitions

M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Hi Erick,
On ATL WO number 2001180, please run sample ID B6-2.0 for WET Lead and TCLP lead. 48 hour TAT.
Thank you,

Please note: In order to do our part to reduce the spread of COVID-19, many Geocon personnel will be working remotely. During this time, our office lines may not be answered. Please also consider contacting us via email, cell phone, or text for the foreseeable future. Thank you!

PHASE I ENVIRONMENTAL SITE ASSESSMENT
MIRAMAR DEVELOPMENT SOUTH LOT

EXECUTIVE SUMMARY

Surveys Inc. performed a Phase I Environmental Site Assessment of the Miramar Development South Lot project located at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California. The subject property was originally part of an age-restricted (62 and older) Section 8 development, known as Miramar Towers, located at 2000 Miramar Street, Los Angles, CA. The Owner has subdivided 30,433 square feet, or 0.698 acres, of excess land from the former larger parcel (Miramar Towers Site) to create an individual new pursuant to Case Numbers AA-2018-7423-PEMX and AA-2018-7418-PEMX. The original larger parcel originally had the assessor parcel number APN 5154-020-030 and has since been fully subdivided into two new parcels with new APN numbers 5154-020-034 and 5154-020-033. The subject Site, now separated from the larger Miramar Towers Site, is improved with irrigated landscaping, a concrete paved drive aisle and parking lot, concrete curbing, concrete sidewalks, concrete stairs, concrete storm drainage channels, a CMU enclosure for electrical transformer and electrical vault and related site improvements. Current improvements on the subject property are associated with the Miramar Towers Site, however, no buildings are currently located onsite. The subject property consists of a 0.698 acre parcel within long dimensions extending east to west. The site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The site inspection was conducted on May 20, 2020. The site inspection consisted of a visual evaluation of the project site and adjacent properties. No buildings were present onsite at the time of the inspection. A review of the pertinent readily available records of local, state and federal agencies, historical information, interviews with people knowledgeable and prior environmental reports was conducted.

Based upon the absence of buildings on the project site, there is a low potential for asbestos containing materials or lead-based paints at this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. No potential vapor encroachment conditions were identified in connection with the subject property.

Interviews with people knowledgeable, aerial photograph studies, historical map reviews, prior environmental reports and regulatory database reviews did not indicate any evidence of hazardous materials being improperly used or disposed of at the site. There was no evidence of any chemical misuse, unlawful dumping or other sources of contamination to the site. There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground storage tanks were observed during the site reconnaissance.

The site inspection indicated there was no evidence of any soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, leaking equipment, unidentified hazardous materials or other unidentified substances were observed during the site reconnaissance. The stormwater catch basins appeared to be free of contaminants.

ENVIRONMENTAL SUMMARY CONTINUED:

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with approximately 5 residential dwellings by the early 1900s. The project appears to have then been associated with the Barker Motel by the 1920s, which included the adjacent site to the north, however, the site still appeared to be occupied by 5 residential dwellings. All of the residential dwellings appear to have been removed from the site starting in the late 1950s through the early 1970s. From the mid to late 1970s, the project appears to have been vacant. The site was then developed with the existing improvements in 1979-1980 when the adjacent Miramar Towers apartments were developed. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was not listed in any of the Regulatory Databases reviewed. Based upon our review of all pertinent Regulatory Databases, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

Based on our review of the development and site use history, along with an examination of existing conditions at the site, we found no hazardous or toxic substances were identified as being improperly generated, used, stored or disposed of on the property. This includes materials defined under the Resource Conservation and Recovery Act (RCRA), and the information and data we have reviewed and documented in this report. No recognized environmental conditions were identified in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

ENVIRONMENTAL SUMMARY GRID

ENVIRONMENTAL STATUS	RESEARCH RESULTS	RECOMMENDS	ESTIMATES
Onsite Underground Storage Tanks	None Detected	None	$0.00
Stained or Discolored Surfaces	None Detected	None	$0.00
Stressed Vegetation	None Detected	None	$0.00
Leaking Transformers - PCBs	None Detected	None	$0.00
Asbestos - ACM	Low Potential	None	$0.00
Lead-Based Paints	Low Potential	None	$0.00
Radon Gas	Moderate Risk Region	None	$0.00
Onsite Hazardous Materials	Low Potential for Impact	None	$0.00
Improper Waste Disposal	None Detected	None	$0.00
EPA - Federal Sites List	Low Potential for Impact	None	$0.00
STATE - Sites List	Low Potential for Impact	None	$0.00
Underground Storage Tank (USTs)	Low Potential for Impact	None	$0.00
Leaking Tanks (LUSTs)	Low Potential for Impact	None	$0.00
Adjacent Properties	Low Potential for Impact	None	$0.00
Drinking Water Standards	Meet EPA Standards	None	$0.00
Fire Department Concerns	None	None	$0.00
Historical Review Concerns	None	None	$0.00
		TOTAL COSTS	**$0.00**
PHASE II REQUIREMENTS	**NONE**	**NONE**	**$0.00**

Based upon the absence of buildings on the project site, there is a low potential for asbestos containing materials or lead-based paints at this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. No potential vapor encroachment conditions were identified in connection with the subject property.

1.0 INTRODUCTION

PURPOSE

This Phase I Environmental Site Assessment of the Miramar Development South Lot project is intended to determine whether there is a potential for significant environmental contamination based on readily available information about the site and a walk-through inspection. If this potential does exist, the Phase I Environmental Site Assessment indicates additional activity necessary to confirm evidence of significant environmental contamination.

This report presents the results of a Phase I Environmental Site Assessment of the Miramar Development South Lot project at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California. Miramar Development, LP, retained Surveys Inc. to perform the Phase I Environmental Site Assessment in order to determine if a potential for significant contamination exists at the subject property.

The assessment consisted of a visual and olfactory inspection of the site, interviews with people knowledgeable about the site, an historical review and a review of all pertinent records from local, state and federal agencies. The results of our Phase I Investigation are described in the following sections of this report.

LIMITATIONS, EXCEPTIONS, AND SIGNIFICANT ASSUMPTIONS

It should be noted when an assessment is completed without subsurface exploration or chemical screening of soils and groundwater beneath the site, as in this study, no statement of scientific certainty can be made regarding the latent subsurface conditions which may be the result of onsite or off-site sources. Thus, this report is not a definitive study of contamination at the site. An evaluation of the subsurface soils and groundwater was not included in this report.

The scope of the onsite assessment consisted of a visual evaluation of the project site and adjacent properties. No buildings were present onsite at the time of the inspection.

This report has been prepared following the requirements outlined in ASTM E-1527-13 Standard Practice for Environmental Site Assessments. This report does not offer to be a legal opinion, representation, or interpretation of environmental laws, regulations or policies of the state, federal or local governmental agencies.

The environmental study conclusions, contained in this report, are professional opinions largely based upon third party data received and reviewed. While efforts have been made to substantiate the third party data, Surveys Inc. cannot guarantee its completeness or accuracy.

USER RELIANCE

This report has been prepared for, and can be relied upon by the Client, Miramar Development, LP.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

The Miramar Development South Lot project is located at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California. The subject property was originally part of an age-restricted (62 and older) Section 8 development, known as Miramar Towers, located at 2000 Miramar Street, Los Angeles, CA. The Owner has subdivided 30,433 square feet, or 0.698 acres, of excess land from the former larger parcel (Miramar Towers Site) to create an individual new pursuant to Case Numbers AA-2018-7423-PEMX and AA-2018-7418-PEMX. The original larger parcel originally had the assessor parcel number APN 5154-020-030 and has since been fully subdivided into two new parcels with new APN numbers 5154-020-034 and 5154-020-033. The subject Site, now separated from the larger Miramar Towers Site, is improved with irrigated landscaping, a concrete paved drive aisle and parking lot, concrete curbing, concrete sidewalks, concrete stairs, concrete storm drainage channels, a CMU enclosure for electrical transformer and electrical vault and related site improvements. Current improvements on the subject property are associated with the Miramar Towers Site, however, no buildings are currently located onsite. The subject property consists of a 0.698 acre parcel within long dimensions extending east to west. The site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The subject site lies at a slight angle to the north south lines of longitude therefore for the purposes of this report we consider W 3rd Street to lie along the south side of the site. The site consists of an irregular rectangular shaped parcel. The site topography generally slopes down toward 3rd Street to the south. The site topography varies from +/- El. 400' in the north-central portions of site down to +/- El. 385' at the south side of the site.

The site is bounded by Miramar Towers Apartments to the north, a single family residence or small apartment building to the east, W 3rd Street to the south and an apartment building to the west. Vehicular and pedestrian access to the site is provided off of W 3rd Street to the south. A concrete driveway enters the site off of W 3rd St at the southeast corner of the site and leads to a small concrete paved parking lot near the north-central portion of the site. A CMU and chain-linked fencing enclosure is located in the southern portion of the parking lot area and encloses a pad-mounted electrical transformer and electrical vault. Concrete sidewalks and concrete stairs are provided along the south and central portions of the site. Irrigated landscaping occupies a majority of the remainder of the site including area of grass lawn, trees, low lying shrubs and flowering plants.

Utilities and services provided to the property include water, sewer, electrical, natural gas trash and telephone. Electrical Power is provided City of Los Angeles Department of Water and Power, natural gas is provided by The Gas Company, Water is supplied by the City of Los Angeles. The City of Los Angeles provides the sanitary sewer services and storm water services. Electrical service is provided underground from a pad-mounted electrical transformer. A storm water drainage system has been provided for the site which includes concrete valley drains within landscaped areas and storm water catch basins located within the parking lot areas. The underground storm water piping and runoff discharge to a City of Los Angeles storm water main off the south side of the site.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

LEGAL DESCRIPTION:

EXHIBIT "A"

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL A:

PARCEL 2 OF CERTIFICATE OF COMPLIANCE FOR LOT LINE ADJUSTMENT NO. AA-2018-7418-PMEX, RECORDED NOVEMBER 15, 2019 AS INSTRUMENT NO. 20191244207 OF OFFICIAL RECORDS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 1, 2, AND 3 OF THE EXTENSION OF THE NOB HILL TRACT, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 42, PAGE 56 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS A WHOLE AS FOLLOWS:

BEGINNING AT A POINT ON THE SOUTHEASTERLY LINE OF SAID LOT 1, DISTANT THEREON NORTH 28°00'04" EAST 94.19 FEET FROM THE SOUTHEASTERLY CORNER OF SAID LOT; THENCE NORTH 61°57'12" WEST, PARALLEL WITH THE SOUTHWESTERLY LINES OF SAID LOTS 1, 2, AND 3, A DISTANCE OF 175.26 FEET TO THE NORTHWESTERLY LINE OF SAID LOT 3; THENCE SOUTH 27°43'11" WEST, ALONG SAID NORTHWESTERLY LINE, 94.19 FEET OT THE SOUTHWESTERLY CORNER OF SAID LOT; THENCE SOUTH 61°57'12" EAST, ALONG THE SOUTHWESTERLY LINES OF SAID LOTS 1, 2, AND 3, A DISTANCE OF 174.80 FEET TO THE SOUTHEASTERLY CORNER OF SAID LOT 1; THENCE NORTH 28°00'04" EAST, ALONG THE SOUTHEASTERLY LINE OF SAID LOT, 94.19 FEET TO THE POINT OF BEGINNING.

PARCEL B:

PARCEL 2 OF CERTIFICATE OF COMPLIANCE FOR LOT LINE ADJUSTMENT NO. AA-2018-7423-PMEX, RECORDED NOVEMBER 15, 2019 AS INSTRUMENT NO. 20191244209 OF OFFICIAL RECORDS, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

PORTIONS OF LOTS 4, 5, AND 6 OF THE EXTENSION OF THE NOB HILL TRACT, IN THE CITY OF LOS ANGELES, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 42, PAGE 56 OF MISCELLANEOUS RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS A WHOLE AS FOLLOWS:

COMMENCING AT A POINT ON THE SOUTHEASTERLY LINE OF LOT 1 OF SAID TRACT, DISTANT THEREON NORTH 28°00'04" EAST 94.19 FEET FROM THE SOUTHEASTERLY CORNER OF SAID LOT; THENCE NORTH 61°57'12" WEST, PARALLEL WITH THE SOUTHWESTERLY LINES OF LOTS 1, 2, AND 3 OF SAID TRACT, A DISTANCE OF 175.26 FEET TO THE SOUTHEASTERLY LINE OF SAID LOT 4 AND THE TRUE POINT OF BEGINNING OF THIS DESCRIPTION; THENCE SOUTH 27°43'11" WEST, ALONG SAID SOUTHEASTERLY LINE, 94.19 FEET TO THE SOUTHEASTERLY CORNER OF SAID LOT 4; THENCE NORTH 61°57'12" WEST, ALONG THE SOUTHWESTERLY LINES OF SAID LOTS 4, 5, AND 6, A DISTANCE OF 149.93 FEET TO THE SOUTHWESTERLY CORNER OF SAID LOT 6; THENCE NORTH 27°48'45" EAST 94.19 FEET TO A LINE THAT IS PARALLEL WITH SAID SOUTHWESTERLY LINES; THENCE SOUTH 61°57'12" EAST, ALONG SAID PARALLEL LINE, 76.53 FEET; THENCE SOUTH 28°02'48" WEST 4.71 FEET TO A LINE THAT IS PARALLEL WITH SAID SOUTHWESTERLY LINES; THENCE SOUTH 61°57'12" EAST, ALONG SAID PARALLEL LINE, 35.91 FEET; THENCE NORTH 28°02'48" EAST 4.71 FEET TO A LINE THAT IS PARALLEL WITH SAID SOUTHWESTERLY LINES; THENCE SOUTH 61°57'12" EAST, ALONG SAID PARALLEL LINE, 37.34 FEET TO THE POINT OF BEGINNING.

PARCEL C:

NON-EXCLUSIVE EASEMENTS AS SET FORTH IN THE RECIPROCAL EASEMENT AGREEMENT RECORDED DECEMBER 16, 2019 AS INSTRUMENT NO. 20191402989 OF OFFICIAL RECORDS.

2.0 SITE DESCRIPTION

ADJACENT PROPERTIES

North: Miramar Towers Apartments.

East: Older single family dwelling and apartments.

South: W 3rd Street followed by apartments, Center Lake Hotel and West Lake Plaza retail center.

West: Apartments.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

PHYSICAL SETTING

According to the USGS Topographical Map of the area (Hollywood, CA Quadrangle), the subject site is located at elevations ranging from approximately 385 to 400 feet above sea level. The regional topography is relatively hilly and undulating. The local topography near the site slopes down moderately to the south to southwest. Local surficial and shallow groundwater, if present, would generally be expected to mimic the local topography and flow in a general west to southwesterly direction. Deeper, regional groundwater flow may vary significantly from the local topography. MacArthur Park Lake is located approximately ½ miles to the southwest.

According to the USDA Soil Conservation Service, Web Soil Survey, the dominant soil type in the vicinity of the subject site consists of Urban Land-Dapplegray complex, 5 to 20% slopes. Urban Land consists of areas that have been so greatly modified by urban works and structures that identification of the native soils is impractical. The Dapplegray series consists of very deep, well drained soils that formed in human-transported materials (HTM) on engineered hillslopes terraces in areas weathered from calcareous shale bedrock and other calcareous sedimentary rocks. The mean annual precipitation is about 383 mm and the mean annual temperature is about 17 degrees C.

According to the FEMA Flood Insurance Rate Map, Map #06037C1610F, with an effective date of September 26, 2008, the site is located within flood Zone X, outside the 100 and 500 year flood zone. A review of the National Wetlands Inventory Map did not reveal any designated wetlands on or directly adjacent to the subject property.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by the user, Miramar Development, LP, with regard to this report.

TITLE RECORDS

We reviewed a Preliminary Title Report for the subject project prepared by Commonwealth Land Title Company dated March 13, 2020. According to the provided title documents, the property owner was identified as Miramar Tower, a California limited Partnership.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATION

No information regarding environmental liens or land use limitations was provided. Interviews with the property contacts indicated they were unaware of environmental liens or usage limitations related to environmental issues. A review of the available regulatory databases did not reveal any information related to environmental liens, land use or activity use limitations for the property related to environmental issues.

SPECIALIZED KNOWLEDGE

No specialized knowledge of environmental conditions associated with the property was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing or past environmental conditions associated with the subject property.

COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

No specialized knowledge of environmental conditions or similar relevant information was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing environmental conditions associated with the subject property. Interviews with local government officials also did not reveal any relevant information.

OWNER, PROPERTY MANAGER

According to the provided title documents, the property owner was identified as Miramar Tower, a California limited Partnership. Property contacts included Nicole Zaccack with Jonathan Rose Companies, the property ownership representative, and the onsite manager of Miramar Towers Apartments, Pam Roberson.

OTHER USER PROVIDED INFORMATION

A Phase I ESA Draft prepared by EBI Consulting dated March 2016; User Environmental Questionnaire completed by Nicole Zaccack and dated May 21, 2020; a Market Evaluation Report prepare by Novogradac dated May 15, 2020, an ALTA Survey prepared by Surveying & Drafting Services, Inc. dated May 26, 2020, and some of the original construction drawings were provided for review.

4.0 RECORDS REVIEW

STANDARD AND ADDITIONAL ENVIRONMENTAL RECORD SOURCES

As a part of our due-diligence, we retained Environmental Data Resources, Inc. (EDR) to provide a review of all major governmental databases for listings of potentially hazardous sites within the ASTM required search distances from the property. See the attached EDR Radius Map Report.

NPL

The National Priority List (NPL) includes sites reviewed (e.g., under CERCLIS) and considered as potential Superfund sites for the Environmental Protection Agency (EPA). These sites have necessarily failed some aspect of EPA's CERCLA criteria regarding hazardous materials. Only sites with high enough health and environmental risk are proposed as NPL sites. There are **no** listed NPL sites located within a one-mile distance from the subject property.

Based upon the information reviewed, we conclude the potential for significant impact to the site from any NPL site is low.

DELISTED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria the EPA uses to delete sites from the NPL.

There are no Delisted NPL sites within a one-mile radius of the site. Based on the information reviewed, we conclude the potential for significant impact to the site from any Delisted NPL site is low.

CERCLIS

The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List is a management database which lists all current and past sites that qualify, or are being considered, for further investigation under the EPA Superfund Assessment Program. According to the EPA, the fact a site is on the CERCLIS list does not necessarily mean it is contaminated and because a site is not on the list does not necessarily mean it is contaminant free. There are **no** listed CERCLIS sites located within a 1/2 miles distance from the subject property.

Based on the information reviewed, we conclude the potential for significant impact to the site from any CERCLIS site is low.

4.0 RECORDS REVIEW

SEMS-ARCHIVE/CERC-NFRAP

The Superfund Enterprise Management System -Archive (SEMS-ARCHIVE) database, formerly known as CERCLIS No Further Remedial Action Planned (CERC-NFRAP) sites database was reviewed. There are **no** listed SEMS-ARCHIVE/CERC-NFRAP sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SEMS-ARCHIVE/CERC-NFRAP site is low.

RCRIS

The EPA Resource Conservation and Recovery Information System (RCRIS) includes all current and past sites storing, transporting, treating, generating or disposing of hazardous materials or waste. This list will include anything from chemical industry to small businesses like dry cleaners and gasoline stations. See EDR Report LQG (Large Quantity Generator), SQG (Small Quantity Generator), TSD (Transport, Storage, Disposal), and CORRACTS (Corrective Action Sites). There are **no** listed RCRIS TSD sites within a 1/2-mile radius of the site. There are **no** listed CORRACTS sites within a one-mile radius of the subject site. There is **one** listed RCRIS LQG site and **seven** SQG sites within a 1/4-mile radius of the subject site. Four of the listed SQG sites are located greater than 1/8 miles distance from the subject property. There are only four listed site located within a 1/8 miles distance from the subject property.

CHLA Center for Personalized Medicine, 2100 W 3rd St, Map ID# G48
Location: 1/8 miles west
Status: Small quantity generator, no listed violations

CT Partners, 329 201 S Alvarado ST, Map ID# F35
Location: 1/8 miles northwest
Status: Small quantity generator, no listed violations

LMS Medical Service, 311 201 S Alvarado, Map ID# F32
Location: 1/8 miles northwest
Status: Small quantity generator, no listed violations

Mid-Wilshire Medical, 201 S Alvarado St, Map ID# F34
Location: 1/8 miles northwest
Status: Small quantity generator, no listed violations

Based upon the information reviewed, and considering the separation distance and intervening construction, we conclude the potential for significant impact to the site from any listed RCRIS site is low.

4.0 RECORDS REVIEW

ERNS

The Emergency Response Notification System (ERNS) records and stores information on reported releases of oil and hazardous substances.

The subject property was not identified as an ERNS site. Based on the information reviewed, we conclude the potential for significant impact to the site from any listed ERNS site is low.

CAL-SITES

The Cal-Sites AWP (Annual Work Plan, State Environmental Protection Agency), known hazardous waste sites, and Cal-Sites ASPIS (Department of Substance Control) Data Bases, contains potential or confirmed hazardous substance release properties. There are **no** listed CAL-SITES within a one-mile radius of the site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed CAL-SITES.

CHMIRS/CORTESE/NOTIFY 65/TOXIC PITS

The California Hazardous Materials Incident Report System contains information on reported hazardous materials incidents (accidental release or spills). There are **no** listed CHMIRS sites within a 1/8-mile radius of the site.

CORTESE identifies public drinking wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. There are **nine** listed CORTESE sites within a 1/2-mile radius of the site. Eight of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Shell Station, 230 Alvarado St, Map ID# B10
Location: Less than 1/8 miles west/northwest
Status: LUST site with case closure granted

Proposition 65 (NOTIFY 65) contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk. There are **no** listed NOTIFY 65 sites within a one-mile radius of the site.

TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. There are **no** listed TOXIC PITS sites within a one-mile radius of the site.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the site from any of these listed sites is low.

4.0 RECORDS REVIEW

SWF/LF

The State of California Integrated Waste Management Board's Solid Waste Information System (SWIS) database list. The list indicates there are **no** Landfill/Solid Waste Facility (SWF/LF) sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SWF/LF site to be low.

WMUDS/SWAT

The Waste Management Unit Database System (WMUDS) is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. There are **no** listed WMUDS/SWAT sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed WMUDS/SWAT site is low.

LUST

The California Water Quality Control Board, Leaking Underground Storage Tank (LUST) Registration list was reviewed. The list indicates there are **19** LUST sites within a 1/2-mile radius of the site, several of which are duplicate listings. There are only two listed sites located within a 1/8 miles distance from the subject property.

H&S Food & Gas, 2000 W 3rd Street, Map ID# A1
Location: Less than 1/8 miles southwest
Status: Case closure granted

Shell Station, 230 S Alvarado St, Map ID# B11
Location: Less than 1/8 miles west
Status: Case closure granted

Based upon the information reviewed, and considering the separation distances, intervening construction, topographical differences and current status of the nearest listed sites, we conclude the potential for significant impact to the site from any listed LUST site to be low.

4.0 RECORDS REVIEW

UST

The California Water Quality Control Board, Underground Storage Tank (UST) Registration list was reviewed. There are **23** listed UST sites within a 1/4-mile radius of the site. Many of the listings are duplicates for the same site. There are only eight listed sites located within a 1/8 miles distance from the subject property. Four of the listed sites are located greater than 1/8 miles distance from the subject property. There are eight listed sites located within a 1/8 miles distance from the subject property.

2004 W 3rd St, Map ID# A3
Location: Less than 1/8 miles west/southwest
Status: Historical UST site

Shell, 230 S Alvarado St, Map ID# B9
Location: Less than 1/8 miles west/northwest
Status: Inactive site

301 S Alvarado Street, Map ID# B13
Location: Less than 1/8 miles west/northwest

1841 W 3rd Street, Map ID# D14
Location: Less than 1/8 miles east/southeast
Status: Historical UST site

192 S Alvarado St, Map ID# C20
Location: Less than 1/8 miles north/northwest
Status: Historical UST site

Country Villa Nursing, 340 S Alvarado St, Map ID# E23
Location: Less than 1/8 miles west/southwest
Status: Inactive site

St Vincent Dialysis/Mid-Wilshire Medical/Norman N Nakata etc.), 201 S Alvarado St, Map ID# F24, F28, F30, F31, F40, F41, F42, F43, F44, F45, F46
Location: 1/8 miles northwest
Status: Inactive site

174 S Alvarado St, Map ID# F53
Location: 1/8 miles north
Status: Inactive site

Based upon the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion the potential for significant impact to the site from any listed UST site to be low.

4.0 RECORDS REVIEW

HISTORICAL UST

The California Water Quality Control Board, Hazardous Substance Storage Container Database is a historical listing of UST sites. There are **five** listed HISTORICAL UST sites within a 1/4-mile radius of the site. Four of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Otto CRVanes/Shell Station, 230 S Alvarado St, Map ID# B12
Location: Less than 1/8 miles west
Status: Previously identified as a LUST site with case closure granted

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed HISTORICAL UST site.

SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) listed underground storage tanks and was updated and maintained in the early 1980s. This listing is no longer updated or maintained. There are **seven** listed SWEEPS sites within a 1/4-mile radius of the site. Three of the listed sites are located greater than 1/8 miles distance from the subject property. There are only four listed sites located within a 1 /8 miles distance from the subject site.

Alvarado II Incorporated, 2000 W 3rd St, Map ID# A2
Location: Less than 1/8 miles southwest

St Vincent Medical, 2021 Miramar St, Map ID# C7
Location: Less than 1/8 miles north/northwest

Juan Cornejo/Arshag, 230 S Alvarado St, Map ID# B8
Location: Less than 1/8 miles west

Serm-Darin Saelak, 174 S Alvarado St, Map ID# C9
Location: 1/8 miles north/northwest

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed SWEEPS site.

4.0 RECORDS REVIEW

CERS TANKS/AST

The California Environmental Protection Agency and California Water Quality Control Board, Aboveground Storage Tank (AST) Registration lists were reviewed. There are **two** listed CERS TANKS/AST sites within a 1/4-mile radius of the site. Both listed sites are located greater than 1/8 miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion the potential for significant impact to the site from any listed AST site to be low.

BEP/FID

Bond Expenditure Plan (BEP). California Department of Health Services developed a site specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act Funds. There are **no** listed BEP sites within a one-mile radius of the site.

The California Environmental Protection Agency Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control board. There are **seven** listed FID UST sites within a 1/4-mile radius of the site. All seven listed sites were previously identified as SWEEPS or HISTORIC UST sites.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, we conclude the potential for significant impact to the site from any listed BEP/FID site is low.

ENVIROSTOR

The DTSC's Site Mitigation and Brownfields Reuse Program's Envirostor database identifies sites that have known contamination or sites where there may be reasons to investigate further. The database includes Federal Superfund sites, State Response, including Military Facilities and State Superfund, Voluntary Cleanup, and School sites. There are **26** listed ENVIROSTOR sites within a one-mile radius of the site. All 26 listed sites are located greater than 1/4 miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is low potential for significant impact to the site from any listed ENVIROSTOR sites.

4.0 RECORDS REVIEW

CA SLIC

The California Regional Water Quality Control Board (RWQCB) Spills, Leaks, Investigation and Cleanup Cost Recovery Listing (SLIC) was reviewed. There are **no** listed CA SLIC sites within a 1/2-mile radius of the site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed CA SLIC site.

VCP

The California Department of Toxic Substance Control Volunteer Cleanup Program (VCP) Properties database contains low threat level properties with either confirmed or unconfirmed releases, and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. There is **one** listed VCP site within a 1/2-mile radius of the site. The listed site is located greater than ¼ miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed VCP site.

ENG/INST CONTROLS & DEEDS

The Engineering/Institutional Controls & Deed Restriction Database (ENG/INST CONTROLS & DEEDS) contains a listed of sites where engineering, institutional controls or deed restrictions have been implemented. Engineering controls are physical measures selected for the purpose of preventing or minimizing exposure to hazardous substances. These may include, but are not limited to, fencing, capping, horizontal or vertical barriers, hydraulic controls, or alternative water supplies. Institutional Controls are non-engineered instruments such as administrative or legal controls that help minimize the potential for human exposure. The review indicates there are **no** listed ENG/INST CONTROLS & DEEDS site within a 1/2-mile radius of the site.

Based upon the information reviewed, we conclude there is a low potential for significant impact to the site from any listed ENG/INST CONTROLS & DEEDS site.

4.0 RECORDS REVIEW

HAZNET

The HAZNET data is extracted from the copies of hazardous waste manifests received each year by the DTSC (Department of Toxic Substance Control). The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. The subject property was not identified as a HAZNET site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed HAZNET site.

CERS HAZ WASTE

The California Environmental Protection Agency CERS HAZ WASTE databases contains a list of sites that fall under hazardous chemical management, hazardous waste onsite treatment, household hazardous waste collection and hazardous waste generator programs. The subject property was not identified as a CERS HAZ WASTE site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed HAZNET site.

BROWNFIELDS

Brownfields are abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. There are **two** listed BROWNFIELDS sites within a 1/2-mile of the subject property. Both listed sites are located greater than 1/8 miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the subject site from any listed BROWNFIELDS site is low.

ORPHAN SUMMARY

A review of the unmapped or "orphan" sites did not reveal any additional sites of potential environmental concern to the subject property.

ENVIRONMENTAL RECORDS SOURCES SUMMARY

The subject property was not identified in any of the regulatory databases reviewed. Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any of these off-site "listed" sources.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

PRIOR ENVIRONMENTAL REPORTS

We reviewed a prior Phase I Environmental Site Assessment for the Miramar Towers at 2000 Miramar Street, Los Angeles, California, property prepared by EBI Consulting, dated March 15, 2016. The target property for the report included the subject property (Miramar Development South Lot), which comprised the southern portion of the overall target property. At the time of the report, the site was fully developed with the existing Miramar Towers apartment project. No recognized environmental conditions were identified in connection with the subject property. The historical review indicated that the site was undeveloped or developed with a few single family residences dating back to the late 1800s and was later developed with a hotel and single family residences from the early 1900s to the 1970s. The site was then developed with the existing apartment project in approximately 1980. The report indicated that, based upon the dates of construction, an asbestos survey was not conducted. The report did indicate that an Asbestos O&M Plan was in place at the subject property and recommended maintaining the O&M program.

Surveys Inc. Conducted a Phase I Environmental Site Assessment for the Miramar Towers project located at 2000 Miramar Street, Los Angeles, California dated August 6, 2018, with an update completed November 23, 2018. The target property for the report included the subject property (Miramar Development South Lot), which comprised the southern portion of the overall target property. At the time of the report, the site was fully developed with the existing Miramar Towers apartment project. No recognized environmental conditions were identified in connection with the report. Asbestos containing materials were identified within the Miramar Towers Apartments with an O&M plan in place. Short term radon testing was conducted which indicated that onsite results were well below EPA recommended action levels. The historical review indicated that the site had originally been vacant dated back to the late 1800s prior to being developed with several residential dwellings in the early 1900s and later occupied by a hotel or motel and residential dwellings prior to being developed with the existing apartments in 1979-1980.

Surveys Inc. Conducted a Phase I Environmental Site Assessment for the Miramar Towers project located at 2000 Miramar Street, Los Angeles, California dated July 18, 2019. The target property for the report included the subject property (Miramar Development South Lot), which comprised the southern portion of the overall target property. At the time of the report, the site was fully developed with the existing Miramar Towers apartment project. No recognized environmental conditions were identified in connection with the report. The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY

As a part of our due-diligence we reviewed aerial photographs included as part of a prior report by EBI Consulting (2016) and aerial photographs obtained from the USGS Earth Explorer, Historic Aerials, and Google Earth internet sites. Our review of the available photographs indicates the following activity on the site:

1923 The subject property appears to be occupied by approximately 5 residential dwellings and several associated out buildings. Several residential and small commercial buildings appear to be present to the north followed by Miramar Street. Dwellings and small commercial or apartment buildings appear to be present to the east. W 3rd Street borders to the south followed by single family dwellings. Several dwellings and small commercial buildings appear to be present to the west.

1938 The subject site and adjacent sites appear little changed except additional small commercial buildings are present to the south and southeast across W 3rd Street.

1948 The subject site and adjacent sites appear little changed.

1952 The subject site and adjacent sites appear little changed.

1960 The subject site and adjacent sites appear little changed.

1964 The subject site appears little changed except several of the residential dwellings have been removed from the western portion of the site. The adjacent sites appear little changed.

1970 The western portion of the subject property now appears to be vacant. Two dwellings appear to remain on the eastern portion of the site. The adjacent sites appear little changed except a new small commercial buildings appear to be present across W 3rd Street to the south.

1972 The subject site and adjacent sites remain little changed.

1976 Low resolution photograph. The subject site and adjacent site to the north appear to have been cleared of most buildings and structures. The adjacent sites to the east, south and west appear little changed.

1979 Low resolution photograph. The subject property appears to be under development in associated with the adjacent property to the north. The shell for the Miramar Towers Apartment building appears to be largely complete to the north. The remaining adjacent sites appear little changed.

1980 The subject property now appears to be fully developed with the existing improvements. The existing Miramar Towers Apartments are present to the north. The remaining adjacent sites remain little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY CONTINUED:

1983 The subject site and adjacent sites appear little changed.

1985 Low resolution photograph. The subject site and adjacent sites appear little changed.

1989 The subject site and adjacent sites appear little changed.

1994 The subject site and adjacent sites appear little changed except the adjacent site to the southwest now appear to be vacant.

1995 The subject site and adjacent sites appear little changed.

2002 The subject site and adjacent sites appear little changed.

2003 The subject site and adjacent sites appear little changed.

2004 The subject site and adjacent sites appear little changed.

2005 The subject site and adjacent sites appear little changed.

2007 The subject site and adjacent sites appear little changed.

2009 The subject site and adjacent sites appear little changed.

2010 The subject site and adjacent sites appear little changed.

2011 The subject site and adjacent sites appear little changed.

2012 The subject site and adjacent sites appear little changed.

2014 The subject site and adjacent sites remain little changed.

2017 The subject site and adjacent sites appear little changed except a new commercial building is present to the southwest, across W 3rd Street.

2019 The subject site, Miramar Development South Lot, located at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California, appears to still be developed with the existing improvements which include primarily a parking lot and drive aisle, landscaped areas, sidewalks and similar improvements. The adjacent sites appear little changed.

4.0 RECORDS REVIEW

USGS TOPOGRAPHIC MAPS

1894 Santa Monica 15' Quadrangle. The subject site appears to be vacant. The adjacent sites also appear to be mostly vacant with a few nearby scattered dwellings.

1896 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1898 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1900 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1902 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1921 Santa Monica 15' Quadrangle. The subject site now appears to be occupied by several single family dwellings. Residential or small commercial buildings also appear to be present on the adjacent sites. W 3rd Street borders to the south.

1928 Los Angeles 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1953 Hollywood 7.5' Quadrangle. The subject site and adjacent sites are located within a shaded region where only landmark structures are identified. No landmark structures are depicted on the subject property or immediate adjacent sites.

1966 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1972 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1981 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1991 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1994 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

SANBORN MAP

1906 The subject property appears to be occupied by 5 single family dwellings and associated out buildings. Single family dwellings and several out buildings border to the north followed by Miramar Street. Single family dwellings border to the east. Ocean View Ave (W 3rd St) borders to the south followed by single family dwellings. Single family dwellings are present to the west.

1950 The subject property still appears to be occupied by approximately 5 residential dwellings, however, they are now labeled as part of the Barker Motel. Several buildings labeled as part of the Barker Motel border to the north followed by Miramar Street. Apartments and residential dwellings are present to the east. W 3rd Street borders to the south followed by several residential dwellings and small commercial buildings including two gas and oil stations to the south and southwest. Apartments appear to be present to the east.

1958 The subject site and adjacent sites appear basically similar to 1950 except one of the residential dwellings has been removed from the western portion of the subject site.

1963 The subject site appears little changed except an additional dwelling has been removed from the western portion of the site. The adjacent sites appear little changed.

1970 The western portion of the site now appears to be vacant. Two residential dwellings appear to remain on the eastern portion of the site. The adjacent sites appear little changed except a new small commercial building is present to the south across W 3rd Street.

CITY DIRECTORY REVIEW

City directories were reviewed as part of a prior environmental assessment that included the subject property by EBI Consulting (2016). City directories were reviewed between the years 1924 and 2013 at approximately 5 year intervals. In 1924 and 1929 listings included Miramar Terrace Apartments and Hotel and multiple residences. From 1933 through 1958 listings included Barker Hotel and multiple residences. From 1962 through 1971 listings included New Miramar Hotel & Apartments and multiple residences. From 1981 through 2013 listings included multiple residences, Miramar Towers and Forest City Management.

CHAIN OF TITLE REVIEW

We reviewed a Preliminary Title Report for the subject project prepared by Commonwealth Land Title Company dated March 13, 2020. According to the provided title documents, the property owner was identified as Miramar Tower, a California limited Partnership.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

INTERVIEWS

Fire Department

We contacted Los Angeles Fire Department regarding potential records for the property. We are currently awaiting a response to our request. NOTE: Previous interviews and requests for information to the Los Angeles Fire Department conducted as part of several prior environmental reports conducted for the subject project, did not reveal any records related to underground storage tanks or hazardous material incidents for the project.

Water Department

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

Property Owner/Management

Interviews with property ownership representative and the onsite property management indicated they were unaware of any environmental liens, activity or land use restrictions related to environmental issues. They were also unaware of any underground storage tanks or other environmental concerns associated with the property.

HISTORICAL REVIEW SUMMARY

Based upon the aerial photograph reviews, historic map reviews, city directory reviews, prior environmental reports and personal interviews, it appears the property was originally vacant undeveloped land dating back to the late 1800s prior to being developed with approximately 5 residential dwellings by the early 1900s. The project appears to have then been associated with the Barker Motel by the 1920s, which included the adjacent site to the north, however, the site still appeared to be occupied by 5 residential dwellings. All of the residential dwellings appear to have been removed from the site starting in the late 1950s through the early 1970s. From the mid to late 1970s, the project appears to have been vacant. The site was then developed with the existing improvements in 1979-1980 when the adjacent Miramar Towers apartments were developed. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses. There is no historical evidence of any chemical misuse, unlawful dumping or landfilling, or other sources of contamination to the property.

5.0 SITE RECONNAISSANCE

METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted on May 20, 2020. The scope of the onsite assessment consisted of a visual evaluation of the project site and adjacent properties. No buildings were present onsite at the time of the inspection. Items of potential or recognized environmental significance to the property, if any, were noted.

GENERAL SITE SETTING

The Miramar Development South Lot project is located at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California. The subject property was originally part of an age-restricted (62 and older) Section 8 development, known as Miramar Towers, located at 2000 Miramar Street, Los Angeles, CA. The Owner has subdivided 30,433 square feet, or 0.698 acres, of excess land from the former larger parcel (Miramar Towers Site) to create an individual new pursuant to Case Numbers AA-2018-7423-PEMX and AA-2018-7418-PEMX. The original larger parcel originally had the assessor parcel number APN 5154-020-030 and has since been fully subdivided into two new parcels with new APN numbers 5154-020-034 and 5154-020-033. The subject Site, now separated from the larger Miramar Towers Site, is improved with irrigated landscaping, a concrete paved drive aisle and parking lot, concrete curbing, concrete sidewalks, concrete stairs, concrete storm drainage channels, a CMU enclosure for electrical transformer and electrical vault and related site improvements. Current improvements on the subject property are associated with the Miramar Towers Site, however, no buildings are currently located onsite. The subject property consists of a 0.698 acre parcel within long dimensions extending east to west. The site is 1.5 miles northwest of the downtown Los Angeles, CBD. The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The site is located in an area containing primarily multifamily residential and commercial development.

INTERIOR AND EXTERIOR OBSERVATIONS

Our exterior inspection and area reconnaissance revealed no evidence of any significant soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, hazardous materials or other unidentified substances were observed during the site reconnaissance. The onsite stormwater catch basins appeared to be free of any contaminants. No buildings were present onsite at the time of the assessment. Site usage consisted primarily of a parking lot and drive aisle and landscaped areas.

USTs/ASTs

There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground or aboveground storage tanks were observed during the site reconnaissance. The adjacent Miramar Towers Apartments building is served by an emergency electrical generator. The generator is fueled from an integrated aboveground diesel storage tank, approximately 50 gallons in size. The generator and associated tank are located directly adjacent to the north of the site and appeared to be newer and remain in good condition.

5.0 SITE RECONNAISSANCE

ADJACENT PROPERTIES

North: Miramar Towers Apartments.

East: Older single family dwelling and apartments.

South: W 3rd Street followed by apartments, Center Lake Hotel and West Lake Plaza retail center.

West: Apartments.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

ADDITIONAL HAZARDS/SERVICES

PCBs

PCBs have commonly been used as dielectric (insulating) fluids in transformers and capacitors and in fluorescent light ballasts. PCB-containing fluids were used mainly in indoor locations to minimize the possibility of fire if electrical equipment overheated. The potential hazard occurs when PCBs vaporize and convert chemically to dioxins and furans (two toxic substances). A secondary potential hazard is from spills and leaks that could contaminate the groundwater, soil or buildings with PCB fluids.

PCB-containing fluorescent light ballasts and air conditioning unit capacitors are considered a minor hazard as long as they are not leaking. However, it should be noted certain states regulate disposal of PCB-containing ballasts and capacitors, regardless of unit quantity or size.

Electrical service is provided underground from a pad-mounted electrical transformer. The transformers are owned by the local electric utility. We did not observe any leaking, staining, soil discoloration or stressed vegetation around the transformer vaults. Any future leakage would be the responsibility of the utility.

Based upon our visual observations of the onsite transformers, it is our opinion the potential for PCB contamination at the site is low.

5.0 SITE RECONNAISSANCE

ASBESTOS

Asbestos can be found in almost any building material and is routinely found in insulation, spray applied acoustic ceiling finishes, flooring and roofing materials. Asbestos-containing material (ACM), defined by the Environmental Protection Agency as any material that contains more than 1% asbestos by weight, is most hazardous when friable - i.e., material which, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure. Friable asbestos is considered more hazardous than non-friable asbestos because it can become more easily airborne, and thus is more likely to enter the respiratory system where it can lead to serious health problems. Inhalation of airborne fibers is believed potentially to lead to lung diseases and cancer. Chrysotile is the most common form of asbestos accounting for 95% of asbestos used in the United States. Less common is amphiboles asbestos group, which includes such forms of asbestos as amosite and crocidolite.

Based upon the absence of buildings on the project site, there is a low potential for asbestos containing materials at this project.

LEAD IN PAINT

In 1977, the Consumer Products Safety Commission banned for consumer use paint products that contain lead in excess of 0.06%. If ingested, lead in substances such as water, paint chips or dust can lead to colic, weakened muscle response and a variety of other adverse health effects. Ingestion of lead in paint is particularly a concern in young children, pregnant women and fetuses. Excessive blood-lead levels can seriously impair a child's brain and central nervous system, causing impaired reading and learning disabilities, delayed cognitive development, mental retardation, seizures, convulsions, coma, and death.

A lead-based paint hazard is defined - by the Department of Housing and Urban Development (HUD), and by many state regulatory agencies - as paint containing 0.5% lead by weight/or 1.0 milligram per square centimeter (mg/cm^2). In 1978, the Consumer Product Safety Commission (CPCS) prohibited the sale of paint containing more than 0.06% lead by weight. Since that time, many state, county, or city agencies have adopted lead regulations/ordinances designed to protect children from a lead-based paint hazard: evaluating the health hazard for children may involve medical confirmation of blood-lead levels in children exposed to the surface. It should be noted the area of lead-based paint control and maintenance is evolving rapidly, particularly with respect to legal and medical aspects. As a result, local, state and federal lead prevention programs or health departments should be periodically consulted as to standard and accepted practices and procedures for handling lead-based paint hazards.

Based upon the absence of buildings on the project site, there is a low potential for lead-based paints.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

DOMESTIC WATER

Drinking water may be contaminated with lead, petroleum products, solvents and other chemical substance allowed to enter groundwater. Public water departments are required to analyze and treat water prior to public consumption to assure it meets current government standards.

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

It is our opinion the human health risks associated with the water supply at the project is very low.

RADON

Radon is a naturally occurring, highly mobile, chemically inert radioactive gas created through radioactive decay of uranium and thorium. The potential for occurrence of radon varies widely and is dependent upon (1) the concentration of radioactive materials in the underlying bedrock; (2) the relative permeability of soils with respect to gases; and (3) the amount of fracturing or faulting in surficial materials (EPA, 1987). The concern regarding radon and its potential effects upon humans arises from the results of studies (EPA 1987) which suggest approximately 15% of all lung cancer mortalities in the United States may be attributable to exposure to radon.

The EPA has established a concentration of radon of 4 picocuries per liter as a maximum permissible concentration “action level”. Concentrations above this value would signal a potential health threat. According to studies, an average concentration in homes across the United States is on the order of 1.4 picocuries per liter. Our conversations with the Regional office of the EPA indicate radon has not been a problem in areas underlain by thick sequences of glacial and alluvial soils. The site is underlain with alluvial type soil deposits. The primary concern with radon is over accumulation in poorly ventilated basement areas.

The EPA Radon Zone for Los Angeles County is Zone 2. Zone 2 households have an average indoor level of greater than 2 but less than 4 pCi/L.

The subject project is located in EPA Radon Zone 2, a moderate risk radon region.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

VAPOR ENCROACHMENT

Vapor Encroachment Condition (VEC) is the presence or likely presence of Chemicals of Concern (COC) vapors in the subsurface of the target property caused by the release of vapors from contaminated soils and/or groundwater either on or near the target property. A Vapor Encroachment Screen is a screening process designed to determine the potential for chemicals of concern vapors released from contaminated soil or groundwater to impact a property.

A limited Vapor Encroachment Screen for the subject was conducted utilizing ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The standard uses a two tiered methodology designed to quickly and cost effectively screen out properties with a low risk of Vapor Encroachment. Per HUD Map Chapter 9 Requirement, Tier 1 Screening has been conducted as part of this assessment.

Tier 1 – Initial Screening for potential Vapor Encroachment Conditions (VEC) was designed as a screening step to supplement a Phase I Environmental Assessment and relies on information already collected in a Phase I Investigation. Tier 1 methodology utilizes two primary tools for screening, search distance and chemicals of concern. Search distance includes the primary area of concern surrounding the target property and secondary area of concern for sites potentially upgradient of the target property. Chemicals of concern review addresses whether or not potential chemicals of concern, those chemicals that have the potential to volatize and become vapor, are likely to be present.

Based upon the information reviewed and documented during this assessment, which included a review of all major governmental environmental regulatory databases (see attached EDR Radius Map Report) and an historical review of the site and surrounding properties, and taking into consideration the separation distances, topographical differences, presumed groundwater flow, and local soils conditions, no potential vapor encroachment conditions were identified in connection with the subject property.

6.0 FINDINGS, OPINIONS, CONCLUSIONS AND DEVIATIONS

Based upon the absence of buildings on the project site, there is a low potential for asbestos containing materials or lead-based paints at this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. No potential vapor encroachment conditions were identified in connection with the subject property.

No significant data gaps were encountered during preparation of this report. Full site access was provided during our site inspection. Sanborn Fire Insurance Map coverage was available for the property area and sufficient other historical sources were available to develop the site history for the property.

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with approximately 5 residential dwellings by the early 1900s. The project appears to have then been associated with the Barker Motel by the 1920s, which included the adjacent site to the north, however, the site still appeared to be occupied by 5 residential dwellings. All of the residential dwellings appear to have been removed from the site starting in the late 1950s through the early 1970s. From the mid to late 1970s, the project appears to have been vacant. The site was then developed with the existing improvements in 1979-1980 when the adjacent Miramar Towers apartments were developed. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was not listed in any of the Regulatory Databases reviewed. Based upon our review of all pertinent Regulatory Databases, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of Miramar Development South Lot project located at 1917-2005½ W 3rd Street, Los Angeles, Los Angeles County, California. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

DEVIATIONS

Surveys Inc. has performed this Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Standard Practice for Environmental Site Assessments with no conscious exceptions to or deletions from the standard.

6.0 ENVIRONMENTAL PROFESSIONALS' CERTIFICATION AND SIGNATURE

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in section 312.10 of 40 CFR 312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXPERIENCE

SURVEYS INC. **1998 – Present**

Consultant Engineer/Environmental Coordinator: Responsibilities include conducting engineering and environmental assessments for Lender's, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects across the U.S. Experience includes conducting over 1000 various Engineering Assessments and Phase I and Phase II Environmental Site Assessments.

The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. The assessments are conducted for the purpose of evaluating the construction of the overall development and identifying any possible deficiencies that could affect its current market value or resale potential. The assessment reports are prepared to meet or exceed the requirements of the Lender or Government Agency. These reviews normally include an existing facilities compliance with ADA Title III and can include a Seismic PML study.

The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review; interviews with people knowledgeable and a review of government environmental regulatory databases. Environmental Assessments typically include a review for potential Lead-Based Paints, suspect Asbestos Containing Materials and Radon Gas. Responsible for preparing site specific Asbestos, Lead-Based Paint and Mold and Moisture Operations and Maintenance Plans.

PAUL H. DALTAS, P.E.
PRINCIPAL – SURVEYS INC.

EDUCATION:

BCE, Civil/Structural Engineering
University of Minnesota, Institute of Technology

EXPERIENCE:

SURVEYS INC. **1990 - Present**

Principal Consultant Engineer. Responsible for providing independent, third party, engineering, environmental and seismic assessment services to Lenders, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects throughout the United States. The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. Our Engineering Assessment Reports are prepared to meet or exceed the requirements of the Mortgage Lender, Fannie Mae, Freddie Mac, ASTM, or other agencies. These reviews normally include a review for compliance with ADA Title III provisions and may, if required, include a Seismic PML study for projects in UBC Seismic Zones 3 or 4. The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review and interviews with people knowledgeable about the property. Phase II Environmental work is provided only as required by the Phase I Assessment to determine if suspected hazardous contamination exists. Over 2,000 Engineering/Environmental Assessments completed.

INDUSTRY - FANNIE MAE/HUD **2002-2003**

Fannie Mae, Property Condition Standards, Technical Advisory Panel 2002/2003. Western Regional MAP Lenders Conference PCNA Committee Member 2003.

WEYERHAEUSER BUILDING SYSTEMS **1988 - 1990**

Design Engineer/Project Manager/Regional Sales Manager. Designed, engineered and marketed to the construction industry a wide variety of commercial, industrial and residential structural systems for projects throughout the western United States. Weyerhaeuser industry representative and team member for the Weyerhaeuser PBDM (Probabilistic Beam Design Methodology) advanced reliability based product manufacturing and lumber grading system. Construction Project Manager for Weyerhaeuser structural systems installed in the Northwest.

WEYERHAEUSER-TIMBERLAND INDUSTRIES **1984 - 1988**

Project Manager/Engineer. Overseas construction materials packages specializing in interior and exterior finished wood products such as architectural doors, fire doors, sound doors, builders' hardware, plastic laminate casework, wood cabinetry, commercial and residential millwork, specialty hardware, custom manufactured windows, panel products and lumber. Involved in designing, engineering, estimating, manufacturing and shipping these multi-million dollar material packages from various mills around the world to the Middle East.

HEA-ARCHITECTS, ENGINEERS & CONSTRUCTION MANAGER **1972 - 1984**

Structural Engineer/Construction Manager. Leading Minneapolis, Minnesota firm specializing in medical related buildings such as hospitals, medical office buildings, geriatric care centers and retirement facilities. Work included the design and engineering of reinforced and post-tensioned concrete structures; masonry and precast buildings; steel and composite systems; and wood structure buildings. Onsite Construction Manager in charge of multiple prime contractors for major hospital remodeling and expansion project. Onsite Construction Engineer in charge of mid-rise senior retirement facility.

PRELIMINARY REPORT

Dated as of March 13, 2020 at 7:30 a.m.

In response to the application for a policy of title insurance referenced herein, Commonwealth Land Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.
The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitation on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

The policy(s) of title insurance to be issued hereunder will be policy(s) of **Commonwealth Land Title Insurance Company.**

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Order No: 09197264-919-KRC-KRE

SCHEDULE A

The form of policy of title insurance contemplated by this report is:

ALTA Extended Owner's Policy of Title Insurance (6-17-06)

ALTA Extended Loan Policy of Title Insurance (6-17-06)

PARCEL C:

NON-EXCLUSIVE EASEMENTS AS SET FORTH IN THE RECIPROCAL EASEMENT AGREEMENT RECORDED DECEMBER 16, 2019 AS INSTRUMENT NO. 20191402989 OF OFFICIAL RECORDS.

Order No: 09197264-919-KRC-KRE

APN: 5154-020-030

SCHEDULE B – Section A

The following exceptions will appear in policies when providing standard coverage as outlined below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the Public Records.

6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

SCHEDULE B – Section B

At the date hereof Exceptions to coverage in addition to the printed exceptions and exclusions in said policy form would be as follows:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2020-2021.

B. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) for the purpose(s) shown below and rights incidental thereto, as granted in a document:

Granted to:	The Pacific Telephone and Telegraph Company
Purpose:	Utilities
Recording Date:	February 13, 1979
Recording No:	79-175414 of Official Records
Affects:	A portion of said land as more particularly described in said document

3. Matters contained in that certain document

Entitled:	Covenant and Agreement Regarding Maintenance of Building and Uses
Recording Date:	March 01, 1979
Recording No:	79-234301 of Official Records

Reference is hereby made to said document for full particulars.

4. An irrevocable offer to dedicate an easement over a portion of said Land for

Purpose(s):	Public street or highway
Recording Date:	March 06, 1979
Recording No:	79-254595 of Official Records
Affects:	A portion of said land as more particularly described in said document

5. Matters contained in that certain document

Entitled:	Covenant and Agreement Regarding Maintenance of Building
Recording Date:	April 10, 1979
Recording No:	79-383663 of Official Records

Reference is hereby made to said document for full particulars.

6. Any rights, interests, or claims which may exist or arise by reason of the following matters disclosed by survey,

Job No.:	Not Shown
Dated:	September 13, 2016
Last revised:	April 20, 2017
Prepared by:	Delta Surveying & Mapping
Matters shown:	As follows:

A) A 0.2' encroachment of a retaining wall into the street right of way of Miramar Street
B) A 1' to 1.2' encroachment of a sidewalk onto the property from the street right of way of Miramar Street
C) An unrecorded easement or other right for a transformer located on the property
D) A generator located on the property
E) A 2.3' to 3.3' encroachment of a sidewalk onto the property from the street right of way of 3rd Street
F) The measured distance (324.71') for the southerly boundary of the property differs from record (324.87') by 0.16'
G) The original survey certification does not extend, nor is it transferable, to the current transaction

7. Matters contained in that certain document

Entitled:	Master Covenant and Agreement Regarding On-Site Stormwater Mitigation Measures and Maintenance
Recording Date:	August 08, 2019
Recording No:	20190791536 of Official Records

Reference is hereby made to said document for full particulars.

8. Matters contained in that certain document

Entitled:	Reciprocal Easement Agreement
Recording Date:	December 16, 2019
Recording No:	20191402989 of Official Records

Reference is hereby made to said document for full particulars.

9. Please be advised that our search did not disclose any open Deeds of Trust of record. If you should have knowledge of any outstanding obligation, please contact the Title Department immediately for further review prior to closing.

10. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

11. Any easements not disclosed by the public records as to matters affecting title to real property, whether or not said easements are visible and apparent.

12. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other matters which a correct survey would disclose and which are not shown by the public records.

13. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

END OF SCHEDULE B EXCEPTIONS

PLEASE REFER TO THE "NOTES AND REQUIREMENTS SECTION" WHICH FOLLOWS FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION

REQUIREMENTS SECTION:

1. Prior to the close of escrow, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

2. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the limited partnership named below:

   Name: Miramar Tower, a California limited partnership

   a) A complete copy of the limited partnership agreement and all amendments thereto.

   b) Satisfactory evidence that the partnership was validly formed and is in good standing.

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

3. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: JRC Miramar MM, LLC (General Partner)

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

4. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below:

   Limited Liability Company: Wakeland Miramar, LLC (General Partner)

   a) A copy of its operating agreement, if any, and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

   b) If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendments thereto with the appropriate filing stamps.

   c) If the Limited Liability Company is member-managed, a full and complete current list of members certified by the appropriate manager or member.

   d) A current dated certificate of good standing from the proper governmental authority of the state in which the entity is currently domiciled.

   e) If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

   f) If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

   g) Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form.

5. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance by the corporation named below:

   Name of Corporation: Wakeland Housing and Development Corp (General Partner)

   a) A Copy of the corporation By-laws and Articles of Incorporation

   b) An original or certified copy of a resolution authorizing the transaction contemplated herein

   c) If the Articles and/or By-laws require approval by a ‘parent’ organization, a copy of the Articles and By-laws of the parent

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

6. Unrecorded matters which may be disclosed by an Owner’s Affidavit or Declaration. A form of the Owner’s Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

Order No: 09197264-919-KRC-KRE

INFORMATIONAL NOTES SECTION

1. The information on the attached plat is provided for your convenience as a guide to the general location of the subject property. The accuracy of this plat is not guaranteed, nor is it a part of any policy, report or guarantee to which it may be attached.

2. For wiring Instructions please contact your Title Officer or Title Company Escrow officer.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

6. Property taxes, including any personal property taxes and any assessments collected with taxes, are paid. For proration purposes the amounts were:

Tax Identification No.:	5154-020-030
Fiscal Year:	2019-2020
1st Installment:	$7,492.72
2nd Installment:	$7,492.70
Exemption:	$0.00
Code Area:	00067

Affects: The herein described Land and other land.

7. None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

8. The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land a multiple family residence, known as 2000 Miramar Street, Los Angeles, CA, to an Extended Coverage Loan Policy.

9. There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective January 1, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We do share Personal Information among affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.
   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:
{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09197264-919-KRC-KRE for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09197264-919-KRC-KRE for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Commonwealth Land Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records.

5. The Land is currently in use as _____ ; _____occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.

8. There are no material violations of any current, enforceable covenant affecting the Property and the Undersigned has received no written notice from any third party claiming that there is a present violation of any current, enforceable covenant affecting the Property.

This declaration is made with the intention that Commonwealth Land Title Company and Commonwealth Land Title Insurance Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on ___ at _____.

Re: Su lemental Letter re HCID Determination 1917-2005 1/2 W 3rd Street

Dear Mr. Truong:

As ou now, this firm re resents the Rose Communit De elo ment Cor oration (the "A licant") in connection with the ro osed se en-stor residential uilding ("Pro ect") located at 1917-2005 1/2 West 3rd Street (Site). Per our re uest on our tele hone call on Ma 19, 2020, we are writing to su lement the A lication For A Re lacement Unit Determination that we su mitted to our office on Ma 18, 2020. S ecificall , ou re uested a rief e lanation of the relationshi etween the Site and the e isting Miramar Towers A artments located at 2000 Miramar Street (the "Miramar Towers Site"). The Site is de icted elow and highlighted in red for our reference.

The Site is a ro imatel 30,433 s uare feet com rised of two legal lots resulting from the a ro ed 2019 lot line ad ustment cases AA-2018-7423-PMEX and AA-2018-7418-PMEX. The Site is identified as "Parcel 2" in the recorded Certificates of Com liance attached hereto as E hi it 1. As a result of the lot line ad ustments, the Site was se arated from the larger ro ert to the north, referred to as "Parcel 1" in the recorded Certificates of Com liance, also nown as the Miramar Towers Site. The Miramar Towers Site is im ro ed with an age-restricted (62 and older) Section 8 de elo ment nown as the Miramar Towers A artments. The Site is currentl im ro ed with a edestrian ath, landsca ing, and dri ewa with se en surface ar ing s aces. As art of the ermitting rocess, the A licant will record a lot tie affida it to co enant and agree with the Cit that the Site shall e held as one arcel and no ortion shall e sold se aratel .

In addition, while the Site and the Miramar Towers Site currentl share the same Assessor Parcel Num er ("APN"), 5154-020-030, the Count Assessor's Office is currentl rocessing a re uest for a new and se arate APN for the Site, which the Count should issue June 2020.

Please contact me should ou ha e an additional uestions.

Ver trul ours,

Kira Teshima Conlon

ENVIRONMENTAL QUESTIONNAIRE

ASTM E-1527-13 USER ENVIRONMENTAL QUESTIONNAIRE

(1.) Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the *property* that are filed or recorded under federal, tribal, state or local law? (Yes/No)
Comments:

(2.) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? (Yes/No)
Comments:

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

As the *user* of this *ESA* do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an adjoining *property* so that you would have specialized knowledge of the chemicals and processes used by this type of business? (Yes/No)
Comments:

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? (Yes/No)
Comments: There are no known contaminates on the site, and no fair market value appraisal done for the site

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example, as *user*, (Yes/No)
(a.) Do you know the past uses of the *property*? No use since 1989 beyond walking path, and fire lane
(b.) Do you know of specific chemicals that are present or once were present at the *property*? No, Not aware of any
(c.) Do you know of spills or other chemical releases that have taken place at the *property*? No, Not aware of any
(d.) Do you know of any environmental cleanups that have taken place at the *property*? No, Not aware of any
Comments:

(6.) The degree of obviousness of the presence of likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the *user* of this *ESA*, based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of contamination at the *property*? (Yes/No)
Comments:

Mr. Michael Daly
Jonathan Rose Companies
551 Fifth Avenue, 23rd floor
New York, NY 10176

Subject: **Phase I Environmental Site Assessment**
Miramar Towers
2000 Miramar Street, Los Angeles, California
EBI Project No. 1716000093

Dear Mr. Daly:

Attached please find our *Phase I Environmental Site Assessment* (the report) for the above-mentioned asset (the Subject Property). During the survey and research, our surveyor met with agents representing the Subject Property, or agents of the owner, and reviewed the Subject Property and its history. The report was completed according to the terms and conditions authorized by you. This report has been completed in general conformance with the ASTM Standard E 1527-13, as well as the requirements of the United States Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Chapter 9.

The purpose of this report is to acquire environmental information, observe the general condition and maintenance status of the Subject Property, to suggest remediation and/or maintenance practices considered customary for the Subject Property to continue in its current operation, compared to properties of similar age and condition, and to identify recognized environmental conditions in connection with the Subject Property described in this report.

Reliance on the report and the information contained herein shall mean (i) the report may be relied upon by a lender to be selected by *Jonathan Rose Companies*, in determining whether to make a loan evidenced by a note secured by the Subject Property ("the Mortgage Loan"); (ii) the report may be relied upon by any purchaser in determining whether to purchase the Mortgage Loan (but not the Subject Property) from that lender, or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan, and any rating agency rating securities representing an interest in the Mortgage Loan or backed or secured by the Mortgage Loan; (iii) the report may be referred to in and included, in whole or in part, with materials offering for sale the Mortgage Loan or an interest in the Mortgage Loan or securities backed or secured by the Mortgage Loan; (iv) the report speaks only as of its date in the absence of a specific written update of the report signed and delivered by EBI Consulting.

There are no intended or unintended third party beneficiaries to this report, except as expressly stated herein.

EBI is an independent contractor, not an employee of either the issuer or the borrower, and its compensation was not based on the findings or recommendations made in the report or on the closing of any business transaction.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312 and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Thank you very much for the opportunity to provide environmental consulting services to *Jonathan Rose Companies*. Should you have any questions or require additional information, please do contact the undersigned.

Respectfully submitted,
EBI CONSULTING

HUD CERTIFICATION

I understand that my environmental review will be used by *Jonathan Rose Companies* ("MAP Lender") to document to the U.S. Department of Housing and Urban Development that the MAP Lender's application for FHA multifamily mortgage insurance was prepared and reviewed in accordance with HUD requirements. I certify that my review was in accordance with the HUD requirements applicable on the date of my review and that I have no financial interest or family relationship with the officers, directors, stockholders, or partners of the Borrower, the general contractor, any subcontractors, the buyer or seller of the proposed property or engage in any business that might present a conflict of interest.

I am under contract for this specific assignment and I have no other side deals, agreements, or financial considerations with the MAP Lender or others in connection with this transaction. This report is written to meet the Multifamily Accelerated Processing (MAP) guidelines pursuant to the HUD mortgage insurance program 223(f) as well as ASTM E 1527-13.

Signed: _____ **Date:** March 15, 2016

EXECUTIVE SUMMARY

At the request of *Jonathan Rose Companies*, EBI has performed a Phase I Environmental Site Assessment (ESA) of the property located at 2000 Miramar Street in Los Angeles, California, herein referred to as the Subject Property. The main objective of this ESA was to identify *recognized environmental conditions* in connection with the Subject Property, defined in ASTM E 1527-13, as the presence or likely presence of any hazardous substances or petroleum products that indicate an existing release, a past release, or a material threat of a release. This ESA also includes a preliminary evaluation of certain potential environmental conditions that are outside the scope of ASTM E 1527-13. In addition to ASTM E 1527-13, the report was completed in accordance with portions of the U.S. Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Chapter 9.

The Subject Property includes one irregular-shaped parcel, totaling approximately 2.77 acres. The Subject Property is currently improved with a 157-unit multifamily residential complex, including one eight-story, concrete slab-on-grade apartment building. Additional structures and amenities include the following: a one-story administrative leasing office and community recreation center, attached on the north exterior of the tower building. There are no basements present beneath the existing structures. The existing improvements were reportedly constructed in 1980.

At the time of inspection, the Subject Property was occupied by a 157-unit multifamily senior residential complex, including one eight-story, concrete slab-on-grade apartment building, attached to one-story leasing office/clubhouse building. With the exception of the administrative leasing office, there are currently no commercial or industrial operations conducted at the Subject Property.

Below is the Assessment Summary Table presenting our recommended actions for the Subject Property. EBI's Findings and Opinions are presented in Section 8.0, and recommendations for further action or investigation are presented in Section 9.0.

ASSESSMENT SUMMARY TABLE

Assessment Component	Section(s)	Recommended Actions	Estimated Cost
Historical Review	4.3	No Further Action	
Current Occupants / Operations	2.3, 5.0	No Further Action	
Hazardous Substances / Petroleum Products	5.2	No Further Action	
Waste Generation	5.3	No Further Action	
Storage Tanks	5.4	No Further Action	
PCBs	5.5	No Further Action	
Potential Off-site Sources	2.5, 4.1	No Further Action	
Regulatory Agency / Database Review	4.1	No Further Action	
Asbestos Containing Materials	7.1	Continue the implementation of the existing Asbestos Operations and Maintenance (O&M) Plan.	Action item

1.0 INTRODUCTION

This report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 2000 Miramar Street in Los Angeles, California.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-13 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Practice E 1527-13. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-13 are noted below or in the corresponding sections of this report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Subject Property through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Subject Property history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Subject Property conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Subject Property.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.
- Past ownership through a review of available prior reports and local municipal file review.

The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-13: asbestos-containing materials (ACM), radon, lead-based paint (LBP), lead in drinking water, mold, additional HUD factors, and vapor encroachment.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This *Phase I Environmental Site Assessment* (the report) has been prepared for the use of *Jonathan Rose Companies* and the United States Department of Housing and Urban Development (HUD), in accordance with our Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services approved and signed by *Jonathan Rose Companies*, and with the limitations described below, all of which are integral parts of this report. A copy of the signed Standard Conditions For Engagement and Authorization Letter and Agreement for Environmental Services is maintained at the EBI Consulting office in Burlington, Massachusetts.

DRAFT

EBI has performed this Phase I Environmental Site Assessment in conformance with the scope and limitations of *ASTM E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* as well as the requirements of the United States Department of Housing and Urban Development (HUD) Multifamily Accelerated Processing (MAP) Guide, Revised August 18, 2011, pursuant to 223(f). This report was prepared with no exceptions or deletions from ASTM Standard E 1527-13.

This *Phase I Environmental Site Assessment* has been prepared to assess a parcel of commercial real estate with respect to the range of contaminants within the scope of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) and petroleum products. As such, this practice is intended to permit *Jonathan Rose Companies* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the Subject Property consistent with good commercial or customary practice" as defined in 42 U.S.C. § 9601(35)(B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-13; a visual site survey of areas readily observable, easily accessible or made accessible by the Subject Property contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Subject Property. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Subject Property. Findings, conclusions, and recommendations included in the report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. EBI relies completely on the information, whether written, graphic, or verbal, provided by the Subject Property contact or as shown on any documents reviewed or received from the Subject Property contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, EBI did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The observations in this report are valid on the date of the investigation. Where access to portions of the Subject Property or to structures on the Subject Property was unavailable or limited, EBI renders no opinion as to the presence of hazardous substances or petroleum products in that portion of the Subject Property or structure. Inaccessible portions of the Subject Property are described below. In addition, EBI renders no opinion as to the presence of, or indirect evidence relating to, hazardous

DRAFT

substances or petroleum products where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

It is acknowledged that EBI judgments shall not be based on scientific or technical tests or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that EBI conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services are not guaranteed to be a representation of actual conditions on the Subject Property, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, EBI shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

Client and EBI agree that to the fullest extent permitted by law, EBI shall not be liable to Client for any special, indirect or consequential damages whatsoever, whether caused by EBI's negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The ASTM Standard E 1527-13 do not encompass analytical testing to evaluate asbestos containing materials, radon, lead-based paint, drinking water quality, indoor air quality, stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Any analytical testing performed at the Subject Property has been conducted in accordance with the Standard Conditions for Engagement and Authorization Letter and Agreement for Environmental Services and the client-specific Scope of Work. Unless otherwise specified herein, such testing involves screening methods intended to provide a broad and approximate evaluation of conditions at readily accessible portions of the Subject Property, limited by project constraints, and should not be construed as a comprehensive program designed to comply with a specific regulatory program. If a thorough and regulatory-compliant study is warranted based on the findings of the Phase I ESA, EBI will recommend the appropriate further investigation. In certain cases, quantitative laboratory testing is performed as part of the assessment and analyses have been conducted by an outside laboratory. EBI relies upon the data provided by the outside laboratory, and has not conducted an independent evaluation of the reliability of this data.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The report speaks only as of its date, in the absence of a specific written update of the report, signed and delivered by EBI.

Additional information that becomes available after our survey and draft submission concerning the Subject Property should be provided to EBI so that our conclusions may be revised and modified if necessary, at additional cost. This report has been prepared in accordance with our Standard Conditions for Engagement, which is an integral part of this report.

DRAFT

1.4 SPECIAL TERMS AND CONDITIONS

This Phase I Environmental Site Assessment (the report) has been prepared to assist a lender to be selected by Jonathan Rose Companies in determining whether to make a loan evidenced by a note secured by the Subject Property. Reliance upon this report does not extend to entities or individuals interested in purchasing the Subject Property. Amendments to EBI's limitations as stated herein that may occur after issuance of the report are considered to be included in this report. EBI's liability to a purchaser wishing to use this report is limited to the cost of the report. Payment for the report is made by, and EBI's contract and report extends to Jonathan Rose Companies only, in accordance with our Standard Conditions For Engagement and, Authorization Letter and Agreement for Environmental Services.

1.5 DATA GAPS

Any data gaps identified herein, as defined by ASTM E 1527-13, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Subject Property and do not alter the conclusions of this report.

DRAFT

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 OWNERSHIP AND LOCATION

According to the Los Angeles County Assessor's Office, the Subject Property is currently owned by Towers Miramar Real Tech.

The Subject Property is located at 2000 Miramar Street in the City and County of Los Angeles, California. The Subject Property includes one irregular-shaped parcel, identified by the Los Angeles, California Assessor's Office as 5154-020-030, totaling approximately 2.77 acres. The Subject Property is located approximately 300 feet east of the intersection of Miramar Street and Alvarado Street. Figure 1 - Location Map depicts the location of the Subject Property on a street map of Los Angeles, California. Figure 2 - Locus Map depicts the location of the Subject Property on the Hollywood, California United States Geological Survey (USGS) 7.5 Minute Topographic Quadrangle. Figure 3 - Site Plan depicts the configuration of the Subject Property and adjoining properties.

2.2 SUBJECT PROPERTY IMPROVEMENTS

The Subject Property is currently improved with a 157-unit multifamily residential complex, including one eight-story, concrete slab-on-grade apartment building. Additional structures and amenities include the following: a one-story administrative leasing office and community recreation center, attached on the north exterior of the tower building. There are no basements present beneath the existing structures. The existing improvements were reportedly constructed in 1980.

The existing buildings are located on the central portion of the property. Areas of the Subject Property surrounding the existing building include the following: asphalt-paved surface parking, located along the northeast side and south side of the tower building; concrete driveway, located at the southeast side of the property, concrete walkways, located throughout the Subject Property; and landscaping surrounding the building. Land and building areas are as follows:

SUBJECT PROPERTY IMPROVEMENTS					
Address	**Floors**	**Basement**	**Area (SF)**	**DOC**	**Lot Size (Acres)**
Miramar Towers	8	No	132,600	1980	2.77
Leasing office/clubhouse building attached to the north exterior of the tower building	1	No	4,028	1980	Inclusive

SF: Gross Square Feet
DOC: Date of Construction

2.3 CURRENT USE OF THE SUBJECT PROPERTY

At the time of inspection, the Subject Property was occupied by 157-unit multifamily senior residential complex, including one eight-story, concrete slab-on-grade apartment building, attached to one-story leasing office/clubhouse building. With the exception of the administrative leasing office, there are currently no commercial or industrial operations conducted at the Subject Property.

Please refer to Section 5.2 for further discussion regarding hazardous substances and petroleum products at the Subject Property.

DRAFT

2.4 MUNICIPAL SERVICES & UTILITIES

The Subject Property is serviced by the following municipal services and utilities:

MUNICIPAL SERVICES AND UTILITIES	
Utility	**Provider/Source**
Potable Water Supply	Los Angeles Department of Water and Power
Sewage Disposal System	City of Los Angeles
Electrical Service	Los Angeles Department of Water and Power
Natural Gas Service	The Gas Company
Oil Service	Not applicable
Heating/Cooling Systems	Electric split system HVAC units for the leasing office/clubhouse. The tower building cooling system is comprised of a two-pipe chilled water system. Chilled water is produced by one 100-ton air-cooled chiller unit that is located on the roof.
Emergency Power	One 30 KW diesel fired emergency generator with a self-contained, 60-gallon fuel tank.

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Subject Property is primarily characterized by residential and retail/commercial development.

ADJOINING PROPERTIES	
North	The Subject Property is bound to the north by Miramar Street, beyond which is residential development.
South	The Subject Property is bound to the south by 3rd Street, beyond which are JJ Park Motel (1906 W. 3rd Street), office building (1920 W. 3rd Street), Westlake Plaza retail strip (1926 W. 3rd Street), and an undeveloped land to the south-southwest.
East	The Subject Property is bound to the east by residential development.
West	The Subject Property is bound to the west by eTown Inn (2020 Miramar Street) and apartment building (2007 W. 3rd Street).

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties.

DRAFT

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by *Jonathan Rose Companies* with regard to this Phase I Environmental Site Assessment. Additionally, a User Questionnaire was forwarded to the designated Client contact. The User Questionnaire has been completed and returned to our offices. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The User Questionnaire and any additional documentation referenced below is presented in Appendix C.

3.1 TITLE RECORDS

Title record information associated with the Subject Property has not been provided to EBI by *Jonathan Rose Companies*. A detailed discussion regarding review of information obtained from other sources is presented in Section 4.3.5 of this report.

3.2 ENVIRONMENTAL LIENS AND ACTIVITY AND USE LIMITATIONS

Jonathan Rose Companies provided no information regarding environmental liens or activity and use limitations in connection with the Subject Property. A detailed discussion regarding environmental liens is presented in Section 4.3.7 of this report. A detailed discussion regarding activity and use limitations is presented in Sections 4.1.1 and 4.1.2 of this report.

3.3 SPECIALIZED KNOWLEDGE

Jonathan Rose Companies provided no specialized knowledge that is material to recognized environmental conditions in connection with the Subject Property. EBI was not provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Subject Property, except as presented in Section 4.3.8 of this report.

3.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Jonathan Rose Companies provided no commonly known or reasonably ascertainable information within the local community about the Subject Property that is material to recognized environmental conditions in connection with the Subject Property.

3.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Jonathan Rose Companies provided no information regarding valuation reduction for environmental issues in connection with the Subject Property.

3.6 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

Jonathan Rose Companies provided contact information for the Subject Property owner, manager and/or occupants.

3.7 REASON FOR PERFORMING PHASE I ESA

Jonathan Rose Companies retained EBI to complete this Phase I Environmental Site Assessment in connection with a real estate transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, state, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM E 1527-13, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded "orphan" properties within the same zip code. The database report is presented in Appendix F.

The database report identified eight "orphan sites." Orphan sites are those sites that could not be accurately mapped or geocoded due to inadequate location information. EBI attempted to locate these sites via vehicular reconnaissance and interviews with personnel familiar with the area. Based on this research, EBI did not identify listed orphan sites within the approximate minimum search distances that may be considered likely to have impacted conditions at the Subject Property.

It should be noted that plotted locations of listed sites are not always accurate. With regard to listings that are determined or suspected to be inaccurate, based on information from other sources such as direct observation or consultation with individuals familiar with the property, EBI uses the best available data when evaluating the location of listed sites discussed below.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	**Approximate Minimum Search Distance**	**Subject Property Listed**	**Off-site Listings Within Search Distance**
Federal NPL Sites	1.0 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
Federal CERCLIS Sites	0.5 mile	No	0
Federal CERCLIS NFRAP Sites	0.5 mile	No	0
Federal RCRA CORRACTS Sites	1.0 mile	No	0
Federal RCRA non-CORRACTS TSD Sites	0.5 mile	No	0
Federal RCRA Generators Sites	Property & Adjoining	No	0
Federal Engineering / Institutional Control Sites	0.5 mile	No	0
Federal ERNS Sites	Property	No	NA
CA Annual Workplan Sites (AWP)	1.0 mile	No	0
CA High-Priority Confirmed Release Sites (RESPONSE)	1.0 mile	No	0
CA Hazardous Waste Sites (ENVIROSTOR)	1.0 mile	No	**22**
CA Proposition 65 Notification Records	1.0 mile	No	0
CA Toxic Pits Cleanup Act Sites (Toxic Pits)	1.0 mile	No	0
CA Bond Expenditure Plan	1.0 mile	No	0
CA Hazardous Waste and Substances Sites List (Cortese)	0.5 mile	No	0
CA Spill, Leaks, Investigations, and Cleanup (SLIC)	0.5 mile	No	**1**
CA Voluntary Cleanup Program (VCP) Properties	0.5 mile	No	**1**
CA Regional Water Quality Control Board (RWQCB)	0.5 mile	No	**18**

4.1.1 Federal Agency Database Records

National Priority List (NPL)
The NPL database, also known as the Superfund List, is a subset of CERCLIS and identifies sites that are ranked as high priority for remedial action under the Federal Superfund Act. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the NPL.

Delisted National Priority List (NPL)
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Delisted NPL database.

Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
CERCLIS contains data regarding potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies, and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability ACT (CERCLA). CERCLIS contains sites that are included on the National Priority List (NPL), as well as sites which are in the screening and assessment phase for possible inclusion on the NPL. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the CERCLIS database.

DRAFT

CERCLIS – No Further Remedial Action Planned (CERCLIS-NFRAP)
As of February 1995, CERCLIS sites designated as No Further Remedial Action Planned (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed without the need for the site to be placed on the NPL, or the contamination was not considered sufficient to warrant Federal Superfund action or NPL consideration. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the CERCLIS-NFRAP database.

Resource Conservation and Recovery Act (RCRA) – Corrective Action Tracking System (CORRACTS)
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information regarding sites that generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. The RCRA-CORRACTS database identifies TSD facilities that have conducted, or are currently conducting, corrective action(s) as regulated under RCRA. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RCRA CORRACTS database.

RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) Facilities
RCRA non-CORRACTS Treatment, Storage and/or Disposal (TSD) facilities are required to register hazardous waste activity under the Resource Conservation and Recovery Act (RCRA). Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the RCRA non-CORRACTS TSD database.

RCRA Hazardous Waste Generators
Hazardous waste generators tracked under the Resource Conservation and Recovery Act (RCRA) are classified as either Large Quantity Generators (LQGs), Small Quantity Generators (SQGs), or Conditionally Exempt Small Quantity Generators (CESQG). A RCRA-LQG is defined as a facility that generates over 1,000 kilograms (Kg) of hazardous waste, or over 1 Kg of acutely hazardous waste per month. A RCRA-SQG is defined as a facility that generates between 100 Kg and 1,000 Kg of hazardous waste per month. A RCRA-CESQG is defined as a facility that generates less than 100 Kg of hazardous waste, or less than 1 Kg of acutely hazardous waste per month. Neither the Subject Property nor any adjoining properties were identified on the RCRA Generator database.

Federal Engineering Control / Institutional Control Registries
The completion of site cleanup activities may include the implementation of engineering controls or institutional controls as part of the response action. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on Federal Engineering Control or Institutional Control Registries.

Emergency Response Notification System (ERNS)
ERNS is a national database used to collect information regarding reported releases of petroleum products and/or hazardous substances. The database contains information from spill reports submitted to Federal agencies, including the EPA, the U.S. Coast Guard, the National Response Center, and the

DRAFT

U.S. Department of Transportation. A review of this database was conducted in order to determine whether any spills or incidents involving releases of hazardous substances or petroleum products have occurred at the Subject Property. The Subject Property was not identified on the ERNS database.

4.1.2 State and Tribal Agency Database Records

Annual Workplan Sites (AWP)
The California Department of Toxic Substance Control (DTSC) Annual Workplan Sites (AWP) identifies known hazardous substance release sites targeted for cleanup. The data source is the California Environmental Protection Agency. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the AWP database.

California High-Priority Confirmed Release Sites (RESPONSE)
The California High-Priority Confirmed Release Sites (RESPONSE) database contains confirmed release sites where the California Department of Toxic Substance Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the RESPONSE database.

California Hazardous Waste Sites (ENVIROSTOR)
The California Hazardous Waste Sites (ENVIROSTOR) database contains potential or confirmed hazardous substance release sites, or sites for which there may be reasons to investigate further, identified by the California DTSC. The database includes the following site types: Federal NPL; State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. The Subject Property was not identified on the ENVIROSTOR database. However, 22 sites located within 1.0 mile of the Subject Property were identified on the ENVIROSTOR database. Of these site, 19 are located more than 0.50 miles from the Subject Property. Based on distance from the Subject Property, these 19 sites are not anticipated to impact the environmental integrity of the Subject Property. Information regarding the remaining three listed sites is presented in the following table:

ENVIROSTOR			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Central Los Angeles High School No.9 450 South Grand View Street Los Angeles, California	0.334 miles / West-northwest / Crossgradient	19730194	Notification Date: 02/10/2000 Contaminants: Total chromium, nickel, arsenic, others Media Impacted: Soil Status: No further action Date of Closure: 11/19/2004
Iglesia Ni Cristo 141 North Union Avenue Los Angeles, California	0.347 miles / East-northeast / Upgradient	60001080	Notification Date: 07/29/2009 Contaminants: Lead Media Impacted: Soil Status: No further action Date of Closure: 10/08/2009
West Fourth Street Site 2424 West 4th Street Los Angeles, California	0.359 miles / West / Downgradient	19490210	Notification Date: 09/20/1990 Contaminants: Not reported Media Impacted: Not reported Status: Refer to other agency Date of Closure: NA

* Presumed hydrogeologic gradient based upon regional topography

DRAFT

Based upon the current regulatory status and/or distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified ENVIROSTOR sites represent an environmental concern to the Subject Property.

Proposition 65 Notification Records

Proposition 65 Notification Records contain facility notifications regarding any release that could potentially impact drinking water and thereby expose the public to a potential health risk. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the Proposition 65 Notification database.

Toxic Pits Cleanup Act Sites (Toxic Pits)

The Toxic Pits Cleanup Act Sites (Toxic Pits) database contains sites identified by the California Water Resources Control Board that are suspected to contain hazardous substances where cleanup has not yet been completed. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the Toxic Pits database.

California Bond Expenditure Plan

The California Bond Expenditure Plan was developed by the California Department of Health Services as a site-specific expenditure plan for the appropriation of Hazardous Substance Cleanup Bond Act funds. Neither the Subject Property nor any sites located within 1.0 mile of the Subject Property were identified on the California Bond Expenditure Plan database.

Hazardous Waste and Substances Sites List (Cortese)

The Hazardous Waste and Substance Site List (also known as the Cortese List) is a planning document used by the State, local agencies, and developers to comply with California Environmental Quality Act requirements in providing information regarding the location of hazardous materials releases. Government Code Section 65962.5 requires the California Environmental Protection Agency to develop at least annually an updated Cortese List. The California Department of Toxic Substance Control (DTSC) is responsible for preparing a portion of the information that comprises the Cortese List, and other state and local government agencies are required to provide additional hazardous material release information for the Cortese List. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the Cortese List.

Spill, Leaks, Investigations, and Cleanup (SLIC)

The Spills, Leaks, Investigations, and Cleanups (SLIC) database, maintained by the California Water Resources Control Board, includes unauthorized discharges from spills and leaks, other than from underground storage tanks or other regulated sites. The Subject Property was not identified on the SLIC database. However, one site located within 0.5 mile of the Subject Property was identified on the SLIC database. Information regarding the listed site is presented in the following table:

SLIC			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Furbert Property 2016 Temple Los Angeles, California	0.493 miles / North-northeast Crossgradient	SL204FM2481	Notification Date: Not reported Contaminants: TPH Media Impacted: Not reported Status: Case closed Date of Closure: 06/10/2002

* Presumed hydrogeologic gradient based upon regional topography

DRAFT

Based upon the current regulatory status and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified SLIC site represent an environmental concern to the Subject Property.

Voluntary Cleanup Program (VCP) Properties

The Voluntary Cleanup Program (VCP) Properties database identifies low threat level properties with either confirmed or unconfirmed releases, for which the project proponents have requested that Department of Toxic Substances Control (DTSC) oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. The Subject Property was not identified on the VCP database. However, one site located within 0.5 mile of the Subject Property was identified on the VCP database. Information regarding the listed site is presented in the following table:

VCP			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Ignesia Ni Cristo 401 North Union Avenue Los Angeles, California	0.52 miles / South / Upgradient	60001080	Responsible Party: Iglesia Ni Crsito Notification Date: 07/29/2009 Contaminants: Lead Media Impacted: Soil Status: No further action Date of Closure: 10/08/2009

* Presumed hydrogeologic gradient based upon regional topography

Based upon the current regulatory status, distance/presumed hydrogeologic gradient relative to the Subject Property, and/or reported nature/extent of contamination, it is considered unlikely that conditions associated with the identified VCP site represent an environmental concern to the Subject Property.

Regional Water Quality Control Board (RWQCB) – Leaking Underground Storage Tanks (LUST)

The Regional Water Quality Control Board (RWQCB) maintains a database of reported Leaking Underground Storage Tank (LUST) Sites. The Subject Property was not identified on the RWQCB – LUST database. However, 18 sites located within 0.5 mile of the Subject Property were identified on the RWQCB – LUST database. Of these sites, 13 are located more than 0.25 miles from the Subject Property. Three of the remaining five sites have case closed status and the nearest site is located approximately 0.218 miles from the Subject Property. Based on the current regulatory status and distance from the Subject Property, these 16 LUST sites are not anticipated to impact the environmental integrity of the Subject Property. Information regarding the remaining two listed sites is presented in the following table:

RWQCB – LUST			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
H & S Food & Gas 2000 West 3rd Street Los Angeles, California	Adjacent/ South-southwest Downgradient	T0603701135	Notification Date: 04/18/1990 Contaminants: Gasoline Media Impacted: GW Status: Case closed Date of Closure: 10/15/2015

DRAFT

RWQCB – LUST			
Site	**Distance / Direction / Gradient***	**ID No.**	**Regulatory Status**
Shell #204-4532-4609 230 S. Alvarado Street Los Angeles, California	0.121 miles / West-southwest Downgradient	T060301130	Notification Date: 11/10/1986 Contaminants: Gasoline Media Impacted: GW Status: Case closed Date of Closure: 10/09/1996

* Presumed hydrogeologic gradient based upon regional topography

According to the 2015 closure report (obtained from the Geotracker) for the H & S facility, the groundwater flow direction is to the southwest. There are no monitoring wells installed along 3rd Street, south of the Subject Property. Based on the current regulatory status and actual groundwater flow direction, the H & S facility is not anticipated to impact the environmental integrity of the Subject Property.

Based upon the current regulatory status and distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified remaining LUST site represent an environmental concern to the Subject Property.

Facility Inventory Database (FID UST)

The California Environmental Protection Agency maintains a Facility Inventory Database (FID), which contains a historical registry of active and inactive underground storage tank (UST) locations reported by the California Water Resource Control Board. The Subject Property was not identified on the FID UST database. However, two adjoining properties were identified on the FID UST database. Information regarding the listed sites is presented in the following table:

FID UST				
Location	**Distance / Direction / Gradient***	**Capacity / Contents**	**Year Installed**	**Status**
St. Vincent Medical Center 2021 Miramar Street Los Angeles, California	Adjacent / North-northwest Crossgradient	Not reported	Not reported	Inactive
Alvarado II Incorporated 2000 W. 3rd Street Los Angeles, California	Adjacent / South-southwest / Downgradient	Not reported	Not reported	Inactive

* Presumed hydrogeologic gradient based upon regional topography

The 2000 W. 3rd Street facility is listed in the LUST database under H & S Food & Gas with same site address and further discussed in the LUST section above.

Based upon the absence of reported releases and/or distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified the remaining FID UST site represent an environmental concern to the Subject Property.

Hazardous Substance Storage Container Database (HIST UST)

The Hazardous Substance Storage Container Database is a historical listing of UST sites maintained by the California Water Resources Control Board. Neither the Subject Property nor any adjoining properties were identified on the HIST UST database.

DRAFT

Statewide Environmental Evaluation and Planning System (SWEEPS)

The Statewide Environmental Evaluation and Planning System (SWEEPS) is an underground storage tank database that was updated and maintained by a company contacted by the State Water Resource Control Board in the early 1980s. The listing no longer updated or maintained. The Subject Property was not identified on the SWEEPS database. However, two adjoining properties were identified on the SWEEPS database. Information regarding the listed sites is presented in the following table:

SWEEPS				
Location	**Distance / Direction / Gradient***	**Capacity / Contents**	**Year Installed**	**Status**
St. Vincent Medical Center 2021 Miramar Street Los Angeles, California	Adjacent / North-northwest Crossgradient	Not reported	Not reported	Not reported
Alvarado II Incorporated 2000 W. 3rd Street Los Angeles, California	Adjacent / South-southwest / Downgradient	Not reported	Not reported	Not reported

* Presumed hydrogeologic gradient based upon regional topography

The 2000 W. 3rd Street facility is listed in the LUST database under H & S Food & Gas with same site address and further discussed in the LUST section above.

Based upon the absence of reported releases and/or distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified the remaining SWEEPS site represent an environmental concern to the Subject Property.

Solid Waste Information System (SWIS)

Solid Waste Information System (SWIS) records typically contain an inventory of solid waste facilities or landfills identified by the Integrated Waste Management Board. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the SWIS database.

Waste Management Unit Database / Solid Waste Assessment Test (WMUDS/SWAT)

The Waste Management Unit Database (WMUDS) is used by the California Water Resources Control Board and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. WMUDS is composed of the following databases: Facility Information, Scheduled Inspections Information, Waste Management Unit Information, SWAT Program Information, SWAT Report Summary Information, SWAT Report Summary Data, Chapter 15 (formerly Subchapter 15) Information, Chapter 15 Monitoring Parameters, TPCA Program Information, RCRA Program Information, Closure Information, and Interested Parties Information. Neither the Subject Property nor any sites located within 0.5 mile of the Subject Property were identified on the WMUDS/SWAT database.

California Hazardous Material Incident Report System (CHMIRS)

The California Hazardous Material Incident Report System (CHMIRS) contains information regarding reported hazardous material incidents (i.e. accidental releases or spills). The data source is the California Office of Emergency Services. The Subject Property was not identified on the CHMIRS database.

DRAFT

Hazardous Waste Information system (HAZNET)
The California Environmental Protection Agency maintains a list of facilities that issue hazardous waste manifests. The source of the manifest records is the California Department of Toxic Substance Control (DTSC). Inclusion on the HAZNET database does not necessarily indicate the existence of an environmental concern, such as a release or spill incident. The Subject Property was not identified on the HAZNET database.

Site Mitigation and Brownfields Reuse Program (SMBRP) Facility Sites with Deed Restrictions & Hazardous Waste Management Program (HWMP) Facility Sites with Deed / Land Use Restriction
The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under SMBRP's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. This list represents deed restrictions that are currently active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future property owners. The Subject Property was not identified on SMBRP or HWMP Deed Restriction or Land Use Restriction Registries. However, two sites located within 0.5 mile of the Subject Property were identified on SMBRP or HWMP Deed Restriction or Land Use Restriction Registries. Information regarding the listed sites is presented in the following table:

SMBRP / HWMP DEED RESTRICTION OR LAND USE RESTRICTION REGISTRIES			
Site	**Distance / Direction / Gradient**	**ID No.**	**Regulatory Status**
Burlington Gardens 409, 411, 415 S. Burlington Los Angeles, California	0.222 miles / South / Downgradient	11446	Notification Date: Not reported Contaminants: Not reported Media Impacted: Not reported Status: Not reported Date of Closure: Not reported
Burlington Park 456, 408 S. Burlington Los Angeles, California	0.284 miles / South / Downgradient	11447	Notification Date: Not reported Contaminants: Not reported Media Impacted: Not reported Status: Not reported Date of Closure: Not reported

* Presumed hydrogeologic gradient based upon regional topography

Based upon the distance/presumed hydrogeologic gradient relative to the Subject Property, it is considered unlikely that conditions associated with the identified sites represent an environmental concern to the Subject Property.

Tribal Environmental Databases
The United States Bureau of Indian Affairs (BIA) is responsible for the administration and management of 55.7 million acres of land held in trust by the United States for American Indians, Indian tribes, and Alaska Natives. There are 562 federally recognized tribal governments in the United States. The environmental database report identifies tribal administered lands of the United States that have any area equal to or greater than 640 acres. No tribal administered lands were identified within 1.0 mile of the Subject Property.

DRAFT

4.1.3 Local Regulatory Agency Records

Local municipal offices consulted during the completion of this assessment included the following: City of Los Angeles Building and Safety Department and Fire Department - Fire Prevention Division. EBI did not identify documented adverse environmental conditions, violations, or complaints associated with the Subject Property. EBI did not identify records of spills or releases of hazardous substances or petroleum products having occurred at the Subject Property.

City of Los Angeles Building and Safety Department
EBI reviewed available files regarding the Subject Property at the City of Los Angeles Building and Safety Department Records Division for information regarding past uses of the Subject Property. The original building permits and certificates of occupancy for the existing building indicates that the building was constructed in 1980. Building permits for general tenant improvments were additionally on file for the Subject Property. Building Department records indicate that the previous hotel buildings were demolished in 1974, prior to construction of the existing senior residential building. The review of Building Department records did not identify past uses of the Subject Property that would constitute a recognized environmental condition.

City of Los Angeles Fire Department - UST Section
EBI contacted Ms. Katie Rosas of the City of Los Angeles Fire Department, UST Section to request available information regarding the existing or historic USTs or ASTs associated with the Subject Property. Ms. Rosas reported that no records regarding USTs were on file for the Subject Property.

City of Los Angeles Fire Department Hazardous Materials Management Division
EBI contacted Ms. Angenee Reygadas of the City of Los Angeles Fire Department Hazardous Materials Management Division to request available information regarding the hazardous materials associated with the Subject Property. Ms. Reygadas reported that no records regarding hazardous substances or petroleum products, spills or releases, or violations were on file for the Subject Property.

4.2 PHYSICAL SETTING

4.2.1 Topography

The Subject Property is located at an elevation of approximately 395 feet above mean sea level (msl). The topography of the Subject Property slopes moderately to the south. The Subject Property is located in a moderately sloping area, and the general slope of the surrounding region is to the south-southwest (see Figure 2 - Locus Map, which depicts the location of the Subject Property on the Hollywood, California USGS 7.5 Minute Topographic Quadrangle).

4.2.2 Geology and Soils

No bedrock outcroppings were observed at the Subject Property. Information concerning the geology of the Subject Property was obtained from the USGS Ground Water Atlas of the United States, California region (1995). The Subject Property is located within the Lower Californian physiographic province, which consists of coastal mountain ranges underlain by severely folded, faulted, commonly metamorphosed marine and continental sediments.

According to the Soil Survey of Los Angeles County, the dominant soil composition in the vicinity of the Subject Property is classified as Diablo-Altamont Association, 2 to 9 percent slopes (map 34). This soil consists of deep, well-drained soils consisting of dark gray clay and dark grayish-brown clay. The Diablo soil extends to a depth of 52 inches below ground surface (bgs) and 36 inches bgs for Altamont. Diablo-

DRAFT

Altamont soils are neutral. Permeability is slow, and the available water capacity is low to moderate. The depth to bedrock is not provided.

4.2.3 Hydrogeology and Hydrology

No natural surface water bodies were identified on or adjacent to the Subject Property. The nearest downgradient surface water body is the Ballona Creek, located approximately five miles southwest of the Subject Property.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Subject Property is expected to flow to the southwest. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Subject Property.

4.3 HISTORICAL USE OF THE SUBJECT PROPERTY AND ADJOINING PROPERTIES

EBI attempted to determine the history of the Subject Property dating back to 1940 or first developed use. The following table summarizes the historical use of the Subject Property and surrounding area.

HISTORICAL USE SUMMARY			
Period	**Historical Uses**		**Source(s)**
	Subject Property	**Surrounding Area**	
At least 1894-1906	Undeveloped and single-family dwellings.	Primarily Undeveloped; limited single-family residential development.	Fire Insurance Maps Topographic Maps
1907-1974	Hotel and single-family dwellings.	Single and multi-family residential and commercial development.	Aerial Photographs Fire Insurance Maps Topographic Maps City Directories Municipal Records
1975-1979	Undeveloped land and single-family dwellings	Single and multi-family residential and commercial development.	Aerial Photographs City Directories Municipal Records
1980 to Present	Existing senior housing development.	Single and multi-family residential and commercial development.	Aerial Photographs City Directories Municipal Records

No environmentally significant conditions were identified on the Subject Property. However, two former gas stations were located to the south-southwest of the Subject Property. One of the gas stations was replaced by a retail strip center and the other former gas station was observed as undeveloped land. The H & S gas station is discussed in the LUST section. The other gas station is not listed in the UST or LUST databases. These gas stations are located across 3rd Street and topographically downgradient from the Subject Property.

4.3.1 Aerial Photographs

Historical aerial photographs may be used to evaluate changes in land use and to identify visible areas of potential environmental concern. A search for historical aerial photographs depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Aerial photographs depicting the Subject Property were reviewed and are summarized in the following table. Copies of the aerial photographs are presented in Appendix G.

AERIAL PHOTOGRAPH SUMMARY		
Year	**Issues Noted**	**Observations**
1923 1928	No	**Subject Property:** The Subject Property appears to consist of three large commercial structures located on the northern portion of the site. Five small residential structures are depicted on the southern portion of the Subject Property.
		Surrounding Area: Surrounding properties to the east, and west are residential structures. A public roadway, trending southeast to northwest, is visible to the north and south of the Subject Property, beyond which are residential buildings. An undeveloped land is depicted to the north-northeast of the Subject Property.
1938	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1923 and 1928 photographs.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1923 and 1928 photographs. Additionally, a gas station type structure is depicted to the south-southwest and undeveloped land to the south of the Subject Property.
1948	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1938 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1938 photograph. Additionally, a gas station type structure is depicted to the south of the Subject Property.
1952 1964	No	**Subject Property:** Conditions on the Subject Property appear to be similar to those depicted on the 1948 photograph.
		Surrounding Area: Conditions on the surrounding properties appear to be similar to those depicted on the 1948 photograph. Additionally, apartment buildings are depicted to the north-northeast of the Subject Property.
1970	No	**Subject Property:** The southern portion of the Subject Property is depicted as undeveloped land. Three large commercial structures are depicted on the northern portion of the Subject Property.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1952 and 1964 photographs. An L-shaped commercial building is depicted to the south of the Subject Property, from a former site of a gas station.
1977	No	**Subject Property:** The majority of the site is depicted as undeveloped land. Two small residential buildings are depicted on the southeastern portion of the Subject Property.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1977 photograph.
1983 1989 1994 2002 2005 2009 2010 2012	No	**Subject Property:** Conditions on the Subject Property are depicted as they exist at the present day. The high-rise building is located on the central portion and the one-story leasing office/clubhouse building is depicted on the northern portion of the site.
		Surrounding Properties: Conditions on the surrounding properties appear to be similar to those depicted on the 1977 photograph.

4.3.2 Fire Insurance Maps

A search for historical fire insurance maps depicting the Subject Property and vicinity was conducted by EDR Sanborn Maps, Inc. Historical fire insurance maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the fire insurance maps are presented in Appendix G.

FIRE INSURANCE MAP SUMMARY

DRAFT

Year	Issues Noted	Observations
1906	No	**Subject Property:** The Subject Property is occupied by five single-family dwellings, three detached garages, and undeveloped lots on the northwestern and northeastern portions of the Subject Property.
		Surrounding Properties: Features depicted on surrounding properties included Miramar Street and undeveloped land located on the northern adjacent property, two single-family dwellings with detached garages and undeveloped land located on the eastern adjacent property, Ocean View Avenue and a single-family dwelling located on the southern adjacent property, a single-family dwelling and a detached garage located on the western adjacent property.
1950 1953 1955 1958	**Yes**	**Subject Property:** The Subject Property is occupied by Barker Hotel and three single-family dwellings located on the eastern portion of the site.
		Surrounding Properties: Features depicted on surrounding properties included Miramar Street and single and multi-family residential dwellings located on the northern adjacent property; single and multi-family dwellings on the eastern adjacent property; single and multi-family dwellings, stores, and gas stations located on the southern adjacent property; Barker Hotel and a multi-family dwelling located on the western adjacent property.
1960 1962 1963	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1950 to 1958 maps, with missing two structures on the southern portion of the Subject Property. Barker Hotel occupies the eastern portion of the Hotel and New Miramar Hotel occupies the majority of the northern portion of the site.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1950 to 1958 maps.
1967	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1960 to 1963 maps.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1960 to 1963 maps. The gas station on the southern adjacent property was replaced by an L-shaped commercial building. One gas station still exist to the south-southwest of the Subject Property.
1968 1970	**Yes**	**Subject Property:** Conditions on the Subject Property are similar to those as depicted on the 1967 map. However, the Barker Hotel located on the southeastern of the site is no longer depicted.
		Surrounding Properties: Conditions on the surrounding properties are similar to those as depicted on the 1967 map.

4.3.3 Topographic Maps

Historical topographic maps provide information related to physical land configuration such as elevation, ground slope, surface water and other features. While most buildings in densely developed urban centers are not depicted, topographic maps typically show structures equal to or larger than the size of a single-family residence in rural areas. Other notable features such as woods, pipelines, municipal boundaries, and areas of filled land are often marked on topographic maps.

A search for historical topographic maps depicting the Subject Property and vicinity was conducted by Environmental Data Resources, Inc. (EDR). Historical topographic maps depicting the Subject Property were reviewed and are summarized in the following table. Copies of the topographic maps are presented in Appendix G.

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1898	No	**Subject Property:** No structures or other notable features are depicted on the Subject

DRAFT

TOPOGRAPHIC MAP SUMMARY		
Year	**Issues Noted**	**Observations**
1900		Property. A portion of the existing 3rd Street is depicted to the south of the Subject Property.
		Surrounding Properties: Surrounding properties to the north, east, south, and west are primarily small residential structures.
1921 1928	No	**Subject Property:** Eight small residential-type structures located on the northern and southern portion of the site.
		Surrounding Properties: Surrounding properties are primarily depicted as small residential structures. The existing Miramar Street, trending southeast to northwest, is depicted to the north. The existing 3rd Street, trending southeast to northwest, is depicted to the south of the Subject Property.
1953 1966 1972 1981 1991	No	**Subject Property:** The Subject Property is shaded to represent urban development; no distinct structures or other notable features are depicted.
		Surrounding Properties: The surrounding properties are shaded to represent urban development; no distinct structures or other notable features are depicted.

4.3.4 Street Directories

Street directories are commercial publications containing names and addresses, and in many cases, occupations of the occupants of a particular community. The directories may also contain information pertaining to business processes conducted within a community. A search for historical street directories was conducted by Environmental Data Resources, Inc. (EDR). Historical street directories were reviewed and are summarized in the following table. Copies of the street directories are presented in Appendix G.

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1924	No	Subject Property is listed as Miramar Terrace Apartments and names of individuals. Surrounding properties are listed with names of individuals.
1929	No	Subject Property is listed as Miramar Terrace Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1933	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1937	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1942	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1951	No	Subject Property is listed as Miramar Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1958	No	Subject Property is listed as Barker Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1962	No	Subject Property is listed as New Miramar Hotel and names of individuals. Surrounding properties are listed with names of individuals.
1967	No	Subject Property is listed as New Miramar Hotel, New Miramar Hotel & Apartments, and names of individuals. Surrounding properties are listed with names of individuals.
1971	No	Subject Property is listed as New Miramar Hotel, New Miramar Hotel & Apartments, and names of individuals. Surrounding properties are listed with names of individuals.
1981	No	Subject Property is listed with names of individuals. Surrounding properties are listed with names of individuals.

DRAFT

STREET DIRECTORY SUMMARY		
Year	**Issues Noted**	**Occupants**
1986	No	Subject Property is listed as Forest City Management and names of individuals. Surrounding properties are listed with names of individuals.
1990	No	Subject Property is listed as Forest City Management and names of individuals. Surrounding properties are listed with names of individuals.
2000	No	Subject Property is listed as Miramar Towers and names of individuals. Surrounding properties are listed with names of individuals.
2006	No	Subject Property is listed as Miramar Towers and names of individuals. Surrounding properties are listed with names of individuals.
2013	No	Subject Property is listed as Miramar Towers. Surrounding properties are listed with names of individuals.

4.3.5 Recorded Land Title Records

Land title records provide information on previous ownership of a property. Typically, deeds signifying transfer of a land parcel are recorded in county files and can be researched to determine the identity of past owners. A "chain of title" is a continuous record of ownership for a specific parcel. A 50-year chain of title search was not included in the scope of work for this assessment.

4.3.6 Property Tax Records

The property information for the Subject Property was obtained at the Los Angeles County Assessor's Office. The property information identifies the current owner as Towers Miramar Real Tech, which acquired the Subject Property in 1984. Assessor's Office records indicate that the existing building was constructed in 1979. A listing of the former Subject Property owners was not available for review.

4.3.7 Environmental Liens and Activity and Use Limitations

A search for Environmental Liens and Activity and Use Limitations was not included in the scope of this assessment.

4.3.8 Previous Environmental Reports

EBI was not provided with or made aware of previous environmental assessments or other documentation regarding environmental investigations performed for the Subject Property. EBI did not identify previous environmental reports for the Subject Property at local agencies or other sources contacted during this assessment.

DRAFT

5.0 SUBJECT PROPERTY RECONNAISSANCE

The Subject Property reconnaissance was conducted by Mr. Renato Nalupa, EBI Field Assessor, on February 19, 2016. Mr. Nalupa was accompanied by Mr. Alfredo Torres, Maintenance Custodian and Mr. Jordan Moreno, Maintenance Supervisor and interviewed Ms. Pamela Roberson, the Subject Property Manager.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Subject Property reconnaissance consisted of visual and/or physical observations of the Subject Property and improvements, adjoining properties as viewed from the Subject Property boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise.

At the time of the survey, the weather was sunny and approximately 75° Fahrenheit. During the survey, representative common areas, apartments units, mechanical spaces, and/or equipment and building components were observed, and approximately 26% of the units were surveyed. There were no significant portions of the Subject Property that were inaccessible or excluded from this survey.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

Notable hazardous substances or petroleum products in connection with identified uses observed at the Subject Property are described below.

HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS			
General Type of Material	**Approximate Quantity / Container / Material**	**Location**	**Storage Condition**
Cleaning Compounds and Janitorial Supplies	Various sized containers, ranging from aerosol cans to five-gallon pails	Storage room and apartment kitchens	Good: No leaks or spills

EBI did not identify evidence of significant leaks, spills, or the improper handling of petroleum or hazardous substances that might impact the environmental condition of the Subject Property.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

EBI did not observe evidence of hazardous substance or petroleum products containers at the Subject Property that were not in connection with identified uses.

5.2.3 Unidentified Substances Containers

EBI did not observe evidence of unidentified substances containers at the Subject Property.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

EBI identified the following waste streams generated at the Subject Property:

WASTE GENERATION, STORAGE, AND DISPOSAL

DRAFT

Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-regulated Solid Waste	Municipal Solid Waste / Routine Site Operations	1 Solid Waste Dumpster (Placed at curb-side)	Republic
Non-regulated Liquid Waste	Sanitary Sewage / Routine Site Operations	NA (Municipal Sanitary Sewer)	City of Los Angeles
Regulated Solid or Liquid Waste	None identified	NA	NA
Biomedical Waste	None identified	NA	NA

No evidence of improper solid waste management or the improper disposal of hazardous substances or petroleum products was observed at the time of reconnaissance.

5.4 UNDERGROUND STORAGE TANKS (USTS) & ABOVEGROUND STORAGE TANKS (ASTS)

5.4.1 Existing Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI did not identify the presence of USTs and ASTs at the Subject Property. However, one 2,500-gallon and two 200-gallon hot water tanks are located on the roof adjacent to the hot water boilers.

5.4.2 Former Storage Tanks

Based upon site reconnaissance, interviews, and a review of state and local records, EBI identified no evidence of USTs or ASTs formerly having been located at the Subject Property.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated biphenyls (PCBs) are a chemical component of many dielectric fluids, heat transfer fluids, hydraulic fluids, lubricating oils, paints, or coatings manufactured prior to July 2, 1979. Equipment that may potentially contain PCBs includes electrical equipment such as transformers or capacitors or hydraulically operated equipment, such as elevators, compaction equipment, or manufacturing equipment. The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the Toxic Substance and Control Act (TSCA). In accordance with *US Code of Federal Regulations Title 40 - Protection of Environment, Chapter I - Environmental Protection Agency, Subchapter R - Toxic Substance Control Act (TSCA), Part 761 - Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce, and Use Prohibitions*, the owner of a transformer or other PCB-containing equipment is responsible for equipment maintenance and remediation in the event of a leak or release.

Based upon the date of construction and upgrades, no potential PCB-containing equipment was identified at the Subject Property. However, the following oil-containing equipment was identified at the Subject Property:

OIL-CONTAINING EQUIPMENT			
Classification	**Type of Equipment**	**Year Installed / Location**	**Staining / Releases Identified**
Transformers and Fluid-Containing Electrical Equipment	(1) Pad-mounted Electrical Transformer [Los Angeles Department of Water and Power]	In an enclosure at south parking lot	No

DRAFT

OIL-CONTAINING EQUIPMENT			
Classification	**Type of Equipment**	**Year Installed / Location**	**Staining / Releases Identified**
Hydraulic Equipment	(2) 3,500-pound passenger elevators	2008 (modernization) / Main lobby	No
	(1) 3,500-pound freight elevator	2008 (modernization)/ Main lobby	No
Other Oil-containing Equipment	None identified	NA	NA

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Subject Property on the day of the site visit. Photographs of pertinent Subject Property features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	**Identified**
Interior Drains, Trenches, or Sumps	**Yes**
Interior Stains or Corrosion	No
Unusual Odors	No
Interior Pools of Liquid	No
Stained Soil or Pavement	**Yes**
Stressed Vegetation	No
Indications of Solid Waste Disposal	No
Exterior Pits, Ponds, or Lagoons	No
Wastewater or Stormwater Discharge/Disposal	**Yes**
Oil-Water Separators or Clarifiers	No
Septic Systems or Cesspools	No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	No
Petroleum or Natural Gas Pipelines/Easements	No
Sink Holes	No

Floor drains were observed in the laundry room and public restroom. The floor drains reportedly discharge to the municipal sewer system. No staining or other evidence of a release of hazardous substances or petroleum products was observed in the vicinity of the floor drains.

Minor staining was observed on the concrete floor of the emergency generator. The staining encompass an area of approximately one square foor. No floor drains, cracks, penetrations, or other potential pathways to the subsurface were observed at this location.

The ground surface outside the building is relatively flat and the north side and moderately sloping on the south side. Stormwater runoff from the asphalt-paved parking areas adjacent to the north and south sides of the existing building discharges to catch basins located throughout. The catch basins are associated with the municipal stormwater sewerage system, operated by the City of Los Angeles.

DRAFT

6.0 INTERVIEWS

The following persons were interviewed to obtain information regarding recognized environmental conditions in connection with the property. Additionally, a Pre-Survey Questionnaire was forwarded to the designated Subject Property contact. The Pre-Survey Questionnaire has been completed and returned to our offices. The information requested in the Pre-Survey Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Subject Property. The Pre-Survey Questionnaire and any accompanying documentation are presented in Appendix C.

INTERVIEWS			
Contact / Affiliation	**Date of Communication**	**Years Associated with Subject Property**	**Telephone No.**
Ms. Pamela Roberson Property Manager Miramar Towers	02/19/2016	3 months	(213) 483-1069
Mr. Jordan Moreno Maintenance Supervisor Miramar Towers	02/19/2016	3 months	(661) 974-6869
Mr. Alfredo Torres Maintenance Custodian Miramar Towers	02/19/2016	9	(323) 804-3532
Ms. Janine Interiano Records Clerk City of Los Angeles Department of Building and Safety Records Division	02/19/2016	NA	(213) 482-6899
Ms. Katie Rosas Clerk City of Los Angeles Fire Department – UST Section	03/01/2016	NA	katie.rosas@lacity.org
Ms. Angenee Reygadas Clerk City of Los Angeles Fire Department Hazardous Materials Management Division	03/02/2016	NA	Angenee.reygadas@lacity.org
Ms. Susan Lu Clerk Los Angeles County Assessor's Office	03/01/2016	NA	(562) 256-1701

Pertinent information from the interviews is presented in applicable sections of this report.

DRAFT

7.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM E 1527-13

The following sections address environmental issues or conditions at the Subject Property that parties may wish to assess in connection with commercial real estate that are outside the scope of ASTM Practice E 1527-13 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

Based upon the date of construction and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM.

According to the property owner, an Asbestos Operations and Maintenance (O&M) Plan is currently in place at the Subject Property. EBI reviewed an Asbestos O&M Plan, prepared by Forest City Residential Management, dated September 2009. The O&M Plan identified the following presumed ACM at the Subject Property: vinyl floor tiles, acoustical ceiling material, and thermal system insulation.

7.2 RADON

Radon is a naturally-occurring, colorless and odorless radioactive gas that is generated primarily in granitic rocks. The United States Surgeon General has published information that radon is a cause of lung cancer. Radon usually enters a building where the building structures contact underlying and surrounding soil. Radon is generally considered to pose the greatest potential health risk to residents of the lowest level of a building. But, radon can also migrate vertically within building structures to areas above the ground contact floors.

EBI conducted a radon screening at the Subject Property as part of this assessment including sampling and analysis in accordance with the Mortgagee Letter 2013-07 and conformance with HUD Office of Multifamily Development Radon Policy and ANSI/AARST MAMF-2012 (Protocol for Conducting Radon Decay Product Measurement in Multifamily Buildings). Per the referenced protocols, tests were placed in a minimum of 25% of the ground contact and 10% of upper floor apartments were tested in each building. The sampling was conducted and supervised by Radon Professionals.

The EPA Map of Radon Zones indicates that Los Angeles County is located within a Zone 2 radon area. Zone 2 is defined as an area that has a moderate potential for radon gas, with a predicted average indoor radon screening level between 2.0 picoCuries per liter (pCi/L) and 4.0 pCi/L. The EPA recommended Action Level for radon is 4.0 pCi/L.

Between February 23 and February 25, 2016, EBI conducted a limited short-term radon screening of the Subject Property by testing 19 residential units and 2 non-residential areas. The radon test canisters were exposed for a minimum of 48 hours and were sent to Air Chek, Inc in Mills River, North Carolina for analysis. The sampling locations and laboratory analytical results are presented in the following table:

DRAFT

Canister No.	Location	Floor	Radon Concentration (p/Ci/L)
7733280	Leasing Office	1	0.9
7733283			0.6 (D)
7733279	Community Room		0.6
7733278			<0.3 (D)
7733277	101		2.5
7733276	101		2.1 (D)
7733275	102		<0.3
7733274	107		0.8
7733272	112		0.6
7733271	118		0.8
7733270	204	2	<0.3
7733269	215		<0.3
7733232	307	3	<0.3
7733273	316		<0.3
7733284	402	4	<0.3
7733285	413		<0.3
7733282	501	5	<0.3
7733371	516		<0.3
7733365	604	6	<0.3
7733364	617		<0.3
7733366	707	7	<0.3
7733240	718		<0.3
7733236	805	8	<0.3
7733361	820		<0.3
Quality Control Blank Samples			
7733287	102	1	<0.3
7733228	107		<0.3

Laboratory analytical results identified radon concentrations less than the EPA Action Level of ≥4.0 pCi/L in all sample locations. The radon laboratory report is appended.

7.3 LEAD-BASED PAINT (LBP)

Use of lead in household paint was banned by the U.S. Environmental Protection Agency (EPA) effective January 1, 1978. The EPA and the U.S. Department of Housing and Urban Development (HUD) consider lead-based paint as containing a lead concentration equal to or greater than 1.0 milligram per square centimeter (mg/cm²) or 0.5% lead by weight, as defined by Title X of the 1992 Housing and Community Development Act.

Based on the date of construction of the existing building and in accordance with the scope of work of this assessment, a LBP survey was not conducted at the Subject Property.

DRAFT

7.4 LEAD IN DRINKING WATER

Lead has historically been used in pipes, solder, and brass fixtures used in water distribution systems and building plumbing systems. In 1986, EPA banned the use of lead at concentrations exceeding 0.2% lead in solder and 8% lead in other plumbing materials. Lead in drinking water results primarily from corrosion of lead containing materials in service lines or from corrosion of lead containing materials in building plumbing systems such as lead solder, brass, bronze, and other lead containing alloys. The EPA Action Level for lead in public drinking water supplies is 0.015 parts per million (ppm) or 0.015 milligrams per liter (mg /L).

Municipal water service is provided to the Subject Property by Los Angeles Department of Water and Power. Potable water is reportedly obtained from Northern California State Water Project, Colorado River, and groundwater wells. Based upon review of the utility's 2014 Drinking Water Supply and Water Quality Report, the municipal water supply meets all current criteria established by the Safe Drinking Water Act (SDWA) and local municipal drinking water standards, including those for lead. Based upon the existing municipal water service and in accordance with the scope of work for this assessment, EBI did not conduct lead-in-drinking water sampling at the Subject Property.

7.5 LIMITED MICROBIAL SURVEY

Microbial growth (e.g., mold or fungus) on building materials may occur when excess moisture is present. Porous building materials such as gypsum board, insulation in walls and ceilings, and carpeting retain moisture and become microbial growth sites if moisture sources are not controlled or mitigated. Potential sources of moisture include rainwater intrusion, groundwater intrusion, condensation on cold surfaces, and water leaks from building systems (e.g., plumbing leaks, HVAC system leaks, overflowing drains, etc.). Inadequate ventilation of clothes dryers and shower stalls may also result in excess moisture conditions. Microbial growth may be clearly visible (e.g., ceramic tile mortar in shower stalls) or may be concealed with no visible evidence of its existence (e.g., inside wall cavities).

Interior areas of the Subject Property building to which access was provided and in which building elements were readily observable were inspected for the presence of moisture and visible or olfactory evidence of microbial development. No disassembly of systems or building components or physical or invasive testing was performed. No observations were conducted within concealed locations (construction elements behind wall and ceiling finishes, and other building components, etc.). The scope of this inspection was limited to visual observations of accessible areas for microbial growth and water damaged materials and did not include the collection and laboratory analysis of bulk samples or air samples to confirm the presence of microbial elements.

Representative observations revealed no obvious visual or olfactory indications of the presence of active moisture or mold activity at the Subject Property. In addition to our observation efforts, a questionnaire provided to Subject Property personnel did not indicate the presence of mold, and Subject Property personnel were not aware of the presence of moisture or mold activity. Based on the interviews and conditions as observed at the time of inspection, mold does not appear to be a concern at the Subject Property.

7.6 HUD FACTORS

The following additional HUD Environmental Factors were reviewed at the Subject Property.

DRAFT

HUD ENVIRONMENTAL FACTOR	FINDINGS
Coastal Zone and Coastal Barrier Resources	The Subject Property is not located within a State Coastal Management Zone, or a coastal barrier designated on a current FEMA flood map or Department of Interior coastal barrier resource map. No further action or investigation is recommended regarding this factor.
Floodplain Management	EBI reviewed the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map, Community Map #060137, Panel #1610F, dated September 26, 2008. The Subject Property Flood Zone Determination appears to be Zone X, defined as an area outside the 100-year and 500-year floodplains. The Subject Property is not located within a Special Flood Hazard Area identified on the current FEMA Flood Insurance Rate Map (FIRM). No further action appears warranted regarding this factor.
Historic Preservation	This assessment is being completed for an existing HUD loan going through a Transfer of Physical Assets (TPA) loan assumption rather than a new HUD MAP 223f loan. As such, SHPO correspondence is not necessary. If it is subsequently determined that any substantial renovation work is required, then SHPO correspondence may need to be completed at a later date.
Noise Abatement	The Subject Property is not located within 1,000 feet of a freeway, major highway, or busy road, 5 miles of a civil airport, 15 miles of a military airport or 3,000 feet of a railroad. No further action appears warranted regarding this factor.
Explosive or Flammable Hazards	No industrial facilities handling explosive or fire-prone materials such as liquid propane, gasoline or other storage tanks are adjacent to or visible from the Subject Property. No further action or investigation is recommended regarding this factor.
Airport Hazards	The Subject Property is not located within 3,000 feet from the end of a runway at a civil airport or 2 ½ miles from the end of a runway at a military airport. No further action or investigation appears warranted regarding this factor.
Protection of Wetlands	There are no surface water bodies, marshy areas or other visible indications of potential wetlands areas on or adjacent to the Subject Property. According to the NWI Wetlands Map, there are no wetland areas in the vicinity of the Subject Property.
High Voltage Power Transmission or Other Towers	No High Voltage Power Transmission or Other Towers are located on-site or on adjacent properties. There are no structures that could fall on a subject building. No further action or investigation is recommended regarding this factor.
Landfills	No landfills are located within 3,000 feet of the Subject Property. As such, no further action or investigation is recommended regarding this factor.
Endangered or Threatened Species or Habitat	Based on the refinancing of an existing property or an existing development, impacts to endangered/threatened species or habitats are not anticipated and no further action is recommended regarding this factor.
Sole Source Aquifer Recharge Area	The Subject Property is connected to the public sewer system. As such, no further action or investigation is recommended regarding this factor.
Farmlands Protection	The Subject Property is not farmland. As such, no further action or investigation is recommended regarding this factor.
Rail Lines	The Subject Property is not located within 100 feet of the right of way of a railroad. As such, no further action or investigation is recommended regarding this factor.
Natural Gas or Petroleum Pipelines	None of the on-site structures are located within 10 feet of a natural gas or petroleum pipeline easement. As such, no further action or investigation is recommended regarding this factor.

DRAFT

7.7 TIER I VAPOR ENCROACHMENT SCREENING

EBI has conducted a Tier I Vapor Encroachment Screen (VES) in general conformance with the American Society for Testing Materials (ASTM) Standard E 2600-10, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, dated June 1, 2010.

7.7.1 Purpose and Scope-of-Services

The purpose of this Tier I VES is to conduct an initial screening to identify a vapor encroachment condition (VEC). A VEC is defined as the presence or likely presence of chemical(s) of concern (COC) vapors in the subsurface of the Subject Property, caused by the release of vapors from contaminated soil or groundwater either on or near the Subject Property, as identified by Tier I or Tier II procedures.

The VES process is a two-tiered screening process. The Tier I VES is based upon information typically collected during an ASTM Standard E 1527 Phase I ESA and is typically focused on known or suspect contaminated properties that may exist in the area of concern (AOC). The Tier I VES includes, but is not limited to, the following: review of Federal, state, local, and tribal government records, as reported in the regulatory database report; chemical use and historical records of prior uses on the Subject Property and within proximity of the Subject Property; soil characteristics; geological characteristics; contaminant characteristics and plume migration data (if this data is readily available); significant conduits that that might provide preferential pathways for vapor migration; and groundwater depth and groundwater flow data.

Search Distance Test and Chemicals of Concern Test

The Tier I screening includes the following: (1) a Search Distance Test to determine whether there are any known or suspect contaminated properties within the AOC; and (2) a Chemicals of Concern Test to determine for those known or suspect contaminated properties within the AOC whether COC are likely to be present.

Standard environmental record sources were reviewed pertaining to the Subject Property and to properties within the AOC (i.e., within the Approximate Minimum Search Distances, as defined by ASTM Standard E 2600-10 Guide). The Approximate Minimum Search Distance is based upon the type of COC known or suspected to exist in any release from a property, that is, non-petroleum hydrocarbon COC (such as chlorinated solvents) versus petroleum hydrocarbon chemicals of concern (PHCOC), and the location of the known or suspect source of contamination with respect to the Subject Property. The AOC is generally one-third of a mile (1,760 feet) around the Subject Property for COC and one-tenth of a mile (520 feet) around the Subject Property for PHCOC. Approximate minimum search distances surrounding the Subject Property to identify the AOC are specified below:

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE
Approximate Minimum Search Distances

Regulatory Database	COC	PHCOC
Federal NPL Sites	1/3 mile	1/10 mile
Federal CERCLIS Sites	1/3 mile	1/10 mile
Federal RCRA CORRACTS Sites	1/3 mile	1/10 mile
Federal RCRA non-CORRACTS TSD Sites	1/3 mile	1/10 mile
Federal RCRA Generators Sites	Subject Property Only	Subject Property Only
Federal Engineering / Institutional Control Sites	Subject Property Only	Subject Property Only
Federal ERNS Sites	Subject Property Only	Subject Property Only
State and Tribal equivalent NPL / CERCLIS Sites	1/3 mile	1/10 mile

COC: Chemicals of Concern
PHCOC: Petroleum Hydrocarbon Chemicals of Concern

If there are known or suspect sources of contamination identified within the AOC, the data contained in the standard environmental record sources is further reviewed in order to evaluate the likelihood that a VEC exists at the Subject Property.

Critical Distance Determination

If information related to the boundaries of a contaminant plume from a known contaminated property is available, a Critical Distance test may be conducted. The Critical Distance is defined as the lineal distance between the nearest edge of the contaminant plume and the nearest Subject Property boundary. The Critical Distance is equal to 100 feet for COC or 30 feet for dissolved PHCOC. The Critical Distance for PHCOC as light non-aqueous phase liquid (LNAPL), such as gasoline product, is 100 feet.

If groundwater flow direction can be estimated, the AOC in the downgradient direction may be reduced to the area within the Critical Distance during the Tier 1 screening. Additionally, the crossgradient direction may be reduced 365 feet. It is not necessary to obtain information regarding the contaminant plume dimensions for downgradient and cross-gradient contaminated properties, as the Critical Distance is measured from the nearest Subject Property boundary directly to the source on the off-site downgradient property that is the origin of the contamination (with the contamination migrating away from the Subject Property).

For a contaminated property located upgradient of the Subject Property, the Critical Distance determination requires knowledge of the length and depth of the groundwater contaminant plume. Such information is required to determine the lineal distance from the groundwater contaminant plume edge to the nearest existing or planned structure on the Subject Property, or the nearest Subject Property boundary if there are no existing or planned structures on the Subject Property. Data related to contaminant plume characteristics and dimensions associated with off-site contaminated properties is not typically available during the Tier 1 screening process and is typically obtained during the Tier 2 screening process. If it is not possible to conservatively estimate contaminant plume dimensions, then the AOC cannot be reduced in upgradient directions during the Tier 1 screening process.

Data regarding site-specific soil characteristics may also be used to adjust the AOC. Low permeability in soil, such as soil high in clay and/or silt content, generally tends to restrict soil gas movement, as may soil with high moisture content. Conversely, high porosity in soil tends to enhance soil gas movement. If known, this data may be used as a basis to either expand or reduce the AOC.

Possible Conclusions of Tier 1 VES

DRAFT

The four possible conclusions of the Tier 1 screening are as follows: (1) a VEC exists; (2) a VEC likely exists; (3) a VEC cannot be ruled out; or (4) a VEC can be ruled out because a VEC does not or is not likely to exist. If a VEC does not exist or is unlikely to exist, then the VES process is considered complete in accordance with ASTM Standard E 2600-10 Guide. Vapor encroachment would unlikely be an issue of concern in connection with the subsurface of the Subject Property, vapor intrusion would unlikely be an issue of concern in connection with existing or planned structures on the Subject Property, and no further action or investigation would be recommended. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the Subject Property (a VEC exists, likely exists, or cannot be ruled out), then further action or investigation may be recommended, including a Tier 2 Screening and/or mitigation. Note that both Tier 2 Screening and mitigation are beyond the scope of the Tier 1 Screening process.

Tier 2 Vapor Encroachment Screening

If a VEC cannot be ruled out during the Tier 1 screening process, then a more refined Tier 2 VES may be completed in order to further evaluate the VEC. Tier 2 focuses on characteristics of the contaminant plume resulting from contaminated properties and the proximity of the contaminant plume to the Subject Property. This data is not typically available during the Tier 1 screening process and is typically obtained from state regulatory files and may also be obtained from other available documents and/or may be collected via sampling. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. A Tier 2 VES has two data collection components: one non-invasive and one invasive.

Non-Invasive Data Collection: If data regarding the source of contamination and its migration in the subsurface is available and accessible in regulatory files and/or from other available documents, then the Tier 2 investigation can be non-invasive. The non-invasive investigation includes review at the appropriate regulatory agency of available subsurface investigation reports and/or other available documents regarding known or suspect contaminated properties within the AOC. The objective of the non-invasive component of the Tier 2 screening process is to identify from existing subsurface investigation reports and/or other available information in regulatory agency files the extent of the contaminated plume and its behavior, the specific COC and their respective concentrations, and the status of remediation. Using this information, a Critical Distance Determination may be performed.

Invasive Data Collection: If data regarding the source of contamination and its migration in the subsurface is not available or accessible or if there are preferential pathways, then the Tier 2 screening process can be invasive. An invasive investigation may include sampling of soil, soil gas, and/or groundwater on the Subject Property, at the Subject Property boundary, or off-site.

Mitigation

If the vapor encroachment and/or vapor intrusion pathway is determined to be complete at the Subject Property, there are a variety of mitigation alternatives, including intrinsically safe building design, engineering controls (e.g., a vapor mitigation system such as a chemical vapor barrier, a sub-slab depressurization system, a methane control system, or a radon control system), institutional controls, and/or removal or remediation of the contaminated media causing the VEC. Selection, design, and implementation of appropriate mitigation alternatives is beyond the scope of this assessment.

DRAFT

7.7.2 Government Records Review

A Vapor Encroachment Screen Worksheet was completed through Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. Standard environmental record sources were reviewed in order to identify whether there are known or suspected sources of contamination located within the AOC. The Approximate Minimum Search Distance is based upon the type of COC known or suspected to exist in any release from a property and the location of the known or suspect source of contamination with respect to the Subject Property.

The Subject Property was not identified as a listed site in the standard environmental record sources. However, the findings of the Vapor Encroachment Screen Worksheet identified one off-site property in the standard environmental record sources that cannot be ruled out as a VEC in connection with the Subject Property. H&S Food & Gas at 2000 West 3rd Street is adjacent to the south of the Subject Property across 3rd Street. This former facility is approximately 75 feet south and slightly down-gradient from the Subject Property. According to the database a release of gasoline occurred that impacted groundwater. The case was closed on October 14, 2015. No additional information was provided in the regulatory database report regarding the extent of the groundwater contaminant plume. This site is located within the AOC for PHCOC (1/10 mile / 520 feet). As such, without data related to contaminant plume characteristics and dimensions, this site cannot be ruled out as a VEC in connection with the Subject Property. However, EBI was able to review a 2015 closure report (obtained from the Geotracker) for the H & S facility. According to the report the groundwater flow direction is to the southwest and away from the Subject Property. There are no monitoring wells installed along 3rd Street, south of the Subject Property. Based on the current regulatory status and actual groundwater flow direction, the H & S facility does not appear to be a VEC to the Subject Property.

The remaining off-site properties listed in the standard environmental record sources were determined to not likely represent a VEC to the Subject Property based on one or more of the following factors: COC are not likely to be present at the site; the site is located outside of the AOC and/or Critical Distance; hydrologic characteristics and/or soil characteristics suggests that contaminant vapors would not migrate from the site to the Subject Property; and/or reported sampling data indicates that the site does not represent a VEC. A copy of the Vapor Encroachment Screen Worksheet is presented in Appendix F.

7.7.3 Current and Historical Use of the Subject Property and Adjoining Properties

EBI did not identify current or historical conditions on the Subject Property or adjoining properties that may be considered likely to represent a VEC to the Subject Property. Refer to Sections 2.0, 4.3, and 5.0 for information regarding current and historical use of the Subject Property and adjoining properties.

7.7.4 Tier 1 Vapor Encroachment Screening Conclusions

The findings of the Vapor Encroachment Screen Worksheet did not identify VECs in connection with the Subject Property. EBI did not identify current or historical conditions on the Subject Property or adjoining properties that may be considered likely to represent a VEC to the Subject Property. Based upon the findings of this Tier 1 Vapor Encroachment Screen, the VES process is considered complete in accordance with ASTM Standard E 2600-10 Guide, vapor intrusion is unlikely to be an issue of concern in connection with existing or planned structures on the Subject Property, and no further action or investigation is recommended.

DRAFT

It should be noted that this Tier 1 Vapor Encroachment Screen is not a formal assessment of indoor air quality and did not include review of regulatory agency files, calculations, testing or sampling, or evaluation of mitigation alternatives.

DRAFT

8.0 FINDINGS AND OPINIONS

EBI has performed this Phase I Environmental Site Assessment of the Subject Property in conformance with the scope and limitations of ASTM E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Subject Property. However, the following *de minimis condition and conditions outside the scope of ASTM E 1527-13* were identified:

- EBI identified surficial oil staining on the concrete floor beneath emergency generator. No cracks, penetrations, or other potential pathways to the subsurface were observed in proximity to the identified staining. This condition is not generally subject to enforcement action if known by a governing agency and is considered a *de minimis condition*.

- Based upon the date of construction and in accordance with the scope of work for this assessment, EBI did not conduct a survey for the presence of ACM. Pressumed asbestos-containing vinyl floor tiles, acoustical ceiling material, and thermal system insulation were included in the existing Asbestos Operations and Maintenance (O & M) program at the Subject Property. Asbestos is a condition outside the scope of ASTM E 1527-13 and is not considered a recognized environmental condition (REC).

- EBI conducted a limited short-term radon screening of the Subject Property testing 19 residential units and 2 non-residential areas. Laboratory analysis indicated that none of the test locations exhibited radon concentrations equal to or greater than the EPA recommended Action Level of 4.0 pCi/L. The overall quality assurance plan for the project was determined to be within normal tolerances. No further action is recommended at this time regarding this Radon assessment. Radon is a condition outside the scope of ASTM Practice E 1527-05 and is not considered a recognized environmental condition (REC).

DRAFT

9.0 RECOMMENDATIONS

Based upon the findings of this investigation, EBI offers the following recommendations:

- EBI recommends the continued implementation of the existing Asbestos Operations and Maintenance (O&M) Plan for the Subject Property. This O&M Plan provides the procedures and guidelines that, when used during facility cleaning, maintenance, and general operations, will minimize human exposure to lead and minimize release of lead to the environment. This O&M Plan is a long term management approach.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
MIRAMAR TOWERS

EXECUTIVE SUMMARY

Surveys Inc. performed a Phase I Environmental Site Assessment of the Miramar Towers project located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The site inspections were conducted on April 27 & 30, 2018; November 1, 2018 and July 9, 2019. The site inspection consisted of a visual evaluation of the project site, building exteriors, interior common areas and typical resident units in the building. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed. A review of the pertinent readily available records of local, state and federal agencies, historical information, interviews with people knowledgeable and prior environmental reports was conducted.

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon. No potential vapor encroachment conditions were identified in connection with the subject property.

Interviews with people knowledgeable, aerial photograph studies, historical map reviews, prior environmental reports and regulatory database reviews did not indicate any evidence of hazardous materials being improperly used or disposed of at the site. There was no evidence of any chemical misuse, unlawful dumping or other sources of contamination to the site. There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground storage tanks were observed during the site reconnaissance.

The site inspection indicated there was no evidence of any soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, leaking equipment, unidentified hazardous materials or other unidentified substances were observed during the site reconnaissance. The stormwater catch basins appeared to be free of contaminants.

ENVIRONMENTAL SUMMARY CONTINUED:

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing. Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

Based on our review of the development and site use history, along with an examination of existing conditions at the site, we found no hazardous or toxic substances were identified as being improperly generated, used, stored or disposed of on the property. This includes materials defined under the Resource Conservation and Recovery Act (RCRA), and the information and data we have reviewed and documented in this report. No recognized environmental conditions were identified in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

ENVIRONMENTAL SUMMARY GRID

ENVIRONMENTAL STATUS	RESEARCH RESULTS	RECOMMENDS	ESTIMATES
Onsite Underground Storage Tanks	None Detected	None	$0.00

		TOTAL COSTS	**$0.00**
PHASE II REQUIREMENTS	**NONE**	**NONE**	**$0.00**

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon.

1.0 INTRODUCTION

PURPOSE

This Phase I Environmental Site Assessment of the Miramar Towers project is intended to determine whether there is a potential for significant environmental contamination based on readily available information about the site and a walk-through inspection. If this potential does exist, the Phase I Environmental Site Assessment indicates additional activity necessary to confirm evidence of significant environmental contamination.

This report presents the results of a Phase I Environmental Site Assessment of the Miramar Towers project at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Tower Preservation, LP., retained Surveys Inc. to perform the Phase I Environmental Site Assessment in order to determine if a potential for significant contamination exists at the subject property.

The assessment consisted of a visual and olfactory inspection of the site, interviews with people knowledgeable about the site, an historical review and a review of all pertinent records from local, state and federal agencies. The results of our Phase I Investigation are described in the following sections of this report.

LIMITATIONS, EXCEPTIONS, AND SIGNIFICANT ASSUMPTIONS

It should be noted when an assessment is completed without subsurface exploration or chemical screening of soils and groundwater beneath the site, as in this study, no statement of scientific certainty can be made regarding the latent subsurface conditions which may be the result of onsite or off-site sources. Thus, this report is not a definitive study of contamination at the site. An evaluation of the subsurface soils and groundwater was not included in this report.

The scope of the onsite assessment consisted of a visual evaluation of the project site, building exteriors, interior common areas and typical resident units in the buildings. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed.

This report has been prepared following the requirements outlined in ASTM E-1527-13 Standard Practice for Environmental Site Assessments. This report does not offer to be a legal opinion, representation, or interpretation of environmental laws, regulations or policies of the state, federal or local governmental agencies.

The environmental study conclusions, contained in this report, are professional opinions largely based upon third party data received and reviewed. While efforts have been made to substantiate the third party data, Surveys Inc. cannot guarantee its completeness or accuracy.

USER RELIANCE

This report has been prepared for, and can be relied upon by the Client, Miramar Tower Preservation, LP.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

The Miramar Towers project is located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD.

The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The subject site lies at a slight angle to the north south lines of longitude therefore for the purposes of this report we consider Miramar Street to lie along the north side of the site. The site consists of an irregular rectangular shaped parcel. The building occupies the central portions of the site. The site topography is mostly level in the central portion of the site with down slopes toward 3rd Street to the south and Miramar Street towards the northwest. The site topography varies from +/- El. 100' in the central portions of site down to +/- El. 85' at the south side and northwest corner of the site.

The single-story Community Room is located on the north side of the building. There is an outside concrete patio and courtyard located along the west side of the Community Room. The Community Room includes a social room, kitchen, a game room area, rental offices, main entrance lobby, and the maintenance office and storage rooms.

The main vehicle entrance is from Miramar Street at the north central portion of the site where a controlled access gate is provided for the tenant parking lot area. Another main visitor vehicle entrance extends into the site from 3rd Street at the southeast portion of the site. The main tenant parking lot contains 38 parking stalls including seven (7) handicap stalls. The visitor parking lot contains seven parking stalls including one (1) handicap stall. All together there are 45 parking stalls including eight (8) handicap parking stalls provided. The main electrical transformer and emergency generator are located along the south side of the building. The building includes a trash chute and a trash room where steel dumpsters are provided. The dumpsters are rolled out to an area off of the south side of the building where the local refuse service empties the dumpsters at least weekly.

2.0 SITE DESCRIPTION

LOCATION AND DESCRIPTION OF STRUCTURE AND IMPROVEMENTS

The main building structure consists of precast and poured in place reinforced concrete platform frame construction. The building is located over a series of order cast pilings and reinforced concrete grade beams that extend in both directions beneath the first floor level reinforced concrete slab on grade. There are no basement areas. The 2nd to 8th floor structures consist of 4 inch reinforced precast concrete slabs with 4 inch reinforced concrete topping slabs creating 8" thick reinforced concrete flat plate structural slabs. Above the grade beams, the apartment building exterior walls and all bearing walls consist of 8" prestressed reinforced concrete construction. The typical wall panels consist of cellular core construction. The precast cells have field installed vertical reinforcing steel bars with poured in place concrete. The flat plate roof structure is of similar concrete construction as the flat plate concrete floor structures. The roofing systems consist of a modern TPO (thermal polyolefin) white reflective membrane provided. The flat roof deck slopes to a series of interior roof drains and there are also perimeter overflow scuppers provided. The original single pane, aluminum framed windows and sliding glass doors are still in service.

The typical building exterior walls consist of painted smooth surfaced and vertically grooved formed and poured precast concrete. The remaining exterior walls include steel studs and stucco exterior finish. All interior walls utilize metal studs. The landscaping on site includes large open grass lawn areas, medium to large shrubbery, large deciduous and evergreen trees, and with ground covers provided. The grass lawn areas are provided in the north and south courtyards. An automated irrigation system serves the landscape areas.

Hydronic hot water for the heating system is provided from a pair of rooftop mounted Raypak gas fired hot water boilers. The hot water recirculates via pumps provided to air handling units located in the unit ceilings. During the warmer summer season, chilled water to the units is from a pair of Carrier chillers that include two (2) high-efficiency screw compressors and an integral set of four air-coolers. Recirculating pumps are provided for the hydronic system. The hydronic system can either be heating or cooling. The common laundry room, rental office, community room and elevator equipment room utilize include split system A/C with interior evaporators and exterior condensing units. The split A/C systems remain in above average to good condition. The typical corridors are served by a rooftop gas fired forced air heating unit. Vertical transportation within the building has been provided by two (2) 8-stop 3,500-pound hydraulic elevators. The elevators were renovated in 2009.

Utilities and services provided to the property include water, sewer, electrical, natural gas trash and telephone. Electrical Power is provided City of Los Angeles Department of Water and Power, natural gas is provided by The Gas Company, Water is supplied by the City of Los Angeles. The City of Los Angeles provides the sanitary sewer services and storm water services. Electrical service is provided underground from a pad-mounted electrical transformer. Common dumpsters are provided for garbage and recycling service. A storm water drainage system has been provided for the site which includes concrete valley drains within landscaped areas and storm water catch basins located within the asphalt paved driveway and parking lot areas. The underground storm water piping and runoff discharge to a City of Los Angeles storm water main off the south side of the site.

2.0 SITE DESCRIPTION

ADJACENT PROPERTIES

North: Miramar Street followed by apartments and single family dwellings.

East: Apartments.

South: W 3rd Street followed by apartments, a motel and a retail strip center.

West: Apartments followed by eTown Inn.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

PHYSICAL SETTING

According to the USGS Topographical Map of the area (Hollywood, CA Quadrangle), the subject site is located at an average elevation of approximately 85 to 100 feet above sea level. The regional topography is relatively hilly and undulating. The local topography near the site slopes down moderately to the west and well as to the northwest and southwest. Local surficial and shallow groundwater, if present, would generally be expected to mimic the local topography and flow in a general westerly direction. Deeper, regional groundwater flow may vary significantly from the local topography. MacArthur Park Lake is located approximately ½ miles to the southwest.

According to the USDA Soil Conservation Service, Web Soil Survey, the dominant soil type in the vicinity of the subject site consists of Urban Land-Dapplegray complex, 5 to 20% slopes. Urban Land consists of areas that have been so greatly modified by urban works and structures that identification of the native soils is impractical. The Dapplegray series consists of very deep, well drained soils that formed in human-transported materials (HTM) on engineered hillslopes terraces in areas weathered from calcareous shale bedrock and other calcareous sedimentary rocks. The mean annual precipitation is about 383 mm and the mean annual temperature is about 17 degrees C.

According to the FEMA Flood Insurance Rate Map, Map #06037C1610F, with an effective date of September 26, 2008, the site is located within flood Zone X, outside the 100 and 500 year flood zone. A review of the National Wetlands Inventory Map did not reveal any designated wetlands on or directly adjacent to the subject property.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by the user, Miramar Tower Preservation, LP., with regard to this report.

TITLE RECORDS

We reviewed a Chain of Title Guarantee issued by Commonwealth Land Title Insurance Company, dated September 28, 2018, which identified the insured as Miramar Tower.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATION

No information regarding environmental liens or land use limitations was provided. Interviews with the property contacts indicated they were unaware of environmental liens or usage limitations related to environmental issues. A review of the available regulatory databases did not reveal any information related to environmental liens, land use or activity use limitations for the property related to environmental issues.

SPECIALIZED KNOWLEDGE

No specialized knowledge of environmental conditions associated with the property was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing or past environmental conditions associated with the subject property.

COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

No specialized knowledge of environmental conditions or similar relevant information was provided. Interviews with the property contacts indicated they had no specialized knowledge of any existing environmental conditions associated with the subject property. Interviews with local government officials also did not reveal any relevant information.

OWNER, PROPERTY MANAGER

Property contacts included Scott Frye with Jonathan Rose Company, the property ownership representative and the onsite property manager, Pam Roberson and the assistant property manager, Beverly Oh.

OTHER USER PROVIDED INFORMATION

A Phase I ESA Draft prepared by EBI Consulting dated March 2016, Asbestos Operations & Maintenance Plan dated October 2016, Asbestos Operations & Maintenance Program Manual dated April 2017, Rent Roll dated February 2018, and some of the original construction drawings were provided for review.

4.0 RECORDS REVIEW

STANDARD AND ADDITIONAL ENVIRONMENTAL RECORD SOURCES

As a part of our due-diligence, we retained Environmental Data Resources, Inc. (EDR) to provide a review of all major governmental databases for listings of potentially hazardous sites within the ASTM required search distances from the property. See the attached EDR Radius Map Report.

NPL

The National Priority List (NPL) includes sites reviewed (e.g., under CERCLIS) and considered as potential Superfund sites for the Environmental Protection Agency (EPA) Region 10. These sites have necessarily failed some aspect of EPA's CERCLA criteria regarding hazardous materials. Only sites with high enough health and environmental risk are proposed as NPL sites. There are **no** listed NPL sites located within a one-mile distance from the subject property.

Based upon the information reviewed, we conclude the potential for significant impact to the site from any NPL site is low.

DELISTED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria the EPA uses to delete sites from the NPL.

There are no Delisted NPL sites within a one-mile radius of the site. Based on the information reviewed, we conclude the potential for significant impact to the site from any Delisted NPL site is low.

CERCLIS

The Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List is a management database which lists all current and past sites that qualify, or are being considered, for further investigation under the EPA Superfund Assessment Program. According to the EPA, the fact a site is on the CERCLIS list does not necessarily mean it is contaminated and because a site is not on the list does not necessarily mean it is contaminant free. There are **no** listed CERCLIS sites located within a 1/2 miles distance from the subject property.

Based on the information reviewed, we conclude the potential for significant impact to the site from any CERCLIS site is low.

4.0 RECORDS REVIEW

SEMS-ARCHIVE/CERC-NFRAP

The SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was former known as CERCLIS No Further Remedial Action Planned (CERC-NFRAP) renamed SEMS-ARCHIVE by the EPA in 2015. There are **no** listed SEMS-ARCHIVE/CERC-NFRAP sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SEMS-ARCHIVE/CERC-NFRAP site is low.

RCRIS

The EPA Resource Conservation and Recovery Information System (RCRIS) includes all current and past sites storing, transporting, treating, generating or disposing of hazardous materials or waste. This list will include anything from chemical industry to small businesses like dry cleaners and gasoline stations. See EDR Report LQG (Large Quantity Generator), SQG (Small Quantity Generator), TSD (Transport, Storage, Disposal), and CORRACTS (Corrective Action Sites). There are **no** listed RCRIS TSD sites within a 1/2-mile radius of the site. There are **no** listed CORRACTS sites within a one-mile radius of the subject site. There are **two** listed RCRIS LQG sites and **seven** SQG sites within a 1/4-mile radius of the subject site. Four of the listed SQG sites are located greater than 1/8 miles distance from the subject property. There are only five listed site located within a 1/8 miles distance from the subject property.

Bonnie Brae Village, 208 S Bonnie Brae St, Map ID# 49
Location: 1/8 miles east/northeast
Status: Large quantity generator, no listed violations

CHLA Center for Personalized Medicine, 2100 W 3rd St, Map ID# G51
Location: Less than 1/8 miles west
Status: Small quantity generator, no listed violations

CT Partners, 329 201 S Alvarado ST, Map ID# D40
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

LMS Medical Service, 311 201 S Alvarado, Map ID# C11
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

Mid-Wilshire Medical, 201 S Alvarado St, Map ID# C12
Location: Less than 1/8 miles northwest
Status: Small quantity generator, no listed violations

Based upon the information reviewed, and considering the separation distance and intervening construction, we conclude the potential for significant impact to the site from any listed RCRIS site is low.

4.0 RECORDS REVIEW

ERNS

The Emergency Response Notification System (ERNS) records and stores information on reported releases of oil and hazardous substances.

The subject property was not identified as an ERNS site. Based on the information reviewed, we conclude the potential for significant impact to the site from any listed ERNS site is low.

CAL-SITES

The Cal-Sites AWP (Annual Work Plan, State Environmental Protection Agency), known hazardous waste sites, and Cal-Sites ASPIS (Department of Substance Control) Data Bases, contains potential or confirmed hazardous substance release properties. There are **no** listed CAL-SITES within a one-mile radius of the site.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed CAL-SITES.

CHMIRS/CORTESE/NOTIFY 65/TOXIC PITS

The California Hazardous Materials Incident Report System contains information on reported hazardous materials incidents (accidental release or spills). There are **no** listed CHMIRS sites within a 1/8-mile radius of the site.

CORTESE identifies public drinking wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. There are **11** listed CORTESE sites within a 1/2-mile radius of the site. Ten of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Shell Station, 230 Alvarado St, Map ID# C13
Location: Less than 1/8 miles west, topographically cross gradient
Status: LUST site with case closure granted

Proposition 65 (NOTIFY 65) contains facility notifications about any release which could impact drinking water and thereby expose the public to a potential health risk. There are **no** listed NOTIFY 65 sites within a one-mile radius of the site.

TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed. There are **no** listed TOXIC PITS sites within a one-mile radius of the site.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the site from any of these listed sites is low.

4.0 RECORDS REVIEW

SWF/LF

The State of California Integrated Waste Management Board's Solid Waste Information System (SWIS) database list. The list indicates there are **no** Landfill/Solid Waste Facility (SWF/LF) sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed SWF/LF site to be low.

WMUDS/SWAT

The Waste Management Unit Database System (WMUDS) is used by the State Water Resources Control Board staff and the Regional Water Quality Control Boards for program tracking and inventory of waste management units. There are **no** listed WMUDS/SWAT sites within a 1/2-mile radius of the site.

Based on the information reviewed, we conclude the potential for significant impact to the site from any listed WMUDS/SWAT site is low.

LUST

The California Water Quality Control Board, Leaking Underground Storage Tank (LUST) Registration list was reviewed. The list indicates there are **22** LUST sites within a 1/2-mile radius of the site, several of which are duplicate listings. There are only two listed sites located within a 1/8 miles distance from the subject property.

H&S Food & Gas, 2000 W 3rd Street, Map ID# A4
Location: Less than 1/8 miles southwest, topographically cross gradient
Status: Case closure granted

Shell Station, 230 S Alvarado St, Map ID# B7
Location: Less than 1/8 miles west, topographically cross gradient
Status: Case closure granted

Based upon the information reviewed, and considering the separation distances, intervening construction, topographical differences and current status of the nearest listed sites, we conclude the potential for significant impact to the site from any listed LUST site to be low.

4.0 RECORDS REVIEW

UST

The California Water Quality Control Board, Underground Storage Tank (UST) Registration list was reviewed. There are **31** listed UST sites within a 1/4-mile radius of the site. Many of these sites are duplicate listings for the same site. There are only eight listed site located within a 1/8 miles distance from the subject property.

St Vincent Dialysis (multiple listings), 201 S Alvarado St, Map ID# D20,D22-26, D28, D30, D36-38 & D44
Location: Less than 1/8 miles northwest
Status: Inactive site

2004 W 3rd Street, Map ID #A3
Location: Less than 1/8 miles southwest
Status: Historic UST site

Shell Station, 230 S Alvarado Street, Map ID# C16
Location: Less than 1/8 miles west
Status: Inactive UST Site

192 S Alvarado St, Map ID# B18
Location: Less than 1/8 miles north/northwest
Status: Active UST site

301 S Alvarado Street, Map ID# C19
Location: Less than 1/8 miles west
Status: Historical UST site

1841 W 3rd Street, Map ID# E45
Location: Less than 1/8 miles southeast
Status: Historical UST site

Country Villa Nursing Center, 340 S Alvarado St, Map ID# F45
Location: Less than 1/8 miles west/southwest
Status: Inactive UST site

341 S Alvarado St, Map ID# F56
Location: Less than 1/8 miles west/southwest
Status: Historic UST site

Based upon the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion the potential for significant impact to the site from any listed UST site to be low.

4.0 RECORDS REVIEW

HISTORICAL UST

The California Water Quality Control Board, Hazardous Substance Storage Container Database is a historical listing of UST sites. There are **nine** listed HISTORICAL UST sites within a 1/4-mile radius of the site. Eight of the listed sites are located greater than 1/8 miles distance from the subject property. There is only one listed site located within a 1/8 miles distance from the subject property.

Otto CRVanes/Shell Station, 230 S Alvarado St, Map ID# C15
Location: Less than 1/8 miles west
Status: Previously identified as an UST and LUST site with case closure granted

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed HISTORICAL UST site.

SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) listed underground storage tanks and was updated and maintained in the early 1980s. This listing is no longer updated or maintained. There are **ten** listed SWEEPS sites within a 1/4-mile radius of the site. Six of the listed sites are located greater than 1/8 miles distance from the subject property. There are only four listed sites located within a 1 /8 miles distance from the subject site.

Alvarado II Incorporated, 2000 W 3rd St, Map ID# A5
Location: Less than 1/8 miles southwest
Status: Inactive site

St Vincent Medical, 2021 Miramar St, Map ID# B6
Location: Less than 1/8 miles north/northwest
Status: Inactive site

Juan Cornejo/Arshag, 230 S Alvarado St, Map ID# C14
Location: Less than 1/8 miles west
Status: Previously identified as an UST and LUST site with case closure granted

Serm-Darin Saelak, 174 S Alvarado St, Map ID# D21
Location: Less than 1/8 miles north/northwest
Status: Inactive site

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed SWEEPS site.

4.0 RECORDS REVIEW

AST

The California Water Quality Control Board, Aboveground Storage Tank (AST) Registration list was reviewed. There are **no** listed AST sites within a 1/4-mile radius of the site.

Based upon the information reviewed, it is our opinion the potential for significant impact to the site from any listed AST site to be low.

BEP/FID

Bond Expenditure Plan (BEP). California Department of Health Services developed a site specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act Funds. There are **no** listed BEP sites within a one-mile radius of the site.

The California Environmental Protection Agency Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control board. There are **ten** listed FID UST sites within a 1/4-mile radius of the site. All ten listed sites were previously identified as UST, SWEEPS or HISTORIC UST sites.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, we conclude the potential for significant impact to the site from any listed BEP/FID site is low.

ENVIROSTOR

The DTSC's Site Mitigation and Brownfields Reuse Program's Envirostor database identifies sites that have known contamination or sites where there may be reasons to investigate further. The database includes Federal Superfund sites, State Response, including Military Facilities and State Superfund, Voluntary Cleanup, and School sites. There are **27** listed ENVIROSTOR sites within a one-mile radius of the site. All 27 listed sites are located greater than 1/4 miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction and topographical differences, it is our opinion there is low potential for significant impact to the site from any listed ENVIROSTOR sites.

CA CPS-SLIC

The California Regional Water Quality Control Board (RWQCB) Cleanup Program Sites (CPS) formerly known as Spills, Leaks, Investigation and Cleanup Cost Recovery (SLIC) Listing was reviewed. There is **one** listed CA CPS-SLIC site within a 1/2-mile radius of the site. The listed site is located greater than ¼ miles distance from the subject property

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed CA CPS-SLIC site.

4.0 RECORDS REVIEW

VCP

The California Department of Toxic Substance Control Volunteer Cleanup Program (VCP) Properties database contains low threat level properties with either confirmed or unconfirmed releases, and the project proponents have requested that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs. There are **two** listed VCP sites within a 1/2-mile radius of the site. Both listed sites are located greater than ¼ miles distance from the subject property.

Based on the information reviewed, and considering the separation distances, intervening construction, and topographical differences, it is our opinion there is a low potential for significant impact to the site from any listed VCP site.

ENG/INST CONTROLS & DEEDS

The Engineering/Institutional Controls & Deed Restriction Database (ENG/INST CONTROLS & DEEDS) contains a listed of sites where engineering, institutional controls or deed restrictions have been implemented. Engineering controls are physical measures selected for the purpose of preventing or minimizing exposure to hazardous substances. These may include, but are not limited to, fencing, capping, horizontal or vertical barriers, hydraulic controls, or alternative water supplies. Institutional Controls are non-engineered instruments such as administrative or legal controls that help minimize the potential for human exposure. The review indicates there is **one** listed ENG/INST CONTROLS & DEEDS site within a 1/2-mile radius of the site. The listed site is located greater than ¼ miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude there is a low potential for significant impact to the site from any listed ENG CONTROLS site.

HAZNET

The HAZNET data is extracted from the copies of hazardous waste manifests received each year by the DTSC (Department of Toxic Substance Control). The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. The subject property was identified as a HAZNET site.

4 City Residential Management, 2000 Miramar St, Map ID# A1
Location: Subject property
Status: In 2000, unspecified sludge waste was disposed of at a transfer station.
Comments: Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing.

Based on the information reviewed, it is our opinion there is a low potential for significant impact to the site from any listed HAZNET site.

4.0 RECORDS REVIEW

BROWNFIELDS

Brownfields are abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination. There are **four** listed BROWNFIELDS sites within a 1/2-mile of the subject property. All four listed sites are located greater than 1/8 miles distance from the subject property.

Based upon the information reviewed, and considering the separation distances, intervening construction, and topographical differences, we conclude the potential for significant impact to the subject site from any listed BROWNFIELDS site is low.

ORPHAN SUMMARY

A review of the unmapped or "orphan" sites did not reveal any additional sites of potential environmental concern to the subject property.

ENVIRONMENTAL RECORDS SOURCES SUMMARY

Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any of these off-site "listed" sources.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

PRIOR ENVIRONMENTAL REPORTS

We reviewed a prior Phase I Environmental Site Assessment for the subject property prepared by EBI Consulting dated March 15, 2016. At the time of the report, the subject property was fully developed with the existing Miramar Towers apartment project. No recognized environmental conditions were identified in connection with the subject property. The historical review indicated that the site was undeveloped or developed with a few single family residences dating back to the late 1800s and was later developed with a hotel and single family residences from the early 1900s to the 1970s. The site was then developed with the existing apartment project in approximately 1980. The report indicated that, based upon the dates of construction, an asbestos survey was not conducted. The report did indicate that an Asbestos O&M Plan was in place at the subject property and recommended maintaining the O&M program.

We reviewed a limited asbestos bulk sampling report for the subject property prepared LA Testing, dated May 13, 2005. A sample of pipe insulation was submitted for laboratory analysis and was found not to contain asbestos.

We reviewed a Limited Asbestos Survey for the subject property prepared by Envirocheck Inc., dated May 9, 2011. A total of 20 bulk asbestos samples were collected and submitted for laboratory analysis including 8 samples of acoustical ceiling spray, 8 samples of dry wall mud and 4 samples of drywall & mud composition. All 20 samples were found not to contain asbestos.

We reviewed an Asbestos O&M Plan prepared for the subject property by EBI dated October 28, 2016. No sampling was conducted, however, suspect asbestos containing materials identified included textured ceiling and wall texture, sheet rock & joint compound, ceiling tiles, pipe insulation, vinyl flooring materials and construction mastics and caulking.

We reviewed an ACM Program Manual prepared for the subject property dated April 2017. Materials confirmed as non-asbestos included pipe insulation, ceiling texture and dry wall and mud composition. Presumed asbestos containing materials included vinyl flooring materials.

We reviewed a Limited Asbestos Survey prepared by Envirocheck dated September 13, 2018. A total of 108 bulk samples were collected and submitted for laboratory analysis. Materials sampled included acoustical ceiling spray, drywall mud & composition, various vinyl sheet flooring & vinyl composition title, vinyl flooring adhesive, vinyl cove base & adhesive, ceiling tile, thin set, grout, and ceramic title. Asbestos containing materials were confirmed to be present in four of the vinyl tile flooring and vinyl floor mastic samples.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY

As a part of our due-diligence we reviewed aerial photographs included as part of a prior report by EBI Consulting (2016) and aerial photographs obtained from the USGS Earth Explorer, Historic Aerials, and Google Earth internet sites. Our review of the available photographs indicates the following activity on the site:

1923 The subject property appears to be occupied by several single family dwellings and small commercial buildings. Miramar St borders to the north followed by several dwellings. Dwellings and small commercial or apartment buildings appear to be present to the east. W 3rd Street borders to the south followed by single family dwellings. Several dwellings and small commercial buildings appear to be present to the west.

1938 The subject site and adjacent sites appear little changed except additional small commercial buildings are present to the south and southeast across W 3rd Street.

1948 The subject site and adjacent sites appear little changed.

1952 The subject site and adjacent sites appear little changed except apartments or similar commercial buildings are present to the north.

1960 The subject site and adjacent sites appear little changed.

1964 The subject site appear little changed except several of the residential dwellings have been removed from the southern portion of the site. The adjacent sites appear little changed.

1970 The subject site and adjacent sites appear little changed except additional dwellings appear to have been cleared from the subject property and new small commercial buildings appear to be present across W 3rd Street to the south.

1972 The subject site and adjacent sites remain little changed.

1976 Low resolution photograph. Most of the site appears to have been cleared of buildings and structures and the site appears to be vacant. The adjacent sites appear little changed.

1979 Low resolution photograph. The subject property appears to be under developed with the existing apartment project. The shell of the main building appears to be largely complete. The adjacent sites appear little changed.

1980 The subject property now appears to be fully developed with the existing apartment project. The adjacent sites remain little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

AERIAL PHOTOGRAPHY CONTINUED:

1983 The subject site and adjacent sites appear little changed.

1985 Low resolution photograph. The subject site and adjacent sites appear little changed.

1989 The subject site and adjacent sites appear little changed.

1994 The subject site and adjacent sites appear little changed except the adjacent site to the southwest now appear to be vacant.

1995 The subject site and adjacent sites appear little changed.

2002 The subject site and adjacent sites appear little changed.

2003 The subject site and adjacent sites appear little changed.

2004 The subject site and adjacent sites appear little changed.

2005 The subject site and adjacent sites appear little changed.

2007 The subject site and adjacent sites appear little changed.

2009 The subject site and adjacent sites appear little changed except a new commercial building project is under construction to the northeast.

2010 The subject site and adjacent sites appear little changed except the new commercial building has been completed to the northeast.

2011 The subject site and adjacent sites appear little changed.

2012 The subject site and adjacent sites appear little changed.

2014 The subject site and adjacent sites remain little changed.

2017 The subject site and adjacent sites appear little changed except a new commercial building is present to the southwest.

2018 The subject site and adjacent sites remain little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

USGS TOPOGRAPHIC MAPS

1894 Santa Monica 15' Quadrangle. The subject site appears to be vacant. The adjacent sites also appear to be mostly vacant with a few nearby scattered dwellings.

1896 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1898 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1900 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1902 Santa Monica 15' Quadrangle. The subject site adjacent sites appears little changed.

1921 Santa Monica 15' Quadrangle. The subject site now appears to be occupied by several single family dwellings. Residential or small commercial buildings also appear to be present on the adjacent sites.

1928 Los Angeles 7.5' Quadrangle. The subject site and adjacent sites appear little changed. Miramar Street is present to the north and W 3rd Street is present to the south.

1953 Hollywood 7.5' Quadrangle. The subject site and adjacent sites are located within a shaded region where only landmark structures are identified. No landmark structures are depicted on the subject property or immediate adjacent sites.

1966 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1972 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1981 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1991 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

1994 Hollywood 7.5' Quadrangle. The subject site and adjacent sites appear little changed.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

SANBORN MAP

1906 The subject property appears to be occupied by approximately 7 or 8 single family dwellings and associated out buildings. Miramar Street borders to the north followed by vacant land and single family dwellings. Single family dwellings are present to the east. Ocean View Ave (W 3rd St) borders to the south followed by single family dwellings. Single family dwellings are present to the west.

1950 The majority of the site now appears to be occupied by multiple buildings comprising the Barker Motel. Several single family dwellings are also present on the eastern portion of the site. Miramar St borders to the north followed by apartments and single family dwellings. Apartments and residential dwellings are present to the east. W 3rd Street borders to the south followed by several residential dwellings and small commercial buildings including two gas and oil stations to the south and southwest. Apartments appear to be present to the east.

1958 The subject site and adjacent sites appear basically similar to 1958.

1963 The subject site appears little changed except several of the small hotel buildings have been removed from the southern portion of the site. The adjacent sites appear little changed.

1970 The site remains little changed except additional small structures have been cleared from the southern portion of the site. The adjacent sites appear little changed except a new small commercial building is present to the south across W 3rd Street.

CITY DIRECTORY REVIEW

City directories were reviewed as part of a prior environmental assessment for the subject property by EBI Consulting (2016). City directories were reviewed between the years 1924 and 2013 at approximately 5 year intervals. In 1924 and 1929 listings included Miramar Terrace Apartments and Hotel and multiple residences. From 1933 through 1958 listings included Barker Hotel and multiple residences. From 1962 through 1971 listings included New Miramar Hotel & Apartments and multiple residences. From 1981 through 2013 listings included multiple residences, Miramar Towers and Forest City Management.

CHAIN OF TITLE REVIEW

We reviewed a Chain of Title Guarantee issued by Commonwealth Land Title Insurance Company dated September 28, 2018. The name of the assured was Miramar Tower. The report indicated that on February 13, 1979, the property was transferred from Realtech to Miramar Tower, a Limited Partnership.

4.0 RECORDS REVIEW

HISTORICAL USE INFORMATION ON AND ADJOINING THE PROPERTY

INTERVIEWS

Fire Department

We contacted Los Angeles Fire Department regarding potential records for the property. They indicated that they had no records of underground storage tanks or hazardous materials incidents for the subject property.

Water Department

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

Property Owner/Management

Interviews with property ownership representative and the onsite property management indicated they were unaware of any environmental liens, activity or land use restrictions related to environmental issues. They were also unaware of any underground storage tanks or other environmental concerns associated with the property.

HISTORICAL REVIEW SUMMARY

Based upon the aerial photograph reviews, historic map reviews, city directory reviews, prior environmental reports and personal interviews, it appears the property was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses. There is no historical evidence of any chemical misuse, unlawful dumping or landfilling, or other sources of contamination to the property.

5.0 SITE RECONNAISSANCE

METHODOLOGY AND LIMITING CONDITIONS

The site reconnaissance was conducted on April 27 & 30, 2018; November 1, 2018 and July 9, 2019. The scope of the onsite assessment consisted of a visual evaluation of the project site, building exteriors, interior common areas, and typical resident units in the buildings. Not all resident units were inspected. We have assumed areas not inspected were originally constructed with similar materials as those observed. Items of potential or recognized environmental significance to the property, if any, were noted.

GENERAL SITE SETTING

The Miramar Towers project is located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Miramar Towers is a low income HUD subsidized 62+ elderly project that consists of an existing eight story reinforced concrete apartment building structure that contains a total of 157 apartment units. The project was constructed in 1979-1980 and is currently +/- 39 years old. In addition to the 157 apartment units, the project includes an onsite rental office, an attached single story Community Building wing, two (2) 8-stop hydraulic elevators, two (2) interior/exterior stair wells, 45 open parking stalls (8 HC), onsite concrete sidewalks, perimeter public concrete sidewalks, asphalt paved driveways and parking areas, perimeter steel fencing, a concrete patio, landscaping, irrigation, a trash chute, a trash room, storm water catch basins and valley gutters, site lighting, project signage, underground utility services and related site improvements. The +/- 2.737 acre site is 1.5 miles northwest of the downtown Los Angeles, CBD. The property is located within the general southwest quadrant formed by of the intersection of State Route 101 and Interstate 110 in the central portion of the City of Los Angeles California. The site is located in an area containing primarily multifamily residential and commercial development.

INTERIOR AND EXTERIOR OBSERVATIONS

Our exterior inspection and area reconnaissance revealed no evidence of any significant soil staining or distressed vegetation. No unusual odors, pools of liquids, drums, leaking containers, hazardous materials or other unidentified substances were observed during the site reconnaissance. The onsite stormwater catch basins appeared to be free of any contaminants. Typical paint, maintenance supplies, and cleaning chemicals appeared to be properly stored and handled. A flame-safe metal cabinet is provided for small containers of paints and flammable liquids.

USTs/ASTs

There are no underground storage tanks at this site registered with the California Regional Water Quality Control Board. No underground storage tanks were observed during the site reconnaissance. The building is served by an emergency electrical generator. The generator is fueled from an integrated aboveground diesel storage tank. The tank appeared to be approximately 50 gallon capacity. The generator and associated tank were newer and appeared to remain in good condition.

5.0 SITE RECONNAISSANCE

ADJACENT PROPERTIES

North: Miramar Street followed by apartments and single family dwellings.

East: Apartments.

South: W 3rd Street followed by apartments, a motel and a retail strip center.

West: Apartments followed by eTown Inn.

The adjacent properties, as viewed from a distance, showed no visible evidence of environmental contamination.

ADDITIONAL HAZARDS/SERVICES

PCBs

PCBs have commonly been used as dielectric (insulating) fluids in transformers and capacitors and in fluorescent light ballasts. PCB-containing fluids were used mainly in indoor locations to minimize the possibility of fire if electrical equipment overheated. The potential hazard occurs when PCBs vaporize and convert chemically to dioxins and furans (two toxic substances). A secondary potential hazard is from spills and leaks that could contaminate the groundwater, soil or buildings with PCB fluids.

PCB-containing fluorescent light ballasts and air conditioning unit capacitors are considered a minor hazard as long as they are not leaking. However, it should be noted certain states regulate disposal of PCB-containing ballasts and capacitors, regardless of unit quantity or size.

Electrical service is provided underground from a pad-mounted electrical transformer. The transformers are owned by the local electric utility. We did not observe any leaking, staining, soil discoloration or stressed vegetation around the transformer vaults. Any future leakage would be the responsibility of the utility. The building is served by two hydraulic elevators. We did not observe evidence of leaking or significant staining around the elevator equipment.

Based upon our visual observations of the onsite transformers, it is our opinion the potential for PCB contamination at the site is low.

5.0 SITE RECONNAISSANCE

ASBESTOS

Asbestos can be found in almost any building material and is routinely found in insulation, spray applied acoustic ceiling finishes, flooring and roofing materials. Asbestos-containing material (ACM), defined by the Environmental Protection Agency as any material that contains more than 1% asbestos by weight, is most hazardous when friable - i.e., material which, when dry, may be crumbled, pulverized, or reduced to powder by hand pressure. Friable asbestos is considered more hazardous than non-friable asbestos because it can become more easily airborne, and thus is more likely to enter the respiratory system where it can lead to serious health problems. Inhalation of airborne fibers is believed potentially to lead to lung diseases and cancer. Chrysotile is the most common form of asbestos accounting for 95% of asbestos used in the United States. Less common is amphiboles asbestos group, which includes such forms of asbestos as amosite and crocidolite.

An assessment for potential asbestos containing materials was conducted as part of our inspection. The scope of the assessment was conducted based upon the general requirements outlined in ASTM E2356-10 for baseline surveys. The assessment was limited to a visual evaluation of the accessible structural areas within the buildings. Suspect asbestos containing materials were identified included acoustical ceiling texture, wallboard/joint compounds, acoustical ceiling tiles, various vinyl flooring and associated mastics, cove base and mastics, pipe insulation, and building penetration mastics and caulking compounds. We reviewed a limited asbestos bulk sampling report for the subject property prepared LA Testing, dated May 13, 2005. A sample of pipe insulation was submitted for laboratory analysis and was found not to contain asbestos. We reviewed a Limited Asbestos Survey for the subject property prepared by Envirocheck Inc., dated May 9, 2011. A total of 20 bulk asbestos samples were collected and submitted for laboratory analysis including 8 samples of acoustical ceiling spray, 8 samples of dry wall mud and 4 samples of drywall & mud composition. All 20 samples were found not to contain asbestos. We reviewed a Limited Asbestos Survey prepared by Envirocheck dated September 13, 2018. A total of 108 bulk samples were collected and submitted for laboratory analysis. Materials sampled included acoustical ceiling spray, drywall mud & composition, various vinyl sheet flooring & vinyl composition title, vinyl flooring adhesive, vinyl cove base & adhesive, ceiling tile, thin set, grout, and ceramic title. Asbestos containing materials were confirmed to be present in four of the vinyl tile flooring and vinyl floor mastic samples.

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. **Materials observed generally remained in good condition.** ***An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started.***

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

LEAD IN PAINT

In 1977, the Consumer Products Safety Commission banned for consumer use paint products that contain lead in excess of 0.06%. If ingested, lead in substances such as water, paint chips or dust can lead to colic, weakened muscle response and a variety of other adverse health effects. Ingestion of lead in paint is particularly a concern in young children, pregnant women and fetuses. Excessive blood-lead levels can seriously impair a child's brain and central nervous system, causing impaired reading and learning disabilities, delayed cognitive development, mental retardation, seizures, convulsions, coma, and death.

A lead-based paint hazard is defined - by the Department of Housing and Urban Development (HUD), and by many state regulatory agencies - as paint containing 0.5% lead by weight/or 1.0 milligram per square centimeter (mg/cm^2). In 1978, the Consumer Product Safety Commission (CPCS) prohibited the sale of paint containing more than 0.06% lead by weight. Since that time, many state, county, or city agencies have adopted lead regulations/ordinances designed to protect children from a lead-based paint hazard: evaluating the health hazard for children may involve medical confirmation of blood-lead levels in children exposed to the surface. It should be noted the area of lead-based paint control and maintenance is evolving rapidly, particularly with respect to legal and medical aspects. As a result, local, state and federal lead prevention programs or health departments should be periodically consulted as to standard and accepted practices and procedures for handling lead-based paint hazards.

The subject project was constructed in 1979-1980, therefore, there is a low potential for lead-based paints. Since the project is designated as housing exclusively for the elderly or persons with disabilities, and no children are present as residents, Lead-Based Paint requirements are not applicable.

DOMESTIC WATER

Drinking water may be contaminated with lead, petroleum products, solvents and other chemical substance allowed to enter groundwater. Public water departments are required to analyze and treat water prior to public consumption to assure it meets current government standards.

The domestic water supply for the property is provided by the City of Los Angeles Department of Water and Power. We obtained a copy of the latest annual water quality report from the City of Los Angeles Department of Water and Power internet site. According to the water quality report, the water supply for the site meets state and federal safe drinking water standards.

It is our opinion the human health risks associated with the water supply at the project is very low.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

RADON

Radon is a naturally occurring, highly mobile, chemically inert radioactive gas created through radioactive decay of uranium and thorium. The potential for occurrence of radon varies widely and is dependent upon (1) the concentration of radioactive materials in the underlying bedrock; (2) the relative permeability of soils with respect to gases; and (3) the amount of fracturing or faulting in surficial materials (EPA, 1987). The concern regarding radon and its potential effects upon humans arises from the results of studies (EPA 1987) which suggest approximately 15% of all lung cancer mortalities in the United States may be attributable to exposure to radon.

The EPA has established a concentration of radon of 4 picocuries per liter as a maximum permissible concentration "action level". Concentrations above this value would signal a potential health threat. According to studies, an average concentration in homes across the United States is on the order of 1.4 picocuries per liter. Our conversations with the Regional office of the EPA indicate radon has not been a problem in areas underlain by thick sequences of glacial and alluvial soils. The site is underlain with alluvial type soil deposits. The primary concern with radon is over accumulation in poorly ventilated basement areas.

The EPA Radon Zone for Los Angeles County is Zone 2. Zone 2 households have an average indoor level of greater than 2 but less than 4 pCi/L. Short-term radon testing was conducted in general accordance with the protocols outlined in AARST MAMF-2010 Protocol for Conducting Radon and Radon Decay Product Measurements in Multifamily Buildings, Section III. An exception to this protocol was the number of units to be tested. The minimum number of units to be tested shall be at least twenty-five percent of randomly selected ground level units in the building. A total of twenty (20) resident rooms and two (2) non-resident rooms were selected for testing. The testing was conducted using an activated charcoal device manufactured by Aircheck Inc.

Manager Office	1	9003612 9003649	0.3 0.3 (Duplicate)
Blank	N/A	9003629	0.3

Onsite short term radon test results were all well below the EPA recommended action level of 4.0 pCi/L. Based upon the results of the onsite short-term radon testing, no additional actions are recommended.

5.0 SITE RECONNAISSANCE

ADDITIONAL HAZARDS/SERVICES

VAPOR ENCROACHMENT

Vapor Encroachment Condition (VEC) is the presence or likely presence of Chemicals of Concern (COC) vapors in the subsurface of the target property caused by the release of vapors from contaminated soils and/or groundwater either on or near the target property. A Vapor Encroachment Screen is a screening process designed to determine the potential for chemicals of concern vapors released from contaminated soil or groundwater to impact a property.

A limited Vapor Encroachment Screen for the subject was conducted utilizing ASTM E 2600-10 Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions. The standard uses a two tiered methodology designed to quickly and cost effectively screen out properties with a low risk of Vapor Encroachment. Per HUD Map Chapter 9 Requirement, Tier 1 Screening has been conducted as part of this assessment.

Tier 1 – Initial Screening for potential Vapor Encroachment Conditions (VEC) was designed as a screening step to supplement a Phase I Environmental Assessment and relies on information already collected in a Phase I Investigation. Tier 1 methodology utilizes two primary tools for screening, search distance and chemicals of concern. Search distance includes the primary area of concern surrounding the target property and secondary area of concern for sites potentially upgradient of the target property. Chemicals of concern review addresses whether or not potential chemicals of concern, those chemicals that have the potential to volatize and become vapor, are likely to be present.

Based upon the information reviewed and documented during this assessment, which included a review of all major governmental environmental regulatory databases (see attached EDR Radius Map Report) and an historical review of the site and surrounding properties, and taking into consideration the separation distances, topographical differences, presumed groundwater flow, and local soils conditions, no potential vapor encroachment conditions were identified in connection with the subject property.

6.0 FINDINGS, OPINIONS, CONCLUSIONS AND DEVIATIONS

Prior asbestos surveys/sampling found that the acoustical ceiling textures, wallboard/joint compounds, ceramic tile, grout, thinset and pipe insulation were non-detect for asbestos. Asbestos containing materials were confirmed to be present in some vinyl tile flooring and sheet vinyl mastics. Materials observed generally remained in good condition. An Asbestos Operations and Maintenance Plan has been put in place at the subject property. Any necessary abatement actions should be completed prior to any renovation or demolition work is started. Lead-based paint testing was not required for this project. The project is located in EPA Radon Zone 2, a moderate risk radon region. Onsite short-term radon test results were all well below the EPA Recommended Action Level, therefore, no additional actions are recommended with respect to radon. No potential vapor encroachment conditions were identified in connection with the subject property.

No significant data gaps were encountered during preparation of this report. Full site access was provided during our site inspection. Sanborn Fire Insurance Map coverage was available for the property area and sufficient other historical sources were available to develop the site history for the property.

The historical review indicated that the site was originally vacant undeveloped land dating back to the late 1800s prior to being developed with several single family residential dwellings by the early 1900s. The project then appears to have been developed with multiple apartment and hotel buildings as well as several single family residences by the 1920s. Site usage remained little changed until the mid to late 1970s at which time the project was vacant. The existing apartment project was then developed on the site in 1979-1980. Site usage has remained little changed since that time. Based upon our investigation, we do not see a potential human health risk resulting from past uses.

The subject property was listed in the HAZNET database. According to the database, in 2000, an unspecified sludge waste was disposed of at a transfer station. Based upon the information reviewed, and considering the identified waste was reported to be properly disposed of at a transfer station, it is our opinion that there is a low potential for significant impact to the subject property from this listing. Based upon our review of all pertinent Regulatory Documents, it is our opinion there is only a low potential for any toxic or hazardous contamination to the property from any off-site "listed" sources.

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of Miramar Towers project located at 2000 Miramar Street, Los Angeles, Los Angeles County, California. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property.

It is our opinion the potential for significant hazardous contamination at the site is low. No additional investigation appears to be warranted at this time.

DEVIATIONS

Surveys Inc. has performed this Phase I Environmental Site Assessment in accordance with ASTM E1527-13 Standard Practice for Environmental Site Assessments with no conscious exceptions to or deletions from the standard.

ENVIRONMENTAL PROFESSIONALS' CERTIFICATION AND SIGNATURE

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in section 312.10 of 40 CFR 312 and we have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXPERIENCE

SURVEYS INC. **1998 – Present**

Consultant Engineer/Environmental Coordinator: Responsibilities include conducting engineering and environmental assessments for Lender's, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects across the U.S. Experience includes conducting over 1000 various Engineering Assessments and Phase I and Phase II Environmental Site Assessments.

The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. The assessments are conducted for the purpose of evaluating the construction of the overall development and identifying any possible deficiencies that could affect its current market value or resale potential. The assessment reports are prepared to meet or exceed the requirements of the Lender or Government Agency. These reviews normally include an existing facilities compliance with ADA Title III and can include a Seismic PML study.

The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review; interviews with people knowledgeable and a review of government environmental regulatory databases. Environmental Assessments typically include a review for potential Lead-Based Paints, suspect Asbestos Containing Materials and Radon Gas. Responsible for preparing site specific Asbestos, Lead-Based Paint and Mold and Moisture Operations and Maintenance Plans.

PAUL H. DALTAS, P.E.
PRINCIPAL – SURVEYS INC.

EDUCATION:

BCE, Civil/Structural Engineering
University of Minnesota, Institute of Technology

EXPERIENCE:

SURVEYS INC. **1990 - Present**

Principal Consultant Engineer. Responsible for providing independent, third party, engineering, environmental and seismic assessment services to Lenders, Owners, Developers and/or government agencies on a variety of commercial and multi-family residential projects throughout the United States. The Engineering Assessment Reports involve an onsite assessment and review of an existing building's Site, Architectural, Structural, Mechanical and Electrical Systems. Our Engineering Assessment Reports are prepared to meet or exceed the requirements of the Mortgage Lender, Fannie Mae, Freddie Mac, ASTM, or other agencies. These reviews normally include a review for compliance with ADA Title III provisions and may, if required, include a Seismic PML study for projects in UBC Seismic Zones 3 or 4. The Phase I Environmental Assessment Reports involve an onsite building and site assessment to determine if hazardous or toxic materials are present that can adversely impact the property. The Phase I Assessments also involve an historical review and interviews with people knowledgeable about the property. Phase II Environmental work is provided only as required by the Phase I Assessment to determine if suspected hazardous contamination exists. Over 2,000 Engineering/Environmental Assessments completed.

INDUSTRY - FANNIE MAE/HUD **2002-2003**

Fannie Mae, Property Condition Standards, Technical Advisory Panel 2002/2003. Western Regional MAP Lenders Conference PCNA Committee Member 2003.

WEYERHAEUSER BUILDING SYSTEMS **1988 - 1990**

Design Engineer/Project Manager/Regional Sales Manager. Designed, engineered and marketed to the construction industry a wide variety of commercial, industrial and residential structural systems for projects throughout the western United States. Weyerhaeuser industry representative and team member for the Weyerhaeuser PBDM (Probabilistic Beam Design Methodology) advanced reliability based product manufacturing and lumber grading system. Construction Project Manager for Weyerhaeuser structural systems installed in the Northwest.

WEYERHAEUSER-TIMBERLAND INDUSTRIES **1984 - 1988**

Project Manager/Engineer. Overseas construction materials packages specializing in interior and exterior finished wood products such as architectural doors, fire doors, sound doors, builders' hardware, plastic laminate casework, wood cabinetry, commercial and residential millwork, specialty hardware, custom manufactured windows, panel products and lumber. Involved in designing, engineering, estimating, manufacturing and shipping these multi-million dollar material packages from various mills around the world to the Middle East.

HEA-ARCHITECTS, ENGINEERS & CONSTRUCTION MANAGER **1972 - 1984**

Structural Engineer/Construction Manager. Leading Minneapolis, Minnesota firm specializing in medical related buildings such as hospitals, medical office buildings, geriatric care centers and retirement facilities. Work included the design and engineering of reinforced and post-tensioned concrete structures; masonry and precast buildings; steel and composite systems; and wood structure buildings. Onsite Construction Manager in charge of multiple prime contractors for major hospital remodeling and expansion project. Onsite Construction Engineer in charge of mid-rise senior retirement facility.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). SURVEYS INC. used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by SURVEYS INC.. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

An online review and analysis by SURVEYS INC. of the RCRA-LQG list, as provided by EDR, has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

BONNIE BRAE VILLAGE EPA ID:: CAR000197236:	208 S BONNIE BRAE ST	NE 1/8 - 1/4 (0.159 mi.)	67	194

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

An online review and analysis by SURVEYS INC. of the RCRA-SQG list, as provided by EDR, has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

An online review and analysis by SURVEYS INC. of the ENVIROSTOR list, as provided by EDR, has revealed that there are 26 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

An online review and analysis by SURVEYS INC. of the LUST list, as provided by EDR, has revealed that there are 19 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

An online review and analysis by SURVEYS INC. of the UST list, as provided by EDR, has revealed that there are 23 UST sites within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

An online review and analysis by SURVEYS INC. of the VCP list, as provided by EDR, has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by SURVEYS INC. of the RCRA NonGen / NLR list, as provided by EDR, has revealed that there are 21 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-20-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.
Eval Division: Los Angeles City Fire Department

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-12-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by SANTOS MENDOZA - MAINTENANCE SUPERVISOR. CONTACT INFORMATION: BARRY.GANS@LOSANGELESREHABWC.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by TODD BURNETT - CHIEF TECHNICIAN. CONTACT INFORMATION: TODDBURNETT@JERITY.ORG Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110066953407

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-14-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by MARCOS ARGEUATA (SUPERVISOR). Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 402782
Site Name: ST VINCENT MEDICAL CENTER
Violation Date: 10-17-2018
Citation: 22 CCR 15 66265.174 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.174
Violation Description: Failure to inspect weekly, areas where hazardous waste containers are stored or transferred. The owner or operator shall look for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors.
Violation Notes: Returned to compliance on 11/14/2018. OBSERVATION: 90 day hazardous waste storage room has not been checked on a weekly basis. CORRECTIVE ACTION: Submit a copy of the inspection log to the CUPA demonstrating that the hazardous waste storage area is being inspected weekly.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 402782
Site Name: ST VINCENT MEDICAL CENTER
Violation Date: 08-29-2019
Citation: 23 CCR 16 2716(f) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(f)
Violation Description: "Failure to maintain on-site, or off-site at a readily available location if approved by the UPA, copies of Designated Operator inspection records as follows: Designated operator monthly inspection records for inspections performed before October 1, 2018 must be kept for 12 months from the month of inspection. For inspections performed on or after October 1, 2018, copies of the ""Designated Underground Storage Tank Operator Visual Inspection Report"" must be kept for 36 months from the month of inspection. "
Violation Notes: Returned to compliance on 08/29/2019. October 2018 DO report was not

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/14/2018. OBSERVATION: Three 1 gallon containers of Formulin waste located in the Formaldehyde Storage Room for specimens were observed without a hazardous waste label. One 20 gallon container of diesel waste was observed in the 90 day hazardous waste storage area without a hazardous waste label. Five 5 gallon containers of used oil located in the 90 day hazardous waste storage area were observed without a hazardous waste storage label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.

Violation Date: 09-10-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 09/13/2019. Observation: Site has audible visual overfill only. Site has single wall vent line and remote fill, as such overfill on site does not meet requirements. Corrective action: obtain permits and repair overfill to meet requirements.

Facility URL: http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002643872

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-20-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by (ARACELI ENCISO - ASST ADMIN). EMAIL: ARACELI@CARALANOPERATIONS.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.
Eval Division: Los Angeles City Fire Department
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-30-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: for documentation only. Site is under the threshold for reporting haz mat (less than 1000 cuft on site) for medical facility. referral sent to dmu

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: There is a State Water Board closure Order for this case issued 1/28/2015. The State Water Board needs confirmation that the corrective action wells and wastes have been removed from the site in order to close the case. Once confirmation has been received State Water Board can issue a Uniform Closure Letter and close the case.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Operations and Maintenance Report
Completed Date: 11/17/2010
Comments: DTSC concurred with the recommendations of the Operation and Maintenance Report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 06/15/2011
Comments: DTSC provided two comments on the Report that should be addressed in future reports. DTSC also concurred with the recommendations to reduce O&M activities to an annual basis and to remove soil vapor probe MW-1-28 from routine monitoring activities; however, monitoring should continue at soil vapor probe MW-4-15.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/30/2020

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.
