**Comments for Public Posting:** Venice blvd is dangerous to people walking, in cars, and on scooters/bikes. It's dangerous to everyone regardless how they travel. I'm a physician who treats trauma patients in Los Angeles. I cannot reiterate enough: we need to elected officials to implement safer and more efficient street designs. These are completely preventable injuries and deaths. Implement narrower streets that don't encourage high speeds, build SEPERATED/PROTECTED paths from cars for people to scooter/bike on. Make intersections safer with curb extensions. Build a bus only lane so there is less congestion and air pollution. I need you all to make streets safer so I don't have to tell another mom her child was killed by a driver. It's just too dangerous by design in LA. Thank you for reading this!
