Comments for Public Posting: We are in a climate emergency. I support the accelerated target date of 2035 for 100% clean energy. 2045 is too late to avoid severe impacts of climate change. Even President Biden has called for a national target of 2035. LADWP should be a statewide and national leader with a more aggressive timeline than the minimum required by state law (SB100).

Comments for Public Posting: I want to thank the committee for the difficult and necessary work on this issue which began in 2016. With the recent report from the U.N., and the major changes in climate we've all experienced over the past few years, It is critical that we move forward to support the LA 100 plan as quickly as possible. Los Angeles must act quickly and aggressively and take a leadership role and show the country how a transition to a green city can benefit everyone—individuals and businesses alike. Thank you.

Comments for Public Posting: This plan must fall into place in a brisk manner approaching and even pre-dating 2035. The rest of our exquisite and precious state is burning. No other argument in favor of the plan need be made.

Comments for Public Posting: Energy, Climate Change, Environmental Justice, Rivers (ECCEJR) Committee members, I appreciate your time today. Given the climate reality here in Southern California and around the world, this motion regarding the Strategic Long Term Resource Plan (SLTRP) that achieves 100% equitable, carbon-free energy by 2035 is crucial. It is important to get this motion passed through all relevant City committees and the full Council in a timely manner in order for Los Angeles Department of Water and Power (LADWP) to begin work on the SLTRP as soon as possible. Acting with urgency is necessary. Thank you again for your time, Sam Miyamoto, MPH

Comments for Public Posting: As we know too well, we are in the midst of a rapidly evolving climate emergency. I support the development of the Strategic Long Term Resource plan but wish to call special attention to the language of the motion that calls for an “accelerated pathway”. The time for reports and studies is over. The time for real action is now. Also, not included in the motion is the need for robust public education. In order for Los Angeles residents to support the transformation of energy production and transmission they need to understand why it is necessary and their part in making it happen. I hope that LADWP and other entities will communicate clear and frequent information, especially with regard to benchmarks and achievements.

Comments for Public Posting: I would like to urge City Council to quickly take action to adopt the most aggressive targets for LA100 and commit to 100% clean renewable energy by 2030. From destructive wildfires to extreme drought, we are already feeling the impacts of climate change in California. The time to deliberate and move slowly has long passed. We need to take quick action to have a chance to avoid the most devastating and irreversible impacts of climate change. This is an opportunity for LA to be a leader and model for other cities around the world. Please move quickly to pass this motion forward.
