Subject: **Phase I Environmental Site Assessment**
Site: 1022-1056 La Cienega Boulevard, Los Angeles, CA

Dear Mr. Settle:

In accordance with your authorization of Geosyntec Consultants, Inc.'s (Geosyntec's) proposal dated 17 May 2021, Geosyntec has prepared the enclosed Phase I Environmental Site Assessment report for Carmel Partners, Inc. for the above-referenced property. Enclosed is an electronic copy of the report.

Should you have questions regarding this submittal or need additional information, please do not hesitate to contact us. We appreciate the opportunity to be of service to you.

Sincerely,

Randy Brandt, P.G. (CA)

Project SC1140

6 August 2021

EXECUTIVE SUMMARY

This Executive Summary presents the results of the Phase I environmental site assessment (ESA) conducted by Geosyntec Consultants, Inc. (Geosyntec) for the property located at 1022-1056 La Cienega Boulevard, Los Angeles, California ("Site" or "Subject Property"). The Site is more specifically identified as Los Angeles County Assessor Parcel Numbers 5087-001-040, 5087-001-041, 5087-001-023, and 5087-001-024. This Phase I ESA was prepared for Carmel Partners, Inc. (CPI) in accordance with the scope of work, terms, and conditions described in Geosyntec's proposal dated 17 May 2021. This Phase I ESA was conducted in accordance with ASTM International (ASTM) Standard E1527-13[1] to identify, to the extent feasible, "recognized environmental conditions" (RECs) at the Site as the term REC is defined by ASTM E1527-13.

The Site comprises an approximately 1.21-acre property comprised of four parcels owned by Be La Cienega LLC. The Site is accessible from La Cienega Boulevard to the west. At the time of Geosyntec's site reconnaissance, the central and southern portions of the Site were utilized as a laydown yard for a paving company, and contained broken concrete and asphalt, gravel, pipe materials, and excavation equipment. Groundwater monitoring well monument boxes in poor shape were present in the northern and southwestern portions of the Site. The eastern boundary of the Site contained telephone poles with pole-mounted transformers. An unused sump (remaining from the former automotive shop) was located in the central portion of the Site. The remainder of the Site was a vacant, unpaved, grassy lot with general refuse and autobody debris.

Based on the information set forth in this Phase I ESA, Geosyntec has identified conditions as described below.

Recognized Environmental Conditions

No RECs were identified during this Phase I ESA with the exception of the following:

- **Known Impacts on the Site – Former Auto Repair Shop:** The Site was occupied by an automotive repair shop from 1948 to 2007. An investigation conducted in the northern portion of the Site in 2012 and 2013 identified residual petroleum fuel-related and chlorinated volatile organic compounds (VOCs) in soil, soil vapor, and/or groundwater. The constituents detected in groundwater exceeded their most conservative screening levels.[2] The elevated concentrations in Site media and likelihood of a vapor intrusion condition for future residential or commercial Site buildings represent a REC.

[1] ASTM Standard E-1527-13, "*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process"*

[2] The screening levels included California Department of Toxic Substances Control (DTSC)-modified Human and Ecological Risk Office (HERO) Note 3 Screening Levels, United States Environmental Protection Agency (USEPA)

- **Undocumented Fill Material:** A geotechnical survey conducted on the Site in 2012 identified fill material in the upper 3 feet to 5 feet below ground surface (ft bgs). Previous reports by others document the presence of sandy silts and sandy clays; no documentation was found to indicate the presence of refuse or manmade materials in the fill. Geosyntec did not encounter records showing the source of this material; therefore, it may be impacted with hazardous materials and is considered a REC.
- **Hydraulically Upgradient Properties:** An automotive service station has operated on the property approximately 100 feet north of the Site (1004 La Cienega Boulevard) since 1964, and a historical dry cleaner operated on the northwest-adjoining property (8500 West Olympic Boulevard) from at least 1984 to 2015. Subsurface investigations conducted on these properties have detected total petroleum hydrocarbons as gasoline (TPH-gasoline) and other fuel constituents and additives in groundwater samples and PCE in soil and soil vapor samples collected from these properties. Due to the historical service station and dry cleaning operations, known impacts to the subsurface, proximity and hydraulically upgradient direction in relation to the Site, and shallow depth of groundwater, these properties are likely to have adversely impacted soil, groundwater, and/or soil vapor beneath the Site. These constituents have been detected in soil, soil vapor, and groundwater at/beneath the Site (as stated in the above REC) and may be from these off-Site sources. Therefore, these findings are considered a REC.

Controlled Recognized Environmental Conditions

- No Controlled Recognized Environmental Conditions (CRECs) were identified during this Phase I ESA.

Historical Recognized Environmental Conditions

- No Historical Recognized Environmental Conditions (HRECs) were identified during this Phase I ESA.

***De Minimis* Conditions**

- **Historical Agricultural Land Use:** The Site was used for livestock grazing and farming from the mid-1800s to the 1920s, according to prior reports. Based on the timeframe, it is possible that hazardous pesticides or herbicides (considered hazardous substances) were used on Site; however, no evidence of pesticide/herbicide usage was found as part of this Phase I ESA. Therefore, this finding is considered to be a *de minimis* condition.

Regional Screening Levels (RSLs; TR=1E-06; HQ=1), California Maximum Contaminant Levels (CA MCLs), and San Francisco Bay (SFB)-RWQCB Tier 1 ESLs for a residential scenario. The conservative attenuation factor of 0.03 was applied to ambient air screening levels to convert to soil vapor screening levels.

- **Solid Materials:** Solid materials and waste (presumed to be non-hazardous) were observed throughout the Site during the June 2021 Site reconnaissance. General refuse and autobody debris were observed in the northern portion of the Site. Soil piles, crushed concrete, rubble, aggregate piles, and demolition debris were staged in the central portion of the Site. There was no indication of releases, ground surface staining, or other impacts from the solid waste/debris listed here; therefore, we consider this finding to be a *de minimis* condition.

Data Gaps

Our assessment revealed the following data gaps, as defined by ASTM:

- ASTM E1527-13 states that "*past owners, operators, and occupants of the property who are likely to have material information regarding the potential for contamination at the property shall be conducted to the extent that they have been identified."* Geosyntec was not provided with and did not identify owner contact information prior to the current Site owner. However, since relevant historical documents were obtained, this limitation is not considered to be significant.
- Geosyntec was not provided contact information for current or former owners/occupants or the User to conduct interviews.
- Geosyntec has not received records from the City of Los Angeles Fire Department (Central) – Haz Mat Division as of the date of this report.

The above data gaps are not considered to be significant with respect to identifying additional RECs for the Site.

Business Environmental Risk

A business environmental risk is defined by ASTM Standard E 1527-13 as: "*a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice. Consideration of business environmental risk issues may involve addressing one or more non-scope considerations…*"

The following Business Environmental Risks (BERs) were identified during this Phase I ESA:

- **Engineering Controls for Possible Methane Mitigation and other Building Department Requirements:** The Site is located within a City of Los Angeles Methane Zone[3], and recommended that a qualified professional be consulted to determine what mitigation measures might be required (Geotechnologies, Inc., 2012). Methane could pose a risk to the structure and building inhabitants, as build-up inside of structures can result in

[3] https://www.geoforward.com/wp-content/uploads/Methane-Zone-Map-Los-Angeles-by-Geo-Forward-Inc.-1.pdf

adverse conditions, including potential low-oxygen or explosive conditions, separate from what would be classified as a BER.

According to a 2017 Phase I ESA report (EFI, 2017), the Site is planned to have a subterranean parking structure that will require dewatering and the proposed building will have a vapor barrier. An approval letter from the City of Los Angeles Department of Building and Safety had a list of requirements for the proposed redevelopment. These findings and features may require additional evaluations, inspections, mitigation, and maintenance, and are considered a BER.

- **On-Site Well Abandonment:** Geosyntec observed seven groundwater monitoring wells on the Site during the reconnaissance. These wells are from prior subsurface investigations associated with the nearby service station nearby to the north and were observed to be in poor condition. If these wells are not anticipated to be used in the future, Geosyntec recommends proper abandonment per regulatory requirements.

1. INTRODUCTION

Geosyntec Consultants, Inc. (Geosyntec)[4] was retained by Carmel Partners, Inc. (CPI) to conduct a Phase I environmental site assessment (ESA) at the property located at 1022-1056 La Cienega Boulevard, Los Angeles, California ("Site" or "Subject Property"). The Site is more specifically identified as Los Angeles County Assessor Parcel Numbers 5087-001-040, 5087-001-041, 5087-001-023, and 5087-001-024. The Site location is shown on **Figure 1** (Site Location Map), a recent site vicinity property layout is depicted on **Figure 2** (Site Vicinity Map), and a recent site layout is depicted on **Figure 3** (Site Layout Map).

1.1 Objective

This Phase I ESA was conducted in general accordance with the scope and limitations of the guidance contained within the ASTM International (ASTM) Practice E1527-13. The objectives of performing this Phase I ESA in accordance with ASTM Standard E1527-13 were to identify, to the extent feasible, "recognized environmental conditions" [5] (RECs) at the Subject Property as the term REC is defined by ASTM E1527-13. Deviations or exceptions to the guidance contained in the ASTM E1527-13 standard of practice are described in Section 1.4.

Geosyntec's effort is to provide the User with a Phase I ESA that includes a search for the existence of potential or known surface or subsurface environmental impacts at the Site. For the purposes of this Phase I ESA report, HRP is the "User," defined as "*the party seeking to use Practice E 1527-13 to complete an environmental site assessment of the property…*" in partial fulfillment of the requirements of the All Appropriate Inquiry Rule under 40 CFR 312.

1.2 Scope of Services

The Phase I ESA scope of work included the following:

- Review of pertinent information/documents;
- Review of environmental databases regarding the Site itself as well sites in the vicinity of the Subject Property pursuant to the ASTM E1527-13 Practice;

[4] The defined term "Geosyntec" refers to Geosyntec Consultants, Inc., except where Services are rendered in Michigan it refers to Geosyntec Consultants of Michigan, Inc.; in New York it refers to B&B Geologists and Engineers of New York, P.C.; in Puerto Rico it refers to Geosyntec Consultants of Puerto Rico, P.C.; in North Carolina it refers to Geosyntec Consultants of NC, P.C.; in Canada it refers to Geosyntec Consultants International, Inc.; in the United Kingdom it refers to Geosyntec Consultants, Ltd.; and in Australia it refers to Geosyntec Consultants Pty Ltd.

[5] As defined by ASTM E1527-13, a Recognized Environmental Condition is: "the presence or likely presence of any hazardous substances or petroleum products in, on or at a property (1) due to [a] release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." The definition further states that "[*d]e minimis* conditions are not recognized environmental conditions."

- Review of historical land usage via historical aerial photographs, fire insurance maps, city directories, property tax files, and topographic maps, as available;
- Visit to the Site for a visual reconnaissance of the major interior and exterior Site features and use of adjoining properties; and
- Preparation of a Phase I ESA report.

In accordance with Geosyntec's scope of work for this project, "non-scope considerations", as defined in ASTM E1527-13, were not evaluated as part of this Phase I ESA.

Geosyntec's authorization and conduct to complete the scope of work are as follows:

Table 1. Scope of Services Details

Scope Item	Detailed Information
Site Name or Reference	La Cienega Boulevard
Site Address	1022-1056 (even) La Cienega Boulevard
City, State, and zip code	Los Angeles, CA 90035
Parcel IDs	Los Angeles County Assessor Parcel Numbers 5087-001-040, 5087-001-041, 5087-001-023, and 5087-001-024
Proposal Date	17 May 2021
Authorization Date	17 May 2021
Database Report Date	20 May 2021
Site Visit Date	3 June 2021
Geosyntec Site Personnel	Josh Nandi
Facility Personnel and Role	Not applicable
Report Preparer(s)	Maya Sederholm
Report Reviewer(s)	Randy Brandt
Environmental Professional[1]	Randy Brandt

Note 1: The Environmental Professional meets the requirements as stated in ASTM Practice E1527-13.

The professional qualifications of the senior reviewers, including the signatory Environmental Professional are presented in Section 11.

1.3 Significant Assumptions

Geosyntec took no significant assumptions into account as part of this project, except as noted in the proposal.

1.4 Limitations, Deviations, and Exceptions

This Phase I ESA was conducted according to the agreed upon scope of work consistent with the ASTM Practice E1527-13, except as follows:

- ASTM E1527-13 states that "*past owners, operators, and occupants of the property who are likely to have material information regarding the potential for contamination at the property shall be conducted to the extent that they have been identified*." Geosyntec was not provided with and did not identify owner contact information prior to the current Site owner. However, since relevant historical documents were obtained, this limitation is not considered to be significant.

This Phase I ESA contains a property description and history, an environmental database review, a summary of observations made during the site reconnaissance, and descriptions of information obtained during interview(s) of person(s) knowledgeable about the Subject Property. This Phase I ESA did not include sampling rock, soil, groundwater, surface water, soil vapor, air, or on-site substances or materials. Therefore, it is not possible to confirm the presence or absence of hazardous substances or petroleum products in the environments associated with the property.

The findings and conclusions presented in this Phase I ESA are the result of professional interpretation of the information collected at the time of this study. Specified information contained in this report has been obtained from publicly available sources and other secondary sources of information. Although care has been taken in compiling this information, Geosyntec has not independently validated this information and provides no warranty as to its accuracy or completeness. The Phase I ESA does not necessarily include an exhaustive search of all available records nor does it include detailed assessment of all Phase I ESA findings. Therefore, Geosyntec cannot "certify" or guarantee that any property is free of environmental impairment; no warranties regarding the environmental quality of the property are expressed or implied.

1.5 Special Terms and Conditions

No special contractual terms or conditions were taken into account as part of this project, except as noted in the proposal.

1.6 User Reliance

This Phase I ESA report has been prepared solely for the benefit of CPI. Geosyntec has issued the Phase I ESA report to CPI and grants CPI the right to rely on the report contents. Except as specifically set forth in Geosyntec's proposal to CPI to perform this work, no third party shall have the right to rely on Geosyntec opinions rendered in connection with the Services without Geosyntec's written consent which may be conditioned on the third party's agreement to be bound to acceptable conditions and limitations similar to those agreed to by CPI. Please note that

Geosyntec’s consent to provide a right-to-rely on the Phase I ESA report is subject to CPI approval and to agreement to Geosyntec’s terms and conditions associated with Geosyntec’s performance of this specific Phase I ESA

2. SITE DESCRIPTION

The site description presented herein is derived from information provided by the User, CPI, and information gathered during the research of historical records and the reconnaissance unless referenced otherwise.

2.1 Site Location and General Characteristics

The Site is associated with addresses 1022-1056 (even) La Cienega Boulevard, Los Angeles, California. The approximately 1.21-acre Site is comprised of four parcels (reported north to south in **Table 2)**. The Site is accessible from La Cienega Boulevard to the west. The location of the Site is shown on **Figure 1**, recent vicinity property layout is depicted on **Figure 2** and a recent site layout is depicted on **Figure 3**. Ownership information was not provided to Geosyntec. The vicinity is mixed residential and commercial/industrial properties.

Table 2. Parcel Information

Parcel ID (associated address)	Zoning	Approximate Area (Acres)	Land Use/Description
5087-001-040 (NA)	Commercial	0.25	Vacant land
5087-001-041 (NA)	Commercial	0.13	
5087-001-023 (1032 La Cienega)	Vacant land	0.20	
5087-001-024 (1042 La Cienega)	Vacant land	0.63	

Source: https://portal.assessor.lacounty.gov/

2.2 Current and Former Uses of the Site

The Site is presently owned by Be La Cienega LLC. At the time of Geosyntec's site reconnaissance, the central and southern portions of the Site were utilized as a laydown yard for a paving company, and contained broken concrete and asphalt, gravel, pipe materials, and excavation equipment. Groundwater monitoring well monument boxes in poor shape were present in the northern and southwestern portions of the Site. The eastern boundary of the Site contained telephone poles with pole-mounted transformers. An unused sump (remaining from the former automotive shop) was located in the central portion of the Site. The remainder of the Site was a vacant, unpaved, grassy lot with general refuse and autobody debris.

The Site was first constructed with a building – a garage and ice house – in 1932. In 1948, the northwest portion of the Site was developed with an automotive shop building (1032 La Cienega Boulevard); this was present until building demolition in 2007. In 1954, the southern half of the

Site was developed into an apartment complex (1042 La Cienega Boulevard); this was present until building demolition in 2010. In 1955, a northern portion of the Site was constructed with a banquet hall (1026 La Cienega Boulevard, occupied by various restaurants, caterers, and other commercial businesses) and an office building (1022 La Cienega Boulevard, occupied by various commercial businesses). The banquet hall and office building were present until building demolition in 2006.

2.3 Description of Structures, Roads, Other Improvements on the Site

There are currently no buildings, structures, active roads, or tanks on the Subject Property. Several groundwater monitoring wells in poor shape are located on the Site – five in the northern portion and two in the southwestern portion. Current Site features observed during the site reconnaissance are presented on **Figure 2**.

2.4 Current and Prior Use of Adjoining Properties

In the 1920s, the vicinity was primarily undeveloped with some residential. Since the 1930s, the vicinity was mixed residential and commercial, with gradual (re)development. Surrounding properties have consisted of residences, places of worship, schools, and commercial properties (including automotive repair, service stations, and a dry cleaner). The land use immediately surrounding the Site is noted in **Table 3** below.

Table 3. Site Vicinity Land Use

Direction	Current Geosyntec-Observed Use[1]	Identified Prior Use	Considered to be More Likely to Result in Soil/Groundwater Quality Impacts to the Site (Yes/No)
North	Matrix Collision Repair (automotive body shop at 1016-1018 La Cienega Boulevard) followed by a service station (1004 La Cienega Boulevard)	Automotive maintenance and repairs; Service stations	Yes
Northeast, East, and Southeast	Residential homes	Residential homes	No
South	An unpaved lot followed by commercial businesses, including office space, a dentist office, a clothing store, a smoke shop, and a martial arts studio	Commercial businesses	No

Direction	Current Geosyntec-Observed Use[1]	Identified Prior Use	Considered to be More Likely to Result in Soil/Groundwater Quality Impacts to the Site (Yes/No)
West	La Cienega Boulevard followed by residential apartments, and a place of worship and associated school	Street followed by commercial businesses, a place of worship, and a school	No
Northwest	La Cienega Boulevard followed by commercial businesses including a vacant suite, a technology service, and a convenience store	Dry cleaner and other commercial businesses	Yes

Note 1: Observations from Geosyntec's site visit and information from Google Maps and Google Earth.

The adjacent properties were briefly inspected during the site reconnaissance (from vantage point of the Site or public rights-of-way) to observe the associated land use practices (e.g., condition, housekeeping, evidence of chemical usage/spills). Observations made for the adjoining sites are described later in this report (Section 5.3).

2.5 Physical Setting

A summary of the physical setting of the Site and vicinity including topography, geology/ hydrogeology, and water resources is presented in **Table 4**.

Table 4. Physical Setting

Topic	Information	Source
Topography		
USGS 7.5-Minute Quadrangle Map	Beverly Hills CA; Hollywood, CA	ERIS Physical Setting Report (ERIS, 2021a); United States Geological Survey (USGS)
Elevation	Approximately 128 feet above mean sea level (AMSL)	ERIS Physical Setting Report
General Topographic Gradient	The Site and vicinity slope slightly to the south.	ERIS Physical Setting Report; USGS Quadrangle Maps
Soils & Geology		

Table 4. Physical Setting

Topic	Information	Source
Site Soils	The Site is comprised of somewhat poorly drained Urban land – Biscailuz-Pico complex soil. According to various Site investigations conducted on the Site from 2007 to 2013, subsurface lithology was typically fill materials consisting of sandy silts and sandy clays in the upper 3 feet to 5 feet below ground surface (ft bgs) followed by native materials – interbedded alluvial soils and well-sorted fine to coarse sand and silty clay.	United States Department of Agriculture Web Soil Survey[6]; NEI, 2007; NEI, 2008; Geotechnologies, Inc., 2012; LEI, 2013
Area Geology	The Site vicinity is underlain by Pliocene to Holocene Quaternary alluvium and marine deposits.	ERIS Physical Setting Report
Other	The Site is located within the Beverly Hills Oil Field and a City of Los Angeles Methane Zone.	https://maps.conservation.ca.gov/doggr/wellfinder/#openModal; https://www.geoforward.com/wp-content/uploads/Methane-Zone-Map-Los-Angeles-by-Geo-Forward-Inc.-1.pdf
Water Resources		
Nearest Water Body	Ballona Creek, a concrete-lined drainage feature is located approximately 1.37 miles south of the Site. This feature extends southwesterly and drains to the Pacific Ocean.	USGS Quadrangle Maps; Google Maps/Google Earth
Estimated Groundwater Flow[7]	According to a 2020 groundwater monitoring report for a property that has wells approximately 100 feet north and east of the Site, groundwater flows south-southeasterly at a gradient of approximately 0.01 feet per foot.	GHD, 2020

[6] https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx

[7] Local groundwater flow direction may vary depending on area groundwater pumping, surface water bodies, land use and development, localized topography, and other macro and micro features.

Table 4. Physical Setting

Topic	Information	Source
Depth of Groundwater	According to an investigation for a nearby property located approximately 100 feet from the Site but with wells more proximal to the Site, in November 2020, groundwater beneath the Site was extrapolated to be approximately 105-107 feet AMSL, or approximately 18 ft bgs. According to investigations conducted on the Site between 2008 and 2013, groundwater was encountered approximately 16 feet to 17.5 ft bgs, and the historical high was reportedly 13 ft bgs.	GHD, 2020; NEI, 2008; Geotechnologies, Inc., 2012; LCI, 2013
Wetlands (on-Site)	There are no known wetlands on the Site. The Site is located in an area 0.2% annual chance of flood hazard.	ERIS Physical Setting Report.
Wells (on-Site)	According to ERIS, no water wells exist on the Site.	GeoTracker
Nearby[8] Groundwater Supply and Monitoring Wells	Several groundwater monitoring wells are located approximately 100 feet north and east of the Site.	GHD, 2020 and ERIS

[8] ERIS searched federal and state water well databases within one mile of the Subject Property boundary.

3. USER-PROVIDED INFORMATION

This section describes the information provided to Geosyntec by CPI (the User of this Phase I ESA). A User Questionnaire was not provided by the User.

3.1 Title Records

Geosyntec was not provided with and did not review title records for the Site. A property title search was not included in the scope of Geosyntec's services.

3.2 Environmental Liens or Activity and Use Limitations

The User did not supply Geosyntec with information regarding environmental liens or activity and land use limitations associated with the Site property.

3.3 Specialized Knowledge

The User did not indicate it had specialized knowledge of environmental conditions at the Site.

3.4 Knowledge of Hazardous Substances or Petroleum Products

The User is not aware of any hazardous substances or petroleum products in, on, or under the Site.

3.5 Commonly Known or Reasonably Ascertainable Information

The User is not aware of any commonly known or reasonably ascertainable information within the local community about the Site that is material to RECs in connection with the Site.

3.6 Valuation Reduction for Environmental Issues

The User has not informed Geosyntec regarding whether or not the valuation of the Site has been reduced or otherwise impacted by environmental issues (as defined in AAI[9]) at the Site.

3.7 Degree of Obviousness

The User has not indicated the degree of obviousness of the presence or likely presence of releases or threatened releases at the Site and the ability to detect releases or threatened releases by appropriate investigation.

[9] The "All Appropriate Inquiry Rule", enacted under the 2002 Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act; 40 CFR 312

3.8 Litigation, Administrative Proceedings, and Notices

The User is not aware of (i) pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site; (ii) pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or (iii) notices from any governmental entity regarding any possible violations of environmental laws or possible liability relating to hazardous substances or petroleum products.

3.9 Reason for Performing This Phase I ESA

Geosyntec understands that CPI engaged Geosyntec to perform this Phase I ESA for the Site to identify RECs (as defined in ASTM E1527-13) to help identify potential environmental liabilities associated with the Subject Property.

3.10 Pertinent Documents

The User provided several environmental reports for the Site. These reports are summarized in Section 4.4 and included in **Appendix C**.

4. RECORDS REVIEW

Geosyntec reviewed the following records, to the extent we found these to be available and reasonably ascertainable:

- Identified federal, state, and local environmental databases
- Identified historical aerial photographs
- Identified historical topographic maps
- Identified fire insurance maps
- Identified city directories
- Local authority permits and records

In addition to the standard sources above, Geosyntec reviewed available Site-related documents provided by the User and reviewed environmental files obtained from regulatory agencies.

4.1 Standard Environmental Records Sources

4.1.1 Database Search Approach

Geosyntec contracted ERIS to provide portions of the records reviewed as described below. ERIS conducted the environmental database search in an attempt to ascertain whether the Site or neighboring properties were suspected of having environmental conditions that could have impacted the surface or subsurface at the Site. ERIS reported specific records and search distances (from the approximate Site boundaries) for the environmental databases to be consistent with ASTM Practice E 1527-13 and are discussed in the ERIS Database Report (ERIS, 2021b) presented in **Appendix B**. Database descriptions are included in the ERIS report.

The following sections discuss listings that are projected to be located upgradient of the Site and have reported (or suspected) contamination or that have the potential for significant contamination that could have impacted the Site (such as National Priorities List [NPL] or Resource Conservation and Recovery Act [RCRA] Corrective Action sites). The locations of these listed sites are shown on the Overview Map and Detail Map in the ERIS Database Report (**Appendix B**).

4.1.2 Database Search Results – Subject Property

ERIS identified eight distinct database listings for the Subject Property, with seven listings under address 1032 La Cienega Boulevard and one listing under address range 1022-1034 La Cienega Boulevard. The database listings are reported by entity name:

- **Iran Omrani at 1032 La Cienega Boulevard:** This entity was identified on the California Department of Toxic Substances Control (DTSC) Hazardous Waste Manifest (HAZNET) database in 1991; no information was provided.

- **Elie Freim at 1032 La Cienega Boulevard:** This entity was identified on the HAZNET database for generating an unspecified solvent mixture (blended on-Site) and tank bottom waste (discharged to the sewer under a National Pollutant Discharge Elimination System [NPDES] permit) in 2007.

- **Auto Repair (or some derivation) at 1032 La Cienega Boulevard:** This entity was identified on the HAZNET, City of Los Angeles Hazardous Materials Facilities (LA City HAZMAT), and Los Angeles County Certified Unified Program Agency (LA County CUPA) databases. This entity generated contaminated soil from Site cleanup, an unspecified solvent mixture, and organic solids from 1991 to 2003, and had an inactive hazardous materials inventory with the City of Los Angeles in 2019.

- **Nasa Environmental Inc. at 1032 La Cienega Boulevard:** This entity was identified on the HAZNET database in 2007; no information was provided.

- **DIDM Development Corp at 1022-1034 La Cienega Boulevard:** This entity was identified on the HAZNET database for generating asbestos-containing waste in 2006.

4.1.3 Database Search Results – Vicinity Properties

The search of environmental databases identified dozens of listings for properties within one mile of the Subject Property, some of which were in databases indicative of releases. Details of the pertinent sites (proximal to the Site and/or hydraulically upgradient and in databases indicative of releases or impacts) are summarized below and provided in the ERIS Database Report (**Appendix B**).

- **Matrix Collision Repair Facility (Matrix)/Unocal Corp/Ships Coffee Shop at 1016 La Cienega Boulevard (north-adjoining and hydraulically upgradient of the Site):** This property was identified on the HAZNET, FINDS/Facility Registry Service (FRS), Emissions, California Environmental Reporting System (CERS) Hazardous Waste Sites (HAZ), RCRA Non-Generator (NonGen), and LA County CUPA databases, none of which are indicative of releases or impacts. Matrix has operated as an automotive body, paint, and interior repair and maintenance shop. The listings reflect the generation of asbestos-containing waste in 1997 and the generation of hazardous substances and petroleum products, including aqueous solutions, unspecified solvent mixture, waste oil and mixed oil, organic solids, and empty containers, from at least 2007 to 2014. Matrix currently operates on this north-adjoining property, and prior reconnaissance by other consultants

have observed drums from this business stored in the north portion of the Site (Section 4.4).

- **Tosco – 76 Station/Unocal/Union Oil (or some derivation) at 1004 La Cienega Boulevard (approximately 100 feet north and hydraulically upgradient of the Site)**: This property was identified on the Delisted Storage Tanks (TNK), Leaking Underground Storage Tank (LUST), RCRA Large Quantity Generator (LQG), Historical Hazardous Substance Storage (HHSS), Alternative Fueling Stations (Alt Fuels), Underground Storage Tank (UST), CERS Tank, CERS Hazardous Waste Sites (Haz), LA City HAZMAT, UST LA City, Hist Tank, Emissions, LA County CUPA, and UST Statewide Environmental Evaluation and Planning System (SWEEPS) databases. According to the listings, a service station has operated on this property since 1964. According to a LUST listing and information on GeoTracker, a release of gasoline to groundwater was reported in 1986. Three USTs (gasoline and waste oil) were removed from the property in 1988. In 1998, approximately 170 tons of impacted soil were excavated and disposed of off-site during replacement of pump islands. From 1989 to 2005, free product was removed, and dual-phase (soil vapor and groundwater) extraction occurred in 1998 and 1999; nearly 5 million gallons of groundwater were extracted. Active remediation has not occurred on the property circa 2016, and water quality objectives have not been achieved. As of February 2021, the Los Angeles Regional Water Quality Control Boards (LA-RWQCB) recommended an off-site soil vapor assessment and delineation of the downgradient groundwater impacts.

  Routine groundwater monitoring of 14 wells (on the property and on surrounding properties) is ongoing. The most recent groundwater monitoring report[10] with data from November 2020 shows groundwater flow to the south-southeast and detections of total petroleum hydrocarbons as gasoline (TPH-gasoline) and other fuel constituents and additives in groundwater samples collected from hydraulically upgradient wells. Maximum reported concentrations of detected constituents were 13,000 micrograms per liter (µg/L) TPH-gasoline in MW-1 (approximately 140 feet north of the Site), 1,300 µg/L benzene in MW-1, 340 µg/L toluene in MW-21 (approximately 130 feet north of the Site), 870 µg/L ethylbenzene in MW-21, 960 µg/L total xylenes in MW-21, 120 µg/L methyl tertiary butyl ether (MTBE) in BC-14 (approximately 140 feet north of the Site), 5,400 µg/L tertiary butanol (TBA) in BC-7 (approximately 190 feet north of the Site), 16 µg/L 1,2-dichloroethane in BC-9 (approximately 210 feet north of the Site), and 250 µg/L naphthalene in BC-5 (approximately 120 feet north of the Site). The majority of these exceed their California Maximum Contaminant Levels (MCLs).[11] The depicted plumes are

[10] https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/8281687855/T0603700871.PDF
[11] https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/documents/ccr/mcls_epa_vs_dwp.pdf

off-Site; however, since dual-phase extraction has ceased and proximal hydraulically upgradient wells have impacts, these groundwater constituents may migrate beneath the Site.

- **Arco – Morris Shachory (or some derivation) at 6739 West Olympic Boulevard (approximately 300 feet north and hydraulically upgradient or crossgradient of the Site):** This property was identified on the LUST database, among others. According to the listing and information on GeoTracker, a release of gasoline to groundwater was reported in 1989. The most recent groundwater monitoring report[12] provided online is from 2007 and shows TPH-gasoline, MTBE, and tert-butyl alcohol detections in groundwater. A request for low-risk closure, dated 30 November 2006, was provided to LA-RWQCB. A closure letter is not provided online; however, the case was reportedly closed in 2007 and a well destruction report documents the abandonment of the four groundwater monitoring wells on this property.

- **Former Allstar Cleaners/SSR Marketing/Verizon Wireless/7-Eleven at 8500 West Olympic Boulevard (approximately 100 feet northwest and hydraulically upgradient of the Site):** This property was identified on the Drycleaners and the State Water Resources Control Board (SWRCB) Cleanup Sites databases, among others. According to the listings and information on GeoTracker, Allstar Cleaners operated as a large- or small-quantity generator of hazardous waste, with permits to operate PCE dry cleaning equipment from approximately 1984 to 2015. The dry cleaning machine was reportedly in the southern portion of the suite, just across the street from the northwest corner of the Site. A soil and soil vapor investigation was conducted in 2018, and elevated PCE was detected in both media. In 2019, a case was opened with LA-RWQCB. In a letter[13] dated 11 May 2021, LA-RWQCB requested that a groundwater investigation be conducted on the property. Investigative reports are not provided online. Due to the historical dry cleaning operations, known subsurface impacts, and proximity to the Site, this property is anticipated to have adversely impacted the Site with chlorinated volatile organic compounds (VOCs).

- **Former Hertz/Texaco/Car Expo/Elizabeth Mullian at 1103 La Cienega Boulevard (approximately 170 feet southwest and hydraulically downgradient of the Site):** This property was identified on the LUST database, among others. Due to the hydraulic

[12] https://geotracker.waterboards.ca.gov/esi/uploads/geo_report/8529393076/T0603701103.PDF

[13] https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/5335172355/SCP3_RV_1452_AllStarCleaners_Access%20Request%20Letter_05.11.2021.pdf

direction in relation to the Site and the reported closure of the LUST case, this property was not further evaluated.

- **Unocal at 8536 Wilshire Boulevard (approximately 0.45 miles north-northwest and hydraulically upgradient of the Site):** This property was identified on the LUST database. According to the listing and information on GeoTracker, a release of gasoline to groundwater was reported in 1989. Following site assessment and remediation, the case was reportedly closed in 1996. Due to the distance from the Site and reported closure, this property is not anticipated to have adversely impacted the Site.

- **Beverly Hills Plating Works at 243 North Robertson Boulevard (reported by ERIS to be 0.9 miles northwest and hydraulically upgradient of the Site):** This property was identified on the DTSC EnviroStor database. According to the listing and information on EnviroStor, Los Angeles County entered into a Corrective Agreement with the facility circa 2009. No reports or additional information are provided. Due to the distance from the Site and lack of evidence of groundwater impacts, this property is not anticipated to have adversely impacted the Site.

4.1.4 Unplottable Sites

ERIS identified three distinct listings for "unplottable sites" which were not mapped by ERIS due to the lack of sufficient address information. Two of the listings were identified on the GeoTracker database and pertain to the Inglewood Oil Field and Cheviot Hills Oil Field. Due to the plotted locations of these distal oil fields on California Geologic Energy Management Division (CalGEM; Section 4.3.2), these are not anticipated to have adversely impacted the Site. Also, due to the nature of the third listing, it was not further evaluated.

4.2 Historical Use Information

Geosyntec contracted ERIS to provide standard historical records, including aerial photographs, topographic maps, city directories, and fire insurance maps (ERIS, 2021c-f). The sections below identify and summarize the historical information sources reviewed for the Subject Property and vicinity. A summary of the findings from the review of the historical sources is provided in **Table 5**. Copies of the historical records reports are included in **Appendix B**.

4.2.1 Historical Aerial Photographs

ERIS provided aerial photographs from 1928, 1938, 1940, 1947, 1948, 1952, 1960, 1964, 1972, 1980, 1985, 1994, 2005, 2009, 2010, 2012, 2014, 2016, 2018, and 2020. In addition, Geosyntec reviewed aerial photographs from 1989 to 2020 on GoogleEarth.

4.2.2 Historical Topographic Maps

ERIS supplied portions of USGS topographical maps of the Site and vicinity for 1894, 1896, 1898, 1900, 1902, 1921, 1924, 1926, 1950, 1953, 1966, 1972, 1981, 1991, 1994, 1995, and 2015.

4.2.3 City Directories

Available business directories, including cross reference and telephone directories, were reviewed for the Site address (3715-3795 [odd] 6th Avenue) for 1927, 1941, 1946, 1950, 1956, 1960, 1965, 1971, 1975, 1980, 1985, 1990, 1995/1996, 2000/2001, 2006/2007, 2012, 2016, and 2020.

4.2.4 Fire Insurance Maps

ERIS supplied portions of Sanborn maps of the Site and vicinity for 1927, 1950, and 1969.

Table 5. Historical Records Review

Aerial Photographs	Topographic Maps	City Directory (CD)	Fire Insurance Maps
Site: 1928: The Site appears to be undeveloped vegetated land, with potentially a pond or pit in the north-central portion. 1938-1940: The Site appears to have a pile of earth and an unpaved path around the perimeter in the north-central portion of the Site. The remainder of the Site remains undeveloped. 1947: The Site appears to have small structures or equipment in various locations; the resolution of the photograph is low. 1948-1952: The west-central portion of the Site is constructed with a rectangular commercial/industrial building, and a lot to the east (east-central portion of the Site) is dark, potentially paved or covered in dark imported soil. Approximately four structures (potentially billboards or trailers) are present along the western boundary of the Site. 1960-1972: A northern portion of the Site is constructed with a rectangular commercial/industrial building, followed to the south by the building observed in the 1948-1952 aerial photographs. The southern half of the Site is constructed with an irregular-shaped building (apartment complex with a pool).	**Site**: 1894-1926: The Site appears vacant. 1950-1995: A church is depicted in the southern portion of the Site. 2015: Features are not depicted on the Site. The Site was not shown on the 1953 and 1991 maps due to incomplete map coverage. **Vicinity**: 1894-1902: The vicinity is primarily undeveloped. Water or drainage features are depicted approximately 0.2 miles west and 0.5 miles east of the Site; these features and their tributaries flow generally southward. Small structures (potentially residential) are scattered throughout the general vicinity. 1921-1926: Roads are depicted nearby to the west	**Site**: 1927: La Cienega Boulevard not listed. 1941-1971: 1056 La Cienega Boulevard listed as Otto's Steak House, Dalton Bob Steak House., Elbow Room, Devonshire Inn, Frascati Belgian Inn/Frascati Restaurants, or some derivation. 1956-2001: 1026 La Cienega Boulevard listed as Beverly Caterers, Dillon Ferdinand, Savoy Caterers, Façade Inc, Showmineth Club, Dragon Phoenix, New York Subway, and/or Phone Masters. 1956-2007: 1022 La Cienega Boulevard listed as Bently Ted Productions, Clough Don & Associates, Do It Yourself Stow, Starkman Architect, Wagner Construction/Realty, Canada Life Insurance, Landis Building & Investment, Clevenger & Associates, Freedman Martin CPA, Brothers Fax Sales & Services, Nextcom, and other commercial (office) business names. 1042 La Cienega Boulevard listed as	**Site**: 1927: The Site is not depicted with structures and features. 1950: An auto repair shop building is depicted near the northwest corner and a wood yard is labeled in the northeast corner of the Site. The remainder of the Site is not depicted with structures and features. 1969: The northern portion of the Site is depicted with a building labeled offices, followed by a building to the south labeled banquet room, then the auto repair shop building. The approximate southern half of the Site is depicted with an irregular-shaped apartment complex with a pool. **Vicinity**: 1927: The Site is bounded to the west by South Cienega

Table 5. Historical Records Review

Aerial Photographs	Topographic Maps	City Directory (CD)	Fire Insurance Maps
1980-2005: The northern portion of the Site is constructed with a rectangular commercial/industrial building. The remainder of the Site appears relatively consistent. 2007-2010: The buildings previously present in the northern half of the Site are gone, and there is an unpaved, empty lot. In the 2008 photographs, there are dark soil stains throughout this lot. The southern half of the Site remains the apartment complex. 2011-2020: The apartment complex previously present in the southern half of the Site is gone, and the entire Site is an unpaved, grassy lot. Select years show vehicles parked on the Site and 55-gallon drums staged in the northern portion of the Site. **Vicinity**: 1928: The Site is bounded by a road to the west and vacant/undeveloped, grassy land to the north, east, and south. The vicinity is primarily undeveloped and residential. 1938-1940: The Site is bounded to the northeast, east, and southeast by residential properties. A nearby property to the north is constructed with a service station. Some of the west-adjoining properties (across the	and east of the Site. Pacific Electric Railroad is depicted approximately 0.4 miles northeast of the Site. Oil wells are depicted over 0.5 miles north and northeast of the Site. 1950-1953: The Site is bounded to the west and east by streets. A street is depicted nearby to the north, beyond which is a water filtration plant. The south-adjoining property contains Westland School. Other vicinity properties contain schools and parks. La Brea Fossil Pits are depicted approximately 1 mile northeast of the Site on the 1953 map. 1966-1995: An oil well is depicted a couple hundred feet south-southeast of the Site. The vicinity is generally consistent. 2015: This map doesn't depict features other than streets and schools.	individuals' names, indicating residential, or as apartments. 1980-2001: 1032 La Cienega Boulevard listed as Alfa Milano Inc., Elias Freim, and/or Updated Auto Repair. 1985-2001: 1056 La Cienega Boulevard listed as The Becker Alarm Co./Hecker Howard and other commercial businesses. 2012-2020: No Site addresses listed. **Vicinity**: 1927: La Cienega Boulevard and West Olympic Boulevard not listed. 1941: Addresses on La Cienega Boulevard and West Olympic Boulevard are residential, community center/place of worship, schools, and commercial including Union Oil Co (1000 La Cienega Boulevard), Standard Stations (8500 West Olympic Boulevard), restaurants, salons, and retail. 1946-1975: Vicinity mixed residential and commercial. 8500 West Olympic	Boulevard. Adjoining properties in each direction are not depicted with structures or features. Vicinity properties are residential. The nearby street to the north (currently West Olympic Boulevard) is labeled as Country Club Drive. 1950: The vicinity is mixed residential and commercial. Adjoining properties to the east are residential. Adjoining properties to the north and south are commercial. Adjoining properties to the west (across South La Cienega Boulevard) include a school and commercial retail businesses. The nearby street to the north is labeled as West Olympic Boulevard. The nearby properties on the southeast, southwest, and northeast corners of South La Cienega Boulevard and West Olympic Boulevard (approximately 100 feet and farther from the Site) are

Table 5. Historical Records Review

Aerial Photographs	Topographic Maps	City Directory (CD)	Fire Insurance Maps
street) are constructed with commercial/industrial buildings. 1947: The vicinity has undergone additional development. A nearby property to the south is constructed with commercial/industrial buildings. 1948-1952: The vicinity has undergone additional development. The south-adjoining property is constructed with two commercial/industrial buildings. 1960-1964: The vicinity has undergone additional development. The north-adjoining property is constructed with a commercial/industrial building. 1972-1994: The north-adjoining property is redeveloped with another commercial/industrial building. The nearby service station to the north has been redeveloped (still as a service station). 2005-2020: The north-adjoining property is redeveloped with the existing commercial/industrial building. The south-adjoining property has been cleared of buildings and is a vacant lot, beyond which are commercial/industrial buildings. The vicinity has remained relatively consistent (mixed residential and commercial) since.		Boulevard listed as Standard Stations/Lou and Al's Service/ Chevron Station. 1946-2020: Vicinity mixed residential and commercial. 1004 La Cienega Boulevard listed as Union Oil Co/Rockies Union Service and La Cienega 76. 1971-2001: Vicinity mixed residential and commercial. 1016 La Cienega Boulevard listed as Ships Truck Rental. 1985-2016: Vicinity mixed residential and commercial. 8500 West Olympic Boulevard listed as Allstar cleaners and other commercial businesses. 2006-2020: Vicinity mixed residential and commercial. 1016 La Cienega Boulevard listed as Matrix Collision Repair Facility.	depicted as service stations with "gas & oil" labels. 1969: The vicinity is generally consistent with the 1950 map. Adjoining and vicinity properties are residential, commercial, and service stations.

Table 5. Historical Records Review

Aerial Photographs	Topographic Maps	City Directory (CD)	Fire Insurance Maps
In summary, the review of aerial photographs, topographic maps, and city directories revealed usages (including automotive shops, service stations, trucking operations, and a dry cleaner) that could be indicative of hazardous materials or chemical storage, management, usage, or disposal at the Site or in the immediate vicinity that could pose a threat to the surface or subsurface quality at the Site. Our opinions on the nature of the historical features of the Site and the surrounding area are included in Section 7 of this report.			

4.3 Local, State, and Federal Files

Geosyntec queried online databases and contracted Environmental Support Services (ESS) to contact local, state, and federal agencies via telephone and electronic mail to inquire as to whether they possessed relevant records regarding the Site. Relevant information is summarized below. Excerpts of relevant regulatory agency documents are presented in **Appendix D**.

4.3.1 Local Records

ESS contacted the following local agencies for Site records:

- City of Los Angeles Fire Department (Central) – Haz Mat Division (records identified; see below);
- City of Los Angeles Fire Department (Central) – Plan Check/Underground Tank Division (no records identified);
- City of Los Angeles Department of Public Works (DPW) – Industrial Waste (records identified; see below);
- City of Los Angeles Building Department (records identified; see below);
- Los Angeles County Public Health Investigator (stated that records would be provided through the County Fire Department);
- Los Angeles County Fire Department – Health Hazardous Materials Division (no records identified); and
- South Coast Air Quality Management District (SCAQMD; records identified; see below).

City of Los Angeles Fire Department – Haz Mat Division identified records for Updated Auto Repair II T 1032 South La Cienega Boulevard. As of 2006, this property was inactive/out of business. No other pertinent was provided.

City of Los Angeles DPW – Industrial Waste (Bureau of Sanitation) identified records for 1056 La Cienega Boulevard. Frascati Inn held an industrial waste permit to discharge liquid wastes from a garbage grinder, floor and equipment washing, and bleed-off/blowdown/overflow from a water conservation device from 1957 to 1966. The facility was estimated to release 3,000 gallons each day into a pipe sewer in the street. The material was not required to be treated prior to discharge.

Geosyntec queried the City of Los Angeles online inventory lists[14] for active, inactive, and historical regulated facilities with USTs and hazardous materials and the County of Los Angeles online inventory lists[15] for site mitigation, the California Accidental Release Prevention (CalARP)

[14] https://www.lafd.org/fire-prevention/cupa/public-records
[15] https://fire.lacounty.gov/public-records-requests/

program, and active and inactive facilities. Site business Updated Auto Repair [II] at 1032 La Cienega Boulevard was identified on the County inactive facility inventories.

Geosyntec queried the City of Los Angeles Department of Building & Safety[16] database as well as records obtained by ESS, and identified numerous building records for the Site. Due to the large number, each was not individually reviewed; however, they consistent of building permits from 1932 to 2019, certificates of occupancy from 1944 to 2001, commissions from 1991 to 1996, an electrical permit from 1985, grading permits from 2004 to 2020, mechanical permits from 1987 and 1988, plan maintenance documents from 1945 to 2007, affidavits from 1949 to 2019, and other records. According to the building permits, the Site was first constructed with a building (1056 La Cienega Boulevard, a garage and an ice house used for sales) in 1932. According to the Certificates of Occupancy, the Site ownership, occupancy, and/or use was as follows:

Years	Address	Owner/Business/Use/Event
1944-1952	1056 La Cienega Boulevard	Robert Dalton and Henry C. Andreson (Café Building & Cocktail Bar; restaurant use)
1948	1032 La Cienega Boulevard	R. Howard (garage)
1954-1955	1042 La Cienega Boulevard	Goldsmith-[illegible] Corporation or Buckeye Construction Co. developed apartment building with swimming pool
1955	1022 La Cienega Boulevard	Wagner Construction Co. developed office building
1956-1957	1026 La Cienega Boulevard	Charles Bucker & Solomon Hobott (banquet hall)
1960-1961	1056 La Cienega Boulevard	Frascati Inn/Frascate Cafe (restaurant)
1965	1022 La Cienega Boulevard	Office building remodeling
1979	1056 La Cienega Boulevard	Building (restaurant and dance hall) remodeling
1985	1056 La Cienega Boulevard	Electronic Entertainment Inc. (auto stereo installation shop)
1985-1991	1026 La Cienega Boulevard	David Ramzi & Iran Omrani (building with dining area)

[16] https://ladbsdoc.lacity.org/

2001	1032 La Cienega Boulevard	Elias Freim (auto body and fender repair shop)

Geosyntec queried the SCAQMD FIND[17] database as well as records obtained by ESS for Site and vicinity listings. ESS obtained records for the Site which are not readily available on FIND. Updated Auto at 1032 La Cienega Boulevard (northern portion of the Site) operated a permitted spray paint booth with solvents from at least 1996 to 2009. Inspections from this time document numerous complaints of strong lacquer and acrid odors and fumes from the paint booth, but enforcement actions weren't taken. Documents also state that the booth was an illegal structure that was not completely enclosed. Documents from 2011 note that an asbestos survey at 1022-1054 La Cienega Boulevard (the apartment building in the southern portion of the Site) was conducted. Other inspections through the years noted non-compliance for various administrative items (such as missing paperwork). A listing was identified for north-adjoining Matrix Collision Repair at 1016 La Cienega Boulevard for operating a permitted spray paint booth with solvents from 2002 to 2017. This north-adjoining property was also identified under Ships Coffee Shop (restaurant) for operating a natural gas char broiler. A listing was identified for the northwest-adjoining Allstar Cleaners at 8500 West Olympic Boulevard for operating permitted PCE dry cleaning equipment and a vapor recovery unit from 1988 to 2011; violations were reported from 1999 to 2004. This northwest-adjoining property was also identified under Chicken on Fire (restaurant) for operating a natural gas char broiler.

4.3.2 State Records

ESS contacted the following state agencies for Site records:

- DTSC – Cypress office (no records identified);
- DTSC – Chatsworth office (no records identified);
- Cal Fire – Office of the State Fire Marshal (no records identified); and
- LA-RWQCB (no records identified).

Geosyntec queried the online SWRCB GeoTracker[18] and DTSC EnviroStor[19] databases for cases pertaining to the Site or vicinity properties. No listings were identified on the Site. The following listings were identified in the immediate vicinity:

- Tosco – 76 Station #0981 at 1004 La Cienega Boulevard (approximately 100 feet north and hydraulically upgradient of the Site);
- Former All Star Cleaners at 8500 Olympic Boulevard (approximately 100 feet northwest and hydraulically upgradient of the Site);

[17] https://www.aqmd.gov/nav/FIND/facility-information-detail
[18] https://geotracker.waterboards.ca.gov/
[19] https://www.envirostor.dtsc.ca.gov/public/

- Hertz (Former Texaco Station) at 1103 La Cienega Boulevard (approximately 170 feet southwest and hydraulically downgradient of the Site).
- Arco #1361 at 6739 Olympic Boulevard (approximately 300 feet north and hydraulically upgradient or crossgradient of the Site).

These properties are discussed in detail in Section 4.1.3.

Geosyntec queried the DTSC HWTS[20] database for Site listings, and identified the following:

- Updated Auto Repair at 1032 La Cienega Boulevard generated unspecified solvent mixture and organic solids from 1997 to 2003.
- Iran Omrani at 1032 La Cienega Boulevard had records from at least 1991 to 2000; however, no other information was provided.
- DIDM Development Corp at 1022-1034 La Cienega Boulevard generated asbestos-containing waste in 2006.
- Elie Freim at 1032 La Cienega Boulevard generated unspecified solvent mixture and tank bottom waste in 2007.
- Nasa Environmental Inc. at 1032 La Cienega Boulevard had records in at least 2007; however, no other information was provided.

This information is consistent with information identified by ERIS, as presented in Section 4.1.2. Geosyntec queried the California Water Resources Control Board Stormwater Multiple Application and Report Tracking System[21] database for Site listings. No listings were identified for the Site.

Geosyntec queried the CalGEM[22] and National Pipeline Mapping System (NPMS) Public Viewer[23] databases for oil/gas wells and petroleum pipelines on the Site or in the vicinity. No oil/gas wells or pipelines were identified on the Site, but one plugged well was identified approximately 560 feet south of the Site. The Site is reportedly located within the Beverly Hills Oil Field and a City of Los Angeles Methane Zone[24]; however, there is not a large number of wells in the immediate vicinity of the Site.

4.3.3 Federal Records

Geosyntec queried the online United States Environmental Protection Agency (USEPA) ECHO[25] and Envirofacts[26] databases. No listings were identified for the Site. Vicinity listings (including

[26] http://www.epa.gov/enviro/.

Super Cleaners at 1115 La Cienega Boulevard, approximately 350 feet south-southwest) do not have reported violations that are anticipated to have adversely impacted the Site.

Geosyntec queried the National Priorities List (NPL) Superfund[27] database for cases in the vicinity of the Site. No cases were identified.

4.4 Other Documents Reviewed

Geosyntec received additional reports related to the Site from the User. Pertinent documents are summarized below in chronological order and included in **Appendix C**.

Report on Preliminary Site Investigation, NEI, 2007

NEI conducted a subsurface investigation on a portion of the Site (1022-1032 La Cienega Boulevard, the center of the Site) in 2007. The purpose of this assessment was to determine if the former automotive repair operations had impacted the Site. NEI advanced 11 borings - seven at the former hoists, one at the sump, two at the hole in the ground, and one at the waste oil storage area – and collected soil samples at depths ranging from 5 feet to 12 ft bgs. Two groundwater samples were also collected at approximately 16 ft bgs (the top of the groundwater table). NEI then backfilled the borings and patched at the surface with concrete. Additionally, the hoists were removed, triple-rinsed, and disposed of off-Site. Soil samples were analyzed for VOCs by USEPA Method 8260B and TPH-gasoline by USEPA Method 8015M. Groundwater samples were analyzed for TPH as the complete carbon chain by USEPA Method 8015M. VOCs and TPH were not detected above their laboratory reporting limits in soil and groundwater samples, and NEI concluded that "environmental impact has not occurred as a result of the former auto repair operation on the property."

Report on Site Investigation, NEI, 2008

NEI conducted a subsurface investigation on a portion of the Site (1042-1054 La Cienega Boulevard, the approximate southern half) in 2008. The purpose of this assessment was to determine if this portion of the Site had been impacted from the former automotive repair business that operated immediately north (on-Site in the northern half) or the nearby service station to the north (off-Site).

NEI advanced 9 soil borings, collected soil samples at approximately 10 ft bgs, and collected grab groundwater samples from 6 of the borings at approximately 16 ft bgs (the top of the groundwater table). NEI then backfilled the borings and patched at the surface with concrete. Soil samples were analyzed for VOCs by USEPA Method 8260B and for TPH-cc by USEPA Method 8015M.

[27] https://www.epa.gov/superfund/national-priorities-list-npl-sites-state#CA

Groundwater samples were analyzed for VOCs by USEPA Method 8260B and for total recoverable petroleum hydrocarbons as gasoline by USEPA Method 8015g.

VOCs and TPH-gasoline were detected in soil samples at the following maximum reported concentrations: 0.086 parts per million (ppm) ethylbenzene (below the USEPA Regional Screening Level [RSL][28] for residential soil of 5.8 milligrams per kilogram [mg/kg]); 0.028 ppm total xylene (below the USEPA RSL for residential soil of 580 mg/kg); and 2.80 ppm TPH-gasoline (below the Tier 1 ESL[29] for soil of 100 mg/kg).

VOCs and TPH-gasoline were detected in groundwater samples at the following maximum reported concentrations: 0.0028 ppm benzene (exceeding the CA MCL[30] of 0.001 mg/L); 0.010 ppm ethylbenzene (below the CA MCL of 0.3 mg/L); 0.005 ppm naphthalene (below the Tier 1 ESL for groundwater of 0.00017 mg/L); 0.024 ppm toluene (below the CA MCL of 0.15 mg/L); 0.040 ppm xylene (below the CA MCL of 1.75 mg/L); and 1.90 ppm TPH-gasoline (exceeding the Tier 1 ESL for groundwater of 0.1 mg/L).

Geotechnical Engineering Investigation, Geotechnologies, Inc., 2012

Geotechnologies, Inc. conducted a geotechnical investigation on the Site for the proposed redevelopment: a five-story assisted living facility with two subterranean parking levels. The lower finished floor is expected to be approximately 23 ft bgs. The consultant advanced borings and encountered fill materials consisting of sandy silts and sandy clays (boring logs do not document refuse or manmade materials in the fill) in the upper 3 feet to 5 ft bgs followed by alluvial soils (native material) to terminal depths (approximately 70 ft bgs). Groundwater was encountered approximately 17 ft bgs, and the historic high was reported at 13 ft bgs. The consultant also reported that the Site is located within a City of Los Angeles Methane Zone, and recommended that a qualified professional be consulted to determine what mitigation measures might be required.

A Soils Report Approval Letter, dated 17 October 2012, from the City of Los Angeles Department of Building and Safety states that the City conditionally approved the report described above. The letter stated that the proposed temporary excavations would go as deep as 28 ft bgs and listed specific conditions pertaining to the proposed dewatering. Another condition was that no uncertified fill would be used on-Site.

[28] USEPA RSLs, TR=1E-06; HQ=1. Revised May 2021.
[29] San Francisco Bay Regional Water Quality Control Board (SFB-WQCB) Tier 1 Environmental Screening Levels (ESLs). Revised 2019.
[30] California Maximum Contaminant Levels (CA MCLs). Revised October 2018. Federal if no state-specific value established. Revised May 2009.

Site Assessment Report, Leighton Consulting, Inc. (LCI), 2013

LCI conducted a subsurface investigation in the northern portion of the Site in 2012 and 2013. The purpose of the investigation was to evaluate potential impacts to soil, soil vapor, and groundwater from the nearby service station to the north. This report estimated a depth of approximately 21 feet to 26 ft bgs for the proposed subterranean parking structure. LEI advanced 12 soil borings to terminal depths between 13 feet and 15 ft bgs and collected soil samples at select depths. The borings were converted to soil vapor probes with depths of 5 feet and 13 ft bgs. LCI advanced another five borings to terminals depths ranging from 22 feet to 32 ft bgs, collected soil samples at select intervals, and installed groundwater monitoring wells (MW-25, MW-25U, MW-25D, MW-26U, and MW-26D). In total, LCI collected 34 soil samples, 30 soil vapor samples, and 6 groundwater samples and analyzed samples for VOCs by USEPA Method 8260.

In soil, VOCs were detected at the following maximum reported concentrations: 8,800,000 micrograms per kilogram (µg/kg) TPH-gasoline (in MW-25U at 20 ft bgs); 100 µg/kg benzene (in MW-25 at 20 ft bgs); 110,000 µg/kg ethylbenzene (in MW-25U at 20 ft bgs); 15,000 µg/kg toluene (in MW-25U at 20 ft bgs); 500,000 µg/kg total xylenes (in MW-25U at 20 ft bgs); 8.8 µg/kg naphthalene (in SV-11 at 13 ft bgs); 210 µg/kg PCE (in MW-25 at 5 ft bgs); 11 µg/kg TCE (in MW-25 at 5 ft bgs); 2.1 µg/kg vinyl chloride (in MW-25 at 5 ft bgs); 18 µg/kg isopropylbenzene (in MW-25 at 15 ft bgs); 1.1 µg/kg p-isopropyltoluene (in SV-11 at 13 ft bgs); 50 µg/kg n-propylbenzene (in MW-15 at 15 ft bgs); 92 µg/kg 1,2,4-trimethylbenzene (in SV-11 at 13 ft bgs); 36 µg/kg 1,3,5-trimethylbenzene (in SV-11 at 13 ft bgs); 8.1 µg/kg cis-1,2-dichloroethene (in MW-25 at 5 ft bgs); 6.4 µg/kg n-butylbenzene (in MW-25 at 20 ft bgs); and 3.3 µg/kg sec-butylbenzene (in MW-25 at 20 ft bgs). The reported concentration of TPH-gasoline exceeds its Human and Ecological Risk Office (HERO) Note 3 Screening Level[31] for a residential scenario and the reported concentration of ethylbenzene exceeds its USEPA RSL for a residential scenario. The other constituents were below their HERO Note 3 Screening Levels or USEPA RSLs for a residential scenario.

In soil vapor, VOCs were detected at the following maximum reported concentrations: 1.74 µg/L (1,700 micrograms per cubic meter [µg/m^3]) TPH-gasoline; 0.052 µg/L (52 µg/m^3) benzene; 0.055 µg/L (55 µg/m^3) toluene; 0.564 µg/L (564 µg/m^3) in total xylenes; 0.032 µg/L (32 µg/m^3) naphthalene; and 0.018 µg/L (18 µg/m^3) MTBE. Each of these maximum reported concentrations was in SV-3 at 13 ft bgs. The reported concentration of benzene exceeds its HERO Note 3 Screening Level for a residential scenario assuming a highly conservative DTSC-recommended attenuation factor of 0.03. The reported concentration of naphthalene exceeds its USEPA RSL for

[31] California Department of Toxic Substances Control (DTSC)-Modified HERO Human Health Risk Assessment (HHRA) Note Number 3 Screening Levels. Default Cancer Endpoint, but if none established, used Noncancer Endpoint. Revised June 2020.

a residential scenario assuming an attenuation factor of 0.03. Neither concentration exceeds its applicable screening level assuming the default DTSC attenuation factor of 0.001. The other constituents were below their Tier 1 ESL (TPH-gasoline), HERO Note 3 Screening Levels or USEPA RSLs for a residential scenario and assuming a default attenuation factor of 0.03.

In groundwater, VOCs were detected at the following maximum reported concentrations: 61,000 µg/L TPH-gasoline (in MW-25U); 4,200 µg/L TPH as diesel (TPH-diesel) (in MW-25U); 420 µg/L benzene (in MW-25); 3,000 µg/L ethylbenzene (in MW-15U); 1,600 µg/L toluene (in MW-25U); 17,800 µg/L total xylenes (in MW-25U); 9.1 µg/L MTBE (in MW-26D); 390 µg/L naphthalene (in MW-25U); 29 µg/L acetone (in MW-25); 48 µg/L n-butylbenzene (in MW-25U); 1.8 µg/L sec-butylbenzene (in MW-25); 130 µg/L isopropylbenzene (in MW-25U); 260 µg/L n-propylbenzene (in MW-25U); 2,400 µg/L 1,2,4-trimethylbenzene (in MW-25U); 740 µg/L 1,3,5-trimethylbenzene (in MW-25U); and 1.6 µg/L 1,2-dichloroethane (in MW-26D). The reported concentrations of TPH-gasoline, TPH-diesel, benzene, ethylbenzene, toluene, total xylenes, MTBE, naphthalene, and 1,2-dichloroethane exceed their CA MCLs as well as their San Francisco Bay (SFB)-RWQCB Tier 1 ESLs if different (established due to a potential vapor intrusion condition).

Reports on All Appropriate Inquiries, National Environmental, Inc. (NEI), 2016

NEI conducted environmental assessments on two portions of the Site (the very northern lot and the center of the Site, provided in two reports) in 2016. These ESAs stated that the Site was used for livestock grazing and farming from the mid-1800s to the 1920s and was first constructed with buildings in the 1930s. During the reconnaissance on both parts of the Site, NEI observed 55-gallon drums of non-hazardous soil cuttings from previous investigations. NEI did not identify an environmental impact requiring a government-mandated investigation at the Site, and recommended no additional environmental assessment work other than having the service station to the north clean up impacted media through an indemnification clause from Chevron.

Phase I ESA Report, EFI Global, Inc. (EFI), 31 July 2017

EFI conducted a Phase I ESA of the Site (1022-1054 La Cienega Boulevard). According to EFI, the northern portion of the Site (Parcels -040 and -041) was developed with a small one-story residential structure by 1927. By at least 1928, this structure was demolished. By 1938, a circular road was present in the northern portion of the Site, and by 1950, the area was utilized as a wood yard. In 1954, an office building (1022 La Cienega Boulevard) was constructed, and in 1955, a banquet hall structure (1026 La Cienega Boulevard) was constructed. In 2006, the banquet hall structure was demolished, and in 2008, the office building was demolished. Former tenants of the northern portion of the Site included doctor, real estate, and accounting businesses, telecommunication sales and services, banquet halls, sports clubs, restaurants, and caterers. The

center of the Site (Parcel -023) was constructed with a commercial building (1032 La Cienega Boulevard) utilized for various automotive repair services from 1948 through 2007, when the building was demolished. The automotive repair shop had 7 in-ground hoists, a waste oil storage area, a sump, and a hole in the ground. The center portion has remained vacant since 2007. The southern portion of the Site (Parcel -024) was constructed with an apartment complex (1054 La Cienega Boulevard) in 1954; this complex remained through 2010 when the building was demolished. The southern portion has remained vacant since. Historical sample locations, including abandoned groundwater monitoring wells, were provided on a figure in this report.

During the reconnaissance, EFI observed five 55-gallon drums of non-hazardous waste in the northeast portion of the Site and eight 55-gallon drums of unreported contents in the northwest portion of the Site; these drums may have been associated with the north-adjoining automotive repair facility (Matrix Collision Repair). The consultant also observed seven groundwater monitoring wells on the Site, associated with a subsurface investigation for the nearby service station to the north.

EFI identified the nearby service station (1004 La Cienega Boulevard, approximately 100 feet north of the Site) as an environmental concern. This property formerly had two 10,000-gallon gasoline USTs and one 280-gallon waste oil UST, and had an unauthorized release of gasoline with impacts to groundwater. LA-RWQCB opened a LUST case in 1986, and soil, soil vapor, and groundwater samples have been collected on the Site. According to 2013 analytical results from Site samples, benzene, TPH-gasoline, ethylbenzene, xylenes, N-butylbenzene, naphthalene, isopropylbenzene, N-propylbenzene, 1,2,3-trimethylbenzene, and 1,3,5-trimethylbenzene were detected in soil samples, with ethylbenzene (38 mg/kg) exceeding the applicable screening level (25 mg/kg) at the time. TPH-gasoline, benzene, toluene, ethylbenzene, m,p-xylene, and naphthalene were detected in soil vapor samples, with benzene (0.0037 µg/L; 3.7 µg/m^3) exceeding the applicable screening level (0.00042 µg/L; 0.42 µg/m^3) used by EFI. TPH-gasoline, benzene, total xylene, MTBE, and ethylene dichloride were detected in groundwater samples, with benzene (7.5 µg/L) exceeding the applicable screening level (1 µg/L) at the time. Remedial activities at the service station have included free product removal, SVE, and groundwater pump-and-treat. According to EFI, the planned development of the Site includes subterranean parking and the user of a vapor barrier at the Site building.

EFI identified a CREC in connection with the known subsurface impacts and planned engineering controls (subterranean parking and vapor barrier, according to the User at the time). EFI did not identify HRECs or *de minimis* conditions. EFI recommended characterization and removal of the drums on the Site, proper monitoring well abandonment, and maintenance of the proposed vapor barrier at the Site building.

5. SITE RECONNAISSANCE

A reconnaissance of the Subject Property was conducted in accordance to the information provided in **Table 1**. The site reconnaissance was unaccompanied. Photographs taken during the reconnaissance are included in **Appendix E**. Adjoining properties were observed from their perimeters.

As part of the reconnaissance, Geosyntec looked for evidence of hazardous substances used, stored, or discarded and inspected the Subject Property for areas of disturbed or discolored soil, suspect equipment, and building materials that may contain hazardous substances; areas of distressed vegetation; wastewater discharge areas; storage tanks/septic systems; waste management and disposal areas; lagoons; pits; sumps; surface water management areas; and stained surfaces.

5.1 Utility Service and Materials Management Provider Information

The utility service and materials management providers and practices at the Site are summarized (**Table 6**) from information supplied during Geosyntec's site reconnaissance.

5.2 Interior and Exterior Observations

Observations made during the site reconnaissance for the Subject Property are documented in **Table 7**.

5.3 Adjacent Property Reconnaissance

During the site reconnaissance, Geosyntec observed the adjoining properties from the Site or public vantage points in an attempt to identify possible sources of obvious environmental impairment that could affect soil and groundwater quality at or result in vapor migration into the Site as a result of surface water runoff, groundwater transport, or similar pathways. Geosyntec saw no obvious evidence of chemical storage or releases to the ground at adjacent properties.

Table 6. Site Utilities and Materials Management

Utility Service/Materials Management	Service Provider
Electricity	Not identified
Natural Gas	Not identified
Sanitary wastewater disposal	Not identified
Industrial wastewater disposal	Not identified
Drinking water supply	Not identified
Irrigation water supply	Not identified
Stormwater disposal	Stormwater flows to unpaved, low-lying areas on-Site. No stormwater management system was observed.
Solid (non-hazardous) waste disposal	Not identified
Hazardous waste disposal	Not identified
Universal waste	Not identified

Table 7. Interior and Exterior Observations

ASTM Section	Feature or Condition	Description
Interior and Exterior Observations		
9.4.2.3	General Usage of Hazardous Substances	At the time of Site reconnaissance, the northern and southern portions of the Site were vacant. The central portion of the Site was in use as a lay-down yard by Mark Company, a construction contractor. The central portion of the Site was observed to have staged conduit, aggregate, and other construction material. Additionally, heavy machinery such as front-loaders and excavators were staged on-Site. Fuel storage and fueling of vehicles or heavy machinery was not observed on-Site.
9.4.2.4	Aboveground Storage Tanks (ASTs)	No evidence of ASTs was observed during Geosyntec's Site visit.
9.4.2.4	Underground Storage Tanks (USTs)	No evidence of USTs was observed during Geosyntec's Site visit.
9.4.2.5	Odors	No notable odors were identified during the Site visit.
9.4.2.6	Pools of Liquids	No pools of liquids were identified during the Site visit.
9.4.2.7	Drums and Containers ≥ 5 Gallons	See General Use of Hazardous Substances.
9.4.2.8	Hazardous Substances and Petroleum Products Containers	
9.4.2.9	Unidentified Substances/Containers	

Table 7. Interior and Exterior Observations

ASTM Section	Feature or Condition	Description
9.4.2.10	Indication of PCBs	Pole-mounted transformers were observed along the eastern boundary of the Site. The age and PCB content (if any) of the transformers were not reported, and PCB labels were not observed on the transformers. No other indication of PCBs was observed during Geosyntec's Site visit.
Interior Observations		
9.4.3.1	Heating and Cooling Systems	No heating or cooling systems were observed during Geosyntec's Site visit.
9.4.3.2	Stains/Corrosion	No significant staining or corrosion were observed during Geosyntec's Site visit.
9.4.3.3	Drains and Sumps	A sump was observed in the central portion of the Site; the condition of the sump was not able to be assessed during reconnaissance. No drains were observed during Geosyntec's Site visit.
Exterior Observations		
9.4.4.1	Pits, Ponds, or Lagoons	Pits, ponds, or lagoons were not observed at the Site.
9.4.4.2	Stained Soil or Pavement	Stained soil or pavement were not observed at the Site.
9.4.4.3	Stressed Vegetation	No obviously stressed vegetation indicative of a chemical discharge or application was observed at the Site.

Table 7. Interior and Exterior Observations

ASTM Section	Feature or Condition	Description
9.4.4.4	Solid Waste	Discarded household waste, vehicle body parts, and wooden pallets were observed to be dumped in the northern portion of the Site. Piles of concrete and asphalt debris were observed in the central portion of the Site, associated with activities conducted by Mark Company. Piles of concrete debris and an apparent encampment were observed in the southern portion of the Site.
9.4.4.5	Wastewater or Stormwater Discharge	Stormwater in the Site appears to run off-site via overland flow or infiltrate through unpaved areas of the Site.
9.4.4.6	Wells	Seven groundwater monitoring wells, reportedly associated with a subsurface investigation to assess potential impacts by a release from a gasoline service station to the north of the Site, were observed.
9.4.4.7	Septic Systems	Geosyntec did not observe evidence of an existing or former septic system.

6. INTERVIEWS

6.1 Interview with Current Owner/Occupant

Geosyntec requested but was not provided with contact information for current owners/operators of the Site. Interviews with current owners and occupants were not conducted as part of this assessment. This is considered a data gap (see Section 7).

6.2 Interview with Previous Owner/Occupant

Geosyntec requested but was not provided with contact information for previous owners/operators of the Site. Interviews with prior owners and occupants were not conducted as part of this assessment. This is considered a data gap (see Section 7).

6.3 Interview with User

Geosyntec requested but was not provided with contact information for a User as a knowledgeable representative. An interview with the User was not conducted as part of this assessment. This is considered a data gap (see Section 7).

6.4 Interview with Local Agencies

ESS contacted local, county, and state agencies via telephone or electronic mail to ask whether they possessed relevant records regarding the Site, as discussed in Section 4.3.

7. FINDINGS AND CONCLUSIONS

Geosyntec has conducted a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the Subject Property located at 1022-1056 La Cienega Boulevard, Los Angeles, California. Any exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

Following the Findings and Opinions section (Section 7.1), we present identified data gaps and conclusions (Sections 7.2 and 7.3) regarding any identified RECs, Historical RECs (HRECs), Controlled (CRECs), or de *minimis conditions* associated with the Site.

7.1 Findings and Opinions

This assessment has revealed no evidence of CRECs or HRECs in connection with the Subject Property. This assessment has revealed evidence of RECs and *de minimis* conditions in connection with the Subject Property. Each identified condition is described below.

Recognized Environmental Conditions

A REC is: *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

The following RECs were identified as part of this Phase I ESA:

- **Known Impacts on the Site – Former Auto Repair Shop:** The Site was occupied by an automotive repair shop from 1948 to 2007. An investigation conducted in the northern portion of the Site in 2012 and 2013 identified residual petroleum fuel-related and chlorinated VOCs in soil, soil vapor, and/or groundwater. The constituents detected in groundwater exceeded their most conservative screening levels.[32] The elevated concentrations in Site media and likelihood of a vapor intrusion condition for future residential or commercial Site buildings represent a REC.
- **Undocumented Fill Material:** A geotechnical survey conducted on the Site in 2012 identified fill material in the upper 3 feet to 5 ft bgs. Previous reports by others document the presence of sandy silts and sandy clays; no documentation was found to indicate the

[32] The screening levels included California Department of Toxic Substances Control (DTSC)-modified Human and Ecological Risk Office (HERO) Note 3 Screening Levels, United States Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs; TR=1E-06; HQ=1), California Maximum Contaminant Levels (CA MCLs), and San Francisco Bay (SFB)-RWQCB Tier 1 ESLs for a residential scenario. The conservative attenuation factor of 0.03 was applied to ambient air screening levels to convert to soil vapor screening levels.

presence of refuse or manmade materials in the fill. Geosyntec did not encounter records showing the source of this material; therefore, it may be impacted with hazardous materials and is considered a REC.

- **Hydraulically Upgradient Properties:** An automotive service station has operated on the property approximately 100 feet north of the Site (1004 La Cienega Boulevard) since 1964, and a historical dry cleaner operated on the northwest-adjoining property (8500 West Olympic Boulevard) from at least 1984 to 2015. Subsurface investigations conducted on these properties have detected TPH-gasoline and other fuel constituents and additives in groundwater samples and PCE in soil and soil vapor samples collected from these properties. Due to the historical service station and dry cleaning operations, known impacts to the subsurface, proximity and hydraulically upgradient direction in relation to the Site, and shallow depth of groundwater, these properties are likely to have adversely impacted soil, groundwater, and/or soil vapor beneath the Site. These constituents have been detected in soil, soil vapor, and groundwater at/beneath the Site (as stated in the above REC) and may be from these off-Site sources. Therefore, these findings are considered a REC.

Controlled Recognized Environmental Conditions

A CREC is "*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)*."

- No CRECs were identified during this Phase I ESA.

Historical Recognized Environmental Conditions

An HREC is "*a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*"

- No HRECs were identified during this Phase I ESA.

***De Minimis* Conditions**

A *de minimis* condition is a condition that "*generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies*".

Based on the information Geosyntec obtained, Geosyntec has concluded that the following findings do not meet the definition of a REC, CREC or HREC and are therefore *de minimis* conditions:

- **Historical Agricultural Land Use:** The Site was used for livestock grazing and farming from the mid-1800s to the 1920s, according to prior reports. Based on the timeframe, it is possible that hazardous pesticides or herbicides (considered hazardous substances) were used on Site; however, no evidence of pesticide/herbicide usage was found as part of this Phase I ESA. Therefore, this finding is considered to be a *de minimis* condition.
- **Solid Materials:** Solid materials and waste (presumed to be non-hazardous) were observed throughout the Site during the June 2021 Site reconnaissance. General refuse and autobody debris were observed in the northern portion of the Site. Soil piles, crushed concrete, rubble, aggregate piles, and demolition debris were staged in the central portion of the Site. There was no indication of releases, ground surface staining, or other impacts from the solid waste/debris listed here; therefore, we consider this finding to be a *de minimis* condition.

7.2 Data Gaps

In accordance with ASTM E1527-13, this section documents data gaps in the information obtained and reviewed as part of this Phase I ESA and discusses the associated significance. A data gap is defined as being "*a lack of or inability to obtain information required by this practice [ASTM E1527-13] despite good faith efforts by the environmental professional to gather such information*".

Identified data gaps are presented below:

- ASTM E1527-13 states that "*past owners, operators, and occupants of the property who are likely to have material information regarding the potential for contamination at the property shall be conducted to the extent that they have been identified."* Geosyntec was not provided with and did not identify owner contact information prior to the current Site owner. However, since relevant historical documents were obtained, this limitation is not considered to be significant.
- Geosyntec was not provided contact information for current or former owners/occupants or the User to conduct interviews.

- Geosyntec has not received records from the City of Los Angeles Fire Department (Central) – Haz Mat Division as of the date of this report.

Collectively, these data gaps are not considered to be significant to the Findings or the identification of additional RECs given the fact that information was identified related to the Site from alternative sources.

7.3 Conclusions

Geosyntec has conducted a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the Subject Property located at 1022-1056 La Cienega Boulevard, Los Angeles, California. Any exceptions to, or deviations from, this practice are described in Section 1.4 of this report. This assessment has revealed evidence of RECs and *de minimis* conditions in connection with the Subject Property as summarized in Section 7.1. No *significant* data gaps were identified.

8. NON-SCOPE CONSIDERATIONS

Non-scope considerations for additional due diligence that exceed AAI requirements are discussed here. The following Business Environmental Risks (BERs) were identified during this Phase I ESA:

- **Engineering Controls for Possible Methane Mitigation and other Building Department Requirements:** The Site is located within a City of Los Angeles Methane Zone[33], and recommended that a qualified professional be consulted to determine what mitigation measures might be required (Geotechnologies, Inc., 2012). Methane could pose a risk to the structure and building inhabitants, as build-up inside of structures can result in adverse conditions, including potential low-oxygen or explosive conditions, separate from what would be classified as a BER.

  According to a 2017 Phase I ESA report (EFI, 2017), the Site is planned to have a subterranean parking structure that will require dewatering and the proposed building will have a vapor barrier. An approval letter from the City of Los Angeles Department of Building and Safety had a list of requirements for the proposed redevelopment. These findings and features may require additional evaluations, inspections, mitigation, and maintenance, and are considered a BER.

- **On-Site Well Abandonment:** Geosyntec observed seven groundwater monitoring wells on the Site during the reconnaissance. These wells are from prior subsurface investigations associated with the nearby service station nearby to the north and were observed to be in poor condition. If these wells are not anticipated to be used in the future, Geosyntec recommends proper abandonment per regulatory requirements.

10. ENVIRONMENTAL PROFESSIONAL STATEMENT

I declare that, to the best of my professional knowledge and belief, I meet the definition of an Environmental professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Signed by Randy Brandt - Geosyntec Consultants

The qualifications of the above-signed professional are included in Section 11.

11. QUALIFICATIONS OF STAFF

Randy Brandt

EDUCATION

B.S., Geology/Oceanography, Humboldt State University, Arcata, California, 1984

REGISTRATIONS AND CERTIFICATIONS

Professional Geologist (P.G.), California, Number 6105

CAREER SUMMARY

Mr. Brandt has over 30 years of management and technical experience with environmental and real estate issues. He has focused on development and implementation of environmental restoration programs for properties that are blighted hazardous waste sites ranging in size from gasoline service stations to closed military bases. He has directed large-scale soil and groundwater remediation projects to support ultimate redevelopment of the distressed properties into thriving and economically productive land uses. Through his experience, he has become adept at developing creative, cost-effective, and integrated land development/restoration strategies supporting an end-state vision that emphasizes enhanced overall life-cycle value while reducing cleanup cost and environmental liability exposure for owners and developers.

He has provided strategic consultation and technical direction for sites falling under the jurisdiction of the Resource Conservation and Recovery Act (RCRA), Comprehensive Environmental Response Compensation and Liability Act (CERCLA), Clean Water Act (CWA), National Environmental Policy Act (NEPA), and numerous state and local environmental programs in California, Washington, Idaho, Oregon, Nevada, and Utah.

Mr. Brandt has also provided expertise on the impacts of climate change on closed and active waste management units and complex industrial facilities located in coastal regions that are susceptible to rising sea level and other climate-related impacts. Mr. Brandt's relevant project experience, organized by industry sector, is presented below.

Industrial Facilities

Former Ordinance Manufacturing Facility Groundwater Remediation, Whittaker Corporation, *Hollister, California*. Mr. Brandt serves as the principal in charge of a team of experts focused on remediation of groundwater conditions impacted by perchlorate, trichloroethylene, and hexavalent chromium at a former military and commercial ordnance manufacturing facility. The work is being conducted pursuant to a Cleanup and Abatement Order from the California Central Coast Regional Water Quality Control Board. The work involves characterizing the nature and extent of contamination, bench-scale testing of treatment technologies, system design and construction, long-term operation and maintenance, groundwater monitoring, and compliance with the requirements of the Order.

Former Wood Treating Facility Remedial Investigation/Feasibility Study (RI/FS), Multiple PRP Group, *Windsor, California*. Mr. Brandt serves as the principal in charge of a team of experts focused on remediation of soil, soil vapor, and groundwater conditions impacted by wood treating activities at a former wooden tank and tower manufacturing plant. Constituents of concern include pentachlorophenol, chlorinated volatile organic compounds, chrome, and lead. The work is being conducted pursuant to an Imminent and Substantial Endangerment Order issued by the California Department of Toxic Substances Control (DTSC). The work involves characterizing the nature and extent of contamination, bench-scale testing of various treatment technologies, and selection of a preferred alternative.

Waste Management Unit Closure, Tesoro Martinez Refinery, *Martinez, California*. Mr. Brandt was the principal consultant project director for a team of technical staff tasked with closing two former waste management units (WMUs) at the Tesoro Martinez Refinery (formerly the Golden Eagle Refinery). Each WMU was approximately 35 acres with wastes that consisted of tank bottom sludge and dredged oily sediments from a nearby canal. The closure was conducted under the primary oversight from the California Regional Water Quality Control Board, San Francisco Region (SFRWQCB), with secondary oversight from the United States Environmental Protection Agency (USEPA). The closure required a biological permit that was negotiated and approved by the SFRWQCB, United States Army Corps of Engineers, and California Fish and Bay Conservation and Development Corporation. The units were closed with an innovative closure system that complied with state regulations for WMUs while providing for the least environmentally damaging project approach, thus preserving approximately 27 acres of healthy wetland and upland ecosystems.

Chico-Martinez Oil Field Litigation Support, CMO, Inc., *Fresno, California*. Mr. Brandt served as project director for litigation support to address a notice of violation from the Central Valley Regional Water Quality Control Board for discharge of produced water to surface impoundments at the oil field facility. Following negotiation of a significantly reduced settlement, Mr. Brandt led a team to bring the facility into compliance with updated Waste Discharge Requirements. The activities included conducting a hydrogeologic investigation, retrofitting the impoundments, implementation of a monitoring and reporting program, and a plan for ultimate closure of the surface impoundments.

Former Metal Fabrication Facility, Artistic Brass Plant, Masco Corporation, *South Gate, California*. Mr. Brandt was the principal consultant for the assessment, remediation, and closure of a former metal fabrication facility. The primary constituents of concern were chlorinated solvents which were used as degreasers and were released to the subsurface soil and groundwater. The work included site characterization, soil vapor extraction pilot testing, full-scale implementation, operation and maintenance, and closure. The work was conducted under the oversight of the California DTSC.

Chabot Gun Club Closure Analysis, East Bay Regional Park District, *Castro Valley, California*. Mr. Brandt was the principal consultant for evaluation of applicable treatment technologies and remediation alternatives to identify the most cost-effective and state-of-the-practice cleanup approach for a small-arms firing range. The operator had leased the land from the Park District for over 50 years and implemented marginal range management practices. As a result, significant

contamination resulted and required creative approaches to investigate and clean up munitions contamination within and outside the range boundaries. Mr. Brandt produced a technical memorandum that presented three viable cleanup strategies and laid out the pathway and cost to implement each. The memorandum formed an essential element for the Park District to develop its exit strategy for the property.

Oakland Manufactured Gas Power Plant, ***Pacific Gas and Electric Company (PG&E),*** *Oakland, California.* Mr. Brandt was the principal investigator and assessed the nature and extent of contamination from a former manufactured gas plant in downtown Oakland, California. The work involved extensive negotiations with the California DTSC regarding appropriate cleanup levels for various metals, cyanide, fuel hydrocarbons, and polynuclear aromatic hydrocarbons. The decisions and approach were incorporated into a Remedial Action Plan prepared by Mr. Brandt and his team, which was approved by the DTSC.

Hydrogeologic Investigation of a Refinery, Chevron Corporation (Chevron)*, Richmond, California.* Mr. Brandt was the program manager for a long-term CERCLA project that involved hydrogeologic investigation and remediation services at a major oil refinery. Mr. Brandt managed a dedicated project team of technical and administrative staff to conduct investigations and remediation in response to state and federal orders. The agencies identified 55 sites that required action, including tank farms, process facilities, land farms, landfills, surface impoundments, and subsurface piping. Under Mr. Brandt's leadership, the technical team developed technical approaches to agency directives; worked with the client to integrate the refinery's position with respect to regulatory directives; provided technical quality assurance, cost estimating, and cost control; and coordinated all aspects of scheduling. Mr. Brandt worked with the client and regulatory agencies to systematically achieve site closure or no further action status for a majority of the sites.

Remediation Services at a Refinery, Chevron, *El Segundo, California.* Mr. Brandt served as the project manager and lead consultant for a long-term CERCLA project involving hydrogeologic investigation and remediation services in response to state and federal cleanup orders. The orders encompassed numerous refinery operating units, including tank farms, process facilities, landfills, surface impoundments, and subsurface piping. Under Mr. Brandt's leadership, the project team developed technical approaches to field investigations and feasibility studies, implemented and evaluated pilot test activities for various remediation technologies, worked with the client to integrate the refinery's position with respect to regulatory directives, provided cost estimating and control, and coordinated all aspects of scheduling.

Conceptual Site Model for a Refinery, Chevron, *Pascagoula, Mississippi.* Mr. Brandt was the project manager and lead consultant for the development of a hydrogeologic conceptual site model to support Chevron in the preparation of a strategy to comply with complex regulatory directives regarding site assessment and remediation. Under Mr. Brandt's direction, the project team assessed the concerns and objectives of the stakeholders involved, developed a technical study and data analysis to compile the conceptual site model, and participated in presentation of the model to the stakeholders.

Groundwater Monitoring Program at a Pesticide Manufacturing Facility, Chevron, *Richmond, California.* Mr. Brandt was the project manager for the development of a revised large-scale groundwater monitoring program at a pesticide manufacturing facility. The plan was being revised in response to changing state environmental regulations and facility operating conditions. Under his direction, Mr. Brandt's technical team reviewed over 10 years of hydrogeologic information, reviewed 5 years of comprehensive groundwater chemical data, provided review and explanation of revised environmental regulations, and prepared a revised monitoring plan to justify a reduction in scope of services. Mr. Brandt coordinated geologists, environmental engineers, regulatory experts, and statisticians to develop and present a revised plan.

Remediation System Optimization Evaluation, Rijeka Refinery, Ecoina Engineers/Croatian National Government*, Rijeka, Croatia*. Mr. Brandt was the project manager and lead consultant responsible for evaluating the technical and economic effectiveness of an existing refinery-wide remediation system at a major government-owned oil refinery. Under Mr. Brandt's leadership, the technical team assisted the refinery operator in complying with new environmental regulations and reduced the operation and maintenance costs of the remediation system. Mr. Brandt's team conducted an audit of the refinery's operation and historical record of environmental incidents, assessed the adequacy of the site investigations completed to-date, and evaluated the adequacy and effectiveness of the remediation system operated by a local consultant.

Closed Military Base Redevelopment

Former Hunters Point Naval Shipyard Redevelopment, Lennar Urban, *San Francisco, California*. Mr. Brandt was the program manager and lead consultant for performing environmental due diligence and supporting the client in the negotiation of the terms of the land transfer from the United States Navy (Navy) at the former Hunters Point Naval Shipyard. Mr. Brandt provided consultation to the client to review and evaluate the progress of the Navy cleanup efforts and worked with the client to integrate the development with components of the remedy implemented at the site by the Navy. As a requirement of the regulatory agencies, Mr. Brandt authored a comprehensive Risk Management Plan, which provided protocol to implement the development activities while preserving the integrity of the Navy's remedy.

Former Concord Naval Weapons Station Redevelopment, FivePoint/Lennar Urban, *San Francisco, California.* Mr. Brandt was the project director and lead consultant to support FivePoint/Lennar in implementing a mixed-use development at the former Concord Naval Weapons Station. Mr. Brandt's work included performing peer reviews of Navy investigation and remediation work, consulting with the developer to integrate development components with the Navy's remedy, and supporting the negotiation of environmental terms associated with the land transfer. As a requirement of the regulatory agencies, Mr. Brandt authored a comprehensive Site Management Plan, which provided protocol to implement the development activities while preserving the integrity of the Navy's remedy.

Presidio Trust Landfill E Closure, Presidio Trust*, San Francisco, California*. Mr. Brandt was the program director and lead consultant to investigate, design, and implement the closure of a former United States Army (Army) dump site within the former Presidio Army Base. The closure was integrated with the redevelopment of the site as public open space and a recreational ball field

(softball and soccer fields). The project was completed within a 30-month period, which was a substantial reduction from the typical timeframe of three to four years. Time and cost reductions were accomplished by parallel tracking many tasks and maintaining an open and cooperative working relationship with the regulatory agencies.

Fort Ord Army Base, Confidential Client, *Marina, California.* Mr. Brandt served as the program manager for a CERCLA remediation of munitions and explosives of concern (MEC) at 4,000 acres of the former Fort Ord Army Base. In this role, Mr. Brandt managed a dedicated project team of over 20 prime and subcontracted staff to conduct environmental due diligence, prepare regulatory documentation, implement approved work plans, perform data analysis and interpretation, prepare reporting, and provide stakeholder interaction. The work was performed in anticipation of future commercial development under a guaranteed fixed-price contracting mechanism that was underwritten by environmental insurance policies through AIG Environmental Insurance. Mr. Brandt managed all aspects of the negotiation, policy development, and compliance with the environmental insurance policies. The work was implemented under the framework of a Guaranteed Fixed Price Contract and was completed under budget with no claims against the cost cap insurance policy.

Closed Military Base Early Transfer Negotiation Support, Confidential Client, *California.* Mr. Brandt was the program manager and lead consultant for performing environmental due diligence and negotiating the terms of the land transfer on behalf of various Local Reuse Authorities (LRA), Master Developers, and the Department of Defense at over 10 active and closed military installations. Work performed under his leadership included conducting environmental due diligence and critical review of Environmental Baseline Surveys, developing environmental closure strategies, preparing environmental remediation cost estimates for various closure scenarios, and preparing a financial assessment of the environmental liabilities remaining at the site. Work was conducted on closed Army, Navy, United States Air Force, and United States Air National Guard bases, primarily on behalf of the master developer.

Brownfield Redevelopment

Redevelopment of a Former Shopping Center Dry-Cleaner Site, MidPen Housing/Urban Mix, *Santa Rosa, California.* Mr. Brandt is the Principal Consultant to the developer and County Development Commission to redevelop a former shopping center into an affordable housing complex and community center. The dry-cleaner business had released spent dry-cleaning fluid (perchloroethylene) to the subsurface soil, soil vapor, and groundwater. Mr. Brandt developed a regulatory and technical strategy for an integrated remediation and development program to implement a timely and cost-effective remediation to make the site safe for the intended land uses. The work was conducted under the framework of the Contaminated Land Revitalization and Reuse Act (CLRRA) with the North Coast Regional Water Quality Control Board as the lead agency. Mr. Brandt also assisted the developer and Development Commission to obtain a California State funding grant. Mr. Brandt played a key role in the negotiating terms of the CLRRA Agreement and the Grant Fund scope, budget, and Funding Agreement.

Candlestick Point Redevelopment Project, Lennar Urban, *San Francisco, California.* Mr. Brandt was the principal consultant to Lennar Urban (now FivePoint) for integrating all aspects of the

environmental cleanup with demolition and redevelopment activities of the 327-acre former Candlestick Park sports area and surrounding properties. The work involved strategic coordination and negotiation with the San Francisco Department of Public Health and the California SFRWQCB. Mr. Brandt managed a multidisciplinary team of technical staff to identify and abate hazardous substances in the existing structures; coordinated environmental aspects of the demolition, grading, and infrastructure; and ensured compliance with the Maher Ordinance, including a comprehensive site history/use analysis, site investigation, and preparation of a site mitigation plan. The mitigation plan addressed metals, polynuclear aromatic hydrocarbons, fuel hydrocarbons, and methane in soil, soil gas, and groundwater.

Blossom Plaza Development Project, Forest City Development Company, *Los Angeles, California.* Mr. Brandt was the principal consultant to lead a team of environmental and geotechnical engineers to coordinate and integrate the development of a former industrial site into a mixed-use commercial and residential development. The site, a former steel mill located within the City of Los Angeles Methane Zone, was operated as commercial businesses. Environmental work included development of a Site Management Plan; closure and cleanup of a former gasoline service station; the excavation, stabilization treatment, and offsite disposal of approximately 50,000 cubic yards of lead-contaminated soil; and the design and construction of a methane mitigation system under the entire development. All environmental work was conducted in coordination with active development work under a Voluntary Cleanup Agreement with the California DTSC and the methane work under the oversight of the City of Los Angeles Building Department, and Environmental Management Department. The site received closure from the DTSC and was successfully redeveloped into a market-rate and affordable-rate housing complex.

Pier 70 Waterfront Development Project, Forest City Development Company, *San Francisco, California.* Mr. Brandt was the principal consultant and led a team of technical staff to support the developer in the acquisition, characterization, cleanup, and redevelopment of a former commercial and Naval ship-building facility. Acquisition support included conducting all appropriate inquiry environmental due diligence and assisting the developer in obtaining Pollution Legal Liability Insurance. Characterization and cleanup was conducted in accordance with the Maher Ordinance process and included the preparation and implementation of a Site Mitigation Plan under the oversight of the San Francisco Department of Public Health and the California SFRWQCB.

Redevelopment of the Former Potrero Power Plant, Associate Capital, *San Francisco, California.* Mr. Brandt was the principal consultant to support Associate Capital in the closure and redevelopment of the former Potrero Power Plant. The plant was over 100 years old and had been operated as a manufactured gas plant and fuel oil powered plant. Mr. Brandt's role included negotiating an investigation and cleanup program with PG&E, the former owner, and integrating cleanup of residual contamination with land development activities conducted by Associate Capital. Specific work included co-authoring a Site Management Plan, supporting the preparation of the Project Description for the environmental analysis under the California Environmental Quality Act, monitoring PG&E cleanup activities, and supporting the development planning and phasing. The work was conducted under the oversight of the California SFRWQCB and the San Francisco Department of Public Health.

Redevelopment of a Closed Mine Tailings Superfund Site, City of Midvale, *Midvale, Utah.* Mr. Brandt was the principal consultant to support the city of Midvale, Utah in evaluating various redevelopment options for a mine tailings pile that was designated as a Superfund site and closed in place with an impermeable cover and other institutional controls. The team, under the leadership of Mr. Brandt, evaluated various land use and construction alternatives to develop the highest and best use of the property while complying with the Superfund closure requirements and institutional controls. To support redevelopment of the site while preserving the USEPA remedy, Mr. Brandt authored a Site Modification Plan (SMP), which identified protocol and specifications for integrating the final cover system with the developed structures and infrastructure, environmental health and safety measures, soil management protocol, dust control, and surface water management. The SMP was approved and adopted by the USEPA and the Utah Department of Environmental Quality (DEQ). Under Mr. Brandt's direction, the Geosyntec team is now monitoring compliance of the developer's construction activities with the SMP.

Redevelopment of Former Agricultural/Commercial Project*, *the Irvine Company, *Santa Clara, California.* Mr. Brandt was the principal consultant to support the client in the redevelopment of an aged office complex that had been constructed on land contaminated by former agricultural land uses. Mr. Brandt worked with the project team to devise a strategy to mitigate impact to human health and the environment through the California DTSC Contaminated Land Revitalization and Reuse Act (CLRRA) program. The ultimate solution involved the excavation of soil impacted with metals and pesticides and placement into consolidation cells located under new office building and parking structure foundations. Land surrounding the buildings was released for unrestricted land use.

Redevelopment of a Former Metal Fabrication Facility*, Area Properties, San Francisco, California*. Mr. Brandt was the principal consultant to support the client in the redevelopment of an aged office complex that had been constructed on land contaminated by chlorinated solvents from a former metal fabrication plant. Mr. Brandt worked with the project team to devise a strategy to mitigate impact to human health and the environment through the San Francisco Department of Public Health Maher Ordinance program. The ultimate solution involved installation of a soil vapor extraction system and sub-slab depressurization system. The site was successfully cleaned up, received closure, and was redeveloped into a state of the art office complex.

Uptown Development Project, Forest City Residential West Developments, *Oakland, California.* Mr. Brandt was the principal in charge and project manager for implementing the Remedial Action Plan/Risk Management Plan (RAP/RMP) at two large city blocks targeted for a residential brownfield redevelopment project. The work was conducted under a guaranteed fixed price contracting mechanism that was underwritten by environmental insurance policies through AIG Environmental Insurance (AIG). Under Mr. Brandt's direction, the project team assessed, quantified, and negotiated the transfer of environmental risk through the structure and implementation of a guaranteed fixed price remediation contract with the City of Oakland, Forest City, and AIG. The project received closure from the regulatory agency and was successfully redeveloped into a mixed-use market-rate and affordable-rate housing complex. The project was implemented under the framework of a Guaranteed Fixed Price Remediation contract. The work was completed under budget and with no claims against the cost cap insurance policy.

Proposed Auto Mall Development, City of Long Beach, Long Beach Redevelopment Agency, *Long Beach, California.* Mr. Brandt was the project manager for a multidisciplinary remedial investigation (RI) and feasibility study (FS) and remediation project for crude oil and chlorinated solvent contaminated soils and groundwater at a proposed 80-acre auto mall redevelopment project. The project site encompassed three unproductive and abandoned oil production fields. Mr. Brandt managed a team representing various technical disciplines to conduct a site assessment, preliminary site characterization, remedial alternative technical and cost evaluation, remediation, and design and planning consultation to the project's civil and architectural engineers.

Various Environmental Due Diligence and Development Support Projects, Multiple Clients, *Multiple Locations*. Mr. Brandt was the principal consultant and conducted environmental due diligence and development projects at over 300 sites throughout California, Washington, and Oregon. Sites ranged from manufacturing facilities, golf courses, multi-site camp grounds, communication facilities, commercial sites, agricultural land, former military sites, former dry-cleaners, and manufacturing plants. The work was done in accordance with the USEPA and all appropriate inquiry requirements and followed the requirements of the ASTM International E1527 Standard for Phase I Environmental Site Assessment process. The developments included commercial land uses, high-density residential land uses, and mixed land uses. The work included investigation of site history, site investigation, remediation, mitigation, development of site management plans, and securing Pollution Legal Liability environmental insurance for the owner.

Mining Industry

Phosphate Mine Closure and Restoration, Georgetown Canyon Phosphate Mine, *Southeast Idaho*. Mr. Brandt served as the technical representative for one of two Responsible Parties (RP) for the cleanup, closure, and restoration of a former phosphate mine. The work involved coordination with the technical consultants of the other RP, providing technical peer review, and strategic planning and negotiation with the regulatory agencies for a multi-media RI/FS. The work also involved coordination and negotiation with the Idaho Department of Environmental Quality and the United States Forest Service.

Groundwater Quality Assessment, Limestone Quarry, Mitsubishi Cement Corporation, *San Bernardino County, California*. Mr. Brandt was the principal consultant to design a groundwater monitoring program to evaluate water quality and wastewater discharge issues associated with the operations at a major limestone quarry in San Bernardino County. Mr. Brandt's efforts included review of existing data, designing a comprehensive groundwater monitoring network, preparing a groundwater monitoring plan, providing consultation, and negotiating with regulatory agencies.

Water Quality Assessment, Proposed Apperson Quarry, DeSilva Gates Corporation, *Alameda County, California.* Mr. Brandt was the principal consultant and designed a surface water quality monitoring program to establish pre-mining operations and surface water quality conditions in support of an Environmental Impact Report for the proposed Apperson Quarry. The operator planned to mine construction materials (sand, gravel, rock, etc.) from the quarry to support local construction activities. Mr. Brandt's efforts included reviewing existing data, designing a comprehensive surface water monitoring network, preparing a surface water monitoring plan, providing consultation, and negotiating with regulatory agencies.

Groundwater Quality and Slope Stability Assessment, Richmond Quarry, Chevron, *Richmond, California.* Chevron Corporation retained Mr. Brandt to assess groundwater quality impacts at a quarry being operated under lease from Chevron on land adjacent to the Richmond Refinery. Mr. Brandt was the principal in charge to develop and implement a groundwater quality investigation to assess the nature and source of impacts to groundwater from the quarry operations and nearby refinery.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property:		*Carmel Partners - La Cienega* *1022-1056 La Cienega Boulevard Los Angeles CA 90035*
Project No:		
Coordinates:

Regulated Programs

EI ID:	10262710	**EI Description:**	Hazardous Waste Generator

Violations

Violation Date:	11/23/2015	**Violation Source:**	CERS
Violation Program:	HW	**Violation Division:**	Los Angeles County Fire Department
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)		
Violation Notes:			

Returned to compliance on 11/23/2015. OBSERVATION: 1-55 G used oil, and 1-55 G DM waste coolant drums missing accumulation start dates on HW label. All hazardous waste tanks shall be marked with the words "Hazardous Waste" and the accumulation start date. CORRECTIVE ACTION: Immediately ensure that all hazardous waste tanks are marked with the required information.

Violation Description:

Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violations

Violation Date:	11/23/2015	**Violation Source:**	CERS
Violation Program:	HW	**Violation Division:**	Los Angeles County Fire Department
Citation:	40 CFR 1 265.35 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.35		
Violation Notes:			

Returned to compliance on 11/23/2015. OBSERVATION: Generator failed to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to all areas of facility operation in an emergency and/or failed to demonstrate to the CUPA that aisle space is not needed for any of these purposes. Observed access to waste coolant and used oil blocked by auto parts and tires., CORRECTIVE ACTION: Owner/Operator shall immediately maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill

control equipment, and decontamination equipment to any area of facility operation in an emergency or demonstrate to the CUPA that aisle space is not needed for any of these purposes.

Violation Description:

Failure to maintain aisle space to allow the unobstructed movement of personnel, fire protection, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless it can be demonstrated to the Department that aisle space is not needed for any of these purposes.

Evaluations

Eval Date: 01/08/2013
Violations Found: No

Violations

Violation Date: 07/22/2016 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: HSC 6.7 25290.1(c)(3), 25290.2(c)(3) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c)(3), 25290.2(c)(3)
Violation Notes:

Returned to compliance on 07/22/2016. OBSERVATION: Liquid residue was observed in the UDC 7/8 sump, meter gasket leak. If water could enter into the secondary containment by precipitation or infiltration, it must be removed and disposed of properly. CORRECTIVE ACTION: Corrected on scene. Meter replaced, and residue cleaned up.

Violation Description:

Failure to keep water out of the secondary containment of UST systems installed on or after July 1, 2003 and before July 1, 2004, or on or after July 1, 2004.

Violations

Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: 23 CCR 16 2712(i) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(i)
Violation Notes:

Returned to compliance on 03/22/2017. OBSERVATION: Owner/Operator did not maintain an approved monitoring plan. 87 tank has ld-2000 Line leak detector and 91 tank has Red Jacket FXIV. No mention of 208 sensors in fill sumps for both tanks. Also both tanks show no isolation and show secondary as steel, but should be isolated and fiberglass secondary. CORRECTIVE ACTION: Maintain an approved monitoring plan. Submit monitoring plan for approval.

Violation Description:

Failure to have a UST Monitoring Plan available on site.

Violations

Violation Date: 04/02/2019 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Notes:

Returned to compliance on 04/29/2019. OBSERVATION: Overfill Protection Test form dated 3/20/19 is incorrect and incomplete. Technician did not check of Shut Off Flow for both tanks(site has Fill Tube Shut Off Devices) & did check Restricts Flow & Checked Yes for Flow Restrictors installed on Vent Piping (Ball Floats were removed during inspection). CORRECTION: Submit corrected form and Manufacturers Guidelines to LAFD. USTTESTNOTIFY@lacity.org for review by 5/2/19.

Violation Description:

Failure to comply with one or more of the following overfill prevention equipment requirements:
Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or
Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or
Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or
Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018.

For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter.

For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter.

Inspected within 30 days after a repair to the overfill prevention equipment.

Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer.

Inspected by a certified UST service technician.

Maintain records of overfill prevention equipment inspection for 36 months.

Violations

Violation Date: 03/13/2018 ***Violation Source:*** CERS
Violation Program: UST ***Violation Division:*** Los Angeles City Fire Department
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Notes:

OBSERVATION: Unable to determine if Line leak detector failed to meet one or more of the following requirements: Monitor at least hourly; Capable of detecting a release of 3.0 gallons per hour at 10 p.s.i.g.; Restricting or shutting off the flow of product through the piping when a leak is detected. Technician did not have a properly calibrated instrument to test both line leak detectors. CORRECTIVE ACTION: Test both line leak detectors by a certified technician with a properly calibrated instrument.

Violation Description:

Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 p.s.i.g. and restrict or shut off the flow of product through the piping when a leak is detected.

Evaluations

Eval Date:	11/30/2020
Violations Found:	No
Eval General Type:	Compliance Evaluation Inspection
Eval Type:	Routine done by local agency
Eval Division:	Los Angeles City Fire Department
Eval Program:	HMRRP
Eval Source:	CERS
Eval Notes:	

Consent to enter, inspect and take photographs was given by: Khin Aye The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into California Environmental Reporting System (CERS) is required between January 1 and March 1 of every year. Per L.A.M.C. 57.121.3.5, failure to submit the required hazardous material business plan (HMBP) information annually into CERS [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

Eval Program: HMRRP
Eval Source: CERS
Eval Notes:

On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by (ERIC EDMAN - MANAGER). Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Disadvantaged Community:
Site History:
CUF Case: NO
Case Worker: RV
File Location: Regional Board

The Regional Board has been providing regulatory oversight for the characterization, cleanup and monitoring of the contaminants of concern (COCs) in soil and groundwater at the Site since March 2005. The Site currently consists of several single-story buildings, canopies, and paved parking areas used for auto body repair and paint work. The Site is located in an area designated for mixed residential and commercial use by the City of Los Angeles.). The Site is located in the northern part of Central Basin of Los Angeles County. Soils types observed during previous subsurface investigations at the Site have been described as alternating intervals of predominantly unconsolidated fine grained sands, silts, silty sands, and some clay down to approximately 30 feet below ground surface (bgs). Based on the sampling results from the deep borings, AEI consultants (AEI) indicated that several sandy intervals were observed at approximately 26, 40, and 54 feet bgs. Depth to first groundwater at the Site has consistently been recorded approximately between 14 and 19 feet bgs in monitoring wells MW-1 through MW-4 since their installation in 2003. Since 2003, AEI and Terracon has conducted several rounds of phase II environmental investigations at the Site. Analytical results of the soil, soil gas and several round of groundwater samples confirm that the soil , soil gas and groundwater beneath the Site have been impacted with total petroleum hydrocarbon (TPH), and volatile organic compounds (VOCs) consisting primarily of tetrachloroethylene (PCE). Based on the results of most recent site investigtion conducted by Terracon in June 2009, on February 18, 2010 the LA RWQCB issued a directive letter to Fleiner Family Trust to initiate preparation of a Remedial Action Plan (RAP) to address the current impacts to soil, soil vapor, and groundwater at the site. The RAP should include an engineering assessment of all the

existing data to evaluate the most appropriate, efficient, and feasible remedial alternatives to mitigate the subsurface impacts. In March 2010 Terracon prepared the RAP and proposed the following remedial technology for VOCS impacted soil, soil vapor and groundwater beneath the Site: 1-In-situ SVE remedial system was proposed for remediation of soils/soil vapor at the Site 2--Enhanced in-situ Bioremediation (EISB) in a Permeable Reactive Zone (PRZ) arrangement for impacted groundwater in down-gradient monitoring wells which has the highest concentrations of VOCs in groundwater. Based on new data in Data Gap Report dated February 2016, the Regional Board staff concluded the following: • Results of 4 GW monitoring events in new installed MW-12 located offsite to north of the property boundary indicated that an anomalous GW elevations data. This anomalous data was not adequately interpreted by NOREAS. Consequently, groundwater flow direction was not correctly illustrated at the vicinity of the MW-12. • New soil vapors and GW investigation results located at offsite to north of the property indicated that, offsite soil vapor and groundwater plumes were not significantly contributed to the onsite VOC in soil vapor or GW plumes • VOC (PCE) vapor results at 5 and 10 feet indicated the concentrations of PCE still exceeded of acceptable levels for the offsite residents • Extend of these PCE concentration to the west and south are unknown • A limited and short time SVE system operation (8 months) was not effectively remediated of the soil vapor beneath the site. • Active groundwater remediation is required to reduce the contaminants to meet the cleanup goals for offsite resident (according to HHRA). Due to long term process for MNA and uncertain effectiveness of this passive technology, the proposed MNA cannot be accepted Therefore: FFT is required for the following: 1. Step out soil vapor and groundwater sampling to the west and south west to delineate extent of Soil vapor and groundwater exceeded RBC for the current and future residential land use. Implementation, operation and monitoring program for of full-scal SVE system for soil and EISB pilot testing for groundwater are currently in progress.

Cleanup Oversight Agencies: LOS ANGELES RWQCB (REGION 4) (LEAD) - CASE #: 1174
CASEWORKER: RYAN VITUG

Site History:

The Regional Board has been providing regulatory oversight for the characterization, cleanup and monitoring of the contaminants of concern (COCs) in soil and groundwater at the Site since March 2005. The Site currently consists of several single-story buildings, canopies, and paved parking areas used for auto body repair and paint work. The Site is located in an area designated for mixed residential and commercial use by the City of Los Angeles.). The Site is located in the northern part of Central Basin of Los Angeles County. Soils types observed during previous subsurface investigations at the Site have been described as alternating intervals of predominantly unconsolidated fine grained sands, silts, silty sands, and some clay down to approximately 30 feet below ground surface (bgs). Based on the sampling results from the deep borings, AEI consultants (AEI) indicated that several sandy intervals were observed at approximately 26, 40, and 54 feet bgs. Depth to first groundwater at the Site has consistently been recorded approximately between 14 and 19 feet bgs in monitoring wells MW-1 through MW-4 since their installation in 2003. Since 2003, AEI and Terracon has conducted several rounds of phase II environmental investigations at the Site. Analytical results of the soil, soil gas and several round of groundwater samples confirm that the soil , soil gas and groundwater beneath the Site have been impacted with total petroleum hydrocarbon (TPH), and volatile organic compounds (VOCs) consisting primarily of tetrachloroethylene (PCE). Based on the results of most recent site investigtion conducted by Terracon in June 2009, on February 18, 2010 the LA RWQCB issued a directive letter to Fleiner Family Trust to initiate preparation of a Remedial Action Plan (RAP) to address the current impacts to soil, soil vapor, and groundwater at the site. The RAP should include an engineering assessment of all the existing data to evaluate the most appropriate, efficient, and feasible remedial alternatives to mitigate the subsurface impacts. In March 2010 Terracon prepared the RAP and proposed the following remedial technology for VOCS impacted soil, soil vapor and groundwater beneath the Site:
1-In-situ SVE remedial system was proposed for remediation of soils/soil vapor at the Site 2--Enhanced in-situ Bioremediation (EISB) in a Permeable Reactive Zone (PRZ) arrangement for impacted groundwater in down-gradient monitoring wells which has the highest concentrations of VOCs in groundwater.

Based on new data in Data Gap Report dated February 2016, the Regional Board staff concluded the following:

• Results of 4 GW monitoring events in new installed MW-12 located offsite to north of the property boundary indicated that an anomalous GW elevations data. This anomalous data was not adequately interpreted by NOREAS. Consequently, groundwater flow direction was not correctly illustrated at the vicinity of the MW-12.

• New soil vapors and GW investigation results located at offsite to north of the property indicated that, offsite soil vapor and groundwater plumes were not significantly contributed to the onsite VOC in soil vapor or GW plumes

• VOC (PCE) vapor results at 5 and 10 feet indicated the concentrations of PCE still exceeded of acceptable levels for the offsite residents

• Extend of these PCE concentration to the west and south are unknown

• A limited and short time SVE system operation (8 months) was not effectively remediated of the soil vapor beneath the site.

• Active groundwater remediation is required to reduce the contaminants to meet the cleanup goals for offsite resident (according to HHRA). Due to long term process for MNA and uncertain effectiveness of this passive technology, the proposed MNA cannot be accepted

Therefore: FFT is required for the following:

1. Step out soil vapor and groundwater sampling to the west and south west to delineate extent of Soil vapor and groundwater exceeded RBC for the current and future residential land use.

Implementation, operation and monitoring program for of full-scal SVE system for soil and EISB pilot testing for groundwater are currently in progress.

School District:
Past Use that Caused Contam: DRY CLEANING
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR
Potential Contamin of Concern:

BENZENE, TETRACHLOROETHYLENE (PCE)

Site History:

This approximately 0.17 acre Site is located in Beverly Hills on the south side of West Olympic Boulevard, between S. Clark Drive and S. Robertson Blvd. It is occupied by a 3,210 square foot, single-story commercial structure which encompasses approximately the northern half of the Site. A paved parking area is located in the southern half of the Site. The structure is currently occupied by a retail clothing store.

In the past, the Site was occupied by a series of dry cleaning businesses from at least 1945 through 1965. The Site is adjacent to multiple former Leaking Underground Storage Tank (LUST) cases, the nearest immediately adjacent to the Site across a small alley to the east. This LUST case was closed (No Further Action) on 03/21/2005.

The Former BH Lincoln Mercury (FBHLM) site (DTSC Site Code 301477) is located approximately 750 feet west of the subject Site (hydrologically up-gradient). Investigation and monitoring of the FBHLM site detected PCE in groundwater in both the up- and down-gradient directions. DTSC provided a No Further Action letter 01/24/14 on the FBHLM site, concluding that no threat to public health or threat to the environment was indicated.

A Phase 2 Environmental Site Assessment (ESA) was conducted for the subject Site (dated 02/19/14). Samples of soil, soil vapor and groundwater (GW) were collected. Five borings (one within the structure) were advanced for soil and vapor sampling, and GW grab samples were taken from two of the five borings. GW was observed at depth of around 12 feet. The ESA revealed low concentrations of PCE in three of five vapor samples, PCE in excess of the screening level in one of five soil samples, and PCE in both GW samples, one in excess of the screening level. Based on this data, it was

concluded that further investigation and delineation of the PCE in soil, soil vapor and GW was warranted.

A Site Characterization was next conducted (dated 05/12/14) for the Site. Six additional borings were advanced (one within the structure). Soil samples were taken from all six borings, vapor samples from one boring (within the structure), and GW grab samples from five of the new borings. GW was observed at depths ranging from approximately 8-11 feet. PCE was detected in three soil samples, all below industrial regional screening levels (RSLs), and two above maximum soil screening levels (SSL). Various VOCs were detected in the additional vapor sample, with only PCE exceeding the industrial California Human Health Screening Level (CHHSL). PCE was detected in excess of the Maximum Contaminant Level (MCL) in all five GW samples.

Based on the elevated PCE concentration in the additional vapor sample, a vapor intrusion model was applied to the data to provide an assessment of exposure risk to humans in the structure. Cumulative risk was calculated at 1.1x10^-6 for carcinogenic risk and 1.6x10^-2 for non-carcinogenic risk, both below commercial screening levels (1x10^-5 and 1, respectively).

Past Use that Caused Contam: SCHOOL - ELEMENTARY, UNDERGROUND STORAGE TANKS, VEHICLE MAINTENANCE
Potential Media Affected: OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL, SOIL VAPOR
Potential Contamin of Concern:

OTHER, VOLATILE ORGANICS (8260B VOCS)

Site History:

The Horace Mann School has been located on a portion of the Site since 1929. Over the years, the school was expanded to its current size and the last parcel of real property associated with the Site was acquired by the District in 1974. Prior to 1929, that portion of the Site that was initially acquired for the school was vacant undeveloped land except for one parcel of real property which had residential development. The land subsequently acquired by the District for expansion fo the school was either vacant undeveloped land or historically used for residential or commerical purposes. The District is proposing to modernize the school and these efforts will include the demolition of existing structures and construction of new facilities, including subteranean parking beneath the southwestern area of the Site.

The Phase I was completed in conformance with the scope and limitations of the ASTM in order to determine if there are any recognized RECs associated with the property. A Preliminary Environmental Assessment (PEA) was conducted in June, 2012,. DTSC reviewed the PEA Report and processed comments on July 12, 2012. Currently DTSC is awaiting response to comments and updates to the PEA.

Cleanup Status: NO FURTHER ACTION AS OF 1/24/2014
Cleanup Oversight Agencies: DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY
School District:
Past Use that Caused Contam: UNDERGROUND STORAGE TANKS, VEHICLE MAINTENANCE
Potential Media Affected: AQUIFER USED FOR DRINKING WATER SUPPLY AFFECTED, SOIL, SOIL VAPOR
Potential Contamin of Concern:

POLYCHLORINATED BIPHENYLS (PCBS), TPH-MOTOR OIL, TPH-DIESEL, TPH-GAS

Site History:

The subject site is comprised of a vacant 18,350 Sq. foot building and a 10,000 square foot parking. The property has been used as an automobile dealership and service center from the time it was developed in 1947. Known or potential sources of contamination include a UST removed in 1989, as well as a clarifier and hydraulic lifts and associated piping and tanks which were removed 2010. Soil and soil gas samples collected at the site indicate the presence of volatile organic compounds in the soil at concentrations that pose a slightly elevated risk to human health and the environment. In addition, limited groundwater samples at the Site indicate VOC impacts to groundwater that may be associated from historical site operations.

Based on DTSC's review, there is sufficient information to evaluate the threat to human health; however additional investigation is necessary to determine risk to the environment from residual on-site VOC impacts. Therefore, DTSC has recommended additional groundwater characterization.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

Standard Environmental Record Sources

Federal

Formerly Utilized Sites Remedial Action Program: DOE FUSRAP

The U.S. Department of Energy (DOE) established the Formerly Utilized Sites Remedial Action Program (FUSRAP) in 1974 to remediate sites where radioactive contamination remained from the Manhattan Project and early U.S. Atomic Energy Commission (AEC) operations. The DOE Office of Legacy Management (LM) established long-term surveillance and maintenance (LTS&M) requirements for remediated FUSRAP sites. DOE evaluates the final site conditions of a remediated site on the basis of risk for different future uses. DOE then confirms that LTS&M requirements will maintain protectiveness.

Government Publication Date: Mar 4, 2017

National Priority List: NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

Government Publication Date: Apr 27, 2021

National Priority List - Proposed: PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

Government Publication Date: Apr 27, 2021

Deleted NPL: DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Government Publication Date: Apr 27, 2021

SEMS List 8R Active Site Inventory: SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

Government Publication Date: Mar 23, 2021

Inventory of Open Dumps, June 1985: ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

Government Publication Date: Jun 1985

SEMS List 8R Archive Sites: SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

Government Publication Date: Mar 23, 2021

Comprehensive Environmental Response, Compensation and Liability Information System - CERCLIS: CERCLIS

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

Government Publication Date: Oct 25, 2013

EPA Report on the Status of Open Dumps on Indian Lands: IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

Government Publication Date: Dec 31, 1998

CERCLIS - No Further Remedial Action Planned: CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Government Publication Date: Oct 25, 2013

CERCLIS Liens: CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 30, 2014

RCRA CORRACTS-Corrective Action: RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

Government Publication Date: Jan 22, 2021

RCRA non-CORRACTS TSD Facilities: RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

Government Publication Date: Jan 22, 2021

RCRA Generator List: RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

Government Publication Date: Jan 22, 2021

RCRA Small Quantity Generators List: RCRA SQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

Government Publication Date: Jan 22, 2021

RCRA Very Small Quantity Generators List: RCRA VSQG

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Very Small Quantity Generators (VSQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

Government Publication Date: Jan 22, 2021

RCRA Non-Generators: RCRA NON GEN

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

Government Publication Date: Jan 22, 2021

Federal Engineering Controls-ECs: FED ENG

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Feb 23, 2021

Federal Institutional Controls- ICs: FED INST

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

Government Publication Date: Feb 23, 2021

Land Use Control Information System: LUCIS

The LUCIS database is maintained by the U.S. Department of the Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

Government Publication Date: Sep 1, 2006

Emergency Response Notification System: ERNS 1982 TO 1986

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1982-1986

Emergency Response Notification System: ERNS 1987 TO 1989

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

Government Publication Date: 1987-1989

Emergency Response Notification System: ERNS

Database of oil and hazardous substances spill reports made available by the United States Coast Guard National Response Center (NRC). The NRC fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. These data contain initial incident data that has not been validated or investigated by a federal/state response agency.

Government Publication Date: Nov 9, 2020

The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database: FED BROWNFIELDS

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

Government Publication Date: Jan 6, 2021

FEMA Underground Storage Tank Listing: FEMA UST

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

Government Publication Date: Dec 31, 2017

Facility Response Plan: FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

Government Publication Date: Dec 2, 2020

Historical Gas Stations: HIST GAS STATIONS

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

Government Publication Date: Jul 1, 1930

Petroleum Refineries: REFN

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

Government Publication Date: Jul 10, 2020

Petroleum Product and Crude Oil Rail Terminals: BULK TERMINAL

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

Government Publication Date: Apr 28, 2020

LIEN on Property: SEMS LIEN

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

Government Publication Date: Mar 23, 2021

Superfund Decision Documents: SUPERFUND ROD

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

Government Publication Date: Feb 23, 2021

State

State Response Sites: RESPONSE

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

Government Publication Date: Jan 13, 2021

EnviroStor Database: ENVIROSTOR

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

Government Publication Date: Jan 13, 2021

Delisted State Response Sites: DELISTED ENVS

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

Government Publication Date: Jan 13, 2021

Solid Waste Information System (SWIS): SWF/LF

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

Government Publication Date: Feb 8, 2021

Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels: SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

Government Publication Date: Sep 20, 2006

EnviroStor Hazardous Waste Facilities: HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

Government Publication Date: Jan 13, 2021

Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report: SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

Government Publication Date: Dec 31, 1995

Construction and Demolition Debris Recyclers: C&D DEBRIS RECY

This listing of Construction and Demolition Debris Recyclers is maintained by the California Intergrated Waste Management Board-common C&D materials include lumber, drywall, metals, masonry (brick, concrete, etc.), carpet, plastic, pipe, rocks, dirt, paper, cardboard, or green waste related to land development.

Government Publication Date: Jun 20, 2018

Recycling Centers: RECYCLING

This list of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Nov 2, 2020

Listing of Certified Processors: PROCESSORS

This list of Certified Processors that are operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Oct 27, 2020

Listing of Certified Dropoff, Collection, and Community Service Programs: CONTAINER RECY

This list of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

Land Disposal Sites: LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

Government Publication Date: Mar 9, 2021

Leaking Underground Fuel Tank Reports: LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

Government Publication Date: Mar 9, 2021

Delisted Leaking Storage Tanks: DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

Government Publication Date: Mar 9, 2021

Permitted Underground Storage Tank (UST) in GeoTracker: UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

Government Publication Date: Mar 23, 2021

Proposed Closure of Underground Storage Tank Cases: UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

Government Publication Date: Feb 2, 2021

Historical Hazardous Substance Storage Information Database: HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

Government Publication Date: Aug 27, 2015

Statewide Environmental Evaluation and Planning System: UST SWEEPS

The Statewide Environmental Evaluation and Planning System (SWEEPS) is a historical listing of active and inactive underground storage tanks made available by the California State Water Resources Control Board (SWRCB).

Government Publication Date: Oct 1, 1994

Aboveground Storage Tanks: AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

Government Publication Date: Aug 31, 2009

SWRCB Historical Aboveground Storage Tanks: AST SWRCB

A list of aboveground storage tanks made available by the California State Water Resources Control Board (SWRCB). Effective January 1, 2008, the Certified Unified Program Agencies (CUPAs) are vested with the responsibility and authority to implement the Aboveground Petroleum Storage Act (APSA).

Government Publication Date: Dec 1, 2007

Oil and Gas Facility Tanks: TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

Government Publication Date: Apr 14, 2021

Delisted Storage Tanks: DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

Government Publication Date: Apr 14, 2021

California Environmental Reporting System (CERS) Tanks: CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 9, 2021

Delisted California Environmental Reporting System (CERS) Tanks: DELISTED CTNK

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

Government Publication Date: Feb 9, 2021

Historical Hazardous Substance Storage Container Information - Facility Summary: HIST TANK

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in th 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

Government Publication Date: May 27, 1988

Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions: LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

Government Publication Date: Jan 13, 2021

CALSITES Database: CALSITES

This historical database was maintained by the Department of Toxic Substance Control (DTSC) for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

Government Publication Date: May 1, 2004

Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions: HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Government Publication Date: Feb 18, 2021

Deed Restrictions and Land Use Restrictions: DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

Government Publication Date: Mar 9, 2021

Voluntary Cleanup Program: VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

Government Publication Date: Jan 13, 2021

GeoTracker Cleanup Program Sites: CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

Government Publication Date: Mar 9, 2021

Delisted County Records: DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

Government Publication Date: May 13, 2021

Tribal

Leaking Underground Storage Tanks (LUSTs) on Indian Lands: INDIAN LUST
LUSTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

Underground Storage Tanks (USTs) on Indian Lands: INDIAN UST
USTs on Tribal/Indian Lands in Region 9, which includes California.
Government Publication Date: Apr 8, 2020

Delisted Tribal Leaking Storage Tanks: DELISTED ILST
Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

Delisted Tribal Underground Storage Tanks: DELISTED IUST
Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.
Government Publication Date: Apr 14, 2020

County

Los Angeles County - Site Mitigation List: LA SML
A Site Mitigation List in the County of Los Angeles. The list is made available by Los Angeles County Fire Department. Site mitigation is handled by the Site Mitigation Unit (SMU) which facilitates completion of site clean-up projects of contaminated sites in an expeditious manner in all cities of the Los Angeles County except El Segundo, Glendale, Long Beach, Santa Fe Springs, and Vernon.
Government Publication Date: Mar 2, 2021

Los Angeles County - Solid Waste Sites: LA SWF
List of permitted solid waste facilities, closed landfills, historical dumpsites and other solid waste sites in Los Angeles County, made available by the Department of Public Works in Los Angeles County.
Government Publication Date: Mar 23, 2021

Los Angeles County - CUPA Program Records: LA COUNTY CUPA
A list of inspection and enforcement records for active and inactive CUPA Program facilities, made available by the Health Hazardous Materials Division (HHMD) of the County of Los Angeles Fire Department. Includes Hazardous Materials Business Plan (HMBP), California Accidental Release Prevention Plan (CalARP), Hazardous Waste Generator (HWG), and the Aboveground Petroleum Storage Act Programs (APSA). Inactive programs include facilities that are out of business or no longer regulated by the HHMD.
Government Publication Date: Mar 25, 2020

Los Angeles County - HMS List: LA HMS
List of sites in the Los Angeles County Department of Public Works Hazardous Materials System (HMS) Database which have or have had permits for Industrial Waste, Underground Storage Tanks, or Stormwater in the county of Los Angeles.
Government Publication Date: Nov 5, 2020

Los Angeles County - Santa Fe Springs Underground Storage Tank: UST SANTAFESP
A list of registered active Underground Storage Tanks (USTs) in the City of Santa Fe Springs. This list is made available by Santa Fe Springs Department of Fire-Rescue.
Government Publication Date: Apr 1, 2021

Los Angeles County - Long Beach UST List: UST LONGB
List of registered Underground Storage Tanks (USTs) in the City of Long Beach, Los Angeles County, made available by the Long Beach Certified Unified Program Agency (CUPA). The Long Beach CUPA operates under oversight shared by the Long Beach Fire Department and Health Department.
Government Publication Date: Jul 9, 2018

Los Angeles County - Burbank City CUPA List: BURBANK CUPA

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Burbank. This list is made available by the City of Burbank Fire Department.

Government Publication Date: Aug 21, 2019

Los Angeles County - El Segundo City Underground Storage Tanks List: UST ELSEGUNDO

List of registered Underground Storage Tanks (USTs) in the City of El Segundo of Los Angeles County, made available by El Segundo City Fire Department.

Government Publication Date: Jan 17, 2017

Los Angeles County - Santa Monica City Underground Storage Tank List: UST SANTA MONICA

A list of registered active Underground Storage Tanks (USTs) in the City of Santa Monica made available by Santa Monica Fire Prevention Division.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City Aboveground Storage Tank List: SANTAMON AST

List of registered Aboveground Storage Tanks (ASTs) made available by the Santa Monica Fire Department in the City of Santa Monica of Los Angeles County, California.

Government Publication Date: Dec 3, 2020

Los Angeles County - Santa Monica City CUPA Facilities List: SANTAMON CUPA

The Santa Monica Fire Department's office maintains a list of CUPA Facilities located in Santa Monica city.

Government Publication Date: Dec 3, 2020

Los Angeles County - Torrance City Underground Storage Tanks: UST TORRANCE

A list of registered Underground Storage Tank (UST) sites in Torrance City of Los Angeles County. This list is made available by Torrance City Office of Clerk.

Government Publication Date: Feb 2, 2021

Los Angeles County - Vernon City UST List: UST VERNON

A list of Underground Storage Tanks (UST) in Vernon City provided by the Vernon City Fire Department.

Government Publication Date: Mar 7, 2021

Los Angeles County - Vernon City CUPA List: VERNON CUPA

The Vernon City Fire Department's office maintains a list of CUPA Facilities located in Vernon city.

Government Publication Date: Mar 7, 2021

Los Angeles County - City of Los Angeles UST List: UST LA CITY

A list of active and inactive underground storage tank facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles AST List: AST LA CITY

A list of active and inactive above ground petroleum storage tanks made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Los Angeles County - City of Los Angeles Hazardous Materials Facilities: LA CITY HAZMAT

A list of active and inactive hazardous materials facilities made available by the Los Angeles Fire Department CUPA.

Government Publication Date: Jun 1, 2019

Additional Environmental Record Sources

Federal

PFOA/PFOS Contaminated Sites: PFAS NPL

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

Government Publication Date: Mar 1, 2021

Facility Registry Service/Facility Index: FINDS/FRS

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Nov 2, 2020

Toxics Release Inventory (TRI) Program: TRIS

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Releases: PFAS TRI

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

Perfluorinated Alkyl Substances (PFAS) Water Quality: PFAS WATER

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Jul 20, 2020

Hazardous Materials Information Reporting System: HMIRS

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Sep 1, 2020

National Clandestine Drug Labs: NCDL

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Oct 5, 2020

Toxic Substances Control Act: TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

Hist TSCA: HIST TSCA

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

FTTS Administrative Case Listing: FTTS ADMIN

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

FTTS Inspection Case Listing: FTTS INSP

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

Potentially Responsible Parties List: PRP

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

Government Publication Date: Feb 23, 2021

State Coalition for Remediation of Drycleaners Listing: SCRD DRYCLEANER

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

Government Publication Date: Nov 08, 2017

Integrated Compliance Information System (ICIS): ICIS

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

Government Publication Date: Mar 24, 2021

Drycleaner Facilities: FED DRYCLEANERS

A list of drycleaner facilities from Enforcement and Compliance History Online (ECHO) online search. The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

Government Publication Date: Feb 17, 2021

Delisted Drycleaner Facilities: DELISTED FED DRY

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

Government Publication Date: Feb 17, 2021

Formerly Used Defense Sites: FUDS

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

Government Publication Date: Jan 28, 2020

Former Military Nike Missile Sites: FORMER NIKE

This information was taken from report DRXTH-AS-IA-83A016 (Historical Overview of the Nike Missile System, 12/1984) which was performed by Environmental Science and Engineering, Inc. for the U.S. Army Toxic and Hazardous Materials Agency Assessment Division. The Nike system was deployed between 1954 and the mid-1970's. Among the substances used or stored on Nike sites were liquid missile fuel (JP-4); starter fluids (UDKH, aniline, and furfuryl alcohol); oxidizer (IRFNA); hydrocarbons (motor oil, hydraulic fluid, diesel fuel, gasoline, heating oil); solvents (carbon tetrachloride, trichloroethylene, trichloroethane, stoddard solvent); and battery electrolyte. The quantities of material a disposed of and procedures for disposal are not documented in published reports. Virtually all information concerning the potential for contamination at Nike sites is confined to personnel who were assigned to Nike sites. During deactivation most hardware was shipped to depot-level supply points. There were reportedly instances where excess materials were disposed of on or near the site itself at closure. There was reportedly no routine site decontamination.

Government Publication Date: Dec 1, 1984

PHMSA Pipeline Safety Flagged Incidents: PIPELINE INCIDENT

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

Government Publication Date: Jul 7, 2020

Material Licensing Tracking System (MLTS): MLTS

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

Government Publication Date: Aug 5, 2020

Historic Material Licensing Tracking System (MLTS) sites: HIST MLTS

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

Government Publication Date: Jan 31, 2010

Mines Master Index File: MINES

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

Government Publication Date: Nov 3, 2020

Surface Mining Control and Reclamation Act Sites: SMCRA

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by the Office of Surface Mining Reclamation and Enforcement (OSMRE) to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of Abandoned Mine Land (AML) impacts, as well as information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Government Publication Date: Dec 18, 2020

Mineral Resource Data System: MRDS

The Mineral Resource Data System (MRDS) is a collection of reports describing metallic and nonmetallic mineral resources throughout the world. Included are deposit name, location, commodity, deposit description, geologic characteristics, production, reserves, resources, and references. This database contains the records previously provided in the Mineral Resource Data System (MRDS) of USGS and the Mineral Availability System/Mineral Industry Locator System (MAS/MILS) originated in the U.S. Bureau of Mines, which is now part of USGS. The USGS has ceased systematic updates of the MRDS database with their focus more recently on deposits of critical minerals while providing a well-documented baseline of historical mine locations from USGS topographic maps.

Government Publication Date: Mar 15, 2006

Uranium Mill Tailings Radiation Control Act Sites: URANIUM

The Legacy Management Office of the Department of Energy (DOE) manages radioactive and chemical waste, environmental contamination, and hazardous material at over 100 sites across the U.S. The L.M. Office manages this database of sites registered under the Uranium Mill Tailings Control Act (UMTRCA).

Government Publication Date: Mar 4, 2017

Alternative Fueling Stations: ALT FUELS

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

Government Publication Date: Jan 18, 2021

Registered Pesticide Establishments: SSTS

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

Government Publication Date: Apr 13, 2021

Polychlorinated Biphenyl (PCB) Notifiers: PCB

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

Government Publication Date: Nov 19, 2020

State

Dry Cleaning Facilities: DRYCLEANERS

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Delisted Drycleaners: DELISTED DRYCLEANERS

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

Government Publication Date: Feb 22, 2021

Non-Toxic Dry Cleaning Incentive Program: DRYC GRANT

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

Government Publication Date: Feb 28, 2018

Per- and Polyfluoroalkyl Substances (PFAS): PFAS

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

Government Publication Date: Mar 9, 2021

PFOA/PFOS Groundwater: PFAS GW

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.

Government Publication Date: Oct 22, 2020

Hazardous Waste and Substances Site List - Site Cleanup: HWSS CLEANUP

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

Government Publication Date: Nov 10, 2020

List of Hazardous Waste Facilities Subject to Corrective Action: DTSC HWF

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

Government Publication Date: Jul 18, 2016

EnviroStor Inspection, Compliance, and Enforcement: INSP COMP ENF

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

Government Publication Date: Oct 7, 2020

School Property Evaluation Program Sites: SCH

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

Government Publication Date: Jan 13, 2021

California Hazardous Material Incident Report System (CHMIRS): CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 21, 2021

Historical California Hazardous Material Incident Report System (CHMIRS): HIST CHMIRS

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

Government Publication Date: Jan 1, 1993

Hazardous Waste Manifest Data: HAZNET

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Oct 24, 2016

Historical Hazardous Waste Manifest Data: HIST MANIFEST

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

Government Publication Date: Dec 31, 1992

DTSC Registered Hazardous Waste Transporters: HW TRANSPORT

The California Department of Toxic Substances Control (DTSC) maintains this list of Registered Hazardous Waste Transporters.

Government Publication Date: Oct 19, 2020

Registered Waste Tire Haulers: WASTE TIRE

This list of registered waste tire haulers is maintained by the California Department of Resources Recycling and Recovery.

Government Publication Date: Dec 16, 2020

California Medical Waste Management Program Facility List: MEDICAL WASTE

This list of Medical Waste Management Program Facilities is maintained by the California Department of Public Health. The Medical Waste Management Program (MWMP) regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations. This list contains transporters, treatment, and transfer facilities.

Government Publication Date: Dec 31, 2020

Historical Cortese List: HIST CORTESE

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

Government Publication Date: Nov 13, 2008

Cease and Desist Orders and Cleanup and Abatement Orders: CDO/CAO

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

Government Publication Date: Feb 16, 2012

California Environmental Reporting System (CERS) Hazardous Waste Sites: CERS HAZ

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

Government Publication Date: Feb 9, 2021

Delisted Environmental Reporting System (CERS) Hazardous Waste Sites: DELISTED HAZ

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

Government Publication Date: Nov 29, 2018

Sites in GeoTracker: GEOTRACKER

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

Government Publication Date: Mar 9, 2021

Mines Listing: MINE

This list includes mine site locations extracted from the Mines Online database, maintained by the California Department of Conservation. Mines Online (MOL) is an interactive web map designed with GIS features that provide information such as the mine name, mine status, commodity sold, location, and other mine specific data. Please note: Mine location information is provided to assist experts in determining the location of mine operators in accordance with California Civil Code section 1103.4 and reflects information reported by mine operators in annual reports provided under Public Resources Code section 2207. While the Division of Mine Reclamation (DMR) attempts to populate MOL with accurate location information, the DMR cannot guarantee the accuracy of operator reported location information.

Government Publication Date: Jan 12, 2021

Recorded Environmental Cleanup Liens: LIEN

The California Department of Toxic Substance Control (DTSC) maintains this list of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

Government Publication Date: Nov 16, 2020

Waste Discharge Requirements: WASTE DISCHG

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

Government Publication Date: Mar 9, 2021

Toxic Pollutant Emissions Facilities: EMISSIONS

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

Government Publication Date: Dec 31, 2018

Clandestine Drug Lab Sites: CDL

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/clandestine drug laboratories.

Government Publication Date: Jan 19, 2021

Tribal

No Tribal additional environmental record sources available for this State.

County

Los Angeles County - Santa Monica City Hazardous Materials Facilities: SANTAMON HAZ

A list of Hazardous Materials Facilities in the City of Santa Monica, Los Angeles county. This list is made available by Santa Monica Fire Prevention Division which has been designated as the CUPA for the City.

Government Publication Date: Mar 12, 2020

Los Angeles County - Santa Monica City Hazardous Waste Facilities: SANTAMON HW

A list of Hazardous Waste Facilities in Los Angeles County, City of Santa Monica. This list is made available by Santa Monica Fire Prevention Division.

Government Publication Date: Jul 19, 2019

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

RE: CITY DIRECTORY RESEARCH
Carmel Partners - La Cienega
1022-1056 La Cienega Boulevard Los Angeles, CA

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
1010-1080 of La Cienega Boulevard
6600-8500 of West Olympic Boulevard

Appendix....232
Liability Notice....234

The ERIS ***Physical Setting Report - PSR*** provides comprehensive information about the physical setting around a site and includes a complete overview of topography and surface topology, in addition to hydrologic, geologic and soil characteristics. The location and detailed attributes of oil and gas wells, water wells, public water systems and radon are also included for review.

The compilation of both physical characteristics of a site and additional attribute data is useful in assessing the impact of migration of contaminants and subsequent impact on soils and groundwater.

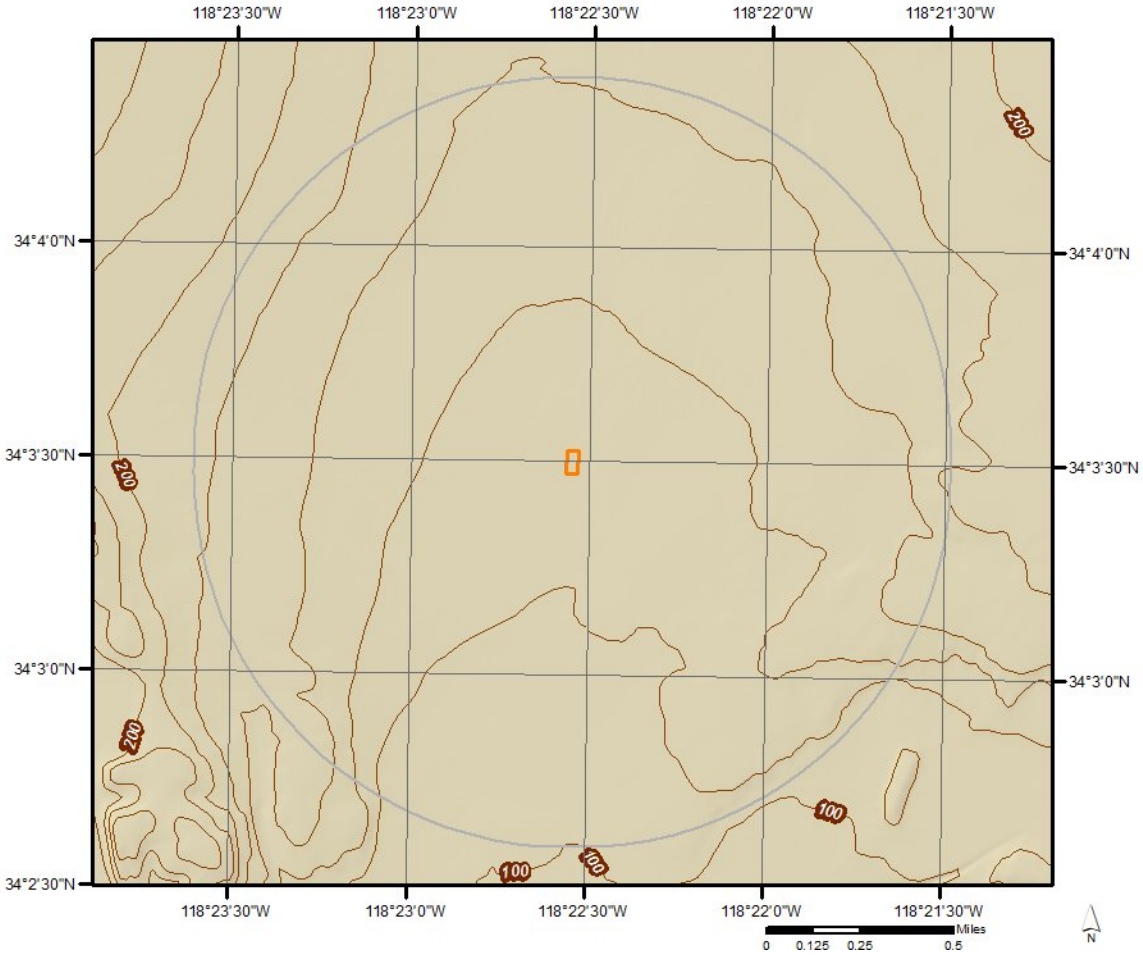
Disclaimer

This Report does not provide a full environmental evaluation for the site or adjacent properties. Please see the terms and disclaimer at the end of the Report for greater detail.

Topographic Information

Current USGS Topo (2015)

Quadrangle(s): Beverly Hills, CA; Hollywood, CA



Source: USGS 7.5 Minute Topographic Map

Topographic Information

The previous topographic map(s) are created by seamlessly merging and cutting current USGS topographic data. Below are shaded relief map(s), derived from USGS elevation data to show surrounding topography in further detail.

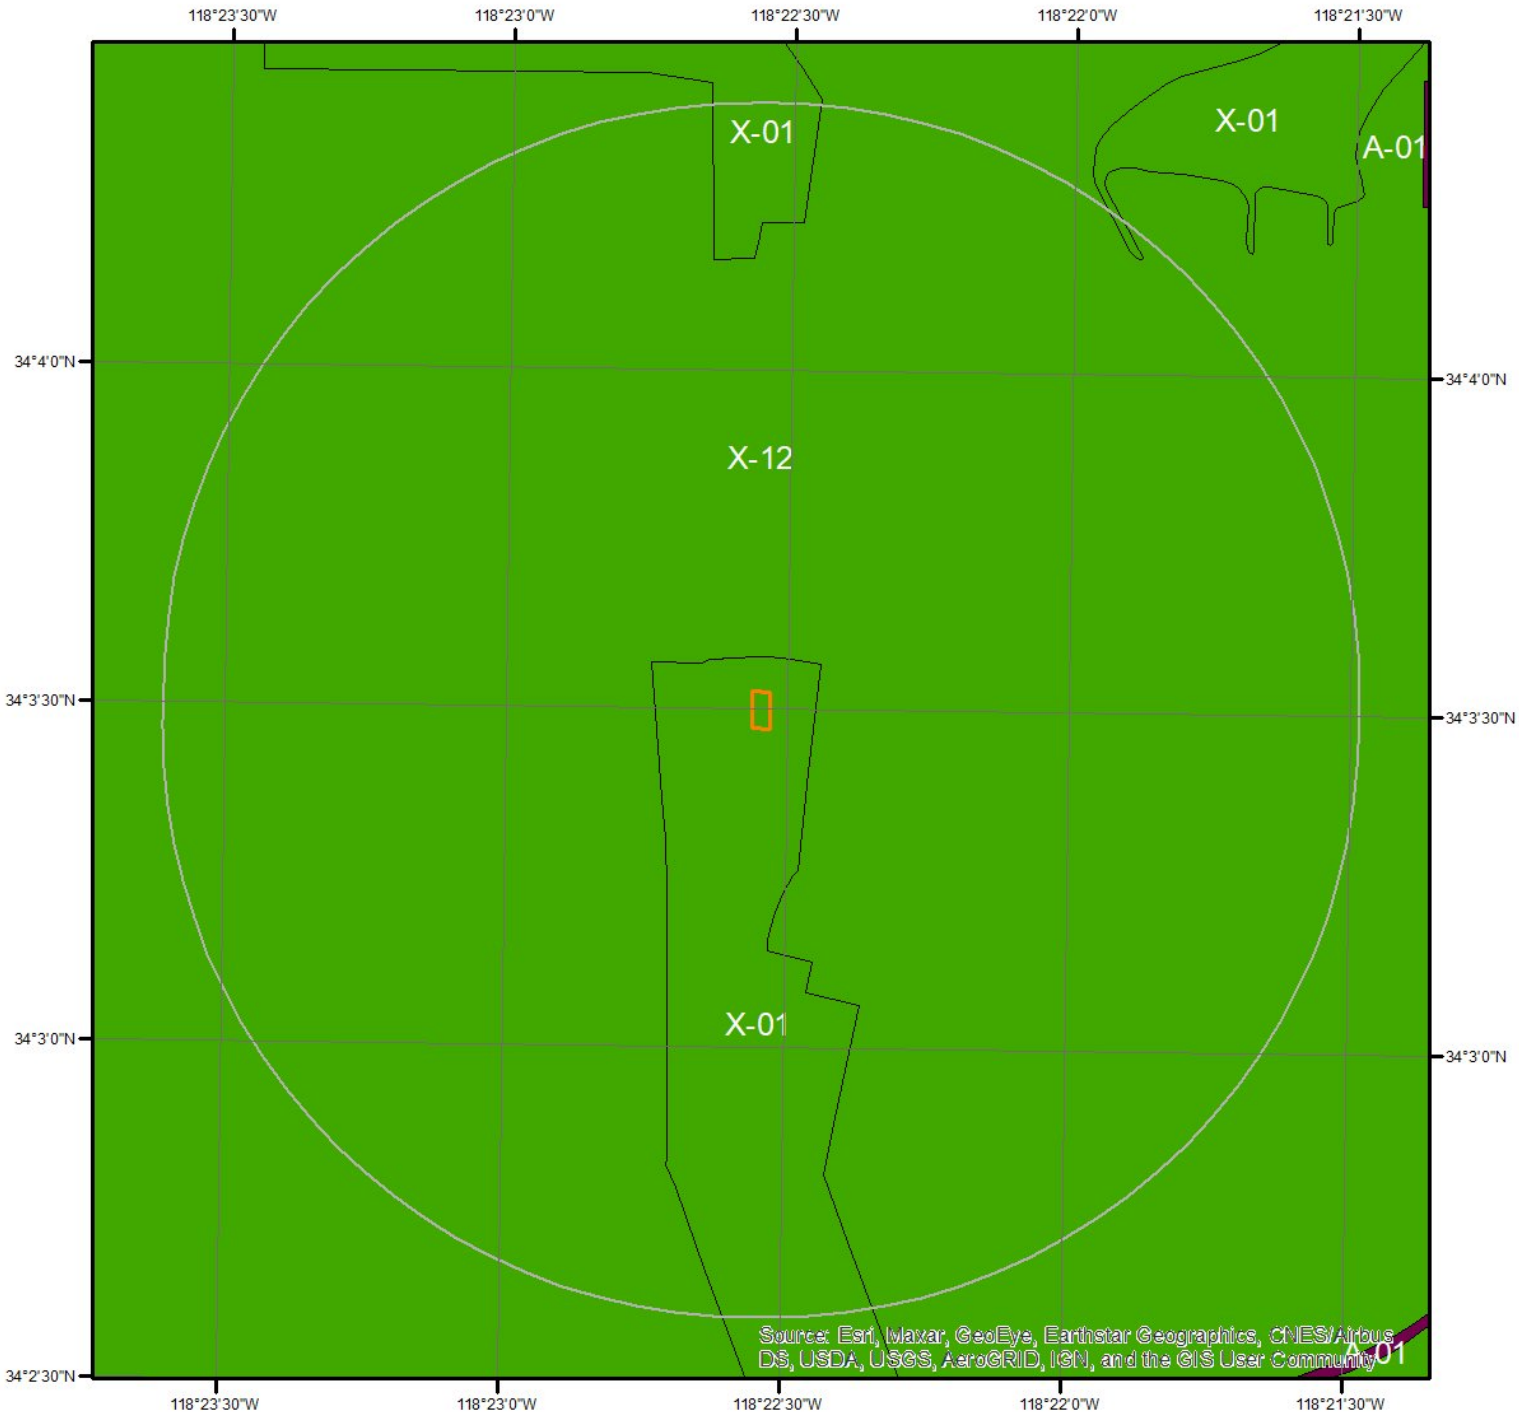
Topographic information at project property:

Elevation:	128.11 ft
Slope Direction:	S

Hydrologic Information

Wetland

0 0.075 0.15 0.3 Miles



N

This map shows wetland existence using data from US Fish & Wildlife.
Data coverage is shown to the right. Gray indicates no data available in the area.

ERIS

Hydrologic Information

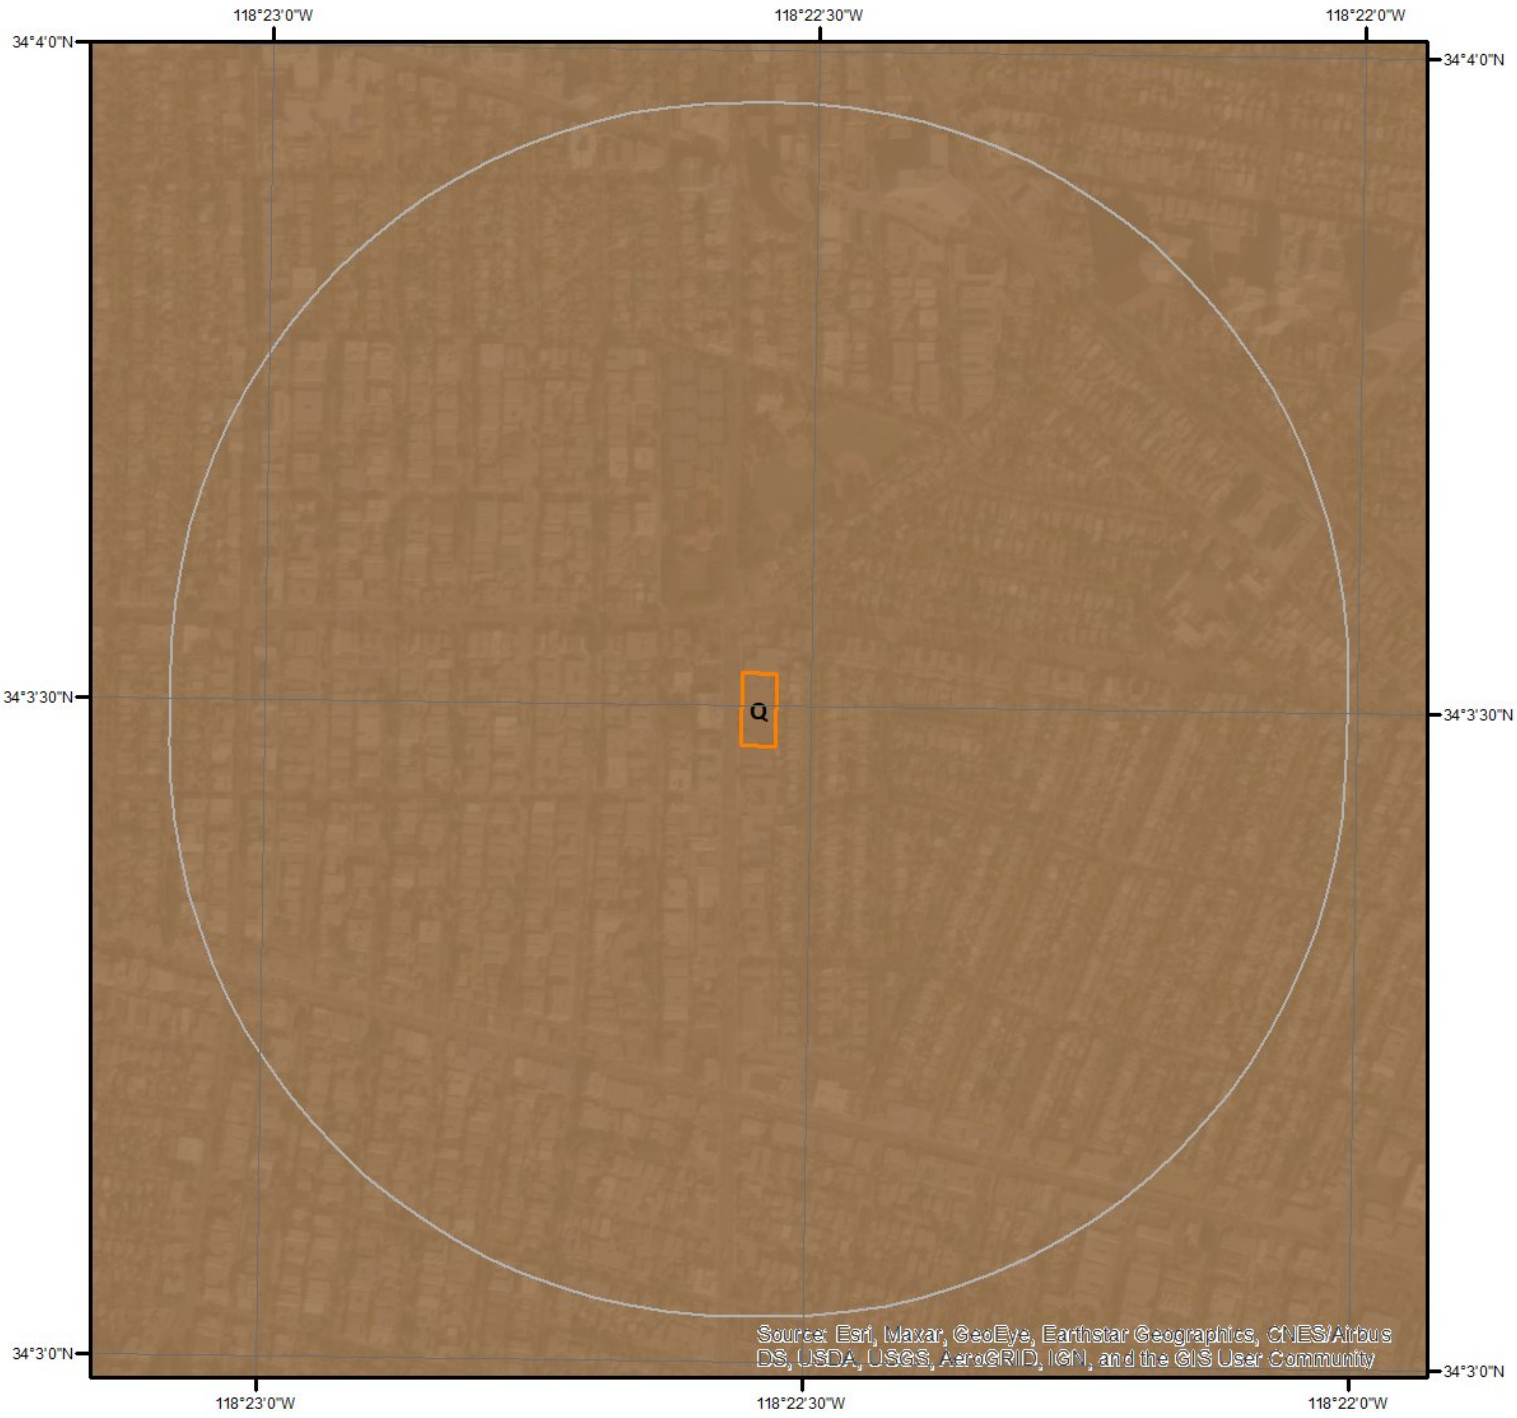
The Wetland Type map shows wetland existence overlaid on an aerial imagery. The Flood Hazard Zones map shows FEMA flood hazard zones overlaid on an aerial imagery. Relevant FIRM panels and detailed zone information is provided below.

Available FIRM Panels in area:	06037C1615F(effective:2008-09-26) 06037C1605F(effective:2008-09-26) 06037C1595F(effective:2008-09-26) 06037C1585F(effective:2008-09-26)



Flood Zone X-01

Zone:	X
Zone subtype:	0.2 PCT ANNUAL CHANCE FLOOD HAZARD

Flood Zone X-12

Zone:	X
Zone subtype:	AREA OF MINIMAL FLOOD HAZARD

Geologic Information

0 0.2 0.4 Miles

N

Geologic Units

This maps shows geologic units in the area. Please refer to the report for detailed descriptions.

ERIS

Geologic Information

The previous page shows USGS geology information. Detailed information about each unit is provided below.

Geologic Unit Q

Unit Name:	Quaternary alluvium and marine deposits
Unit Age:	Pliocene to Holocene
Primary Rock Type:	alluvium
Secondary Rock Type:	terrace
Unit Description:	Alluvium, lake, playa, and terrace deposits; unconsolidated and semi-consolidated. Mostly nonmarine, but includes marine deposits near the coast.

Soil Information

SSURGO Soils

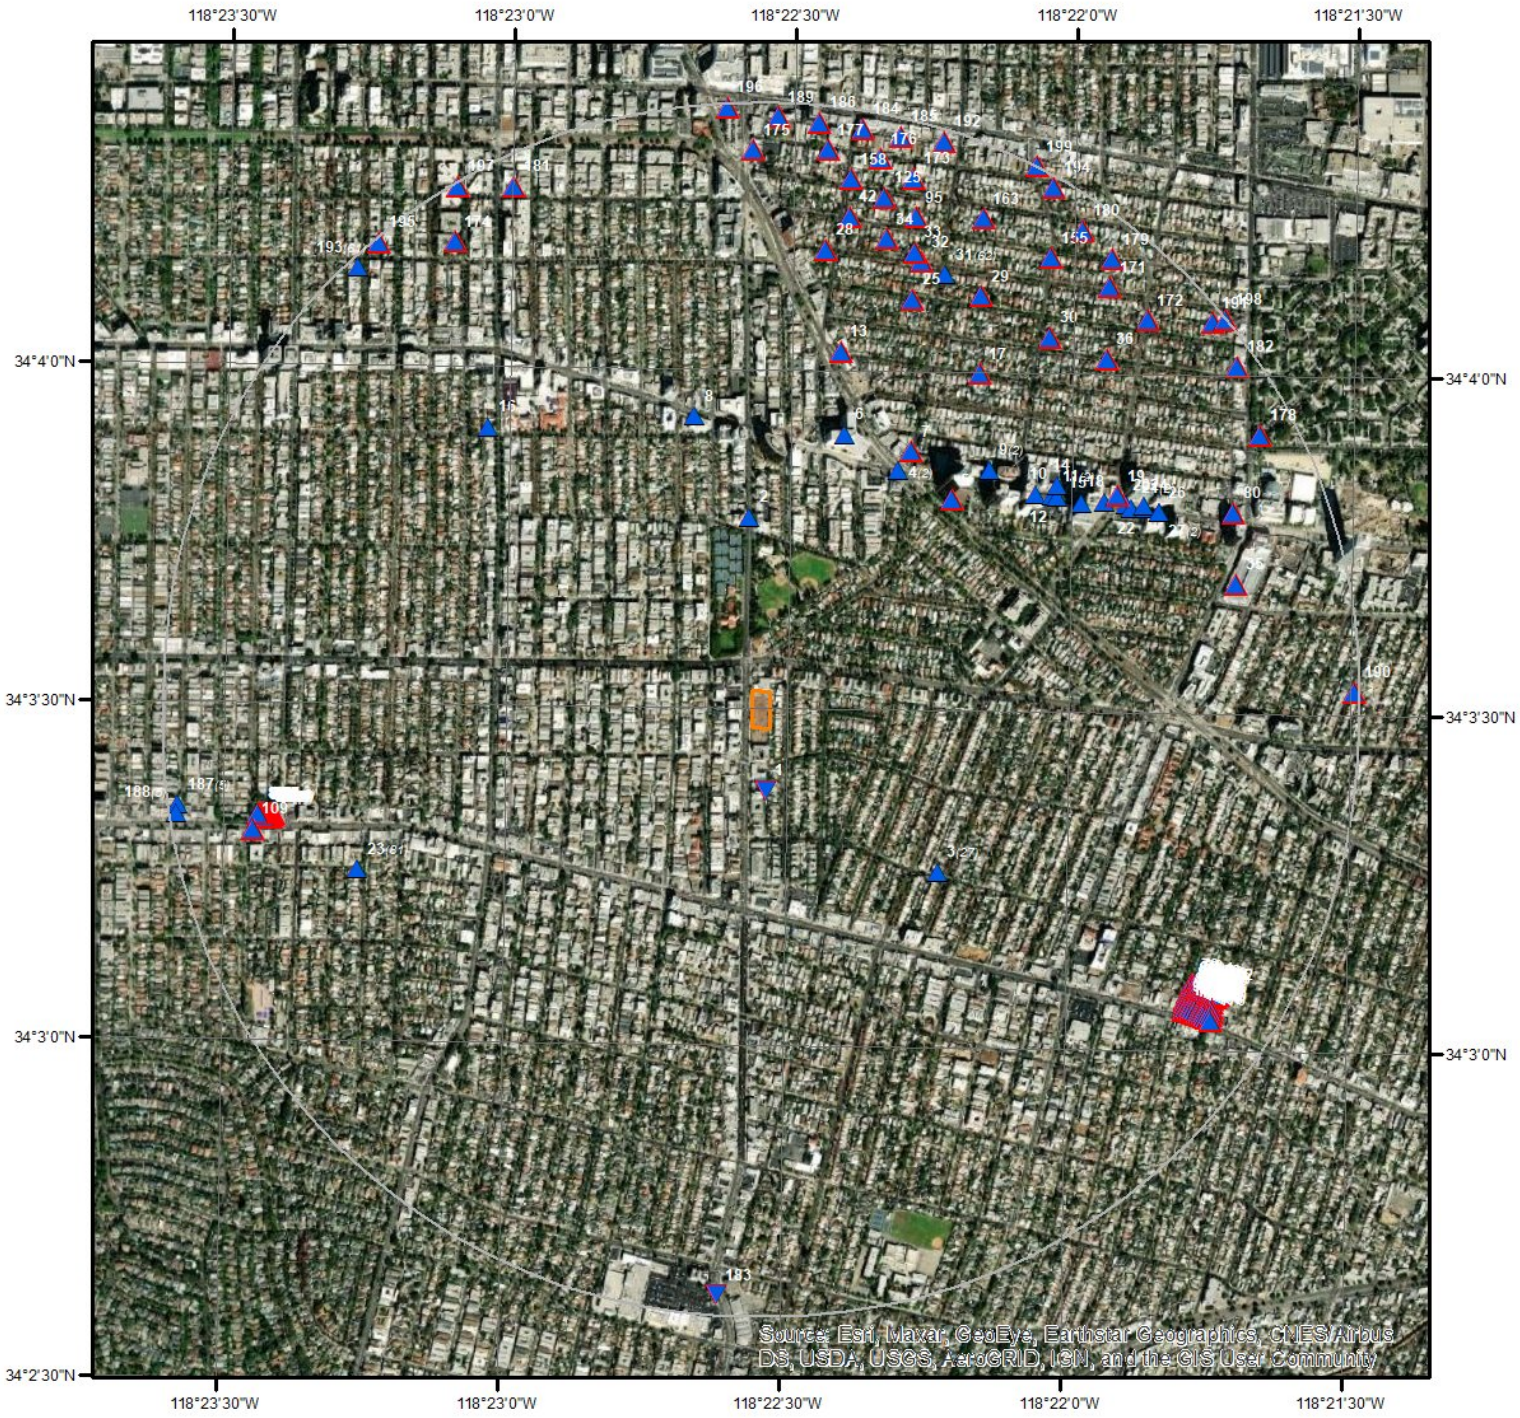
N

0 0.2 0.4 Miles

This maps shows SSURGO soil units around the target property. Please refer to the report for detailed soil descriptions.

ERIS

Soil Information



The previous page shows a soil map using SSURGO data from USDA Natural Resources Conservation Service. Detailed information about each unit is provided below.

Map Unit NOTCOM (100.0%)

Appendix

Federal Sources

FEMA National Flood Hazard Layer — **FEMA FLOOD**

The National Flood Hazard Layer (NFHL) data incorporates Flood Insurance Rate Map (FIRM) databases published by the Federal Emergency Management Agency (FEMA), and any Letters Of Map Revision (LOMRs) that have been issued against those databases since their publication date. The FIRM Database is the digital, geospatial version of the flood hazard information shown on the published paper FIRMs. The FIRM Database depicts flood risk information and supporting data used to develop the risk data. The FIRM Database is derived from Flood Insurance Studies (FISs), previously published FIRMs, flood hazard analyses performed in support of the FISs and FIRMs, and new mapping data, where available.

Indoor Radon Data — **INDOOR RADON**

Indoor radon measurements tracked by the Environmental Protection Agency(EPA) and the State Residential Radon Survey.

Public Water Systems Violations and Enforcement Data — **PWSV**

List of drinking water violations and enforcement actions from the Safe Drinking Water Information System (SDWIS) made available by the Drinking Water Protection Division of the US EPA's Office of Groundwater and Drinking Water. Enforcement sensitive actions are not included in the data released by the EPA. Address information provided in SWDIS may correspond either with the physical location of the water system, or with a contact address.

Radon Zone Level — **RADON ZONE**

Areas showing the level of Radon Zones (level 1, 2 or 3) by county. This data is maintained by the Environmental Protection Agency (EPA).

Safe Drinking Water Information System (SDWIS) — **SDWIS**

The Safe Drinking Water Information System (SDWIS) contains information about public water systems as reported to US Environmental Protection Agency (EPA) by the states. Addresses may correspond with the location of the water system, or with a contact address.

Soil Survey Geographic database — **SSURGO**

The Soil Survey Geographic database (SSURGO) contains information about soil as collected by the National Cooperative Soil Survey at the Natural Resources Conservation Service (NRCS). Soil maps outline areas called map units. The map units are linked to soil properties in a database. Each map unit may contain one to three major components and some minor components.

U.S. Fish & Wildlife Service Wetland Data — **US WETLAND**

The U.S. Fish & Wildlife Service Wetland layer represents the approximate location and type of wetlands and deepwater habitats in the United States.

USGS Current Topo — **US TOPO**

US Topo topographic maps are produced by the National Geospatial Program of the U.S. Geological Survey (USGS). The project was launched in late 2009, and the term "US Topo" refers specifically to quadrangle topographic maps published in 2009 and later.

USGS Geology — **US GEOLOGY**

Seamless maps depicting geological information provided by the United States Geological Survey (USGS).

USGS National Water Information System — **FED USGS**

The U.S. Geological Survey (USGS)'s National Water Information System (NWIS) is the nation's principal repository of water resources data. This database includes comprehensive information of well-construction details, time-series data for gage height, streamflow, groundwater level, and precipitation and water use data.

State Sources

Oil and Gas Wells — **OGW**

A list of Oil and Gas well locations. This is provided by California's Department of Conservation Division of

Appendix

Oil, Gas and Geothermal Resources.

Periodic Groundwater Level Measurement Locations **MONITOR WELLS**

Locations of groundwater level monitoring wells in the Department of Water Resources (DWR)'s Periodic Groundwater Levels dataset. The DWR Periodic Groundwater Levels dataset contains seasonal and long-term groundwater level measurements collected by the Department of Water Resources and cooperating agencies.

Well Completion Reports **WATER WELLS**

List of wells from the Well Completion Reports data made available by the California Department of Water Resources' (DWR) Online System for Well Completion Reports (OSWCR). Please note that the majority of well completion reports have been spatially registered to the center of the 1x1 mile Public Land Survey System section that the well is located in.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by B.H.A.S.A.L. to conduct a Preliminary Site Investigation (Phase II) on the property located at 1022-1026 La Cienega Blvd., Los Angeles, CA 90035 and report the findings (maps 1, 2).

Briefly, a auto repair shop operated on 1032 La Cienega Blvd. from the 1960's until 2007. This facility had 7 in-ground hoists. A visual inspection of the property located the former waste oil storage area, a sump, and a hole in the ground. There are 2 groundwater monitoring wells on the 1026 La Cienega property. These wells are part of a on-going groundwater cleanup on the 76 station that is located on the southeast corner of Olympic and La Cienega.

This investigation was conducted to obtain information on the subsurface soils and groundwater. The primary chemicals of concern are gasoline and it's additives in the groundwater, and hydrocarbons, primarily hydraulic fluid, in the soils.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the CA Regional Water Quality Control Board - Region 4 (RWQCB) in May, 1996. This guidebook provides standards and protocols for subsurface

investigations of this type. It is intended to assess the chemical contamination of property and potential impact to ground water resources.

A Geoprobe was used to drill eleven soil borings. A description of the Geoprobe method of drilling and sampling is presented in the Appendix. Each soil boring was backfilled with bentonite clay, and patched on the surface with concrete. The location and depth of each soil boring is presented on map 2b.

Soil Boring	Location	Sample Depth in feet
B1	former hoist	12
B2	former hoist	12
B3	former hoist	12
B4	former hoist	12
B5	former hoist	10
B6	this soil boring was determined as unnecessary and not drilled	
B7	former sump	5
B8	former hoist	10
B9	former hoist	10
B10	former hole in the ground	5
B11	former hole in the ground	5
B12	waste oil storage area	5

Chain of Custody was maintained between the sampler and the analytical testing laboratory. The groundwater samples were analyzed for EPA Method 8260B (Volatile Organic Compounds) and EPA Method 8015g (Total Petroleum Hydrocarbons as gasoline). The soil samples were analyzed for EPA Method 8015M carbon chain (Total Petroleum Hydrocarbons by Carbon Range). EPA Method 8260B is specific to the additives in gasoline. EPA Method 8015M reports each range of hydrocarbons specific to gasoline, diesel, and heavy oils.

Analytical work was conducted by a State of California approved hazardous waste testing laboratory. The laboratory performed routine level Quality Assurance/Quality Control (QA/QC).

The seven former underground hoists were triple rinsed and disposed of off-site as scrap metal. The manifest for the rinseate and destruction certificate is included in the Appendix.

NEI geologist Gary Mann (California Professional Geologist #6589), supervised project protocol and report preparation. Logistics, communications, and field activities were conducted by NEI staff geologist Robert Maikisch (CA REA II #20190).

FINDINGS

Sediment:

The Unified Soils Classification System (USCS) is a standard system of describing sediments. It was first presented by the United States Army Corps of Engineers in 1953. A copy is presented in the Appendix. Refined Geologic Logs were prepared using the USCS, from splits of each soil sample.

The sediments encountered in the upper 10 feet are generally described as a brown, fine to medium sized, well rounded grains, very well sorted, silty, Sand and classified as SM by the USCS.

There are clay lenses and areas with coarser sands and fine gravel. This suggest this area was part of a migrating stream channel, and consistent with the historic aerial photograph of this area (historic photo 1928). The sediment is considered native and is consistent with the local geology. The local geologic setting is a Recent (Holocene) age alluvium (map 3).

Recent Alluvium is described as poorly sorted, unconsolidated, interbedded, sand, gravel, silt, and clay. The Recent geologic epoch is considered to represent the sediments that have accumulated during the previous 11,000 years.

Ground Water:

The depth to the aquifer is usually estimated by subtracting the elevation of the ground water table from the elevation of the site. The elevation of the site is obtained from the Hollywood topographic quadrangle published by the United States Geological Survey (map 4). The is no map available that displays the elevation of the ground water in this area. In this case the depth to groundwater was measured from the monitoring wells on the property. It is 16 feet deep.

The property is located in the Central Basin Pressure Area of the Central Basin (map 5). The Central Basin of the Coastal Plain is bordered by the Hollywood Basin on the north. The Pacific Ocean on the south, and the Newport-Inglewood uplift on the west. The east boundary is made up by the Repetto Hills and the Santa Fe Springs-Coyote Uplift. The hills of the Los Angeles area comprise

the lateral extent to the northeast.

The basin is a single structural unit with no obstructions to the flow of ground water. It is comprised of the alluvial cones of three major rivers and the smaller streams that discharge onto the plain forming compound alluvial cones. The four subdivisions of the basin are the Los Angeles Forebay Area, the Montebello Forebay Area, the Whittier Area, and the Central Basin Pressure Area.

The Central Basin Pressure Area is characterized by the ground water aquifers being contained by alternating layers of impermeable strata (clay layers). The historic natural ground water flow direction in this area is southwest. It is flowing in accordance with the natural topography and around the La Brea High (map 3a). The La Brea High is the formation labeled Qc on the geologic map.

Screening Levels:

The Action Level is the level at which action must be taken to protect human health and the environment. This is calculated by using Screening Levels obtained from the California Regional Water Quality Control Board (RWQCB), and the CA Department of Toxic Substances Control (DTSC).

The Screening Level for solvents in soil is determined by comparing a RWQCB calculated Attenuation Factor, the Maximum Contaminant Level (MCL), the depth to ground water, and the sediment type. The MCL's are obtained from California Code of

Regulations (CCR), Title 22. Table 2 in the Appendix presents the Attenuation Factors and MCL's. This basically involves multiplying the Maximum Contaminant Level (MCL) by the Attenuation Factor.

The Screening Level for hazardous concentrations of metals in soil is determined by using DTSC standards as published in CCR, Title 22. A summary is presented in the Appendix (Table 3). Table 3 also presents the average background concentration of metals in Western U.S. sediments. It basically sets limits on how much metal a sediment may contain before it is considered hazardous in California. DTSC in general works on a site by site basis, but this is a appropriate screening tool.

The Screening Level for hydrocarbons and the BTEX (Benzene, Toluene, Ethylbenzene, Xylene) compounds in soils is determined from Table 4.1 of the "Interim Site Assessment & Cleanup Guidebook" as published by the RWQCB. It is determined by comparing the hydrocarbon range, sediment type, and the depth to the ground water. It is presented for reference in the Appendix.

Analytical:

The Chain-of-Custody and Analytical Results from this investigation are presented in the Appendix.

TABLE 1

The analytical results are summarized for review: **nd** = not detected at the method reporting limit; - = not analyzed; AL = Action Level; MCL = Maximum Contaminant Level; **ppm** = parts per million; **ppb** = parts per billion; 1 ppm = 1000 ppb; * = See Below. Results in bold face type exceed Action Level/MCL.

Sample #/Location/ depth	8015M (ppm)	8015g (ppb)	8260B (ppb)
S1-B1-12'	nd	-	-
S2-B2-12'	nd	-	-
S3-B3-12'	nd	-	-
S4-B4-12'	nd	-	-

CONCLUSIONS

Non-detectable concentrations of solvents and gasoline were reported in the groundwater.

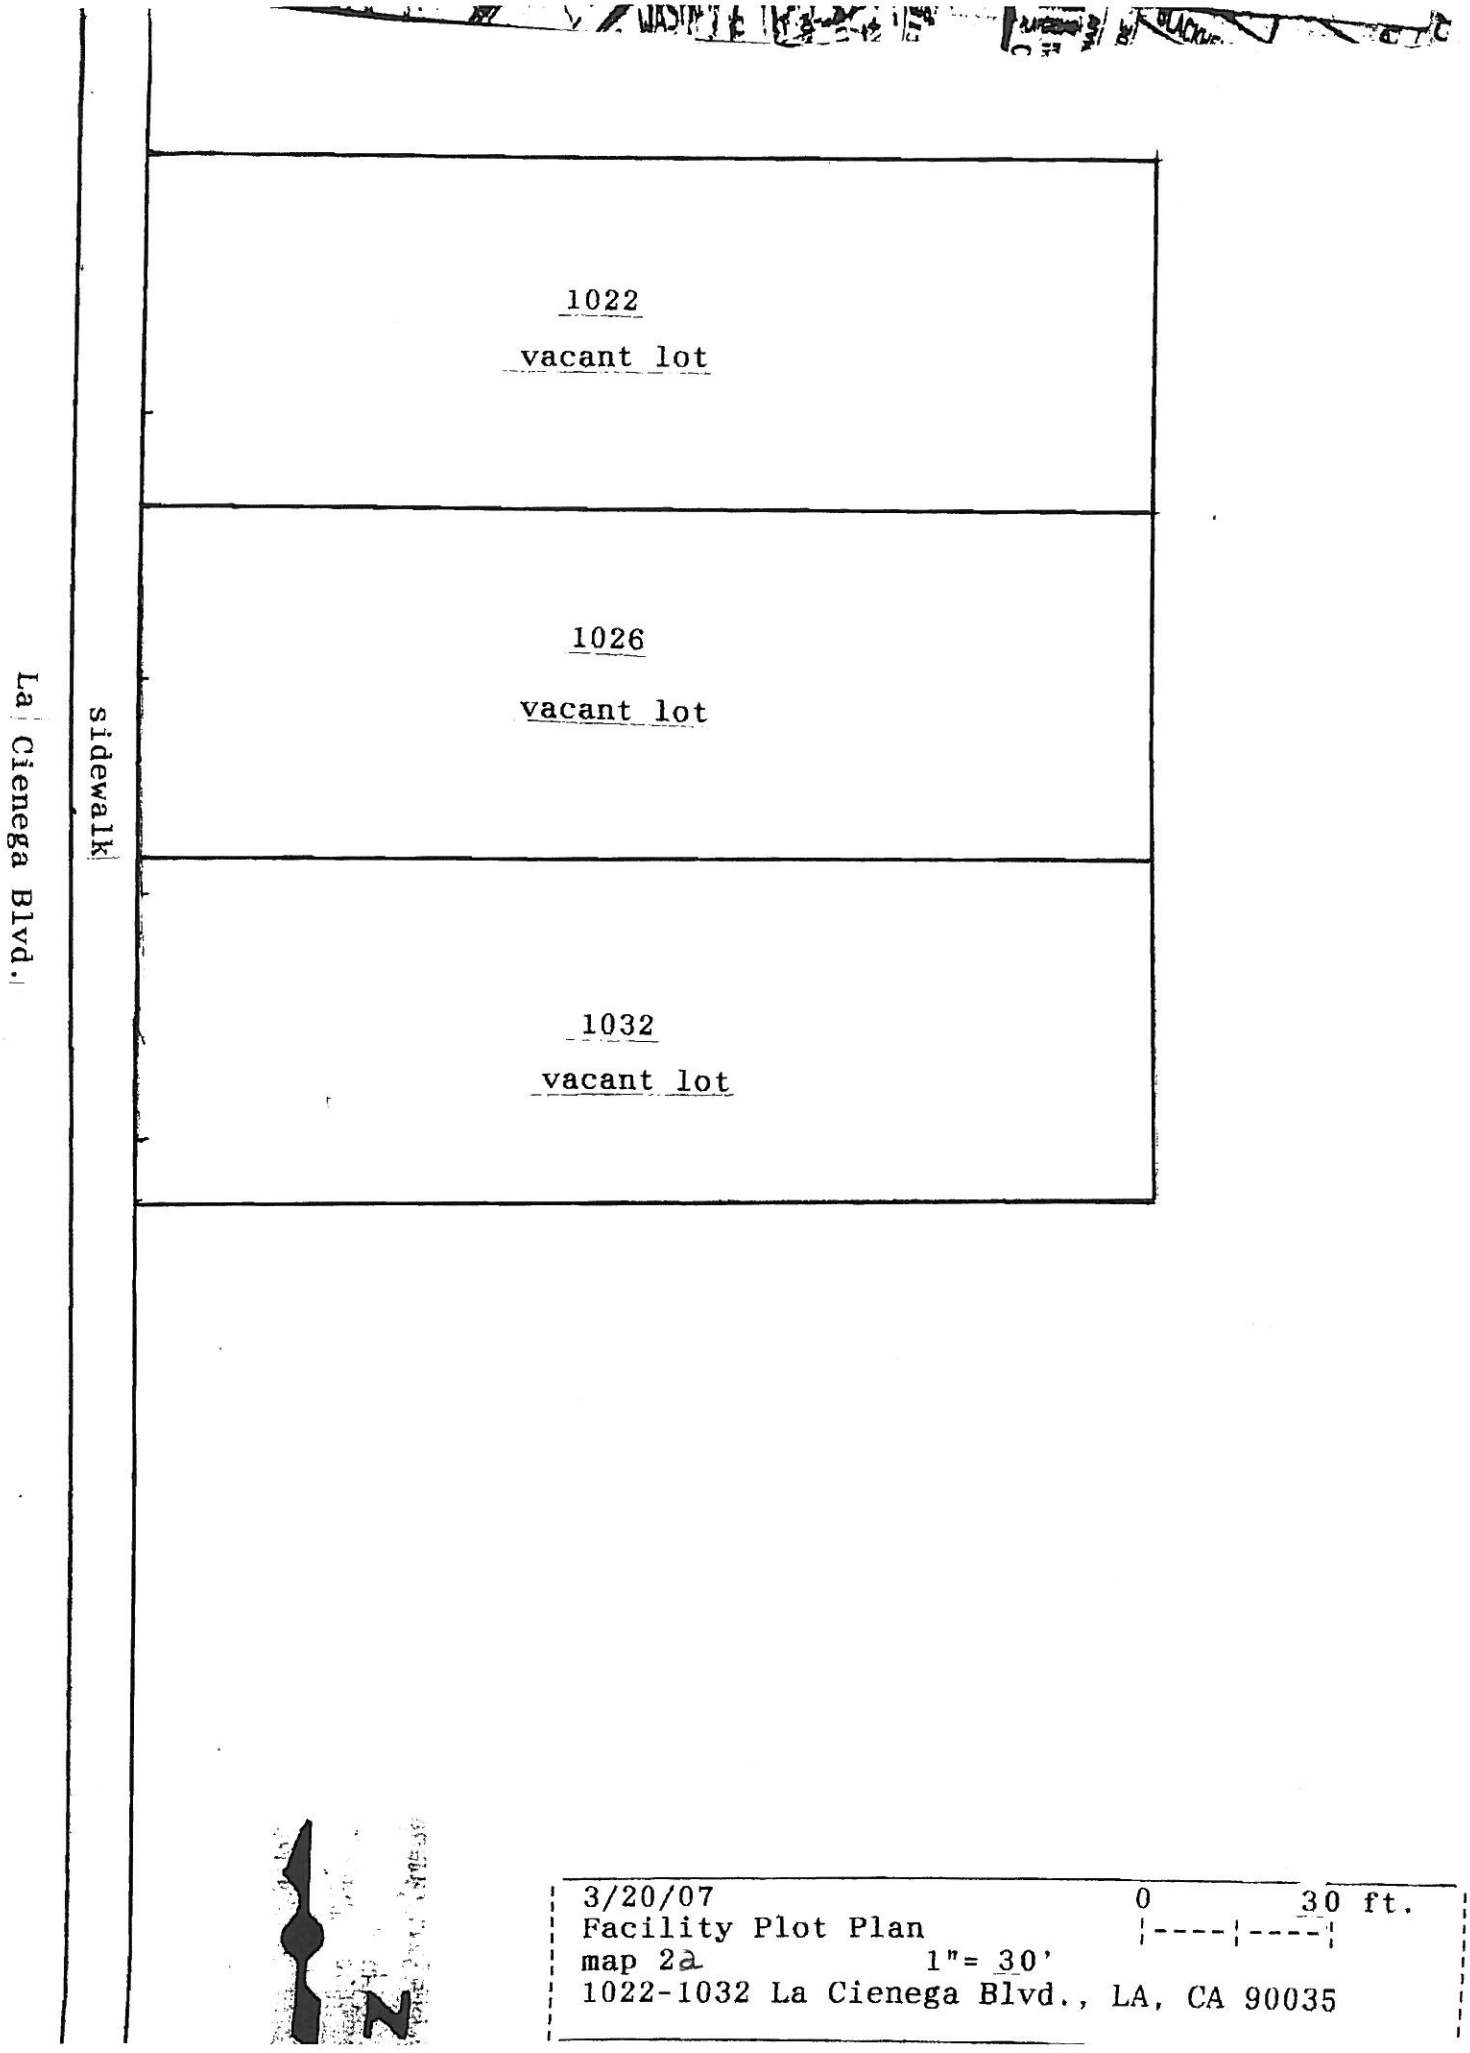
Non-detectable concentrations of gasoline, diesel fuel, and heavy oils were reported under the former hoists, in the former sump area, in the former waste oil storage area, and near a former hole in the ground.

Environmental impact has not occurred as a result of the former auto repair operation on the property. There is no threat to human health or the environment.

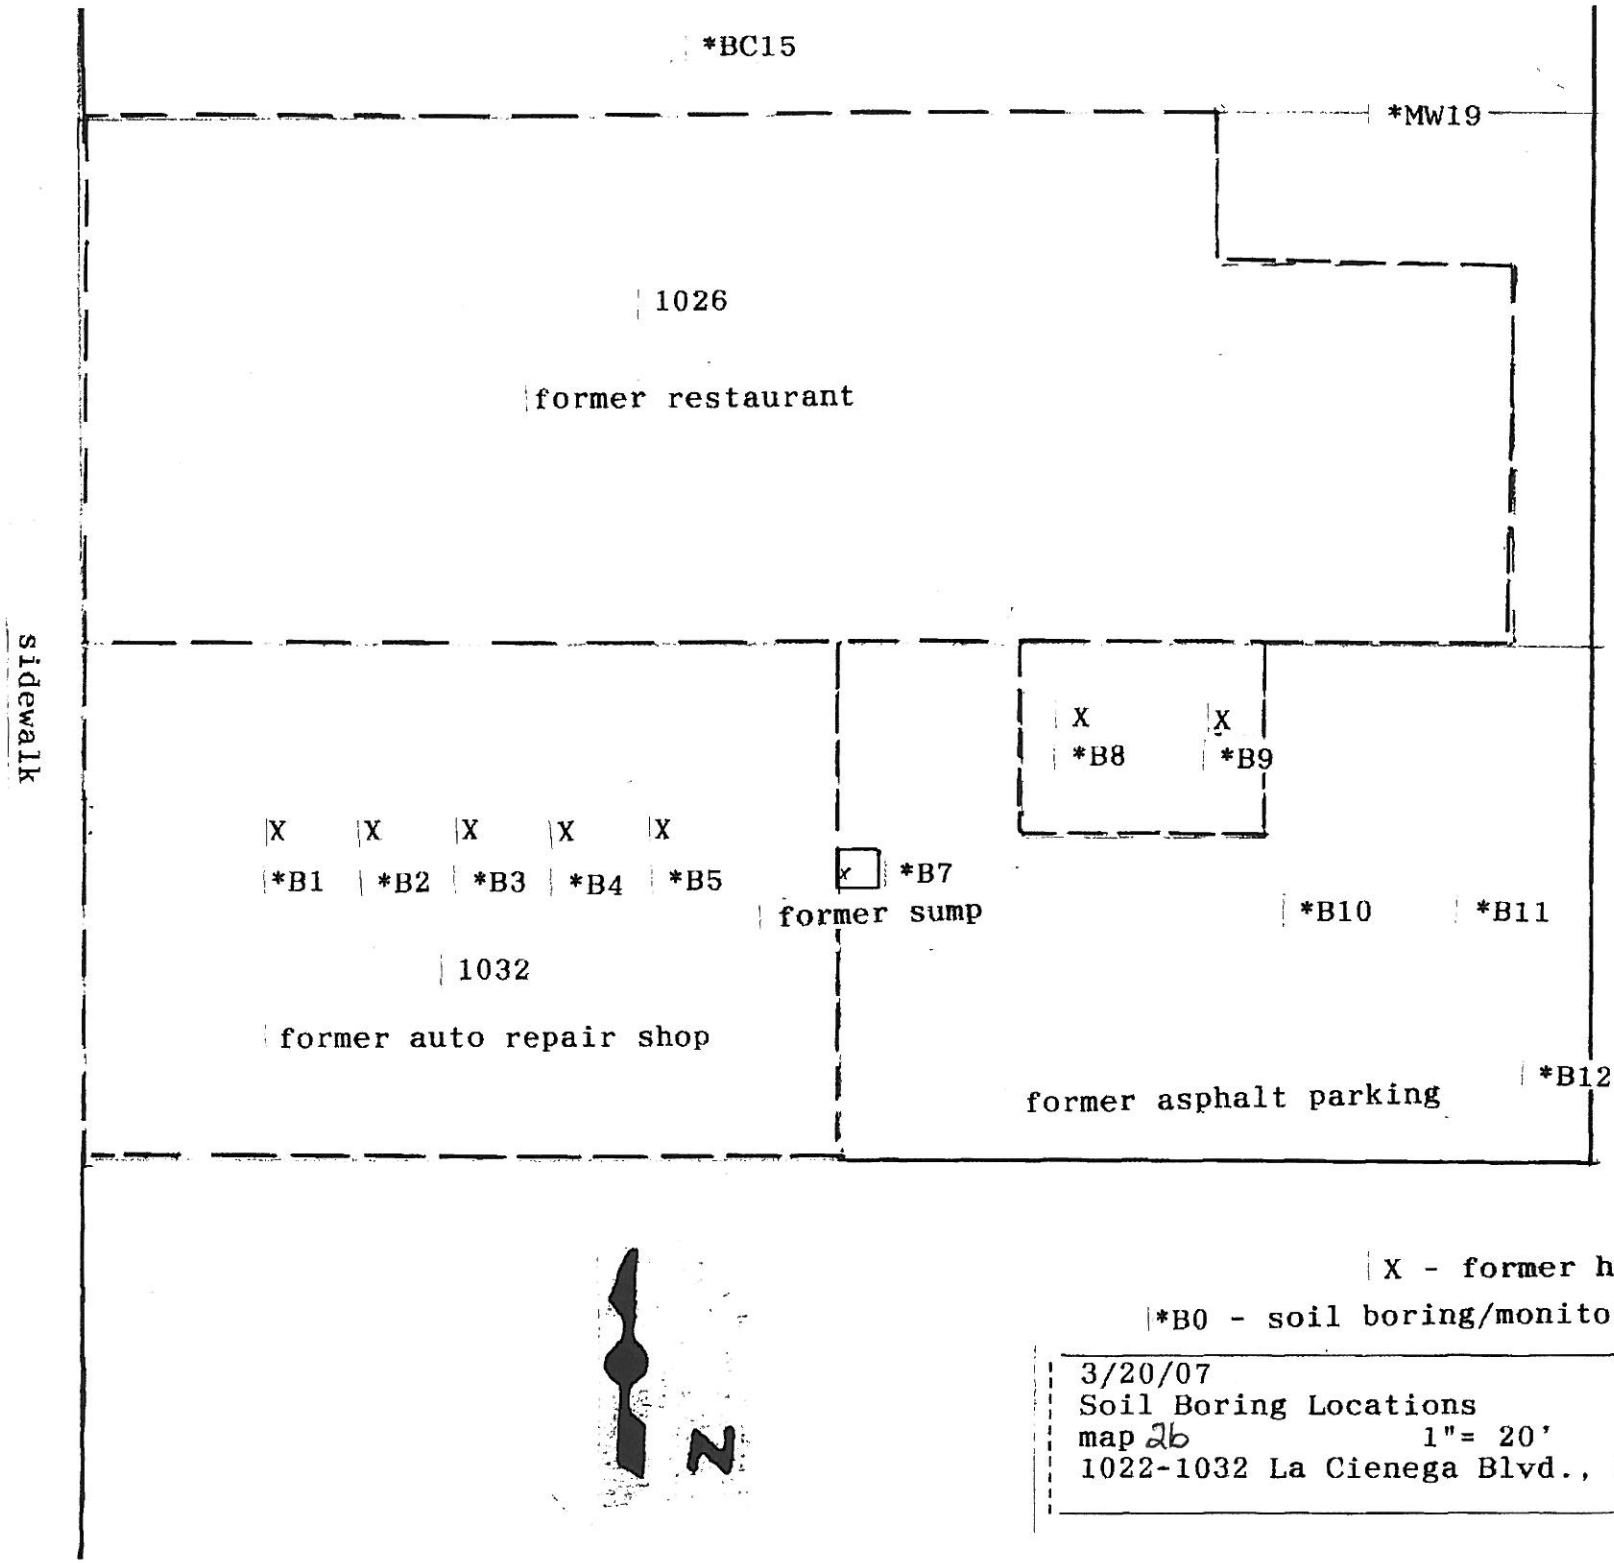
RECOMMENDATIONS

We recommend no additional environmental assessment work be required on the subject property at this time.

LIMITATIONS



This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.



CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written/verbal consent from B.H.A.S.A.L. and Mr. Dean Isaacson.

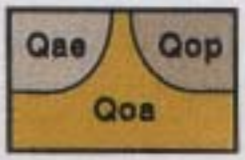
HOLLYWOOD—BURBANK (South 1/2) QUADRANGLES

LEGEND

SURFICIAL SEDIMENTS



unconsolidated detrital sediments; generally undissected

af *artificial cut and fill* **Qls** *landslide debris*

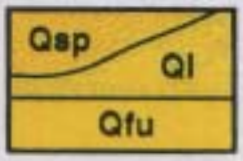
Qg *gravel and sand of major stream channels*

Qc *clay and sand of pre-development marshlands*

Qa *alluvium: clay, sand and gravel; includes gravel and sand of minor stream channels*

OLDER SURFICIAL SEDIMENTS

unconsolidated to weakly consolidated; dissected and eroded where elevated; late Pleistocene age



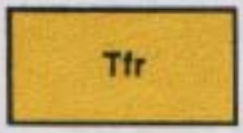
Qae *similar to* **Qa**, *but slightly elevated and dissected; includes alluvial fan sediments*

Qop *paleosoil in Baldwin Hills (Fox Hills residual paleosoil of Weber et al. 1982); moderately indurated, erosion-resistant, gray to rusty brown pebbly and sandy paleosoil or "hardpan" on* **Qoa**

Qoa *older alluvium, gray to light brown pebble-gravel, sand, silt, and clay of detritus derived from Santa Monica Mountains; similar to* **Qae**, *but slightly consolidated; in Baldwin Hills designated as Baldwin Hills sandy gravel (Weber et al. 1982), where it is much dissected and eroded*

—UNCONFORMITY—

in mountain areas



SHALLOW MARINE SEDIMENTS

shallow marine clastic sediments exposed in Baldwin Hills; weakly consolidated, eroded; Pleistocene age

Qsp *San Pedro Sand (of Wright 1987; Culver Sand of Weber et al. 1982): light gray to light brown sand, fine to coarse grained, pebbly; locally contains shell fragments*

Ql *Inglewood Formation (of Wright 1987; Weber et al. 1982): light gray, friable; fine grained sandstone and interbedded soft gray siltstone*

Qfu *upper Fernando (?) Formation (part of Inglewood Formation of Weber et al. 1982; Wright 1987): soft gray massive silty claystone, base not exposed*

FERNANDO FORMATION

(of Lamar 1970)

marine clastic; early Pliocene age (Repettian Stage)

Tfr *Repetto Member (Lamar 1970): in downtown Los Angeles, consolidated but crumbly gray to greenish-gray claystone-siltstone, in part sandy; vaguely bedded, locally fossiliferous*

40	1	3	5	26
20	1	1	3	13
10	1	1	1	7

* - CA Regional Water Quality Control Board, "Interim Site Assessment and Cleanup Guidebook", February, 1995.

1) The Cleanup Level for volatile organic compound (VOC) impacted soil is calculated from the attenuation factors on the above table and the maximum concentration limit (MCL).

2) The MCL's are obtained from California Code of Regulations (CCR), Title 22.

3) The Cleanup Level is obtained by multiplying the AF by the MCL. This is compared to the actual concentration of the chemical present in the sediment.

4) If the Cleanup Levels are above the actual concentrations in the sediment, Remedial Action may not be necessary.

TABLE 2: MCL, Koc, K_H, MAXIMUM VALUES OF ATTENUATION FACTOR FOR COMMON VOCs

Comparison of MCLs and PHGs

Maximum Contaminant Levels (MCLs)—health-protective **drinking water standards**—adopted by DHS are to be met by public water systems. MCLs take into account not only chemicals' health risks but also factors such as their detectability and treatability, as well as the costs of treatment. Health and Safety Code §116365(a) requires DHS to establish a contaminant's MCL at a level as close as is technically and economically feasible to its public health goal (PHG), placing primary emphasis on the protection of public health.

Health and Safety Code §116365(c) requires the **Office of Environmental Health Hazard Assessment** (OEHHA) to establish PHGs, which are concentrations of drinking water contaminants that pose no significant health risk if consumed for a lifetime, based on current risk assessment principles, practices, and methods. PHGs are established for (1) contaminants with MCLs, and (2) contaminants for which DHS will be adopting MCLs, *e.g.*, **perchlorate** and **chromium-6**.

Water systems also use PHGs to provide information about drinking water contaminants in annual **Consumer Confidence Reports**. Certain public water systems must provide a report to their customers about health risks from a contaminant that exceeds its PHG and about the cost of treatment to meet the PHG, and hold a public hearing on the report.

Once OEHHA establishes or revises a PHG for a contaminant with an MCL, DHS determines whether the MCL should be considered for possible revision. DHS subsequently conducts an in-depth risk management analysis to determine whether or not to propose a revision. For more information, see **MCL review status**.

The following table compares MCLs and PHGs and includes each contaminant's Detection Limit for Purposes of Reporting (DLR)—the level at which DHS is confident about the quantification of the chemical's presence. Analytical data are required to be submitted to DHS if they are at or above the DLR. Some data may be reported at levels below the DLR.

Comparisons of PHGs, DLRs, and MCLs. Also included at results of drinking water source monitoring. Units are in milligrams per liter (mg/L), unless otherwise noted. For more about PHGs, go to **OEHHA's website**. Also, see **MCL review status**

Table 3 *

Action Levels for Metals

Total Threshold Limit Concentration - (TTLC)
Soluble Threshold Limit Concentration - (STLC)

Action Levels in parts per million (ppm).

Metal	TTLC	STLC
Antimony	500	15
Arsenic	500	5
Barium	10,000	100
Beryllium	75	0.75
Cadmium	100	1
Chromium VI	500	5
Chromium III	2,500	560
Cobalt	8,000	80
Copper	2,500	25
Flouride	18,000	180
Lead	1,000	5
Mercury	20	0.2
Molybdenum	3,500	350
Nickel	2,000	20
Selenium	100	1
Silver	500	5
Thallium	700	7
Vanadium	2,400	24
Zinc	5,000	250

* California Code of Regulations (CCR), Title 26

1) If the TTLC value of the sample is above the TTLC Action Level, the material is classified as hazardous.

2) If the TTLC value of the sample is between the TTLC and the STLC Action Levels, a STLC analyses must be run to determine if the material is hazardous.

3) If The STLC value of the sample is above the STLC ACtion Level, the material is classified as hazardous.

4) The STLC can not exceed more than 10% of the TTLC value. This is due to a laboratory dilution factor.

5) If the 10% value of the TTLC is above the STLC Action Level, the material is theoretically hazardous. In some cases, the actual STLC value may be below the theoretically predicted value, classifying the material as non-hazardous.

Background Concentrations For Selected Metals in Western United States Soils, in parts per million (ppm = mg/kg)

Metal	Mean	Standard Deviation	Range
Aluminum	58,000	2.00	5,000 - >100,000
Antimony	0.47	2.15	<1 - 2.6
Arsenic	5.5	1.98	<0.1 - 97
Barium	580	1.72	70 - 5,000
Beryllium	0.68	2.30	<1 - 15
Cadimum	1	--	<1 - 10
Chromium	41	2.19	3 - 2,000
Cobalt	7.1	1.97	<3 - 50

Table 4-1: Maximum Soil Screening Levels (mg/kg) for TPH and BTEX above Drinking Water Aquifers

	Distance Above Groundwater	Carbon Range		
		C4-C12	C13-C22	C23-C32
TPH	>150 feet	1,000	10,000	50,000
	20-150 feet	500	1,000	10,000
	<20 feet	100	100	1,000

	Distance Above Groundwater	Lithology			
		Gravel	Sand	Silt	Clay
BTEX	150 feet	B=0.044 T=2 E=8 X=23	B=0.077 T=4 E=17 X=48	B=0.165 T=9 E=34 X=93	B=0.8 T=43 E=170 X=465
	80 feet	B=0.022 T=1 E=4 X=11	B=0.033 T=2 E=7 X=20	B=0.066 T=4 E=15 X=40	B=0.34 T=18 E=73 X=200
	20 feet	B=0.011 T=0.15 E=0.7 X=1.75	B=0.011 T=0.3 E=0.7 X=1.75	B=0.011 T=0.45 E=2 X=5.3	B=0.044 T=2.3 E=9 X=24.5

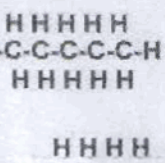
- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MCLs (ppm): B=0.001, T=0.15, E=0.7, X=1.75.
- MTBE (methyl tertiary butyl ether) must be included in BTEX analyses.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for benzene. Table values for BTEX can be linearly interpolated between distance above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwaters are considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used; BTEX screening levels are set at 100 times respective MCLs as preliminary levels determined to be protective of human health and the environment.
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- For BTEX, each component is not to exceed the specified screening level.
- For TPH, the total allowable for each carbon range is not to be exceeded. In areas of naturally-occurring hydrocarbons, Regional Board staff will make allowance for TPH levels.
- BTEX to be analyzed by EPA Method 8020 or EPA Method 8260 (usually for confirmation).
- TPH to be analyzed by EPA Methods 418.1 plus 8015 (Modified). Ranges of TPH to be analyzed by GC/MS carbon range methods (EPA Method 8260) or EPA Method 8015 (Modified).

Hydrocarbons

A hydrocarbon is one of the most simple and primitive of organic compounds. All living organisms produce hydrocarbons, one such example is plants, they synthesize waxes containing hydrocarbons in order to prevent leaf surface decay. This is what makes their leaves shiny. Almost all useable supplies of hydrocarbons are obtained from fossil fuels - coal, petroleum, and natural gas.

Did you know that there are approximately 300,000 different natural hydrocarbon compounds, that mostly from oil reservoirs or coal deposits? Hydrocarbons contains only carbon and hydrogen atoms. These atoms link together to form straight, branched chains, or ring structures commonly called PAHs (poly aromatic hydrocarbons).

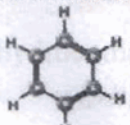
Examples of common hydrocarbons are: gasoline, diesel fuels, lighter fluid, propane, home heating oil, marine and motor oil, fuels, cleaning solvents, hydraulic fluids, crude oil and lubricating oils.



Hydrocarbon Chains

Product	Carbon Chain	Molecular Formula	Boiling Point	Melting Point	State	Uses
Methane	C1	CH_4	-161	-182.5	Gas	Fuel, carbon black, gasoline
Ethane	C2	C_2H_6	-88	-183.3	Gas	Chemistry
Propane	C3	C_3H_8	-46	-189.7	Gas	Cigarette lighter fuel and barbecues.
Butane	C4	C_4H_{10}	-1	-138.40	Gas	Cigarette lighters fuel and barbecues.
Pentane	C5	C_5H_{12}	36.1	-129.7	Liquid	Solvents, dry cleaning, refrigerant
Hexane	C6	C_6H_{14}	68.7	-95.3	Liquid	Motor fuel
Heptane	C7	C_7H_{16}	98.4	-90.6	Liquid	Solvents
Octane	C8	C_8H_{118}	125.7	-56.8	Liquid	Solvents
Nonane	C9	C_9H_{20}	150.8	-53.5	Liquid	Solvents
Decane	C10	$C_{10}H_{22}$	174.1	-29.7	Liquid	Solvents
Kerosene	C12 - C16		200 - 315		Liquid	Diesel, heating oil, lighting/oil stove fuels.
Fuel Oil	C15 - C18		Up to 375		Liquid	Furnace oils, diesels
Lubricating Oils	C16 - C20		350 up		Liquid	Lubrication
Grease, Vaseline	C20 & up				Semisolid	Lubrication, sizing paper
Paraffin - Wax	C26 & up				Solid	Candles, match sticks, household canning
Pitch and Tar	C26 & up				Residue	Roofing, paving, rubber
Petroleum Coke	C26 & up				Residue	Fuel, carbon electrode

The carbon atoms of different hydrocarbons are organized into two general groups:



Aliphatic - a straight or branched chain.

Straight chain (pentane) C_5H_{12}

Aromatic - contains 1 or more benzene rings. Their name comes from the fact that many have strong, pungent aromas. A PAH is a group of benzene rings which have branched chains of carbon.

Aromatic (benzene)

Soil and Groundwater Sampling and Decontamination Protocol

Geoprobe

The Geoprobe uses a 1.5" to 2" outside diameter hollow steel probe. The probe is driven into the ground using a hydraulic ram until the sample interval is reached. A 24" X 1" Acetate, Teflon, or steel liner is inserted into the probe, and driven into the soil. It is recovered, and a 6 inch section is cut away from the sampling tube. The ends of the tube are capped with Teflon sheets and plastic caps, They are sealed with a Silicon based tape. Disposal latex gloves are worn when collecting the sample.

Each sample is then labeled with the project #, soil boring # and depth, sampling date, and the analytical tests to be conducted. It is then placed in a cooler for cold storage for transportation to the laboratory.

The soil not used for sampling is used in the field to be described using the Unified Soils Classification System (USCS). Any unusual discoloration or odors are noted, and occasionally a photoionization detector is used to screen the sample. This is done by placing the sample in a glass jar, and allowing it to sit in the sun for 5 minutes. After that the headspace is measured for volatile compounds. This information is presented in a geologic log in the report.

When sampling ground water the probe is driven to the ground water depth. A stainless steel wire mesh screen is inserted into the probe and ground water enters the probe. A stainless steel mini bailer is then used to collect the sample. The bailer is emptied into 40 milliliter glass containers and sealed with a Teflon cap. The sample is then labeled, and placed in the cooler.

Decontamination of the probe is performed after each sample is collected. Decontamination consists of washing the equipment in a solution of TSP (tri-sodium phosphate), a rinse in tap water, and a final rinse in tap/distilled water. This is commonly referred to as the three bucket method. This method is generally effective in removing residual contaminants and avoiding cross contamination between samples. In the event the equipment is to be reused immediately, it is dried off with a paper towel.

NEI utilizes only California certified analytical laboratories, and chain of custody is maintained between the sampler and the laboratory. Quality Control/Quality Assurance data is requested for all samples submitted.

The upper 15' of the wells are to be removed for the construction of new underground parking.

Notes / Comments (Department Use Only)

DEFINITIONS

Alluvium	-	A general term for all detrital deposits resulting from the operations of modern rivers. Including sendiments deposited in river beds, flood plains, lakes, fans at the foot of mountain slopes, and estuaries.
Anticline	-	Inclined toward each other,as,the ridge tiles of the roof of a house.
Aquiclude	-	A formation which,, although porous and capable of absorbing water slowly, will not transmit it fast enough to furnish an appreciable supply for a well or spring.
Aquifer	-	A geologic formation , group of formations, or part of a formation that transmite water in sufficient quantity to supply pumping wells or sprins.
Basin	-	An extensive depressed area into which the adjacent land drains, and having no surface outlet.
Dome	-	A roughly symmetrical upfold, the beds dipping in all directions, more or less equally, from a point.
Echelon	-	Seperate faults having parallel but steplike trends.
Formation	-	A geological mappable unit, the primary unit of formal mapping or distinction. Most formations possess certain distinctive or combinations of distinctive lithic features. Formations may be combined into groups or subdivided into members.
Fluvial	-	Produced by river/stream action.
Fault	-	A fracture or fracture zone along which there has been displacement of the sides relative to one another paralel to the fracture.
Hydrologic	-	Pertaining to the occurrence, circulation, distribution, and properties of the water of the earth and the earths atmosphere.
Marine	-	Of, belonging to, or caused by the sea.
Syncline	-	A fold in rocks in which the strata (formations) dip inward from both sides toward the axis.
Uplift	-	Elevation of any extensive part of the earths surface relative to some other parts.

PERSONNEL SUMMARIES

Mr. Alex T. Feucht- California (CA) Certified Engineering Geologist #2027, CA Registered Geologist #4433, CA Registered Environmental Assessor #4085. Mr. Feucht received his BS degree in geology from the University of Wisconsin at Madison, and his MS degree in geology from the University of Montana, Missoula. He spent 17 years working as a petroleum exploration geologist for Texaco, and has over 20 years experience as a environmental consultant.

Barry Keller, Ph.D.- CA Registered Hydrogeologist #370, CA Registered Geologist #4460. Dr. Keller received his Ph.D. in geophysics from the University of California Santa Barbara in 1984, his MS degree in geology from the California Institute of Technology in 1969. Dr. Keller has over 25 years experience applying geophysics and hydrogeology to all aspects of environmental protection. His work briefly includes petroleum and mineral exploration, US Military base clean-ups, development of environmental regulation for the World Bank in South America, hazardous waste management, fresh water delivery systems, and computer modeling. Dr. Keller has numerous publications in all of these fields.

Mr. Craig A. Kitchen- CA Registered Environmental Assessor #5086. Mr. Kitchen studied at California State University at Los Angeles and is an environmental scientist. He is 40 hour OSHA certified, and the director of safety and environmental affairs at a large manufacturing concern. He has over 20 years of experience in the storage, utilization, and disposal of hazardous materials and wastestreams. He is currently specialized in facility compliance audits, site investigations, and oversight of consulting services.

Mr. Robert J. Maikisch- CA Registered Environmental Assessor II #20190, CA REA I #2224. Mr. Maikisch received his BS degree in geology from Bradley University, Illinois. He has completed graduate studies in hydrogeology and stratigraphy at the Colorado School of Mines in Golden, CO. He spent 6 years working for Noranda Exploration as a technician and geologist, and has US EPA level training in Radon gas detection and mitigation. He is one of NEI's founders, with over 20 years experience as a environmental consultant.

Mr. Gary M. Mann- CA Registered Geologist #6589. Mr. Mann received his MS degree in geology from the California State University at Hayward, and his BS degree in geology from the California State University at Long Beach. He spent 12 years as a geologist for the United States Geological Survey, involved in remote sensing and seismic reflection, and has written several publications. He is currently specialized in the application of ground penetrating radar for subsurface imaging. He has over 10 years experience in all aspects of environmental consulting.

Ms. Mya L. Raggio- Environmental Assessor and Project Manager, Ms. Raggio studied at Saddleback University. She has over a year of experience in the environmental industry, and is currently focused on studies in Industrial Hygiene.

Mr. William R. Shofner – CA Registered Environmental Assessor I # 05826. Mr. Shofner received a BS degree in geology from San Diego State University. He was employed as an environmental geologist for over 7 years, and has been an independent geologist for over 10 years, providing geologic services to over 25 geotechnical and environmental consulting firms.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by the Beverly Hills Adjacent Senior Assisted Living, LLC. to conduct a Site Investigation (Phase II) on the property located at 1042 S. La Cienega Blvd. and report the findings (maps 1-2).

Briefly, the property was developed in the early 1950's with the current 2 story apartment building, pool, and associated parking. The purpose of this investigation is to determine if the property has been impacted from a former auto repair center that was immediately to the north and a nearby gasoline station that had a leaking underground storage tank.

The primary contaminants of concern are gasoline and associated additives. The planned vapor barrier and recommended monitoring wells will insure environmental safety requirements will be met in the future.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency, but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the California Regional Water Quality Control Board – Los Angeles Region (RWQCB) in May. 1996. This guidebook provides standards and protocols for subsurface investigations of this type. It is intended to assess the chemical contamination of property and potential impact to ground water resources.

A Geoprobe was used to drill 9 soil borings. Soil samples were collected from each soil boring at the 10 foot depth. Ground water grab samples were collected from 6 of the soil borings at approximately the 16 foot depth. A description of the Geoprobe method of drilling and sampling is included in the Appendix. Each soil boring was backfilled with bentonite clay. The surface was patched with concrete. The location of each soil boring is presented on map 2.

Soil Sample/Boring/Depth	Location
S1-B1-10’	adjacent property to the north
S2-B2-10’	adjacent property to the north
S3-B3-10’	adjacent property to the north
S4-B3-H_2O	B3 ground water
S5-B4-10’	adjacent property to the north
S6-B4-H_2O	B4 ground water
S7-B5-10’	north parking area
S8-B5-H_2O	B5 ground water
S9-B6-10’	north parking area
S10-B6-H_2O	B6 ground water
S11-B7-10’	south parking area
S12-B7-H_2O	B7 ground water
S13-B8-10’	south parking area
S14-B8-H_2O	B8 ground water
S15-B9-10’	south parking area

Chain of Custody was maintained between the sampler and the analytical testing laboratory. Each soil sample was analyzed for EPA Method 8260B (Total Volatile Organic Compounds), and EPA Method 8015M carbon chain (Total Petroleum Hydrocarbons by carbon chain). Each ground water sample was analyzed for EPA Method 8260B and EPA Method 8015g (Total Recoverable Petroleum Hydrocarbons as gasoline). EPA Method 8260B is specific to all industrial solvents that may have been utilized on the property to the north, and gasoline additives that may have migrated from the nearby gas station. EPA Method 8015M is specific to fuel and motor oils. This test also specifies what hydrocarbons are present and in what quantity. EPA Method 8015g is specific to the gasoline range hydrocarbons C5-C12.

Analytical work was conducted by a State of California approved hazardous waste testing laboratory. The laboratory performed routine level Quality Assurance/Quality Control (QA/QC).

NEI Geologist Gary Mann (CA PG #6589), supervised project protocol and report preparation. Logistics, communications, field activities, and reporting were conducted by NEI Geologist Robert Maikisch (CA REA II #20190).

FINDINGS

Sediment:

In an effort to make this section more understandable, definitions of the common geologic terms used in this report are presented at the end of the text. The Unified Soils Classification System (USCS) is a standard system of describing sediments. It was first presented by the United States Army Corp of Engineers in 1953. A copy is presented in the Appendix. Refined Geologic Logs were prepared using the USCS, from splits of each soil sample. Photographs of representative soil boring cuttings are presented for reference in the Appendix.

The property is located on the northern Coastal Plain at an elevation of 125 feet above mean sea level. It is underlain by 150 to 200 feet of Holocene age alluvium (map 3a). The Coastal Plain has a length of about 50 miles, and a width of 12 to 20 miles. On the Coastal Plain during the late Pleistocene and Holocene geologic epochs, fluvial deposition, associated with the rivers and streams that drain from the interior, has built up the surface from a shallow sea bottom to an alluvial plain (map 5b).

Holocene age alluvium is described as poorly sorted, unconsolidated, interbedded, sand, gravel, silt, and clay. The Holocene geologic epoch represent the sediments that have accumulated during the previous 11,000 years. Late Pleistocene alluvium is similar to Holocene alluvium except it may be semi-consolidated. The late Pleistocene geologic epoch represents the sediments deposited from 700,000 to 11,000 years ago.

The sediments encountered were generally a fine sized, very well sorted, sand, with the exception of B2 and B3 which was a silty, clay. Soil borings B5-B7 encountered a, fine to coarse sized, well sorted, sand, with 10-15% percent fine sized gravel up to 5 mm in size. They are classified as SW by the USCS. The sediment in soil borings B2 and B3 are classified as CL. Both sediment types are considered native, and consistent with the local geology (map 3b).

Historically a stream channel drained through the property (maps 4b-4c). The coarse sand deposits from B5 and B7 are indicative of this historic buried channel. The soil boring collected from B3 on the property to the north also encountered the coarser grained material. The geologic log is included in the Pertinent Excerpts from the NEI investigation report. The

"Dissolved Phase TBA" map from the TRC Quarterly report also suggests the presence of the coarser grained material. It is included in the Pertinent Excerpts as figure 6. The approximate area of the channel is presented in the historic photograph dated 1928.

Soil borings B2 and B3 are clay. This suggests the presence of a clay lens. Ground water would tend to migrate around this clay lens into the coarser materials. This could account for the absence of gasoline in the ground water in soil borings B3 and B6. The presence of a clay lens would be consistent with the sedimentation patterns associated with a migrating stream channel (cross section). Soil boring B8 and B9 from the previous report encountered a similar clay lens (pertinent excerpts).

Ground Water:

The property is located in the hydrologic Central Basin Pressure Area. The Central Basin of the Coastal Plain is bordered by the Hollywood Basin on the north, the Pacific Ocean on the south, and the Newport-Inglewood Uplift on the west. The east boundary is made up by the Repetto Hills and the Santa Fe Springs-Coyote Uplift. The hills of the Los Angeles area comprise the northwest boundary.

The Basin is a single structural unit with no obstructions to the flow of ground water. It is comprised of the alluvial cones of the three major rivers, and the smaller streams, that discharge onto the plain forming a compound alluvial cone. The four subdivisions of the basin area, the Los Angeles Forebay Area, the Montebello Forebay Area, the Whittier Forebay area, and the Central Basin Pressure Area.

The Forebay areas of the Central Basin are broadly characterized by the aquifers being unconfined, allowing ground water to rise and fall freely. The Central Basin Pressure Area is broadly characterized by aquifers being confined by layers of impermeable strata, and pressurizing the interbedded aquifers.

In the absence of direct measurements, the depth to the aquifer is estimated by subtracting the elevation of the ground water table from the elevation of the site. The elevation of the site is obtained from the Hollywood topographic quadrangle as published by the United States Geological Survey in 1966 (map 4). The ground water in this area is not currently utilized for

municipal purposes, and regional ground water contour maps are not available. The elevation of the ground water table was obtained from direct measurement of the ground water monitoring wells on the property to the north in 2007. In this case the ground water is approximately 16 feet deep.

Screening Levels:

The Action Level is the level at which action must be taken to protect human health and the environment. This is calculated using Screening Levels obtained from the RWQCB, and the Cal/EPA, Department of Toxic Substances Control (DTSC).

The screening level for solvents in soil is determined by comparing a RWQCB calculated Attenuation Factor, the Maximum Contaminant Level (MCL), the depth to ground water, and the sediment type. The MCL's are obtained from California Code of Regulations (CCR), Title 22. Table 2 in the Appendix presents the Attenuation Factors and MCL's. The screening level for soils is obtained basically by multiplying the MCL by the Attenuation Factor. The screening level for ground water is simply the Maximum Contaminant Level (MCL) as presented in Table 2.

The screening level for hazardous concentrations of metals in soil is determined by using DTSC standards as published in CCR, Title 22. A summary is presented in the Appendix (Table 3). Table 3 also presents the average background concentration of metals in Western U.S. sediments. It basically sets limits on how much metal a sediment may contain before it is considered hazardous. DTSC in general works on a site by site basis, but this is an appropriate screening tool.

The screening level for hydrocarbons and the BTEX (Benzene, Toluene, Ethylbenzene, Xylene) compounds in soils is determined from Table 4.1 of the "Interim Site Assessment & Cleanup Guidebook" as published by the RWQCB. It is determined by comparing the hydrocarbon range, sediment type, and the depth to ground water. It is presented in the Appendix.

Gasoline, it's additives, and several breakdown products were discovered in soil boring B2 and the ground water samples from B4 and B5. The screening levels for soil when ground water is less than 20 feet deep are summarized:

Chemical	Action Level
Gasoline/C5-C12	100.0 ppm
Ethylbenzene	0.70 ppm
Xylene	1.75 ppm
Benzene	0.011 ppm
Toluene	0.15 ppm
MTBE	0.013 ppm

The MCL's for drinking water are summarized:

Chemical	Action Level
Gasoline/C5-C12	nd
Ethylbenzene	0.30 ppm
Xylene	1.75 ppm
Benzene	0.001 ppm
Toluene	0.15 ppm
MTBE	0.013 ppm

Analytical:

The Chain-of-Custody and Analytical Results from this investigation are presented in the Appendix. The analytical results are summarized for review: **nd** = not detected at the method reporting limit; **-** = not analyzed; **AL** = Action Level; **MCL** = Maximum Contaminant Level; **ppm** = parts per million; **ppb** = parts per billion; 1 ppm = 1000 ppb; ***** = See Below. Results in bold face type exceed the screening level.

Naphthalene is also known as white tar. It is a breakdown product of hydrocarbons, and is a indicator of degradation of gasoline. It is hazardous as a irritant to humans in it’s pure form, but poses no threat at these concentrations.

The presence of gasoline and it’s additives in the soil boring B2 would be consistent with the clay acting to absorb the migratory vapor from the ground water. The volatile compounds associated with gasoline have a greater affinity for the molecular interlayer of the clay than the natural bond. The clay has a tendency to contain the gasoline and it’s additives.

CONCLUSIONS

Concentrations of gasoline were reported from the ground water grab samples from soil borings B4 and B5. The soil samples from the 10 foot depth of B4 and B5 do not indicate a surface release had occurred. The soil sample from the 5 foot depth of soil boring B12 from the previous investigation is in the immediate area of soil boring B4, and did not have any concentrations of hydrocarbons.

The results from the Site Investigation on the former auto repair garage, conducted by NEI in March, 2007, did not detect hydrocarbons from the former hoist areas, sump, or oil stained area. The ground water samples from monitoring wells BC-15 and MW-19 were non-detectable for gasoline and it’s additives. This suggests the gasoline in the ground water had likely passed these wells. The presence of Naphthalene and several benzene byproducts suggests the gasoline in the ground water has had sufficient time to partially break down.

The review of the historical data from the release at the 76 gas station indicates gasoline was present in the ground water in 2005. We conclude the leading edge of the gasoline plume has reached the northern edge of the subject property in concentrations above current drinking water standards.

The Action Level for Benzene in ground water is 0.001 ppm. The concentration of Benzene in the ground water grab sample from soil boring B4 is 0.0028 ppm. The plume is apparently migrating south and southwest. It is also possibly migrating around a clay lens in the immediate area of the property.

The sediment type of soil boring B5 is similar to the sediment type in soil boring B7. The grains are fine to course in size. This sediment type is also present in soil boring B3 from the investigation on 1032 S. La Cienega. This geologic data, and map data, suggests a historic stream channel may be present. While gasoline and associated additives are not yet detected in soil borings B7, B8, or B9, we anticipate the leading edge of the gasoline plume to reach the soil boring B7 area in the future.

The concentrations of gasoline reported from the 10 foot depth of soil boring B2 (2.8 ppm) are well below the screening level of 100 ppm and may be considered insignificant. These finding are suggestive of clay acting to trap migrating gasoline vapors off the ground water.

RECOMMENDATIONS

It is our understanding that a vapor barrier is planned for the future development of this property as a retirement home. The vapor barrier should be effective in protecting any future occupants of the planned facility from migratory vapors off the ground water.

Ground water monitoring wells should be placed in areas that will not put holes in the planned vapor barrier, but allow for monitoring of the gasoline plume as it passes under the subject property. A recommended is the property to the south of the planned new development.

The concentrations of gasoline in the ground water are relatively low, and we do not anticipate any vapors migrating 16 feet to the surface in concentrations that will be hazardous to human health or the environment. Since this ground water is not used for municipal purposes the contamination poses no immediate threat to drinking water supplies, or the proposed development.

LIMITATIONS

This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results, as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written or verbal consent from Beverly Hills Adjacent Senior Assisted Living, LLC.

DEFINITIONS

Alluvium	-	A general term for all detrital deposits resulting from the operations of modern rivers. Including sendiments deposited in river beds, flood plains, lakes, fans at the foot of mountain slopes, and estuaries.
Anticline	-	Inclined toward each other,as,the ridge tiles of the roof of a house.
Aquiclude	-	A formation which,, although porous and capable of absorbing water slowly, will not transmit it fast enough to furnish an appreciable supply for a well or spring.
Aquifer	-	A geologic formation , group of formations, or part of a formation that transmite water in sufficient quantity to supply pumping wells or sprins.
Basin	-	An extensive depressed area into which the adjacent land drains, and having no surface outlet.
Dome	-	A roughly symmetrical upfold, the beds dipping in all directions, more or less equally, from a point.
Echelon	-	Seperate faults having parallel but steplike trends.
Formation	-	A geological mappable unit, the primary unit of formal mapping or distinction. Most formations possess certain distinctive or combinations of distinctive lithic features. Formations may be combined into groups or subdivided into members.
Fluvial	-	Produced by river/stream action.
Fault	-	A fracture or fracture zone along which there has been displacement of the sides relative to one another paralel to the fracture.
Hydrologic	-	Pertaining to the occurrence, circulation, distribution, and properties of the water of the earth and the earths atmosphere.
Marine	-	Of, belonging to, or caused by the sea.
Syncline	-	A fold in rocks in which the strata (formations) dip inward from both sides toward the axis.
Uplift	-	Elevation of any extensive part of the earths surface relative to some other parts.

PERSONNEL SUMMARIES

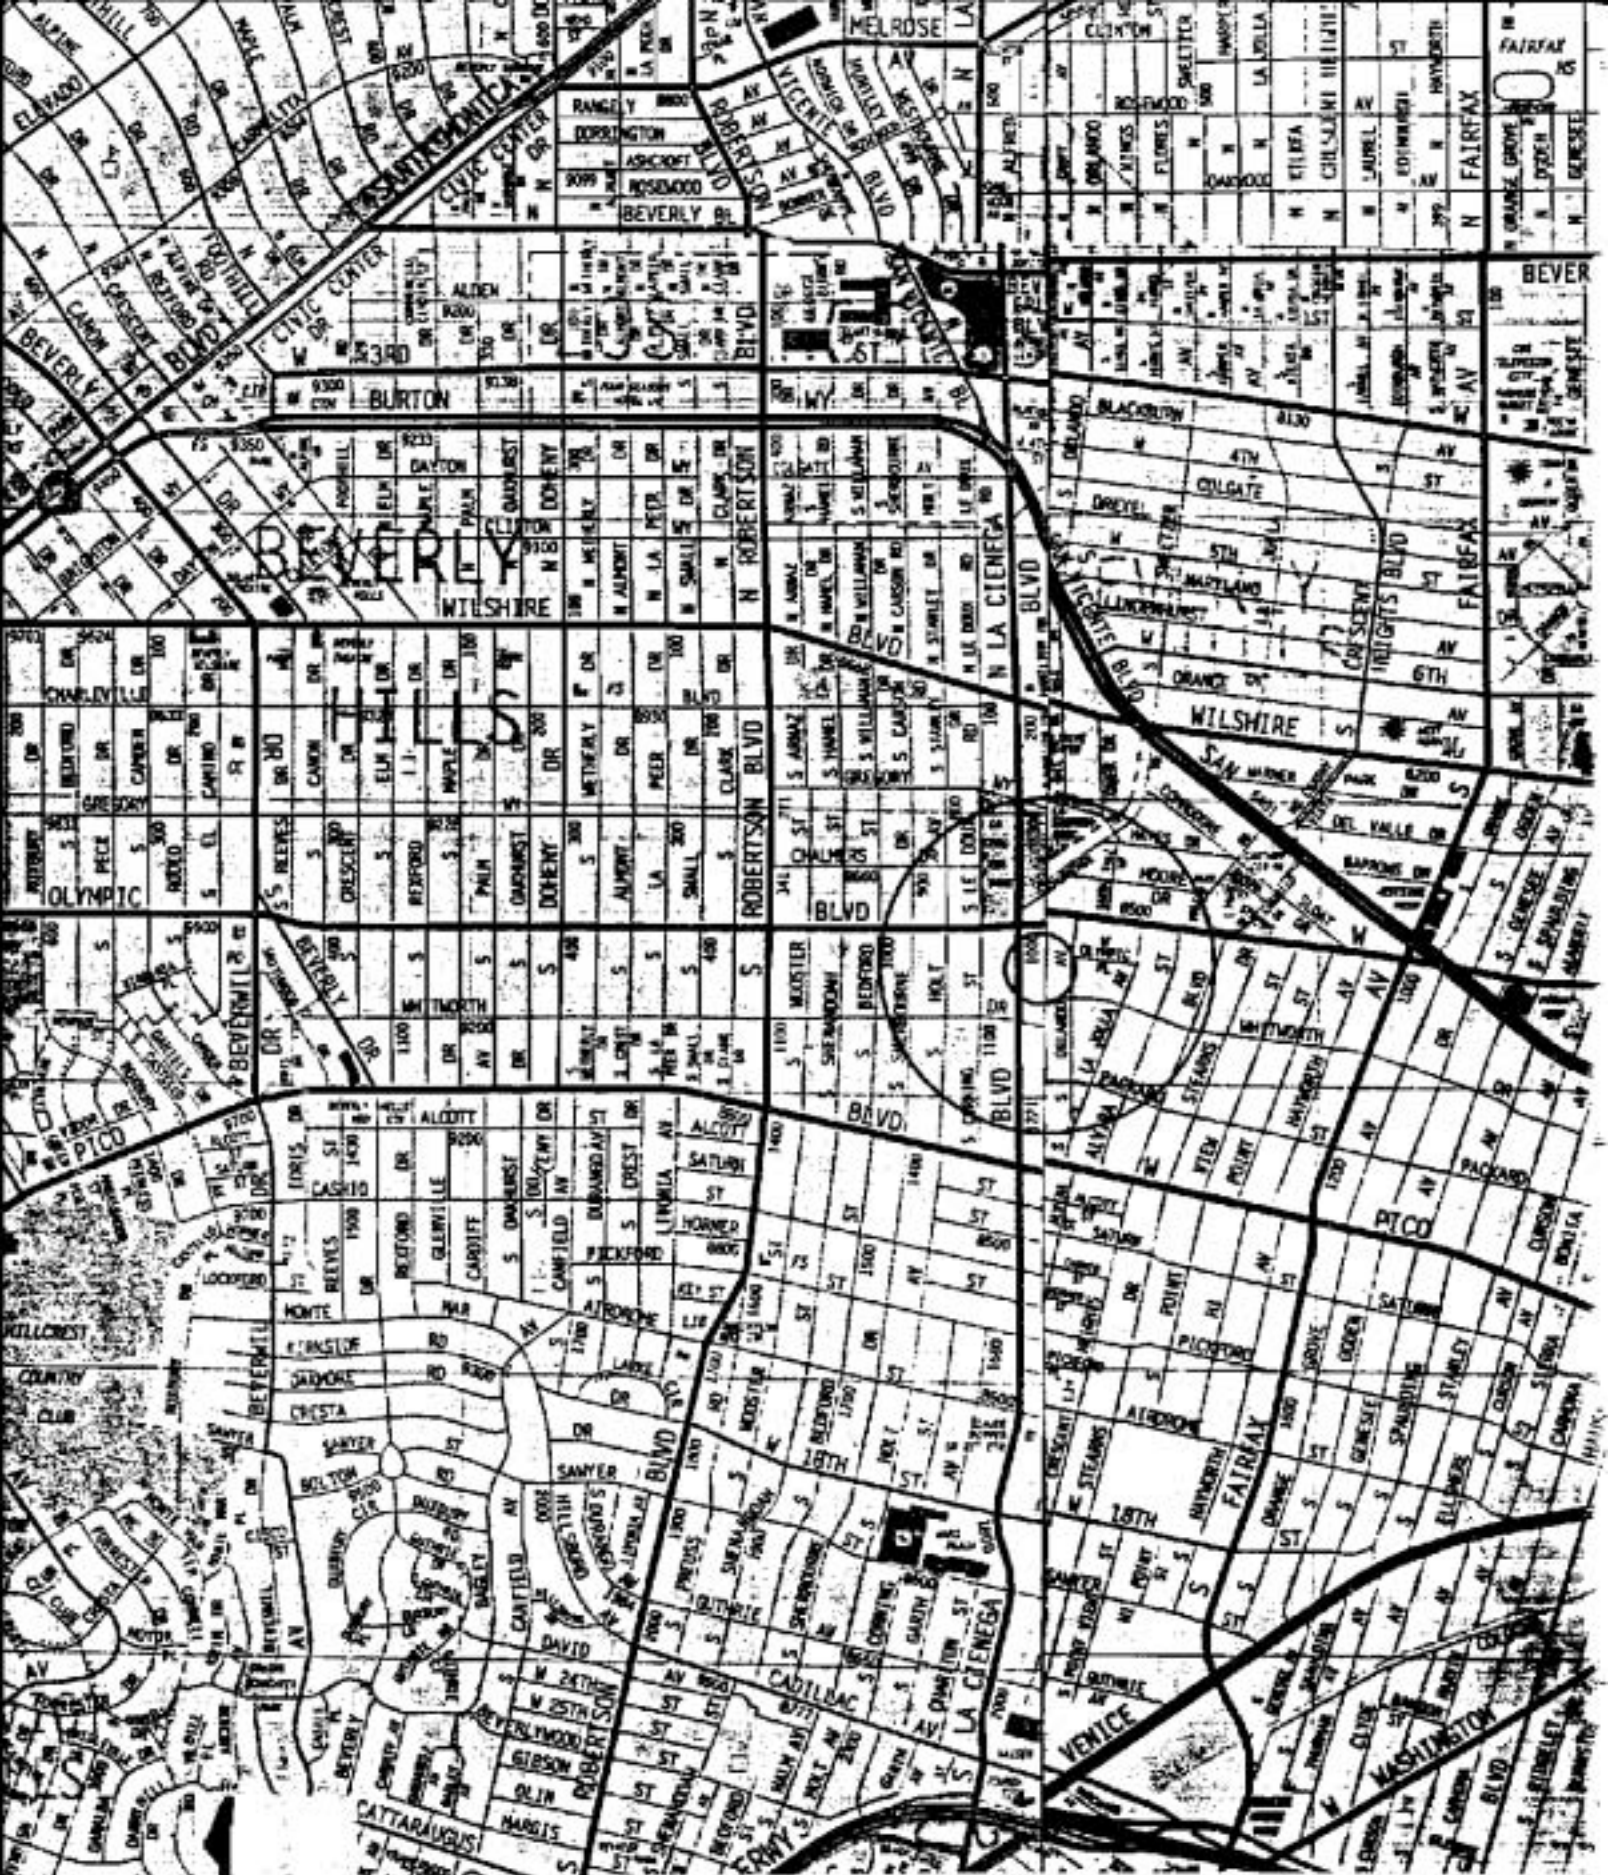
Mr. Alex T. Feucht- California (CA) Certified Engineering Geologist #2027, CA Registered Geologist #4433, CA Registered Environmental Assessor #4085. Mr. Feucht received his BS degree in geology from the University of Wisconsin at Madison, and his MS degree in geology from the University of Montana, Missoula. He spent 17 years working as a petroleum exploration geologist for Texaco, and has over 20 years experience as a environmental consultant.

Barry Keller, Ph.D.- CA Registered Hydrogeologist #370, CA Registered Geologist #4460. Dr. Keller received his Ph.D. in geophysics from the University of California Santa Barbara in 1984, his MS degree in geology from the California Institute of Technology in 1969. Dr. Keller has over 25 years experience applying geophysics and hydrogeology to all aspects of environmental protection. His work briefly includes petroleum and mineral exploration, US Military base clean-ups, development of environmental regulation for the World Bank in South America, hazardous waste management, fresh water delivery systems, and computer modeling. Dr. Keller has numerous publications in all of these fields.

Mr. Craig A. Kitchen- CA Registered Environmental Assessor #5086. Mr. Kitchen studied at California State University at Los Angeles and is an environmental scientist. He is 40 hour OSHA certified, and the director of safety and environmental affairs at a large manufacturing concern. He has over 20 years of experience in the storage, utilization, and disposal of hazardous materials and wastestreams. He is currently specialized in facility compliance audits, site investigations, and oversight of consulting services.

Mr. Robert J. Maikisch- CA Registered Environmental Assessor II #20190, CA REA I #2224. Mr. Maikisch received his BS degree in geology from Bradley University, Illinois. He has completed graduate studies in hydrogeology and stratigraphy at the Colorado School of Mines in Golden, CO. He spent 6 years working for Noranda Exploration as a technician and geologist, and has US EPA level training in Radon gas detection and mitigation. He is one of NEI's founders, with over 20 years experience as a environmental consultant.

Mr. Gary M. Mann- CA Registered Geologist #6589. Mr. Mann received his MS degree in geology from the California State University at Hayward, and his BS degree in geology from the California State University at Long Beach. He spent 12 years as a geologist for the United States Geological Survey, involved in remote sensing and seismic reflection, and has written several publications. He is currently specialized in the application of ground penetrating radar for subsurface imaging. He has over 10 years experience in all aspects of environmental consulting.



Ms. Mya L. Raggio- Environmental Assessor and Project Manager, Ms. Raggio studied at Saddleback University. She has over a year of experience in the environmental industry, and is currently focused on studies in Industrial Hygiene.

Mr. William R. Shofner – CA Registered Environmental Assessor I # 05826. Mr. Shofner received a BS degree in geology from San Diego State University. He was employed as an environmental geologist for over 7 years, and has been an independent geologist for over 10 years, providing geologic services to over 25 geotechnical and environmental consulting firms.

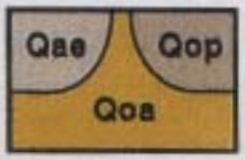
LEGEND

SURFICIAL SEDIMENTS



unconsolidated detrital sediments; generally undissected

af *artificial cut and fill* **Qls** *landslide debris*

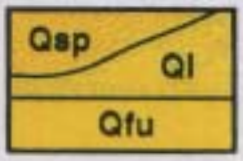
Qg *gravel and sand of major stream channels*

Qc *clay and sand of pre-development marshlands*

Qa *alluvium: clay, sand and gravel; includes gravel and sand of minor stream channels*

OLDER SURFICIAL SEDIMENTS

unconsolidated to weakly consolidated; dissected and eroded where elevated; late Pleistocene age



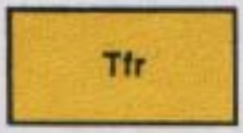
Qae *similar to* **Qa**, *but slightly elevated and dissected; includes alluvial fan sediments*

Qop *paleosoil in Baldwin Hills (Fox Hills residual paleosoil of Weber et al. 1982); moderately indurated, erosion-resistant, gray to rusty brown pebbly and sandy paleosoil or "hardpan" on* **Qoa**

Qoa *older alluvium, gray to light brown pebble-gravel, sand, silt, and clay of detritus derived from Santa Monica Mountains; similar to* **Qae**, *but slightly consolidated; in Baldwin Hills designated as Baldwin Hills sandy gravel (Weber et al. 1982), where it is much dissected and eroded*

—UNCONFORMITY—

in mountain areas



SHALLOW MARINE SEDIMENTS

shallow marine clastic sediments exposed in Baldwin Hills; weakly consolidated, eroded; Pleistocene age

Qsp *San Pedro Sand (of Wright 1987; Culver Sand of Weber et al. 1982): light gray to light brown sand, fine to coarse grained, pebbly; locally contains shell fragments*

Ql *Inglewood Formation (of Wright 1987; Weber et al. 1982): light gray, friable; fine grained sandstone and interbedded soft gray siltstone*

Qfu *upper Fernando (?) Formation (part of Inglewood Formation of Weber et al. 1982; Wright 1987): soft gray massive silty claystone, base not exposed*

FERNANDO FORMATION

(of Lamar 1970)

marine clastic; early Pliocene age (Repettian Stage)

Tfr *Repetto Member (Lamar 1970): in downtown Los Angeles, consolidated but crumbly gray to greenish-gray claystone-siltstone, in part sandy; vaguely bedded, locally fossiliferous*

* - CA Regional Water Quality Control Board, "Interim Site Assessment and Cleanup Guidebook", February, 1995.

1) The Cleanup Level for volatile organic compound (VOC) impacted soil is calculated from the attenuation factors on the above table and the maximum concentration limit (MCL).

2) The MCL's are obtained from California Code of Regulations (CCR), Title 22.

3) The Cleanup Level is obtained by multiplying the AF by the MCL. This is compared to the actual concentration of the chemical present in the sediment.

4) If the Cleanup Levels are above the actual concentrations in the sediment, Remedial Action may not be necessary.

TABLE 2: MCL, Koc, K_h, MAXIMUM VALUES OF ATTENUATION FACTOR FOR COMMON VOCs

Compound	MCL(µg/l)[a]	Koc(ml/g)[b]	K_h(-)[c]	AF_{MAX}

[FNa1] MCL is for either a single isomer or the sum of the isomers.

Note: Authority cited: Sections 100275, 116350 and 116365, Health and Safety Code. Reference: Sections 116365, 116385 and 116555, Health and Safety Code.

HISTORY

1. Repealer of section and renumbering and amendment of section 64445.5 to section 64441 filed 9-8-94 as an emergency; operative 9-8-94 (Register 94, No. 36). A Certificate of Compliance must be transmitted to OAL by 1-6-95 or emergency language will be repealed by operation of law on the following day. For prior history, see Register 90, No. 13.

2. Repealer of section and renumbering and amendment of section 64445.5 to section 64444 refiled 1-3-95 as an emergency; operative 1-3-95 (Register 95, No. 1). A Certificate of Compliance must be transmitted to OAL by 5-3-95 or emergency language will be repealed by operation of law on the following day.

3. Repealer of section and renumbering and amendment of former section 64444.5

Review of MCLs in Response to PHGs

Last Update: December 6, 2002

Comparison of MCLs and PHGs

Maximum Contaminant Levels (MCLs)—health-protective **drinking water standards**—adopted by DHS are to be met by public water systems. MCLs take into account not only chemicals' health risks but also factors such as their detectability and treatability, as well as the costs of treatment. Health and Safety Code §116365(a) requires DHS to establish a contaminant's MCL at a level as close as is technically and economically feasible to its public health goal (PHG), placing primary emphasis on the protection of public health.

Health and Safety Code §116365(c) requires the **Office of Environmental Health Hazard Assessment** (OEHHA) to establish PHGs, which are concentrations of drinking water contaminants that pose no significant health risk if consumed for a lifetime, based on current risk assessment principles, practices, and methods. PHGs are established for (1) contaminants with MCLs, and (2) contaminants for which DHS will be adopting MCLs, *e.g.*, **perchlorate** and **chromium-6**.

Water systems also use PHGs to provide information about drinking water contaminants in annual **Consumer Confidence Reports**. Certain public water systems must provide a report to their customers about health risks from a contaminant that exceeds its PHG and about the cost of treatment to meet the PHG, and hold a public hearing on the report.

Once OEHHA establishes or revises a PHG for a contaminant with an MCL, DHS determines whether the MCL should be considered for possible revision. DHS subsequently conducts an in-depth risk management analysis to determine whether or not to propose a revision. For more information, see **MCL review status**.

The following table compares MCLs and PHGs and includes each contaminant's Detection Limit for Purposes of Reporting (DLR)--the level at which DHS is confident about the quantification of the chemical's presence. Analytical data are required to be submitted to DHS if they are at or above the DLR. Some data may be reported at levels below the DLR.

Comparisons of PHGs, DLRs, and MCLs. Also included at results of drinking water source monitoring. Units are in milligrams per liter (mg/L), unless otherwise noted. For more about PHGs, go to **OEHHA's website**. Also, see **MCL review status**

#detects/ #sampled	Contaminant	PHG	DLR	MCL	Date of PHG

Action Levels for Metals

Total Threshold Limit Concentration - (TTLC)
Soluble Threshold Limit Concentration - (STLC)

Action Levels in parts per million (ppm).

Metal	TTLC	STLC
Antimony	500	15
Arsenic	500	5
Barium	10,000	100
Beryllium	75	0.75
Cadmium	100	1
Chromium VI	500	5
Chromium III	2,500	560
Cobalt	8,000	80
Copper	2,500	25
Flouride	18,000	180
Lead	1,000	5
Mercury	20	0.2
Molybdenum	3,500	350
Nickel	2,000	20
Selenium	100	1
Silver	500	5
Thallium	700	7
Vanadium	2,400	24
Zinc	5,000	250

* California Code of Regulations (CCR), Title 26

1) If the TTLC value of the sample is above the TTLC Action Level, the material is classified as hazardous.

2) If the TTLC value of the sample is between the TTLC and the STLC Action Levels, a STLC analyses must be run to determine if the material is hazardous.

3) If The STLC value of the sample is above the STLC ACtion Level, the material is classified as hazardous.

4) The STLC can not exceed more than 10% of the TTLC value. This is due to a laboratory dilution factor.

5) If the 10% value of the TTLC is above the STLC Action Level, the material is theoretically hazardous. In some cases, the actual STLC value may be below the theoretically predicted value, classifying the material as non-hazardous.

Background Concentrations For Selected Metals in Western United States Soils, in parts per million (ppm = mg/kg)

Metal	Mean	Standard Deviation	Range

Table 4-1: Maximum Soil Screening Levels (mg/kg) for TPH and BTEX above Drinking Water Aquifers

	Distance Above Groundwater	Carbon Range		
TPH		C4-C12	C13-C22	C23-C32
	>150 feet	1,000	10,000	50,000
	20-150 feet	500	1,000	10,000
	<20 feet	100	100	1,000

	Distance Above Groundwater	Lithology			
BTEX		Gravel	Sand	Silt	Clay
	150 feet	B=0.044 T=2 E=8 X=23	B=0.077 T=4 E=17 X=48	B=0.165 T=9 E=34 X=93	B=0.8 T=43 E=170 X=465
	80 feet	B=0.022 T=1 E=4 X=11	B=0.033 T=2 E=7 X=20	B=0.066 T=4 E=15 X=40	B=0.34 T=18 E=73 X=200
	20 feet	B=0.011 T=0.15 E=0.7 X=1.75	B=0.011 T=0.3 E=0.7 X=1.75	B=0.011 T=0.45 E=2 X=5.3	B=0.044 T=2.3 E=9 X=24.5

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MCLs (ppm): B=0.001, T=0.15, E=0.7, X=1.75.
- MTBE (methyl tertiary butyl ether) must be included in BTEX analyses.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for benzene. Table values for BTEX can be linearly interpolated between distance above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwaters are considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used; BTEX screening levels are set at 100 times respective MCLs as preliminary levels determined to be protective of human health and the environment.
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- For BTEX, each component is not to exceed the specified screening level.
- For TPH, the total allowable for each carbon range is not to be exceeded. In areas of naturally-occurring hydrocarbons, Regional Board staff will make allowance for TPH levels.
- BTEX to be analyzed by EPA Method 8020 or EPA Method 8260 (usually for confirmation).
- TPH to be analyzed by EPA Methods 418.1 plus 8015 (Modified). Ranges of TPH to be analyzed by GC/MS carbon range methods (EPA Method 8260) or EPA Method 8015 (Modified).

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by B.H.A.S.A.L. to conduct a Preliminary Site Investigation (Phase II) on the property located at 1022-1026 La Cienega Blvd., Los Angeles, CA 90035 and report the findings (maps 1, 2).

Briefly, a auto repair shop operated on 1032 La Cienega Blvd. from the 1960's until 2007. This facility had 7 in-ground hoists. A visual inspection of the property located the former waste oil storage area, a sump, and a hole in the ground. There are 2 groundwater monitoring wells on the 1026 La Cienega property. These wells are part of a on-going groundwater cleanup on the 76 station that is located on the southeast corner of Olympic and La Cienega.

This investigation was conducted to obtain information on the subsurface soils and groundwater. The primary chemicals of concern are gasoline and it's additives in the groundwater, and hydrocarbons, primarily hydraulic fluid, in the soils.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the CA Regional Water Quality Control Board - Region 4 (RWQCB) in May, 1996. This guidebook provides standards and protocols for subsurface

TABLE 1

The analytical results are summarized for review: **nd** = not detected at the method reporting limit; - = not analyzed; **AL** = Action Level; MCL = Maximum Contaminant Level; **ppm** = parts per million; **ppb** = parts per billion; 1 ppm = 1000 ppb; * = See Below. Results in bold face type exceed Action Level/MCL.

Sample #/Location/ depth	8015M (ppm)	8015g (ppb)	8260B (ppb)

S12-B12-5'	nd	-	-
S13-MW19	-	nd	nd
S14-MW15	-	nd	nd

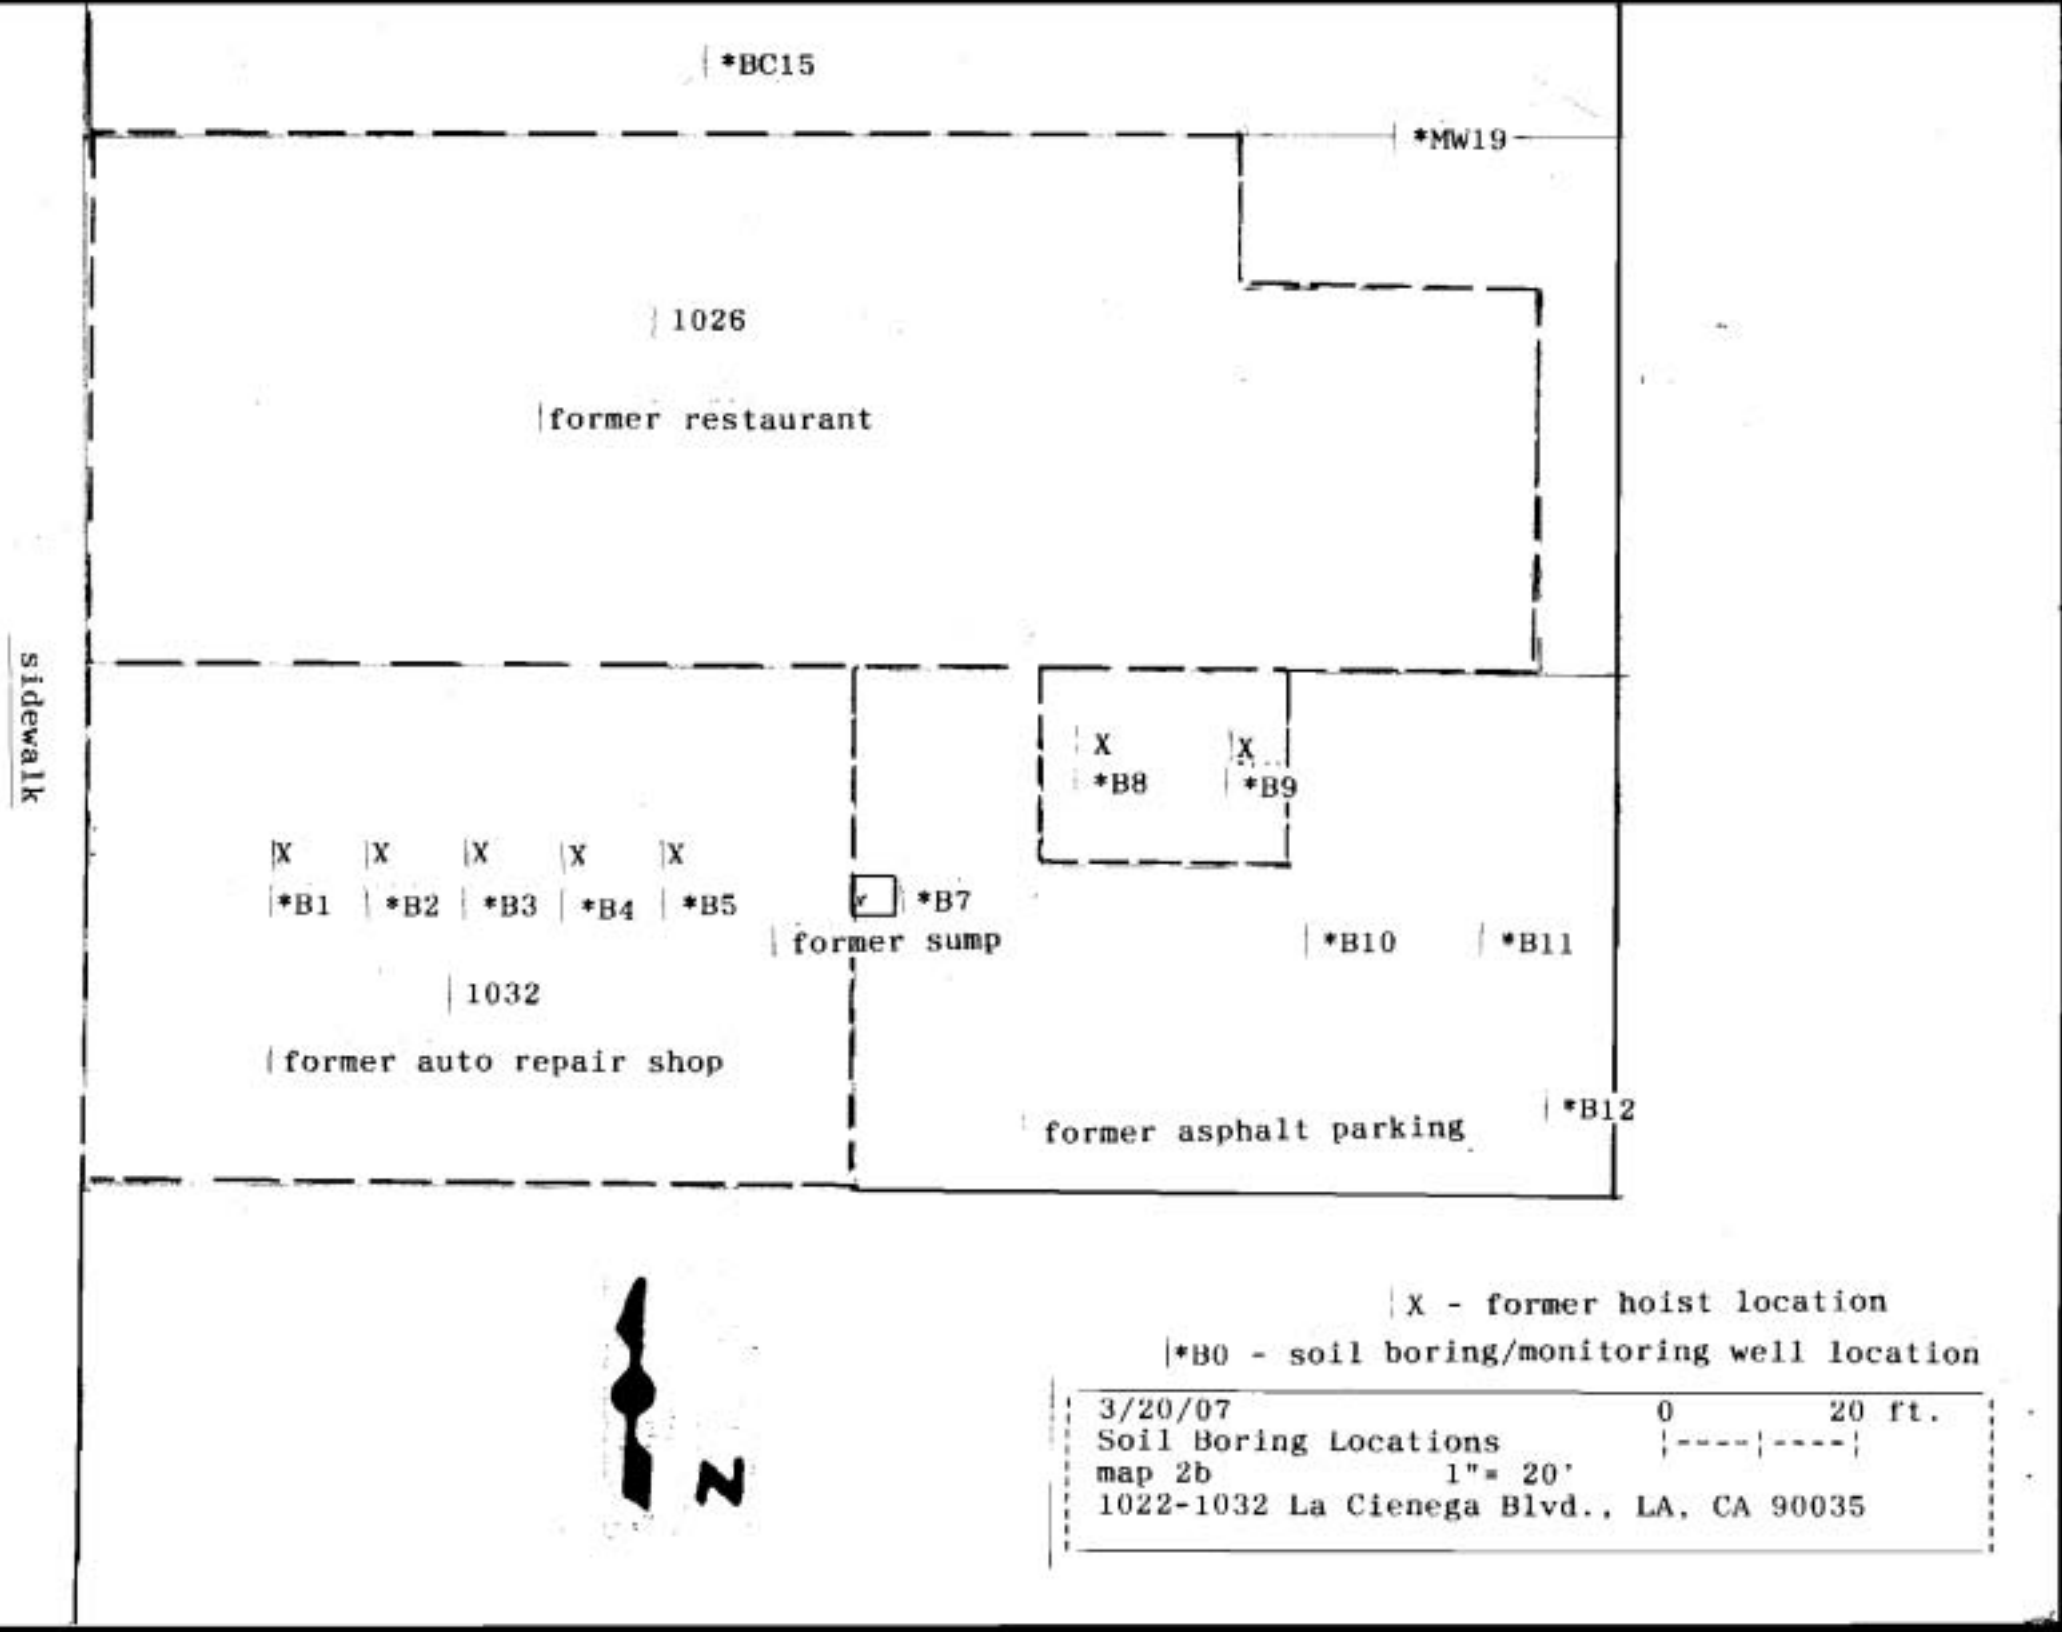
CONCLUSIONS

Non-detectable concentrations of solvents and gasoline were reported in the groundwater.

Non-detectable concentrations of gasoline, diesel fuel, and heavy oils were reported under the former hoists, in the former sump area, in the former waste oil storage area, and near a former hole in the ground.

Environmental impact has not occurred as a result of the former auto repair operation on the property. There is no threat to human health or the environment.

RECOMMENDATIONS



We recommend no additional environmental assessment work be required on the subject property at this time.

LIMITATIONS

This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written/verbal consent from B.H.A.S.A.L. and Mr. Dean Isaacson.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by the Beverly Hills Adjacent Senior Assisted Living, LLC. to conduct a Site Investigation (Phase II) on the property located at 1042 S. La Cienega Blvd. and report the findings (maps 1-2).

Briefly, the property was developed in the early 1950's with the current 2 story apartment building, pool, and associated parking. The purpose of this investigation is to determine if the property has been impacted from a former auto repair center that was immediately to the north and a nearby gasoline station that had a leaking underground storage tank.

The primary contaminants of concern are gasoline and associated additives. The planned vapor barrier and recommended monitoring wells will insure environmental safety requirements will be met in the future.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency, but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the California Regional Water Quality Control Board – Los Angeles Region (RWQCB) in May. 1996. This guidebook provides standards and protocols for subsurface investigations of this type. It is intended to assess the chemical contamination of property and potential impact to ground water resources.

A Geoprobe was used to drill 9 soil borings. Soil samples were collected from each soil boring at the 10 foot depth. Ground water grab samples were collected from 6 of the soil borings at approximately the 16 foot depth. A description of the Geoprobe method of drilling and sampling is included in the Appendix. Each soil boring was backfilled with bentonite clay. The surface was patched with concrete. The location of each soil boring is presented on map 2.

Soil Sample/Boring/Depth	Location
S1-B1-10’	adjacent property to the north
S2-B2-10’	adjacent property to the north
S3-B3-10’	adjacent property to the north
S4-B3-H_2O	B3 ground water
S5-B4-10’	adjacent property to the north
S6-B4-H_2O	B4 ground water
S7-B5-10’	north parking area
S8-B5-H_2O	B5 ground water
S9-B6-10’	north parking area
S10-B6-H_2O	B6 ground water
S11-B7-10’	south parking area
S12-B7-H_2O	B7 ground water
S13-B8-10’	south parking area
S14-B8-H_2O	B8 ground water
S15-B9-10’	south parking area

Chain of Custody was maintained between the sampler and the analytical testing laboratory. Each soil sample was analyzed for EPA Method 8260B (Total Volatile Organic Compounds), and EPA Method 8015M carbon chain (Total Petroleum Hydrocarbons by carbon chain). Each ground water sample was analyzed for EPA Method 8260B and EPA Method 8015g (Total Recoverable Petroleum Hydrocarbons as gasoline). EPA Method 8260B is specific to all industrial solvents that may have been utilized on the property to the north, and gasoline additives that may have migrated from the nearby gas station. EPA Method 8015M is specific to fuel and motor oils. This test also specifies what hydrocarbons are present and in what quantity. EPA Method 8015g is specific to the gasoline range hydrocarbons C5-C12.

Analytical work was conducted by a State of California approved hazardous waste testing laboratory. The laboratory performed routine level Quality Assurance/Quality Control (QA/QC).

NEI Geologist Gary Mann (CA PG #6589), supervised project protocol and report preparation. Logistics, communications, field activities, and reporting were conducted by NEI Geologist Robert Maikisch (CA REA II #20190).

FINDINGS

Sediment:

In an effort to make this section more understandable, definitions of the common geologic terms used in this report are presented at the end of the text. The Unified Soils Classification System (USCS) is a standard system of describing sediments. It was first presented by the United States Army Corp of Engineers in 1953. A copy is presented in the Appendix. Refined Geologic Logs were prepared using the USCS, from splits of each soil sample. Photographs of representative soil boring cuttings are presented for reference in the Appendix.

The property is located on the northern Coastal Plain at an elevation of 125 feet above mean sea level. It is underlain by 150 to 200 feet of Holocene age alluvium (map 3a). The Coastal Plain has a length of about 50 miles, and a width of 12 to 20 miles. On the Coastal Plain during the late Pleistocene and Holocene geologic epochs, fluvial deposition, associated with the rivers and streams that drain from the interior, has built up the surface from a shallow sea bottom to an alluvial plain (map 5b).

Holocene age alluvium is described as poorly sorted, unconsolidated, interbedded, sand, gravel, silt, and clay. The Holocene geologic epoch represent the sediments that have accumulated during the previous 11,000 years. Late Pleistocene alluvium is similar to Holocene alluvium except it may be semi-consolidated. The late Pleistocene geologic epoch represents the sediments deposited from 700,000 to 11,000 years ago.

The sediments encountered were generally a fine sized, very well sorted, sand, with the exception of B2 and B3 which was a silty, clay. Soil borings B5-B7 encountered a, fine to coarse sized, well sorted, sand, with 10-15% percent fine sized gravel up to 5 mm in size. They are classified as SW by the USCS. The sediment in soil borings B2 and B3 are classified as CL. Both sediment types are considered native, and consistent with the local geology (map 3b).

Historically a stream channel drained through the property (maps 4b-4c). The coarse sand deposits from B5 and B7 are indicative of this historic buried channel. The soil boring collected from B3 on the property to the north also encountered the coarser grained material. The geologic log is included in the Pertinent Excerpts from the NEI investigation report. The

"Dissolved Phase TBA" map from the TRC Quarterly report also suggests the presence of the coarser grained material. It is included in the Pertinent Excerpts as figure 6. The approximate area of the channel is presented in the historic photograph dated 1928.

Soil borings B2 and B3 are clay. This suggests the presence of a clay lens. Ground water would tend to migrate around this clay lens into the coarser materials. This could account for the absence of gasoline in the ground water in soil borings B3 and B6. The presence of a clay lens would be consistent with the sedimentation patterns associated with a migrating stream channel (cross section). Soil boring B8 and B9 from the previous report encountered a similar clay lens (pertinent excerpts).

Ground Water:

The property is located in the hydrologic Central Basin Pressure Area. The Central Basin of the Coastal Plain is bordered by the Hollywood Basin on the north, the Pacific Ocean on the south, and the Newport-Inglewood Uplift on the west. The east boundary is made up by the Repetto Hills and the Santa Fe Springs-Coyote Uplift. The hills of the Los Angeles area comprise the northwest boundary.

The Basin is a single structural unit with no obstructions to the flow of ground water. It is comprised of the alluvial cones of the three major rivers, and the smaller streams, that discharge onto the plain forming a compound alluvial cone. The four subdivisions of the basin area, the Los Angeles Forebay Area, the Montebello Forebay Area, the Whittier Forebay area, and the Central Basin Pressure Area.

The Forebay areas of the Central Basin are broadly characterized by the aquifers being unconfined, allowing ground water to rise and fall freely. The Central Basin Pressure Area is broadly characterized by aquifers being confined by layers of impermeable strata, and pressurizing the interbedded aquifers.

In the absence of direct measurements, the depth to the aquifer is estimated by subtracting the elevation of the ground water table from the elevation of the site. The elevation of the site is obtained from the Hollywood topographic quadrangle as published by the United States Geological Survey in 1966 (map 4). The ground water in this area is not currently utilized for

municipal purposes, and regional ground water contour maps are not available. The elevation of the ground water table was obtained from direct measurement of the ground water monitoring wells on the property to the north in 2007. In this case the ground water is approximately 16 feet deep.

Screening Levels:

The Action Level is the level at which action must be taken to protect human health and the environment. This is calculated using Screening Levels obtained from the RWQCB, and the Cal/EPA, Department of Toxic Substances Control (DTSC).

The screening level for solvents in soil is determined by comparing a RWQCB calculated Attenuation Factor, the Maximum Contaminant Level (MCL), the depth to ground water, and the sediment type. The MCL's are obtained from California Code of Regulations (CCR), Title 22. Table 2 in the Appendix presents the Attenuation Factors and MCL's. The screening level for soils is obtained basically by multiplying the MCL by the Attenuation Factor. The screening level for ground water is simply the Maximum Contaminant Level (MCL) as presented in Table 2.

The screening level for hazardous concentrations of metals in soil is determined by using DTSC standards as published in CCR, Title 22. A summary is presented in the Appendix (Table 3). Table 3 also presents the average background concentration of metals in Western U.S. sediments. It basically sets limits on how much metal a sediment may contain before it is considered hazardous. DTSC in general works on a site by site basis, but this is an appropriate screening tool.

The screening level for hydrocarbons and the BTEX (Benzene, Toluene, Ethylbenzene, Xylene) compounds in soils is determined from Table 4.1 of the "Interim Site Assessment & Cleanup Guidebook" as published by the RWQCB. It is determined by comparing the hydrocarbon range, sediment type, and the depth to ground water. It is presented in the Appendix.

Gasoline, it's additives, and several breakdown products were discovered in soil boring B2 and the ground water samples from B4 and B5. The screening levels for soil when ground water is less than 20 feet deep are summarized:

Chemical	Action Level
Gasoline/C5-C12	100.0 ppm
Ethylbenzene	0.70 ppm
Xylene	1.75 ppm
Benzene	0.011 ppm
Toluene	0.15 ppm
MTBE	0.013 ppm

The MCL's for drinking water are summarized:

Chemical	Action Level
Gasoline/C5-C12	nd
Ethylbenzene	0.30 ppm
Xylene	1.75 ppm
Benzene	0.001 ppm
Toluene	0.15 ppm
MTBE	0.013 ppm

Analytical:

The Chain-of-Custody and Analytical Results from this investigation are presented in the Appendix. The analytical results are summarized for review: **nd** = not detected at the method reporting limit; **-** = not analyzed; **AL** = Action Level; **MCL** = Maximum Contaminant Level; **ppm** = parts per million; **ppb** = parts per billion; 1 ppm = 1000 ppb; ***** = See Below. Results in bold face type exceed the screening level.

Naphthalene is also known as white tar. It is a breakdown product of hydrocarbons, and is a indicator of degradation of gasoline. It is hazardous as a irritant to humans in it’s pure form, but poses no threat at these concentrations.

The presence of gasoline and it’s additives in the soil boring B2 would be consistent with the clay acting to absorb the migratory vapor from the ground water. The volatile compounds associated with gasoline have a greater affinity for the molecular interlayer of the clay than the natural bond. The clay has a tendency to contain the gasoline and it’s additives.

CONCLUSIONS

Concentrations of gasoline were reported from the ground water grab samples from soil borings B4 and B5. The soil samples from the 10 foot depth of B4 and B5 do not indicate a surface release had occurred. The soil sample from the 5 foot depth of soil boring B12 from the previous investigation is in the immediate area of soil boring B4, and did not have any concentrations of hydrocarbons.

The results from the Site Investigation on the former auto repair garage, conducted by NEI in March, 2007, did not detect hydrocarbons from the former hoist areas, sump, or oil stained area. The ground water samples from monitoring wells BC-15 and MW-19 were non-detectable for gasoline and it’s additives. This suggests the gasoline in the ground water had likely passed these wells. The presence of Naphthalene and several benzene byproducts suggests the gasoline in the ground water has had sufficient time to partially break down.

The review of the historical data from the release at the 76 gas station indicates gasoline was present in the ground water in 2005. We conclude the leading edge of the gasoline plume has reached the northern edge of the subject property in concentrations above current drinking water standards.

The Action Level for Benzene in ground water is 0.001 ppm. The concentration of Benzene in the ground water grab sample from soil boring B4 is 0.0028 ppm. The plume is apparently migrating south and southwest. It is also possibly migrating around a clay lens in the immediate area of the property.

The sediment type of soil boring B5 is similar to the sediment type in soil boring B7. The grains are fine to course in size. This sediment type is also present in soil boring B3 from the investigation on 1032 S. La Cienega. This geologic data, and map data, suggests a historic stream channel may be present. While gasoline and associated additives are not yet detected in soil borings B7, B8, or B9, we anticipate the leading edge of the gasoline plume to reach the soil boring B7 area in the future.

The concentrations of gasoline reported from the 10 foot depth of soil boring B2 (2.8 ppm) are well below the screening level of 100 ppm and may be considered insignificant. These finding are suggestive of clay acting to trap migrating gasoline vapors off the ground water.

RECOMMENDATIONS

It is our understanding that a vapor barrier is planned for the future development of this property as a retirement home. The vapor barrier should be effective in protecting any future occupants of the planned facility from migratory vapors off the ground water.

Ground water monitoring wells should be placed in areas that will not put holes in the planned vapor barrier, but allow for monitoring of the gasoline plume as it passes under the subject property. A recommended is the property to the south of the planned new development.

The concentrations of gasoline in the ground water are relatively low, and we do not anticipate any vapors migrating 16 feet to the surface in concentrations that will be hazardous to human health or the environment. Since this ground water is not used for municipal purposes the contamination poses no immediate threat to drinking water supplies, or the proposed development.

LIMITATIONS

This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results, as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written or verbal consent from Beverly Hills Adjacent Senior Assisted Living, LLC.

DEFINITIONS

Alluvium	-	A general term for all detrital deposits resulting from the operations of modern rivers. Including sendiments deposited in river beds, flood plains, lakes, fans at the foot of mountain slopes, and estuaries.
Anticline	-	Inclined toward each other,as,the ridge tiles of the roof of a house.
Aquiclude	-	A formation which,, although porous and capable of absorbing water slowly, will not transmit it fast enough to furnish an appreciable supply for a well or spring.
Aquifer	-	A geologic formation , group of formations, or part of a formation that transmite water in sufficient quantity to supply pumping wells or sprins.
Basin	-	An extensive depressed area into which the adjacent land drains, and having no surface outlet.
Dome	-	A roughly symmetrical upfold, the beds dipping in all directions, more or less equally, from a point.
Echelon	-	Seperate faults having parallel but steplike trends.
Formation	-	A geological mappable unit, the primary unit of formal mapping or distinction. Most formations possess certain distinctive or combinations of distinctive lithic features. Formations may be combined into groups or subdivided into members.
Fluvial	-	Produced by river/stream action.
Fault	-	A fracture or fracture zone along which there has been displacement of the sides relative to one another paralel to the fracture.
Hydrologic	-	Pertaining to the occurrence, circulation, distribution, and properties of the water of the earth and the earths atmosphere.
Marine	-	Of, belonging to, or caused by the sea.
Syncline	-	A fold in rocks in which the strata (formations) dip inward from both sides toward the axis.
Uplift	-	Elevation of any extensive part of the earths surface relative to some other parts.

PERSONNEL SUMMARIES

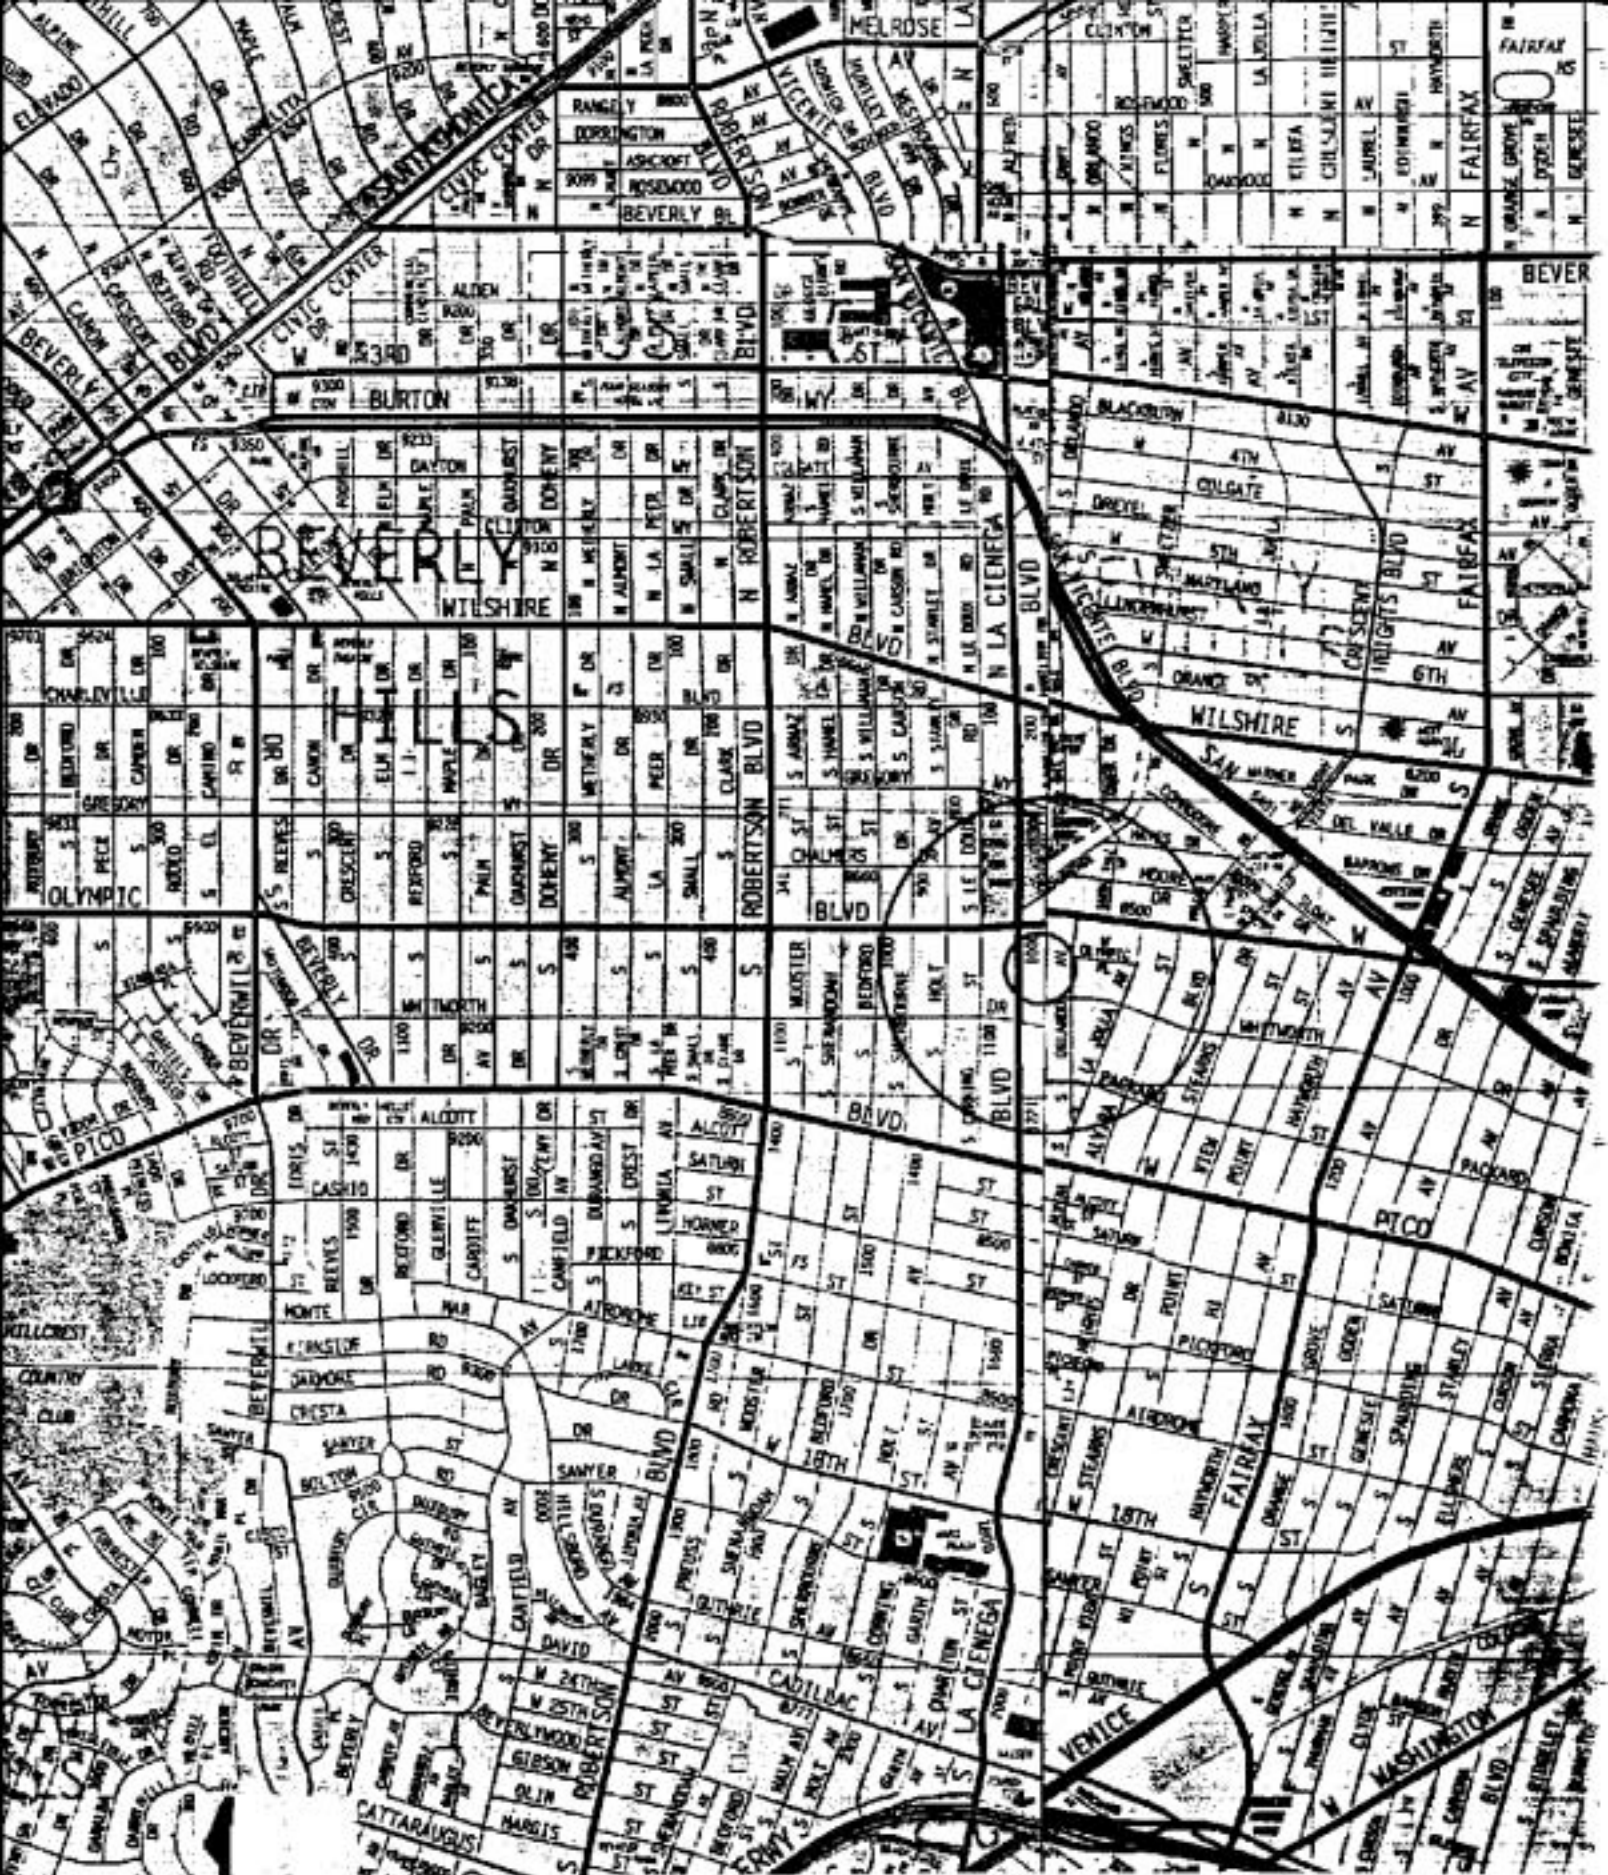
Mr. Alex T. Feucht- California (CA) Certified Engineering Geologist #2027, CA Registered Geologist #4433, CA Registered Environmental Assessor #4085. Mr. Feucht received his BS degree in geology from the University of Wisconsin at Madison, and his MS degree in geology from the University of Montana, Missoula. He spent 17 years working as a petroleum exploration geologist for Texaco, and has over 20 years experience as a environmental consultant.

Barry Keller, Ph.D.- CA Registered Hydrogeologist #370, CA Registered Geologist #4460. Dr. Keller received his Ph.D. in geophysics from the University of California Santa Barbara in 1984, his MS degree in geology from the California Institute of Technology in 1969. Dr. Keller has over 25 years experience applying geophysics and hydrogeology to all aspects of environmental protection. His work briefly includes petroleum and mineral exploration, US Military base clean-ups, development of environmental regulation for the World Bank in South America, hazardous waste management, fresh water delivery systems, and computer modeling. Dr. Keller has numerous publications in all of these fields.

Mr. Craig A. Kitchen- CA Registered Environmental Assessor #5086. Mr. Kitchen studied at California State University at Los Angeles and is an environmental scientist. He is 40 hour OSHA certified, and the director of safety and environmental affairs at a large manufacturing concern. He has over 20 years of experience in the storage, utilization, and disposal of hazardous materials and wastestreams. He is currently specialized in facility compliance audits, site investigations, and oversight of consulting services.

Mr. Robert J. Maikisch- CA Registered Environmental Assessor II #20190, CA REA I #2224. Mr. Maikisch received his BS degree in geology from Bradley University, Illinois. He has completed graduate studies in hydrogeology and stratigraphy at the Colorado School of Mines in Golden, CO. He spent 6 years working for Noranda Exploration as a technician and geologist, and has US EPA level training in Radon gas detection and mitigation. He is one of NEI's founders, with over 20 years experience as a environmental consultant.

Mr. Gary M. Mann- CA Registered Geologist #6589. Mr. Mann received his MS degree in geology from the California State University at Hayward, and his BS degree in geology from the California State University at Long Beach. He spent 12 years as a geologist for the United States Geological Survey, involved in remote sensing and seismic reflection, and has written several publications. He is currently specialized in the application of ground penetrating radar for subsurface imaging. He has over 10 years experience in all aspects of environmental consulting.



Ms. Mya L. Raggio- Environmental Assessor and Project Manager, Ms. Raggio studied at Saddleback University. She has over a year of experience in the environmental industry, and is currently focused on studies in Industrial Hygiene.

Mr. William R. Shofner – CA Registered Environmental Assessor I # 05826. Mr. Shofner received a BS degree in geology from San Diego State University. He was employed as an environmental geologist for over 7 years, and has been an independent geologist for over 10 years, providing geologic services to over 25 geotechnical and environmental consulting firms.

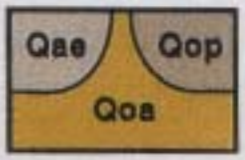
LEGEND

SURFICIAL SEDIMENTS



unconsolidated detrital sediments; generally undissected

af *artificial cut and fill* **Qls** *landslide debris*

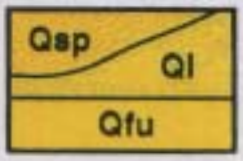
Qg *gravel and sand of major stream channels*

Qc *clay and sand of pre-development marshlands*

Qa *alluvium: clay, sand and gravel; includes gravel and sand of minor stream channels*

OLDER SURFICIAL SEDIMENTS

unconsolidated to weakly consolidated; dissected and eroded where elevated; late Pleistocene age



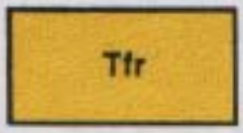
Qae *similar to* **Qa**, *but slightly elevated and dissected; includes alluvial fan sediments*

Qop *paleosoil in Baldwin Hills (Fox Hills residual paleosoil of Weber et al. 1982); moderately indurated, erosion-resistant, gray to rusty brown pebbly and sandy paleosoil or "hardpan" on* **Qoa**

Qoa *older alluvium, gray to light brown pebble-gravel, sand, silt, and clay of detritus derived from Santa Monica Mountains; similar to* **Qae**, *but slightly consolidated; in Baldwin Hills designated as Baldwin Hills sandy gravel (Weber et al. 1982), where it is much dissected and eroded*

—UNCONFORMITY—

in mountain areas



SHALLOW MARINE SEDIMENTS

shallow marine clastic sediments exposed in Baldwin Hills; weakly consolidated, eroded; Pleistocene age

Qsp *San Pedro Sand (of Wright 1987; Culver Sand of Weber et al. 1982): light gray to light brown sand, fine to coarse grained, pebbly; locally contains shell fragments*

Ql *Inglewood Formation (of Wright 1987; Weber et al. 1982): light gray, friable; fine grained sandstone and interbedded soft gray siltstone*

Qfu *upper Fernando (?) Formation (part of Inglewood Formation of Weber et al. 1982; Wright 1987): soft gray massive silty claystone, base not exposed*

FERNANDO FORMATION

(of Lamar 1970)

marine clastic; early Pliocene age (Repettian Stage)

Tfr *Repetto Member (Lamar 1970): in downtown Los Angeles, consolidated but crumbly gray to greenish-gray claystone-siltstone, in part sandy; vaguely bedded, locally fossiliferous*

* - CA Regional Water Quality Control Board, "Interim Site Assessment and Cleanup Guidebook", February, 1995.

1) The Cleanup Level for volatile organic compound (VOC) impacted soil is calculated from the attenuation factors on the above table and the maximum concentration limit (MCL).

2) The MCL's are obtained from California Code of Regulations (CCR), Title 22.

3) The Cleanup Level is obtained by multiplying the AF by the MCL. This is compared to the actual concentration of the chemical present in the sediment.

4) If the Cleanup Levels are above the actual concentrations in the sediment, Remedial Action may not be necessary.

TABLE 2: MCL, Koc, K_h, MAXIMUM VALUES OF ATTENUATION FACTOR FOR COMMON VOCs

Compound	MCL(µg/l)[a]	Koc(ml/g)[b]	K_h(-)[c]	AF_{MAX}
Acetone	610[c]	2	0.0009	3.2

[FNa1] MCL is for either a single isomer or the sum of the isomers.

Note: Authority cited: Sections 100275, 116350 and 116365, Health and Safety Code. Reference: Sections 116365, 116385 and 116555, Health and Safety Code.

HISTORY

1. Repealer of section and renumbering and amendment of section 64445.5 to section 64441 filed 9-8-94 as an emergency; operative 9-8-94 (Register 94, No. 36). A Certificate of Compliance must be transmitted to OAL by 1-6-95 or emergency language will be repealed by operation of law on the following day. For prior history, see Register 90, No. 13.

2. Repealer of section and renumbering and amendment of section 64445.5 to section 64444 refiled 1-3-95 as an emergency; operative 1-3-95 (Register 95, No. 1). A Certificate of Compliance must be transmitted to OAL by 5-3-95 or emergency language will be repealed by operation of law on the following day.

3. Repealer of section and renumbering and amendment of former section 64444.5

Review of MCLs in Response to PHGs

Last Update: December 6, 2002

Comparison of MCLs and PHGs

Maximum Contaminant Levels (MCLs)—health-protective **drinking water standards**—adopted by DHS are to be met by public water systems. MCLs take into account not only chemicals' health risks but also factors such as their detectability and treatability, as well as the costs of treatment. Health and Safety Code §116365(a) requires DHS to establish a contaminant's MCL at a level as close as is technically and economically feasible to its public health goal (PHG), placing primary emphasis on the protection of public health.

Health and Safety Code §116365(c) requires the **Office of Environmental Health Hazard Assessment** (OEHHA) to establish PHGs, which are concentrations of drinking water contaminants that pose no significant health risk if consumed for a lifetime, based on current risk assessment principles, practices, and methods. PHGs are established for (1) contaminants with MCLs, and (2) contaminants for which DHS will be adopting MCLs, *e.g.*, **perchlorate** and **chromium-6**.

Water systems also use PHGs to provide information about drinking water contaminants in annual **Consumer Confidence Reports**. Certain public water systems must provide a report to their customers about health risks from a contaminant that exceeds its PHG and about the cost of treatment to meet the PHG, and hold a public hearing on the report.

Once OEHHA establishes or revises a PHG for a contaminant with an MCL, DHS determines whether the MCL should be considered for possible revision. DHS subsequently conducts an in-depth risk management analysis to determine whether or not to propose a revision. For more information, see **MCL review status**.

The following table compares MCLs and PHGs and includes each contaminant's Detection Limit for Purposes of Reporting (DLR)--the level at which DHS is confident about the quantification of the chemical's presence. Analytical data are required to be submitted to DHS if they are at or above the DLR. Some data may be reported at levels below the DLR.

Comparisons of PHGs, DLRs, and MCLs. Also included at results of drinking water source monitoring. Units are in milligrams per liter (mg/L), unless otherwise noted. For more about PHGs, go to **OEHHA's website**. Also, see **MCL review status**

#detects/ #sampled	Contaminant	PHG	DLR	MCL	Date of PHG

Zinc	5,000	250

* California Code of Regulations (CCR), Title 26

1) If the TTLC value of the sample is above the TTLC Action Level, the material is classified as hazardous.

2) If the TTLC value of the sample is between the TTLC and the STLC Action Levels, a STLC analyses must be run to determine if the material is hazardous.

3) If The STLC value of the sample is above the STLC ACtion Level, the material is classified as hazardous.

4) The STLC can not exceed more than 10% of the TTLC value. This is due to a laboratory dilution factor.

5) If the 10% value of the TTLC is above the STLC Action Level, the material is theoretically hazardous. In some cases, the actual STLC value may be below the theoretically predicted value, classifying the material as non-hazardous.

Background Concentrations For Selected Metals in Western United States Soils, in parts per million (ppm = mg/kg)

Metal	Mean	Standard Deviation	Range
Aluminum	58,000	2.00	5,000 - >100,000
Antimony	0.47	2.15	<1 - 2.6
Arsenic	5.5	1.98	<0.1 - 97
Barium	580	1.72	70 - 5,000
Beryllium	0.68	2.30	<1 - 15
Cadimum	1	--	<1 - 10
Chromium	41	2.19	3 - 2,000
Cobalt	7.1	1.97	<3 - 50
Copper	21	2.07	2 - 300
Iron	21,000	1.95	1,000 - >100,000
Lead	17	1.80	<10 - 700
Manganese	380	1.98	30 - 5,000
Mercury	0.046	2.33	<0.01 - 4.6

Zinc	55	1.79	<10 - 2,100

Shacklette, H.T., and Boerngen, J.G, USGS Professional Paper 1270 (1984)
Conner, J.J. and Shacklette, H.T., USGS Professional Paper 574-F (1975)

Table 4-1: Maximum Soil Screening Levels (mg/kg) for TPH and BTEX above Drinking Water Aquifers

	Distance Above Groundwater	Carbon Range		
TPH		C4-C12	C13-C22	C23-C32
	>150 feet	1,000	10,000	50,000
	20-150 feet	500	1,000	10,000
	<20 feet	100	100	1,000

	Distance Above Groundwater	Lithology			
BTEX		Gravel	Sand	Silt	Clay
	150 feet	B=0.044 T=2 E=8 X=23	B=0.077 T=4 E=17 X=48	B=0.165 T=9 E=34 X=93	B=0.8 T=43 E=170 X=465
	80 feet	B=0.022 T=1 E=4 X=11	B=0.033 T=2 E=7 X=20	B=0.066 T=4 E=15 X=40	B=0.34 T=18 E=73 X=200
	20 feet	B=0.011 T=0.15 E=0.7 X=1.75	B=0.011 T=0.3 E=0.7 X=1.75	B=0.011 T=0.45 E=2 X=5.3	B=0.044 T=2.3 E=9 X=24.5

- TPH = Total petroleum hydrocarbons.
- BTEX = benzene, toluene, ethylbenzene, and xylenes, respectively. MCLs (ppm): B=0.001, T=0.15, E=0.7, X=1.75.
- MTBE (methyl tertiary butyl ether) must be included in BTEX analyses.
- BTEX screening concentrations determined per the attenuation factor method as described in RWQCB Guidance for VOC Impacted Sites (March 1996), with a natural degradation factor of 11 for benzene. Table values for BTEX can be linearly interpolated between distance above groundwater and are proportional to fraction of each lithological thickness.
- Values in Table 4-1 are for soils above drinking water aquifers. All groundwaters are considered as drinking water resources unless exempted by one of the criteria as defined under SWRCB Resolution 88-63 (TDS>3000 mg/L, or deliverability <200 gal/day, or existing contamination that cannot be reasonably treated). Regional Board staff will make a determination of potential water use at a particular site considering water quality objectives and beneficial uses. For non-drinking water aquifers, regardless of depth, TPH for ">150 feet" category in the table should be used; BTEX screening levels are set at 100 times respective MCLs as preliminary levels determined to be protective of human health and the environment.
- Distance above groundwater must be measured from the highest anticipated water level. Lithology is based on the USCS scale.
- For BTEX, each component is not to exceed the specified screening level.
- For TPH, the total allowable for each carbon range is not to be exceeded. In areas of naturally-occurring hydrocarbons, Regional Board staff will make allowance for TPH levels.
- BTEX to be analyzed by EPA Method 8020 or EPA Method 8260 (usually for confirmation).
- TPH to be analyzed by EPA Methods 418.1 plus 8015 (Modified). Ranges of TPH to be analyzed by GC/MS carbon range methods (EPA Method 8260) or EPA Method 8015 (Modified).

Soils Report	20358	07/13/2012	Geotechnologies

PREVIOUS REFERENCE REPORT/LETTER(S)	REPORT NO.	DATE(S) OF DOCUMENT	PREPARED BY
(1022- 1054 S La Cienega Boulevard)			
Soils Report	4869	4/15/2008	Calwest Geotechnical
Approval	Log #63711	07/01/2008	LADBS

The Grading Division of the Department of Building and Safety has reviewed the referenced report for the proposed construction of a 5-story assisted living facility over two levels of subterranean parking. The report recommends not to install a stormwater infiltration system on site.

The Department has approved a previous report and a Tentative Tract Map 70521 for the proposed construction of a 5-story senior assisted living building, and an adjacent 24-unit 4-story building, both over 2 levels of subterranean parking, on the property. The current report appears to be prepared independently from the previous report, and no responsibility statement is provided in using the previous finding.

According to the current report, the subsurface materials are low to moderately expansive and consist of fill over alluvium. Groundwater was encountered as high as 17 feet in depth during the exploration. The historically high groundwater is 13 below the ground surface. The report recommends supporting the proposed structures with conventional spread footings if permanent

AN EQUAL EMPLOYMENT OPPORTUNITY - AFFIRMATIVE ACTION EMPLOYER

dewatering is used, or with mat foundations otherwise. The proposed foundations will be supported on the alluvium. The proposed temporary excavations will as deep as 28 feet. Open cuts, and tieback shoring are recommended in the report for the temporary excavations. Casing or drilling fluid may be required for the shoring pile excavation. The excavations will required temporary dewatering, and bottom stabilization with gravels, due to the groundwater.

The site is located within the Liquefaction Hazard Zone as mapped by the State of California. The liquefaction study included as a part of the report demonstrates that the project site does not possess a liquefaction potential. This satisfies the requirement of the State of California Seismic Hazard Mapping Act.

The report is acceptable, provided the following conditions are complied with during site development:

(The numbers in the parentheses are in reference to the applicable sections of the 2011 Building Code, or to the Department's Information Bulletins. The Department Information Bulletins are posted on the internet at LADBS.ORG.)

1. The soils engineer shall evaluate the effects of, and modify as necessary, the proposed dewatering, to avoid any adverse effects on the existing offsite structures and facilities.

2. Clearances shall be obtained from the Department of Public Works and from the California Regional Water Quality Control Board for the proposed permanent or temporary dewatering.

3. A stormwater infiltration system shall not be installed on the property, as recommended in the report. All roof and pad drainage shall be conducted to an approved drainage device/facility, or to the street in an acceptable manner. (7013.10)

4. The proposed building shall be designed with mat foundations, subject to a hydrostatic uplift, if no permanent dewatering system is to be installed, as recommended on page 25 of the report of 7/12/12.

5. Conventional spread foundations, for supporting the proposed building, shall only be used if an approved permanent dewatering system is to be installed, as recommended on page 25 of the report of 7/12/12.

6. The soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans which clearly indicates that the soil engineer has reviewed the plans prepared by the design engineer and that the plans include the recommendations contained in the report. (7006.1)

7. All the recommendations of the report, which are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

8. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans. Submit one copy of the above reports to

the Building Department Plan Checker prior to issuance of the permit. (7006.1)

9. All the foundations shall derive the entire support from the competent natural alluvium, as recommended in the report.

10. When water over 3 inches in depth is present in the drilled pile holes, a concrete mix with a strength of 1,000 pound per square inch over the design strength shall be tremied from the bottom up. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste shall be included. (1808.8.3)

11. All friction pile or caisson drilling and installation shall be performed under the inspection and approval of the soils engineer, and the deputy grading inspector. (1803.5.5, 1704.9)

12. Concrete floor slabs placed on uncertified fill shall be designed as structural slabs.

13. Whenever expansive soil, as defined in Code Section 1803.5.3, is encountered during construction and will be used for supporting the footings and slabs, the footings and slabs shall be designed and constructed to the requirements of the Department's Information Bulletin No. P/BC 2008-116. (1803.5.3, P/BC 2008-116)

14. The seismic Site Class is D, as recommended in the report. All the other seismic design parameters shall be reviewed by LADBS building plan check. (1613.5.2)

15. If the actual foundation design loads do not conform to the foundation loads assumed in the report, the soil engineer shall submit a supplementary report containing specific design recommendations for the heavier loads to the Department for review and approval prior to issuance of a permit.

16. A grading permit shall be obtained. (106.1.2)

17. All newly graded slopes shall be no steeper than a gradient of 2:1 (horizontal: vertical). (7010.2 and 7011.2)

18. If import soils are used, no footings shall be poured until the soil engineer has submitted a compaction report containing in-place shear test data and settlement data to the Department, and obtained approval. (7008.2)

19. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill. (1809.2)

20. Manufactured fills to be placed within 40 feet and deeper than 40 feet below the finish grade, shall be compacted to a minimum relative compaction of 90 percent and 93 percent, respectively, of the maximum dry density in accordance to ASTM D1557. Where cohesionless soil having less than 15% of particles finer than 0.005 millimeters is used in the fill, it shall be compacted to a minimum of 95% relative compaction. (7011.3)

21. Retaining walls shall be designed for the lateral loading pressures no less than as recommended on pages 28 and 29 of the report. All the additional surcharge loads shall be included into the retaining wall design.

22. Retaining walls higher than 12 feet shall be designed for the additional seismic lateral pressure, as recommended in the report. (1803.5.12)

23. Basement retaining walls, or portion thereof, located below the historic high groundwater shall be designed for the additional hydrostatic pressure.

24. The retaining wall with a back slope shall be provided with a vee channel behind the wall to carry off the slope water to an approved drainage device. (7013.4)

25. Retaining walls not designed for the hydrostatic pressure shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to the issuance of any permit, the retaining wall subdrain system recommended in the soil report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record. (1805.4, 1805.1.3)

26. Prefabricated drainage composite, including Miradrains, if use in the retaining wall subdrains shall be installed with the traditionally accepted methods for draining retained earth consisting of gravel or crushed stone.

27. Installation of the subdrain system shall be inspected and approved by the soil engineer of record and the City grading/building inspector. (108.9)

28. Gravel backfill behind a retaining wall, and without a compaction report, shall not exceed 10 feet in height and 24 inches in width, and shall be mechanically compacted and covered with concrete pavement or 24 inches of compacted fill. The gravel backfill shall not support structures or adverse bedding planes. (7011.3)

29. Where the ground water table is lowered and maintained at an elevation not less than 6 inches below the bottom of the lowest floor, or where hydrostatic pressures will not occur, the floor and basement walls shall be damp-proofed. Where a hydrostatic pressure condition exists, and the design does not include a ground-water control system, the basement walls and floors shall be waterproofed. (1803.5.4, 1805.1.3, 1805.2, 1805.3)

30. The basement floor slab shall be designed for the effects of hydrostatic uplift due to the historic-high groundwater, as recommended in the report.

31. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the State Construction Safety Orders enforced by the State Division of Industrial Safety. (3301.1)

32. Approval shall be obtained from the Department of Public Works, Bureau of Engineering, Constituent Service Division for the proposed removal of support and/or retaining of slopes

adjoining to the public way. (3307.3.2)

33. Unsupported excavations shall not extend below a 1:1 plane project downward from a public way, adjacent property, or existing structures. Footing excavations not exceeding 2 feet in depth is exempt from this requirement. (3307.3.1)

34. A structure shall be considered surcharging an excavation if the structure is located within a horizontal distance from the top of the excavation equal to the depth of the excavation. (3307.3.1)

35. Prior to the issuance of any permit which authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation. (3307.1)

36. Unsupported temporary excavations shall not be subject to the surcharged load, and shall not exceed a height of 5 feet in vertical cuts, and a gradient of 1:1 in sloping excavations up to a maximum height of 10 feet, as recommended on pages 31 and 32 of the report of 7/12/12.

37. Gravel used in stabilizing the excavation bottoms shall not exceed a thickness of 18 inches, unless a supplementary report is submitted to the Department to demonstrate that there will be no detrimental fine migration.

38. The thickness of the gravel layers/mats for used in stabilizing the excavation bottoms shall be determined by the soils engineer, but not exceeding 8 inches.

39. Shoring shall be designed for the lateral loading pressure no less than as recommended on page 36 of the report of 7/12/12. All the additional surcharge loads shall be included into the shoring design. (3307.3.2)

40. Shoring shall be designed for an allowable lateral deflection not exceeding as recommended on page 39 of the report of 7/12/12.

41. The soil engineer shall monitor the shoring deflections during construction from affecting existing offsite structures and facilities.

42. The installation and testing of temporary tie-back anchors shall conform to the recommendations included in the report or to the Department's Research Report No. RR23835 titled "Requirements For Temporary Tieback Earth Anchors", whatever is more restrictive.

43. Installation of shoring and tieback anchors shall be performed under the inspection and approval of the soils engineer and the deputy grading inspector. (1704.7)

44. Suitable arrangements shall be made with the Department of Public Works for the proposed removal of support and/or retaining of slopes adjoining the public way.

45. Prior to excavation, an initial inspection shall be called at which time sequence of shoring, protection fences and dust and traffic control will be scheduled. (108.9.1)

46. The soil engineer shall inspect all excavations to determine that conditions are as anticipated and shall make recommendations for correction of hazards found during grading. (7008, 1704.70)

47. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. He shall post a notice on the job site for the City Grading Inspector and the Contractor stating that the soil inspected meets the conditions of the report, but that no fill shall be placed until the LADBS Grading Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. An engineer's certificate of compliance shall include the grading permit number and the legal descriptions as described in the permit. (7011.3)

48. Prior to the pouring of concrete, a representative of the soil engineer shall inspect and approve the footing excavations. A notice shall be posted on the job site for the City Building Inspector and the Contractor stating that the work so inspected meets the conditions of the report, but that no concrete shall be poured until the City Building Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Department upon completion of the work.

Attention: Dean Isaacson

Subject: Geotechnical Engineering Investigation
Proposed Assisted Living Facility
1054 South La Cienega, Los Angeles, California

Dear Mr. Isaacson:

This letter transmits the Geotechnical Engineering Investigation for the subject site prepared by Geotechnologies, Inc. This report provides geotechnical recommendations for the development of the site, including earthwork, seismic design, temporary excavations, foundations, floor slabs, and pavements. Engineering for the proposed project should not begin until approval of the geotechnical investigation is granted by the local building official. Significant changes in the geotechnical recommendations may result due to the building department review process.

The validity of the recommendations presented herein is dependant upon review of the geotechnical aspects of the project during construction by this firm. The subsurface conditions described herein have been projected from limited subsurface exploration and laboratory testing. The exploration and testing presented in this report should in no way be construed to reflect any variations which may occur between the exploration locations or which may result from changes in subsurface conditions.

Should you have any questions please contact this office.

Respectfully submitted,
GEOTECHNOLOGIES, INC.

GEOTECHNICAL ENGINEERING INVESTIGATION
PROPOSED ASSISTED LIVING FACILITY
1054 SOUTH LA CIENEGA BOULEVARD
LOS ANGELES, CALIFORNIA

INTRODUCTION

This report presents the results of the geotechnical engineering investigation performed on the subject site. The purpose of this investigation was to identify the distribution and engineering properties of the earth materials underlying the site, and to provide geotechnical recommendations for the design of the proposed development.

This investigation included excavation of two exploratory borings, collection of representative samples, laboratory testing, engineering analysis, review of published geologic data, review of available geotechnical engineering information, and the preparation of this report. The site location is shown on the enclosed Vicinity Map, and the boring locations are shown on the enclosed Plot Plan. The results of the exploration and the laboratory testing are presented in the Appendix of this report.

PROPOSED DEVELOPMENT

Information concerning the proposed development was furnished by Douglas Pancake Architects and Englekirk Partners. The proposed project consists of the construction of a 5-story assisted living facility. The facility will be constructed above 2 subterranean parking levels. The lowest finished floor of the proposed structure is expected to be on the order of 23 feet below the existing ground surface. The proposed development is shown on the enclosed Plot Plan.

Column loads are expected to range between 300 and 1,350 kips. Wall loads are expected to range between 10 and 21 kips per lineal foot. Grading will consist of excavations on the order of 25 to 28 feet for construction of the proposed subterranean levels and foundation elements.

Any changes in the design of the project or location of any structure, as outlined in this report, should be reviewed by this office. The recommendations contained in this report should not be considered valid until reviewed and modified or reaffirmed, in writing, subsequent to such review.

SITE CONDITIONS

The subject site is located at 1054 South La Cienega Boulevard, in the City of Los Angeles, California. At the time of exploration, the subject site was vacant and undeveloped, with the exception of a billboard sign near the southwest corner of the property. It is the understanding of this firm that the site was previously developed with apartment and commercial structures. However, these structures have been demolished.

The subject site is bounded to the north and south by single story commercial / retail structures. It is bounded to the east by single family residences and to the west by La Cienega Boulevard. The site is roughly level with no pronounced topographic highs or lows. Drainage appears to occur by sheet flow along existing contours towards the city streets. Vegetation on the site consists of low lying grasses and weeds. The surrounding developments predominantly consist of commercial, retail, and residential developments.

PREVIOUS GEOTECHNICAL REPORTS OF THE SUBJECT SITE

Two geotechnical engineering investigations of the subject site have been provided to this office. The following reports were provided for review. A summary of each report is also provided below.

- **Calwest Geotechnical Consulting Engineers, April 15, 2008, Update Geotechnical Engineering Report, Proposed (5) Story Structure with Two (2) Levels of Subterranean Parking, 1022 - 1042 S. La Cienega Boulevard, Los Angeles, California. Project No. 4869.**

The report addresses a proposed development that is similar to the currently proposed project. It should be noted that although the project address is 1022 - 1042 South La Cienega Boulevard, the investigation was actually performed on the subject site. The investigation incorporates earlier investigations by Calwest Geotechnical and others. The investigation included 5 borings to depths between 25 and 50 feet. The borings encountered alluvial soils to the maximum depth of exploration. The site soils were found to be in the moderate to high expansion range. Groundwater was encountered at depths between 17 and 17½ feet below the ground surface. The investigation indicates the site is exempt of liquefaction hazard. This determination was based, in part, on the "Chinese Criteria," which is no longer accepted by the local building official.

Conventional spread footings, interconnected with grade beams and structural slab on grade (so that the foundation system behaves as a mat foundation), or a conventional mat foundation were recommended for foundation support. However, recommendations for a mat foundation were not provided. In either case, the foundations were recommended to bear in native soils at the basement level. The report indicates that temporary dewatering and shoring would be necessary for construction of the basement levels. Basement wall pressures were provided based on drained backfill conditions.

The report was approved by the City of Los Angeles Department of Building and Safety (LADBS). The conditions of approval were provided in the "Soils Report Approval Letter, dated July 1, 2008, Log No. 63711."

The boring logs contained in the report are provided for reference in the Supplemental Appendix A. However, the report provided to this office did not contain a plan indicating the specific boring locations.

- **AGI Geotechnical, Inc., July 31, 2009, Supplemental Soils Engineering Investigation, Proposed 4 and 5-Story Buildings Over Two Levels of Subterranean Parking, 1022 - 1054 S. La Cienega Boulevard, Los Angeles, California. Project No. 19-3342-00.**

The report also addresses a development that is similar to the currently proposed project. The investigation included 2 borings to depths between 51½ and 77½ feet. The borings encountered alluvial soils to the maximum depth of exploration. The site soils were found to be in the low to moderate expansion range. Groundwater was encountered at depths between 16½ and 17 feet below the ground surface. The investigation indicates the site soils have a low possibility of liquefaction.

Conventional spread footings or a mat foundation bearing in native soils at the basement level were recommended for foundation support. However, bearing values for conventional foundations were not provided. The report indicates that temporary dewatering and shoring would be necessary for construction of the basement levels. Basement wall pressures were provided based on drained backfill conditions.

The report is not known to have been submitted to LADBS. The boring logs contained in the report are provided for reference in the Supplemental Appendix B, and the boring locations are indicated on the enclosed Plot Plan

GEOTECHNICAL EXPLORATION

FIELD EXPLORATION

The site was explored by this office on June 23, 2012 by excavating two exploratory borings. The borings were conducted to depths between 40 and 70 feet with the aid 5-inch diameter mud rotary drilling machine. Soil samples were collected in the borings and transported to our office for laboratory testing. The boring locations are shown on the enclosed Plot Plan, and the geologic materials encountered are logged on Plates A-1 and A-2.

Geologic Materials

Fill materials encountered on the subject site consist of sandy silts and sandy clays. The fill materials were found to be dark brown, moist, and stiff. Between 3 and 5 feet of fill was encountered during exploration.

Native alluvial soils were encountered below the fill. The natural alluvium consists of silty to sandy clays, sandy to clayey silts, and silty sands. The natural soils are generally brown to dark brown and gray to dark gray in color, moist to wet, firm to stiff, medium dense to dense, and predominantly fine grained.

More detailed descriptions of the earth materials encountered may be obtained from the individual boring logs.

Groundwater and Caving

Groundwater was encountered during exploration at depths between 17 and 18 feet below the ground surface. According to the Seismic Hazard Zone Report of the Hollywood 7½-Minute Quadrangle (CDMG, 1998, Revised 2006), the historic high groundwater level for the subject site was 13 feet below the ground surface.

Fluctuations in the level of groundwater may occur due to variations in rainfall, temperature, and other factors not evident at the time of the measurements reported herein. Fluctuations also may occur across the site. High groundwater levels can result in changed conditions.

Caving did not occur in the mud rotary borings. However, the boreholes were filled with drilling fluid during drilling in order to prevent caving. Based on the general experience of this firm, large diameter excavations, excavations that encounter granular cohesionless soils, and excavations below the groundwater table will most likely experience caving.

CITY OF LOS ANGELES METHANE ZONE

The site is located within a City of Los Angeles Methane Buffer Zone (City of Los Angeles, 2003). It is recommended that a qualified professional in the field of methane analysis and mitigation be consulted to determine what mitigating measures, if any, may be required. The site is shown relative to nearby methane zones on the attached "Methane Zone Risk Map".

SEISMIC EVALUATION

REGIONAL GEOLOGIC SETTING

The subject property is located in the Los Angeles Basin and within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are characterized by northwest-trending blocks of mountain ridges and sediment-floored valleys. The dominant geologic structural features are northwest trending fault zones that either die out to the northwest or terminate at east-west trending reverse faults that form the southern margin of the Transverse Ranges (Yerkes, 1965).

The Los Angeles Basin is located at the northern end of the Peninsular Ranges Geomorphic Province. The basin is bounded by the east and southeast by the Santa Ana Mountains and San Joaquin Hills. It is bounded to the northwest by the Santa Monica Mountains. Over 22 million years ago the Los Angeles basin was a deep marine basin formed by tectonic forces between the North American and Pacific plates. Since that time, over 5 miles of marine and non-marine sedimentary rock as well as intrusive and extrusive igneous rocks have filled the basin. During the last 2 million years, defined by the Pleistocene and Holocene epochs, the Los Angeles basin and surrounding mountain ranges have been uplifted to form the present day landscape. Erosion of the surrounding mountains, has resulted in deposition of unconsolidated sediments in low-lying areas by rivers such as the Los Angeles River. Areas that have experienced subtle uplift have been eroded with gullies.

REGIONAL FAULTING

Based on criteria established by the California Division of Mines and Geology (CDMG) now called California Geologic Survey(CGS), faults may be categorized as active, potentially active, or inactive. Active faults are those which show evidence of surface displacement within the last 11,000 years (Holocene-age). Potentially-active faults are those that show evidence of most recent surface

displacement within the last 1.6 million years (Quaternary-age). Faults showing no evidence of surface displacement within the last 1.6 million years are considered inactive for most purposes, with the exception of design of some critical structures.

The enclosed Southern California Fault Map shows the location of many mapped faults in the Southern California area. Buried thrust faults are faults without a surface expression but are a significant source of seismic activity. They are typically broadly defined based on the analysis of seismic wave recordings of hundreds of small and large earthquakes in the southern California area. Due to the buried nature of these thrust faults, their existence is usually not known until they produce an earthquake. The risk for surface rupture potential of these buried thrust faults is inferred to be low (Leighton, 1990). However, the seismic risk of these buried structures in terms of recurrence and maximum potential magnitude, is not well established. Therefore, the potential for surface rupture on these surface-verging splays at magnitudes higher than 6.0 cannot be precluded.

Two major buried thrust fault structures in the Los Angeles area are the Elysian Park fold and thrust belt and the Torrance-Wilmington fold and thrust belt. It is postulated that the Elysian Park structure was responsible for the magnitude 5.9, October 1, 1987 Whittier Narrows earthquake, and that the Torrance-Wilmington structure was responsible for the magnitude 5.0, January 19, 1989 Malibu earthquake. The magnitude 6.7, January 17, 1994 Northridge earthquake was caused by a buried thrust fault located beneath the San Fernando Valley.

SEISMIC DESIGN CONSIDERATIONS

The primary geologic hazard at the site is moderate to strong ground motion (acceleration) caused by an earthquake on any of the local or regional faults. Design of the proposed development in accordance with the provisions of the 2010 California Building Code (2010 CBC), or most current applicable building code, is intended to minimize the potential effects of ground shaking. The

potential for other earthquake-induced hazards was also evaluated including surface rupture, liquefaction, dynamic settlement, inundation and landsliding.

2010 CBC Seismic Parameters

Based on Table 1613.5.2 of the 2010 CBC, the subject site is classified as Site Class D, which corresponds to a "Stiff Soil" Profile. The following table outlines the Mapped Spectral Accelerations and Site Coefficients per the 2010 CBC and may be used by the structural engineer for the seismic design and analysis of structures on the site. The values below were obtained from the USGS Ground Motion Parameter Calculator (Version 5.1.0) using the site latitude and longitude coordinates (USGS, 2011).

2010 CALIFORNIA BUILDING CODE SEISMIC PARAMETERS	
Site Class	D
Mapped Spectral Acceleration at Short Periods (S_S)	1.792g
Site Coefficient (F_a)	1.0
Maximum Considered Earthquake Spectral Response for Short Periods (S_{MS})	1.792g
Five-Percent Damped Design Spectral Response Acceleration at Short Periods (S_{DS})	1.195g
Mapped Spectral Acceleration at One-Second Period (S_1)	0.694g
Site Coefficient (F_v)	1.5
Maximum Considered Earthquake Spectral Response for One-Second Period (S_{M1})	1.042g
Five-Percent Damped Design Spectral Response Acceleration for One-Second Period (S_{D1})	0.694g

Deaggregated Seismic Source Parameters

The peak ground acceleration (PGA) and mean and modal earthquake magnitudes were obtained from the USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2008). The results are based on a 10 percent in 50 years ground motion (475 year return period). A published shear wave velocity, consistent with fine grained sediment, of 230 meters per second was utilized for Vs30 (Tinsley and Fumal, 1985). The deaggregation program indicates a PGA of 0.47g and a mean magnitude of 6.71 for the site.

OTHER SEISMIC HAZARDS

Surface Rupture

In 1972, the Alquist-Priolo Special Studies Zones Act (now known as the Alquist-Priolo Earthquake Fault Zoning Act) was passed into law. The Act defines "active" and "potentially active" faults utilizing the same aging criteria as that used by California Geological Survey (CGS). However, established state policy has been to zone only those faults which have direct evidence of movement within the last 11,000 years. It is this recency of fault movement that the CGS considers as a characteristic for faults that have a relatively high potential for ground rupture in the future.

CGS policy is to delineate a boundary from 200 to 500 feet wide on each side of the known fault trace based on the location precision, the complexity, or the regional significance of the fault. If a site lies within an Earthquake Fault Zone, a geologic fault rupture investigation must be performed that demonstrates that the proposed building site is not threatened by surface displacement from the fault before development permits may be issued.

Ground rupture is defined as surface displacement which occurs along the surface trace of the causative fault during an earthquake. Based on research of available literature and results of site reconnaissance, no known active or potentially active faults underlie the subject site. In addition, the subject site is not located within an Alquist-Priolo Earthquake Fault Zone. Based on these considerations, the potential for surface ground rupture at the subject site is considered low.

Liquefaction

Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction-related effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures.

Liquefaction typically occurs in areas where groundwater is less than 50 feet from the surface, and where the soils are composed of poorly consolidated, fine to medium-grained sand. In addition to the necessary soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to initiate liquefaction.

The Seismic Hazards Zone Map of the Hollywood Quadrangle by the State of California (CDMG, 1999), indicates that the subject site is located within an area designated as "Liquefiable." This determination is based on groundwater depth records, soil type and distance to a fault capable of producing a substantial earthquake. A copy of this map is provided in the Appendix.

A site-specific liquefaction analysis was performed following the Recommended Procedures for Implementation of CDMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California (Martin and Lew, 1999). Recommendations provided in CGS Special Publication 117A were also incorporated in to the analysis (CDMG, 2008). The enclosed

liquefaction analysis was performed using the spreadsheet template LIQ2_30.WQ1 developed by Thomas F. Blake (Blake, 1996). This program utilizes the 1996 NCEER method of analysis. This semi-empirical method is based on a correlation between measured values of Standard Penetration Test (SPT) resistance and field performance data.

Groundwater was encountered during exploration at a depths between 17 and 18 feet below the ground surface. According to the Seismic Hazard Zone Report (CDMG, 1998, Revised 2006), the historic high groundwater level for the subject site was 13 feet below the ground surface. The historic high groundwater level of 13 feet has been utilized for the enclosed liquefaction analysis.

According to Section 1803.5.12 of the 2010 CBC, the peak ground acceleration (PGA) utilized for liquefaction analysis may be taken as S_{DS} divided by 2.5 in the absence of a site specific seismic study. Based on the USGS Ground Motion Parameter Calculator (USGS, 2011), this corresponds to a PGA of 0.48g. The USGS Probabilistic Seismic Hazard Deaggregation program (USGS, 2008) indicates a PGA of 0.47g (10 percent in 50 years ground motion) and a mean magnitude of 6.71 for the site. Therefore, the liquefaction potential evaluation was performed by utilizing a magnitude 6.71 earthquake and a peak horizontal acceleration of 0.48g.

The enclosed "Empirical Estimation of Liquefaction Potential" is based on Boring B1. Standard Penetration Test (SPT) data were collected at 5-foot intervals. Samples of the collected materials were conveyed to the laboratory for testing and analysis. The percent passing a Number 200 sieve, Atterberg Limits, and the plasticity index (PI) of representative samples of the soils encountered in the exploratory boring are presented on the enclosed E-Plate and F-Plates. Based on CGS Special Publication 117A (CDMG, 2008), the vast majority of liquefaction hazards are associated with sandy soils and silty soils of low plasticity. Furthermore, cohesive soils with PI between 7 and 12 and moisture content greater than 85 percent of the liquid limit are susceptible to liquefaction. The results of Atterberg Limits testing (shown on Plates F-1 and F-2) indicate that selected soils below

the subject site have PI between approximately 15 and 30. Therefore, these soils are not considered prone to liquefaction, and the analysis of these soil layers was turned off in the liquefaction susceptibility column.

Utilizing the adjusted blow count data, and the results of laboratory testing, the enclosed liquefaction analysis indicates that the soils underlying the site would not be prone to liquefaction. Therefore, the potential for liquefaction at the site is considered to be remote.

Dynamic Dry Settlement

Seismically-induced settlement or compaction of dry or moist, cohesionless soils can be an effect related to earthquake ground motion. Such settlements are typically most damaging when the settlements are differential in nature across the length of structures.

The proposed structure will be constructed below the groundwater level. Therefore, dynamic dry settlements of the proposed structure are not expected to occur. In addition, based on the relatively cohesive nature of the alluvial soils underlying the site, dynamic dry settlements at the existing ground surface would be expected to be negligible.

Tsunamis, Seiches and Flooding

Tsunamis are large ocean waves generated by sudden water displacement caused by a submarine earthquake, landslide, or volcanic eruption. Review of the County of Los Angeles Flood and Inundation Hazards Map, (Leighton, 1990), indicates the site does not lie within the mapped tsunami inundation boundaries.

Seiches are oscillations generated in enclosed bodies of water which can be caused by ground shaking associated with an earthquake. Review of the County of Los Angeles Flood and Inundation Hazards Map, (Leighton, 1990), indicates the site lies within the mapped inundation boundaries of the Mulholland Dam and the Lower Franklin Reservoir. A determination of whether a higher site elevation would remove the site from the potential inundation zones is beyond the scope of this investigation.

Landsliding

The probability of seismically-induced landslides affecting the subject development is considered to be remote, due to the lack of significant slopes on the site and surrounding areas.

CONCLUSIONS AND RECOMMENDATIONS

Based upon the exploration, laboratory testing, and research, it is the finding of this firm that construction of the proposed development is considered feasible from a geotechnical engineering standpoint provided the advice and recommendations presented herein are followed and implemented during construction.

Between 3 and 5 feet of existing fill was encountered during exploration conducted on the subject site. The existing fill materials are considered to be unsuitable for support of new foundations, floor slabs, or additional fill. It is anticipated excavation to the proposed basement level would remove the exiting fill soils.

Groundwater was encountered on the site at depths between 17 and 18 feet, and the historic high water level was 13 feet below the existing ground surface. The finished floor of the proposed structure is expected to be on the order of 23 feet below the ground surface, with foundations

extending to depths between approximately 25 and 28 feet. Therefore, the proposed structure should either be designed to resist potential hydrostatic forces, or a permanent dewatering system should be installed so that external water pressure does not develop against the proposed retaining walls and floor slabs. In either case, the design of the proposed development should be based on the historic high water level.

Recommendations and design values for both design approaches (i.e. hydrostatic design or permanent dewatering design) are provided herein. The client should be aware that designing the proposed development to resist hydrostatic forces in lieu of installation of a permanent dewatering system eliminates the need for maintenance of the dewatering system and continuous handling, testing, and possible treatment of waters pumped from the system. In addition, it would not be necessary to comply with future changes in water quality standards for collected and released groundwater.

Due to the depth of the proposed basement excavation, it is recommended shoring be utilized to maintain a stable excavation. Soldier piles are recommended for shoring. Shoring and excavation recommendations are provided in the "Temporary Excavations" section of this report.

Excavation to the expected bottom of foundation will extend below the groundwater level, and temporary dewatering measures will be required to provide a dry excavation. It is recommended a qualified dewatering consultant be retained in order to develop a formal pre-construction temporary dewatering program. It will be necessary to lower the groundwater table prior to excavation of the subterranean levels. Additional recommendations for dewatering are provided in the "Temporary Dewatering" section of this report.

Although temporary dewatering will lower the groundwater elevation prior to construction, the soils at the proposed subgrade level should be expected to be well above their optimum moisture level.

These soils could be wet, soft, and susceptible to disturbance from construction activities. The placement of a mat of gravel over the bottom excavation will most likely be necessary to protect the subgrade soils from disturbance, create a firm working surface, and provide a firm bottom that is suitable for support of the proposed structure. Placement of gravel and wet subgrade soils are discussed in the "Temporary Dewatering" section below.

HYDROSTATIC DESIGN APPROACH

Due to the depth of the proposed basement below the historic high water level, it is anticipated a conventional floor slab on grade would not resist the expected hydrostatic uplift pressure. Therefore, it is recommended the proposed structure be supported on a mat foundation bearing in competent native soils at or below the basement depth of 23 feet below the ground surface. The mat foundation should be designed to resist hydrostatic uplift based on the historic high water level. In addition, the proposed retaining walls should be designed to resist hydrostatic pressures. Hydrostatic forces are addressed in the "Foundation Design" and "Retaining Wall Design" sections of this report.

It is recommended that the mat foundation system and retaining walls be completely watertight in order to prevent water seepage through normal shrinkage cracks or construction joints. It is recommended care be taken in the design and installation of waterproofing to avoid moisture problems, and to prevent water seepage into the structure. The design and inspection of waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method which would provide protection to subterranean walls, floors, and foundations.

DESIGN APPROACH INCORPORATING PERMANENT DEWATERING

If a permanent dewatering system is installed during construction, the proposed structure may be supported on conventional spread footings bearing in competent native soils at or below the bottom of the proposed basement level. A concrete floor slab on grade could also be utilized.

The permanent dewatering system shall be installed below the bottom of the slab on grade, as discussed in "Slabs on Grade" section of this report. The proposed retaining walls shall also be equipped with drainage systems so that hydrostatic forces do not develop on the basement walls. Recommendations for retaining wall drainage are provided in the "Retaining Walls" section of this report.

TEMPORARY DEWATERING

It is recommended that a qualified dewatering consultant be retained during the design phase of the project. Temporary dewatering on this project will be necessary to lower the water table beneath the site and allow for the proposed excavations and construction to proceed. The expected number and depths of well-points, expected flow rates, and expected pre-pumping time frames should be determined during a dewatering test program conducted by a qualified dewatering consultant.

It is anticipated that the well points will collect the majority of the water, however, even after pre-pumping, some free water may be encountered during excavation due to entrapment within cohesive lenses. Such water may be collected and removed from the excavation through the use of french drains and sump pumps.

Wet Subgrade Soils

Soils at the proposed subgrade level should be expected to be well above their optimum moisture level. A representative of this office should observe the subgrade as it becomes exposed so that the recommendations provided herein may be revised or reaffirmed as necessary. At this time, pumping, rutting, and disturbance of the high-moisture content soils should be expected to occur during operation of heavy equipment. In order to minimize disturbance of the subgrade bearing soils, provide a firm working surface, and provide a subgrade suitable for support of the proposed foundations, it is recommended the subgrade be protected and/or stabilized as it becomes exposed.

Protection or stabilization of the subgrade may be accomplished by placement of a minimum one-foot thick layer of angular 1-inch gravel. The gravel should be placed and vibrated to a dense state as the subgrade becomes exposed. The elevation at the bottom of excavation will require adjustment to provide space for the gravel mat. It is not recommended that rubber tire construction equipment attempt to operate directly on the subgrade soils prior to placing the gravel. Direct operation of rubber tire equipment on soft subgrade soils will likely result in excessive disturbance to the soils, which in turn could result in a delay to the construction schedule. Extreme care should be utilized to place gravel as the subgrade becomes exposed.

FILL SOILS

Between 3 and 5 feet of fill was encountered during exploration on the site. It is anticipated that this material will be removed during excavation of the proposed basement levels. Any fill remaining at the proposed subgrade should be removed and recompacted as controlled fill.

EXPANSIVE SOILS

The site soils are in the very low to moderate expansion ranges. The Expansion Index was found to range between 5 and 73 for representative samples of the site soils. Previous reports by Cal West Geotechnical indicated an expansion index up to 96, which is in the highly expansive range. Recommended reinforcing is provided in the "Foundation Design" and "Slabs on Grade" sections of this report.

WATER-SOLUBLE SULFATES

The portland cement portion of concrete is subject to attack when exposed to water-soluble sulfates. Usually the two most common sources of exposure are from soil and marine environments. The source of natural sulfate minerals in soils include the sulfates of calcium, magnesium, sodium, and potassium. When these minerals interact and dissolve in subsurface water, a sulfate concentration is created, which will react with the exposed concrete. Over time sulfate attack will destroy improperly proportioned concrete well before the end of its intended service life.

The water-soluble sulfate content of the onsite materials was determined to be less than 0.10 percentage by weight, for representative samples tested. Based on the 2010 CBC and American Concrete Institute - (ACI 318), Table 4.3.1, the sulfate exposure is considered to be negligible for soils with less than 0.10 percentage by weight, and Type I cement may be utilized for all concrete in contact with the site soils.

GRADING GUIDELINES

The following guidelines may be used in preparation of the grading plan and job specifications for any areas where fill or recompaction may be required, such as the driveway and sidewalk areas.

Site Preparation

All vegetation, existing fill, and soft or disturbed earth materials should be removed from the areas to receive controlled fill. The excavated areas shall be observed by the geotechnical engineer prior to placing compacted fill.

It is very important that the positions of the proposed improvements are accurately located so that the limits of the graded areas are accurate and the grading operation proceeds efficiently.

Any vegetation or associated root system located within the area to be graded should be removed during grading. Any existing or abandoned utilities located within the area to be graded should be removed or relocated as appropriate. All fill materials and disturbed earth materials resulting from grading operations should be removed and properly recompacted.

Subsequent to the indicated removals, the exposed grade shall be scarified to a depth of six inches, moistened to optimum moisture content, and recompacted in excess of the minimum required comparative density.

Compaction

Fill, consisting of soil approved by a representative of this firm shall be placed in loose lifts not more than 8 inches in thickness. The loose materials shall be compacted with suitable compaction equipment. Once a layer has been adequately compacted, the next loose lift may be placed.

Fill materials shall be moisture conditioned to within 3 percent of optimum moisture content and sufficiently blended prior to placement as controlled fill. Materials larger than 6 inches in maximum dimension shall not be used in the fill.

All fill shall be compacted to at least 90 percent of the maximum laboratory density, except for cohesionless soils having less than 15 percent finer than 0.005 millimeters, which shall be compacted to a minimum 95 percent of the maximum density, in accordance with the April 15, 1998 amendment to the Los Angeles Municipal Code. The maximum density shall be determined by the laboratory operated by Geotechnologies, Inc. using test method ASTM D 1557-07 or equivalent.

Field observation and testing shall be performed by a representative of the geotechnical engineer during grading to assist the contractor in obtaining the required degree of compaction and the proper moisture content. Where compaction is less than required, additional compactive effort shall be made with adjustment of the moisture content, as necessary, until a minimum of 90 or 95 percent compaction is obtained.

Acceptable Materials

The excavated onsite materials are considered satisfactory for reuse in the controlled fills as long as any debris and/or organic matter is removed.

Any imported materials shall be observed and tested by the representative of the geotechnical engineer prior to use in fill areas. Imported materials should contain sufficient fines so as to be relatively impermeable and result in a stable subgrade when compacted. Any required import materials should consist of soils with an expansion index of less than 50. The water-soluble sulfate content of the import materials should be less than 0.10 percentage by weight.

Imported materials should be free from chemical or organic substances which could affect the proposed development. A competent professional should be retained in order to test imported materials and address environmental issues and organic substances which might affect the proposed development.

Over Optimum Subgrade Soils

At the time of exploration, the site soils were above their optimum moisture level. Some drying, aeration, and processing of the onsite soils should be anticipated prior to placement as compacted fill. If necessary, wet subgrades should be stabilized as indicated in the "Temporary Dewatering" section of this report.

A representative of this office should observe subgrades as they becomes exposed so that the recommendations provided herein may be revised or reaffirmed as necessary.

Utility Trench Backfill

Utility trenches should be backfilled with controlled fill. The utility should be bedded with clean sands at least one foot over the crown. The remainder of the backfill may be onsite soil compacted to 90 or 95 percent of the laboratory maximum density. Utility trench backfill should be tested by representatives of this firm in accordance with ASTM D-1556 or ASTM D-6938.

Weather Related Grading Considerations

When rain is forecast all fill that has been spread and awaits compaction shall be properly compacted prior to stopping work for the day or prior to stopping due to inclement weather. These fills, once compacted, shall have the surface sloped to drain to an area where water can be removed.

Temporary drainage devices should be installed to collect and transfer excess water to the street in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Drainage should not be allowed to flow uncontrolled over any descending slope.

Work may start again, after a period of rainfall, once the site has been reviewed by a representative of this office. Any soils saturated by the rain shall be removed and aerated so that the moisture content will fall within three percent of the optimum moisture content.

Surface materials previously compacted before the rain shall be scarified, brought to the proper moisture content and recompacted prior to placing additional fill, if considered necessary by a representative of this firm.

Geotechnical Observations and Testing During Grading

Geotechnical observations and testing during grading are considered to be a continuation of the geotechnical investigation. It is critical that the geotechnical aspects of the project be reviewed by this firm during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

FOUNDATION DESIGN

The proposed structure should either be designed to resist hydrostatic forces, or a permanent dewatering system shall be installed so that hydrostatic forces do not develop against the floor slabs and retaining walls. A mat foundation is recommended to resist hydrostatic uplift forces. Conventional foundations may be utilized if a permanent dewatering system is installed.

MAT FOUNDATIONS - (Hydrostatic Design Approach)

For the hydrostatic design approach, it is recommended the proposed structure be supported on a mat foundation bearing in competent native soils at or below the basement depth of 23 feet below the ground surface. Based on information provided by Englekirk Partners, it is anticipated the proposed mat foundation would impart bearing pressures ranging between approximately 500 and 5,000 pounds per square foot under static loading conditions. Should the actual bearing stresses exceed these values, the foundation recommendations contained herein should be reviewed, reconfirmed, and revised if necessary. In addition, the subgrade modulus provided below should be reviewed, reconfirmed, and revised once the distribution of bearing stresses below the mat foundation has been analyzed by the structural engineer.

The anticipated bearing pressures are well below the allowable bearing pressures given the size of the proposed mat foundation. An allowable bearing value of 6,000 pounds per square foot may be utilized in the design of the proposed mat foundation. For initial design purposes, the mat foundation may be designed utilizing a modulus of subgrade reaction of 60 pounds per cubic inch.

The bearing value indicated for the mat foundation is for the total of dead and frequently applied live loads, and may be increased by one third for short duration loading, which includes the effects of wind or seismic forces.

Since the recommended bearing value is a net value, the weight of concrete in the foundations may be taken as 50 pounds per cubic foot and the weight of the soil backfill may be neglected when determining the downward load on the foundations.

Hydrostatic Considerations for Mat Foundations

The proposed mat foundation shall be waterproofed and designed to withstand the hydrostatic uplift pressure based on the historic high water level of 13 feet below the ground surface. The uplift pressure to be used in design should be 62.4(H) pounds per square foot, where "H" is the height of the height of the historic high water level above the bottom of the mat foundation in feet.

Mat Foundation Settlement

Settlement of the mat foundation system is expected to occur on application of loading. The maximum settlement is expected to be 1 inch. Differential settlement is not expected exceed ¼ inch.

CONVENTIONAL FOUNDATIONS - (Permanent Dewatering Design Approach)

If a permanent dewatering system is installed behind the proposed basement walls and below the proposed floor slab, it is recommended the proposed structure be supported on conventional spread footings bearing in competent native soils at or below the bottom of the proposed basement level of 23 feet below the ground su

Continuous wall foundations may be designed for a bearing value of 3,000 pounds per square foot, and should be a minimum of 12 inches in width, 24 inches in depth below the lowest adjacent grade and 24 inches into the native soils. Isolated pad foundations may be designed for a bearing value of 3,500 pounds per square foot, and should be a minimum of 24 inches in width, 24 inches in depth below the lowest adjacent grade and 24 inches into the native soils.

The bearing value increase for each additional foot of width is 60 pounds per square foot. The bearing value increase for each additional foot of depth is 300 pounds per square foot. The maximum recommended bearing value is 4,500 pounds per square foot.

If depth increases are utilized, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

Miscellaneous Conventional Foundations

Miscellaneous conventional foundations for minor at-grade structures such as planter walls and trash enclosures, which will not be rigidly connected to the proposed structure, may bear in native soils and/or properly compacted fill. These footings may be designed for a bearing value of 1,500 pounds per square foot, and should be a minimum of 12 inches in width, 24 inches in depth below the lowest adjacent grade and at least 12 inches into the recommended bearing material. No bearing value increases are recommended.

Conventional Foundations General

The bearing values indicated above are for the total of dead and frequently applied live loads, and may be increased by one third for short duration loading, which includes the effects of wind or seismic forces.

Since the recommended bearing value is a net value, the weight of concrete in the foundations may be taken as 50 pounds per cubic foot and the weight of the soil backfill may be neglected when determining the downward load on the foundations.

All continuous foundations should be reinforced with a minimum of four #4 steel bars. Two should be placed near the top of the foundation, and two should be placed near the bottom.

Conventional Foundation Settlement

The maximum settlement of conventional foundations is not expected to exceed 1 inch, and is expected to occur below the heaviest loaded elements. Differential settlement is not expected to exceed 1/4 inches.

LATERAL FOUNDATION DESIGN - (Mat and Conventional Foundations)

Resistance to lateral loading may be provided by friction acting at the base of foundations and by passive earth pressure. An allowable coefficient of friction of 0.3 may be used with the dead load forces.

Passive earth pressure for the sides of foundations poured against undisturbed or recompacted soil may be computed as an equivalent fluid having a density of 300 pounds per cubic foot with a maximum earth pressure of 3,000 pounds per square foot. When combining passive and friction for lateral resistance, the passive component should be reduced by one third. A one-third increase in the passive value may be used for wind or seismic loads.

FOUNDATION OBSERVATIONS

It is critical that all foundation excavations are observed by a representative of this firm to verify penetration into the recommended bearing materials. The observation should be performed prior to the placement of reinforcement. Foundations should be deepened to extend into satisfactory earth materials, if necessary.

Foundation excavations should be cleaned of all loose soils prior to placing steel and concrete. Any required foundation backfill should be mechanically compacted, flooding is not permitted.

RETAINING WALL DESIGN

Retaining walls on the order of 23 feet in height will be required for the proposed subterranean levels. It is anticipated these walls will be restrained. The proposed structure will either be designed to resist hydrostatic forces, or a permanent dewatering system will be installed so that hydrostatic forces do not develop on the basement walls. Retaining wall parameters for both design approaches are provided below.

Additional active pressure should be added for any additional surcharge conditions, such as sloping ground, or adjacent traffic and structures. Foundations may be designed in accordance with the "Foundation Design" section above.

Restrained Retaining Walls

Restrained retaining walls up to 23 feet in height supporting a level back slope may be designed triangular distribution of at-rest earth pressure. Walls designed to resist hydrostatic forces may be designed using an equivalent fluid pressure of 114 pounds per square foot per foot of depth. Walls equipped with drainage systems may be designed using an equivalent fluid pressure of 86 pounds per square foot per foot of depth.

Traffic Surcharge

In addition to the recommended earth pressure, the upper ten feet of the retaining wall adjacent to streets, driveways or parking areas should be designed to resist a uniform lateral pressure of 100

pounds per square foot, acting as a result of an assumed 300 pounds per square foot surcharge behind the walls due to normal street traffic. If the traffic is kept back at least ten feet from the retaining walls, the traffic surcharge may be neglected.

Seismic Loads on Retaining Walls

For design consideration, the combined hydrostatic pressure, active lateral soil pressure, and seismic earth pressure imposed on basement walls up to 23 feet in height may be taken as an equivalent fluid with density of 95 pounds per cubic foot (i.e. 11 pcf active lateral soil pressure + 21 pcf seismic increment + 62.4 pcf hydrostatic). Under drained conditions, the combined active lateral soil pressure and seismic earth pressure on walls up to 23 feet in height may be taken as an equivalent fluid with density of 53 pounds per cubic foot (i.e. 32 pcf active lateral soil pressure + 21 pcf seismic increment).

Based on these considerations, it is recommended the proposed basement walls be designed to resist the more conservative "at-rest" earth pressures of 114 pounds per cubic foot (hydrostatic design) or 86 pounds per cubic foot (drained wall design).

Surcharge from Adjacent Structures

Some areas of the proposed basement walls will be adjacent to existing single story commercial and residential structures. These existing structures will surcharge the proposed basement walls. Based on information provided by Englekirk Partners, the adjacent building walls would have a maximum line load of approximately 2,200 pounds per lineal foot. The enclosed calculation sheet titled "Horizontal Surcharge Pressure from Line Load" indicates the surcharge pressures that would develop on the proposed basement walls due to the anticipated line load. The calculation assumes an existing foundation depth of 2 feet below the ground surface.

Waterproofing

Moisture affecting retaining walls is one of the most common post- construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water inside the building. Efflorescence is a process in which a powdery substance is produced on the surface of the concrete by the evaporation of water. The white powder usually consists of soluble salts such as gypsum, calcite, or common salt.

It is recommended that retaining walls be waterproofed. Waterproofing design and inspection of its installation is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method which would provide protection to below grade walls.

Retaining Wall Drainage

If the proposed development be designed to resist hydrostatic forces, retaining wall back drains may be omitted from the design.

If the development incorporates permanent dewatering, retaining walls should be provided with a subdrain covered with a minimum of 12 inches of gravel, and a compacted fill blanket or other seal at the surface. Certain types of subdrain pipe are not acceptable to the various municipal agencies. It is recommended that prior to purchasing subdrainage pipe, the type and brand is cleared with the proper municipal agencies. Subdrainage pipes should outlet to an acceptable location.

It is recommended a qualified dewatering consultant be retained in order to establish design flow rates and ensure adequate sizing of subdrainage pipes.

Sump Pump Design

Sump pumps will be required if a permanent dewatering system is installed. It is recommended that a de-watering specialist be retained to establish design flow rates, and to provide recommendations regarding the handling of groundwater. The flow rates should be based on the historic high groundwater level of 13 feet below the ground surface.

It is anticipated that sump pumps would not be necessary if the development is designed to resist hydrostatic forces.

Retaining Wall Backfill

Any required backfill should be mechanically compacted in layers not more than 8 inches thick, to at least 90 or 95 percent of the maximum density obtainable by the ASTM Designation D 1557-07 method of compaction. Flooding should not be permitted. Proper compaction of the backfill will be necessary to reduce settlement of the backfill and to reduce settlement of overlying walks and paving. Some settlement of required backfill should be anticipated, and any utilities supported therein should be designed to accept differential settlement.

TEMPORARY EXCAVATIONS

It is anticipated that excavations up to approximately 28 feet in vertical height will be required for construction of the proposed subterranean levels and foundation elements. The excavations are expected to expose fill and dense native soils, which are suitable for vertical excavations up to 5 feet where not surcharged by adjacent traffic or structures.

Due to the presence of groundwater, the depth of the excavation, and the proximity of property lines, adjacent structures and public ways, excavation of the proposed subterranean levels will require shoring and dewatering measures to provide a stable and dry excavation. Soldier piles are recommended for shoring. Shoring recommendations are provided in the following section.

Where sufficient space is available, temporary unsurcharged embankments could be cut at a uniform 1:1 (h:v) slope gradient in their entirety, up to a maximum height of 10 feet. A uniform sloped excavation does not have a vertical component. Sloped excavations with vertical cuts at the toe of the slope are not recommended.

Where sloped embankments are utilized, the tops of the slopes should be barricaded to prevent vehicles and storage loads near the top of slope within a horizontal distance equal to the depth of the excavation. If the temporary construction embankments are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. Water should not be allowed to pond on top of the excavation nor to flow towards it.

Excavation Observations

It is critical that the soils exposed in the cut slopes are observed by a representative of this office during excavation so that modifications of the slopes can be made if variations in the earth material conditions occur. Many building officials require that temporary excavations should be made during the continuous observations of the geotechnical engineer.

SHORING

The following information on the design and installation of the shoring is as complete as possible at this time. It is suggested that a review of the final shoring plans and specifications be made by this office prior to bidding or negotiating with a shoring contractor.

The recommended method of shoring consists of steel soldier piles, placed in drilled holes and backfilled with concrete. The soldier piles may be designed as cantilevers or laterally braced utilizing drilled tie-back anchors or raker braces.

Soldier Piles

Drilled cast-in-place soldier piles should be placed no closer than 2½ diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the earth materials. For design purposes, an allowable passive value for the earth materials below the bottom plane of excavation may be assumed to be 600 pounds per square foot per foot of depth, up to a maximum of 6,000 pounds per square foot. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed earth materials.

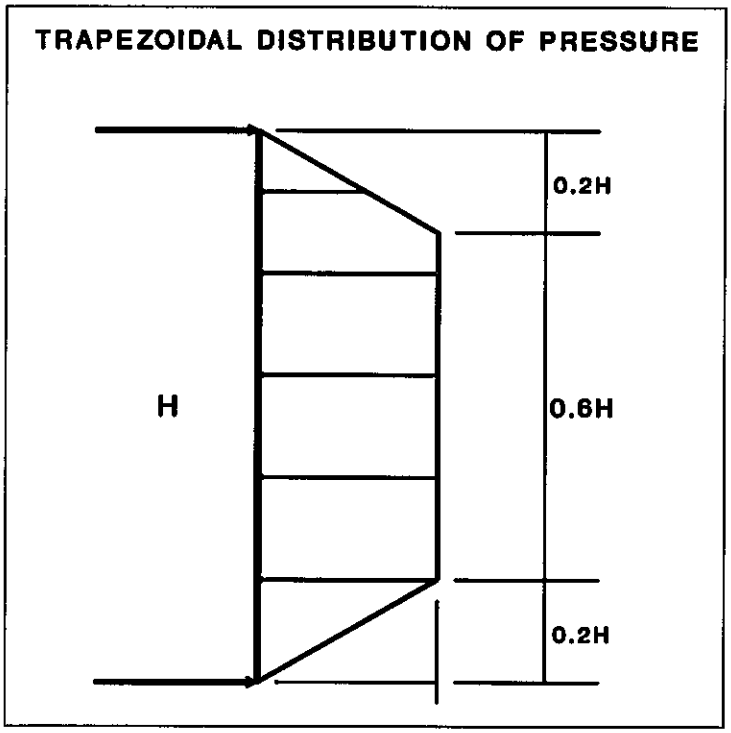
The frictional resistance between the soldier piles and retained earth material may be used to resist the vertical component of the anchor load. The coefficient of friction may be taken as 0.3 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The

downward capacity may be determined using a frictional resistance of 400 pounds per square foot. The minimum depth of embedment for shoring piles is 5 feet below the bottom of the footing excavation, or 7 feet below the bottom of excavated plane, whichever is deeper.

Groundwater was encountered during exploration at depths between 17 and 18 feet below the existing site grade. Caving of the saturated earth materials below the groundwater level may occur during drilling of piles. Casing or polymer drilling fluid will most likely be required during drilling in order to maintain open shafts. If casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet.

Depending on the draw down level associated with the future dewatering program, it is anticipated that the proposed piles will likely encounter water. Piles placed below the water level will require the use of a tremie to place the concrete into the bottom of the hole. A tremie shall consist of a water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube shall be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie shall be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end shall be closed at the start of the work to prevent water entering the tube and shall be entirely sealed at all times, except when the concrete is being placed. The tremie tube shall be kept full of concrete. The flow shall be continuous until the work is completed and the resulting concrete seal shall be monolithic and homogeneous. The tip of the tremie tube shall always be kept about five feet below the surface of the concrete and definite steps and safeguards should be taken to insure that the tip of the tremie tube is never raised above the surface of the concrete.

A special concrete mix should be used for concrete to be placed below water. The design shall provide for concrete with a strength of 1,000 psi over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste shall be included. The slump shall be commensurate to any research report for the admixture, provided that it shall also be the minimum for a reasonable consistency for placing when water is present.



Lagging

At this time, it is anticipated that most or all of the excavation will require continuous lagging. It is recommended that the exposed soils be observed by a representative of the geotechnical engineer to verify the cohesive nature of the earth materials, and determine whether any lagging may be omitted.

Soldier piles and anchors should be designed for the full anticipated pressures. Due to arching in the earth materials, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 pounds per square foot.

Lateral Pressures

A triangular distribution of lateral earth pressure should be utilized for the design of a cantilever shoring system. A trapezoidal distribution of lateral earth pressure (as shown in the diagram below) would be appropriate where shoring is to be restrained at the top by tie backs or raker braces.

Pressures for the design of cantilevered and restrained shoring supporting level backslopes are presented in the following table.

Height of Shoring (feet)	Cantilever Shoring System Equivalent Fluid Pressure (pcf) Triangular Distribution of Pressure	Restrained Shoring System Lateral Earth Pressure (psf)* Trapezoidal Distribution of Pressure
Up to 28 feet	38 pcf	24H psf

*Where H is the height of the shoring in feet.

Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination.

Surcharge from Adjacent Traffic or Structures

Additional active pressures should be applied where the shoring will be surcharged by adjacent traffic or structures. Traffic and/or structure surcharge pressures should be determined in accordance with the "Retaining Wall Design" section of this report.

Raker Brace Foundations

A preliminary allowable bearing pressure of 1,500 pounds per square foot may be used for the design a raker foundations. This bearing pressure is based on a raker foundation that is a minimum of 4 feet in width, 4 feet length, and 4 feet in depth, with a raker inclination of 45 degrees. The bearing pressure also assumes the bases of the raker foundations are horizontal. The allowable bearing capacity should be verified once the location and approximate size of the raker foundations are more defined. Changes in the foundation size and angle of load will affect the allowable bearing value.

Care should be employed in the positioning of raker foundations so that they do not interfere with the foundations for the proposed structure.

Tieback Anchor Design and Installation

Tieback anchors may be used to resist lateral loads. Friction anchors are recommended. For design purposes, it may be assumed that the active wedge is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge.

Tieback anchors may be installed between 20 and 40 degrees below the horizontal. Caving may occur within granular materials. Where caving occurs the following provisions should be implemented in order to minimize such caving. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

Drilled friction anchors constructed without utilizing pressure-grouting techniques may be designed for a skin friction of 400 pounds per square foot. Depending on the techniques utilized, and the experience of the contractor performing the installation, it is anticipated that a skin friction of 2,000 pounds per square foot could be utilized for post-grouted anchors, provided the design does not rely on end-bearing plates to provide the necessary capacity. Only the frictional resistance developed beyond the active wedge should be utilized in resisting lateral loads. Anchors should be placed at least 6 feet on center to be considered isolated.

Tieback Anchor Testing

At least 10 percent of the anchors should be selected for "Quick", 200 percent tests. It is recommended that at least three anchors be selected for 24-hour, 200 percent tests. It is recommended that the 24-hour tests be performed prior to installation of additional tiebacks. The purpose of the 200 percent tests is to verify the friction value assumed in design. The anchors should be tested to develop twice the assumed friction value. Where satisfactory tests are not achieved on these initial anchors, the anchor diameter and/or length should be increased until satisfactory test results are obtained.

The total deflection during the 24-hour 200 percent test should not exceed 12 inches. During the 24-hour tests, the anchor deflection should not exceed 0.75 inches measured after the 200 percent test load is applied.

For the "quick" 200 percent tests, the 200 percent test load should be maintained for 30 minutes. The total deflection of the anchor during the 200 percent quick tests should not exceed 12 inches; the deflection after the 200 percent load has been applied should not exceed 0.25 inch during the 30-minute period.

All of the remaining anchors should be tested to at least 150 percent of design load. The total deflection during the 150 percent test should not exceed 12 inches. The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15 minute period in order for the anchor to be approved for the design loading.

After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. Where satisfactory tests are not attained, the anchor diameter and/or length should be increased or additional anchors installed until satisfactory test results are obtained. Where post-grouted anchors are utilized, additional post-grouting may be required. The installation and testing of the anchors should be observed by a representative of the soils engineer.

Deflection

It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the shoring be designed for a maximum deflection of ½-inch at the top of the shored embankment. If greater deflection occurs

during construction, additional bracing may be necessary to minimize settlement of adjacent buildings and streets.

Pre-Construction Survey

Prior to shoring installation and excavation, it is recommended the adjacent improvements be surveyed to provide a documented record of their condition. Such a survey would aid in the resolution of any disputes that may arise concerning damage to adjacent facilities caused by the proposed construction.

Monitoring

Because of the depth of the excavations, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

Shoring Observations

It is critical that the installation of shoring is observed by a representative of this office. Many local agencies require that shoring installation be performed under the continuous observation of the geotechnical engineer. The observations are made so that modifications of the recommendations can be made if variations in the earth material or groundwater conditions occur. Also, the observations will allow for a report to be prepared on the installation of shoring for the use of the local building official.

SLABS ON GRADE

Interior Building Floor Slab

If a permanent dewatering system (including under slab drainage) is incorporated into the proposed design, a concrete slab on grade could be utilized in the basement of the proposed structure. The underslab drainage system should consist of a minimum 1-foot thick layer of gravel underlying the entire floor slab. Subdrain pipes should be placed in gravel-filled drainage trenches leading to the sump pump. As a minimum, the subdrain pipes should consist of 4-inch perforated pipe, perforations down, placed in trenches approximately 1 foot wide and 1 foot in depth below the bottom of the gravel blanket. The pipes would then be covered with gravel, and the entire gravel and pipe system within the trenches would be wrapped in filter fabric. The gravel filled drainage trenches are typically spaced on approximate 40-foot centers, although there is flexibility in the spacing, depending on the column grid line spacing. In either case, it is recommended a qualified dewatering consultant be retained in order to establish design flow rates and ensure adequate sizing of subdrainage system.

The under slab drainage system should be placed above competent native soils and/or properly controlled fill materials. Any soils loosened or over-excavated should be wasted from the site or properly compacted to 90 or 95 percent of the maximum dry density.

Building floor slabs cast above the permanent dewatering system should be a minimum of 5 inches thick and reinforced with a minimum of #4 steel bars on 16-inch centers each way.

Outdoor Concrete Flatwork

Outdoor concrete flatwork, such as sidewalks and patio areas, should be a minimum of 4 inches in thickness and reinforced with a minimum of #4 steel bars on 16-inch centers each way. The slabs may be cast over undisturbed natural earth materials and/or properly controlled fill materials. Any earth materials loosened or over-excavated should be wasted from the site or properly compacted to 90 or 95 percent of the maximum dry density.

Exterior Concrete Pavements

Exterior concrete pavement subject to passenger vehicle and truck traffic should be a minimum of 6 inches in thickness and reinforced with a minimum of #4 steel bars on 16-inch centers each way. The concrete pavement should be underlain by 4 inches of base. A subgrade modulus of 150 pounds per cubic inch may be assumed for design of concrete paving.

Base materials may consist of aggregate base or crushed miscellaneous base and should be compacted to a minimum of 95 percent of the ASTM D 1557 laboratory maximum dry density. Base materials should conform with Sections 200-2.2 or 200-2.4 of the "Standard Specifications for Public Works Construction", (Green Book), current edition.

Design Of Slabs That Receive Moisture-Sensitive Floor Coverings

In any areas where dampness would be objectionable, it is recommended floor slabs should be supported on a vapor retarder. A qualified waterproofing consultant should be retained in order to recommend a product or method which would provide protection for concrete slabs-on-grade. The design of the slab and the installation of the vapor retarder should comply with ASTM E 1643-98 and ASTM E 1745-97 (Reapproved 2004). Where a vapor retarder is used, a low-slump concrete

should be used to minimize possible curling of the slabs. The barrier can be covered with a layer of trimmable, compactible, granular fill, where it is thought to be beneficial. See ACI 302.2R-32, Chapter 7 for information on the placement of vapor retarders and the use of a fill layer.

Concrete Crack Control

The recommendations presented in this report are intended to reduce the potential for cracking of concrete slabs-on-grade due to settlement. However even where these recommendations have been implemented, foundations, stucco walls and concrete slabs-on-grade may display some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete cracking may be reduced and/or controlled by limiting the slump of the concrete used, proper concrete placement and curing, and by placement of crack control joints at reasonable intervals, in particular, where re-entrant slab corners occur.

For standard crack control maximum expansion joint spacing of 10 feet should not be exceeded. Lesser spacings would provide greater crack control. Joints at curves and angle points are recommended. The crack control joints should be installed as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. Construction joints should be designed by a structural engineer.

Complete removal of the existing fill soils beneath outdoor flatwork and exterior concrete pavements is not required. However, due to the rigid nature of concrete, some cracking, a shorter design life and increased maintenance costs should be anticipated. In order to provide uniform support beneath the flatwork it is recommended that a minimum of 12 inches of the exposed subgrade beneath the flatwork be scarified and recompacted to 90 or 95 percent relative compaction.

SITE DRAINAGE

Proper surface drainage is critical to the future performance of the project. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. Proper site drainage should be maintained at all times.

All site drainage should be collected and transferred to an acceptable location in non-erosive drainage devices. The proposed structure should be provided with roof drainage. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. Planters located adjacent to a structure should be sealed to prevent moisture intrusion into the underlying soils. Irrigation in the planter areas around the proposed development should be properly controlled. Excessive irrigation may saturate the underlying soils and adversely affect the proposed development.

STORMWATER DISPOSAL

Recently, regulatory agencies have been requiring the disposal of a certain amount of stormwater generated on a site by infiltration into the site soils. This requirement goes against prudent engineering practice. Increasing the moisture content of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the designed engineering properties. This means that any overlying structure, including buildings, pavements and concrete flatwork, could sustain damage due to saturation of the subgrade soils. Structures serviced by subterranean levels could be adversely impacted by stormwater disposal by increasing the design fluid pressures on retaining walls and causing leaks in the walls. Proper site drainage is critical to the performance of any structure in the built environment.

The proposed structure will be constructed below the current and historic high water levels and is expected to occupy the entire site. Based on these considerations, it is the opinion of this firm that stormwater infiltration is not feasible as part of the proposed development.

Where percolation of stormwater into the subgrade soils is not advisable, some Building Officials have allowed the stormwater to be filtered through soils in planter areas. Once the water has been filtered through a planter it may be released into the storm drain system. It is recommended that overflow pipes are incorporated into the design of the discharge system in the planters to prevent flooding. In addition, the planters shall be sealed and waterproofed to prevent leakage. Please be advised that adverse impact to landscaping and periodic maintenance may result due to excessive water and contaminates discharged into the planters.

It is recommended that the design team (including the structural engineer, waterproofing consultant, plumbing engineer, and landscape architect) be consulted in regards to the design and construction of filtration systems. Please be advised that stormwater infiltration and treatment is a relatively new requirement by the various cities and has been subject to change without notice.

DESIGN REVIEW

Engineering of the proposed project should not begin until approval of the geotechnical report by the Building Official is obtained in writing. Significant changes in the geotechnical recommendations may result during the building department review process.

It is recommended that the geotechnical aspects of the project be reviewed by this firm during the design process. This review provides assistance to the design team by providing specific recommendations for particular cases, as well as review of the proposed construction to evaluate whether the intent of the recommendations presented herein is satisfied.

CONSTRUCTION MONITORING

Geotechnical observations and testing during construction is considered to be a continuation of the geotechnical investigation. Therefore, it is critical that the geotechnical aspects of the project be reviewed by this firm during the construction process. Compliance with the design concepts, specifications or recommendations during construction requires review by this firm during the course of construction. All foundations should be observed by a representative of this firm prior to placing concrete or steel. Any fill which is placed should be observed, tested, and verified if used for engineered purposes. Please advise this office at least twenty-four hours prior to any required site visit.

If conditions encountered during construction appear to differ from those disclosed herein, notify this office immediately so the need for modifications may be considered in a timely manner.

It is the responsibility of the contractor to ensure that all excavations and trenches are properly sloped or shored. All temporary excavations should be cut and maintained in accordance with applicable OSHA rules and regulations.

EXCAVATION CHARACTERISTICS

The exploration performed for this investigation is limited to the geotechnical excavations described. Direct exploration of the entire site would not be economically feasible. The owner, design team and contractor must understand that differing excavation and drilling conditions may be encountered based on boulders, gravel, oversize materials, groundwater and many other conditions. Fill materials, especially when they were placed without benefit of modern grading codes, regularly contain materials which could impede efficient grading and drilling. Southern California sedimentary bedrock is known to contain variable layers which reflect differences in depositional

environment. Such layers may include abundant gravel, cobbles and boulders. Similarly bedrock can contain concretions. Concretions are typically lenticular and follow the bedding. They are formed by mineral deposits. Concretions can be very hard. Excavation and drilling in these areas may require full size equipment and coring capability. The contractor should be familiar with the site and the geologic materials in the vicinity.

CLOSURE AND LIMITATIONS

The purpose of this report is to aid in the design and completion of the described project. Implementation of the advice presented in this report is intended to reduce certain risks associated with construction projects. The professional opinions and geotechnical advice contained in this report are sought because of special skill in engineering and geology. Geotechnologies, Inc. has a duty to exercise the ordinary skill and competence of members of the engineering profession. Those who hire Geotechnologies, Inc. are not justified in expecting infallibility, but can expect reasonable professional care and competence.

The scope of the geotechnical services provided did not include any environmental site assessment for the presence or absence of organic substances, hazardous/toxic materials in the soil, surface water, groundwater, or atmosphere, or the presence of wetlands.

Proper compaction is necessary to reduce settlement of overlying improvements. Some settlement of compacted fill should be anticipated. Any utilities supported therein should be designed to accept differential settlement. Differential settlement should also be considered at the points of entry to the structure.

Corrosion testing was not conducted as part of this investigation. However, if corrosion sensitive improvements are planned, it is recommended that a comprehensive corrosion study should be

commissioned. The study would develop recommendations to avoid premature corrosion of buried pipes and concrete structures in direct contact with the soils.

GEOTECHNICAL TESTING

Classification and Sampling

The soil is continuously logged by a representative of this firm and classified by visual examination in accordance with the Unified Soil Classification System. The field classification is verified in the laboratory, also in accordance with the Unified Soil Classification System. Laboratory classification may include visual examination, Atterberg Limit Tests and grain size distribution. The final classification is shown on the boring logs.

Samples of the earth materials encountered in the borings were collected and transported to the laboratory. Undisturbed samples of soil are obtained at frequent intervals. Unless noted on the boring logs as an SPT sample, samples acquired while utilizing a mud rotary drill rig are obtained by driving a thin-walled, California Modified Sampler with successive 30-inch drops of a 140-pound automatic trip hammer. The soil is retained in brass rings of 2.50 inches inside diameter and 1.00 inches in height. The central portion of the samples are stored in close fitting, waterproof containers for transportation to the laboratory. Samples noted on the boring logs as SPT samples are obtained in accordance with ASTM D 1586 utilizing an automatic hammer. Samples are retained for 30 days after the date of the geotechnical report.

Moisture and Density Relationships

The field moisture content and dry unit weight are determined for each of the undisturbed soil samples, and the moisture content is determined for SPT samples by ASTM D 4959 or ASTM D

4643. This information is useful in providing a gross picture of the soil consistency between exploration locations and any local variations. The dry unit weight is determined in pounds per cubic foot and shown on the "Boring Logs", A-Plates. The field moisture content is determined as a percentage of the dry unit weight.

Direct Shear Testing

Shear tests are performed by ASTM D 3080 with a strain controlled, direct shear machine manufactured by GeoMatic, Inc. The rate of deformation is approximately 0.025 inches per minute. Each sample is sheared under varying confining pressures in order to determine the Mohr-Coulomb shear strength parameters of the cohesion intercept and the angle of internal friction. Samples are generally tested in an artificially saturated condition. Depending upon the sample location and future site conditions, samples may be tested at field moisture content. The results are plotted on the "Shear Test Diagrams," B-Plates.

Consolidation Testing

Settlement predictions of the soil's behavior under load are made on the basis of the consolidation tests ASTM D 2435. The consolidation apparatus is designed to receive a single one-inch high ring. Loads are applied in several increments in a geometric progression, and the resulting deformations are recorded at selected time intervals. Porous stones are placed in contact with the top and bottom of each specimen to permit addition and release of pore fluid. Samples are generally tested at increased moisture content to determine the effects of water on the bearing soil. The normal pressure at which the water is added is noted on the drawing. Results are plotted on the "Consolidation Test," C-Plates.

Expansion Index Testing

The expansion tests performed on the remolded samples are in accordance with the Expansion Index testing procedures, as described in the ASTM D4829. The soil sample is compacted into a metal ring at a saturation degree of 50 percent. The ring sample is then placed in a consolidometer, under a vertical confining pressure of 1 lbf/square inch and inundated with distilled water. The deformation of the specimen is recorded for a period of 24 hours or until the rate of deformation becomes less than 0.0002 inches/hour, whichever occurs first. The expansion index, EI, is determined by dividing the difference between final and initial height of the ring sample by the initial height, and multiplied by 1,000.

Grain Size Distribution

These tests cover the quantitative determination of the distribution of particle sizes in soils. Sieve analysis is used to determine the grain size distribution of the soil larger than the Number 200 sieve. ASTM D 422-63 (Reapproved 2007) is used to determine particle sizes smaller than the Number 200 sieve. A hydrometer is used to determine the distribution of particle sizes by a sedimentation process. Hydrometer testing was not performed as part of this investigation. Particle size determination for this investigation utilized the Number 200 sieve. The results are plotted on Plate E presented in the Appendix of this report.

Atterberg Limits

Depending on their moisture content, cohesive soils can be either solid, plastic, or liquid. The water contents corresponding to the transitions from solid to plastic or plastic to liquid are known as the Atterberg Limits. The transitions are called the plastic limit and liquid limit. The difference

between the liquid and plastic limits is known as the plasticity index. ASTM D 4318 is utilized to determine the Atterberg Limits. The results are shown on the enclosed F-Plates.

Description: Liquefaction Analysis
Boring Number: 1

EMPIRICAL ESTIMATION OF LIQUEFACTION POTENTIAL

NCEER (1996) METHOD — By Thomas F. Blake (1994-1996) — LIQ2_30.WQ1

EARTHQUAKE INFORMATION:

Earthquake Magnitude:	6.7
Peak Horiz. Acceleration (g):	0.48
Calculated Mag.Wtg.Factor:	0.756

GROUNDWATER INFORMATION:

Current Groundwater Level (ft):	17.0
Historic Highest Groundwater Level* (ft):	13.0
Unit Wt. Water (pcf):	62.4

* Based on California Geological Survey Seismic Hazard Evaluation Report

ENERGY & ROD CORRECTIONS:

Energy Correction (CE) for N60:	1.30
Rod Len.Corr.(CR)(0-no or 1-yes):	1.0
Bore Dia. Corr. (CB):	1.00
Sampler Corr. (CS):	1.20
Use Ksigma (0 or 1):	1.0

LIQUEFACTION CALCULATIONS:

Depth to Base (ft)	Total Unit Wt. (pcf)	Current Water Level (0 or 1)	FIELD SPT (N)	Depth of SPT (ft)	Liq.Sus. (0 or 1)	-200 (%)	Est. Dr (%)	CN Factor	Corrected $(N_1)_{60}$	Resist. CRR	rd Factor	Induced CSR	Liquefac. Safe.Fact.

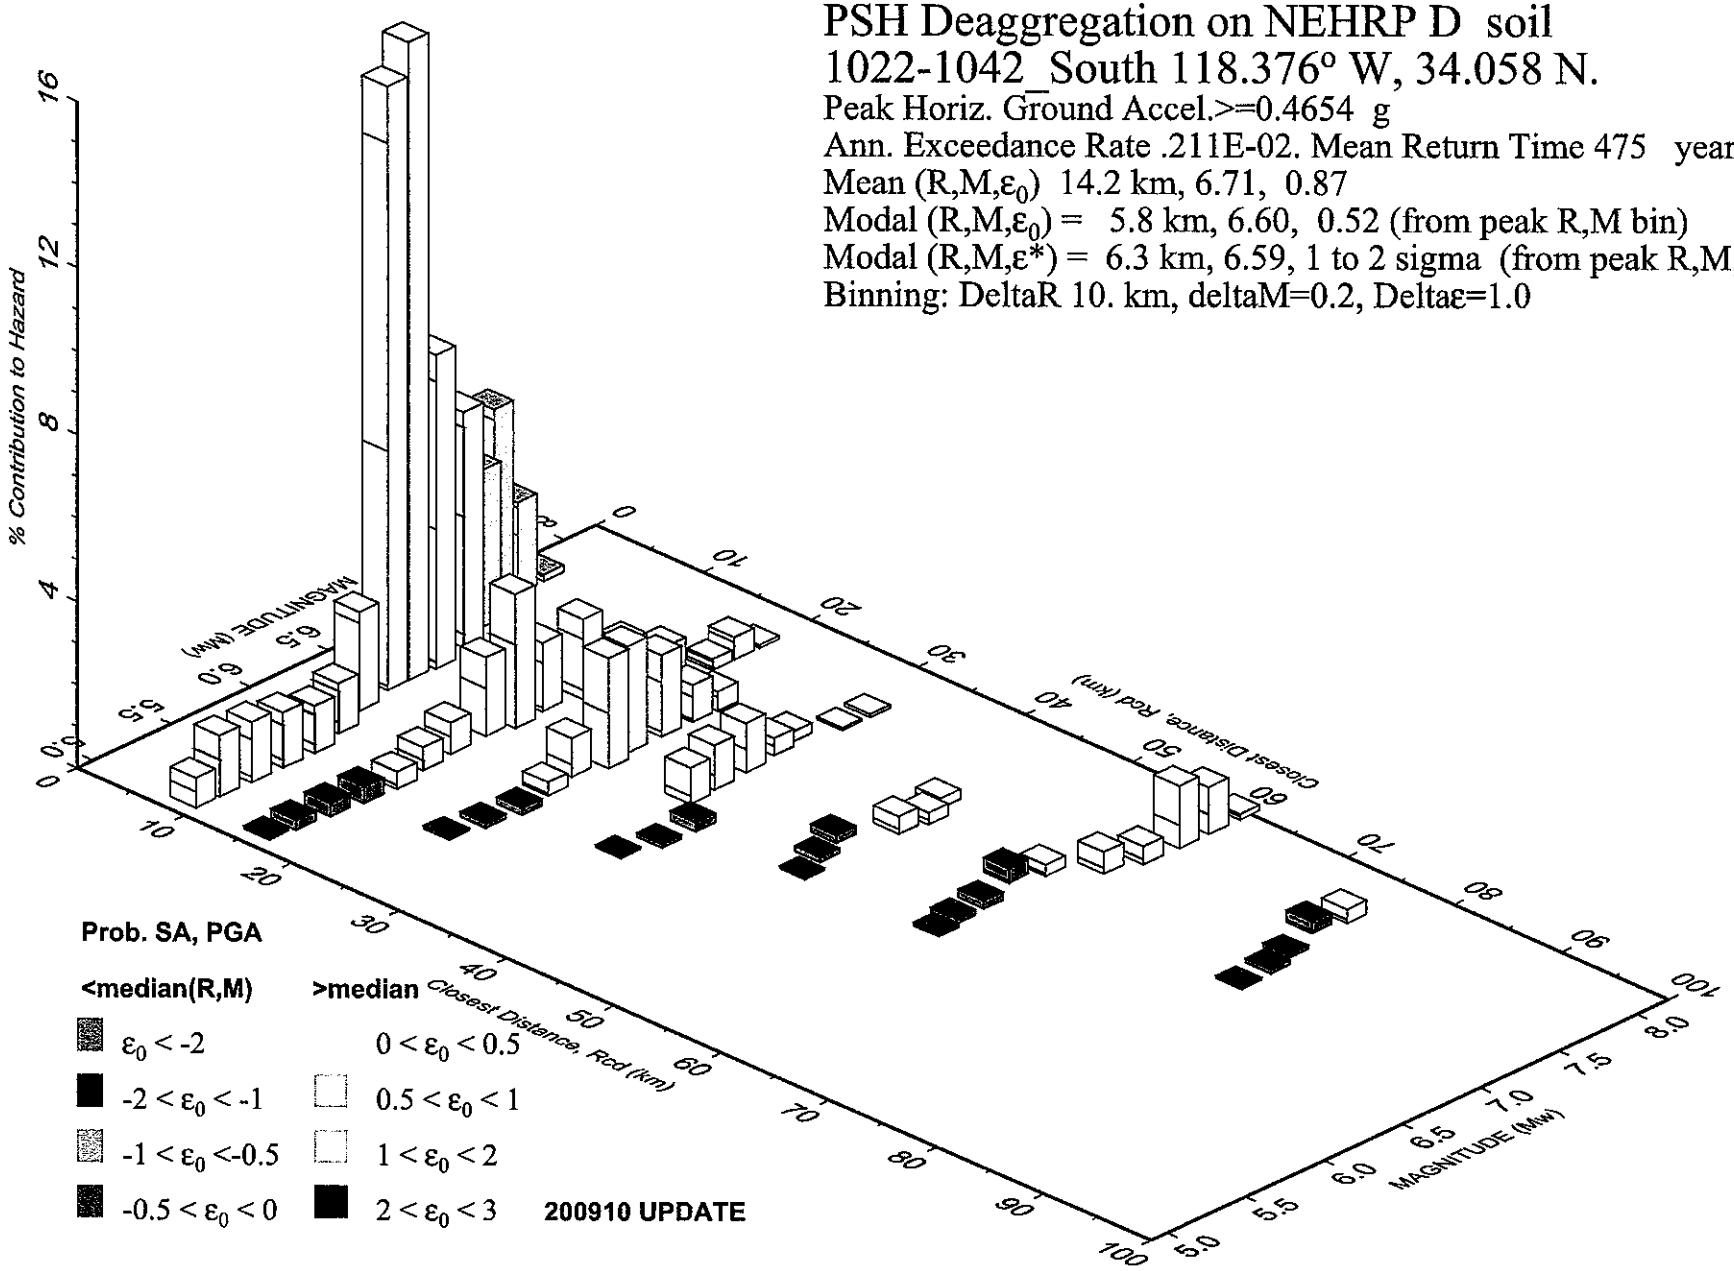
Description: Line Load from Footing

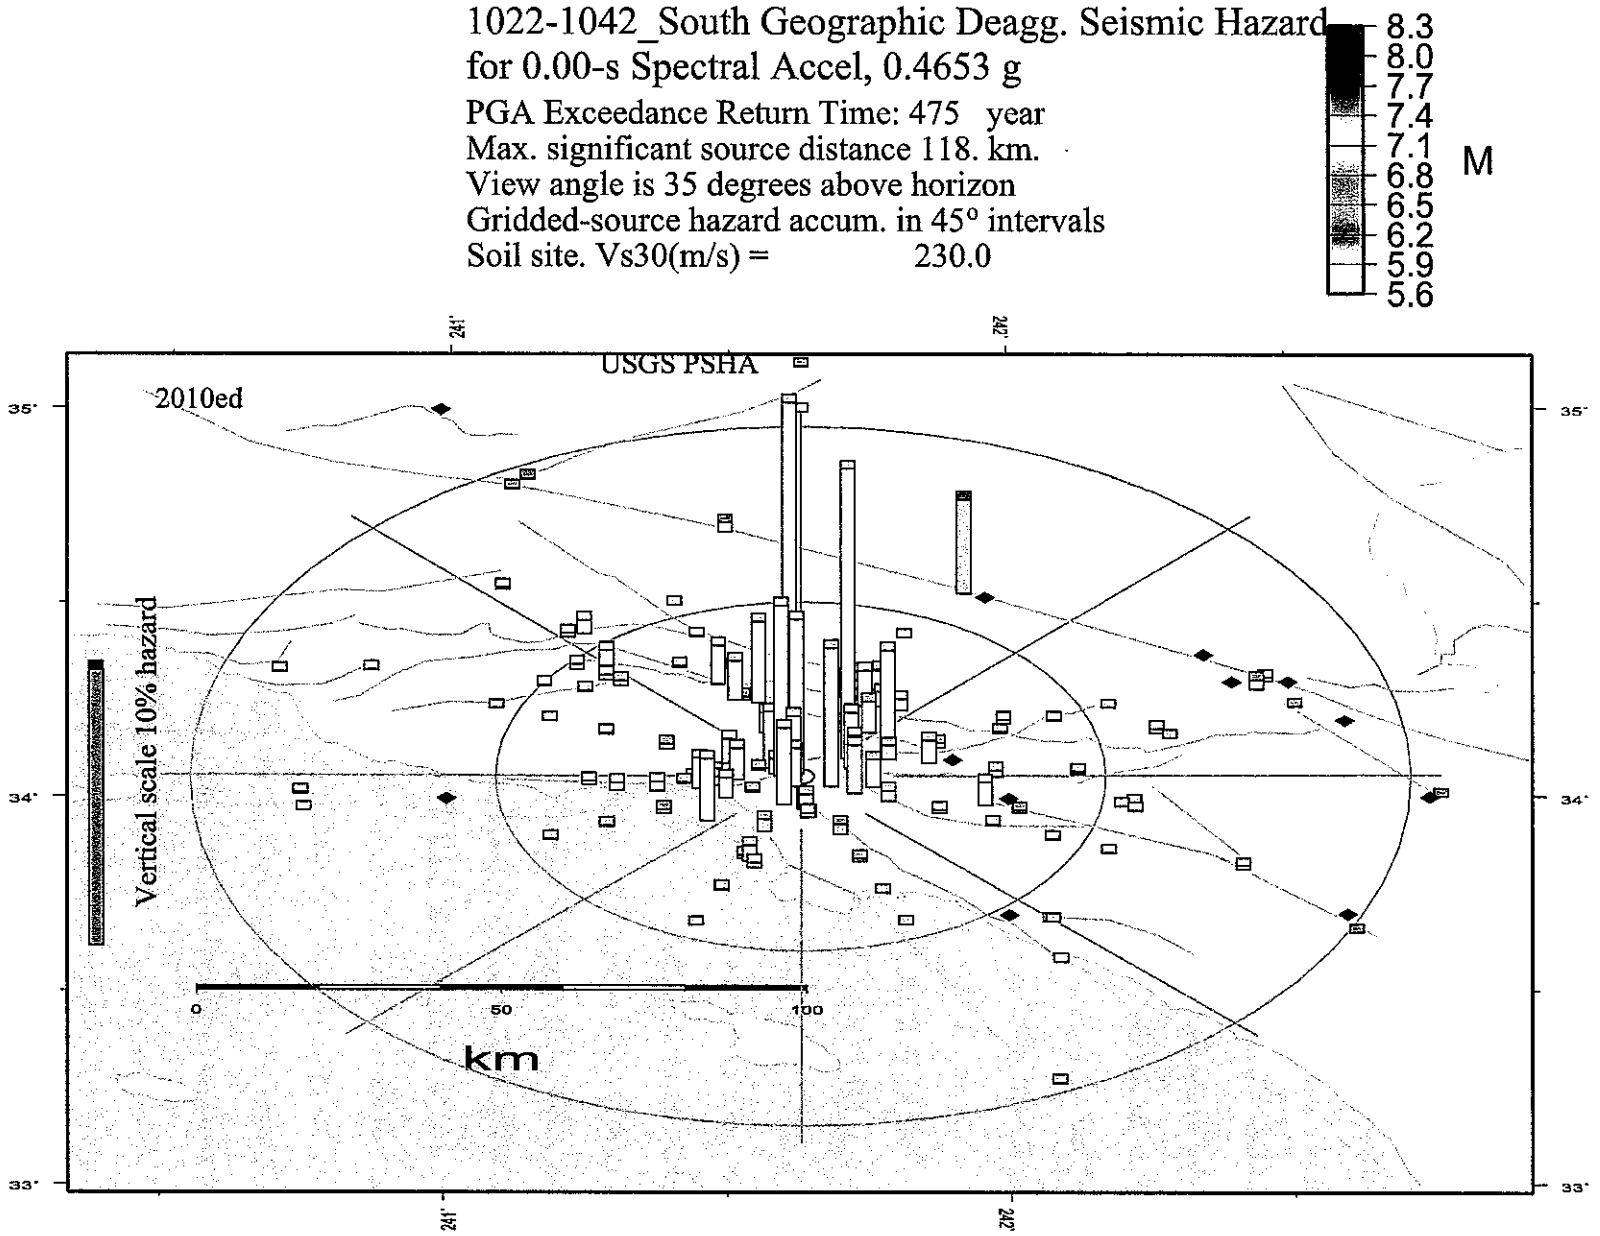
Horizontal Surcharge Pressure from Line Load

(Ref: NAVFAC 7.2-74)

Line Load	Ql=	2200.00	lbs
Height of Cut	H=	21.00	ft
Distance Away	X=	2.00	ft
	m=	0.10	



Elevation (feet) Z	n-value	Horizontal Pressure (lbs/ft^2) sigma(h)
21.0	0.00	0.00
20.0	0.05	39.67
18.9	0.10	72.50
17.9	0.15	94.36
16.8	0.20	104.76
15.8	0.25	105.81
14.7	0.30	100.57
13.7	0.35	91.89
12.6	0.40	81.85
11.6	0.45	71.75
10.5	0.50	62.32
9.5	0.55	53.87
8.4	0.60	46.49
7.4	0.65	40.14
6.3	0.70	34.71
5.2	0.75	30.10
4.2	0.80	26.19
3.1	0.85	22.87
2.1	0.90	20.04
1.0	0.95	17.63
0.0	1.00	15.57



Maximum Pressure =	105.81	lbs/ft^2
Total Load per Lineal Foot of Wall =	1181.59	lbs/ft
Resultant occurs at an elevation of	12.65	ft

PSH Deaggregation on NEHRP D soil
1022-1042_South 118.376° W, 34.058 N.

Peak Horiz. Ground Accel.>=0.4654 g
Ann. Exceedance Rate .211E-02. Mean Return Time 475 years
Mean (R,M,ε_0) 14.2 km, 6.71, 0.87
Modal (R,M,ε_0) = 5.8 km, 6.60, 0.52 (from peak R,M bin)
Modal (R,M,ε^*) = 6.3 km, 6.59, 1 to 2 sigma (from peak R,M,ε bin)
Binning: DeltaR 10. km, deltaM=0.2, Deltaε=1.0

1.0 INTRODUCTION

This report summarizes a soil, soil gas, and groundwater investigation performed by Leighton Consulting, Inc. at the property located at 1022 through 1054 South Cienega Boulevard, Los Angeles (subject property). The property was vacant at the time of the assessment. The investigation was performed at the request of DIDM Development Corporation. Figure 1 illustrates the location of the Subject Property in relation to the surrounding area and Figure 2 is a site plan.

DIDM Development Corporation intends to construct a senior community assisted living residence on the subject property. A portion of the proposed building will include two levels of subterranean garage that will require soil to be excavated to a planned depth of approximately 21 feet below existing grade if a conventional slab and foundation is used, or 26 feet below existing grade if a mat foundation is used. Groundwater beneath the proposed building was present at depths between approximately 16 and 17.5 feet below existing ground surface (bgs) during the assessment. The purposes of the site investigation activities were:

1. Assess the type and concentrations of fuel related petroleum hydrocarbons in soil, soil gas, and groundwater beneath the subject property.

2. Evaluate the vertical distribution of fuel related petroleum hydrocarbons in soil, soil gas beneath the subject property.

3. Review assessment and monitoring reports prepared for 1004 La Cienega Boulevard to evaluate past and current conditions of the contaminant plume resulting from a release associated with two 10,000 gallon underground storage tanks (USTs).

A release of gasoline and diesel range hydrocarbons has been documented at 1004 La Cienega Boulevard located approximately 110 feet north of the subject property where an active Union 76 Fuel Station is currently operating. Environmental reports posted on the California State Water Resources Control Board GeoTracker website indicate that a release was discovered beneath 1004 La Cienega Boulevard in 1987. According to reports prepared by TRC, the fuel release impacted soil and groundwater beneath the Union 76 station and surrounding properties (TRC, 2005; Appendix A). Environmental assessments performed by consulting firms subcontracted by Union Oil Company, ConocoPhillips, and Chevron Environmental Management Corporation, included soil and groundwater investigations and quarterly groundwater monitoring.

Based on the depth to groundwater and the proposed depth of subterranean garage, dewatering will be required to construct the subterranean garage or other structures that extend into the groundwater table. A water collection, conveyance, and discharge system will be required to remove and manage groundwater from areas of the subterranean garage that are below groundwater if a traditional slab and foundation system is selected.

Contaminated soil associated with a release of gasoline and diesel range petroleum hydrocarbons at 1004 La Cienega Boulevard was encountered in 2003 at an adjacent property during construction of Ships Center property located at 1016 La Cienega Boulevard. Matrix Collision Repair now occupies 1016 La Cienega Boulevard (Figure 2). A total of 8,175 tons soil and 48,500 gallons of groundwater impacted by petroleum hydrocarbons were reportedly removed and disposed during the construction activities (TRC, 2007, Appendix A).

The responsible party associated with 1004 La Cienega Boulevard initiated a soil vapor extraction program at the Union 76 station property in July 2004 and a groundwater pump and treatment program in November 2004. These activities and previous investigations have been under the oversight of the Los Angeles Regional Quality Control Board (LARWQCB) since March 1986. The name of the responsible party was not clearly stated in the report documenting the soil vapor extraction and groundwater pump and treat operation (TRC, 2005, Appendix A).

Petroleum hydrocarbons were detected in soil and groundwater beneath the subject site, primarily on the 1022 La Cienega parcel, during Site assessment activities performed by National Environmental, Inc. in 2007 and 2008, Holguin, Fahan & Associates in August 2012, and Leighton Consulting between December 2012 and August 2013. The site assessment activities were conducted to evaluate the extent and concentrations of gasoline and diesel range petroleum hydrocarbons that have migrated from 1004 La Cienega Boulevard to soil and groundwater beneath 1022 through 1054 La Cienega Boulevard.

2.0 SCOPE OF WORK

The scope of work performed during the Leighton Consulting soil, soil gas and groundwater assessments performed between December 2012 and August 2013 included:

- Collection and laboratory analysis of 30 soil gas samples;
- Collection and laboratory analysis of 34 soil samples;
- Installation of five groundwater monitoring wells;
- Collection of six groundwater samples; and
- Preparation of this report, including tables, illustrations, and appendices.

3.0 BACKGROUND

The Subject Property is located in a residential and commercial setting at 1022 through 1054 South La Cienega Boulevard, Los Angeles, California. The property is between South La Cienega Boulevard to the west, West Olympic Boulevard to the north, and Whitworth Drive to the south. The property is bounded to the west by South La Cienega Boulevard, a vacant lot used for storage of construction materials to the south, and residential properties to the east. An automobile collision repair facility, Matrix Automotive, is located adjacent to the north side of the subject property at 1016 La Cienega Boulevard, and occupies the property between the Union 76 fuel station and the subject property (Figure 2).

Petroleum hydrocarbon impacts to soil and groundwater beneath the Union 76 Station property were reported in March 1986, during the installation of four groundwater monitoring wells. In March 1987, two 10,000-gallon gasoline USTs and one waste oil UST were excavated and removed from the station. Petroleum hydrocarbons were detected in soil samples collected beneath the USTs during the removal operations. Since 1987 the LARWQCB has provided regulatory oversight for various soil and groundwater assessments, remedial excavation, groundwater monitoring, and groundwater and soil gas remediation activities. The activities associated with the site assessment and cleanup have included the installation of eleven onsite and three offsite groundwater monitoring wells, installation and operation of a soil vapor extraction and a groundwater remediation system. The soil vapor extraction system began operating in July 2004 and the groundwater pump and treatment system began operating in November 2004. Environmental activities including semiannual groundwater monitoring and operation of a multiphase soil gas and groundwater extraction and treatment system were reported to still be operational at 1004 La Cienega in May 2013. The petroleum impacts and remediation systems are discussed in the 2005 TRC and 2013 Holguin, Fahan & Associates reports included in Appendices A and C, respectively.

Redevelopment of 1016 La Cienega Boulevard was initiated in September 2003. During redevelopment of the property approximately 8,175 tons of soil and 48,500 gallons of groundwater contaminated with fuel related petroleum hydrocarbons were required to be removed and treated or disposed offsite. A historical summary of these activities is included in the First Quarter 2009 Site Status Report, prepared by Delta Consultants, dated April 16, 2008 (Appendix A).

A Quarterly Monitoring Report for the period of January through March 2005 prepared by TRC for the ConocoPhillips Company dated August 3, 2005 summarized the results

monitoring activities associated with nine onsite and five offsite groundwater monitoring wells. The report summarized the results of laboratory analyses performed on groundwater samples with reported maximum concentrations of benzene of 1,740 micrograms per liter (µg/L) TPPH (Total Purgeable Petroleum Hydrocarbons, aka gasoline) of 30,000 µg/L, and methyl tert-butyl ether of 4,400 µg/L all detected in well MW-1 located in the south-central portion of the Union 76 property. Groundwater flow beneath 1004 La Cienega Boulevard was reported to be southeast with a gradient of 0.02 feet per foot. Figures 3 and 4 of TRC's Monitoring Report January through March 2005 illustrated TPPH and benzene plumes extending south of the Union 76 station property and approximately halfway into the subject property. Maximum concentrations of TPPH and Benzene reported beneath the subject property were 240 µg/L and 3.6 µg/L, respectively. The full January through March 2005 Monitoring Report, containing the referenced figures and tables, is included in Appendix A.

National Environmental, Inc. completed 11 soil borings using direct push technology in February 2007 to assess a former automotive repair facility located on the subject property at 1032 La Cienega Boulevard. The repair shop was reported to have operated between the 1960's and 2007. The borings were reportedly completed near locations of former hoists, sump, hole in the ground, and waste storage area. Eleven soil samples were analyzed for Total Petroleum Hydrocarbons – Petroleum Range Hydrocarbons by EPA Method 8015M and two groundwater samples were analyzed by EPA Method 8260B for volatile organic compounds. No petroleum hydrocarbons were detected in soil samples and no volatile organic compounds were detected in groundwater samples that were collected during the assessment. The 2007 National Environmental, Inc. report, containing maps illustrating the locations of borings and samples, is included in Appendix B.

National Environmental, Inc. completed nine additional soil borings using direct push technology to assess chemical contamination in soil and potential impact to groundwater beneath the subject property in April 2008. National Environmental, Inc. reportedly collected nine soil samples and seven groundwater samples that were submitted to a laboratory for analysis. Soil samples were collected from the borings 10 feet bgs and groundwater samples were collected at approximately 16 feet bgs. The soil and groundwater samples were analyzed by EPA Method 8260B for volatile organic compounds and EPA Method 8015M for total petroleum hydrocarbons by carbon chain and gasoline range hydrocarbons (TPH-g). TPH-g, ethylbenzene, and xylenes were detected in one soil sample collected in the north central portion of the subject property. Gasoline range petroleum hydrocarbons, benzene, ethylbenzene, toluene, xylenes, and naphthalene were detected in two groundwater samples collected from borings

completed in the northern and southern portions the subject property. National Environmental, Inc. concluded that soil samples collected from the 10-foot depth of two borings did not indicate that a surface release had occurred and recommended installing groundwater monitoring wells to monitor plume migration (Appendix B).

In August 2009, the owners of 1004 La Cienega property submitted a request for low risk site closure to the LARWQCB for the Union 76 property. The request for site closure was subsequently denied by the LARWCB. The LARWQCB's denial was based on elevated concentrations of TPH-g, benzene, Methyl t-butyl ether (MTBE), and tert-butyl alcohol (TBA) reported in groundwater, above the regulatory Maximum Concentration Levels (MCLs).

In November and December 2012, Houguin, Fahan, and Associates (HFA) performed soil, soil gas, and groundwater sampling activities on four of the subject parcels 1022, 1026, 1032, and 1042-1054 La Cienega Boulevard, Los Angeles, California. HFA's assessment included nine cone penetrometer test (CPT) borings that were advanced to depths of 20 to 36 feet bgs to assess lithology beneath the subject site, Soils encountered included sands, silts, clay, and mixtures of these soil types. The log CPT-1, located in the northeast corner of the subject property, details layers of silty clay and clay from approximately 10 to 20 feet bgs. Four soil gas probes were installed (G-1, G-2, G-4, G-5) with collection probes installed at depths of 5.5 and 12.5 feet bgs. A detection of benzene was reported in the sample collected from G-5 at a depth of 12.5 feet bgs, at a concentration of 3.7 micrograms per cubic meter ($\mu g/m^3$). Five groundwater monitoring wells (W-1 through W-5) were installed during this investigation. Groundwater during the HFA investigation was encountered at depths ranging from approximately 15 to 17 feet bgs. Maximum concentrations of TPH-g (150 µg/L) and benzene (8.2 µg/L) were reported in groundwater samples collected from W-1. Naphthalene was detected beneath the 1022 Parcel in soil sample W-2-15 at a concentration of 62,000 µg/kg, and in soil gas sample G-5-5.5' at a concentration of 13 $\mu g/m^{3.}$ HFA's "Draft Soil, Soil Gas, and Groundwater Sampling Report for Contiguous Vacant Lots at 1022, 1026, and 1042-1054 South La Cienega Boulevard, Los Angeles, California", dated January 25, 2013, is included in Appendix C.

DIDM Development Corporation contracted Leighton Consulting to further assess potential petroleum hydrocarbon impacts to soil and groundwater beneath the Subject Property. In December 2012 through January 2013, Leighton Consulting completed an initial assessment that included a soil gas survey at thirteen locations and installation and sampling of a groundwater monitoring well, MW-25, located near the northeastern corner of the subject property (Figure 3). During installation of MW-25, the Leighton field

geologist noted groundwater entering the borehole from a layer of sediments located 13.9 feet bgs. The geologist also observed discontinuous sediments, with darkly stained and odorous soil in soil cuttings from approximately the same depth. A photoionization detector (PID) used to detect volatile organic compounds (VOCs) reported elevated readings in soil samples collected from this soil layer. A deeper groundwater bearing zone was identified at approximately 25 feet bgs with substantially greater amounts of groundwater that flowed into the borehole than was observed in the thin water bearing unit at 13.9 feet bgs. These observations and findings prompted the installation of four additional groundwater monitoring wells. In August 2013, two groundwater wells were installed in the upper water bearing zone, and two groundwater monitoring wells were installed in the lower groundwater bearing zone to assess differences in well recharge and contaminant concentration. The investigation procedures and results are detailed in the following sections.

4.0 GEOLOGY AND HYDROGEOLOGY

The subject site is located at an elevation of approximately 125 feet above mean sea level (msl). Recent alluvium is approximately 250 feet thick and is underlain by the Pleistocene Lakewood Formation. The subject site is located in the Hollywood Groundwater Basin, with physical boundaries that include the Santa Monica Mountains to the north, the Inglewood fault to the west, and the Elysian Hills to the east (DWR 1961).

Within the boundaries of the subject site, soils encountered during the drilling activities included interbedded sand, silty sand, sandy clay, silty sand with clay, and silty clay from the ground surface to approximately 25 feet bgs. A thin water bearing unit composed of sand was identified between 15 feet bgs and 20 feet bgs. A deeper groundwater zone was identified between 20 and 25 feet bgs. Substantially greater groundwater flow was observed entering the boreholes and monitoring wells from the deeper water bearing unit than was observed from the shallow water bearing unit.

5.0 SOIL BORING, VAPOR PROBE AND GOUNDWATER WELL INSTALLATIONS

5.1 Geoprobe Borings, Soil Gas Probe Installation, and Sample Collection

On December 26, 2012, 12 direct push soil borings were advanced to depths between 13 and 15 feet bgs using a truck mounted Geoprobe direct push rig. The Geoprobe soil core barrel was constructed of 1.5 inch outside diameter steel that was hydraulically driven into the subsurface to the desired sample depth. Soil samples were collected inside the core barrel in acetate sample sleeves. The acetate sample sleeves were extracted from the barrel, the section of the core matching the sample interval was cut off. Sample aliquots were removed from the sample and preserved in accordance with US EPA Method 5035. The remainder of the sample was sealed with Teflon and plastic caps. All samples were properly labeled, logged onto a Chain of Custody Form, inserted into re-sealable plastic bags, and placed into a cooler with ice. The soil samples were submitted to Calscience Environmental Laboratories, Inc. (Calscience) in Garden Grove, California. The remaining sections of the sample sleeve were used for lithologic logging and to monitor the concentrations of VOCs emitted from the soil. The VOC readings from each sample were measured with a PID calibrated with isobutylene, and the results were recorded on boring logs (Appendix D). The sample locations where samples were collected are illustrated on Figure 3.

The 12 direct push borings were converted to soil gas sampling locations with sampling probes placed at depths of five and 13 feet bgs. The soil gas sampling locations were numbered SV-1 through SV-12 and are illustrated on Figure 3. The placement of the soil gas sampling probes and following soil gas survey was performed in accordance with California Department of Toxic Substances Control (DTSC) Interim Final Guidance for the Evaluation and Mitigation of Subsurface Intrusion to Indoor Air.

The soil gas sampling probes were constructed through the hydraulically-driven drilling rods. After the probes were driven to the desired depth and the soil samples had been removed, the drilling rod was retracted slightly to allow installation of the vapor sampling port through the center of the rod. The soil gas probe consisted of 1/4-inch inert tubing and a porous fitting utilized for the sampling port. The soil gas probes were installed with a minimum of six inches of sand above and below each probe. At least six inches of dry granular bentonite followed by hydrated granular bentonite was placed above and below each sand layer. The tubing was extended to approximately 12 inches above the ground

surface and fitted with a valve. The vapor ports were installed in the same borehole with separation provided by the bentonite seal. The probes were allowed to equilibrate for a minimum of 20 minutes before soil gas samples were collected.

A series of rain events occurred between December 26, 2012 and January 18, 2013 requiring postponement of soil gas sampling. Soil gas samples were collected from the probes on January 23, 2013 after approximately four days of dry weather. A series of purge tests were performed prior to collecting the soil gas samples. The sampling system ambient air volume was calculated based on the diameter and length of the sample tubing and screen and the diameter and length of the sand filter pack less the volume of sand (assuming 35% porosity). A site-specific purge volume test was conducted on the probe expected to have the highest VOCs concentrations. The probe selected for the purge test was purged of 1-, 3-, and 10-purge volumes, with a sample collected and analyzed after each purge volume increment. The results were evaluated with regard to soil gas concentration trends and which purge volume yielded the highest concentration of the target constituents. The samples of representative soil gas were then collected in laboratory supplied 1-liter SUMMA canisters and immediately delivered to the on-site mobile laboratory for analysis.

Quality Assurance/Quality Control (QAQC) measures included the collection of two duplicate soil gas samples and analysis of a tracer gas mixture of n-propanol and n-pentane. The two duplicate QAQC samples, SV-8-5 DUP and SV-9-5 DUP were collected to compare consistency of results to the primary samples, SV-8-5 and SV-9-5. The tracer gas compounds were analyzed during the laboratory analytical run to identify any possible surface leaks into the subsurface due to improper installation of the vapor sample probe. A total of 28 primary soil gas samples were collected from the 12 sample locations.

5.2 Soil Borings, Well Installations, and Soil Sample Collection

Boring MW-25 was completed on December 28, 2012 and borings MW-25U, MW-25D, MW-26U and MW26D were completed on August 16, 2013. Well MW-25D was re-drilled and installed on August 19, 2013. All wells were installed in accordance with a permit obtained from the County of Los Angeles Environmental Health Department. Figure 3 illustrates the location of the wells and copies of the Los Angeles County permit for monitoring wells and well construction/boring logs are included in Appendix D.

Each borehole was advanced to depths ranging from 22 to 32 feet bgs using a hollow-stem auger drill rig equipped with 8-inch diameter augers. The wells were constructed of 2-inch diameter Schedule 40 PVC with 0.010-inch slotted screen. The well screen was inserted into the center of the auger and lowered to the desired depth of the borehole by connecting a sufficient amount of solid casing to reach the ground surface. A filter pack consisting of either #3 or #2/12 silica sand was installed in the annulus surrounding each well screen. A sanitary seal constructed of a minimum of 3 feet of hydrated bentonite granules was placed above the sand filter pack. The wells were sealed with concrete and completed with a flush-mounted traffic rated well box cemented into place at grade. A watertight well cap was placed on each well casing. Monitoring Well Construction Logs illustrating the lithology observed in the borings are included in Appendix D.

Wells MW-25U and MW-26U were continuously cored from a depth of 10 feet to the total depth of the boreholes which was 29.5 and 21.5 feet bgs, respectively. Continuous coring was performed in order to observe the soil types and to assess whether separate water bearing zones were present at these locations. Photographs of the cores obtained from MW-25U and MW-26U are included in Appendix E. After drilling to the total depth of the boreholes, bentonite was placed into the bottom of the borehole and hydrated. The bentonite was placed a minimum of 6 inches below the well screen and sand was placed over the bentonite to keep bentonite from entering the well screen.

Soil samples were collected at 5-foot intervals from 5 feet to 25 feet bgs in boring MW-25. Soil samples were cut from the cores obtained from boring MW-25U at depths of 14.5, 18, 19, and 20 feet bgs during the initial boring of the well. Soil samples were cut from the cores obtained from MW-26D at depths of 17 and 19 feet bgs. All of the soil samples were submitted to Calscience in Garden Grove, California for analysis. Calscience is a California State Certified laboratory. The samples that were collected and analyzed are included in Table 1 and the locations where samples were collected are illustrated on Figure 3.

The soil samples were collected through the hollow-stem auger using either a split spoon sampler or a SPT coring device that was driven into the soil ahead of the auger. Upon reaching the selected depths the sampler was immediately retracted and the sample liners were removed from the sampler. The ends of the sample liners were covered with Teflon and capped with plastic end caps. One of the liners from each sample was used to obtain a PID headspace reading. Each sample was labeled with a unique sample number, the time and date the sample

was collected, the initials of the person that collected the sample, and the laboratory analytical methods. The samples were inserted into re-sealable plastic bags, and placed into a cooler with ice. The samples were logged onto a Chain-of-Custody form and transported to Calscience in Garden Grove, California for analysis. All sample equipment was decontaminated between each sampling attempt and the hollow-stem augers were cleaned with a pressure washer before use and between each boring.

All samples collected were inspected and logged by a geologist in accordance with the Unified Soil Classification System under the direct supervision of a California Professional Geologist.

On August 26, 2013 the upper 2-feet (approximately) of the MW-25D well casing broke during an attempt to remove a well cap that was stuck on the casing. The short section of casing came out of the hole and material from around the casing fell into the well casing causing a blockage that precluded gauging, purging, or sampling the well. On August 19, 2013, the original MW-25D well casing and all annular materials were removed by over-drilling the well and a new 2-inch diameter PVC was installed in the same location in accordance with the procedures described above.

5.3 Groundwater Well Development and Sample Collection

The groundwater monitoring wells were developed by surging with a surge block and bailing the wells in order to seat the filter pack and to remove fine grained sediment and suspended solids from the well casing. Conductivity, pH, and turbidity were monitored and recorded during well purging and were recorded on Groundwater Sampling Forms (Appendix D). The wells were bailed until the groundwater parameters stabilized.

The wells were allowed to stabilize for a minimum of 48 hours after development and before sampling. A minimum of three casing volumes were purged from each of the wells and the groundwater levels were allowed to recover to a minimum of 80% of the original elevation prior to sampling. Recharge rates in wells MW-25U and MW-26U were slow with respect to wells MW-25D and MW-26D.

Groundwater samples were collected from wells MW-25U, MW-26U, and MW-26D on August 23, 2013. Monitoring wells MW-25D and MW-25U were purged

on August 29, 2013. A sample was collected from MW-25D after the well had recharged, however MW25U did not recharge sufficiently and was sampled on August 30, 2013. Groundwater monitoring well MW-25U was resampled in an attempt to obtain data within the same timeframe as MW-25D.

The groundwater samples were collected using clean, new, dedicated disposable polyethylene bailers. The samples were transferred to laboratory supplied 1-liter glass bottles, 250-ml polypropylene bottles, and 40-milliliter volatile organic analysis (VOA) vials with appropriate preservative. All sample containers were properly labeled and placed in a cooler with ice. The samples were transported via courier to Calscience in Garden Grove, California under strict chain of custody protocol.

6.0 RESULTS OF LABORATORY ANALYSIS

6.1 Summary of Laboratory Results - Soil

All soil samples collected from the borings were analyzed by the following methods:

- Volatile Organic Compounds (VOCs) and Oxygenates by EPA Method 8260B; and
- Total Purgeable Petroleum Hydrocarbons as gasoline (TPH-g) by EPA Method 8260B.

A summary of the concentrations detected in soil samples is presented in Table 1. Copies of the laboratory analytical reports and chain-of-custody forms are presented in Appendix F. Figure 4 illustrates the distribution of TPH-g, and benzene, toluene, ethylbenzene, total xylenes (collectively BTEX), and naphthalene detected in the borings that were completed during this investigation.

6.1.1 Total Petroleum Hydrocarbons - Soil

TPH-g was detected in nine samples at concentrations ranging from 290 to 8,800,000 µg/kg. TPH-g was detected at the highest concentrations at the following locations: MW-25U at 18 feet bgs; MW-25U at 19 feet bgs; MW-25U at 20 feet bgs; MW-25 at 15 feet bgs; and SV-11 at 13 feet bgs.

6.1.2 Volatile Organic Compounds - Soil

BTEX were detected at the highest concentrations and most frequently at the following locations: MW-25 between 15 feet and 20 feet bgs; MW-25U between 18 feet and 20 feet bgs (benzene not detected in MW-25U samples above the laboratory reporting limits); and SV-11 at 13 feet bgs.

The concentration ranges of VOCs detected included:

- Benzene: Detected in 23 samples at concentrations ranging from 1.0 to 100 µg/kg.
- Toluene: Detected in eight samples at concentrations ranging from 0.94 to 15,000 µg/kg.

- Ethylbenzene: Detected in seven samples at concentrations ranging from 4.1 to 110,000 µg/kg.
- Total xylenes: Detected in six samples at concentrations ranging from 8.6 to 500,000 µg/kg.
- Naphthalene: Detected in one sample, SV11-13, at a concentration of 8.8 µg/kg.
- Tetrachloroethene: Detected in one sample, MW25-5, at a concentration of 210 µg/kg.
- Trichloroethene: Detected in one sample, MW25-5, at a concentration of 11 µg/kg.
- Vinyl Chloride: Detected in one sample, MW25-5, at a concentration of 2.1 µg/kg.
- Isopropylbenzene: Detected in three samples at concentrations ranging from 4.8 to 18 µg/kg.
- p-Isopropyltoluene: Detected in one sample, SV11-13, at a concentration of 1.1 µg/kg.
- n-Propylbenzene: Detected in three samples at concentrations ranging from 14 to 50 µg/kg.
- 1,2,4-Trimethylbenzene: Detected in one sample, SV11-13, at a concentration of 92 µg/kg.
- 1,3,5-Trimethylbenzene: Detected in two samples, SV-11-13 and MW-25-15 at concentrations of 6.6 µg/kg and 36 µg/kg, respectively.
- Cis 1,2-Dichloroethene: Detected in one sample, MW25-5, at a concentration of 8.1 µg/kg.
- n-Butylbenzene: Detected in three samples at concentrations ranging from 3.2 to 6.4 µg/kg.
- sec-Butylbenzene: Detected in three samples at concentrations ranging from 1.4 to 3.3 µg/kg.

6.2 Summary of Laboratory Results - Soil gas

Thirty soil gas samples, including six samples collected during purging, and two duplicate samples were collected in 1-liter SUMMA canisters and analyzed for VOCs by EPA Method TO-15 in a mobile laboratory stationed onsite. The mobile laboratory was operated by Jones Environmental, Inc., a California State Certified mobile laboratory.

A summary of the concentrations detected in soil gas samples is presented in Table 2. Copies of the laboratory analytical reports and chain-of-custody forms are presented in Appendix F. Figure 5 illustrates the distribution of TPH-g and VOCs detected in the soil gas samples collected during this investigation.

6.2.1 Volatile Organic Compounds-Soil Gas

Six fuel related VOCs were detected above the method detection limit in the primary soil gas samples that were analyzed in a mobile laboratory during this investigation (Table 2). The VOCs detected in the primary soil gas samples were:

- TPH-g was detected in six soil gas samples at concentrations ranging from 0.049 to 1.74 µg/L. TPH-g was detected at the highest concentrations at locations: SV-2 at 13 feet bgs and SV-3 at 13 feet bgs.
- Benzene was detected in three soil gas samples collected from borings SV-3 at concentrations of 0.052 µg/L (three purge volumes) and 0.041 µg/L (10 purge volumes), and in SV-3 at 0.003 µg/L.
- Toluene was detected in four soil gas samples collected from boring SV-3 collected from depths of 5 feet bgs, 10 feet bgs, and 13 feet bgs at concentrations ranging from 0.003 µg/L to 0.055 µg/L.
- Total xylenes were detected in four soil gas samples collected from borings SV-3 and SV-11 at concentrations ranging from 0.008 µg/L to 0.564 µg/L.
- Naphthalene was detected in three soil gas samples collected from borings SV-3 and SV-11 at concentrations of 0.18 µg/L, 0.21 µg/L, and 0.32 µg/L.

- MTBE was detected in two soil gas samples collected from boring SV-3 in samples collected at depths of 13 feet bgs at concentrations of 0.017 µg/L and 0.018 µg/L.

6.2.2 QA/QC Soil Gas Sample Results

Two duplicate soil gas samples (SVE-8-5 DUP and SVE-9-5 DUP) were collected during the investigation for QAQC purposes. No VOCs were detected above the laboratory reporting limits in the primary or QAQC samples collected from the same sample locations. The tracer gas compounds analyzed during the laboratory analytical were not reported above the laboratory detection limits; which indicated proper installation of the vapor sample probes.

6.3 Summary of Laboratory Results - Groundwater

Five groundwater samples collected from the monitoring wells were analyzed by the following methods:

- Gasoline Range Organics (TPH-g) by EPA Method 8015M or 8260B;
- Diesel Range Organics (TPH-d) by EPA Method 8015B.; and
- Volatile Organic Compounds (VOCs) and Oxygenates by EPA Method 8260B.

A summary of the concentrations of the contaminants of concern detected in groundwater samples is presented in Table 3. Copies of the laboratory analytical reports and chain-of-custody forms are presented in Appendix F. Figure 6 illustrates the distribution of TPH-g, TPH-d, BTEX, MTBE, and naphthalene detected in the groundwater samples collected during this investigation.

6.3.1 Total Petroleum Hydrocarbons - Groundwater

TPH-g was detected in all six samples at concentrations ranging from 53 to 61,000 µg/L. Concentrations of TPH-g were detected at the highest concentrations at the following locations: MW-25U (61,000 µg/L) and MW-25 (3,000 µg/L).

TPH-d was detected in three samples at concentrations ranging from 1,100 to 4,200 µg/L. TPH-d was detected at the highest concentrations at the following locations: MW-25U (4,200 µg/L) and MW-25 (1,100 µg/L).

6.3.2 Volatile Organic Compounds - Groundwater

BTEX were detected at the highest concentrations in wells MW-25 and MW-25U.

The concentration ranges of VOCS detected included:

- Benzene: Detected in four samples at concentrations ranging from 0.53 to 420 µg/L.
- Toluene: Detected in three samples at concentrations of 3.6 µg/L, 1,300 µg/L, and 1,600 µg/L.
- Ethylbenzene: Detected in four samples at concentrations ranging from 1.3 µg/L to 3,000 µg/L.
- Total xylenes: Detected in four samples at concentrations ranging from 5.5 to 17,800 µg/L.
- MTBE: Detected in three samples collected from MW-25U at concentrations of 1.2 µg/L, 3.2 µg/L, and 9.1 µg/L.
- Naphthalene: Detected in two samples collected from MW-25U at concentrations of 300 µg/L and 390 µg/L.
- Acetone: Detected in one sample, MW25, at a concentration of 29 µg/L.
- n-Butylbenzene: Detected in three samples at concentrations of 2.0 µg/L, 34 µg/L, and 48 µg/L.
- sec-Butylbenzene: Detected in one sample, MW-25, at a concentration of 1.8 µg/L.
- Isopropylbenzene: Detected in four samples at concentrations ranging from 1.4 to 130 µg/kg.
- n-Propylbenzene: Detected in five samples at concentrations ranging from 1.4 to 260 µg/L.

- 1,2,4-Trimethylbenzene: Detected in four samples at concentrations ranging from 2.2 to 2,400 µg/L.
- 1,3,5-Trimethylbenzene: Detected in four samples at concentrations ranging from 1.3 to 740 µg/L.
- 1,2-Dichloroethane: Detected in two samples at concentrations of 1.2 µg/L and 1.6 µg/L.

7.0 DISCUSSION

Groundwater monitoring reports prepared by TRC and Holguin, Fahan & Associates were reviewed to obtain information regarding the concentration and distribution of contaminants of concern associated with a reported release that was discovered beneath 76 Service Station #0981 located at 1004 La Cienega Boulevard in 1987. Copies of the TRC and Holguin, Fahan & Associates reports that were reviewed are included in Appendices A and C, respectively.

The apparent sources of the contamination, two 10,000 gallon underground fuel storage tanks, were removed from 1004 La Cienega Boulevard in March 1987. An automotive service station was observed on the 1004 La Cienega Boulevard property in available on-line aerial photographs dating back to at least 1948. Documentation regarding the number, locations, and sizes of USTs, and releases at fuel stations of similar age are often incomplete. It is not known if the original USTs had been removed from the site. Groundwater plume assessment activities were initiated in January 1988 and included the installation of six onsite and four offsite groundwater monitoring wells, and groundwater monitoring has been performed since. Separate phase hydrocarbons floating on the groundwater were observed in groundwater monitoring wells and were removed from the wells manually from May 1989 through November 2004. Soil vapor extraction and groundwater pump and treat systems were installed at the site in 2004 and were still operating in May 2013 (Site Quarterly Report January 1 – March 31, 2007, Appendix B).

Figures included in the TRC Quarterly Monitoring Report January through March 2005 illustrate a contaminant plume centered over the area of two former USTs located in the southern portion of the property and two dispenser islands that were located in the west-central portion of the 1004 La Cienega property. The direction of groundwater flow is illustrated to be to the south-southeast. The dissolved TPPH and benzene plume is depicted as extending approximately 200 feet south of the 76 Station property line and beneath the subject property.

Groundwater monitoring wells BC-5, BC-6, BC-8, BC-9, BC-11, BC-13, BC-14, MW-1, and MW-2, completed by the owners of 1004 La Cienega Boulevard to assess the release and groundwater monitoring associated with the release from the USTs have screen intervals extending from 10 feet to 40 feet bgs. Well MW-20, also completed during the 1004 La Cienega assessment activities, was screened from 10 to 30 feet bgs (Holguin, Fahan & Associates, Second Quarter 2013 Semiannual Groundwater Monitoring Report, Appendix C).

Groundwater samples collected from well BC-16, installed 100 feet southeast of the source area, contained high concentrations of gasoline range organics and BTEX when monitored between 1992 and 2003. The depth of the screened interval of well BC-16 is not known. Groundwater monitoring well MW-22, completed during 1004 La Cienega Boulevard assessment activities, is screened from 5 to 25 feet bgs and is located in South Alfred Street approximately 320 feet down-gradient from the reported source area. Well MW-18 is located in South Alfred Street approximately 450 feet southeast and down-gradient of the reported source area. The depth of the MW-18 screened interval is not known. Gasoline range hydrocarbons have consistently been reported in samples collected from well MW-22, with occasional detections of ethylbenzene and xylene. BTEX and MTBE have been reported sporadically in well MW-18 during the 1004 La Cienega Boulevard monitoring activities (Appendices A and C).

Holguin, Fahan & Associates performed a site assessment on the subject property (1022 – 1054 La Cienega Boulevard) in November and December 2012 that included CPT borings, collection of soil, soil gas, and groundwater samples. Lithology recorded in logs of CPT borings completed throughout the subject property illustrate interbedded fine grained sediments containing various mixtures of silt, clay and sand are present between the surface of the ground and 36 feet bgs. Sand layers consistent with groundwater levels measured between 15 and 17.5 were observed at depths between 15 and 20 feet bgs in borings CPT-2, CPT-3, CPT-4, CPT-6, CPT-7, CPT-8, and CPT-9. Petroleum hydrocarbons including gasoline and BTEX were detected in two soil samples, both collected from a depth of 15 feet bgs. Gasoline range petroleum hydrocarbons, BTEX, and other gasoline related VOCs were detected in groundwater samples collected from wells W-1 and W-2. Gasoline, benzene, and xylenes were detected in groundwater from well W-1, and MTBE was detected in groundwater collected from well W-3. Gasoline range petroleum hydrocarbons were detected in all soil gas samples at concentrations ranging from 1,000 micrograms per cubic meter ($\mu g/m^3$) to 12,000 $\mu g/m^3$ (Appendix C), and toluene, ethylbenzene, and xylenes were detected in two soil gas samples. Benzene was detected in one soil gas sample at a concentration of 3.7 $\mu g/m^3$. Naphthalene was detected in eight of nine soil gas samples. The Holguin, Fahan & Associates report is included in Appendix C.

8.0 CONCLUSIONS

Based on the results of the investigation performed in the northern section of the Subject Property, and the results of laboratory analyses performed on soil, soil gas, and groundwater samples collected from the study area, the following conclusions can be made:

1. Sediments beneath the subject site are composed of interbedded sand, silty sand, sandy clay, silty sand with clay, and silty clay layers from the ground surface to approximately 25 feet bgs.

2. A granular sand layer containing few fines was observed in borings MW-25U and MW-26U at depths between 17 and 20 feet bgs. Moisture in the borehole increased below a depth of approximately 13 feet and between 18 to 19.5 feet bgs the sand was saturated with free water between sand grains. A sand layer was observed in MW-26U from 18 to 18.5 feet bgs and was wet. Non-water bearing fine grained sediments composed of silty clay were observed below and between the sand layers.

3. A deeper groundwater zone was observed between 23 and 35 feet bgs in soil boring MW-25, with wet sediments observed in the 25 foot sample. Substantially more water was observed flowing into monitoring wells at a depth between 20 and 25 feet bgs than was observed in the shallower water bearing unit located between 17 and 20 feet bgs in MW-25U and MW-26U.

4. Sand layers consistent with groundwater levels measured between 15 and 17.5 were observed at depths between 15 and 20 feet bgs in CPT borings completed during Holguin, Fahan & Associates assessment activities performed in 2013. Sand layers observed in borings CPT-2, CPT-3, CPT-4, CPT-6, CPT-7, CPT-8, and CPT-9 are at depths consistent with the shallow water bearing unit observed in MW-25U and wet sand observed in MW-26U.

5. Groundwater samples collected from monitoring wells with screens crossing both the shallow groundwater bearing sediments and deeper water bearing unit contain lower concentrations of petroleum hydrocarbons when compared to concentrations in samples collected from monitoring wells completed in the upper water bearing unit. The lower concentrations of petroleum hydrocarbons detected in samples collected with longer and deeper well screens demonstrate that the concentrations of petroleum hydrocarbons in groundwater samples collected from wells with screens

crossing both water bearing units are likely to have been diluted with cleaner water from the deeper water bearing unit.

6. Groundwater monitoring well MW-21 was installed during assessment activities associated with 1004 La Cienega boulevard near the east edge of Union 76 property and is screened from 5 to 25 feet bgs. Well MW-21 is hydraulically cross-gradient of the source area illustrated by TRC in their Quarterly Monitoring Report January through March 2005 (Appendix A). However, concentrations of petroleum hydrocarbons reported in groundwater samples collected from MW-21 are remarkably higher than those detected in well MW-20, located west of MW-21 and closer to the center of the plume (Appendix C). The difference in hydrocarbon concentrations detected in samples collected from these two wells suggest that two water bearing units, similar to that observed on the subject property may be present beneath 1004 La Cienega Boulevard, and that water collected from well MW-20 may be diluted with cleaner water from a deeper water bearing unit.

7. Groundwater monitoring wells BC-5, BC-6, BC-8, BC-9, BC-11, BC-13, BC-14, MW-1, and MW-2, completed by consultants for ConocoPhillips Company to assess the release and groundwater monitoring associated with 1004 La Cienega Boulevard have screen intervals extending from 10 feet to 40 feet bgs. Well MW-20, also completed during assessment activities associated with 1004 La Cienega Boulevard assessment activities was screened from 10 to 30 feet bgs (Second Quarter Semiannual Groundwater Monitoring Report, Appendix C). The results of laboratory analyses performed on samples collected from these wells suggest that water with lower concentrations of the chemicals of concern may enter the wells from deeper water bearing units. Groundwater results from these wells may be skewed low and not representative of depth-specific conditions.

8. Groundwater monitoring well MW-22, completed for ConocoPhillips and the 1004 La Cienega assessment, is screened from 5 to 25 feet bgs and is located approximately 320 feet down-gradient from the reported source area. Gasoline range petroleum hydrocarbons have consistently been detected in this well demonstrating the plume from the service station extends well offsite to the southeast of 1004 La Cienega Boulevard (Appendix A and Appendix C).

9. TPH-g, TPH-d, and fuel-related VOCs are present in the subsurface soils and groundwater and in greater concentrations in soil samples collected in the northeastern section of the subject property at depths between 13 feet bgs and 20 feet bgs, as groundwater is approached. Gray discolored soil with a gasoline odor

was noted in borings MW-25U, MW-26U, SV-1, SV-8, and SV-11 below a depth of 10 feet bgs indicating shallow soil impacts may be present beneath the subject site. Additionally, a hydrocarbon sheen was observed on groundwater purged from monitoring well MW-25U (Well Construction and Groundwater Sampling Logs, Appendix D).

10. Volatile fuel constituents including TPH-g, benzene, toluene, xylenes, naphthalene, and/or MTBE were detected in soil gas samples collected from locations SV-2, SV-3, and SV-11 during Leighton Consulting's assessment. However these soil gas samples were collected approximately 72 hours after several rain events had occurred and soils may have contained moisture that reduced soil gas volumes resulting in lower concentrations of the analytes. Higher concentrations of contaminants of concern were detected in soil gas samples collected from borings completed within the boundaries of the subject property during the Holguin, Fahan Associates investigation performed during December 2012.

11. Benzene was detected in soil samples collected from 14 of 15 boring locations during Leighton Consulting's January and August 2013 assessments. The maximum concentrations of benzene were detected in soil samples collected at depths of 15 feet and 20 feet bgs from boring MW-25 with reported concentrations of 100 µg/kg and 68 µg/kg, respectively.

12. Elevated concentrations of volatile fuel constituents were detected in groundwater samples collected from groundwater wells, MW-25, MW-25U, MW-25D, MW26U, and MW-26D. Benzene, ethylbenzene, toluene, and total xylene exceed the current Maximum Contaminant Levels (MCLs) in several samples.

13. Based on previous groundwater monitoring reports reviewed by Leighton Consulting and results of our assessment, gasoline range petroleum hydrocarbons and gasoline related VOCs including benzene and naphthalene have migrated from beneath 1004 La Cienega Boulevard to the subject property. Contaminants of concern resulting from releases occurring beneath 1004 La Cienega Boulevard are present in groundwater beneath the subject site at concentrations that may impact sensitive receptors that will occupy the proposed facility.

10.0 LIMITATIONS/DISCLOSURE

Leighton Consulting prepared this report using the data provided by others. We assume that the data was collected in a defensible manner and all field work met the standard of care for similar services. The field data that was provided to us was used as the foundation of all our interpretations and conclusions.

Services were performed in accordance with Leighton Consulting's agreement and understanding with DIDM and solely for the use of DIDM and their designated representatives. Opinions and/or recommendations are intended for use by DIDM and the purpose, site, location, time frame, and project parameters indicated. Leighton Consulting is not responsible for subsequent separation, detachment, or partial use of this document. Any reliance on this report by a third party shall be at such party's sole risk.

RE: SITE QUARTERLY REPORT
JANUARY 1 – MARCH 31, 2005

Dear Mr. Pirotton:

On behalf of ConocoPhillips Company, TRC submits this First Quarter 2005 Site Quarterly Report for 76 Station 0981. Copies of the Quarterly Monitoring Report, January through March 2005 and the First Quarter 2005 Vapor Extraction and Groundwater Treatment System O&M Report are also included with this report.

BACKGROUND

In March 1986, four groundwater monitoring wells (B1, MW-1, MW-2, and B4) and one soil boring (B5) were drilled during initial site assessment activities. In March 1987, two 10,000-gallon gasoline underground storage tanks (USTs) and one waste oil UST were excavated and removed from the site. The two gasoline USTs were replaced with two 12,000-gallon, double-walled, fiberglass-coated, steel USTs. Monitoring Wells B1 and B4 were damaged during UST replacement activities and were subsequently abandoned. Hydrocarbon-affected soil was detected in soil samples collected from beneath the former gasoline USTs.

From January through July 1988, six onsite (BC-5 through BC-9 and BC-14) and four offsite (BC-10 through BC-13) groundwater monitoring wells were installed. In August 1992, two additional offsite groundwater monitoring wells (BC-15 and BC-16) were installed. In August 1997, offsite Monitoring Well MW-17 was installed, and in March 2000, offsite Monitoring Well MW-18 was installed southeast of the site in Alfred Street.

21 Technology Drive • Irvine, California 92618
Telephone 949-727-9336 • Fax 949-727-7399

Fluid level monitoring and groundwater sampling have been performed at the site on a quarterly, or more frequent, basis since February 1988 and continue to the present. Groundwater has historically occurred at depths of approximately 10.7 to 18 feet below grade, with a gradient predominantly directed to the south-southeast. Dissolved-phase petroleum hydrocarbons and liquid-phase hydrocarbons (LPH) have been detected beneath the site.

In July 1997, July 1998, and January 1999, dual phase extraction tests were performed at the site. In addition, dual phase extraction tests were performed on a month basis during the fourth quarter of 1999.

In November 2002, Recovery Well MW-20 and Vapor Well VW-1 were drilled and installed in the southeast corner of the site and adjacent to the western dispenser island, respectively. Concentrations of 0.86 mg/kg total petroleum hydrocarbons (TPH-G) and 0.096 mg/kg benzene were detected in the soil sample collected from approximately 15.5 fbg in Recovery Well MW-20; no detectable concentration of methyl tertiary butyl ether (MTBE) was present in this soil sample. Concentrations of 2.8 mg/kg TPH-G, 0.020 mg/kg benzene, and 4.2 mg/kg MTBE were detected in soil sample collected from approximately 6.5 fbg in Vapor Well VW-1.

In July 2003, offsite Monitoring Wells BC-10, BC-12, BC-16, and MW-17 were abandoned prior to redevelopment of the property located adjacent to (south of) the site.

In September 2003, redevelopment of the property located adjacent to the site (Ships Center property) was initiated. Excavation and soil handling activities were conducted in accordance with South Coast Air Quality Management (SCAQMD) Rule 1166 soil monitoring requirements.

METHOD OF CLEANUP

From May 1989 to November 2004, LPH accumulations were manually recovered from onsite groundwater monitoring wells.

During dual-phase extraction activities conducted in July 1997, July 1998, and January 1999, approximately 650 pounds of hydrocarbons were recovered and destroyed. During dual-phase extraction activities conducted monthly during the fourth quarter of 1999, approximately 1,527 pounds of hydrocarbons were removed and destroyed. In total, approximately 2,178 pounds of hydrocarbons have been removed and destroyed from the site via dual-phase extraction activities.

A total of approximately 8,175 tons of hydrocarbon-affected soil and 48,500 gallons of hydrocarbon-affected groundwater were removed from the Ships Center property during development activities.

In July 2004, a vapor extraction began operation at the site. During this reporting period, approximately 8,373 pounds of hydrocarbons were recovered through vapor extraction. In November 2004, a groundwater treatment system began operation at the site. During this reporting period, approximately 102,943 gallons of groundwater were processed. Since startup, the treatment system has recovered approximately 31,071 pounds of hydrocarbons and processed 302,504 gallons of water.

DISPOSAL

Fluids generated during quarterly groundwater sampling activities were transported to an approved offsite facility for disposal or recycling. Copies of manifests are included in the attached quarterly monitoring report.

PROGRESS THIS QUARTER

Fluid level monitoring and groundwater sampling activities were performed at the site on January 17, 2005. A copy of the Quarterly Monitoring Report, January through March 2005 is attached.

The vapor extraction and groundwater treatment system operated for 627 hours during this quarter. A copy of the First Quarter 2005 Vapor Extraction and Groundwater Treatment System O&M Report is attached.

PLANNED PROGRESS NEXT QUARTER

Quarterly monitoring and sampling activities, operation of the vapor extraction and groundwater treatment system, and quarterly reporting activities will continue through the next reporting period.

Redevelopment of the Ships Center property (located adjacent to the site) will continue through the next reporting period. TRC will complete modifications to the groundwater treatment system at the site to accept groundwater from the basement sump in the Ships Center building.

Summary of Gauging and Sampling Activities
January 2005 through March 2005
76 Station 0981
1004 South La Cienega Boulevard
Los Angeles, CA

Project Coordinator: **Shari London**
Telephone: **714-428-7720**
Water Sampling Contractor: ***TRC***
Compiled by: **Alma Montaño**
Date(s) of Gauging/Sampling Event: **1/17/05**

Sample Points

Groundwater wells: **9** onsite, **5** offsite Wells gauged: **8** Wells sampled: **5**
Purging method: **Submersible pump**
Purge water disposal: **Crosby and Overton treatment facility**
Other Sample Points: **0** Type: **n/a**

Liquid Phase Hydrocarbons (LPH)

Wells with LPH: **1** Maximum thickness (feet): **0.01 (BC-5)**
LPH removal frequency: **n/a** Method: **n/a**
Treatment or disposal of water/LPH: **n/a**

Hydrogeologic Parameters

Depth to groundwater (below TOC): Minimum: **9.67 feet** Maximum: **15.63 feet**
Average groundwater elevation (relative to available local datum): **112.35 feet**
Average change in groundwater elevation since previous event: **1.78 feet**
Interpreted groundwater gradient and flow direction:
Current event: **0.02 ft/ft, southeast**
Previous event: **0.008 ft/ft, south (10/15/04)**

Selected Laboratory Results

Wells with detected **Benzene:** **5** Wells above MCL (1.0 µg/l): **5**
Maximum reported benzene concentration: **1,700 µg/l (MW-1)**

Wells with **TPPH 8260B** **5** Maximum: **30,000 µg/l (MW-1)**
Wells with **MTBE** **4** Maximum: **4,400 µg/l (MW-1)**

Notes:

BC-11=Monitored Only, BC-13=Monitored Only, BC-14=Inaccessible - Pump In Well, BC-5=LPH in well, BC-7=Port Sample, BC-8=Monitored Only, BC-9=Monitored Only, MW-1=Port Sample, MW-18=Car over well, MW-19=Monitored Only, MW-2=Port sample dry, MW-20=Port Sample,

This report presents the results of groundwater monitoring and sampling activities performed by TRC. Please contact the primary consultant for other specific information on this site.

TABLES

TABLE KEY

STANDARD ABREVIATIONS

--	=	not analyzed, measured, or collected
LPH	=	liquid-phase hydrocarbons
Trace	=	less than 0.01 foot of LPH in well
µg/l	=	micrograms per liter (approx. equivalent to parts per billion, ppb)
mg/l	=	milligrams per liter (approx. equivalent to parts per million, ppm)
ND<	=	not detected at or above laboratory detection limit
TOC	=	top of casing (surveyed reference elevation)

ANALYTES

BTEX	=	benzene, toluene, ethylbenzene, and (total) xylenes
DIPE	=	di-isopropyl ether
ETBE	=	ethyl tertiary butyl ether
MTBE	=	methyl tertiary butyl ether
PCB	=	polychlorinated biphenyls
PCE	=	tetrachloroethene
TBA	=	tertiary butyl alcohol
TCA	=	trichloroethane
TCE	=	trichloroethene
TPH-G	=	total petroleum hydrocarbons with gasoline distinction
TPH-D	=	total petroleum hydrocarbons with diesel distinction
TPPH	=	total purgeable petroleum hydrocarbons
TRPH	=	total recoverable petroleum hydrocarbons
TAME	=	tertiary amyl methyl ether
1,1-DCA	=	1,1-dichloroethane
1,2-DCA	=	1,2-dichloroethane (same as EDC, ethylene dichloride)
1,1-DCE	=	1,1-dichloroethene
1,2-DCE	=	1,2-dichloroethene (cis- and trans-)

NOTES

1. Elevations are in feet above mean sea level. Depths are in feet below surveyed top-of-casing.
2. Groundwater elevations for wells with LPH are calculated as: Surface Elevation – Measured Depth to Water + (Dp x LPH Thickness), where Dp is the density of the LPH, if known. A value of 0.75 is used for gasoline and when the density is not known. A value of 0.83 is used for diesel.
3. Wells with LPH are generally not sampled for laboratory analysis (see General Field Procedures).
4. Comments shown on tables are general. Additional explanations may be included in field notes and laboratory reports, both of which are included as part of this report.
5. A "J" flag indicates that a reported analytical result is an estimated concentration value between the method detection limit (MDL) and the practical quantification limit (PQL) specified by the laboratory.
6. Other laboratory flags (qualifiers) may have been reported. See the official laboratory report (attached) for a complete list of laboratory flags.
7. Concentration graphs based on tables (presented following Figures) show non-detect results prior to the Second Quarter 2000 plotted at fixed values for graphical display. Non-detect results reported since that time are plotted at reporting limits stated in the official laboratory report.
8. Groundwater vs. Time graphs may be corrected for apparent level changes due to resurvey.

GENERAL FIELD PROCEDURES

Groundwater Monitoring and Sampling Assignments

For each site, TRC technicians are provided with a Technical Service Request (TSR) that specifies activities required to complete the groundwater monitoring and sampling assignment for the site. TSRs are based on client directives, instructions from the primary environmental consultant for the site, regulatory requirements, and TRC's previous experience with the site.

Fluid Level Measurements

Initial site activities include determination of well locations based on a site map provided with the TSR. Well boxes are opened and caps are removed. Indications of well or well box damage, or of pressure buildup in the well are noted.

Fluid levels in each well are measured using a coated cloth tape equipped with an electronic interface probe, which distinguishes between liquid phase hydrocarbon (LPH) and water. The depth to LPH (if it is present), to water, and to the bottom of the well are measured from the top of the well casing (surveyors mark or notch if present) to the nearest 0.01 foot. Unless otherwise instructed, a well with less than 0.67 foot between the measured top of water and the measured bottom of the well casing is considered dry, and is not sampled. If the well contains 0.67 foot or more of water, an attempt is made to bail and/or sample as specified on the TSR.

Wells that are found to contain LPH are not purged or sampled. Instead, one casing volume of fluid is bailed from the well and the well is re-sealed. Bailed fluids are placed in a container separate from normal purge water, and properly disposed.

Purging and Groundwater Parameter Measurement

TSR instructions may specify that a well not be purged (no-purge sampling), be purged using low-flow methods, or be purged using conventional pump and/or bail methods. Conventional purging generally consists of pumping or bailing until a minimum of three casing volumes of water have been removed or until the well has been pumped dry. Pumping is generally accomplished using submersible electric or pneumatic diaphragm pumps.

During conventional purging, three groundwater parameters (temperature, pH, and conductivity) are measured after removal of each casing volume. Stabilization of these parameters, to within 10 percent, confirm that sufficient purging has been completed. In some cases, the TSR indicates that other parameters are also to be measured during purging. TRC commonly measures dissolved oxygen (DO), oxidation-reduction potential (ORP), and/or turbidity. Instruments used for groundwater parameter measurement are calibrated daily according to manufacturer's instructions.

Low-flow purging utilizes a bladder or peristaltic pump to remove water from the well at a low rate. Groundwater parameters specified by the TSR are measured continuously until they become stable in general accordance with EPA guidelines.

Purge water is generally collected in labeled drums for disposal. Drums may be left on site for disposal by others, or transported to a collection location for eventual transfer to a licensed treatment or recycling facility. In some cases, purge water may be collected directly from the site by a licensed vacuum truck company, or may be treated on site by an active remediation system, if so directed.

Groundwater Sample Collection

After wells are purged, or not purged, according to TSR instructions, samples are collected for laboratory analysis. For wells that have been purged using conventional pump or bail methods, sampling is conducted after the well has recovered to 80 percent of its original volume or after two hours if the well does not recover to at least 80 percent. If there is insufficient recharge of water in the well after two hours, the well is not sampled.

Samples are collected by lowering a new, disposable, ½-inchto 4-inch polyethylene bottom-fill bailer to just below the water level in the well. The bailer is retrieved and the water sample is carefully transferred to containers specified for the laboratory analytical methods indicated by the TSR. Particular care is given to containers for volatile organic analysis (VOAs) which require filling to zero headspace and fitting with Teflon-sealed caps.

After filling, all containers are labeled with project number (or site number), well designation, sample date, and the samplers initials, and placed in an insulated chest with ice. Samples remain chilled prior to and during transport to a state-certified laboratory for analysis. Sample container descriptions and requested analyses are entered onto a chain-of-custody form in order to provide instructions to the laboratory. The chain-of-custody form accompanies the samples during transportation to provide a continuous record of possession from the field to the laboratory. If a freight or overnight carrier transports the samples, the carrier is noted on the form.

For wells that have been purged using low-flow methods, sample containers are filled from the effluent stream of the bladder or peristaltic pump. In some cases, if so specified by the TSR, samples are taken from the sample ports of actively pumping remediation wells.

Sequence of Gauging, Purging, and Sampling

The sequence in which monitoring activities are conducted are specified on the TSR. In general, wells are gauged beginning with the least-affected well and ending with the well that has highest concentration based on previous analytic results. After all gauging for the site is completed, wells are purged and/or sampled from the least-affected well to the most-affected well.

Decontamination

In order to reduce the possibility of cross-contamination between wells, strict isolation and decontamination procedures are observed. Portable pumps are not used in wells with LPH. Technicians wear nitrile gloves during all gauging, purging and sampling activities. Gloves are changed between wells and more often if warranted. Any equipment that could come in contact with fluids are either dedicated to a particular well, decontaminated prior to each use, or discarded after a single use. Decontamination consists of washing in a solution of Liqui-nox and water and rinsing twice. The final rinse is in deionized water.

Exceptions

Additional tasks or non-standard procedures, if any, that may be requested or required for a particular site, and noted on the site TSR, are documented in field notes on the following pages.

Project Number: 0981
COC Number:
BCL Number: 05-00525

Dear Ms. Farfan:

This report contains the analytical results for the samples received under chain of custody by BC Laboratories, Inc. The samples were logged into the Laboratory Information Management System (LIMS) and BC Lab numbers were assigned to each sample. The result of the temperature check, condition of the samples and any other discrepancies were recorded on the cooler receipt form.

All applicable quality control procedures met method-specific acceptance criteria, except as noted on the following analytical and quality control reports.

This report shall not be reproduced except in full, without written approval of the laboratory.

California DOHS Certification #1186

Authorized Signature

All results listed in this report are for the exclusive use of the submitting party. BC Laboratories, Inc. assumes no responsibility for report alteration, separation, detachment or third party interpretation.

LIMITATIONS

The fluid level monitoring and groundwater sampling activities summarized in this report have been performed under the responsible charge of a California Registered Geologist or Registered Civil Engineer and have been conducted in accordance with current practice and the standard of care exercised by geologists and engineers performing similar tasks in this area. No warranty, express or implied, is made regarding the conclusions and professional opinions presented in this report. The conclusions are based solely upon an analysis of the observed conditions. If actual conditions differ from those described in this report, our office should be notified.

Summary of Gauging and Sampling Activities
July 2005 through September 2005
76 Station 0981
1004 South La Cienega Boulevard
Los Angeles, CA

Project Coordinator: **Shari London**
Telephone: **714-428-7720**
Water Sampling Contractor: ***TRC***
Compiled by: **Alma Montaño**
Date(s) of Gauging/Sampling Event: **07/18/05**

Sample Points

Groundwater wells: **9** onsite, **5** offsite Wells gauged: **9** Wells sampled: **2**
Purging method: **Submersible pump**
Purge water disposal: **Crosby and Overton treatment facility**
Other Sample Points: **0** Type: **n/a**

Liquid Phase Hydrocarbons (LPH)

Wells with LPH: **1** Maximum thickness (feet): **0.01 (BC-5)**
LPH removal frequency: **n/a** Method: **n/a**
Treatment or disposal of water/LPH: **n/a**

Hydrogeologic Parameters

Depth to groundwater (below TOC): Minimum: **11 feet** Maximum: **15.73 feet**
Average groundwater elevation (relative to available local datum): **111.72 feet**
Average change in groundwater elevation since previous event: **-0.51 feet**
Interpreted groundwater gradient and flow direction:
Current event: **0.01 ft/ft, south**
Previous event: **0.007 ft/ft, south (04/18/05)**

Selected Laboratory Results

Wells with detected **Benzene:** **1** Wells above MCL (1.0 µg/l): **1**
Maximum reported benzene concentration: **340 µg/l (BC-6)**

Wells with **TPPH 8260B** **2** Maximum: **3,000 µg/l (BC-6)**
Wells with **MTBE** **2** Maximum: **480 µg/l (BC-6)**

Notes:

BC-11=Sampled semi-annually, BC-13=Sampled semi-annually, BC-14=Not sampled-system down, BC-5=LPH in well, BC-7=Not sampled-system down, BC-8=Sampled semi-annually, BC-9=Sampled semi-annually, MW-1=Not sampled-system down, MW-18=Sampled semi-annually, MW-19=Sampled semi-annually, MW-2=Not sampled-system down, MW-20=Not sampled-system down,

This report presents the results of groundwater monitoring and sampling activities performed by TRC. Please contact the primary consultant for other specific information on this site.

TABLES

TABLE KEY

STANDARD ABREVIATIONS

--	=	not analyzed, measured, or collected
LPH	=	liquid-phase hydrocarbons
Trace	=	less than 0.01 foot of LPH in well
µg/l	=	micrograms per liter (approx. equivalent to parts per billion, ppb)
mg/l	=	milligrams per liter (approx. equivalent to parts per million, ppm)
ND<	=	not detected at or above laboratory detection limit
TOC	=	top of casing (surveyed reference elevation)

ANALYTES

BTEX	=	benzene, toluene, ethylbenzene, and (total) xylenes
DIPE	=	di-isopropyl ether
ETBE	=	ethyl tertiary butyl ether
MTBE	=	methyl tertiary butyl ether
PCB	=	polychlorinated biphenyls
PCE	=	tetrachloroethene
TBA	=	tertiary butyl alcohol
TCA	=	trichloroethane
TCE	=	trichloroethene
TPH-G	=	total petroleum hydrocarbons with gasoline distinction
TPH-D	=	total petroleum hydrocarbons with diesel distinction
TPPH	=	total purgeable petroleum hydrocarbons
TRPH	=	total recoverable petroleum hydrocarbons
TAME	=	tertiary amyl methyl ether
1,1-DCA	=	1,1-dichloroethane
1,2-DCA	=	1,2-dichloroethane (same as EDC, ethylene dichloride)
1,1-DCE	=	1,1-dichloroethene
1,2-DCE	=	1,2-dichloroethene (cis- and trans-)

NOTES

1. Elevations are in feet above mean sea level. Depths are in feet below surveyed top-of-casing.
2. Groundwater elevations for wells with LPH are calculated as: Surface Elevation – Measured Depth to Water + (Dp x LPH Thickness), where Dp is the density of the LPH, if known. A value of 0.75 is used for gasoline and when the density is not known. A value of 0.83 is used for diesel.
3. Wells with LPH are generally not sampled for laboratory analysis (see General Field Procedures).
4. Comments shown on tables are general. Additional explanations may be included in field notes and laboratory reports, both of which are included as part of this report.
5. A "J" flag indicates that a reported analytical result is an estimated concentration value between the method detection limit (MDL) and the practical quantification limit (PQL) specified by the laboratory.
6. Other laboratory flags (qualifiers) may have been reported. See the official laboratory report (attached) for a complete list of laboratory flags.
7. Concentration graphs based on tables (presented following Figures) show non-detect results prior to the Second Quarter 2000 plotted at fixed values for graphical display. Non-detect results reported since that time are plotted at reporting limits stated in the official laboratory report.
8. Groundwater vs. Time graphs may be corrected for apparent level changes due to resurvey.
