Support – C.F. 21-0352 – LADWP 100% Carbon-Free Energy by
2035 Dear Councilmembers Krekorian and O'Farrell, On behalf
of the Los Angeles Business Council (LABC), we would like to
express our strong support for motion 21-0352 instructing
LADWP to prepare a Strategic Long Term Resource Plan that
achieves 100% carbon-free energy by 2035, the most aggressive
of timelines studied during LA 100. In 2016, the LABC proudly
supported motion 16-0243 calling for LADWP to study and
develop a plan to achieve a 100% renewable energy. For the past
4 years, the LABC represented the business community on
LADWP's LA 100 Advisory Group, providing feedback
throughout the entirety of the process on methodology, scope,
metrics, and more. We understand the importance of establishing
concrete timelines that can set up Los Angeles for success and
hold it accountable for our clean energy future. The City of Los
Angeles prides itself as a leader within the State and across the
Nation on combating climate change. Concrete actions to swiftly
and effectively implement this plan will be vital to magnify this
leadership. We have already seen the impact that our clean energy
policies have had on jobs in Los Angeles. With over half a million
jobs, Los Angeles leads the nation in clean energy job growth. By
establishing a timeline and plan to achieve a 100% carbon-free
economy, the City will be sending a market signal that will spark
investment, spur new industries, and enhance clean energy job
growth in our region. We also recognize that our City's transition
to 100% clean energy must be built upon the principles of equity.
Frontline communities are disproportionately impacted by the
negative consequences of climate change and have carried the
most significant health and environmental burden for far too long.
Considering the magnitude that COVID-19 has had on frontline
communities, the need for an equitable transition to clean energy
has only grown. This plan must find ways to prioritize
communities with the greatest need, so that our residents most
vulnerable to climate change are not only protected but positioned
to thrive as we transition to a more sustainable future. We strongly
support this motion and are excited about continuing to work

together towards achieving our critical climate goals and making Los Angeles a more resilient place for everyone. Sincerely, Mary Leslie President LABC/LABC Institute

RE: Los Angeles Business Council Support – C.F. 21-0352 – LADWP 100% Carbon-Free Energy by 2035

Dear Councilmembers Krekorian and O'Farrell,

On behalf of the Los Angeles Business Council (LABC), we would like to express our strong support for motion 21-0352 instructing LADWP to prepare a Strategic Long Term Resource Plan that achieves 100% carbon-free energy by 2035, the most aggressive of timelines studied during LA 100.

In 2016, the LABC proudly supported motion 16-0243 calling for LADWP to study and develop a plan to achieve a 100% renewable energy. For the past 4 years, the LABC represented the business community on LADWP's LA 100 Advisory Group, providing feedback throughout the entirety of the process on methodology, scope, metrics, and more. We understand the importance of establishing concrete timelines that can set up Los Angeles for success and hold it accountable for our clean energy future.

The City of Los Angeles prides itself as a leader within the State and across the Nation on combating climate change. Concrete actions to swiftly and effectively implement this plan will be vital to magnify this leadership. We have already seen the impact that our clean energy policies have had on jobs in Los Angeles. With over half a million jobs, Los Angeles leads the nation in clean energy job growth. By establishing a timeline and plan to achieve a 100% carbon-free economy, the City will be sending a market signal that will spark investment, spur new industries, and enhance clean energy job growth in our region.

We also recognize that our City's transition to 100% clean energy must be built upon the principles of equity. Frontline communities are disproportionately impacted by the negative consequences of climate change and have carried the most significant health and environmental burden for far too long. Considering the magnitude that COVID-19 has had on frontline communities, the need for an equitable transition to clean energy has only grown. This plan must find ways to prioritize communities with the greatest need, so that our residents most vulnerable to climate change are not only protected but positioned to thrive as we transition to a more sustainable future.

We strongly support this motion and are excited about continuing to work together towards achieving our critical climate goals and making Los Angeles a more resilient place for everyone.

Sincerely,

A handwritten signature in dark ink that reads "Mary Leslie". The script is fluid and cursive, with the first name "Mary" and last name "Leslie" written in a single continuous stroke.
