Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No

ST VINCENT MEDICAL CENTER (Continued) **1024854701**

Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 11/14/2018. OBSERVATION: Three 1 gallon containers of Formulin waste located in the Formaldehyde Storage Room for specimens were observed without a hazardous waste label. One 20 gallon container of diesel waste was observed in the 90 day hazardous waste storage area without a hazardous waste label. Five 5 gallon containers of used oil located in the 90 day hazardous waste storage area were observed without a hazardous waste storage label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the container listed above has been properly labeled.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 123291
Site Name: HOTEL DIEU
Violation Date: 09-10-2019
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 09/13/2019. Observation: Site has audible visual overfill only. Site has single wall vent line and remote fill, as such overfill on site does not meet requirements. Corrective action: obtain permits and repair overfill to meet requirements.

HOTEL DIEU, A CAL NONPROFIT CORP (Continued) **S112927931**

Site ID: 123291
Site Name: HOTEL DIEU
Violation Date: 09-10-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 09/13/2019. Observation: Site has audible visual overfill only. Site has single wall vent line and remote fill, as such overfill on site does not meet requirements. Corrective action: obtain permits and repair overfill to meet requirements.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-20-2016
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by (ARACELI ENCISO - ASST ADMIN). EMAIL: ARACELI@CARALANOPERATIONS.COM Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: Cusory review - no comment til final report.

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/29/2004
Comments: DTSC did not concur with NFA and recommended additional GW sampling.

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/26/2005
Comments: No comments issued, pending additional monitoring.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Report
Completed Date: 01/02/2003
Comments: Approval of CSSI and determination of FA

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Tank Removal Report
Completed Date: 01/23/2004
Comments: DTSC concurred with the sampling approach to assess tank areas

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan

CENTRAL LOS ANGELES MIDDLE SCHOOL NO. 1 (Continued) **S107736103**

Completed Date: 05/27/2004
Comments: Approval of FSI Report and "hot" spot removal for benzene and MTBE impacted soils

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 04/02/2004
Comments: Conditional approval of RAW Addendum for implementation

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Plan
Completed Date: 01/14/2005
Comments: awaiting for final detemination for the site

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 12/15/2005
Comments: DTSC acknowledged receipt of report. Final detm pending additional monitoring and coordination with LARWQCB,

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 07/01/2005
Comments: Currently evaluating GW and coordinating with RWQCB

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/10/2006
Comments: Report reviewed as an update of GW conditions. No approval necessary.

Completed Area Name: GW
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 08/14/2006

Site History: There is a State Water Board closure Order for this case issued 1/28/2015. The State Water Board needs confirmation that the corrective action wells and wastes have been removed from the site in order to close the case. Once confirmation has been received State Water Board can issue a Uniform Closure Letter and close the case.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/23/2020

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

New York, NY 10176

Subject: LIMITED SOIL SAMPLING AND ANALYSIS
PROPOSED MULTI-FAMILY RESIDENTIAL DEVELOPMENT
1917 - 2005 ½ WEST 3rd STREET
LOS ANGELES, CALIFORNIA
TRACT: EXTENSION OF THE NOB HILL TRACT
LOTS: 1-6; PARCELS: 2-5

Dear Ladies and Gentlemen:

In accordance with the scope of services outlined in our proposal dated May 1, 2020, we have prepared this letter to document the soil sample collection and analysis from four hand auger borings advanced at the property located at 1917 - 2005 ½ West 3rd Street (the Site) in Los Angeles, California. The location of the Site is depicted on Figure 1.

PURPOSE AND SCOPE OF SERVICES

It is our understanding that the proposed development will consist of a 7-story multi-family residential structure constructed at the existing elevation of West 3rd St. Due to the sloping nature of the site, the proposed structure will be partially tucked into the existing slope (up to 12 feet below existing grade).

Geocon was retained to perform a geotechnical evaluation for the proposed new structure. At the Client's request, select soil samples were collected from borings advanced during the geotechnical investigation and submitted for laboratory analysis to aid in developing a preliminary waste profile for export soil.

BACKGROUND

Regulatory criteria to classify a waste as "California hazardous" for handling and disposal purposes are contained in the California Code of Regulations (CCR), Title 22, Division 4.5, Chapter 11, Article 3, § 66261.24. Criteria to classify a waste as "Resource, Conservation, and Recovery Act (RCRA) hazardous" are contained in Chapter 40 of the Code of Federal Regulations (40 CFR), § 261.

For waste containing metals, the waste is classified as California hazardous when: 1) the representative total metal content equals or exceeds the respective Total Threshold Limit Concentration (TTLC); or 2) the representative soluble metal content equals or exceeds the respective Soluble Threshold Limit Concentration (STLC) based on the standard Waste Extraction Test (WET). A waste may have the potential of exceeding the STLC when the waste's total metal content is greater than or equal to ten times the respective STLC value, since the WET uses a 1:10 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to ten times the respective STLC, and assuming that 100 percent of the total metals are soluble, soluble metal analysis by the WET is required.

A material is classified as RCRA hazardous, or Federal hazardous, when the representative soluble metal content equals or exceeds the Federal regulatory level based on the Toxicity Characteristic Leaching Procedure (TCLP). A waste may have the potential of exceeding the TCLP when the waste's total metal content is greater than or equal to twenty times the respective TCLP value, since the TCLP uses a 1:20 dilution ratio. Hence, when a total metal is detected at a concentration greater than or equal to twenty times the respective TCLP, and assuming that 100 percent of the total metals are soluble, soluble metal analysis by the TCLP is required.

The above regulatory criteria are based on chemical concentrations. Wastes may also be classified as hazardous based on other criteria such as ignitability and corrosivity; however, for the purposes of this investigation, toxicity (i.e., representative lead concentrations) is the primary factor considered for waste classification since waste generated during the construction activities would not likely warrant testing for ignitability or corrosivity. Waste that is classified as either California-hazardous or RCRA-hazardous requires management as a hazardous waste.

FIELD SAMPLING AND ANALYTICAL TESTING

On May 14 and May 15, 2020, Geocon's representative collected soil samples from four geotechnical borings (labeled B3, B4, B6, and B7) advanced using hand-auger methods at the Site. A total of eight soil samples were collected from the four boring locations. Samples were collected from depths of 2 and 10 feet within each boring. The approximate boring locations are shown on Figure 2.

The soil samples were labeled with a unique ID consisting of the boring location number followed by a dash and the depth (in feet) from which the sample was collected. For example, Sample ID B3-2.0 was collected from boring B3 at a depth of 2 feet.

Soil samples were collected with a stainless steel hand-auger. Soil was transferred directly from the hand-auger bucket into laboratory-provided 8-ounce glass containers. The containers were capped, labeled, and placed in a chilled cooler for transport to Advanced Technology Laboratories (ATL), a State certified laboratory located in Signal Hill, California, under chain-of-custody protocol. The sampling equipment was cleansed prior to each sampling effort by washing with an Alconox solution and double rinsing with distilled water.

The eight soil samples were submitted to ATL for analysis of Title 22 metals by Environmental Protection Agency (EPA) Method 6010B/7000, total petroleum hydrocarbons (TPH) (C6-C40) by modified EPA Method 8015B, and volatile organic compounds (VOCs) by EPA Method 8260B.

One soil sample (B6-2.0) exhibited a total lead concentration greater than ten times STLC for lead of 5.0 milligrams per liter (mg/l) and greater than twenty times the TCLP for lead of 5.0 mg/l and was further analyzed for the WET and TCLP soluble lead.

RESULTS

The analytical results are summarized below. Constituents of concern reported at concentrations above the laboratory detection limit are summarized on Table 1 for metals and on Table 2 for TPH and VOCs. Laboratory analytical reports and chain-of-custody documentation are attached.

Title 22 Metals

Analysis of soil samples for Title 22 metals did not indicate the presence of metals at or above their respective Total Threshold Limit Concentrations (TTLCs).

With the exception of the lead concentration of 250 milligrams per kilogram (mg/kg) reported for sample B6-2.0, concentrations of metals were lower than 10 times their respective Soluble Threshold Limit Concentrations (STLCs).

WET soluble lead was reported in the one sample analyzed (sample B6-2.0) at a concentration of 16 mg/l.

TCLP soluble lead was reported in the one sample analyzed (sample B6-2.0) at a concentration of 0.50 mg/l.

Total Petroleum Hydrocarbons

TPH was reported in four of the eight samples analyzed at total concentrations ranging from 45 mg/kg to 720 mg/kg. The reported concentrations of TPH fall predominately within the waste oil carbon chain range.

Volatile Organic Compounds

VOCs were not detected at concentrations equal to or greater than their respective laboratory detection limits.

CONCLUSIONS AND RECOMMENDATIONS

With the exception of lead in sample B6-2.0, none of the Title 22 metals reported for the soil samples collected from the hand-auger borings had concentrations exceeding the respective TTLC values or ten times the respective STLC values.

Wet soluble lead was reported in sample B6-2.0 at a concentration of 16 mg/l which is greater than the STLC for lead of 5.0 mg/l. Based on this analytical result, the soil in the vicinity of B6-2.0 would be characterized as a California Hazardous waste based on soluble lead content. The soil would not be characterized as a RCRA hazardous waste because the TCLP soluble lead content of 0.50 mg/l reported for the sample is less than the TCLP of 5.0 mg/l.

The extent of lead impacted soil in the vicinity of Boring B6 is undefined. We recommend that a Soil Management Plan (SMP) be prepared for the project prior to the start of grading. Soil management procedures shall be described so the hazardous soil can be separated from nonhazardous soil during excavation tasks. Soil management procedures outlined in the SMP should be followed during the project's excavation and development phases to properly manage the various classes of soil and to minimize risk to workers and the public during construction. .

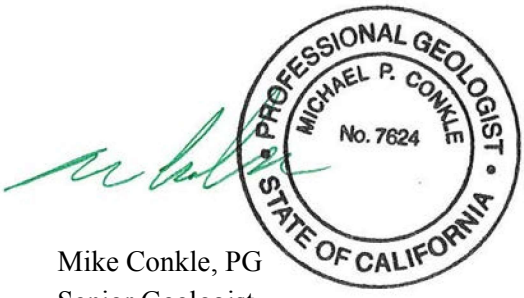
TPH was reported in four of the eight samples analyzed at total concentrations ranging from 45 mg/kg to 720 mg/kg.

Currently, regulatory criteria for the classification of wastes based solely on the concentrations of TPH have not yet been promulgated. Disposal of petroleum hydrocarbon-impacted soil is generally regulated by disposal facility permit and acceptance criteria. Client is advised that municipal landfills in Los Angeles County have a zero tolerance for TPH in soil. However, private landfills, such as the Republic Chiquita Canyon facility in Castaic, California, will accept TPH containing soil. Soil excavated from the site should be stockpiled and characterized for TPH content, and acceptance from the intended receiving facility should be obtained prior to shipping the soil off site for disposal. For disposal purposes, and with the exception of the area in the vicinity of Boring B6, the soil would be classified as a non-hazardous waste based on TPH content.

REPORT LIMITATIONS

This report has been prepared exclusively for the Client. The information obtained is only relevant as of the date of the latest site visit and will require an update to reflect additional information obtained.

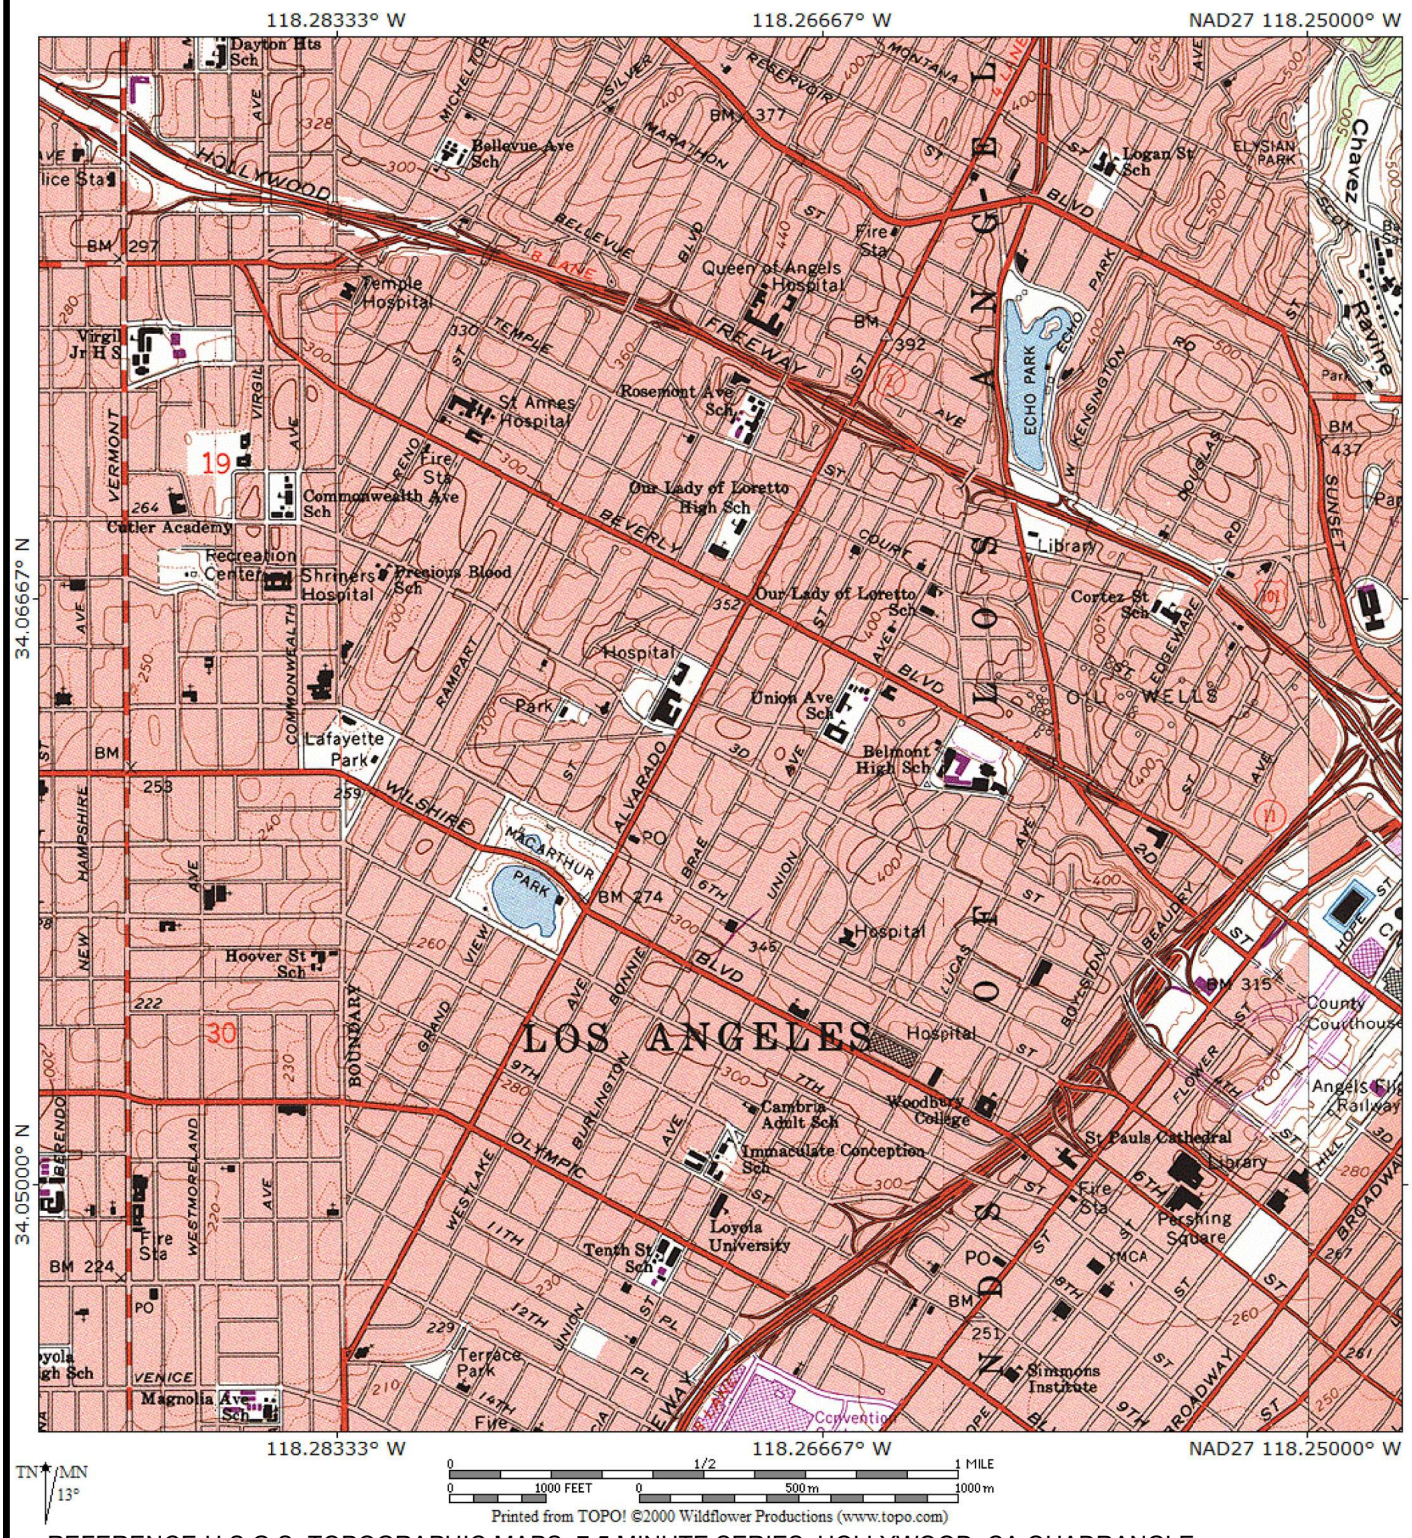
The results presented herein are based on a limited number of samples collected from widely spaced boring locations. The purpose of these sampling activities was to provide a preliminary evaluation of the potential presence of contaminants in the soil at the Site.



The Client should recognize that this report is not a comprehensive site characterization and should not be construed as such. Designated soil receiving facilities may require additional analytical results prior to accepting this soil, if applicable. The results as presented in this report are predicated on the limited soil sampling and laboratory analyses performed. In addition, the information obtained is not intended to address potential impacts related to sources other than those specified herein.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the report is implied within the intent of this report or any subsequent reports, correspondence, or consultation, either express or implied. Geocon strived to perform the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

Please call if you have any questions or desire additional information.



Very truly yours,

GEOCON WEST, INC.

Mike Conkle, PG
Senior Geologist

Geocon West, Inc.		Project Number :	2000 W. 3rd ST, W1182-06-01
3303 N. San Fernando Blvd., Suite 100		Report To :	Mike Conkle
Burbank , CA 91504		Reported :	06/02/2020

Notes and Definitions

S1	Surrogate recovery was above laboratory acceptance limit. No associated target analyte was detected in the sample.
R	RPD value outside acceptance criteria. Calculation is based on raw values.
M2	Matrix spike recovery outside of acceptance limit due to possible matrix interference. The analytical batch was validated by the laboratory control sample.
M1	Matrix spike recovery outside of acceptance limit. The analytical batch was validated by the laboratory control sample.
L5	Laboratory Control Sample high biased. Sample result/s was non-detect (ND) for the target analyte; therefore reanalysis was not necessary.
ND	Analyte is not detected at or above the Practical Quantitation Limit (PQL). When client requests quantitation against MDL, analyte is not detected at or above the Method Detection Limit (MDL)
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
NR	Not Reported
RPD	Relative Percent Difference
CA2	CA-ELAP (CDPH)
OR1	OR-NELAP (OSPHL)

Notes:
(1) The reported MDL and PQL are based on prep ratio variation and analytical dilution.
(2) The suffix [2C] of specific analytes signifies that the reported result is taken from the instrument's second column.
(3) Results are wet unless otherwise specified.

Re: ATL Work Order Number : 2001180
Client Reference : 2000 W. 3rd ST, W1182-06-01

Enclosed are the results for sample(s) received on May 15, 2020 by Advanced Technology Laboratories. The sample(s) are tested for the parameters as indicated on the enclosed chain of custody in accordance with applicable laboratory certifications. The laboratory results contained in this report specifically pertains to the sample(s) submitted.

Thank you for the opportunity to serve the needs of your company. If you have any questions, please feel free to contact me or your Project Manager.

Sincerely,

Dr. Reza Karimi
Laboratory Director

The cover letter and the case narrative are an integral part of this analytical report and its absence renders the report invalid. Test results contained within this data package meet the requirements of applicable state-specific certification programs. The report cannot be reproduced without written permission from the client and Advanced Technology Laboratories.

LOS ANGELES, CALIFORNIA
TRACT: EXTENSION OF THE NOB HILL TRACT
LOTS: 1-6; PARCELS: 2-5

Dear Ladies and Gentlemen:

In accordance with your authorization of our proposal dated May 1, 2020, we have performed a geotechnical investigation for the proposed multi-family residential development located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed multi-family residential development located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on May 14 and May 15, 2020. Site exploration included excavating seven 3-inch diameter hand auger borings and one 24-inch diameter bucket auger boring. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2A). A detailed discussion of the field investigation, including the boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analyses of the data obtained during our investigation, as well our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the List of References section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 1917 -2005½ West 3rd Street in the City of Los Angeles, California. The site consists of two legal lots and is currently occupied by a surface parking lot with seven parking spaces and a driveway and associated hardscape and landscaping. The site is bounded by an eight-story residential structure to the north, by a two-story single-family residential structure to the east, a four-story residential structure to the west, and by West 3rd Street to the south. The subject property slopes downward to the southwest with a topographic relief across the site of approximately 14 feet. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation on-site consists of lawn areas, trees, and shrubs typical of residential landscaping.

Based on the information provided by the Client, it is our understanding that the proposed development will consist of a seven-story structure with a partial basement level. Due to the sloping nature of the site, the proposed structure will be partially tucked into the existing slope (up to 14 feet below existing grade). The proposed development is depicted on the Site Plan and Geologic Cross-Sections (see Figures 2B through 2D).

Based on our correspondence with the project structural engineer, John Labib and Associates, column loads for the proposed structure are estimated to be up to 850 kips, and wall loads will be up to 10 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located along the south flank of the Elysian Hills at the north edge of the Los Angeles Basin. The Elysian Hills are composed of folded and faulted Miocene age sedimentary bedrock of the Puente Formation that has been uplifted and incised by local drainages. Subsequently, the incised channels have been infilled with alluvial sediments derived from the Elysian Hills.

Regionally, the site is located within the Peninsular Ranges geomorphic province that is characterized by elongate northwest-trending mountain ridges separated by straight-sided sediment-filled valleys. The northwest trend is further reflected in the direction of the dominant geologic structural features of the province that are northwest to west-northwest trending folds and faults including the nearby Newport-Inglewood Fault Zone located approximately 5.9 miles to the west-southwest.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain by artificial fill, colluvium, and Miocene age sedimentary bedrock of the Puente Formation (Lamar, 1970). Detailed stratigraphic profiles of the materials encountered in our borings are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered to a maximum depth of $6^1/_2$ feet below existing ground surface. The artificial fill generally consists of dark brown, yellowish brown, or olive brown sandy clay, sandy silt, and silty sand with some bedrock fragments and construction debris. The artificial fill is characterized as fine-grained, slightly moist to moist and medium dense or soft to stiff. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Colluvium

Colluvium was encountered in the explorations beneath the artificial fill in borings B1, B2, B3 and B5. The colluvial soils range in thickness from approximately 1 to 5½ feet and generally consist of dark grayish brown, olive brown or blackish brown sandy silt and clay with trace amounts of bedrock fragments (up to1-inch maximum dimension). The colluvium is characterized as slightly moist to moist and firm to hard.

4.3 Puente Formation

Miocene age sedimentary bedrock of the Puente Formation was in encountered beneath the fill and colluvial deposits at depths ranging from 1 foot to 7 feet beneath the existing ground surface. The bedrock generally consists of interbedded yellowish brown or olive brown sandstone and gray siltstone with some localized diatomaceous-rich beds. The bedrock is locally diatomaceous. The bedrock was generally characterized as moderately hard to hard, fine-grained, thinly bedded and highly weathered. Oxidation staining is common along bedding surfaces.

Bedding observed in the bucket auger boring (B7) generally strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south. This orientation is generally consistent with published geologic maps that indicate the bedding in the area strikes east-west to N75ºE and dips 33º to 68º to the southeast (Dibblee, 1991; Lamar, 1970).

5. GROUNDWATER

The site is underlain by shallow bedrock and is not located within the local groundwater basin. Consequently, historic high groundwater level information from groundwater monitoring wells is not available for the site or the immediately surrounding area from the California Geological Survey (CGS, formerly California Division of Mines and Geology, 1998).

Groundwater was not encountered in our explorations at the site However, the shallow bedrock in the area commonly results in a perched water condition, either on top of the bedrock or within the joints and fractures in the bedrock, that can be variable from year to year based on many local factors such as irrigation and precipitation. Therefore, the contractor should be prepared to encounter groundwater seepage during construction. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (See Section 7.20).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include Holocene-active, pre-Holocene, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, a Holocene-active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A pre-Holocene fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years), but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2020a; 2020b; 2014) nor a city-designated Preliminary Fault Rupture Study Area (City of Los Angeles, 2020) for surface fault rupture hazards. No Holocene-active or pre-Holocene faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest active fault to the site is the Hollywood Fault located approximately 3.5 miles to the north (CGS, 2014). Other nearby active faults are the Raymond Fault, the Newport-Inglewood Fault Zone, and the Santa Monica Fault located approximately 4.6 miles northeast, 5.9 miles west-southwest, and 7.2 miles west of the property, respectively (CGS, 2014; USGS, 2006; Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 35 miles northeast of the site (Ziony and Jones, 1989).

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Coastal Plain at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 M_w 5.9 Whittier Narrows earthquake and the January 17, 1994 M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The site is underlain at depth by the Los Angeles segment of the Puente Hills Blind Thrust and the Upper Elysian Park Blind Thrust. These blind thrust faults and others in the Los Angeles area do not present a potential surface fault rupture hazard at the site. However, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Near Redlands	July 23, 1923	6.3	59	E
Long Beach	March 10, 1933	6.4	35	SE
Tehachapi	July 21, 1952	7.5	77	NW
San Fernando	February 9, 1971	6.6	25	NNW
Whittier Narrows	October 1, 1987	5.9	11	E
Sierra Madre	June 28, 1991	5.8	21	NE
Landers	June 28, 1992	7.3	105	E
Big Bear	June 28, 1992	6.4	83	E
Northridge	January 17, 1994	6.7	18	WNW
Hector Mine	October 16, 1999	7.1	120	ENE
Ridgecrest	July 5, 2019	7.1	123	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes site-specific design criteria obtained from the 2019 California Building Code (CBC; Based on the 2018 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application *Seismic Design Maps*, provided by OSHPD. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2019 CBC and Table 20.3-1 of ASCE 7-16. The values presented on the following page are for the risk-targeted maximum considered earthquake (MCE_R).

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2019 CBC Reference
Site Class	C	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.997g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.711g	Figure 1613.2.1(2)
Site Coefficient, F_A	1.2	Table 1613.2.3(1)
Site Coefficient, F_V	1.4	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	2.397g	Section 1613.2.3 (Eqn 16-36)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	0.996g	Section 1613.2.3 (Eqn 16-37)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.598g	Section 1613.2.4 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.664g	Section 1613.2.4 (Eqn 16-39)

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.855g	Figure 22-7
Site Coefficient, F_{PGA}	1.2	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	1.026g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2019 California Building Code and ASCE 7-16, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 6.89 magnitude event occurring at a hypocentral distance of 8.46 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.75 magnitude event occurring at a hypocentral distance of 11.19 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The State of California Seismic Hazard Zone Map for the Hollywood Quadrangle (CDMG, 1999; CGS, 2014) indicates that the site is not located within an area identified as having a potential for liquefaction. The site is underlain shallow sedimentary bedrock of the Miocene age Puente Formation that is not susceptible to liquefaction. Based on these considerations, it is our opinion that the potential for liquefaction to occur beneath the site is considered very low.

6.5 Slope Stability

Topography at the site slopes gently to the southwest. The site is located within a City of Los Angeles Hillside Grading Area but is not located within a city-designated Hillside Ordinance Area (City of Los Angeles, 2020). According to the County of Los Angeles Safety Element (Leighton, 1990), the site is not located within an area identified as being susceptible to slope stability hazards. Additionally, the site is not within zone of required investigation for earthquake-induced landslides (CDMG, 1999; CGS, 2014, 2020b). There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low.

As previously described, Miocene age Puente Formation bedrock was encountered at depths of 1 foot to 7 feet beneath the existing ground surface. Bedding observed at the site generally strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south.

The planned excavation for the proposed development will be a maximum of 14 feet along the northern project boundary. The upper portion of the excavation will expose artificial fill and colluvium that are generally massive to horizontally stratified and lack any well-defined planar features or discontinuities (such as bedding planes or joints) which would act as planes of weakness. Bedrock is anticipated to be exposed in the lower portion of the planned excavation and, based on the orientation of the bedrock, is anticipated to expose adversely oriented bedrock along the project north and west excavation walls and will result in lateral surcharge loading on the proposed basement walls at these locations (see Figures 2B through 2D.

Where bedrock is exposed in the excavation, it is very important that a Professional Geologist (a representative of Geocon) observe the cuts during the grading process in order to confirm the bedrock orientation and identify any unforeseen variations within the bedrock. Any necessary recommendations to eliminate or support any unfavorably oriented bedding planes will be made at that time.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. The Los Angeles County Safety Element (Leighton, 1990) indicates that the site is not located within a designated dam inundation area. Therefore, the potential for inundation at the site, as a result of an earthquake-induced dam failure, is considered low.

6.7 Tsunamis, Seiches, and Flooding

The site is not located within a coastal area. Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding from a seismically induced seiche is considered unlikely.

The site is within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA, 2020; LACDPW, 2020b).

6.8 Oil Fields & Methane Potential

Based on a review of the California Geologic Energy Management Division (CalGEM) Well Finder Website (2020) the site is located within the limits of the Los Angeles City Oil Field. The majority of wells in this oil field are located to the north of the site. The nearest documented well to the site is the Conoco Inc. Well Number 1-C, an idle oil and gas well, located approximately 250 feet to the north. Due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not shown on the location map and undocumented wells could be encountered during construction. Any wells encountered will need to be properly abandoned in accordance with the current requirements of the CalGEM.

The site is located within the boundaries of a city-designated Methane Zone (City of Los Angeles, 2020). A methane study will be required by the city prior to site development. A methane specialist, Terra – Petra, has been contacted to perform a site-specific methane study. Their findings should be incorporated into the final design.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. As previously indicated, the site is located within the City of Los Angeles Oil Field. However, the limited oil production from this field has not resulted in regional or local subsidence. No known large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. Therefore, the potential for ground subsidence due to withdrawal of fluids or gases at the site is considered low.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 6½ feet of existing artificial fill was encountered during site exploration. The existing fill encountered is believed to be the result of past grading and construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. Demolition of the existing structure that occupies the site is anticipated to disturb the upper few feet of existing site soils. It is our opinion that the existing fill and colluvial soils, in their present condition, are not suitable for direct support of proposed foundations or slabs. The existing fill and colluvial soils are suitable for re-use as engineered fill provided the recommendations in the Grading section of this report are followed (see Section 7.5).

7.1.3 Based on these considerations, the proposed structure may be supported on a conventional foundation system deriving support exclusively in the undisturbed bedrock. Based on our discussions with the design team, it is our understanding that the preferred design is to excavate all existing artificial fill and colluvial soils in order to construct conventional foundations directly in competent bedrock. Subsequent to foundation construction, engineered fill will be placed and compacted in order to bring the site elevation back to the proposed finished floor elevations. At this time the team has not yet determined if excavations to remove the existing artificial fill and colluvium will be conducted through the use of sloping techniques, shoring measures, or a combination of both. For the purposes of this report, we have assumed that shoring techniques will be utilized, resulting in undisturbed soils being retained by proposed below grade walls.

7.1.4 It is anticipated that bedrock will be exposed throughout the basement area excavation bottom, and the bedrock is considered suitable for support of the concrete slab-on-grade. At the ground floor level, it is recommended that all existing artificial fill and/or soft colluvium be excavated and properly compacted for slab support. The limits of existing fill and/or soft colluvium removal will be confirmed by the Geocon representative during site grading activities.

7.1.5 If a methane mitigation system is required for this project, a mat foundation system may be a more cost-effective foundation system for this project. The mat foundation system allows for more efficient construction when performed in conjunction with a methane mitigation system. In addition, the bottom of the mat can be shaped to channel the methane simplifying the passive mitigation system. A qualified methane consultant should be retained for the design of the mitigation system.

7.1.6 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, such as adjacent to property lines, foundations may be deepened as necessary to maintain a minimum maintain a minimum 24-inch embedment below the ground surface, and a minimum 12-inch embedment into the undisturbed colluvium and/or bedrock. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.7 Although not encountered during site exploration, groundwater seepage conditions could develop on top of the bedrock or within the joints and fractures in the bedrock. If this occurs during construction, temporary dewatering activities may be necessary and recommendations are provided in Section 7.3 of this report.

7.1.8 Excavations on the order of 16 feet in vertical height are anticipated for construction of the proposed structure, including foundation depths. The proposed excavations will expose bedrock, with strikes N74ºW to N90ºE and dips 18 to 36 degrees to the south. These conditions are considered unfavorable to the proposed excavations along the north and west property lines. The recommendations for shoring and retaining wall design presented herein incorporate the anticipated surcharge loads generated by out-of-slope bedding. Excavations must be conducted in a manner that maintains stability and must be observed and approved by the Project Geologist (a representative of Geocon West, Inc.). A geologist should periodically observe the excavation to confirm that the orientation of the exposed bedrock is consistent with the conditions observed during our investigation.

7.1.9 Due to the depth of the excavation and the proximity to the property lines, city streets, and adjacent on-site structures, as well as the unfavorable geologic conditions for proposed excavations along the south property line, excavation of the proposed subterranean levels will require sloping and/or shoring measures in order to provide a stable excavation. Where shoring is required it is recommended that a soldier pile shoring system be utilized. Where excavation depths exceed 12 feet or surcharges are imposed on the shoring system, raker braces or tie-back anchors may be required in conjunction with the soldier piles. The need for lateral bracing and the acceptable shoring deflection should be determined by the project shoring engineer.

7.1.10 Due to the nature of the proposed design and intent for a partial subterranean basement level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.1.11 Where new paving is to be placed, it is recommended that all existing fill soils and soft soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft soils in the area of new paving is not required, however, paving constructed over existing uncertified fill or unsuitable soils may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of soil should be scarified and properly compacted. Paving recommendations are provided in the *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.1.12 Based on the likely impermeable nature of the bedrock which underlies the site, infiltration of stormwater at this site is not considered feasible and would be considered detrimental to the project. It is recommended that stormwater be retained, filtered, and discharged in accordance with the requirements of the local governing agency.

7.1.13 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. If the final foundation loading configuration is greater than the assumed loading in this report, the potential for settlement should be re-evaluated by this office.

7.1.14 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Some caving should be anticipated in unshored excavations, especially if granular soils are encountered. The surficial bedrock is moderately to highly weathered and should be rippable with conventional equipment; however, concretions or well cemented layers may be encountered in the bedrock which could make excavation or drilling conditions difficult. Coring or jack-hammering may be required if concretions are encountered and the contractor should be prepared for these conditions.

7.2.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of adjacent existing improvements.

7.2.3 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping and shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.18).

7.2.4 The soils and bedrock encountered during this investigation are considered to have a "low" to "high" expansive potential (EI = 36 to 108) and are classified as "expansive" based on the 2019 California Building Code (CBC) Section 1803.5.3. Recommendations presented herein assume that the building foundations and slabs will derive support in these materials.

7.3 Minimum Resistivity, pH and Water-Soluble Sulfate Content

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "severely corrosive" with respect to corrosion of buried ferrous metals onsite. The results are presented in Appendix B (Figure B12) and should be considered for design of underground structures. Due to the corrosive potential of the soils, it is recommended that PVC, ABS or other approved plastic piping be utilized in lieu of cast-iron when in direct contact with the site soils.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B12) and indicate that the on-site materials possess a sulfate exposure class of "S2" to concrete structures as defined by 2019 CBC Section 1904 and ACI 318-14 Table 19.3.1.1. The table below presents a summary of concrete requirements set forth by 2019 CBC Section 1904 and ACI 318. The presence of water-soluble sulfates is not a visually discernible characteristic; therefore, other soil samples from the site could yield different concentrations. Additionally, over time landscaping activities (i.e., addition of fertilizers and other soil nutrients) may affect the concentration.

REQUIREMENTS FOR CONCRETE EXPOSED TO SULFATE-CONTAINING SOLUTIONS

Exposure Class	Water-Soluble Sulfate Percent by Weight	Cement Type (ASTM C150)	Maximum Water to Cement Ratio by Weight	Minimum Compressive Strength (psi)
S0	SO_4<0.10	--	--	2,500
S1	0.10≤SO_4<0.20	II	0.50	4,000
S2	0.20≤SO_4≤2.00	V	0.45	4,500
S3	SO_4>2.00	V+Pozzolan or Slag	0.45	4,500

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Temporary Dewatering

7.4.1 Groundwater seepage conditions could develop on top of the bedrock or within the joints and fractures in the bedrock. The presence of groundwater seepage can be further verified at the time of construction. If groundwater seepage occurs above the excavation bottom, temporary dewatering will be necessary to maintain a safe working environment during excavation and construction activities. Dewatering system design, operation, and proper discharge is the responsibility of the contractor.

7.4.2 Temporary dewatering may be accomplished by constructing gravel filled trenches (French drains) to collect and control any encountered seepage. The number and locations of the French drains can be adjusted during excavation activities as necessary. The French drains will then direct the collected seepage to a sump where it will be pumped out of the excavation. If a French drain is to remain on a permanent basis, it must be lined with filter fabric to prevent soil migration into the gravel. Alternative methods of temporary dewatering may be feasible, and it is recommended that the contractor meet with the Geotechnical Engineer to discuss dewatering procedures in more detail.

7.5 Grading

7.5.1 Grading is anticipated to include excavation of the site soils for the proposed structure, foundations, and utility trenches, as well as placement of backfill for ramps and trenches.

7.5.2 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing site soils and bedrock encountered during exploration are suitable for re-use as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed. If bedrock is to be utilized as an engineered fill, it may be blocky and may have to be crushed and moisture conditioned prior to utilization. The contractor should also be aware the bedrock has some localized diatomaceous-rich beds, which may make use of this material as engineered fill difficult.

7.5.3 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and, if applicable, building official in attendance. Special soil handling requirements can be discussed at that time.

7.5.4 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.) and the City of Los Angeles Inspector.

7.5.5 It is recommended that foundations for the proposed structure penetrate through the existing artificial fill and colluvium in order to derive support exclusively in the underlying competent bedrock. All excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.) prior to the placement of engineered fill.

7.5.6 It is anticipated that bedrock will be exposed throughout the basement area excavation bottom, and the bedrock is considered suitable for support of the concrete slab-on-grade. Any bedrock that is unintentionally disturbed should be compacted for slab support. At the ground floor level, it is recommended that all existing artificial fill and/or soft colluvium be excavated and properly compacted for slab support. The limits of existing fill and/or soft colluvium removal will be confirmed by the Geocon representative during site grading activities.

7.5.7 All imported fill shall be observed, tested and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. Imported soils should have an expansion index less than 50 and soils corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B12).

7.5.8 Prior to placing engineered fill over bedrock, the bedrock exposed at the excavation bottom must be cut or benched to create horizontal planes so that fill can be placed and compacted on horizontal surfaces.

7.5.9 The City of Los Angeles Department of Building and Safety requires a minimum compactive effort of 95 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition) where the soils to be utilized in the fill have less than 15 percent finer than 0.005 millimeters. Soils with more than 15 percent finer than 0.005 millimeters may be compacted to 90 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition). All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to near optimum moisture content, and properly compacted to the required degree of compaction in accordance with ASTM D 1557 (latest edition).

7.5.10 Where new paving is to be placed, it is recommended that all existing fill soils and soft soils be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to two percent above optimum moisture content, and compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.5.11 Utility trenches should be properly backfilled in accordance with the requirements of the Green Book (latest edition). The pipe should be bedded with clean sands (Sand Equivalent greater than 30), to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry is also acceptable as backfill (see Section 7.7). Prior to placing any bedding material or pipes, the trench excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.5.12 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding sands, fill, steel, gravel, or concrete.

7.6 Controlled Low Strength Material (CLSM)

7.6.1 Controlled Low Strength Material (CLSM) may be utilized in lieu of compacted soil as engineered fill where approved in writing by the Geotechnical Engineer. Where utilized within the City of Los Angeles use of CLSM is subject to the following requirements:

Standard Requirements

1. CLSM shall be ready-mixed by a City of Los Angeles approved batch plant;
2. CLSM shall not be placed on uncertified fill, on incompetent natural soil, nor below water;
3. CLSM shall not be placed on a sloping surface with a gradient steeper than 5:1 (horizontal to vertical);
4. Placement of the CLSM shall be under the continuous inspection of a concrete deputy inspector;
5. The excavation bottom shall be accepted by the soil engineer and the City Inspector prior to placing CLSM.

Requirements for CLSM that will be used for support of footings

1. The cement content of the CLSM shall not be less than 188 pounds per cubic yard (min. 2 sacks);
2. The excavation bottom must be level, cleaned of loose soils and approved in writing by Geocon prior to placement of the CLSM;
3. The ultimate compressive strength of the CLSM shall be no less than 100 pounds per square inch (psi) when tested on the 28th-day per ASTM D4832 (latest edition), Standard Test Method for Preparation and Testing of Controlled Low Strength Material Test Cylinders. Compression testing will be performed in accordance with ASTM C39 and City of Los Angeles requirements;
4. Samples of the CLSM will be collected during placement, a minimum of one test (two cylinders) for each 50 cubic yards or fraction thereof;
5. Overexcavation for CLSM placement shall extend laterally beyond the footprint of any proposed footings as required for placement of compacted fill, unless justified otherwise by the soil engineer that footings will have adequate vertical and horizontal bearing capacity.

7.7 Conventional Foundation Design

7.7.1 The proposed structure may be supported on a conventional foundation system deriving support in the competent bedrock. Proposed foundations should penetrate through the existing artificial fill, colluvium and any soft or highly weathered bedrock, in order to derive support exclusively in competent bedrock. Foundations excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.7.2 Continuous footings may be designed for an allowable bearing capacity of 3,000 pounds per square foot (psf), and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.3 Isolated spread foundations may be designed for an allowable bearing capacity of 3,700 psf, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.4 The allowable soil bearing pressure above may be increased by 100 psf and 380 psf for each additional foot of foundation width and depth, respectively, up to a maximum allowable soil bearing pressure of 6,200 psf.

7.7.5 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.7.6 If depth increases are utilized for the perimeter foundations, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.7.7 Continuous footings should be reinforced with four No. 4 steel reinforcing bars, two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.

7.7.8 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only, and are not intended to be used in lieu of those required for structural purposes.

7.7.9 Provided the foundation excavations and the concrete slab-on-grade subgrade exposes undisturbed bedrock, no special subgrade presaturation is required prior to placement of concrete. However, the slab and foundation subgrade should be sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement. Where engineered fill is placed as subgrade soils, due to the expansive nature of the soils, the moisture content in the slab and foundation subgrade should be maintained at 2 percent above optimum moisture content prior to and at the time of concrete placement.

7.7.10 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavation and exposed soil conditions are consistent with those anticipated. If unanticipated conditions are encountered, foundation modifications may be required.

7.7.11 This office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.8 Mat Foundation Design

7.8.1 The client should be aware that if a methane mitigation system is required for this project, a mat foundation system may be a more cost-effective foundation system for this project. The mat foundation system allows for more efficient construction when performed in conjunction with a methane mitigation system. The mat foundation may derive support in the competent bedrock, and foundations excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.8.2 The recommended maximum allowable bearing value is 6,200 pounds per square foot (psf). The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.8.3 It is recommended that a modulus of subgrade reaction of 200 pounds per cubic inch (pci) be utilized for the design of the mat foundation bearing in the undisturbed bedrock. The modulus should be reduced in accordance with the following equation when used with larger foundations:

$$K_R = K\left[\frac{B+1}{2B}\right]^2$$

where: K_R = reduced subgrade modulus
K = unit subgrade modulus
B = foundation width (in feet)

7.8.4 The thickness of and reinforcement for the mat foundation should be designed by the project structural engineer.

7.8.5 For seismic design purposes, a coefficient of friction of 0.30 may be utilized between the concrete mat and bedrock without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier or methane barrier.

7.8.6 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.8.7 Waterproofing of subterranean walls and slabs is suggested for this project. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer.

7.8.8 The client should be aware that if a methane barrier is installed to envelope the structure, the installation of a waterproofing barrier should not be necessary since it is a redundant system. A waterproofing consultant should be retained in order to recommend a product or method which would provide protection to subterranean walls, floor slabs and foundations.

7.8.9 This office should be provided a copy of the final construction plans so that the recommendations presented herein could be properly reviewed and revised if necessary.

7.9 Foundation Settlement

7.9.1 The maximum anticipated settlement for a conventional foundation system designed with the maximum allowable bearing value of 6,200 psf and deriving support in undisturbed bedrock is expected to be less than ¾ inch and occur below the heaviest loaded structural element. Differential settlement is not expected to exceed ½ inch over a distance of 20 feet or between adjacent foundations.

7.9.2 The maximum expected static settlement for structure supported on a mat foundation system deriving support in undisturbed bedrock is estimated to be less than ½ inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is expected to be less than ¼ inch between the center and corner of the mat foundation.

7.9.3 Once the design and foundation loading configurations for the proposed structure proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.10 Lateral Design

7.10.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.30 may be used with the dead load forces in the newly placed engineered fill, undisturbed colluvium, or undisturbed bedrock.

7.10.2 Passive earth pressure for the sides of foundations and slabs poured against competent bedrock may be computed as an equivalent fluid having a density of 900 pounds per cubic foot (pcf), with an increase of 190 psf for each additional foot of embedment, up to a maximum earth pressure of 2,600 pcf. Passive earth pressure for the sides of foundations poured against properly compacted engineered fill or undisturbed colluvium may be computed as an equivalent fluid having a density of 190 pounds per cubic foot with a maximum earth pressure of 1,900 pounds per square foot. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.11 Concrete Slabs-on-Grade

7.11.1 Concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Pavement Recommendations* section of this report (Section 7.12).

7.11.2 Unless specifically evaluated and designed by a qualified structural engineer, the slab-on-grade for the structure should be a minimum of 5 inches of concrete reinforced with No. 4 steel reinforcing bars placed 16 inches on center in both horizontal directions and positioned vertically near the slab midpoint. The concrete slab-on-grade may derive support in the bedrock or properly compacted engineered fill. Any bedrock that is unintentionally disturbed should be compacted for slab support. The finished subgrade must be approved in writing prior to placement of a vapor retarder, reinforcing steel, or concrete.

7.11.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder selection and design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) as well as ASTM E1745 and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning is recommended. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4-inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.11.4 Due to the nature of the proposed design and intent for a partial subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.11.5 For seismic design purposes, a coefficient of friction of 0.30 may be utilized between concrete slabs and bedrock without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.11.6 Exterior slabs for walkways or flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to two percent above optimum moisture content and properly compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.11.7 Due to the expansive potential of the anticipated subgrade soils, the moisture content of the slab subgrade should be maintained and sprinkled as necessary to maintain a moist condition as would be expected in any concrete placement. Furthermore, consideration should be given to doweling slabs into adjacent curbs and foundations to minimize movements and offsets which could lead to a potential tripping hazard. As an alternative, the upper 18 inches of soil could be replaced with granular, non-expansive soils which will reduce the potential for movements and offsets.

7.11.8 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.12 Preliminary Pavement Recommendations

7.12.1 Where new paving is to be placed, it is recommended that all existing fill and soft materials be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable colluvium, material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to two percent above optimum moisture content, and properly compacted to at least 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.2 The following pavement sections are based on an assumed R-Value of 20. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.12.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking and Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	12.0

7.12.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base (CMB) in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.12.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 5 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 92 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.13 Retaining Wall Design

7.13.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 14 feet. In the event that walls significantly higher than 14 feet are planned, Geocon should be contacted for additional recommendations.

7.13.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Foundation Design* sections of this report (see Sections 7.7 and 7.8).

7.13.3 Based on the orientation of the proposed excavation with respect to the strike and dip of the bedrock, the apparent dips for north and west retaining walls are anticipated to range from approximately 26° to 36°. The retaining wall recommendations presented below include consideration of the surcharge due to out-of-slope bedding on the north and west retaining wall. Excavations into bedrock should be observed and approved in writing by the Project Geologist (a representative of Geocon West, Inc.) during excavation to check for the presence of jointing or bedding which may require revised retaining wall recommendations.

7.13.4 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure). Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure). The table below presents recommended pressures to be used in retaining wall design, assuming that proper drainage will be maintained. Calculation of the recommended wall pressures are provided on Figures 5 and 6.

RETAINING WALL WITH LEVEL BACKFILL SURFACE
(East and South Retaining Walls – Favorable Bedding)

HEIGHT OF RETAINING WALL (Feet)	ACTIVE PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)	AT-REST PRESSURE EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot)
Up to 14	30	68

RETAINING WALL WITH SURCHARGE FROM JOINTING OR BEDDING
(North and West Retaining Walls – Adverse Bedding)

HEIGHT OF RETAINING WALL (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (AT-REST PRESSURE)
Up to 14	55	83

7.13.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed colluvial soils and bedrock. If sloping techniques are to be utilized for construction of proposed walls, which would result in a wedge of engineered fill behind the retaining walls, revised earth pressures may be required to account for the expansive potential of the soil placed as engineered fill. This should be evaluated once the use of sloping measures is established and once the geotechnical characteristics of the engineered backfill soils can be further evaluated.

7.13.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 95 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.13.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses.

7.13.8 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.13.9 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H\,(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_p is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.13.10 In addition to the recommended earth pressure, the upper 10 feet of the subterranean wall adjacent to the street and parking lot should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the walls due to normal street traffic. If the traffic is kept back at least 10 feet from the subterranean walls, the traffic surcharge may be neglected.

7.13.11 Seismic lateral forces should be incorporated into the design as necessary, and recommendations for seismic lateral forces are presented below.

7.14 Dynamic (Seismic) Lateral Forces

7.14.1 The structural engineer should determine the seismic design category for the project in accordance with Section 1613 of the CBC. If the project possesses a seismic design category of D, E, or F, proposed retaining walls in excess of 6 feet in height should be designed with seismic lateral pressure (Section 1803.5.12 of the 2019 CBC).

7.14.2 A seismic load of 10 pcf should be used for design of walls that support more than 6 feet of backfill in accordance with Section 1803.5.12 of the 2019 CBC. The seismic load is applied as an equivalent fluid pressure along the height of the wall and the calculated loads result in a maximum load exerted at the base of the wall and zero at the top of the wall. This seismic load should be applied in addition to the active earth pressure. The earth pressure is based on half of two-thirds of PGA_M calculated from ASCE 7-16 Section 11.8.3.

7.15 Retaining Wall Drainage

7.15.1 Retaining walls should be provided with a drainage system. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 7). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.15.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 8). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.15.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures.

7.15.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.16 Elevator Pit Design

7.16.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.7, 7.8 and 7.13).

7.16.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.16.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.13).

7.16.4 It is suggested that the elevator pit walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.17 Elevator Piston

7.17.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation or shoring pile, or the drilled excavation could compromise the existing foundation or pile support, especially if the drilling is performed subsequent to the foundation or pile construction.

7.17.2 Although caving is not anticipated in the bedrock, casing may be required if groundwater seepage is encountered. The contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.17.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.18 Temporary Excavations

7.18.1 Excavations on the order of 16 feet in vertical height may be required for excavation and construction of the partial subterranean level, including foundation depths. Excavation is anticipated to expose artificial fill, colluvial soils and bedrock, which are considered suitable for vertical excavations up to 5 feet in height where loose soils or caving sands are not present, and where excavations are not surcharged by adjacent traffic or structures. Where bedrock with adverse bedding is exposed in excavations, vertical cuts should not exceed 3 feet in height.

7.18.2 Excavations into bedrock should be observed by the Project Geologist (a representative of Geocon West, Inc.) during excavation to check for the presence of jointing or bedding which

may require special recommendations for sloping and/or shoring. Any recommendations deemed necessary will be provided at that time.

7.18.3 Vertical excavations greater than the permissible heights outlined above will require sloping and/or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1.5:1 (H:V) slope gradient or flatter up to a maximum height of 10 feet. Temporary unsurcharged embankments may also be sloped back at a uniform 2:1 (H:V) slope gradient or flatter up to a maximum height of 20 feet. A uniform slope does not have a vertical portion. Where space is limited, shoring measures will be required. Shoring recommendations are provided in Section 7.19 of this report.

7.18.4 Where sloped embankments are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction embankments are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. The soils exposed in the cut slopes should be inspected during excavation by our personnel so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.19 Shoring – Soldier Pile Design and Installation

7.19.1 The following information on the design and installation of shoring is preliminary. Review of the final shoring plans and specifications should be made by this office prior to bidding or negotiating with a shoring contractor.

7.19.2 Installation of shoring on a sloping ground surface requires careful consideration of excavation sequencing. Prior to installation of shoring, grading to create a relatively flat pad for equipment access may be required. Excavation of unsupported vertical cuts into a sloping ground surface would remove support from the ascending portion of the slope and create a potentially unstable condition. Unsupported vertical excavation into a slope is not permitted. Equipment access can be created by placement of additional fill to build up a temporary equipment pad against the existing slope.

7.19.3 One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. Installation of shoring piles by vibration is not recommended at this site due to the dense nature of the underlying bedrock. Where maximum excavation heights are less than 12 feet the soldier piles are typically designed as cantilevers. Where excavations exceed 12 feet or are surcharged, soldier piles may require lateral bracing utilizing drilled tie-back anchors or raker braces to maintain an economical steel beam size and prevent excessive deflection. The size of the steel beam, the need for lateral bracing, and the acceptable shoring deflection should be determined by the project shoring engineer. Should it be determined that temporary tiebacks or rakers are necessary, additional recommendations can be provided under separate cover.

7.19.4 The design embedment of the shoring pile toes must be maintained during excavation activities. The toes of the perimeter shoring piles should be deepened to take into account any required excavations necessary for grading activities, foundations, and/or adjacent drainage systems.

7.19.5 The proposed soldier piles may also be designed as permanent piles. The required pile depth, dimension, spacing should be determined and designed by the project structural and shoring engineers. All piles utilized for shoring can also be incorporated into a permanent retaining wall system (shotcrete wall) and should be designed in accordance with the earth pressure provided in the *Retaining Walls* section of this report (see Section 7.13).

7.19.6 Drilled cast-in-place soldier piles should be placed no closer than three diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the soil. For design purposes, an allowable passive value for the bedrock below the bottom plane of excavation may be assumed to be 900 pcf, with an increase of 190 psf for each additional foot of embedment. The allowable passive value may be doubled for isolated piles, spaced a minimum of 3 times the pile diameter. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed bedrock.

7.19.7 Casing may be required if caving is experienced in the drilled excavation and the contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.19.8 The contractor should be aware that some difficult drilling conditions could be encountered in the bedrock which could require coring and jack-hammering. The contractor should be prepared for these conditions prior to commencement of drilling activities.

7.19.9 Groundwater seepage was not encountered at the time of the site exploration. However, the contractor should be prepared for groundwater during pile installation should the need arise. Piles placed below the water level require the use of a tremie to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to insure that the tip of the tremie tube is never raised above the surface of the concrete.

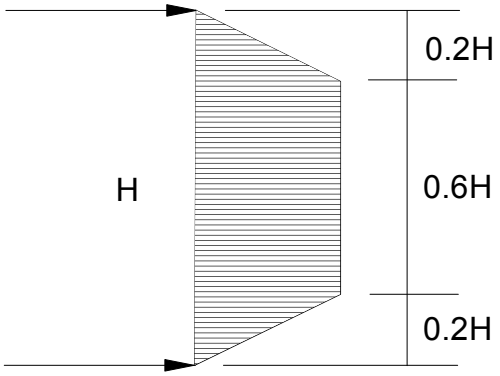
7.19.10 A special concrete mix should be used for concrete to be placed below water. The design should provide for concrete with an unconfined compressive strength psi of 1,000 pounds per square inch (psi) over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste should be included. The slump should be commensurate to any research report for the admixture, provided that it should also be the minimum for a reasonable consistency for placing when water is present.

7.19.11 The frictional resistance between the soldier piles and retained soil may be used to resist the vertical component of the anchor load. The coefficient of friction may be taken as 0.30 based on uniform contact between the steel beam and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 360 pounds per square foot.

7.19.12 Due to the nature of the site soils, it is expected that continuous lagging between soldier piles will be required. However, it is recommended that the exposed soils be observed by the Geotechnical Engineer (a representative of Geocon West, Inc.), to verify the presence of any cohesive soils and the areas where lagging may be omitted.

7.19.13 The time between lagging excavation and lagging placement should be as short as possible. Soldier piles should be designed for the full-anticipated pressures. Due to arching in the soils, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 pounds per square foot.

7.19.14 For the design of shoring, it is recommended that an equivalent fluid pressure based on the following tables, be utilized for design. A trapezoidal distribution of lateral earth pressure may be used where shoring will be restrained at the top by bracing or tie backs. The recommended active and trapezoidal pressure are provided in the following tables. A diagram depicting the trapezoidal pressure distribution of lateral earth pressure is provided below the table. Calculation of the recommended shoring pressures are provided on Figures 9 and 10.



SHORING WALL WITH LEVEL BACKFILL SURFACE
(East and South Shoring Walls – Favorable Bedding)

HEIGHT OF SHORING (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE) Triangular	EQUIVALENT FLUID PRESSURE (Pounds Per Square Foot per Foot) Trapezoidal (Where H is the height of the shoring in feet)
Up to 16	25	16H

SHORING WALL WITH LEVEL BACKFILL SURFACE
(North and West Shoring Walls – Adverse Bedding)

HEIGHT OF SHORING (FEET)	EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE) Triangular	EQUIVALENT FLUID PRESSURE (Pounds Per Square Foot per Foot) Trapezoidal (Where H is the height of the shoring in feet)
Up to 16	25	16H

Trapezoidal Distribution of Pressure

7.19.15 Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent structures and must be determined for each combination.

7.19.16 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.19.17 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H\,(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.19.18 In addition to the recommended earth pressure, the upper 10 feet of the shoring adjacent to the street should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If the traffic is kept back at least ten feet from the shoring, the traffic surcharge may be neglected.

7.19.19 It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the deflection be minimized to prevent damage to existing structures and adjacent improvements. Where public right-of-ways are present or adjacent offsite structures do not surcharge the shoring excavation, the shoring deflection should be limited to less than 1 inch at the top of the shored embankment. Where offsite structures are within the shoring surcharge area it is recommended that the beam deflection be limited to less than ½ inch at the elevation of the adjacent offsite foundation, and no deflection at all if deflections will damage existing structures. The allowable deflection will be assessed and designed by the project shoring engineer.

7.19.20 Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

7.19.21 Due to the depth of the excavation and proximity to adjacent structures, it is suggested that prior to excavation the existing improvements be inspected to document the present condition. For documentation purposes, photographs should be taken of preconstruction distress conditions and level surveys of adjacent grade and pavement should be considered. During excavation activities, the adjacent structures and pavement should be periodically inspected for signs of distress. In the even that distress or settlement is noted, an investigation should be performed and corrective measures taken so that continued or worsened distress or settlement is mitigated. Documentation and monitoring of the offsite structures and improvements is not the responsibility of the geotechnical engineer.

7.20 Surface Drainage

7.20.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the foundation supporting soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage in building areas should be maintained at all times.

7.20.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2019 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. The proposed structure should be provided with roof gutters. Discharge from downspouts, roof drains and scuppers not recommended onto unprotected soils within five feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the engineered fill providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.20.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.20.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.21 Plan Review

7.21.1 Grading, foundation, and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of this scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

APPENDIX A

APPENDIX A

FIELD INVESTIGATION

The site was explored on May 14 and May 15, 2020. Site exploration included excavating seven 3-inch diameter hand auger borings to depths between 5½ and 16 feet below existing ground surface, and one 24-inch diameter bucket auger boring to a depth of 20 feet below existing ground surface.

The soil conditions encountered in the explorations were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A8. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing. The location of the borings are shown on Figure 2A.

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation and expansion characteristics, corrosivity, in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B12. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

Subject: **Report of Methane Soil Gas Testing**
Proposed Mixed-Use Development
1917- 2005 ½ W 3rd St., Los Angeles, CA 90057
Tract: Extension of Nob Hill Tract, Block: None, Lot: 1, 2, 3, 4, 5, 6

Terra-Petra is pleased to submit this report to summarize the methane soil gas investigation services conducted at the subject site referenced above. The purpose of this investigation was to determine the methane soil gas mitigation requirements, in connection with the proposed development. The project site has been determined to be located within a City of Los Angeles Designated Methane Zone (See **Exhibit 1, Site Location Map**).

Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities. No other warranty, expressed or implied, is made as to the professional advice included in this report. This report has been prepared for Jonathan Rose Companies and any pertinent consultants to be used solely for the design of the proposed project. This report has not been prepared for use by other parties, and may not contain sufficient information for purposes of other parties or other uses.

PROJECT INFORMATION

Terra-Petra was contracted to perform a soil gas investigation at the approximately 30,432 sq. ft. project site under our LADBS Testing License #10224. The proposed development will consist of the construction of a new building having a basement and seven stories above grade. The building footprint is approximately 15,000 SF. The purpose of this investigation was to detect the presence of any elevated levels of methane gas in the in-situ soils underlying the foundation of the proposed structure.

SOIL GAS PROBE INSTALLATION & TESTING

The methane soil gas testing at the site was performed based on the procedures conforming to the Los Angeles Department of Building and Safety (LADBS) Information Bulletin Ref. No. LABC 7104.1, P/BC 2014-101. City guidelines require that one shallow-depth probe, at a depth of not less than 4 feet below ground surface, be installed for every 10,000 square feet of site area where the highest concentration of soil gas is most likely to be found. A minimum of two shallow-depth probes are required per project site. A total of seven (7) shallow probe locations were selected based on the total site testing area of 30,432 sq. ft. (See **Exhibit 2, Probe Locations Map**). Predicated on the soil gas testing results at the shallow probes, an additional four (4) deep gas probe locations were selected. City guidelines require one deep-depth gas probe for every 20,000 square feet or at a minimum of two gas probe sets regardless of area. Each deep-depth gas probe set shall consist of three probes, installed at approximate sampling depths of 5 feet, 10 feet and 20 feet below the elevation of the lowest building slab or footing.

On 5/18/20 shallow borings were drilled using a 3.25-inch diameter hand-auger. Shallow borings were drilled to a depth of 4 feet, with gas probes installed at approximately 4 ft bsg. On 5/19/20 deep-probe borings were drilled using a direct-push GeoProbe 5410. Terra-Petra was obligated by City guidelines to attempt to install the deepest soil gas probes a minimum of 20 ft below the lowest level of the proposed building.

As such, the deepest gas probes were set at 20 ft bsg in DP-1, DP-2, DP-3, and DP-4. Nested gas probes were also set at 5 ft and 10 ft in each of the deep borings. Gas probes were constructed as shown in **Exhibit 3, Probe Construction Diagrams**. Groundwater was not encountered in any of the soil borings during the course of the investigation and the historic groundwater level at the site is unknown.

The current investigation was performed in accordance with LADBS standards. Soil gas samples were collected during two rounds of monitoring on 5/19/20 and 5/20/20 from each of the probes. Each sampling period was separated by a minimum time period of 24 hours. As required by the LADBS, all probes were monitored for detectable combustible gas and soil gas pressures using a calibrated CES/Landtec GEM 5000 portable 4-gas detector with a lower limit for reporting methane levels of 1,000 ppmv (parts per million by volume). The results of the soil gas testing measurements are presented in the attached **Exhibit 4: Field Data Sheets.**

TEST RESULTS

Methane soil gas was measured at elevated levels for the Landtec GEM 5000 portable 4-gas detector in two deep gas probes during both days of monitoring. Due to the detection in our field instruments we were obligated to collect samples and submit them to a City of Los Angeles registered methane testing laboratory for 3rd party verification. The results of the soil gas testing measurements and 3rd party lab verification were recorded in an approved format as presented in the attached **Exhibit 5: Form 01 – Certificate of Compliance for Methane Test Data** and **Exhibit 6: Registered Methane Testing Laboratory results.**

CONCLUSIONS

Methane gas is combustible with a lower explosive limit (LEL) of approximately 5%,v/v in air. In structures, regulatory agencies commonly consider methane concentrations above 25% of the LEL (1.25%,v/v) to be action levels above which gas concentrations must be mitigated. The City of Los Angeles Department of Building and Safety considers methane soil gas concentrations at 0.0%,v/v to be the action level at which soil gas concentrations must be mitigated for buildings to be constructed in a methane zone. For the methane buffer zone, this same action level applies only if the water column pressure is greater than 2 inches.

LEVEL V: Due to the elevated methane concentrations detected on the site (which were confirmed through laboratory analysis), we recommend that the methane mitigation measures for the proposed structure adhere to design requirements for a **Methane Zone – Level V, All Pressures** design. As such, we would typically recommend that the mitigation system incorporate all components listed for a Design Level V on the attached **Table 1A**, including: an active sub-slab vent system with an impervious methane/waterproofing membrane, perforated collection pipes, 4" gravel blanket/thickness surrounding the pipes, vent risers with mechanical extraction, electrical seal-offs on dry utility lines and trench dams at utility trenches. In addition, a methane gas detection system incorporating gas sensors and alarms shall be required.

DWP: Please note based on the City of Los Angeles Department of Water and Power issued Guidelines for Underground Electrical Distribution Construction in Areas where Soil Gas is Present Requirements for Vaults and Maintenance Holes for this site may be as follows: Coating Structures with Zebron or Equal (Impermeable Gas Membrane), 60 mil HDPE Membrane Under Structures, Casting Restraining System, 4 Architectural Stand Pipes per Structure, Waterproofing grout around ground rods, blank duct plugs in all conduits in the structures. Other General Requirements include: Metal grating access cover for pad-mounts, Surface Mounted Pull Box for Small Services, Outside Pull Sections for Customer's Switchboard, Trench Dam for direct buried conduit every 300' and 5' concrete anchor next to any Underground Structure.

I am a registered California civil engineer with experience in methane gas mitigation systems. Should you have any questions regarding this report, please contact Justin Conaway at 213-458-0494. We appreciate the opportunity to assist you with your project.

Sincerely,

John Conaway, PE

Exhibit 5:
Form 01 Certificate of Compliance for Methane Test Data

FORM 1 - CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

Part 1: Certification Sheet

Site Address: 1917- 2005 W. 3rd St., Los Angeles, CA 90057

Legal Description: Tract: Extension of Nob Hill Tract Lot: 1,2,3,4,5, Block: none

Building Use: Mixed-Use Development

Architect's, Engineer's or Geologist's Stamp:

REGISTERED PROFFESIONAL ENGINEER
JOHNNY RAY CONAWAY
NO. C 19,689
exp. 09-30-21
CIVIL
STATE OF CALIFORNIA

Name of Architect, Engineer, or Geologist:
John Conaway
Mailing Address:
700 S Flower St., Suite 2580
Los Angeles CA 90017
Telephone: 213.458.0494

Name of Testing Laboratory:
Terra-Petra
City Test Lab License #: 10224
Telephone: 213.458.0494

I hereby certify that I have tested the above site for the purpose of methane mitigation and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2002-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the architect, engineer or geologist whose signature is affixed thereon.

Signed: John C Conaway date May 28, 2020

Required Data:

- Project is in the (Methane Zone) or (~~Methane Buffer Zone~~).
- Depth of ground water observed during testing: _____ feet below the Impervious Membrane.
- Depth of Historical High Ground Water Table Elevation*: UKN feet below the Impervious Membrane.
- Design Methane Concentration**: >12,500 parts per million in volume (ppmv).
- Design Methane Pressure***: All Pressure inches of water column.
- Site Design Level: (~~Level I, Level II, Level III, Level IV~~, Level V) with All Pressure inches of water column.

De-watering:

- De-watering (~~ is ~~) (is not) required per Section 91.7104.3.7.
- Pump discharge rate _____ cubic feet per minute per reference geology or soil report: _____ dated _____.

Additional Investigation:

- Additional investigation (~~ was ~~) (was not) conducted.

Latest Grading on Site:

- Date of last grading on site (was) (~~was not~~) more than 30 days before Site Testing.
- See Attached explanation of the effect on soil gas survey results by grading operations.

Notes:

* Historical High Ground Water Table Elevation shall mean the highest recorded elevation of ground water table based on historical records and field investigations as determined by the engineer for the methane mitigation system.

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either Shallow Soil Gas Test or any Gas Probe Set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services and activities. For efficient handling of information internally and in the internet, conversion to this new format of code related and administrative information bulletins including MGD and RGA that were previously issued will allow flexibility and timely distribution of information to the public.

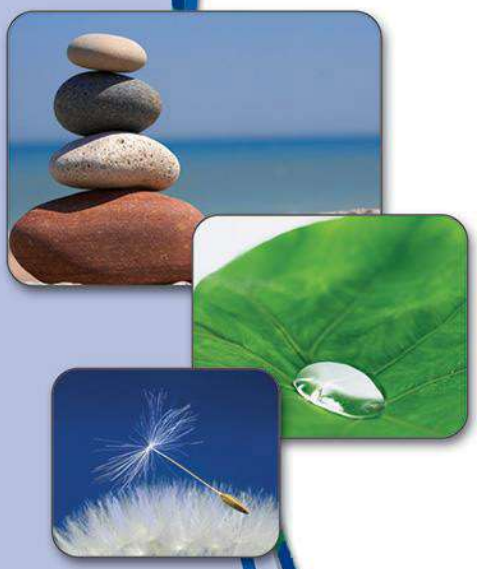
	Conduit or Cable Seal Fitting		X	X	X	X	X	X	X	X	X
	Additional Vent Risers (See note 5)										X



NOTES FOR TABLES 1A AND 1B:

"x" = Indicates a required mitigation component

1. De-watering is not required when the maximum Historical High Ground Water Table Elevation, or projecterd post-construction ground water level, is more than 12 inches below the bottom of the Perforated Horizontal Pipes.
2. The Mechanical Extraction System shall be capabale of providing an equivalent of a complete change of air 20 minutes of the total volume of the Gravel Blanket.
3. The mechanical ventilation system shall be capable of providing an equivalent of one complete change of the lowest occupied space every 15 minutes.
4. Vent openings to comply with Item IV.B.4 on sheet 1 may be used in lieu of mechanical ventilation.
5. The total quantity of the installed Vent Risers shall be increased to twice the rate for the Passive System.

Comments
No additional comments.

Receipt
The samples were received on 5/20/2020 8:55 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 22.0° C.

Air Toxics
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	False	Thermal preservation not required.
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Residual Chlorine Checked.	True	

Exhibit 7:
Mitigation Strategy

Mitigation Strategy

Subterranean basement area and slab on grade areas shall be constructed with an active sub-slab vent system with an impervious methane/waterproofing membrane below the slab, beneath elevator pits and at all subterranean walls. 4" dia. perforated collection pipes will be installed within a 4" gravel blanket. The pipes require a 4" thickness surrounding the pipes. Four 3" dia. cast iron vent risers shall be routed through the building to the roof. Vent risers will be fitted with a mechanical extraction fan activated by a methane gas detection sensor in the vent riser.

A methane gas detection system incorporating gas sensors and alarms will be installed throughout the lowest level basement within any enclosed spaces including at elevator pits and stairwells. The methane gas detectors shall tie into the lowest mechanical ventilation system so as to activate upon elevated readings to provide 4 air changes per hour within any enclosed rooms or spaces. Electrical seal-offs are required on all dry utility lines. Trench dams are required along the exterior of the building at utility trenches where they feed into the building.

In accordance with the Methane Hazard Mitigation Plan Section IV.B.2, slab on grade areas designed to be naturally ventilated shall be exempt from providing any of the above noted measures with the exception of electrical seal–offs and utility trench dams. Enclosed spaces within the naturally ventilated areas shall be designed to accommodate natural ventilation.

EDR NEPASearch DESCRIPTION

The National Environmental Policy Act of 1969 (NEPA) requires that Federal agencies include in their decision-making processes appropriate and careful consideration of all environmental effects and actions, analyze potential environmental effects of proposed actions and their alternatives for public understanding and scrutiny, avoid or minimize adverse effects of proposed actions, and restore and enhance environmental quality as much as possible.

The EDR NEPASearch Map Report provides information which may be used, in conjunction with additional research, to determine whether a proposed site or action will have significant environmental effect.

Federal Endangered Species from the U.S. Fish and Wildlife for LOS ANGELES County

Group:Amphibians

Common Name: California red-legged frog
Status: Threatened
Scientific Name: Rana draytonii

Common Name: Mountain yellow-legged frog
Status: Endangered
Scientific Name: Rana muscosa

Common Name: Arroyo (=arroyo southwestern) toad
Status: Endangered
Scientific Name: Anaxyrus californicus

Group:Birds

Common Name: Light-footed clapper rail
Status: Endangered
Scientific Name: Rallus longirostris levipes

Common Name: San Clemente loggerhead shrike
Status: Endangered
Scientific Name: Lanius ludovicianus mearnsi

Common Name: San Clemente sage sparrow
Status: Threatened
Scientific Name: Amphispiza belli clementeae

Common Name: Least Bell's vireo
Status: Endangered
Scientific Name: Vireo bellii pusillus

Common Name: Western snowy plover
Status: Threatened
Scientific Name: Charadrius alexandrinus nivosus

Common Name: Marbled murrelet
Status: Threatened
Scientific Name: Brachyramphus marmoratus

Common Name: Coastal California gnatcatcher
Status: Threatened
Scientific Name: Polioptila californica californica

Common Name: Southwestern willow flycatcher
Status: Endangered
Scientific Name: Empidonax traillii extimus

Common Name: No Common Name
Status: Species of Concern
Scientific Name: Coccyzus americanus ssp. occidentalis

Common Name: California least tern
Status: Endangered
Scientific Name: Sterna antillarum browni

Common Name: California condor
Status: Endangered
Scientific Name: Gymnogyps californianus

Common Name: Yellow-billed Cuckoo
Status: Threatened
Scientific Name: Coccyzus americanus

Common Name: Xantus'sMurrelet
Status: Candidate
Scientific Name: Synthliboramphus hypoleucus

Group:Crustaceans

Common Name: Riverside fairy shrimp
Status: Endangered
Scientific Name: Streptocephalus woottoni

Common Name: Vernal pool fairy shrimp
Scientific Name: Branchinecta lynchi

Federal Endangered Species from the U.S. Fish and Wildlife for LOS ANGELES County (Continued...)

Status: Threatened

Group:Fishes

Common Name: Tidewater goby
Scientific Name: Eucyclogobius newberryi
Status: Endangered

Common Name: Santa Ana sucker
Scientific Name: Catostomus santaanae
Status: Threatened

Common Name: Unarmored threespine stickleback
Scientific Name: Gasterosteus aculeatus williamsoni
Status: Endangered

Group:Flowering Plants

Common Name: San Clemente Island bush-mallow
Scientific Name: Malacothamnus clementinus
Status: Endangered

Common Name: Spreading navarretia
Scientific Name: Navarretia fossalis
Status: Threatened

Common Name: Slender-horned spineflower
Scientific Name: Dodecahema leptoceras
Status: Endangered

Common Name: San Fernando Valley Spineflower
Scientific Name: Chorizanthe parryi var. fernandina
Status: Candidate

Common Name: Verity's dudleya
Scientific Name: Dudleya verityi
Status: Threatened

Common Name: Santa Monica Mountains dudleyea
Scientific Name: Dudleya cymosa ssp. ovatifolia
Status: Threatened

Common Name: Gambel's watercress
Scientific Name: Rorippa gambellii
Status: Endangered

Common Name: Thread-leaved brodiaea
Scientific Name: Brodiaea filifolia
Status: Threatened

Common Name: Nevin's barberry
Scientific Name: Berberis nevinii
Status: Endangered

Common Name: Coastal dunes milk-vetch
Scientific Name: Astragalus tener var. titi
Status: Endangered

Common Name: Ventura Marsh Milk-vetch
Scientific Name: Astragalus pycnostachyus var. lanosissimus
Status: Endangered

Common Name: Braunton's milk-vetch
Scientific Name: Astragalus brauntonii
Status: Endangered

Common Name: Catalina Island mountain-mahogany
Scientific Name: Cercocarpus traskiae
Status: Endangered

Common Name: Marcescent dudleya
Scientific Name: Dudleya cymosa ssp. marcescens
Status: Threatened

Federal Endangered Species from the U.S. Fish and Wildlife for LOS ANGELES County (Continued...)

Common Name: San Clemente Island lotus (=broom) — Scientific Name: Acmispon dendroideus var. traskiae (=Lotus d. ssp. traskiae)
Status: Threatened

Common Name: California Orcutt grass — Scientific Name: Orcuttia californica
Status: Endangered

Common Name: San Clemente Island woodland-star — Scientific Name: Lithophragma maximum
Status: Endangered

Common Name: Lyon's pentachaeta — Scientific Name: Pentachaeta lyonii
Status: Endangered

Common Name: Santa Cruz Island rockcress — Scientific Name: Sibara filifolia
Status: Endangered

Common Name: Marsh Sandwort — Scientific Name: Arenaria paludicola
Status: Endangered

Common Name: San Clemente Island indian paintbrush — Scientific Name: Castilleja grisea
Status: Threatened

Common Name: Salt marsh bird's-beak — Scientific Name: Cordylanthus maritimus ssp. maritimus
Status: Endangered

Common Name: San Clemente Island larkspur — Scientific Name: Delphinium variegatum ssp. kinkiense
Status: Endangered

Group:Insects

Common Name: Quino checkerspot butterfly — Scientific Name: Euphydryas editha quino (=E. e. wrighti)
Status: Endangered

Common Name: El Segundo blue butterfly — Scientific Name: Euphilotes battoides allyni
Status: Endangered

Common Name: Palos Verdes blue butterfly — Scientific Name: Glaucopsyche lygdamus palosverdesensis
Status: Endangered

Group:Mammals

Common Name: Pacific pocket mouse — Scientific Name: Perognathus longimembris pacificus
Status: Endangered

Common Name: Santa Catalina Island Fox — Scientific Name: Urocyon littoralis catalinae
Status: Endangered

Common Name: San Bernardino Merriam's kangaroo rat — Scientific Name: Dipodomys merriami parvus
Status: Endangered

Common Name: San Joaquin kit fox — Scientific Name: Vulpes macrotis mutica
Status: Endangered

Group:Reptiles

Common Name: Green sea turtle — Scientific Name: Chelonia mydas

Federal Endangered Species from the U.S. Fish and Wildlife for LOS ANGELES County (Continued...)

Status: Threatened

Common Name: Olive ridley sea turtle
Scientific Name: Lepidochelys olivacea
Status: Threatened

Common Name: Blunt-nosed leopard lizard
Scientific Name: Gambelia silus
Status: Endangered

Common Name: Desert tortoise
Scientific Name: Gopherus agassizii
Status: Threatened

Common Name: Leatherback sea turtle
Scientific Name: Dermochelys coriacea
Status: Endangered

Federal Endangered Species from the U.S. Fish and Wildlife for CA State

Group:Amphibians

Common Name: Western spadefoot
Scientific Name: Spea hammondii
Status: Under Review

Common Name: Channel Islands slender salamander
Scientific Name: Batrachoseps pacificus pacificus
Status: Species of Concern

Common Name: Limestone salamander
Scientific Name: Hydromantes brunus
Status: Under Review

Common Name: Large-blotched ensatina
Scientific Name: Ensatina eschscholtzii klauberi
Status: Species of Concern

Common Name: Oregon spotted frog
Scientific Name: Rana pretiosa
Status: Threatened

Common Name: Lowland leopard (=San Felipe leopard) frog
Scientific Name: Rana yavapaiensis
Status: Species of Concern

Common Name: Del Norte salamander
Scientific Name: Plethodon elongatus
Status: Species of Concern

Common Name: Owens Valley web-toes salamander
Scientific Name: Hydromantes sp.
Status: Species of Concern

Common Name: Mount Lyell salamander
Scientific Name: Hydromantes platycephalus
Status: Species of Concern

Common Name: Foothill yellow-legged frog
Scientific Name: Rana boylii
Status: Under Review

Common Name: Breckenridge Mountain slender salamander
Scientific Name: Batrachoseps sp.
Status: Species of Concern

Common Name: California tiger Salamander
Scientific Name: Ambystoma californiense
Status: Endangered

Common Name: Kern Plateau salamander
Scientific Name: Batrachoseps robustus
Status: Under Review

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Lesser slender salamander — Scientific Name: Batrachoseps minor
Status: Under Review

Common Name: Yellow-blotched ensatina — Scientific Name: Ensatina eschscholtzii croceator
Status: Species of Concern

Common Name: Northern red-legged frog — Scientific Name: Rana aurora aurora
Status: Species of Concern

Common Name: Relictual slender salamander — Scientific Name: Batrachoseps relictus
Status: Under Review

Common Name: Cascades frog — Scientific Name: Rana cascadae
Status: Under Review

Common Name: Inyo Mountains slender salamander — Scientific Name: Batrachoseps campi
Status: Under Review

Common Name: Shasta salamander — Scientific Name: Hydromantes shastae
Status: Under Review

Common Name: Arizona toad — Scientific Name: Bufo microscaphus microscaphus
Status: Under Review

Common Name: Kern Canyon slender salamander — Scientific Name: Batrachoseps simatus
Status: Under Review

Common Name: Black toad — Scientific Name: Bufo exsul
Status: Species of Concern

Common Name: Tailed frog — Scientific Name: Ascaphus truei
Status: Species of Concern

Group:Arachnids

Common Name: Carlow's Cave pseudoscorpion — Scientific Name: Aphrastochthonius similis
Status: Species of Concern

Common Name: Hom's micro-blind harvestman — Scientific Name: Microcina homi
Status: Species of Concern

Common Name: Lum's micro-blind harvestman — Scientific Name: Microcina lumi
Status: Species of Concern

Common Name: Edgewood blind harvestman — Scientific Name: Calcina minor
Status: Species of Concern

Common Name: Lee's micro-blind harvestman — Scientific Name: Microcina leei
Status: Species of Concern

Common Name: Jung's micro-blind harvestman — Scientific Name: Microcina jungi
Status: Under Review

Common Name: Grubbs' cave pseudoscorpion — Scientific Name: Aphrastochthonius grubbsi
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Music Hall Cave pseudoscorpion
Scientific Name: Pseudogarypus orpheus
Status: Species of Concern

Common Name: Lacey's cave pseudoscorpion
Scientific Name: Larca laceyi
Status: Species of Concern

Common Name: Empire Cave pseudoscorpion
Scientific Name: Microcreagris imperialis
Status: Species of Concern

Common Name: Santa Cruz telemid spider
Scientific Name: Telema sp.
Status: Species of Concern

Common Name: Aalbu's cave pseudoscorpion
Scientific Name: Archeolarca aalbui
Status: Species of Concern

Common Name: Monterey Dunes scorpion
Scientific Name: Pauroctonus maritimus
Status: Species of Concern

Common Name: Tiburon micro-blind harvestman
Scientific Name: Microcina tiburona
Status: Species of Concern

Group:Birds

Common Name: Xantus'sMurrelet
Scientific Name: Synthliboramphus hypoleucus
Status: Candidate

Common Name: Spotted Towhee
Scientific Name: Pipilo maculatus clementae
Status: Species of Concern

Common Name: Cooper's hawk
Scientific Name: Accipiter cooperii
Status: Species of Concern

Common Name: Grasshopper sparrow
Scientific Name: Ammodramus savannarum ssp. perpallidus
Status: Species of Concern

Common Name: Black-backed woodpecker
Scientific Name: picoides arcticus
Status: Under Review

Common Name: Tufted Puffin
Scientific Name: Fratercula cirrhata
Status: Under Review

Common Name: Sharp shinned hawk
Scientific Name: Accipiter striatus
Status: Species of Concern

Common Name: Common Yellowthroat
Scientific Name: Geothlypis trichas sinuosa
Status: Species of Concern

Common Name: Yuma clapper rail
Scientific Name: Rallus longirostris yumanensis
Status: Endangered

Common Name: Southwestern willow flycatcher
Scientific Name: Empidonax traillii extimus
Status: Endangered

Common Name: Southern California rufous-crowned sparrow
Scientific Name: Aimophila ruficeps canescens
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: California spotted Owl — Scientific Name: Strix occidentalis occidentalis
Status: Under Review

Common Name: Tricolored blackbird — Scientific Name: Agelaius tricolor
Status: Under Review

Common Name: San Joaquin LeConte's thrasher — Scientific Name: Toxostoma lecontei macmillanorum
Status: Species of Concern

Common Name: Eagle Mountain scrub jay — Scientific Name: Aphelocoma coerulescens cana
Status: Species of Concern

Common Name: Elegant tern — Scientific Name: Sterna elegans
Status: Species of Concern

Common Name: Least bittern — Scientific Name: Ixobrychus exilis hesperis
Status: Species of Concern

Common Name: Song Sparrow — Scientific Name: Melospiza melodia pusillula
Status: Species of Concern

Common Name: Little willow flycatcher — Scientific Name: Empidonax traillii brewsteri
Status: Species of Concern

Common Name: Song Sparrow — Scientific Name: Melospiza melodia samuelis
Status: Species of Concern

Common Name: Large-billed savannah sparrow — Scientific Name: Passerculus sandwichensis rostratus
Status: Species of Concern

Common Name: Black tern — Scientific Name: Chlidonias niger
Status: Species of Concern

Common Name: Song Sparrow — Scientific Name: Melospiza melodia maxillaris
Status: Species of Concern

Common Name: Fulvous whistling duck — Scientific Name: Dendrocygna bicolor
Status: Species of Concern

Common Name: Belding's savannah sparrow — Scientific Name: Passerculus sandwichensis beldingi
Status: Species of Concern

Common Name: Bell's sage sparrow — Scientific Name: Amphispiza belli belli
Status: Species of Concern

Group:Conifers and Cycads

Common Name: Monterey cypress — Scientific Name: Cupressus macrocarpa
Status: Species of Concern

Common Name: Torrey, Del Mar pine — Scientific Name: Pinus torreyana torreyana
Status: Species of Concern

Common Name: Tecate cypress — Scientific Name: Cupressus forbesii
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Bolander's beach pine — Scientific Name: Pinus contorta bolanderi
Status: Species of Concern

Common Name: Monterey pine — Scientific Name: Pinus radiata
Status: Species of Concern

Common Name: Torrey Island pine — Scientific Name: Pinus torreyana insularis
Status: Species of Concern

Common Name: Mendocino cypress — Scientific Name: Cupressus goveniana pigmaea
Status: Species of Concern

Common Name: Yellow cedar — Scientific Name: Calliptropsis nootkatensis
Status: Under Review

Group:Crustaceans

Common Name: [Unnamed] isopod — Scientific Name: Caecidotea tomalensis
Status: Species of Concern

Common Name: Vernal pool tadpole shrimp — Scientific Name: Lepidurus packardi
Status: Endangered

Common Name: Longhorn fairy shrimp — Scientific Name: Branchinecta longiantenna
Status: Endangered

Common Name: California freshwater shrimp — Scientific Name: Syncaris pacifica
Status: Endangered

Common Name: Mono Lake brine shrimp — Scientific Name: Artemia monica
Status: Species of Concern

Common Name: Conservancy fairy shrimp — Scientific Name: Branchinecta conservatio
Status: Endangered

Group:Ferns and Allies

Common Name: Crater Lake grap fern — Scientific Name: Botrychium pumicola nealleyi
Status: Species of Concern

Common Name: No common name — Scientific Name: Botrychium crenulatum
Status: Species of Concern

Group:Fishes

Common Name: Rough sculpin — Scientific Name: Cottus asperrimus
Status: Species of Concern

Common Name: Kern River rainbow trout — Scientific Name: Oncorhynchus mykiss gilberti
Status: Species of Concern

Common Name: Steelhead — Scientific Name: Oncorhynchus (=Salmo) mykiss
Status: Endangered

Common Name: Goose Lake redband trout — Scientific Name: Oncorhynchus mykiss ssp.
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Eagle Lake rainbow Trout
Status: Under Review
Scientific Name: Oncorhynchus mykiss aquilarum

Common Name: Flannelmouth sucker
Status: Species of Concern
Scientific Name: Catostomus latipinnis

Common Name: Steelhead
Status: Under Review
Scientific Name: Oncorhynchus (=Salmo) mykiss

Common Name: longfin smelt
Status: Candidate
Scientific Name: Spirinchus thaleichthys

Common Name: Benton Valley speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Jenny Creek sucker
Status: Species of Concern
Scientific Name: Catostomus rimiculus ssp.

Common Name: Arroyo chub
Status: Species of Concern
Scientific Name: Gila orcuttii

Common Name: Steelhead
Status: Threatened
Scientific Name: Oncorhynchus (=Salmo) mykiss

Common Name: Owens speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Red Hills roach
Status: Species of Concern
Scientific Name: Lavinia symmetricus ssp.

Common Name: Santa Ana speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Shoshone pupfish
Status: Species of Concern
Scientific Name: Cyprinodon nevadensis shoshone

Common Name: Long Valley speckled dace
Status: Species of Concern
Scientific Name: Rhinichthys osculus ssp.

Common Name: Klamath largescale sucker
Status: Species of Concern

Status: Species of Concern

Common Name: Russian River tule perch
Scientific Name: Hysterocarpus traskii pomo
Status: Species of Concern

Common Name: Goose Lake lamprey
Scientific Name: Lampetra tridentata ssp.
Status: Species of Concern

Common Name: Gualala roach
Scientific Name: Lavinia symmetricus parvipinnis
Status: Species of Concern

Group:Flowering Plants

Common Name: Marin dwarf-flax
Scientific Name: Hesperolinon congestum
Status: Threatened

Common Name: Fleshy owl's-clover
Scientific Name: Castilleja campestris ssp. succulenta
Status: Threatened

Common Name: Pine Hill ceanothus
Scientific Name: Ceanothus roderickii
Status: Endangered

Common Name: Hoover's spurge
Scientific Name: Chamaesyce hooveri
Status: Threatened

Common Name: Suisun thistle
Scientific Name: Cirsium hydrophilum var. hydrophilum
Status: Endangered

Common Name: Vine Hill clarkia
Scientific Name: Clarkia imbricata
Status: Endangered

Common Name: Soft bird's-beak
Scientific Name: Cordylanthus mollis ssp. mollis
Status: Endangered

Common Name: Baker's larkspur
Scientific Name: Delphinium bakeri
Status: Endangered

Common Name: Yellow larkspur
Scientific Name: Delphinium luteum
Status: Endangered

Common Name: Ione (incl. Irish Hill) buckwheat
Scientific Name: Eriogonum apricum (incl. var. prostratum)
Status: Endangered

Common Name: Pine Hill flannelbush
Scientific Name: Fremontodendron californicum ssp. decumbens
Status: Endangered

Common Name: El Dorado bedstraw
Scientific Name: Galium californicum ssp. sierrae
Status: Endangered

Common Name: Sebastopol meadowfoam
Scientific Name: Limnanthes vinculans
Status: Endangered

Common Name: San Joaquin Orcutt grass
Scientific Name: Orcuttia inaequalis
Status: Threatened

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Sacramento Orcutt grass
Status: Endangered
Scientific Name: Orcuttia viscida

Common Name: Pitkin Marsh lily
Status: Endangered
Scientific Name: Lilium pardalinum ssp. pitkinense

Common Name: Few-flowered navarretia
Status: Endangered
Scientific Name: Navarretia leucocephala ssp. pauciflora (=N. pauciflora)

Common Name: Many-flowered navarretia
Status: Endangered
Scientific Name: Navarretia leucocephala ssp. plieantha

Common Name: Colusa grass
Status: Threatened
Scientific Name: Neostapfia colusana

Common Name: Hairy Orcutt grass
Status: Endangered
Scientific Name: Orcuttia pilosa

Common Name: Lake County stonecrop
Status: Endangered
Scientific Name: Parvisedum leiocarpum

Common Name: Calistoga allocarya
Status: Endangered
Scientific Name: Plagiobothrys strictus

Common Name: Napa bluegrass
Status: Endangered
Scientific Name: Poa napensis

Common Name: Hartweg's golden sunburst
Status: Endangered
Scientific Name: Pseudobahia bahiifolia

Common Name: San Joaquin adobe sunburst
Status: Threatened
Scientific Name: Pseudobahia peirsonii

Common Name: Layne's butterweed
Status: Threatened
Scientific Name: Senecio layneae

Common Name: Keck's Checker-mallow
Status: Endangered
Scientific Name: Sidalcea keckii

Common Name: Kenwood Marsh checker-mallow
Status: Endangered
Scientific Name: Sidalcea oregana ssp. valida

Common Name: Metcalf Canyon jewelflower
Status: Endangered
Scientific Name: Streptanthus albidus ssp. albidus

Common Name: Presidio Manzanita
Status: Endangered
Scientific Name: Arctostaphylos hookeri var. ravenii

Common Name: Sonoma sunshine
Status: Endangered
Scientific Name: Blennosperma bakeri

Common Name: Tiburon mariposa lily
Status: Threatened
Scientific Name: Calochortus tiburonensis

Common Name: Coyote ceanothus
Scientific Name: Ceanothus ferrisae

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Status: Endangered

Common Name: Sonoma spineflower — Scientific Name: Chorizanthe valida
Status: Endangered

Common Name: Tiburon jewelflower — Scientific Name: Streptanthus niger
Status: Endangered

Common Name: Hidden Lake bluecurls — Scientific Name: Trichostema austromontanum ssp. compactum
Status: Threatened

Common Name: Fountain thistle — Scientific Name: Cirsium fontinale var. fontinale
Status: Endangered

Common Name: Presidio clarkia — Scientific Name: Clarkia franciscana
Status: Endangered

Common Name: Palmate-bracted bird's beak — Scientific Name: Cordylanthus palmatus
Status: Endangered

Common Name: Tiburon paintbrush — Scientific Name: Castilleja affinis ssp. neglecta
Status: Endangered

Common Name: Sonoma alopecurus — Scientific Name: Alopecurus aequalis var. sonomensis
Status: Endangered

Common Name: Ione manzanita — Scientific Name: Arctostaphylos myrtifolia
Status: Threatened

Common Name: Pallid manzanita — Scientific Name: Arctostaphylos pallida
Status: Threatened

Common Name: Solano grass — Scientific Name: Tuctoria mucronata
Status: Endangered

Common Name: San Mateo thornmint — Scientific Name: Acanthomintha obovata ssp. duttonii
Status: Endangered

Common Name: Clara Hunt's milk-vetch — Scientific Name: Astragalus clarianus
Status: Endangered

Common Name: Chinese Camp brodiaea — Scientific Name: Brodiaea pallida
Status: Threatened

Common Name: Mariposa pussypaws — Scientific Name: Calyptridium pulchellum
Status: Threatened

Common Name: Stebbins' morning-glory — Scientific Name: Calystegia stebbinsii
Status: Endangered

Common Name: White sedge — Scientific Name: Carex albida
Status: Endangered

Common Name: Santa Clara Valley dudleya — Scientific Name: Dudleya setchellii
Status: Endangered

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Island tree poppy
Scientific Name: Dendromecon rigida rhamnoides
Status: Species of Concern

Common Name: Northcoast birds-beak
Scientific Name: Cordylanthus maritimus palustris
Status: Species of Concern

Common Name: Loch Lomond coyote thistle
Scientific Name: Eryngium constancei
Status: Endangered

Common Name: Red Hills vervain
Scientific Name: Verbena californica
Status: Threatened

Common Name: San Francisco lessingia
Scientific Name: Lessingia germanorum (=L.g. var. germanorum)
Status: Endangered

Common Name: Payson's jewelflower
Scientific Name: Caulanthus simulans
Status: Species of Concern

Common Name: Santa Barbara false-lupine
Scientific Name: Thermopsis macrophylla agnina
Status: Species of Concern

Common Name: Beaked clarkia
Scientific Name: Clarkia rostrata
Status: Species of Concern

Common Name: Boundary Peak rock-cress
Scientific Name: Boechera pinzliae
Status: Species of Concern

Common Name: Island jepsonia
Scientific Name: Jepsonia malvifolia
Status: Species of Concern

Common Name: Channel Island tree poppy
Scientific Name: Dendromecon rigida ssp. harfordii
Status: Species of Concern

Common Name: Springville clarkia
Scientific Name: Clarkia springvillensis
Status: Threatened

Common Name: Pennell's bird's-beak
Scientific Name: Cordylanthus tenuis ssp. capillaris
Status: Endangered

Common Name: Hollisteria
Scientific Name: Hollisteria lanata
Status: Species of Concern

Common Name: Tuolumne fawn-lily
Scientific Name: Erythronium tuolumnense
Status: Species of Concern

Common Name: No common name
Scientific Name: Holocarpha virgata elongata
Status: Species of Concern

Common Name: Peirson's spring beauty
Scientific Name: Claytonia lanceolata peirsonii
Status: Species of Concern

Common Name: Hispid birds-beak
Scientific Name: Cordylanthus mollis hispidus
Status: Species of Concern

Common Name: Wart-stemmed ceanothus
Scientific Name: Ceanothus verrucosus
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Oso manzanita
Scientific Name: Arctostaphylos osoensis
Status: Species of Concern

Common Name: Dudley's lousewort
Scientific Name: Pedicularis dudleyi
Status: Species of Concern

Common Name: Pierpoint Springs liveforever
Scientific Name: Dudleya cymosa costifolia
Status: Species of Concern

Common Name: Mono milk-vetch
Scientific Name: Astragalus monoensis monoensis
Status: Species of Concern

Common Name: Kern mallow
Scientific Name: Eremalche kernensis
Status: Endangered

Common Name: San Mateo woolly sunflower
Scientific Name: Eriophyllum latilobum
Status: Endangered

Common Name: Long-petaled lewisia
Scientific Name: Lewisia longipetala
Status: Species of Concern

Common Name: Monterrey manzanita
Scientific Name: Arctostaphylos montereyensis
Status: Species of Concern

Common Name: [Unnamed] checkermallow
Scientific Name: Sidalcea malvaeflora patula
Status: Species of Concern

Common Name: Howe's hedgehog cactus
Scientific Name: Echinocereus engelmannii howei
Status: Species of Concern

Common Name: Tuolumne coyote-thistle
Scientific Name: Eryngium pinnatisectum
Status: Species of Concern

Common Name: No common name
Scientific Name: Lessingia micradenia micradenia
Status: Species of Concern

Common Name: Santa Catalina Island manzanita
Scientific Name: Arctostaphylos catalinae

Common Name: San Gabriel bedstraw
Scientific Name: Galium grande
Status: Species of Concern

Common Name: Island morning-glory
Scientific Name: Calystegia macrostegia amplissima
Status: Species of Concern

Common Name: Santa Barbara Island buckwheat
Scientific Name: Eriogonum giganteum compactum
Status: Species of Concern

Common Name: The Geysers panic grass
Scientific Name: Dichanthelium acuminatum acuminatum
Status: Species of Concern

Common Name: Flat-seeded spurge
Scientific Name: Chamaesyce platysperma
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Narrow-leaved nightshade — Scientific Name: Solanum tenuilobatum
Status: Species of Concern

Common Name: Green liveforever — Scientific Name: Dudleya virens
Status: Species of Concern

Common Name: Three Peaks jewelflower — Scientific Name: Streptanthus morrisonii elatus
Status: Species of Concern

Common Name: Big Bear milk-vetch — Scientific Name: Astragalus lentiginosus sierrae
Status: Species of Concern

Common Name: Deane's milk-vetch — Scientific Name: Astragalus deanei
Status: Species of Concern

Common Name: Ft. Tejon wooly-sunflower — Scientific Name: Eriophyllum lanatum hallii
Status: Species of Concern

Common Name: El Dorado mule-ears — Scientific Name: Wyethia reticulata
Status: Species of Concern

Common Name: Siskiyou onion — Scientific Name: Allium tribracteatum
Status: Species of Concern

Common Name: Enterprise clarkia — Scientific Name: Clarkia mosquinii xerophila
Status: Species of Concern

Common Name: San Francisco Bay spineflower — Scientific Name: Chorizanthe cuspidata cuspidata
Status: Species of Concern

Common Name: Santa Cruz silverpuffs — Scientific Name: Stebbinsoseris decipiens
Status: Species of Concern

Common Name: Hetch Hetchy monkey-flower — Scientific Name: Mimulus filicaulis
Status: Species of Concern

Common Name: Caliente clarkia — Scientific Name: Clarkia temblorensis ssp. calientensis
Status: Species of Concern

Common Name: Lemon lily — Scientific Name: Lilium parryi
Status: Species of Concern

Common Name: Two carpeled dwarf-flax — Scientific Name: Hesperolinon bicarpellatum
Status: Species of Concern

Common Name: Baker's meadowfoam — Scientific Name: Limnanthes bakeri
Status: Species of Concern

Group:Insects

Common Name: Denning's cryptic caddisfly — Scientific Name: Cryptochia denningi
Status: Species of Concern

Common Name: Shirttail Creek stonefly — Scientific Name: Megaleuctra sierra
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Sonoma arctic skipper
Scientific Name: Carterocephalus palaemon ssp.
Status: Species of Concern

Common Name: Globose dune beetle
Scientific Name: Coelus globosus
Status: Species of Concern

Common Name: Sierra pygmy grasshopper
Scientific Name: Tetrix sierrana
Status: Species of Concern

Common Name: Bumblebee scarab
Scientific Name: Lichnanthe ursina
Status: Species of Concern

Common Name: Franklin's bumblebee
Scientific Name: Bombus franklini
Status: Under Review

Common Name: Gold rush hanging fly
Scientific Name: Orbittacus obscurus
Status: Species of Concern

Common Name: Brownish dubiraphian riffle beetle
Scientific Name: Dubiraphia brunnescens
Status: Species of Concern

Common Name: Coachella Valley jerusalem cricket
Scientific Name: Stenopelmatus cahuilaensis
Status: Species of Concern

Common Name: Desert monkey grasshopper
Scientific Name: Psychomastix deserticola
Status: Species of Concern

Common Name: Point Conception jerusalem cricket
Scientific Name: Ammopelmatus muwu
Status: Species of Concern

Common Name: Sacramento anthicid
Scientific Name: Anthicus sacramento
Status: Species of Concern

Common Name: Wawona riffle beetle
Scientific Name: Atractelmis wawona
Status: Species of Concern

Common Name: San Joaquin tiger beetle
Scientific Name: Cicindela tranquebarica ssp.
Status: Species of Concern

Common Name: Sagehen Creek goeracean caddisfly
Scientific Name: Goeracea oregona
Status: Species of Concern

Common Name: Hopping's blister beetle
Scientific Name: Lytta hoppingi
Status: Species of Concern

Common Name: Kelso Dune glaresis scarab
Scientific Name: Glaresis arenata
Status: Species of Concern

Common Name: Wilbur Springs shore fly
Scientific Name: Paracoenia calida
Status: Species of Concern

Common Name: Antioch andrenid bee
Scientific Name: Perdita scitula antiochensis
Status: Species of Concern

Common Name: Point Reyes blue
Scientific Name: Icaricia icariodes ssp.
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Simple hydroporus diving beetle — Scientific Name: Hydroporus simplex
Status: Species of Concern

Common Name: Antioch cophuran robberfly — Scientific Name: Cophura hurdi
Status: Species of Concern

Common Name: MacNeill sooty wing skipper — Scientific Name: Hesperopsis gracielae
Status: Species of Concern

Common Name: King's Creek ecclisomyian caddisfly — Scientific Name: Ecclisomyia bilera
Status: Species of Concern

Common Name: King's Creek parapsyche caddisfly — Scientific Name: Parapsyche extensa
Status: Species of Concern

Common Name: Kings Canyon cryptochian caddisfly — Scientific Name: Cryptochia excella
Status: Species of Concern

Common Name: San Clemente Island coenonycha beetle — Scientific Name: Coenonycha clementina
Status: Species of Concern

Common Name: Spiny rhyacophilan caddisfly — Scientific Name: Rhyacophila spinata
Status: Species of Concern

Common Name: Delta june beetle — Scientific Name: Polyphylla stellata
Status: Species of Concern

Common Name: Trinity Alps ground beetle — Scientific Name: Nebria sahlbergii triad
Status: Species of Concern

Common Name: San Francisco lacewing — Scientific Name: Nothochrysa californica
Status: Species of Concern

Common Name: San Gabriel Mountains blue — Scientific Name: Plejebus saepiolus ssp.
Status: Species of Concern

Common Name: White Mountains copper — Scientific Name: Lycaena rubicus ssp.
Status: Species of Concern

Common Name: Oso Flaco patch butterfly — Scientific Name: Chlosyne leanira osoflaco
Status: Species of Concern

Common Name: Golden-horned caddisfly — Scientific Name: Neothremma genella
Status: Species of Concern

Common Name: Rude's long-horned beetle — Scientific Name: Necydalis rudei
Status: Species of Concern

Common Name: Busck's gall moth — Scientific Name: Carolella busckana
Status: Species of Concern

Common Name: Andrew's marble butterfly — Scientific Name: Euchloe hyantis andrewsi
Status: Species of Concern

Common Name: [Unnamed] ground beetle — Scientific Name: Scaphinotus behrensi
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: White Mountains saepiolus blue
Scientific Name: Plejebus saepiolus ssp.
Status: Species of Concern

Common Name: White Mountains sandhill skipper
Scientific Name: Polites sabuleti albomontana
Status: Species of Concern

Common Name: Greenest tiger beetle
Scientific Name: Cicindela tranquebarica viridissima
Status: Species of Concern

Common Name: Siskiyou caddisfly
Scientific Name: Neothremma siskiyou
Status: Species of Concern

Common Name: Casey's June Beetle
Scientific Name: Dinacoma caseyi
Status: Endangered

Common Name: Channel Islands dune beetle
Scientific Name: Coelus pacificus
Status: Species of Concern

Common Name: Hurd's metapogon robberfly
Scientific Name: Metapogon hurdi
Status: Species of Concern

Common Name: Molestan blister beetle
Scientific Name: Lytta molesta
Status: Species of Concern

Common Name: Nelson's miloderes weevil
Scientific Name: Miloderes nelsoni
Status: Species of Concern

Common Name: Lake Tahoe benthic stonefly
Scientific Name: Capnia lacustra
Status: Species of Concern

Common Name: Bilobed rhyacophilan caddisfly
Scientific Name: Rhyacophila mosana
Status: Species of Concern

Common Name: Santa Cruz Island shore weevil
Scientific Name: Trigonoscuta stantoni
Status: Species of Concern

Common Name: Ancient ant
Scientific Name: Smithistruma reliquia
Status: Species of Concern

Common Name: Pinnacles shield-back katydid
Scientific Name: Idiostatus kathleenae
Status: Species of Concern

Common Name: Oso Flaco robber fly
Scientific Name: Ablautus schlingeri
Status: Species of Concern

Common Name: Morro Bay blue butterfly
Scientific Name: Icaricia icarioides moroensis
Status: Species of Concern

Common Name: Valley mydas fly
Scientific Name: Rhaphiomidas trochilus
Status: Under Review

Common Name: Giuliani's dubiraphian riffle beetle
Scientific Name: Dubiraphia giulianii
Status: Species of Concern

Common Name: Amphibious caddisfly
Scientific Name: Desmona bethula
Status: Species of Concern

Federal Endangered Species from the U.S. Fish and Wildlife for CA State (Continued...)

Common Name: Cheese-weed moth lacewing
Scientific Name: Oliarces clara

Endangered Species Codes

Global Imperilment Rank Codes - GRANK: Priority rank (1-5) based on number of occurrences through element's range.

G1 - Critically imperiled globally because of extreme rarity (5 or fewer occurrences or very few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G2 - Imperiled globally because of rarity (6-20 occurrences or few remaining individuals or acres) or because of some factor(s) making it especially vulnerable to extinction.

G3 - Vulnerable. Either very rare and local throughout its range or found locally (even abundantly at some of its locations) in a restricted range. (e.g., a single western state, a physiographic region in the East) or because of other factors making it vulnerable to extinction throughout its range; in terms of occurrences, in the range of 21 - 100.

G4 - Apparently secure globally, though it may be quite rare in parts of its range, especially at the periphery.

G5 - Demonstrably secure globally, though it may be quite rare in parts of its range, especially at the periphery.

GH - Possibly extinct or eliminated. Of historical occurrence throughout its range, i.e., formerly part of the established biota, with the expectation that it may be rediscovered (e.g., Bachman's Warbler). For historic and ecological communities, no likelihood for rediscovery, but possibility of restoration (e.g., American Chestnut Forest).

GNA - Not applicable to the element at a global level. Includes Hybrids, Invasive species, species of Domestic Origin, Cultural communities, and communities that have been managed.

GNR - Rank not assigned.

GU - Unrankable. Possibly in peril range-wide but status uncertain; more information is needed.

GX - Believed to be extinct throughout range (e.g., Passenger Pigeon) with virtually no likelihood that it will be rediscovered. For an ecological community, no restoration potential.

G#G# - Rank with a range. Used to show the range of uncertainty, will not skip more than 1 rank.

T-RANKS - T subranks are given to global ranks when a subspecies, variety, or race is considered at the state level. The subrank is made up of a "T" plus a number or letter (1, 2, 3, 4, 5, H, U, X) with the same ranking rules as a full species.

State Rank Codes - SRANK: Priority rank (1-5) based on number of occurrences through element's range.

S1 - Critically imperiled, Extremely rare. Typically 5 or fewer estimated occurrences in the state, or only a few remaining individuals, may be especially vulnerable to extirpation.

S2 - Imperiled, very rare. Typically between 5 and 20 estimated occurrences or with many individuals in fewer occurrences, often susceptible to becoming extirpated.

S3 - Vulnerable, rare to uncommon. Typically between 21 and 100 estimated occurrences, may have fewer occurrences but with large number of individuals in some populations, may be susceptible to large-scale disturbances.

S4 - Common, apparently secure under present conditions. Typically 100 or more estimated occurrences, but may be fewer with many large populations, may be restricted to only a portion of the state, usually not susceptible to immediate threats.

S5 - Demonstrably widespread, common, and secure in the state and essentially ineradicable under present conditions.

SA - Accidental.

SH - Historically known from the state, but not verified for an extended period, usually 15 years.

SU - Unrankable, not assessed. Possibly in peril in the state, but status uncertain, more information is needed. When possible, the most likely rank is assigned and a question mark is added to show uncertainty.

SX - Apparently extirpated from state.

SNR - Unranked. The state rank not yet assessed.

SRF - Reported falsely in the state.

SE - Exotic for local area.

SZ - Birds that migrate through the state but have no identifiable location.

S#S# - State level of G#G#.

Endangered Species Codes, (Continued...)

General Ranking Notes

Q - A "Q" in the global rank indicates the element's taxonomic classification as a species is a matter of conjecture among scientists.

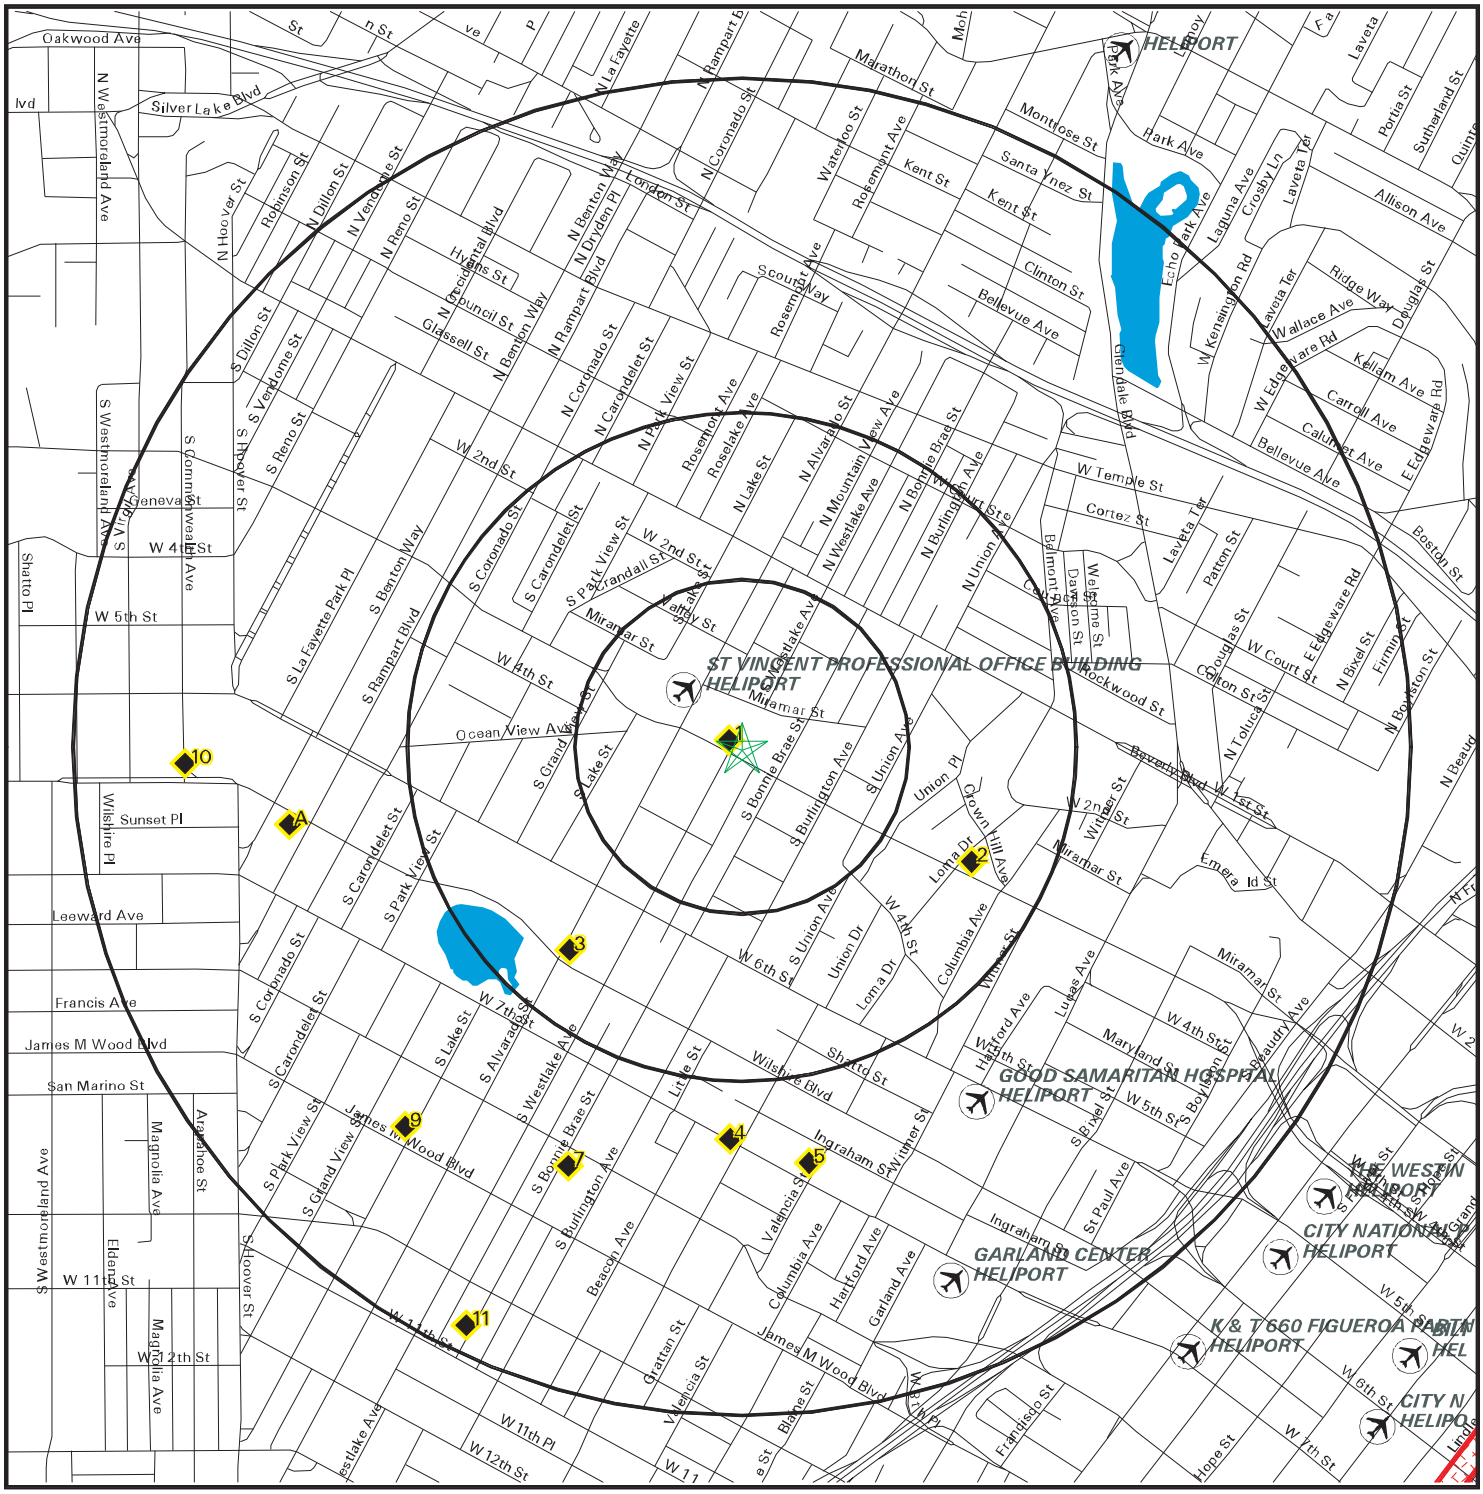
A - Accidental - far outside usual range

C - Captive or Cultivated only

HYB - Element represents an interspecific hybrid, not a species

R - Reported but not confirmed

Z - Zero Occurrences



Breeding Status Qualifiers (animals only)

B - Breeding population of the element

N - Nonbreeding population of the element

M - Migrant population

WETLANDS CLASSIFICATION SYSTEM

National Wetland Inventory Maps are produced by the U.S. Fish and Wildlife Service, a sub-department of the U.S. Department of the Interior. In 1974, the U.S. Fish and Wildlife Service developed a criteria for wetland classification with four long range objectives:

- to describe ecological units that have certain homogeneous natural attributes,
- to arrange these units in a system that will aid decisions about resource management,
- to furnish units for inventory and mapping, and
- to provide uniformity in concepts and terminology throughout the U.S.

High altitude infrared photographs, soil maps, topographic maps and site visits are the methods used to gather data for the productions of these maps. In the infrared photos, wetlands appear as different colors and these wetlands are then classified by type. Using a hierarchical classification, the maps identify wetland and deepwater habitats according to:

- system
- subsystem
- class
- subclass
- modifiers

(as defined by Cowardin, et al. U.S. Fish and Wildlife Service FWS/OBS 79/31. 1979.)

The classification system consists of five systems:

1. marine
2. estuarine
3. riverine
4. lacustrine
5. palustrine

The marine system consists of deep water tidal habitats and adjacent tidal wetlands. The riverine system consists of all wetlands contained within a channel. The lacustrine systems includes all nontidal wetlands related to swamps, bogs & marshes. The estuarine system consists of deepwater tidal habitats and where ocean water is diluted by fresh water. The palustrine system includes nontidal wetlands dominated by trees and shrubs and where salinity is below .5% in tidal areas. All of these systems are divided in subsystems and then further divided into class.

National Wetland Inventory Maps are produced by transferring gathered data on a standard 7.5 minute U.S.G.S. topographic map. Approximately 52 square miles are covered on a National Wetland Inventory map at a scale of 1:24,000. Electronic data is compiled by digitizing these National Wetland Inventory Maps.

MODIFIERS

In order to more adequately describe wetland and deepwater habitats one or more of the water regime, water chemistry, soil, or special modifiers may be applied at the class or lower level in the hierarchy. The farmed modifier may also be applied to the ecological system.

WATER REGIME

Non-Tidal

- A Temporarily Flooded
- B Saturated
- C Seasonally Flooded
- D Seasonally Flooded/ Well Drained
- E Seasonally Flooded/ Saturated
- F Semipermanently Flooded
- G Intermittently Exposed

Tidal

- H Permanently Flooded
- J Intermittently Flooded
- K Artificially Flooded
- W Intermittently Flooded/Temporary
- Y Saturated/Semipermanent/ Seasonal
- Z Intermittently Exposed/Permanent
- U Unknown

Coastal Salinity

- K Artificially Flooded
- L Subtidal
- M Irregularly Exposed
- N Regularly Flooded
- P Irregularly Flooded

Inland Salinity

- *S Temporary-Tidal
- *R Seasonal-Tidal
- *T Semipermanent -Tidal
- V Permanent -Tidal
- U Unknown

*These water regimes are only used in tidally influenced, freshwater systems.

WATER CHEMISTRY

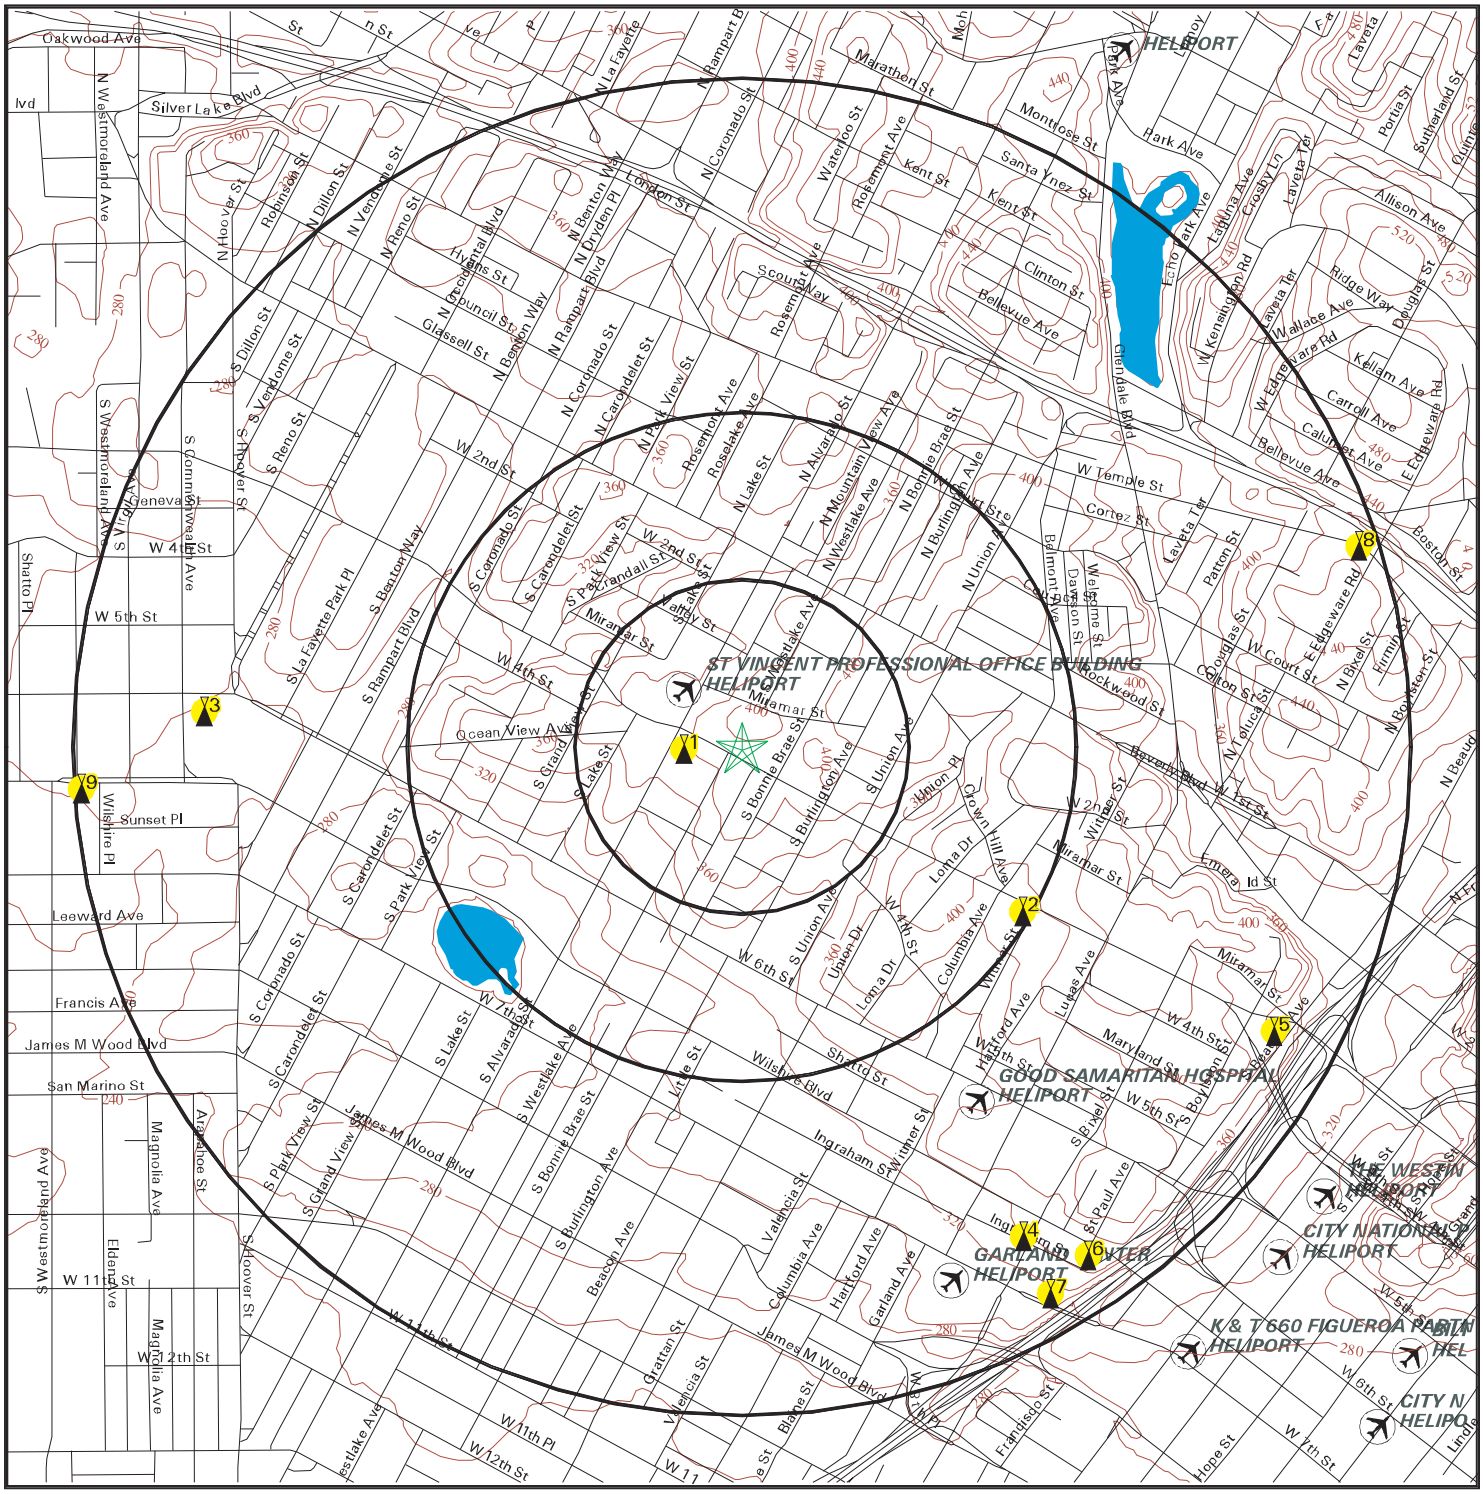
pH Modifiers for all Fresh Water

- 1 Hyperhaline
- 2 Euhaline
- 3 Mixohaline (Brackish)
- 4 Polyhaline
- 5 Mesohaline
- 6 Oligohaline
- 0 Fresh

- 7 Hypersaline
- 8 Eusaline
- 9 Mixosaline
- 0 Fresh

- a Acid
- t Circumneutral
- i Alkaline

SOIL



- g Organic
- n Mineral

SPECIAL MODIFIERS

- b Beaver
- d Partially Drained/Ditched
- f Farmed
- h Diked/Impounded
- r Artificial Substrate
- s Spoil
- x Excavated

KEY CONTACTS & GOVERNMENT RECORDS SEARCHED

Various Federal laws and executive orders address specific environmental concerns. NEPA requires the responsible offices to integrate to the greatest practical extent the applicable procedures required by these laws and executive orders. EDR provides key contacts at agencies charged with implementing these laws and executive orders to supplement the information contained in this report.

LANDMARKS, HISTORICAL, AND ARCHEOLOGICAL SITES
Historic Places

Government Records Searched in This Report

National Register of Historic Places:
The National Register of Historic Places is the official federal list of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, engineering, and culture. These contribute to an understanding of the historical and cultural foundations of the nation.
The National Register includes:
- All prehistoric and historic units of the National Park System;
- National Historic Landmarks, which are properties recognized by the Secretary of the Interior as possessing national significance; and
- Properties significant in American, state, or local prehistory and history that have been nominated by State Historic Preservation Officers, federal agencies, and others, and have been approved for listing by the National Park Service.

Date of Government Version: 07/19/2015

CEQA Exemption Energy and Water Efficiency Compliance Memorandum

ESA

MEP CONSULTING ENGINEERS
BUDLONG & ASSOCIATES, INC.
An MBE | SBE | DBE | LBSE Firm

To: Nicole Zaccack

From: Budlong & Associates

Date: July 8, 2020

Subject: CEQA 21155.1 (a) (8) Energy and Water Efficiency Compliance for 1917 -2005 1/2 West 3rd Street Los Angeles, CA 90057

The purpose of this memo is to document that the proposed affordable housing project ("Project") located at 1917 -2005 1/2 West 3rd Street Los Angeles, CA 90057 ("Site"), being developed by Miramar Development, LP, would meet the CEQA 21155.1 exemption for transit priority project subsection (a) (8) requirement for energy and water efficiency. The Project is a 7- story multifamily residential development with 137 units.

California Public Resources Code Section 21155.1 (a) (8) requires:

> Buildings in the transit priority project are 15 percent more energy efficient than required by Chapter 6 of Title 24 of the California Code of Regulations and the buildings and landscaping are designed to achieve 25 percent less water usage than the average household use in the region.

The energy and water efficiency compliance strategies are separately described below. This Project complies with both requirements, as follows:

- Energy Use: **15.5%** more than required by Title 24, Part 6 2019
- Water Use: **89%** below the MWD baseline

ENERGY EFFICIENCY

Regulatory Framework

21155.1 (a) (8) requires that a project be 15 percent more energy efficient than required by Title 24, Part 6, the California Energy Code.

Title 24 is updated, typically every three years. Title 24 2019 has been approved and took effect January 1, 2020. Projects will need to comply under the Title 24 version in effect when filing a building permit application.

Title 24, Part 6 provides two compliance paths:

1. The *Prescriptive Path*, under which projects must implement a specified list of strategies.

2. The *Performance Path*, under which projects use California Energy Commission-approved energy modeling software to demonstrate that projects meet the required level of energy performance (typically stated in kBTUs/square foot/year). Under the Performance Path, project teams can utilize any energy efficiency strategy as long as the required energy performance level is met.

To enable the Department of City Planning to readily confirm compliance with the Subsection (a) (8) requirement of 15% more efficient than Title 24, Part 6, the Project must use the Performance Path.

Energy Modeling Process

Preliminary whole building energy modeling was conducted to determine the expected Title 24 energy code performance. The following sections provide greater detail into the energy modeling process, the necessary design measures, and the resulting performance.

To fully understand the actual building performance and effect of various energy efficiency measures, an energy modeling methodology was used to perform the analysis. A model of the Title 24 standards was created and strictly followed the Title 24 Alternative Calculation Method (ACM) Manual. Energy model inputs assumptions such as envelope construction, schedules and internal loads follow Title 24 Reference Method Appendix 5.4 A and B. HVAC system efficiencies were derived from Title 24-2019 standards.

Building energy simulations were performed using simulation software that permits modeling of complex building geometry, lighting systems, mechanical systems, central plant equipment, and detailed thermal energy definitions of key characteristics for the building envelope, mechanical equipment, lighting fixtures, and electrical equipment. Systems were simulated with detailed control sequences and utilization schedules. The interactions between all building loads, systems and HVAC plants were then simulated in hourly time intervals using typical or long-term average weather and solar data for the location to provide a detailed account of energy consumption and demand. For each of the 8,760 hours during the course of a typical year, the program considered site climate data, building construction, occupancy load, connected loads, and the response of the mechanical systems to maintain occupancy comfort to calculate the overall annual

building energy utilization profile.

Simulation inputs for this energy analysis are discussed below and were derived from the designed system information, Project documents, mechanical schedules and assumptions provided by the design team, and Title 24 standard.

Energy Efficiency Measures

The energy efficiency measures used in the design and analysis of the Project are summarized in this section. The energy measures identified below provide a path to achieve the 15 percent energy efficiency requirement set forth in Section 21155.1(a)(8). During Project implementation, other equally or more effective energy efficiency measures may ultimately be incorporated into the Project to achieve the same or better overall efficiency.

The measures are organized into categories (building envelope, lighting, HVAC, domestic water heating and renewables). To see more detailed inputs for the proposed and Title 24 baseline models, refer to Appendix A.

Building Envelope

1. **Exterior walls with R-21 batt insulation:** The Project uses 2"x6" framed wall construction for above-grade walls, with high density batt insulation in the framing cavity. This high density insulation provides a greater R-value than that of typically used insulation products which improves insulation and, hence, reduces heating and cooling energy use.
2. **Roofs with R-30 batt insulation:** Using extra thick insulation in the roof assembly increases the R- value, reducing heating and cooling energy use.
3. **High-reflectance roofing rated by the Cool Roof Rating Council:** A "cool roof" reflects additional solar heat, which reduces cooling energy in cooling-dominated climates like Southern California.
4. **Perforated rainscreen for solar shading:** On the south side of the building a metal perforated rainscreen will provide solar shading for the exposed surfaces.
5. **High-performance windows with dual-paned low-emissivity glazing:** Dual-paned windows provide additional insulation over single-paned windows, while high performance, low-emissivity coatings help to let in mostly visible light while blocking other light that brings in heat and no visible light. These combined effects reduce cooling energy during the summer and heating during the winter.

Lighting

1. **Optimized façade to capitalize on natural daylight first:** Optimizing the façade is a means of balancing the amount of windows. Windows let in natural daylight which allows electric lights to be turned off, but they also bring in additional heating and cooling when compared to an insulated wall. The result is a building that provides ample daylighting while not being excessive, decreasing overall lighting, heating and cooling energy use.

2. **High-efficacy, LED lamp types for common areas:** High-efficacy LED fixtures provide more lumens (light output) per watt (electric input) than other lamps like fluorescent or incandescent.
3. **Daylighting controls for all indoor, nonresidential spaces:** Also known as "daylight harvesting," these controls sense the amount of natural daylight entering a space to automatically dim the electric lights, saving energy while maintaining light levels.
4. **Occupancy controls with dimming for most common area lighting:** Occupancy controls sense when spaces are vacant for a period of time and automatically turn off lights, saving energy as compared to leaving them on.

HVAC System

1. **High-efficiency 20.5 SEER split system heat pumps for heating, ventilating and air-conditioning (HVAC):** Split system heat pumps have one outdoor unit connected to one indoor fan coil unit (FCU). Seasonal energy efficiency ratio (SEER) represents the "average" efficiency of HVAC equipment. By increasing this value over typical code-minimum efficiencies, the equipment provides the same amount of heating and cooling while using less electricity to operate it. Providing individual systems for each apartment allows the system to be powered from the tenant's electric meter, which tends to encourage more responsible use and lower energy consumption.

Domestic Water Heating

1. **Centralized hot water system:** Centralized water heating systems are larger and use more efficient equipment than individual heating within the units (condensing water heaters are 92+%). They have recirculation controls to keep water in the lines hot, which reduces waste. They also make it easier to integrate into renewable energy systems like solar hot water.
2. **Solar water heating system:** Solar domestic hot water heating panels use solar energy to heat water for domestic use. The water is stored in tanks so that it can be used as needed. Installing 25 solar water heating panels on the roof produces about 30% of the total hot water demand.
3. **High-efficiency water fixtures:** Using water-efficient fixtures (like those described in a later section) inherently uses less hot water, which reduces the amount of water being heated and overall energy consumption.

Energy Model Results

Energy modeling resulted in a design that anticipates using **15.5% less energy than the Title 24-2019** energy code requirements for each building. Refer to the table and figure below to see additional details about the result by each energy end-use.

Energy End-Use	Proposed	Standard	Margin
Space Heating	0.96	0.93	-0.03
Space Cooling	77.52	115.44	37.92
Indoor Fans	68.86	47.92	-20.94
Heat Rejection	-	2.52	2.52
Pumps and Misc.	-	4.43	4.843
Domestic Hot Water	17.47	24.49	7.02
Indoor Lighting	3.12	3.12	-
Total	**167.93**	**198.85**	**30.92**
Savings	**15.5%**		

Table 1. Energy Performance of Proposed Design Compared with the Title 24-2019 Standard Baseline (kBtu/sf/yr)

WATER EFFICIENCY

Regulatory Framework

21151.1 (a) (8) water efficiency requirement is that each project must achieve a 25 percent water use reduction from the *regional average household water use*.

The water baseline for the Project is set with help of *MWD- February 2020 Covering Fiscal Year (July 2018 – June 2019)*. **131 GPCD** (Gallons Per Capita Per Day) is considered as per the calendar year data available from 1985 to 2019.

The projected water fixture rates assume the maximum fixture flow rates allowed under the City of Los Angeles Green Building Code for residential uses. Other elements are calculated using accepted industry practice. The fixture flow rates are as follows:

1. **Showerheads:** 1.8 GPM (gallons per minute)
2. **Lavatory faucets:** 1.2 GPM
3. **Kitchen faucets:** 1.5 GPM
4. **Tank water closets (toilets):** 1.28 GPF (gallon per flush)
5. **Clothes washers:**, 5.1 GPD (gal/person-day)
6. **Dishwashers:** 0.4 GPD (gal/person-day)

Projected Savings

The Project's *Water Use Analysis*, included in Appendix B, calculates both the baseline and projected water use, and then the percentage savings from the MWD baseline. The projected water use is based on compliance with the City of Los Angeles Green Building Code, which includes water efficiency measures designed to reduce water use.

The Project has 137 units, thus occupancy is estimated as 332. (The latest Citywide average household size is 2.42 residents per housing unit, based on 2017 Census American Community Survey 5-Year Estimate data (2013–2017), per correspondence with Jack Tsao, Housing Planner, Los Angeles Department of City Planning, July 31, 2019.)

Water baseline for this Project is 131 GPCD (As per MED report) X 2.42 (Occupants per unit) = 317.02 GPCD. Against it only 34.8 GPCD water consumption is found inclusive of appliance and landscape. It is only 10.98 % from total baseline GPCD. So, the percent reduction from MWD baseline is 89.02%.

These water efficiency measures would sufficiently reduce water use to meet the CEQA 21155.1 (a) (8) threshold of 25%.

CONCLUSION

As discussed above, the Project meets both energy and water efficiency standards

mandated by CEQA Section 21155.1 (a) (8).

[1] Notes: This table is used to document compliance with programs OTHER THAN Title 24 Part 6, if applicable.

D. EXCEPTIONAL CONDITIONS

The aged solar reflectance and aged thermal emittance must be listed in the Cool Roof Rating Council database of certified products. For projects where initial reflectance is used, the initial reflectance must be listed, and the aged reflectance is calculated by the software program and used in the compliance model.

This project uses the Simplified Geometry Performance Modeling Approach which is not capable of modeling daylighting controls and assumes the prescriptive Secondary Daylit Control requirements are met. PRESCRIPTIVE COMPLIANCE documentation (form NRCC-LTI-02-E) for the requirements of section 140.6(d) Automatic Daylighting Controls in Secondary Daylit Zones is required.

E. HERS VERIFICATION

The following is a summary of the features that must be field-verified by a certified HERS Rater as a condition for meeting the modeled energy performance for this computer analysis. Additional detail is provided in the building tables below.

- Highrise residential ventilation airflow
- Highrise residential kitchen hood rated by HVI
- Highrise residential dwelling unit envelope air leakage

DOCUMENTATION AUTHOR'S DECLARATION STATEMENT

I certify that this Certificate of Compliance documentation is accurate and complete.

Documentation Author Name: Budlong HVAC Designer	Signature:
Company: Budlong & Associates	
Address: 315 Arden Avenue, No. 23	Signature Date: 2020-07-13
City/State/Zip: Glendale CA 91203	CEA/ HERS Certification Identification (if applicable):
Phone: 818-638-8780	

RESPONSIBLE PERSON'S DECLARATION STATEMENT

I certify the following under penalty of perjury, under the laws of the State of California:

1. The information provided on this Certificate of Compliance is true and correct.
2. I am eligible under Division 3 of the Business and Professions Code to accept responsibility for the building design or system design identified on this Certificate of Compliance (responsible designer)
3. The energy features and performance specifications, materials, components, and manufactured devices for the building design or system design identified on this Certificate of Compliance conform to the requirements of Title 24, Part 1 and Part 6 of the California Code of Regulations.
4. The building design features or system design features identified on this Certificate of Compliance are consistent with the information provided on other applicable compliance documents, worksheets, calculations, plans and specifications submitted to the enforcement agency for approval with this building permit application.
5. I will ensure that a completed signed copy of this Certificate of Compliance shall be made available with the building permit(s) issued for the building, and made available to the enforcement agency for all applicable inspections. I understand that a completed signed copy of this Certificate of Compliance is required to be included with the documentation the builder provides to the building owner at occupancy.

Appendix B
Water Use Analysis

2020

1917 – 2005 ½ West 3rd Street, Los Angeles, CA 90057- Affordable Housing (Water Use Analysis)

6/25/2020

Contents

1. Introduction..... 2

2. Report:..... 3

3. Discussion:..... 4

1. Introduction

The project is in Westlake/Los Angeles (1917 – 2005 ½ West 3rd Street, Los Angeles, CA 90057). It is a 137-unit 100% affordable housing project with 7 stories + 1 basement level. It is measured to be +/- 95779 SF for interior units and 10,607 SF for the amenity areas. The project will be Type III-A (5 levels) over I-A podium (3 levels). The typical residential floor is a double loaded corridor consisting of studios, 1-bedroom and 2-bedroom units.

The unit analysis for this project is as follows,

Total	
Type	Units
Studio	64
1 Bedroom	59
2 Bedroom	14
Total Units	137

Following are the assumptions taken while doing the baseline calculations.

1. For 137 Units, occupancy is estimated as 332.

(The latest Citywide average household size is 2.42 residents per housing unit, based on 2017 Census American Community Survey 5-Year Estimate data (2013–2017), per correspondence with Jack Tsao, Housing Planner, Los Angeles Department of City Planning, July 31, 2019.)

2. Potable water daily usage for irrigation of area of 11,000 SF is considered as **334 gallons per day.**

TINA CHEE LANDSCAPE STUDIO

06/09/2020

NEW MIRAMAR (including easement area) - ESTIMATED WATER USE

Month	January	February	March	April	May	June	July	August	September	October	November	December

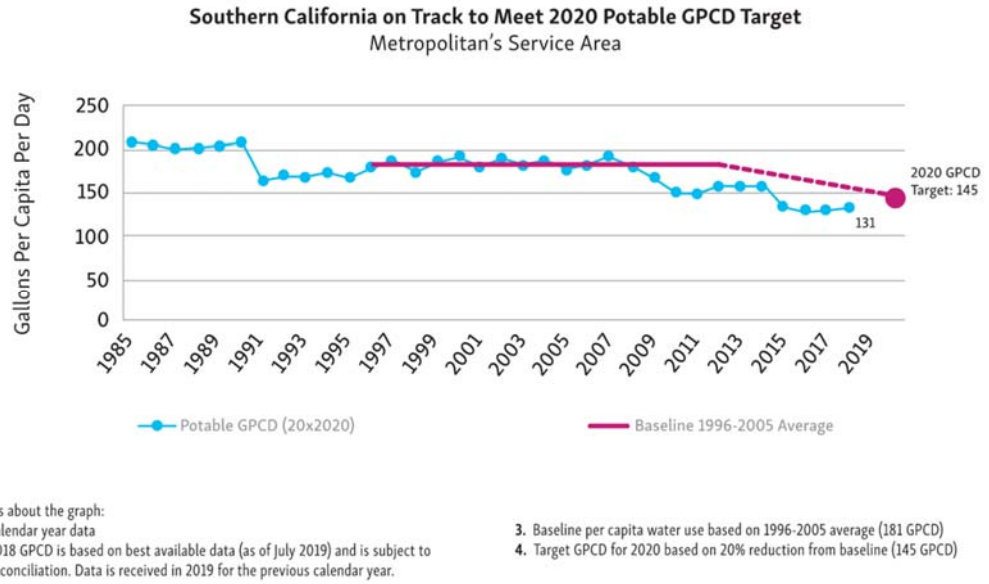
An average of the estimated water use per month is taken into consideration while finalizing this number.

2. Report:

1917 – 2005 ½ West 3rd Street, Los Angeles, CA 90057 - Affordable Housing
Water Use Analysis



Water Use Calculation Table						
Fixture Type	**Flow Rate** (gpm or gpf)**	**Duration (min or # flush)**	**Daily Uses**	**Occupants***		**Gallons Per Day**
Residential Water Use						
Showerheads	1.8	8	1	332	=	4780.8
Lavatory faucets	1.2	0.25	5	332	=	498
Kitchen faucets	1.5	4	1	332	=	1992
Tank water closets(M)	1.28	1	5	166	=	1062.4
Tank water closets(F)	1.28	1	5	166	=	1062.4
				Subtotal	=	9395.6
Clothes washers (gal/person-day)***	5.1			332	=	1693.2
Dishwashers (gal/person-day)****	0.4			332	=	132.8
Potable Water irrigation (daily)*****					=	334
Total Daily Baseline Water Use (BWU) in Gallons Per Day					**=**	**11555.6**
Average use per Household per Day= 11116.2/332					**=**	**34.8**

Current Projected Water Use per Multi- Family Household (*MWD February 2020 Report covering fiscal years July 2018 -July 2019, (PG. 29.)* Gallons Per Capita Per Day of 131 X EIR estimate of 2.42 occupants per residential unit*	**=**	**317.02**
Water Use per Unit Day (inc. appliance and landscape water consumption)	**=**	**34.8**
Percent Reduction from MWD baseline	**=**	**89.02**

Assumptions:
*137 units = 332 estimated occupants, based on 2.42 residents/unit (The latest Citywide average household size is 2.42 residents per housing unit, based on 2017 Census American Community Survey 5-Year Estimate data (2013–2017), www.census.gov/programs-surveys/acs/technical-documentation/table-and-geography-changes/2015/5-year.html, per correspondence with Jack Tsao, Housing Planner, Los Angeles Department of City Planning, July 31, 2019.)
** Flow rates are the maximum allowed under City of Los Angeles Green Building Code (Form GRN 17).
***Clothes Washers assumed for common use on each floor. Los Angeles Green Building Code requires Energy Star certified units. Typical Energy Star unit = 3.2 WF (Water Factor) = 5.08 gal per person per day.
****Dishwasher assumed in each unit. Los Angeles Green Building Code requires Energy Star certified units. Typical Energy Star unit = 4 GPC (Gallons per Cycle) = 0.43 gal per person per day.
***** Irrigation water use per previous landscape architect estimate using efficient irrigation system for similar project. Calculation incorporates all code-required measures.

3. Discussion:

The water baseline for the project is set with help of *MWD- February 2020 Covering Fiscal Year (July 2018 – June 2019)*. 131 GPCD (Gallons Per Capita Per Day) is considered as per the calendar year data available from 1985 to 2019.

Water baseline for this project is 131 GPCD (As per MED report) X 2.42 (Occupants per unit) = 317.02 GPCD. Against it only 34.8 GPCD water consumption is found inclusive of appliance and landscape. Its only 11.40 % part from total baseline GPCD. So, the percent reduction from MWD baseline is (100%-10.98% = 89.02%).

Its better result as the water usage for the building is getting reduced by 89% from the baseline acceptance.

Table of Contents

1. INTRODUCTION 2

2. EXISTING UTILITY INFASTRUCTURE 2

3. PROPOSED UTILITY INFASTRUCTURE 4

4. CONCLUSION 10

1. INTRODUCTION

1.1. PROJECT DESCRIPTION

Miramar Development, LP has proposed a new affordable multi-family residential development (Project) located at 1917-2005 ½ 3rd Street in the City of Los Angeles (Site). The Site is bounded by an eight-story residential apartment building, Miramar Towers, on the north, a four-story apartment on the west, a single-story residential property on the east, and 3rd Street on the south. The Site is approximately 0.70-acres (30,432 square feet) and consists of a fire lane, parking lot consisting of seven parking spaces, outdoor seating, walkway, and landscape area that serves the existing Miramar Towers.

The new development will include one seven-story building, basement level tenant amenities, ADA compliant walkways, a fire lane, and several landscaped areas. The Project would redevelop the entire 0.70-acre site.

1.2. SCOPE OF WORK

The purpose of this report is to analyze the potential impact of the Project to the existing water, wastewater, and energy infrastructure system.

2. EXISTING UTILITY INFASTRUCTURE

The Site currently provides access for gas, electrical, sewer, water, and storm drainage utilities associated with the existing Miramar Towers. The existing gas, electrical, and storm drain utilities will be relocated to other areas of the Site, but will continue to service the existing building. The existing water and sewer line will remain protected in place.

2.1. WATER

2.1.1. EXISTING WATER INFRASTRUCTURE

The Los Angeles Department of Water and Power (LADWP) maintains water infrastructure to the Site. Per LADWP Water Service Map 134-204, there is an existing 12-inch Delavaud cast iron (DEL) water main located along 3rd Street fronting the Site.

2.1.2. EXISTING FIRE INFRASTRUCTURE

Based on information provided on the City of Los Angeles NavigateLA website (https://navigatela.lacity.org/navigatela/), the nearest fire hydrant is located

across 3rd Street approximately 200 feet from the Site.

The ALTA survey for the Site also shows an existing onsite fire department connection (FDC) located near 3rd Street.

2.2. WASTEWATER

The Site is located within the Hyperion Sewer System Service Area, which is operated and maintained by the City's Bureau of Sanitation (LASAN). The existing design capacity of the Hyperion Sewer Treatment Plant is 450 million gallons per day (mgd). The sewerage generated at the Site will be treated within the Hyperion Sewer System Service Area. Based on information provided on the City of Los Angeles NavigateLA website (https://navigatela.lacity.org/navigatela/), there is an 8-inch vitrified clay pipe (VCP) which runs along 3rd Street fronting the Site.

2.3. STORM WATER

Based on the ALTA survey for the Site, the existing storm water from the Site is collected in onsite gutters and catch basins, and discharged to the street gutter via two parkway drains on 3rd Street, one located on the east of the Site and the other on the west of the Site. Storm water runoff from the existing Miramar Towers site is also conveyed to the onsite gutters.

2.4. ENERGY

LADWP is responsible for providing power supply to the City while complying with Local, State, and Federal regulations. LADWP's Power system is the nation's largest municipal electric utility, and serves a 465-square-mile area in Los Angeles and much of the Owens Valley. The system supplies more than 26 million megawatt-hours (MWh) of electricity a year for the City of Los Angeles' 1.4 million residential and business customers as well as over 5,000 customers in the Owens Valley. LADWP has over 7,460 megawatts (MW) of generation capacity from a diverse mix of energy sources including Renewable Energy, Natural Gas, Nuclear, Large Hydro, coal, and other sources. The distribution network includes 6,800 miles of overhead distribution lines and 3,597 miles of underground distribution cables.

2.5. NATURAL GAS

Southern California Gas Company (SoCalGas) is responsible for providing natural gas supply to the City and is regulated by the California Public Utilities Commission and other state and federal agencies.

SoCalGas is the principal distributor of natural gas in Southern California, providing retail and wholesale customers with transportation, exchange and storage services and also procurement services to most retail core customers. SoCalGas is a gas-only utility and, in addition to serving the residential, commercial, and industrial markets, provides gas for enhanced oil recovery (EOR) and electric generation (EG) customers in Southern California. SoCalGas's natural gas system is the nation's largest natural gas distribution utility, and serves a 24,000 square-mile area in Central and Southern California. The system supplies natural gas to 21.8 million customers through 5.9 million meters in more than 500 communities.

3. PROPOSED UTILITY INFRASTRUCTURE

3.1. CONSTRUCTION

3.1.1. WATER

Water demand for construction of the Project would be required for dust control, cleaning of equipment, excavation/export, removal and re-compaction, etc. Based on a review of construction projects of similar size and duration, a conservative estimate of construction water use ranges from 200 to 350 gallons per day (gpd). Considering temporary construction water use will be less than the Project water consumption during operation, it is anticipated that the existing water infrastructure would meet the limited and temporary water demand associated with construction of the Project. The Project will require construction of new, on-site water distribution lines to serve the new buildings. Construction impacts associated with the installation of water distribution lines would primarily involve trenching in order to place the water distribution lines below surface and would be limited to on-site water distribution, and minor off-site work associated with connections to the public main. Prior to ground disturbance, Project contractors would coordinate with LADWP to identify the locations and depth of all lines.

Further, LADWP would be notified in advance of proposed ground disturbance activities to avoid water lines and disruption of water service.

3.1.2. WASTEWATER

Wastewater generation would occur incrementally throughout construction of the Project as a result of construction workers on-site. However, such use would be temporary and nominal when compared with the wastewater generated by the Project during operation. In addition, construction workers would typically utilize portable restrooms, which would not contribute directly to the wastewater system that serves the site but would eventually be deposited to the Hyperion Treatment Plant. Thus, wastewater generation from Project construction activities is not anticipated to cause a measurable increase in wastewater flows.

3.1.3. ENERGY

Electrical power would be consumed to construct the new buildings and facilities of the Project. LADWP can serve temporary power with an overhead 4.8kV circuit that is available in the alley south of the project site in between Westlake Ave and Bonnie Brae Street. During construction, the existing transformer for Miramar Tower will be relocated from the center of the project site to the Southeast corner of the Miramar Tower Site. This will be the utility yard for the existing building, which be on an unexcavated area open to sky. Typical uses include temporary power for lighting, equipment, construction trailers, etc. The demand would be supplied from existing electrical services within the Site and would not affect other services. Overall, demolition and construction activities would require minimal electricity consumption and would not be expected to have any adverse impact on available electricity supplies and infrastructure. No natural gas usage is expected to occur during construction. Construction impacts associated with the Project's electrical and gas infrastructure upgrades would primarily be confined to trenching. Infrastructure improvements will comply with all applicable LADWP, SoCalGas, and City requirements, which are expected to and would in fact mitigate impact to existing energy systems and adjacent properties. To reduce any temporary pedestrian access and traffic impacts during any necessary off-site

energy infrastructure improvements, a construction management plan would be implemented to ensure safe pedestrian and vehicular travel.

3.2. OPERATION

3.2.1. INFRASTRUCTURE CAPACITY

3.2.1.1. WATER

When analyzing the Project for infrastructure capacity, the projected demands for both fire suppression and domestic water are considered. Although domestic water demand is the Project's main contributor to water consumption, fire flow demands have a much greater instantaneous impact on infrastructure, and therefore are the primary means for analyzing infrastructure capacity. Nevertheless, conservative analysis for both fire suppression and domestic water flows has been completed by LADWP for the Project.

LADWP performed a flow test to determine if available water conveyance exists for future development. LADWP's approach consists of data ranging from available static pressure (meaning how much pressure is available at the source before applying the project's demand), to the available pressure at the maximum demand needed for the Project. Based on the results, LADWP determines whether they can meet the project needs based on existing infrastructure. See Exhibit 1 for the results of the Service Advisory Request (SAR).

DOMESTIC WATER

A new 3-inch equivalent water line is proposed based on the estimated water demand shown in Table 1. A Service Advisory Request (SAR) was submitted to LADWP to obtain the existing pressure and flow of the main line. The approved SAR confirms that sufficient capacity is available for the Project (Exhibit 1). Per the results a static pressure of 110 pounds per square inch (psi) and a flow of up to 1440 gallons per minute (gpm) can be delivered with a residual pressure of 71 psi.

Table 1. Domestic Water Demand

1917 – 2005 ½ WEST 3RD STREET - Affordable				
WATER SUPPLY FIXTURE UNIT COUNT (COLD				
Fixture	Tag	QTY	WSFU	TOTAL

Hose	HB-1	38	1	38
			TOTAL	1396.0
TOTAL				1396.0
GPM FROM				**260 GPM***

FIRE WATER

A new 6-inch water line is proposed based on the estimated water demand required by the proposed sprinkler system. A Service Advisory Request (SAR) was submitted to LADWP to obtain the existing pressure and flow of the main line. The approved SAR confirms that sufficient capacity is available for the Project (Exhibit 1). Per the results a static pressure of 110 pounds per square inch (psi) and a flow of up to 1440 gallons per minute (gpm) can be delivered with a residual pressure of 71 psi.

A new fire hydrant is also proposed along 3rd street fronting the project site.

3.2.2. WASTEWATER

The base estimated sewer flows were based on the Bureau of Sanitation (BOS) sewerage generation factors for residential categories, and are summarized in Table 2 below. The Site is anticipated to produce 13,390 gallons per day (gpd) of sewage which will require an 8-inch pipe (Table 3 and 4). Since the sewage production is over 10,000 gpd the project was required to submit a Sewer capacity Availability Request (SCAR) to the City of Los Angeles Bureau of Sanitation. The SCAR was approved by BOS establishing that the existing public infrastructure can accommodate the new development (Exhibit 2). There are no existing sewer fixtures

on-site and no Sewer Connection Certificates. The Project will require a new 8" sewer line to service the new building. The existing sewer line will be protected in place and will continue to service the existing building. Construction impact in the public right-of-way associated with the installation of the new sewer line will consist of trenching under the sidewalk and roadway on 3rd Street.

Table 2. Daily Sewer Demand

Sewer Demand				
	Proposed Use Description	Sewage Generation (GDP)	Quantity	Total GPD
1	Studio	75	64	4800
2	1 Bed	110	59	6490
3	2 Bed	150	14	2100

Q =	**1.692**	cfs			Flow Rate	
*** Calculation is for 75% capacity**						

3.2.3. STORM WATER

The proposed development will comply with Los Angeles' current storm water treatment requirements by implementing Low Impact Development (LID) Best Management Practices (BMPs) per the Planning and Land Development handbook for Low Impact Development 5th Edition.

Storm water from the existing Miramar Towers site will not be allowed to drain onsite and instead will be collected in catch basins along the property line and piped to the street gutter on 3rd Street. Additionally a v-gutter will be located along the east property line to prevent stormwater from running on to the neighboring property. The proposed development will be required to treat the runoff produced from the 85th percentile design storm event prior to discharging it offsite. The Project will utilize a combined biofiltration and capture and reuse planter box. Runoff will be filtered through the planter soil and then stored within the planter base for reuse as passive irrigation. Runoff that exceeds the 85th design storm volume will be

collected through the planter overflow pipes and discharged to the gutter on 3rd street via parkway drains.

3.2.4. ENERGY

ELECTRICITY

An electricity will serve letter was sent to LADWP to determine if there is sufficient capacity to serve the Project. Based on the response from the LADWP (see Exhibit 3), electrical service is available and can be served to the Project. The Project will increase electricity consumption. Based on the information that is currently available, the estimated electrical load is approximately 3,000 kilo-volt-ampere (kVa). However, the actual loads will remain unknown until load calculations are completed.

NATURAL GAS

A will serve letter was sent to the Southern California Gas Company (SoCal Gas) to determine if there is sufficient capacity to serve the Project. Based on the response from the SoCal Gas (see Exhibit 4), gas service is available and can be served to the Project.

The Project will increase the demand for natural gas resources.

4. CONCLUSION

Based on the analysis contained in this report the existing municipal water, wastewater and energy infrastructure is adequate to meet the demand of the project. The results from the SARs completed by LADWP show that the existing water infrastructure is adequate to meet both the fire water and domestic water demand of the project. The results of the SCAR show that the existing sewer infrastructure is adequate to meet the sewerage generation of the project. Therefore, the existing municipal water, wastewater and energy infrastructure has sufficient capacity to accommodate the project and no improvements will be required.

VIRGIL AOANAN
1041 S GARFIELD AVE SUITE 210
ALHAMBRA, CA, 91803

Dear Virgil Aoanan,

SEWER AVAILABILITY: 1917-2005½ 3rd Street

The Bureau of Sanitation has reviewed your request of 07/08/2020 for sewer availability at **1917-2005½ 3RD STREET**. Based on their analysis, it has been determined on 07/13/2020 that there is capacity available to handle the anticipated discharge from your proposed project(s) as indicated in the attached copy of the Sewer Capacity Availability Request (SCAR) .

This determination is valid for 180 days from the date shown on the Sewer Capacity Availability request (SCAR) approved by the Bureau of Sanitation.

While there is hydraulic capacity available in the local sewer system at this time, availability of sewer treatment capacity will be determined at the Bureau of Engineering Public Counter upon presentation of this letter. A Sewer Connection Permit may also be obtained at the same counter provided treatment capacity is available at the time of application.

A Sewerage Facilities Charge is due on all new buildings constructed within the City. The amount of this charge will be determined when application is made for your building permit and the Bureau of Engineering has the opportunity to review the building plans. To facilitate this determination a preliminary set of plans should be submitted to Bureau of Engineering District Office, Public Counter.

Provision for a clean out structure and/or a sewer trap satisfactory to the Department of Building and Safety may be required as part of the sewer connection permit.

Lateral connection of development shall adhere to Bureau of Engineering Sewer Design Manual Section F 480.

Scar Request Number: 3580

Sincerely,

Jeanie Lam

Miramar Apartments

This is in response to your letter dated July 14, 2020 regarding electric service for the proposed project at the above address.

Electric service is available and will be provided in accordance with the Los Angeles Department of Water and Power Rules and Regulations. The estimated power requirement for this proposed project is part of the total load growth forecast for the City and has been taken into account in the planned growth of the power system.

If you have any questions regarding this matter, please call Mr. Jonathan Mota at (213) 367-6082.

Sincerely,

Jeff Bergman

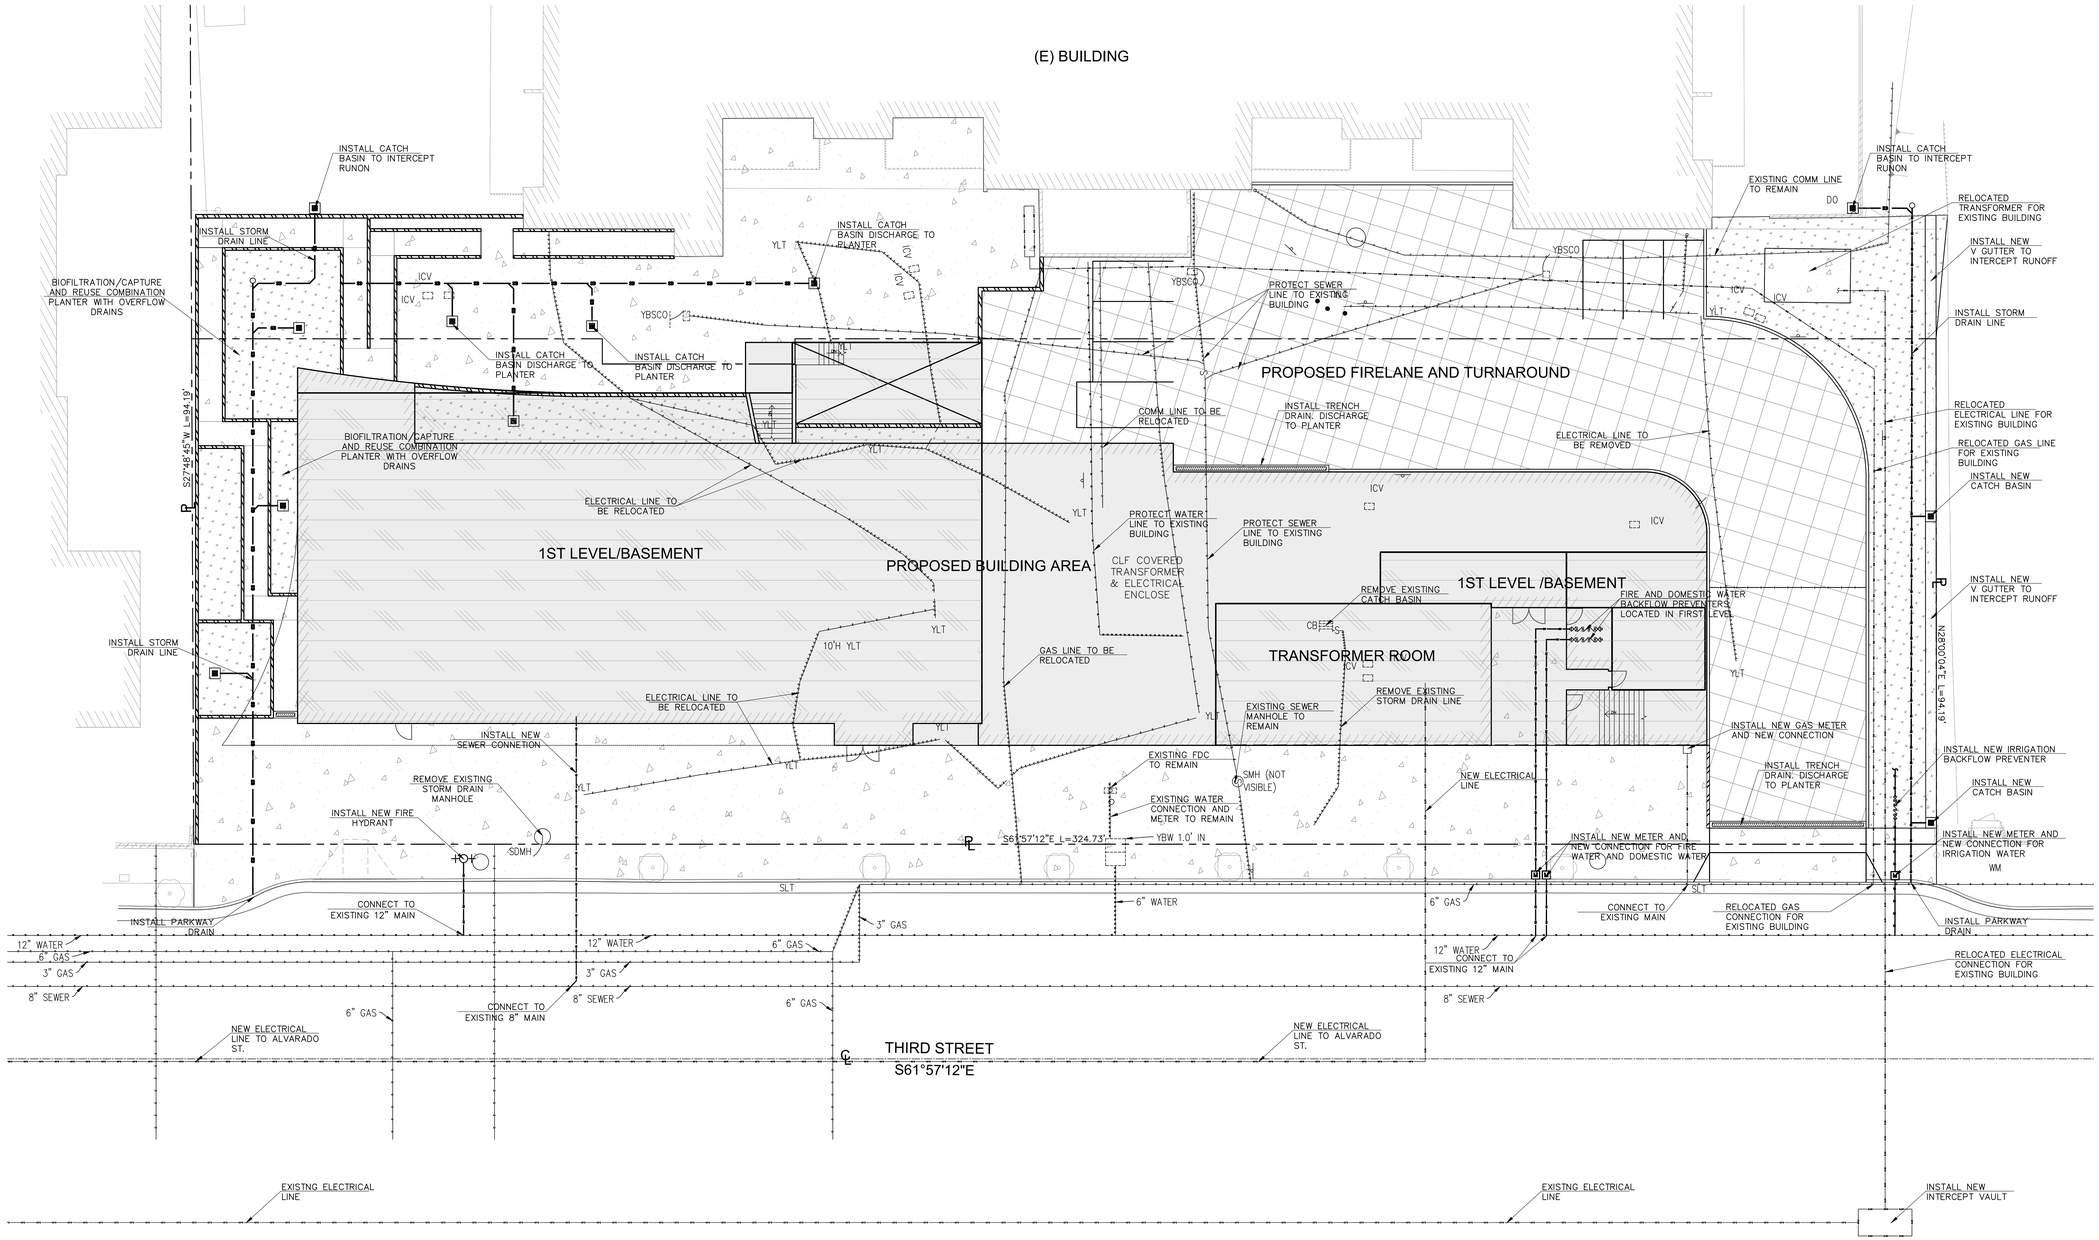
Subject: Maps & Will Serve - 2000 3rd St. Los Angeles, CA

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.



Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

Sincerely,

Jason Sum

HISTORIC RESOURCES TECHNICAL REPORT

1917-2005 ½ West 3rd Street
Los Angeles, California

HISTORIC RESOURCES GROUP

1.0 EXECUTIVE SUMMARY

This report identifies historic resources and analyzes potential impacts in conjunction with the proposed project located on the site of 1917-2005½ West 3rd Street in the Westlake neighborhood of Los Angeles (Project Site). The project will demolish an existing pedestrian path, landscaping, and surface parking lot developed in conjunction with an adjacent apartment complex, Miramar Towers. The Miramar Towers property, including the Project Site, was designed by Maxwell Starkman, AIA, in 1979 as a senior living apartment building and grounds. The current project proposes to construct a seven-story affordable housing building with basement level resident amenities along West 3rd Street, on a 30,432 square foot site (Project)

The purpose of this report is to determine if historic resources as defined by the California Environmental Quality Act (CEQA)[1] are present at or near the Project Site, and, if so, to identify potential impacts to historic resources caused by the proposed Project.

This study included a review of primary and secondary sources related to the development of the surrounding community, a field investigation of the Project Site, and analysis and evaluation of the Project Site in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Los Angeles designation criteria.

Based on visual observation of the property, research of primary and secondary sources, and an analysis of the eligibility criteria for listing at the federal, state, and local levels, HRG has determined that the surface parking lot and landscaped area located at the Project Site is ineligible for listing in the NRHP, the CRHR, or for local designation as a Los Angeles Historic-Cultural Monument (HCM). Investigation of the immediately surrounding area identified one building (1913 West 3rd Street) and one commercial sign located in the near vicinity of the Project Site that have been previously identified as eligible for historic listing. One additional building (2007 West 3rd Street) has been previously evaluated and identified as not eligible for historic listing. Additionally, the apartment building located at 2000 West Miramar Street, for which the Project Site was originally developed, is not found to be eligible for historic listing.

Analysis of potential impacts to historical resources reveals that construction of the proposed Project will not result in significant impacts to any historical resources in the near vicinity of the Project Site.

[1] California PRC, Section 21084.1.

Figure 1: Project Location

2.0 PROJECT DESCRIPTION[2]

The applicant proposes the demolition of an existing pedestrian path, landscaping, and surface parking lot to construct a new seven-story, 106,386 square foot housing complex, with 137 affordable, Low Income dwelling units; 10,708 square feet of common open space; and 35 trees.

[2] Project description as provided by the Applicant.

3.0 DESCRIPTION OF PROJECT SITE AND SETTING

The Project Site is located at 1917-2005½ West 3rd Street in the northern portion of the Westlake Community Plan Area, immediately north of the Westlake Recovery Redevelopment Project Area. The Project Site currently consists of two legal lots and is bounded by the Miramar Towers property to the north; a two-story multi-family apartment house to the east; West 3rd Street to the south; and a four-story apartment building to the west. The Site was developed as part of the Miramar Towers property in 1979 to provide parking, pedestrian pathways, and landscaping to the building tenants. The Project Site is zoned C2-1 or Commercial Zone, in Height District 1, with a Highway-Oriented Commercial land use designation and is located within a Bureau of Engineering Special Grading Area and a Methane Zone.[3] The Project Site is also located within the Transit Oriented Communities Affordable Housing Incentive Program ("TOC"), Tier 3 area. The Project Site is currently developed as a pedestrian pathway, landscaping, and surface parking lot with a combined lot size of approximately 30,432 square feet.

Surrounding land uses in the immediate vicinity of the Project Site consist primarily of commercial and multi-family residential buildings, with low- to mid-rise commercial buildings along West 3rd Street and South Alvarado Street. Low- to mid-rise multi-family residences are predominantly located north and south of the Site along South Westlake Avenue and South Bonnie Brae Street.

[3] Multi-family residential uses are a permitted use in the C2 zone.

Sources consulted as part of this investigation included primary and secondary literature regarding the history of the Project Site and associated developmental history of Hollywood. Archival sources consulted included but were not limited to historical *Los Angeles Times* articles, historical aerial photographs, and historical maps including tract, assessor, and Sanborn Insurance Co. fire insurance maps.

Contemporary planning documents were also consulted, which included but were not limited to previous environmental evaluations conducted within the Project Site, the California State Historic Resources Inventory for Los Angeles County, and the Westlake Community Plan Area.

Tract maps associated with the Project Site, available online through the Los Angeles Department of Public Works, were reviewed and included the Extension of the Nob Hill Tract (MR042-056) and Block F of the Hays Tract (MR036-083).

Digital Sanborn Insurance Company fire insurance maps, available through the Los Angeles Public Library were also reviewed for the Project Site from 1906, 1950, and 1953.

Historical aerial photographs available through the UC Santa Barbara Digital Aerial Photography Collections and HistoricArials.com were reviewed for the Project Site from the following years: 1927, 1928, 1952, 1960, 1962, 1971, 1979, 1980, and 2007.

4.2 Identification of Historical Resources

The area that includes the Project Site has been subject to local historical resources evaluations and surveys over the past thirty years. Most recently, Historic Resources Group completed an intensive historical resources survey of the Westlake Community Plan Area in 2014 as part of SurveyLA.[4] The survey report includes California Historical Resources Status Codes ("status codes") as assigned by SurveyLA.

For the purposes of this report, analysis is focused on those areas reasonably foreseen to be potentially vulnerable to significant impacts caused by the proposed Project. A more detailed discussion of potential impacts is included in Section 8 of this report.

4.3 Field Examinations

Field examinations were conducted to review and confirm previous findings and to identify previously unevaluated properties that may be potentially eligible within and in the immediate surroundings of the Project Site. Properties previously identified as eligible

4 "Historic Resources Survey, Westlake Community Plan Area."

for historic listing were assessed for their physical integrity to determine if alterations conducted since the previous evaluation had adversely affected their ability to convey historic significance. In general, previous findings of historic significance were carried forward for the purposes of this report and those properties are treated herein as historical resources for the purposes of CEQA.

No additional resources were identified as historically significant through this investigation.

4.4 Project Team

Research, evaluation, field inspection, and analysis were performed by Paul Travis, AICP, Principal; Morgan Quirk, Associate Preservation Planner. Both are qualified professionals who meet the Secretary of the Interior's Professional Qualification Standards.

5.1 Historic Designation Programs

A property may be designated as historic by National, State, and local authorities. In order for a building to qualify for listing in the National Register or the California Register, it must meet one or more identified criteria of significance. The property must also retain sufficient architectural integrity to continue to evoke the sense of place and time with which it is historically associated.

National Register of Historic Places

The National Register of Historic Places is an authoritative guide to be used by Federal, State, and local governments, private groups and citizens to identify the Nation's cultural resources and to indicate what properties should be considered for protection from destruction or impairment.[5] The National Park Service administers the National Register program. Listing in the National Register assists in preservation of historic properties in several ways including: recognition that a property is of significance to the nation, the state, or the community; consideration in the planning for federal or federally assisted projects; eligibility for federal tax benefits; and qualification for federal assistance for historic preservation, when funds are available.

To be eligible for listing and/or listed in the National Register, a resource must possess significance in American history and culture, architecture, or archaeology. Listing in the National Register is primarily honorary and does not in and of itself provide protection of a historic resource. The primary effect of listing in the National Register on private owners of historic buildings is the availability of financial and tax incentives. In addition, for projects that receive Federal funding, a clearance process must be completed in accordance with Section 106 of the National Historic Preservation Act. Furthermore, state and local regulations may apply to properties listed in the National Register.

The criteria for listing in the National Register follow established guidelines for determining the significance of properties. The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects:

A. That are associated with events that have made a significant contribution to the broad patterns of our history; or

B. That are associated with the lives of persons significant in our past; or

[5] 36CFR60, Section 60.2.

C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or

D. That have yielded, or may be likely to yield, information important in prehistory or history. [6]

In addition to meeting any or all of the criteria listed above, properties nominated must also possess integrity of *location, design, setting, materials, workmanship, feeling,* and *association.*

California Register of Historical Resources

The California Register is an authoritative guide in California used by State and local agencies, private groups, and citizens to identify the State's historic resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change.[7]

The criteria for eligibility for listing in the California Register are based upon National Register criteria. These criteria are:

1. Associated with events that have made a significant contribution to the broad patterns of local or regional history or the cultural heritage of California or the United States.

2. Associated with the lives of persons important to local, California or national history.

3. Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of a master or possesses high artistic values.

4. Has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California or the nation.

The California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register includes the following:

[6] 36CFR60, Section 60.3.
[7] California PRC, Section 5023.1(a).

- California properties formally determined eligible for (Category 2 in the State Inventory of Historical Resources) or listed in (Category 1 in the State Inventory), the National Register of Historic Places.
- State Historical Landmark No. 770 and all consecutively numbered state historical landmarks following No. 770. For state historical landmarks preceding No. 770, the Office of Historic Preservation (OHP) shall review their eligibility for the California Register in accordance with procedures to be adopted by the State Historical Resources Commission (commission).
- Points of historical interest which have been reviewed by the OHP and recommended for listing by the commission for inclusion in the California Register in accordance with criteria adopted by the commission. [8]

Other resources which may be nominated for listing in the California Register include:

- Individual historic resources.
- Historic resources contributing to the significance of a historic district.
- Historic resources identified as significant in historic resources surveys, if the survey meets the criteria listed in subdivision (g).
- Historic resources and historic districts designated or listed as city or county landmarks or historic properties or districts pursuant to any city or county ordinance, if the criteria for designation or listing under the ordinance have been determined by the office to be consistent with California Register criteria.

Local landmarks or historic properties designated under any municipal or county ordinance.[9]

City of Los Angeles Historic-Cultural Monuments

The City of Los Angeles Cultural Heritage Ordinance, enacted in 1962, allows for the designation of buildings and sites as individual local landmarks in the City of Los Angeles. These landmarks are known as "Historic-Cultural Monuments."

Section 22.171.7 of Article 1, Chapter 9, Division 22 of the City of Los Angeles Administrative Code defines a Historic-Cultural Monument as "any site (including significant trees or other plant life located on the site), building or structure of particular

[8] California PRC, Section 5023.1(d).
[9] California PRC, Section 5023.1(e).

historic or cultural significance to the City of Los Angeles." A proposed Monument may be designated by the City Council upon the recommendation of the Cultural Heritage Commission if it meets at least one of the following criteria:

1. Is identified with important events of national, state, or local history, or exemplifies significant contributions to the broad cultural, economic or social history of the nation, state, city or community;

2. Is associated with the lives of historic personages important to national, state, city, or local history; or

3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder, or architect whose individual genius influenced his or her age.

Designation recognizes the unique architectural value of certain structures and helps to protect their distinctive qualities. Any interested individual or group may submit nominations for Historic-Cultural Monument status. Buildings may be eligible for Historic-Cultural Monument status if they retain their historic design and materials. Those that are intact examples of past architectural styles or that have historical associations may meet the criteria listed in the Cultural Heritage Ordinance.

5.2 Historic Resources Under CEQA

CEQA requires that environmental protection be given significant consideration in the decision-making process. Historic resources are included under environmental protection. Thus, any project or action which constitutes a substantial adverse change on a historic resource also has a significant effect on the environment and shall comply with the State CEQA Guidelines.

When the California Register of Historical Resources was established in 1992, the Legislature amended CEQA to clarify which cultural resources are significant, as well as which project impacts are considered to be significantly adverse. A "substantial adverse change" means "demolition, destruction, relocation, or alteration such that the significance of a historical resource would be impaired."

CEQA defines a historic resource as a resource listed in, or determined eligible for listing, in the California Register of Historical Resources. All properties on the California Register are to be considered under CEQA. However, because a property does not appear on the California Register does not mean it is not significant and therefore exempt from CEQA consideration. All resources determined eligible for the California Register are also to be considered under CEQA.

The CEQA statute provides that a historic resource is a resource that is:

- Listed in the California Register of Historical Resources (California Register);
- Determined eligible for the California Register by the State Historical Resources Commission; or
- Included in a local register of historic resources.

The courts have interpreted CEQA to create three categories of historic resources:

- *Mandatory historical resources* are resources "listed in, or determined to be eligible for listing in, the California Register of Historical Resources."
- *Presumptive historical resources* are resources "included in a local register of historical resources, as defined in subdivision (k) of Section 5020.1 or deemed significant pursuant to criteria set forth in subdivision (g) of Section 5024.1" of the Public Resources Code, unless the preponderance of the evidence demonstrates that the resource is not historically or culturally significant.
- *Discretionary historical resources* are those resources that are not listed but determined to be eligible under the criteria for the California Register of Historical Resources.[10]

To simplify the first three definitions provided in the CEQA statute, a historic resource is a resource that is:

- Listed in the California Register of Historical Resources (California Register);
- Determined eligible for the California Register by the State Historical Resources Commission; or
- Included in a local register of historic resources.

Section 15064.5 of the CEQA Guidelines (California Code of Regulations, Title 14, Chapter 3) supplements the statute by providing two additional definitions of historical resources, which may be simplified in the following manner. A historic resource is a resource that is:

- Identified as significant in a historical resource survey meeting the requirements of Public Resources Code 5024.1 (g);

[10] *League for the Protection of Oakland's Architectural and Historic Resources vs. City of Oakland*, 52 Cal. App. 4th 896, 906-7 (1997).

- Determined by a Lead Agency to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Generally, this category includes resources that meet the criteria for listing on the California Register (Pub. Res. Code SS5024.1, Title 14 CCR, Section 4852).

The fact that a resource is not listed in, or determined eligible for listing in, the California Register, not included in a local register of historic resources, or not deemed significant pursuant to criteria set forth in subdivision (g) of Section 5024.1, does not preclude a lead agency from determining that the resource may be a "historic resource" for purposes of CEQA.

Properties formally determined eligible for listing in the National Register of Historic Places are automatically listed in the California Register. Properties designated by local municipalities can also be considered historic resources. A review of properties that are potentially affected by a project for historic eligibility is also required under CEQA.

5.3 SurveyLA

The Project Site is located within the City of Los Angeles, which has been subject to a citywide historic resources survey known as SurveyLA. SurveyLA is the City's comprehensive program to identify and document potential historic resources throughout the City of Los Angeles. SurveyLA is intended to provide baseline information on historic resources to inform planning decisions and support City policy goals and processes.[11]

As part of SurveyLA, the Office of Historic Resources has developed a Historic Context Statement (HCS) to provide a framework for identifying and evaluating potential historic resources within the City of Los Angeles. The HCS utilizes the Multiple Property Documentation (MPD) format developed by the National Park Service for the National Register of Historic Places and complies with the standards and guidelines set forth by the National Park Service and the California Office of Historic Resources.[12] This approach organizes the themes, trends, and patterns of history shared by properties into historic contexts; identifies and describes historic resources or property types that represent the

[11] "SurveyLA Findings and Reports," SurveyLA: Los Angeles Historic Resources Survey, https://preservation.lacity.org/surveyla-findings-and-reports (accessed June 2020). Resources identified through SurveyLA are not designated resources; designation is a separate process that requires public hearings and property owner notification.
[12] "Historic Context," SurveyLA: Los Angeles Historic Resources Survey, https://preservation.lacity.org/sites/default/files/SurveyLA_HistoricContextStatementOutline_July2018.pdf (accessed June 2020).

contexts; and provides specific standards to guide the evaluation of significance. The SurveyLA HCS is organized into nine broad historical contexts, which are specific to Los Angeles and focus on the development of the City during the period dating from 1780 to 1980, and further subdivided into themes and sub-themes that reflect the various historical trends and patterns of events associated with each context.[13]

Some parts of Los Angeles were surveyed concurrent with SurveyLA under the direction of the Community Redevelopment Agency (CRA) and were not reevaluated by SurveyLA.[14]

5.4 Westlake Community Plan Area

The Project Site is located within the planning boundary of the Westlake Community Plan, adopted in September 1997. The Westlake Community Plan is one of thirty-five Community Plans that comprise the Land Use Element of the City of Los Angeles' General Plan. The General Plan is the City's fundamental policy document, directing the City's future growth and development.

A stated objective of the 1997 Plan is to "to ensure that the Plan area's significant cultural and historical resources are protected, preserved, and/or enhanced." In addition, the Plan outlines a policy to "identify all designated City of Los Angeles Historical and Cultural Monuments in order to foster public appreciation of the City of Los Angeles' valuable historic resources and to promote education of the public by preserving Los Angeles' historic past and to promote that any other appropriate landmarks of unique architectural and historic significance continue to be identified for the purpose of inclusion in the list."[15]

The Plan also reiterates that it is "In addition through the inclusion of this plan policy, the plan supports the continued identification of appropriate landmarks."[16]

5.5 Historic Significance and Integrity

Historic Significance and Periods of Significance

[16] " Westlake Community Plan," https://planning.lacity.org/odocument/b189be15-6f71-43db-8a04-491fdd188729/Westlake_Community_Plan.pdf (accessed June 2020).

The definition of *historic significance* used by the California Office of Historic Preservation (OHP) in its administration of the California Register is based upon the following definition used by the National Park Service for the National Register.[17]

> Historic significance is [defined as] the importance of a property to the history, architecture, archaeology, engineering, or culture of a community, State, or the nation. It is achieved in several ways:
>
> - Association with important events, activities or patterns
> - Association with important persons
> - Distinctive physical characteristics of design, construction, or form
> - Potential to yield important information

A property may be significant individually or as part of a grouping of properties.

In addition to the above criteria, significance is defined by the area of history in which the property made important contributions and by the period of time when these contributions were made.[18] The National Park Service defines this period of time as the *period of significance.*

The *period of significance* is the length of time when a property was associated with important events, activities or persons, or attained the characteristics which qualify it for…listing. The period of significance usually begins with the date when significant activities or events began giving the property its historic significance; this is often a date of construction.[19]

The period of significance usually begins with the date when significant activities or events began giving the property its historic significance; this is often a date of construction.[20] The period of significance can be as brief as a single year; many, however, span many years and consist of beginning and closing dates."[21] Identification and definition of the period is

[19] Ibid.
[20] Ibid.
[21] Ibid.

based on "specific events directly related to the significance of the property," for example, the date of construction, years of ownership, or length of operation as a particular entity.[22]

Integrity

Historic integrity is the ability of a property to convey its significance and is defined as the "authenticity of a property's historic identity, evidenced by the survival of physical characteristics that existed during the property's historic period."[23] The National Park Service defines seven aspects of integrity: *location*, *design*, *setting*, *materials*, *workmanship*, *feeling*, and *association*. These qualities are defined as follows:

- *Location* is the place where the historic property was constructed or the place where the historic event took place.
- *Design* is the combination of elements that create the form, plan, space, structure, and style of a property.
- *Setting* is the physical environment of a historic property.
- *Materials* are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
- *Workmanship* is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
- *Feeling* is a property's expression of the aesthetic or historic sense of a particular period of time.
- *Association* is the direct link between an important historic event or person and a historic property.[24]

While it is not necessary for a property to retain all seven aspects of integrity, or indeed, "all its historic physical features or characteristics,"[25] the National Park Service notes that the property must retain "the essential physical features that enable it to convey its historic

[22] *National Register Bulletin 16A: How to Complete the National Register Nomination Form.*

[24] U. S. Department of the Interior, National Park Service, *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, by the staff of the National Register of Historic Places, finalized by Patrick W. Andrus, edited by Rebecca H. Shrimpton (Washington, DC: 1990; revised for Internet, 2002), https://www.nps.gov/nr/publications/bulletins/nrb15/ (accessed June 2020).
[25] *National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation.*

identity. The essential physical features are those features that define both *why* a property is significant and *when* it was significant."[26]

Character-Defining Features

Every historic building is unique, with its own identity and its own distinctive character. *Character-defining features* are those visual aspects and physical features or elements, constructed during the property's period of significance, that give the building its historic character and contribute to the integrity of the property. Character-defining features should be considered in the planning and design of a project to preserve them to the maximum extent possible. Character-defining features can identify the building as an example of a specific building type, usually related to the building's function; they can exemplify the use of specific materials or methods of construction or embody a historical period or architectural style; and they can convey the sense of time and place in buildings associated with significant events or people.

6.1 Area Development[27]

Late-19th and Early-20th Century Development

The Westlake Community Plan Area (CPA) contains some of the oldest residential and commercial development in the City. The area was first recorded in 1857 by United States Deputy Surveyor Henry Hancock. Hancock had been assigned to survey the four square leagues of land confirmed to the City of Los Angeles by the United States Land Commission Patent of 1856. The original patent land included the CPA, with the patent boundary extending west to Hoover Street. At the time, the vast majority of the land was unoccupied, and Hancock divided the landscape into square tracts, extending the orthogonal grid planning which had been imposed by earlier surveys and was originally dictated by the Laws of the Indies. As the land passed into private ownership, the City constructed streets along the boundary lines between the tracts, giving rise to such present-day thoroughfares as Rampart Boulevard and Alvarado Street.[28]

The area was first settled in the 1860s, after a series of floods in the lower plains made the highland area to the west of downtown a popular alternative. The land was also used for dairy farming and agricultural purposes. As the population of Los Angeles grew, the land immediately to the west of downtown became increasingly desirable for residential development. In the early years of development in the Westlake area, there were several developers who played significant roles in shaping the local landscape. George C. Knox, Los Angeles' City Engineer from 1883 to 1885, was the sole subdivider of several early tracts, including the Westlake Park Tract, the West End Terrace Tract, and the West End Terrace Tract. Knox also partnered with E. A. Forrester, who served as County Supervisor, to subdivide the Westlake Tract. Knox's successor, Fred Eaton, began his own real estate development career, which included developing further subdivisions in Westlake, including The Extension of The Nob Hill Tract.

The most well-known developers, however, were brothers Henry Gaylord Wilshire and William Wilshire. After several successful real estate ventures in Long Beach and Orange County, the Wilshire brothers purchased 35 acres in the Westlake area in 1887 in

[27] Portions of the historic context statement have been excerpted and adapted from the "SurveyLA Los Angeles Historic Resources Survey Report: Westlake Community Plan Area," April 2014, prepared for the City of Los Angeles by Historic Resources Group, https://planning.lacity.org/odocument/db31e62f-7e53-4de9-b891-07a8515913bc/Westlake_Report_0.pdf (accessed June 2020).

See also "The Hancock Survey," http://eng.lacity.org/aboutus/city_engineers_hist/hancock.htm and David Rumsey's discussion of the Map of the City of Los Angeles, http://www.davidrumsey.com/maps5294.html.

anticipation of the City's westward expansion. The Wilshires' land acquisition spanned the western portion of the CPA, stretching westward from Alvarado Boulevard. The brothers laid out a grid of five major thoroughfares, including Wilshire Boulevard running east-west, and Rampart Boulevard, Park View, Carondelet, and Coronado Streets running north-south. Wilshire Boulevard was originally intended to serve as an exclusive residential enclave, and the Wilshire brothers confirmed the character of the area by using their social and political connections to attract prominent Angelenos to Westlake. Early residents of Wilshire Boulevard included Harrison Gray Otis, owner of the Los Angeles Times, who later bequeathed his property to establish the Otis Art Institute; Arthur Letts, owner of the Broadway Department Store; Chicago grain merchant Hiram Higgins; and Homer Laughlin, founder of the Homer Laughlin China Company.[29]

As more people began to move to Westlake, residents and developers alike began to campaign for the improvement of the area which now comprises present-day MacArthur Park. Originally developed as Westlake Park, the land occupied a saddle shaped depression between two ridges and had once been the site of a naturally occurring alkali lake, which was fed by runoff from the highlands to the north.[30] Los Angeles Mayor William Workman spearheaded an effort to develop the site as a city park and campaigned for donations, which were matched by the City. In 1886, an ordinance was passed dedicating the land as public parkland, and extensive grading and improvements commenced. Albert Hardcastle was hired to design the landscape, and an artificial lake was created. In 1890 Westlake Park – named in reference to its location near the western limits of the City – opened to the public. The City of Los Angeles changed the name of Westlake Park in 1942 in honor of General Douglas MacArthur. The development of additional parks throughout the 1880s and 1890s confirmed Westlake's reputation as an affluent and desirable neighborhood.

While Westlake's parks played a critical role in drawing Angelenos westward, transportation also played an important part in the development of the area. The introduction of electric streetcar lines in the 1880s and 1890s provided easy access to the downtown commercial core and made the development of residential neighborhoods in outlying areas to the west possible. During this period, Westlake was crisscrossed by numerous streetcar lines on most of its major roadways. Streetcars along east-west corridors included Temple Street, Beverly Boulevard, 3rd Street, 6th Street, Olympic

[29] The portion of Wilshire Boulevard between Alvarado and Figueroa streets was originally a narrow avenue called Orange Street. After a massive street-widening project launched in 1925 by the Major Street Plan for Los Angeles, Orange Street was widened to become an extension of Wilshire Boulevard, linking Westlake Park to downtown Los Angeles.

[30] Information on the development of Westlake Park was drawn primarily from "Westlake (MacArthur) Park: How A Neighborhood Dump Became a Civic Treasure," http://www.kcet.org/updaily/socal_focus/history/la-assubject/westlake-macarthur-park-how-a-neighborhood-dump-became-a-civic-treasure.html (accessed July 2013).

Boulevard, Pico Boulevard, and Venice Boulevard; north-south streetcar lines included Rampart Boulevard, Alvarado Street, and Glendale Boulevard. Additional transportation-related infrastructure in the area includes the Beverly Boulevard/1st Street Viaduct, historic ornamental streetlights along several major east-west corridors, and public stairways in the hillside neighborhoods.

In 1892 the discovery of oil deposits in Westlake marked a turning point in the development of the CPA. Edward Laurence Doheny identified the first oil deposits in the City near the base of Crown Hill and later drilled the first successful oil well in Los Angeles. Along with his business partner, Charles A. Canfield, Doheny established the Los Angeles City Oil Field, which stretched across Westlake and grew to include 80 wells in the first two years of operation. By 1898, The Los Angeles City Oil Field accounted for 65 percent of the oil production in California. By the end of the 19th century, the field was the largest producer in the world and would become the most influential in the history of California.[31] Doheny and Canfield's success sparked the petroleum boom which helped fuel much of the early development of Los Angeles, and derricks sprang up throughout the surrounding residential neighborhoods. Many residents, eager to tap into the oil boom, constructed derricks in their yards or purchased additional property to develop smaller, family-operated oil fields. Residents of several tracts, however, protested the further construction of derricks in the area; as a result, no oil development took place south of 3rd Street and Ocean Avenue. These restrictions increased the desirability and prestige of the Westlake region.[32]

By the turn of the twentieth century, prosperity from the fledgling movie industry as well as the oil industry attracted newly wealthy residents from the emerging service and creative industries. [33] As residents flocked to Westlake, the demand for housing necessitated greater density in residential development, and the Westlake CPA contains one of the largest concentrations of early twentieth century multi-family residential development in the City. To accommodate the more transient culture of the less established industries as well as to house tourists, a proliferation of one-story bungalow courts, brick apartment houses, and luxury apartment hotels were developed. Apartment houses continued to be constructed well into the 1920s, when the City hit its peak in population growth. Entire blocks of apartments were constructed in the mid-1920s, while

[33] Ibid.

more developed areas containing earlier single-family residences were infilled with bungalow courts and apartment buildings.

Westlake, which contained a high concentration of middle- and upper-class residents, was also seen as a particularly desirable development opportunity. Commercial development, which until the turn of the century had been confined primarily to tourism-related commerce such as restaurants, stores, and ice cream parlors, began to increase in the early 1900s in response to the demands of the growing community. By the 1920s, commercial development in the CPA was concentrated primarily along 7th Street, which benefitted from its proximity to the Los Angeles Yellow Car lines, and along the area's other east-west corridors and accompanying streetcar lines.

World War II and Post-World War II Development

By the 1930s, the Westlake area was largely built out. However, in the years following World War II, builders responded to the sudden postwar population boom by developing the remaining infill lots with budget apartment buildings, which were typically designed in the "dingbat" style. Postwar commercial development also shared the street with earlier commercial buildings. Several insurance companies chose to locate their headquarters in Westlake during the 1950s and 1960s, along with other industrial corporations.

The years following World War II brought significant changes to Westlake. The widening of Wilshire and Olympic Boulevards, completed in the 1930s and 1940s, shifted development on the two major thoroughfares from largely residential uses to more commercial construction. Adjacent segments of the Hollywood (101) Freeway and the Harbor (110) Freeway were also completed in the 1950s, allowing Angelenos to bypass Westlake in favor of communities further west.

By the late 1960s, the CPA suffered from an aging infrastructure, widespread neglect, and private disinvestment. Senior citizens and immigrant families, many of whom had been displaced from Bunker Hill, were attracted by the low cost of housing and began to settle in the area.

Late 20th Century Development

In 1971, City planners began to consider Westlake for potential redevelopment as an emerging urban center. Over the next several years, attempts were made to alleviate the demand for better and more extensive housing facilities for seniors and low-income families by adopting provisions in the 1990 General Plan that encouraged greater density in residential parcels. This provision may have inadvertently led to the widespread demolition of smaller, early apartment houses in favor of higher-capacity, multi-parcel

apartment complexes.[34] However, immigrant families continued to be drawn to the area due to the low cost of housing and the proximity to downtown Los Angeles, and Westlake soon established itself as a multicultural neighborhood, an identity which became central to the character of Westlake throughout the 1970s and 1980s.

[34] Intensive Survey, Westlake Recovery Community Redevelopment Area, prepared for the City of Los Angeles by LSA Associates, Inc. (May 1, 2009), 21.

6.2 Development of the Project Site

The pedestrian pathway, landscaping, and surface parking lot that make up the Project Site are situated on two legal lots comprised of portions of Lots 1 through 6 of The Extension of the Nob Hill Tract, also known as "Eaton's Subdivision."[35] The land was platted in 1891 by real estate developer, engineer, and future Los Angeles mayor, Frederick Eaton.[36] The tract consisted of approximately 22-acres of 87 residential lots, bounded by the Hays Tract to the north; the Sunset Tract to the east; Ward Street (now 6th Street) to the south; and South Alvarado Street to the West.[37] The parcels presently occupied by the Miramar Towers property immediately north of the Project Site, are also located on portions of Lots 1 through 6 of the Extension of the Nob Hill Tract, as well as portions of Lots 1 through 6 of Block F of the Hays Tract, subdivided in 1889 by B.S. Hays.

In 1896, Mary P. Lamb purchased Lots 2 and 3 of the Extension of Nob Hill from Fred Eaton for $2,200. [38] By 1928, the parcels that made up Lots 1 through 6 of The Extension of the Nob Hill Tract were occupied by single-family residences.[39] In 1937, the Barker Hotel was constructed at 2000 Miramar Street , immediately north of the Project Site, by owner Sue V. Barker.[40] By this time, some of the single-family residences had been converted to apartment houses to accommodate an influx of middle-class residents to the area.[41] Barker became owner of the residences located at 1917-2005½ West 3rd Street and continued to construct auxiliary buildings related to the hotel's operations on the already-occupied parcels. These buildings included a garden shelter, drive-in stand, store, additional hotel building, and cocktail lounge—all built in the 1930s and 1940s.[42] Many of the existing residences were subsequently demolished from 1956 to 1960.[43]

[35] The Miramar Towers site and the Project Site were subdivided into two legal lots (APN 5154-020-030) in 2019 by LLA; Certificate of Compliance for Lot Line Adjustment, AA-2018-7418-PMEX & AA-2018-7423-PMEX, City of Los Angeles, Department of City Planning, December 12, 2019.

In 1974, the Barker Hotel was demolished, with the two remaining residences located on the Project Site also demolished in 1979. The buildings were razed to make way for the construction of an apartment building for seniors to be named "Miramar Towers".[44] Designed by architect Maxwell Starkman, AIA, the eight-story apartment building was developed on portions of Lots 1 through 6 of both the Hays Tract and Lots 1 through 6 of the Extension of the Nob Hill Tract. The parcels that presently make up the Project Site were improved with a pedestrian pathway, landscaping, and surface parking lot as part of the Miramar Towers property, constructed in 1979.[45]

6.3 Maxwell Starkman, AIA (1921-2003)

Known for his late modernist high-rise designs, Maxwell Starkman was a Canadian-born architect who began practicing architecture in Southern California after moving to Los Angeles in 1950 to work for Richard Neutra.[46] He began his prolific career by designing post-war tract housing, eventually starting his own firm, Maxwell Starkman Associates, in 1954. He became a member of the American Institute of Architects in 1956.[47] Starkman went on to design many residential, commercial, and institutional buildings throughout the region. Some of his more well-known designs include the sixteen-story Zenith Tower (1972), the 28-story Meridian Condominiums in San Diego (1985), the Sony Pictures Plaza entertainment complex (1986), and the Museum of Tolerance (1991). Starkman was also known as one of the first combination architect-developers, considering costs, material, and construction in conjunction with architectural design.[48] He retired from architecture in 1987, shortly after completing designs for the Museum of Tolerance. Starkman died in Los Angeles on December 29, 2003 at the age of 82.[49]

7.0 IDENTIFICATION OF HISTORICAL RESOURCES LOCATED ON THE PROJECT SITE

The Project Site (1917-2005½ West 3rd Street) is currently improved with landscape areas, pedestrian paths, stairs, an outdoor seating area, and surface parking. These features that make up the Project Site were developed as part of the Miramar Towers property (2000 West Miramar Street) located immediately north of the Project Site and constructed in 1979. The apartment building and grounds were designed as an affordable senior living facility and continues to operate as such today. The Miramar Towers property, including the Project Site, is evaluated for potential historical significance below.

7.1 Miramar Apartments Description

The Miramar Towers property consists of an 8-story apartment building and ancillary one-story amenity building connected by a small hyphen. The two buildings are surrounded by lawns, shrubbery, mature trees, pedestrian paths and stairways, outdoor seating areas and surface parking.

The 8-story main apartment building is of steel and concrete construction with an H-shaped plan and flat roof. Exterior walls are clad with textured concrete panels and cement plaster. Facades are largely unadorned save for the symmetrical arrangement of vertically aligned, partial-width recessed balconies. Each balcony is enclosed by a low concrete wall topped by a metal railing. Fenestration includes metal frame sliding windows and metal frame sliding glass doors providing access to the unit balconies. The building does not exhibit a distinctive architectural style but its concrete construction, symmetrical arrangement and date of construction (1979) are most closely associated with Late Modern architectural styles.

A one-story amenity building is located just north of the main apartment building. The concrete block, one-story building is rectangular in plan with a flat roof. The two buildings are connected by a small hyphen on the main building's north (primary) façade which faces a landscaped surface parking lot accessed from Miramar Street. Primary entry to the apartment building is provided through the one-story amenity building.

A secondary entry opening to the Project Site is located on the south façade of the 8-story main apartment building. As noted earlier, landscaping, pedestrian paths, stairs, an outdoor seating area, a small surface parking lot and driveway are located on the Project Site.

7.2 Previous Evaluations

The Miramar Towers property, including its surrounding landscaping, has not been previously identified as historically significant and is not listed in the BERD, a database of previously evaluated resources maintained by the California Office of Historic

Preservation.[50] Most recently, the property was not identified as eligible for listing as a historic resource when the Westlake Community Plan area was surveyed by SurveyLA in 2014.

7.3 SurveyLA Context/Themes & Associated Eligibility Standards

SurveyLA is the City's citywide survey of historic resources, conducted in accordance with the standards and guidelines set forth by the National Park Service and the California State Office of Historic Preservation. Properties surveyed as part of SurveyLA were evaluated for eligibility for listing in the National Register of Historic Places, the California Register of Historical Resources, and for designation as a Los Angeles Historic-Cultural Monument.

The Miramar Towers property is an example of an apartment tower property type and was designed in a style most closely associated with Late Modern. The Los Angeles Citywide Historic Context Statement, prepared for SurveyLA, includes the following associated contexts and themes relevant to evaluation of the Miramar Apartments:

Residential Development

Context: Residential Development and Suburbanization, 1850-1980
Theme: Multi-Family Residential Development, 1895-1970
Sub-themes: Apartment Houses, 1895-1970
Bungalow Court, 1910-1939
Courtyard Apartments, 1910-1969
The Dingbat/Stucco Box, 1954-1968
Multi-Family Residential Historic Districts, 1910-1970
Property type: Apartment Tower

Architecture

Context: Architecture and Engineering, 1850-1980
Theme: L.A. Modernism, 1919-1980
Sub-theme: Late Modern, 1966-1990
Property type: Apartment Tower

[50] California Office of Historic Preservation, "Built Environment Resource Directory," 2020, https://ohp.parks.ca.gov/pages/1068/files/Los%20Angeles.csv (accessed June 2020).

7.4 Evaluation of Potential Historical Significance

The Miramar Towers property, including the Project Site, is evaluated below using eligibility criteria for listing in the National Register of Historic Places, the California Register of Historical Resources, and as City of Los Angeles Historic-Cultural Monuments.[51]

Criterion A/1/1 (association with events or patterns of development)

According to guidance from the National Park Service, in order to be considered eligible for designation for representing a pattern of development:

> …A property must be associated with one or more events important in the defined historic context. The event or trends, however, must clearly be important within the associated context: settlement, in the case of the town, or development of a maritime economy, in the case of the port city. Moreover, the property must have an important association with the event or historic trends, and it must retain historic integrity…Mere association with historic events or trends is not enough, in and of itself, to qualify under [this criterion]; the property's specific association must be considered important as well.[52]

The Miramar Towers property was not identified as significant under a residential development theme by SurveyLA in 2014. Constructed in 1979, the property was constructed after the period of significance for the Apartment House subtheme established by SurveyLA, which ends in 1970.

No evidence was identified to link the Miramar Towers property with important patterns or trends of multi-family residential development. The property was constructed well after the resurgence of multi-family housing in the decades immediately after-Word War II and is not associated with the population boom of the mid-20th century when an expanding industrial sector exponentially increased the local population. At eight stories tall, the Miramar Towers property is also not associated with the trend of high-rise apartment buildings during the later decades of the 20th century realized in west Los Angeles neighborhoods such as the Wilshire corridor in Westwood and in Century City.

For these reasons, the Miramar Towers property, including the Project Site, is not eligible for listing in the National Register of Historic Places, the California Register of Historical

[51] This report analyzes the Project Site for eligibility under Criterion A/1/1, B/2/2, and C/3/3. Criterion D/4 addresses potential archaeological resources which is outside the scope of this study.
[52] *National Register Bulletin 15.*

Resources, or as a City of Los Angeles Historic-Cultural Monument under Criterion A/1/1.

Criterion B/2/2 (association with an important person)

According to the National Park Service, properties may be eligible for an association with the lives of persons significant in our past. Persons "significant in our past" refers to individuals whose activities are demonstrably important within a local, state, or national historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. In addition, the property must be associated with a person's productive life, reflecting the time period when he or she achieved significance.

The SurveyLA Historic Context Statement includes an "Important Persons/Individuals" theme for evaluating properties that may be significant for their association with persons who are proven to have made important individual contributions to the history of Los Angeles. No documentation was found to suggest that any owner or resident of the Miramar Towers rose to prominence in their profession or made significant contributions to growth or development in Los Angeles.

Therefore, the Miramar Towers property, including the Project Site, is not eligible for listing in the National Register of Historic Places, the California Register of Historical Resources, or as a City of Los Angeles Historic-Cultural Monument under Criterion B/2/2.

Criterion C/3/3 (architectural merit or work of a master architect)

According to guidance from the National Park Service, to be eligible under Criterion C/3/3, a building must clearly contain enough of the "distinctive characteristics" to be considered a true representative of the style or type. Buildings eligible for artistic merit must embody the distinctive characteristics or a type, period, or method of construction, and they must possess high artistic value, or represent a notable work of a master designer, builder, or architect. A building with some applied detailing is not eligible if the details are not fully integrated into the overall design.

The Miramar Towers property was not identified as significant under an architectural or engineering theme by SurveyLA in 2014. Although sharing a construction date and some material characteristics of Late Modern architecture, the property is not an excellent or distinguished example of Late Modern architectural styles. Indeed, the property's main apartment building is not a true example of either the Glass Skin, Brutalism, or High Tech variants of Late Modernism, nor an amalgamation of any of those types. Characterized by an exaggeration and mannered application of Modernist tenets, Late Modernism is distinguished by design that "takes many of the stylistic ideas and values of modernism to

an extreme."[53] But there is little that is "extreme" in the design of the Miramar Towers property. It is, instead, a fairly perfunctory exercise in rectangular massing and concrete and cement plaster cladding, perforated by windows and sliding doors opening to recessed balconies.

Maxwell Starkman was generally considered a "developer's architect," widely appreciated by investors for his ability to complete projects quickly and return speedy profits.[54] While financially successful and highly prolific, it appears that Starkman did not develop a reputation for architectural innovation or the aesthetic quality of his buildings. Although the Starkman office would design several striking buildings, he is best known for simple, glass curtain wall mid- and high-rise buildings, the majority of which follow a cost-effective modernist formula.

Research to date does not suggest that Starkman was particularly innovative in design or construction techniques. Regardless, the Miramar Towers property is representative of numerous Starkman commissions that attempted little more than meeting client needs in terms of function and cost. The Miramar Towers property does not appear to be "a notable work of a master builder, designer, or architect."

More importantly for the Project Site portion of the Miramar Towers property, no landscape architect was identified in researching the Miramar Towers property. While providing access and some outdoor amenity for the residents, nothing about the Miramar Towers landscape, including the Project Site, suggests that it is an excellent or notable example of landscape design.

Therefore, the Miramar Towers property, including the Project Site, is not eligible for listing in the National Register of Historic Places, the California Register of Historical Resources, or as a City of Los Angeles Historic-Cultural Monument under Criterion C/3/3. The Project Site and the adjacent Miramar Towers property immediately north, are not considered historical resources for the purposes of CEQA.

8.1 Previously Evaluated Resources

One building and one commercial sign located in the near vicinity of the Project Site have been previously identified as eligible for historic listing. One additional building has been previously evaluated and identified as not eligible for historic listing. These properties are discussed below.

1913 West 3rd Street (Map #4)

The residence at 1913 West 3rd Street is located directly east of the Project Site. It was originally constructed in 1912 combining elements of Craftsman and Queen Anne architectural styles. The two-story residence was originally constructed as a single-family home and later converted to multi-family use. The building is set back from the street and the surrounding yard has been paved for parking and automobile circulation. An additional detached two-story multi-family residence is located at the rear of the property.

The wood-frame main house is irregular in plan, with complex massing and an asymmetrical composition. The cross-gabled roof is clad in composition shingles and has overhanging eaves and exposed rafter tails. The south (primary) façade features a catslide gabled roof over a recessed entry porch accessed by a wood steps with wood railing, a central bay window on the ground floor, and a one-story projecting volume with a gabled roof.

A half-turret projects from the west façade. The exterior walls are clad in horizontal wood siding. Fenestration includes divided-light fixed windows with transoms in wood frames, as well as vinyl and aluminum replacement windows.

1913 West 3rd Street was most recently identified as eligible for listing in the National Register, California Register and as a City of Los Angeles HCM by SurveyLA in 2014. It was identified as historically significant under the Residential Development and Suburbanization context as a rare, intact example of early residential development in Westlake. Because the property was identified as eligible for historic listing by SurveyLA, it is considered a historical resource herein for the purposes of CEQA.

Royal Viking Motel Pole Sign (Map #1)

This freestanding pole sign is located west of the Project Site just beyond the neighboring apartment building at 2007 W. 3rd Street (see below). Constructed in 1955, the Royal Viking Motel Pole Sign was identified as eligible for local historic listing by SurveyLA in the 2014 as an excellent example of a 1950s pole sign with neon lettering. The motel building associated with the pole sign was not identified as eligible for historic listing due

to substantial alteration. The sign appears to meet local criteria only and was not found eligible for National Register or California Register eligibility. The pole sign was assigned a status code of 5S3; meaning it appears to be individually eligible for local listing or designation through survey evaluation. Because the sign was identified as eligible for listing as a City of Los Angeles HCM, it is considered a historical resource herein for the purposes of CEQA.

2007 West 3rd Street (Map #2)

The four-story apartment building at 2007 West 3rd Street is located directly west of the Project Site. It was constructed in 1914 with Neoclassical stylistic details. It is setback from the street on a raised parcel with masonry retaining walls, metal security fencing, large plant boxes, and bifurcated stairs leading to the street.

The building is H-shaped in plan, with simple massing, and symmetrical composition. There is a flat roof with shallow coping, a stepped parapet along the south (primary) façade, and cornice throughout the remaining façades. The primary façade includes a central first floor entry distinguished by a trabeated portico and entablature supported by four doric columns on low masonry walls. It is accessed by a flight of concrete steps with metal hand rails. A recessed bay above the main entrance includes a lintel and belt course on the third and fourth floors. Exterior walls are clad in textured cement plaster and painted brick masonry. The symmetrically arranged fenestration pattern consists of punched rectangular and arched window openings some of which have been filled. Fenestration consists primarily of divided-light fixed windows, aluminum replacement windows, and aluminum sliding windows with the majority of windows replaced.

2007 West 3rd Street was previously evaluated in 2006 and assigned a status code of 6Y or "determined ineligible for the National Register by consensus through Section 106 process. Not evaluated for state or local listing." More recently, the building was not identified as eligible for historic listing by SurveyLA in 2014.

Since its construction in 1914, the building has undergone substantial alteration including the removal of decorative detailing, the replacement of the majority of original windows and infill of some window openings. For these reasons, the building lacks sufficient integrity to be considered eligible for historic listing as a multi-family residential building from the early 20th century. It does not appear eligible for the California Register or for local listing as a City of Los Angeles HCM and is not considered a historical resource herein for the purposes of CEQA.

8.3 Summary of Historical Resources Located on or Adjacent to the Project Site

As noted above in Section 7, the Project Site does not contain any historical resources. Additionally, the Miramar Towers property located at 2000 West Miramar Street, for which the Project Site was originally developed, is not eligible for historic listing.

One property, the former single-family residence at 1913 West 3rd Street, has been identified by SurveyLA as eligible for local, state, and national listing. The Royal Viking Motel Pole Sign, a freestanding neon sign associated the motel property west of the Project Site, was identified by SurveyLA as eligible for local listing as a City of Los Angeles HCM.

No other historic resources were identified on or in the immediate vicinity of the Project Site either previously or a result of this study.

Table 1: Area of Investigation

MAP	APN	LOCATION	DATE	COMMON	STATUS
Historic Resources in the Near Vicinity of the Project Site					
No. 1	n/a	Near 2007 West 3rd Street	1955	Royal Viking Motel Pole Sign	Considered a historical resource for the purposes of CEQA. Excellent example of a 1950s pole sign with neon lettering; appears to meet local criteria only; Status Code: 5S3 (SurveyLA, 2014)
No. 4	5154020025	1913 West 3rd Street	1912	n/a	Considered a historical resource for the purposes of CEQA. Rare, intact example of early residential development in Westlake; considered eligible for local, state, or national listing; Status Codes: 3S;3CS;5S3 (SurveyLA, 2014)
Other Properties in the Near Vicinity of the Project Site					
No. 3	5154020030	2000 W Miramar Street	1979	Miramar Towers	Not considered a historical resource for the purposes of CEQA. No evidence of historic significance identified.
No. 2	5154020019	2007 West 3rd Street	1914	Mariposa	Not considered a historical resource for the purposes of CEQA. Determined ineligible for the National Register by consensus. Appears not eligible for historic listing due to poor integrity. Status Codes: 6Y;7R (HRI, 2011)

Figure 2: Properties in the Near Vicinity of the Project Site

9.1 Significance Thresholds

CEQA Guidelines, including Appendix F of the Guidelines, state that a project with an effect that may cause a substantial adverse change in the significance of a historic resource is a project that may have a significant effect on the environment.[55] A substantial adverse change in the significance of a historic resource means demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource would be materially impaired.[56]

The Guidelines go on to state that "[t]he significance of an historical resource is materially impaired when a project… [d]emolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources… local register of historic resources… or its identification in a historic resources survey meeting the requirements of section 5014.1(g) of the Public Resources Code…."."[57] As such, the test for determining whether or not a proposed project will have a significant impact on an identified historical resource is whether or not the project will alter in an adverse manner the physical integrity of the historical resource such that it would no longer be eligible for listing in the National or California Registers or for local designation as a City of Los Angeles Historical-Cultural Monument.

9.2 Discussion of Potential Impacts

This section examines potential impacts that that would be caused by alterations on the Project Site that may impact adjacent historical resources. For the purposes of this study, impacts analysis focuses on those resources that could be subject to the following potential impacts:

> **Direct Impacts** involve the demolition, material alteration, relocation or conversion of a historical resource and/or important character-defining features.
>
> **Indirect Impacts** involve alteration to the surroundings of an historical resource that could remove part or all of the associated setting of an historical resource, remove historic features or spaces surrounding the historical resource, or substantially impair or obscure the ability of the resource to convey its historical significance. Indirect impacts may also involve potential damage related to adjacent underground

55 *CEQA Guidelines*, section 15064.5(b).
56 *CEQA Guidelines*, section 15064.5(b) (1).
57 *CEQA Guidelines*, section 15064.5(b)(2).

excavation and general construction procedures that could undermine the stability of a historical resource.

Direct Impacts

As noted in Section 2 of this report, the Project proposes to construct a new seven-story, housing complex, with 137 affordable, Low Income dwelling units; 10,708 square feet of common open space; and 35 trees. Because all new construction associated with the Project will be contained within the Project Site, and the Project Site does not contain any historic resource or resources, the Project will not physically alter or demolish any historical resources located on the Project Site. Therefore, the Project will not result in significant direct impacts to any historic resources.

Indirect Impacts

It is understood that the Project will place new construction in the near vicinity of adjacent historical resources. Alteration of the immediate surroundings of a historical resource such that its significance would be materially impaired constitutes a substantial adverse change under CEQA.[58] The significance of an historical resource is materially impaired when a project "demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and justify its inclusion in, or eligibility for inclusion in the California Register of Historical Resources or in a local register of historical resources."[59]

For the new construction associated with the Project to be considered a substantial adverse change, however, it must be shown that the integrity and/or significance of the nearby historical resources would be materially impaired by the proposed adjacent new construction, that adjacent new constructionwould substantially impair or obscure the ability of the resource to convey its historical significance, or involve potential damage related to adjacent underground excavation and general construction procedures that could undermine the stability of a historical resource. The potential for indirect impacts to identified historical resources in the near vicinity of the Project Site is examined in detail below.

The written Project description, plans, elevation drawings, and renderings were used to analyze potential impacts to historical resources.

9.3 Potential Impacts to Historical Resources in the Near Vicinity

[58] *CEQA Guidelines,* Section 15064.5(b) (1).
[59] *CEQA Guidelines,* Section 15064.5(b)(2).

As noted in Section 8 of this report, there is one building immediately adjacent to the Project Site and one pole sign in the near vicinity of the Project Site that have been identified as eligible for individual historic listing through survey evaluation. Potential impacts to these resources are analyzed below.

Potential Impacts to 1913 West 3rd Street (Map #3)

The former single-family residence at 1913 West 3rd Street is located immediately east of the Project Site. Constructed in 1912, the property was identified by SurveyLA as eligible for the National Register, California Register and as a City of Los Angeles HCM as a rare and intact example of early residential development in Westlake.

Direct Impacts

The Project does not include the demolition, relocation, rehabilitation, alteration, or conversion of the 1912 residence. 1913 West 3rd Street will remain unchanged and in its original location after implementation of the Project and the Project will not result in direct adverse impacts to 1913 West 3rd Street. Therefore, the Project will not result in significant direct impacts to any historic resources.

Indirect Impacts

Because the Project will be located west of the 1912 residence at 1913 West 3rd Street, it will not block important street views of 1913 West 3rd Street from West 3rd Street. New construction to the west will not obscure the building's important south-facing facade which will remain unobstructed from view after implementation of the Project.

As noted in Section 5 of this report, *historic integrity* is the ability of a property to convey its significance and is defined as the "authenticity of a property's historic identity, evidenced by the survival of physical characteristics that existed during the property's historic period."[60] The National Park Service defines seven aspects of integrity: *location*, *design*, *setting*, *materials*, *workmanship*, *feeling*, and *association*.

Because the Project will not result in any physical change to 1913 West 3rd Street, the Project would not affect the integrity of *location, design, materials, or workmanship* of 1913 West 3rd Street. It would remain intact in its current location and would not be materially altered by new construction in its immediate surroundings. Therefore, integrity of *feeling* would also remain unaffected because all the existing physical elements that characterize the 1913 West 3rd Street would continue to convey the property's historic significance. Because 1913 West 3rd Street would retain integrity of *location, design,*

[60] Ibid.

materials, workmanship, and *feeling*, it would continue to reflect its historic significance as a rare intact example of early 20th century residential development in Westlake, therefore, integrity of *association* would also remain unaffected by the Project. Moreover, the landscape area, pedestrian paths, stairs, outdoor seating areas and surface parking area that comprise the Project Site immediately west of 1913 West 3rd Street do not represent setting features that are character-defining or important to the historic significance of the 1913 West 3rd Street, since they were not present until 1979, 67 years after the construction of 1913 West 3rd Street. Therefore, 1913 West 3rd Street will also retain integrity of *setting*.

Although the Project will add new height and mass directly west of 1913 West 3rd Street, all of the aspects of integrity for 1913 West 3rd Street will be unaffected by the Project, so that its historic integrity will be retained. After construction of the Project, 1913 West 3rd Street will remain intact, and continue to convey its historic significance. For these reasons, the significance and integrity of 1913 West 3rd Street will not be materially impaired by the Project.

As proposed, new construction associated with the Project would include excavation work and the construction of a basement level. The excavation work associated with the Project, however, would be located 33 feet or more from the 1913 West 3rd Street residence. Moreover, the equipment to be used is not anticipated to cause a level of vibration that would result in damage to adjacent structures so that any potential for adverse indirect impacts from vibration associated with construction activity will be avoided and 1913 West 3rd Street will retain its eligibility for listing in the National Register, California Register and designation as a Los Angeles HCM.

Potential Impacts to the Royal Viking Motel Pole Sign (Map #1)

The Royal Viking Motel Pole Sign is located west of the Project Site adjacent to the sidewalk on West 3rd Street. The Royal Viking Motel Pole Sign was identified by SurveyLA as an excellent example of a 1950s pole sign with neon lettering, eligible for designation as a Los Angeles HCM.

Direct Impacts

The Royal Viking Motel Pole Sign is located a considerable distance to the west of the Project Site with the apartment building at 2007 West 3rd Street separating the Royal Viking Motel Pole Sign from the Project Site. The Project does not include the demolition, relocation, rehabilitation, alteration, or conversion of the Royal Viking Motel Pole Sign. The Royal Viking Motel Pole Sign will remain unchanged and in its original location after implementation of the Project and the Project will not result in direct adverse impacts to the Royal Viking Motel Pole Sign.

Indirect Impacts

Because the Project will be located east of the Royal Viking Motel Pole Sign, it will not block any street views of the Royal Viking Motel Pole Sign from West 3rd Street or Alvarado Street. New construction to the east will not obscure street views of the pole sign which will remain unobstructed from view after implementation of the Project.

The Project would not affect the integrity of *location, design, materials, or workmanship* of the Royal Viking Motel Pole Sign. The pole sign would remain intact in its current location and would not be materially altered by new construction in its immediate surroundings. Therefore, integrity of *feeling* would also remain unaffected because all the existing physical elements that characterize the Royal Viking Motel Pole Sign would continue to convey the property's historic significance. Because the Royal Viking Motel Pole Sign would retain integrity of *location, design, materials, workmanship*, and *feeling*, it would continue to reflect its historic significance as a neon pole sign from the 1950s, therefore, integrity of *association* would also remain unaffected by the Project. Moreover, the landscape area, pedestrian paths, stairs, outdoor seating areas and surface parking area that comprise the Project Site are separated by a 4-story apartment building and do not represent setting features that are character-defining or important to the historic significance of the Royal Viking Motel Pole Sign. Therefore, 1913 West 3rd Street will also retain integrity of *setting*.

Although the Project will add new height and mass in the near vicinity of the Royal Viking Motel Pole Sign, all of the aspects of integrity for the Royal Viking Motel Pole Sign will be unaffected by the Project, so that the historic integrity of the Royal Viking Motel Pole Sign will be retained. After construction of the Project, the Royal Viking Motel Pole Sign will remain intact, continue to convey its historic significance, and be readily visible from the public right-of-way. For these reasons, the significance and integrity of the Royal Viking Motel Pole Sign will not be materially impaired by the Project and the Royal Viking Motel Pole Sign will retain its eligibility for designation as a Los Angeles Historic-Cultural Monument. The Project will not result in significant indirect impacts to the Royal Viking Motel Pole Sign.

9.4 Impacts Analysis Using Los Angeles CEQA Thresholds

The following analysis uses the guidance provided in the City of Los Angeles CEQA Thresholds Guide.

1. Would the Project involve the demolition of a significant resource?

The Project does not propose the demolition of any significant resources on the Project Site or in the immediately adjacent area.

2. Would the Project involve relocation that does not maintain the integrity of a significant resource?

The Project does not involve the relocation of any significant resources on the Project Site or in the immediate adjacent area.

3. Would the Project involve conversion, rehabilitation or alteration of a significant resource which does not conform to the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings?

The Project does not involve the conversion, rehabilitation or alteration of any significant resources.

4. Would the Project involve construction that reduces the integrity or significance of important resources on the site or in the vicinity?

The Project will construct a seven-story building on a site currently used for a pedestrian pathway, landscaped area, and surface parking which will alter the surroundings of historical resources in the near vicinity. As demonstrated above, this change will not reduce the integrity or significance of historical resources in the vicinity of the Project Site.

9.5 Conclusions

Analysis of potential impacts to historical resources reveals that construction of the proposed Project will not result in significant direct or indirect impacts to any historical resources in the near vicinity of the Project Site.

Experience Profile

Paul Travis specializes in master planning, CEQA, NEPA and Section 106 environmental review, and historic resources assessment. At HRG, Paul manages planning-related projects with a focus on large, multi-property sites including college campuses, historic downtowns, neighborhoods and districts, industrial sites, motion picture studios, and military bases. Paul has drafted preservation plans for the University of Southern California, NBC Universal Studios, Hollywood, and Los Angeles International Airport. He has participated in the development of community plans or specific plans for Paso Robles, Fresno, and Whittier; and has been involved in the master planning process for Loyola Marymount University, Occidental College, Mount St. Mary's College, Fox Studios, the Alameda Naval Station, and the Downey NASA site. Recent survey experience includes historic resource surveys for the cities of Los Angeles, Ventura, Glendale, Paso Robles, San Diego, and Fresno.

Prior to working at HRG, Paul worked as a research assistant at the Lewis Center for Regional Policy Studies performing academic research for study of transit-oriented development along the Pasadena Gold Line light rail system. Responsibilities include gathering and analysis of ridership data and adjacent development activity, and field observation of conditions surrounding transit stops.

Paul Travis meets the *Secretary of the Interior's Professional Qualification Standards* in Historic Preservation in Historic Preservation Planning and History.

Experience Profile

Morgan Quirk first joined Historic Resources Group as an intern in 2017 and returned after completing her graduate studies. She holds a Master of Science in Historic Preservation from the University of Texas School of Architecture and a Bachelor of Science in Policy, Planning & Development with an emphasis on Urban Planning from the University of Southern California Sol Price School of Public Policy. At Historic Resources Group, Morgan supports staff with GIS mapping skills and performing research for historic resources surveys, historic context statements, historic resource assessments, historic structures reports, and nomination forms. In addition to her experience in architectural history research methodologies, Morgan has advanced knowledge of geospatial statistical analysis in ArcGIS Desktop, relational database management, data manipulation, and 3D modeling.

Prior to joining HRG, Morgan centered her master's thesis research on the nexus of geospatial statistical analysis and the designation of Los Angeles Historic Cultural Monuments. With ArcGIS, she conducted an independent survey of designated resources to build a predictive model using a geographically weighted regression. The mapped model aimed to increase inclusivity in local preservation practice by identifying Los Angeles neighborhoods that lack monument representation for historically marginalized communities.

Morgan Quirk meets the *Secretary of the Interior's Professional Qualifications Standards* in Historic Preservation Planning and Architectural History.

TRACT: EXTENSION OF THE NOB HILL TRACT
MAP REFERENCE: MR 42-56
LOT: 1-6
PARCELS: 2-5 PTR
ASSESSOR PARCEL # (APN) : 5154-020-030

LOT SIZE: 324.73 FEET BY 94.19 FEET

CLIMATE ZONE: 9

TOC TIER 4 INCENTIVES

BASE INCENTIVES:

A) RESIDENTIAL DENSITY: 80% INCREASE IN NUMBER OF DWELLING UNITS
B) FLOOR AREA RATIO (FAR): 4.25 : 1
C) AUTOMOBILE PARKING: NONE REQUIRED

ADDITIONAL INCENTIVES:

PROJECT IS 100% AFFORDABLE W/ LOW INCOME UNITS

D) YARD/SETBACK: AS REQUIRED FOR RAS3 ZONE PER LAMC 12.10.5
E) OPEN SPACE: 25% DECREASE IN REQUIRED OPEN SPACE

ZONING INFORMATION

ZONING: C2-1 (LIMITED COMMERCIAL DISTRICT)

GENERAL PLAN LAND USE DESIGNATION: HIGHWAY ORIENTED COMMERCIAL
(COMMUNITY PLAN AREA: WESTLAKE)

LOT/PARCEL AREA SQUARE FOOTAGE: 30,432 SF
BUILDABLE AREA: 29,422 SF

FLOOR AREA SUMMARY (SEE A0.30):

PER TOC TIER 4 BASE INCENTIVE [1.B.IV], PROJECT USES AN INCREASED ALLOWABLE FAR FOR 100% AFFORDABLE PROJECTS.

FLOOR AREA RATIO (FAR): 4.25 : 1

FAR CALCULATION: 4.25 X 29,422 SF = 125,043 SF ALLOWABLE

NOTE: PER LAMC 12.03, FLOOR AREA IS THE AREA IN SQUARE FEET CONFINED WITHIN THE EXTERIOR WALLS OF A BUILDING, BUT NOT INCLUDING THE AREA OF THE FOLLOWING: EXTERIOR WALLS, STAIRWAYS, SHAFTS, ROOMS HOUSING BUILDING-OPERATING EQUIPMENT OR MACHINERY, PARKING AREAS WITH ASSOCIATED DRIVEWAYS AND RAMPS, SPACE DEDICATED TO BICYCLE PARKING, SPACE FOR THE LANDING AND STORAGE OF HELICOPTERS, AND BASEMENT STORAGE AREAS.

FLOOR AREA PROVIDED: 3:1 = 91,462 SF

DENSITY:

PER TOC TIER 4 BASE INCENTIVE [1.A.IV], 80% INCREASE IN ALLOWABLE NUMBER OF DWELLING UNITS IS PERMITTED.

TOTAL # OF UNITS ALLOWED: 30,432 SF/400 = 76.08 = 77 UNITS X 1.8 = 139 UNITS

TOTAL # OF UNITS PROPOSED: 135 UNITS
TOTAL # OF AFFORDABLE UNITS: 134 LOW INCOME (1 NON-RESTRICTED MANAGER'S UNIT)

UNIT MATRIX (135 UNITS)

TYPE OF UNIT	# OF UNITS	%	AVG. SIZE PROVIDED
STUDIOS	70	52%	470 SF
1 BEDROOM	65	48%	570 SF
2 BEDROOM	0	0%	840 SF
TOTAL	135	100%	

SETBACKS (SEE SITE PLAN A1.00):

PER TOC ADDITIONAL INCENTIVE [A], PROJECT USES SIDE/REAR YARD REQUIREMENTS FOR THE RAS3 ZONE PER LAMC 12.10.5.

FRONT YARD: NONE REQUIRED + 3 FEET HIGHWAY DEDICATION
SIDE YARD: 5 FEET REQUIRED (PER RAS4)
REAR YARD: 5 FEET REQUIRED (PER RAS4)

HEIGHT:

C2 ZONE: UNLIMITED HEIGHT AND STORIES
PROVIDED: 87'-9 1/2" *(FROM LOWEST ADJ. GROUND LEVEL PER LAMC 12.03)*

PARKING:

PER TOC BASE INCENTIVE [2.A.II], NO PARKING IS REQUIRED FOR RESIDENTIAL UNITS.

REQUIRED AUTOMOBILE PARKING: NONE REQUIRED
PROVIDED AUTOMOBILE PARKING: 31 SPACES (SEE A3.10 FOR PARKING PLAN)

REQUIRED BICYCLE PARKING: *PER LAMC T12.21.A.16, FOR 101 - 200 DWELLING UNITS, REQUIRED SHORT TERM SPACES = (1) SPACE PER (20) UNITS; REQUIRED LONG TERM SPACES = (1) SPACE PER (2) UNITS.*

SHORT TERM = 135 / 20 = 6.75 = 7 STALLS.
LONG TERM = 135 / 2 = 67.5 = 68 STALLS.

PROVIDED BICYCLE PARKING:
SHORT TERM = 7 STALLS
LONG TERM = 70 STALLS.

OPEN SPACE (SEE A0.31 CALCULATION):

PER TOC ADDITIONAL INCENTIVE [1.B.II], PROJECT IS ALLOWED UP TO A 25% DECREASE IN REQUIRED OPEN SPACE.

REQUIRED OPEN SPACE (PER LAMC 12.21.G.2): 10,125 SF (135 UNITS)
PROVIDED OPEN SPACE: 10,626 SF > 10,125 SF

100 SF FOR EACH UNIT HAVING LESS THAN THREE HABITABLE ROOMS; 125 SF FOR EACH UNIT HAVING THREE HABITABLE ROOMS; AND 175 SF FOR EACH UNIT HAVING MORE THAN THREE HABITABLE ROOMS.

BUILDING & SAFETY

TYPE OF CONSTRUCTION: TYPE III-A O/ CONCRETE PODIUM OF TYPE I-A & BASEMENT LEVEL. FULLY SPRINKLERED NFPA 13

OCCUPANCY GROUP: 'R-2' APARTMENTS O/ 'S-2' PARKING AND BASEMENT

HEIGHT LIMIT (PER LABC 2019 TABLE 504.4):
S-2 GROUP TYPE I-A = UNLIMITED
R-2 GROUP TYPE III-A = 5 STORIES & 85 FEET

BUILDING HEIGHT PROVIDED: 83'-4" FROM AVG. GRADE PLANE PER LABC 2019.
SEE SITE PLAN A1.00 FOR GRADE PLANE CALCULATION

ALLOWABLE AREA CALCULATION:

LABC 506.3 FRONTAGE INCREASE:

BUILDING PERIMETER [P] = 310'-11 + 56'-2" + 296'-11" + 56'-2" = 720'-2"
25% OF PERIMETER = 720'-2" X 0.25 = 180'-0 1/2"

W = CALCULATED WIDTH OF PUBLIC WAY
L1 = 310'-11"
W1 = 30'-0"
F = 310'-11" (>180'-0 1/2")

W = (L1 X W1) / F
W = (310'-11" X 30'-0") / 310'-11"
W = 30'-0"

If = [F/P - 0.25]W/30
If = [310'-11"/720'-2" - 0.25]30/30
If = [0.43 - 0.25] 1
If = 0.18

PER LABC 506.2.3 SINGLE OCCUPANCY, MULTISTORY BUILDINGS [R-2 / TYPE I-A / SM]: UNLIMITED

PER LABC 506.2.3 SINGLE OCCUPANCY, MULTISTORY BUILDINGS [R-2 / TYPE III-A / SM]:

Aa = ALLOWABLE AREA
At = 72,000 SF
NS = 24,000 SF
If = 0.18
Sa = 2

Aa = [At + (NS X If)] X Sa (EQUATION 5-2)
Aa = [72,000 SF + (24,000 SF X 0.18)] X 2
Aa = [72,000 SF + 4,320 SF] X 2

Aa = 152,640 SF

MAX ALLOWABLE AREA PER FLOOR = [72,000 SF + 4,320 SF] = **76,320 SF**

PARKING

PER TOC BASE INCENTIVE [2.A.II], NO PARKING IS REQUIRED FOR RESIDENTIAL UNITS.

ADA PARKING CALCULATION

TYPE	# REQ'D	#	# OF SPACES REQUIRED
RESIDENTIAL	(2) PER CBC 2019 11B-208.2	32	(1) VAN ACC. SPACE + (1) STANDARD ACC. SPACE

CALGREEN EVCS PARKING CALCULATION

TYPE	# REQ'D	#	# OF SPACES REQUIRED
RESIDENTIAL	30% OF TOTAL SPACES PER LA CITY ORDINANCE 186485	32	9.6 = (9) FUTURE EVCS

** NOTE: FOR RESIDENTIAL EVCS REQUIREMENT, PER CALGREEN 2019 SECTION 4.106.4.2, PROJECT IS ONLY REQUIRED TO DEMONSTRATE CAPABILITY AND CAPACITY FOR FACILITATING FUTURE EV CHARGING. THERE IS NO REQUIREMENT FOR EV SPACES TO BE CONSTRUCTED OR AVAILABLE UNTIL EV CHARGERS ARE INSTALLED FOR US. PER CALGREEN 2019 SECTION 4.106.4.2.2, ONE IN EVERY 25 EV SPACES IS REQUIRED TO HAVE AN 8'-0" WIDE MINIMUM AISLE OR A 5'-0" WIDE MINIMUM AISLE IF THE STALL IS 12'-0" WIDE.*

NOTES

1. REFERENCE DOCUMENT FOR EASEMENTS:
COMMONWEALTH LAND TITLE COMPANY PRELIMINARY REPORT, ORDER NO. 09197264-919-KRC-KRE, DATED MARCH 13, 2020.

2. SITE ADDRESS: 1917–2005 1/2 W 3RD STREET, LOS ANGELES, CA 90057.

3. ASSESSOR'S PARCEL NUMBER: 5154–020–030.

4. LAND AREAS:
PARCEL A: 16,486 SQ. FT. 0.378 ACRE
PARCEL B: 13,946 SQ. FT. 0.320 ACRE
TOTAL: 30,432 SQ. FT. 0.699 ACRE

5. CURRENT ZONING PER CITY OF LOS ANGELES ZIMAS, DATED 08/09/2018:
C2–1 (LIMITED COMMERCIAL DISTRICT)

6. BUILDING RESTRICTIONS PER ZONE:

SETBACKS:
FRONT: NONE
SIDE & REAR: SAME AS R4 FOR RESIDENTIAL USES (SEE ABOVE)

HEIGHT LIMIT: NONE

FLOOR AREA RATIO:
LIMITED COMMERCIAL DISTRICT: 1.5:1

7. FLOOD ZONE NOTE:
THE PROPERTY SHOWN ON THIS SURVEY DOES NOT LIE WITHIN A SPECIAL FLOOD HAZARD AREA AS DEFINED BY THE FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA). THE PROPERTY LIES WITHIN ZONE "X" (OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN) PER FLOOD INSURANCE RATE MAP OF LOS ANGELES COUNTY AND INCORPORATED AREAS AS MAP NO. 06037C1610F DATED SEPTEMBER 26, 2008.

8. ALL SET POINTS ARE TAGGED LS 7123.

9. THERE IS NO EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIRS OBSERVED IN THE PROCESS OF CONDUCTING THE FIELD WORK.

10. NUMBER OF PARKING SPACES WITH STRIPES:
VISITOR PARKING = 6 STALLS
HANDICAP PARKING = 1 STALL

11. THE PROPERTY DESCRIBED AND SHOWN HEREON IS THE SAME PROPERTY WHICH IS DESCRIBED IN THE TITLE COMMITMENT.

12. ANY SUBSTANTIAL FEATURES OBSERVED IN THE PROCESS OF CONDUCTING THE FIELDWORK WERE NOTED AND SHOWN HEREON.

13. NO OBSERVED EVIDENCE OF SHARED PARTY WALLS WITH ADJOINING LOTS.

14. ON–SITE UTILITIES WERE BASED ON VISUAL OBSERVATIONS ONLY. STREET UTILITIES WERE BASED ON VISUAL OBSERVATIONS AND AVAILABLE CITY PLANS.

15. THERE WERE NO OBSERVED FIELD DELINEATION OF WETLAND MARKERS.

16. THE PROPERTY PHYSICALLY ABUTS AND HAS DIRECT PHYSICAL ACCESS TO 3RD STREET WHICH IS A PUBLICLY DEDICATED RIGHT–OF–WAY.

BASIS OF BEARINGS

THE CENTERLINE OF MIRAMAR STREET BEING S 82°29'07" E PER RECORD OF SURVEY 89/71.

NATURAL VENTILATION AT GARAGE:

PER CBC 406.5.2 FOR NATURAL VENTILATION PURPOSES, THE EXTERIOR SIDE OF THE STRUCTURE SHALL HAVE UNIFORMLY DISTRIBUTED OPENINGS ON TWO OR MORE SIDES. THE AREA OF SUCH OPENINGS IN EXTERIOR WALLS ON A TIER SHALL BE NOT LESS THAN 20% OF THE TOTAL PERIMETER WALL AREA OF EACH TIER. THE AGGREGATE LENGTH OF THE OPENINGS CONSIDERED TO BE PROVIDING NATURAL VENTILATION SHALL BE NOT LESS THAN 40% OF THE PERIMETER OF THE TIER.

OPEN AREA AT GARAGE WALL			
	TOTAL PERIMETER WALL AREA	TOTAL OPENINGS PROVIDED	% OPEN
SOUTH ELEVATION	2,477 SF	208 SF + 287 SF = 495	47%
NORTH ELEVATION	2,326 SF	979 SF	21%
WEST ELEVATION	672 SF	70 SF	10%
EAST ELEVATION	513 SF	0 SF	0%
TOTAL	5,988 SF	1,544 SF	25%

MINIMUM OPEN AREA PER CBC 406.5.2 = 20%
PROVIDED OPEN AREA = **25%**

Transportation Assessment Memorandum

ESA

Gibson
transportation consulting, inc.

MEMORANDUM

TO: Wes Pringle, Los Angeles De artment of Trans ortation

FROM: Sarah M. Dro is, P.E., Emil Wong, P.E., and Da id Roachford

DATE: August 18, 2020

RE: Trans ortation Assessment for the
Miramar De elo ment Pro ect
Los Angeles, California **Ref:** J1832

This memorandum resents the trans ortation assessment for the ro osed Miramar De elo ment (Pro ect) located at 1917-2005 West 3rd Street (Pro ect Site) within the *Westlake Community Plan* (Los Angeles De artment of Cit Planning LADCP , 1997) area of the Cit of Los Angeles, California (Cit). The methodolog and ase assum tions used in the anal sis were esta lished in con unction with the Los Angeles De artment of Trans ortation (LADOT). The anal sis in this assessment is for informational ur oses onl and is not legall re uired for the Sustaina le Communities Pro ect E em tion under Pu lic Resources Code Sections 21155 and 21155.1. As such, nothing in this assessment shall trigger the need for an California En ironmental Qualit Act (CEQA) findings, CEQA anal sis, or CEQA mitigation measures.

The sco e of assessment was de elo ed in consultation with LADOT and is consistent with *Transportation Assessment Guidelines* (LADOT, Jul 2020) (TAG) and in com liance with the CEQA Guidelines (California Code of Regulations, Title 14, Section 15000 and following). The ase assum tions and technical methodologies (i.e., tri generation, stud locations, anal sis methodolog , etc.) were identified as art of the stud a roach and were outlined in a Memorandum of Understanding (MOU) that was re iewed and a ro ed LADOT in Jul 2020 and is ro ided in Attachment A.

PROJECT DESCRIPTION

The Pro ect ro oses to construct a total of 137 afforda le housing units in a se en-stor residential uilding a o e a asement lo le el. O en s ace would e ro ided in the form of e terior areas, communit recreation rooms, and landsca ed areas. Vehicular access to the Pro ect Site would e ro ided ia the e isting dri ewa along 3rd Street. The ad acent Miramar Towers senior a artment uilding would share the e isting dri ewa solel for the ur ose of fire de artment access. Short-term ic cle ar ing would e ro ided at the uilding e terior to the west of the main entrance. Long-term ic cle ar ing would e ro ided within the asement le el of the Pro ect. Both ic cle and edestrian access to the Pro ect would e ro ided ia the entrances along 3rd Street. The Pro ect Site is currentl im ro ed with the Pro ect dri ewa , a edestrian wal wa , landsca ing, outdoor seating, and a surface ar ing lot as art of the ad acent Miramar Towers.

The Pro ect is antici ated to e com leted in Year 2023. The Pro ect site lan is ro ided in Figure 1.

PROJECT LOCATION

The Pro ect Site, contained within a ortion of Assessor Parcel Num er 5154020030, is located in the Westla e area of Los Angeles, within Cit Council District 1. As shown in Figure 2, the Pro ect Site is ounded Miramar Towers to the north, residential uses to the east, 3rd Street to the south, and a multi-famil residential use to the west. The Pro ect is located a ro imatel 0.70 miles south of the Holl wood Freewa (US 101) and 1.0 miles west of the Har or Freewa (I-110/SR 110). The Pro ect Site is rimaril ser ed 3rd Street and Al arado Street.

The Pro ect Site is located within 0.5 miles of numerous Ma or Transit Sto s, which are defined in *Transit Oriented Communities Program Guidelines* (LADCP, Re ised Fe ruar 26, 2018) (TOC Guidelines) as a rail station or an intersection of two or more us routes with ser ice inter als of 15 minutes or less during the morning and afternoon commuter ea eriods. The Pro ect Site is located within 0.50 miles of the Westla e/MacArthur Par Station, which is ser ed the Los Angeles Count Metro olitan Transit Authorit (Metro) B Line (formerl Red Line) and D Line (formerl Pur le Line). The Metro B Line runs etween North Holl wood and downtown Los Angeles and the Metro D Line runs etween Koreatown and downtown Los Angeles. In addition, the Pro ect Site is ser ed numerous us lines rimaril along 3rd Street and Al arado Street that are o erated Metro and the LADOT Downtown Area Shuttle (DASH).

PROJECT CONTEXT

A com rehensi e data collection effort was underta en to de elo a detailed descri tion of e isting and future conditions in the Stud Area.

Study Area

The Stud Area includes e intersections along 3rd Street, as well as the trans ortation infrastructure descri ed elow. This Stud Area was esta lished in consultation with LADOT ased on the following factors identified in the TAG:

1. Primar dri ewa (s)
2. Intersections at either end of the loc on which the Pro ect is located or u to 600 feet from the rimar Pro ect dri ewa (s)
3. Unsignali ed intersections ad acent to the Pro ect Site that are integral to the Pro ect s site access and circulation lan
4. Signali ed intersections in ro imit to the Pro ect Site where 100 or more Pro ect tri s would e added

The following two signali ed stud intersections were identified for detailed anal sis during the MOU rocess: Al arado Street & 3rd Street and Bonnie Brae Street & 3rd Street.

Figure 3 illustrates the Stud Area and the two stud intersections. The e isting lane configurations at the anal ed intersections are ro ided in Figure 4.

Existing Transportation Conditions

The E isting Conditions includes an assessment of the e isting trans ortation infrastructure and conditions of the Stud Area including freewa and street s stems and transit ser ice, as well as edestrian and ic cle circulation, in Year 2020. An in entor of lane configurations, signal hasing, ar ing restrictions, etc., for the anal ed intersections was also collected. Traffic count data is ro ided in Attachment B.

Existing Street System. The e isting street s stem in the Stud Area consists of a regional roadwa s stem including arterials and local streets that ro ide regional, su -regional, or local access and circulation to the Pro ect. These trans ortation facilities generall ro ide two to four tra el lanes and usuall allow ar ing on one or oth sides of the street. T icall , the s eed limits range etween 25 and 35 miles er hour (m h) on the streets and 55 m h on freewa s.

Street classifications are designated in *Mobility Plan 2035, An Element of the General Plan* (LADCP, Se tem er 2016) (the Mo ilit Plan). The Mo ilit Plan defines s ecific street standards in an effort to ro ide an enhanced alance etween traffic flow and other im ortant street functions including transit routes and sto s, edestrian en ironments, ic cle routes, uilding design and site access, etc.

The following is a rief descri tion of the roadwa s in the Stud Area, including their classifications under the Mo ilit Plan:

- Al arado Street Al arado Street is a designated A enue II that runs in the north-south direction and is located west of the Pro ect Site. It generall ro ides si tra el lanes, three lanes in each direction, and a two-wa left-turn median. Da time two-hour metered ar ing is generall a aila le with morning ea hour restrictions on the west side of the street and afternoon ea hour restrictions on the east side of the street within the Stud Area. Tra el lanes are t icall 10 feet wide and the total a ed width is a ro imatel 56 to 66 feet wide.

- Bonnie Brae Street Bonnie Brae Street is a designated Collector Street that runs in the north-south direction and is located east of the Pro ect Site. It generall ro ides two tra el lanes, one in each direction, and a two wa left-turn median north of 3rd Street. Unmetered ar ing is generall a aila le on oth sides of the street. The total a ed width of the street is a ro imatel 56 feet north of 3rd Street and a ro imatel 36 feet south of 3rd Street.

- 3rd Street 3rd Street is a designated A enue II that runs in the east-west direction and is located ad acent to the southern oundar of the Pro ect Site. It generall ro ides four tra el lanes, two in each direction, and a two-wa left-turn median. Within the Stud Area, unmetered ar ing with morning ea hour restrictions is generall a aila le on the south side of the street etween Westla e A enue and Bonnie Brae Street and metered two-hour

ar ing is a aila le on the north side of the street west of Al arado Street. Tra el lanes are t icall 10 feet wide and the total a ed width is t icall 56 to 60 feet.

The e isting intersection mo ilit facilities are shown in Figure 5 and the Mo ilit Plan street designations are shown in Figure 6.

Existing Pedestrian Facilities. The wal a ilit of e isting facilities is ased on the a aila ilit of edestrian routes necessar to accom lish dail tas s without the use of an automo ile. These attri utes are uantified Wal Score.com and assigned a score out of 100 oints. With the arious commercial usinesses, em lo ment, entertainment, and cultural centers ad acent to residential neigh orhoods, the wal a ilit of the Stud Area is a ro imatel 91 oints[1].

The sidewal s that ser e as routes to the Pro ect Site ro ide ro er connecti it and ade uate widths for a comforta le and safe edestrian en ironment. The sidewal s ro ide connecti it to accessi le crossings at signali ed intersections within the Stud Area. Both stud intersections ro ide edestrian access in the icinit of the Pro ect Site with mar ed edestrian crossings on all a roaches, edestrian hasing, crosswal stri ing, and Americans with Disa ilities Act (ADA) cur ram s. Pedestrian facilities located within the Stud Area and are further detailed in Figure 5. An in entor of edestrian attractors within a 0.25-mile wal ing distance from the Pro ect Site is illustrated in Figure 7.

Vision Zero. As descri ed in *Vision Zero: Eliminating Traffic Deaths in Los Angeles by 2025* (Cit of Los Angeles, August 2015) (Vision Zero), Vision Zero is a traffic safet olic that romotes strategies to eliminate trans ortation-related collisions that result in se ere in ur or death. Vision Zero has identified a High In ur Networ (HIN), a networ of streets included ased on collision data from the last fi e ears, where strategic in estments would ha e the iggest im act in reducing death and se ere in ur . Ad acent to the Pro ect Site, 3rd Street has een identified as art of the HIN. Additionall , the following streets within 0.25 miles of the Pro ect are also identified in the HIN (and de icted in Figure 8):

- Al arado Street
- Westla e A enue
- 6th Street

Existing Bicycle System. The Mo ilit Plan includes the s ecific goals and olicies of *2010 Bicycle Plan, A Component of the City of Los Angeles Transportation Element* (LADCP, 2010) (2010 Bic cle Plan). The Mo ilit Plan esta lishes the o erall framewor for those com onents of the 2010 Bic cle Plan and uilds u on those goals of im ro ing ic cling for all le els of e erience. Currentl , no ic cle facilities are ro ided within 0.25 miles of the Pro ect Site.

Existing Transit System. Figure 9 illustrates the e isting transit ser ice in the Stud Area, which is ser ed us lines o erated Metro and LADOT DASH. In addition, Figure 9 identifies Ma or Transit Sto s located within 0.50 miles of the Pro ect Site, including the Westla e/MacArthur Par Station, which ser es the Metro B Line and D Line.

[1] Wal Score (www.wal score.com) rates the Pro ect Site with a score of 91 of 100 ossi le oints (scores assessed on Jul 7, 2020 for 1917 W. 3rd Street). Wal Score calculates the wal a ilit of s ecific addresses ta ing into account the ease of li ing in the neigh orhood with a reduced reliance on automo ile tra el.

Ta le 1 summari es the arious transit line ser ices o erating in and around the Stud Area for each of the ro iders in the region, the t e of ser ice (ea s. off- ea , e ress s. local), and fre uenc of ser ice. The a erage fre uenc of transit ser ice during the ea hours was deri ed from schedule information from each res ecti e transit ro ider for the sto nearest the Pro ect Site, as well as detailed tri data from A ril 2019 ro ided Metro.

Ta les 2A and 2B summari e the total ca acit of the Metro transit s stem and LADOT us lines during the morning and afternoon ea hours ased on the fre uenc of ser ice of each line, detailed ridershi data ro ided the transit ro ider and the ma imum seated and standing ca acit of each us or train. As shown, the Metro and LADOT us lines within 0.50 miles of the Pro ect Site currentl ro ide additional ca acit for 4,993 transit riders during the morning ea hour and 4,451 transit riders during the afternoon ea hour. Additionall , the Metro B Line and D Line ro ide additional ca acit for a ro imatel 9,222 transit riders during the morning ea hour and 8,094 transit riders during the afternoon ea hour. In total, the u lic transit s stem in the Stud Area has a aila le ca acit for a ro imatel 14,215 additional riders during the morning ea hour and 12,545 additional riders during the afternoon ea hour. Ridershi data information was not a aila le for the Pico Union Echo Par DASH ser ice, so an additional ca acit from those ser ices could not e calculated into the a o e alues ut are e ected to ro ide additional ca acit .

Existing Traffic Volumes. Traffic count data collection is generall conducted during times with t ical tra el demand atterns (i.e., when local schools are in session, usinesses are in full o eration, wee s without holida s, etc.). Collection of new traffic count data was not conducted in light of the Safer at Home order in res onse to COVID-19. Consistent with the TAG, ased on historical trends in traffic growth, an am ient growth rate of 1% er ear was a lied to wee da morning (7:00 AM to 10:00 AM) and afternoon (3:00 PM to 6:00 PM) ea eriod intersection counts from A ril 2016 to re resent Year 2020 conditions. The e isting intersection ea hour traffic olumes are illustrated in Figure 10.

Future Cumulative Transportation Conditions

The future conditions detail the assum tions used to de elo the Future without Pro ect Conditions in Year 2023, which corres onds to e ected occu anc of the Pro ect.

The Future without Pro ect Conditions traffic olumes include am ient growth, which reflects the increase in traffic due to regional growth and de elo ment outside the Stud Area, as well as traffic generated ongoing or entitled ro ects near or within the Stud Area (the Related Pro ects) in accordance with rocedures outlined in the CEQA Guidelines.

Ambient Traffic Growth. Traffic le els are e ected to increase o er time as a result of regional growth and de elo ment in and around the Stud Area. Based on discussions with LADOT through the MOU rocess, a conser ati e am ient growth factor of 1% er ear com ounded annuall was a lied inflating the e isting traffic olumes to simulate Year 2023 traffic olumes. The total ad ustment a lied o er the three- ear eriod was 3.03%. These growth factors account for increases in traffic due to otential ro ects not et ro osed and ro ects located outside the Stud Area.

Related Projects. The list of Related Pro ects is ased on information ro ided LADCP and LADOT, as well as recent studies in the area. The Related Pro ects are detailed in Ta le 3 and their a ro imate locations are shown in Figure 11. Though the uildout ears of man of these Related Pro ects are uncertain and ma e well e ond the uildout ear of the Pro ect, and notwithstanding that some ma ne er e a ro ed or de elo ed, the were all considered as art of this trans ortation assessment and conser ati el assumed to e com leted the Pro ect uildout ear of 2023. The traffic growth due to the de elo ment of Related Pro ects considered in this anal sis is conser ati e and, itself, su stantiall o erestimates the actual traffic olume growth in the area that would li el occur rior to Pro ect uildout ears. With the addition of the 1% er ear am ient growth factor re iousl discussed, the Future without Pro ect cumulati e condition is e en more conser ati e.

Pea hour traffic olumes resulting from Related Pro ects are shown in Figure 12 at each stud intersection.

Future without Project Traffic Volumes. The Related Pro ects olumes were then added to the e isting traffic olumes after ad ustment for am ient growth through the ro ected Pro ect com letion ear of 2023. These olumes re resent the Future without Pro ect Conditions (i.e., am ient traffic growth and Related Pro ect traffic added to e isting traffic olumes) for Year 2023 and are shown in Figure 13 for oth stud intersections.

Future Improvements. The anal sis of Future Conditions considered roadwa im ro ements that ha e een funded and are e ected to e im lemented rior to the uildout of the ro osed Pro ect, howe er, none were identified within the Stud Area. Other ro osed roadwa s im ro ement ro ects that are not funded and traffic/tri reduction strategies such as Trans ortation Demand Management (TDM) rograms for indi idual uildings and de elo ments were not considered in the Future Conditions anal ses.

Although no lanned im ro ements were identified within the Stud Area, the Mo ilit Plan identifies e corridors as com onents of arious mo ilit -enhanced networ s. Each networ is intended to focus on im ro ing a articular as ect of ur an mo ilit , including transit, neigh orhood connecti it , ic cles, edestrians, and ehicles. The s ecific im ro ements that ma e im lemented in those networ s ha e not et een identified, and there is no schedule for im lementation therefore, no changes to ehicular lane configurations were made as a result of the Mo ilit Plan. Howe er, the following mo ilit -enhanced networ s included corridors within or near the Stud Area and de icted in Figure 14:

- Transit Enhanced Networ (TEN): The TEN aims to im ro e e isting and future us ser ices through relia le and fre uent transit ser ice in order to increase transit ridershi , reduce single-occu anc ehicle tri s, and integrate transit infrastructure in estments within the surrounding street s stem. The TEN has designated Al arado Street and 3rd Street within the Stud Area as art of the networ .

- Neigh orhood Enhanced Networ (NEN): The NEN reflects the s nthesis of the ic cle and edestrian networ s and ser es as a s stem of local streets that are slow mo ing and safe enough to connect neigh orhoods through acti e trans ortation. The NEN has designated Bonnie Brae Street and 6th Street within the Stud Area as art of the networ .

- Bic cle Enhanced Networ (BEN)/Bic cle Lane Networ (BLN): No streets within the Stud Area are designated as art of the BEN. The BLN has designated Al arado Street within the Stud Area as art of the networ .

- Pedestrian Enhanced District (PED): The Mo ilit Plan aims to romote wal ing to reduce the reliance on automo ile tra el ro iding more attracti e and edestrian-friendl sidewal s, as well as adding edestrian signali ations, street trees, and edestrian-oriented design features. The PED has designated Be erl Boule ard, 3rd Street, 6th Street, Al arado Street, and Union A enue within the Stud Area as art of the networ .

PROJECT TRAFFIC

Tri generation estimates, tri distri ution atterns and tri assignments were re ared for the Pro ect.

Trip Generation

The num er of tri s generated the Pro ect was estimated using local tri generation rates de elo ed LADOT for afforda le famil housing ro ects inside Transit Priorit Areas (TPAs), as ro ided in Ta le 3.3-2 of the TAG. These rates are ased on ehicle tri count data collected at afforda le housing sites in the Cit . The rates calculate the num er of wee da ea hour ehicle tri s tra eling to and from the Pro ect Site ased on the ro osed residential densit . These rates also inherentl account for transit utili ation and wal -in tri s therefore, no further tri reductions were a lied.

As shown in Ta le 4, after accounting for the ad ustments a o e, the Pro ect is antici ated to generate 67 morning ea hour tri s (25 in ound tri s, 42 out ound tri s) and 48 afternoon ea hour tri s (27 in ound tri s, 21 out ound tri s).

Project Trip Distribution

Traffic entering and e iting the Pro ect was assigned to the surrounding street s stem land use t e and access ro isions. The intersection-le el tri distri ution attern for Pro ect traffic at the stud intersections is shown in Figure 15.

Project Trip Assignment

The Pro ect tri generation estimates summari ed in Ta le 4 and the tri distri ution atterns shown in Figure 15 were used to assign the Pro ect-generated traffic through the stud intersections. Figure 16 illustrates the net Pro ect-onl traffic olumes for the Pro ect at the stud intersections during t ical wee da morning and afternoon ea hours.

CEQA ANALYSIS OF TRANSPORTATION IMPACTS

State of California Senate Bill 743 (Stein erg, 2013) (SB 743), made effecti e in Januar 2014, re uired the Go ernor s Office of Planning and Research to change the CEQA guidelines regarding the anal sis of trans ortation im acts. Under SB 743, the focus of trans ortation anal sis shifts from dri er dela (le el of ser ice LOS) to ehicle miles tra eled (VMT) in order to reduce greenhouse gas emissions (GHG), create multimodal networ s, and romote mi ed-use de elo ments.

LADOT s TAG defines the methodolog for anal ing a ro ect s trans ortation im acts in accordance with SB 743.

The TAG and CEQA Guidelines A endi G identifies four CEQA thresholds a lica le to the Pro ect for identif ing significant trans ortation im acts in accordance with SB 743:

- Threshold T-1: Conflicting with Plans, Programs, Ordinances, or Policies
- Threshold T-2.1: Causing Su stantial Vehicle Miles Tra eled (VMT)
- Threshold T-2.2: Su stantiall Inducing Additional Automo ile Tra el
- Threshold T-3: Su stantiall Increasing Ha ards Due to a Geometric Design Feature or Incom ati le Use

In addition, LADOT issued *Interim Guidance for Freeway Safety Analysis* (LADOT, Ma 1, 2020) (Cit Freewa Guidance) identif ing Cit re uirements for a CEQA safet anal sis of California De artment of Trans ortation (Caltrans) facilities as art of a trans ortation assessment.

THRESHOLD T-1: CONFLICTING WITH PLANS, PROGRAMS, ORDINANCES, OR POLICIES

Threshold T-1 states that a ro ect would result in a significant im act if it conflicts with a rogram, lan, ordinance, or olic ado ted to rotect the en ironment and that addresses the circulation s stem, including transit, roadwa s, ic cle, and edestrian facilities. Ta le 2.1-1 of the TAG ro ides the Cit lans, olicies, rograms, ordinances, and standards rele ant in determining ro ect consistenc . Attachment D of the TAG *Plans, Policies, and Programs Consistency Worksheet* ro ides a structured a roach to e aluate whether a ro ect conflicts with the Cit lans, rograms, ordinances, or olicies and streamlines the re iew highlighting the most rele ant lans, olicies, and rograms when assessing otential im acts to the Cit s trans ortation s stem. The *Plans, Policies, and Programs Consistency Worksheet* was com leted for the Pro ect and is ro ided in Attachment C.

As stated in Section 2.1.4 of the TAG, a ro ect that generall conforms with, and does not o struct the Cit s de elo ment olicies and standards will generall e considered to e consistent. As summari ed elow, the Pro ect is consistent with the trans ortation-related elements of the Cit documents listed in Ta le 2.1-1 of the TAG. Therefore, the Pro ect would not result in a significant im act under Threshold T-1. Detailed discussion of the lans, rograms, ordinances, or olicies related is ro ided elow.

Mobility Plan

The Mo ilit Plan com ines com lete street rinci les with the following fi e goals that define the Cit s mo ilit riorities:

1. Safet First
2. World Class Infrastructure
3. Access for all Angelenos
4. Colla oration, Communication, and Informed Choices
5. Clean En ironments and Health Communities

The Pro ect location and site access is consistent with the goals of the Mo ilit Plan as the Pro ect would e designed to ro ide safe access for all users. The Pro ect would su ort the olicies of the Mo ilit Plan as it would romote a alanced trans ortation s stem locating afforda le housing in ro imit to transit, o s, and local retail uses. The Pro ect would meet the goals of the Mo ilit Plan and would not interfere with the a lica le olicies of the Mo ilit Plan. Thus, the Pro ect would e consistent with the Mo ilit Plan. The following ro ides further details of s ecific olicies and rograms in the Mo ilit Plan that were deemed most rele ant to the Pro ect.

- Polic 1.3 Safe Routes to School Prioriti e the safet of school children on all streets regardless of highwa classifications. A num er of elementar and middle schools are located within the Pro ect Stud Area, including Union Elementar School, N.E.W. Academ of Science & Arts, and Sal Castro Middle School, which are located less than 0.25 miles east of the Pro ect Site. Ad acent to the Pro ect Site, 3rd Street has een identified as art of the edestrian route to Sal Castro Middle School as art of the Safe Routes to School rogram. A ro riate traffic measures would e installed during construction acti ities to ensure edestrian and ic cle safet ad acent to the Pro ect Site. Once o erational, the e anded e isting Pro ect dri ewa would e designed and o erated to ro ide safe edestrian crossings along 3rd Street. Therefore, the Pro ect would not conflict with Mo ilit Plan Polic 1.3.

- Polic 2.3 Pedestrian Infrastructure Recogni e wal ing as a com onent of e er tri and ensure high ualit edestrian access in all site lanning and u lic right-of-wa (ROW) modifications to ro ide a safe and comforta le wal ing en ironment. Pedestrian access to the Pro ect would e ro ided ia se arated edestrian entrances along 3rd Street. The Pro ect includes edestrian-friendl landsca ing and design to enhance the edestrian e erience. The Pro ect would also widen the e isting sidewal along the Pro ect frontage in accordance with Cit standards. In addition, the dri ewa widening would e designed to ro ide safe edestrian crossings. Therefore, the Pro ect would not conflict with Mo ilit Plan Polic 2.3.

- Polic 2.5 Transit Networ Im ro e the erformance and relia ilit of e isting and future us ser ice. As detailed in Ta les 2A and 2B, the transit s stem ser ing the Pro ect Site has a aila le ca acit for a ro imatel 14,215 additional riders during the morning ea hour and 12,545 additional riders during the afternoon ea hour. E en with the increased ridershi from the Pro ect, am le transit ca acit would e a aila le to ser e the Pro ect area. Furthermore, Los Angeles Count oters a ro ed Measure R, a half-cent sales ta increase to finance new trans ortation ro ects and accelerate ro ects alread in rogress, in 2008 and Measure M, an additional half-cent sales ta increase to fund

trans ortation ro ects, in 2016. As such, the Pro ect s net increase in transit tri s would e artiall offset im ro ements to transit ser ice in the Pro ect area. Accordingl , the Pro ect would not cause the ca acit of the transit s stem to e su stantiall e ceeded and the Pro ect would not conflict with Mo ilit Plan Polic 2.5.

- Polic 2.6 Bic cle Networ s Pro ide safe, con enient, and comforta le local and regional ic cling facilities for eo le of all t es and a ilities. There are no e isting ic cle facilities within 0.25 miles of the Pro ect Site. Howe er, Al arado Street is art of the BLN in the Mo ilit Plan. The Pro ect dri ewa widening would e designed to minimi e conflicts to ic clists along 3rd Street and ic clists would ha e the same access o ortunities to the Pro ect Site as edestrians. Bic cle ar ing re uirements er Los Angeles Munici al Code (LAMC) Section 12.21-A,16(a) include short-term and long-term ar ing. Short-term ic cle ar ing is characteri ed ic cle rac s that su ort the ic cle frame at two oints and long-term ic cle ar ing is characteri ed an enclosure rotecting all sides from inclement weather and secured from the general u lic. In accordance with the re uirements of LAMC Section 12.21-A, 16(a), the Pro ect would ro ide 104 ic cle ar ing s aces, including 10 short-term and 94 long-term ic cle ar ing s aces. Therefore, the Pro ect would not conflict with Mo ilit Plan Polic 2.6.

- Polic 2.9 Multi le Networ s Consider the role of each enhanced networ (i.e., TEN, PED, and BEN) when designing a street that includes multi le modes. As discussed a o e, in the anal ses for Policies 2.5 and 2.6, the Pro ect would not conflict with Mo ilit Plan olicies related to transit and ic cle networ s. 3rd Street ad acent to the Pro ect Site is identified as art of the TEN and PED. The Pro ect would u grade the e isting sidewal on 3rd Street along the Pro ect frontage to meet Mo ilit Plan standards. Additionall , ic cle ar ing that meets LAMC re uirements would e ro ided. Bic clists and edestrians would ha e se arate entrances from ehicles and the dri ewa widening would e designed in line with the Dri ewa Design Guidelines. No modifications to the roadwa width are ro osed, and com letion of the Pro ect would not reclude im lementation of the Mo ilit Plan. Therefore, the Pro ect would not conflict with Mo ilit Plan olicies related to an of the enhanced networ s in the Mo ilit Plan.

- Polic 2.10 Loading Area Facilitate the ro ision of ade uate on and off-street loading areas. The Pro ect would maintain its e isting loading area on-site. As such, deli er truc s would not encroach on or loc the u lic ROW. Therefore, the Pro ect would not conflict with Mo ilit Plan Polic 2.10.

- Polic 3.2 Peo le with Disa ilities Accommodate the needs of eo le with disa ilities when modif ing or installing infrastructure in the u lic ROW. Both ehicular and edestrian access to the Pro ect from the u lic ROW would e designed to meet the standards of ADA re uirements. Therefore, the Pro ect would not conflict with Mo ilit Plan Polic 3.2.

Plan for a Healthy Los Angeles

Plan for a Healthy Los Angeles: A Health and Wellness Element of the General Plan (LADCP, March 2015) (Plan for a Health Los Angeles) introduces guidelines for the Cit to follow to

enhance the Cit s osition as a regional leader in health and e uit , encourage health design and e uita le access, and increase awareness of e uit and en ironmental issues.

The Pro ect su orts health lifest les reducing single-occu ant ehicle tri s irtue of its location near to a undant high- ualit and high-fre uenc transit o tions and its ro ision of ic cle ar ing er the LAMC. The Pro ect does not interfere with an other olicies recommended the lan. Therefore, the Pro ect is consistent with Plan for a Health Los Angeles.

LAMC Section 12.21-A.16

LAMC Section 12.21.A.16 details the ic cle ar ing re uirements for new de elo ments. In accordance with the re uirements of the LAMC, the Pro ect would ro ide a total 104 ic cle ar ing s aces, including 10 short-term and 94 long-term ic cle ar ing s aces.

LAMC Section 12.26-J

LAMC Section 12.26J, the TDM Ordinance (1993), esta lishes TDM re uirements for ro ects with at least 25,000 sf of non-residential gross floor area. The Pro ect is not ro osing an non-residential floor area and, therefore, the TDM Ordinance does not a l .

LAMC Section 12.37

LAMC Section 12.37 ertains to de elo ment or e ansion of uildings along Highwa s and Collector Streets and a lies to streets designated Boule ard I, Boule ard II, A enue I, A enue II, and A enue III in the Mo ilit Plan. 3rd Street is a designated A enue II in the Mo ilit Plan. The Pro ect would ro ide a three-foot dedication to widen the sidewal to 15 feet, in accordance with the Mo ilit Plan standards for an A enue II. Thus, the Pro ect would e consistent with the re uirements of LAMC Section 12.37.

Vision Zero

The rimar goal of Vision Zero is to eliminate traffic deaths in the Cit 2025. Vision Zero identifies the HIN, a networ of streets where strategic in estments will ha e the iggest im act in reducing death and se ere in ur . Annuall de elo ed Action Plans em hasi e creating safe streets for all users, de elo ing a culture of safet , ado ting olic measures to romote safet , and using data to inform the most effecti e solutions. The information from this re iew comes from the Cit s *Vision Zero Los Angeles: 2018 Action Plan + Progress Report* (2018) and LADOT s list of acti e Vision Zero ro ects maintained at www.ladotli a lestreets.org.

3rd Street has een identified as art of the HIN within the immediate icinit of the Pro ect Site, howe er, has not een identified as a Priorit Corridor, and no im ro ements are currentl lanned ad acent to the Pro ect Site. Ne ertheless, the Pro ect would not reclude future Vision Zero safet im ro ements the Cit . Thus, the Pro ect does not conflict with Vision Zero.

Citywide Design Guidelines for Residential, Commercial, and Industrial Development

Citywide Design Guidelines (LADCP Ur an Design Studio, Octo er 2019), identifies ur an design rinci les to guide architects and de elo ers in designing high- ualit ro ects that meet the Cit s functional, aesthetic, and olic o ecti es and hel foster a sense of communit . *Citywide Design Guidelines* is organi ed around si design o ecti es. *City of Los Angeles Urban Design Principles* (LADCP, 2011) aims to im ro e mo ilit in the Cit through tra el mode choices.

The Pro ect would ro ide afforda le housing in ro imit to a road range of land uses and transit o tions within wal ing distance, which would encourage edestrian acti it . The Pro ect would e integrated within the surrounding area ro iding wider sidewal s and landsca ing. Pedestrian connections would e ro ided ia se arate entrances from ehicle entrances. In addition, all loading acti ities would occur on-site, which would limit s illo er of ehicle ueues into 3rd Street. Therefore, the Pro ect would align with *Citywide Design Guidelines* to ro ide a safe, comforta le, and accessi le e erience for all trans ortation modes.

Cumulative Analysis

In addition to otential Pro ect-s ecific im acts, the TAG re uires that the Pro ect e re iewed in com ination with near Related Pro ects to determine if there ma e a cumulati el significant im act resulting from inconsistenc with a articular rogram, lan, olic , or ordinance. In accordance with the TAG, the cumulati e anal sis must include consideration of an Related Pro ects within 0.5 miles of the Pro ect Site and an trans ortation s stem im ro ements in the icinit .

Each of the Related Pro ects considered in this cumulati e anal sis of consistenc with rograms, lans, olicies, and ordinances would e se aratel re iewed and a ro ed the Cit , including a chec for their consistenc with a lica le olicies. Collecti el , the Pro ect and the Related Pro ects add higher-densit de elo ment in a high- ualit transit area, which would increase edestrian acti it and reduce the need for single occu anc ehicles. Therefore, the Pro ect, together with the Related Pro ects identified in this stud , would neither create inconsistencies nor result in cumulati e im acts with res ect to the identified rograms, lans, olicies, and ordinances.

THRESHOLD T-2.1 – CAUSING SUBSTANTIAL VMT

The VMT metric is intended to romote the reduction of greenhouse gas emissions, the de elo ment of multimodal trans ortation networ s, and a di ersit of land uses. This encourages de elo ment that shortens the distance etween housing, o s, and ser ices, increases the a aila ilit of afforda le housing o tions in ro imit to u lic transit, offers attracti e non-ehicular trans ortation alternati es, ro ides strong trans ortation demand management rograms, and romotes wal ing and ic cling tri s.

VMT Impact Thresholds

The TAG identifies significance thresholds to a l to de elo ment ro ects when e aluating otential VMT im acts consistent with the California Go ernor s Office of Planning and Research (OPR) CEQA guidance. Threshold T-2.1 (Causing Su stantial Vehicle Miles Tra eled) of the TAG states that a residential ro ect would result in a significant VMT im act if it cannot demonstrate a erage household VMT er ca ita of at least 15% elow the e isting standard for the Area Planning Commission (APC) in which it is located.

The Pro ect is located in the Central APC which, according to the TAG, has an a erage household VMT er ca ita im act threshold of 6.0, including the 15% reduction target. Therefore, should the Pro ect s a erage household VMT er ca ita e e ual to or lower than 6.0, the Pro ect s o erall VMT im act would e less than significant.

VMT Analysis Methodology

LADOT de elo ed the *City of Los Angeles VMT Calculator Version 1.3* (Jul 2020) (VMT Calculator) to estimate ro ect-s ecific dail household VMT er ca ita and dail wor VMT er em lo ee for de elo ments within Cit limits, which are ased on the following t es of one-wa tri s:

- Home-Based Wor Production: origin tri s from a residential use to a wor lace destination
- Home-Based Other Production: origin tri s from a residential use to a non-wor lace destination (e.g., retail, restaurant, etc.)
- Home-Based Wor Attraction: destination tri s to a wor lace originating from a residential use

As detailed in *City of Los Angeles VMT Calculator Documentation* (LADOT and LADCP, Ma 2020), the household VMT er ca ita threshold a lies to home- ased wor roduction and home- ased other roduction tri s, and the wor VMT er em lo ee threshold a lies to home- ased wor attraction tri s, as the location and characteristics of residences and wor laces are often the main dri ers of VMT, as detailed in A endi 1 of *Technical Advisory on Evaluating Transportation Impacts in CEQA* (OPR, Decem er 2018).

Other t es of tri s included in the VMT Calculator include Non-Home-Based Other Production (tri s to a non-residential destination originating from a non-residential use), Home-Based Other Attraction (tri s to a non-wor lace destination originating from a residential use), and Non-Home-Based Other Attraction (tri s to a non-residential destination originating from a non-residential use), are not factored into the VMT er ca ita and VMT er em lo ee thresholds as those tri s are t icall locali ed and are assumed to ha e a negligi le effect on the VMT im act assessment. Howe er, those tri s are factored into the calculation of total ro ect VMT for LADOT screening ur oses when determining if further VMT anal sis for a ro ect would e re uired.

The methodolog in determining VMT ased on the VMT Calculator is consistent with the TAG.

Travel Behavior Zone (TBZ). The Cit de elo ed TBZ categories to determine the magnitude of VMT and ehicle tri reductions that could e achie ed through TDM strategies. As detailed in *City of Los Angeles VMT Calculator Documentation*, the de elo ment of the TBZs considered the o ulation densit , land use densit , intersection densit , and ro imit to transit of each Census tract in the Cit and are categori ed as follows:

1. *Suburban (Zone 1): Very low-density primarily centered around single-family homes and minimally connected street network.*

2. *Suburban Center (Zone 2): Low-density developments with a mix of residential and commercial uses with larger blocks and lower intersection density.*

3. *Compact Infill (Zone 3): Higher density neighborhoods that include multi-story buildings and well-connected streets.*

4. *Urban (Zone 4): High-density neighborhoods characterized by multi-story buildings with a dense road network.*

The VMT Calculator determines a ro ect s TBZ ased on the latitude and longitude of the ro ect address. The Pro ect is located in an Ur an (Zone 4) TBZ.

Trip Lengths. The VMT Calculator determines a ro ect s VMT ased on tri length information from the Cit s Tra el Demand Forecasting (TDF) Model. The TDF Model considers the traffic anal sis ones within 0.125 miles of a ro ect to determine the tri lengths and tri t es, which factor into the calculation of a ro ect s VMT.

Population and Employment Assumptions. As re iousl stated, the VMT thresholds identified in the TAG are ased on household VMT er ca ita and wor VMT er em lo ee. Thus, the VMT Calculator contains o ulation assum tions de elo ed ased on Census data for the Cit and em lo ment assum tions deri ed from multi le data sources, including *2012 Developer Fee Justification Study* (Los Angeles Unified School District, 2012), the San Diego Association of Go ernments Acti it Based Model, *Trip Generation Manual, 9th Edition* (Institute of Trans ortation Engineers, 2012), the US De artment of Energ , and other modeling resources. A summar of o ulation and em lo ment assum tions for arious land uses is ro ided in Ta le 1 of *City of Los Angeles VMT Calculator Documentation.*

TDM Measures. Additionall , the VMT Calculator measures the reduction in VMT resulting from a ro ect s incor oration of TDM strategies as ro ect design features or mitigation measures. The following se en categories of TDM strategies are included in the VMT Calculator:

1. Par ing
2. Transit
3. Education and Encouragement
4. Commute Tri Reductions
5. Shared Mo ilit
6. Bic cle Infrastructure
7. Neigh orhood Enhancement

TDM strategies within each of these categories ha e een em iricall demonstrated to reduce tri -ma ing or mode choice in such a wa as to reduce VMT, as documented in *Quantifying Greenhouse Gas Mitigation Measures* (California Air Pollution Control Officers Association, 2010). As detailed in *Transportation Demand Management Strategies in LA VMT Calculator* (LADOT, No em er 2019), the effecti eness of the TDM strategies a lied in the VMT Calculator is ased on the research resented in *Quantifying Greenhouse Gas Mitigation Measures,* as well as locali ed data. To ensure that the cumulati e effecti eness of the a lied TDM strategies is not o erstated, a multi licati e dam ening formula is a lied to account for otential o erla s in users of each strateg .

Project VMT Analysis

The VMT Calculator was used to e aluate Pro ect VMT and com are it to the VMT im act criteria. Ta le 5 summari es the Pro ect VMT e aluation. The detailed wor sheets from the VMT Calculator are ro ided in Attachment D.

Project VMT. It should e noted that as art of the Pro ect design, measures would e im lemented to reduce the num er of single occu anc ehicle tri s to the Pro ect Site. For the ur oses of this anal sis, the VMT e aluation accounted for the inclusion of short-term and long-term ic cle ar ing er LAMC re uirements.

As shown in Ta le 5[2], the VMT Calculator estimates that the Pro ect would generate 3,089 total household VMT. Thus, ased on the o ulation assum tions, the Pro ect would generate an a erage household VMT er ca ita of 3.4, which would not e ceed the significance thresholds for the Central APC (6.0 household VMT er ca ita). Therefore, the Pro ect would not result in a significant household VMT im act and no mitigation measures would e re uired.

Cumulative Analysis. The TAG ro ides that cumulati e effects of de elo ment ro ects are determined ased on the consistenc with the air ualit and GHG reduction goals of *2016–2040 Regional Transportation Plan / Sustainable Communities Strategy* (Southern California Association of Go ernments, Ado ted A ril 2016) (RTP/SCS) in terms of de elo ment location, densit , and intensit . The RTP/SCS resents a long-term ision for the region s trans ortation s stem through Year 2040 and alances the region s future mo ilit and housing needs with economic, en ironmental, and u lic health goals. The TAG also e lains that the RTP/SCS is the regional lan that demonstrates com liance with air ualit conformit re uirements and GHG reduction targets. As such, ro ects that are consistent with this lan in terms of de elo ment location, densit , and intensit are art of the regional solution for meeting air ollution and GHG goals. Pro ects that are deemed to e consistent would ha e a less than significant cumulati e im act on VMT. Therefore, ased on the conclusions a o e, the Pro ect would not result in a significant cumulati e VMT im act.

Moreo er, as re iousl detailed, the Pro ect is located within a TPA as defined the Cit and a High-Qualit Transit Area as defined the RTP/SCS. The Pro ect s s ecific location in close ro imit to high- ualit transit and other off-site retail, restaurant, commercial, and residential

[2] Without a lication of an TDM strategies, the Pro ect would also generate a erage household VMT er ca ita of 3.4, thus falling elow the Central APC significance threshold. Therefore, im lementation of TDM strategies as either ro ect design features or mitigation is not re uired for the Pro ect.

areas, along with its highl wal a le en ironment, su ort the conclusion that the Pro ect would achie e a VMT reduction greater than the a erage for the area, as concluded in the Pro ect VMT anal sis ro ided a o e.

Thus, the Pro ect encourages a ariet of trans ortation o tions and is consistent with the RTP/SCS goal of ma imi ing mo ilit and accessi ilit in the region. The Pro ect would also contri ute to the roducti it and use of the regional trans ortation s stem ro iding housing near transit and encourage acti e trans ortation ro iding new ic cle ar ing infrastructure and acti e street frontages, consistent with RTP/SCS goals. Therefore, the Pro ect would not result in a cumulati e VMT im act under Threshold T-2.1, and no further e aluation or mitigation measures would e re uired.

THRESHOLD T-2.2: SUBSTANTIALLY INDUCING ADDITIONAL AUTOMOBILE TRAVEL ANALYSIS

Threshold T-2.2 a lies to trans ortation ro ects that increase ehicular ca acit can lead to additional tra el on the roadwa networ , which can include induced ehicle tra el due to factors such as increased s eeds and induced growth.

The Pro ect does not include additional through traffic lanes on e isting or new highwa s, general ur ose lanes, high-occu anc ehicle lanes, ea eriod lanes, au iliar lanes, or lanes through grade-se arated interchanges. Accordingl , neither the Pro ect nor an im ro ements associated with it are considered a trans ortation ro ect. Therefore, Threshold T-2.2 does not a l to the Pro ect and no further e aluation is re uired.

THRESHOLD T-3: SUBSTANTIALLY INCREASING HAZARDS DUE TO A GEOMETRIC DESIGN FEATURE OR INCOMPATIBLE USE

Im acts regarding the otential increase of ha ards due to a geometric design feature generall relate to the design of access oints to and from a ro ect site, and ma include safet , o erational, or ca acit im acts. Im acts can e related to ehicle/ ehicle, ehicle/ ic cle, or ehicle/ edestrian conflicts as well as to o erational dela s caused ehicles slowing and/or ueuing to access a ro ect site. These conflicts ma e created the dri ewa configuration or through the lacement of ro ect dri ewa (s) in areas of inade uate isi ilit , ad acent to ic cle or edestrian facilities, or too close to us or congested intersections.

A re iew of Pro ect access oints, internal circulation, and ar ing access was erformed to determine if the Pro ect would su stantiall increase ha ards due to geometric design features, including safet , o erational, or ca acit im acts.

Vehicles

As re iousl detailed, ehicular access to the Pro ect Site would e ro ided ia an e isting dri ewa along 3rd Street, a designated A enue II. The dri ewa would e im ro ed in accordance with Cit standards and widened to etter accommodate fire truc access. The dri ewa would continue to ro ide full access and accommodate oth left- and right-turn ingress and egress

maneu ers. 3rd Street currentl ro ides a two-wa left-turn median ad acent to the Pro ect Site, which would allow for oth left and right-turn ingress and egress maneu ers at the dri ewa without causing s illo er into the through traffic lanes. Ade uate ueuing area would also e ro ided at the dri ewa internal to the Pro ect Site to limit an otential s illo er into the u lic ROW.

The dri ewa is located etween the signali ed intersections of Al arado Street & 3rd Street, located a ro imatel 600 feet to the west, and Bonnie Brae Street & 3rd Street, located a ro imatel 150 feet to the east. The o erations of the signali ed intersections would create ga s in traffic to allow ehicles to safel e it the Pro ect dri ewa onto 3rd Street.

Therefore, as detailed a o e, the ehicular access and internal circulation lan for the Pro ect would e designed to minimi e ehicular conflicts, and safet im acts to the a utting street s stem are not antici ated.

Pedestrians & Bicycles

Bic cle and edestrian access would e ro ided ia se arated edestrian entrances along 3rd Street, which has een identified as art of Vision Zero s High In ur Networ and the Mo ilit Plan s Pedestrian Enhanced Networ . The Pro ect would dedicate three feet along 3rd Street to im ro e the sidewal s ad acent to the Pro ect Site to meet Cit standards. In addition, the dri ewa s would continue to ro ide safe edestrian crossings.

Currentl , no ic cle facilities are ro ided along 3rd Street ad acent to the Pro ect Site. Therefore, the dri ewa would not ose a safet ha ard to ic clists.

Cumulative Analysis

The TAG indicates that cumulati e im acts for Threshold T-3 re uire a re iew of related ro ects with access oints ro osed along the same loc (s) as a ro osed ro ect in order to determine the com ined im act and the ro osed ro ect s contri ution. None of the Related Pro ects identified in Ta le 3 ro ides access along the same loc as the Pro ect. Thus, the Pro ect and Related Pro ects would not result in a cumulati e im act under Threshold T-3.

CALTRANS ANALYSIS

LADOT issued the Cit Freewa Guidance identif ing re uirements for a CEQA safet anal sis of Caltrans facilities as art of a trans ortation assessment.

Methodology

The Cit Freewa Guidance relates to the identification of otential safet im acts at freewa off-ram s as a result of increased traffic from de elo ment ro ects. It ro ides a methodolog and significance criteria for assessing whether additional ehicle ueueing at off-ram s could result in

a safet im act due to s eed differentials etween the mainline freewa lanes and the ueued ehicles at the off-ram .

Based on the Cit Freewa Guidance, a trans ortation assessment for a de elo ment ro ect must include anal sis of an freewa off-ram where the ro ect adds 25 or more ea hour tri s. A ro ect would result in a significant im act at such a ram if each of the following three criteria were met:

1. Under a scenario anal ing future conditions u on ro ect uildout, with ro ect traffic included, the off-ram ueue would e tend to the mainline freewa lanes[3].

2. A ro ect would contri ute at least two ehicle lengths (50 feet, assuming 25 feet er ehicle) to the ueue.

3. The a erage s eed of mainline freewa traffic ad acent to the off-ram during the anal ed ea hour(s) is greater than 30 m h.

Should a significant im act e identified, mitigation measures to e considered include TDM strategies to reduce a ro ect s tri generation, in estments in acti e trans ortation or transit s stem infrastructure to reduce a ro ect s tri generation, changes to the traffic signal timing or lane assignments at the ram intersection, or h sical changes to the off-ram . An h sical change to the ram would ha e to im ro e safet , not induce greater VMT, and not result in secondar en ironmental im acts.

Analysis

Based on the Pro ect s tri generation estimates and tri assignments, the Pro ect would not add 25 or more ea hour tri s to an freewa off-ram . Therefore, no further freewa off-ram ueuing anal sis is re uired. Furthermore, the Pro ect would not result in a significant safet im act, and no correcti e measures at an freewa off-ram s would e re uired.

NON-CEQA TRANSPORTATION ANALYSIS

The non-CEQA trans ortation anal sis of the Pro ect includes sections related to the Pro ect traffic, ro osed access ro isions, safet , and circulation o erations of the Pro ect, and edestrian, ic cle, and transit facilities in the icinit of the Pro ect, as well as the Pro ect s o erational conditions and effects due to Pro ect construction.

Per Section 3.1 of the TAG, an deficiencies identified ased on the non-CEQA trans ortation anal sis is not intended to e inter reted as thresholds of significance, or significance criteria for ur oses of CEQA re iew unless otherwise s ecificall identified in Section 2. Section 3 of the TAG identifies the following four non-CEQA trans ortation anal ses for re iewing otential trans ortation deficiencies that ma result from a de elo ment ro ect:

[3] If an au iliar lane is ro ided on the freewa , then half the length of the au iliar lane is added to the ram storage length.

- Pedestrian, Bic cle, and Transit Access Assessment
- Pro ect Access, Safet , and Circulation E aluation
- Residential Street Cut-Through Anal sis
- Pro ect Construction

PEDESTRIAN, BICYCLE, AND TRANSIT ASSESSMENT

The TAG indicates that the edestrian, ic cle, and transit facilities assessment is intended to determine a ro ect s otential effect on edestrian, ic cle, and transit facilities in the icinit of the ro osed ro ect. The deficiencies could e h sical (through remo al, modification, or degradation of facilities) or demand- ased (adding edestrian or ic cle demand to inade uate facilities).

Project Modifications

As re iousl descri ed, ehicular access to the Pro ect would e ro ided ia an e isting dri ewa located along 3rd Street. The dri ewa would e shared with the ad acent Miramar Towers senior a artment uilding. The Pro ect would widen the dri ewa three feet to etter accommodate fire truc access this im ro ement would e designed in accordance with LADOT standards and would not resent a significant safet ha ard for edestrians or ic clists. Further, the utili ation of an e isting dri ewa for ehicular access to the Pro ect Site would limit increased interru tions to edestrian flow along 3rd Street.

The Pro ect would ro ide a three-foot dedication along the 3rd Street Pro ect frontage to widen the sidewal width to meet the designated standards for an A enue II in the Mo ilit Plan. The Pro ect would also im ro e the ad acent sidewal facilities to meet ADA re uirements for slo es and assa le s aces, including ADA com liance at dri ewa s. The Pro ect would not remo e or cause degradation of e isting sidewal s, crosswal s, edestrian refuge areas or cur e tensions, nor would the Pro ect narrow e isting sidewal s, aths, crossings, or access oints.

The Pro ect would not result in the deterioration of an e isting ic cle facilities or transit facilities as no dedicated ic cle facilities or transit sto s are located ad acent to the Pro ect Site.

Intensification of Use

Although the Pro ect would result in an increase in edestrian olume along edestrian facilities and edestrian connections to transit sto s along 3rd Street, continuous edestrian facilities are ro ided ad acent to the Pro ect Site that connect to the signali ed intersection of Bonnie Brae Street & 3rd Street, which ro ides signali ed edestrian hasing with edestrian ush uttons and mar ed edestrian crossings, including continental crosswal s along the east, south, and west legs. Thus, the increase in edestrian olume resulting from the Pro ect would not warrant the installation of additional edestrian facilities. Further, the Pro ect would dedicate three feet along 3rd Street ad acent to the Pro ect Site to im ro e the sidewal to meet Cit standards.

PROJECT ACCESS AND CIRCULATION EVALUATION

Pro ect access and circulation constraints relate to the ro ision of access to and from the Pro ect Site, and ma include safet , o erational, or ca acit constraints. Constraints can e related to ehicular/ ehicular, ehicular/ ic cle, or ehicular/ edestrian constraints as well as to o erational dela s. These conflicts ma e created the dri ewa configuration or through the lacement of ro ect dri ewa (s) in areas of inade uate isi ilit , ad acent to ic cle or edestrian facilities, or too close to an intersection or crosswal .

Vehicular Access & Internal Circulation

Vehicular access to the Pro ect Site would e ro ided ia the e isting dri ewa along 3rd Street and would e shared with the ad acent Miramar Towers senior a artment uilding. 3rd Street currentl ro ides a two-wa left-turn median ad acent to the Pro ect Site, which would allow for oth left and right-turn ingress and egress maneu ers at the dri ewa without causing s illo er into the through traffic lanes. Ade uate ueuing area would also e ro ided at the dri ewa internal to the Pro ect Site to limit an otential s illo er into the u lic ROW.

With de elo ment of the Pro ect, the dri ewa would e widened and im ro ed to safel accommodate fire truc access, consistent with Cit design standards. The dri ewa is located a ro imatel 600 feet east of the signali ed intersection of Al arado Street & 3rd Street and a ro imatel 150 west of the signali ed intersection of Bonnie Brae Street & 3rd Street. The o erations of these signali ed intersections would create ga s in traffic to allow ehicles to safel enter/e it the Pro ect dri ewa along 3rd Street.

The Pro ect dri ewa is antici ated to safel accommodate oth the Pro ect and the e isting Miramar Towers senior a artment uilding without causing significant ueues at the dri ewa and along the ad acent roadwa networ . A detailed o erational anal sis is resented elow.

Pedestrians and Bicycles

Pedestrian access to the Pro ect Site would e ro ided ia im ro ed sidewal s along 3rd Street. The Pro ect access locations would e designed to ro ide ade uate sidewal s widths and connecti it that meet the Cit s re uirements to further rotect edestrian safet . The dri ewa and internal circulation s stem would e designed to ma imi e sight distance for all tra el modes. The design is sensiti e to not lace street trees and other otential im ediments in the sidewal that would affect sight distance and isi ilit .

Residents, guests, and em lo ees arri ing ic cle would ha e the same access o ortunities as edestrian isitors. Due to the minimal ic cle traffic demand on 3rd Street and the alignment of the Pro ect dri ewa , the dri ewa design is not antici ated to result in ehicle- ic cle conflicts. In order to su ort and facilitate ic cle use to and from the Pro ect Site, short-term and long-term ic cle ar ing s aces would e ro ided.

Operational Evaluation

Intersection o eration conditions were e aluated at the two stud intersections for t ical wee da morning (7:00 AM to 10:00 AM) and afternoon (3:00 PM to 6:00 PM) ea eriods. The following traffic conditions were de elo ed and anal ed as art of this stud :

- E isting with Pro ect Conditions (Year 2020) This anal sis condition anal es the otential intersection o erating conditions that could e e ected if the Pro ect were uilt under e isting conditions. In this anal sis, the Pro ect-generated traffic is added to the E isting Conditions.

- Future with Pro ect Conditions (Year 2023) This anal sis condition anal es the otential intersection o erating conditions that could e e ected if the Pro ect were full occu ied in the ro ected uildout ear. In this anal sis, the Pro ect-generated traffic is added to Future without Pro ect Conditions (Year 2023).

Methodology. In accordance with the TAG, the intersection dela and ueue anal ses for the o erational e aluation were conducted using the *Highway Capacity Manual, 6th Edition* (Trans ortation Research Board, 2016) (HCM) methodolog . The HCM methodolog was im lemented using S nchro software and signal timing wor sheets from the Cit to anal e intersection o erating conditions. The HCM signali ed methodolog calculates the a erage dela , in seconds, for each ehicle assing through the intersections. Ta le 6 resents a descri tion of the LOS categories, which range from e cellent, nearl free-flow traffic at LOS A, to sto -and-go conditions at LOS F, for signali ed and unsignali ed intersections. The ueue lengths were estimated using S nchro, which re orts the 95th ercentile ueue length in feet. The re orted ueues are calculated using the HCM signali ed intersection methodolog .

LOS and ueuing wor sheets for each scenario are ro ided in Attachment E.

Existing with Project Conditions. The Pro ect-onl morning and afternoon ea hour traffic olumes were added to the E isting morning and afternoon ea hour traffic olumes, resulting in the E isting with Pro ect Conditions traffic olumes illustrated in Figure 17, re resenting Pro ect o eration under E isting Conditions.

Ta le 7 summari es the results of the E isting and E isting with Pro ect Conditions during the wee da morning and afternoon ea hours for the two stud intersections. As shown, oth stud intersections are antici ated to continue to o erate at LOS C or etter during oth the morning and afternoon ea hours under E isting with Pro ect Conditions.

Future with Project Conditions. All future ad ustments, including cumulati e traffic growth (i.e., am ient growth and Related Pro ect traffic) and trans ortation infrastructure im ro ements were incor orated into this anal sis.

The Pro ect-onl morning and afternoon ea hour traffic olumes were added to the Future without Pro ect (Year 2023) morning and afternoon ea hour traffic olumes, resulting in the Future with Pro ect Conditions traffic olumes illustrated in Figure 18, re resenting conditions after de elo ment of the Pro ect in Year 2023.

Ta le 8 summari es the results of the Future without Pro ect (Year 2026) and Future with Pro ect Conditions during the wee da morning and afternoon ea hours for the two stud intersections. As shown, oth stud intersections are antici ated to continue to o erate at LOS C or etter during oth the morning and afternoon ea hours under Future with Pro ect Conditions.

Intersection Queuing Analysis. The ueue lengths were estimated using S nchro software, which re orts the 95th ercentile ueue length for signali ed intersection at each a roach lane. S nchro ueue results that are re orted in ehicle-length were con erted to feet multi l ing each ehicle 25 feet to account for the a erage length of a ehicle lus distance etween ehicles in the ueue. The re orted ueues are calculated using the HCM signali ed and unsignali ed intersection methodolog .

Detailed ueuing anal sis wor sheets are ro ided in Attachment E.

RESIDENTIAL STREET CUT-THROUGH ANALYSIS

The o ecti e of the residential street cut-through anal sis is to determine otential increases in a erage dail traffic olumes on designated Local Streets, as classified in the Cit s General Plan, that can e identified as cut-through tri s generated the Pro ect and that can ad ersel affect the character and function of those streets.

Section 3.5.2 of the TAG ro ides a list of uestions to assess whether the Pro ect would negati el affect residential streets. The net dail tri s generated the Pro ect are not antici ated to cause a traffic shift from 3rd Street, a designated A enue II, to alternati e routes along residential Local Streets. In addition, access to the Pro ect is ro ided along 3rd Street, in ro imit to regional connections. Thus, ased on the location of the Pro ect Site, it is unli el that local residential streets would ser e as an alternati e route. Therefore, the addition of Pro ect tri s would not ad ersel affect an residential Local Streets.

CONSTRUCTION IMPACT ANALYSIS

The construction im act anal sis relates to the tem orar im acts that ma result from the construction acti ities associated with the Pro ect and was erformed in accordance with Section 3.4 of the TAG.

Section 3.4.3 of the TAG identifies three t es of in-street construction im acts that re uire further anal sis to assess the effects of Pro ect construction on the e isting edestrian, ic cle, transit, or ehicle circulation. The three t es of im acts and related o ulations are:

1. Tem orar trans ortation constraints otential im acts on the trans ortation s stem
2. Tem orar loss of access otential im acts on isitors entering and lea ing sites
3. Tem orar loss of us sto s or rerouting of us lines otential im acts on us tra elers

The factors used to determine the significance of a ro ect s im acts in ol e the li elihood and e tent to which an im act might occur, the otential incon enience caused to users of the trans ortation s stem, and consideration for u lic safet . Construction acti ities could otentiall interfere with edestrian, ic cle, transit, or ehicle circulation and accessi ilit to ad oining areas.

Proposed Construction Schedule

The Pro ect is antici ated to e constructed o er a eriod of a ro imatel 24 months. The construction eriod would include su - hases of site clearing and utilit relocation, uilding structure, and uilding s in and finishes. Pea haul truc acti it occurs during the site clearing and utilit relocation hase, and ea wor er acti it occurs during uilding s in and finishes hase. These two su - hases of construction were studied in greater detail.

Site Clearing and Utility Relocation Phase

The ea eriod of truc acti it during construction of the Pro ect would occur during the site clearing and utilit relocation hase of the Pro ect Site.

Haul truc s would tra el on a ro ed truc routes designated within the Cit from 3rd Street to US 101. The haul route will e re iewed and a ro ed the Cit . Based on ro ections com iled for the Pro ect, a ro imatel 8,500 cu ic ards of material would e e ca ated and remo ed from the Pro ect Site and would re uire on a erage 40 haul truc s er da . In addition, u to one deli er truc is antici ated er da during this hase. Thus, on a erage 82 dail haul truc tri s (41 in ound, 41 out ound) are forecast to occur during the site clearing and utilit relocation hase, with a ro imatel 14 tri s er hour (se en in ound, se en out ound) uniforml o er a t ical si -hour haul eriod (i.e., outside of commuter ea hours).

Transportation Research Circular No. 212, Interim Materials on Highway Capacity (Trans ortation Research Board, 1980) defines assenger car e ui alenc (PCE) for a hea ehicle as the num er of through mo ing assenger cars to which it is e ui alent ased on the hea ehicle s headwa and dela -creating effects. Ta le 8 of *Transportation Research Circular No. 212* and E hi it 12-25 of the HCM suggest a PCE of 2.0 for truc s. Assuming a PCE factor of 2.0, the 82 truc tri s would e e ui alent to 164 dail PCE tri s. The 14 hourl truc tri s would e e ui alent to 28 PCE tri s (14 in ound, 14 out ound) er hour.

An antici ated total of 16 construction wor ers would e on-site during this hase. Assuming minimal car ooling amongst those wor ers, an a erage ehicle occu anc (AVO) of 1.135 ersons er ehicle was a lied, as ro ided in *CEQA Air Quality Handbook* (South Coast Air Qualit Management District, 1993). Therefore, 16 wor ers would result in 14 ehicles in ound and 14 ehicles out ound on a dail asis during this hase.

With im lementation of the Construction Management Plan, it is antici ated that almost all haul truc acti it to and from the Pro ect Site would occur outside of the morning and afternoon commuter ea hours. In addition, construction wor er tri s to and from the Pro ect Site would also occur outside of the ea hours. Therefore, no ea hour construction traffic im acts are e ected during the site clearing and utilit relocation hase of construction.

Building Skin and Finishes Phase

According to construction ro ections re ared for the Pro ect, the uilding s in and finishes su hase would em lo the most construction wor ers, with an antici ated total of 206 wor ers er da for all com onents of the uilding after the structure is com leted.

In general, the hours of construction t icall re uire wor ers to e on-site efore the wee da morning commuter ea eriod and allow them to lea e efore or after the afternoon commuter ea eriod (i.e., arri e at the site rior to 7:00 AM and de art efore 4:00 PM or after 6:00 PM). Therefore, most, if not all, construction wor er tri s would occur outside of the t ical wee da commuter ea eriods.

Assuming an AVO of 1.135 ersons er ehicle, 206 wor ers would result in a total of 153 ehicles that would arri e and de art from the Pro ect Site each da . The estimated num er of dail tri s associated with the construction wor ers is a ro imatel 306 (153 in ound and 153 out ound tri s), ut nearl all of those tri s would occur outside of the ea hours, as descri ed a o e. As such, the uilding hase of Pro ect construction would not cause a significant traffic im act at an of the stud intersections.

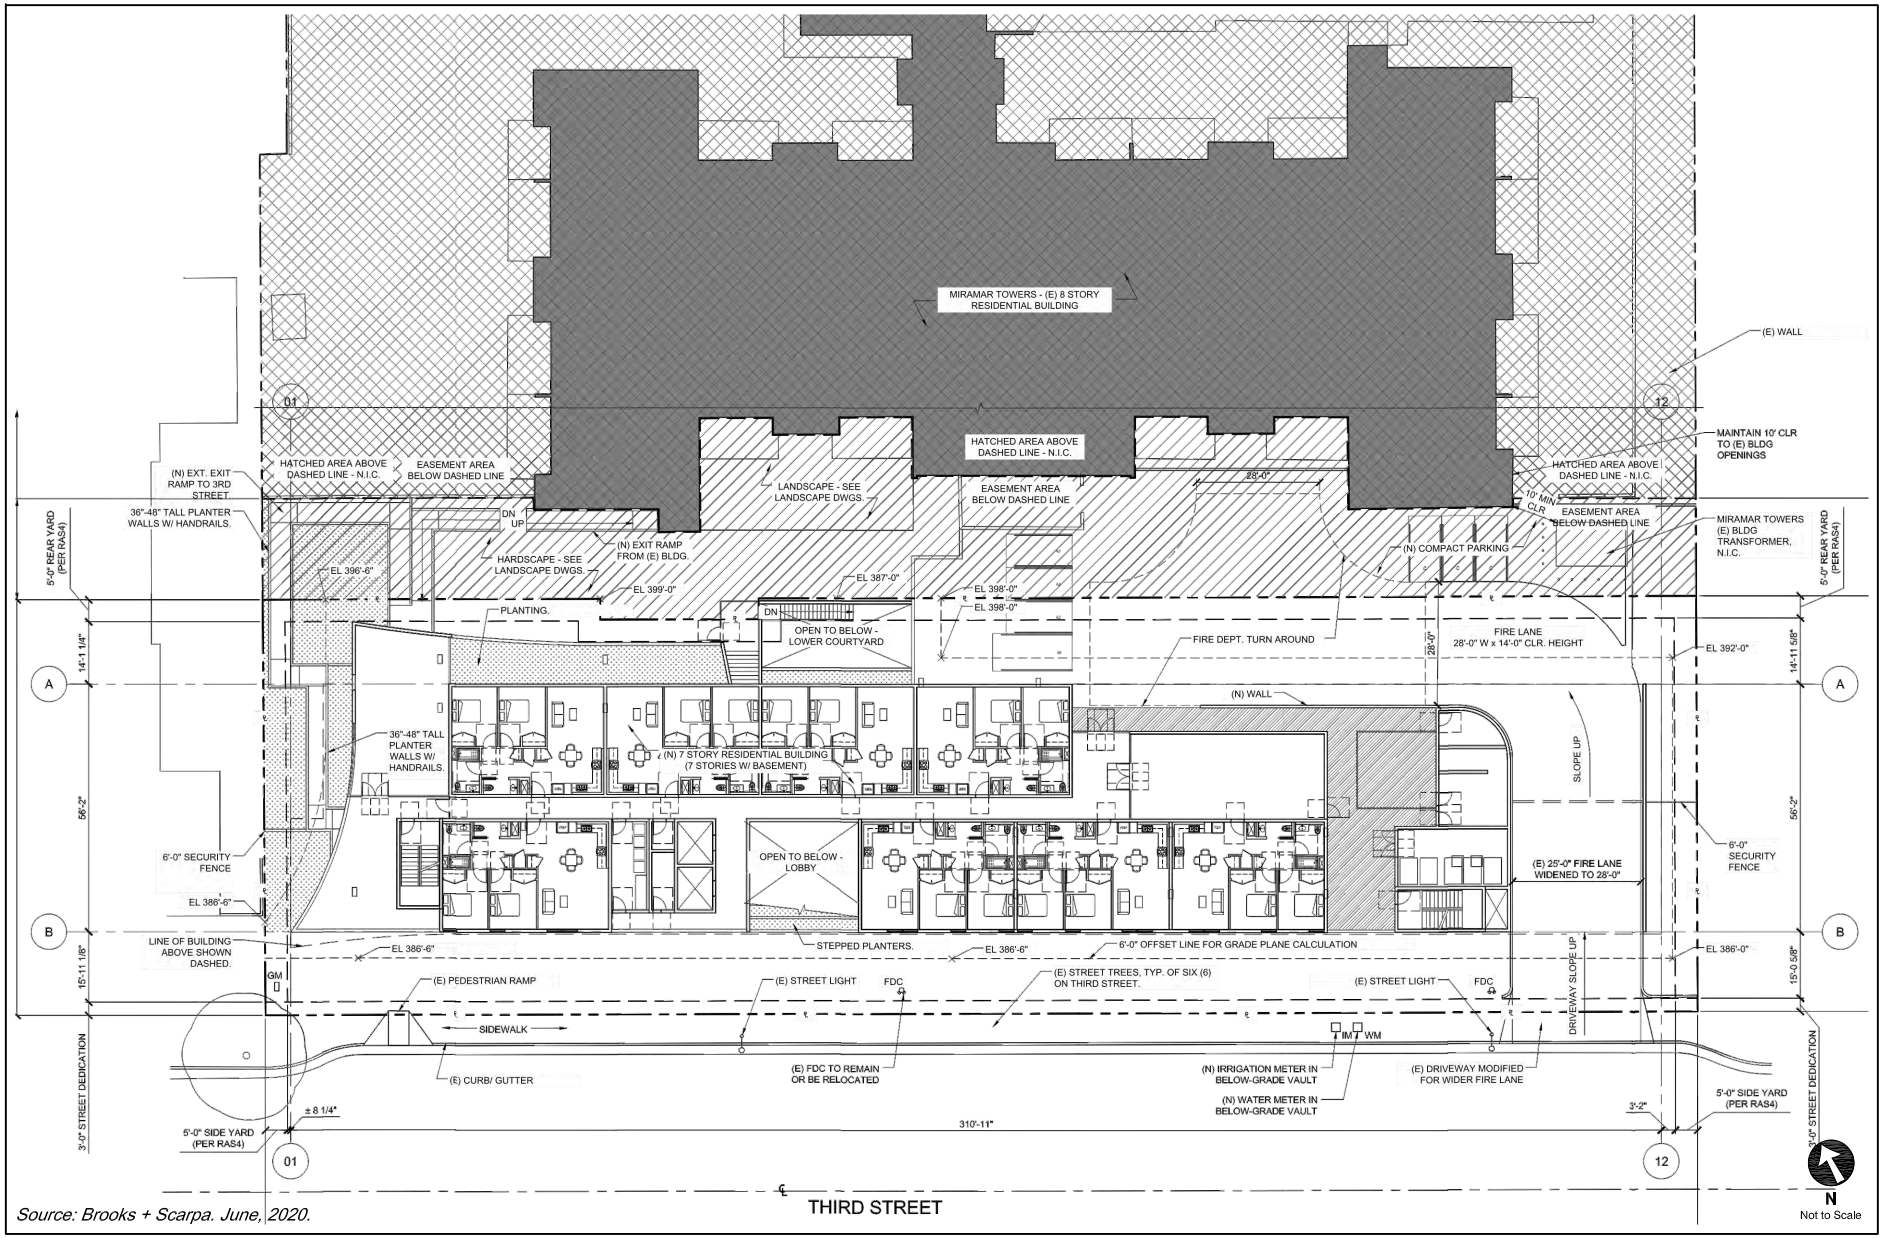
Par ing for construction wor ers would e secured off-site in a near ar ing facilit . Restrictions against wor ers ar ing in the u lic ROW in the icinit of (or ad acent to) the Pro ect Site would e identified as art of the Construction Management Plan. All construction materials storage and truc staging would e contained on-site or ro ided on-demand/as needed to reduce the need for storage.

Potential Impacts on Access, Transit, And Parking

Pro ect construction is not e ected to create ha ards for roadwa tra elers, us riders, or ar ers, so long as commonl racticed safet rocedures for construction are followed. Such rocedures and other measures (e.g., to address tem orar traffic control, lane closures, sidewal closures, etc.) would e incor orated into the Construction Management Plan. The construction-related im acts associated with access to other usinesses and transit are antici ated to e less than significant, and the im lementation of the Construction Management Plan descri ed elow would further reduce those im acts.

Access. Construction acti ities would e rimaril contained within the Pro ect Site oundaries. All construction e ui ment will e staged entirel on-site or deli ered on an as needed asis. Howe er, tem orar closures of the u lic ROW (e.g., tra el lanes, sidewal s) ad acent to the Pro ect Site ma e re uired during construction. Tem orar traffic controls (e.g., use of directional signage, maintaining continuous and uno structed edestrian aths, and/or ro iding o erhead co ering) would e ro ided to direct traffic and/or edestrians safel around an closures, as re uired in the Construction Management Plan.

Transit. The construction acti ities of the Pro ect would not re uire tem orar transit sto relocation for an routes along 3rd Street. The Pro ect would coordinate with Metro to ensure no construction related im acts to the transit s stem would occur. Metro would e notified should the Pro ect construction affect an other Metro facilities.

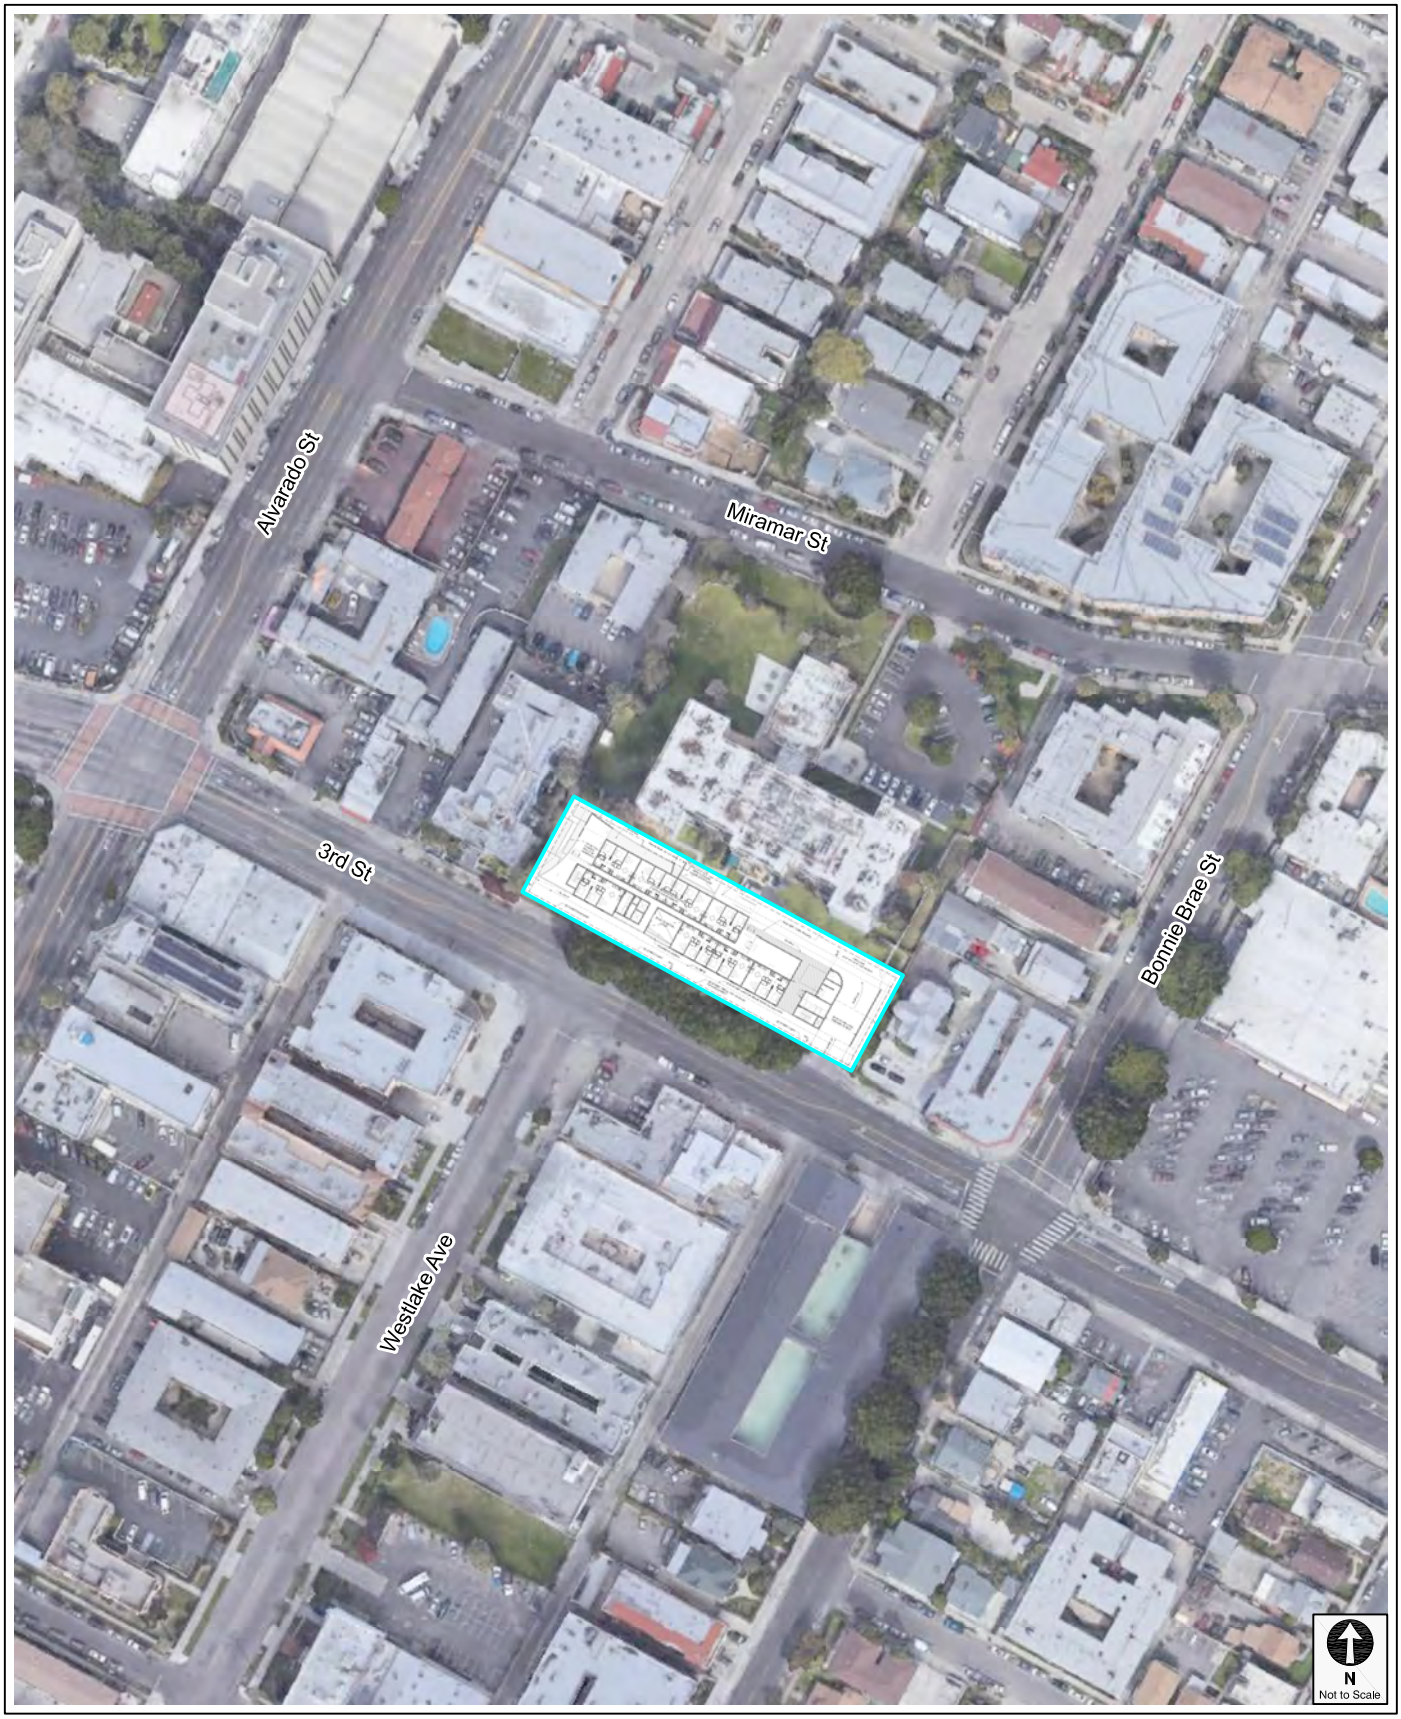


Parking. Par ing is not ermitted along 3rd Street ad acent to the Pro ect Site. Howe er, construction acti ities ma result in a tem orar remo al of u to three metered ar ing s aces on the south side of 3rd Street. As such, coordination with LADOT would e included in the Construction Management Plan.

Construction Management Plan

A detailed Construction Management Plan, including street closure information, a detour lan, haul routes, and a staging lan, would e re ared and su mitted to the Cit for re iew and a ro al, rior to commencing construction. The Construction Management Plan would formali e how construction would e carried out and identif s ecific actions that would e re uired to reduce effects on the surrounding communit . The Construction Management Plan shall e ased on the nature and timing of the s ecific construction acti ities and other ro ects in the icinit of the Pro ect Site.

CONCLUSION



The Pro ect is consistent with the Cit s lans, rograms, ordinances, and olicies and would not generate an VMT, geometric design ha ard, or emergenc access im acts. Therefore, the Pro ect would not result in a significant and una oida le CEQA im act. In addition, the Pro ect would not result in a significant safet im act on an Caltrans freewa off-ram facilities. Furthermore, the Pro ect is not antici ated to result in an o erational deficiencies on the ad acent trans ortation s stem.

Memorandum of Understanding

LADOT

Transportation Assessment Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: Miramar De elo ment

Project Address: 1917-2005 1/2 W 3rd Street

Project Description: The Pro ect ro oses to construct an afforda le housing a artment uilding with 137 afforda le units.

LADOT Project Case Number: _____ Project Site Plan attached? *(Required)* ■ Yes ☐ No

II. TRIP GENERATION

Geographic Distribution: N 25 % S 15 % E 35 % W 25 %

Illustration of Project trip distribution percentages at Study intersections attached? *(Required)* ■ Yes ☐ No

Trip Generation Rate(s): ITE 10th Edition / Other LADOT Traffic Assessment Guidelines (TAG)

Trip Generation Adjustment *(Exact amount of credit subject to approval by LADOT)*	**Yes**	**No**
Transit Usage	☐	☒
Transportation Demand Management	☐	☒
Existing Active Land Use	☐	☒
Previous Land Use	☐	☒
Internal Trip	☐	☒
Pass-By Trip	☐	☒

Trip generation table including a description of the proposed land uses, ITE rates, estimated morning and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. attached? *(Required)* ■ Yes ☐ No

	IN	OUT	TOTAL
AM Trips	25	42	67
PM Trips	27	21	48

Daily Trips 492
(From VMT Calculator)

III. STUDY AREA AND ASSUMPTIONS

Project Buildout Year: 2023 Ambient Growth Rate: 1 % Per Yr.

Related Projects List, researched by the consultant and approved by LADOT, attached? *(Required)* ■ Yes ☐ No

Map of Study Intersections/Segments attached? ■ Yes ☐ No

STUDY INTERSECTIONS *(May be subject to LADOT revision after access, safety and circulation analysis)*

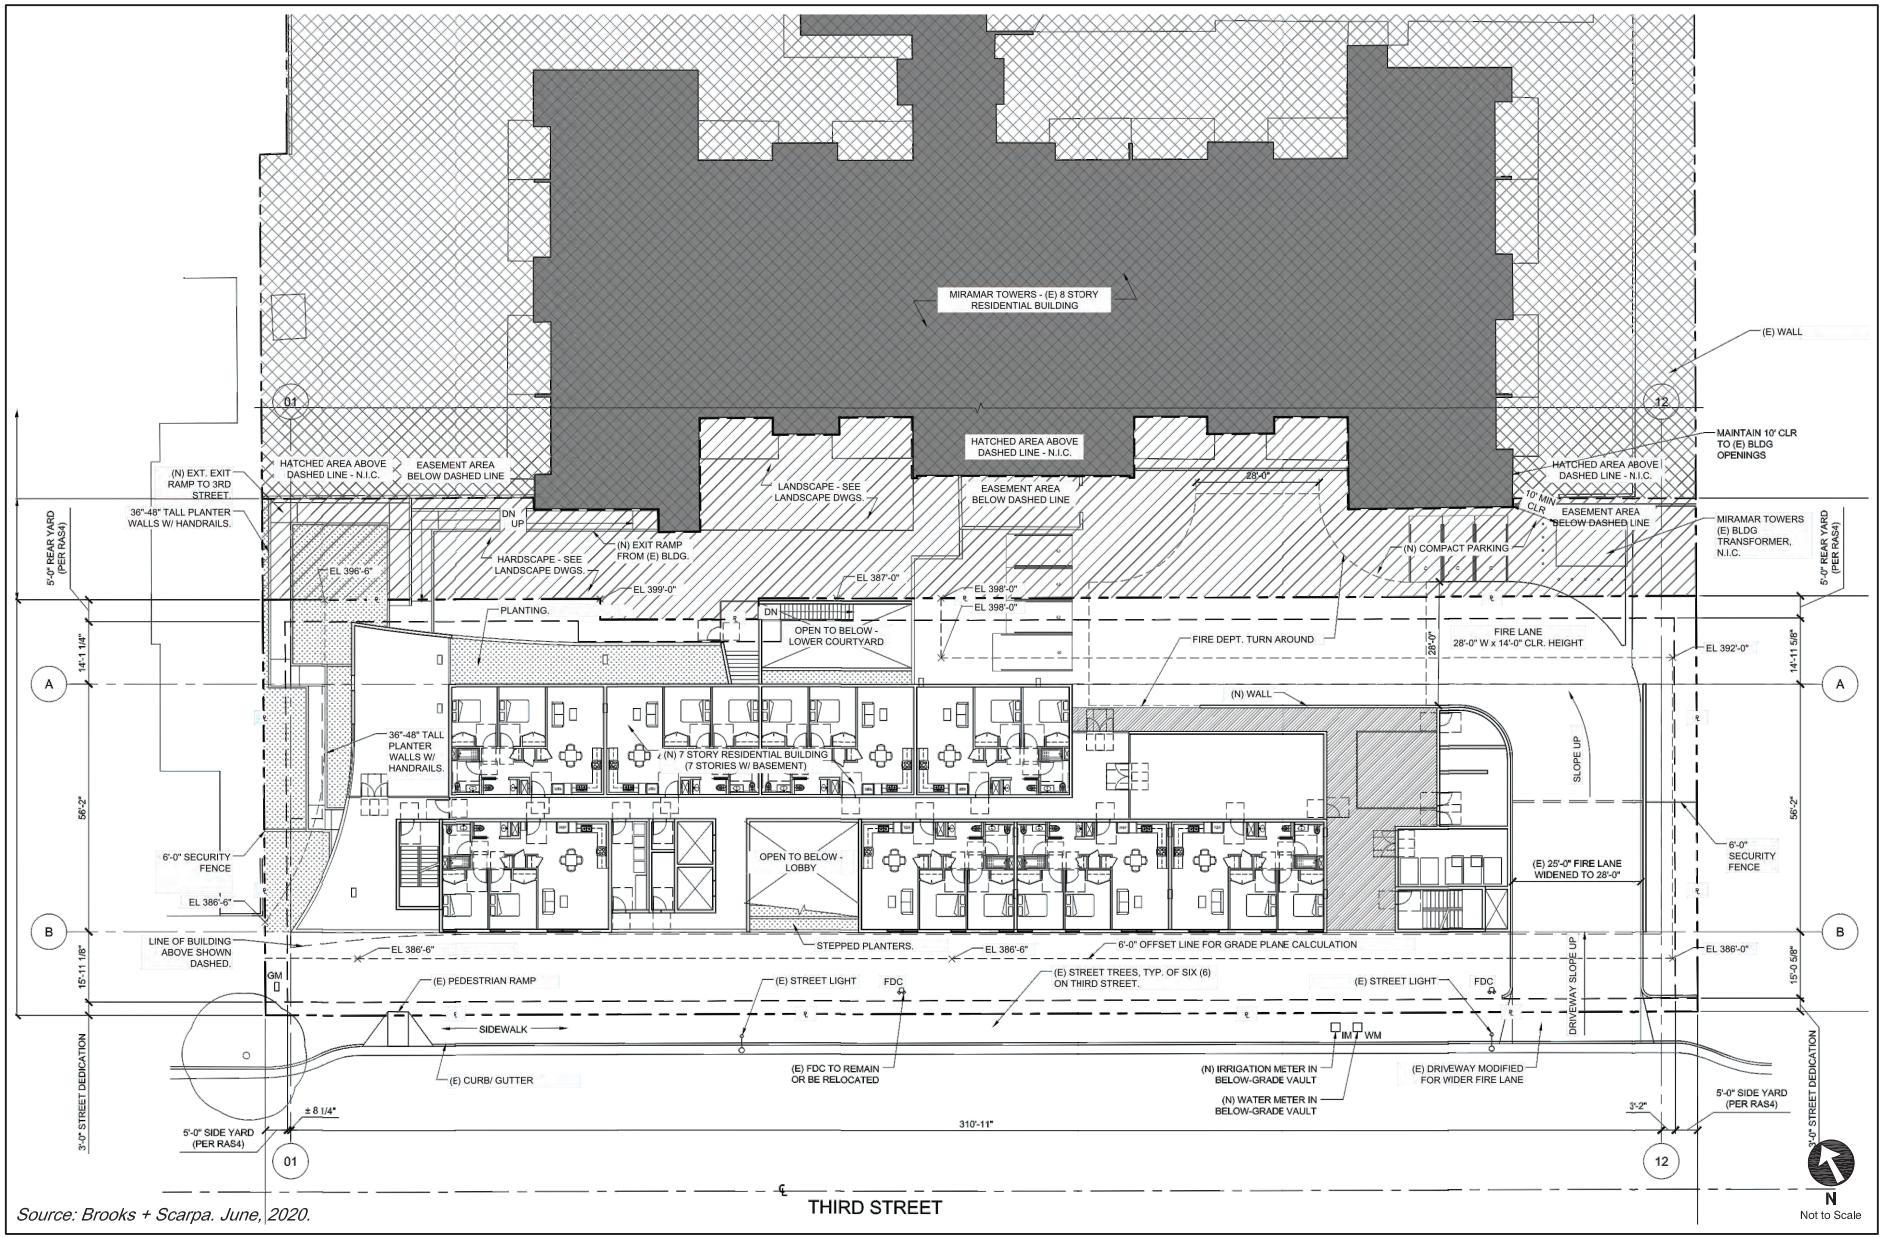
1 Al arado Street & 3rd Street
2 Bonnie Brae Street & 3rd Street
3 _____
4 _____
5 _____
6 _____

Is this Project located on a street within the High Injury Network? ■ Yes ☐ No

IV. ACCESS ASSESSMENT

Is the project on a lot that is 0.5-acre or more in total gross area? ☐ Yes ■ No

Is the project's frontage 250 linear feet or more along an Avenue or Boulevard as classified by the City's General Plan? ■ Yes ☐ No

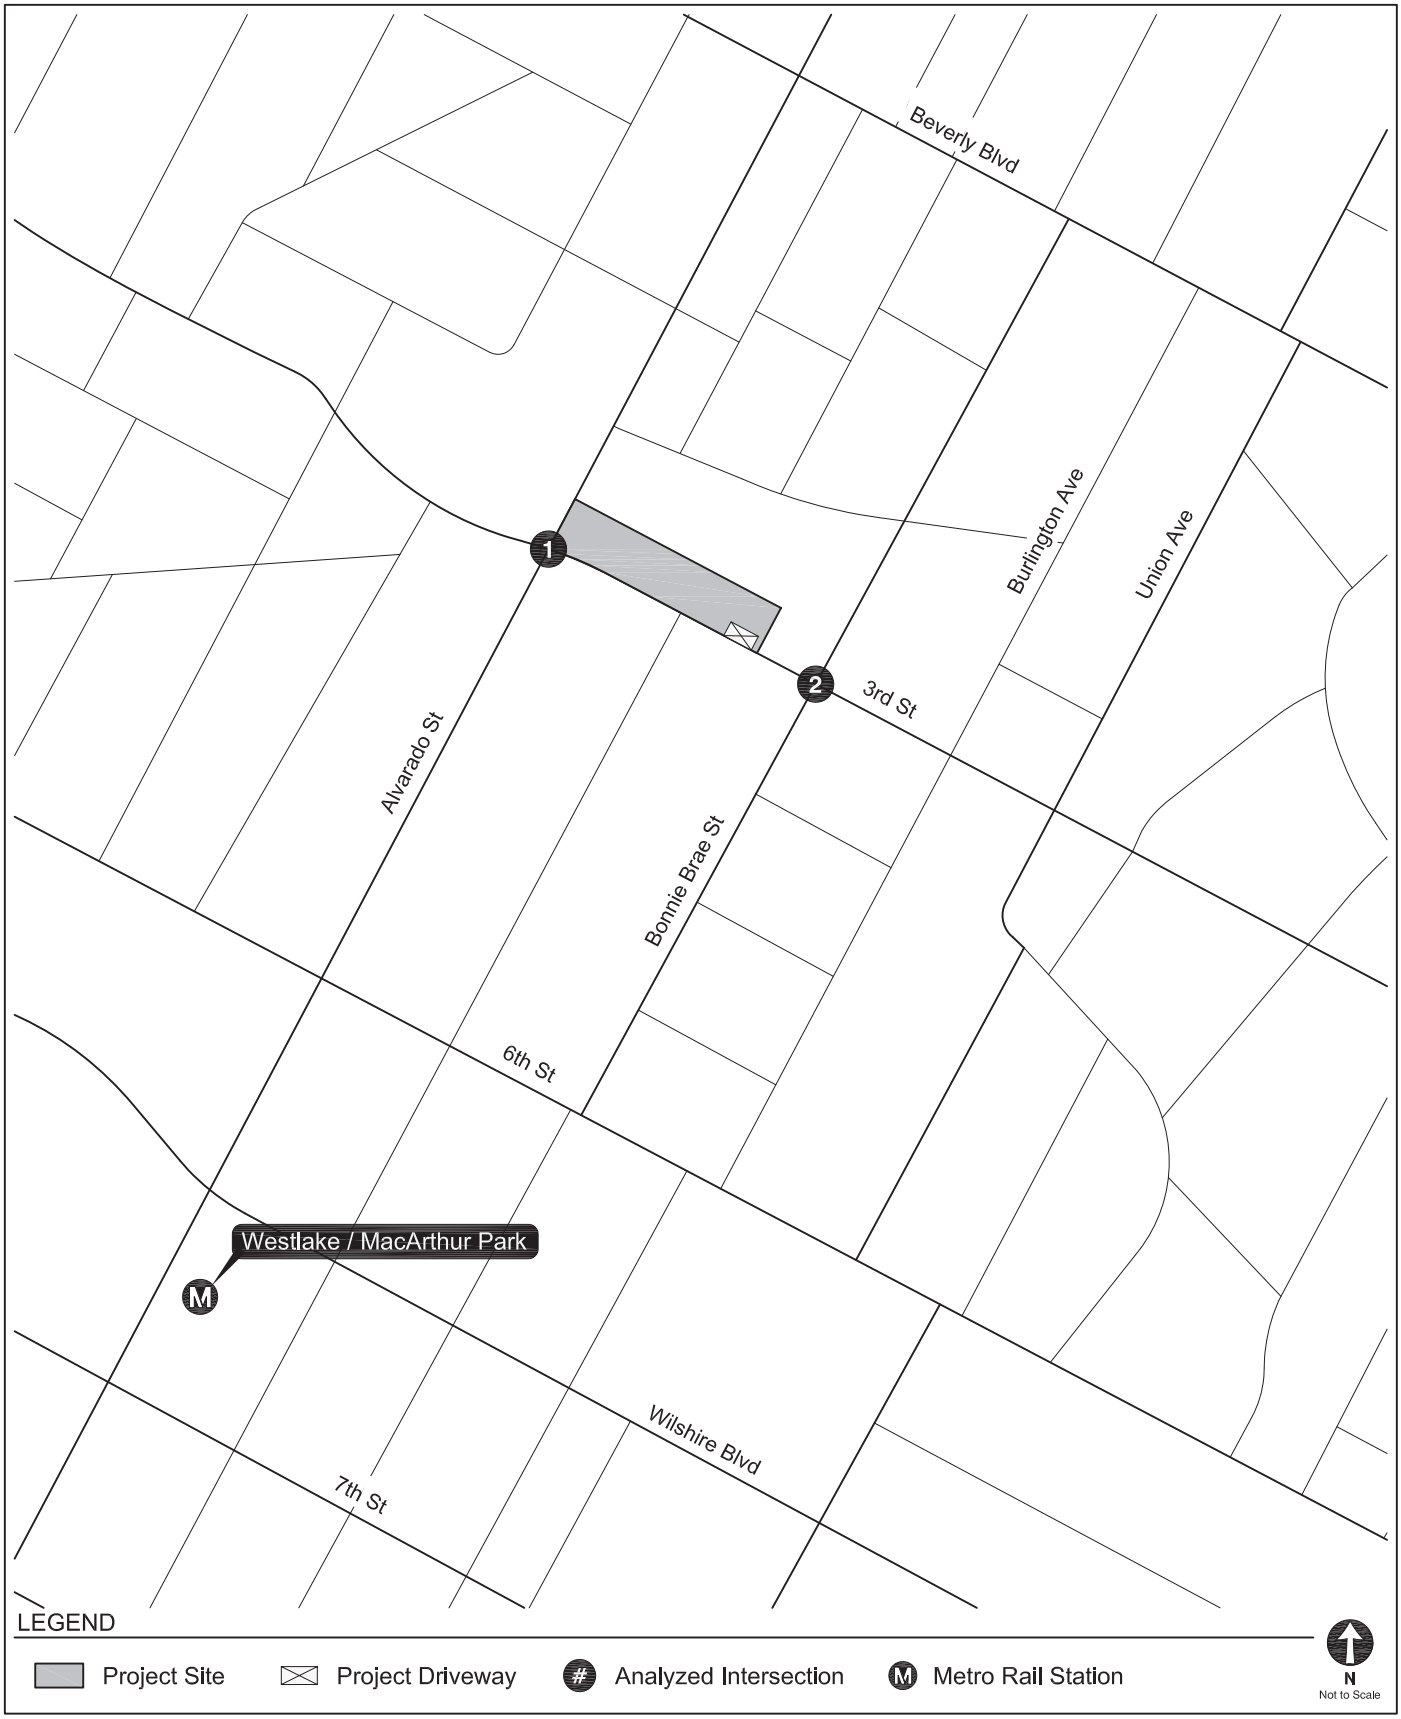


Is the project's building frontage encompassing an entire block along an Avenue or Boulevard as classified by the City's General Plan? ☐ Yes ■ No

V. CONTACT INFORMATION

	CONSULTANT	DEVELOPER
Name:	Gi son Trans ortation Consulting, Inc.	Miramar De elo ment, LP
Address:	555 W. 5th St., Suite 3375, Los Angeles, CA 90013	
Phone Number:	(213) 683-0088	(917)-542-3618
E-Mail:	ewong@gi sontrans.com	n accac @rosecom anies.com

Approved by:	x		6-30-2020	x		7/9/2020
		Consultant's Representative	Date		LADOT Representative	*Date



*MOUs are generally valid for two years after signing. If after two years a transportation assessment has not been submitted to LADOT, the developer's representative shall check with the appropriate LADOT office to determine if the terms of this MOU are still valid or if a new MOU is needed.

Notes

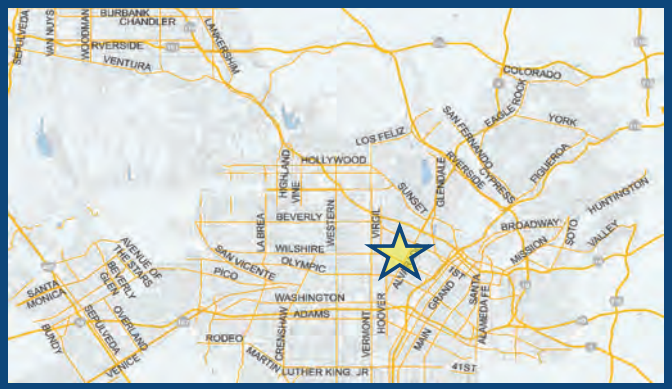
a Source: Related ro ect information ased on a aila le information ro ided LADOT and De artment of Cit Planning on June 10, 2020, and recent studies. Related ro ects include de elo ments within one- uarter mile radius of the furthest outl ing intersection, as suggested in the TAG. Therefore, Related Pro ects within 0.4-mile radius of the Pro ect Site were considered.

LOCATIONS OF RELATED PROJECTS

FIGURE 5

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3



Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Miramar Development

Scenario:

Address: 1917 W 3RD ST, 90057

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Single Family		DU

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Housing | Affordable Housing - Family	2	DU
Housing Afforda le Housing - Famil	137	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed
0 Daily Vehicle Trips	492 Daily Vehicle Trips
0 Daily VMT	3,107 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	492 Net Daily Trips
The net increase in daily VMT ≤ 0	3,107 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	0.000 ksf

The proposed project is required to perform VMT analysis.

Attachment C

Plans, Policies, and Programs Consistency Worksheet

Plans, Policies and Programs Consistency Worksheet

The worksheet provides a structured approach to evaluate the threshold T-1 question below, that asks whether a project conflicts with a program, plan, ordinance or policy addressing the circulation system. The intention of the worksheet is to streamline the project review by highlighting the most relevant plans, policies and programs when assessing potential impacts to the City's circulation system.

> Threshold T-1: Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

This worksheet does not include an exhaustive list of City policies, and does not include community plans, specific plans, or any area-specific regulatory overlays. The Department of City Planning project planner will need to be consulted to determine if the project would obstruct the City from carrying out a policy or program in a community plan, specific plan, streetscape plan, or regulatory overlay that was adopted to support multimodal transportation options or public safety. LADOT staff should be consulted if a project would lead to a conflict with a mobility investment in the Public Right of Way (PROW) that is currently undergoing planning, design, or delivery. This worksheet must be completed for all projects that meet the Section I. Screening Criteria. For description of the relevant planning documents, **see Attachment D.1.**

For any response to the following questions that checks the box in bold text ((i.e. ☐ Yes or ☐ No), further analysis is needed to demonstrate that the project does not conflict with a plan, policy, or program.

I. SCREENING CRITERIA FOR POLICY ANALYSIS

If the answer is 'yes' to any of the following questions, further analysis will be required:

Does the project require a discretionary action that requires the decision maker to find that the project would substantially conform to the purpose, intent and provisions of the General Plan?

☑ Yes ☐ No

Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?

☐ Yes ☑ No

Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?

☑ Yes ☐ No

II. PLAN CONSISTENCY ANALYSIS

A. Mobility Plan 2035 PROW Classification Standards for Dedications and Improvements

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.1 *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*

Mobility Plan 2035 Policy 2.3 *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*

Mobility Plan 2035 Policy 3.2 – *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*

Mobility Plan 2035 Street Designations and Standard Roadway Dimensions

A.1 Does the project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone? ☑ Yes ☐ No

A.2 If **A.1 is yes**, is the project required to make additional dedications or improvements to the Public Right of Way as demonstrated by the street designation. ☑ Yes ☐ No ☐ N/A

A.3 If **A.2 is yes**, is the project making the dedications and improvements as necessary to meet the designated dimensions of the fronting street (Boulevard I, and II, or Avenue I, II, or III)?

☑ Yes ☐ No ☐ N/A

If the answer is to **A.1 or A.2 is NO, or to A.1, A.2 and A.3. is YES**, then the project does not conflict with the dedication and improvement requirements that are needed to comply with the Mobility Plan 2035 Street Designations and Standard Roadway Dimensions.

A.4 If the answer to **A.3. is NO**, is the project applicant asking to waive from the dedication standards?

☐ **Yes** ☐ **No** ☑ N/A

Lists any streets subject to dedications or voluntary dedications and include existing roadway and sidewalk widths, required roadway and sidewalk widths, and proposed roadway and sidewalk width or waivers.

Frontage 1 Existing PROW'/Curb' : Existing 60/80 Required 56/86 Proposed 60/83

Frontage 2 Existing PROW'/Curb' : Existing _____ Required _____ Proposed _____

Frontage 3 Existing PROW'/Curb' : Existing _____ Required _____ Proposed _____

Frontage 4 Existing PROW'/Curb' : Existing _____ Required _____ Proposed _____

If the answer to **A.4 is NO**, the project is inconsistent with Mobility Plan 2035 street designations and must file for a waiver of street dedication and improvement.

If the answer to **A.4 is YES**, additional analysis is necessary to determine if the dedication and/or improvements are necessary to meet the City's mobility needs for the next 20 years. The following factors may contribute to determine if the dedication or improvement is necessary:

Is the project site along any of the following networks identified in the City's Mobility Plan?

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[1]

Is the project within the service area of Metro Bike Share, or is there demonstrated demand for micro-mobility services?

If the project dedications and improvements asking to be waived are necessary to meet the City's mobility needs, the project may be found to conflict with a plan that is adopted to protect the environment.

B. Mobility Plan 2035 PROW Policy Alignment with Project-Initiated Changes

B.1 Project-Initiated Changes to the PROW Dimensions

These questions address potential conflict with:

> ***Mobility Plan 2035 Policy 2.1*** *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*
>
> ***Mobility Plan 2035 Policy 2.3*** *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*
>
> ***Mobility Plan 2035 Policy 3.2 –*** *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*
>
> ***Mobility Plan 2035 Policy 2.10*** *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*
>
> **Mobility Plan 2035 Street Designations and Standard Roadway Dimensions**

[1] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.1 Does the project physically modify the curb placement or turning radius and/or physically alter the sidewalk and parkways space that changes how people access a property?

Examples of physical changes to the public right-of-way include:

- widening the roadway,
- narrowing the sidewalk,
- adding space for vehicle turn outs or loading areas,
- removing bicycle lanes, bike share stations, or bicycle parking
- modifying existing bus stop, transit shelter, or other street furniture
- paving, narrowing, shifting or removing an existing parkway or tree well

☑ **Yes** ☐ No

B.2 Driveway Access

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.10 *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*

Mobility Plan 2035 Program PL.1. Driveway Access. *Require driveway access to buildings from non-arterial streets or alleys (where feasible) in order to minimize interference with pedestrian access and vehicular movement.*

Citywide Design Guidelines - Guideline 2*: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience.*

Site Planning Best Practices:

- *Prioritize pedestrian access first and automobile access second. Orient parking and driveways toward the rear or side of buildings and away from the public right-of-way. On corner lots, parking should be oriented as far from the corner as possible.*
- *Minimize both the number of driveway entrances and overall driveway widths.*
- *Do not locate drop-off/pick-up areas between principal building entrances and the adjoining sidewalks.*
- *Orient vehicular access as far from street intersections as possible.*
- *Place drive-thru elements away from intersections and avoid placing them so that they create a barrier between the sidewalk and building entrance(s).*
- *Ensure that loading areas do not interfere with on-site pedestrian and vehicular circulation by separating loading areas and larger commercial vehicles from areas that are used for public parking and public entrances.*

B.2 Does the project add new driveways along a street designated as an Avenue or a Boulevard that conflict with LADOT's Driveway Design Guidelines (See Sec. 321 in the Manual of Policies and Procedures) by any of the following:

- locating new driveways for residential properties on an Avenue or Boulevard, and access is otherwise possible using an alley or a collector/local street, or
- locating new driveways for industrial or commercial properties on an Avenue or Boulevard and access is possible along a collector/local street, or

- the total number of new driveways exceeds 1 driveway per every 200 feet[2] along on the Avenue or Boulevard frontage, or
- locating new driveways on an Avenue or Boulevard within 150 feet from the intersecting street, or
- locating new driveways on a collector or local street within 75 feet from the intersecting street, or
- locating new driveways near mid-block crosswalks, requiring relocation of the mid-block crosswalk

☐ **Yes** ☑ No

If the answer to **B.1 and B.2 are both NO**, then the project would not conflict with a plan or policies that govern the PROW as a result of the project-initiated changes to the PROW.

Impact Analysis

If the answer to either **B.1 or B.2 are YES**, City plans and policies should be reviewed in light of the proposed physical changes to determine if the City would be obstructed from carrying out the plans and policies. The analysis should pay special consideration to substantial changes to the Public Right of Way that may either degrade existing facilities for people walking and bicycling (e.g., removing a bicycle lane), or preclude the City from completing complete street infrastructure as identified in the Mobility Plan 2035, especially if the physical changes are along streets that are on the High Injury Network (HIN). The analysis should also consider if the project is in a Transit Oriented Community (TOC) area, and would degrade or inhibit trips made by biking, walking and/ or transit ridership. The streets that need special consideration are those that are included on the following networks identified in the Mobility Plan 2035, or the HIN:

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network
- High Injury Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[3]

Once the project is reviewed relevant to plans and policies, and existing facilities that may be impacted by the project, the analysis will need to answer the following two questions in concluding if there is an impact due to plan inconsistency.

B.2.1 Would the physical changes in the public right of way or new driveways that conflict with LADOT's Driveway Design Guidelines degrade the experience of vulnerable roadway users such as modify, remove, or otherwise negatively impact existing bicycle, transit, and/or pedestrian infrastructure?

☐ **Yes** ☑ No ☐ N/A

[2] for a project frontage that exceeds 400 feet along an Avenue or Boulevard, the incremental additional driveway above 2 is more than 1 driveway for every 400 additional feet.

[3] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.2.2 Would the physical modifications or new driveways that conflict with LADOT's Driveway Design Guidelines preclude the City from advancing the safety of vulnerable roadway users?

☐ **Yes** ☑ No ☐ N/A

If either of the answers to either **B.2.1 or B.2.2 are YES**, the project may conflict with the Mobility Plan 2035, and therefore conflict with a plan that is adopted to protect the environment. If either of the answers to both **B.2.1. or B.2.2. are NO**, then the project would not be shown to conflict with plans or policies that govern the Public Right-of-Way.

C. Network Access

C. 1 Alley, Street and Stairway Access

These questions address potential conflict with:

Mobility Plan Policy 3.9 *Increased Network Access: Discourage the vacation of public rights-of-way.*

C.1.1 Does the project propose to vacate or otherwise restrict public access to a street, alley, or public stairway?

☐ Yes ☑ No

C.1.2 If the answer to C.1.1 is Yes, will the project provide or maintain public access to people walking and biking on the street, alley or stairway?

☐ Yes ☐ **No** ☑ N/A

C.2 New Cul-de-sacs

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.10 *Cul-de-sacs: Discourage the use of cul-de-sacs that do not provide access for active transportation options.*

C.2.1 Does the project create a cul-de-sac or is the project located adjacent to an existing cul-de-sac?

☐ Yes ☑ No

C.2.2 If yes, will the cul-de-sac maintain convenient and direct public access to people walking and biking to the adjoining street network?

☐ Yes ☐ **No** ☑ N/A

If the answers to either C.1.2 or C.2.2 are YES, then the project would not conflict with a plan or policies that ensures access for all modes of travel. If the answer to either **C.1.2 or C.2.2 are NO**, the project may conflict with a plan or policies that governs multimodal access to a property. Further analysis must assess to the degree that pedestrians and bicyclists have sufficient public access to the transportation network.

D. Parking Supply and Transportation Demand Management

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.8 *– Bicycle Parking, Provide bicyclists with convenient, secure and well maintained bicycle parking facilities.*

Mobility Plan 2035 Policy 4.8 – *Transportation Demand Management Strategies. Encourage greater utilization of Transportation Demand Management Strategies to reduce dependence on single-occupancy vehicles.*

Mobility Plan 2035 Policy 4.13 *– Parking and Land Use Management: Balance on-street and off-street parking supply with other transportation and land use objectives.*

D.1 Would the project propose a supply of onsite parking that exceeds the baseline amount[4] as required in the Los Angeles Municipal Code or a Specific plan, whichever requirement prevails?

☐ Yes ☑ No

D.2 If the answer to D.1. is YES, would the project propose to actively manage the demand of parking by independently pricing the supply to all users (e.g. parking cash-out), or for residential properties, unbundle the supply from the lease or sale of residential units?

☐ Yes ☐ **No** ☑ N/A

If the answer to **D.2. is NO** the project may conflict with parking management policies. Further analysis is needed to demonstrate how the supply of parking above city requirements will not result in additional (induced) drive-alone trips as compared to an alternative that provided no more parking than the baseline required by the LAMC or Specific Plan. If there is potential for the supply of parking to result in induced demand for drive-alone trips, the project should further explore transportation demand management (TDM) measures to further off-set the induced demands of driving and vehicle miles travelled (VMT) that may result from higher amounts of on-site parking. The TDM measures should specifically focus on strategies that encourage dynamic and context-sensitive pricing solutions and ensure the parking is efficiently allocated, such as providing real time information. Research has demonstrated that charging a user cost for parking or providing a 'cash-out' option in return for not using it is the most effective strategy to reduce the instances of drive-alone trips and increase non-auto mode share to further reduce VMT. To ensure the parking is efficiently managed and reduce the need to build parking for future uses, further strategies should include sharing parking with other properties and/or the general public.

D.3. Would the project provide the minimum on and off-site bicycle parking spaces as required by Section 12.21 A.16 of the LAMC?

☑ Yes ☐ **No**

[4] The baseline parking is defined here as the default parking requirements in section 12.21 A.4 of the Los Angeles Municipal Code or any applicable Specific Plan, whichever prevails, for each applicable use not taking into consideration other parking incentives to reduce the amount of required parking.

D.4. Does the Project include more than 25,000 square feet of gross floor area construction of new non-residential gross floor?

☐ Yes ☑ No

D.5 If the answer to D.4. is YES, does the project comply with the City's TDM Ordinance in Section 12.26 J of the LAMC?

☐ Yes ☐ **No** ☑ N/A

If the answer to **D.3. or D.5. is NO** the project conflicts with LAMC code requirements of bicycle parking and TDM measures. If the project includes uses that require bicycle parking (Section 12.21 A.16) or TDM (Section 12.26 J), and the project does not comply with those Sections of the LAMC, further analysis is required to ensure that the project supports the intent of the two LAMC sections. To meet the intent of bicycle parking requirements, the analysis should identify how the project commits to providing safe access to those traveling by bicycle and accommodates storing their bicycle in locations that demonstrates priority over vehicle access.

Similarly, to meet the intent of the TDM requirements of Section 12.26 J of the LAMC, the analysis should identify how the project commits to providing effective strategies in either physical facilities or programs that encourage non-drive alone trips to and from the project site and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks).

E. Consistency with Regional Plans

This section addresses potential inconsistencies with greenhouse gas (GHG) reduction targets forecasted in the Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) / Sustainable Communities Strategy (SCS).

E.1 Does the Project or Plan apply one the City's efficiency-based impact thresholds (i.e. VMT per capita, VMT per employee, or VMT per service population) as discussed in Section 2.2.3 of the TAG?

☑ Yes ☐ No

E.2 If the Answer to E.1 is YES, does the Project or Plan result in a significant VMT impact?

☐ Yes ☑ No ☐ N/A

E.3 If the Answer to E.1 is NO, does the Project result in a net increase in VMT?

☐ Yes ☐ No ☑ N/A

If the Answer to E.2 or E.3 is NO, then the Project or Plan is shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS.

E.4 If the Answer to E.2 or E.3 is YES, then further evaluation would be necessary to determine whether such a project or land use plan would be shown to be consistent with VMT and GHG reduction goals of the SCAG RTP/SCS. For the purpose of making a finding that a project is consistent with the GHG reduction targets forecasted in the SCAG RTP/SCS, the project analyst should consult Section 2.2.4 of the Transportation Assessment Guidelines (TAG). Section 2.2.4 provides the methodology for evaluating a land use project's cumulative impacts to VMT, and the appropriate reliance on SCAG's most recently adopted RTP/SCS in reaching that conclusion.

The analysis methods therein can further support findings that the project is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy for which the State Air Resources Board, pursuant to Section 65080(b)(2)(H) of the Government Code, has accepted a metropolitan planning organization's determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.

ATTACHMENT D.1: CITY PLAN, POLICIES AND GUIDELINES

The Transportation Element of the City's General Plan, Mobility Plan 2035, established the "Complete Streets Design Guide" as the City's document to guide the operations and design of streets and other public rights-of-way. It lays out a vision for designing safer, more vibrant streets that are accessible to people, no matter what their mode choice. As a living document, it is intended to be frequently updated as City departments identify and implement street standards and experiment with different configurations to promote complete streets. The guide is meant to be a toolkit that provides numerous examples of what is possible in the public right-of-way and that provides guidance on context-sensitive design.

The Plan for A Healthy Los Angeles (March 2015) includes policies directing several City departments to develop plans that promote active transportation and safety.

The City of Los Angeles Community Plans, which make up the Land Use Element of the City's General Plan, guide the physical development of neighborhoods by establishing the goals and policies for land use. The 35 Community Plans provide specific, neighborhood-level detail for land uses and the transportation network, relevant policies, and implementation strategies necessary to achieve General Plan and community-specific objectives.

The stated goal of Vision Zero is to eliminate traffic-related deaths in Los Angeles by 2025 through a number of strategies, including modifying the design of streets to increase the safety of vulnerable road users. Extensive crash data analysis is conducted on an ongoing basis to prioritize intersections and corridors for implementation of projects that will have the greatest effect on overall fatality reduction. The City designs and deploys Vision Zero Corridor Plans as part of the implementation of Vision Zero. If a project is proposed whose site lies on the High Injury Network (HIN), the applicant should consult with LADOT to inform the project's site plan and to determine appropriate improvements, whether by funding their implementation in full or by making a contribution toward their implementation.

The Citywide Design Guidelines (October 24, 2019) includes sections relevant to development projects where improvements are proposed within the public realm. Specifically, Guidelines one through three provide building design strategies that support the pedestrian experience. The Guidelines provide best practices in designing that apply in three spatial categories of site planning, building design and public right of way. The Guidelines should be followed to ensure that the project design supports pedestrian safety, access and comfort as they access to and from the building and the immediate public right of way.

The City's Transportation Demand Management (TDM) Ordinance (LA Municipal Code 12.26.J) requires certain projects to incorporate strategies that reduce drive-alone vehicle trips and improve access to destinations and services. The ordinance is revised and updated periodically and should be reviewed for application to specific projects as they are reviewed.

The City's LAMC Section 12.37 (Waivers of Dedication and Improvement) requires certain projects to dedicate and/or implement improvements within the public right-of-way to meet the street designation standards of the Mobility Plan 2035.

The Bureau of Engineering (BOE) Street Standard Dimensions S-470-1 provides the specific street widths and public right of way dimensions associated with the City's street standards.

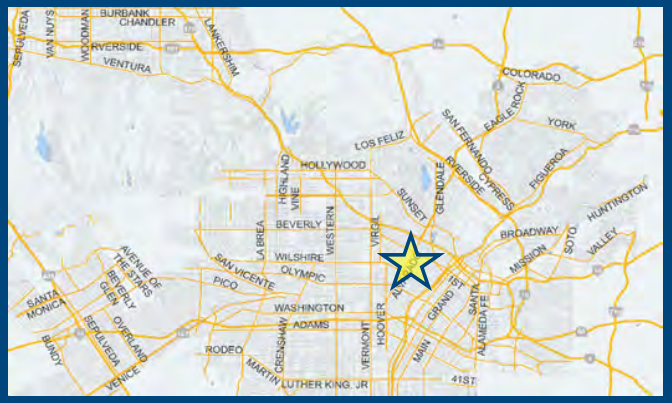
VMT Worksheets

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3



Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Miramar Development

Scenario:

Address: 1917 W 3RD ST, 90057

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Single Family		DU

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Housing | Affordable Housing - Family	137	DU
Housing Afforda le Housing - Famil	137	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
0 Daily Vehicle Trips	492 Daily Vehicle Trips
0 Daily VMT	3,107 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	492 Net Daily Trips
The net increase in daily VMT ≤ 0	3,107 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	0.000 ksf

The proposed project is required to perform VMT analysis.

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

1917-2005 ½ W 3rd St
DOT Case No. CEN20-49969

Date: August 27, 2020

To: Milena Zasadzien, Senior City Planner
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION ASSESSMENT FOR THE PROPOSED MIRAMAR DEVELOPMENT AFFORDABLE HOUSING PROJECT LOCATED AT 1917-2005 ½ WEST 3RD STREET (DIR-2020-3752-TOC-SPR-HCA-PHP/ENV-2020-3753-EAF)**

The Department of Transportation (DOT) has reviewed the transportation assessment prepared by Gibson Transportation Consulting, Inc. (GTC), dated August 18, 2020, for the proposed Miramar Development project located at 1917-2005 ½ West 3rd Street in the Central Area Planning Commission and Transit Oriented Community (TOC) Tier 3. In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a vehicle miles traveled (VMT) analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, the access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG). Although the project is designated as a Sustainable Communities Project CEQA Exemption (SCPE) under Public Resources Sections 21155 and 21155.1, the project has submitted a VMT analysis and the results of which are discussed below.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to replace landscaping and a surface parking lot with a seven-story residential development with 137 affordable housing units adjacent to the Miramar Towers, a senior apartment building, located at 1917-2005 ½ West 3rd Street as illustrated in **Attachment A**. The project is within half a mile of the Los Angeles County Metropolitan Transit Authority (Metro) B Line (formerly Red Line), D Line (formerly Purple Line, and the Westlake/MacArthur Park Station, which serves both B and D Lines. The existing driveway will be shared by Miramar Towers and the project and will serve primarily as fire department access. The project will provide 104 (10 short-term and 94 long-term) bicycle parking spaces. Bicycle and pedestrian access would be provided via the entrances along 3rd Street. The project is expected to be completed by 2023.

B. Freeway Safety Analysis

Per the Interim Guidance for Freeway Safety Analysis memorandum issued by DOT on May 1, 2020 to address Caltrans safety concerns on freeways, the study addresses the project's effects on vehicle queuing on freeway off-ramps. Such an evaluation measures the project's potential to lengthen a forecasted off-ramp queue and create speed differentials between vehicles exiting the freeway off-ramps and vehicles operating on the freeway mainline. The assessment determined that project traffic at any nearby freeway off-ramp serving the project site will not exceed 25 peak hour trips. Therefore, a freeway ramp analysis is not required.

C. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips screening threshold. Using the City of Los Angeles VMT Calculator tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project **does** exceed the net 250 daily vehicle trips threshold.

Additionally, the analysis included further discussion of the transportation impact thresholds:

T-1 Conflicting with plans, programs, ordinances, or policies
T-2.1 Causing substantial vehicle miles traveled
T-3 Substantially increasing hazards due to a geometric design feature or incompatible use.

The assessment determined that the project would **not** have a significant transportation impact under Thresholds T-1 and T-3. A project's impacts per Threshold T-2.1 is determined by using the VMT calculator and is discussed further below. A copy of the VMT Calculator summary report is provided as **Attachment B** to this report.

C. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.03 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as criteria in determining transportation impacts under CEQA. The new DOT TAG provide instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The DOT VMT Calculator tool measures project impact in terms of Household VMT per Capita, and Work VMT per Employee. DOT identified distinct thresholds for significant VMT impacts for each of the seven Area Planning Commission (APC) areas in the City. For the Central APC area, in which the project is located, the following thresholds have been established:

- Household VMT per Capita: 6.0
- Work VMT per Employee: 7.6

As cited in the VMT Analysis report, prepared by GTC, the project proposes to incorporate the TDM strategy of including bicycle parking per Los Angeles Municipal Code (LAMC) as a project design feature. The proposed project is projected to have a Household VMT per capita of 3.4 and a Work VMT per employee of 0. Therefore, it is concluded that implementation of the project would result in no significant VMT impact. A copy of the VMT Calculator summary report is provided as **Attachment B**.

D. Access and Circulation

During preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the LAMC. Therefore, DOT continues to require and

review a project's site access, circulation, and operational plan to determine if any access enhancements, transit amenities, intersection improvements, traffic signal upgrades, neighborhood traffic calming, or other improvements are needed. In accordance with this authority, the project has completed a circulation analysis using a "level of service" screening methodology that indicates that the trips generated by the proposed development will not likely result in adverse circulation conditions at several locations. Vehicular access to the project will be provided along 3rd Street. DOT has reviewed this analysis and determined that it adequately discloses operational concerns. A copy of the circulation analysis table that summarizes these potential deficiencies is provided as **Attachment C** to this report.

PROJECT REQUIREMENTS

A. CEQA-Related Requirement

The project will implement the TDM strategy of Include Bike Parking per LAMC as a project design feature by providing 10 short-term and 94 long-term bicycle parking spaces in order to encourage the use of bicycling as an alternative to driving.

B. Non-CEQA-Related Requirements and Considerations

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Parking Requirements

   The project would provide parking for 104 bicycles. The applicant should check with the Departments of Building and Safety and City Planning on the number of parking spaces required for this project within a TOC Tier 3.

2. Highway Dedication and Street Widening Requirements

   Per the new Mobility Element of the General Plan, **3rd Street**, an Avenue II, would require an 28-foot half-width roadway within a 43-foot half-width right-of-way. The project would provide a three-foot dedication to widen the sidewalk to 15 feet. The project should check with the Bureau of Engineering's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

3. Project Access and Circulation

   The conceptual site plan for the project (see **Attachment A**) is acceptable to DOT. The project would be accessed via an existing full-access driveway along 3rd Street. Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of the driveway should be coordinated with DOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design.

4. Worksite Traffic Control Requirements

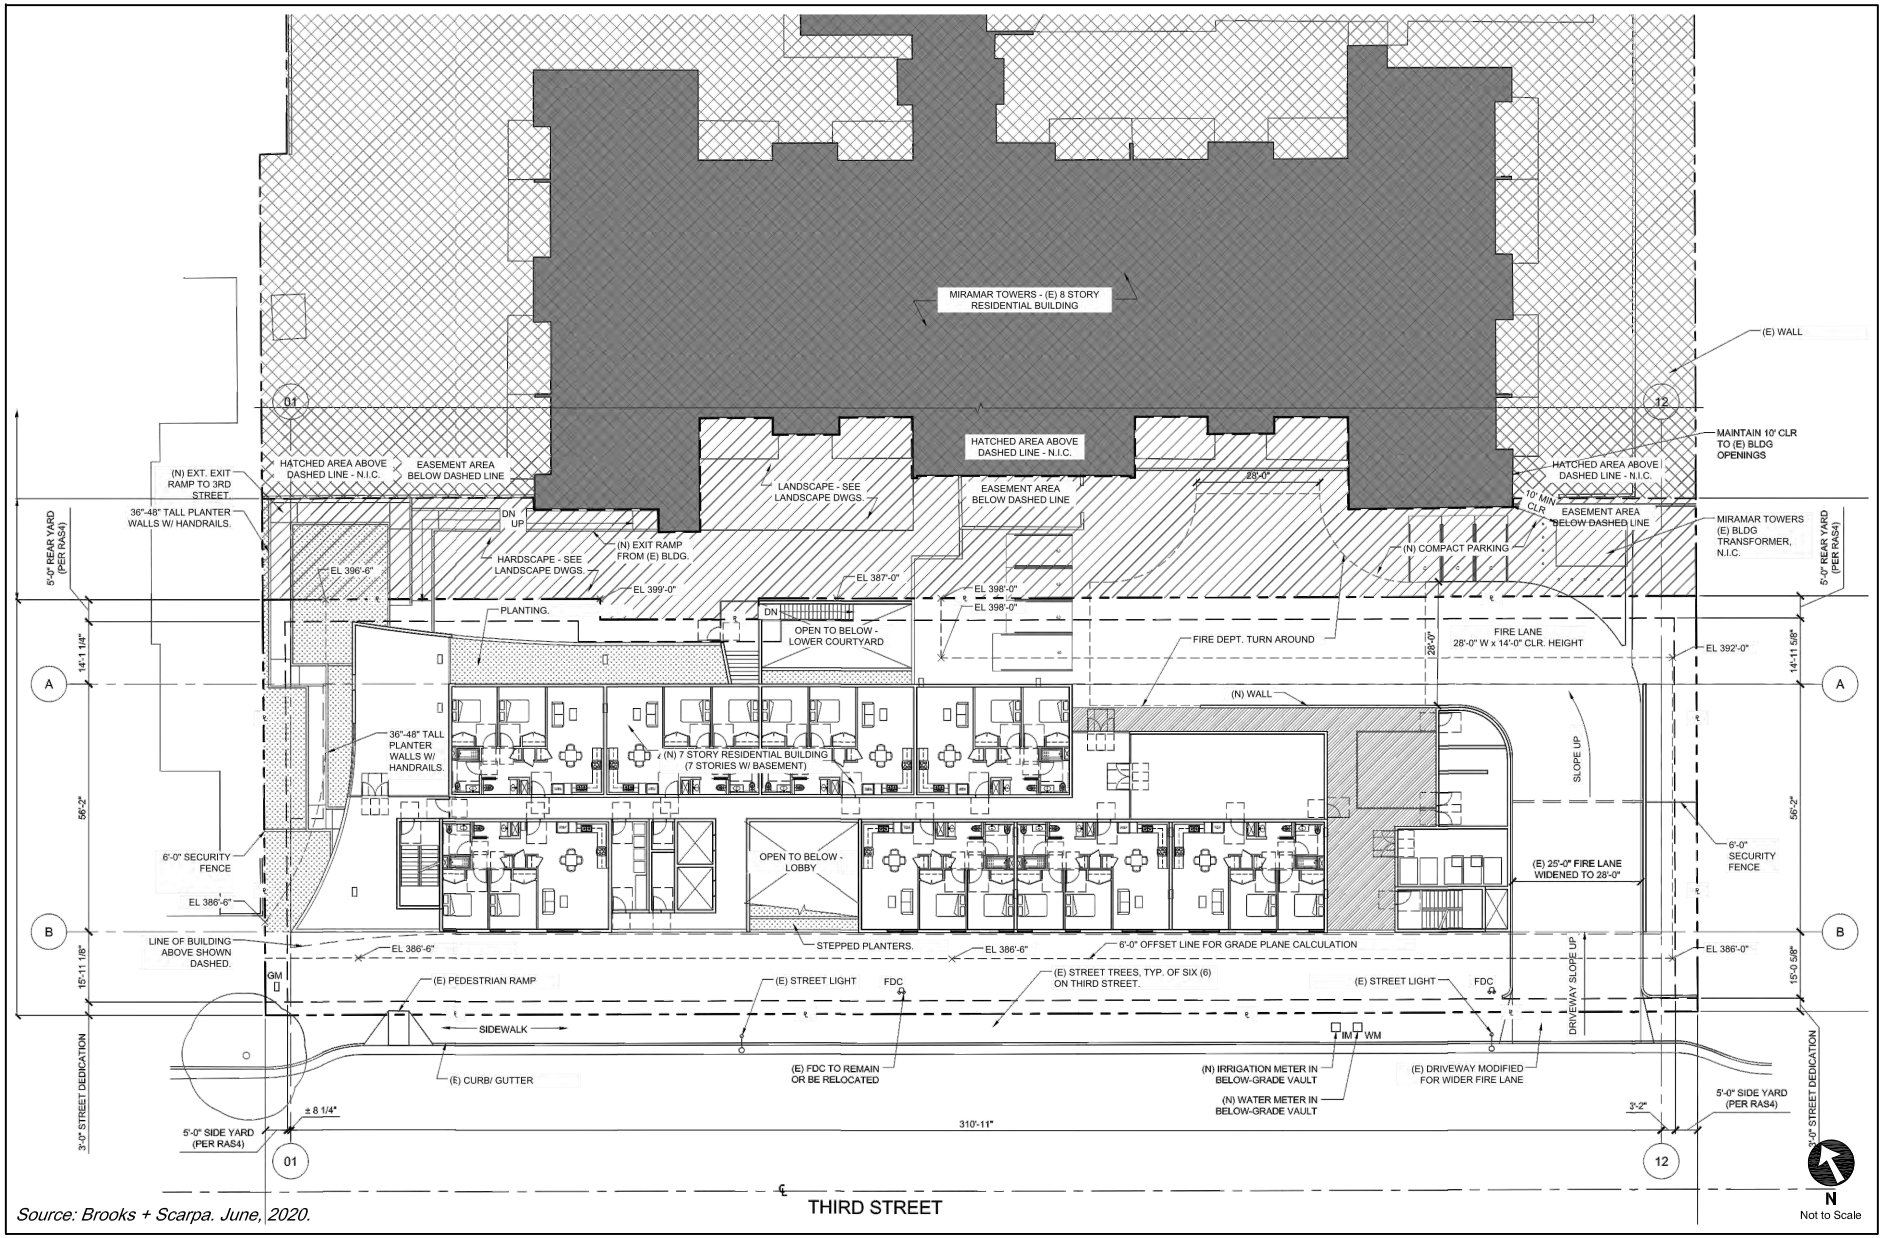
   DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/businesses/temporary-traffic-control-plans to determine which

section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

5. TDM Ordinance Requirements
The TDM Ordinance (LAMC 12.26 J) is currently being updated. The updated ordinance, which is currently progressing through the City's approval process, will:

- Expand the reach and application of TDM strategies to more land uses and neighborhoods,
- Rely on a broader range of strategies that can be updated to keep pace with technology, and
- Provide flexibility for developments and communities to choose strategies that work best for their neighborhood context.

Although not yet adopted, DOT recommends that the applicant be subject to the terms of the proposed TDM Ordinance update expected in 2020. The updated ordinance is expected to be completed prior to the anticipated construction of this project, if approved.



6. Development Review Fees
Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Eileen Hunt of my staff at (213) 972-8481.

PROJECT SITE PLAN

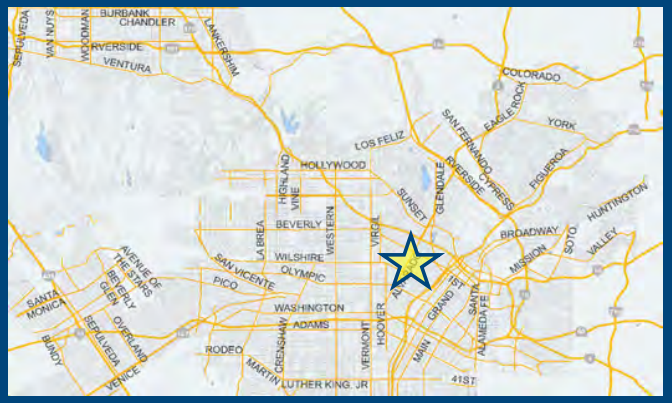

FIGURE 1

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Miramar Development
Scenario:
Address: 1917 W 3RD ST, 90057

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Single Family		DU

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Housing | Affordable Housing - Family	137	DU
Housing Afforda le Housing - Famil	137	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
0 Daily Vehicle Trips	492 Daily Vehicle Trips
0 Daily VMT	3,107 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	492 Net Daily Trips
The net increase in daily VMT ≤ 0	3,107 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	0.000 ksf

The proposed project is required to perform VMT analysis.
