CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

1911 W Sunset Bl DOT Case No. CEN 19-48428

Date: February 19, 2020

To: Debbie Lawrence, Senior City Planner

Department of City Planning

From: Wes Pringle, Transportation Engineer

Department of Transportation

Subject: TRANSPORTATION ASSESSMENT FOR THE PROPOSED MIXED-USE PROJECT LOCATED

AT 1911 WEST SUNSET BOULEVARD

The Department of Transportation (DOT) has reviewed the transportation assessments prepared by Crain & Associates, dated September 10, 2019 and January 30, 2020, for the proposed mixed-use project located at 1911 West Sunset Boulevard in the East Los Angeles Area Planning Commission. In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a vehicle miles traveled (VMT) analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, the access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG), as described below.

DISCUSSION AND FINDINGS

A. Project Description

The project proposes to construct a mixed-use development on the north side of Sunset Boulevard at 1911-1931 West Sunset Boulevard and 1910-2018 West Reservoir Street as illustrated in **Attachment A**. The development will include up to 170 residential dwelling units and up to 13,000 square feet of ground-floor commercial retail space. The project will remove the existing medical office and TAIX restaurant. However, features of TAIX will be preserved and installed into a smaller version of the restaurant in the new development. The project will provide 132 (16 short-term and 116 long-term) bicycle parking spaces and 220 (7 spaces on the ground floor for commercial retail uses and 193 spaces within two subterranean levels for residential uses) vehicle parking spaces. The existing driveway on Sunset Boulevard, which functions as the north leg of the signalized intersection of Park Avenue and Sunset Boulevard, will continue to provide access to the site. The project is expected to be completed by 2023.

B. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips screening threshold. Using the trip generation estimates based on formulas published by in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition, 2017, it was determined that the net daily vehicle trips generated by the project **does** exceed the net 250 daily vehicle trips threshold. A copy of the project trip generation table can be found in **Attachment B**.

C. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.03 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as criteria in determining transportation impacts under CEQA. The new DOT TAG provide instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The DOT VMT Calculator tool measures project impact in terms of Household VMT per Capita, and Work VMT per Employee. DOT identified distinct thresholds for significant VMT impacts for each of the seven Area Planning Commission (APC) areas in the City. For the East Los Angeles APC area, in which the project is located, the following thresholds have been established:

Household VMT per Capita: 7.2Work VMT per employee: 12.7

As cited in the VMT Analysis report, prepared by the Crain and Associates, the project proposes to incorporate a TDM strategy of providing bicycle parking per the Los Angeles Municipal Code (LAMC) as a project feature. The proposed project is projected to have a Household VMT per capita of 8.8 and a Work VMT per employee of 7.3. Therefore, it is concluded that implementation of the Project would result in a significant Household VMT impact.

To mitigate this impact, the project proposes to implement the TDM strategies of reducing the parking supply and unbundling parking. By implementing these strategies, the Household VMT project is forecasted to be reduced to 6.3. A copy of the VMT Calculator summary report is provided as **Attachment C** to this report.

D. Access and Circulation

During preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the LAMC. Therefore, DOT continues to require and review a project's site access, circulation, and operational plan to determine if any access enhancements, transit amenities, intersection improvements, traffic signal upgrades, neighborhood traffic calming, or other improvements are needed. In accordance with this authority, the project has completed a circulation analysis using a "level of service" screening methodology that indicates that the trips generated by the proposed development will not likely result in adverse circulation conditions at several locations. The Sunset Boulevard driveway, which is signalized, will continue to serve as the primary access to the project site. DOT has reviewed this analysis and determined that it adequately discloses operational concerns. A copy of the circulation analysis table that summarizes these potential deficiencies is provided as **Attachment D** to this report.

PROJECT REQUIREMENTS

A. CEQA Related Mitigation

To off-set the expected significant impacts identified in the project's transportation assessment study, DOT recommends that the applicant be required to implement the TDM strategies of reducing the parking supply and unbundling parking as mitigation measures.

Reducing the parking supply encourages alternative transportation choices by project residents and employees. Unbundling parking costs from property costs would require those who wish to purchase parking spaces to do so at an additional cost from the property cost. This removes the burden from those who do not wish to utilize a parking space. An assumption is made that the parking costs are passed through to the vehicle owners/drivers utilizing the parking spaces.

B. <u>Non-CEQA-Related Requirements and Considerations</u>

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. <u>Parking Requirements</u>

Parking for vehicles and long-term parking for bicycles will be provided onsite. The applicant should check with the Department of Building and Safety on the number of Code-required parking spaces needed for this project.

2. <u>Highway Dedication and Street Widening Requirements</u>

Per the new Mobility Element of the General Plan, **Sunset Boulevard**, an Avenue I, would require a 35-foot half-width roadway within a 50-foot half-width right-of-way and **Reservoir Street**, Local Street, would require an 18-foot half-width roadway within a 30-foot half-width right-of-way. The applicant should check with the Bureau of Engineering's Land Development Group to determine if there are any other applicable highway dedication, street widening and/or sidewalk requirements for this project.

3. <u>Project Access and Circulation</u>

The conceptual site plan for the project (see **Attachment A**) is acceptable to DOT. The driveway on Sunset Boulevard would continue to serve the project site. Review of this study does not constitute approval of the dimensions for any new proposed driveway. Review and approval of the driveway should be coordinated with DOT's Citywide Planning Coordination Section (201 North Figueroa Street, 5th Floor, Room 550, at 213-482-7024). In order to minimize and prevent last minute building design changes, the applicant should contact DOT for driveway width and internal circulation requirements prior to the commencement of building or parking layout design.

4. Worksite Traffic Control Requirements

DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/what-we-do/plan-review to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

5. TDM Ordinance Requirements

The TDM Ordinance (LAMC 12.26 J) is currently being updated. The updated ordinance, which is currently progressing through the City's approval process, will:

- Expand the reach and application of TDM strategies to more land uses and neighborhoods,
- Rely on a broader range of strategies that can be updated to keep pace with technology, and
- Provide flexibility for developments and communities to choose strategies that work best for their neighborhood context.

Although not yet adopted, LADOT recommends that the applicant be subject to the terms of the proposed TDM Ordinance update expected in 2020. The updated ordinance is expected to be completed prior to the anticipated construction of this project, if approved.

6. Development Review Fees

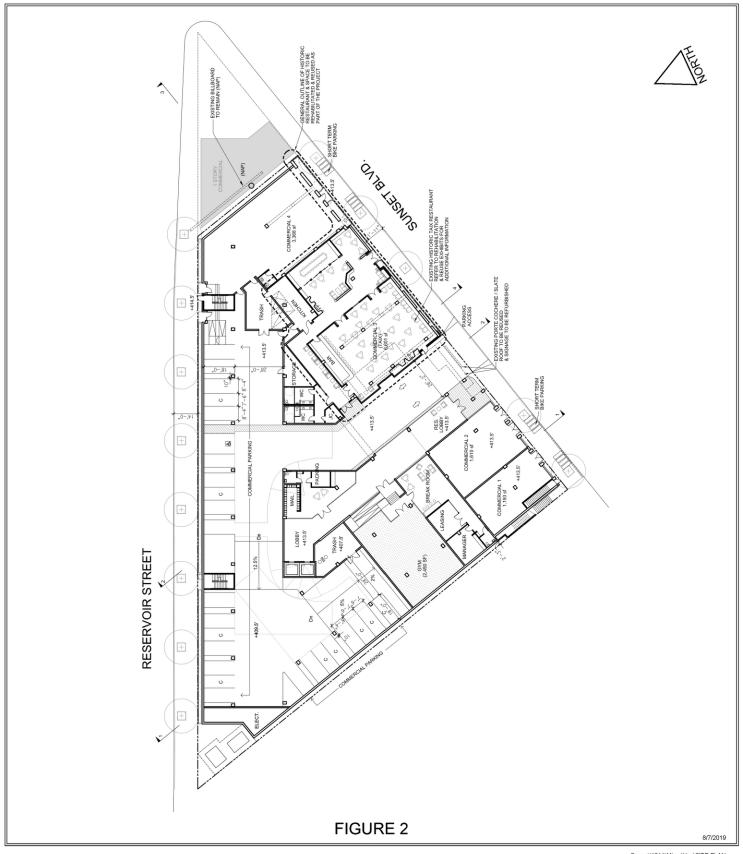

Section 19.15 of the Los Angeles Municipal Code identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact Eileen Hunt of my staff at (213) 972-8481.

<u>Notes</u>

- 1) ITE *Trip Generation Manual* (10th Edition, 2017) trip generation rates and equations applied for Land Use Codes 221 (Multifamily Housing [Mid-Rise]) and 820 (Shopping Center). Trip generation rates for the General Urban/Suburban setting were utilized due to the robust number of studies the trip rates are based on (versus limited data for the Dense Multi-Use Urban setting trip rates).
- 2) du = Dwelling units; ksf = Thousands of square feet of gross floor area.
- 3) 10 percent internal capture adjustment assumed. The internal capture adjustment is applied to the lower trip-generating component of the uses sharing trips with each other. For the proposed land uses, the shopping center is the lower-generating use; therefore, the internally captured trips are based on the baseline shopping center trip estimates and then balanced with the higher trip-generating residential use.
- 4) Consistent with current LADOT *Transportation Impact Study Guidelines*, a 15 percent transit/walk adjustment has been assumed for the proposed land uses (given that the Project is located within an approximate one-quarter mile walking distance of Metro rapid bus service, and such an adjustment is not already accounted for in the General Urban/Suburban setting baseline trip rates).
- 5) Based on Attachment D of the current LADOT *Transportation Impact Study Guidelines*, appropriate pass-by trip adjustments have been applied for the proposed commercial retail (Shopping Center) and existing quality restaurant land use categories.
- 6) Peak-hour trips were determined from the inbound and outbound turning movements observed for the site driveway north leg at the intersection of Park Avenue & Sunset Boulevard during the June 4, 2019 traffic counts. These trips were distributed proportionally between the two existing land uses, based on their relative ITE rate-based peak-hour trip generations. Daily traffic volumes were calculated by applying a daily-to-peak hour (AM + PM) trip-rate factor, based on the ITE rates above, to the combined AM + PM peak-hour volumes observed during the traffic counts.
