Comments for Public Posting: Spay and neuter of animals is critical especially when it comes to reducing the shelter population. The City should consider increasing the amount of discount vouchers offered so that it is more affordable. Depending on the size and/or medical condition of the animal, it can still cost an individual/family hundreds of dollars. What other promotions is the City considering to help with reducing the shelter population? A detailed report on what the City is currently doing and potential future promotions should be shared with the public.
