Lead Hazards

Lead based paint is poisonous. The dust and chips from lead based paint are dangerous when swallowed or inhaled. The smallest lead dust particles cannot be seen but they get into the body. They are especially dangerous to small children and pregnant women. Lead can affect children's developing nervous systems, causing reduced IQ and learning disabilities.

Lead poisoning affects adults too. High lead levels can cause health problems including high blood pressure, headaches, digestive problems, memory and concentration problems, kidney damage, mood changes, nerve disorders, sleep disturbances, and muscle or joint pain. A single, very high exposure to lead can cause lead poisoning. Lead can also affect the ability of both women and men to have healthy children.

A home built before 1978 is likely to have surfaces painted with lead based paint. When you work on these surfaces you can be exposed to lead. Dry-sanding lead based paint can produce dust and chips. Scraping, brushing, or blasting lead based paint can produce poisonous paint chips or dust. Burning lead based paint with open flame torches to make it eaiser to strip is especially dangerous. The fumes from the hot paint contain lead and volatile chemicals that are poisonous when inhaled.

EPA has proposed regulations that would require renovation and remodeling contractors to provide the EPA pamphlet, Lead-Based paint: Protect Your Family, to homeowners and occupants of most pre-1978 homes before they begin work. You should call the National Lead Information Clearinghouse (800-424-LEAD) to get further information on the availability of the pamphlet.

Fluorescent & High Intensity Discharge (HID) lamps

The following lamps contain mercury:
fluorescent; mercury vapor; metal halide; high pressure sodium and neon. Fluorescent and HID lighting is an excellent business and environmental choice because it can use up to 50% less electricity than incandescent lighting. However, used fluorescent and HID lamps must be managed properly because they contain mercury. The following is a list of Cal EPA, Department of Toxic Substances Control (DTSC) Guidelines:

- Store lamps in an area and in a way that will prevent them from breaking, such as in boxes the lamps came in or boxes supplied by lamp recyclers;
- Mark the lamp storage area with the words "Fluorescent lamps for recycling";
- Do not break or crush lamps because mercury may be released;
- If lamps are accidentally broken, store them in a sealed container. Pick spilled powder and add it to the sealed container;
- Take lamps to a consolidation site * or arrange with a lamp transporter to pick them up. Contact your county or state environmental office or solid waste office for services in your area. To protect yourself from future liability save the invoices that track your lamps and include the following information.
- The date of shipment;
- The number of lamps;
- The location from where the lamps are being shipped;
- The destination of the shipment.

For further information contact the DTSC regional office nearest you:
Region 1 – Sacramento (916) 255-3618
Region 2 – Berkeley (510) 540-3739
Region 3 – Glendale (818) 551-2830
Region 4 – Cypress (714) 484-5400

WHAT IS GROUNDWATER?

Groundwater is but one stage, or form, through which water passes in the earth's hydrologic cycle (see Figure 1). The hydrologic cycle is the continual movement of water over, in, and through the earth and its atmosphere as it changes from one form—solid, liquid, gas—to another.

The water you use today may have evaporated from an ocean, traveled through the atmosphere, fallen back to the earth's surface, gone underground, and from there moved to streams leading back to the seas.

Water is readily visible in many forms—clouds, rain, snow, fog, lakes, streams, oceans, polar ice caps—but as groundwater, it is, by definition, out of sight. Our understanding of groundwater and its role in the hydrologic cycle has been hindered by the difficulty of observing and measuring the properties and extent of groundwater.

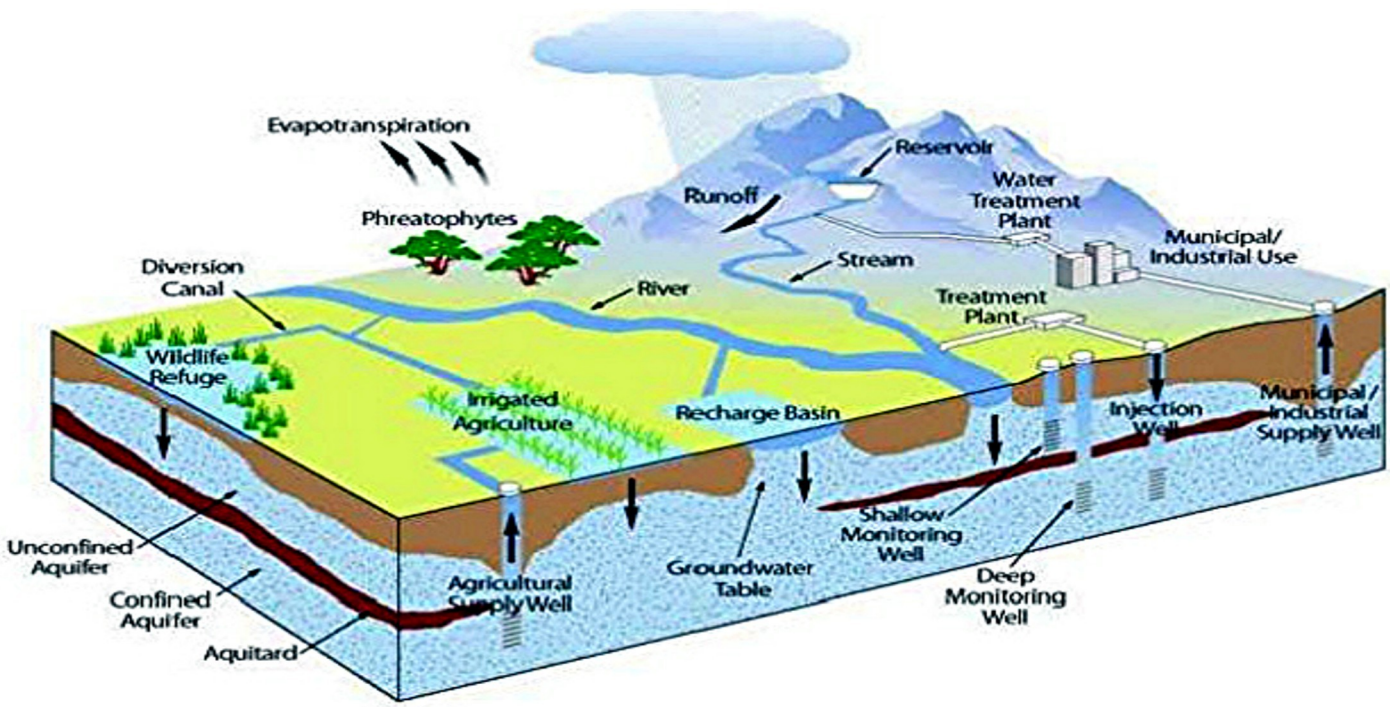
Long-standing misconceptions about groundwater's origin, occurrence, and movement have by no means prevented people from using it. Groundwater supplies have been tapped for thousands of years, but only recently have we started to understand their characteristics and to manage them.

Much remains to be discovered about groundwater, but wider public awareness of its nature and properties is an important first step.

Water Underground

When water falls to earth as rain or snow, most of it seeps into the ground. It first passes through the unsaturated zone, where soil pores are filled partly with air and partly with water. Plant roots, bacteria, fungi, insects, and burrowing animals are found in the unsaturated zone.

The water flows downward through the unsaturated zone into the saturated zone, where all pores are filled with water. The upper boundary of the saturated zone is called the water table (see Figure 2).



The water table rises when water enters the saturated zone; the water table falls when water is discharged from the saturated zone naturally (e.g., springs, lakes, or rivers) or by pumping. Water in the saturated zone is commonly referred to as groundwater.

Recharge

The process by which water—from rainfall, snowmelt, and other sources—flows into a waterbearing geologic formation (aquifer) is known as recharge.

Recharge of the saturated zone occurs when water seeps down through the unsaturated zone. The unsaturated zone is important to the groundwater underlying it because many impurities are removed as water moves through this zone.

Both the quantity and quality of groundwater can be affected by the condition of the unsaturated zone in a recharge area.

Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin

- Groundwater Basin Number: 4-11.04
- County: Los Angeles
- Surface Area: 177,000 acres (277 square miles)

Basin Boundaries and Hydrology

The Central Subbasin occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. This subbasin is commonly referred to as the "Central Basin" and is bounded on the north by a surface divide called the La Brea high, and on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced and Puente Hills. The southeast boundary between Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, which is a regional drainage province boundary. The southwest boundary is formed by the Newport Inglewood fault system and the associated folded rocks of the Newport Inglewood uplift. The Los Angeles and San Gabriel Rivers drain inland basins and pass across the surface of the Central Basin on their way to the Pacific Ocean. Average precipitation throughout the subbasin ranges from 11 to 13 inches with an average of around 12 inches.

Hydrogeologic Information

Water Bearing Formations

Throughout the Central Basin, groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. The Central Basin is historically divided into forebay and pressure areas. The Los Angeles forebay is located in the northern part of the Central Basin where the Los Angeles River enters the Central Basin through the Los Angeles Narrows from the San Fernando Groundwater Basin. The Montebello forebay extends southward from the Whittier Narrows where the San Gabriel River encounters the Central Basin and is the most important area of recharge in the subbasin. Both forebays have unconfined groundwater conditions and relatively interconnected aquifers that extend up to 1,600 feet deep to provide recharge to the aquifer system of this subbasin (DWR 1961). The Whittier area extends from the Puente Hills south and southwest to the axis of the Santa Fe Springs-Coyote Hills uplift and contains up to 1,000 feet of freshwater-bearing sediments. The Central Basin pressure area is the largest of the four divisions, and contains many aquifers of permeable sands and gravels separated by semi-permeable to impermeable sandy clay to clay, that extend to about 2,200 feet below the surface (DWR 1961). The estimated average specific yield of these sediments is around 18 percent. Throughout much of the subbasin, the aquifers are confined, but areas with semi-permeable aquicludes allow some interaction between the aquifers (DWR 1961).

The main productive freshwater-bearing sediments are contained within Holocene alluvium and the Pleistocene Lakewood and San Pedro Formations (DWR 1961). Throughout most of the subbasin, the near surface Bellflower aquiclude restricts vertical percolation into the Holocene age Gaspur aquifer and other underlying aquifers, and creates local semi-perched groundwater

conditions. The main additional productive aquifers in the subbasin are the Gardena and Gage aquifers within the Lakewood Formation and the Silverado, Lynwood and Sunnyside aquifers within the San Pedro Formation (DWR 1961). Specific yield of deposits in this subbasin range up to 23 percent in the Montebello forebay, 29 percent in the Los Angeles forebay, and 37 percent in the Central Basin pressure area (DWR 1961). Historically, groundwater flow in the Central Basin has been from recharge areas in the northeast part of the subbasin, toward the Pacific Ocean on the southwest. However, pumping has lowered the water level in the Central Basin and water levels in some aquifers are about equal on both sides of the Newport-Inglewood uplift, decreasing subsurface outflow to the West Coast Subbasin (DWR 1961).

There are several principal aquifers/aquicludes present in this subbasin.

Aquifers/ Aquiclude	Age	Formation	Lithology	Maximum Thickness (feet)
Gaspur	Holocene		Coarse sand, gravel	120
Semiperched	Holocene		Sand, gravel	60
Bellflower	Pleistocene	Lakewood Formation	Clay, sandy clay	140
Gardena	Pleistocene	Lakewood Formation	Sand, gravel	160
Gage			Sand	120
Silverado	Lower Pleistocene	San Pedro Formation	Sandy gravel	300
Lynwood			Coarse sand and gravel	150
Sunnyside				350

Restrictive Structures

Many faults, folds and uplifted basement areas affect the water-bearing rocks in the Central Basin. Most of these structures form minor restrictions to groundwater flow in the subbasin. The strongest effect on groundwater occurs along the southwest boundary to the Central Subbasin. The faults and folds of the Newport – Inglewood uplift are partial barriers to movement of groundwater from the Central Basin to the West Coast Basin (DWR 1961). The La Brea high is a system of folded, uplifted and eroded Tertiary basement rocks. Because the San Pedro Formation is eroded from this area, subsurface flow southward from the Hollywood Basin is restricted to the Lakewood formation (DWR 1961). The Whittier Narrows is an eroded gap through the Merced and Puente Hills that provides both surface and subsurface inflow to the Central Basin (DWR 1961). The Rio Hondo, Pico, and Cemetery faults are northeast-trending faults that project into the gap and displace aquifers. The trend of these faults parallels the local groundwater flow and do not act as significant barriers to groundwater flow (DWR 1961).

Recharge Areas

Groundwater enters the Central Basin through surface and subsurface flow and by direct percolation of precipitation, stream flow, and applied water; and replenishes the aquifers dominantly in the forebay areas where permeable sediments are exposed at ground surface (DWR 1961). Natural replenishment of the subbasin's groundwater supply is largely from surface inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Percolation into the Los Angeles Forebay Area is restricted due to paving and development of the surface of the forebay. Imported water purchased from Metropolitan Water District and recycled water from Whittier and San Jose Treatment Plants are used for artificial recharge in the Montebello Forebay at the Rio Hondo and San Gabriel River spreading grounds (DWR 1999). Saltwater intrusion is a problem in areas where recent or active river systems have eroded through the Newport Inglewood uplift. A mound of water to form a barrier is formed by injection of water in wells along the Alamitos Gap (DWR 1999).

Groundwater Level Trends

Water levels varied over a range of about 25 feet between 1961 and 1977 and have varied through a range of about 5 to 10 feet since 1996. Most water wells show levels in 1999 that are in the upper portion of their recent historical range.

Groundwater Storage

Groundwater Storage Capacity. Total storage capacity of the Central Basin is 13,800,000 (DWR 1961).

Groundwater in Storage.

Groundwater Budget (Type A)

A complete water budget could not be constructed due to the lack of data available. Recharge to the subbasin is accomplished through both natural and artificial recharge. The Watermaster reported natural recharge for the subbasin to be 31,950 af and artificial recharge to be 63,688 af for 1998 (DWR 1999). Additionally, the subbasin receives 27,000 af/yr of water through the Whittier Narrows from the San Gabriel Valley Basin in the form of subsurface flow (SWRB 1952). Urban extractions for the subbasin were 204,335 af in 1998 (DWR 1999).

Groundwater Quality

Characterization. TDS content in the subbasin ranges from 200 to 2,500 mg/l according to data from 293 public supply wells. The average for these 293 wells is 453 mg/l.

I

Impairments.

Water Quality in Public Supply Wells

Constituent Group[1]	Number of wells sampled[2]	Number of wells with a concentration above an MCL[3]
Inorganics – Primary	316	15
Radiological	315	1
Nitrates	315	2
Pesticides	322	0
VOCs and SVOCs	344	43
Inorganics – Secondary	316	113

[1] A description of each member in the constituent groups and a generalized discussion of the relevance of these groups are included in *California's Groundwater – Bulletin 118* by DWR (2003).
[2] Represents distinct number of wells sampled as required under DHS Title 22 program from 1994 through 2000.
[3] Each well reported with a concentration above an MCL was confirmed with a second detection above an MCL. This information is intended as an indicator of the types of activities that cause contamination in a given basin. It represents the water quality at the sample location. It does not indicate the water quality delivered to the consumer. More detailed drinking water quality information can be obtained from the local water purveyor and its annual Consumer Confidence Report.

Well Production characteristics

	Well yields (gal/min)

Department of Health Services and cooperators	Title 22 water quality	294

Basin Management

Groundwater management:	Central Basin was adjudicated in 1965, and the Department of Water Resources was appointed Watermaster. Every month extractions are reported to the Watermaster by each individual pumper. This allows the Watermaster to regulate the water rights of the subbasin. (DWR 1999)

TIPS TO PREVENT MOLD, MILDEW & FUNGI

Mold can become a problem in your apartment home and/or homesite if there is moisture available to allow it to thrive and multiply. The following sources of indoor moisture that may cause problems are:

- House plants (watering can generate large amounts of moisture);
- Steam from cooking;
- Shower/bath steam;
- Wet clothes on indoor drying lines; and
- Water leaks, improper window caulking allowing water to intrude.

There are several ways in which your help can prevent mold growth in the future. The following list may be used as a guide:

A. Remove Excess Moisture

1. Dry out mops and cleaning utensils thoroughly before storing inside your mobilehome.
2. Wipe down bathroom walls and shower doors immediately after bathing; allow towels to air out. Wash and dry towels often.
3. Wipe down any condensation from interior of windows and windowsills.

B. Keep Things Clean

1. Keep closets, dresser drawers – any place where mildew is likely to grow – as clean as possible.
2. Soil on dirty articles can supply enough food for mildew to start to grow when moisture and temperature is right.
3. Greasy films, such as those that form on kitchen walls, also contain many nests for mildew-causing growth.

C. Circulate the Air

1. When the outside is drier than the inside, ventilation allows the dry air to enter, take up excess moisture, and then be carried outside.
2. When natural breezes are not sufficient, use central air conditioning (fan only) and bath/laundry room exhaust fan(s) where available.
3. Poorly ventilated closets get damp and musty during continued wet weather, and articles stored in them are apt to mildew. Try to improve the air circulation by opening the closet doors. In addition, hang the clothes loosely so that air can circulate around them.
4. Dry all wet clothing (including clothes wet from rain or perspiration) before putting in the closet.

Mold is caused when microscopic, air-borne spores land on moist surfaces and spread rapidly. Molds can have useful purposes. Life-saving penicillin is derived from mold. Many foods, such as blue cheese, require mold as part of the manufacturing process. And as owners of compost piles know, mold plays an important role in the cycle of nature, helping to break down organic materials.

But the mold that a growing number of builders and homeowners are encountering poses significant problems. Unchecked mold growth on interior wood, wallboard, paper and carpet has been blamed for serious illnesses. It can be exceedingly difficult to eradicate, and has even rendered some buildings uninhabitable.

This mold has the same root causes as food mold. Tiny spores—less than 4 microns in size—land on damp spots when excessive moisture or water accumulates indoors. These spores then begin digesting whatever they are growing on in order to survive and spread.

According to the U.S. Environmental Protection Agency, there is no practical way to eliminate all mold and mold spores in the indoor environment. But mold can be controlled by controlling moisture.

It takes a concerted effort to maintain a mold-resistant building. Builders and contractors must carefully construct buildings in accordance with approved plans and follow good construction practices in assembling the building components. Building owners and tenants must be observant and take immediate steps to maintain existing buildings and their systems to prevent moisture from accumulating.

General Tips for Preventing Mold

Here are some commonsense precautions that builders, homeowners, and/or building owners can follow to avoid mold and ensure health and safety when building or maintaining a structure.

- Fix leaky plumbing and leaks in the building envelope as soon as possible.
- Watch for condensation and wet spots.
- Fix sources of moisture problems as soon as possible.
- Prevent moisture caused by condensation by increasing surface temperature or reducing the moisture level in air (humidity).
- Insulate or increase air circulation to increase surface temperature.
- Increase ventilation (if outside air is cold and dry), or dehumidify (if outdoor air is warm and humid) to reduce the moisture level in air, repair leaks, etc.
- Keep heating, ventilation and air-conditioning drip pans clean, flowing properly and unobstructed.
- Vent moisture-generating appliances, such as dryers, to the outside where possible.
- Maintain low indoor humidity, below 60 percent relative humidity (RH), ideally 30 to 50 percent, if possible.
- Adhere to a regular schedule of building/HVAC inspections and maintenance.
- Provide drainage outside foundation walls, and slope the ground away from the foundation to speed drying after rainfalls.

What the Codes Say

The ICC *International Codes*™ are the minimum requirements necessary to ensure safety. According to these codes, builders and owners must fight the problem of mold with a three-fold approach.

1. There must be proper ventilation of all interior habitable and occupiable areas along with specific concealed spaces.
   - See Section 1203 of the *International Building Code®*, Section R303 of the *International Residential Code®*, and Chapter 4 of the *International Mechanical Code®*.
2. The exterior envelope of all buildings must be provided with vapor retarders, water-resistant barriers and the necessary flashing.
   - See Chapter 14 of the *International Building Code* and Section R703 of the *International Residential Code*.
3. The maintenance of existing buildings and structures is of the utmost importance. This includes not only the exterior of the structure but also its plumbing and mechanical systems.
   - See Sections 304, 403 and 504 of the *International Property Maintenance Code®*.

If You Have To Remove Mold: Guidelines for Remediation

Mold can generally be removed from nonporous (hard) surfaces by wiping or scrubbing with water or a combination of water and detergent. The use of a biocide, such as chlorine bleach, is not recommended as a routine practice during mold cleanup. Remember, biocides are toxic to humans, as well as to mold, and you should read and follow label precautions. Never mix chlorine bleach solution with cleaning solutions or detergents that contain ammonia becouse toxic fumes could be produced.

When a mold problem is discovered, it is important to protect the health of everyone involved—tenants, contractors ond work crews. These guidelines will help, even if you have little or no experience with mold remediation.

Refer to these guidelines when evaluating an in-house remediation plan or a remediation plan submitted by an outside contractor. Contractors and other professionals who respond to mold and moisture situations in commercial buildings and schools will also find these guidelines essential.

Investigate and evaluate moisture and mold problems.

- Assess the size of the moldy area (square feet).
- Consider the possibility of hidden mold.
- Clean up small mold problems and fix moisture problems before they become large problems.
- Select a remediation manager for medium- or large-sized mold problems.
- Investigate areas associated with occupant complaints.
- Identify sources or causes of water or moisture problems.
- Note type of water-damaged materials (wallboard, carpet).
- Check inside air ducts and air-handling unit.
- Throughout process, consult qualified professional if necessary or desired.

Communicate with building occupants at all stages of process, as appropriate.

- Designate a contact person for questions and comments about medium- or large-scale remediation as needed.

Develop a remediation plan.

- Adapt or modify remediation guidelines to fit your situation; use professional judgment.
- Select cleanup methods for moldy items.
- Select personal protection equipment to protect remediators.
- Select containment equipment to protect building occupants.
- Select experienced remediation personnel.
- Address the moisture problem at its source. Implement repair and/or maintenance plan.
- Dry wet, nonmoldy materials within 48 hours to prevent mold growth.
- Clean and dry moldy materials.
- Discard moldy porous items that cannot be cleaned.

During Cleanup Efforts: Reducing Your Exposure to Mold

During any mold cleanup process, mold spores will be released into the air. For protection during the cleanup operation:

- Use a HEPA filter respirator to reduce the number of mold spores you breathe in.
- Wear protective clothing that can be discarded.
- Wear rubber gloves.
- Work for a short while and then take breaks in the fresh air.
- Work with windows open and keep them open after cleanup.
- Turn off heat and air conditioning to prevent spores from being spread to other areas of the house.
- If there is an air return vent in the room, cover it tightly.
- Place a fan in a window to blow air out of the affected room.
- Double-bag all cleanup materials before removal from contaminated area.

If you use outside contractors or professionals, make sure they have experience cleaning up mold, check their references and have them follow the recommendations presented in this brochure.

COUNTY: **LOS ANGELES**

FACILITY DETAILS

CASE TYPE: **CLEANUP PROGRAM SITE**

CASE NUMBER: **1174**

STATUS: **OPEN - REMEDIATION 4/16/2015**

POTENTIAL CONTAMINATION:

TETRACHLOROETHYLENE (PCE)

POTENTIAL MEDIA AFFECTED:

AQUIFER USED FOR DRINKING WATER SUPPLY, INDOOR AIR, SOIL VAPOR

SITE HISTORY:

THE REGIONAL BOARD HAS BEEN PROVIDING REGULATORY OVERSIGHT FOR THE CHARACTERIZATION, CLEANUP AND MONITORING OF THE CONTAMINANTS OF CONCERN (COCS) IN SOIL AND GROUNDWATER AT THE SITE SINCE MARCH 2005. THE SITE CURRENTLY CONSISTS OF SEVERAL SINGLE-STORY BUILDINGS, CANOPIES, AND PAVED PARKING AREAS USED FOR AUTO BODY REPAIR AND PAINT WORK. THE SITE IS LOCATED IN AN AREA DESIGNATED FOR MIXED RESIDENTIAL AND COMMERCIAL USE BY THE CITY OF LOS ANGELES.). THE SITE IS LOCATED IN THE NORTHERN PART OF CENTRAL BASIN OF LOS ANGELES COUNTY. SOILS TYPES OBSERVED DURING PREVIOUS SUBSURFACE INVESTIGATIONS AT THE SITE HAVE BEEN DESCRIBED AS ALTERNATING INTERVALS OF PREDOMINANTLY UNCONSOLIDATED FINE GRAINED SANDS, SILTS, SILTY SANDS, AND SOME CLAY DOWN TO APPROXIMATELY 30 FEET BELOW GROUND SURFACE (BGS). BASED ON THE SAMPLING RESULTS FROM THE DEEP BORINGS, AEI CONSULTANTS (AEI) INDICATED THAT SEVERAL SANDY INTERVALS WERE OBSERVED AT APPROXIMATELY 26, 40, AND 54 FEET BGS. DEPTH TO FIRST GROUNDWATER AT THE SITE HAS CONSISTENTLY BEEN RECORDED APPROXIMATELY BETWEEN 14 AND 19 FEET BGS IN MONITORING WELLS MW-1 THROUGH MW-4 SINCE THEIR INSTALLATION IN 2003. SINCE 2003, AEI AND TERRACON HAS CONDUCTED SEVERAL ROUNDS OF PHASE II ENVIRONMENTAL INVESTIGATIONS AT THE SITE. ANALYTICAL RESULTS OF THE SOIL, SOIL GAS AND SEVERAL ROUND OF GROUNDWATER SAMPLES CONFIRM THAT THE SOIL , SOIL GAS AND GROUNDWATER BENEATH THE SITE HAVE BEEN IMPACTED WITH TOTAL PETROLEUM HYDROCARBON (TPH), AND VOLATILE ORGANIC COMPOUNDS (VOCS) CONSISTING PRIMARILY OF TETRACHLOROETHYLENE (PCE). BASED ON THE RESULTS OF MOST RECENT SITE INVESTIGTION CONDUCTED BY TERRACON IN JUNE 2009, ON FEBRUARY 18, 2010 THE LA RWQCB ISSUED A DIRECTIVE LETTER TO FLEINER FAMILY TRUST TO INITIATE PREPARATION OF A REMEDIAL ACTION PLAN (RAP) TO ADDRESS THE CURRENT IMPACTS TO SOIL, SOIL VAPOR, AND GROUNDWATER AT THE SITE. THE RAP SHOULD INCLUDE AN ENGINEERING ASSESSMENT OF ALL THE EXISTING DATA TO EVALUATE THE MOST APPROPRIATE, EFFICIENT, AND FEASIBLE REMEDIAL ALTERNATIVES TO MITIGATE THE SUBSURFACE IMPACTS. IN MARCH 2010 TERRACON PREPARED THE RAP AND PROPOSED THE FOLLOWING REMEDIAL TECHNOLOGY FOR VOCS IMPACTED SOIL, SOIL VAPOR AND GROUNDWATER BENEATH THE SITE: 1-IN-SITU SVE REMEDIAL SYSTEM WAS PROPOSED FOR REMEDIATION OF SOILS/SOIL VAPOR AT THE SITE. 2--ENHANCED IN-SITU BIOREMEDIATION (EISB) IN A PERMEABLE REACTIVE ZONE (PRZ) ARRANGEMENT FOR IMPACTED GROUNDWATER IN DOWN-GRADIENT MONITORING WELLS WHICH HAS THE HIGHEST CONCENTRATIONS OF VOCS IN GROUNDWATER. IMPLEMENTATION, OPERATION AND MONITORING PROGRAM FOR OF FULL-SCAL SVE SYSTEM FOR SOIL AND EISB PILOT TESTING FOR GROUNDWATER ARE CURRENTLY IN PROGRESS.

NPL LISTED: **NO** RESTRICTED LAND USE: **NO**

SITE TYPE: **EVALUATION**

SITE TYPE DESCRIPTION

EVALUATION: IDENTIFIES SUSPECTED, BUT UNCONFIRMED, CONTAMINATED SITES THAT NEED OR HAVE GONE THROUGH AN INVESTIGATION AND ASSESSMENT PROCESS. IF A SITE IS FOUND TO HAVE CONFIRMED CONTAMINATION, IT WILL CHANGE FROM EVALUATION TO EITHER A STATE RESPONSE OR VOLUNTARY CLEANUP SITE TYPE. SITES FOUND TO HAVE NO CONTAMINATION AT THE COMPLETION OF THE INVESTIGATION AND ASSESSMENT PROCESS RESULT IN A NO ACTION REQUIRED (FOR PHASE 1 ASSESSMENTS) OR NO FURTHER ACTION (FOR PHASE 2 ASSESSMENTS) DETERMINATION.

DTSC's CURRENT INVOLVEMENT AT SITE (as of 08/21/2014)

ACTIVE - IDENTIFIES THAT AN INVESTIGATION AND/OR REMEDIATION IS CURRENTLY IN PROGRESS AND THAT DTSC IS ACTIVELY INVOLVED, EITHER IN A LEAD OR SUPPORT CAPACITY

PAST USE/S THAT CAUSED THE CONTAMINATION

DRY CLEANING

CONFIRMED CONTAMINANTS OF CONCERN

30003 - BENZENE

30022 - TETRACHLOROETHYLENE (PCE)

DTSC SUPERVISOR: **SHAHIR HADDAD**

DTSC DIVISION BRANCH: **SOUTHERN CALIFORNIA SCHOOLS & BROWNFIELDS OUTREACH**

NPL LISTED: **NO** RESTRICTED LAND USE: **NO**

SITE TYPE: **SCHOOL CLEANUP**

SITE TYPE DESCRIPTION

SCHOOL: IDENTIFIES PROPOSED AND EXISTING SCHOOL SITES THAT ARE BEING EVALUATED BY DTSC FOR POSSIBLE HAZARDOUS MATERIALS CONTAMINATION. SCHOOL SITES ARE FURTHER DEFINED AS "CLEANUP" (REMEDIAL ACTIONS OCCURRED) OR "EVALUATION" (NO REMEDIAL ACTION OCCURRED) BASED ON COMPLETED ACTIVITIES. ALL PROPOSED SCHOOL SITES THAT WILL RECEIVE STATE FUNDING FOR ACQUISITION OR CONSTRUCTION ARE REQUIRED TO GO THROUGH A RIGOROUS ENVIRONMENTAL REVIEW AND CLEANUP PROCESS UNDER DTSC'S OVERSIGHT.

DTSC's CURRENT INVOLVEMENT AT SITE (as of 11/7/2012)

NO FURTHER ACTION - IDENTIFIES COMPLETED SITES WHERE DTSC DETERMINED AFTER INVESTIGATION, GENERALLY A PEA (AN INITIAL ASSESSMENT), THAT THE PROPERTY DOES NOT POSE A PROBLEM TO PUBLIC HEALTH OR THE ENVIRONMENT

PAST USE/S THAT CAUSED THE CONTAMINATION

SCHOOL - ELEMENTARY, UNDERGROUND STORAGE TANKS, VEHICLE MAINTENANCE

CONFIRMED CONTAMINANTS OF CONCERN

30015 - METHANE

30016 - METHYL TERTBUTYL ETHER (MTBE)

30022 - TETRACHLOROETHYLENE (PCE)

30026 - 1,1,1-TRICHLOROETHANE (TCA)

Unlocatable Summary

This list contains sites that could not be mapped due to limited or incomplete address information.

Database Name	Site ID#	Site Name	Address	City/State/Zip/County
LUST	T0603737987*LUST	LOS ANGELES AFS		LOS ANGELES

AIRSAFS Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

CDL Clandestine Drug Laboratory Locations

VERSION DATE: 09/17/15

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

DOCKETS EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

EC Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

ERNSCA Emergency Response Notification System

VERSION DATE: 05/10/15

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

FRSCA Facility Registry System

VERSION DATE: 07/20/15

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

HMIRSR09 Hazardous Materials Incident Reporting System

VERSION DATE: 11/08/15

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 10/20/14

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

ICISNPDES Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 10/20/14

In 2006, the Integrated Compliance Information System (ICIS) - National Pollutant Discharge Elimination System (NPDES) became the NPDES national system of record for select states, tribes and territories. ICIS-NPDES is an information management system maintained by the United States Environmental Protection Agency's Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

MLTS Material Licensing Tracking System

VERSION DATE: 03/11/15

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements.

NPDESR09 National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Information in this database is extracted from the Water Permit Compliance System (PCS) database which is used by United States Environmental Protection Agency to track surface water permits issued under the Clean Water Act. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data.

PADS PCB Activity Database System

VERSION DATE: 07/01/14

The PCB Activity Database System (PADS) is used by the United States Environmental Protection Agency to monitor the activities of polychlorinated biphenyls (PCB) handlers.

PCSR09 Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

RCRASC RCRA Sites with Controls

VERSION DATE: 10/26/15

This list of Resource Conservation and Recovery Act sites with institutional controls in place is provided by the U.S. Environmental Protection Agency.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

SSTS Section Seven Tracking System

VERSION DATE: 12/08/14

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TRI Toxics Release Inventory

VERSION DATE: 12/31/13

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/06

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

NLRRCRAG No Longer Regulated RCRA Generator Facilities

VERSION DATE: 10/13/15

This database includes RCRA Generator facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly generated hazardous waste.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRAGR09 Resource Conservation & Recovery Act - Generator Facilities

VERSION DATE: 10/13/15

This database includes sites listed as generators of hazardous waste (large, small, and exempt) in the RCRAInfo

system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRANGR09 Resource Conservation & Recovery Act - Non-Generator Facilities

VERSION DATE: 10/13/15

This database identifies RCRAInfo system sites that only handle hazardous waste, such as transporters, without generating any amount hazardous waste. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

HISTPST Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

BF Brownfields Management System

VERSION DATE: 10/08/15

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

CERCLIS Comprehensive Environmental Response, Compensation & Liability Information System

VERSION DATE: 10/25/13

CERCLIS is the repository for site and non-site specific Superfund information in support of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This United States Environmental Protection Agency database contains an extract of sites that have been investigated or are in the process of being investigated for potential environmental risk. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

DNPL Delisted National Priorities List

VERSION DATE: 07/22/15

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

NFRAP No Further Remedial Action Planned Sites

VERSION DATE: 10/25/13

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the National Priorities List, or the contamination was not serious enough to require Federal Superfund action.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 10/13/15

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An “open dump” is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 10/13/15

This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste in the RCRAInfo system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

DOD Department of Defense Sites

VERSION DATE: 06/21/10

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. DISCLAIMER: This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used

Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

NLRRCRAC No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

NPL National Priorities List

VERSION DATE: 07/22/15

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL Proposed National Priorities List

VERSION DATE: 07/22/15

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes all hazardous waste sites with ongoing corrective action activity and where corrective action is statutorily required to be address but have not had corrective action imposed in the RCRAInfo system. The Corrective Action Program requires owners or operators of RCRA facilities (or treatment, storage, and disposal facilities) to investigate and cleanup contamination in order to protect human health and the environment. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RCRASUBC Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes hazardous waste sites which are potentially subject to corrective action regardless of whether they have correction action underway, plus any sites showing a corrective action event of RFI or beyond in the RCRAInfo system. Sites conducting corrective action under analogous state authorities are also included. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information

system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RODS Record of Decision System

VERSION DATE: 07/01/13

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

CDL Clandestine Drug Labs

VERSION DATE: 12/31/14

The California Department of Toxic Substance Control (DTSC) provides this listing of illegal drug laboratories. Pursuant to Section 25354.5 of the California Health and Safety Code, DTSC conducts emergency removal actions at clandestine drug labs at the request of State and local law enforcement agencies. DTSC's contractors typically remove hazardous substances that may pose an immediate threat to public health and the environment while the enforcement officials are on scene. During the emergency removal actions, contractors remove and properly dispose of contaminated lab equipment, chemicals used to make the illegal drugs (usually methamphetamine), lab chemical wastes, and other grossly contaminated materials. DTSC does not perform additional assessment work beyond standard emergency removal actions and makes no further determination regarding the need for future cleanup work at the emergency removal location. The reported location information may or may not include the actual location of the illegal drug lab. The DTSC does not guarantee the accuracy of the address or location information or the condition of the location listed.

CHMIRS California Hazardous Material Incident Report System

VERSION DATE: 11/18/15

The California Hazardous Material Incident Report System database is provided by the California Emergency Management Agency. This database contains accidental or spill release information from reported hazardous material incidents since 1993.

DTSCDR DTSC Deed Restrictions

VERSION DATE: 10/21/15

The California Department of Toxic Substances Control (DTSC) maintains this listing of sites with deed restrictions. According to the DTSC, restricted land use indicates whether the site or area within the site has an environmental restriction recorded and/or other institutional control preventing certain types of land use or activities. The land use restrictions listed under the site management requirements are only an abbreviated summary of the land use restrictions, and may not encompass all restrictions and notification requirements placed on a property. For complete land use restriction information please contact the DTSC to review associated Land Use Restriction documents.

EMI Emissions Inventory Data

VERSION DATE: 12/31/12

The Air Resources Board's Emissions Inventory Database contains criteria pollutant data and toxic data on facilities throughout the state of California for the 2012-2000 inventory years.

HWTS Hazardous Waste Tanner Summary

VERSION DATE: 12/31/14

This data is prepared from information extracted from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. The Hazardous Waste Summary Report (Tanner Report) currently includes manifest data from the 1993 through the 2013 reporting years.

LIENS Recorded Environmental Cleanup Liens

VERSION DATE: 10/06/15

The California Department of Toxic Substance Control (DTSC) maintains this listing of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

NPDES National Pollutant Discharge Elimination System Facilities

VERSION DATE: 09/22/15

This State Water Resources Control Board database contains NPDES permits, including stormwater general permit enrollees that are active, inactive and historical. NPDES permits are required from all facilities that discharge their wastewater from a point source into a waterbody.

WTHAULERS Registered Waste Tire Haulers

VERSION DATE: 10/14/15

This listing of registered waste tire haulers is maintained by the California Integrated Waste Management Board.

ABST Above Ground Storage Tanks

VERSION DATE: 12/01/07

This database contains aboveground storage tank facilities registered with the California State Water Resources Control Board (SWRCB). Since 2006, tanks were required to contain a minimum (even as cumulative) of 1320 gallons to be in the program. As of January 1, 2008, the SWRCB no longer maintains a list of registered aboveground storage tanks, due to effective Assembly Bill No. 1130 (Laird) of the Aboveground Petroleum Storage Act (APSA). This Bill authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA.

CLEANER Dry Cleaner Facilities

VERSION DATE: 06/01/15

This database, created by accessing the California Department of Toxic Substances Control's (DTSC) Hazardous Waste Tracking System, includes dry cleaner facilities that have registered EPA identification numbers. These facilities are categorized with one of the following NAICS Codes: 81231 or 81232. This database may also include facilities other than dry cleaners who also register with these same NAICS Codes. Not all companies report their NAICS/SIC Codes to the DTSC and therefore this database may exclude registered dry cleaner facilities with incomplete classification information.

DTSCHWT DTSC Registered Hazardous Waste Transporters

VERSION DATE: 10/30/14

The Department of Toxic Substances Control provides this list of Registered Hazardous Waste Transporters.

HISTUST Historical Underground Storage Tanks

VERSION DATE: 12/31/87

The Hazardous Substance Storage Container Database is a historical list of Underground Storage Tank sites, compiled from tank survey and registration information collected at one time between 1984 and 1987 by the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials.

MWMP California Medical Waste Management Program Facility List

VERSION DATE: 10/13/15

To protect the public and the environment from potential infectious exposure to disease causing agents, the Medical Waste Management Program (MWMP), in the Environmental Management Branch of the California Department of Public Health, regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations.

SLIC Spills, Leaks, Investigation & Cleanup Recovery Listing

VERSION DATE: 06/16/08

These records are maintained by the California Regional Water Quality Control Board (RWQCB). This list includes contaminated sites that impact groundwater or have the potential to impact ground water. Please refer to CLEANUPSITES database as source of current data.

SWEEPS Statewide Environmental Evaluation and Planning System

VERSION DATE: 10/01/94

The Statewide Environmental Evaluation and Planning System (SWEEPS) contains a historical listing of active and inactive underground storage tank locations from the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials. Refer to CUPA listing for source of current data.

USTCUPA Underground Storage Tanks

VERSION DATE: 10/21/15

An underground storage tank is an individual tank or group of tanks that store hazardous substances. Underground storage tanks are completely or considerably below the ground surface. This database contains UST permit data submitted from the Certified Unified Program Agencies (CUPA) directly to the State Water Resources Control Board. CUPA's are local agencies that have been certified by the California EPA to implement state environmental programs within the local agency's jurisdiction.

CALSITES CALSITES Database

VERSION DATE: 09/14/04

This historical database was maintained by the Department of Toxic Substance Control for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

CLEANUPSITES GeoTracker Cleanup Sites

VERSION DATE: 10/21/15

This GeoTracker Cleanup Sites database is maintained by the California Regional Water Quality Control Board (RWQCB). The database contains contaminated sites that impact groundwater or have the potential to impact ground water, including spills, investigations, cleanup recoveries and reported leaking underground storage tank incidents.

CORTESE Cortese List

VERSION DATE: 11/02/02

This historical listing includes hazardous waste and substances sites designated by the State Water Resources Control Board (LUST), the Integrated Waste Board (SWIS), and the Department of Toxic Substance Control (CALSITES). The Cortese List was utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites.

DROP Listing of Certified Dropoff, Collection, and Community Service Programs

VERSION DATE: 10/23/15

Listing of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

ERAP Expedited Removal Action Program Sites

VERSION DATE: 10/21/14

The Expedited Remedial Action Program is a pilot project administered by the Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program to promote the cleanup of up to 30 hazardous

substance release sites. ERAP provides significant incentives for redevelopment of contaminated properties by promoting cleanups based on the planned land use, by providing a covenant not to sue, and by outlining a fair and equitable liability scheme.

LUST Leaking Underground Storage Tanks

VERSION DATE: 06/16/08

This database is maintained by the State Water Resources Control Board. LUST records contain an inventory of reported leaking underground storage tank incidents. Please refer to the CLEANUPSITES database as source of current data.

NFA No Further Action Determination

VERSION DATE: 07/01/05

The NFA listing contains properties at which the Department of Toxic Substance Control has made a clear determination that the property does not pose a problem to the environment or to public health.

NFE Sites Needing Further Evaluation

VERSION DATE: 07/01/05

The NFE listing contains properties that the Department of Toxic Substance Control suspects with possible contamination. These are unconfirmed contaminated properties that need further assessment.

PROC Listing of Certified Processors

VERSION DATE: 10/23/15

Listing of Certified Processors that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

REF Referred to Another Local or State Agency

VERSION DATE: 07/01/05

The REF listing contains properties where contamination has not been confirmed and which were determined as not requiring direct Department of Toxic Substance Control Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

SCH School Property Evaluations

VERSION DATE: 07/01/05

The SCH listing contains proposed and existing school sites that are being evaluated by Department of Toxic Substance Control for possible hazardous materials contamination. In some cases, these properties may be

listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

SWIS Solid Waste Information System Sites

VERSION DATE: 10/21/15

The Solid Waste Information System (SWIS) database includes information on solid waste facilities, operations, and disposal sites located in California. This database is maintained by the California Department of Resources Recycling and Recovery.

SWRCY Recycling Centers

VERSION DATE: 10/23/15

Listing of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

VCP Voluntary Cleanup Program

VERSION DATE: 09/14/04

The California Voluntary Cleanup program provides regulatory oversight by the Department of Toxic Substance Control (DTSC) to project proponents desiring to address mitigation activities at sites which have lower health and/or environmental risk than sites which are currently being addressed by DTSC. Refer to Envirostor database as source of current data.

WMUDS Waste Management Unit Database

VERSION DATE: 01/01/00

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

ENVIROSTOR EnviroStor Cleanup Sites

VERSION DATE: 10/21/15

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database of cleanup sites contains the following: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Sites where DTSC has made a "No Action Required" determination are not included in this

database, as these sites had assessments that revealed no evidence of recognized environmental conditions in connection with the property.

ENVIROSTORPCA EnviroStor Permitted and Corrective Action Sites

VERSION DATE: 10/21/15

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database contains detailed information on hazardous waste permitted and corrective action facilities. Investigation and cleanup activities at hazardous waste facilities (either Resource Conservation and Recovery Act (RCRA) or State-only) that either were eligible for a permit or received a permit are called "corrective action." These facilities treated stored, disposed and/or transferred hazardous waste.

TOXPITS Toxic Pits Cleanup Act Sites

VERSION DATE: 07/01/95

Toxic Pits are sites with possible contamination of hazardous substances where cleanup is necessary. This listing is no longer updated by the State Water Resources Control Board.

Environmental Records Definitions - LOCAL

LAHMS Los Angeles County Hazardous Materials System

VERSION DATE: 02/16/06

The Los Angeles County Department of Public Works maintains this listing of Industrial Waste and Underground Storage Tank sites.

LASM Los Angeles County Site Mitigation List

VERSION DATE: 04/23/15

This listing of industrial sites with a reported spill or complaint is provided by the Site Mitigation Unit (SMU) of the Health Hazardous Materials Division, Los Angeles County Fire Department.

WIP Well Investigations Program Case List

VERSION DATE: 07/01/09

The Well Investigations Case List for the San Gabriel and San Fernando Valley Cleanup Programs is maintained by the State Water Resources Control Board.

LASWF Los Angeles County Solid Waste Facilities

VERSION DATE: 04/16/15

This list of permitted solid waste sites, closed landfills, and historical dumpsites is provided by the Los Angeles County Department of Public Works.

AOC San Gabriel Valley Areas of Concern

VERSION DATE: 01/01/06

A listing of the San Gabriel Valley Superfund Sites located in Los Angeles County with Volatile Organic Compound groundwater contamination.

Environmental Records Definitions - TRIBAL

USTR09 Underground Storage Tanks On Tribal Lands

VERSION DATE: 12/04/14

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

LUSTR09 Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 12/04/14

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

ODINDIAN Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

INDIANRES Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

All Appropriate Inquiries Rule:
Reporting Requirements and Suggestions on Report Content

WHAT IS "ALL APPROPRIATE INQUIRIES"?

"All appropriate inquiries" is a process of evaluating a property's environmental conditions and assessing potential liability for any contamination. All appropriate inquiries must be conducted to obtain certain protections from liability under the federal Superfund Law (CERCLA).

WHY DID EPA ESTABLISHING STANDARDS FOR CONDUCTING ALL APPROPRIATE INQUIRIES?

The 2002 Brownfields Amendments to the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) require EPA to promulgate regulations establishing standards and practices for conducting all appropriate inquiries.

WHEN IS THE ALL APPROPRIATE INQUIRES RULE EFFECTIVE?

The final rule is effective on November 1, 2006, one year after its publication date in the Federal Register.

WHAT ARE THE DOCUMENTATION REQUIREMENTS FOR ALL APPROPRIATE INQUIRIES?

The final rule requires that the results of an all appropriate inquiries investigation be documented in a written report. The specific reporting requirements for all appropriate inquiries are provided in 40 CFR §312.21 (*Results of Inquiry by an Environmental Professional*) and §312.31 of the final rule and include:

I. An *opinion* as to whether the inquiry has identified conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property.

II. An identification of *data gaps* (as defined in §312.10) in the information collected for the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property, as well as comments regarding the significance of these data gaps.

III. *Qualifications* and *signature* of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:

''[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part.''

''[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.''

IV. In compliance with §32.31(b), the environmental professional must include in the final report an *opinion regarding additional appropriate investigation*, if the environmental professional has such an opinion.

IS THERE A REQUIRED FORMAT FOR REPORTING RESULTS OF ALL APPROPRIATE INQUIRIES?

The final rule requires no specific format, length, or structure of the written report. However, EPA offers the following suggestions regarding the potential content of a written report. The following suggestions generally are consistent with recommendations published in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The ASTM E 1527-13 standard is consistent with the requirements of the final rule and may be used to comply with the provisions of the rule. The following are suggestions regarding format and content of an all appropriate inquiries written report. Please note that the suggestions below do not represent regulatory requirements. Prospective landowners and environmental professionals may design their own format for a written report, as long as the report contains the four documentation requirements listed above (and as noted below).

- ***Introduction.*** An introduction could include descriptions of: the purpose and objectives of the assessment; scope of services provided; methodology used to complete the inquiry; any significant assumptions made; limitations and exceptions; any modifications or deviations from the final rule requirements or from the ASTM E 1527-13 process; special terms and conditions; and information obtained from the landowner or user. The environmental professional and the person(s) who conducted the site reconnaissance and interviews may be identified.

- ***Site Description.*** This section may describe the property location; site and vicinity characteristics; structures, roads, site improvements, and utilities; current and historic use(s) of the property; site topography, geology, and surface/ground water resources; and current and historic use(s) of adjacent properties.

- ***User-Provided Information.*** The report may describe any information provided by the prospective landowner, or user, to the environmental professional. This information may include: title records; information of recorded environmental cleanup liens; recorded activity and use limitations (e.g., engineering controls, land use restrictions, institutional controls); specialized knowledge or experience held by the user related to the property or nearby properties; commonly known or reasonably ascertainable information; and relationship of the purchase price to the fair market value of the property, if it were not contaminated.

- ***Records Review.*** The written report may include a section that summarizes the information found during the records review. This section may describe records that were reviewed to complete the inquiry including: physical setting sources (*e.g.,* topographic maps); historical use sources (*e.g.,* aerial photographs, fire insurance maps, street directories, newspaper archives); federal, state, tribal, and local records or databases of government records; and other environmental record sources (*e.g.,* prior investigation reports, tank/transformer inventories, spill records, permits, etc.).

- ***Site Reconnaissance.*** The written report may include a section dedicated to describing the methodology used to conduct the visual inspection of the subject and adjoining properties. The description may include: when and who performed the reconnaissance; physical imitations (*e.g.,* snow-covered ground, limited access, safety concerns, etc.); general site setting; exterior observations; and interior observations. Additional information on evidence of staining, spills, odors, stressed vegetation, corrosion, pools of liquids, discolored water, ground surface alterations, and other conditions that might suggest a release or threatened release of hazardous substances also may be provided.

- ***Interviews.*** A summary of the interviews conducted could include a description of when and with whom the interviews were conducted (*e.g.,* current property owner and occupants, site manager, attorneys, financial manager, local/state/federal government officials, past site owners and

occupants) and the method used to conduct the interviews (*e.g.,* in person, written, telephone). If property is abandoned, this section may describe which neighboring property owners were interviewed and if applicable, which past owners and occupants were interviewed.

- ***Findings*.** A findings section could describe the results of the assessment including the identified known or suspected recognized environmental conditions, historical recognized environmental conditions, and de minimis conditions. This section also may include findings related to, but not limited to: current and historic site usage; adjoining and nearby properties; hazardous substances and petroleum products; non-hazardous, solid, and hazardous waste management; water pollution; pits, ponds, and lagoons; drains and sumps; waste water; wells; septic systems; spills or releases; air emissions; storage tanks and drums; soil and groundwater contamination, polychlorinated biphenyls (PCB) contaminants, or other contaminants.

- ***Opinion of the Environmental Professional.*** In compliance with the all appropriate inquiries final rule at §312.21(c)(1), the written report **must include** the environmental professional's opinion(s) as to whether the inquiry identified conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property. The opinion likely will be based on conditions identified during the inquiries (and potentially noted in a findings section), and include a discussion of the logic, reasoning, and rationale used by the environmental professional in developing the opinion. The environmental professional also must include in the final report an opinion regarding additional appropriate investigation to detect the presence of contamination at the property, if the environmental professional has such an opinion.

- ***Data Gaps.*** **As required** in §312.21(c)(2) of the final rule, the report should document and discuss significant data gaps that affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases.

- ***Conclusions.*** A conclusions section may be included that summarizes all identified conditions indicative of releases or threatened releases of hazardous substances (or recognized environmental conditions) connected with the property. The final rule does not require that any specific statements be made regarding these conditions, however, ASTM E 1527-13 requires that the report include a statement substantially similar to one of the following written statements:

    - *"We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of [insert address or legal description], the property. Any exceptions to, or deletions from, this practice are described in Section [ ] of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property," or*
    - *"We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of [insert address or legal description], the property. Any exceptions to, or deletions from, this practice are described in Section [ ] of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except for the following: (list)."*

- ***Additional Services.*** If applicable, it may be useful to include a description of any additional services performed as part of the assessment that are beyond the scope of the final rule, and were contracted for between the user and the environmental professional. Additional services could include, but are not limited to: non-scope considerations (*e.g.,* lead-based paint, mold, radon, asbestos, regulatory compliance assessment, indoor air quality, etc.); broader scope of assessment; liability or risk evaluations; Phase II sampling and analysis; health and safety; evaluation of remediation techniques; etc.

- ***References.*** A reference section may be included that lists the published sources relied upon to complete the assessment.

- ***Signature(s) and Qualifications of the Environmental Professional(s).*** Include the statements and environmental professional(s) signature required by §312.21(d), as discussed above in "*What are the Documentation Requirements for All Appropriate Inquiries?"*

- ***Appendices***. Appendices could include: regulatory records documentation; environmental database report; site map/plan; vicinity maps; site photographs; historical source documentation (building department records, local street records, chain of title documents, property tax records, zoning/land use records, aerial photos, fire insurance maps, USGS topographical maps); interview documentation; and qualifications of the environmental professional(s).

EXECUTIVE SUMMARY

Previous Environmental Assessment Work:
Four previous Site Investigations have been conducted on the property. In 2007, the former auto shop (1032 La Cienega) was investigated for contaminants related to auto repair. None were found, and the report recommended no further action be required.

In 2008, the apartment building (1042 La Cienega) was investigated for impact related to the gas station on the corner of Olympic and La Cienega. Tainted ground water was discovered, but it was well below regulatory Action Levels.

In 2010, a site wide investigation was conducted to assess any potential impact from the gas station on the corner of Olympic and La Cienega. The investigation discovered two gravelly sand lenses that had gasoline concentrations that exceeded current regulatory Action Levels. The two sand lenses were located on the adjacent property to the north 1022 S. La Cienega. No hydrocarbons of concern were discovered on the subject property.

In 2013, a second site wide investigation did not discover the same areas of environmental impact, and it is possible the pollutants trapped in the sand lenses escaped or degraded or both.

Site Location and Description:
The property is located in a mixed residential, commercial, and industrial area of Los Angeles, CA. The site is vacant land that is being used temporarily by the auto body repair shop to the north for vehicle parking.

Since there are no structures on the property, friable asbestos containing materials, Polychlorinated Biphenyl's (PCB's), lead in paint, lighting waste, and mold cultures are not issues at this time. The infiltration of Radon gas is minimal.

Geology and Hydrogeology:
The site elevation is 125 feet. It is underlain by 150-200 feet of Holocene and late Pleistocene age alluvium. The depth to groundwater is approximately 17 feet, with a regional flow direction to the south. The property is 3 miles northeast of the active Newport-Inglewood Fault Zone. The property is in FEMA Zone X, not a 100 or 500 year flood zone. The property is located in the abandoned Beverly Hills Oil field, and is in a LA City methane gas study area. The closest oil well is 500 feet to the south. It was closed and abandoned in 1965. No landfilling or mining has been done within 1/2 mile of the property. The property is not in wetlands

Site Land-Use History:
From the mid 1800's to 1900's, the property was used for livestock grazing and farming. From 1906 to the 1930's the property was vacant lots. From the 1930's to 2006, the property was developed with: 1026 was a restaurant, bar, and banquet room; 1032 was an auto repair shop; 1042 was a 36 unit apartment building. The planned future use is for the property to be developed with retirement community including a skilled care nursing facility.

EXECUTIVE SUMMARY – page 2

Site Reconnaissance:
Hazardous materials were stored, utilized, and generated in the past by the auto repair shop. Existing documents indicate chlorinated solvents were properly disposed of by recycling. The skilled nursing facility may eventually generate small quantities of medical waste. No evidence of illegal disposal to the land was observed and there are no permit or fire code violations on record.

Regulatory Agency Listings and Area Reconnaissance:
1032 S. La Cienega is listed on the Hazardous Waste Tanner Summary (HWTS) as a hazardous waste generator. The auto shop generated tank bottom sludge from the sump, used solvent for recycling, oil tainted soil from the hoist removal operation, and asbestos containing materials from the demolition operation. None of the other addresses are listed as hazardous sites or generators.

There are 5 sites within the ASTM distances of the property known or suspected to have caused environmental degradation. Three are up-gradient from the property. One of these has tainted the ground water migrating under the property with gasoline and its additives. The concentrations are very low and pose no threat. The other two up-gradient sites are located too far away to have adversely impacted the ground water migrating under the property. No on-site or off-site soil vapor intrusion threats were found.

Neighboring and Adjacent Properties:
There is vacant land to the north and south. There are 5 residences to the east. There is a Temple and private school to the west. None of the neighboring or adjacent property addresses are listed on government documents as hazardous sites or as generators of hazardous waste. There is no documented or observed threat to the subject property from the adjacent operations.

Environmental Compliance Program:
An environmental compliance program is not necessary at this time, since there are no structures on the property.

Conclusions, Recommendations, Opinions:
We conclude environmental impact requiring a government mandated investigation has not occurred on the subject property. There is no threat to human health or the environment at this time.

We recommend no additional environmental assessment work be required at this time.

It is our opinion to proceed with the redevelopment of the property as planned. If any hydrocarbon impacted soil or ground water is encountered during excavation or grading use the indemnification clause from Chevron to clean it up.

BACKGROUND

A summary from the US EPA concerning the All Appropriate Inquires Rule, commonly referred to as a Phase I, is located as the last four pages of this report for your review. The official title of a Phase I is an "All Appropriate Inquiries" It was instituted in 2006 by the United States, Environmental Protection Agency (US EPA). It originated out of the innocent purchaser clause of the Comprehensive Environmental Response Compensation and Liability Act (CERCLA), commonly known as Superfund. The "All Appropriate Inquiries" is the premier and preferred document by the US EPA to protect innocent landowners from the expenses related to investigation and clean-up of polluted property.

There are 11 primary components to the "All Appropriate Inquiries" that must be addressed by a qualified environmental professional. The collected information can be presented in any form at the environmental professional prefers. There is no mandatory format, and demanding a specific format may be considered discrimination. Maintaining a list of consultants may be considered discrimination, and an attempt to manipulate the market. This practice was observed to lead to collusion, price fixing, and fraud. The "All Appropriate Inquiries" has a Federal suggested format for its preparation.

The American Society for Testing Materials (ASTM) has established a set of standards to conduct the "All Appropriate Inquiries". These are intended to be guidelines for the collection of the data used in preparing the report. ASTM has presented a suggested format for the presentation of the data. The ASTM format is accepted by the US EPA as a secondary format that may be used as a substitute for the Federal report guidelines. The ASTM format is the most common; however, it is not an "All Appropriate Inquiries" on its own.

What you need to be aware of, is the secondary ASTM format, accepted by the US EPA, is not the official format. If any of the 11 primary information components is missing, the ASTM formatted report may not be recognized as an "All Appropriate Inquiries", and you will not be protected under Federal CERCLA regulations. To insure you qualify for protection under this Federal law, National Environmental, Inc. (NEI) prepares an "All Appropriate Inquiries", in full compliance with current Federal CERCLA regulation, utilizing the Federal suggested guidelines for report preparation.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by 1022 South La Cienega Partnership to conduct an "All Appropriate Inquiries" (Phase I) on the property located at 1022 South La Cienega Blvd., Los Angeles, CA 90035 and report the results.

"We have the specific qualifications based on education, training, and experience, to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 Code of Federal Regulations, Part 312".

This investigation is being conducted to determine the environmental condition and hazardous waste liability of the subject property. "We have performed a Phase I All Appropriate Inquiries in conformance with the scope and limitations of American Society for Testing Materials (ASTM) Standards E 1527-13, any exceptions to or deletions from this practice are described in the Scope of Services. This assessment has not revealed evidence of significant adverse environmental conditions on the subject property".

SCOPE OF SERCIVES

The investigation consisted of: a review of previous environmental assessment work; a visual site inspection; interviews with primary parties; a geologic and hydrogeologic summary; a review of property history; a hazardous materials site reconnaissance; a regulatory agency review; a soil vapor intrusion review; a review of the existing environmental compliance program; and this report on the results.

Previous environmental assessment work, presented for review or discovered, consisted of four site investigations on the property related to a leaking underground storage tank site that is 0.2 miles to the north, the former auto repair facility at 1032 S. La Cienega Blvd., and the apartments at 1042 S. La Cienega Blvd.

The visual site inspection was conducted on the morning of December 5, 2015. At that time, the property was photographed, mapped, and inspected for evidence of environmental impact. The immediately adjacent and neighboring properties were also inspected for evidence of environmental impact and

photographed. The occupants, of the current adjacent business, were interviewed for local historical information whenever possible.

The primary party interviewed was Mr. Dean Isaacson. Mr. Isaacson is a representative of the property owner, Assisted Living America V. LLC. He provided information on previous and planned future land uses of the property.

The geologic/hydrogeologic summary was compiled from various publications of: the United States Environmental Protection Agency (EPA); United States Geological Survey (USGS); Federal Emergency Management Agency (FEMA); Federal Department of Fish and Game; California Geological Survey; California Division of Water Resources; California Environmental Protection Agency (Cal EPA); and the Los Angeles County, Department of Building and Safety. This summary is intended to identify the uppermost geologic formation, depth and flow direction of groundwater, and any pertinent geologic hazards.

Historic aerial photographs, Sanborn Fire Insurance maps and topographic maps, and were provided by Geosearch. The Los Angeles County Tax Assessor provided information on the value of the property. The City of Los Angeles, Dept. of Building and Safety provided reference to old permits, land zoning, and other pertinent information. This information assisted us in determining previous ownership, occupancies, and land uses.

A site reconnaissance was conducted on the property to determine: what hazardous materials are, were, and will be stored, utilized, and generated; permit compliance and violation history; hazardous materials housekeeping; and emergency response protocols. A visual inspection of the storage and usage areas, with emphasis on illegal releases and compliance, was conducted. This audit researched the presence of storage tanks and clarifiers, pools of liquids, drums and substance containers, PCB's, stained pavement, stressed vegetation, and waste water and sewage disposal systems.

The regulatory agency review consisted of a computer search of the ASTM determined Federal, State, and local public documents relating to sites that have been identified as causing environmental degradation. The computer service maintains a continually updated database of public records. With this information, NEI highlights sites that pose a potential off-site environmental threat, including potential soil vapor migration onto the subject property. The computer search was performed by Geosearch.

FINDINGS

Site Location and Description:

The Los Angeles County Tax Assessor has assigned the following Parcel ID numbers:

1026-1028 S. La Cienega Blvd. - 5087-001-022, the land is valued at $ 2,039,960.00;

1032 S. La Cienaga Blvd. – 5087-001-023, the land is valued at $ 2,243,956.00;

1036-1054 S. La Cienega Blvd. – 5087-001-024, the land is valued at $ 7,037,862.00.

The addresses utilized for this purpose are 1026, 1032, and 1042 S. La Cienega Blvd., LA, CA 90035 (maps 1 & 2). The property is zoned C2-1-0 for highway oriented, general commercial by the City of Los Angeles. This zoning allows for a wide range of commercial businesses. For more detailed information concerning specific land uses, contact the City of Los Angeles, Dept. of Building and Planning (permits section of the Appendix).

The property is currently vacant land. It is being utilized by the occupants of the property to the north, Matrix Collision Repair Facility, for vehicle parking. They have been using the property since mid-2015.

Since the property is vacant land: asbestos containing materials; Polychlorinated Biphenyls (PCB's), lead in paint, lighting waste, and mold cultures are not issues at this time. The threat from Radon gas is minimal.

The property is served by: the City of Los Angeles for (fresh) potable water and power. Los Angeles County provides sewage disposal; and the Southern California Gas Company provides natural gas.

Previous Environmental Assessment Work:

A "Report on Preliminary Site Investigation" was conducted on 3/25/07 by NEI for Beverly Hills Adjacent Senior Assisted Living, LLC. (BHASAL). This investigation was focused on the former auto repair facility that operated at 1032 S. La Cienega from 1952 to 2005. This report did not find evidence of environmental impact and recommended no further assessment work be required.

A "Report on Site Investigation" was conducted by NEI on 5/15/08 for BHASAL. This report discovered traces of gasoline migrating under the property in the ground water. It was speculated the gasoline was derived from the service station on the corner of Olympic and La Cienega, and we encountered the edge of the ground water plume. No concentrations of hydrocarbons above Action Levels were discovered, and the report recommended monitoring to track the gasoline plume as it migrated under the property.

A “Report on Site Investigation” was conducted by NEI on 12/8/2010 for BHASAL. This investigation discovered two sand lenses that had elevated concentrations of gasoline and benzene. The pollutants originated from a leaking tank on the gas station on the southeast corner of Olympic and La Cienega. The impacted sand lenses were located on the adjacent property to the north, 1022 S. La Cienega Blvd. The parcels in this report did not have concentrations of gasoline or its additives above Action Levels.

A “Soil, Soil Gas, and Ground Water Sampling Report” was conducted by Holguin, Fahan & Associates (HFA) on 1/25/13 for Chevron. This investigation involved more de tailed investigation, since the previous investigation discovered elevated concentrations of pollutants on 1022 S. La Cienega. The investigation was conducted on behalf of the owners of the gas station where the leak had occurred and is now part of the public record.

The excessive concentrations of gasoline and benzene discovered by NEI in 2010 were not found a second time in 2013 by HFA. There are numerous possible explanations, but the two most predominant are that the pollutants escaped from the sand lens that was retaining them and were flushed away by the fast moving ground water or they degraded naturally. A combination of the two is most likely to have occurred. Relatively low concentrations of residual hydrocarbons are present, however, it was determined there is no longer an imminent threat to the general public or any future occupants of the property.

Parcel number 5087-001-022 or 1026 S. La Cienega Blvd. has been indemnified by Chevron. The property will be resto red to environmentally acceptable conditions if contamination is encountered during development. Pertinent excerpts from all four reports are presented in the Appendix.

Geology/Hydrogeology:

Definitions of selected geologic terms are included at the end of the text for your reference.

The property is located on the northern Coastal Plain at an elevation of 125 feet above mean sea level. It is underlain by 150 to 200 feet of Holocene and late Pleistocene age alluvium (map 5).

The property is located in the Central Basin Pressure Area of the Central Basin (map 6). The depth to the closest ground water was measured at approximately 17 feet in 2013 by HFA. Ground water was measured at roughly 16 feet deep in 2010 (map 6d).

The property is located 3 miles northeast of the Newport-Inglewood fault zone. The property is not located in a 100 or 500 year flood zone (Zone X). The property is located in the now abandoned Beverly Hills Oil Field. No oil or gas wells have been drilled on the proper ty. An exploratory well was drilled 500 feet south of the property. This well was plugged and abandoned in 1965.

The property is located in a City of Los Angeles designated methane zone. This city code requires a soil vapor survey be conducted for Methane prior to new development. The HFA report sampled for methane gas, with no elevated concentrations reported, and we do not anticipate this to become an issue. The property is not located in wetlands (maps 7-10).

The Coastal Plain (map 5a) is 50 miles long and 12 to 20 miles wide. During the Holocene and late Pleistocene geologic epochs, the 3 main rivers that drain the interior built up the shallow sea floor with fluvial deposits, to form a complex, coalescing, alluvial plain.

Review of the historic topographic maps (map 4) indicates the presence of a Holocene age stream channel in the vicinity of the subject property. It is the nature of the stream channel to migrate relative to the amount of water flowing through it. As the amount of surface water decreased, the stream channel infilled with sediment leaving behind the sand and gravel lenses encountered during the investigations. This depositional process was documented in the 2010 investigation using Ground Penetrating Radar, and again in the 2013 using a Cone Penetrometer.

Holocene age alluvium is described as poorly sorted, unconsolidated, interbedded, sand, gravel, silt, and clay. The Holocene geologic epoch represents the sediments that have accumulated during the previous 11,000 years. Late Pleistocene alluvium is similar to Holocene alluvium except it may be semi-consolidated. The late Pleistocene geologic epoch represents the sediments deposited from 700,000 to 11,000 years ago.

The Central Basin of the Coastal Plain is bordered by the Hollywood Basin on the north. The southern boundary is an arbitrary line, along the Coyote Creek, dividing it from the Lower Santa Ana Basin (Orange County portion of the basin). The Newport-Inglewood Uplift is the western boundary, and the east boundary is made up by the Repetto Hills and the Santa Fe Springs-Coyote Uplift. The Central Basin has been adjudicated since 1965 due to over-pumping of the ground water. The basin has been managed by the California Division of Water Resources since then.

The Central Basin is a single structural unit with no obstructions to the flow of ground water. It is comprised of the alluvial cones of the three major rivers that discharge onto the Coastal Plain, forming a compound alluvial cone. The four subdivisions of the basin are the Los Angeles Forebay Area, the Montebello Forebay Area, the Whittier Forebay Area, and the Central Basin Pressure Area (map 6a). Additional information on the Central Basin is presented in the ground water section of the Appendix in Bulletin 118.

The forebay areas of the Central Basin are characterized as unconfined aquifers, which allow ground water to rise and fall freely. The Central Basin Pressure Area is characterized by having confined aquifers. Confined aquifers are under pressure due to clay and silt layers containing and building pressure between the sand and gravel aquifers. We have tentatively identified an ancient stream channel along the east end of the subject property, with the water flowing south. The base of the channel is approximately 30 feet deep. The depth to ground water in this area is generally less than 20 feet (maps 6c – 6d).

Current CA regulation places a property in a liquefaction zone if the depth to ground water is historically less than 45 feet in areas of unconsolidated alluvium. The property is in an area subject to liquefaction (map 7c). The surface expression of liquefaction is commonly referred to as "sand blows". Liquefaction may be described as the resettling of the underlying alluvium in the saturated (water filled) zone, resulting in unstable sediments and a jet of water and sand being emitted on the surface. Damage to the foundation of structures may result if they overlie this geologic activity.

Liquefaction threat is based on the historic highest depth to the ground water table in areas underlain by unconsolidated alluvium. The classification is presented for reference:

depth to ground water	liquefaction potential
0-30 feet	high
30-50 feet	moderate
50-80 feet	low
> 80 feet	no threat

Active faults are defined as faults displaying evidence of movement within the previous 11,000 years (map 7a). Potentially active faults are faults that display evidence of movement within the previous 700,000 years. The time of faulting is color coded on the Legend to map 7a. A strike-slip fault is defined as one side moving

parallel relative to the other side. A thrust fault is defined as one side moving up or down relative to the other side.

The property is 3 miles northeast of the active Newport-Inglewood fault zone. The Newport- Inglewood fault zone is approximately 40 miles long and extends from the Newport Mesa to Beverly Hills. It is capable of producing a magnitude 7 earthquake and last ruptured in the Signal Hill area in 1933. The Newport-Inglewood fault is a thrust fault with evidence of movement in both directions.

The underlying structure of the uplift is a series of en-echelon faults, anticlinal folds, and domes. The surface expression of the Newport-Inglewood Uplift is an alignment of low hills and coastal mesas (map 7d). The Newport-Inglewood fault is now believed to be a part of a more extensive fault system that is associated with the Rose Canyon fault system. The Rose Canyon fault system parallels the coast line off-shore and extends as far south as San Diego.

The property is not located in an Alquist-Priolo Special Studies Zone. Special Study Zones identify property that is located within a hazardous distance of active faults, and development and redevelopment are subject to review by the CA State Geologist (map 7b). A 6 or greater magnitude regional earthquake will subject the property to high levels of seismic intensity. This is due to the thickness of the underlying alluvium. Alluvium is known to amplify the seismic motion associated with the earthquake (map 7d).

Many areas in Southern California are located in areas subject to high seismic intensity. This is due to the active geologic nature of the region. The geologic activity can be broadly related to the Pacific Plate sliding past the North American Plate along the San Andreas Fault. The active, San Andreas Fault is a 600 mile long, strike slip, fault zone that stretches from San Francisco to the Salton Sea. In this case the west side is moving north relative to the east side. The San Andreas Fault is 50 miles northeast of the property (map 7a).

Surface water drains off the property as sheet flow west onto South La Cienega Blvd., where the runoff enters a storm drain. It flows south in a storm drain and discharges into the Ballona Creek, near the intersection with Interstate 10. The Ballona Creek flows west and discharges into Santa Monica Bay. Here the water mixes with the waters of the Pacific Ocean.

The property is located in FEMA Zone X (map 8). The property is located in the inactive Beverly Hills oil field (map 9). This is why the property is within the City of Los Angeles methane assessment zone. The

property has tested negative for methane and no oil or gas wells have been drilled on the property. The property is not in wetlands (map 10).

Regional Land Use History:

This land was first occupied by Tongva (people of the earth) Indians. They lived in villages made up of small, reed, huts along the Los Angeles and San Gabriel river banks. Four settlements were noted in the early 1500's by Spanish explorer Juan Cabrillo. He named the area "Bahia de los Fumos" (bay of smokes). The Indians lived simply off the land, sustained by acorns, sage seeds and small animals. Tongva were well known as basket weavers and canoe makers. Their primary trading partners were the Chumash Indians living along the coast and on the Channel Islands. They traded canoes and baskets for fish and shells.

First contact in Southern California was made by Spanish explorers and missionaries in 1769 and declared Spanish Territory. Father Junipero Serra built a series of 21 missions along the "Camino Real". The task of the Mission was to convert the Indians to Christianity, teach them to plant crops, raise cattle, and make products. Many Indians died from imported disease. Some Indians eventually owned their own land.

The land was declared Mexican Territory when they gained independence from Spain in 1821. Mexico ceased to fund the Missions and they were gradually phased out. The land was subdivided into Rancho's, which were awarded to veterans of war, old war heroes, and others in favor with the Mexican Government. The land became US Territory, after the Mexican-American War (1846-1848), and the State of California in 1850. High taxes caused many of the Rancho's to be further subdivided.

The property is located in the "Rancho de las Aguas" (Ranch of the Gathering Waters) which was awarded to Luis Quintero. His daughter Maria Rita and son in law Vicente Villa, who was a soldier for the Mexican Army, acquired the Rancho when the Mexican/Spanish Land Grants were returned to the original owners in 1852. They sold the Rancho to Benjamin Wilson and Major Henry Hancock in 1854 for sheep grazing. A portion of the land was sold in 1868 to Edward Preuss, who started a town called Santa Maria. Drought caused the town to fail and the land reverted to sheep grazing.

Next the owners of the United States Hotel in downtown Los Angeles, Henry Hammel and Andrew Denker, purchased the land and grew vast fields of lima beans. In 1900, the land was purchased by Amalgated Oil Company. They explored for oil and gas, but came up with dry wells. They conveyed the land to the Rodeo Land and Water Company, and residential and commercial development of the area began. Historic photos,

maps, and permits display the land from this point in time.

Southern California was opened up to the rest of the country when the Santa Barbara Line of the Southern Pacific Railroad was constructed in 1876. It completed the final rail link between Los Angeles and San Francisco. The City of Los Angeles was first started as the Mission San Gabriel (the 4th mission) in 1771. In 1781, the Spanish Governor, Felipe De Neve, sent 44 people to colonize “El Pueblo de la Reina de Los Angeles (The City of the Queen of the Angeles). The pueblo was originally founded, near what is now Alvera Street, to grow food for the soldiers guarding this far off territory for Spain.

Historic primary thoroughfares were Wilshire and Pico, east and west, and La Cienega and Doheny, north and south. The Pacific Electric operated the “Red Car” along Santa Monica Blvd. (1920’s - 1950’s) to connect downtown LA with the Pacific Ocean. The property is located south of historic Sherman (West Hollywood). This is where the train was serviced and the employees housed, primarily due to fresh water being close to the surface (historic photos, maps 3 & 4).

The area today is a residential area of Los Angeles, with commercial development located along the primary thoroughfares. The ownership and land use of the property has been summarized from available sources as:

1800 - 1852, Luis Quintero /sheep grazing;

18? - 1900, Henry Hammel, Andrew Denker/farming;

1900-1906, Amagalated Oil Company/oil and gas exploration;

1906 – 1954, Rodeo Land and Water Company/property development.

Site Land Use History:

Sanborn fire insurance maps date 1927, 1950, and 1969. Historic aerial photographs date 1922, 1928, 1947, 1952, 1965, 1976, 1989, and 1994. Historical topographic maps date 1897, 1921, 1924, 1950, 1966, and 1972. Building permits date back to 1954.

Historical topographic maps from 1897, 1921 and 1924 show the property was vacant land, and indicate it is in the vicinity of a stream. Topographic maps after this simply indicate the property is located in a developed area. The Sanborn map from 1927 indicates the property is vacant land.

The Sanborn map from 1950 indicates a structure is present on 1026, with 1036 and 1042 vacant. The historic photo confirms this. The structure was likely the original banquet hall. The earliest permit on record is a Certificate of Occupancy from 1957, indicating the eastern addition to this structure. The Sanborn map from 1969 displays all three parcels developed with the prior structures. The construction date of the former auto repair facility on 1032 was narrowed down to 1952. The construction date of the 36 unit apartment building was 1954, with the pool added in 1955.

The historic aerial photo from 1922 shows the land as vacant. The photo from 1928 shows trees or bushes on the property. The 1947 photo shows the subject property as vacant land with signs or very small single room structures, possibly fruit stands, on them. The photo from 1952 shows the auto repair garage on 1032, billboards occupy 1026, and 1042. The photos from 1965, 1976, 1989, and 1994 show all the former structures on the property.

The careful review of historic photos, historic topographic maps, building permits, and Sanborn fire insurance maps all display the same evidence of the local property history. Interviews with the property owner determined the vacant lot to the north has been utilized for wrecked vehicle parking since mid-2015. Ownership and land uses have been summarized from available data as:

1026-1028 S. La Cienega;

1950 - 1988; unidentified owners/restaurant, bar, banquet hall;

1988 - 2005; Iran Ohrani/restaurant, bar, banquet hall;

2005 - 2015; Beverly Hills Adjacent Senior Assisted Living, LLC/vacant land;

2015 – present, Assisted Living America V, LLC. /vacant land (photos 1-8);

1032 S. La Cienega;

1952 – 1989, Unidentified owners/general auto repair;

1989 - 2005, Elie Freim/general auto repair;

2005 – 2015, BHASAL/vacant land;

2015 – present, Assisted Living America V, LLC/vacant land (photos 1-8);

1042- 1054 S. La Cienega;

1954- 1983, Buckeye Construction Company (possibly the developer), /36 unit apartment building with

a pool;

1983 - 19?, La Cienega Plaza/36 unit apartment building;

19? – 2005, Mr. Badad/36 unit apartment building

2005 - 2010, BHASAL/36 unit apartment building;

2010 – 2015, BHASAL/vacant land;

2015 – present, Assisted Living America V, LLC/vacant land (photos 1-8).

The planned future use is for a senior citizen retirement community to be developed with a skilled nursing care facility (map 11).

Site Reconnaissance:

Prior to development in 1955 the property was grazing land and vacant lots. The historic photo from 1947 shows small structures on each parcel. They were fruit stands or billboards. These structures were demolished when the properties were developed with the more permanent structures. No written records of these structures were found, and they were most likely billboards advertising the property for sale.

Grazing land use is rarely found to be impacted with herbicides or pesticides. Generally these chemicals are not used and the livestock grazes on what is growing naturally. Routine applications of these chemicals to the land do not pose a threat to the environment, and eventually break down to harmless compounds of nitrogen, phosphorous, sulfides, and oxides over 30 to 50 years. Since the last possible grazing land use was 95 years ago, environmental impact from this potential source is not suspected.

1024-1026 S. La Cienega; this property was developed with a restaurant and bar in 1955 and was always used for this purpose until it was purchased in 2005 and demolished. This parcel has been utilized for wrecked car parking by Matrix Auto Body since mid-2015. In general any miscellaneous fluids from a wrecked car are drained prior to storage. Any fluids from the initial collision usually leak out at the scene of the accident or during transport to the storage yard. We did not observe evidence of hazardous vehicle fluids leaking onto the unpaved surfaces of the property.

1032 S. La Cienega; this property was developed in 1952 and was always used as an automotive repair facility until it was purchased in 2005 and demolished. A chemical inventory was prepared by the Los Angeles City Fire Department and is included in the closure report section of the Appendix. A site

investigation was conducted on this property prior to the purchase in 2006, with no contamination from the auto repair discovered. It contained several hoists and a sump. The hoists were removed, washed, and disposed of as scrap metal without incident. Pertinent excerpts from this report are included in the Appendix.

1042-1054 S. La Cienega; this property was developed in 1954 with a two story, 36 unit, apartment building. This remained the use until it was purchased in 2005 and demolished in 2010. No hazardous materials were stored, utilized, or generated by this occupancy. The planned future use is for a retirement home and a skilled nursing care facility to be constructed (map 11). In the event a skilled care nursing facility is constructed, small quantities of medical waste may be generated. There is no environmental threat from the planned future land use.

Regulatory Agency Listings and Area Reconnaissance:

The Geosearch report is 132 pages in its entirety and presented in the Appendix. The Geosearch report is centered on the property address of 1022 S. La Cienega Blvd. The subject property addresses appears as adjacent properties in this report, and the report extends out to the ASTM required 1 mile radius. This was necessary, since this report was conducted on a rush basis and there was not sufficient time to obtain 2 separate reports for the properties involved.

The former auto repair shop located at 1032 S. La Cienega Blvd. is listed on the Hazardous Waste Tanner Summary (HWTS) for recycling: tank bottom sludge from the sump clean-out (Geosearch page 21); used solvents from the parts washer (Geosearch pages 22-23); oil contaminated soil from the hoist removal operation and (Geosearch page 24); asbestos containing materials from the demolition operation (Geosearch page 25).

These are routine listings indicating the property is in full compliance with current hazardous waste reporting requirements. These listings do not pose any threat to the property.

None of the other addresses are listed on ASTM regulated government documents as hazardous sites or generators of hazardous waste.

Review of the existing agency publications, documenting properties know to have caused environmental degradation, has found 5 sites of concern within current ASTM distances of the subject property. The location of the identified site relative to the subject property is presented in the Appendix after map 10 as

Radius Maps 1 & 2. The location, case type, and case status are presented for reference. Detailed information may be found in the Geosearch Radius Report.

3) Geosearch page 30 — 0. 04 miles north
Tosco Arco station — LUST/RWQCB
1004 S. La Cienega Blvd. — clean-up is in progress
Los Angeles, CA 90035
This site is up-gradient and the ground water is impacted with hydrocarbons.

6) Geosearch page 60
Paulie Auto Body Shop — 0.15 mi. south
1135 S. La Cienega Blvd. — LUST/RWQCB
Los Angeles, CA 90035 — clean-up is in progress
This site is down-gradient and the ground water is impacted with solvents.

7) Geosearch page 67
Mobil station — 0.4 miles south
6162 W. Pico Blvd. — LUST/RWQCB
Los Angeles, CA 90035 — under investigation
This site is down-gradient with the full impact from a leaking waste oil tank is unknown.

17) Geosearch page 105
Horrace Mann School — 0.6 miles northwest
8701 Charlieville Blvd. — Envirostore/DTSC
Beverly Hills, CA 90210 — under investigation
This site is investigation up-gradient and the ground water is impacted with gasoline.

20) Geosearch page 109
Beverly Hills Plating Works — 0.9 miles northwest
243 N. Robertson Blvd. — Envirostor/DTSC
Beverly Hills, CA 90211 — clean-up is in progress
This site is up-gradient, and the pollutants are not reported.

Of the 5 sites identified as causing environmental degradation 3 are located up-gradient from the subject property. All 3 are known to have impacted the ground water and 1 has impacted the ground water migrating under the subject property in the past. The other 2 up-gradient sites are not close enough to the subject property to have an adverse impact on the ground water migrating under the subject property.

Soil Vapor Intrusion:

None of the open or closed sites known to have discharged volatile organic compounds (VOC's) are located within 100 feet of the subject property. No solvent or gasoline additive vapor will migrate in concentrations that pose a threat to the occupants of any structures on the subject property. Any vapor from these long closed sites would have dissipated to harmless concentrations.

Neighboring and Adjacent Properties:

The primary sources of information for the neighboring and adjacent properties were obtained from the Los Angeles, Department of Building and Planning, historical aerial photographs, and Sanborn Fire Insurance maps.

The adjacent property to the north, 1022 S. La Cienega Blvd, has been vacant land since 2006. It has been used since mid-2015 by Matrix Collision Repair Center for vehicle parking (photos 9-12). From 1955 to 2006 the property was an office building. The occupants were not identified from 1955 to 2000. From 2000 to 2006 the office building was occupied by Nextel Communications. The property to the south, 1056 S. La Cienega, is currently a vacant lot (photo 13). The former occupants have been identified as:

1934 – 1945, Unidentified owner(s)/ice house and store;
1945 – 1984, Unidentified owner(s)/restaurant and night club;
1984 – 2001, Unidentified owner(s)/vehicle electronics installer;
2001 – 2008 (?), Kabbalah Center/preschool;
2008 – present, Unidentified owner(s)/vacant land (photo 13).

There are 5 adjacent properties to the east. 1031 to 1051 S. Alfred St are all residences that were constructed in 1935 (photos 14-19). Several of the residences have been split into two unit apartments.

The property to the west, 1023 -1055 S. La Cienega, has been occupied by Temple Beth Am since 1950 (photo 20). The construction of the first building was in 1950, since then 3 additional structures have been constructed (1956, 1966, and 1967) and the Temple facility has added a private school.

None of the neighboring or adjacent property addresses are listed on government documents as hazardous waste sites or generators of hazardous waste.

Environmental Compliance Program:

Since there are no structures on the property, there is no need for an environmental compliance program at this time.

Data Gaps:

The property owners of 1026 from 1954 to 1988 were not identified. The property owners of 1032 from 1952 to 1989 were not identified. The property owners of 1042 from 1955 to 2005 are not fully confirmed. The owners of the property to the north from 1955 to 2000 were not identified. The owners for the property to the south from 1934 to 2001 were not identified.

The data gaps identified is not critical in formation, and has no influence on the conclusions, recommendations, or opinions rendered in the report.

CONCLUSIONS and RECOMMENDATIONS

Our review of public and private records, occupancy and land use history, and inspection of the property has not found evidence of environmental impact that could result in a government mandated investigation or restoration.

The ground water migrating under the property was found to have been tainted from the leaking underground storage tanks at the service station on the corner of Olympic and La Cienega. Four investigations have been conducted on the subject property. All indicate that an environmental issue that threatens human health or the environment is not present. A second gas station operated on the northeast corner of Olympic and La Cienega. This gas station was reported to have impacted soil only and was cleaned up and closed in 1998.

Property address 1026 S. La Cienega Blvd. is indemnified by Chevron against any hydrocarbon impacted soil or ground water encountered during the planned future construction. Chevron will clean-up any impacted soil or ground water encountered.

Since there are no structures on the property, friable asbestos containing materials, polychlorinated byphenols (PCB's), lead in paint, lighting waste, and mold cultures are not issues at this time. The property is located in Radon Zone 2 (2 to 4 pico curries/liter). The potential for infiltration with Radon Gas is minimal. A US EPA map depicting this is presented in the Radon section of the Appendix.

The property is at an elevation of 125 feet. It is underlain by 150-200 feet of Holocene and late Pleistocene age alluvium. The depth to ground water is currently estimated at 17 feet, with a flow direction to the south.

The property is located 3 miles northeast of the Newport-Inglewood fault zone. The property is not in an Alquist-Priolo Special Studies Zone. Ground water in general is less than 20 feet deep and the property is listed as being within a liquefaction hazard zone.

The property is located in the abandoned Beverly Hills Oil Field, and is included in a City of Los Angeles methane assessment zone. The investigation conducted in 2013 analyzed for methane with none detected. The nearest oil well drilled in the area is 500 feet to the south. The property is located in FEMA Flood Zone

X (not a 100or 500 year flood zone). The property is not in wetlands. No evidence of willful industrial abuse, mining, legal or illegal landfilling, or oil and gas exploration was discovered.

There are 5 sites within current ASTM distances known to have caused environmental impact. 3 of the sites are located up-gradient from the subject property. One site is currently active and undergoing clean-up. The edge of the gasoline ground water plume has possibly tainted the ground water migrating under the subject property. The levels are below current regulatory Action Levels and considered insignificant at this time. The gasoline station is near the end of the clean-up and it is not likely contaminants in the ground water will rise. The gasoline plume has apparently migrated under the property and dissipated.

Neither of the other two up-gradient sites is close enough to impact the ground water under the subject property. The remaining two sites are either down or off gradient and pose no environmental, legal, or financial threat to the subject property. There is no potential for vapor intrusion from off-site sources at this time.

We recommend no additional environmental assessment work be required on the property at this time.

OPINION

It is our opinion to proceed with the planned construction and have Chevron clean-up any hydrocarbon impacted soil or ground water if it is encountered during excavation and grading.

LIMITATIONS

This report has been prepared to impart information of the obvious environmental condition and hazardous waste liability of the subject property. The statements in this report are based upon observations of the apparent conditions of the premises, systematic investigation of public information, and the interviews with the primary parties, as stated in the Scope of Services. No representation, warranties, or guaranties are given with respect to concealed or latent problems outside the boundaries of the documented investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written or verbal consent from Assisted Living America V, LLC.

Definitions of Selected Geologic Terms

Acre-foot – The volume of liquid or solid to cover one acre to a depth of one foot.

Alluvium – A general term for all sedimentary deposits resulting from the operations of modern rivers. Including sediments deposited in river beds, flood plains, lakes, fans at the foot of mountain slopes, and estuaries

Anticline - Inclined toward each other, as the ridge tiles of the roof of a house.

Aquiclude – A formation which, although porous and capable of absorbing water slowly, will not transmit it fast enough to furnish an appreciable supply for a well or spring.

Aquifer – a formation, group of formations, or part of a formation that transmits water in sufficient quantity to supply pumping wells or springs.

Basin – An extensive depressed area into which the adjacent land drains, and having no surface outlet.

Bedding – Planes dividing sedimentary rocks of the same or different lithology.

Cemented – The process of chemically precipitating a bonding material around grains or minerals in rocks.

Consolidated – Any or all of the processes whereby loose, soft, or liquid earth materials become firm and coherent.

Dome – A roughly symmetrical upfold, the beds dipping in all directions, more or less equally around a point.

En echelon – Separate faults having parallel but steplike trends.

Epoch – a division of geologic time that corresponds to a series of rock and is a subdivision of a period.

Formation – A geological mappable unit, the primary unit of formal mapping of distinction. Most formations possess certain distinctive or combinations of distinctive lithic features. Formations may be combined into groups or subdivided into members.

Fault – A fracture or fracture zone along which there has been displacement of the sides relative to one another.

Hydrologic – Pertaining to the occurrence, circulation, distribution, and properties of the water of the earth and the earths atmosphere.

Interbedded – A bed of sedimentary rock that lies between two other sedimentary beds or formations.

Lithic- Referring to rocks and the minerals that makes up the rocks.

Marine – Of, belonging to, or caused by the sea.

Perched – Water that lies above an impermeable bed that prevents it from migrating downward into an aquifer.

Permeable – Having a texture that allows a fluid to move through it.

Plate – One of many large segments of the earths crust, varying in thickness in 50 to 250 km.

Saturated Zone – The zone in which the voids in the rock or soil are filled with water at a pressure greater than atmospheric in an unconfined aquifer.

Syncline – A fold in rocks in which the strata (formations) dip inward from both sides toward the axis.

Uplift – Elevation of any extensive part of the earths surface relative to some other parts.

Vadose Zone - The zone between the water table (saturated zone) and the atmosphere where the spaces between the grains or minerals contain water at less than atmospheric pressure.

Personnel

Mr. Hector G. Estrella – California (CA) Professional Geologist # 9019. Mr. Estrella received his BS Degree in Oceanography from Universidad Autonoma the Baja California, School of Oceanography with a concentration in Geology. He has over 25 years of experience in geotechnical, geology, and environmental applications. He has extensive experience, and has coordinated hundreds of reports in these areas.

Mr. Alex T. Feucht – CA Professional Geologist #4433. Mr. Feucht received his BS degree in geology from the University of Wisconsin at Madison, and his MS degree in geology from the University of Montana, Missoula. He spent 17 years working as a petroleum exploration geologist for Texaco, and has over 25 years experience as an environmental consultant.

Mr. Carl M. Hulick – Geologist and Licensed Hazardous Waste Contractor. Mr. Hulick received his Bachelors of Science Degree in Geology and Master of Business Administration (MBA) from the California State University at Bakersfield in 1991. He has over 25 years of experience in all aspects of environmental consulting, specialty engineering, water treatment systems, demolition and grading, and real estate transactions. Mr. Hulick is a voting member of the American Society of Testing Materials (ASTM), and has assisted the California State Licensing Board in exam preparation.

Barry Keller, Ph.D. - CA Certified Hydrogeologist #370, CA Professional Geologist #4460. Dr. Keller received his Ph.D. in geophysics from the University of California Santa Barbara in 1984, his MS degree in geology from the California Institute of Technology in 1969. Dr. Keller has over 25 years experience applying geophysics and hydrogeology to all aspects of environmental protection. His work briefly includes petroleum and mineral exploration, US Military base clean-ups, development of environmental regulation for the World Bank in South America, hazardous waste management, fresh water delivery systems, and computer modeling. Dr. Keller has numerous publications in all of these fields.

Mr. Craig A. Kitchen – National Registry of Environmental Professionals, REPA #456935 Mr. Kitchen studied at California State University at Los Angeles and is an environmental scientist by trade. He is 40 hour OSHA certified, and the director of safety and environmental affairs at a large manufacturing concern. He has over 25 years of experience in the storage, utilization, and disposal of hazardous materials and waste streams.

Mrs. Mercedes Q. Maikisch – Environmental Assessor. Mrs. Maikisch received her Bachelor of Science Degree in Mathematics from Saint Peter College of Toril Davao City Philippines. She has 1 year of experience conducting and editing “All Appropriate Inquiries” (Phase I’s).

Mr. Robert J. Maikisch - CA Professional Geologist #8963. Mr. Maikisch received his BS degree in geology from Bradley University, Illinois in 1982. He has completed graduate studies in hydrogeology and stratigraphy at the Colorado School of Mines in Golden, CO. He spent 6 years working for Noranda Exploration as a technician and geologist, and has US EPA level training in Radon gas detection and mitigation. He is one of NEI’s founders, with over 25 years experience as an environmental consultant.

Mr. Gary M. Mann - CA Professional Geologist #6589. Mr. Mann received his MS degree in geology from the California State University at Hayward, and his BS degree in geology from the California State University at Long Beach. He spent 12 years as a geologist for the United States Geological Survey, involved in remote sensing and seismic reflection, and has written several publications. He is currently specialized in the application of Ground Penetrating Radar and Electrical Resistivity Tomography for subsurface imaging.

Ms. Dawn McGuire, Ph.D, - CA Certified Engineering Geologist #2280, CA Certified Hydrogeologist #905, CA Professional Geologist #7181. Dr. McGuire received her Ph.D. in geology/geochemistry from the Colorado School of Mines, Golden CO, in 1983; her MA degree in geology from the University of California at Santa Barbara (UCSB) in 1976; and her BA degree in geology from UCSB in 1972. She has more than 36 years of experience in geosciences, including research with the USGS (>75 publications); the National Park Service; California Geological Survey; CA Department of Fish and Game; and roadway-engineering geology with the CA Department of Transportation (Caltrans).

Ms. Mya L. Raggio - United States Code Qualified Environmental Assessor and Project Manager, Ms. Raggio studied at Saddleback University. She has over ten years of experience in the environmental industry, and is currently focused on studies in Industrial Hygiene.

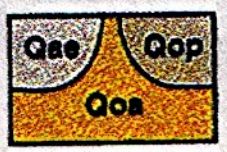
BEVERLY HILLS—VAN NUYS (South 1/2) QUADRANGLES

LEGEND



SURFICIAL SEDIMENTS

unconsolidated detrital sediments; generally undissected

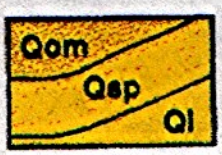
af *artificial cut and fill* **Qls** *landslide debris*

Qs *beach sand*

Qa *alluvial gravel, sand, and silt-clay, derived mostly from Santa Monica Mountains; includes gravel and sand of stream channels*

OLDER SURFICIAL SEDIMENTS

unconsolidated to weakly consolidated alluvial sediments, dissected where elevated; late Pleistocene age



Qae *alluvial fan sediments of granitic sand at West Hollywood, derived from adjacent Santa Monica Mountains*

Qop *paleosoil in Baldwin Hills (Fox Hills residual paleosoil of Weber et al.1982), gray to rusty brown, sandy, locally pebbly, moderately indurated "hardpan" on* **Qoa**

Qoa *older alluvium of gray to light brown pebble-gravel, sand and silt-clay derived from Santa Monica Mountains; slightly consolidated; in Baldwin Hills designated as Baldwin Hills sandy gravel by Weber et al.1982, where it is much dissected and eroded*

—UNCONFORMITY—

in mountain areas

SHALLOW MARINE SEDIMENTS

shallow marine and some alluvial detrital sediments, weakly consolidated, dissected where elevated; Pleistocene age

Qom *marine deposits of Hoots 1931: light gray to light brown sand, pebbly sand gravel and silt; probably in part non-marine alluvium*

Qsp *San Pedro Sand (of Wright 1987; Culver Sand of Weber et al.1982, in Baldwin Hills): light gray to light brown sand, fine to coarse grained or pebbly, locally contains shell fragments*

Ql *Inglewood Formation (of Wright 1987; Weber et al.1982, in Baldwin Hills): light gray, friable fine grained sandstone and interbedded soft gray siltstone; base not exposed*

UNNAMED SHALE

(upper member of Modelo Formation of Hoots 1931; Upper Modelo Formation of Durrell 1954; equivalent to Sisquoc Formation of Dibblee 1989, in Ventura Basin)

marine clastic and biogenic; late Miocene age ("Delmontian" and late Mohnian Stages)

Tud *soft, white-weathering diatomaceous shale to diatomite, bedded, soft, semi-punky, porous; grades laterally westward into* **Tush**

Displacement during historic time (e.g. San Andreas fault 1857). Includes areas of known fault creep.
Displacement during Holocene.[1]
Faults showing evidence of displacement during late Quaternary time.[2, 3]
Quaternary (undifferentiated) faults-most faults in this category show evidence of displacement during the last 2,000,000 years; possible exceptions are faults which displace rocks of undifferentiated Plio-Pleistocene age.
Faults showing evidence of no displacement during Quaternary time or faults without recognized Quaternary displacement.

Sierra Madre	Active	62	38	>7.0
Verdugo	Active	21	13	6.7
Whittier	Active	>40	>25	>7.0

[1]The term potentially active is used here to classify those faults for which there is evidence for Pleistocene age offsets but for which evidenc for or against Holocene activity has not (yet) been developed. The term active is used here to indicate a fault for which there is geologic o geomorphic evidence to infer Holocene offset or for which there is current seismic activity on the fault structure.

EQ = earthquake; M = magnitude.

Source: Ziony (1985), and updated based on preliminary research by the Southern California Earthquake Center.

Federal Emergency Management Agency - 2015

FEMA LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A No Base Flood Elevations determined.

ZONE AE Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

ZONE AR Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.

ZONE A99 Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.

ZONE V Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D Areas in which flood hazards are undetermined, but possible.

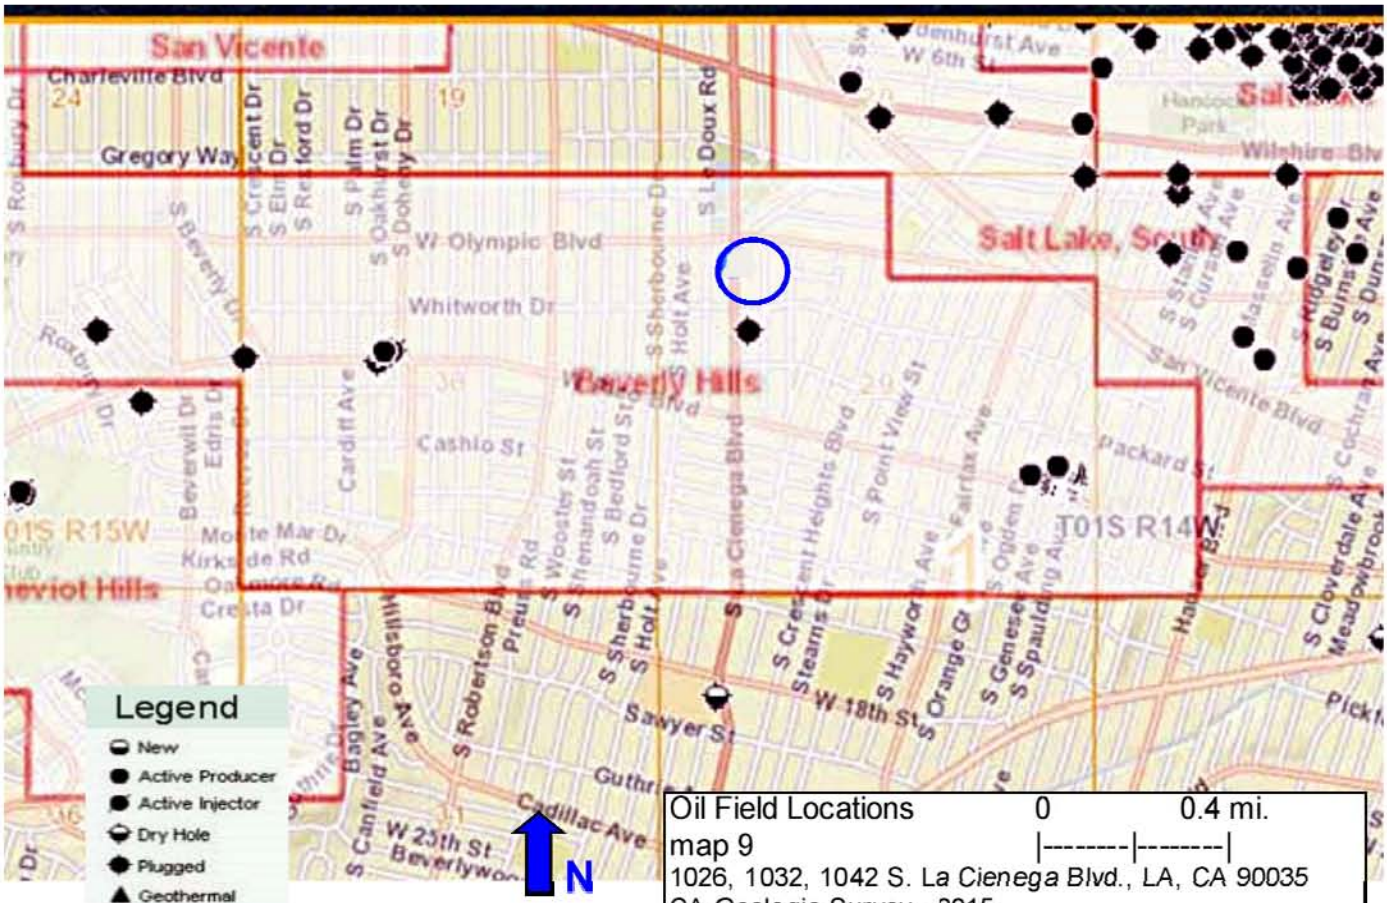
COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

1% annual chance floodplain boundary

0.2% annual chance floodplain boundary



Floodway boundary

Zone D boundary

CBRS and OPA boundary

Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.

14. APPLICATION COMMENTS

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information has been captured electronically and could not be printed due to space restrictions. Nevertheless, the information printed exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME	ADDRESS	CLASS	LICENSE#	PHONE #
(O) , Owner-Builder	, ,		0	

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code:
Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(__) I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

OR

(✓) I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(__) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(__) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier:_____ Policy Number:_____

(✓) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Owner-Builder Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

(C) Isaacson Dean R Co A	P O Box 9148,	Calabasas, CA 91372	B	404304	310-344-7900

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** Lic. No.: **404304** Contractor: **ISAACSON DEAN R CO A**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(_) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(_) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **State Comp. Ins. Fund** Policy Number: **238-0011442**

(_) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).
Lender's name (if any): _____ Lender's address: _____

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified here n, and it does not authorize or permit any violation or failure to comply with any applicable law Furthermore, neither the City of Los Angeles nor any board. department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property

there is an existing temporary sign surety bond for $10000 on 8/4/2010

In the event that any box (i.e. 1-16) is filled to capacity, it is possible that additional information has been captured electronically and could not be printed due to space restrictions. Nevertheless, the information printed exceeds that required by Section 19825 of the Health and Safety Code of the State of California.

15. Building Relocated From:

16. CONTRACTOR, ARCHITECT, & ENGINEER NAME	ADDRESS		CLASS	LICENSE#	PHONE #
(C) Clopton John Construction Inc	3370 Overland Avenue,	Los Angeles, CA 90034	B	911994	3106295414

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. LICENSED CONTRACTOR'S DECLARATION

I hereby affirm under penalty of perjury that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect. The following applies to B contractors only: I understand the limitations of Section 7057 of the Business and Professional Code related to my ability to take prime contracts or subcontracts involving specialty trades.

License Class: **B** Lic. No.: **911994** Contractor: **CLOPTON JOHN CONSTRUCTION INC**

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

( ) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(X) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier: **State Comp. Ins. Fund** Policy Number: **713-0030793**

( ) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. CONSTRUCTION LENDING AGENCY DECLARATION

I hereby affirm under penalty of perjury that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civil Code).
Lender's name (if any): Lender's address:

21. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Licensed Contractor's Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning, Construction Lending Agency Declaration and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by B.H.A.S.A.L. to conduct a Preliminary Site Investigation (Phase II) on the property located at 1022-1026 La Cienega Blvd., Los Angeles, CA 90035 and report the findings (maps 1, 2).

Briefly, a auto repair shop operated on 1032 La Cienega Blvd. from the 1960's until 2007. This facility had 7 in-ground hoists. A visual inspection of the property located the former waste oil storage area, a sump, and a hole in the ground. There are 2 groundwater monitoring wells on the 1026 La Cienega property. These wells are part of a on-going groundwater cleanup on the 76 station that is located on the southeast corner of Olympic and La Cienega.

This investigation was conducted to obtain information on the subsurface soils and groundwater. The primary chemicals of concern are gasoline and it's additives in the groundwater, and hydrocarbons, primarily hydraulic fluid, in the soils.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the CA Regional Water Quality Control Board - Region 4 (RWQCB) in May, 1996. This guidebook provides standards and protocols for subsurface

the lateral extent to the northeast.

The basin is a single structural unit with no obstructions to the flow of ground water. It is comprised of the alluvial cones of three major rivers and the smaller streams that discharge onto the plain forming compound alluvial cones. The four subdivisions of the basin are the Los Angeles Forebay Area, the Montebello Forebay Area, the Whittier Area, and the Central Basin Pressure Area.

The Central Basin Pressure Area is characterized by the ground water aquifers being contained by alternating layers of impermeable strata (clay layers). The historic natural ground water flow direction in this area is southwest. It is flowing in accordance with the natural topography and around the La Brea High (map 3a). The La Brea High is the formation labeled Qc on the geologic map.

Screening Levels:

The Action Level is the level at which action must be taken to protect human health and the environment. This is calculated by using Screening Levels obtained from the California Regional Water Quality Control Board (RWQCB), and the CA Department of Toxic Substances Control (DTSC).

The Screening Level for solvents in soil is determined by comparing a RWQCB calculated Attenuation Factor, the Maximum Contaminant Level (MCL), the depth to ground water, and the sediment type. The MCL's are obtained from California Code of

Regulations (CCR), Title 22. Table 2 in the Appendix presents the Attenuation Factors and MCL's. This basically involves multiplying the Maximum Contaminant Level (MCL) by the Attenuation Factor.

The Screening Level for hazardous concentrations of metals in soil is determined by using DTSC standards as published in CCR, Title 22. A summary is presented in the Appendix (Table 3). Table 3 also presents the average background concentration of metals in Western U.S. sediments. It basically sets limits on how much metal a sediment may contain before it is considered hazardous in California. DTSC in general works on a site by site basis, but this is a appropriate screening tool.

The Screening Level for hydrocarbons and the BTEX (Benzene, Toluene, Ethylbenzene, Xylene) compounds in soils is determined from Table 4.1 of the "Interim Site Assessment & Cleanup Guidebook" as published by the RWQCB. It is determined by comparing the hydrocarbon range, sediment type, and the depth to the ground water. It is presented for reference in the Appendix.

Analytical:

The Chain-of-Custody and Analytical Results from this investigation are presented in the Appendix.

TABLE 1

The analytical results are summarized for review: **nd** = not detected at the method reporting limit; - = not analyzed; AL = Action Level; MCL = Maximum Contaminant Level; **ppm** = parts per million; **ppb** = parts per billion; 1 ppm = 1000 ppb; * = See Below. Results in bold face type exceed Action Level/MCL.

Sample #/Location/ depth	8015M (ppm)	8015g (ppb)	8260B (ppb)
S1-B1-12'	nd	-	-
S2-B2-12'	nd	-	-
S3-B3-12'	nd	-	-
S4-B4-12'	nd	-	-
S5-B5-10'	nd	-	-
S7-B7-5'	nd	-	-
S8-B8-10'	nd	-	-
S9-B9-10'	nd	-	-
S10-B10-5'	nd	-	-
S11-B11-5'	nd	-	-
S12=B12-5'	nd	-	-
S13-MW19	-	nd	nd
S14-MW15	-	nd	nd

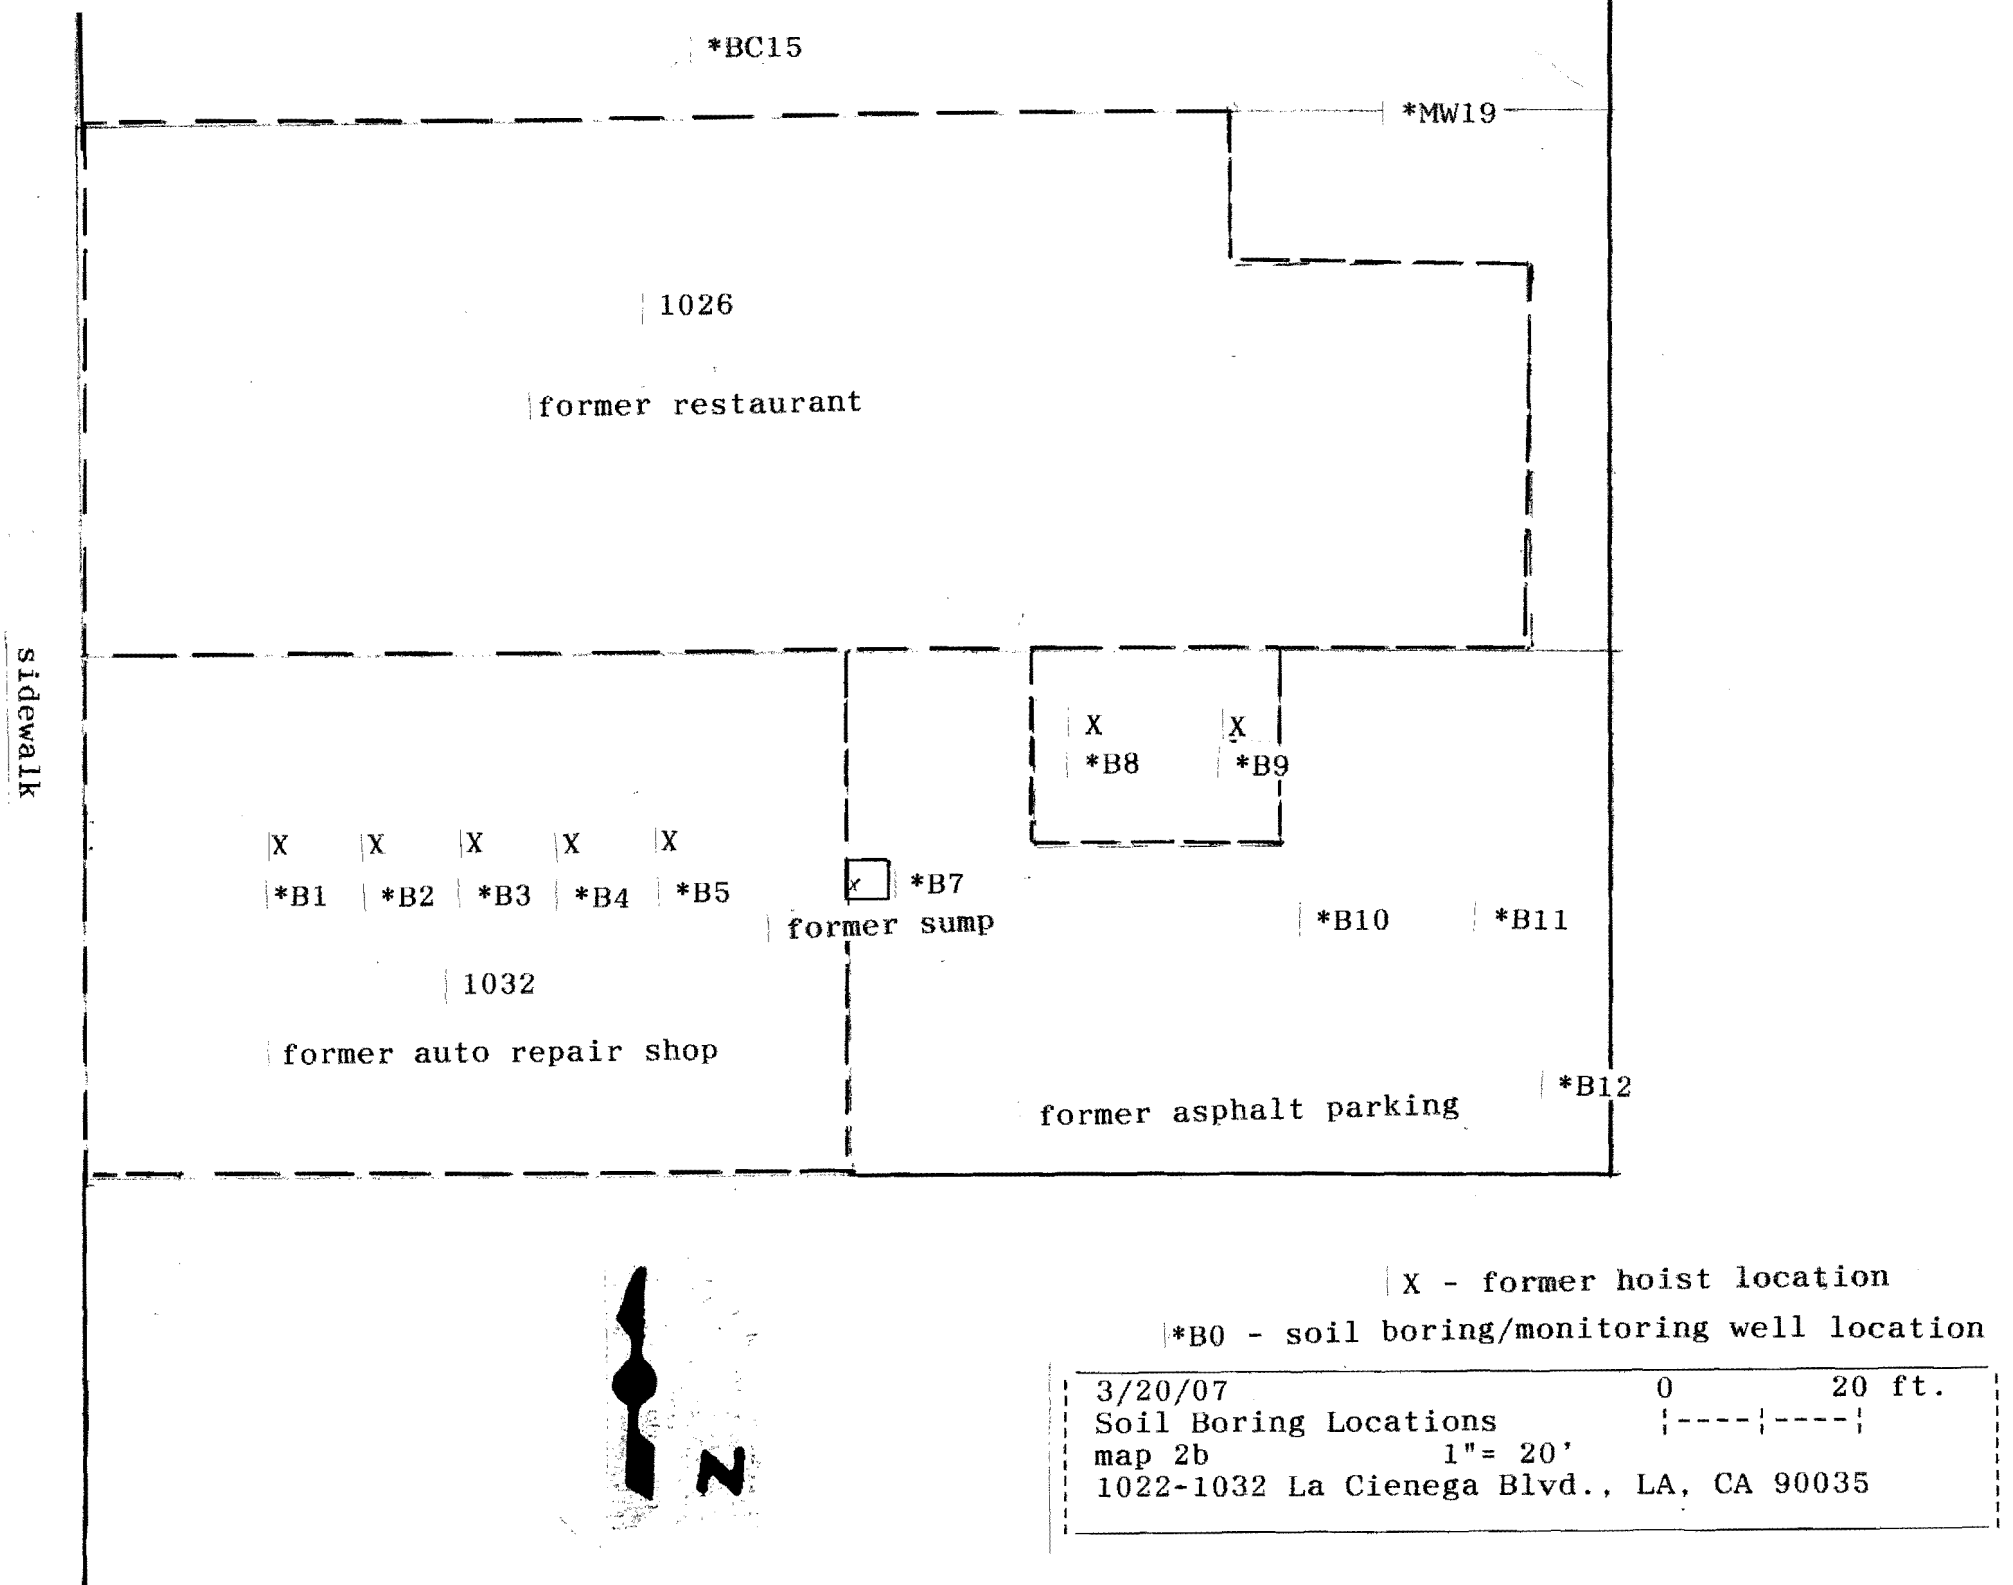
CONCLUSIONS

Non-detectable concentrations of solvents and gasoline were reported in the groundwater.

Non-detectable concentrations of gasoline, diesel fuel, and heavy oils were reported under the former hoists, in the former sump area, in the former waste oil storage area, and near a former hole in the ground.

Environmental impact has not occurred as a result of the former auto repair operation on the property. There is no threat to human health or the environment.

RECOMMENDATIONS



We recommend no additional environmental assessment work be required on the subject property at this time.

LIMITATIONS

This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written/verbal consent from B.H.A.S.A.L. and Mr. Dean Isaacson.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by the Beverly Hills Adjacent Senior Assisted Living, LLC. to conduct a Site Investigation (Phase II) on the property located at 1042 S. La Cienega Blvd. and report the findings (maps 1-2).

Briefly, the property was developed in the early 1950's with the current 2 story apartment building, pool, and associated parking. The purpose of this investigation is to determine if the property has been impacted from a former auto repair center that was immediately to the north and a nearby gasoline station that had a leaking underground storage tank.

The primary contaminants of concern are gasoline and associated additives. The planned vapor barrier and recommended monitoring wells will insure environmental safety requirements will be met in the future.

SCOPE OF INVESTIGATION

This investigation was conducted without the oversight of a Government agency, but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the California Regional Water Quality Control Board – Los Angeles Region (RWQCB) in May. 1996. This guidebook provides standards and protocols for subsurface investigations of this type. It is intended to assess the chemical contamination of property and potential impact to ground water resources.

A Geoprobe was used to drill 9 soil borings. Soil samples were collected from each soil boring at the 10 foot depth. Ground water grab samples were collected from 6 of the soil borings at approximately the 16 foot depth. A description of the Geoprobe method of drilling and sampling is included in the Appendix. Each soil boring was backfilled with bentonite clay. The surface was patched with concrete. The location of each soil boring is presented on map 2.

S15-B9-10’		nd	nd		nd

Naphthalene is also known as white tar. It is a breakdown product of hydrocarbons, and is a indicator of degradation of gasoline. It is hazardous as a irritant to humans in it’s pure form, but poses no threat at these concentrations.

The presence of gasoline and it’s additives in the soil boring B2 would be consistent with the clay acting to absorb the migratory vapor from the ground water. The volatile compounds associated with gasoline have a greater affinity for the molecular interlayer of the clay than the natural bond. The clay has a tendency to contain the gasoline and it’s additives.

CONCLUSIONS

Concentrations of gasoline were reported from the ground water grab samples from soil borings B4 and B5. The soil samples from the 10 foot depth of B4 and B5 do not indicate a surface release had occurred. The soil sample from the 5 foot depth of soil boring B12 from the previous investigation is in the immediate area of soil boring B4, and did not have any concentrations of hydrocarbons.

The results from the Site Investigation on the former auto repair garage, conducted by NEI in March, 2007, did not detect hydrocarbons from the former hoist areas, sump, or oil stained area. The ground water samples from monitoring wells BC-15 and MW-19 were non-detectable for gasoline and it’s additives. This suggests the gasoline in the ground water had likely passed these wells. The presence of Naphthalene and several benzene byproducts suggests the gasoline in the ground water has had sufficient time to partially break down.

The review of the historical data from the release at the 76 gas station indicates gasoline was present in the ground water in 2005. We conclude the leading edge of the gasoline plume has reached the northern edge of the subject property in concentrations above current drinking water standards.

The Action Level for Benzene in ground water is 0.001 ppm. The concentration of Benzene in the ground water grab sample from soil boring B4 is 0.0028 ppm. The plume is apparently migrating south and southwest. It is also possibly migrating around a clay lens in the immediate area of the property.

The sediment type of soil boring B5 is similar to the sediment type in soil boring B7. The grains are fine to course in size. This sediment type is also present in soil boring B3 from the investigation on 1032 S. La Cienega. This geologic data, and map data, suggests a historic stream channel may be present. While gasoline and associated additives are not yet detected in soil borings B7, B8, or B9, we anticipate the leading edge of the gasoline plume to reach the soil boring B7 area in the future.

The concentrations of gasoline reported from the 10 foot depth of soil boring B2 (2.8 ppm) are well below the screening level of 100 ppm and may be considered insignificant. These finding are suggestive of clay acting to trap migrating gasoline vapors off the ground water.

RECOMMENDATIONS

It is our understanding that a vapor barrier is planned for the future development of this property as a retirement home. The vapor barrier should be effective in protecting any future occupants of the planned facility from migratory vapors off the ground water.

Ground water monitoring wells should be placed in areas that will not put holes in the planned vapor barrier, but allow for monitoring of the gasoline plume as it passes under the subject property. A recommended is the property to the south of the planned new development.

The concentrations of gasoline in the ground water are relatively low, and we do not anticipate any vapors migrating 16 feet to the surface in concentrations that will be hazardous to human health or the environment. Since this ground water is not used for municipal purposes the contamination poses no immediate threat to drinking water supplies, or the proposed development.

LIMITATIONS

This report has been prepared to impart accurate information concerning the procedures and findings of this action. The conclusions in this report are based upon the field methods, field observations, and analytical results, as stated in the Scope of Investigation. No representation, warranties, or guaranties are given with respect to concealed or latent environmental impacts outside the documented Scope of Investigation.

CONFIDENTIALITY AGREEMENT

National Environmental, Inc. hereby agrees not to release this report, any portion of this report, or the results of the investigation to any party, except as required by law, without written or verbal consent from Beverly Hills Adjacent Senior Assisted Living, LLC.

INTRODUCTION

National Environmental, Inc. (NEI) has been retained by the Beverly Hills Adjacent Senior Assisted Living, LLC. (BHASAL) to conduct a Site Investigation (Phase II) on the property located at 1022-1054 S. La Cienega Blvd., LA, CA 90035 and report the findings (maps 1-2).

Briefly, the property was developed in the 1950's and 1960's with a retail store (1022), a restaurant (1026), an auto repair shop (1032), and the current 2 story apartment building (1042-1056). The purpose of this investigation was to determine if the property has been impacted from a nearby gasoline station (76 Station) that had leaking underground storage tanks (UST), and is currently undergoing clean-up (photo 1, maps 1 & 2).

The primary contaminants of concern are gasoline and its associated additives.

SCOPE OF INVESTIGATION

This investigation was conducted without the direct oversight of a Government agency, but in accordance with the "Interim Site Assessment & Cleanup Guidebook", as published by the California Regional Water Quality Control Board – Los Angeles Region (RWQCB) in May. 1996. This guidebook provides standards and protocols for subsurface investigations of this type. It is intended to assess the chemical contamination of property and potential impact to ground water resources.

A review of previous environmental assessment work was conducted on the subject property, and the site where the UST leak had occurred. Pertinent excerpts from the previous studies are included in this report for reference. Complete copies of the previous reports are available from NEI or BHASAL.

A Ground Penetrating Radar (GPR) survey was conducted to obtain information on the sub-surface conditions of historic and ancient stream channels that are known to have once migrated through this area. Ground Penetrating Radar sends pulses of radio waves into the ground and receives the information as it bounces off the different things underground. The Ground Penetrating Radar allows us to determine the difference between coarse sand and

CONCLUSIONS

We conclude the sand and gravel "pockets" of the migratory stream are interconnected when groundwater is at a higher elevation. Simply, the groundwater fills up until it spills over into the next down-gradient sand and gravel "pocket". At lower groundwater elevations the groundwater remains isolated in the individual "pockets", by the surrounding clay deposits. We ascertain this is the case between the deeper channels, at the 25 to 35 foot depth on the central and eastern side of the property, and the release point at the 76 station. This explains why the groundwater plume apparently ends at the center of the 35 foot deep channel. Map 5b is the best depiction of this scenario.

The concentrations of gasoline in soil borings B30, B32, and B34 appear to be related to groundwater that is currently trapped in sand and gravel "pockets". Minor overflow or seepage through the surrounding clay, is allowing gasoline to escape into the deeper underlying channels, as suggested by the gasoline present in soil borings B11 and B15. These down-gradient points correspond to the path of the stream channel, at the 25 foot depth, identified during the Ground Penetrating Radar survey.

When comparing the data from May, 2008 to the current data, the groundwater samples from B7 and B8 (map 2d) were both non-detectable for gasoline. The groundwater sample from soil boring B11 (map 2a), this investigation, is in nearly the same location as B7 and B8 and reports a concentration of 220 parts per billion. This demonstrates downward migration along the proven stream channel, along the entire length of the property.

The concentrations of gasoline in B15 (2010) also correspond to the findings of soil boring B5 that was drilled in nearly the same location, in May, 2008. Gasoline is also present in the groundwater sample collected from B4 in 2008. This is in the 35 foot deep channel that runs along the east side of the property. Gasoline was not detected in this area in 2010, suggesting groundwater is relatively fast moving in this subsurface channel.

The highest concentrations of contaminants are in soil boring B37. This correlates to the southernmost extent of the original plume when it was investigated in 2000. Map 5c displays the southernmost extent of the mapped plume in 2000 as 1,000 ppm. Map 5a displays the

contaminant level in the B37 area as 1,000 ppm in 2010. We conclude this is fairly clear evidence of the sand and gravel "pockets" isolating the released gasoline long after the occurrence of the initial release.

The post release down-gradient migration, likely due to seepage through the clay, is evident in soil boring B29.

We ascertain the geology underlying the subject property continues on the surrounding properties to the north and west, and it is possible there are other sand and gravel "pockets", surrounding the original release point, that contain highly contaminated groundwater that were not discovered during the 2000-2005 investigation of the 76 Station. This possibility poses a continuous threat to any future occupants of the planned Skilled Nursing Facility, and retirement community.

Based on these data we conclude the downward migration of contaminants will continue under the property as either seepage or over flow during times of higher ground water elevation.

We conclude the planned excavation of a two story underground parking structure will only hasten the down-gradient migration of pollutants into areas of the property that are currently not impacted.

RECOMMENDATIONS

We recommend the polluted groundwater trapped in the sand and gravel "pockets" on the north portion of the property be pumped to and processed in the groundwater treatment unit at the 76 Station.

During excavation for the underground parking structure, any soils above the Action Level should be separated out and disposed of off-site in accordance with current regulations.

There are several options for the long term protection of the occupants of the planned skilled nursing care facility and retirement community. The consideration of these options is beyond the scope of this investigation.

HOLGUIN, FAHAN & ASSOCIATES, INC.
ENVIRONMENTAL MANAGEMENT CONSULTANTS

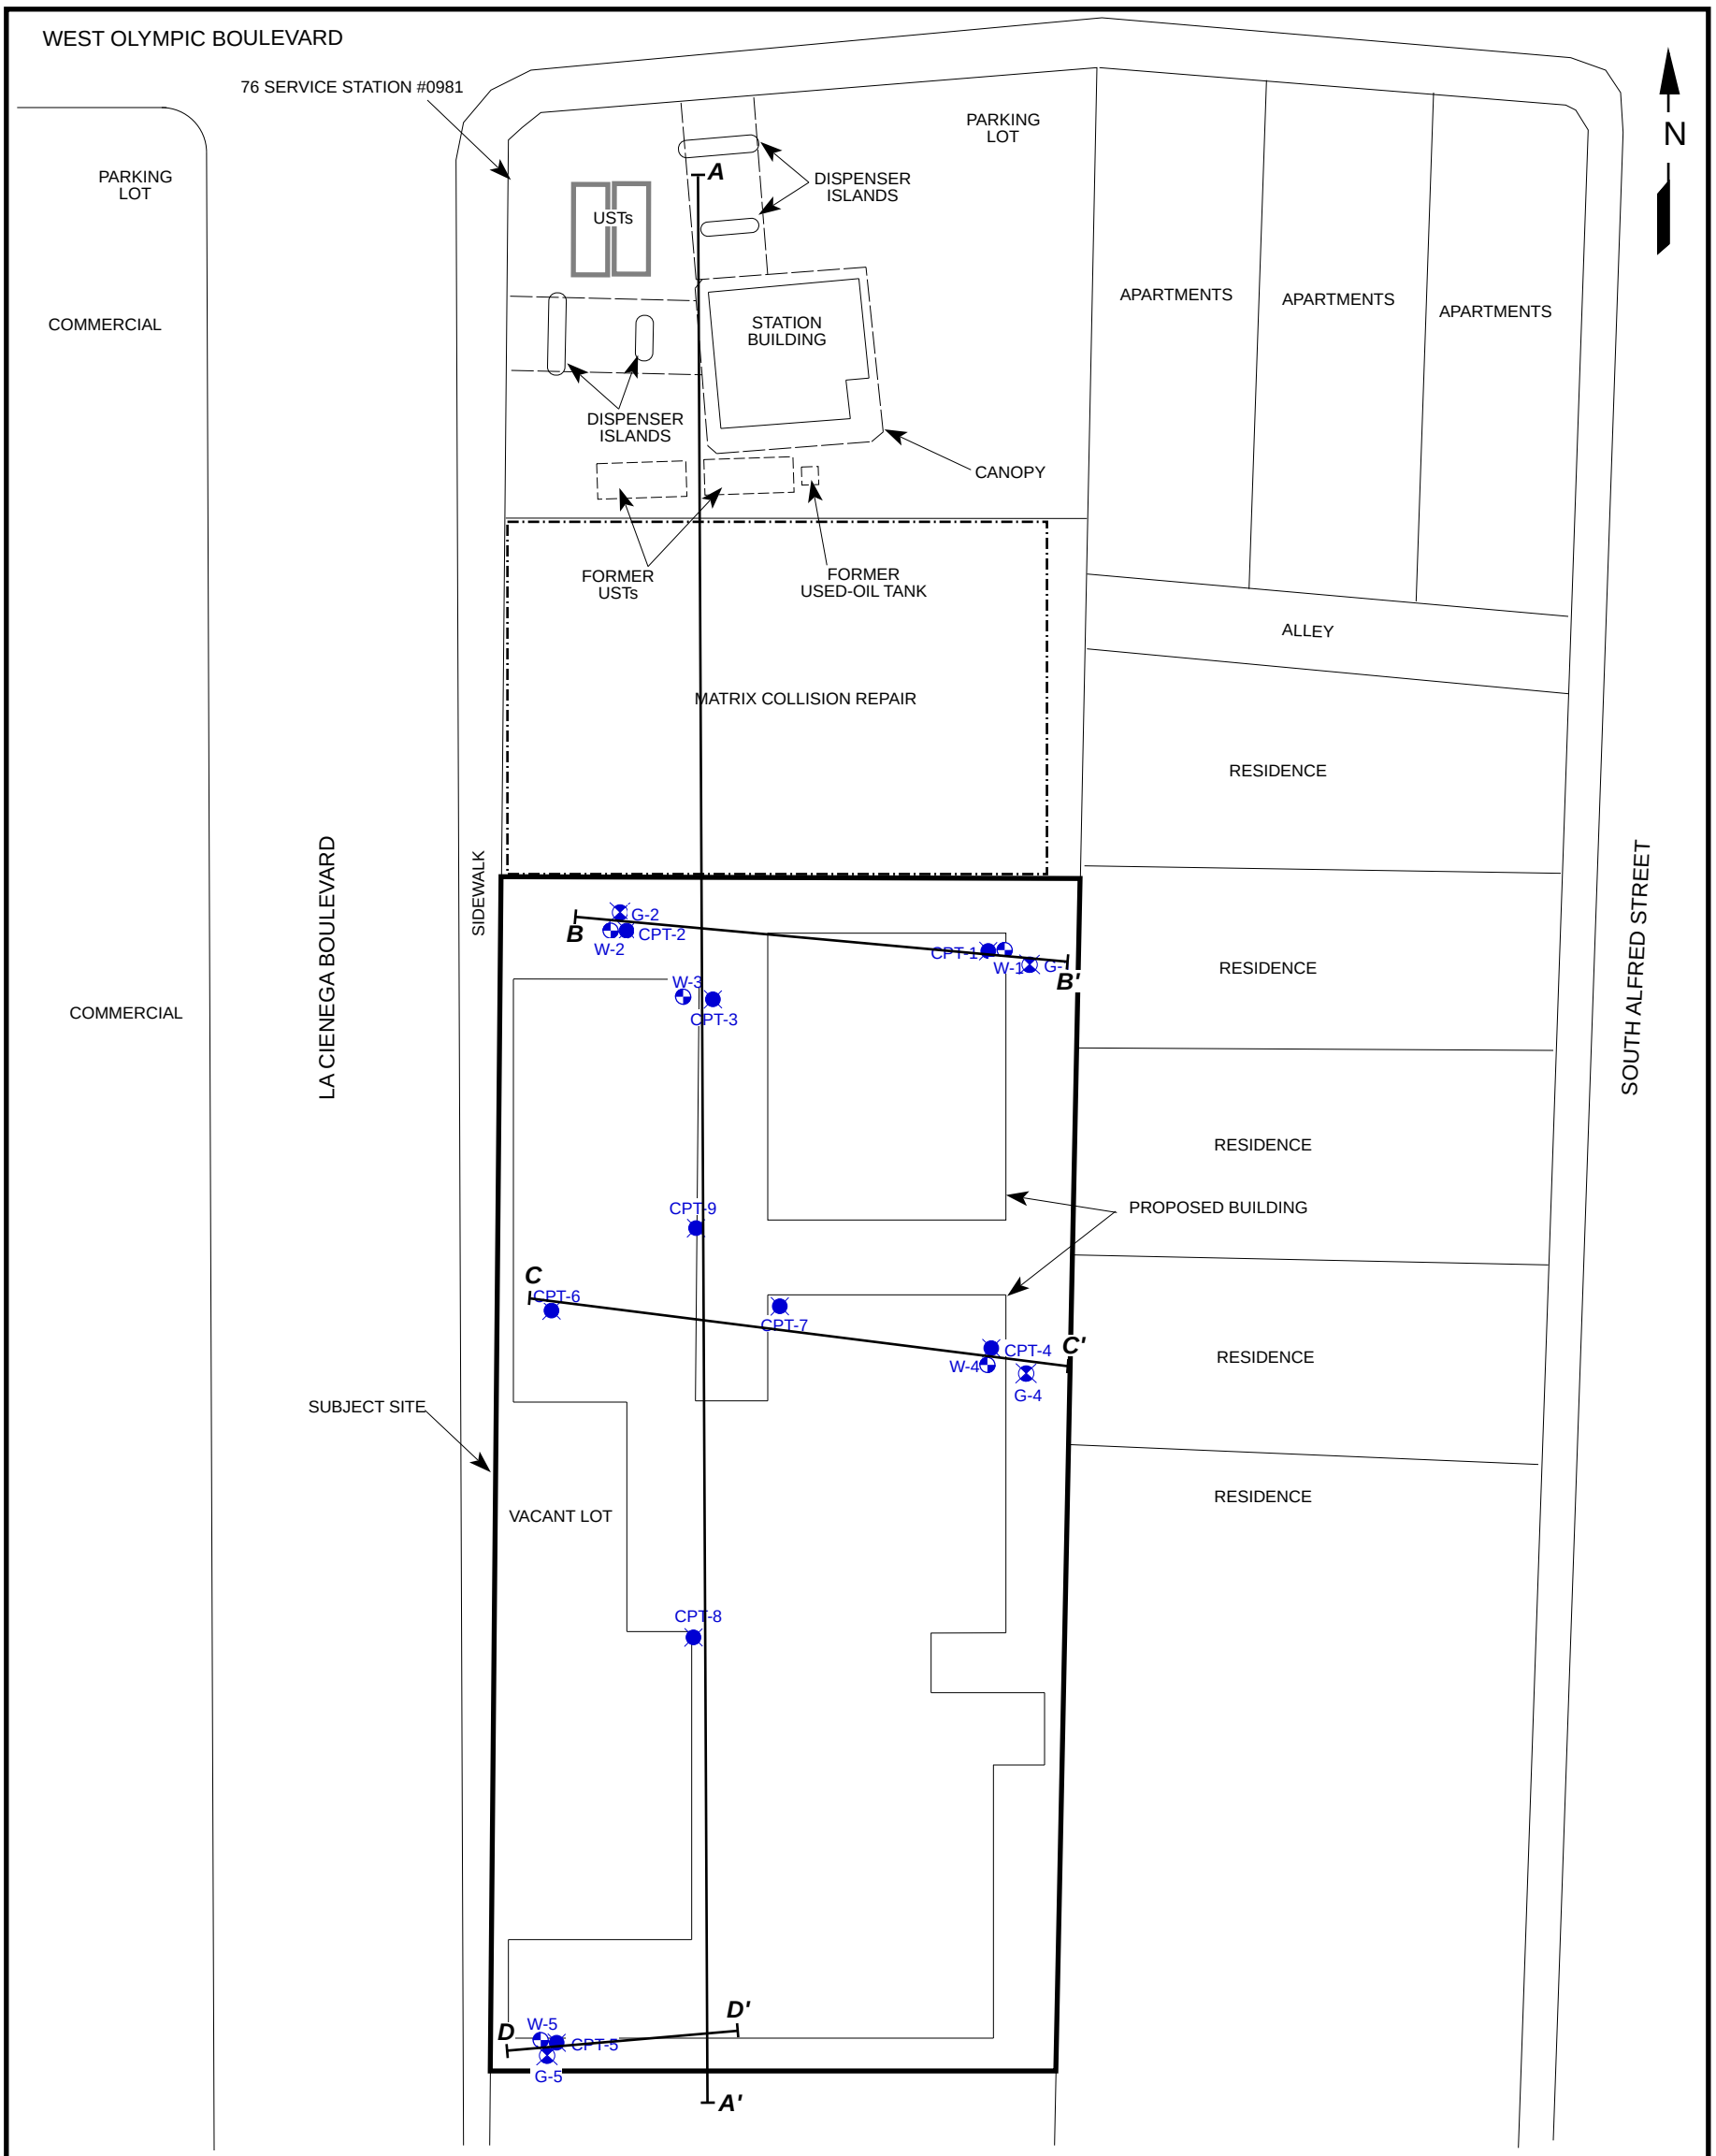
INTRODUCTION



Steptoe & Johnson, LLP, contracted Holguin, Fahan & Associates, Inc. (HFA) to prepare this soil, soil gas, and groundwater sampling report for the contiguous four parcels located at 1022, 1026, 1032, and 1042–1054 South La Cienega Boulevard, Los Angeles, California (see Figure 1 - Site Location Map and Figure 2 - Plot Plan). The four parcels are owned by Beverly Hills Adjacent Senior Assisted Living LLC (BHASAL) and by SRC.SCH LLC. Site access for performing the subject sampling was provided by site access agreements between Chevron Environmental Management Company (EMC) and the above-referenced property owners. The work was performed in accordance with HFA's soil gas and groundwater sampling plan dated August 15, 2012 (HFA, 2012), as modified by subsequent emailed communications and field decisions. The four parcels were unpaved, vacant lots at the time of the sampling activities. Mr. Matt Houser of Blaine Tech Services, Inc. provided access to the four parcels and observed all site work on behalf of the property owners.

SUMMARY

Between November 9 and November 30, 2012, HFA advanced nine CPTu borings and installed five groundwater monitoring wells and four soil gas probes. Soil encountered during the CPTu borings and drilling of the well and probe locations consisted of sand, silt, clay, and mixtures of these soil types.

On December 10, 2012, HFA gauged, purged, and sampled the groundwater monitoring wells and gauged several of the off-site groundwater monitoring wells associated with the nearby 76 service station. No PSH was detected. Depth to groundwater ranged from 15.20 (76 service station well BC-6) to 17.49 ft-TOC (well W-21). Laboratory analytical results for groundwater samples indicated maximum benzene and MTBE concentrations at 7.5 and 2.4 μg/l, respectively.

On December 12, 2012, HFA sampled the soil gas probes. Laboratory analytical results of soil gas samples indicated maximum benzene, ethylbenzene, and naphthalene concentrations of 3.7, 4.6, and 10 $\mu g/m^3$, respectively.

Legal Requirements for Selling Your California Commercial Property

- If you are planning to sell a commercial building constructed before 1975, and it has precast (tiltup) concrete or reinforced masonry walls and wood-frame floors or roof, or if it has unreinforced masonry walls, state law requires you to give a copy of this booklet, *The Commercial Property Owner's Guide to Earthquake Safety*, to the buyer.

- You are not required to hire anyone to evaluate your property, although you may find it in your best interests to do so. The state does not require you to strengthen your property to resist earthquakes, but you should check to see whether your local government requires it.

Taking precautions such as strengthening your commercial property can reduce the risk of earthquake damage. There are no guarantees of safety during earthquakes, but precautions can help. The Seismic Safety Commission hopes that you will act on the suggestions outlined in this booklet and make yourself, your business, and your commercial property safer before the next damaging earthquake.

Why You Should Read This Guide

Anywhere in California, your commercial property can be shaken by damaging earthquakes. Although modern California commercial properties are among the safest buildings in the world during earthquakes, some of the older buildings contain serious *earthquake weaknesses*—problems such as unreinforced masonry walls or walls inadequately anchored to floors and roofs—that buyers frequently overlook .

- **If you plan to buy a commercial property, this guide will tell you how to spot its earthquake weaknesses and other potential earthquake-related concerns, and help you get them fixed.**

  There is no law that requires sellers of commercial properties to disclose earthquake weaknesses like the disclosure laws for residential properties. So it is up to you to find out about them and decide if the property is a good investment. You can ask the seller to complete a disclosure form, like the one opposite, to help you decide. While the earthquake weaknesses listed on the form are those most likely to cause deaths and injuries in an earthquake, you should look for *all* the earthquake weaknesses and concerns mentioned in this booklet. You should consider the possibility that the property could be seriously damaged or could be subject to earthquake strengthening ordinances, or that you could be liable for earthquake damage to tenants and passersby.

- **If you own a commercial property, this guide will help you assess and manage your earthquake risk so that your property will survive damaging earthquakes.**

  You can strengthen your building to help reduce or prevent earthquake damage. It may be expensive to fix these weaknesses before an earthquake, but it could cost much more to repair the damage afterward.

- **If you lease space in a commercial building, this booklet can help you decide whether it is safe enough in earthquakes, and help you protect your business.**

It makes good financial and personal sense to make sure that you, your family, and your property or business are ready when the next quake hits.

How to Use This Guide

Use this guide to help you:

- Identify the earthquake weaknesses and concerns that may threaten your property and get them fixed (pages 6-19).
- Understand the geologic hazards of earthquakes (pages 20-22).
- Evaluate the financial implications of strengthening (pages 23-24).
- Prepare yourself, your property, and your business for earthquakes (pages 25-27).

COMMERCIAL PROPERTY EARTHQUAKE WEAKNESS DISCLOSURE REPORT

Refer to Section 8893 *et seq.*, California Government Code and Section 10147, Business and Professions Code

Owner's Name	Assessor's Parcel No.
Street Address	Year Built
City and County	Zip Code

Answer these questions to the best of your knowledge. If you do not have actual knowledge as to whether the weakness exists or not, answer "Don't Know." If you know that a weakness exists or has been corrected, or the building has been seismically retrofitted, explain on a separate sheet. If your property does not have the feature, answer "Doesn't Apply." The page numbers in the right-hand column indicate where in this guide you can find information on each of these features.

		Yes	No	Don't Know	Doesn't Apply	See Page
1.	If the building has precast (tiltup) concrete or reinforced masonry walls with wood-frame floors or roof, are the exterior walls adequately anchored to the floors and the roof in accordance with Sections 2310, 2336, and 2337 of the 1991 Uniform Building Code?	☐	☐	☐	☐	6
2.	If the exterior walls, or part of them, are made of unreinforced masonry, have they been strengthened?	☐	☐	☐	☐	8
3.	If the building has unreinforced masonry bearing walls and is located in Seismic Zone 4, has it been posted as potentially unsafe?	☐	☐	☐	☐	9
4.	If the building has concrete columns, were they adequately reinforced to resist earthquakes or have they been strengthened?	☐	☐	☐	☐	10

☐ Separate pages describing earthquake weaknesses or seismic retrofit work done to this building are attached.

As Seller of the property described herein, I have answered the questions above to the best of my knowledge. Other earthquake concerns may be present but are not disclosed.

EXECUTED BY

(Seller) (Seller) Date

I acknowledge receipt of this form, completed and signed by the Seller. I understand that if the Seller has answered "No" to one or more questions, or if Seller has indicated a lack of knowledge, or if the building was constructed prior to 1975, there may be one or more earthquake weaknesses in this building.

(Buyer) (Buyer) Date

This earthquake weakness disclosure report is made in addition to other real estate transfer disclosures.

Keep your copy of this form for future reference.

If You Are Selling Your Commercial Property

- You must give prospective buyers a copy of this guide if the building was built before January 1, 1975 and it has precast (tiltup) concrete or reinforced masonry walls and wood-frame floors or roof, or if it has unreinforced masonry walls.
- You are not required to hire someone to identify earthquake weaknesses. You may, however, want to get assistance from a qualified engineer or architect with experience in evaluating earthquake hazards, who can prepare a written report for you that describes the earthquake weaknesses in more detail.
- You are not required to remove siding, drywall, or plaster to identify earthquake weaknesses.
- You are not required to strengthen earthquake weaknesses before you sell, but you may get a better price for your property if you do.
- If you list your property for sale by a real estate broker or agent, it is strongly recommended that you give the agent a report, like the one on page 3, that describes earthquake weaknesses when you sign the listing agreement. Your agent can give a copy of this guide and the report on the building to the buyer.
- You should keep a copy of your report, signed by the buyer, as evidence that you have disclosed the earthquake weaknesses.

If You Own or Are Buying A Commercial Property

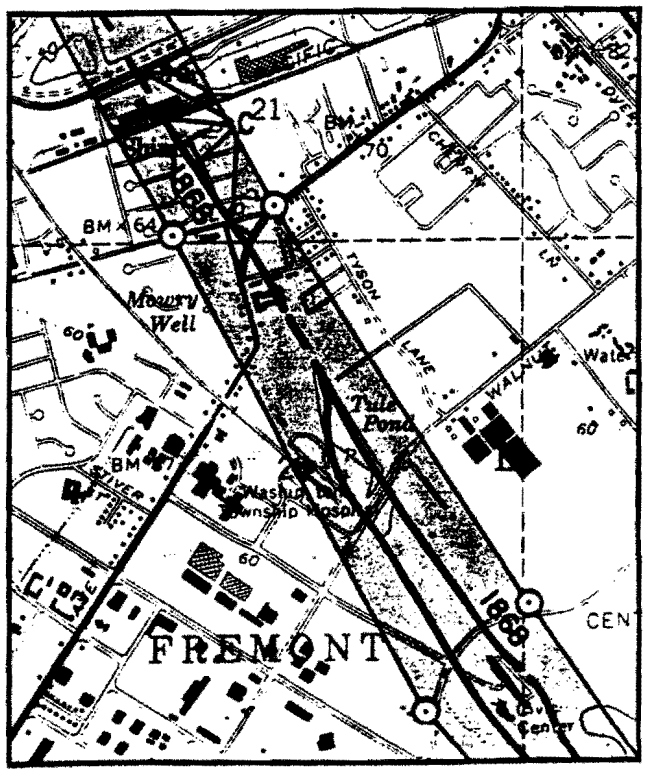
- Before you buy a property, read this guide and review all information disclosed by the seller. Pay special attention to any items that indicate earthquake weaknesses.
- Consider how well the building's design would withstand earthquakes. You may wish to have a qualified architect or engineer with experience in evaluating earthquake weaknesses give you an opinion regarding any earthquake weaknesses and the cost to strengthen them.
- Consider the property's location: Is it in or near a fault rupture zone or an area where it might be damaged by a landslide, liquefaction, or a tsunami?
- You may wish to negotiate the cost of strengthening with the seller. If these weaknesses are not fixed you may find that your repair costs after an earthquake could exceed your equity in your property, or force you to sell at a loss. You could also be liable for deaths, injuries, or property losses.
- Develop emergency plans to deal with earthquake damage repairs and business recovery.
- Check whether the community has earthquake strengthening ordinances that would affect the property.

State Laws Regarding Earthquake Hazard Disclosure

- California's modern earthquake codes are among the strongest in the world, and its buildings are among the safest. However, since many older buildings were not built to these codes, sellers of commercial property built before 1975 that has precast (tiltup) concrete or reinforced masonry walls and wood-frame floors or roof must deliver to the buyer, "as soon as practicable before the transfer," a copy of *The Commercial Property Owner's Guide to Earthquake Safety* (this booklet) to warn the buyer of earthquake weaknesses that the property might have (Government Code Sections 8893 *et seq.*).
- Local governments in Seismic Zone 4, where a damaging earthquake is most likely (see map, page 20), must inventory their unreinforced masonry buildings and establish a seismic risk mitigation program for these buildings that includes the disclosure of the risk to the building owner (Government Code Section 8875 *et seq.*). Owners of buildings in Seismic Zone 4 who have received notice that their buildings have load-bearing unreinforced masonry walls must post their buildings with signs warning that they may be unsafe in an earthquake (Government Code Section 8875.8).
- Sellers of real estate and their agents or brokers must disclose whether the property is located in an "Alquist-Priolo Special Studies Zone," where earthquake faults have ruptured the ground (Public Resources Code Section 2621 *et seq.*).
- The Seismic Safety Commission is required to develop, adopt, publish, and update *The Commercial Property Owner's Guide to Earthquake Safety* containing information on geologic and seismic hazards, explanations of structural and nonstructural earthquake weaknesses, and recommendations for mitigating the weaknesses (Business and Professions Code Section 10147). This guide is to be distributed to buyers of commercial property (Civil Code Section 2079.9) and also made available to the general public.

ALQUIST—PRIOLO EARTHQUAKE FAULT ZONING ACT

The Alquist–Priolo Earthquake Fault Zoning Act was passed in 1972 to mitigate the hazard of surface faulting to structures for human occupancy. This state law was a direct result of the 1971 San Fernando earthquake, which was associated with extensive fault ruptures that damaged numerous homes, commercial buildings and other structures. Surface rupture is the most easily avoided seismic hazard.



What is the Alquist–Priolo Act?

The Alquist–Priolo Earthquake Fault Zoning Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The Act only addresses the hazard of surface fault rupture and is not directed toward other earthquake hazards. The Seismic Hazards Mapping Act, passed in 1990, addresses non-surface fault rupture earthquake hazards, including liquefaction and seismically induced landslides. For further information on Seismic Hazards maps and the Seismic Hazards Mapping Act refer to the DMG website: www.consrv.ca.gov/dmg/shezp/index.htm

How does the law work?

The law requires the State Geologist to establish regulatory zones (known as Earthquake Fault Zones*) around the surface traces of active faults and issue appropriate official Earthquake Fault Zones maps. The maps are distributed to all affected cities, counties and state agencies for their use in planning and controlling new or renewed construction. Local agencies must regulate most development projects within the zones. Projects include all land divisions and most structures for human occupancy. Single family wood-frame and steel-frame dwellings up to two stories not part of a development of four units or more are exempt. However, local agencies can be more restrictive than state law requires.

Before a project can be permitted, cities and counties require a geologic investigation to demonstrate a proposed building will not be constructed across active faults. An evaluation and written report of a specific site must be prepared by a registered geologist. If an active fault is found, a structure for human occupancy cannot be placed over the trace of an active fault and must be set back from the fault (generally 50 feet).

A portion of a map showing Earthquake Fault Zone (shaded) and traces of the Hayward Fault that were active in 1868 and where fault creep (c) occurs.

What is an Earthquake Fault Zone?

Earthquake Fault Zones (EFZs) are regulatory zones around active faults. The zones are defined by turning points connected by straight lines. Most of the turning points are identified by roads, drainages, and other features on the ground. EFZs are plotted on topographic maps at a scale of 1 inch equals 2,000 feet. The zones vary in width, but average about one-quarter mile wide.

What is a fault?

A fault is a fracture in the crust of the earth along which rocks on one side have moved relative to those on the other side. Most faults are a result of repeated displacements. A fault trace is the line on the earth's surface defining the fault. For the purpo
is one that has ruptured in the las
11,000 years.

What is "surface rupture" in an earthquake?

Surface rupture occurs when movement on a fault deep within the earth breaks through to the surface. Surface ruptures associated with the 1992 Landers earthquake, in San Bernardino County, extended for 50 miles with displacements from a fraction of an inch to 20 feet. Not all earthquakes result in surface rupture. The Loma Prieta earthquake of 1989 caused major shaking in the San Francisco Bay Area but the movement deep in the earth did not break through the surface.

* Earthquake Fault Zones were called Special Studies Zones prior to January 1, 1994.

Fault rupture almost always follows preexisting faults, which are zones of weakness. Rupture may occur suddenly during an earthquake or slowly in the form of fault creep. Sudden displacements are more damaging to structures because they are accompanied by shaking.

Fault creep is the slow rupture of the earth's crust. Examples of creep are well known along the Hayward Fault where it crosses highly developed areas in Contra Costa and Alameda counties. Although the Hayward Fault ruptured suddenly in the 1868 earthquake, it also exhibits slow surface creep which offsets and deforms curbs, streets, buildings and other structures that lie on top of the fault.

How can I tell if a property is in an Earthquake Fault Zone?

EFZ maps can be studied at local planning departments or at the DMG offices listed on the back of this brochure. These maps show most streets, drainages, and other features. Local government may have already transferred Earthquake Fault Zone boundaries to parcel maps, so the relationship of the zone to each parcel can easily be determined.

Does the law require that all real estate within an Earthquake Fault Zone be disclosed as such before it is sold?

The fact that a property is located in an Earthquake Fault Zone must be disclosed to a potential buyer before the sales process is complete. The real estate agent is legally bound to present this information to the buyer. When no realtor is involved, the seller must inform the buyer directly. This is usually done at the time an offer is made or accepted.

Effective June 1, 1998, the Natural Hazards Disclosure Act requires that sellers of real property and their agents provide prospective buyers with a "Natural Hazard Disclosure Statement" when the property being sold lies within one or more state-mapped hazard areas, including Earthquake Fault Zones. Additional information on Earthquake Fault Zones and disclosure can be found at the DMG website: www.consrv.ca.gov/dmg/rghm/disclose.htm

What does an Earthquake Fault Zone mean to me?

It means an active fault is present near or within the land parcel and may pose a risk of surface fault rupture to existing or future structures.

If the property is not developed, a fault study may be required before the parcel can be subdivided or structures permitted. See the definition of "proje

under "How does the law work?" Check with your local permitting agency for specific requirements.

If property is developed, you will not need a geologic study unless you plan to extensively add onto or remodel an existing structure. See the definition of a project above and check with your local permitting agency.

You can learn more about the potential fault rupture hazard by:

- Asking the property owner or real estate agent to see any geologic report prepared for the site.
- Checking the files of local government for consulting geologic reports for nearby sites. Also, most fault investigations required by the Alquist-Priolo Act are on file at the DMG office in San Francisco.
- Researching maps and data on active faults at technical libraries at DMG, U.S. Geological Survey, and universities.
- Hiring a consulting geologist to provide a preliminary assessment of the fault rupture hazard for a specific site (see the Yellow Pages).

Where can I go to get more information on Earthquake Fault Zones?

A detailed description of the Alquist-Priolo program, an index of Earthquake Fault Zone maps, and the Act and its regulations are presented in Special Publication 42, *Fault-Rupture Hazard Zones in California*. It can purchased at the DMG offices listed below for $5.00, including tax and postage.

For additional information, visit the DMG website at www.consrv.ca.gov/dmg/

How can I tell whether the map that I have is a Seismic Hazard Zone Map?

The following text appears on all Seismic Hazard Zone Maps for which real estate disclosure is required by California Public Resources Code Section 2694:

STATE OF CALIFORNIA
SEISMIC HAZARD ZONES

Delineated in compliance with Chapter 7.8. Division 2 of the California Public Resources Code (Seismic Hazards Mapping Act)

STATE GEOLOGIST

California Is [redacted] Country

Most people in California live within 30 miles of an earthquake fault. More than 200 faults in California could produce a damaging earthquake.

Earthquake damage most often occurs in locations that we know about. The areas most likely to suffer damage include soils that are susceptible to liquefaction, steep slopes prone to landslides, and areas near faults. When these sites are identified, they can be avoided or structures can be designed to resist collapse and damage. Such measures could save tens of thousands of dollars per home when the next earthquake occurs.

Liquefaction

If a layer of sandy soil near the ground surface is saturated with water and shaken by an earthquake, the soil can flow like a liquid. If the ground fails above the liquefied zone, it can cause severe damage to structures, roads, and utilities. Seismic hazard zone maps published by the Department of Conservation show areas where site investigations are required because of the potential for liquefaction.

Landslides

Steep, unstable hill slopes may slide when an earthquake occurs and boulders may roll down slope. The seismic hazard zone maps published by the Department of Conservation show areas where site investigations are required because of the potential for landsliding.

Faults

Faults can cause the ground to break as they move during an earthquake. The Department of Conservation's Alquist-Priolo earthquake fault zone maps show surface traces of known active faults. Today it is illegal to build new structures for human occupancy over the surface trace of an active fault.

Department scientists also collect information about faults that do not break the surface but that can cause earthquakes. Although those faults are not shown on Alquist-Priolo maps, engineers use the information to design schools, hospitals and other important structures.

What Is Radon?

Radon is a naturally occurring, cancer-causing, radioactive gas.

It is produced by the normal decay of uranium, an element that is found in nearly all soils.

Impossible to detect without a test, radon gas is colorless, odorless, and tasteless.

Radon gas levels in California.

To date, surveys indicate that elevated radon levels can be found in any part of the state. The estimated number of California homes exceeding the recommended **U.S. Environmental Protection Agency's (EPA's)** action level of 4 picoCuries is roughly one percent, or approximately 100,000 homes. The **California Department of Health Services (DHS)**, along with the **U.S. Geological Survey (USGS)** and EPA, have identified several areas with a higher-than-statewide-average of homes with high radon levels. These areas include sections of Santa Barbara, Ventura and Los Angeles counties. Ongoing testing by DHS in these and other counties continues to identify areas of high radon potential.

In addition to geographic location, other factors can affect radon levels, such as house structure, soil/house pressures, climatic conditions, and soil permeability. If you are concerned about radon gas, DHS recommends testing. Testing is the **only** way to determine the radon level in your home.

What are the health risks of radon?

The U.S. Surgeon General has warned that radon is the second leading cause of lung cancer in the United States -- after smoking. A known human carcinogen, radon is estimated to cause approximately 1,100 lung cancer deaths per year in California. DHS and EPA believe that any radon exposure carries some risk -- no level of radon is safe.

How can radon affect you and your family?

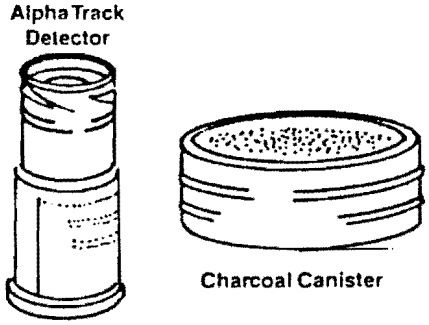
Everyone who breathes is at risk from radon. As radon decays, it changes into other radioactive elements. These elements can become trapped in the lungs as the radon decay process releases energy in the form of particles. Over the course of a lifetime, this process can damage lung tissue and increase the risk of lung cancer.

Your risk of developing lung cancer from radon gas depends on:

- How much radon is in the home.
- The amount of time spent at home.
- Whether you are a smoker (or if you have ever smoked – smoking combined with radon is an especially serious lung cancer risk).

How does radon enter the home?

Typically, radon gas moves up through the soil into your home through cracks in the foundation and walls, pores in hollow-block walls, and gaps in suspended floors and around service pipes.



Homes often draw in radon because of differences in pressure caused by a variety of factors. Your home can trap radon inside, where it can build up to elevated levels.

Radon can also be present in well water, which then is released into the air by showering or other water usage. In most cases, radon in water is a small risk compared to radon gas entering the home from the soil.

How is radon gas detected?

Since you can't see, smell, feel or taste radon gas, you need specialized equipment to test for it. The types of commercially available detectors that can be purchased by home owners are:

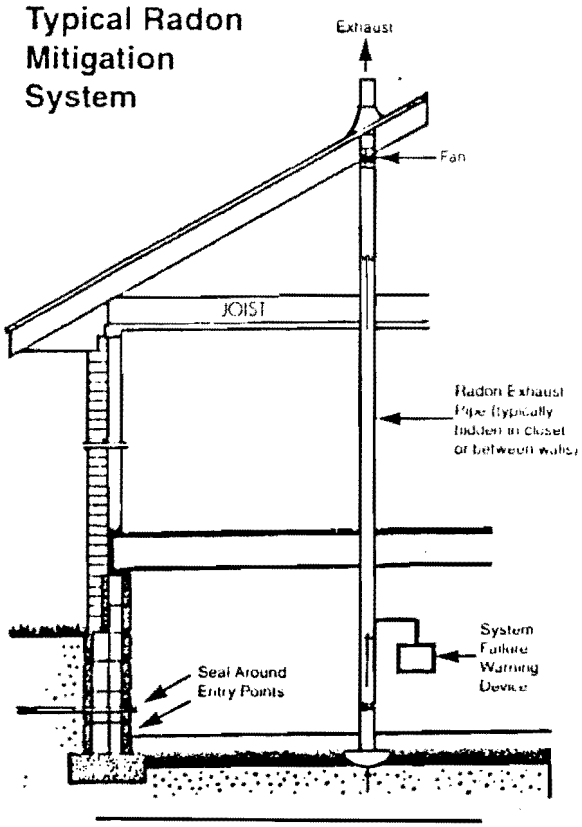
- Charcoal canister (or liquid scintillation device) designed for short-term screening (two to seven days).

- Filtered or unfiltered alpha track detector for longer-term measurement (generally three months to one year).

These detectors usually cost less than $20, which includes postage and the test report.

All types of detectors are acceptable, but since the amount of radon gas escaping from the ground varies from day-to-day and season-to-season, the longer-term test will give you a more representative assessment of your actual radon gas exposure.

Test kits are available in some hardware stores and home improvement centers. Whether using a short- or long-term test, use a device that is state-certified by DHS. A list of mail-order companies handling certified detectors is available from DHS. If you wish to hire a company to conduct testing for you, make sure it is also certified by DHS.



What do test results mean?

Radon gas is measured in picoCuries per liter (pCi/L). Average radon concentrations range from about 0.4 pCi/L outdoors to around 1.3 pCi/L indoors. If short-term tests register levels of 4 pCi/L or higher, DHS and EPA recommend testing with a long-term test (for a better understanding of your year-round average). If you need results right away, verify the first test with a second short-term test. If results are still above 4 pCi/L, you should correct the problem. Radon levels below 4 pCi/L still pose some risk, therefore you may wish to consider further reductions. The higher the radon level, the greater the risk of lung cancer.

What if the test results are high?

There are several methods of lowering radon levels in your home. Some techniques prevent radon from infiltrating, while others reduce the radon gas after it has already entered the home. Usually, DHS and EPA recommend those methods that **prevent** the entry of radon.

Lowering high radon levels requires technical knowledge and special skills; therefore a trained contractor should be used. DHS can provide a list of state-certified contractors. The cost of making repairs to reduce radon gas depends on a variety of factors, but for most homes such repairs will range from approximately $500 to $2,500.

Radon tests and contractors must be certified.

To ensure consumer protection, DHS regulates the radon service industry through a state certification program. Any company providing radon services to the public must be certified and provide its certification number to clients.

Also, California has a real estate disclosure law that requires the disclosure of known environmental hazards, including radon, by the seller to the buyer.❑

WHAT IS THE PROPER WAY TO DISPOSE OF ASBESTOS?

Cal-EPA is responsible for hazardous waste control. They define asbestos waste as having more than 1% asbestos and being friable. Call them for a ruling if you are disposing of asbestos containing material. Asbestos waste must be placed in landfill sites approved for hazardous waste. The California Water Resources Control Board licenses hazardous waste sites. The contractor will normally handle the transport and disposal of asbestos waste. The homeowner is the owner of the waste and if it is over a certain amount must sign an EPA form documenting the waste and where it will be deposited. The contractor will help obtain this form but you must sign it. Cal-EPA can give you advice on how to transport and dispose of small amounts of asbestos. They have special policies for homeowners with only small amounts of asbestos waste.

Any hazardous waste that is transported to a disposal site must be accompanied by a properly completed Uniform Hazardous Waste Manifest. To properly complete the manifest, the generator must obtain an EPA Identification number. Permanent ID numbers are issued to generators who routinely generate hazardous waste. Provisional ID numbers and emergency ID numbers are issued for one-time only situations and are valid for 90 days. A special provisional number is issued for asbestos containing wastes generated in the course of residential removals. For further information and to obtain an application, call the Department of Health Services (DHS) at (916) 324-1781.

Asbestos wastes must be contained and transported in one of the following ways:

1. In sealed, leak-tight, and non-returnable containers (e.g. plastic bags of 6mm thickness, cartons, drums, or cans) from which fibers cannot escape. Wastes within the container must be adequately wetted to prevent blowing of fibers in case the container is broken.

2. For bulk wastes that will not fit into containers without additional breaking, place wastes into sealed and leak-tight wrapping after wetting. If the wastes are to be placed directly in trailer or drop-boxes, the trailer or drop-box should be lined with plastic sheeting. The wastes should be wetted to prevent blowing of fibers in case the wrapping is broken. The wrapping should be sealed (e.g. with duct tape), and the trailer or drop-box should be covered with a tarp.

In California, asbestos wastes totaling more than 50 lbs., must be transported by a registered hazardous waste hauler to an approved treatment, storage, or disposal facility. Persons generating and transporting less than 50 lbs. of a hazardous waste to a permitted hazardous waste facility are exempt from this requirement and the requirements concerning possession of the manifest while transporting hazardous waste upon meeting all of the following conditions:

3. The hazardous wastes are transported in closed containers and packed in a manner that prevents the containers from tipping, spilling, or breaking during the transporting.

4. Different hazardous waste materials are not mixed within a container during the transporting.

5. The person transporting the hazardous waste is the producer of that hazardous waste, the person produces no more than 100 kg of hazardous waste in any month, and accumulates no more than 1000 kg at any one time.

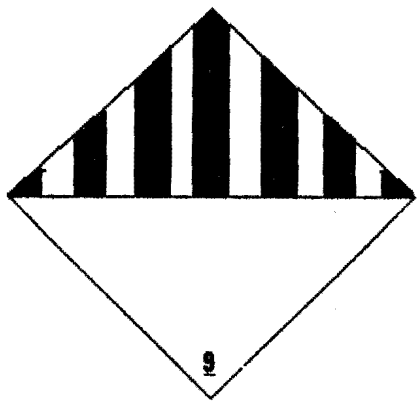
Warning labels are required on each container or wrapping and should state:

DANGER

Contains Asbestos Fibers

Avoid Creating Dust
Cancer and Lung Disease Hazard

HAZARDOUS WASTE



State and Federal Law Prohibits Improper Disposal

Lead Hazards

Lead based paint is poisonous. The dust and chips from lead based paint are dangerous when swallowed or inhaled. The smallest lead dust particles cannot be seen but they get into the body. They are especially dangerous to small children and pregnant women. Lead can affect children's developing nervous systems, causing reduced IQ and learning disabilities.

Lead poisoning affects adults too. High lead levels can cause health problems including high blood pressure, headaches, digestive problems, memory and concentration problems, kidney damage, mood changes, nerve disorders, sleep disturbances, and muscle or joint pain. A single, very high exposure to lead can cause lead poisoning. Lead can also affect the ability of both women and men to have healthy children.

A home built before 1978 is likely to have surfaces painted with lead based paint. When you work on these surfaces you can be exposed to lead. Dry-sanding lead based paint can produce dust and chips. Scraping, brushing, or blasting lead based paint can produce poisonous paint chips or dust. Burning lead based paint with open flame torches to make it eaiser to strip is especially dangerous. The fumes from the hot paint contain lead and volatile chemicals that are poisonous when inhaled.

EPA has proposed regulations that would require renovation and remodeling contractors to provide the EPA pamphlet, Lead-Based paint: Protect Your Family, to homeowners and occupants of most pre-1978 homes before they begin work. You should call the National Lead Information Clearinghouse (800-424-LEAD) to get further information on the availability of the pamphlet.

Fluorescent & High Intensity Discharge (HID) lamps

The following lamps contain mercury:
fluorescent; mercury vapor; metal halide; high pressure sodium and neon. Fluorescent and HID lighting is an excellent business and environmental choice because it can use up to 50% less electricity than incandescent lighting. However, used fluorescent and HID lamps must be managed properly because they contain mercury. The following is a list of Cal EPA, Department of Toxic Substances Control (DTSC) Guidelines:

- Store lamps in an area and in a way that will prevent them from breaking, such as in boxes the lamps came in or boxes supplied by lamp recyclers;
- Mark the lamp storage area with the words "Fluorescent lamps for recycling";
- Do not break or crush lamps because mercury may be released;
- If lamps are accidentally broken, store them in a sealed container. Pick spilled powder and add it to the sealed container;
- Take lamps to a consolidation site * or arrange with a lamp transporter to pick them up. Contact your county or state environmental office or solid waste office for services in your area. To protect yourself from future liability save the invoices that track your lamps and include the following information.
- The date of shipment;
- The number of lamps;
- The location from where the lamps are being shipped;
- The destination of the shipment.

For further information contact the DTSC regional office nearest you:
Region 1 – Sacramento (916) 255-3618
Region 2 – Berkeley (510) 540-3739
Region 3 – Glendale (818) 551-2830
Region 4 – Cypress (714) 484-5400

WHAT IS GROUNDWATER?

Groundwater is but one stage, or form, through which water passes in the earth's hydrologic cycle (see Figure 1). The hydrologic cycle is the continual movement of water over, in, and through the earth and its atmosphere as it changes from one form—solid, liquid, gas—to another.

The water you use today may have evaporated from an ocean, traveled through the atmosphere, fallen back to the earth's surface, gone underground, and from there moved to streams leading back to the seas.

Water is readily visible in many forms—clouds, rain, snow, fog, lakes, streams, oceans, polar ice caps—but as groundwater, it is, by definition, out of sight. Our understanding of groundwater and its role in the hydrologic cycle has been hindered by the difficulty of observing and measuring the properties and extent of groundwater.

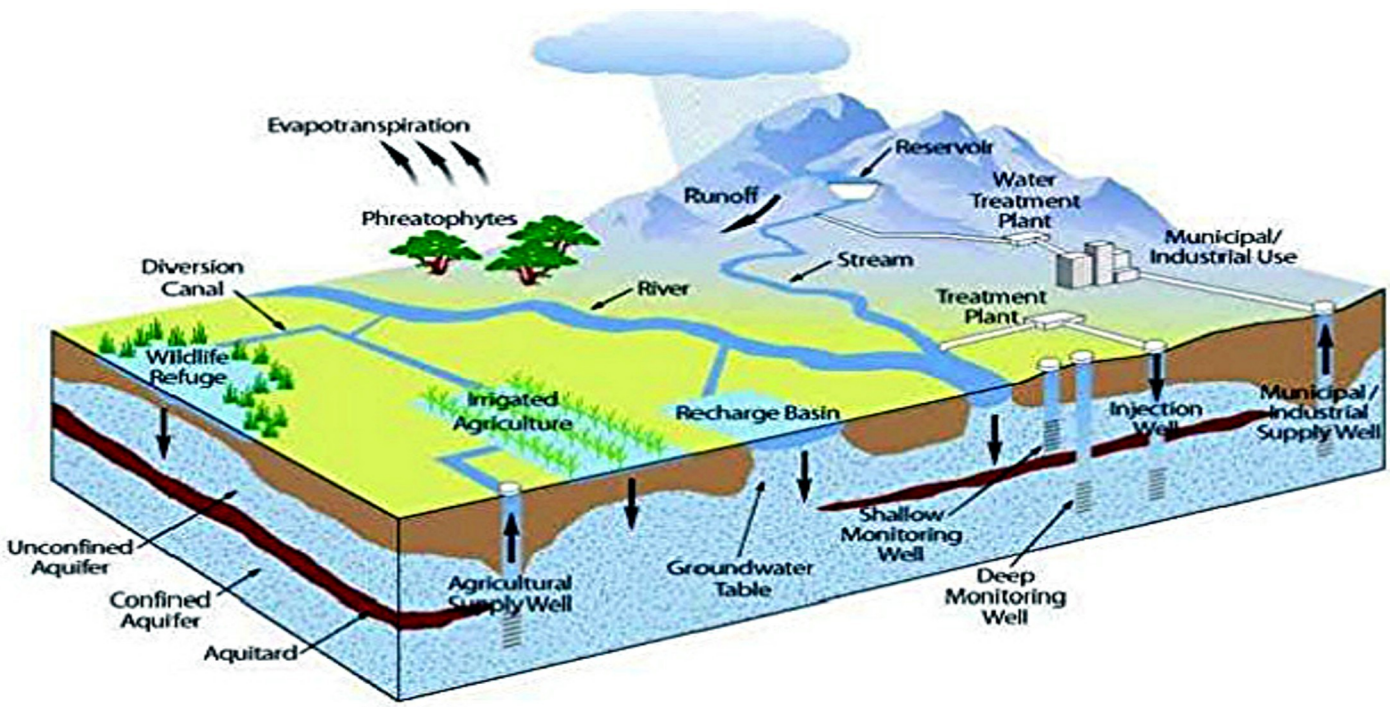
Long-standing misconceptions about groundwater's origin, occurrence, and movement have by no means prevented people from using it. Groundwater supplies have been tapped for thousands of years, but only recently have we started to understand their characteristics and to manage them.

Much remains to be discovered about groundwater, but wider public awareness of its nature and properties is an important first step.

Water Underground

When water falls to earth as rain or snow, most of it seeps into the ground. It first passes through the unsaturated zone, where soil pores are filled partly with air and partly with water. Plant roots, bacteria, fungi, insects, and burrowing animals are found in the unsaturated zone.

The water flows downward through the unsaturated zone into the saturated zone, where all pores are filled with water. The upper boundary of the saturated zone is called the water table (see Figure 2).



The water table rises when water enters the saturated zone; the water table falls when water is discharged from the saturated zone naturally (e.g., springs, lakes, or rivers) or by pumping. Water in the saturated zone is commonly referred to as groundwater.

Recharge

The process by which water—from rainfall, snowmelt, and other sources—flows into a waterbearing geologic formation (aquifer) is known as recharge.

Recharge of the saturated zone occurs when water seeps down through the unsaturated zone. The unsaturated zone is important to the groundwater underlying it because many impurities are removed as water moves through this zone.

Both the quantity and quality of groundwater can be affected by the condition of the unsaturated zone in a recharge area.

Coastal Plain of Los Angeles Groundwater Basin, Central Subbasin

- Groundwater Basin Number: 4-11.04
- County: Los Angeles
- Surface Area: 177,000 acres (277 square miles)

Basin Boundaries and Hydrology

The Central Subbasin occupies a large portion of the southeastern part of the Coastal Plain of Los Angeles Groundwater Basin. This subbasin is commonly referred to as the "Central Basin" and is bounded on the north by a surface divide called the La Brea high, and on the northeast and east by emergent less permeable Tertiary rocks of the Elysian, Repetto, Merced and Puente Hills. The southeast boundary between Central Basin and Orange County Groundwater Basin roughly follows Coyote Creek, which is a regional drainage province boundary. The southwest boundary is formed by the Newport Inglewood fault system and the associated folded rocks of the Newport Inglewood uplift. The Los Angeles and San Gabriel Rivers drain inland basins and pass across the surface of the Central Basin on their way to the Pacific Ocean. Average precipitation throughout the subbasin ranges from 11 to 13 inches with an average of around 12 inches.

Hydrogeologic Information

Water Bearing Formations

Throughout the Central Basin, groundwater occurs in Holocene and Pleistocene age sediments at relatively shallow depths. The Central Basin is historically divided into forebay and pressure areas. The Los Angeles forebay is located in the northern part of the Central Basin where the Los Angeles River enters the Central Basin through the Los Angeles Narrows from the San Fernando Groundwater Basin. The Montebello forebay extends southward from the Whittier Narrows where the San Gabriel River encounters the Central Basin and is the most important area of recharge in the subbasin. Both forebays have unconfined groundwater conditions and relatively interconnected aquifers that extend up to 1,600 feet deep to provide recharge to the aquifer system of this subbasin (DWR 1961). The Whittier area extends from the Puente Hills south and southwest to the axis of the Santa Fe Springs-Coyote Hills uplift and contains up to 1,000 feet of freshwater-bearing sediments. The Central Basin pressure area is the largest of the four divisions, and contains many aquifers of permeable sands and gravels separated by semi-permeable to impermeable sandy clay to clay, that extend to about 2,200 feet below the surface (DWR 1961). The estimated average specific yield of these sediments is around 18 percent. Throughout much of the subbasin, the aquifers are confined, but areas with semi-permeable aquicludes allow some interaction between the aquifers (DWR 1961).

The main productive freshwater-bearing sediments are contained within Holocene alluvium and the Pleistocene Lakewood and San Pedro Formations (DWR 1961). Throughout most of the subbasin, the near surface Bellflower aquiclude restricts vertical percolation into the Holocene age Gaspur aquifer and other underlying aquifers, and creates local semi-perched groundwater

conditions. The main additional productive aquifers in the subbasin are the Gardena and Gage aquifers within the Lakewood Formation and the Silverado, Lynwood and Sunnyside aquifers within the San Pedro Formation (DWR 1961). Specific yield of deposits in this subbasin range up to 23 percent in the Montebello forebay, 29 percent in the Los Angeles forebay, and 37 percent in the Central Basin pressure area (DWR 1961). Historically, groundwater flow in the Central Basin has been from recharge areas in the northeast part of the subbasin, toward the Pacific Ocean on the southwest. However, pumping has lowered the water level in the Central Basin and water levels in some aquifers are about equal on both sides of the Newport-Inglewood uplift, decreasing subsurface outflow to the West Coast Subbasin (DWR 1961).

There are several principal aquifers/aquicludes present in this subbasin.

Aquifers/ Aquiclude	Age	Formation	Lithology	Maximum Thickness (feet)
Gaspur	Holocene		Coarse sand, gravel	120
Semiperched	Holocene		Sand, gravel	60
Bellflower	Pleistocene	Lakewood Formation	Clay, sandy clay	140
Gardena	Pleistocene	Lakewood Formation	Sand, gravel	160
Gage			Sand	120
Silverado	Lower Pleistocene	San Pedro Formation	Sandy gravel	300
Lynwood			Coarse sand and gravel	150
Sunnyside				350

Restrictive Structures

Many faults, folds and uplifted basement areas affect the water-bearing rocks in the Central Basin. Most of these structures form minor restrictions to groundwater flow in the subbasin. The strongest effect on groundwater occurs along the southwest boundary to the Central Subbasin. The faults and folds of the Newport – Inglewood uplift are partial barriers to movement of groundwater from the Central Basin to the West Coast Basin (DWR 1961). The La Brea high is a system of folded, uplifted and eroded Tertiary basement rocks. Because the San Pedro Formation is eroded from this area, subsurface flow southward from the Hollywood Basin is restricted to the Lakewood formation (DWR 1961). The Whittier Narrows is an eroded gap through the Merced and Puente Hills that provides both surface and subsurface inflow to the Central Basin (DWR 1961). The Rio Hondo, Pico, and Cemetery faults are northeast-trending faults that project into the gap and displace aquifers. The trend of these faults parallels the local groundwater flow and do not act as significant barriers to groundwater flow (DWR 1961).

Recharge Areas

Groundwater enters the Central Basin through surface and subsurface flow and by direct percolation of precipitation, stream flow, and applied water; and replenishes the aquifers dominantly in the forebay areas where permeable sediments are exposed at ground surface (DWR 1961). Natural replenishment of the subbasin's groundwater supply is largely from surface inflow through Whittier Narrows (and some underflow) from the San Gabriel Valley. Percolation into the Los Angeles Forebay Area is restricted due to paving and development of the surface of the forebay. Imported water purchased from Metropolitan Water District and recycled water from Whittier and San Jose Treatment Plants are used for artificial recharge in the Montebello Forebay at the Rio Hondo and San Gabriel River spreading grounds (DWR 1999). Saltwater intrusion is a problem in areas where recent or active river systems have eroded through the Newport Inglewood uplift. A mound of water to form a barrier is formed by injection of water in wells along the Alamitos Gap (DWR 1999).

Groundwater Level Trends

Water levels varied over a range of about 25 feet between 1961 and 1977 and have varied through a range of about 5 to 10 feet since 1996. Most water wells show levels in 1999 that are in the upper portion of their recent historical range.

Groundwater Storage

Groundwater Storage Capacity. Total storage capacity of the Central Basin is 13,800,000 (DWR 1961).

Groundwater in Storage.

Groundwater Budget (Type A)

A complete water budget could not be constructed due to the lack of data available. Recharge to the subbasin is accomplished through both natural and artificial recharge. The Watermaster reported natural recharge for the subbasin to be 31,950 af and artificial recharge to be 63,688 af for 1998 (DWR 1999). Additionally, the subbasin receives 27,000 af/yr of water through the Whittier Narrows from the San Gabriel Valley Basin in the form of subsurface flow (SWRB 1952). Urban extractions for the subbasin were 204,335 af in 1998 (DWR 1999).

Groundwater Quality

Characterization. TDS content in the subbasin ranges from 200 to 2,500 mg/l according to data from 293 public supply wells. The average for these 293 wells is 453 mg/l.

I

Impairments.

Water Quality in Public Supply Wells

Constituent Group[1]	Number of wells sampled[2]	Number of wells with a concentration above an MCL[3]
Inorganics – Primary	316	15
Radiological	315	1
Nitrates	315	2
Pesticides	322	0
VOCs and SVOCs	344	43
Inorganics – Secondary	316	113

[1] A description of each member in the constituent groups and a generalized discussion of the relevance of these groups are included in *California's Groundwater – Bulletin 118* by DWR (2003).
[2] Represents distinct number of wells sampled as required under DHS Title 22 program from 1994 through 2000.
[3] Each well reported with a concentration above an MCL was confirmed with a second detection above an MCL. This information is intended as an indicator of the types of activities that cause contamination in a given basin. It represents the water quality at the sample location. It does not indicate the water quality delivered to the consumer. More detailed drinking water quality information can be obtained from the local water purveyor and its annual Consumer Confidence Report.

Department of Health Services and cooperators	Title 22 water quality	294

Basin Management

Groundwater management:	Central Basin was adjudicated in 1965, and the Department of Water Resources was appointed Watermaster. Every month extractions are reported to the Watermaster by each individual pumper. This allows the Watermaster to regulate the water rights of the subbasin. (DWR 1999)

TIPS TO PREVENT MOLD, MILDEW & FUNGI

Mold can become a problem in your apartment home and/or homesite if there is moisture available to allow it to thrive and multiply. The following sources of indoor moisture that may cause problems are:

- House plants (watering can generate large amounts of moisture);
- Steam from cooking;
- Shower/bath steam;
- Wet clothes on indoor drying lines; and
- Water leaks, improper window caulking allowing water to intrude.

There are several ways in which your help can prevent mold growth in the future. The following list may be used as a guide:

A. Remove Excess Moisture

1. Dry out mops and cleaning utensils thoroughly before storing inside your mobilehome.
2. Wipe down bathroom walls and shower doors immediately after bathing; allow towels to air out. Wash and dry towels often.
3. Wipe down any condensation from interior of windows and windowsills.

B. Keep Things Clean

1. Keep closets, dresser drawers – any place where mildew is likely to grow – as clean as possible.
2. Soil on dirty articles can supply enough food for mildew to start to grow when moisture and temperature is right.
3. Greasy films, such as those that form on kitchen walls, also contain many nests for mildew-causing growth.

C. Circulate the Air

1. When the outside is drier than the inside, ventilation allows the dry air to enter, take up excess moisture, and then be carried outside.
2. When natural breezes are not sufficient, use central air conditioning (fan only) and bath/laundry room exhaust fan(s) where available.
3. Poorly ventilated closets get damp and musty during continued wet weather, and articles stored in them are apt to mildew. Try to improve the air circulation by opening the closet doors. In addition, hang the clothes loosely so that air can circulate around them.
4. Dry all wet clothing (including clothes wet from rain or perspiration) before putting in the closet.

Mold is caused when microscopic, air-borne spores land on moist surfaces and spread rapidly. Molds can have useful purposes. Life-saving penicillin is derived from mold. Many foods, such as blue cheese, require mold as part of the manufacturing process. And as owners of compost piles know, mold plays an important role in the cycle of nature, helping to break down organic materials.

But the mold that a growing number of builders and homeowners are encountering poses significant problems. Unchecked mold growth on interior wood, wallboard, paper and carpet has been blamed for serious illnesses. It can be exceedingly difficult to eradicate, and has even rendered some buildings uninhabitable.

This mold has the same root causes as food mold. Tiny spores—less than 4 microns in size—land on damp spots when excessive moisture or water accumulates indoors. These spores then begin digesting whatever they are growing on in order to survive and spread.

According to the U.S. Environmental Protection Agency, there is no practical way to eliminate all mold and mold spores in the indoor environment. But mold can be controlled by controlling moisture.

It takes a concerted effort to maintain a mold-resistant building. Builders and contractors must carefully construct buildings in accordance with approved plans and follow good construction practices in assembling the building components. Building owners and tenants must be observant and take immediate steps to maintain existing buildings and their systems to prevent moisture from accumulating.

General Tips for Preventing Mold

Here are some commonsense precautions that builders, homeowners, and/or building owners can follow to avoid mold and ensure health and safety when building or maintaining a structure.

- Fix leaky plumbing and leaks in the building envelope as soon as possible.
- Watch for condensation and wet spots.
- Fix sources of moisture problems as soon as possible.
- Prevent moisture caused by condensation by increasing surface temperature or reducing the moisture level in air (humidity).
- Insulate or increase air circulation to increase surface temperature.
- Increase ventilation (if outside air is cold and dry), or dehumidify (if outdoor air is warm and humid) to reduce the moisture level in air, repair leaks, etc.
- Keep heating, ventilation and air-conditioning drip pans clean, flowing properly and unobstructed.
- Vent moisture-generating appliances, such as dryers, to the outside where possible.
- Maintain low indoor humidity, below 60 percent relative humidity (RH), ideally 30 to 50 percent, if possible.
- Adhere to a regular schedule of building/HVAC inspections and maintenance.
- Provide drainage outside foundation walls, and slope the ground away from the foundation to speed drying after rainfalls.

What the Codes Say

The ICC *International Codes*™ are the minimum requirements necessary to ensure safety. According to these codes, builders and owners must fight the problem of mold with a three-fold approach.

1. There must be proper ventilation of all interior habitable and occupiable areas along with specific concealed spaces.
   - See Section 1203 of the *International Building Code®*, Section R303 of the *International Residential Code®*, and Chapter 4 of the *International Mechanical Code®*.
2. The exterior envelope of all buildings must be provided with vapor retarders, water-resistant barriers and the necessary flashing.
   - See Chapter 14 of the *International Building Code* and Section R703 of the *International Residential Code*.
3. The maintenance of existing buildings and structures is of the utmost importance. This includes not only the exterior of the structure but also its plumbing and mechanical systems.
   - See Sections 304, 403 and 504 of the *International Property Maintenance Code®*.

If You Have To Remove Mold: Guidelines for Remediation

Mold can generally be removed from nonporous (hard) surfaces by wiping or scrubbing with water or a combination of water and detergent. The use of a biocide, such as chlorine bleach, is not recommended as a routine practice during mold cleanup. Remember, biocides are toxic to humans, as well as to mold, and you should read and follow label precautions. Never mix chlorine bleach solution with cleaning solutions or detergents that contain ammonia becouse toxic fumes could be produced.

When a mold problem is discovered, it is important to protect the health of everyone involved—tenants, contractors ond work crews. These guidelines will help, even if you have little or no experience with mold remediation.

Refer to these guidelines when evaluating an in-house remediation plan or a remediation plan submitted by an outside contractor. Contractors and other professionals who respond to mold and moisture situations in commercial buildings and schools will also find these guidelines essential.

Investigate and evaluate moisture and mold problems.

- Assess the size of the moldy area (square feet).
- Consider the possibility of hidden mold.
- Clean up small mold problems and fix moisture problems before they become large problems.
- Select a remediation manager for medium- or large-sized mold problems.
- Investigate areas associated with occupant complaints.
- Identify sources or causes of water or moisture problems.
- Note type of water-damaged materials (wallboard, carpet).
- Check inside air ducts and air-handling unit.
- Throughout process, consult qualified professional if necessary or desired.

Communicate with building occupants at all stages of process, as appropriate.

- Designate a contact person for questions and comments about medium- or large-scale remediation as needed.

Develop a remediation plan.

- Adapt or modify remediation guidelines to fit your situation; use professional judgment.
- Select cleanup methods for moldy items.
- Select personal protection equipment to protect remediators.
- Select containment equipment to protect building occupants.
- Select experienced remediation personnel.
- Address the moisture problem at its source. Implement repair and/or maintenance plan.
- Dry wet, nonmoldy materials within 48 hours to prevent mold growth.
- Clean and dry moldy materials.
- Discard moldy porous items that cannot be cleaned.

During Cleanup Efforts: Reducing Your Exposure to Mold

During any mold cleanup process, mold spores will be released into the air. For protection during the cleanup operation:

- Use a HEPA filter respirator to reduce the number of mold spores you breathe in.
- Wear protective clothing that can be discarded.
- Wear rubber gloves.
- Work for a short while and then take breaks in the fresh air.
- Work with windows open and keep them open after cleanup.
- Turn off heat and air conditioning to prevent spores from being spread to other areas of the house.
- If there is an air return vent in the room, cover it tightly.
- Place a fan in a window to blow air out of the affected room.
- Double-bag all cleanup materials before removal from contaminated area.

If you use outside contractors or professionals, make sure they have experience cleaning up mold, check their references and have them follow the recommendations presented in this brochure.

Disclaimer

This report was designed by GeoSearch to meet or exceed the records search requirements of the All Appropriate Inquiries Rule (40 CFR §312.26) and the current version of the ASTM International E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process or, if applicable, the custom requirements requested by the entity that ordered this report. The records and databases of records used to compile this report were collected from various federal,state and local governmental entities. It is the goal of GeoSearch to meet or exceed the 40 CFR §312.26 and E1527 requirements for updating records by using the best available technology. GeoSearch contacts the appropriate governmental entities on a recurring basis. Depending on the frequency with which a record source or database of records is updated by the governmental entity, the data used to prepare this report may be updated monthly, quarterly, semi-annually, or annually.

The information provided in this report was obtained from a variety of public sources. GeoSearch cannot ensure and makes no warranty or representation as to the accuracy, reliability, quality, errors occurring from data conversion or the customer's interpretation of this report. This report was made by GeoSearch for exclusive use by its clients only. Therefore, this report may not contain sufficient information for other purposes or parties. GeoSearch and its partners, employees, officers And independent contractors cannot be held liable For actual, incidental, consequential, special or exemplary damages suffered by a customer resulting directly or indirectly from any information provided by GeoSearch.

FACILITY DETAILS

CASE TYPE: **CLEANUP PROGRAM SITE**

CASE NUMBER: **1174**

STATUS: **OPEN - REMEDIATION 4/16/2015**

POTENTIAL CONTAMINATION:

TETRACHLOROETHYLENE (PCE)

POTENTIAL MEDIA AFFECTED:

AQUIFER USED FOR DRINKING WATER SUPPLY, INDOOR AIR, SOIL VAPOR

SITE HISTORY:

THE REGIONAL BOARD HAS BEEN PROVIDING REGULATORY OVERSIGHT FOR THE CHARACTERIZATION, CLEANUP AND MONITORING OF THE CONTAMINANTS OF CONCERN (COCS) IN SOIL AND GROUNDWATER AT THE SITE SINCE MARCH 2005. THE SITE CURRENTLY CONSISTS OF SEVERAL SINGLE-STORY BUILDINGS, CANOPIES, AND PAVED PARKING AREAS USED FOR AUTO BODY REPAIR AND PAINT WORK. THE SITE IS LOCATED IN AN AREA DESIGNATED FOR MIXED RESIDENTIAL AND COMMERCIAL USE BY THE CITY OF LOS ANGELES.). THE SITE IS LOCATED IN THE NORTHERN PART OF CENTRAL BASIN OF LOS ANGELES COUNTY. SOILS TYPES OBSERVED DURING PREVIOUS SUBSURFACE INVESTIGATIONS AT THE SITE HAVE BEEN DESCRIBED AS ALTERNATING INTERVALS OF PREDOMINANTLY UNCONSOLIDATED FINE GRAINED SANDS, SILTS, SILTY SANDS, AND SOME CLAY DOWN TO APPROXIMATELY 30 FEET BELOW GROUND SURFACE (BGS). BASED ON THE SAMPLING RESULTS FROM THE DEEP BORINGS, AEI CONSULTANTS (AEI) INDICATED THAT SEVERAL SANDY INTERVALS WERE OBSERVED AT APPROXIMATELY 26, 40, AND 54 FEET BGS. DEPTH TO FIRST GROUNDWATER AT THE SITE HAS CONSISTENTLY BEEN RECORDED APPROXIMATELY BETWEEN 14 AND 19 FEET BGS IN MONITORING WELLS MW-1 THROUGH MW-4 SINCE THEIR INSTALLATION IN 2003. SINCE 2003, AEI AND TERRACON HAS CONDUCTED SEVERAL ROUNDS OF PHASE II ENVIRONMENTAL INVESTIGATIONS AT THE SITE. ANALYTICAL RESULTS OF THE SOIL, SOIL GAS AND SEVERAL ROUND OF GROUNDWATER SAMPLES CONFIRM THAT THE SOIL , SOIL GAS AND GROUNDWATER BENEATH THE SITE HAVE BEEN IMPACTED WITH TOTAL PETROLEUM HYDROCARBON (TPH), AND VOLATILE ORGANIC COMPOUNDS (VOCS) CONSISTING PRIMARILY OF TETRACHLOROETHYLENE (PCE). BASED ON THE RESULTS OF MOST RECENT SITE INVESTIGTION CONDUCTED BY TERRACON IN JUNE 2009, ON FEBRUARY 18, 2010 THE LA RWQCB ISSUED A DIRECTIVE LETTER TO FLEINER FAMILY TRUST TO INITIATE PREPARATION OF A REMEDIAL ACTION PLAN (RAP) TO ADDRESS THE CURRENT IMPACTS TO SOIL, SOIL VAPOR, AND GROUNDWATER AT THE SITE. THE RAP SHOULD INCLUDE AN ENGINEERING ASSESSMENT OF ALL THE EXISTING DATA TO EVALUATE THE MOST APPROPRIATE, EFFICIENT, AND FEASIBLE REMEDIAL ALTERNATIVES TO MITIGATE THE SUBSURFACE IMPACTS. IN MARCH 2010 TERRACON PREPARED THE RAP AND PROPOSED THE FOLLOWING REMEDIAL TECHNOLOGY FOR VOCS IMPACTED SOIL, SOIL VAPOR AND GROUNDWATER BENEATH THE SITE: 1-IN-SITU SVE REMEDIAL SYSTEM WAS PROPOSED FOR REMEDIATION OF SOILS/SOIL VAPOR AT THE SITE. 2--ENHANCED IN-SITU BIOREMEDIATION (EISB) IN A PERMEABLE REACTIVE ZONE (PRZ) ARRANGEMENT FOR IMPACTED GROUNDWATER IN DOWN-GRADIENT MONITORING WELLS WHICH HAS THE HIGHEST CONCENTRATIONS OF VOCS IN GROUNDWATER. IMPLEMENTATION, OPERATION AND MONITORING PROGRAM FOR OF FULL-SCAL SVE SYSTEM FOR SOIL AND EISB PILOT TESTING FOR GROUNDWATER ARE CURRENTLY IN PROGRESS.

NPL LISTED: **NO** RESTRICTED LAND USE: **NO**

SITE TYPE: **EVALUATION**

SITE TYPE DESCRIPTION

EVALUATION: IDENTIFIES SUSPECTED, BUT UNCONFIRMED, CONTAMINATED SITES THAT NEED OR HAVE GONE THROUGH AN INVESTIGATION AND ASSESSMENT PROCESS. IF A SITE IS FOUND TO HAVE CONFIRMED CONTAMINATION, IT WILL CHANGE FROM EVALUATION TO EITHER A STATE RESPONSE OR VOLUNTARY CLEANUP SITE TYPE. SITES FOUND TO HAVE NO CONTAMINATION AT THE COMPLETION OF THE INVESTIGATION AND ASSESSMENT PROCESS RESULT IN A NO ACTION REQUIRED (FOR PHASE 1 ASSESSMENTS) OR NO FURTHER ACTION (FOR PHASE 2 ASSESSMENTS) DETERMINATION.

DTSC's CURRENT INVOLVEMENT AT SITE (as of 08/21/2014)

ACTIVE - IDENTIFIES THAT AN INVESTIGATION AND/OR REMEDIATION IS CURRENTLY IN PROGRESS AND THAT DTSC IS ACTIVELY INVOLVED, EITHER IN A LEAD OR SUPPORT CAPACITY

PAST USE/S THAT CAUSED THE CONTAMINATION

DRY CLEANING

CONFIRMED CONTAMINANTS OF CONCERN

30003 - BENZENE

30022 - TETRACHLOROETHYLENE (PCE)

Unlocatable Summary

This list contains sites that could not be mapped due to limited or incomplete address information.

Database Name	Site ID#	Site Name	Address	City/State/Zip/County
LUST	T0603737987*LUST	LOS ANGELES AFS		LOS ANGELES

AIRSAFS Aerometric Information Retrieval System / Air Facility Subsystem

VERSION DATE: 10/20/14

The United States Environmental Protection Agency (EPA) modified the Aerometric Information Retrieval System (AIRS) to a database that exclusively tracks the compliance of stationary sources of air pollution with EPA regulations: the Air Facility Subsystem (AFS). Since this change in 2001, the management of the AIRS/AFS database was assigned to EPA's Office of Enforcement and Compliance Assurance.

BRS Biennial Reporting System

VERSION DATE: 12/31/11

The United States Environmental Protection Agency (EPA), in cooperation with the States, biennially collects information regarding the generation, management, and final disposition of hazardous wastes regulated under the Resource Conservation and Recovery Act of 1976 (RCRA), as amended. The Biennial Report captures detailed data on the generation of hazardous waste from large quantity generators and data on waste management practices from treatment, storage and disposal facilities. Currently, the EPA states that data collected between 1991 and 1997 was originally a part of the defunct Biennial Reporting System and is now incorporated into the RCRAInfo data system.

CDL Clandestine Drug Laboratory Locations

VERSION DATE: 09/17/15

The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments. The Department does not establish, implement, enforce, or certify compliance with clean-up or remediation standards for contaminated sites; the public should contact a state or local health department or environmental protection agency for that information.

DOCKETS EPA Docket Data

VERSION DATE: 12/22/05

The United States Environmental Protection Agency Docket data lists Civil Case Defendants, filing dates as far back as 1971, laws broken including section, violations that occurred, pollutants involved, penalties assessed and superfund awards by facility and location. Please refer to ICIS database as source of current data.

EC Federal Engineering Institutional Control Sites

VERSION DATE: 08/03/15

This database includes site locations where Engineering and/or Institutional Controls have been identified as part

of a selected remedy for the site as defined by United States Environmental Protection Agency official remedy decision documents. A site listing does not indicate that the institutional and engineering controls are currently in place nor will be in place once the remedy is complete; it only indicates that the decision to include either of them in the remedy is documented as of the completed date of the document. Institutional controls are actions, such as legal controls, that help minimize the potential for human exposure to contamination by ensuring appropriate land or resource use. Engineering controls include caps, barriers, or other device engineering to prevent access, exposure, or continued migration of contamination.

ERNSCA Emergency Response Notification System

VERSION DATE: 05/10/15

This National Response Center database contains data on reported releases of oil, chemical, radiological, biological, and/or etiological discharges into the environment anywhere in the United States and its territories. The data comes from spill reports made to the U.S. Environmental Protection Agency, U.S. Coast Guard, the National Response Center and/or the U.S. Department of Transportation.

FRSCA Facility Registry System

VERSION DATE: 07/20/15

The United States Environmental Protection Agency's Office of Environmental Information (OEI) developed the Facility Registry System (FRS) as the centrally managed database that identifies facilities, sites or places subject to environmental regulations or of environmental interest. The Facility Registry System replaced the Facility Index System or FINDS database.

HMIRSR09 Hazardous Materials Incident Reporting System

VERSION DATE: 11/08/15

The HMIRS database contains unintentional hazardous materials release information reported to the U.S. Department of Transportation located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

ICIS Integrated Compliance Information System (formerly DOCKETS)

VERSION DATE: 10/20/14

ICIS is a case activity tracking and management system for civil, judicial, and administrative federal Environmental Protection Agency enforcement cases. ICIS contains information on federal administrative and federal judicial cases under the following environmental statutes: the Clean Air Act, the Clean Water Act, the Resource Conservation and Recovery Act, the Emergency Planning and Community Right-to-Know Act - Section 313, the Toxic Substances Control Act, the Federal Insecticide, Fungicide, and Rodenticide Act, the Comprehensive Environmental Response, Compensation, and Liability Act, the Safe Drinking Water Act, and the Marine Protection, Research, and Sanctuaries Act.

ICISNPDES Integrated Compliance Information System National Pollutant Discharge Elimination System

VERSION DATE: 10/20/14

In 2006, the Integrated Compliance Information System (ICIS) - National Pollutant Discharge Elimination System (NPDES) became the NPDES national system of record for select states, tribes and territories. ICIS-NPDES is an information management system maintained by the United States Environmental Protection Agency's Office of Compliance to track permit compliance and enforcement status of facilities regulated by the NPDES under the Clean Water Act. ICIS-NPDES is designed to support the NPDES program at the state, regional, and national levels.

LUCIS Land Use Control Information System

VERSION DATE: 09/01/06

The LUCIS database is maintained by the U.S. Navy and contains information for former Base Realignment and Closure (BRAC) properties across the United States.

MLTS Material Licensing Tracking System

VERSION DATE: 03/11/15

MLTS is a list of approximately 8,100 sites which have or use radioactive materials subject to the United States Nuclear Regulatory Commission (NRC) licensing requirements.

NPDESR09 National Pollutant Discharge Elimination System

VERSION DATE: 04/01/07

Information in this database is extracted from the Water Permit Compliance System (PCS) database which is used by United States Environmental Protection Agency to track surface water permits issued under the Clean Water Act. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. The NPDES database was collected from December 2002 until April 2007. Refer to the PCS and/or ICIS-NPDES database as source of current data.

PADS PCB Activity Database System

VERSION DATE: 07/01/14

The PCB Activity Database System (PADS) is used by the United States Environmental Protection Agency to monitor the activities of polychlorinated biphenyls (PCB) handlers.

PCSR09 Permit Compliance System

VERSION DATE: 08/01/12

The Permit Compliance System is used in tracking enforcement status and permit compliance of facilities controlled by the National Pollutant Discharge Elimination System (NPDES) under the Clean Water Act and is maintained by the United States Environmental Protection Agency's Office of Compliance. PCS is designed to support the NPDES program at the state, regional, and national levels. This database includes permitted facilities located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa. PCS has been modernized, and no longer exists. National Pollutant Discharge Elimination System (ICIS-NPDES) data can now be found in Integrated Compliance Information System (ICIS).

RCRASC RCRA Sites with Controls

VERSION DATE: 10/26/15

This list of Resource Conservation and Recovery Act sites with institutional controls in place is provided by the U.S. Environmental Protection Agency.

SFLIENS CERCLIS Liens

VERSION DATE: 06/08/12

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which United States Environmental Protection Agency has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties. This database contains those CERCLIS sites where the Lien on Property action is complete.

SSTS Section Seven Tracking System

VERSION DATE: 12/08/14

The United States Environmental Protection Agency tracks information on pesticide establishments through the Section Seven Tracking System (SSTS). SSTS records the registration of new establishments and records pesticide production at each establishment. The Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) requires that production of pesticides or devices be conducted in a registered pesticide-producing or device-producing establishment. ("Production" includes formulation, packaging, repackaging, and relabeling.)

TRI Toxics Release Inventory

VERSION DATE: 12/31/13

The Toxics Release Inventory, provided by the United States Environmental Protection Agency, includes data on toxic chemical releases and waste management activities from certain industries as well as federal and tribal facilities. This inventory contains information about the types and amounts of toxic chemicals that are released each year to the air, water, and land as well as information on the quantities of toxic chemicals sent to other facilities for further waste management.

TSCA Toxic Substance Control Act Inventory

VERSION DATE: 12/31/06

The Toxic Substances Control Act (TSCA) was enacted in 1976 to ensure that chemicals manufactured, imported, processed, or distributed in commerce, or used or disposed of in the United States do not pose any unreasonable risks to human health or the environment. TSCA section 8(b) provides the United States Environmental Protection Agency authority to "compile, keep current, and publish a list of each chemical substance that is manufactured or processed in the United States." This TSCA Chemical Substance Inventory contains non-confidential information on the production amount of toxic chemicals from each manufacturer and importer site.

NLRRCRAG No Longer Regulated RCRA Generator Facilities

VERSION DATE: 10/13/15

This database includes RCRA Generator facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly generated hazardous waste.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRAGR09 Resource Conservation & Recovery Act - Generator Facilities

VERSION DATE: 10/13/15

This database includes sites listed as generators of hazardous waste (large, small, and exempt) in the RCRAInfo

system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.
Large Quantity Generators: Generate 1,000 kg or more of hazardous waste during any calendar month; or Generate more than 1 kg of acutely hazardous waste during any calendar month; or Generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month; or Generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1kg of acutely hazardous waste at any time; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.
Small Quantity Generators: Generate more than 100 and less than 1000 kilograms of hazardous waste during any calendar month and accumulate less than 6000 kg of hazardous waste at any time; or Generate 100 kg or less of hazardous waste during any calendar month, and accumulate more than 1000 kg of hazardous waste at any time.
Conditionally Exempt Small Quantity Generators: Generate 100 kilograms or less of hazardous waste per calendar month, and accumulate 1000 kg or less of hazardous waste at any time; or Generate one kilogram or less of acutely hazardous waste per calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste; or Generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, or acutely hazardous waste during any calendar month, and accumulate at any time: 1 kg or less of acutely hazardous waste; or 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste.

RCRANGR09 Resource Conservation & Recovery Act - Non-Generator Facilities

VERSION DATE: 10/13/15

This database identifies RCRAInfo system sites that only handle hazardous waste, such as transporters, without generating any amount hazardous waste. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). This database includes sites located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

HISTPST Historical Gas Stations

VERSION DATE: NR

This historic directory of service stations is provided by the Cities Service Company. The directory includes Cities Service filling stations that were located throughout the United States in 1930.

BF Brownfields Management System

VERSION DATE: 10/08/15

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. The United States Environmental Protection Agency maintains this database to track activities in the various brown field grant programs including grantee assessment, site cleanup and site redevelopment. This database included tribal brownfield sites.

CERCLIS Comprehensive Environmental Response, Compensation & Liability Information System

VERSION DATE: 10/25/13

CERCLIS is the repository for site and non-site specific Superfund information in support of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). This United States Environmental Protection Agency database contains an extract of sites that have been investigated or are in the process of being investigated for potential environmental risk. In 2014, the Superfund Program implemented a new information system, the Superfund Enterprise Management System (SEMS). Efforts to migrate data to SEMS and to enhance data quality control are now in the final stages. The Program will continue to rely on the final CERCLIS data set (dated November 12, 2013, which reflects official end of Fiscal Year 2013 Program progress) for public reporting until a complete and accurate SEMS data set is available.

DNPL Delisted National Priorities List

VERSION DATE: 07/22/15

This database includes sites from the United States Environmental Protection Agency's Final National Priorities List (NPL) where remedies have proven to be satisfactory or sites where the original analyses were inaccurate, and the site is no longer appropriate for inclusion on the NPL, and final publication in the Federal Register has occurred.

NFRAP No Further Remedial Action Planned Sites

VERSION DATE: 10/25/13

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the National Priorities List, or the contamination was not serious enough to require Federal Superfund action.

NLRRCRAT No Longer Regulated RCRA Non-CORRACTS TSD Facilities

VERSION DATE: 10/13/15

This database includes RCRA Non-Corrective Action TSD facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements. This listing includes facilities that formerly treated, stored or disposed of hazardous waste.

ODI Open Dump Inventory

VERSION DATE: 06/01/85

The open dump inventory was published by the United States Environmental Protection Agency. An “open dump” is defined as a facility or site where solid waste is disposed of which is not a sanitary landfill which meets the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944) and which is not a facility for disposal of hazardous waste. This inventory has not been updated since June 1985.

RCRAT Resource Conservation & Recovery Act - Non-CORRACTS Treatment, Storage & Disposal Facilities

VERSION DATE: 10/13/15

This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste in the RCRAInfo system. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

DOD Department of Defense Sites

VERSION DATE: 06/21/10

This information originates from the National Atlas of the United States Federal Lands data, which includes lands owned or administered by the Federal government. Army DOD, Army Corps of Engineers DOD, Air Force DOD, Navy DOD and Marine DOD areas of 640 acres or more are included.

FUDS Formerly Used Defense Sites

VERSION DATE: 06/01/15

The Formerly Used Defense Sites (FUDS) inventory includes properties previously owned by or leased to the United States and under Secretary of Defense Jurisdiction, as well as Munitions Response Areas (MRAs). The remediation of these properties is the responsibility of the Department of Defense. This data is provided by the U.S. Army Corps of Engineers (USACE), the boundaries/polygon data are based on preliminary findings and not all properties currently have polygon data available. DISCLAIMER: This data represents the results of data collection/processing for a specific USACE activity and is in no way to be considered comprehensive or to be used in any legal or official capacity as presented on this site. While the USACE has made a reasonable effort to insure the accuracy of the maps and associated data, it should be explicitly noted that USACE makes no warranty, representation or guaranty, either expressed or implied, as to the content, sequence, accuracy, timeliness or completeness of any of the data provided herein. For additional information on Formerly Used

Defense Sites please contact the USACE Public Affairs Office at (202) 528-4285.

NLRRCRAC No Longer Regulated RCRA Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes RCRA Corrective Action facilities that are no longer regulated by the United States Environmental Protection Agency or do not meet other RCRA reporting requirements.

NPL National Priorities List

VERSION DATE: 07/22/15

This database includes United States Environmental Protection Agency (EPA) National Priorities List sites that fall under the EPA's Superfund program, established to fund the cleanup of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action.

PNPL Proposed National Priorities List

VERSION DATE: 07/22/15

This database contains sites proposed to be included on the National Priorities List (NPL) in the Federal Register. The United States Environmental Protection Agency investigates these sites to determine if they may present long-term threats to public health or the environment.

RCRAC Resource Conservation & Recovery Act - Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes all hazardous waste sites with ongoing corrective action activity and where corrective action is statutorily required to be address but have not had corrective action imposed in the RCRAInfo system. The Corrective Action Program requires owners or operators of RCRA facilities (or treatment, storage, and disposal facilities) to investigate and cleanup contamination in order to protect human health and the environment. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RCRASUBC Resource Conservation & Recovery Act - Subject to Corrective Action Facilities

VERSION DATE: 10/13/15

This database includes hazardous waste sites which are potentially subject to corrective action regardless of whether they have correction action underway, plus any sites showing a corrective action event of RFI or beyond in the RCRAInfo system. Sites conducting corrective action under analogous state authorities are also included. The United States Environmental Protection Agency defines RCRAInfo as the comprehensive information

system which provides access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS).

RODS Record of Decision System

VERSION DATE: 07/01/13

These decision documents maintained by the United States Environmental Protection Agency describe the chosen remedy for NPL (Superfund) site remediation. They also include site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, and scope and role of response action.

CDL Clandestine Drug Labs

VERSION DATE: 12/31/14

The California Department of Toxic Substance Control (DTSC) provides this listing of illegal drug laboratories. Pursuant to Section 25354.5 of the California Health and Safety Code, DTSC conducts emergency removal actions at clandestine drug labs at the request of State and local law enforcement agencies. DTSC's contractors typically remove hazardous substances that may pose an immediate threat to public health and the environment while the enforcement officials are on scene. During the emergency removal actions, contractors remove and properly dispose of contaminated lab equipment, chemicals used to make the illegal drugs (usually methamphetamine), lab chemical wastes, and other grossly contaminated materials. DTSC does not perform additional assessment work beyond standard emergency removal actions and makes no further determination regarding the need for future cleanup work at the emergency removal location. The reported location information may or may not include the actual location of the illegal drug lab. The DTSC does not guarantee the accuracy of the address or location information or the condition of the location listed.

CHMIRS California Hazardous Material Incident Report System

VERSION DATE: 11/18/15

The California Hazardous Material Incident Report System database is provided by the California Emergency Management Agency. This database contains accidental or spill release information from reported hazardous material incidents since 1993.

DTSCDR DTSC Deed Restrictions

VERSION DATE: 10/21/15

The California Department of Toxic Substances Control (DTSC) maintains this listing of sites with deed restrictions. According to the DTSC, restricted land use indicates whether the site or area within the site has an environmental restriction recorded and/or other institutional control preventing certain types of land use or activities. The land use restrictions listed under the site management requirements are only an abbreviated summary of the land use restrictions, and may not encompass all restrictions and notification requirements placed on a property. For complete land use restriction information please contact the DTSC to review associated Land Use Restriction documents.

EMI Emissions Inventory Data

VERSION DATE: 12/31/12

The Air Resources Board's Emissions Inventory Database contains criteria pollutant data and toxic data on facilities throughout the state of California for the 2012-2000 inventory years.

HWTS Hazardous Waste Tanner Summary

VERSION DATE: 12/31/14

This data is prepared from information extracted from copies of hazardous waste manifests received each year by the Department of Toxic Substances Control. The Hazardous Waste Summary Report (Tanner Report) currently includes manifest data from the 1993 through the 2013 reporting years.

LIENS Recorded Environmental Cleanup Liens

VERSION DATE: 10/06/15

The California Department of Toxic Substance Control (DTSC) maintains this listing of liens placed upon real properties. A lien is utilized by the DTSC to obtain reimbursement from responsible parties for costs associated with the remediation of contaminated properties.

NPDES National Pollutant Discharge Elimination System Facilities

VERSION DATE: 09/22/15

This State Water Resources Control Board database contains NPDES permits, including stormwater general permit enrollees that are active, inactive and historical. NPDES permits are required from all facilities that discharge their wastewater from a point source into a waterbody.

WTHAULERS Registered Waste Tire Haulers

VERSION DATE: 10/14/15

This listing of registered waste tire haulers is maintained by the California Integrated Waste Management Board.

ABST Above Ground Storage Tanks

VERSION DATE: 12/01/07

This database contains aboveground storage tank facilities registered with the California State Water Resources Control Board (SWRCB). Since 2006, tanks were required to contain a minimum (even as cumulative) of 1320 gallons to be in the program. As of January 1, 2008, the SWRCB no longer maintains a list of registered aboveground storage tanks, due to effective Assembly Bill No. 1130 (Laird) of the Aboveground Petroleum Storage Act (APSA). This Bill authorized the Certified Unified Program Agencies to implement and administer the requirements of the APSA.

CLEANER Dry Cleaner Facilities

VERSION DATE: 06/01/15

This database, created by accessing the California Department of Toxic Substances Control's (DTSC) Hazardous Waste Tracking System, includes dry cleaner facilities that have registered EPA identification numbers. These facilities are categorized with one of the following NAICS Codes: 81231 or 81232. This database may also include facilities other than dry cleaners who also register with these same NAICS Codes. Not all companies report their NAICS/SIC Codes to the DTSC and therefore this database may exclude registered dry cleaner facilities with incomplete classification information.

DTSCHWT DTSC Registered Hazardous Waste Transporters

VERSION DATE: 10/30/14

The Department of Toxic Substances Control provides this list of Registered Hazardous Waste Transporters.

HISTUST Historical Underground Storage Tanks

VERSION DATE: 12/31/87

The Hazardous Substance Storage Container Database is a historical list of Underground Storage Tank sites, compiled from tank survey and registration information collected at one time between 1984 and 1987 by the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials.

MWMP California Medical Waste Management Program Facility List

VERSION DATE: 10/13/15

To protect the public and the environment from potential infectious exposure to disease causing agents, the Medical Waste Management Program (MWMP), in the Environmental Management Branch of the California Department of Public Health, regulates the generation, handling, storage, treatment, and disposal of medical waste by providing oversight for the implementation of the Medical Waste Management Act (MWMA). The MWMP permits and inspects all medical waste off-site treatment facilities, medical waste transporters, and medical waste transfer stations.

SLIC Spills, Leaks, Investigation & Cleanup Recovery Listing

VERSION DATE: 06/16/08

These records are maintained by the California Regional Water Quality Control Board (RWQCB). This list includes contaminated sites that impact groundwater or have the potential to impact ground water. Please refer to CLEANUPSITES database as source of current data.

SWEEPS Statewide Environmental Evaluation and Planning System

VERSION DATE: 10/01/94

The Statewide Environmental Evaluation and Planning System (SWEEPS) contains a historical listing of active and inactive underground storage tank locations from the State Water Resources Control Board. The hazardous substances stored within these tanks includes, but not restricted to, petroleum products, industrial solvents, and other materials. Refer to CUPA listing for source of current data.

USTCUPA Underground Storage Tanks

VERSION DATE: 10/21/15

An underground storage tank is an individual tank or group of tanks that store hazardous substances. Underground storage tanks are completely or considerably below the ground surface. This database contains UST permit data submitted from the Certified Unified Program Agencies (CUPA) directly to the State Water Resources Control Board. CUPA's are local agencies that have been certified by the California EPA to implement state environmental programs within the local agency's jurisdiction.

CALSITES CALSITES Database

VERSION DATE: 09/14/04

This historical database was maintained by the Department of Toxic Substance Control for more than a decade. CALSITES contains information on Brownfield properties with confirmed or potential hazardous contamination. In 2006, DTSC introduced EnviroStor as the latest Brownfields site database.

CLEANUPSITES GeoTracker Cleanup Sites

VERSION DATE: 10/21/15

This GeoTracker Cleanup Sites database is maintained by the California Regional Water Quality Control Board (RWQCB). The database contains contaminated sites that impact groundwater or have the potential to impact ground water, including spills, investigations, cleanup recoveries and reported leaking underground storage tank incidents.

CORTESE Cortese List

VERSION DATE: 11/02/02

This historical listing includes hazardous waste and substances sites designated by the State Water Resources Control Board (LUST), the Integrated Waste Board (SWIS), and the Department of Toxic Substance Control (CALSITES). The Cortese List was utilized by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites.

DROP Listing of Certified Dropoff, Collection, and Community Service Programs

VERSION DATE: 10/23/15

Listing of Certified Dropoff, Collection, and Community Service Programs (non-buyback) operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

ERAP Expedited Removal Action Program Sites

VERSION DATE: 10/21/14

The Expedited Remedial Action Program is a pilot project administered by the Department of Toxic Substances Control's Site Mitigation and Brownfields Reuse Program to promote the cleanup of up to 30 hazardous

substance release sites. ERAP provides significant incentives for redevelopment of contaminated properties by promoting cleanups based on the planned land use, by providing a covenant not to sue, and by outlining a fair and equitable liability scheme.

LUST Leaking Underground Storage Tanks

VERSION DATE: 06/16/08

This database is maintained by the State Water Resources Control Board. LUST records contain an inventory of reported leaking underground storage tank incidents. Please refer to the CLEANUPSITES database as source of current data.

NFA No Further Action Determination

VERSION DATE: 07/01/05

The NFA listing contains properties at which the Department of Toxic Substance Control has made a clear determination that the property does not pose a problem to the environment or to public health.

NFE Sites Needing Further Evaluation

VERSION DATE: 07/01/05

The NFE listing contains properties that the Department of Toxic Substance Control suspects with possible contamination. These are unconfirmed contaminated properties that need further assessment.

PROC Listing of Certified Processors

VERSION DATE: 10/23/15

Listing of Certified Processors that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

REF Referred to Another Local or State Agency

VERSION DATE: 07/01/05

The REF listing contains properties where contamination has not been confirmed and which were determined as not requiring direct Department of Toxic Substance Control Site Mitigation Program action or oversight. Accordingly, these sites have been referred to another state or local regulatory agency.

SCH School Property Evaluations

VERSION DATE: 07/01/05

The SCH listing contains proposed and existing school sites that are being evaluated by Department of Toxic Substance Control for possible hazardous materials contamination. In some cases, these properties may be

listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

SWIS Solid Waste Information System Sites

VERSION DATE: 10/21/15

The Solid Waste Information System (SWIS) database includes information on solid waste facilities, operations, and disposal sites located in California. This database is maintained by the California Department of Resources Recycling and Recovery.

SWRCY Recycling Centers

VERSION DATE: 10/23/15

Listing of Certified Recycling Centers that are operating under the state of California's Beverage Container Recycling Program. This list is maintained by the Department of Conservation.

VCP Voluntary Cleanup Program

VERSION DATE: 09/14/04

The California Voluntary Cleanup program provides regulatory oversight by the Department of Toxic Substance Control (DTSC) to project proponents desiring to address mitigation activities at sites which have lower health and/or environmental risk than sites which are currently being addressed by DTSC. Refer to Envirostor database as source of current data.

WMUDS Waste Management Unit Database

VERSION DATE: 01/01/00

The Waste Management Unit Database System tracks and inventories waste management units. CCR Title 27 contains criteria stating that Waste Management Units are classified according to their ability to contain wastes. Containment shall be determined by geology, hydrology, topography, climatology, and other factors relating to the ability of the Unit to protect water quality. Water Code Section 13273.1 requires that operators submit a water quality solid waste assessment test (SWAT) report to address leak status. The WMUDS was last updated by the State Water Resources control board in 2000.

ENVIROSTOR EnviroStor Cleanup Sites

VERSION DATE: 10/21/15

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database of cleanup sites contains the following: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. Sites where DTSC has made a "No Action Required" determination are not included in this

database, as these sites had assessments that revealed no evidence of recognized environmental conditions in connection with the property.

ENVIROSTORPCA EnviroStor Permitted and Corrective Action Sites

VERSION DATE: 10/21/15

The Department of Toxic Substances Control (DTSC) has developed the EnviroStor database system to evaluate and track sites with confirmed or potential contamination and sites where further investigation may be necessary. This EnviroStor database contains detailed information on hazardous waste permitted and corrective action facilities. Investigation and cleanup activities at hazardous waste facilities (either Resource Conservation and Recovery Act (RCRA) or State-only) that either were eligible for a permit or received a permit are called "corrective action." These facilities treated stored, disposed and/or transferred hazardous waste.

TOXPITS Toxic Pits Cleanup Act Sites

VERSION DATE: 07/01/95

Toxic Pits are sites with possible contamination of hazardous substances where cleanup is necessary. This listing is no longer updated by the State Water Resources Control Board.

Environmental Records Definitions - LOCAL

LAHMS Los Angeles County Hazardous Materials System

VERSION DATE: 02/16/06

The Los Angeles County Department of Public Works maintains this listing of Industrial Waste and Underground Storage Tank sites.

LASM Los Angeles County Site Mitigation List

VERSION DATE: 04/23/15

This listing of industrial sites with a reported spill or complaint is provided by the Site Mitigation Unit (SMU) of the Health Hazardous Materials Division, Los Angeles County Fire Department.

WIP Well Investigations Program Case List

VERSION DATE: 07/01/09

The Well Investigations Case List for the San Gabriel and San Fernando Valley Cleanup Programs is maintained by the State Water Resources Control Board.

LASWF Los Angeles County Solid Waste Facilities

VERSION DATE: 04/16/15

This list of permitted solid waste sites, closed landfills, and historical dumpsites is provided by the Los Angeles County Department of Public Works.

AOC San Gabriel Valley Areas of Concern

VERSION DATE: 01/01/06

A listing of the San Gabriel Valley Superfund Sites located in Los Angeles County with Volatile Organic Compound groundwater contamination.

Environmental Records Definitions - TRIBAL

USTR09 Underground Storage Tanks On Tribal Lands

VERSION DATE: 12/04/14

This database, provided by the United States Environmental Protection Agency (EPA), contains underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

LUSTR09 Leaking Underground Storage Tanks On Tribal Lands

VERSION DATE: 12/04/14

This database, provided by the United States Environmental Protection Agency (EPA), contains leaking underground storage tanks on Tribal lands located in EPA Region 9. This region includes the following states: Arizona, California, Hawaii, Nevada, and the territories of Guam and American Samoa.

ODINDIAN Open Dump Inventory on Tribal Lands

VERSION DATE: 11/08/06

This Indian Health Service database contains information about facilities and sites on tribal lands where solid waste is disposed of, which are not sanitary landfills or hazardous waste disposal facilities, and which meet the criteria promulgated under section 4004 of the Solid Waste Disposal Act (42 U.S.C. 6944).

INDIANRES Indian Reservations

VERSION DATE: 01/01/00

The Department of Interior and Bureau of Indian Affairs maintains this database that includes American Indian Reservations, off-reservation trust lands, public domain allotments, Alaska Native Regional Corporations and Recognized State Reservations.

All Appropriate Inquiries Rule:
Reporting Requirements and Suggestions on Report Content

WHAT IS "ALL APPROPRIATE INQUIRIES"?

"All appropriate inquiries" is a process of evaluating a property's environmental conditions and assessing potential liability for any contamination. All appropriate inquiries must be conducted to obtain certain protections from liability under the federal Superfund Law (CERCLA).

WHY DID EPA ESTABLISHING STANDARDS FOR CONDUCTING ALL APPROPRIATE INQUIRIES?

The 2002 Brownfields Amendments to the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) require EPA to promulgate regulations establishing standards and practices for conducting all appropriate inquiries.

WHEN IS THE ALL APPROPRIATE INQUIRES RULE EFFECTIVE?

The final rule is effective on November 1, 2006, one year after its publication date in the Federal Register.

WHAT ARE THE DOCUMENTATION REQUIREMENTS FOR ALL APPROPRIATE INQUIRIES?

The final rule requires that the results of an all appropriate inquiries investigation be documented in a written report. The specific reporting requirements for all appropriate inquiries are provided in 40 CFR §312.21 (*Results of Inquiry by an Environmental Professional*) and §312.31 of the final rule and include:

I. An *opinion* as to whether the inquiry has identified conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property.

II. An identification of *data gaps* (as defined in §312.10) in the information collected for the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property, as well as comments regarding the significance of these data gaps.

III. *Qualifications* and *signature* of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:

''[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part.''

''[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.''

IV. In compliance with §32.31(b), the environmental professional must include in the final report an *opinion regarding additional appropriate investigation*, if the environmental professional has such an opinion.

IS THERE A REQUIRED FORMAT FOR REPORTING RESULTS OF ALL APPROPRIATE INQUIRIES?

The final rule requires no specific format, length, or structure of the written report. However, EPA offers the following suggestions regarding the potential content of a written report. The following suggestions generally are consistent with recommendations published in ASTM E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The ASTM E 1527-13 standard is consistent with the requirements of the final rule and may be used to comply with the provisions of the rule. The following are suggestions regarding format and content of an all appropriate inquiries written report. Please note that the suggestions below do not represent regulatory requirements. Prospective landowners and environmental professionals may design their own format for a written report, as long as the report contains the four documentation requirements listed above (and as noted below).

- ***Introduction.*** An introduction could include descriptions of: the purpose and objectives of the assessment; scope of services provided; methodology used to complete the inquiry; any significant assumptions made; limitations and exceptions; any modifications or deviations from the final rule requirements or from the ASTM E 1527-13 process; special terms and conditions; and information obtained from the landowner or user. The environmental professional and the person(s) who conducted the site reconnaissance and interviews may be identified.

- ***Site Description.*** This section may describe the property location; site and vicinity characteristics; structures, roads, site improvements, and utilities; current and historic use(s) of the property; site topography, geology, and surface/ground water resources; and current and historic use(s) of adjacent properties.

- ***User-Provided Information.*** The report may describe any information provided by the prospective landowner, or user, to the environmental professional. This information may include: title records; information of recorded environmental cleanup liens; recorded activity and use limitations (e.g., engineering controls, land use restrictions, institutional controls); specialized knowledge or experience held by the user related to the property or nearby properties; commonly known or reasonably ascertainable information; and relationship of the purchase price to the fair market value of the property, if it were not contaminated.

- ***Records Review.*** The written report may include a section that summarizes the information found during the records review. This section may describe records that were reviewed to complete the inquiry including: physical setting sources (*e.g.,* topographic maps); historical use sources (*e.g.,* aerial photographs, fire insurance maps, street directories, newspaper archives); federal, state, tribal, and local records or databases of government records; and other environmental record sources (*e.g.,* prior investigation reports, tank/transformer inventories, spill records, permits, etc.).

- ***Site Reconnaissance.*** The written report may include a section dedicated to describing the methodology used to conduct the visual inspection of the subject and adjoining properties. The description may include: when and who performed the reconnaissance; physical imitations (*e.g.,* snow-covered ground, limited access, safety concerns, etc.); general site setting; exterior observations; and interior observations. Additional information on evidence of staining, spills, odors, stressed vegetation, corrosion, pools of liquids, discolored water, ground surface alterations, and other conditions that might suggest a release or threatened release of hazardous substances also may be provided.

- ***Interviews.*** A summary of the interviews conducted could include a description of when and with whom the interviews were conducted (*e.g.,* current property owner and occupants, site manager, attorneys, financial manager, local/state/federal government officials, past site owners and

occupants) and the method used to conduct the interviews (*e.g.,* in person, written, telephone). If property is abandoned, this section may describe which neighboring property owners were interviewed and if applicable, which past owners and occupants were interviewed.

- ***Findings*.** A findings section could describe the results of the assessment including the identified known or suspected recognized environmental conditions, historical recognized environmental conditions, and de minimis conditions. This section also may include findings related to, but not limited to: current and historic site usage; adjoining and nearby properties; hazardous substances and petroleum products; non-hazardous, solid, and hazardous waste management; water pollution; pits, ponds, and lagoons; drains and sumps; waste water; wells; septic systems; spills or releases; air emissions; storage tanks and drums; soil and groundwater contamination, polychlorinated biphenyls (PCB) contaminants, or other contaminants.

- ***Opinion of the Environmental Professional.*** In compliance with the all appropriate inquiries final rule at §312.21(c)(1), the written report **must include** the environmental professional's opinion(s) as to whether the inquiry identified conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the subject property. The opinion likely will be based on conditions identified during the inquiries (and potentially noted in a findings section), and include a discussion of the logic, reasoning, and rationale used by the environmental professional in developing the opinion. The environmental professional also must include in the final report an opinion regarding additional appropriate investigation to detect the presence of contamination at the property, if the environmental professional has such an opinion.

- ***Data Gaps.*** **As required** in §312.21(c)(2) of the final rule, the report should document and discuss significant data gaps that affect the ability of the environmental professional to identify conditions indicative of releases or threatened releases.

- ***Conclusions.*** A conclusions section may be included that summarizes all identified conditions indicative of releases or threatened releases of hazardous substances (or recognized environmental conditions) connected with the property. The final rule does not require that any specific statements be made regarding these conditions, however, ASTM E 1527-13 requires that the report include a statement substantially similar to one of the following written statements:

    - *"We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of [insert address or legal description], the property. Any exceptions to, or deletions from, this practice are described in Section [ ] of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property," or*
    - *"We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of [insert address or legal description], the property. Any exceptions to, or deletions from, this practice are described in Section [ ] of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the property except for the following: (list)."*

- ***Additional Services.*** If applicable, it may be useful to include a description of any additional services performed as part of the assessment that are beyond the scope of the final rule, and were contracted for between the user and the environmental professional. Additional services could include, but are not limited to: non-scope considerations (*e.g.,* lead-based paint, mold, radon, asbestos, regulatory compliance assessment, indoor air quality, etc.); broader scope of assessment; liability or risk evaluations; Phase II sampling and analysis; health and safety; evaluation of remediation techniques; etc.

- ***References.*** A reference section may be included that lists the published sources relied upon to complete the assessment.

- ***Signature(s) and Qualifications of the Environmental Professional(s).*** Include the statements and environmental professional(s) signature required by §312.21(d), as discussed above in "*What are the Documentation Requirements for All Appropriate Inquiries?"*

- ***Appendices***. Appendices could include: regulatory records documentation; environmental database report; site map/plan; vicinity maps; site photographs; historical source documentation (building department records, local street records, chain of title documents, property tax records, zoning/land use records, aerial photos, fire insurance maps, USGS topographical maps); interview documentation; and qualifications of the environmental professional(s).

APPENDIX III: SUPPORTING DOCUMENTATION

EXECUTIVE SUMMARY

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for Black Equities Group, Ltd. (Client) for a vacant property located at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, in Los Angeles County and the City of Los Angeles, California , Assessor's Parcel Numbers: 5087-001-023, 5087-001-024, 5087-001-040, and 5087-001-041 . The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

Site Description

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, Los Angeles, California. The subject property is located on the east side of South La Cienega Boulevard and approximately 215 feet south of West Olympic Boulevard, in the City of Los Angeles. The subject property is approximately 1.2 acers in size and consists of fenced vacant land. The surrounding area is used for commercial and residential purposes. Groundwater is estimated to be approximately 10-feet below ground surface in the area of the site and is assumed to flow towards the southeast.

- Five 55-gallon drums of non-hazardous waste were observed in the northeast portion of the property and eight 55-gallon drums were observed on the northwest portion of the property. Mr. Zalben, the property owner, does not know the contents or source of the drums, but believes they could be from the north adjoining property tenant (Matrix Collision Repair). The drums were not located in secondary containment. However, the drums were in good condition, with no evidence of staining on the soil surface in the vicinity. Based on the good condition of the drums and lack of evidence of a release, the 13 55-gallon drums on the subject property are not expected to represent a significant environmental concern. However, EFI Global, Inc. recommends proper waste profiling and disposal of the 55-gallon drums on the subject property.
- A total of seven groundwater monitoring wells were observed on the subject property during the site reconnaissance. These groundwater monitoring wells are associated with a subsurface investigation to assess for potential impacts of the north adjacent gasoline services station release. For more information regarding the release from the north adjacent gasoline service station refer to the Environmental Data Search discussion below. Three monitoring wells were observed in the northeast portion of the property: one was unlabeled while the other two were labeled MW-25d and MW-25U. Two monitoring wells were observed on the northwest portion of the property and labeled MW-26d and MW-26U. Two monitoring wells were observed on the southwest portion of the property, both of which were unlabeled. For monitoring well locations please refer to Figure 3. For more information regarding the previous subsurface assessments on the subject property, please refer to the Environmental Data Search discussion below.

Historical Land Use

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property is associated with the following APNs: 5087-001-023, 5087-001-024, 5087-001-040, and 5087-001-041. Based upon differing timelines of development, the historical land use summary has divided the subject

property into the following: (1) APNs 5087-001-040 and -041 which consist of the north portion, (2) APN 5087-001-023 which consists of the central portion, and (3) APN 5087-001-024 which consists of the south portion.

APNs 5087-001-040 and -041 were developed with a small one story structure that was utilized for residential purposes on the eastern portion by 1927. By at least 1928, the structure was demolished and the parcels consisted of vacant land. By 1938, a circular road was developed on the parcels. By 1947, the road was no longer present and the subject property consisted of vacant land with a billboard located on the western portion. By at least 1950, the parcels were utilized as a wood yard. In 1954, an office building was developed on the north portion of the parcels (1022 South La Cienega Boulevard). In 1955, the southern portion of the parcels was developed with a banquet hall structure (1026 South La Cienega Boulevard). The structure on the southern portion of the parcel was utilized as a banquet hall until at least 2006, when the structure was demolished. The structure on the northern portion of the parcel (1022 South La Cienega Boulevard) was utilized for office purposes from at least 1954 until at least 2008, when the structure was demolished. The parcels are currently vacant land, with a portion utilized as a parking lot. Commercial occupants of 1022 South La Cienega Boulevard have been office related from at least 1955 until the late 1980s. Former office operations included: doctors offices, real estate offices, and accounting offices. By the 1990s the structure was occupied by numerous telecommunication sales and services tenants. Commercial occupants of 1026 South La Cienega Boulevard have included: banquet halls, sports clubs, restaurants, and caterers.

APN 5087-001-023 was undeveloped land from 1927 until at least 1938. By at least 1947, a billboard was developed on the west portion of the parcel. In 1948, the subject property was developed with a commercial structure that was utilized for various auto repair purposes through 2007 (1032 South La Cienega Boulevard). By 2007, the commercial structure at 1032 South La Cienega Boulevard was demolished. The parcel is currently vacant land. Former commercial occupants of 1032 South La Cienega Boulevard have included: Eila Muis Auto Repair (1948), R. Howard Auto Garage (1948), Foster & Kleiser Co. (1960-1971), Alfa Milano Inc. (1979-1980), and Updated Auto Repair/Freim, Elias D. (1998-2007).

APN 5087-001-024 was undeveloped land from 1927 until at least 1938. By at least 1947, a billboard was developed on the west portion of the parcel. In 1954, the parcel was developed with an apartment complex (1042 South La Cienega Boulevard). The parcel remained utilized for residential purposes as an apartment complex until 2010 when the apartment complex was demolished. The parcel is currently vacant land.

- According to the historical research, the subject property was occupied by an automotive repair shop at 1032 South La Cienega Boulevard from at least 1948 until 2007. For more information regarding the former automotive repair operations on site, refer to the Environmental Data Search discussion below.
- The earliest historical resource obtained during this investigation was a Sanborn map from 1927, which indicated development of the subject property with a small structure. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, based on the size of the structure (approximately 200 square feet) it is assumed to be residential in nature. From review of the foregoing the use of the subject property prior to 1927, would have been developed for residential uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

Environmental Data Search

- **1X Updated Auto Repair #2/Elie Freim (1032 South La Cienega Boulevard)** – The subject property is listed on the Facility and Manifest Data (HAZNET) and EDR US Historical Auto Station (EDR US Hist Auto Stat) databases. According to the EDR US Hist Auto Stat, the site was formerly used for general automotive repair by Alfa Milano Inc. in 1979 and 1980 and by Updated Auto Repair from 1992 to 2005. According to the HAZNET listing, the facility disposed of hazardous waste from 1996 to 2001 and 2003, consisting of unspecified solvent mixture and other organic solids. The wastes were disposed of via recycler and transfer station. The quantities disposed of ranged from 0.05 ton to 0.45 ton. According to the HAZNET listing, Updated Auto Repair disposed of 12-tons of contaminated soil in 1994. Additionally, Elie Freim disposed of 0.25-ton of unspecified solvent mixture by fuel blending prior to energy recovery at another site and 2.08-tons of tank bottom waste via discharge to sewer. For more information regarding the use of the subject property for auto repair purposes please refer to the agency files discussion below.
- **Didm Development Corporation (1022-1034 South La Cienega Boulevard)** – The subject property is listed on the HAZNET database. According to the listing, the site disposed of 5.89 tons of asbestos containing waste in 2006. For more information regarding disposal of asbestos containing waste, please refer to the agency files discussion below.
- **Big Time Auto (1042 South La Cienega Boulevard)** – The subject property is listed on the EDR US Hist Auto Stat database. According to the EDR US Hist Auto Stat, the site was formerly used for general automotive repair purposes by Big Time Auto from 2003 to 2010. However, based on historical information the subject property at address 1042 South La Cienega Boulevard was developed with an apartment complex in 1954 until it was demolished in 2010. Based on the foregoing, the Historical Auto Station database listing for Big Time Auto is assumed to be for a business that utilized the subject property address as its main mailing address and not for auto related operations on site. Based on the foregoing, the database listing is not expected to represent a significant environmental concern for the subject property.
- **Tosco-76 Station (1004 South La Cienega Boulevard)** – The property located approximately 105 feet north of the subject property is listed on the Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST), Facility Inventory Database (FID UST), EDR US Hist Auto Stat, Active Underground Storage Tank Facilities (UST), Resource Conservation and Recovery Act - Large Quantity Generator (RCRA-LQG), Hazardous Substance Storage Container Database (HIST UST), Waste Discharge System (WDS), Leaking Underground Storage Tank (LUST), Enforcement Action Listing (ENF), and Hazardous Waste & Substance Site List (HIST CORTESE) databases. According to the LUST database listing and the State Water Resources Control Board's (SWRCB) GeoTracker database, the site was originally developed with a gasoline service station in 1964. Two 10,000-gallon gasoline underground storage tanks (USTs) and one 280-gallon waste oil UST were formerly located at the site. According to the database, the site had an unauthorized release of gasoline impacting groundwater, and the Los Angeles Water Quality Control Board (LARWQCB) opened the LUST case on March 1, 1986. Groundwater, soil vapor, and soil samples have been collected on and off the site. The groundwater monitoring wells BC-15 and MW-19 were located on the subject property (see Figure 3 for locations) and first drilled and sampled in 1992 and 2000, respectively. According to analytical results for BC-15 and MW-19 from the most recent sampling events in 2007, TPH-g, and BETX were non-detect. An additional assessment was conducted in 2013 on the subject property to further assess the potential impacts of the north adjacent gasoline

service station release. The report (Soil, Soil Gas, And Groundwater Sampling Report for SCR/SCH v. Union Oil of California, Et Al. Contiguous Vacant Lots at 1022, 1026, 1032, and 1042-1054 South La Cienega Boulevard, Los Angeles, California by Holguin, Fahan & Associates, Inc. (HAF) dated January 25, 2013) included a geophysical investigation of proposed drilling locations, core penetration with core-pressure testing (CPT), soil sampling, groundwater sampling, soil vapor sampling, and waste management. Nine CPT borings were advanced on the subject property (CPT-1 through CPT-9). According to the CPT, soils at the site consisted of sand, silt, clay, and mixtures of these soils. Four groundwater monitoring wells (W-1 through W-5), were advanced on the subject property in November 2012, and groundwater was encountered at approximately 15 feet below ground surface (bgs). Soil samples were collected at 5, 15, and 25 feet bgs of each groundwater monitoring wells. Soil samples were analyzed for total petroleum hydrocarbons-gas (TPH-g), benzene, toluene, ethylbenzene, and xylene (BTEX), and other gasoline constitutes. According to analytical results, TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of the maximum concentrations of 0.21 mg/kg of benzene at W-1 at 15 feet bgs and 2,000 miligrams per kilogram (mg/kg) of TPH-g, 38 mg/kg of ethylbenzene, 28 mg/kg of total xylenes, 5.1 mg/kg of N-butylbenzene, 6.2 mg/kg of napthalene, 6.7 mg/kg of isopropylbenzene, 25 mg/kg of N-propylbenzene, 52 mg/kg of 1,2,3-trimethylbenzene, and 47 mg/kg of 1,3,5- trimethylbenzene in W-2 at 15 feet bgs. According to review of Regional Screening Levels (RSLs) etheylbenzene was above the soil screening level for industrial standards (25 mg/kg). According to groundwater monitoring results from December 2012, TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of 130 micrograms per liter (µg/L) of TPH-g, 7.5 µg/L of benzene and 3.8 µg/L of total xylene in W-1, 2.4 µg/L of methyl tert-butyl ether (MTBE) in W-3, and 3.8 µg/L of ethylene dichloride (EDC) in W-4. According to our review benzene was above the maximum concentration levels (MCLs) of 1.0 µg/L. Four soil gas samples were advanced at the subject property (G-1, G-2, G4, and G-5). No soil gas sample G-3 was identified in the assessment. Soil gas samples were collected at 5.5 feet and 12.5 feet bgs in December 2012. According to analytical results all TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of a maximum concentrations of 12 µg/L of TPH-g in G-5 at 5.5 feet bgs, 0.0037 µg/L of benzene, 0.0093 µg/L of toluene, 0.0046 µg/L of ethyl-benzene, and 0.015 µg/L of m,p xylene in G-5 at 12.5 feet bgs, and 0.01 µg/L of naphthalene in G-4 at 5.5 feet bgs. According to our review benzene is above the Department of Toxic Substances Control's (DTSC) HERO Note 3 screening levels for industrial standards at 0.00042 µg/L.

Site remediation at the gasoline service station site (1004 South La Cienega Boulevard) has consisted of free product removal of three gallons of liquid waste from 1997 to 2005, soil vapor extraction (SVE) of 76,169 pounds of contaminate mass from 2004 to 2013, and groundwater pump and treatment of 3,242,950 gallons of groundwater from 2004 to 2013. Currently, the status of the adjacent site, is listed as open and under remediation. From observations made during the site reconnaissance, seven monitoring wells were observed on the subject property and labeled MW-25U, MW-25d, MW-26U, MW-26d, or unlabeled according to concrete markings observed at the well locations. It is unclear if the monitoring wells observed on the subject property are the same as the monitoring wells advanced on the subject property in 2007 and 2012. No other information regarding the monitoring wells on the subject property was provided by the User or within the GeoTracker database. The documented concentrations in soil, soil vapor, and groundwater above industrial screening levels are considered an environmental concern in respect to the subject property. However, according to information provided by the User, the planned development of the subject property will include the use of subterranean parking and the use of a vapor barrier. Based on the identification of the Responsible Party (Tosco-76

Station #0981), ongoing regulatory oversight and remediation at the north adjacent gasoline service station, and planned use for a vapor barrier beneath the subject property structure to mitigate any potential vapor intrusion risk, the soil, soil vapor, and groundwater contamination beneath the subject property from the north adjacent gasoline service station is considered a Controlled Recognized Environmental Condition (CREC).

- In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

The offices of the Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), South Coast Air Quality Management District (SCAQMD), The Los Angeles County Fire Department Health Hazardous Materials Division (LACFDHHMD), Los Angeles Fire Department (LAFD) Hazardous Materials Division (HazMat), LAFD Underground Storage Tank Unit (USTD), LAFD Arson (Arson) and City of Los Angeles Bureau of Sanitation (LABS) were contacted and the State Water Resources Control Board's (SWRCB) GeoTracker (GeoTracker), DTSC's EnviroStor and Hazardous Waste Tracking System (HWTS), SCAQMD's Facility Information Detail (FIND), LAFD HazMat, LAFD Above ground Storage Tank (AST), and LAFD UST databases were reviewed for information pertaining to the subject property. According to responses to our requests and a review of the online databases, there are no files for the subject property, except for the following:

- The LAFD HazMat database maintains a record at 1032 South La Cienega Boulevard for Updated Auto Repair under ID number FA0021538. A request has been made to LAFD HazMat regarding the listing and a response has not been received at the time of issuance of this report. These records are not expected to impact the conclusions of the report, however should relevant information be obtained from LAFD HazMat subsequent to issuing this report, an addendum will be prepared and provided to the Client.
- HWTS maintains a listing for the subject property addresses 1022-1034 South La Cienega Boulevard. According to the listing DIDM Development Corporation maintained an inactive listing from September 2006, under Environmental Protection Agency (EPA) ID: CAC00268821. According to the listing the site disposed of 2.8-tons of asbestos containing waste in 2006. From historical review the subject property addresses 1026 and 1032 South La Cienega Boulevard were demolished in 2006. This listing is assumed to be associated with these demolition activities. Based on demolition activities during a time during a time of stringent regulatory oversight (post-1980) and nature of the waste, this listing is not expected to represent a significant environmental concern for the subject property.
- HWTS also maintains a listing for the subject property address 1032 South La Cienega Boulevard for NASA Environmental Inc. in 2007 with EPA ID: CAC002613592. According to the listing the site had no manifest records found. From an online review, NASA Environmental Inc. collects, recycles, and transfers wastes. Based on the foregoing, this listing is assumed to be associated with former auto repair operations at the site, please refer below for more information. However, based on the lack of any identified manifest records, this listing is not expected to represent a significant environmental concern for the subject property.
- LABS maintains records for 1026 South La Cienega Boulevard. According to the permit The Savory Caters Inc. was issued an industrial waste discharge permit for a garbage grinder and floor and

equipment washing in May 25, 1966. Based on the food grade nature of the industrial waste discharge, this record is not expected to represent a significant environmental concern.

- According to historical research the subject property at 1032 South La Cienega Boulevard has been used for automobile repair purposes from at least 1948 until 2007 (approximately 59 years). According to SCAQMD records and the FIND database, Updated Auto Repair was permitted to operate a paint spray booth in July 8, 1998. Updated Auto Repair under ownership by Elie Freim, was also listed on the hazardous waste databases. According to a HAZNET listing, the site disposed of 12-tons of contaminated soil in 1994. Additionally, the facility disposed of hazardous waste from 1996 to 2001 and 2003, consisting of unspecified solvent mixture and other organic solids. The quantities disposed of ranged from 0.05 ton to 0.45 ton. LABS maintains a permit for Updated Auto Repair, Sales, Body, and Paint Inc. According to the LABS permit, Updated Auto Repair received and industrial waste discharge permit in 2004. However the type of discharge was not indicated within the permit. According to the HWTS and HAZNET listings, Elie Freim maintained an inactive permit in 2007 under EPA ID: CAC002613511. According to the listing the site disposed of 0.252-ton of unspecified solvent mixture and 2.085 tons of tank bottom waste in 2007.
- The User provided a previous assessment of the former on site auto repair. The report (Report on Preliminary Site Investigation for Former Auto Repair 1022-1032 La Cienega Boulevard, Los Angeles, CA 90035 by National Environmental, Inc. (NEI) dated March 25, 2007), included soil sampling to assess for the former hoists, former sump, former below grade pit, and former waste oil storage area on the subject property and sampling of two on site groundwater monitoring wells. Eleven soil borings B1 through B5 and B7 through B12 were drilled on site. It was noted that B6 was deemed unnecessary and never drilled. See Figure 3 for soil boring locations. Soil borings were drilled to a maximum of 12 feet below ground surface (bgs). Soil samples were analyzed for Environmental Protection Agency (EPA) method 8015M and sampled at 5, 10, or 12 feet bgs depending on the boring. According to analytical results all soil samples were non-detect. Two groundwater monitoring wells (BC-15 and BW-19) were located on the north portion of the subject property. These wells were advanced in 2000, to assess for the north adjacent gasoline service station release. For more information regarding the north adjacent gasoline service station, please refer to the Tosco-76 Station discussion above. NEI sampled these wells and analyzed samples under EPA Method 826B and EPA Method 8015g. According to analytical results in groundwater monitoring wells BC-15 and BW-19, all samples were non-detect. NEI concluded that non-detectable concentrations of solvents and gasoline were reported in groundwater and that non-detectable concentrations of gasoline, diesel fuel, and heavy oils were reported in the former hoists, former sump area, former waste oil storage area, and former below grade pit at the subject property. NEI recommended no additional environmental assessment of work required on the subject property at that time. EFI Global, Inc. concurs with the conclusions of this report. Based on the non-detect concentrations at the former auto repair facility, the use of the subject property for auto repair purposes is not expected to represent a significant environmental concern.
- At the time this report was issued, no response has been received from LAFD HazMat and LAFD Arson. Should relevant information be obtained from these agencies subsequent to issuing this report, an addendum will be prepared and provided to the Client.
- The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property. No oil wells were identified within 500 feet of the subject property.

- Based on review of the Los Angeles Department of Public Works Bureau of Engineering substructure maps there are no underground storage tanks on the subject property.

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the Department of Toxic Substances Control (DTSC) EnviroStor Database, no environmental liens enforced by the DTSC were identified.

Additional Issues

- As there are no on-site structures on the subject property, the potential for asbestos containing building materials (ACMs) is considered to be low.
- As there are no on-site structures on the subject property, the potential for lead based paint is considered to be low.
- According to our research, radon potential at the subject property is considered low.
- As there are no on-site structures on the subject property, a mold inspection was not conducted as part of this assessment.
- The City of Los Angeles Department of Building and Safety methane zone data was reviewed to determine if the subject property is located in a methane or methane buffer zone. According to the information reviewed, the subject property is located within a methane zone. Therefore testing for the presence of methane and the installation of methane mitigation systems at the property prior to construction activities may be necessary. (Division 71 of the Los Angeles Building Code).

CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, Los Angeles, California , the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property except for the following:

Recognized Environmental Conditions (REC)

In our opinion, no RECs were identified during the course of this assessment.

Historical Recognized Environmental Conditions (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Conditions (CREC)

The soil, soil vapor, and groundwater contamination beneath the subject property from the north adjacent gasoline service station release is considered a CREC.

De Minimis Conditions

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

RECOMMENDATIONS

EFI Global, Inc. recommends proper removal and characterization profiling of the 55-gallon drums located on the subject property.

EFI Global, Inc. recommends maintenance of the proposed soil vapor barrier at the subject property building and proper adherence to LARWQCB regulatory directives regarding the on site monitoring wells associated with the north adjacent gasoline service station release case. If no regulatory adherence is necessary, EFI Global, Inc. recommends proper monitoring well abandonment.

1.0 INTRODUCTION

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for the property located at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, in Los Angeles County and the City of Los Angeles, California (Subject Property). This report has been prepared for the sole use of Black Equities Group, Ltd. (Client).

The research conducted for this study and the report prepared are in general conformance with the EPA "All Appropriate Inquiries" standard and the ASTM 1527-13 "Standard Practices for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The primary purpose for performing a Phase I ESA is to "…permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations (commonly known as landowner liability protections) on Comprehensive Emergency Response Compensation and Liability Act (CERCLA) liability." (ASTM, 2013) An environmental site assessment meeting or exceeding this practice and completed less than 180 days prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the User also has a "continuing obligation to not interfere with activity and use limitations associated with the property," must take "reasonable steps to prevent releases" and must "comply with legal release reporting obligations." (ASTM, 2013) Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

The goal of this process is to identify any (1) recognized environmental conditions (RECs), (2) historic recognized environmental conditions (HRECs), (3) controlled recognized environmental conditions (CRECs), and/or (4) *de minimis* conditions associated with the subject property.

- A **recognized environmental condition** is defined as "…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment." This definition does not include de minimis conditions defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies" (ASTM, 2013).
- A **historical recognized environmental condition** is defined as "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)." (ASTM, 2013). The HREC designation requires the comparison of residual contamination concentrations, if any, to current regulatory standards.
- A **controlled recognized environmental condition** is defined as "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to

remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)" (ASTM, 2013).

- A ***de minimis condition*** is defined as "a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions" (ASTM, 2013).

In order to identify environmental conditions at the site, the Phase I ESA includes a site inspection, interviews with parties familiar with the property, historical research into the past uses of the property, and an environmental records search with regard to the subject property, adjoining and immediately surrounding properties, and the surrounding area. In addition, EFI Global, Inc. provides an opinion regarding the potential for asbestos containing materials, lead-based paints, mold, radon, oil and gas exploration, and methane as they relate to the subject property. Reviewing those documents that are publicly available, reasonably ascertainable, and practically reviewable controls the completeness of this assessment. The inability to review documents which do not exist or are not publicly available, reasonably ascertainable, or practically reviewable may result in a data gap.

1.1 Significant Assumptions

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

1.2 Limitations and Exceptions

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM 1527-2013, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of EFI Global, Inc. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

1.3 Reliance

This report has been prepared for the sole use of Black Equities Group, Ltd.. The contents should not be relied upon by any other parties without the express written consent of Black Equities Group, Ltd. and EFI Global, Inc.

1.4 User Responsibilities

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM E 1527-13 Phase I Standards require that the User conduct independent research and consider certain information before purchasing a property:

- Obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations (AULs) with regard to the subject property. If environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or AULs encumbering the subject property or in connection with the subject property, the User should provide that information to the Environmental Professional (EFI Global, Inc.).
- The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.
- If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).
- If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

2.0 SITE DESCRIPTION

EFI Global, Inc. has performed a Phase I for a vacant property located at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, in Los Angeles County and the City of Los Angeles, California . The subject property is located on the east side of South La Cienega Boulevard and approximately 215 feet south of West Olympic Boulevard, in the City of Los Angeles. The subject property is approximately 1.2-acers in size and consists of fenced vacant land. The surrounding area is used for commercial and residential purposes.

Natural gas is provided to the subject property by Southern California Gas Company. Potable water, electric services, and sewer services are provided by the City of Los Angeles.

2.1 Current and Historical Addresses

According to our research and information provided by the Client, the following addresses have been found to be associated with the subject property: 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, Los Angeles,California .

2.2 Legal Description

According to the Los Angeles County Assessor's Office, the subject property is located in the City of Los Angeles, and is described by the Assessor's Parcel Numbers: 5087-001-023, 5087-001-024, 5087-001-040, and 5087-001-041 .

2.3 Physical Setting

The elevation of the subject property is approximately 130 feet above sea level (United States Geological Survey Beverly Hills, California 7.5 minute topographic quadrangle). Based on our review of the GeoCheck Section of the EDR Radius report, the subject property is situated within a 500-year Federal Environmental Management Agency (FEMA) Flood Zone. No wetlands were identified at the property or adjoining/ immediately surrounding properties. Based on our review of groundwater data from the subject property, groundwater is approximately 15 feet below ground surface. Based on regional groundwater data, regional groundwater flow direction is estimated to be towards the southeast; however local groundwater flow direction may vary.

3.0 SITE RECONNAISSANCE/INTERVIEWS

3.1 Site Reconnaissance

On July 12, 2017, Ms. Chloe Adelmann of EFI Global Inc., conducted a site reconnaissance of the subject property. The site inspection was conducted to attempt to identify current site use(s), current hazardous materials storage, and evidence of past site uses and hazardous material storage and to identify evidence of other recognized environmental conditions. The following table summarizes our Site Reconnaissance observations:

Yes	No	Observed Feature(s)
✔		Hazardous Substances and Petroleum Products Containers
	✔	Underground and/or Aboveground Storage Tanks
	✔	Drains/Sumps/Clarifiers/Sewer Interceptors/Septic Systems
	✔	Stained or Corroded Surfaces/Stained Soil or Stressed Vegetation
	✔	Pits/Ponds/Lagoons/Wetlands
✔		Electrical Equipment with the Potential to contain Fluids
✔		Production or Monitoring Wells
	✔	Evidence of Solid Waste Disposal/Dumping/Fill Areas

3.1.1 Exterior Observations

The exterior portions of the site consist off fenced vacant land. The north portion of the property consisted of rows of parked cars. The central portion consisted of dirt patches, wood building material debris, and short grasses. The south portion the property consisted of overgrown vegetation and grasses. Three pole mounted transformers were observed on the eastern portion of the property. The transformers were in good condition with no signs of leaking or staining in the vicinity. Five 55-gallon drums of non-hazardous waste were observed in the northeast portion of the property and eight 55-gallon drums were observed on the northwest portion of the property. Mr. Zalben, the property owner does not know the contents or the source of the drums, but believes they are from the north adjoining property tenant (Matrix Collision Repair). The drums were not located in secondary containment. However, the drums were in good condition, with no evidence of staining on the soil surface in the vicinity. Based on the good condition of the drums and lack of evidence of a release, the 13 55-gallon drums on the subject property are not expected to represent a significant environmental concern. However, EFI Global, Inc. recommends proper waste profiling and disposal of the 55-gallon drums on the subject property.

A total of seven groundwater monitoring wells were observed on the subject property during the site reconnaissance. These groundwater monitoring wells are associated with a subsurface investigation to assess for potential impacts of the north adjacent gasoline services station release. For more information regarding the release from the north adjacent gasoline service station refer to Section 5.3. Three monitoring wells were observed in the northeast portion of the property: one was unlabeled while the other two were labeled MW-25d and MW-25U. Two monitoring wells were observed on the northwest portion of the property and labeled MW-26d and MW-26U. Two monitoring wells were observed on the southwest portion of the property, both of which were unlabeled. For monitoring well locations please refer to Figure 3. For more information regarding the previous subsurface assessments on the subject property, please refer to Section 5.3.

3.1.2 Interior Observations

As the subject property is currently vacant land. No structures were observed during the site reconnaissance.

3.1.3 Reconnaissance Limitations

Due to the presence of cars, wood building materials, and tall grasses not all ground surfaces could be observed.

3.2 Adjoining and Immediately Surrounding Properties

The adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) were visually and physically observed from public right-of ways and the subject property in an attempt to identify recognized environmental conditions. Our observations are summarized in the following table:

Location	Address(es)	Uses/Observations
North	1016 South La Cienega Boulevard	Commercial: Matrix Collision Repair
South	1056 South La Cienega Boulevard	Vacant land
East	1017, 1021, 1029, 1033, 1037, 1041, 1049, and 1053 South Alfred Street	Residential
West	1039 South La Cienega Boulevard and 1055 South La Cienega Boulevard.	Commercial: Temple Beth Am and Pressman Academy

- No recognized environmental conditions were readily observable at the adjoining/immediately surrounding properties.

3.3 Surrounding Area Observations

3.3.1 Surrounding Property Uses

The surrounding area is mostly developed with commercial and residential structures. A gas station was observed to the north. For more information please refer to Section 5.2.

3.3.2 Surrounding Geography

The surrounding area is mostly flat with a slight topographic slope to the southeast. No nearby hills or bedrock outcroppings were observed in the area of the site. No lakes, ponds, rivers or streams were observed in the surrounding area.

3.4 Interviews

3.4.1 Property Owner

Mr. Zachary Zalben, of Black Equities Group, Ltd, was interviewed on July 13, 2017. According to Mr. Zalben the property is currently fenced vacant land. Mr. Zalben is aware of a previous subsurface assessment for the property, for more information please refer to Section 3.6. Mr. Zalben was unaware of any 55-gallon drums on site and believes they belong to the auto body shop on the north adjoining property. Mr. Zalben was unaware of any environmental conditions associated with the

property. Mr. Zalben confirmed that the planned development of the subject property will include the use of vapor barrier in addition to a subterranean parking.

3.4.2 Key Site Manager

The owner of the property is the key site manager and was interviewed as the owner.

3.4.3 Property Occupants

No occupants were available for interview during the completion of this report.

3.4.4 Past Owners, Operators and Occupants

Past owners, operators and occupants were not able to be identified for an interview for this report.

3.4.5 Prospective Purchaser

As the user of this report is the Owner for a transaction which is for financing purposes, there is no prospective purchaser included in the transaction.

3.4.6 Neighboring Property Owners/Tenants

Per ASTM, an attempt to interview neighboring property owners/tenants should be conducted when the subject property is vacant and unsecured land.

As the subject property is currently fenced and secured vacant land, no neighboring property owners/ tenants were interviewed during this assessment.

3.5 User Provided Information

The United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) and ASTM 1527-13 Phase I Standards require that the Report User conduct independent research and consider certain information before purchasing a property. EFI Global, Inc. recommends that the User documents completion of the following items:

3.5.1 Lien Search

The User is required to obtain a recent (less than 180 days old) title report prepared for the subject property. The report should be reviewed to obtain information regarding environmental clean-up liens or activity and use limitations with regard to the subject property. If environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property are identified, the User should provide that information to the Environmental Professional (EFI Global, Inc.). If the User has actual knowledge of environmental cleanup liens or activity and use limitations encumbering the subject property or in connection with the subject property, the User should provide that

- The User did not provide EFI Global any information either verbally or in writing (i.e. Title Report) regarding environmental cleanup liens or activity and use limitations encumbering the subject property. An environmental lien search was not requested by the User; however, based on our review of the Department of Toxic Substances Control (DTSC) EnviroStor Database, no environmental liens enforced by the DTSC were identified.

3.5.2 Specialized Knowledge

The User should provide the Environmental Professional (EFI Global, Inc.) with any specialized knowledge the User has with regard to recognized environmental conditions in connection with the property.

- The User has no specialized knowledge with respect to recognized environmental conditions in connection with the property.

3.5.3 Commonly Known or Reasonably Ascertainable Information

If the User is aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions, the User should provide the information to the Environmental Professional (EFI Global, Inc.).

- The User is not aware of any commonly known information in the community about the subject property with respect to recognized environmental conditions.

3.5.4 Property Valuation

If this Phase I ESA was prepared as due diligence for a property transaction, it is the responsibility of the User to consider the relationship of the purchase price to the fair market value of the property. If the purchase price is significantly lower than the fair market value, the User should identify the alternate reason for the low purchase price if the lower purchase price is not related to the property being affected by hazardous substances or petroleum products.

As the User of this report is the owner of the property performing due diligence on the subject property in contemplation of a refinance, there is no prospective purchaser included in the transaction.

3.5.5 Purpose of Performing Phase I ESA

According to the user, the user is the owner of the property performing due diligence on the subject property in contemplation of a future refinance.

3.6 User Provided Documents

The user provided a report titled Report on Preliminary Site Investigation for Former Auto Repair 1022-1032 La Cienega Boulevard, Los Angeles, CA 90035 by National Environmental, Inc. (NEI) dated March 25, 2007. The report was prepared to assess the former auto repair operations on the subject property. For more information please refer to Section 6.2.

The user provided a report titled Report on Site Investigation for Apartment Building at 1042-1054 South La Cienega Boulevard, Los Angeles, CA 90035 by National Environmental, Inc. (NEI) dated May 15, 2008. The scope of the investigation included drilling of nine soil borings (B1 through B9) and collection of groundwater grab samples at seven of the boring locations (B2 through B8). Soil samples were collected at 10 feet bgs and groundwater samples were collected at 16 feet bgs. Soil samples were analyzed for EPA method 8260B, EPA method 8015M, and EPA method 8015g. Groundwater samples were analyzed for EPA method 8260B and EPA method 8015g. According to analytical results all samples were non-detect or below current regulatory standards, with the exception of 2.8 micrograms per liter (µg/L) of benzene and 1,600 µg/L of total petroleum hydrocarbons-gasoline (TPH-g) in groundwater grab sample at B4. NEI concluded that the concentrations of TPH-g and benzene were from the leading edge of a gasoline plume from the north adjacent property. For more information regarding groundwater sampling on the

subject property to assess for the north adjacent gasoline service station, please refer to Section 5.3. NEI recommended that a vapor barrier is used in the planned development of the subject property. Additionally NEI recommended continued groundwater sampling on the subject property. EFI Global concurs with the conclusions of this report. For more information regarding additional assessment on the subject property, please refer to Section 5.3.

The user provided a draft report titled Draft Soil, Soil Gas, and Groundwater Sampling Report for Contiguous Vacant Lots at 1022, 1026, 1032, and 1042-1054 South La Cienega Boulevard, Los Angeles, California by Holguin, Fahan & Associates, Inc. (HAF) dated January 25, 2013. This finalized assessment was located on the State Water Resources Control Board (SWRCB)'s GeoTracker database in association with a the release from the north surrounding gas station at 1004 South La Cienega Boulevard. For more information regarding this assessment please refer to Section 5.3.

4.0 HISTORICAL LAND USE

A review of historical data derived from standard historical resources is provided in this section. The objective of consulting historical sources is to develop a history of the previous uses of the property and surrounding area, in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property. During our historical review, acute attention is paid to the subject property. Data relating to the adjoining and immediately surrounding properties (within 100-feet of the subject property boundary) and the surrounding area is reviewed to the extent that it is revealed in the course of researching the property itself.

4.1 Aerial Photography Review

Aerial Photography of many portions of the United States dates back to the 1920's. Items searched for in each photograph included, but were not limited to: evidence of tanks, gas stations, industrial site usage, water drainage pathways, areas which show evidence of drums or excessive debris, discolored or stained soils, areas of distressed vegetation, et cetera.

Aerial Photograph Coverage was available from Environmental Data Resources (EDR) and Google Earth Historical Aerials for the years: 1928, 1938, 1947, 1956, 1965, 1976, 1989, 1994, 2005, and 2014. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1928	Assessor's Parcel Numbers (*APNs) 5087-001-040 and -041*: Appears to be undeveloped land. *APN 5087-001-023*: Appears to be undeveloped land. *APN 5087-001-024*: Appears to be undeveloped land.	All: undeveloped land	Appears to be primarily undeveloped land with some residential development to the north and west.
1938	*APNs 5087-001-040 and -041*: Appears to be undeveloped land and a circular path in the center portion. *APN 5087-001-023*: Appears to be undeveloped land. *APN 5087-001-024*: Appears to be undeveloped land.	North: Undeveloped land South: Residential East: Residential West: Commercial and undeveloped	Appears to be developed for primarily residential and commercial purposes. A structure characteristic of a gas station appears to the north.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1947	*APNs 5087-001-040 and -041*: Appears to be undeveloped land with a billboard near South La Cienega Boulevard *APN 5087-001-023*: Appears to be undeveloped land with a billboard near South La Cienega Boulevard *APN 5087-001-024*: Appears to be undeveloped land with a billboard near South La Cienega Boulevard	North: Commercial South: Commercial East: Residential West: Commercial and undeveloped	Appears to be developed for primarily residential and commercial purposes, with a structure characteristic of a gas station to the north.
1956, 1965, 1976, 1989, 1994, and 2005	*APNs 5087-001-040 and -041*: Appears to be developed with two commercial structures. *APN 5087-001-023*: Appears to be developed with one commercial structure. *APN 5087-001-024*: Appears to be developed with one apartment complex.	North: Commercial South: Commercial East: Residential West: Commercial	Appears to be developed for primarily residential and commercial purposes, with a structure characteristic of a gas station to the north
2014	*APNs 5087-001-040 and -041*: Appears to be vacant land. *APN 5087-001-023*: Appears to be vacant land. *APN 5087-001-024*: Appears to be vacant land, with a billboard near South La Cienega Boulevard.	North: Commercial South: Vacant East: Residential West: Commercial	Appears to be developed for primarily residential and commercial purposes, with a structure characteristic of a gas station to the north

- A structure characteristic of a gas station appears to the north by 1938. For more information please refer to Section 5.3.

4.2 Building Department Records Review

The addresses identified as current and historical addresses for the subject property were researched at the City of Los Angeles Building and Safety Department. Items considered in the course of the building permit review are previous site usage, previous ownership, and the construction or demolition of any

structures that may have had a negative environmental impact on the property. The following table summarizes relevant building permits obtained and reviewed:

1022 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
06/11/1954	Wagner Construction Company	Certificate of occupancy for an office building
03/14/1955	Wagner Construction Company	Certificate of occupancy for a two story office building.
10/09/1956	Max Sherman	Partitions for an office building
09/01/1960	Dr. Max Sherman	Interior remodeling for a commercial office
11/30/1965	Dr. Sherman	Remodel office suites B and G
02/02/1966	Hans Hoffman	Remove partitions
11/27/1995	Mr. David	Reroof permit
10/10/2000	1022 So La Cienega Partners	Sign permit
12/04/2008	Equestrian System Specialist LL	Demolish one story wood office building

1026 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
08/04/1955	Chas. Zucker and Solomon Keboh	Building permit for a banquet hall
11/07/1955	Zuck and Rebott	Alteration to banquet hall
04/12/1956	C. Zucker & S. Reboh	Addition to a banquet hall
04/20/1956	Charles Sucker and Solomon Rebott	Certificate of occupancy for a banquet hall and addition
02/08/1957	Savoy Caterers	Sign permit
03/25/1957	Unknown	Certificate of occupancy for one story storage addition to banquet hall.
06/03/1985	David Ramzi and Iran Omrani	To increase occupancy from 264 to 412
11/05/1985	Omrani Ramzi	Store front and new entrance for a dance hall and restaurant
11/13/1985	David Ramzi and Iran Omrani	Certificate of occupancy for a one story addition with and occupant increase from 264 to 412
04/25/1989	Iran Om	Certificate of occupancy for the conversion of the rear portion of the structure into dining area and increase occupancy to 433.
10/27/1976	Frank Dang	Add mansard roof projection for restaurant

1026 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
06/25/1991	Iran Omrani and David Ramzi	Install a pool table in restaurant
07/12/1991	Iran Ohrani	Certificate of occupancy to convert rear portion of building to dining area
07/16/1992	Mr. Illovlian	Relocate restroom
01/09/2002	1022 S. La Cienega Partnership	Sign permit for Nextcom
05/05/2006	Equestrian System Specialist LL	Demolition permit for 2 story office building

1032 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
02/09/1948	Eila Muis	Building permit for an automobile repair shop
07/19/1948	R. Howard	Certificate of occupancy for a 55 foot by 80 foot garage
11/30/1960	Foster & Kleiser Co.	Sign permit for a garage
05/20/1970	Foster & Kleiser Co.	Sign permit renewal
11/16/1971	Foster & Kleiser Co.	Roof sign alteration
04/17/1998	Freim, Elias D.	Correction on permit to include auto body and fender repair
04/09/1999	Freim, Elias D.	Reroof permit
05/02/2001	Freim, Elias D.	Correction on certificate of occupancy to include auto body and fender repair
05/05/2006	Beverly Hills Adjacent Senior	Demolish one story reinforced masonry auto body repair building.

1042 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
09/09/1954	Colosmith, Konhem Corp.	Building permit for an apartment building
10/21/1955	Buckeye Construction Co.	Permit for a semi-public swimming pool for an apartment complex
11/14/1955	Colosmith-Konhem Corp.	Certificate of occupancy for an 36 unit apartment house
11/14/1955	Buckeye Construction Co.	Certificate of occupancy for a swimming pool
04/07/1982	Northern Communications, Inc.	Roof sign on an apartment
11/28/1983	La Cienega Plaza	Mechanical permit
06/29/2011	SCR SHC LLC	Sign permit

1042-1054 South La Cienega Boulevard		
Date	**Owner/Occupant**	**Purpose**
06/10/2010	SRC SCH LLC	Demolition of an apartment building
02/28/2011	SRC SCH LLC	Change of contractor

4.3 City Directory Review

City directories have been published since the 1800's and provide detailed occupant information for the property and its surrounding area at five-year intervals. The purpose of the City Directory research is to attempt to determine the businesses that historically occupied the subject property. Historical City Directories provided by EDR and reviewed by EFI Global, Inc. are listed below.

1022 South La Cienega Boulevard	
Date	**Listing**
1958	Wagner Realty Co., Canada Life Assurance Co., CPA offices
1962	AM Food Inc, Canada Life Assurance Co., Max Sherman MD, CPA offices
1965	Neuman & Steinhauser CPA, Max Sherman MD, Canada Life Assurance Co., Hemstreet Elenor McMorris Associates, Landis Building and Investments Co. Co.
1970	Neuman & Steinhauser CPA, Landis Building and Investments Co., Co California Counseling Center
1971	Landis Building and Investments Co., Neuman & Steinhauser CPA
1975	Landis Building and Investments Co., Neuman & Steinhauser CPA, Nitchman Eugene CPA, Freedman Martin CPA, Clevenger and Associates

- Listings for adjoining and immediately surrounding properties reviewed during the course of researching the subject property did not reveal any uses of concern.
- The subject property at address 1032 South La Cienega Boulevard was used for auto repair purposes by Updated Auto Repair (2000-2006). For more information please refer to Section 6.2.
- Big Time Auto (2010) was listed at the subject property address 1042 South La Cienega Boulevard. For more information please refer to Section 5.2

4.4 Sanborn Map Review

Originally compiled by the Sanborn Map Company of Pelham, New York for fire insurance companies to assess fire risks related to building materials and hazardous materials storage, today Sanborn Maps are an invaluable tool for Environmental Professionals in determining historical site use and the potential for environmental conditions. Sanborn Map Coverage is available from as early as 1867 in some cities. Although Sanborn maps were created for approximately twelve thousand cities and towns in the United States, Canada, and Mexico, Sanborn Map Coverage is not available in newer and more rural communities. Sanborn Map Coverage was available from EDR for the years: 1927, 1950, and 1969. A summary of our observations is presented in the following table.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1927	Assessor's Parcel Numbers (APNs): *5087-001-040 and -041: Depicted with undeveloped land and one small singles story structure.* *APN: 5087-001-023 and 5087-001-024*: Depicted with undeveloped land.	All: Undeveloped	The surrounding area is depicted as primarily undeveloped land.
1950	*APN 5087-001-040 and -041*: Depicted with a wood yard. *APN 5087-001-023*: Depicted with an auto repair shop (1032 South La Cienega Boulevard). *APN 5087-001-024*: Depicted with undeveloped land.	North: Two commercial stores South: Restaurant East: Seven residential flats and auto garages West: office, synagogue, uphostery store, vacant lot, school, and two stores.	The surrounding area is depicted as primarily developed with residential and commercial structures, with a gas station to the north at 1004 South La Cienega Boulevard.

Year	Subject Property	Notable Adjoining Property Observations	Notable Observations of the Surrounding Area
1969	*APN 5087-001-040 and -041*: Depicted with an office (1022 South La Cienega Boulevard) and banquet room (1026 South La Cienega Boulevard). *APN 5087-001-023*: Depicted with an auto repair shop (1032 South La Cienega Boulevard). *APN 5087-001-024*: Depicted with a two story (36 unit) apartment building with pool (1042 South La Cienega Boulevard).	North: One commercial store South: Restaurant East: Seven residential flats and auto garages West: Class room, Temple Beth AM Sanctuary, and parking lot	The surrounding area is depicted as primarily developed with residential and commercial structures, with a gas station to the north at 1004 South La Cienega Boulevard.

- Sanborn maps indicated the following historical street addresses associated with the subject property: 1022, 1026, 1032, and 1042 South La Cienega Boulevard. These addresses were not researched during the completion of this report.
- The subject property address 1032 South La Cienega Boulevard is depicted with an automobile repair shop in 1950 and 1969. For more information please refer to Section 6.3.
- A gas station appears to the north at 1004 South La Cienega Boulevard in 1950. For more information please refer to Section 5.3.

4.5 Historical Summary

4.5.1 Subject Property

According to EFI Global, Inc.'s interpretation of the historical research data, the subject property is associated with the following APNs: 5087-001-023, 5087-001-024, 5087-001-040, and 5087-001-041. Based upon differing timelines of development, the historical land use summary has divided the subject property into the following: (1) APNs 5087-001-040 and -041 which consist of the north portion, (2) APN 5087-001-023 which consists of the central portion, and (3) APN 5087-001-024 which consists of the south portion.

APNs 5087-001-040 and -041 were developed with a small one story structure that was utilized for residential purposes on the eastern portion by 1927. By at least 1928, the structure was demolished and the parcels consisted of vacant land. By 1938, a circular road was developed on the parcels. By 1947, the road was no longer present and the subject property consisted of vacant land with a billboard located on the western portion. By at least 1950, the parcels were utilized as a wood yard. In 1954, an office building was developed on the north portion of the parcels (1022 South La Cienega Boulevard). In 1955, the southern portion of the parcels was developed with a banquet hall structure (1026 South La Cienega Boulevard). The structure on the southern portion of the parcel was utilized as a banquet hall until at least 2006, when the structure was demolished. The structure on the northern portion of the parcel (1022 South La Cienega Boulevard) was utilized for office purposes from at least 1954 until at least 2008, when the structure was demolished. The parcels are currently

vacant land, with a portion utilized as a parking lot. Commercial occupants of 1022 South La Cienega Boulevard have been office related from at least 1955 until the late 1980s. Former office operations included: doctors offices, real estate offices, and accounting offices. By the 1990s the structure was occupied by numerous telecommunication sales and services tenants. Commercial occupants of 1026 South La Cienega Boulevard have included: banquet halls, sports clubs, restaurants, and caterers.

APN 5087-001-023 was undeveloped land from 1927 until at least 1938. By at least 1947, a billboard was developed on the west portion of the parcel. In 1948, the subject property was developed with a commercial structure that was utilized for various auto repair purposes through 2007(1032 South La Cienega Boulevard). By 2007, the commercial structure at 1032 South La Cienega Boulevard was demolished. The parcel is currently vacant land. Former commercial occupants of 1032 South La Cienega Boulevard have included: Eila Muis Auto Repair (1948), R. Howard Auto Garage (1948), Foster & Kleiser Co. (1960-1971), Alfa Milano Inc. (1979-1980), and Updated Auto Repair/Freim, Elias D. (1998-2007).

APN 5087-001-024 was undeveloped land from 1927 until at least 1938. By at least 1947, a billboard was developed on the west portion of the parcel. In 1954, the parcel was developed with an apartment complex (1042 South La Cienega Boulevard). The parcel remained utilized for residential purposes as an apartment complex until 2010 when the apartment complex was demolished. The parcel is currently vacant land.

- According to the historical research, the subject property was occupied by an automotive repair shop at 1032 South La Cienega Boulevard from at least 1948 until 2007. For more information regarding the former automotive repair operations on site, refer to Section 6.2.

4.5.2 Adjoining and Immediately Surrounding Properties

According to EFI Global, Inc.'s interpretation of the historical research data, the adjoining and immediately surrounding properties were undeveloped land in at least 1927. By 1938, the south and east were developed for residential purposes and the west was partially developed for commercial purposes. By 1947, the north and south were developed for commercial purposes. By at least 1950, the west was developed entirely for existing commercial purposes. By at least 2014, the south becomes existing vacant land.

4.5.3 Surrounding Area

According to EFI Global, Inc.'s interpretation of the historical research data, the surrounding area was primarily undeveloped land in at least 1927. By at least 1938, the surrounding area was primarily developed for existing residential and commercial purposes.

- A structure characteristic of a gas station appears to the north at 1004 South La Cienega Boulevard from at least 1938 until present. For more information please refer to Section 5.3.

4.6 Historical Data Gaps

The earliest historical resource obtained during this investigation was a Sanborn map from 1927, which indicated development of the subject property with a small structure. The lack of historical data sources for the subject property dating back to first developed uses represents historical data source failure. However, based on the size of the structure (approximately 200 square feet) it is assumed to be residential in nature. From review of the foregoing the use of the subject property prior to 1927, would have been developed

for residential uses, if not undeveloped. Based on this notion, this limitation is not expected to significantly alter the findings of this investigation.

5.0 REGULATORY DATABASE REPORT

A radial database search was conducted in accordance with the specifications defined in ASTM E 1527-13 which sets the radial search distances for each regulatory database. The radial database search was conducted by EDR on June 28, 2017. A copy of the database report is presented in Appendix II of this report. The following table summarizes required databases reviewed, the approximate search distances, and indicates if the subject site, adjoining/immediately surrounding properties or surrounding sites are listed on the respective database.

Following the table are summaries of the information found in the relevant database listings and our opinion regarding the potential for the subject property to be impacted. Our opinion is based on the information found in the database listings, through other historical and regulatory resources, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions" (ASTM E2600-15), and assumed groundwater flow direction. As discussed in Section 2.3, groundwater is estimated to be approximately 10-feet below ground surface in the area of the site and is assumed to flow towards the southeast.

DATABASE	Search Distance (Miles)	Subject Site (Yes/ No)	Adjacent Site (Yes/ No)	Total Listings (#)
Federal National Priorities List (NPL)	1.0	No	No	0
Federal De-listed NPL	1.0	No	No	0
Federal CERCLIS	0.5	No	No	0
Federal CERCLIS NFRAP	0.5	No	No	0
Federal RCRA CORRACTS	1.0	No	No	0
Federal RCRA non-CORRACTS TSD	0.5	No	No	0
Federal RCRA Generators	0.25	No	No	8
Federal Institutional/Engineering Controls	0.5	No	No	0
Federal ERNS	Property	No	No	0
State/Tribal Equivalent NPL	1.0	No	No	0
State/Tribal Equivalent CERCLIS	1.0	No	No	5
State/Tribal Landfill	0.5	No	No	0
State/Tribal Underground Storage Tank (UST)	0.25	No	No	11
State/Tribal Leaking Underground Storage Tank (LUST/SLIC)	0.5	No	No	17
State/Tribal Institutional/Engineering Controls	0.5	No	No	0
State/Tribal Voluntary Clean-up Sites	0.5	No	No	0
State/Tribal Brownfield Sites	0.5	No	No	1

5.1 Subject Property

1X Updated Auto Repair #2/Elie Freim (1032 South La Cienega Boulevard) – The subject property is listed on the Facility and Manifest Data (HAZNET) and EDR US Historical Auto Station (EDR US Hist Auto Stat) databases. According to the EDR US Hist Auto Stat, the site was formerly used for general automotive repair by Alfa Milano Inc. in 1979 and 1980 and by Updated Auto Repair from 1992 to 2005. According to the HAZNET listing, the facility disposed of hazardous waste from 1996 to 2001 and 2003,

consisting of unspecified solvent mixture and other organic solids. The wastes were disposed of via recycler and transfer station. The quantities disposed of ranged from 0.05 ton to 0.45 ton. According to the HAZNET listing, Updated Auto Repair disposed of 12-tons of contaminated soil in 1994. Additionally, Elie Freim disposed of 0.25-ton of unspecified solvent mixture by fuel blending prior to energy recovery at another site and 2.08-tons of tank bottom waste via discharge to sewer. For more information regarding the use of the subject property for auto repair purposes please refer to Section 6.2.

Didm Development Corporation (1022-1034 South La Cienega Boulevard) – The subject property is listed on the HAZNET database. According to the listing, the site disposed of 5.89 tons of asbestos containing waste in 2006. For more information regarding disposal of asbestos containing waste, please refer to Section 6.1.

Big Time Auto (1042 South La Cienega Boulevard) – The subject property is listed on the EDR US Hist Auto Stat database. According to the EDR US Hist Auto Stat, the site was formerly used for general automotive repair purposes by Big Time Auto from 2003 to 2010. However, based on historical information the subject property at address 1042 South La Cienega Boulevard was developed with an apartment complex in 1954 until it was demolished in 2010. Based on the foregoing, the Historical Auto Station database listing for Big Time Auto is assumed to be for a business that utilized the subject property address as its main mailing address and not for auto related operations on site. Based on the foregoing, the database listing is not expected to represent a significant environmental concern for the subject property.

5.2 Adjoining and Immediately Surrounding Properties

Tanner B.D. (1019 South La Cienega Boulevard) – The northwest immediately surrounding (across South La Cienega Boulevard) is listed on the EDR Exclusive Historic Dry Cleaners (EDR US Hist Cleaners) database. According to the listing, Tanner B.D. was listed as a Clothes Presses and Cleaners in 1937. From historical research the property was undeveloped in 1928 and by 1950 developed with an office. According to aerial photography, the property was redeveloped in 1965. Based on the distance from the subject property, lack of evidence of a release, and subsequent redevelopment the use of the northwest immediately surrounding property is not expected to represent a significant environmental concern for the subject property.

5.3 Surrounding Area

Tosco-76 Station #0981 (1004 South La Cienega Boulevard) – The property located approximately 105 feet north of the subject property is listed on the Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST), Facility Inventory Database (FID UST), EDR US Hist Auto Stat, Active Underground Storage Tank Facilities (UST), Resource Conservation and Recovery Act - Large Quantity Generator (RCRA-LQG), Hazardous Substance Storage Container Database (HIST UST), Waste Discharge System (WDS), Leaking Underground Storage Tank (LUST), Enforcement Action Listing (ENF), and Hazardous Waste & Substance Site List (HIST CORTESE) databases. According to the LUST database listing and the State Water Resources Control Board's (SWRCB) GeoTracker database, the site was originally developed with a gasoline service station in 1964. Two 10,000-gallon gasoline underground storage tanks (USTs) and one 280-gallon waste oil UST were formerly located at the site. According to the database, the site had an unauthorized release of gasoline impacting groundwater, and the Los Angeles Water Quality Control Board (LARWQCB) opened the LUST case on March 1, 1986. Groundwater, soil vapor, and soil samples have been collected on and off the site. The groundwater monitoring wells BC-15 and MW-19 were located on the subject property (see Figure 3 for locations) and first drilled and sampled in 1992 and 2000, respectively. According to analytical results for BC-15 and MW-19 from the most recent

sampling events in 2007, TPH-g, and BETX were non-detect. An additional assessment was conducted in 2013 on the subject property to further assess the potential impacts of the north adjacent gasoline service station release. The report (Soil, Soil Gas, And Groundwater Sampling Report for SCR/SCH v. Union Oil of California, Et Al. Contiguous Vacant Lots at 1022, 1026, 1032, and 1042-1054 South La Cienega Boulevard, Los Angeles, California by Holguin, Fahan & Associates, Inc. (HAF) dated January 25, 2013) included a geophysical investigation of proposed drilling locations, core penetration with core-pressure testing (CPT), soil sampling, groundwater sampling, soil vapor sampling, and waste management. Nine CPT borings were advanced on the subject property (CPT-1 through CPT-9). According to the CPT, soils at the site consisted of sand, silt, clay, and mixtures of these soils. Four groundwater monitoring wells (W-1 through W-5), were advanced on the subject property in November 2012, and groundwater was encountered at approximately 15 feet below ground surface (bgs). Soil samples were collected at 5, 15, and 25 feet bgs of each groundwater monitoring wells. Soil samples were analyzed for total petroleum hydrocarbons-gas (TPH-g), benzene, toluene, ethylbenzene, and xylene (BTEX), and other gasoline constitutes. According to analytical results, TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of the maximum concentrations of 0.21 mg/kg of benzene at W-1 at 15 feet bgs and 2,000 miligrams per kilogram (mg/kg) of TPH-g, 38 mg/kg of ethylbenzene, 28 mg/kg of total xylenes, 5.1 mg/kg of N-butylbenzene, 6.2 mg/kg of napthalene, 6.7 mg/kg of isopropylbenzene, 25 mg/kg of N-propylbenzene, 52 mg/kg of 1,2,3-trimethylbenzene, and 47 mg/kg of 1,3,5- trimethylbenzene in W-2 at 15 feet bgs. According to review of Regional Screening Levels (RSLs) etheylbenzene was above the soil screening level for industrial standards (25 mg/kg). According to groundwater monitoring results from December 2012, TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of 130 micrograms per liter (µg/L) of TPH-g, 7.5 µg/L of benzene and 3.8 µg/L of total xylene in W-1, 2.4 µg/L of methyl tert-butyl ether (MTBE) in W-3, and 3.8 µg/L of ethylene dichloride (EDC) in W-4. According to our review benzene was above the maximum concentration levels (MCLs) of 1.0 µg/L. Four soil gas samples were advanced at the subject property (G-1, G-2, G4, and G-5). No soil gas sample G-3 was identified in the assessment. Soil gas samples were collected at 5.5 feet and 12.5 feet bgs in December 2012. According to analytical results all TPH-g, BTEX, and other gasoline constitutes were non-detect, with the exception of a maximum concentrations of 12 µg/L of TPH-g in G-5 at 5.5 feet bgs, 0.0037 µg/L of benzene, 0.0093 µg/L of toluene, 0.0046 µg/L of ethyl-benzene, and 0.015 µg/L of m,p xylene in G-5 at 12.5 feet bgs, and 0.01 µg/L of naphthalene in G-4 at 5.5 feet bgs. According to our review benzene is above the Department of Toxic Substances Control's (DTSC) HERO Note 3 screening levels for industrial standards at 0.00042 µg/L.

Site remediation at the gasoline service station site (1004 South La Cienega Boulevard) has consisted of free product removal of three gallons of liquid waste from 1997 to 2005, soil vapor extraction (SVE) of 76,169 pounds of contaminate mass from 2004 to 2013, and groundwater pump and treatment of 3,242,950 gallons of groundwater from 2004 to 2013. Currently, the status of the adjacent site, is listed as open and under remediation. From observations made during the site reconnaissance, seven monitoring wells were observed on the subject property and labeled MW-25U, MW-25d, MW-26U, MW-26d, or unlabeled according to concrete markings observed at the well locations. It is unclear if the monitoring wells observed on the subject property are the same as the monitoring wells advanced on the subject property in 2007 and 2012. No other information regarding the monitoring wells on the subject property was provided by the User or within the GeoTracker database. The documented concentrations in soil, soil vapor, and groundwater above industrial screening levels are considered an environmental concern in respect to the subject property. However, according to information provided by the User, the planned development of

the subject property will include the use of subterranean parking and the use of a vapor barrier. Based on the identification of the Responsible Party (Tosco-76 Station #0981), ongoing regulatory oversight and remediation at the north adjacent gasoline service station, and planned use for a vapor barrier beneath the subject property structure to mitigate any potential vapor intrusion risk, the soil, soil vapor, and groundwater contamination beneath the subject property from the north adjacent gasoline service station is considered a Controlled Recognized Environmental Condition (CREC).

Hertz Former Texaco Station/Elizabeth M. Mullian/Beverly Hills Auto Service (1103 South La Cienega Boulevard) – The property located approximately 320 feet southwest (hydrologically down-gradient) of the subject property is listed on the LUST, SWEEPS UST, and EDR Hist Auto databases. According to the LUST listing and the SWRCB's GeoTracker database, the site had an unauthorized release of gasoline and methane, impacting an unspecified media and the LARWQCB opened the case on November 22, 2008. According to the site closure packet dated November 2010, the site removed four gasoline USTs and one waste oil UST in 1993 and a release was detected in soil samples. One groundwater monitoring well, MW-1, located approximately 350 feet from the subject property, was sampled in March of 1994, and no concentrations of gasoline or gasoline constitutes were detected above Maximum Contaminant Levels (MCLs). The site has performed remediation via excavation and received case closure on November 29, 2010. Based on the case closure, distance from the subject property, and hydrological location from the subject property, this listing is not expected to represent a significant environmental concern for the subject property.

Morris Shachory/Morrie Service Station/Arco #1361/Roya Goltche (67390 West Olympic Boulevard) – The property located approximately 320 feet north of the subject property (hydrologically cross-gradient), is listed on the UST, HIST CORTESE, SWEEPS UST, FID UST, and LUST databases. According to the listing and the SWRCB's GeoTracker database, the site had an unauthorized release of gasoline impacting groundwater and the LARWQCB opened the case on October 16, 1989. Three groundwater monitoring wells were advanced on the property, with the closest groundwater monitoring well to the subject property, MW-3, located approximately 325 feet north of the subject property. According to the analytical results from the most recent sampling event at MW-3 in January 2007, gasoline range organics (GRO), BTEX, and all other gasoline constitutes were non-detect. The LARWQCB issued case closure on April 30, 2007. Based on the case closure, non-detect concentrations in the closest groundwater monitoring well, distance from the subject property and hydrologoical orientation to the subject property, this listing is not expected to represent a significant environmental concern for the subject property.

In our opinion, none of the other sites listed on the regulatory database report pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

5.4 Orphan Sites

Orphan sites are unmappable sites which appear in a list form in the Radius Map Report rather than on the standard Radius Map. Three orphan sites were identified in the Radius Map Report prepared for this site. The sites were manually mapped to determine the location of the site relative to the subject property and groundwater gradient. The following conclusions were made:

In our opinion, none of the orphan sites listed pose a significant threat to the subject property as there is no indication of a release at the respective sites, a release has occurred but groundwater has not been

impacted, a release has occurred but the case is closed, or the sites are located cross or down gradient of the subject property and in excess of 1/10 mile from the subject property.

6.0 AGENCY FILE REVIEWS

6.1 State Agencies

The regional offices of the Los Angeles Regional Water Quality Control Board (LARWQCB), Department of Toxic Substances Control (DTSC), and South Coast Air Quality Management District (SCAQMD) were contacted regarding permits and site investigation files for the subject property. Additionally, the State Water Resources Control Board's (SWRCB) GeoTracker (GeoTracker), DTSC's EnviroStor and Hazardous Waste Tracking System (HWTS) and SCAQMD's Facility Information Detail (FIND) databases were reviewed for information pertaining to the subject property.

- According to responses to our requests from LARWQCB and DTSC and review of the GeoTracker and EnviroStor databases, there are no files for the subject property addresses.
- HWTS maintains a listing for the subject property addresses 1022-1034 South La Cienega Boulevard. According to the listing DIDM Development Corporation maintained an inactive listing from September 2006, under Environmental Protection Agency (EPA) ID: CAC00268821. According to the listing the site disposed of 2.8-tons of asbestos containing waste in 2006. From historical review the subject property addresses 1026 and 1032 South La Cienega Boulevard were demolished in 2006. This listing is assumed to be associated with these demolition activities. Based on demolition activities during a time during a time of stringent regulatory oversight (post-1980) and nature of the waste, this listing is not expected to represent a significant environmental concern for the subject property.
- HWTS also maintains a listing for the subject property address 1032 South La Cienega Boulevard for NASA Environmental Inc. in 2007 with EPA ID: CAC002613592. According to the listing the site had no manifest records found. From an online review, NASA Environmental Inc. collects, recycles, and transfers wastes. Based on the foregoing, this listing is assumed to be associated with former auto repair operations at the site, please refer below for more information. However, based on the lack of any identified manifest records, this listing is not expected to represent a significant environmental concern for the subject property.
- SCAQMD and the FIND and HWTS databases maintain files for the Updated Auto Repair at 1032 South La Cienega Boulevard. Based on the overlapping information, these records are discussed together in Section 6.2.

The Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System was reviewed for information pertaining to oil and gas exploration on or nearby the subject property.

- No oil wells were identified within 500 feet of the subject property.

6.2 City/County Agencies

The Los Angeles County Fire Department Health Hazardous Materials Division (LACFDHHMD), Los Angeles Fire Department (LAFD) Hazardous Materials Division (HazMat), LAFD Underground Storage Tank Unit (USTD), LAFD Arson (Arson), and City of Los Angeles Bureau of Sanitation (LABS) were contacted and the City of Los Angeles Department of Public Works (LADPW) Bureau of Engineering substructure maps, and LAFD HazMat, LAFD Above ground Storage Tank (AST), and LAFD UST databases were reviewed regarding hazardous materials, underground storage tank, and industrial waste discharge records for the subject property.

- According to responses to our requests from LACFDHHMD, and LAFD USTD, there are no files for the subject property. According to review of the LAFD AST and UST databases, there are no files for the subject property.
- The LAFD HazMat database maintains a record at 1032 South La Cienega Boulevard for Updated Auto Repair under ID number FA0021538. A request has been made to LAFD HazMat regarding the listing and a response has not been received at the time of issuance of this report. These records are not expected to impact the conclusions of the report, however should relevant information be obtained from LAFD HazMat subsequent to issuing this report, an addendum will be prepared and provided to the Client.
- LABS maintains records for 1026 South La Cienega Boulevard. According to the permit The Savory Caters Inc. was issued an industrial waste discharge permit for a garbage grinder and floor and equipment washing in May 25, 1966. Based on the food grade nature of the industrial waste discharge, this record is not expected to represent a significant environmental concern.
- According to historical research the subject property at 1032 South La Cienega Boulevard has been used for automobile repair purposes from at least 1948 until 2007 (approximately 59 years). According to SCAQMD records and the FIND database, Updated Auto Repair was permitted to operate a paint spray booth in July 8, 1998. Updated Auto Repair under ownership by Elie Freim, was also listed on the hazardous waste databases. According to a HAZNET listing, the site disposed of 12-tons of contaminated soil in 1994. Additionally, the facility disposed of hazardous waste from 1996 to 2001 and 2003, consisting of unspecified solvent mixture and other organic solids. The quantities disposed of ranged from 0.05 ton to 0.45 ton. LABS maintains a permit for Updated Auto Repair, Sales, Body, and Paint Inc. According to the LABS permit, Updated Auto Repair received and industrial waste discharge permit in 2004. However the type of discharge was not indicated within the permit. According to the HWTS and HAZNET listings, Elie Freim maintained an inactive permit in 2007 under EPA ID: CAC002613511. According to the listing the site disposed of 0.252-ton of unspecified solvent mixture and 2.085 tons of tank bottom waste in 2007. The User provided a previous assessment of the former on site auto repair. The report (Report on Preliminary Site Investigation for Former Auto Repair 1022-1032 La Cienega Boulevard, Los Angeles, CA 90035 by National Environmental, Inc. (NEI) dated March 25, 2007), included soil sampling to assess for the former hoists, former sump, former below grade pit, and former waste oil storage area on the subject property and sampling of two on site groundwater monitoring wells. Eleven soil borings B1 through B5 and B7 through B12 were drilled on site. It was noted that B6 was deemed unnecessary and never drilled. See Figure 3 for soil boring locations. Soil borings were drilled to a maximum of 12 feet below ground surface (bgs). Soil samples were analyzed for Environmental Protection Agency (EPA) method 8015M and sampled at 5, 10, or 12 feet bgs depending on the boring. According to analytical results all soil samples were non-detect. Two groundwater monitoring wells (BC-15 and BW-19) were located on the north portion of the subject property. These wells were advanced in 2000, to assess for the north adjacent gasoline service station release. For more information regarding the north adjacent gasoline service station, please refer to the Tosco-76 Station discussion above. NEI sampled these wells and analyzed samples under EPA Method 826B and EPA Method 8015g. According to analytical results in groundwater monitoring wells BC-15 and BW-19, all samples were non-detect. NEI concluded that non-detectable concentrations of solvents and gasoline were reported in groundwater and that non-detectable concentrations of gasoline, diesel fuel, and heavy oils were reported in the former hoists, former sump area, former waste oil storage area, and former below grade pit at the subject property. NEI recommended no additional environmental assessment of work required on the subject property at that time. EFI Global,

Inc. concurs with the conclusions of this report. Based on the non-detect concentrations at the former auto repair facility, the use of the subject property for auto repair purposes is not expected to represent a significant environmental concern.

- Based on review of the Los Angeles Department of Public Works Bureau of Engineering substructure maps there are no underground storage tanks on the subject property.

6.3 Agency File Review Limitations

At the time this report was issued, no response has been received from LAFD HazMat and LAFD Arson. Should relevant information be obtained from these agencies subsequent to issuing this report, an addendum will be prepared and provided to the Client.

7.0 NON-SCOPE ENVIRONMENTAL RISKS

ASTM Standard E1527-13 identifies additional conditions which, should they exist at the subject property, may create a human health risk to the occupants of the site. These risks may also create additional costs to the property owner in the form of identification, operations & maintenance, and cleanup or remediation.

7.1 Asbestos Containing Building Materials

Asbestos is a group of naturally occurring minerals used in many products, including building materials vehicle brakes, insulation and other products that require resistance to heat and corrosion. Asbestos includes: chrysotile, amosite, crocidolite, tremolite asbestos, anthophyllite asbestos, actinolite asbestos, and any of these materials that have been chemically treated and/or altered.

The inhalation of asbestos fibers by workers can cause cancer and other serious diseases of the lungs and other organs that may not appear until years after the exposure has occurred. For instance, asbestosis can cause a buildup of scar-like tissue in the lungs and result in loss of lung function. Asbestos fibers associated with these health risks are too small to be seen with the naked eye, and smokers are at higher risk of developing some asbestos-related diseases.

Asbestos-containing materials (ACM) do not always pose a hazard to occupants and workers in buildings that contain these materials. Intact, undisturbed ACMs generally do not pose a health risk. ACMs may become hazardous and pose an inhalation risk when they are damaged, disturbed in some manner, or deteriorate over time and asbestos fibers are released into building air.

ACM can be found in a multitude of building products which include decorative and acoustical plaster texture, fire-proofing (Monokote), joint compound, attic and wall insulation, resilient floor covering, mastic, recessed lighting fixtures, wiring, elevator brakes, fire doors, pipe insulation, pipe gaskets, duct insulation, duct tape, siding and roofing materials (tar/shingles), textured paint, stucco, concrete, asphalt underlayment (Petromat) and plaster.

Local jurisdictions have specific laws and regulations regarding asbestos and actions including building renovations and building demolition.

- As there are no on-site structures on the subject property, the potential for asbestos containing building materials (ACMs) is considered to be low.

7.2 Lead-Based Paint

Although the use of lead-based paint in residential structures has been prohibited since 1978, it may still be used in commercial and industrial buildings. It is approximated that 80 percent of buildings built prior to 1978 contain lead paint. Even at low levels, lead poisoning can cause IQ deficiencies, reading and learning disabilities, impaired hearing, reduced attention spans, hyperactivity and other behavior problems with children under 6 years old being most at risk.

Lead is a highly toxic metal that was used for many years in products found in and around our homes and commercial buildings. Lead can be found in dust from friction surfaces of windows and doors that are painted with lead-based paint and from building components coated with lead-based paint that has begun peeling, flaking and chalking. There is also the potential for soil to have elevated lead levels due to leaching from lead based paint on nearby structures and deposition of airborne lead when leaded fuel was in use prior to the 1976 ban and phase out.

Since the 1980's, lead has been phased out in gasoline, reduced in drinking water, reduced in industrial air pollution, and banned or has been limited in use in consumer products.

Between the local, State and Federal agencies, including the Environmental Protection Agency (EPA), Department of Housing and Urban Development (HUD), Occupational Safety & Health Administration (OSHA) and the California Department of Public Health (CDPH), each state has various action limits that have been enacted with the intent to prevent human exposure and contamination of the surrounding environment.

- As there are no on-site structures on the subject property, the potential for lead based paint is considered to be low.

7.3 Radon

Radon is a radioactive gas that has been found in structures all over the United States. Radon is produced from the natural breakdown of uranium in soil, rock, and water. Radon typically moves up through the ground and into structures through cracks and other holes in the foundation. Movement of radon through the earth is strongly influenced by moisture content and permeability of soil, porosity, and degree of fracturing in rocks, as well as surface meteorological conditions. High levels of radon have been discovered in every state.

Radon cannot be seen, smelled, or tasted. Breathing air-containing radon may increase the risk of getting lung cancer. The Surgeon General of the United States has warned that radon is the second leading cause of lung cancer in the United States today after smoking.

Testing for the presence of radon is fairly inexpensive, simple and is the only way to be certain of the on-site concentrations. Various types of sampling methods exist to determine the concentration. On-site radon sampling was not performed during the completion of this assessment.

- Based on research by the United States Environmental Protection Agency (USEPA), the average radon concentrations for Los Angeles County are between 2.0 picocuries per liter (pCi/L) and 4.0 pCi/L, below the 4.0 pCi/L action level set by the USEPA; however, site specific radon levels vary greatly within the EPA radon zones and on-site radon measurements would need to be collected in order to determine the radon levels at the subject property.

7.4 Wetlands

According to the Clean Water Act, a wetland is “those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions.” Wetland areas have been identified as ecologically diverse and sensitive areas and are generally subject to more stringent development, re-development, and building regulations.

- The U.S. Fish and Wildlife Service National Wetlands Inventory was reviewed to determine if the subject property is situated within an identified wetland. According to the USFWS, the subject property is not located within a wetland area.

7.5 Mold

Mold and mildew are simple, microscopic organisms in the Fungi kingdom that can grow virtually anywhere if they have adequate moisture, nutrients, air and appropriate temperatures. Depending on the particular mold or fungus, growing colonies can be almost any color. Most household molds and fungi (mildews) are

white, black, grey, or brown colored. Spores of dozens of kinds of mold and fungus (mildew) are present at all times in indoor and outdoor air. These spores can settle, germinate and grow wherever good growth conditions are found. They can grow on soil, plants, dead plant materials, foods, fabrics, paper, wood and many other materials found within buildings. Many molds are not harmful and actually have a beneficial role in the environment and in living systems. In soil, molds play a crucial part in decomposition of organic matter and in making nutrients available to plants.

When mold and fungi (mildews) growth occurs in buildings, it can be very destructive to the materials on which they grow and cause high levels of airborne mold spores and volatile organic compounds associated with the characteristic musty / moldy odor. They cause staining, decomposition (rotting of materials) and objectionable, musty odors. Where colonies are extensive they can also produce enough spores, and by-products to be harmful to health. Many of the by-products of mold and fungus (mildew) are irritating to skin, eyes and respiratory tracts. Some molds produce true allergic sensitization and allergic reactions in susceptible people. Some molds produce toxic by-products that could be harmful to skin, and poisonous if ingested or inhaled in quantity. Persons with compromised immune systems may even experience systemic fungal infections of the respiratory tract.

EFI Global, Inc. observed a limited amount of interior areas of the subject building(s) in order to identify the significant, visible presence of mold. This activity was not intended to discover all areas which may be affected by mold growth at the subject property. Potential areas of mold not observed as part of this limited assessment, include but are not limited to, pipe chases, HVAC systems and within enclosed wall and ceiling cavities that may be present in the subject property. A complete mold assessment, which may include various types of sampling, would be required to determine if mold levels within the subject building(s) are at levels acceptable by industry standards.

- As there are no on-site structures on the subject property, a mold inspection was not conducted as part of this assessment.

7.6 Methane Gas

In response to growing concern regarding methane intrusion into buildings and to the potential for methane build-up underneath buildings, certain municipalities have established methane requirements for structures based on the proximity to oil wells and landfills. If a subject property is located in the proximity of active or abandoned oil wells or landfills, methane mitigation devices installed prior to construction activities at a subject property may be necessary.

- The City of Los Angeles Department of Building and Safety methane zone data was reviewed to determine if the subject property is located in a methane or methane buffer zone. According to the information reviewed, the subject property is located within a methane zone. Therefore testing for the presence of methane and the installation of methane mitigation systems at the property prior to construction activities may be necessary. (Division 71 of the Los Angeles Building Code).

8.0 FINDINGS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment (Phase I) for Black Equities Group, Ltd. (Client) for a vacant property located at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, in Los Angeles County and the City of Los Angeles, California , Assessor's Parcel Numbers: 5087-001-023, 5087-001-024, 5087-001-040, and 5087-001-041 . The research conducted for this study and the report prepared are in conformance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiry (AAI) standard and the American Society for Testing and Materials (ASTM) E 1527-13 scope of work.

8.1 CONCLUSIONS

EFI Global, Inc. has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice 1527-13, at 1022, 1026, 1032, 1042, 1044, 1046, 1048, 1050, 1052, and 1054 South La Cienega Boulevard, Los Angeles, California , the subject property. Any exceptions to or deletions from this practice are described in the individual sections of this report. This assessment has revealed no evidence of recognized environmental conditions or *de minimis* conditions in connection with the subject property except for the following:

Recognized Environmental Condition (REC)

In our opinion, no RECs were identified during the course of this assessment.

Historical Recognized Environmental Condition (HREC)

In our opinion, no HRECs were identified during the course of this assessment.

Controlled Recognized Environmental Condition (CREC)

The soil, soil vapor, and groundwater contamination beneath the subject property from the north adjacent gasoline service station release is considered a CREC.

De Minimis Condition

In our opinion, no *de minimis* conditions were identified during the course of this assessment.

8.2 RECOMMENDATIONS

EFI Global, Inc. recommends proper removal and characterization profiling of the 55-gallon drums located on the subject property.

EFI Global, Inc. recommends maintenance of the proposed soil vapor barrier at the subject property building and proper adherence to LARWQCB regulatory directives regarding the on site monitoring wells associated with the north adjacent gasoline service station release case. If no regulatory adherence is necessary, EFI Global, Inc. recommends proper monitoring well abandonment.

9.0 SIGNATURES

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Prepared By: Date: July 31, 2017

Chloe Adelmann
Project Manager

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

FORMER UNOCAL 351697	1004 S LA CIENEGA BL	NNW 0 - 1/8 (0.035 mi.)	C14	17

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 6 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2017 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 4 EDR Hist

EXECUTIVE SUMMARY

Cleaner sites within approximately 0.125 miles of the target property.

Agency Telephone:	Not reported
Agency Type:	Private
SIC Code:	2999
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	CNWTRS
Waste Type2:	Not reported
Waste2:	Contaminated Ground Water
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity:	Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

FINDS:

Registry ID: 110002727443

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Latitude:	34.056394
Longitude:	-118.3762
Case Type:	Cleanup Program Site
Case Worker:	TTW
Local Agency:	Not reported
RB Case Number:	1174
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Indoor Air, Soil Vapor
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	The Regional Board has been providing regulatory oversight for the characterization, cleanup and monitoring of the contaminants of concern (COCs) in soil and groundwater at the Site since March 2005. The Site currently consists of several single-story buildings, canopies, and paved parking areas used for auto body repair and paint work. The Site is located in an area designated for mixed residential and commercial use by the City of Los Angeles.). The Site is located in the northern part of Central Basin of Los Angeles County. Soils types observed during previous subsurface investigations at the Site have been described as alternating intervals of predominantly unconsolidated fine grained sands, silts, silty sands, and some clay down to approximately 30 feet below ground surface (bgs). Based on

PAULEE AUTO BODY SHOP (Continued) **S106916804**

the sampling results from the deep borings, AEI consultants (AEI) indicated that several sandy intervals were observed at approximately 26, 40, and 54 feet bgs. Depth to first groundwater at the Site has consistently been recorded approximately between 14 and 19 feet bgs in monitoring wells MW-1 through MW-4 since their installation in 2003. Since 2003, AEI and Terracon has conducted several rounds of phase II environmental investigations at the Site. Analytical results of the soil, soil gas and several round of groundwater samples confirm that the soil , soil gas and groundwater beneath the Site have been impacted with total petroleum hydrocarbon (TPH), and volatile organic compounds (VOCs) consisting primarily of tetrachloroethylene (PCE). Based on the results of most recent site investigtion conducted by Terracon in June 2009, on February 18, 2010 the LA RWQCB issued a directive letter to Fleiner Family Trust to initiate preparation of a Remedial Action Plan (RAP) to address the current impacts to soil, soil vapor, and groundwater at the site. The RAP should include an engineering assessment of all the existing data to evaluate the most appropriate, efficient, and feasible remedial alternatives to mitigate the subsurface impacts. In March 2010 Terracon prepared the RAP and proposed the following remedial technology for VOCS impacted soil, soil vapor and groundwater beneath the Site: 1-In-situ SVE remedial system was proposed for remediation of soils/soil vapor at the Site 2--Enhanced in-situ Bioremediation (EISB) in a Permeable Reactive Zone (PRZ) arrangement for impacted groundwater in down-gradient monitoring wells which has the highest concentrations of VOCs in groundwater. Based on new data in Data Gap Report dated February 2016, the Regional Board staff concluded the following: Results of 4 GW monitoring events in new installed MW-12 located offsite to north of the property boundary indicated that an anomalous GW elevations data. This anomalous data was not adequately interpreted by NOREAS. Consequently, groundwater flow direction was not correctly illustrated at the vicinity of the MW-12. New soil vapors and GW investigation results located at offsite to north of the property indicated that, offsite soil vapor and groundwater plumes were not significantly contributed to the onsite VOC in soil vapor or GW plumes VOC (PCE) vapor results at 5 and 10 feet indicated the concentrations of PCE still exceeded of acceptable levels for the offsite residents Extend of these PCE concentration to the west and south are unknown A limited and short time SVE system operation (8 months) was not effectively remediated of the soil vapor beneath the site. Active groundwater remediation is required to reduce the contaminants to meet the cleanup goals for offsite resident (according to HHRA). Due to long term process for MNA and uncertain effectiveness of this passive technology, the proposed MNA cannot be accepted Therefore: FFT is required for the following: 1. Step out soil vapor and groundwater sampling to the west and south west to delineate extent of Soil vapor and groundwater exceeded RBC for the current and future residential land use. Implementation, operation and monitoring program for of full-scal SVE system for soil and EISB pilot testing for groundwater are currently in progress.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

FINDS:

Registry ID: 110002925354

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002768853

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002678086

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002678380

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Title:	ACLC for Wilshire Le Doux Medical Plaza LP
Description:	Original MMPC amount was $63,000. Amended Complaint No. OE-2010-0011A is reissued to the Permittee in the revised amount of $57,000 reflecting the dismissal of the two alleged late reporting violations MMP Amount Owed for Effluent Violations: (14 Serious Violations + 5 Chronic Violations) x $3,000 = $57,000. MMP Amount Owed for Reporting Violations: (2 Late Reporting Violations) x $3,000 = $6,000.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/05/2017

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/05/2017
Date Data Arrived at EDR: 04/21/2017
Date Made Active in Reports: 05/12/2017

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/05/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 02/07/2017

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

East Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

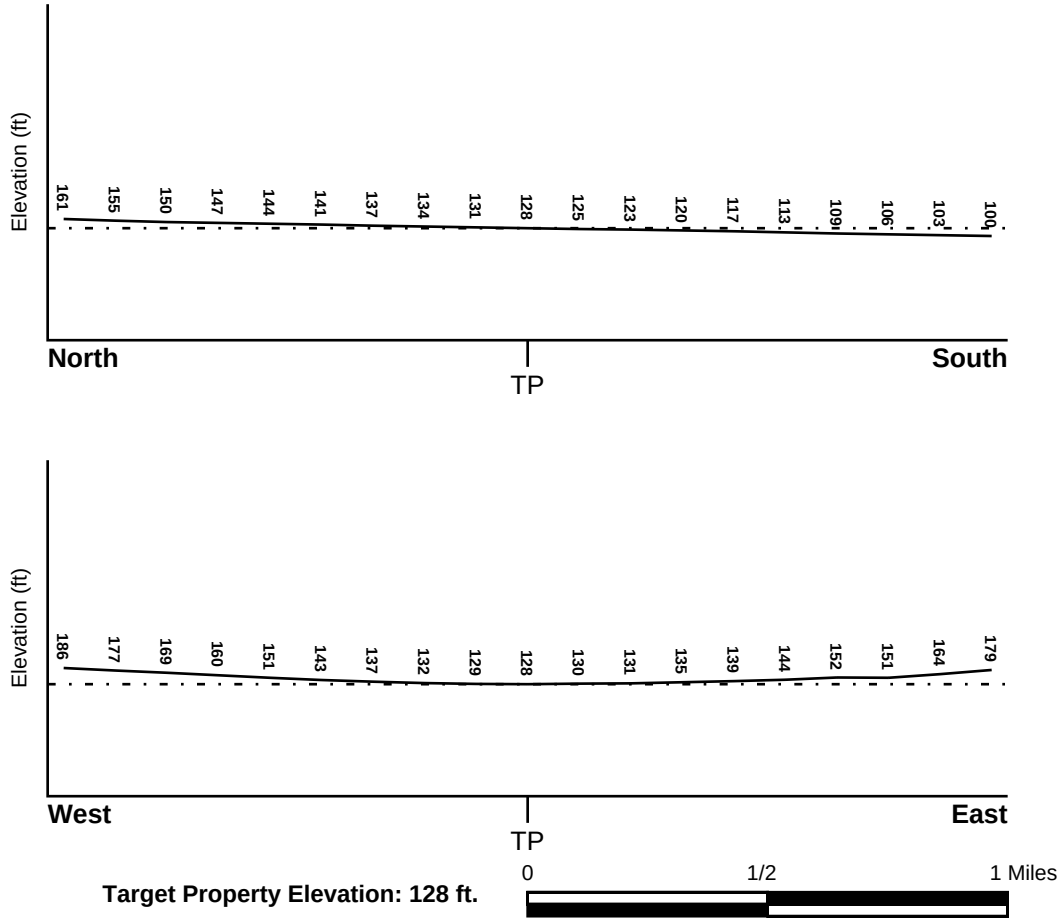
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1595F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1585F	FEMA FIRM Flood data
06037C1605F	FEMA FIRM Flood data
06037C1615F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

18	1/2 - 1 Mile NW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Certified Sanborn® Map Report

06/28/17

Site Name:	Client Name:
9836002503	EFI Global Inc.
1022 S. LA Cienaga Blvd	5261 West Imperial Highway
La Cienega, CA 90035	Los Angeles, CA 90045
EDR Inquiry # 4979185.3	Contact: Chloe Adelmann

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by EFI Global Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Unless a shorter period of time has been established by an official action, plan check approval expires one and a half years after the fee has been paid. This permit expires two years after the fee has been paid or 180 days after the fee has been paid and construction has not commenced; or if work is suspended, discontinued or abandoned for a continuous period of 180 days (Sec. 98.0603 L.A.M.C). Claims for refund of fees paid on permits must be filed within one year from the date of expiration for building permits granted by the Department of Building and Safety (Sec. 22.12 & 22.13 L.A.M.C.).

OWNER-BUILDER DECLARATION

I hereby affirm, under penalty of perjury, that I am exempt from the Contractors License Law for the following reason (Sec. 7031.5, Business & Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chap. 9 commencing with Sec. 7000 of Div. 3 of the Business & Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Sec. 7031.5 by any applicant for a permit, subjects the applicant to a civil penalty of not more than five hundred dollars ($500):

☐ I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to the owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he or she did not intend to improve for the purpose of sale).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law).

☐ I am exempt under Sec. _____, Bus. & Prof. Code for the following reason _____

Print _____ Sign _____ Date _____ ☐ OWNER ☐ AUTHORIZED AGENT

(5)

FINAL DECLARATION

I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein. Also, that it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, that neither the City of Los Angeles nor any board, department, officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

(19.) I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 4-6-82 Lic. Class B Lic. No. 330312 Contractor's Signature Richard Delaney

Contractor's Mailing Address 11694 Sheldon St Sun Valley

OWNER-BUILDER DECLARATION

20. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____ B. & P. C. for this reason _____

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

15. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date 11-23-83 Lic. Class B-1 Lic. Number 408513 Contractor [signature]

Contractor's Mailing Address 3818 LA SALLE, COSTA MESA

OWNER-BUILDER DECLARATION

16. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date _____ Owner _____

WORKERS' COMPENSATION DECLARATION

17. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Insurance Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date _____ Applicant's Signature _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

18. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date 11-23-83 Applicant's Signature [signature]

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

19. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____

Lender's Address _____

20. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

UPDATED AUTO REPAIR, ELIE FREIM, DBA
1032 S LA CIENEGA
LOS ANGELES, CA 90035

Equipment Location: 1032 S LA CIENEGA, LOS ANGELES, CA 90035

Equipment Description:

SPRAY BOOTH, AUTOMOTIVE TYPE, REVERSE FLOW, MODEL NO RA24A, 14'-0" W. X 23'-0" L. X 9'-0" H., WITH THIRTY 24" X 24" EXHAUST FILTERS AND ONE 3 H.P. EXHAUST FAN.

Conditions:

1. OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2. THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3. THIS SPRAY BOOTH SHALL NOT BE OPERATED UNLESS ALL EXHAUST AIR PASSES THROUGH A FILTER MEDIA AT LEAST 2 INCHES THICK.

4. A GAUGE SHALL BE INSTALLED TO INDICATE, IN INCHES OF WATER, THE STATIC PRESSURE DIFFERENTIAL ACROSS THE EXHAUST FILTERS. IN OPERATION, THE PRESSURE DIFFERENTIAL SHALL NOT EXCEED 0.25 INCH OF WATER.

5. THIS EQUIPMENT SHALL BE OPERATED IN COMPLIANCE WITH RULES 1151 AND 1171.

6 THE TOTAL QUANTITY OF VOLATILE ORGANIC COMPOUNDS (VOC) EMISSIONS FROM THIS EQUIPMENT SHALL NOT EXCEED 666 POUNDS IN ANY ONE CALENDAR MONTH.

7. MATERIAL SAFETY DATA SHEETS FOR ALL MATERIALS USED AT THIS FACILITY SHALL BE KEPT CURRENT AND BE MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

FILE COPY

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

8. IN ADDITION TO THE RECORD KEEPING REQUIREMENTS OF RULE 109, THE OPERATOR SHALL KEEP ADEQUATE RECORDS FOR THE FACILITY TO VERIFY CALENDAR MONTHLY VOLATILE ORGANIC COMPOUND (VOC) EMISSIONS IN POUNDS AND THE VOC CONTENT OF EACH MATERIAL AS APPLIED (INCLUDING WATER AND EXEMPT COMPOUND).

9. MATERIALS USED IN THIS EQUIPMENT SHALL NOT CONTAIN ANY CARCINOGENIC COMPOUNDS AS IDENTIFIED IN RULE 1401 AS AMENDED DECEMBER 7, 1990.

10. THE OPERATOR SHALL KEEP RECORDS IN ACCORDANCE WITH THE REQUIREMENTS OF RULE 109 - RECORDKEEPING FOR VOLATILE ORGANIC COMPOUNDS AND SUCH RECORDS SHALL BE RETAINED FOR A PERIOD OF THREE YEARS.

11. WITHIN 14 CALENDAR DAYS AFTER THE END OF EACH MONTH, THE OPERATOR SHALL TOTAL AND RECORD VOC EMISSIONS FOR THE MONTH FROM ALL PERMITTED EQUIPMENT COVERED BY THE MONTHLY LIMIT. THE RECORD SHALL INCLUDE ANY PROCEDURES USED TO ACCOUNT FOR CONTROL DEVICE EFFICIENCIES AND/OR WASTE DISPOSAL. IT SHALL BE SIGNED AND CERTIFIED FOR ACCURACY BY THE HIGHEST RANKING MANAGEMENT OFFICIAL RESPONSIBLE FOR COMPLIANCE WITH DISTRICT RULES.

12. THE OPERATOR SHALL MAINTAIN A SINGLE LIST WHICH INCLUDES ONLY THE NAME AND ADDRESS OF EACH PERSON FROM WHOM THE FACILITY ACQUIRED VOC-CONTAINING MATERIAL REGULATED BY THE DISTRICT THAT WAS USED OR STORED AT THE FACILITY DURING THE PRECEDING 12 MONTHS.

13. THE OPERATOR SHALL RETAIN ALL PURCHASE INVOICES FOR ALL VOC-CONTAINING MATERIAL USED OR STORED AT THE FACILITY, AND ALL WASTE MANIFESTS FOR ALL WASTE VOC-CONTAINING MATERIAL REMOVED FROM THE FACILITY, FOR 36 MONTHS.

14. ALL RECORDS REQUIRED BY THIS PERMIT SHALL BE RETAINED AT THE FACILITY FOR 36 MONTHS, AND SHALL BE MADE AVAILABLE TO ANY DISTRICT REPRESENTATIVE UPON REQUEST.

THIS PERMIT TO OPERATE R-F00824 SUPERSEDES PERMIT TO OPERATE F00824 ISSUED 07/16/96.

PERMIT TO OPERATE

CONTINUATION OF PERMIT TO OPERATE

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

Subject: Public Records Request

Hello,

This firm is performing a Phase I Environmental Site Assessment on a property located at the following addresses:

1022-1054 (even) S. La Cienega Blvd., Los Angeles, CA 90035

We are requesting any records in relation to the subject property. Please feel free to contact Chloe Adelmann with any questions or concerns related to this request at 310-854-6300 or Chloe_Adelmann@efiglobal.com

Thank you for your time and consideration in this matter.

Regards,

James Kyle Johnston

☐ Urgent ☐ For Review ☐ Please Comment X Please Reply ☐ For Information

In preparation for a Phase I Environmental Site Assessment, I would like to request available records pertaining to industrial wastewater discharge, clarifiers, storm water/waste water and inspection records for the following addresses:

1032-1054 (even) S. La Cienega Blvd., Los Angeles, CA 90035

If permits are found for the aforementioned property, please fax the information to me; otherwise standard mailing is sufficient. We understand that a fax fee will be accrued for sending the information.

Thank you.

Sincerely,
Chloe Adelmann

The Department of Toxics Substances Control (DTSC) takes every precaution to ensure the accuracy of data in the Hazardous Waste Tracking System (HWTS). However, because of the large number of manifests handled, inaccuracies in the submitted data, limitations of the manifest system and the technical limitations of the database, DTSC cannot guarantee that the data accurately reflect what was actually transported or produced.

VARIOUS SITES
PR3-062817-02

Dear Ms. Adelmann:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced below.

- 1022-1054 S. La Cienaga Boulevard, Los Angeles, CA 90035 (even only)

We would like to inform you about EnviroStor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor.

If you have any questions or would like further information regarding your request, please contact me at (818) 717-6522.

Sincerely,

Glenn Castillo/cs
Regional Records Coordinator

Subject: RE: 17-0596 RE: Public Records Request

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: *1022-1054 EVEN S. LA CIENEGA BLVD., LOS ANGELES, CA 90035*

This search revealed that no records were found for the above noted address(es).

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destoyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at *(310-348-1784).*

Custodian of Records,

This firm is performing a Phase 1 Environmental Site Assessment on properties located at the following address:

1022-1054 (even) S. La Cienaga Blvd., Los Angeles, CA 90035

We are requesting any information from your department pertaining to any spills or releases of hazardous materials (HAZMAT) or substances or petroleum products that have ever been located on the properties. Please feel free to contact me with any questions or concerns at 310-854-6300. Thank you for your assistance with this information.

Regards,

James Kyle Johnston

DRAFT – ATTORNEY WORK PRODUCT

January 25, 2013

Mr. Jay E. Smith
Steptoe & Johnson, LLP
633 West Fifth Street, Suite 700
Los Angeles, California 90071
(VIA PAPER COPY AND COMPACT DISC)

Subject: **DRAFT SOIL, SOIL GAS, AND GROUNDWATER SAMPLING REPORT FOR CONTIGUOUS VACANT LOTS AT 1022, 1026, 1032, AND 1042–1054 SOUTH LA CIENEGA BOULEVARD LOS ANGELES, CALIFORNIA (SRC/SCH LLC V. UNION OIL OF CALIFORNIA, ET AL. LOS ANGELES SUPERIOR COURT CASE NO. BC471071 FILE NO. 70185-2639)**

Dear Mr. Smith:

In accordance with your request, Holguin, Fahan & Associates, Inc. (HFA) is pleased to present this soil, soil gas, and groundwater sampling report for the above-referenced site.

Holguin, Fahan & Associates, Inc. trusts that this information meets the requirements of Steptoe & Johnson, LLP. If you have any questions or require additional information, please contact Mr. Mark R. Fahan at (805) 701-1416 or Mark_Fahan@hfa.com.

Respectfully submitted,

Mark R. Fahan, PG

INTRODUCTION

Steptoe & Johnson, LLP, contracted Holguin, Fahan & Associates, Inc. (HFA) to prepare this soil, soil gas, and groundwater sampling report for the contiguous four parcels located at 1022, 1026, 1032, and 1042–1054 South La Cienega Boulevard, Los Angeles, California (see Figure 1 - Site Location Map and Figure 2 - Plot Plan). The four parcels are owned by Beverly Hills Adjacent Senior Assisted Living LLC (BHASAL) and by SRC.SCH LLC. Site access for performing the subject sampling was provided by site access agreements between Chevron Environmental Management Company (EMC) and the above-referenced property owners. The work was performed in accordance with HFA's soil gas and groundwater sampling plan dated August 15, 2012 (HFA, 2012), as modified by subsequent emailed communications and field decisions. The four parcels were unpaved, vacant lots at the time of the sampling activities. Mr. Matt Houser of Blaine Tech Services, Inc. provided access to the four parcels and observed all site work on behalf of the property owners.

SITE EVALUATION METHODS AND RESULTS

PRE-FIELD ACTIVITIES

Prior to performing any subsurface work, HFA:

- obtained a well permit from the County of Los Angeles (see Appendix 1 for a copy of the permit);
- performed a pre-drilling site visit to investigate and mark all proposed drilling locations;
- ordered a utility markout from Underground Service Alert of Southern California;
- performed a land survey to locate proposed sampling locations, the proposed building footprints, and selected previous sampling locations (see Appendix 2 for the survey data);
- performed a geophysical investigation of all proposed drilling locations to identify subsurface utilities; and
- cleared each drilling location of subsurface lines using hand-auger or vacuum digging techniques to a diameter larger than the hollow-stem augers and the CPT rods and 5 feet in depth (see Appendix 3 for HFA's clearance procedures).

CONE PENETRATION WITH PORE-PRESSURE TESTING

On November 9, 2012, HFA oversaw Gregg Drilling and Testing, Inc. (Gregg Drilling) advance nine CPTu borings to depths from 20 to 36 fbg to determine detailed lithology beneath the site (see Figure 2 for locations). The CPTu equipment automatically collects CPTu data at approximate 5-centimeter intervals during boring advancement and identifies the soil type at each interval based on standard correlations of the CPTu data to lithology (see Appendix 4 for Gregg Drilling's CPTu procedures). The soil types encountered by the CPTu included sand, silt, clay, and mixtures of these soil types (see Figure 2 for the cross-section locations; Figure 3 - CPT Cross-Section A-A'; and Figure 4 - CPT Cross-Sections B-B', C'-C', and D-D'; Appendix 4 for Gregg Drilling's CPTu results). Gregg Drilling immediately abandoned the CPTu borings by backfilling with grout using the tremie method.

GROUNDWATER MONITORING WELL AND SOIL GAS PROBE INSTALLATION

On November 26 through 30, 2012, HFA oversaw Cascade Drilling LP (Cascade Drilling) install and sample four soil gas probes (G-1, G-2, G-4, G-5) and five groundwater monitoring wells (W-1

through W-5) (see Figure 2 for the locations). The boreholes for the wells and probes were drilled using hollow-stem auger techniques. Soil samples were collected at 5-foot intervals and were screened in the field for VOCs with a PID and logged under the supervision of a State of California professional geologist (see Appendix 3 for the procedures). The soil samples at 5, 15, and 25 fbg from each of the five groundwater monitoring well locations were collected for laboratory analysis for COCs using Encore® samplers in accordance with EPA Method 5035. The Encore® soil samples were chilled to a temperature of 4°C and transported under chain of custody to TestAmerica Laboratories, Inc. (TestAmerica). TestAmerica analyzed the soil samples for TPH as gasoline using EPA Method 8015B, and for BTEX, naphthalene, MTBE, TBA, TAME, DIPE, and ETBE, and other VOCs using EPA Method 8260B. Select soil samples from the groundwater monitoring well borings and soil gas probe borings were collected in steel sleeves and analyzed for bulk density using ASTM Method D2937 and for total porosity, air-filled porosity, and water-filled porosity using API Method RP 40 (see Appendix 3 for the sampling procedures).

Soil encountered during drilling of the well and probe locations consisted of sand, silt, clay, and mixtures of these soil types (see Appendix 5 for HFA's log of exploratory borings). The laboratory results for the soil samples are summarized in Table 1 - Summary of Soil Sample Analytical Results, Table 2 - Summary of Additional Soil Sample Analytical Results, and Table 3 - Summary of Soil Sample Geotechnical Results (see Appendix 6 for the laboratory reports).

Each groundwater monitoring well was drilled to a depth of 25 fbg using a 10-inch-diameter, hollow-stem auger, and installed using 4-inch-diameter PVC casing with a screened interval from 10 to 25 fbg (see Appendix 3 for the procedures, and Appendix 5 for the well construction details). Each soil gas probe was drilled to 13 fbg using a 6-inch-diameter, hollow-stem auger, and installed using two stainless-steel probes centered at 5.5 and 12.5 fbg and connected to the surface via teflon tubing (see Appendix 5 for the well construction details, and Appendix 7 for the procedures).

GROUNDWATER CHARACTERIZATION AND SAMPLING RESULTS

On December 6, 2012, Cascade Drilling developed the groundwater monitoring wells by surging and bailing. Also on December 6, 2012, WM Surveys, Inc. surveyed the groundwater monitoring wells (see Appendix 2 for the survey data). On December 10, 2012, HFA gauged, purged, and sampled groundwater monitoring wells W-1 through W-5 (see Appendix 8 for the procedures). No PSH was detected in any of the wells. HFA purged each well with a hand pump until temperature, conductivity, and pH stabilized (at least 15 gallons per well) and after purging collected samples from the top of the water column with a bailer (see Appendix 8 for the procedures, and Appendix 9 for the well sampling forms). The groundwater samples were chilled to a temperature of 4°C and transported under chain of custody to TestAmerica, where the

groundwater samples were analyzed for TPH as gasoline using EPA Method 8015B; for BTEX, MTBE, TBA, TAME, DIPE, ETBE, and other VOCs using EPA Method 8260B; for semi-VOCs using EPA Method 8270C; for chloride using EPA Method 300.0; for metals using EPA Method 6020; and for TDS, total and non-amenable cyanide, and dissolved sulfide using general chemistry methods. Additionally, HFA gauged several of the off-site groundwater monitoring wells associated with the nearby 76 service station to obtain groundwater elevations in the site vicinity.

Depth to groundwater ranged from 15.20 (76 station well BC-6) to 17.49 ft-TOC (well W-21) (see Figure 5 - Groundwater Elevation Map, and Table 4 - Summary of Groundwater Monitoring Results). The maximum concentrations of select COCs for groundwater samples collected from the new wells W-1 through W-5 are summarized in the following table (see Table 4 for summary data, and Appendix 6 for the laboratory reports)

SUMMARY OF MAXIMUM COC CONCENTRATIONS IN GROUNDWATER

CONSTITUENT	MAXIMUM CONCENTRATION (µg/l)	WELL ID
TPH as gasoline	130	W-1
Benzene	7.5	W-1
Toluene	<2	all wells
Ethylbenzene	<2	all wells
Total Xylenes	3.8	W-1
MTBE	2.4	W-3
TBA	<10	all wells

<# = not detected at the reporting limit indicated.

The only detectable TPH as gasoline and benzene are for well W-1 and the only detectable MTBE is for well W-3 (see Figure 6 - TPH as Gasoline/Benzene/MTBE Concentrations In Groundwater). The results of the duplicate sample for sample W-1 are similar to the original results (see Table 4 and Appendix 6).

SOIL GAS SAMPLING

On December 12, 2012, HFA oversaw H&P Mobile Geochemistry, Inc. (H&P) collect soil gas samples in general accordance with the procedures in DTSC (2011) and DTSC et al. (2012) (see Appendix 7 for the procedures). H&P collected the samples in Summa canisters that were 100% certified clean (total of eight samples plus a duplicate). Laboratory-grade helium was used for

leak detection during soil gas sampling (see Appendix 10 for the leak test procedures). H&P analyzed the samples for TPH as gasoline, BTEX, MTBE, TBA, TAME, DIPE, ETBE, and naphthalene using EPA Method TO-15; for nitrogen, oxygen, and carbon dioxide using ASTM Method 1945-96; for helium using ASTM Method D1945M; and for methane using EPA Method 8015M.

Laboratory analytical results indicated a single benzene detection of 3.7 $\mu g/m^3$ in the sample collected at 12.5 fbg from location G-5. All other soil gas samples did not contain benzene at concentrations above the reporting limit. Ethylbenzene was detected in at a maximum concentration of 4.6 $\mu g/m^3$ at 12.5 fbg from locations G-2 and G-5. The maximum naphthalene concentration was 10 $\mu g/m^3$ in the sample collected at 5.5 fbg from location G-4 (see Table 5 - Summary of Soil Gas Sample Analytical Results, and Appendix 6 for the laboratory reports).

H&P performed a leak test at each sampling location using helium as the tracer. The helium concentration was maintained above 50% in the helium shroud (see Appendix 6 for H&P's log of vapor sampling with a helium shroud). DTSC et al.'s (2012) acceptance limit for quantitative leak testing is 5% of the ambient (shroud) concentration, so the acceptance limit for the current sample set is 2.5% helium. The maximum helium concentration is 0.7%, well below the acceptance limit. A replicate sample of sample G-2-12.5' had VOC concentrations slightly higher than the original sample (see Table 5).

WASTE MANAGEMENT

Soil cuttings and decontamination water were temporarily stored onsite in 55-gallon DOT-approved drums, pending receipt of laboratory analytical results. The soil and groundwater wastes were awaiting removal at the time of this report. Laboratory reports for samples collected for waste profiling are included in Appendix 6.

SUMMARY

Between November 9 and November 30, 2012, HFA advanced nine CPTu borings and installed five groundwater monitoring wells and four soil gas probes. Soil encountered during the CPTu borings and drilling of the well and probe locations consisted of sand, silt, clay, and mixtures of these soil types.

On December 10, 2012, HFA gauged, purged, and sampled the groundwater monitoring wells and gauged several of the off-site groundwater monitoring wells associated with the nearby 76 service station. No PSH was detected. Depth to groundwater ranged from 15.20 (76 service station well BC-6) to 17.49 ft-TOC (well W-21). Laboratory analytical results for groundwater samples indicated maximum benzene and MTBE concentrations at 7.5 and 2.4 μg/l, respectively.

On December 12, 2012, HFA sampled the soil gas probes. Laboratory analytical results of soil gas samples indicated maximum benzene, ethylbenzene, and naphthalene concentrations of 3.7, 4.6, and 10 $\mu g/m^3$, respectively.

ATTENTION: WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER FROM THE SCOPE OF WORK PRESENTED TO THIS DEPARTMENT.

I hereby agree to comply in every respect with all the regulations of the County Environmental Health Division and with all ordinances and laws of the County of Los Angeles and the State of California pertaining to well construction, reconstruction, and decommissioning data deemed necessary by the County Environmental Health Division Of Los Angeles County.

Signature of Applicant: [signature] Printed Name: Jeff Nobriga

THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED OFF BY THE DEPUTY HEALTH OFFICER. WELL CONSTRUCTION OR DECOMMISSIONING CANNOT BE INITIATED WITHOUT A WORK PLAN APPROVAL FROM THIS DEPARTMENT.

**********(DEPARTMENT USE ONLY)**********

WORK PLAN APPROVAL This Approval is Valid for 180 Days	REHS	DATE
Conditions: On 10/09/12 $2,595 was paid for permit # 892388/1-5 to install 5 monitoring wells. Maintain all setbacks. Observe the workplan submitted. Ensure fieldwork oversight by a licensed professional. Please notify me at least 2 business days ahead of fieldwork by E-MAIL = MTSIEBOS@DH.LACOUNTY.GOV	MICHELLE TSIEBOS	10/11/12
FINAL INSPECTION The placement of the annular seal must be witnessed by a Deputy Health Officer for the permit to be valid. Contact this Department to arrange for an appointment.	REHS	DATE

NOTICE

This well permit approval is limited to compliance with the California Well Standards and the Los Angeles County Code and does not grant any rights to construct, reconstruct, or decommission any well. The applicant is responsible for securing all other necessary permits such as: coastal commission, water rights, encroachment, utility lines detection, city public works division.

APPENDIX 3.

SOIL BORING, DIRECT-PUSH SAMPLING, AND WELL CONSTRUCTION PROCEDURES

SOIL BORING, DIRECT-PUSH SAMPLING, AND WELL CONSTRUCTION PROCEDURES

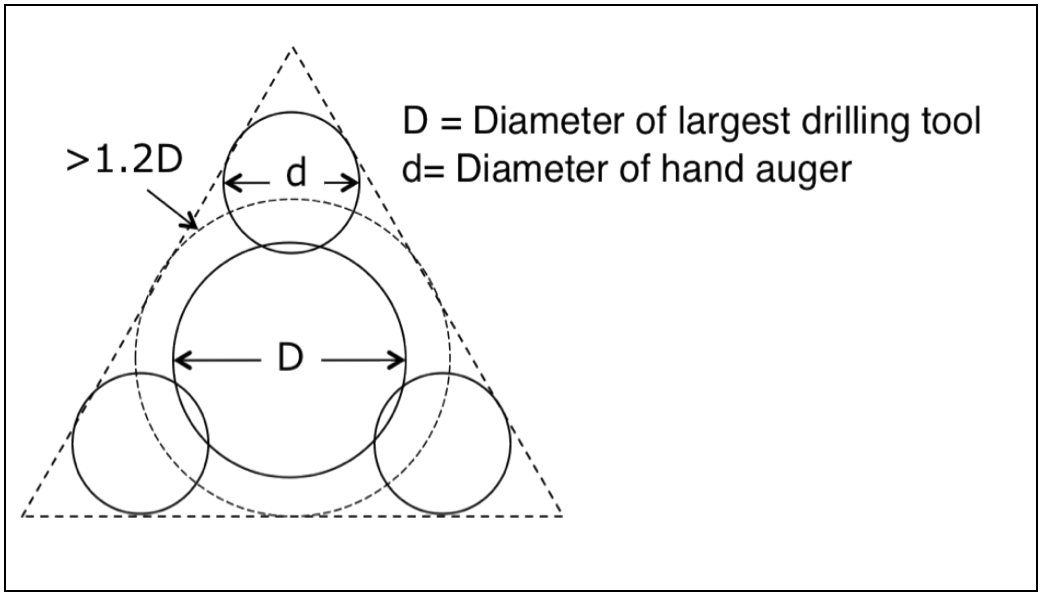
PRE-DRILLING PROTOCOL

Planning

Prior to the start of drilling, necessary permits, site access agreements, and/or encroachment permits are obtained. As-built drawings are obtained if possible. At least 2 weeks in advance of drilling, notifications are made to the property owner, client representative, on-site facility manager, regulatory agency, and/or other appropriate parties. Underground Service Alert of Southern California, Arizona Blue Stake, or an equivalent utility locating service is notified prior to drilling. A geophysical survey may be conducted to attempt to locate subsurface utilities. Site plans and/or as-built drawings are compared to actual conditions observed at the site. The property owner/retailer is interviewed to gain information about locations of former UST systems (including dispensers, product lines, and vent lines). A visual inspection is made of the locations of the existing UST system, and scars and patches in pavement are noted.

In order to determine the natural subsurface conditions, better recognize fill conditions, and prevent cross contamination, the first sampling location is generally located the furthest from any suspected underground improvement.

Hole Clearance



Hole clearance is performed prior to mechanical drilling (e.g. direct push, hollow stem auger, or rotary drilling). The minimum hole clearance depth is 8 feet below grade (fbg) and the minimum diameter to be cleared is 120 percent of the diameter of the largest tool to be advanced (unless the client specifies another clearance protocol). If a subsurface utility was identified within 10 feet of the drilling location (based on as-built drawings, geophysical markouts, etc.) and the utility may be deeper than 8 feet (especially gravity-drain sewage lines), then clearance is continued vertically to the anticipated maximum possible depth of the utility. Hole clearance is performed by any of the following soft-dig methods.

- Air knife: The hole is cleared using an air knife and air vacuum to make a hole at least 120 percent of the diameter of the largest tool to be advanced and to a minimum depth of 8 fbg. The drill tool is then lowered into the hole until rests on the bottom of the cleared hole, at which point drilling commences. If the hole is cleared a day or more before drilling, the hole may be backfilled or covered to prevent possible accidents from leaving an open hole. If the hole is backfilled, drilling is performed slowly and carefully through the cleared interval and the position of the drill stem is continuously monitored for lateral drift. Additionally, both the cleared hole and the drilling tool (e.g. hollow stem auger, direct push rod) must be vertical such that the drilling tool remains within the backfill to the total depth of the cleared hole and does not touch the undisturbed sidewalls where utility lines may be present. Drilling/pushing is stopped if the drill stem drifts outside the cleared area.

- Manual clearance for narrow-diameter tools: Clearance for narrow-diameter tools such as direct push rods may be accomplished with a single hand-dug hole that is at least 120 percent of the diameter of the largest tool to be advanced and to a minimum depth of 8 fbg. The hand digging is performed with minimal force, especially in areas of possible fiberglass lines such as near fueling facilities. For direct push drilling tools, the hole is backfilled/compacted with native or other fill to provide support to the rods during pushing. Drilling/pushing is performed slowly and carefully through the cleared interval and the position of the rod is continuously monitored for lateral drift. Additionally, both the cleared hole and the drilling tool must be vertical such that the drilling tool remains within the backfill to the total depth of the cleared hole and does not touch the undisturbed sidewalls where utility lines may be present. Drilling/pushing is stopped if the rod drifts outside the cleared area.

- Manual clearance of large-diameter hole: If air-knife clearance is not feasible for a larger-diameter tool such as a hollow stem auger, a single hole is hand-dug to at least 120 percent of the diameter of the largest tool to be advanced and to a minimum depth of 8 fbg. The hand digging is performed with multiple holes dug with a hand auger and/or posthole digger with minimal force, especially in areas of possible fiberglass lines such as near fueling facilities. The drill tool is then lowered into the hole until rests on the bottom of the cleared hole, at which point drilling commences. If the hole is cleared a day or more before drilling, the hole may backfilled or covered to prevent possible accidents from leaving an open hole. If the hole is backfilled, drilling is performed slowly and carefully through the cleared interval and the position of the drill stem is continuously monitored for lateral drift. Additionally, both the cleared hole and the drilling tool (e.g. hollow stem auger, direct push rod) must be vertical such that the drilling tool remains within the backfill to the total depth of the cleared hole and does not touch the undisturbed sidewalls where utility lines may be present. Drilling/pushing is stopped if the drill stem drifts outside the cleared area.

- Manual clearance of large-diameter hole with multiple narrow-diameter holes: If air-knife and manual clearance are not feasible for a larger-diameter tool such as a hollow stem auger, a minimum of three locations are hand-dug to a minimum depth of 8 fbg. The hand digging is performed with minimal force, especially in areas of possible fiberglass lines such as near fueling facilities. The three locations are spaced at the corners of an equilateral triangle that is large enough to contain a circle that is at least 120 percent of the diameter of the largest tool to be advanced (see diagram).

Minimum spacing of hand-cleared holes.

Because drill bits tend to follow the path of least resistance, this method requires a fourth hand-dug hole in the center of the triangle to act as a pilot hole for the drill. This center pilot hole is dug left open to guide the drill tool, but the three (or more) outer holes are backfilled and compacted with native or other fill to reduce drift of the drilling tool into these holes and out of the cleared area.

This method clears the area of subsurface lines outside the large triangle. However, depending on the diameters of the hand auger/post hole digger (d) and the diameter to be cleared (D), an evaluation is made as to whether a subsurface line could have been missed within the cleared area between the hand-dug holes. If so, the center pilot hole and if need be more holes are hand-dug within the triangle to the same depth as the other 3 holes; the number of clearance holes must be sufficient to ensure that utility lines could not be missed within the cleared area. When using this method, the holes are dug as near to vertical as possible to ensure the same spacing at 8 fbg as at the surface.

The air knife method is the standard, preferred method of hole clearance for larger tools (hollow stem auger or rotary drilling), and the single hand auger/post hole digger method is the preferred method for smaller tools (direct push rods). The triangle method has limitations and should only be used if the other methods are not feasible.

If subsurface conditions prevent adequate subsurface clearance, the field activities cease until the client gives written approval of a procedure for continuation. Alternate or additional subsurface clearance procedures may also be employed, as required by clients, permit

conditions, and/or anticipated subsurface conditions (for example, near major utility corridors or in hard soils).

When pea gravel, fill sand, or other non-indigenous material is encountered, the sampling location is abandoned unless the absence of subsurface facilities can be demonstrated and client approval to proceed is obtained. If any portion of a UST system is encountered, or if there is any possibility that it has been encountered, the work ceases, and the client is notified immediately.

SOIL SAMPLING PROCEDURES

Soil samples are collected using one of the following methods:

- Manual drilling: Manual drilling utilizes a hand auger. Soil samples are collected with a drive sampler outfitted with steel or brass sleeves. The specific equipment used is noted on a log of exploratory boring.

- Truck-mounted, powered drilling: Truck-mounted, powered drilling utilizes hollow-stem flight auger drilling, air rotary drilling, percussion hammer drilling, or similar technologies. Soil samples are collected in steel or brass sleeves with a California-modified, split-spoon sampler or, for specific projects, a continuous sampler. The specific equipment used is noted on a log of exploratory boring.

- Direct push sampling: Direct push sampling utilizes Geoprobes, cone penetrometer testing rigs, or similar technologies. Soil samples are collected with a drive sampler outfitted with steel, acetate or brass sleeves. The specific equipment used is noted on a log of soil sample descriptions.

Before each soil sampling episode, the sampling equipment is decontaminated using a non-phosphate soap and water wash. The equipment is then rinsed in a bucket of tap water, followed by a second and third bucket of tap water as a final rinse. The last rinse may be de-ionized or distilled to meet technical or regulatory project requirements. For rinsing small equipment, clean rags moistened with clean water (tap, de-ionized or distilled) or spray bottles with clean water may be used. The drill augers or direct-push rods are decontaminated with a steam cleaner between each soil boring (truck-mounted rigs). The decontamination water is disposed of off site or, if local regulations allow, is disposed on bare ground in the vicinity of the wells.

Soil samples that are collected in sample sleeves are covered with aluminum foil or Teflon tape followed by plastic caps. If EPA Method 5035 is required, then 5 to 20 grams of soil is extracted from the sample and placed in methanol-preserved or sodium bisulfate-preserved containers supplied by the laboratory, or subsamples are collected using Encore samplers. During the

sampling process, soil samples and cuttings are field screened for VOCs using a photoionization detector calibrated to an isobutylene or hexane standard. The calibration information is recorded on an equipment calibration log. Any soil staining or discoloration is visually identified. Soils are classified according to the Unified Soil Classification System. Specific geologic and hydrogeologic information collected includes grading, plasticity, density, stiffness, mineral composition, moisture content, soil structure, grain size, degree of rounding, and other features that could affect contaminant transport. All data are recorded on a soil boring log under the supervision of a geologist registered in the state in which the site is located. A soil boring log is completed for each soil sampling location and includes the following minimum information:

- date of drilling;
- project name and location;
- soil sample names and depths;
- soil descriptions and classifications;
- standard penetration counts (rigs);
- photoionization detector readings;
- drilling equipment;
- soil boring diameter;
- sampling equipment;
- depth to groundwater in soil boring;
- name of person performing logging;
- name of supervising registered geologist; and
- name of drilling company (rigs and direct push).

The samples are labeled, sealed, recorded on a chain-of-custody record, and stored in a cooler while on-site and in transport to the state-certified, hazardous waste testing laboratory or office. The cooler has sufficient water ice to maintain appropriate temperature.

Cuttings from the soil borings are stored in 55-gallon, Department of Transportation (DOT) approved drums, roll-off bins, or other appropriate containers, as approved by the client. Each container is labeled as waste material or non-hazardous waste, with the number of the soil boring(s) from which the waste was derived, the date the waste was generated, the generator name, and other pertinent information. The waste is stored at the site of generation, or at another location approved by the client until sample laboratory analytical results are obtained, at which time the soil is disposed of appropriately.

HYDROPUNCH GROUNDWATER SAMPLING PROCEDURES

Hydropunch sampling of groundwater is designed for collecting discrete, one-time samples of groundwater for analysis during drilling or direct-push operations. The hydropunch sampler consists of a 5-foot long, 1.5-inch diameter screen sheathed by a 2-inch diameter, steel barrel. A disposable point is connected to the bottom of the screen. The hydropunch assembly is lowered through the hollow-stem auger and driven into the undisturbed soils below the base of the hole, or is pushed into the soil using a direct push rig. The outer sheath is then retracted to expose the screen. A bailer is then lowered into the hydropunch assembly and retrieves a sample of the groundwater within the assembly.

The extracted groundwater is collected in chilled, 40-milliliter, volatile organic analysis vials having Teflon-lined caps, or other appropriate containers as required by the respective analytical method. For organic compound analyses, hydrochloric acid preservative may be added to the containers by the laboratory to lower sample pH. Samples are stored in a cooler while on-site and in transport to the laboratory or office. The cooler has sufficient ice to maintain appropriate temperature prior to collecting samples. The VOA vials are kept chilled both prior to and after filling. Warm containers are not used when volatile compounds are the target analytes. Analysis is performed by a state-certified, hazardous waste testing laboratory.

Documentation requirements include:

- sample identification number;
- borehole identification number;
- time and date of sample collection;
- depth at which Hydropunch sample was collected;
- name of person collecting sample;
- number and types of sample containers; and
- type of preservative used, if any.

BOREHOLE COMPLETION PROCEDURES

All sampling locations are either properly abandoned or completed as a well.

Abandonment

Each borehole/sample location that is not completed as a well is backfilled with bentonite grout, neat cement, concrete, or bentonite chips with a permeability less than that of the surrounding soils, and/or soil cuttings, depending on local regulatory requirements or client instructions. Grout is placed by the tremie method. Backfilling is performed carefully to avoid bridging. The type of backfill material is noted on the log.

Well Installation

Wells are designed according to applicable state and local regulations as well as project needs. Details of the well design and construction are recorded on the log and include the following minimum information (in addition to the items noted above for soil borings):

- detailed drawing of well;
- type of well (groundwater, vadose, or air sparging);
- casing diameter and material;
- screen slot size;
- well depth and screen length (±1 foot);
- filter pack material, size, and placement depths;
- annular seal material and placement depths; and
- surface seal design/construction.

Groundwater monitoring wells are generally designed with 30 feet of slotted casing that crosses the water table, unless site conditions, project needs, or local regulations dictate a different well design. Vadose wells are designed with slotted casing appropriate for the project needs, e.g. slotted in hydrocarbon-containing intervals for vapor extraction. Air sparging wells are typically designed with 5 feet of slotted casing placed 15 feet below the water table. The sand pack is placed at least two feet above the top of the screen, and at least 3 feet of low permeability seal material is placed between the sand pack and the surface seal, unless shallow groundwater conditions exist (less than 5 fbg). The sand pack and low permeability seal material are placed in the annular space from the bottom up using the tremie method.

When drilling in asphalt, a 24-inch round cut is made for the well pad. When drilling on concrete, a 2 x 2-foot square or 24-inch circle is sawcut. The well cover is traffic-rated and has a white lid with a black triangle painted on it or a black lid with a white triangle. The well number is labeled on the outside of the well box/pad and/or the inside of the well box. The casing has a notch or indication on its north side indicating a unique measuring/surveying point. Well casings are capped with a locking or slip well cap.

Well Development

Well development is conducted by the use of surge blocks, bailers, pumps, or other appropriate methods in accordance with the requirements of the California Department of Water Resources Bulletin #74–81 dated December 1981, or ASTM International 4448-85a (as required by the ADEQ). Only formation water is used for surging the well. Well development continues until non-turbid groundwater is produced or turbidity stabilizes. The method of development and the volume of groundwater produced are recorded in the field log. All purged groundwater is held on-site, or at another location approved by the client, in sealed, 55-gallon DOT approved drums or other appropriate containers pending transport to an approved recycling facility.

APPENDIX 4.

CPT PROCEDURES AND RESULTS

Cone Penetration Testing Procedure (CPT)

Gregg Drilling carries out all Cone Penetration Tests (CPT) using an integrated electronic cone system, *Figure CPT*. The soundings were conducted using a 20 ton capacity cone with a tip area of 15 cm^2 and a friction sleeve area of 225 cm^2. The cone is designed with an equal end area friction sleeve and a tip end area ratio of 0.80.

The cone takes measurements of cone bearing (q_c), sleeve friction (f_s) and penetration pore water pressure (u_2) at 5-cm intervals during penetration to provide a nearly continuous log. CPT data reduction and interpretation is performed in real time facilitating on-site decision making. The above mentioned parameters are stored on disk for further analysis and reference. All CPT soundings are performed in accordance with revised (2007) ASTM standards (D 5778-07).

The cone also contains a porous filter element located directly behind the cone tip (u_2). It consists of porous plastic and is 5.0mm thick. The filter element is used to obtain penetration pore pressure as the cone is advanced as well as Pore Pressure Dissipation Tests (*PPDT's*) during appropriate pauses in penetration. It should be noted that prior to penetration, the element is fully saturated with oil under vacuum pressure to ensure accurate and fast dissipation.

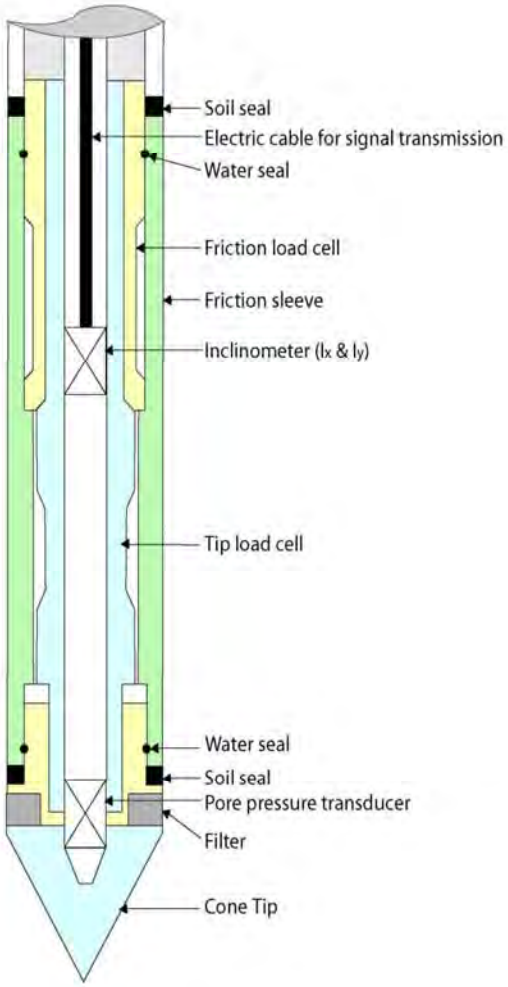


Figure CPT

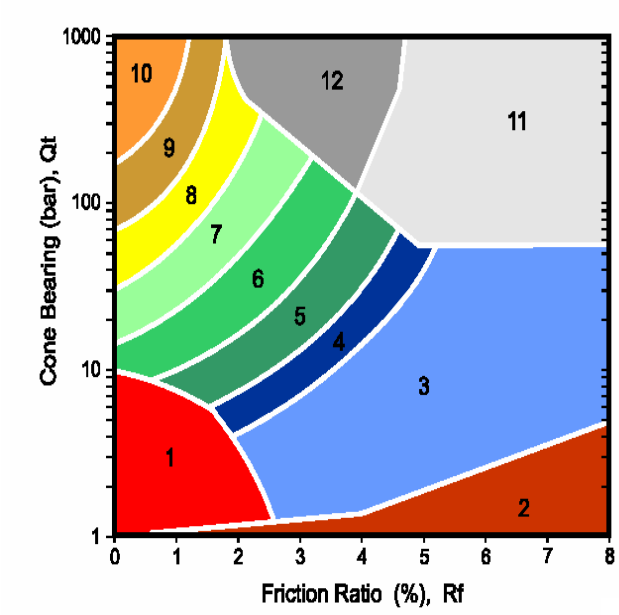
The cone has the following accuracy:
1 tsf for q_c, 0.02 tsf for f_s and 0.5 psi for u_2. In soft clays, a lower capacity cone should be used for improved accuracy.

When the soundings are complete, the test holes are grouted. The grouting procedures generally consist of pushing a hollow tremie pipe with a "knock out" plug to the termination depth of the CPT hole. Grout is then pumped under pressure as the tremie pipe is pulled from the hole. Disruption or further contamination to the site is therefore minimized.



Cone Penetration Test Data & Interpretation

The Cone Penetration Test (CPT) data collected from your site are presented in graphical form in the attached report. The plots include interpreted Soil Behavior Type (SBT) based on the charts described by Robertson (1990). Typical plots display SBT based on the non-normalized charts of Robertson et al (1986). For CPT soundings extending greater than 50 feet, we recommend the use of the normalized charts of Robertson (1990) which can be displayed as SBTn, upon request. The report also includes spreadsheet output of computer calculations of basic interpretation in terms of SBT and SBTn and various geotechnical parameters using current published correlations based on the comprehensive review by Lunne, Robertson and Powell (1997), as well as recent updates by Professor Robertson. The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg Drilling & Testing Inc. do not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and do not assume any liability for any use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software.

Some interpretation methods require input of the groundwater level to calculate vertical effective stress. An estimate of the in-situ groundwater level has been made based on field observations and/or CPT results, but should be verified by the user.

A summary of locations and depths is available in Table 1. Note that all penetration depths referenced in the data are with respect to the existing ground surface.

Note that it is not always possible to clearly identify a soil type based solely on q_t, f_s, and u_2. In these situations, experience, judgment, and an assessment of the pore pressure dissipation data should be used to infer the correct soil behavior type.

(After Robertson, et al., 1986)

Figure SBT

Cone Penetration Test (CPT) Interpretation

Gregg has recently updated their CPT interpretation and plotting software (2007). The software takes the CPT data and performs basic interpretation in terms of soil behavior type (SBT) and various geotechnical parameters using current published empirical correlations based on the comprehensive review by Lunne, Robertson and Powell (1997). The interpretation is presented in tabular format using MS Excel. The interpretations are presented only as a guide for geotechnical use and should be carefully reviewed. Gregg does not warranty the correctness or the applicability of any of the geotechnical parameters interpreted by the software and does not assume any liability for any use of the results in any design or review. The user should be fully aware of the techniques and limitations of any method used in the software.

The following provides a summary of the methods used for the interpretation. Many of the empirical correlations to estimate geotechnical parameters have constants that have a range of values depending on soil type, geologic origin and other factors. The software uses 'default' values that have been selected to provide, in general, conservatively low estimates of the various geotechnical parameters.

Input:

1 Units for display (Imperial or metric) (atm. pressure, pa = 0.96 tsf or 0.1 MPa)
2 Depth interval to average results,(ft or m). Data are collected at either 0.02 or 0.05m and can be averaged every 1, 3 or 5 intervals.
3 Elevation of ground surface (ft or m)
4 Depth to water table, z_w (ft or m) – input required
5 Net area ratio for cone, a (default to 0.80)
6 Relative Density constant, C_{Dr} (default to 350)
7 Young's modulus number for sands, α (default to 5)
8 Small strain shear modulus number
  a. for sands, S_G (default to 180 for SBT_n 5, 6, 7)
  b. for clays, C_G (default to 50 for SBT_n 1, 2, 3 & 4)
9 Undrained shear strength cone factor for clays, N_{kt} (default to 15)
10 Over Consolidation ratio number, k_{ocr} (default to 0.3)
11 Unit weight of water, (default to γ_w = 62.4 lb/ft^3 or 9.81 kN/m^3)

Column

1 Depth, z, (m) – CPT data is collected in meters
2 Depth (ft)
3 Cone resistance, q_c (tsf or MPa)
4 Sleeve friction, f_s (tsf or MPa)
5 Penetration pore pressure, u (psi or MPa), measured behind the cone (i.e. u_2)
6 Other – any additional data, if collected, e.g. electrical resistivity or UVIF
7 Total cone resistance, q_t (tsf or MPa) $q_t = q_c + u\,(1\text{-}a)$

8	Friction Ratio, R_f (%)	$R_f = (f_s/q_t) \times 100\%$
9	Soil Behavior Type (non-normalized), SBT	see note
10	Unit weight, γ (pcf or kN/m^3)	based on SBT, see note
11	Total overburden stress, σ_v (tsf)	$\sigma_{vo} = \gamma z$
12	Insitu pore pressure, u_o (tsf)	$u_o = \gamma_w (z - z_w)$
13	Effective overburden stress, σ'_{vo} (tsf)	$\sigma'_{vo} = \sigma_{vo} - u_o$
14	Normalized cone resistance, Q_{t1}	$Q_{t1} = (q_t - \sigma_{vo}) / \sigma'_{vo}$
15	Normalized friction ratio, F_r (%)	$F_r = f_s / (q_t - \sigma_{vo}) \times 100\%$
16	Normalized Pore Pressure ratio, B_q	$B_q = u – u_o / (q_t - \sigma_{vo})$
17	Soil Behavior Type (normalized), SBT_n	see note
18	SBT_n Index, I_c	see note
19	Normalized Cone resistance, Q_{tn} (n varies with Ic)	see note
20	Estimated permeability, k_{SBT} (cm/sec or ft/sec)	see note
21	Equivalent SPT N_{60}, blows/ft	see note
22	Equivalent SPT $(N_1)_{60}$ blows/ft	see note
23	Estimated Relative Density, D_r, (%)	see note
24	Estimated Friction Angle, ϕ', (degrees)	see note
25	Estimated Young's modulus, E_s (tsf)	see note
26	Estimated small strain Shear modulus, Go (tsf)	see note
27	Estimated Undrained shear strength, s_u (tsf)	see note
28	Estimated Undrained strength ratio	s_u/σ_v'
29	Estimated Over Consolidation ratio, OCR	see note

Notes:

1 Soil Behavior Type (non-normalized), SBT Lunne et al. (1997) listed below

2 Unit weight, γ either constant at 119 pcf or based on Non-normalized SBT (Lunne et al., 1997 and table below)

3 Soil Behavior Type (Normalized), SBT_n Lunne et al. (1997)

4 SBT_n Index, I_c $I_c = ((3.47 – \log Q_{t1})^2 + (\log F_r + 1.22)^2)^{0.5}$

5 Normalized Cone resistance, Q_{tn} (n varies with Ic)

$Q_{tn} = ((q_t - \sigma_{vo})/pa)\ (pa/(\sigma'_{vo})^n$ and recalculate I_c, then iterate:

When $I_c < 1.64$, n = 0.5 (clean sand)
When $I_c > 3.30$, n = 1.0 (clays)
When $1.64 < I_c < 3.30$, $n = (I_c – 1.64)0.3 + 0.5$
Iterate until the change in n, $\Delta n < 0.01$

6 Estimated permeability, k_{SBT} (based on Normalized SBT_n)
(Lunne et al., 1997 and table below)

7 Equivalent SPT N_{60}, blows/ft Lunne et al. (1997)

$$\frac{(q_t/p_a)}{N_{60}} = 8.5\left(1 - \frac{I_c}{4.6}\right)$$

8 Equivalent SPT $(N_1)_{60}$ blows/ft $(N_1)_{60} = N_{60}\, C_{N,}$
where $C_N = (pa/\sigma'_{vo})^{0.5}$

9 Relative Density, D_r, (%) $D_r^2 = Q_{tn} / C_{Dr}$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

10 Friction Angle, ϕ', (degrees) $\tan \phi' = \frac{1}{2.68}\left[\log\left(\frac{q_c}{\sigma'_{vo}}\right) + 0.29\right]$
Only SBT_n 5, 6, 7 & 8 *Show'N/A' in zones 1, 2, 3, 4 & 9*

11 Young's modulus, E_s $E_s = \alpha\, q_t$
Only SBT_n 5, 6, 7 & 8 *Show 'N/A' in zones 1, 2, 3, 4 & 9*

12 Small strain shear modulus, Go
a. $G_o = S_G\,(q_t\ \sigma'_{vo}\ pa)^{1/3}$ *For SBT_n 5, 6, 7*
b. $G_o = C_G\, q_t$ *For SBT_n 1, 2, 3& 4*
Show 'N/A' in zones 8 & 9

13 Undrained shear strength, s_u $s_u = (q_t - \sigma_{vo}) / N_{kt}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

14 Over Consolidation ratio, OCR $OCR = k_{ocr}\, Q_{t1}$
Only SBT_n 1, 2, 3, 4 & 9 *Show 'N/A' in zones 5, 6, 7 & 8*

SBT Zones		**SBT_n Zones**

7	117.8	18.5
8	120.9	19.0
9	124.1	19.5
10	127.3	20.0
11	130.5	20.5
12	120.9	19.0

GREGG DRILLING & TESTING, INC.
GEOTECHNICAL AND ENVIRONMENTAL INVESTIGATION SERVICES

November 12, 2012

HFA
Attn: Mark Fahan

Subject: CPT Site Investigation
1022-1054 S. La Cienega
Los Angeles, California
GREGG Project Number: 12-812SH

Dear Mr. Fahan:

The following report presents the results of GREGG Drilling & Testing's Cone Penetration Test investigation for the above referenced site. The following testing services were performed:

1	Cone Penetration Tests	(CPTU)	☒
2	Pore Pressure Dissipation Tests	(PPD)	☒
3	Seismic Cone Penetration Tests	(SCPTU)	☐
4	UVOST Laser Induced Fluorescence	(UVOST)	☐
5	Groundwater Sampling	(GWS)	☐
6	Soil Sampling	(SS)	☐
7	Vapor Sampling	(VS)	☐
8	Pressuremeter Testing	(PMT)	☐
9	Vane Shear Testing	(VST)	☐
10	Dilatometer Testing	(DMT)	☐

A list of reference papers providing additional background on the specific tests conducted is provided in the bibliography following the text of the report. If you would like a copy of any of these publications or should you have any questions or comments regarding the contents of this report, please do not hesitate to contact our office at (925) 313-5800.

Sincerely,
GREGG Drilling & Testing, Inc.

Peter Robertson
Technical Director, Gregg Drilling & Testing, Inc.

APPENDIX 5.

LOG OF EXPLORATORY BORINGS AND WELL CONSTRUCTION DETAILS

LITHOLOGY
(UNIFIED SOIL CLASSIFICATION SYSTEM)

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
COARSE-GRAINED SOILS MORE THAN HALF IS LARGER THAN No. 200 SIEVE	GRAVEL MORE THAN HALF COARSE FRACTION IS LARGER THAN No. 4 SIEVE SIZE	GRAVELS WITH LITTLE OR NO FINES	GW	WELL-GRADED GRAVELS, GRAVEL-SAND MIXTURES, LITTLE OR NO FINES
			GP	POORLY-GRADED GRAVELS OR GRAVEL-SAND MIXTURES, LITTLE OR NO FINES
		GRAVELS WITH OVER 12% FINES	GM	SILTY GRAVELS, GRAVEL-SAND-SILT MIXTURES
			GC	CLAYEY GRAVELS, GRAVEL-SAND-CLAY MIXTURES
	SAND MORE THAN HALF COARSE FRACTION IS SMALLER THAN No. 4 SIEVE SIZE	SANDS WITH LITTLE OR NO FINES	SW	WELL-GRADED SANDS, GRAVELLY SANDS, LITTLE OR NO FINES
			SP	POORLY-GRADED SANDS OR GRAVELLY SANDS, LITTLE OR NO FINES
		SANDS WITH OVER 12% FINES	SM	SILTY SANDS, SAND-SILT MIXTURES
			SC	CLAYEY SANDS, SAND-CLAY MIXTURES
FINE-GRAINED SOILS MORE THAN HALF IS SMALLER THAN No. 200 SIEVE	SILT AND CLAY		ML	INORGANIC SILTS AND VERY FINE SANDS, ROCK FLOUR, SILTY OR CLAYEY FINE SANDS OR CLAYEY FINE SANDS OR CLAYEY SILTS WITH SLIGHT PLASTICITY
			CL	INORGANIC CLAYS OF LOW TO MEDIUM PLASTICITY, GRAVELLY CLAYS, SANDY CLAYS, SILTY CLAYS, LEAN CLAYS
			OL	ORGANIC SILTS AND ORGANIC SILTY CLAYS OF LOW PLASTICITY
	SILT AND CLAY		MH	INORGANIC SILTS, MICACEOUS OR DIATOMACEOUS FINE SANDY OR SILTY SOILS, ELASTIC SILTS
			CH	INORGANIC CLAYS OF HIGH PLASTICITY, FAT CLAYS
			OH	ORGANIC CLAYS OF MEDIUM TO HIGH PLASTICITY, ORGANIC SILTS
HIGHLY ORGANIC SOIL			Pt	PEAT AND OTHER HIGHLY ORGANIC SOILS

SYMBOLS AND ACRONYMS

- SOIL SAMPLE COLLECTED
- GROUNDWATER SAMPLE COLLECTED (HYDROPUNCH® OR SIMILAR)
- SAMPLE NOT RECOVERED
- GROUNDWATER ENCOUNTERED DURING DRILLING

- WELL BOX WITH LOCKING CAP
- BLANK SCHEDULE 40 PVC CASING
- MICROPOROUS BUBBLER
- SLOTTED SCHEDULE 40 PVC CASING
- BOTTOM PLUG

- 0.25-INCH NYLON TUBING WITH GAS-TIGHT CAP
- STEEL PROBE

BOREHOLE COMPLETION

- ASPHALT/CONCRETE SURFACE PATCH
- CONCRETE
- BENTONITE CHIPS OR PELLETS
- BENTONITE/CEMENT GROUT
- FILTER PACK

PID = PHOTOIONIZATION DETECTOR
ppmv = PARTS PER MILLION BY VOLUME
fbg = FEET BELOW GRADE
USCS = UNIFIED SOIL CLASSIFICATION SYSTEM
PVC = POLYVINYLCHLORIDE
