The increased growth within the CPA would cause an increase in demand for fire protection. The increase in demand over time may create a need to construct new fire stations. Although there are no current plans to construct new fire stations or expand a fire station, it is foreseeable that providing fire services to the reasonably anticipated development of the Proposed Plan may result in the need for new or expanded fire facilities over the plan horizon.

Based on information provided in LAFD's Strategic Plan 2018-2020, the ability to provide adequate fire protection services is dependent on numerous factors including staffing levels, mutual aid agreements, deployment strategies, and technological advances in equipment. LAFD's primary determinant for

assessing future service needs is based on their cumulative review and analysis of past incidents. Options available to LAFD include expanding fire prevention services, increasing staffing levels, and adding new fire stations(s) to underserved areas. The projected number of residents, employees, and overall anticipated development levels is routinely reviewed by LAFD to assist in determining the future need for emergency services. LAFD determines the need for new fire stations based on the needs assessment that takes into account the complex set of factors discussed above, as well as geographic distribution of physical structures; access to trucks, ambulances, and other equipment; the location of new structures; and anticipated response times.[17]

Existing regulations and policies would partially offset future increases in demand for fire protection service. For example, new developments in the CPA would be required to comply with current fire code standards, which require new construction to incorporate more dynamic and advanced fire and life safety technologies and fire prevention measures than was previously required. Furthermore, LAFD has a constitutional mandate to protect public safety and must respond to changing circumstances and, therefore, would act to maintain response times. As development occurs over the lifetime of the Proposed Plan, it is expected that fire protection service levels will be evaluated and maintained by LAFD. In conformance with California Constitution Article XIII, Section 35, (a)(2), existing policies, procedures, and practices related to fire protection and emergency services, LAFD would maintain acceptable emergency response times through the provision of additional personnel and equipment as needed, as well as potentially constructing new or expanding existing fire and emergency response facilities.

In the event it is determined that a new or expanded fire station is necessary to serve the CPA, construction of any such facility would occur in an urban center and would be limited in number (possibly one or two new facilities) and size. Such facilities would be located on parcels that are infill opportunities on lots approximately less than one acre in size. The CPA is an urbanized area and new facilities would not involve expansion of the urban sphere beyond current boundaries and, thus, there would be no need for new or expanded infrastructure. According to the Los Angeles Bureau of Engineering (BOE), there are four basic configurations for fire stations, but the typical standard fire/paramedic station would consist of a 15,250-square foot building on a parcel that is approximately one acre. Based on the urban location and the relatively small size of typical facilities, the construction of a new fire facility or expansion of an existing facility would likely qualify for an infill exemption or result in less–than-significant impacts with standard regulatory compliance measures and design features. The EIR for Van Nuys No. 39 fire station, certified in 2017, found no unavoidable significant impacts for the construction and operation of the new fire station.

---

17 LAFD, *A Safer City 2.0, Strategic Plan 2018-2020*, 2018. https://issuu.com/lafd/docs/strategic_plan_final_2018.02.09?e=17034503/59029441

New facilities would also be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinances and Noise Ordinance, and the California Building Code, including CALGreen requirements. Construction and operational impacts to air, noise, traffic, as well as other impacts of new developments are discussed throughout this EIR, and they would not be any different for a fire/paramedic station/facility. It is not foreseeable that impacts from building any other stations in the CPA would have greater or different impacts than those identified in this EIR for construction or operations. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time.

Based on the above, impacts related to fire protection and emergency services would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.13.2.6 Cumulative Impacts

The Proposed Plan along with cumulative development from other plans (such as surrounding community plans, the Los Angeles County General Plan and SCAG's RTP/SCS) could result in a significant impact to fire services and facilities if the Proposed Plan along with other projects would result in the need for new fire or emergency response facilities or expanded facilities and the construction and operation of those new facilities along with other construction results in significant impacts. The cumulative context for fire protection and emergency services is the City and adjacent areas where impacts from construction and operational impacts could occur.

All future growth and development would be required to maintain consistency with City of Los Angeles fire protection regulations. As discussed above, the Proposed Plan over the planning horizon of 20 years may result in the need for new or expanded fire and emergency response facilities. Growth as a result of other plans (including surrounding community plans, the Los Angeles County General Plan, and/or the RTP/SCS), along with reasonably expected growth anticipated to result from the Proposed Plan would likely result in the need for new or expanded fire and emergency response facilities in the City.

LAFD has a mandate to protect public safety and must respond to changing circumstances and, therefore, would act to maintain response times. As discussed above, this may result in the need for new fire stations. Based on information provided in LAFD's Strategic Plan 2018-2020, the ability to provide adequate fire protection services is dependent on numerous factors including staffing levels, mutual aid agreements, deployment strategies, and technological advances in equipment. Moreover, LAFD's primary determinant for assessing future service needs is based on their cumulative review and analysis of past incidents. Options available to LAFD include expanding the FPS, increasing staffing levels, and adding new fire stations(s) to underserved areas.

To the extent new facilities would be needed, the impacts from the construction and operations of those facilities would be similar to those addressed in the impact section above and would not be expected to result in new or substantially different impacts from those impacts discussed in **Section 4.2 Air Quality**, **4.11, Noise and Vibration**, **Section 4.4, Cultural Resources**, and **Section 4.14, Transportation and Traffic,** of this EIR. Further, the Proposed Plan would have a less than significant impact related to fire protection services. Therefore, the Proposed Plan would not make a cumulatively considerable contribution to impacts related to fire protection and impacts would be less than significant.

4.13.3 POLICE PROTECTION SERVICES

4.13.3.1 Existing Environmental Setting

The Los Angeles Police Department (LAPD) provides police protection services in the City, including the CPA. The LAPD also contains specialized units, including Special Operations, Special Weapons and Tactics (SWAT), Gangs and Narcotics, K-9 Units, and Mounted Units. The LAPD is divided into four geographic bureaus: Central, South, West, and Valley Bureaus, which are divided into 21 community police divisions, and into reporting districts. In 2016, the LAPD had a total of 9,941 sworn personnel.[18] As of 2021, there were 24.6 officers for 10,000 persons.[19] This is above the 2016 national average number of officers per 10,000 persons of 16.8 for jurisdictions with a population 500,000 and higher.[20]

The CPA is located within Central Bureau. The Central Bureau encompasses a 65-square mile service area with a population of approximately 900,000 residents. The Central Bureau service boundaries include the

Los Angeles City limits on the north and east, Florence Avenue to the south, and Griffith Park Boundary/Western Avenue to the west. The Central Bureau overseas operations in the following area divisions: Central, Hollenbeck, Newton, Northeast, and Rampart, as well as the Central Traffic Division. Communities served by the Central Bureau include Boyle Heights, the downtown business district, Eagle Rock, Garment District, MacArthur Park, Dodger Stadium, and Griffith Park.

The CPA is served by the Hollenbeck Police Station. The Hollenbeck Police station is located at 2111 East 1st Street in the CPA and has 300 sworn and civilian offices and serves a population of 200,000. The 2016 Citywide and LAPD Community Plan Area Crime Statistics area provided in **Table 4.13-7**. Crimes categorized as Part I crimes include homicide, rape, robbery, aggravated assault, burglary, motor vehicle theft, burglary theft from vehicle, and personal/other theft. **Table 4.13-7** shows crimes committed Citywide and within the Hollenbeck Division.

Table 4.13-7
Crime Statistics for LAPD Stations Serving the Community Plan Area (Year 2016)

Crimes/Arrests	Citywide	Central	Hollenbeck
Homicide	223	11	14
Rape	1,388	122	65
Robbery	6,692	680	326
Aggravated Assault	10,201	889	887
Violent Crime Total	18,504	1,702	1,292
Burglary	12,031	312	379
Motor Vehicle Theft	11,755	397	1,205
Burglary Theft From Vehicle	20,902	1,091	1,269
Personal/Other Theft	24,450	2,577	800
Property Crime Total	**69,138**	**4,377**	**3,653**
Part I Crime Total	**87,642**	**6,079**	**4,945**
Arrests			
Homicide	234	15	15
Rape	267	30	14
Robbery	2,154	178	90
Aggravated Assault	6,889	604	438
Burglary	1,789	102	93
Larceny	4,194	711	130
Motor Vehicle Theft	2,002	77	148
Violent Arrest Total	9,413	827	537
Part I Crime Arrest Total	17,398	1.717	918
All Arrest Total	99,511	13,596	3,712

Source: City of Los Angeles Police Department "Compstat Citywide Profile," "Community Area Profile," www.lapd.org; Impact Sciences, 2017.

The crime rate, which represents the number of crimes reported, affects the "needs" projection for staff and equipment for the LAPD. As such, for a conservative analysis, the crime rate in a given area is anticipated to increase as the level of activity or population and the opportunities for crime increase. However, due to external factors that contribute to crime rates, such as police presence, crime prevention measures, and ongoing legislation/funding, the potential for increased crime rates may not be directly proportional to the increase in population or land use activity.

Response time is the amount of time between the time an emergency call is made and the time a police unit arrives at the scene. Calls for police assistance are prioritized based on the nature of the call. Police units are often in a mobile state; thus, the number of officers on the street is more directly related to the realized response time than the distance between a police station and a project site. The LAPD has an existing preferred response time of seven minutes for emergency calls. The LAPD also uses technology to enhance strategic deployment of field officers in their service area, which can help lower average response time. PredPol software predicts the times and places where crimes are most likely to occur based on historic data on the time, location, and type of crimes committed.

4.13.3.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Public Services at the state and local levels. As described below, these plans, guidelines, and laws include the following:

- California Penal Code
- California Constitution Article XIII, Section 35
- California Vehicle Code, Section 21806
- City of Los Angeles General Plan Framework Element
- City of Los Angeles General Plan Safety Element
- City of Los Angeles Charter
- Administrative and Municipal Codes
- Los Angeles Police Department (LAPD) Computer Statistics Unit (COMPSTAT) Program
- LAPD Guidelines and Plan Review
- LAPD Strategic Plan 2019-2021

Federal

There are no federal police protection services regulations applicable to the Proposed Plan.

State

California Penal Code. All law enforcement agencies in California are organized and operated in accordance with the applicable provisions of the California Penal Code. This code sets forth the authority, rules of conduct, and training for peace officers. Under state law, all sworn municipal and county officers are state peace officers.

California Constitution Article XIII, Section 35. Section 35 of Article XIII of the California Constitution was adopted by the voters in 1993 under Proposition 172. Proposition 172 directed the proceeds of a 0.50-percent sales tax to be expended exclusively for local public safety services. California Government Code Sections 30051-30056 provide rules to implement Proposition 172. Public safety services include police protection. Section 30056 provides that cities are not allowed to spend less of their own financial resources on their combined public safety services in any given year compared to the 1992-93 fiscal year. Therefore, an agency is required to use Proposition 172 to supplement its local funds used on police protection, as well as other public safety services. Section 35 at subdivision (a)(2) provides: "The protection of public safety is the first responsibility of local government and local officials have an obligation to give priority to the provision of adequate public safety services." In *City of Hayward v. Board of Trustees of California State University* (2015), the court found that Section 35 of Article XIII of the California Constitution requires local agencies to provide public safety services, including police protection, and that it is reasonable to conclude that the city will comply with that provision to ensure that public safety services are provided.

California Vehicle Code, Section 21806. Section 21806 of the California Vehicle Code (CVC) pertains to emergency vehicles responding to Code 3 incident/calls.[1] This section of the CVC states the following:

> *Upon the immediate approach of an authorized emergency vehicle which is sounding a siren and which has at least one lighted lamp exhibiting red light that is visible, under normal atmospheric conditions, from a distance of 1,000 feet to the front of the vehicle, the surrounding traffic shall, except as otherwise directed by a traffic officer, do the following: (a)(1) Except as required under paragraph (2), the driver of every other vehicle shall yield the right-of-way and shall immediately drive to the right-hand edge or curb of the highway, clear of any intersection, and thereupon shall stop and remain stopped until the authorized emergency vehicle has passed. (2) A person driving a vehicle in an exclusive or preferential use lane shall exit that lane immediately upon determining that the exit can be accomplished with reasonable safety....(c) All pedestrians upon the highway shall proceed to the nearest curb or place of safety and remain there until the authorized emergency vehicle has passed.*

Title 13 California Code Regulations (CCR) Division 2 (CHP). Division 2 of Title 13 of the CCR governs the operations of the California Highway Patrol.

Local

City of Los Angeles General Plan Framework Element. The City of Los Angeles General Plan Framework Element (General Plan Framework), originally adopted in December 1996 and re-adopted in August 2001, provides a comprehensive vision for long-term growth within the City and guides subsequent amendments of the City's Community Plans Specific Plans, zoning ordinances, and other local planning programs.

Chapter 9 of the General Plan Framework addresses Infrastructure and Public Services. Goal 9I states that every neighborhood should have the necessary police services, facilities, equipment, and manpower required to provide for the public safety needs of that neighborhood. Related Objective 9.13 and n 9.13.1, which implement Goal 9I, support the monitoring and reporting of police statistics and population projections for the purpose of evaluating existing and future needs. Objective 9.14 calls for adequate police services, facilities, equipment, and personnel be available to meet existing and future public needs. Policies related to Objective 9.14 generally provide guidance for public agencies. Objective 9.15 calls for LAPD services to provide adequate public safety in emergency situations by maintaining mutual assistance relationships with local law enforcement agencies, state law enforcement agencies, and the National Guard.

Table 4.13-8
Relevant General Plan Police Protection Goals, Objectives, and Policies

Framework Element – Chapter 9, Infrastructure and Public Services	
Goal 9I	Every neighborhood in the City has the necessary police services, facilities, equipment, and manpower required to provide for the public safety needs of that neighborhood.
Objective 9.13	Monitor and forecast demand for existing and projected police service and facilities.
Policy 9.13.1	Monitor and report police statistics, as appropriate, and population projections for the purpose of evaluating police service based on existing and future needs.
Objective 9.14	Protect the public and provide adequate police services, facilities, equipment and personnel to meet existing and future needs.
Policy 9.14.1	Work with the Police Department to maintain standards for the appropriate number of sworn police officers to serve the needs of residents, businesses, and industries.
Policy 9.14.5	Identify neighborhoods in Los Angeles where facilities are needed to provide adequate police protection.
Policy 9.14.7	Participate fully in the planning of activities that assist in defensible space design and utilize the most current law enforcement technology affecting physical development.
Objective 9.15	Provide for adequate public safety in emergency situations.
Policy 9.15.1	Maintain mutual assistance agreements with local law enforcement agencies, State law enforcement agencies, and the National Guard to provide for public safety in the event of emergency situations.

Source, City of Los Angeles, 2001

City of Los Angeles General Plan Safety Element. The Safety Element of the Los Angeles General Plan addresses natural hazard issues related to Los Angeles Police Department (LAPD) resources (e.g., traffic safety during or following a disaster) and recognizes that most jurisdictions rely on emergency personnel (police, fire, gas, and water) to respond to emergencies.

City of Los Angeles Charter. The City Charter at Section 570 gives the power and the duty to the LAPD to enforce the penal provisions of the Charter, City ordinances, and state and federal laws. The Charter also gives responsibility to the LAPD to act as peace officers and to protect lives and property in case of disaster or public calamity.

Administrative and Municipal Codes. Section 22.240 of the Administrative Code requires the LAPD to adhere to the state standards described in Section 13522 of the California Penal Code for the training of police dispatchers. LAMC Chapter 5 includes regulations, enforceable by the police, related to fire arms, illegal hazardous waste disposal, and nuisances (such as excessive noise), and providing support to the Department of Building and Safety Code Enforcement inspectors and the LAFD in the enforcement of the City's Fire, Building, and Health Codes. The LAPD is also given the power and the duty to protect residents and property and to review and enforce specific security related mitigation measures in regard to new development.

Los Angeles Police Department (LAPD) Computer Statistics Unit (COMPSTAT) Program. The LAPD COMPSTAT was created in 1994 and implements the General Plan Framework goal of assembling statistical population and crime data to determine necessary crime prevention actions. This system implements a multi-layer approach to police protection services through statistical and geographical information system (GIS) analysis of growing trends in crime through its specialized crime control model. COMPSTAT has effectively and significantly reduced the occurrence of crime in Los Angeles communities through accurate and timely intelligence regarding emerging crime trends or patterns.[21]

LAPD Guidelines and Plan Review. Projects subject to City review are required to develop an Emergency Procedures Plan to address emergency concerns and practices. The plan is subject to review by LAPD. In addition, projects are encouraged to comply with the LAPD's Design Out Crime Guidelines, which incorporates techniques of Crime Prevention Through Environmental Design (CPTED) and seeks to deter crime through the design of buildings and public spaces. Specifically, projects are recommended to:

- Provide on-site security personnel whose duties shall include but not be limited to the following:

21 LAPD, *COMPSTAT,* http://www.lapdonline.org/crime_mapping_and_compstat/content_basic_view/6363, accessed October 10, 2018.

- Monitoring entrances and exits;
- Managing and monitoring fire/life/safety systems;
- Controlling and monitoring activities in parking facilities;
- Install security industry standard security lighting at recommended locations including parking structures, pathway options, and curbside queuing areas;
- Install closed-circuit television at select locations including (but not limited to) entry and exit points, loading docks, public plazas and parking areas;
- Provide adequate lighting of parking structures, elevators, and lobbies to reduce areas of concealment;
- Provide lighting of building entries, pedestrian walkways, and public open spaces to provide pedestrian orientation and to clearly identify a secure route between parking areas and points of entry into buildings;
- Design public spaces to be easily patrolled and accessed by safety personnel;
- Design entrances to, and exits from buildings, open spaces around buildings, and pedestrian walkways to be open and in view of surrounding sites; and
- Limit visually obstructed and infrequently accessed "dead zones."

LAPD Strategic Plan 2019-2021. The Los Angeles Police Department (LAPD) Strategic Plan 2019-2021, LAPD: 2020 & Beyond, is a guiding document reflective of emerging trends, complex issues, and demands of the policing environment. The plan covers the fiscal years 2019-2021 and provides goals and key activities to improve the safety and quality of life for all Angelenos. The intent of the Strategic Plan is to serve as an "organizational blueprint to maximize our workforce potential while providing the highest level of professionalism for those who visit, work, and live in the City of Los Angeles"[22].

The Plan has six goals: (1) Protect Los Angeles; (2) Engage Los Angeles; (3) Improve Organization Accountability; (4) Modernize Technology; (5) Enrich Training; and (6) Maximize Workforce Potential. The goals are then followed by initiatives, key activities associated with each initiative and milestones.

---

22 Los Angeles Police Department (LAPD). 2019. The Los Angeles Police Department Strategic Plan 2019-2021. http://lapd-assets.lapdonline.org/assets/pdf/Strategic%20Plan%202019-2021.pdf. Accessed on November 23, 2021

Protecting the City of Los Angeles is the primary function of LAPD. The initiatives under this goal are: reduce crime and victimization, reduce gun violence, emphasize preparedness and counter-terrorism, improve traffic safety, increase investigative effectiveness, and support coordinated City efforts to address homelessness.

4.13.3.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guideline*s, the Proposed Plan would have a significant impact related to police protection if it would:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered police facilities, need for new or physically altered police facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for police protection.

4.13.3.4 Methodology

The need for or deficiency in adequate police services in and of itself is not a CEQA impact, but a social or economic impact (*City of Hayward v. B'd of Trustees* [2015] 242 Cal.App. 4th 833, 843). To the extent that the Proposed Plan causes a need for additional police services and that results in the construction of new facilities or additions to existing facilities and the impact from that construction results in a potential impact to the environment which is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR that relates solely to the level of police protection services provided to the residents or users of the CPA and its surrounding community, including any existing or future needs and deficiencies, is relevant to the impact analysis only insofar as it indicates the demand and need for new or expanded police facilities. The ultimate determination of whether construction of new or expanded fire and emergency response facilities will cause a significant impact to the environment.

Police protection service needs are dependent on the size of the service population and the geographic area served, the number and types of calls for service, and the characteristics of a project and its surrounding community. According to LAPD, impacts on police protection services are considered significant if the demand for services exceeds the capacity of existing facilities, or if a station area is located outside of specified distances from a project area.

To the extent that the Proposed Plan results in the need for new police services that will cause the need for new or altered police facilities, the analysis below evaluates the potential need for new facilities and associated potential impacts from the construction of new police protection facilities or the expansion of existing police protection facilities if they could be required.

This discussion of impacts to police protection services addresses impacts for the entire CPA.

4.13.3.5 Impacts

Threshold 4.13-2 **Result in substantial adverse physical impacts associated with the provision of new or physically altered police facilities, need for new or physically altered police facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for police protection.**

This impact would be less than significant.

Construction

The Proposed Plan would allow for increased development potential in the CPA but would not constitute a commitment to any project-specific construction. Construction related to future development within the CPA, particularly within transit corridors and nodes and other areas with proposed zoning changes, could result in the effects described below. Construction activities would have the potential to temporarily increase the demand on police services. Construction sites can pose an attractive nuisance with respect to vandalism and theft. Road and lane closures due to construction activities related to individual development projects could affect response times of police vehicles. Traffic delays caused by potential closures could impede the ability of police vehicles to efficiently move along roadways to their destination. Additionally, temporary road closures may also result in detours that impact response time. Any development project that will cause temporary road closures is required to submit a plan to LADOT for approval to ensure any impacts are minimized and, if necessary, proper signage and flagmen provided to avoid impacts. Additionally, large projects are required to develop a construction staging and traffic management plan, as necessary, to ensure emergency access is maintained. As discussed in **Section 4.8, Hazards and Hazardous Materials**, and **Section 4.14, Transportation and Traffic**, construction activities related to the Proposed Plan's reasonably anticipated development is not expected to result in significant impacts to emergency services or response times. Construction activities for reasonably anticipated development would not result in the need for expansion of existing police facilities or construction of new police facilities due to the temporary nature of construction.

Operation

The Proposed Plan is expected to result in increases in population, housing, and employment in the CPA. The CPA is projected to have approximately 115,000 residents by year 2040, which would be a population increase of approximately 29,000 residents compared to the estimated 2016 population. Although an

increase in development intensity and residential density would not necessarily result in a directly proportional increase in crime, a larger population would increase demand for LAPD services by increasing the opportunities for crime. An area's crime rate is influenced by many factors, such as police presence, implementation of crime prevention measures, department funding, and socioeconomic factors. To ensure that necessary police services, facilities, and equipment are provided for the public safety needs of all neighborhoods, demand for existing and projected police services and facilities is monitored and forecasted by LAPD in order to maintain standards. Accordingly, as development occurs over the lifetime of the Plan, police protection service levels would continue to be evaluated and maintained by LAPD in accordance with existing policies, procedures and practices. Individual developments in the CPA would be required to incorporate design features to deter crime. The LAMC and Los Angeles Building Code (LABC) include recently adopted requirements regarding lighting and/ or security locks and devices for residential uses, as well as outdoor lighting requirements for a variety of uses.[23,24] LAPD would review development project applications to determine the types of design features that the development project would need to incorporate to deter crime, consistent with the techniques of CPTED.

The projected increase in population could also affect the ability to meet service standards as a result of increased roadway congestion. As discussed in **Section 4.14, Transportation and Traffic**, of this EIR, implementation of the Proposed Plan would result in land use intensification and an organized and coordinated development pattern that would increase accessibility of destinations while minimizing the related growth in vehicle trips and VMT per capita. Growth by 2040 regardless of the Plan is expected to increase population, housing, and jobs within the CPA which could cause delay on street segments. However, there is not a direct relationship between predicted travel delay and emergency response times as California State law requires that drivers yield the right of way to emergency vehicles and remains stopped until the emergency vehicles have passed. Designated emergency and disaster routes within the Plan Area would be maintained. Generally, multi-lane arterial roadways allow emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. On congested roadways, multi-lane arterial roadways with continuous center left-turn lanes facilitate emergency access when the thru lanes experience delays. Additionally, as previously mentioned under Existing Setting, various roadways within the CPA are equipped with FPS, a system that automatically turns traffic lights to green for emergency vehicles traveling on designated streets, including police vehicles. As development occurs, LAPD would maintain acceptable service levels through the provision of additional personnel and equipment as needed, in conformance with their existing policies, procedures and practices.

---

23 LABC Chapter 67, 1029, 8697

24 Los Angeles Department of Building and Safety [LADBS] 2017

In addition to additional personnel and equipment, the Proposed Plan may also result in a need for new police facilities. There are currently no planned police facilities to be constructed in the CPA at this time. Nevertheless, it is anticipated that the increase in people and dwelling units in the CPA would increase the demand for police protection services, which may result in the need for construction or expansion of police facilities over the plan horizon. Such facilities would more likely be small neighborhood facilities and could be accommodated in existing buildings or small new structures. If new facilities are required, such facilities would be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinance and Noise Ordinance, and the California Building Code, including CALGreen requirements. Construction of such development would likely not result in new significant impacts and would likely qualify for infill exemptions. To the extent there are site specific conditions that would result in impacts, such impacts would be speculative at this time. To the extent construction would result in any impacts those would not be different from other infill development analyzed throughout the EIR.

Based on the above, impacts related to police protection services, would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.13.3.6 Cumulative Impacts

The Proposed Plan along with cumulative development from other plans (such as surrounding community plans, the Los Angeles County General Plan and SCAG's RTP/SCS) could create a significant impact on police services and facilities if the need for additional services and facilities extended beyond existing levels of service. The geographic context for this analysis is the City as served by the LAPD. Future needs for police protection are reviewed regularly, including during the budgeting process. As described above, development projects within the City, including the CPA, would be subject to review upon project submittal of the development application and may be required to provide security features, such as security cameras, private security services, and/or on-site police drop-in facilities that reduce the demand for police service. Future development would also be required to incorporate design elements relative to security, and semi-public and private spaces such as CPTED. These features may include, but not be limited to, access control to buildings, secured parking facilities, walls/fences with key systems, well-illuminated public and semi-public space designed with a minimum of dead space to eliminate areas of concealment,

and location of toilet facilities or building entrances in high-foot traffic areas. Development with such design should reduce the potential for incidents that will result in demand on police services throughout the City.

Implementation of the Proposed Plan would create increased development opportunities, particularly within transit corridors and transit nodes, increasing the overall housing, population, and employment levels of the CPA, which likely would increase demand for LAPD services. However, as previously discussed, the provision of police protection services in the City is based on the community's existing and projected needs, as determined by LAPD. When an evaluation indicates response times have increased, the acquisition of equipment, personnel, and/or new stations would be considered and procured as needed through the LAPD. As demand for LAPD services increases, LAPD will act to maintain adequate service levels. As discussed, there are no planned facilities at this time. However, the potential for construction or expansion of police facilities over the plan horizon with the increased growth in the CPA and in neighboring area is likely. Such facilities would more likely be small neighborhood facilities and could be accommodated in existing buildings or small new structures. Construction of such development would likely not result in new significant impacts and would likely qualify for infill exemptions. To the extent there are site specific conditions that would result in impacts, such impacts would be speculative at this time. Therefore, the Proposed Plan would not make a cumulatively considerable contribution to impacts related to police protection. Impacts would be less than significant.

4.13.4 PUBLIC SCHOOLS

This analysis below presents an evaluation of the environmental impacts on public schools that could result from the implementation of the Proposed Plan; this analysis does not consider impacts on fully independent private schools outside of district-affiliated charter schools.

4.13.4.1 Existing Environmental Setting

The LAUSD is the nation's second-largest school district and provides public Kindergarten through 12th grade education to students living in the City in addition to all or portions of 26 incorporated cities and unincorporated areas of Los Angeles County. In total, LAUSD provides education services to an area of 710 square miles with a total of 1,413 educational schools and centers, including 439 elementary schools, 77 middle schools, 88 senior high schools, and 231 independent charter schools.[25] Further, through LAUSD's eChoices program, there are nearly 300 Magnet Programs located throughout LAUSD. For the 2020-2021

[25] Los Angeles Unified School District. *Fingertip Facts 2020-20217*, updated July 2021. https://ca01000043.schoolwires.net/cms/lib08/CA01000043/Centricity/Domain/32/Fingertip%20Facts2016-17_FINAL.pdf

school year, 65 new magnet schools and 245 magnet centers would be available for LAUSD students under the LAUSD eChoices program. Of the 65 new magnet schools, three serve the CPA: Hollenbeck Middle School Law, Math, Science, and Technology Magnet Academy, and STEM Academy of Boyle Heights.

A total of 27 LAUSD public schools and 7 charter schools would serve the CPA, including 6 primary/early education centers, 15 elementary schools, 2 middle schools, and 4 high schools.[26] **Figure 4.13-2, Schools Serving the Community Plan Area,** shows the distribution of the public and charter schools that would serve the CPA. For the purposes of analysis, the Proposed Plan anticipates that all the students residing in the CPA would attend public schools within the CPA. However, LAUSD students would have the option of attending public schools outside the CPA through the eChoices program or the option of private schooling.

Charter schools are publicly funded elementary or secondary schools that are usually created or organized by a group of teachers, parents and community leaders, or a community-based organization. These schools are usually sponsored by an existing local public school board or county board of education and are generally exempt from most laws governing school districts, except where specifically noted in the law. In exchange for this exempt status, charter schools are accountable for producing certain results, which are specifically set forth in a detailed agreement (or "charter") between the sponsoring board and the charter organizers. Charter schools are opened and attended by choice, and, while they provide an alternative to other public schools, they are part of the public education system and may not charge tuition. Where enrollment in a charter school is oversubscribed, admission is frequently allocated by lottery. Currently, there are 279 charter schools consisting of 54 Affiliated and 225 Independent Charter schools under the jurisdiction of LAUSD, serving more than 138,000 students from K-12 grades. As shown in **Table 4.13-9**, four charter schools are located within and serve the CPA.

Based on September 2016 figures, approximately 664,774 students are enrolled in Kindergarten-12th grades in the LAUSD with an additional 69,867 students enrolled in adult education schools, totaling approximately 734,641 students enrolled through LAUSD.[27] **Table 4.13-9** provides the names and locations of LAUSD schools serving the CPA. **Table 4.13-10** provides the current data for capacity, enrollment, seating overage, and overcrowding status. Enrollment and capacity numbers are based on data for the 2016-2017 school year and already take into account planned school building additions and portable classrooms on the site. **Table 4.13-11** provides the projected data for capacity, enrollment, seating overage,

"—" indicates information is not available.

1. Opened in 2018/2019 school year

- School planning capacity based on baseline calculation of the number of eligible classrooms after implementing LAUSD operational goals and shifting to a 1-Track Calendar. Includes capacity for magnet programs.

- Project 5-year total number of students living in the school's attendance area and who are eligible to attend the school; includes magnet students

- Projected seating overage or (shortage) based on the difference between the capacity and resident enrollment.

- The schools is considered to be overcrowded or without available capacity if the school operates on a multi-track calendar, there is a seating shortage, or there is a seating overage of less than or equal to a "safety margin" of 30 seats.

- Independent Charter: Capacity and/or enrollment information may not be reported for some independent charters

- Bernstein High School Zone of Choice includes Bernstein High School and Bernstein High School STEM. The individual school and calculated total capacities and reenrollments for school choice areas are reports to show current and projected seating overage/shortage and overcrowding

Source: Los Angeles Unified School District School Directory, https://schooldirectory.lausd.net/schooldirectory/, 2021; California School Dashboard Fall 2021, https://www.caschooldashboard.org/#/Home, 2021.

For some schools in the Boyle Heights CPA, enrollment and capacity data for the public schools serving the CPA indicate that the area's schools are over-crowded or over-burdened (i.e., have a seating shortage or a safety margin of less than 20 seats). Although, currently, LAUSD does report that they are able to accommodate actual enrollment. Currently, two schools are overcrowded and facing seating shortages – Roosevelt Senior High School Math/Science Magnet and KIPP Los Angeles College Preparatory. In total, the area schools during the 2015-2016 school year had a deficit of 263 seats for middle school students, and a deficit of 15 seats for high school students. Seating availability is calculated using residential enrollment numbers, which includes the total number of students eligible to attend a school, rather than actual enrollment numbers. Currently, all schools are able to accommodate actual enrollment.

Based on projected enrollment, Roosevelt Senior High School and KIPP Los Angeles College Preparatory are expected to continue to experience overcrowding in the future. Projected enrollment and capacity data are also provided in **Table 4.13-11**. School enrollment is projected by LAUSD to decrease for all schools in five years. Further, LAUSD overall expects a decrease of 30 percent in enrollment over the next ten years.[28] The reduction in enrolment numbers is due to a number of factors, including the ongoing Covid pandemic during which many parents moved to online schooling as well as declines in birth rates and a reduction in the number of school aged children overall in the District. In response, LAUSD may reduce capacity on some campuses and lower class sizes as the trend in lower enrolment continues.

4.13.4.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Public Services at the state and local levels. As described below, these plans, guidelines, and laws include the following:

- California Education Code
- Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998
- Senate Bill 50
- Open Enrollment Policy (Cal. Educ. Code Sections 48350, et seq.)
- City of Los Angeles General Plan Framework Element
- Los Angeles Unified School District
- LAUSD Strategic Plan 2016–2019

State

California Education Code. Educational services and school facilities for the Project are subject to the rules and regulations of the California Education Code, the California Department of Education (CDE) and governance of the State Board of Education (CBE) (Gov. Code Section 33000, et seq.). The CDE is the government agency responsible for public education throughout the state. With the State Superintendent of Public Instruction, the CDE is responsible for enforcing education law and regulations and for continuing to reform and improve public elementary school, secondary school, childcare programs, adult education, and preschool programs. The CDE oversees funding, and student testing and achievement levels for all state schools. A sector of the CDE, the SBE is the 11-member governing and policymaking body of the

28 LA Times, https://www.latimes.com/california/story/2022-05-18/l-a-unified-enrollment-expect-to-plummet-leading-to-academic-and-employment-worries Accessed May 20, 2022

California Department of Education (CDE) that sets Kindergarten through 12th Grade (K–12) education policy in the areas of standards, instructional materials, assessment, and accountability. The State also provides funding through a combination of sales and income taxes. In addition, pursuant to Proposition 98, the State is also responsible for the allocation of educational funds that are acquired from property taxes. Further, the governing board of any school district is authorized to levy a fee, charge, dedication, or other requirement against any construction within the boundaries of the district, for the purpose of funding the construction or reconstruction of school facilities.[29]

Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998. Proposition 1A, the Class Size Reduction Kindergarten-University Public Education Facilities Bond Act of 1998 (Ed. Code, Section 100400–100405) is a school construction funding measure that was approved by the voters on the November 3, 1998 ballot. This Act created the School Facility Program where eligible school districts may obtain state bond funds.

Senate Bill 50. The Leroy F. Greene School Facilities Act of 1998 (known as the Greene Act), enacted in 1998, is a program for funding school facilities largely based on matching funds. For new school construction, grants provide funding on a 50/50 State and local match basis. For school modernization, grants provide funding on a 60/40 State and local match basis. Districts that are unable to provide some, or all, of the local match requirement and are able to meet the financial hardship provisions may be eligible for additional State funding.[30]

The Greene Act permits the local district to levy a fee, charge, dedication, or other requirement against any development project within its boundaries, for the purpose of funding the construction or reconstruction of school facilities. The Act also sets a maximum level of fees a developer may be required to pay. Pursuant to Government Code Section 65996, the payment of these fees by a developer serves to mitigate all potential impacts on school facilities that may result from implementation of a project to a less-than-significant level.[31]

Open Enrollment Policy (Cal. Educ. Code Sections 48350, et seq.). The open enrollment policy is a state-mandated policy that enables students located in the LAUSD to apply to any regular, grade-appropriate LAUSD school with designated "open enrollment" seats. Open enrollment seats are granted through an application process that is completed before the school year begins. Under the Open Enrollment Policy,

29 California Education Code Section 17620(a)(1).

30 State of California, Office of Public School Construction, School Facility Program Guide, October 24, 2012, https://www.dgs.ca.gov/-/media/Divisions/OPSC/Services/Guides-and-Resources/SFP_Hdbk_ADA.pdf?la=en&hash=B871984008A7D2E35D16DB50DDE0C87791C294A7 Accessed September 2020.

31 California Government Code Section 65996.

students living in a particular school's attendance area are not displaced by a student requesting an open enrollment transfer to that school.[32]

Regional

Los Angeles Unified School District. As indicated above, the State is primarily responsible for the funding and structure of the local school districts, and in this case, LAUSD. As LAUSD provides education to students in many cities and county areas, in addition to the City, its oversight is largely a district-level issue. Public schools operate under the policy direction of elected governing district school boards (elected from the local area) as well as by local propositions which directly impact the funding of facility construction and maintenance. Pursuant to the Greene Act, LAUSD collects developer fees for new construction within its boundaries. The LAUSD School Facilities Needs Analysis has been prepared to support the school district's levy of the fees authorized by Section 17620 of the California Education Code. Payment of these fees would be mandatory for the Project Applicant and would fully mitigate any impact upon school services generated by the Project.[33]

LAUSD Strategic Plan 2016–2019. The LAUSD Strategic Plan 2016–2019 (Strategic Plan) represents the LAUSD's framework towards a commitment to 100 percent graduation. In following the Strategic Plan's fundamental strategy, the LAUSD will direct its efforts and resources to recruit, develop, and support principals and teachers in creating a learning environment that ensures 100 percent of students achieve and graduate. The Strategic Plan identified five main objectives: (1) Build a Solid Foundation for Early Learners; (2) Proficiency for All; (3) 100 Percent Attendance; (4) Parent, Community, and Student Engagement; (5) School Safety. Furthermore, the Strategic Plan provides key initiatives to achieve these commitments from which implementation plans will be created. Plans will be structured to include specific action steps, responsibilities, and timelines. As such, the LAUSD will be able to monitor and measure progress and provide accountability during the Strategic Plan's implementation process.

LAUSD Choices Program. LAUSD provides education choices including magnet and permits with transportation (PWT) programs to students residing within the LAUSD boundaries. Students interested in enrolling in LAUSD magnet and PWT programs are required to apply through LAUSD eChoices. Magnet schools under the Choice Program include business, communication arts, center for enriched studies,

Local

City of Los Angeles General Plan Framework Element. Chapter 9, Infrastructure and Public Services of the Framework Element includes goals, objectives, and policies applicable to public schools; these are summarized in **Table 4.13-12**.

Table 4.13-12
Relevant General Plan School Goals, Objectives, And Policies

Framework Element – Chapter 9 Infrastructure and Public Services	
Goal 9N	Public schools that provide a quality education for all of the City's children, including those with special needs, and adequate school facilities to serve every neighborhood in the City so that students have an opportunity to attend school in their neighborhoods.
Objective 9.31	Work constructively with the Los Angeles Unified School District to monitor and forecast school service demand based upon actual and predicted growth.
Policy 9.31.1	Participate in the development of, and share demographic information about, population estimates.
Objective 9.32	Work constructively with Los Angeles Unified School District to promote the siting and construction of adequate school facilities phased with growth.
Policy 9.32.1	Work with the Los Angeles Unified School District to ensure that school facilities and programs are expanded commensurate with the City's population growth and development.
Policy 9.32.2	Explore creative alternatives for providing new school sites in the City, where appropriate.
Policy 9.32.3	Work with LAUSD to explore incentives and funding mechanisms to provide school facilities in areas where there is a deficiency in classroom seats.
Objective 9.33	Maximize the use of local schools for community use and local open space and parks for school use.
Policy 9.33.1	Encourage a program of decision-making at the local school level to provide access to school facilities by neighborhood organizations.
Policy 9.33.2	Develop a strategy to site community facilities (libraries, parks, schools, and auditoriums) together.

Source: City of Los Angeles 2001

4.13.4.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to schools if it would:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, need for new or physically altered school facilities, the construction of which

34 LAUSD, *e-Choices LAUSD Choices Program*, http://echoices.lausd.net//GeneralInformation.aspx, Accessed September 2016.

could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools.

4.13.4.4 Methodology

For purposes of this EIR, an impact on schools would occur if the Proposed Plan promotes growth patterns resulting in the need for and/or the provision of new or physically altered public school facilities (including charter schools), the construction of which would cause significant environmental impacts in order to maintain service ratios, response times, or other performance objectives. To the extent that the Proposed Plan causes impacts to classroom sizes or school service impacts that results in the construction of new facilities or alterations to existing facilities and the impact from that construction results in a potential impact to the environment, that is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR that relates solely to the level of school services provided to the residents of the CPA, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to schools is based on whether a significant impact will result from the construction of new or expanded school facilities to non-school property.

The discussion of impacts to public schools addresses impacts for the entire CPA. Public school service needs are dependent on the size of the service population and the geographic area served. This analysis estimates the number of students that would be generated by Reasonably Anticipated Development with the Proposed Plan using LAUSD student generation rates and assesses whether existing and planned LAUSD school facilities expected to serve the CPA would have sufficient available capacity to accommodate the students.[35] If there would not be sufficient available capacity, the EIR will consider whether new school facilities will be needed and if foreseeable, whether the construction of the school facilities will result in a significant impact.

4.13.4.5 Impacts

Threshold 4.13-3 **Result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, need for new or physically altered school facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for schools.**

---

35 Los Angeles Unified School District, *Student Generation Rate Calculation*, February 2008; Los Angeles Unified School District, *Commercial/Industrial Development School Fee Justification Study*, February 2018. Available online at: https://achieve.lausd.net/cms/lib/CA01000043/Centricity/Domain/921/LAUSD%20Dev%20Fee%20Study%202018%20FINAL.pdf.

This impact would be less than significant.

The Reasonably Anticipated Development under the Proposed Plan is approximately 115,000 residents, 33,000 housing units, and 39,000 jobs by year 2040, which would be a population increase of approximately 29,000 residents compared to the estimated 2016 population. Non-residential uses, including commercial, industrial and public facility uses, would result an approximately 56,000,000 square feet of new development. As summarized in **Table 4.13-13**, residential and non-residential development accommodated by the Boyle Heights Plan would result in approximately 18,262 new students by 2040. Of this total, an estimated 9,300 would enroll in elementary school, 2,916 would enroll in middle schools, 5,404 would enroll in high school, and 642 would enroll in specialized day care.

Table 4.13-13
Anticipated Student Generation in the Project Area

	Units	Student Generation				
		Elementary (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated

Existing (2016) Total	-	***5,678***	***1,647***	***3,270***	***442***	**11,037**
Future (2040) No Project / Existing Plan						
Residential	28,162 du	6,390	1,721	3,650	546	**12,307**
Non-Residential [2]	75,293,747 sf	1,717	858	1,069		**3,644**
Existing Plan (2040) Total	-	***8,107***	***2,579***	***4,719***	***546***	**15,951**
Proposed Plan (2040)						
Residential	33,117 du	7,514	2,023	4,292	642	**14,471**
Non-Residential[2]	78,318,717 sf	1,786	893	1,112		**3,791**
Proposed Plan (2040) Total	-	***9,300***	***2,916***	***5,404***	***642***	**18,262**

Note: du = dwelling units; sf. = square feet; TK = Transitional Kindergarten; SDC= Specialized Day Care
Non-residential uses include commercial, industrial, and public facilities.
1 Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du
2 Non-residential uses can generate increases in student enrollment when local employees opt to send their children to schools in the area of their employment. Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Nonresidential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

As shown in **Table 4.13-11**, LAUSD enrollment forecasts are limited to five-year increments extending to 2020-2021, and do not extend out to 2040. Thus, a comparison to LAUSD forecasts for the plan horizon year

is not possible. However, LAUSD's Program EIR for the School Upgrade Program cites declining enrollment across LAUSD of approximately four percent by 2030.[36] (See Program EIR page 4-3 and 4-4) and this is supported by recent LAUSD data. Additionally, the COVID-19 pandemic has accelerated the declining enrollment due to increases in remote learning. Declining enrollments are also a result of families moving to more affordable areas outside of the City and the growth of charter schools. LAUSD's Choices program provides families with the ability to send their children to a school other than their 'home' school. LAUSD also offers 'zone of choice' which allows children to attend any one of the schools within a given neighborhood. Together these programs help relieve overcrowding at schools that are operating at or above capacity. Independent charter schools also help alleviate schools that are operating at or over capacity by providing additional schooling options.

Within the CPA boundaries, there are several private schools, including parochial schools. These schools are open to students within and outside of the Boyle Heights CPA. With population growth through 2040, it is reasonable to assume that these schools would also increase capacity which will further alleviate pressure on the LAUSD system. Furthermore, there have been recent investments by LAUSD to expand school capacity. LAUSD has constructed 131 new schools between 2010 and 2014 as part of its New School Construction Program to address overcrowded conditions.[37] Since 2014, more than 170,000 new seats have been added to the district.[38] For the 2018-2019 school year, 35 new magnet schools/centers were made available for LAUSD students under the LAUSD Choices program. Of the 35 new magnet schools/centers, one would be located at a school serving the Project Area CPA: Hollenbeck Middle School Law/Public Service Magnet. In addition, Roosevelt High School is undergoing a major renovation to modernize the existing campus to be completed in 2022.[39]

LAUSD's Facilities Division monitors growth and school capacity and determines future school needs. Due to declining enrollment and the addition of several new schools in the CPA, it is unlikely that LAUSD will need to expand existing schools and/or provide new facilities in order to accommodate the additional students generated as a result of the Proposed Plan.

---

37 Los Angeles Unified School District. Facilities Project Execution. Available online at: https://www.laschools.org/new-site/project-execution/, accessed May 10, 2022.

38 Los Angeles Unified School District, Facilities Services Division. Available online at: https://www.laschools.org/new-site/, accessed May 11, 2022.

39 LAUSD Facility Services Division Strategic Execution Plan, 2017 http://www.laschools.org/documents/download/about_fsd/sep/2012_consolidated_strategic_execution_plan/2017_Facilities_Services_Division_SEP.PDF?version_id=313448462

General Plan Framework Element Policies 9.31.1, 9.32.1 through 9.32.3, 9.33.1, and 9.33.2 require the City to participate and integrate incentives for funding facilities in areas with deficiency in classroom seats; publish demographics and population estimates for school planning; to cooperate with LAUSD to expand school facilities commensurate with population growth; to explore alternatives for new school sites; and to strategize on planning and access for school facilities. Additionally, state mandated school facility fees pursuant to Gov. Code Section 65995 are required for new development, which would help fund schools.

In the unlikely event LAUSD constructs a new school or physically alters an existing facility, all laws will be complied with and such development would not be anticipated to have different impacts from other infill development analyzed in this EIR. Any unique site specific impacts would be speculative. A project-specific environmental analysis would be required to address site-specific environmental concerns.

As a result, the Proposed Plan would not result in adverse impacts associated with the provision of new or expanded school facilities, and impacts would ***be less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.13.4.6 Cumulative Impacts

The geographic context for this cumulative analysis is the City as served by LAUSD. The Proposed Plan along with cumulative projects from other plans (such as surrounding community plans, the Los Angeles County General Plan and SCAG's RTP/SCS) could increase student enrollment possibly causing the need for new or expanded facilities. However, as LAUSD recently constructed schools throughout the City and is now experiencing declining enrollment, the construction of new schools is not anticipated to be necessary. LAUSD's Facilities Division monitors growth and school capacity and determines future school needs. Appropriate school fees would be paid by future development to ensure that new development under the Proposed Plan would bear its fair share of the cost of accommodating additional students generated. Any school construction project that would result from cumulative growth would be subject to additional environmental review. In general, impacts as a result of construction of new schools would be confined to the immediate area of each school. Therefore, the Proposed Plan would not make a cumulatively considerable contribution to impacts related to school capacity and new school construction. Impacts would be less than significant.

4.13.5 LIBRARIES

4.13.5.1 Existing Environmental Setting

The Los Angeles Public Library (LAPL) System provides library services for the City of Los Angeles. The LAPL System includes the Central Library, 8 regional branch libraries, 72 community branches, and 4 bookmobiles. The LAPL collection includes more than 6.5 million items, including digital and print items that are borrowed more than 15 million times a year. The library system also offers an array of other services to the LA community, such as homework help, story-time, professional development services, lecture series, music and arts events, and a summer reading series for kids. In total, LAPL offers more than 18,000 public programs a year.[40] LAPL members have access to materials housed at libraries throughout the LAPL system through the library loan program and can pick up materials at whichever library is most convenient. All branch libraries also provide free access to computer workstations, which allow patrons to fully access the Internet and the LAPL's electronic resources, including the online catalog, subscription databases, word processing, language learning, and collections of historic documents and photographs. The LAPL website is also specially designed to allow accessibility for children, teens, and Spanish-speakers.

The LAPL operates three libraries within the CPA, listed in detail in **Table 4.13-14**. **Figure 4.13-3, Public Libraries Serving Boyle Heights Community Plan Area,** shows the location of these libraries. Combined, these libraries serve a population of approximately 76,198 residents and provide approximately 61,288 total volumes of materials.[41]

Table 4.13-14
Public Libraries Serving Boyle Heights Community Plan Area

Library / Address	Collection Size	Building Size (Square Feet)	Population Served (Persons)	Square Feet per Person	Volumes per Person
Malabar Branch Library 2801 Wabash Avenue Los Angeles, CA 90033	30,288	6,000	29,518	.20	1.03
Benjamin Franklin Branch Library 2200 E. 1st Street Los Angeles, CA 90033*	NA	NA	NA	NA	NA

40 Los Angeles Public Library (LAPL). 2015. Los Angeles Public Library Strategic Plan. 2015-2020.

41 The Benjamin Franklin Library is closed for renovation with no anticipated reopening date.

Library / Address	Collection Size	Building Size (Square Feet)	Population Served (Persons)	Square Feet per Person	Volumes per Person
Robert Louis Stevenson Branch Library 803 Spence Street Los Angeles, CA 90023	31,000	6,000	46,680	.13	.66

* *Temporarily closed for facility maintenance.*
Source: Los Angeles Public Library, Library Facilities Division; Impact Sciences, 2021. Available online at: https://www.lapl.org/branches/central-library/departments

Malabar Branch Library. The Malabar Branch Library currently has a building size of 6,000 square feet. This library branch does not meet LAPL's standard of 14,500 square feet for a service population of 45,000 or more, which gives an approximately three persons per square foot of library space ratio. The Malabar Branch currently offers nearly five persons per square foot of library space ratio. Therefore, there are more people per square foot of library space at the Malabar Branch than what is standardized at LAPL.

Benjamin Franklin Branch Library. The Benjamin Franklin Branch Library is currently closed to the public and undergoing renovation. There is no anticipated re-opening date.[42]

Robert Louis Stevenson Branch Library. The Robert Louis Stevenson Branch Library currently has a building size of 6,000 square feet. This library branch does not meet LAPL's standard of 14,500 square feet for a service population of 45,000 or more.

There are no current plans for the construction of new library facilities or expansion of existing library facilities in the CPA.[43]

Based on the existing library facilities and its resources, each library facility serving the CPA does not meet the standard of 14,500 square feet for communities with more than 45,000 population, up to 20,000 square feet for a regional branch, or an additional branch library for communities that reach a population of 90,000.[44]

IMPACT SCIENCES

Public Libraries Serving Boyle Heights Community Plan Area

1264.03•05/2022

4.13.5.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Public Services at the local level. As described below, these plans, guidelines, and laws include the following:

- City of Los Angeles General Plan Framework Element
- Los Angeles Public Library (LAPL) Branch Facilities Plan

Federal

There are no federal library services regulations applicable to the Proposed Plan.

State

There are no state library services regulations applicable to the Proposed Plan.

Local

City of Los Angeles General Plan Framework Element. The City's General Plan Framework, adopted in December 1996 and readopted in August 2001, provides general guidance regarding land use issues for the entire City and defines Citywide policies regarding land use, including infrastructure and public services. The City's objectives regarding the provision of adequate library services and facilities to meet the needs of the City's residents are set forth in Objectives 9.20 and 9.21. Objective 9.21 proposes to ensure library services for current and future residents and businesses. Under the Framework Implementation Programs, Plans and Policies Chapter, Framework Policy 13, the Department of Libraries is charged with the responsibility of updating the Library Master Plan to provide sufficient capacity to correct existing deficiencies as well as meet the needs of future population. The implementation plans and policies set forth in the General Plan Framework were addressed through the 2007 LAPL Branch Facilities Plan (Facilities Plan) (discussed further below).[45]

Los Angeles Public Library (LAPL) Branch Facilities Plan. The Los Angeles Public Library Branch Facilities Plan was first adopted in 1988 and later revised in 2007 as Appendix VI of the Los Angeles Public Library Strategic Plan 2007-2010. The 1988 Branch Facilities Plan became the blueprint for the most significant change in the Los Angeles Public Library infrastructure in its history. Based on the Facilities

---

[45] City of Los Angeles, Department of City Planning, City of Los Angeles General Plan Framework, https://planning.lacity.org/cwd/framwk/chapters/09/09.htm#libraries, Objectives 9.20 and 9.21. Accessed September 2020.

Plan and the construction funds obtained in the subsequent bond issues, 90% of the library infrastructure was replaced in a fifteen-year period. The Facilities Plan guides the construction of branch libraries and specifies standards for the size and features of branch facilities based on the population served in each community.[46] Facility needs and population growth projections to the year 2030 are forecasted within the Strategic Plan. The Facilities Plan within the Strategic Plan also outlines guidelines for the expansion of City library facilities based on the location and population served in each community. Under the Facilities Plan, the service population for a branch library is determined by the size of the facility as set forth in **Table 4.13-15.**

Table 4.13-15
LAPL Branch Facilities Plan – Library Building Size Standards

Library Type	Population Served	Size of Facility (sf)
Local Branch	< 45,000	12,500
Local Branch	> 45,000	14,500
Regional Branch	Unspecified	≤ 20,000
Central Library	System-Wide	Unspecified
Level at which new Branch Library is recommended	90,000	12,500-14,500

Source: Los Angeles Public Library, Building on Success: Strategic Plan, 2007–2010, [URL]. Accessed September 2020.

The 2007 Branch Facilities Plan is the basic document driving future development of LAPL facilities. As such, it provides guidance on the preparation of cost estimates for property acquisition, design and construction of proposed library projects, and analyses of options for obtaining funding to build new libraries.

Los Angeles Public Library Strategic Plan 2015-2020. The Los Angeles Public Library Strategic Plan 2015–2020[47] (Strategic Plan) sets forth LAPL's goals and objectives focused on providing library services within existing library facilities. The goals and objectives discussed in the Strategic Plan focus on community development and program expansion in an effort to increase the number of people who use the library services, increase the number of library card holders, and increase residents' overall engagement with the library. Through Measure L, approved in March 2011, LAPL would also be able to expand its services,

46 Los Angeles Public Library, Building on Success: Strategic Plan, 2007–2010, https://www.lapl.org/sites/default/files/media/pdf/about/Strategic_Plan.pdf. Accessed September 2020.

47 Los Angeles Public Library Strategic Plan 2015–2020, June 2015.

collections and technology. The LAPL Strategic Plan 2015-2020 is a five-year plan to detail expanded programs and services, referred to as Key Activities within the Plan, offered by LAPL.[48]

4.13.5.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to other public services (including libraries) if it would:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, need for new or physically altered library facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for library services.

4.13.5.4 Methodology

The following analysis focuses on determining whether the Proposed Plan would result in adverse physical impacts to the environment due to the expansion or construction of new library facilities. Whether additional facilities would be required is determined primarily by considering the adequacy of existing library services, impacts of the Proposed Plan on demand for library services, and input provided by LAPL staff.

The need for or deficiency in adequate library facilities to serve the residents or users of the CPA is not in and of itself a CEQA impact, but a social or economic impact (*City of Hayward v. B'd of Trustees* [2015]). To the extent that the Proposed Plan causes a need for additional library services and facilities and that results in the construction of new facilities or additions to existing facilities and the impact from that construction results in a potential impact to the environment, that is a CEQA impact that needs to be assessed in this EIR. Any discussion in this EIR that relates solely to the level of library services provided to the residents or users of the CPA and its surrounding community, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to library services is based on whether a significant impact will result from the construction of new or altered library facilities as a result of the implementation of the Proposed Plan.

This analysis estimates the number of residents that would be generated by implementation of the Proposed Plan and assesses whether existing and planned public libraries expected to serve the CPA would have sufficient available capacity to accommodate additional users and whether new facilities would need to be constructed, the construction of which would cause significant environmental impacts.

---

48 Los Angeles Public Library, Strategic Plan 2015-2020, page 6.

4.13.5.5 Impacts

Threshold 4.13-4 **Result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, need for new or physically altered library facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for library services.**

This impact would be less than significant.

The CPA is projected to have approximately 115,000 residents by year 2040, which would be a population increase of approximately 29,000 residents compared to the estimated 2016 population. This population increase is anticipated to increase the demand for library services and resources of the LAPL System. **Table 4.13-14**, identifies libraries within the CPA. However, 75% of Los Angeles residents visit the library less than once a month, and 18% have not visited the library more than once in the last five years.[49] Thus, an increase in residents is unlikely to result in a substantial increase in annual visits to library facilities. Demand for library facilities may also be offset over time due to increased use of digital materials available through LAPL's online catalog; circulation of e-media is expected to increase from 2,200,000 in 2014 to 3,000,000 in 2020.[50]

As discussed above, the libraries serving the CPA do not currently meet LAPL's minimum criteria. Implementation of the Proposed Plan would increase residential population and in turn would increase library demand. The CPA is expected to increase to a population of approximately 115,000 people by 2040. Based on the site selection criteria of 90,000 persons per library branch, as identified in the Branch Facilities Plan, the three existing libraries (once the Benjamin Franklin Branch Library reopens) serving the Boyle Heights Community Plan Area would accommodate the expected population. However, as the two existing facilities do not meet the standards and the third does not have a targeted open date, the demand for library facilities may not be met. However, as described above, overall use of branch facilities is declining in part due to the reliance on digital materials. Further, the construction of any new facility would likely occur on an infill location and would be expected to result in the same types of impacts as described throughout this EIR. Based on the urban location and size, the construction of new libraries or expansion of an existing library would likely result in less than significant impacts and likely would qualify for an infill exemption. Therefore, impacts related to library services would be less than significant.

---

49 Los Angeles Public Library (LAPL). 2015. Los Angeles Public Library Strategic Plan. 2015-2020.

50 *Ibid*.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.13.5.6 Cumulative Impacts

The geographic context for this cumulative analysis is the City as served by the LAPL. Although library requirements are changing with increasing resources being available online, alleviating some of the need for library services and resources, the Proposed Plan along with cumulative projects from other plans (such as surrounding community plans, the Los Angeles County General Plan and SCAG's RTP/SCS) would increase the demand for library services, which may increase the need for additional library facilities. The construction of new library facilities would be confined to the immediate area of each library. No new library facilities are currently planned within the CPA. The reasonably anticipated development growth under the Proposed Plan could cause an increase in demand for libraries services. The Branch Facilities Plan will continue to forecast future demand for library facilities throughout the City and strive to provide adequate facilities and related improvements to serve the existing and future population. The potential for new library construction is speculative at the present time and is, therefore, not analyzed in this document. It is assumed that if new facilities are determined to be necessary at some point in the future, such facilities would occur where allowed under the designated land use. Therefore, the incremental effect of the Proposed Plan with respect to libraries would not be cumulatively considerable. Impacts would be less than significant.

4.13.6 PARKS AND RECREATION

4.13.6.1 Existing Environmental Setting

The City of Los Angeles Department of Recreation and Parks manage and provide parks and recreational services throughout the City. City park and recreation facilities include more than 16,000 acres of parkland with over 444 park sites, including athletic fields, 422 playgrounds, 321 tennis courts, 184 recreation centers, 72 fitness areas, 62 swimming pools and aquatic centers, 30 senior centers, 26 skate parks, 13 golf courses, 12 museums, and 9 dog parks. In addition, the Department of Recreation and Parks also operates 187

summer youth camps and supports the Summer Night Lights gang reduction and community intervention program.[51]

According to the City of Los Angeles Public Recreation Plan, parks can be classified as neighborhood, community, or regional. A neighborhood park should be a minimum of five acres in size (ideally 10 acres), with a service radius of a one-half-mile. A community park should be a minimum of 15 acres in size (ideally 20 acres), with a service radius of two miles. Regional parks are generally more than 50 acres in size and serve the City and region.[52] The Los Angeles County Department of Parks and Recreation manages regional parks, community parks, and golf courses that are available for all county residents to use.

In general, Boyle Heights is mostly built out and contains few areas of natural open space. Land designated Open Space consists of approximately 5 percent (149.3 acres) of the total area in the CPA, with the most significant civic open space being Hollenbeck Park. Currently, there are 16 parks and recreational facilities located within the CPA that immediately serve the residents. These include 0 regional parks, 1 community park~~s~~, 12 neighborhood parks, and 3 pocket parks as shown in **Table 4.13-16**. **Figure 4.13-4, Parks, Open Space, and Recreational Facilities in the Community Plan Area,** shows the locations of the parks and recreational facilities within the Boyle Heights CPA boundaries.

The City's Public Recreation Plan states that to meet long-range recreational standards, a project must have a minimum of two acres of neighborhood and community recreational facilities for every 1,000 persons and a minimum of two acres of neighborhood and local recreational facilities for every 1,000 persons.[53] Local recreation standards are long-range and may not be reached during the life of a Community Plan. As shown in **Table 4.13-16**, approximately 54 acres of recreational facilities are located within the CPA, consisting of 0 acres of regional park facilities, 20.5 acres of community parks, 33 acres of neighborhood parks, and 0.4 acres of pocket parks.

Available online at: https://opr.ca.gov/docs/20200624-PlanningForHealth-LosAngeles-case-study.pdf, accessed on October 6, 2021.

Using factors from the Public Recreation Plan, existing demand is for approximately 850 acres of recreational facilities in the CPA, as detailed in **Table 4.13-17**. Currently, there is not a sufficient amount of total recreational acreage available in sum of pocket, neighborhood, community, and regional parks/recreational facilities. Based on the City's standards, there is a deficit of 137 acres of neighborhood parks and 119.5 acres of community parks in the CPA. No regional parks are located in the CPA. The nearest regional parks which serve the residents of the CPA are Elysian Park, located approximately 0.7 miles northwest, and Debs Park, located approximately 2.3 miles northeast. The City has a parkland acres-to-population ratio of 4.23 acres per 1,000 residents. The CPA has an overall parkland acres-to-population ratio of 0.6 acres per 1,000 residents. The parkland acres-to-population ratio of neighborhood and community parks is also 0.6 acres per 1,000 residents (there are no regional parks in the Plan Area).

Table 4.13-17
Existing Demand for Parks and Recreational Facilities in the Boyle Heights Community Plan Area

Recreational Facility Type	Population (2016)	Demand per 1,000 residents	Demand for Recreational Facilities[1]	Acres of Recreational Space Available	Acres of Surplus[2]	Demand Met
Pocket Parks	86,000	--	0.4	--	--	--
Neighborhood Parks		2 acres	172 acres	33	(139)	No
Community Parks		2 acres	172 acres	20.5	(151.5)	No
Regional Parks		6 acres	516 acres	0	(516)	Yes*
Total		**10 acres**	**860 acres**	53.5	(806.5)	No

Source: Impact Sciences, 2017.
** Regional Park service is measured on a citywide basis. There are adequate regional parks within the City of Los Angeles.*
"—" indicates information is not available.
1 Existing demand is based on open space provisions as provided for each facility type by the City of Los Angeles Public Recreation Plan (i.e., 2 acres for every 1,000 residents for neighborhood facilities; 2 acres for every 1,000 residents for community facilities; 6 acres for every 1,000 residents for regional parks).
2 Parenthesis () denotes a deficient acreage.

As a response to the need for additional park and recreational facilities, Department of Recreation and Parks has implemented the 50 Parks Initiative which aims to better meet the park and recreational needs of the City's diverse communities by substantially increasing the number of citywide facilities, with a specific focus on densely-populated neighborhoods and communities lacking sufficient park space and recreational facilities.[54] The Department of Recreation and Parks is currently seeking opportunities to expand parkland within the CPA but has not yet currently identified specific parcels for acquisition of development.

4.13.6.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Recreation at the state and local levels. As described below, these plans, guidelines, and laws include the following:

- Quimby Act
- City of Los Angeles Charter
- City of Los Angeles General Plan

- Park Proud LA Strategic Plan 2018-2022

State

Quimby Act. California Government Code Section 66477, also known as the Quimby Act, was enacted by the California legislature in 1965. The Quimby Act authorizes cities and counties to enact ordinances requiring the dedication of land, or the payment of fees for park and/or recreational facilities in lieu thereof, or both, by developers of residential subdivisions as a condition to the approval of a tentative tract map or parcel map. As discussed below, the City implemented the Quimby Act in the City through the adoption of Los Angeles Municipal Code (LAMC) Sections 17.12, 12.33 and 19.17.

State Public Park Preservation Act of 1971 (PRC Section 5400–5409). This act provides for no net loss of parkland and facilities by prohibiting cities and counties from acquiring any real property that is in use as a public park for any non-park use unless compensation or land, or both, are provided to replace the parkland acquired.

Local

City of Los Angeles Charter. The City Charter established the Department of Recreation and Parks (RAP) to construct, maintain, operate, and control all parks, recreational facilities, museums, observatories, municipal auditoriums, sports centers and all lands, waters, facilities or equipment set aside or dedicated for recreational purposes and public enjoyment within the City. The Board of Recreation and Parks Commissioners oversees the RAP.

With regard to control and management of recreation and park lands, Section 594(c) of the City Charter provides that all lands set apart or dedicated as a public park shall forever remain for the use of the public inviolate. However, the Board of Recreation and Parks Commissioners may authorize the use of those lands for any park purpose and for other specified purposes.

City of Los Angeles General Plan

Framework Element. The City's General Plan Framework Element (adopted in December 1996 and readopted in August 2001) (Framework) includes park and open space policies for the provision, management, and conservation of Los Angeles' open space resources while addressing the outdoor

recreation needs of the City's residents and is intended to guide the amendment of the General Plan's Open Space and Conservation Elements.

The Framework Chapter 9, Infrastructure and Public Services, contains policies and objectives that address the provision of parks within the City. These standards are addressed in the following policies:

Table 4.13-18
Relevant General Plan Policies

Framework Element - Chapter 6, Open Space and Conservation	
Policy 6.2.1	Establish, where feasible, the linear open space system represented in the Citywide Greenways Network map, to provide additional open space for active and passive recreational uses and to connect adjoining neighborhoods to one another and to regional open space resources.
Policy 6.2.2	Protect and expand equestrian resources, where feasible, and maintain safe links in major public open space areas such as Hansen Dam, Sepulveda Basin, Griffith Park, and the San Gabriel, Santa Monica, Santa Susanna Mountains and the Simi Hills.
Policy 6.4.1	Encourage and seek to provide for usable open space and recreational facilities that are distributed throughout the City.
Policy 6.4.2	Encourage increases in parks and other open space lands where deficiencies exist, such as South East and South Central Los Angeles and neighborhoods developed prior to the adoption of the State Quimby Act in 1965
Policy 6.4.3	Encourage appropriate connections between the City's neighborhoods and elements of the Citywide Greenways Network.
Policy 6.4.5	Provide public open space in a manner that is responsive to the needs and wishes of the residents of the City's neighborhoods through the involvement of local residents in the selection and design of local parks. In addition to publicly-owned and operated open space, management mechanisms may take the form of locally run private/non-profit management groups, and should allow for the private acquisition of land with a commitment for maintenance and public access.
Policy 6.4.6	Explore ways to connect neighborhoods through open space linkages, including the "healing" of neighborhoods divided by freeways, through the acquisition and development of air rights over freeways (such as locations along the Hollywood Freeway between Cahuenga Pass and Downtown), which could be improved as a neighborhood recreation resource.
Policy 6.4.7	Consider as part of the City's open space inventory of pedestrian streets, community gardens, shared school playfields, and privately-owned commercial open spaces that are accessible to the public, even though such elements fall outside the conventional definitions of "open space." This will help address the open space and outdoor recreation needs of communities that are currently deficient in these resources
Policy 6.4.8	Maximize the use of existing public open space resources at the neighborhood scale and seek new opportunities for private development to enhance the open space resources of the neighborhoods.
Policy 6.4.9	Encourage the incorporation of small-scaled public open spaces within transit-oriented development, both as plazas and small parks associated with transit stations, and as areas of public access in private joint development at transit station locations.
Policy 6.4.11	Seek opportunities to site open space adjacent to existing public facilities, such as schools, and encourage the establishment of mutually beneficial development agreements that make privately-owned open space accessible to the public. For example, encourage the improvement of scattered small open spaces for public access in private projects with small branch libraries, child care centers, or decentralized schools.

Framework Element – Chapter 9, Infrastructure and Public Services	
Policy 9.23.2	Prioritize the implementation of recreation and park projects in areas of the City with the greatest existing deficiencies.
Policy 9.23.5	Re-evaluate the current park standards and develop modified standards which recognize urban parks, including multi-level facilities, smaller sites, more intense use of land, public/private partnerships and so on.
Policy 9.23.7	Establish guidelines for developing non-traditional public park spaces like community gardens, farmer's markets, and public plazas.
Policy 9.24.1	Phase the development of new programs and facilities to accommodate projected growth.

Source: City of Los Angeles, The Citywide General Plan Framework, An Element of the City of Los Angeles General Plan, re-adopted 2001.

Service Systems Element - Public Recreation Plan. As a part of the General Plan's Service Systems Element, the Public Recreation Plan (PRP) establishes policies and standards related to parks, and recreational facilities in the City. The PRP was adopted in 1980 by the Los Angeles City Council and amended by City Council resolution in March 2016. The amendments modernize the PRP's recommendations and provide for more flexibility and equity in the distribution of funds used for the acquisition and development of recreational resources. The PRP also addresses the need for publicly accessible neighborhood, community, and regional recreational sites and facilities across the City. The PRP focuses on recreational site and facility planning in underserved neighborhoods with the fewest existing resources and the greatest number of potential users (i.e., where existing residential development generates the greatest demand), as well as areas where new subdivisions, intensification of existing residential development, or redevelopment of "blighted" residential areas creates new demand.

The amended PRP establishes general guidelines for neighborhood, community, and regional recreational sites and facilities that address general service radius and access as well as service levels relative to population within that radius. The PRP also states that the allocation of acreage for community and neighborhood parks should be based on the resident population within that general service radius. Toward this end, the amended PRP recommends the goals of 2.0 acres each of neighborhood and community recreational sites and facilities per 1,000 residents, and 6.0 acres of regional recreational sites and facilities per 1,000 residents. To determine existing service ratios, the RAP commonly uses the geographic area covered by the applicable Community Plan rather than the park service radius. The PRP does not establish requirements for individual development projects.

For a given neighborhood recreational site or facility, the amended PRP does not recommend a specific size, noting only that a school playground may partially serve this function (with up to one-half of its acreage counted toward the total acreage requirement [service level per capita]). The amended PRP does not define a specific service radius for neighborhood recreational sites and facilities, instead recommending

that they should generally be within walking distance and not require users to cross a major arterial street or highway for access.

For community recreational sites and facilities, the amended PRP states that facilities may be of any size, but are generally larger than neighborhood parks, and a high school site may be counted toward half the acreage requirement/service level per capita. The amended PRP does not define a specific service radius for community recreational sites and facilities, instead recommending that they should generally be accessible within a relatively short bicycle, bus, or car trip, and easily accessible.

For regional recreational sites and facilities, the amended PRP states that facilities may be large urban recreational sites or smaller sites or facilities that draw visitors from across the City. The amended PRP does not define a specific service radius or further qualify access, stating only that the service radius should be that within a reasonable drive.

Health, Wellness, and Equity Element. The City's Plan for a Healthy Los Angeles, updated in 2021, which also serves as the City's environmental justice element, lays the foundation to create healthier and equitable communities for all Angelenos. As an Element of the General Plan, it provides high-level policy vision, along with measurable objectives and implementation programs, to elevate health as a priority for the City's future growth and development. Chapter 3 of the Plan, Bountiful Parks and Open Spaces, outlines policies and objectives to increase the availability of parks through park funding and allocation, park expansion, the Los Angeles River, park quality and recreation programs, park safety, local partnerships, water recreation, and active spaces. Specifically, the objectives include:

- Increase the number of neighborhood and community parks so that every Community Plan Area strives for 3 acres of neighborhood and community park space per 1000 residents (excluding regional parks and open spaces).
- Increase access to parks so that 75% of all residents are within a ¼ mile walk of a park or open space facility.
- Increase the number of schools (public, private, and charter) that have shared use agreements for community use outside of normal school hours by 25%.
- Increase the miles of the Los Angeles River that are revitalized for natural open space and physical activity, particularly in low-income areas.
- Increase the number of parks that feature or incorporate universally-accessible features.
- Improve the percentage of citywide population meeting physical fitness standards per week so that 50% percent of the population meets physical activity guidelines.

Los Angeles Municipal Code. In September 2016, the City adopted Ordinance No. 184,505, Parks Dedication and Fee Update Ordinance (Park Fee Ordinance). The aim of the Park Fee Ordinance is to increase the opportunities for park space creation and expand the fee program beyond those projects requiring a subdivision map to include a park linkage fee for all net new residential units. The Park Fee Ordinance amends LAMC Sections 12.21, 12.33, 17.03, 17.12 and 17.58, deletes LAMC Sections 17.07 and 19.01, and adds LAMC Section 19.17. The Park Fee Ordinance increases Quimby in-lieu fees, provides a new impact fee for non-subdivision projects, eliminates the deferral of park fees for market rate projects that include residential units, increases the fee spending radii from the site from which the fee is collected, provides for early City consultation for subdivision projects or projects with over 50 units in order to identify means to dedicate land for park space, and updates the provisions for credits against park fees. The Park Fee Ordinance went into effect on January 11, 2017.

LAMC Section 12.21 G requires that all residential developments containing six or more dwelling units on a lot provide, at a minimum, the following usable open space area per dwelling unit: 100 square feet for each unit having less than three habitable rooms, 125 square feet for each unit having three habitable rooms, and 175 square feet for each unit having more than three habitable rooms. LAMC Section 12.21 G also identifies what areas of a project would qualify as usable open space for the purposes of meeting the project's open space requirements.

As stated in LAMC Section 12.21 G, usable open space is defined as areas designated for active or passive recreation and may consist of private and common areas. Common open space areas must be readily accessible to all residents of the site and constitute at least 50 percent of the total required usable open space. Common open space areas can incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, children's play areas, ball courts, barbecue areas, and sitting areas. A minimum of 25 percent of the outdoor common open space area must be planted with ground cover, shrubs, or trees. Indoor recreational amenities can account for up to 25 percent of the usable open space requirements. Private open space is defined in an area that is contiguous to and immediately accessible from an individual dwelling unit, may have a dimension no less than six feet in any direction and must contain a minimum of 50 square feet, of which no more than 50 square feet per dwelling unit can be counted towards the total required usable open space.

LAMC Section 12.33, Park Fees and Land Dedication, authorized under the Quimby Act, requires developers of most residential projects to dedicate land and/or pay in-lieu fees for parks and recreational facilities. Specific requirements are determined based on the type of project and number of units. Under LAMC Section 12.33 D, the area of land within a residential subdivision that is required to be dedicated for parks and recreational uses is determined by the formulas provide therein. Land dedication and in-lieu fee payment are subject to the restrictions set forth in Section 12.33 (i.e., land must be used for park or

recreational uses and fees must be used for the acquisition or development of, and not the operation or maintenance of, park land).

LAMC Section 12.33 G, Affordable Housing Exemption, allows new residential dwelling units that are rented or sold to persons or households of very low, low, or moderate income to receive an affordable housing exemption from the park fee and land dedication requirement. An affordable housing unit shall receive an exemption from the requirement for dedication of land for park and recreational purposes and/or payment of the park fee if the affordable housing unit is affordable to a household at or below 120 percent of the area median income. In projects with a mix of market-rate and affordable units, only the affordable housing units shall receive this exemption.

LAMC Section 12.33 H, Credits, allows private recreational areas developed within a project site for use by the particular project's residents to be credited as meeting up to 35 percent of the project's calculated land dedication and/or in-lieu fee requirement. Recreational areas that qualify under this provision of LAMC Section 12.33 H include, in part, indoor recreation areas, gyms, swimming pools, and spas (when the spas are an integral part of a pool complex). Furthermore, in accordance with LAMC Section 12.33 H.2, the recreational areas proposed as part of a project must meet the following standards in order to be credited against the requirement for land dedication: (1) each facility is available for use by all of the residents of a project; and (2) the area and the facilities satisfy the park and recreation needs of a project so as to reduce that project's need for public recreation and park facilities.

LAMC Section 21.10.3, Dwelling Unit Construction Tax, establishes the payment of a dwelling unit construction tax of $200 per new residential unit. The tax is to be paid to a "Park and Recreational Sites and Facilities Fund" for the acquisition and development of park and recreational sites and facilities. If park and recreation provisions (i.e., fees, improvements, or land dedication) have been made pursuant to LAMC Section 12.33, the fair market value of those provisions is credited against the payment of this tax.

Pursuant to LAMC Sections 17.12 and 17.58, a final subdivision map shall not be approved or recorded, unless a park fee has been paid or land within the subdivision has been dedicated to the City for park or recreational purposes. Park fee rates for residential subdivision and non-subdivision residential projects are identified in LAMC Section 19.17 and adjusted for inflation annually.

Los Angeles Department of Recreation and Parks 2009 Citywide Community Needs Assessment. In 2009, the Department of Recreation and Parks commissioned an update of the last Recreation and Parks Needs Assessment from 1999 as a preliminary step in developing a citywide park master plan and five-year capital improvement plan. The report provides an inventory of existing facilities, defines geographic areas of need and recommended facilities to serve specific populations, and identifies priorities for additional parks and

recreation facilities. The report provides a more current assessment of conditions and future needs compared to the PRP, while the PRP recommends the ratios of park acreage per person used in the analysis.

Department of Recreation and Parks 50 Parks Initiative. In response to the 2009 Citywide Community Needs Assessment, the Department of Recreation and Parks developed the 50 Parks Initiative with the purpose of substantially increasing the number of parks and facilities available across the City, with a specific focus on densely populated neighborhoods and communities that lack sufficient open space and recreational services.

Park Proud LA Strategic Plan 2018-2022. The Park Proud LA Strategic Plan (Strategic Plan) is the most recent strategic plan for the Department of Recreation and Parks, effective from 2018 until 2022. The Strategic Plan highlights critical work that needs to be accomplished over the next several years to ensure that the City has an accessible, equitable, and first class park system. The Strategic Plan reflects chief priorities of the RAP, confronts new and existing challenges, and lays the framework to pursue new opportunities. Within the Strategic Plan, there are over two dozen outcomes organized under the following seven high-level priority goals:

- Provide safe and accessible parks;
- Offer affordable and equitable recreation programming;
- Create and maintain world class parks and facilities;
- Actively engage communities;
- Ensure an environmentally sustainable park system;
- Build financial strength and innovative partnerships; and
- Maintain a diverse and dynamic workforce.

4.13.6.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to parks and recreation if it would:

- Result in substantial adverse physical impacts associated with the provision of new or physically altered recreational facilities, need for new or physically altered recreational facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for parks. (Based on the nature of the Proposed Plan,

the City finds that this threshold question will be answered in the third threshold questions below, as both threshold questions relates to impacts from the construction of park or recreational facilities.)

- Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.

- Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

4.13.6.4 Methodology

The need for or deficiency in adequate park and recreation facilities to serve the residents or users of the CPA or the City is not in and of itself a CEQA impact, but a social or economic impact (*City of Hayward v. B'd of Trustees* [2015] 242 Cal.App. 4th 833, 843). To the extent that the Proposed Plan causes a need for additional recreational services and facilities and that results in the construction of new facilities or additions to existing facilities and the impact from that construction results in a potential impact to the environment, that is a CEQA impact that needs to be assessed in this EIR. Additionally, the deterioration of existing recreational facilities and parks caused by the Proposed Plan is a CEQA impact that needs to be assessed in the EIR. Any discussion in this EIR that relates solely to the level of park services provided to the residents or users of the CPA and its surrounding community, including any existing or future needs and deficiencies, is for informational purposes only. The ultimate determination of whether there is a significant impact related to park and recreational services is based on whether a significant impact will result from the construction of new or altered park and recreational facilities or where existing park and recreational facilities will be substantially physically deteriorated as a result of the implementation of the Proposed Plan.

This analysis estimates the number of residents that would be generated by implementation of the Proposed Plan and assesses whether existing and planned public parks and recreational facilities expected to serve the CPA would have sufficient available capacity to accommodate additional users and whether new facilities would need to be constructed, the construction of which would cause significant environmental impacts; and whether the Proposed Plan will result in substantial physical deterioration to park and recreational facilities.

4.13.6.5 Impacts

Threshold 4.13-5 **Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated.**

This impact would be significant and unavoidable.

Reasonably anticipated development within the CPA is approximately 115,000 residents, 33,000 housing units, and 39,000 jobs by year 2040, which would be a population increase of approximately 29,000 residents compared to the estimated 2016 population**.** This increase in population would augment the use of existing and planned parks and recreational facilities in and new the CPA, particularly in residential areas. Residential development would be encouraged along mixed-use corridors and through the Community Benefits Program, which expands areas where affordable housing production is incentivized beyond the Citywide TOC Tiers. The addition of residential development in the CPA and associated population growth and park use would contribute to the deterioration of the existing and planned recreational facilities listed in **Table 4.13-18**.

Developers of future residential projects in the CPA would be required to pay park mitigation fees (for non-subdivision projects) or dedicate land or pay Quimby in-lieu fees (for subdivision projects). Park fee amounts are reviewed and updated annually by the City. Payment of impact fees and the anticipated enhancement or maintenance of facilities with funds provided by these fees would help offset the deterioration of existing recreational facilities.

The Proposed Plan aims to broaden the application of public realm and open space strategies to include major streets, the Los Angeles River, and local cemeteries. The Plan envisions a diverse and integrated network of pedestrian pathways, paseos, plazas, green spaces, and landscaped streets that foster social life and support community identity. In addition, the Sixth Street Viaduct is expected to be completed in 2022, and RAP is seeking additional opportunities to expand park opportunities within the CPA through construction of the 6th Street Park, River, Arts & Connectivity (PARC) Project. Moreover, future implementation actions specifically Public Realm and Open Space Policy 12 aims to revitalize the area adjacent to the Los Angeles River consistent with the LA River Revitalization Master Plan to restore and revitalize an 11-mile stretch of the Los Angeles River, while prioritizing public access to this public resource in densely populated communities such as Boyle Heights. The new zoning Frontage District requires that buildings have frequent breaks between them to increase pedestrian access as well as promote visual connections to the River. Landscaped buffers on frontages facing the River and transparency features embed existing regulations found in the River Improvement Overlay (RIO) into the zoning and aim to bring

more public green space to developments near the Los Angeles River. The Plan also envisions more public and open space created through private development projects, through a requirement for Lot Amenity space on each development site and provides an incentive for developments that make the Lot Amenity space publicly accessible.

The Proposed Plan supports this effort through inclusion of policies to support the provision of new recreational facilities, such as the following:

- **LU 29.2** Support the development of more open and public space opportunities that facilitate space for multiple activities, including those at a safe distance from other users, and an overall more active lifestyle.

The Proposed Plan's Public Realm and Open Space Goal 3 states the Los Angeles River serves as a natural and recreational public amenity that is well-connected to surrounding neighborhoods. It recommends implementing the following policies:

- **PO 3.1** Create a network of linked public spaces along the rail-River corridor that provide safe and attractive public access to the Los Angeles River through gateways, plazas, paseos, and pedestrian paths by repurposing underutilized alleys and decommissioned rail spurs.

- **PO 3.2** Design urban trails and paths that connect the eastside to the river adjacent areas using pervious paving and native, drought-tolerant, and watershed friendly landscaping to encourage biodiversity and maximize water recapture.

- **PO 3.3** Utilize bridges spanning the Los Angeles River as gateways and opportunities for placemaking that highlight the history of the community's relationship to the River.

- **PO 3.4** Provide convenient and visually interesting paths of travel for pedestrians from nearby neighborhoods and transit stations to destinations along the River.

Finally, **PO Goal 5** states that cemeteries serve as safe and accessible places within neighborhoods and encourages improvement to accessibility to cemeteries and enhance the recreational path around Evergreen Cemetery with improved lighting and consider extending the path along the access roads within the cemetery grounds.

To meet long-range recreational standards identified in the City's Public Recreation Plan, a minimum of two acres of neighborhood and community recreational facilities for every 1,000 persons should be

provided to the community.[55] To meet short- and intermediate-range recreational standards, a minimum of one acre of neighborhood and community parks for every 1,000 persons. The population of the CPA is anticipated to increase to approximately 115,000 people in 2040, which is an incremental increase of 29,000 people.

As shown in **Table 4.13-19**, Reasonably Anticipated Development associated with the Proposed Plan would create demand for an additional 290 acres of park space within the CPA. Neighborhood parks are in an existing deficit of 139 acres with 33 acres of neighborhood parks currently available; the demand in 2040 would be for 58 additional acres. Thus, the demand is anticipated to not be met. Community parks are currently in an existing deficit of 151.5 acres with 20.5 acres of community parks available; the demand in year 2040 would be for an additional 58 acres. Thus, the demand is not anticipated to be met. Demand for regional parks is currently being met on a citywide basis. There are several parks within the vicinity of the CPA, such as Elysian Park, Debs Park, and Griffith Park, which all serve residents of the CPA. Within the CPA, the Sixth Street Viaduct is currently under construction and expected to be completed in 2022. The Sixth Street Viaduct project will construct a 12-acre Park, Arts, River, and Connectivity (PARC) improvement project that will connect Boyle Heights and the Arts District. The 12-acres of open and recreational space will alleviate some of the park deficit within the CPA and are assumed within the 2040 demand.

Table 4.13-19
Future (2040) Demand for Recreational Facilities in the Community Plan Area

Facility	Reasonably Anticipated Development	Demand for Recreational Facilities per 1,000[1]	Acres of Recreational Space Available	Existing Deficit (2016)	Additional Acres of Demand in 2040	Demand Met
Pocket Parks	115,000 population	--	0.4	--	--	--
Neighborhood Parks		2 acres	33	139	58	No
Community Parks		2 acres	20.5	151.5	58	No
Regional Parks		6 acres	0	516	174	No
TOTAL		**10 acres**	**53.5**	**806.5**	**290**	**No**

Note:
[1] Recommended standard per the City of Los Angeles Public Recreation Plan (i.e., 2 acres for every 1,000 residents for neighborhood facilities; 2 acres for every 1,000 residents for community facilities; 6 acres for every 1,000 residents for regional parks).
Source: Impact Sciences, 2021

55 City of Los Angeles, *General Plan Public Recreation Plan*, 1980. https://planning.lacity.org/Code_Studies/GeneralElement/PublicRecreationPlan.pdf

Existing regulations and Proposed Plan policies would provide funding for the provision of new recreational facilities and some Proposed Plan policies would also support the maintenance of existing facilities. However, as discussed in the Setting, existing and planned parks serving the Boyle Heights Plan Area currently fail to meet the City's goal for neighborhood and community parks; therefore, although recreational needs are often met in different ways in highly urban settings (e.g., use of private gymnasiums and recreational facilities, use of public rights-of-way for walking and jogging), the increase in population accommodated by the Proposed Plan combined with the constraints on new park development in urbanized areas of Los Angeles would be expected to substantially increase demands upon existing recreational facilities. All of the parks listed in **Table 4.13-16** could be adversely affected by the increase in population for the Proposed Plan, which may cause and accelerate deterioration of those existing parks. Impacts related to the deterioration of existing parks would be ***potentially significant***.

Mitigation Measures

The Quimby Act requires developers of residential projects (except affordable housing units and second dwelling units) to dedicate land for park and recreation purposes, or pay a fee in lieu thereof, prior to obtaining a permit. As discussed above, the city collects fees, will require open space under updated fee and Quimby program, but there is not adequate land at reasonable costs to meet the City's park needs. The City has not identified any feasible mitigation to address the impact related to deterioration of existing parks.

Significance After Mitigation

Significant and unavoidable as to deterioration of existing parks.

Threshold 4.13-6 **Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.**

This impact would be less than significant.

Based on the City's two acres of neighborhood and community parks each per 1,000 persons goal, development facilitated by the Proposed Plan would generate demand for up to 290 acres of new parks to meet City standards. For this reason and because Proposed Plan policies support the development of new park facilities, the Proposed Plan is anticipated to result in the construction of new recreational facilities. However, several constraints would limit the number and size of new park facilities constructed in the CPA, including the following:

1. A scarcity of vacant or underused land

2. High cost of real estate in Los Angeles

3. Competition with other identified community priorities, such as affordable housing

The 50 Parks Initiative exemplifies the kind of park facilities the City is currently implementing and is likely to continue implementing in the dense urban areas of Los Angeles. Most of the parks are pocket parks less than an acre in size with playground structures and exercise machines. These parks typically include zero or minimal structures and green space, and, because they are intended to serve the local community and be accessible by foot and bike, do not provide parking. The construction and operation of such small-scale facilities would be expected to have minimal environmental impacts. For example, it is anticipated that these parks would be located on vacant lots lacking biological or cultural resources; generate minimal vehicle traffic to the site, which would limit air quality, greenhouse gas, noise, and transportation impacts; and be able to accommodate a limited number of people due to their small size, which would reduce park noise levels.

Construction of new or expanded neighborhood or pocket park facilities to serve the CPA would occur in an urban center. Construction of new parks would be required to comply with applicable federal, State, and local regulations and policies discussed in this EIR, such as NPDES permit requirements, the City's Tree Ordinance and Noise Ordinance, and the California Building Code, including CALGreen requirements.

Potential environmental impacts of construction and operation of any new parks, as an allowed land use, have been evaluated throughout this EIR. Construction and operational impacts to air, noise, traffic, as well as other impacts of new developments are discussed throughout this EIR. It is not foreseeable that impacts from the construction of new or expanded parks in the CPA would have greater or different impacts than those identified in this EIR for construction or operations. Based on the urban location and the limited land available, the construction of a new park facilities would likely qualify for an infill exemption or result in less–than-significant impacts with standard regulatory compliance measures and project specific design features or project specific mitigation measures identified through a project EIR or mitigated negative declaration. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Furthermore, the construction of a new park facility or expansion of an existing park facility would require a project-specific environmental analysis under CEQA to address any site-specific environmental concerns. Therefore, impacts related to recreational facilities would ***be less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.13.6.6 Cumulative Impacts

Future citywide development is expected to increase the City's residential population from just over 4 million persons in 2016 to more than 4.6 million persons in 2040, an increase of about 600,000 residents. This increase would exacerbate the existing need for new or expanded recreational facilities over time. In the absence of new parks, the citywide increase in park demand would be expected to accelerate the deterioration of existing parks, which would be a potentially significant cumulative impact. As discussed under **Impact 4.13-4**, the Proposed Plan would result in a potentially significant impact related to the deterioration of existing parks serving the CPA since there is not adequate space to provide sufficient park acreage to meet the projected increase in demand for parks based on the City's adopted standards. This would constitute a cumulatively considerable contribution to the significant cumulative impact related to park deterioration. The Quimby Act and Mitigation Fee Act would ameliorate park and recreational demands but likely not enough to meet all the demand. As discussed above, given the existing deficit of neighborhood and community parks, the analysis identifies a significant impact of the Project on the deterioration of existing recreational and park facilities. Therefore, Proposed Plan would make a substantial contribution to cumulative park impacts; thus, its cumulative impact is significant and unavoidable.

With respect to the construction of new parks, the City is currently in the process of constructing new parks and recreational facilities to serve its residents, as exemplified by the 50 Parks Initiative, and is anticipated to continue to do so in the future to meet increasing demand for parks. The City has approved the development of Sixth Street PARC (Park, Arts, River, and Connectivity Improvements), a 12-acre recreational space under the Sixth Street Viaduct. Construction is expected to begin in 2022. Expansion or construction of new pocket, neighborhood, community, and regional parks, or other recreational facilities such as the Sixth Street PARC, would have physical impacts to the environment (e.g., emissions of air pollutants, aesthetics impacts, noise impacts) that may be cumulatively significant. However, these impacts are likely to be localized and construction is not likely to overlap. As a result, it is not anticipated that the Proposed Plan will result in cumulative impacts.

As discussed under **Impacts 4.14-5,** the Proposed Plan would not result in a significant impact because it would not involve the development of new parks with the potential to result in significant environmental

effects. As such, the Proposed Plan would not substantially contribute to the potentially significant cumulative impact associated with new park construction. Cumulative impacts are less than significant

4.14 TRANSPORTATION & TRAFFIC

4.14.1 INTRODUCTION

This section provides an overview of existing and potential future transportation and mobility conditions in the Boyle Heights CPA. Topics addressed in this section include the environmental setting, circulation and mobility systems, regulatory framework, thresholds of significance, methodology, and mitigation measures related to transportation impacts.

4.14.2 EXISTING ENVIRONMENTAL SETTING

Boyle Heights Community Plan Area Overview

The project study area is the Boyle Heights CPA, which is located in the City of Los Angeles east of downtown Los Angeles. The analysis evaluates the transportation network within the boundaries of the CPA as well as the surrounding transportation network that could be potentially impacted by the Proposed Plan. For the purposes of the EIR transportation impact analysis, Existing Conditions (baseline) is defined as Year 2016, which corresponds to the date of the release of the Proposed Plan's NOP.[1]

Boyle Heights, like many other urban areas throughout the country, experiences significant traffic congestion. Despite an extensive street network and various transit options, vehicular circulation continues to deteriorate due to historical over-reliance on the car as the primary mode of transportation. The combination of oversaturated roadways, and unreliable travel times for autos and bus transit underlie the need for creating a transportation network for the CPA that will better serve all modes of transportation, improve the efficiency of the overall system, and enhance the livability along major boulevards.

The CPA is served by a network of roadways (called Boulevards, Avenues, Collector Streets, and Local Streets). Bus transit lines operate on several arterials. Metro, the primary transit provider in the region, also maintains a light rail route, the Metro L Line, which runs both at grade and below grade within the CPA. Pedestrian facilities primarily consist of sidewalks adjacent to roadways, and a limited bicycle network is provided. The transportation network in the CPA is primarily auto- and bus transit-oriented.

Regional access to Boyle Heights is provided by the San Bernardino Freeway (I-10 Freeway) and Hollywood Freeway (US 101) traversing through the northern portion of the Boyle Heights CPA and Interstate 5 (I-5) and the Pomona Freeway (SR-60) traversing through the southern portion of the CPA. There are several key Boulevards and Avenues, as well as Collector and Local Streets. Major east-west

[1] **Appendix B, Methodology**, of this DEIR describes the data sources and methodologies used in the identification of the existing conditions and future projections, and additional discussion on the 2016 baseline.

corridors include (from north to south) Marengo Street, Wabash Avenue, Cesar E Chavez Avenue, 1st Street, 4th Street, Whittier Boulevard, and Olympic Boulevard. Major north-south corridors include (from west to east) Mission Road, Soto Street, Lorena Street, and Indiana Street.

Highway and Street System

Boyle Heights Community Plan Area Highway and Street System

The roadway network in the CPA ranges from major freeways, such as US-101, I-5, I-10, and SR-60, to neighborhood-serving local roadways. **Figure 4.14-1, Existing Roadway Network**, displays the roadways within the CPA and illustrates the classification of roadway facilities. The Boyle Heights CPA contains the following types of facilities based on the City's Mobility Plan 2035 and Complete Streets Design Guide as described above: Boulevard I, Boulevard II, Avenue I, Avenue II, Avenue III, Collector Street, Industrial Collector Street, Local Street, and Modified Streets. Below is a brief description of the types of facilities in the City based on the City's Mobility Plan 2035[2] and Complete Streets Design Guide.[3]

- **Boulevard I (Major Highway Class I).** Class I Boulevards are generally defined as having three to four lanes in each direction along with a median turn lane. The width of a Class I Boulevard is usually 100 feet, with a typical sidewalk width of 18 feet and a target operating speed of 35 miles per hour (mph).

- **Boulevard II (Major Highway Class II).** Class II Boulevards are generally defined as having two to three lanes in each direction along with a median turn lane. The width of a Class II Boulevard is usually 80 feet, with a typical sidewalk width of 15 feet and a target operating speed of 35 mph.

- **Avenue I (Secondary Highway).** Class I Avenues typically have one to two lanes in each direction, a roadway width of 70 feet, a sidewalk width of 15 feet and a target operating speed of 35 mph. An Avenue I typically includes streets with a high amount of retail uses and local destinations.

- **Avenue II (Secondary Highway).** Avenue II streets usually have one to two lanes in each direction, with a typical roadway width of 56 feet, a typical sidewalk width of 15 feet and a target operating speed of 30 mph. Such streets are typically located in parts of the City with dense active uses, and a lively pedestrian environment.

---

2 Mobility Plan 2035: An Element of the General Plan. Adopted September 7, 2016. Available: https://planning.lacity.org/odocument/523f2a95-9d72-41d7-aba5-1972f84c1d36/Mobility_Plan_2035.pdf. Accessed August 2021

3 Complete Streets Design Guide. Adopted August 11, 2015. Available: https://losangeles2b.files.wordpress.com/2015/05/2015_csdg_web-4-22.pdf. Accessed May 2020.

- **Avenue III (Secondary Highway).** Avenue III streets are defined to have one to two lanes in each direction, with a roadway width of 46 feet, a sidewalk width of 15 feet, and a target operating speed of 25 mph. This classification was developed to maintain roadway width in older, more historic parts of the City.

- **Collector Street.** Collector Streets generally have one travel lane in each direction, with a roadway width of 40 feet and a sidewalk width of 13 feet. The target operating speed for Collector Streets is 25 mph. Such streets are typically intended for vehicle trips that start or end in the immediate vicinity of the street.

- **Industrial Collector Street.** Industrial Collector Streets vary from normal collector streets in that larger curb returns are incorporated to allow for the wider turning radii of trucks.

- **Local Street Standard.** Local Street Standard roadways typically have one lane in each direction, and are designed to have a 36-foot width, 12-foot sidewalks, and a target operating speed of 20 mph. Such streets are not designed for through traffic; rather, their focus is to allow access to and from destination points. Unrestricted parking is typically available on both sides of the street.

- **Local Street Limited.** Local Street Limited roadways typically have one lane in each direction, and are designed to have a 30-foot width, 10-foot sidewalks, and a target operating speed of 15 mph.

- **Industrial Local Street.** Although similar to the normal local streets, Industrial Local Streets differ primarily in width for the purpose of providing adequate space for trucks to maneuver. The typical roadway width for an Industrial Local Street is 44 feet, with 10-foot sidewalks and a target operating speed of 20 mph.

- **Pedestrian Walkway.** Pedestrian Walkways are designed for pedestrian use but are also appropriate for slow-moving bicyclists. Pedestrian Walkways have a width of 10 to 25 feet.

- **Shared Street.** Shared Streets provide a slow-speed environment where cars, bike, pedestrians, and scooters are able to comfortably utilize the street. Shared Streets have a minimum width of 20 feet with 5-foot buffer zones and a target operating speed of 5 mph.

- **Access Roadway.** Access Roadways are designed to have a width of 20 feet and are limited to private streets only that access no more than four dwelling units and are a maximum of 300 feet in length.

- **One-Way Service Road – Adjoining Arterial Street.** One-Way Service Roads typically have a width of 12 to 18 feet with a 3-foot curb separation from arterial streets.

- **Bi-Directional Service Road – Adjoining Arterial Streets.** Bi-Directional Service Roads typically have a width of 20 to 28 feet with a 3-foot curb separation from arterial streets.

- **Hillside Collector Street.** Hillside Collector Streets vary from normal collector streets in that sidewalks have a width of 5 feet and the target operating speed is 15mph. On-street parking is provided on both sides of the street.

- **Hillside Local Street.** Hillside Local Streets vary from normal local streets in that sidewalks have a width of 4 feet and the target operating speed is 15 mph. On-street parking is provided on both sides of the street.

- **Hillside Street Standard.** Hillside Street Standard roadways typically have one lane in each direction and are designed to have a 28-foot width, 4-foot sidewalks, and a target operating speed of 10 mph. On-street parking is provided on one side of the street.

- **Hillside Street Limited.** Hillside Street Limited roadways typically have one land in each direction and are designed to have a 20-foot width, 3-foot sidewalks, and a target operating speed of 10 mph. On-street parking is provided on one side of the street.

- **Modified Streets.** Many streets are identified under a specific roadway classification, but with a modification generally due to available width on smaller, historic streets. In these cases, typical number of lanes and traffic volumes are similar to the non-modified versions, but lane widths or available parking may be diminished.

- **Signalized Intersections and Traffic Control Devices.** The City of Los Angeles' Automated Traffic Surveillance and Control (ATSAC) system is a computer-based traffic signal control system that monitors traffic conditions and system performance to allow ATSAC operations to manage signal timing to improve traffic flow conditions. This system allows monitoring and control of the signal from a central Traffic Operations Center at City Hall. The importance of linking to the ATSAC system is the ability to coordinate the signals in relationship with other signals along a travel corridor. Signal coordination minimizes delay due to stops and enhances vehicle flow. Studies by LADOT and independent third parties have shown that the ATSAC system reduces congestion and increases average travel speeds.[4] The Adaptive Traffic Control System (ATCS) is an enhancement to ATSAC and provides fully traffic-adaptive signal control based on real-time traffic conditions. In addition, LADOT staff can manually adjust traffic signals remotely from the department's command center to respond

4 Los Angeles Signal Synchronization Fact Sheet. LADOT. February 14, 2016. Accessed July 27, 2017: http://ladot.lacity.org/sites/g/files/wph266/f/LADOT%20ATSAC%20%26%20Signals%20_%20Fact%20Sheet%202-14-2016.pdf

to collisions, weather, special events, and other emergencies. All signalized intersections in the Proposed Plan Area are currently operating under the City's ATSAC system and ATCS control.

SOURCE: City of Los Angeles, 2020

FIGURE **4.14-1**

IMPACT SCIENCES

Existing Roadway Network

Existing Transportation Operations

This section presents existing traffic conditions by applying vehicle miles traveled (VMT) to evaluate significant transportation impacts under CEQA. VMT is a measure of the number of miles driven within a defined area and are based on the number of Vehicle Trips (VT) multiplied by the average trip lengths in miles for various trip types. To obtain an average VMT per service population (i.e., total population and employment in the CPA), the total VMT is divided by the total population and employees within the area of analysis. The section that follows provides a brief summary of these characteristics for the City of Los Angeles and provides a detailed summary of these characteristics for the Boyle Heights CPA. For more information on the use of VMT as an impact threshold, see **Section 4.14.5, Thresholds of Significance**.

Citywide Existing Transportation Operations

The City of Los Angeles' Travel Demand Forecasting (TDF) Model estimates the mode split of existing (2016) peak period trips. It is estimated that nearly 80 percent of citywide peak period person trips are made by automobile, more than 13 percent by walking, almost 5 percent by transit, and more than 1 percent by bicycle.

Boyle Heights Community Plan Area Existing Transportation Operations

Vehicle Miles Traveled

The trip generation estimated by the City of Los Angeles TDF model was categorized according to the origin and destination of each trip. Internal-to-Internal (II) trips remain within the CPA. Internal-to-External (IX) trips originate within the CPA and terminate at an outside destination. External-to-Internal (XI) trips originate outside the CPA and terminate within it. The VMT calculation accounts for all internal (II) trips and trips that begin or end (IX or XI) within the CPA, as these trips are generated by or attracted to land uses within the Boyle Heights CPA. The travel behavior effects of land use and network changes in Boyle Heights can be understood by measuring the VMT of trips originating in and/or destined for the CPA.

VMT is reported as Total Daily VMT per Service Population, which equates to all VMT for the CPA divided by the number of people living and working within the CPA. For more information on the use of VMT and service population, see **Section 4.14.5, Thresholds of Significance.**

An alternative method for measuring VMT is known as the "boundary method", which accounts for all vehicle miles traveled strictly within the border of a defined area. This method would include VMT for trips passing through, but not originating in or destined for, the CPA. Although a valid method for

measuring VMT, it less effectively measures the regional travel effects of Proposed Plan area land uses, and includes travel that passes through the CPA, which is unrelated to the Community Plan land uses. This method was not used to calculate VMT for the purposes of this report.

The tables below summarize the travel characteristics under Existing Conditions for the CPA based on the City's 2016 model. **Table 4.14-1** presents the model estimates of vehicle mode split for automobiles, transit, bicycles and walk trips. According to model estimates, approximately 24% of all trips within the CPA are made by transit, walking or biking. This is 4% more than trips across the City of Los Angeles at large.

Table 4.14-1
2016 Mode Split

Travel Mode	Boyle Heights Community Plan Area Percentage (%)	Citywide Percentage
Automobile	76%	80%
Non-Automobile (transit/bike/walk)	24%	20%

Source: US Fact Finder, Zip Codes 90023, 90033, 90063.

Table 4.14-2 summarizes the Daily Household and Daily Work VT and VMT for existing conditions within the CPA, based on the City's 2016 model. **Table 4.14-3** summarizes the Daily VT and VMT Citywide. **Table 4.14-4** summarizes the Daily VT and VMT Regional-wide based on 2016 SCAG TDF model.

Table 4.14-2
2016 Boyle Heights CPA Daily Vehicle Trips and Vehicle Miles Traveled

Transportation Metrics	Daily Total
Vehicle Trips (VT)	262,513
Total Vehicle Miles Traveled (VMT)	2,968,948
Vehicle Miles Traveled per Service Population	23. 2

Source: Citywide TDF Model, 2016

Table 4.14-3
2016 Citywide Daily Vehicle Trips and Vehicle Miles Traveled

Transportation Metrics	Daily Total
Vehicle Trips (VT)	17,197,000
Total Vehicle Miles Traveled (VMT)	133,424,000
Vehicle Miles Traveled per Service Population	23.1

Source: Citywide TDF Model, 2016

Table 4.14-4
2016 SCAG Regionwide Daily Vehicle Trips and Vehicle Miles Traveled

Transportation Metrics	Daily Total
Vehicle Trips (VT)	82,283,000
Total Vehicle Miles Traveled (VMT)	908,573,000
Vehicle Miles Traveled per Service Population	33.9

Source: SCAG 2016 RTP Model, 2019

The 2016 Daily VMT generated by uses from, to, and within the Boyle Heights CPA is approximately 2,968,948 miles, which equates to 23.2 VMT per service population.

Citywide, the TDF Model estimates a 2016 total of 17,197,000 daily vehicle trips for a total of 133,424,000 daily vehicle miles traveled. This results in an average daily VMT per service population of 23.1.

Regional-wide, the SCAG Model estimates a 2016 total of 82,283,000 daily vehicle trips for a total of 908,573,000 daily vehicle miles traveled. This results in an average daily VMT per service population of 33.9.

Level of Service (LOS)

Another way to understand existing traffic conditions is to study existing traffic volumes with an analysis of the operating conditions, indicated through volume-to-capacity (V/C) ratios and Level of Service (LOS). LOS was used previously as the primary method for determining CEQA transportation-related impacts but upon implementation of VMT thresholds, vehicle delay or traffic congestion is no longer a significant impact in of itself and is now considered only as it relates to secondary impacts, such as emergency access or air quality. Recent changes in state legislation and the related guidance from OPR have moved analysis to VMT in order to support statewide GHG goals and encourage multi-modality in California cities.

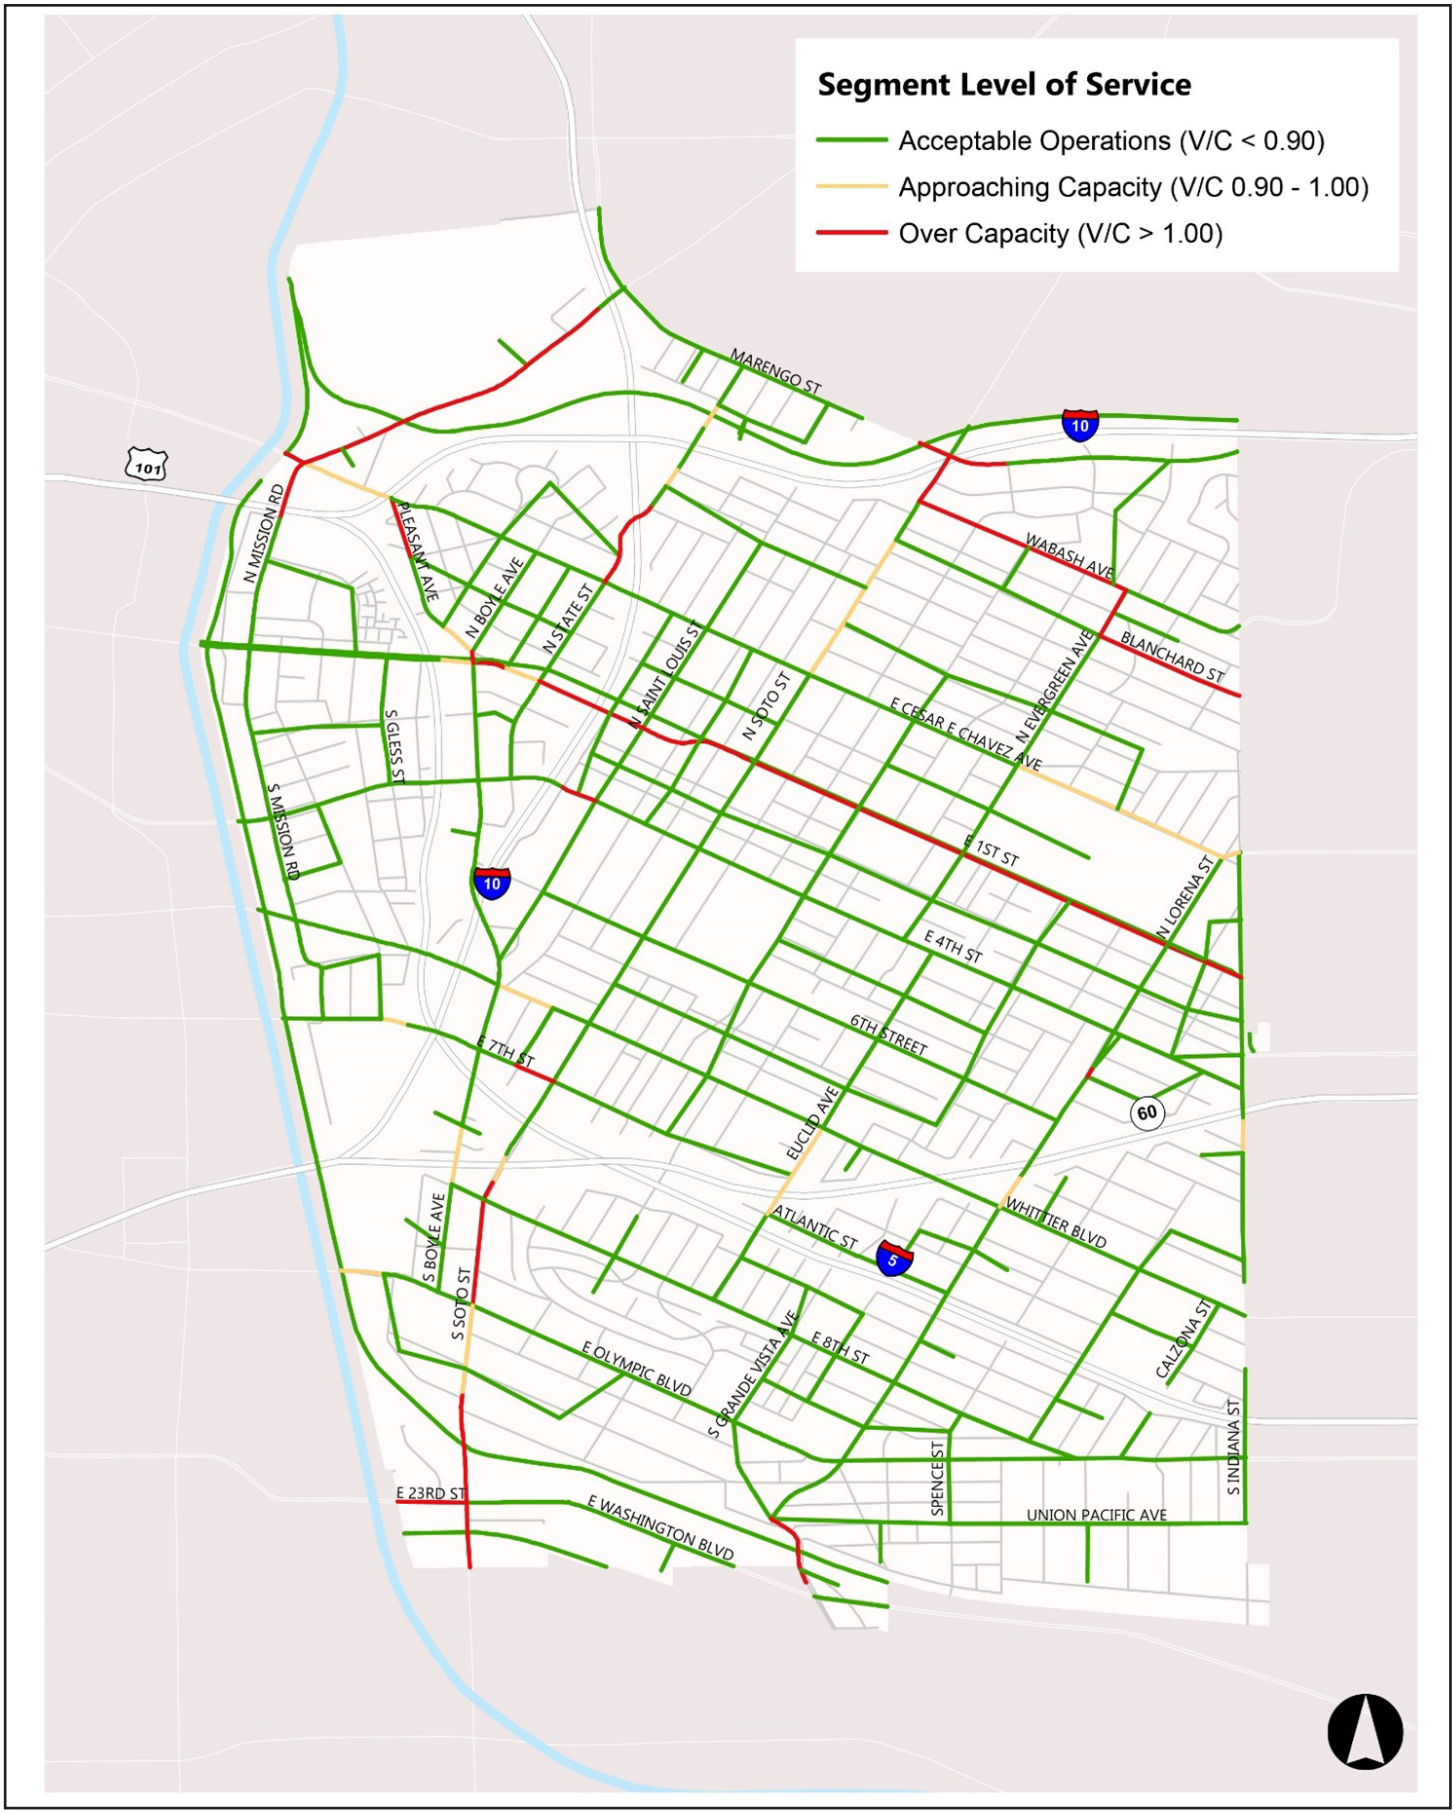
Traditional mitigation measures to address increases in vehicle delay often involved increasing vehicle capacity (i.e., the width of a roadway or intersection), which has the potential to induce more trips/VMT and does not support State goals.

As an information metric, LOS is a measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS can be determined by dividing the number of vehicles (i.e., volume [V]) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. To determine the operations of the roadway network during peak commute hours, a LOS analysis was conducted for the roadways in the Project Area.

The highest peak period traffic volume during the AM peak period (6 A.M. – 9 A.M.) or P.M. peak period (3 P.M. – 7P.M.) on roadways within the Project Area are displayed in **Figure 4.14-2** and **Figure 4.14-3**, as represented by the A.M. Peak Period Level of Service and P.M. Peak Period Level of Service, respectively. It should be noted that because traffic volumes are a result of the collective travel choices of thousands of individual drivers, variation in the daily and peak period volumes on any given facility is both expected and observed. The Federal Highway Administration (FHWA) guidelines recommend traffic models are calibrated to within 7 to 15% for freeway and arterial volumes to account for this regular variation. This range is based on studies that show that this range represents the average daily fluctuation in traffic for major roadways. Accordingly, the estimates of both existing and future conditions are subject to regular variation due to fluctuations in travel demand (or the travel choices of the thousands of individual drivers using the CPA roadways).

The LOS of the study corridors was determined based on the V/C ratio using the City of Los Angeles TDF model. This ratio was calculated by comparing peak period traffic volumes to the roadway capacity for each facility. The roadway capacities reflect the operating characteristics of the study corridors, such as functional classifications, number of lanes, and travel speeds. Functional classification is a scale that determines the vehicles-per-lane-per-hour capacity; higher classifications generally have more and wider lanes and are designed to facilitate a higher volume of vehicles per hour.

Table 4.14-5 summarizes the typical travel conditions for the roadway network (using a weighted average V/C ratio) and the percentage of roadway segments operating at LOS E or F. The weighted average V/C ratio represents typical travel conditions for the roadway network in the CPA.



SOURCE: City of Los Angeles, 2020

FIGURE **4.14-2**

Existing AM Peak Period Level of Service

IMPACT SCIENCES

1264.003•09/2021

SOURCE: City of Los Angeles, 2020

FIGURE **4.14-3**

IMPACT SCIENCES

Existing PM Peak Period Level of Service

Table 4.14-5
Existing 2016 Roadway Segment Level of Service (LOS)

Transportation Metrics	Analyzed Time Period	
	A.M. Peak Period	P.M. Peak Period
Weighted Average V/C	0.72 (LOS C)	0.74 (LOS C)
Percentage (%) of Street Segments at LOS E or F	17%	18%
Weighted Average V/C by Facility Type		
Avenue	0.72 (LOS C)	0.74 (LOS C)
Boulevard	0.72 (LOS C)	0.75 (LOS C)
Local / Collector	0.70 (LOS B)	0.73 (LOS C)

Source: City of Los Angeles TDF Model, 2019.

Approximately 17-18% of the roadways operate at an LOS E or F during the A.M. and P.M. peak periods. The weighted average V/C ratio is 0.72 (LOS C) in the A.M. peak period and 0.74 (LOS C) in the P.M. peak period. As a general matter, this means approximately 17-18% of the road network (Avenues, Boulevards, and Local/Collector streets) in the Boyle Heights CPA experiences substantial delay during the peak period, while the remainder of the network is far from reaching the limits of its capacity.

Reliability

The VMT results presented in this section reflect typical weekday (Tuesday through Thursday) conditions within the Los Angeles Model and the Boyle Heights CPA without major incidents and under mild weather conditions. Atypical traffic conditions, such as a collision on the freeway, rainy weather, or a special event, can impact travelers in a given plan area. The reliability of the roadway network can be impacted by these occurrences and is a common frustration for drivers. The bus transit system can also be affected by these events.

Emergency Access

California state law requires that drivers yield the right-of-way to emergency vehicles and remain stopped until the emergency vehicles have passed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. In addition, the LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system

that automatically turns traffic lights to green for emergency vehicles travelling on designated streets in the City.[5] The City has over 205 miles of routes equipped with FPS.[6]

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD. New development projects in the City may increase the demand for fire protection and emergency medical services, and the LAFD evaluates new project impacts on a project-by-project basis. Consideration is given to project size and components, required fire-flow, response time and distance for engine and truck companies, fire hydrant sizing and placement standards, access, and potential to use or store hazardous materials.[7] The adequacy of emergency service may be influenced by factors such as staffing levels, emergency response times, and technology improvements, management strategies, and mutual aid agreements. Every year, LAFD assesses its resources and reallocates them based on demand and need citywide. The provision of new fire stations varies as a function of not only the geographic distribution of physical stations but also due to the availability of fire trucks, ambulances, and other equipment as well as access to reciprocal agreements with neighboring jurisdictions. The City requires that development plans be submitted to the City for review and approval to ensure that new development has adequate access, including driveway access and turning radius in compliance with existing City regulations.[8]

As discussed above, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle. Within the CPA, multi-lane roadways include:

North South Multi-Lane Roadways

- Mission Road
- Boyle Avenue
- State Street
- Soto Street
- Evergreen Avenue
- Euclid Avenue
- Lorena Street
- Indiana Street

- Atlantic Street
- 8th Street
- Olympic Boulevard
- Washington Boulevard

Additionally, the US-101, I-10, I-5 and SR-60 freeways provide primary emergency access to and from locations within the Project Area. Secondary emergency access routes include Cesar Chavez Avenue, 1st Street, Whittier Boulevard, Euclid Avenue, Soto Street, and Washington Boulevard. **Table 4.14-6** identifies the existing fire stations in the CPA and provides the 2016 average response times for Non-EMS and EMS calls.

Table 4.14-6
LAFD Fire Stations Serving the Community Plan Area

9 One-way roadway with multiple lanes

Public Transit Service

Metro's L Line provides high-speed local and regional transit connections both with the San Gabriel Valley and downtown Los Angeles, including a direct connection to Union Station. Other public transit service within the CPA consists primarily of local bus services linking riders to localized businesses and destinations. A relatively dense network of buses provides local access as well as first/last-mile connections to the Metro L Line stations.

Services are provided by multiple transit operators, including Metro Rail, Rapid buses, Express buses, Local buses, LADOT Commuter Express buses, Downtown Area Short Hop (DASH) buses, and other local operators. The above mentioned Metro lines are for Existing year 2016. After December 2020, Metro began service changes as part of NextGen Bus Plan. **Figure 4.14-4**, **Existing Transit Service – Metro and LADOT**, shows Metro and LADOT transit service coverage in the CPA.

Below are brief descriptions of the transit operators that provide service within the CPA:

Metro

Metro is the primary transit operator in Los Angeles County, providing bus, light rail, and subway services as described below.[10]

- **Rail & Bus Rapid Transit:** There are two Metro heavy rail lines (B and D), four Metro light rail lines (A, C, L, E) and two bus rapid transit (BRT) lines (G and J) operating in exclusive rights-of-way.[11] Headways for Metro rail and bus rapid transit lines are typically as frequent as 15 minutes or less. Bicycles are allowed in designated areas on Metro trains at no extra charge.

- **Rapid, Express & Local Bus Lines:** Metro also operates approximately 180 bus routes in mixed traffic, with services varying considerably in speed, frequency and capacity. Headways for Metro Rapid buses are typically 10 minutes during peak hours, and 20 minutes during off-peak times. Metro Express buses operate during peak hours only. All buses are equipped with two bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus.

---

10 Metro services described are from existing year 2016. After December 2020, Metro began service changes as part of NextGen Bus Plan.

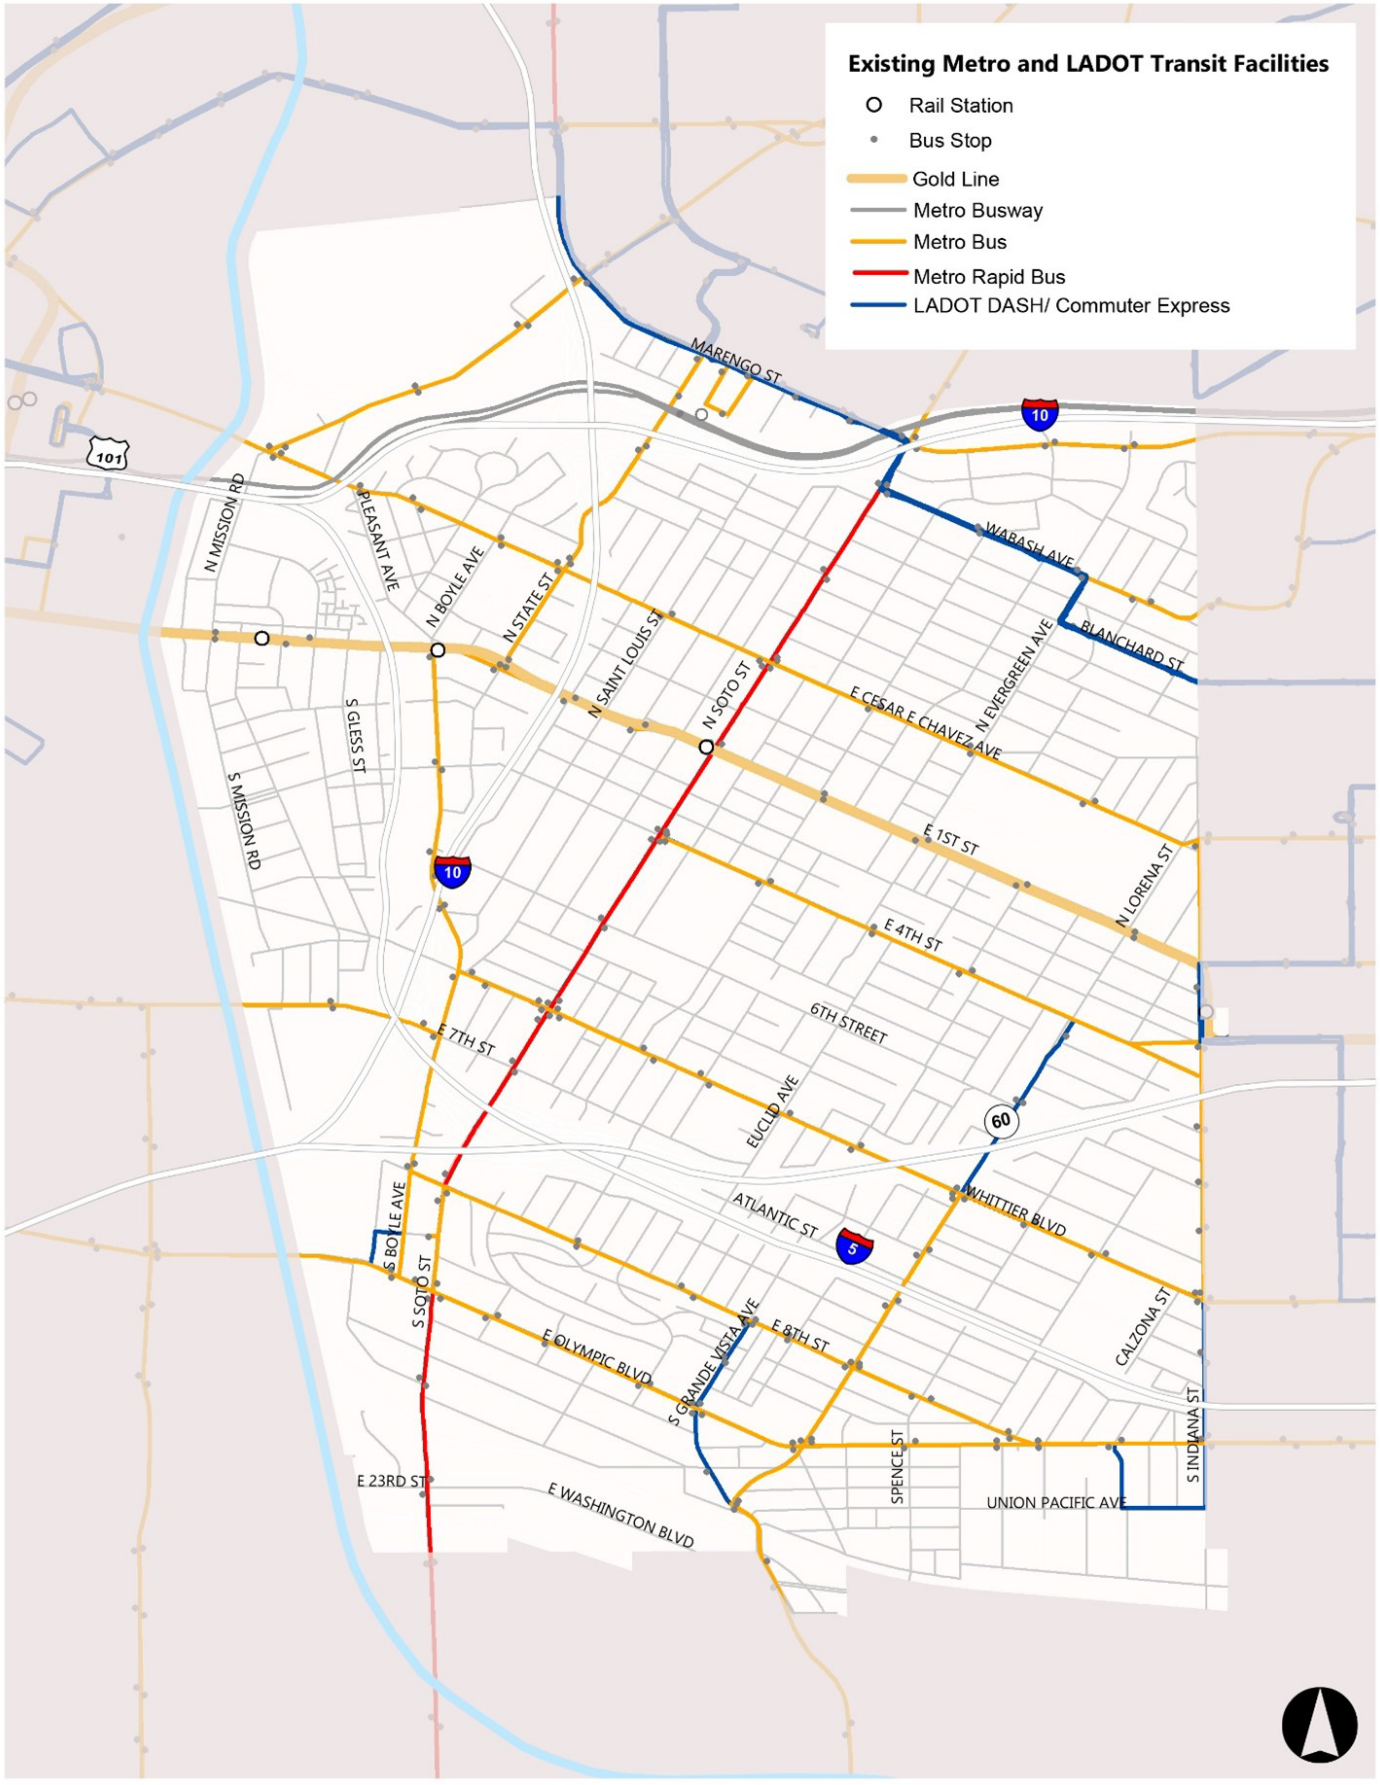
11 Starting as of late 2019, the Red Line is known as B Line, the Purple Line is known as the D Line, the Gold Line is known as the L Line, the Blue Line is known as the A Line, the Green Line is known as Metro C Line and the Expo line is known as the E Line.

The following Metro lines currently provide transit service in and through the Project Area:[12]

Metro Rail

- Metro L Line

Metro Rapid Lines (in mixed traffic)



- 720
- 751
- 770

Metro Local Lines

- 18
- 30
- 62
- 66
- 68
- 70

FIGURE **4.14-4**

IMPACT SCIENCES

Existing Transit Service – Metro and LADOT

LADOT

LADOT provides local Downtown Area Short Hop (DASH) buses and Commuter Express bus services in the City of Los Angeles. DASH operates 32 community circulator routes covering Downtown Los Angeles and many outlying communities within the City. DASH buses provide local access in addition to first/last-mile connections to and from Metro Rail stations. Headways for DASH buses vary between 5-20 minutes depending on the selected route. The Commuter Express operates 14 routes, making a limited number of stops and transporting passengers between Downtown Los Angeles and other major centers within the City. Most Commuter Express routes operate during the peak hours only in the peak direction. All LADOT buses are equipped with three bicycle racks at the front of the bus, and bicyclists may load their bicycles on the rack when there is space available at no extra charge. If the rack is full, bicyclists are asked to wait for the next bus. The following LADOT services operate within and through the CPA:

- DASH Boyle Heights/East LA

Other Transit Operators

Other transit operators with respective routes to and from Boyle Heights include:

- Montebello Bus Lines - Line 40
- El Sol Shuttle (East Los Angeles Shuttle) - Union Pacific/Salazar Park Shuttle

Bicycle and Pedestrian Facilities

The City's existing bicycle network consists of approximately 500 miles of on- and off-street facilities including approximately 58 miles of Class I bikeways (bicycle paths), 324 miles of Class II bikeways (bicycle lanes), and 121 miles of Class III bikeways (bicycle routes and bicycle friendly streets) (City of Los Angeles 2015a).

The CPA includes of a network of bicycle facilities; pedestrian facilities primarily consist of sidewalks adjacent to roadways. Pedestrian access to transit in the CPA ranks above average for major transit stops/stations in Los Angeles County, with an average rating of 81 out of 100, as reported by WalkScore.com.[13] Walk Score is a company that provides walk scores, transit scores, and bike scores for neighborhoods ranging from 0-100. A walk score is created by assessing the walkability of an area dependent upon how many errands can be completed by foot. Walking routes available in the area are assessed. Amenities with a five-minute walk proximity are scored the highest. Bike scores are created by evaluating available bicycle infrastructure available in an area, frequency of hills, the number of bicycle

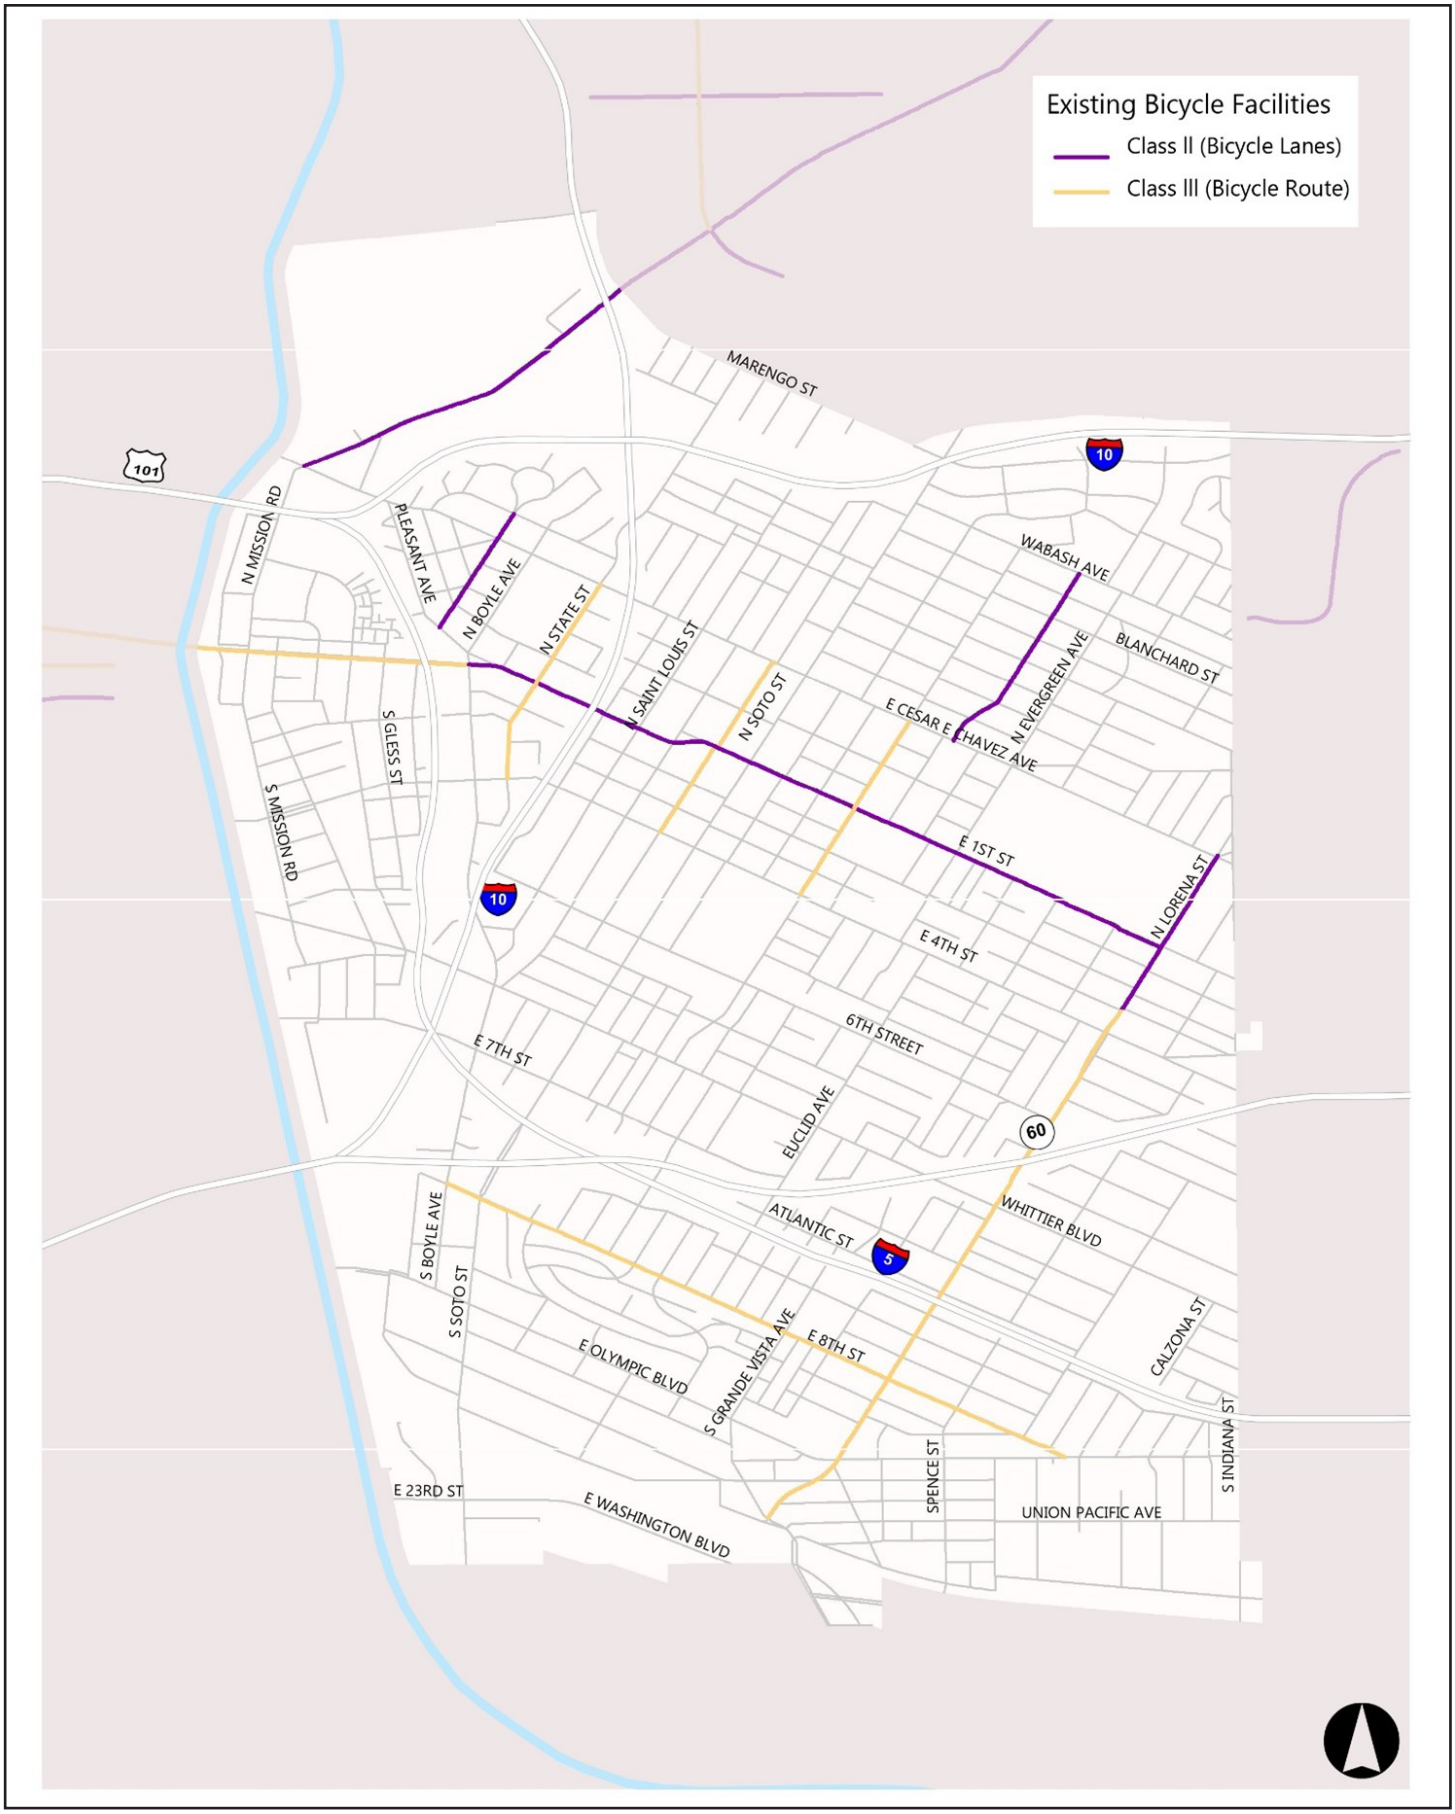
13 Walkscore.com. https://www.walkscore.com/. Accessed September 2019.

commuters, and road connectivity. All four components are weighted equally to create a bike score. Bicycle access to major transit stops in the area is less robust, receiving an average score of 54 out of 100, as reported by WalkScore.com. Most roadways are aligned on a grid system providing multiple route options for traveling throughout the Project Area.

Bicycle facilities are defined as off-street bicycle paths (Class I), on-street signed and striped bicycle lanes (Class II), on-street signed bicycle routes (Class III), and protected bicycle lanes or cycle tracks (Class IV). The design features of the various types of bicycle facilities are summarized below.

- **Bicycle Path:** A paved pathway separated from motorized vehicular traffic by an open space or barrier and either within the highway rights-of-way or within an independent alignment. Bicycle paths may be used by bicyclists, skaters, wheelchairs users, joggers, and other non-motorized users. Caltrans refers to this facility as Class I Bikeway, which "provides a completely separated right-of-way for the exclusive use of bicycles and pedestrians with cross flow of motorists minimized."

- **Buffered Bike Lanes:** Buffered bicycle lanes provide on-street right-of-way in the form of a painted buffer that directs motorists to travel away from the bike lane and provides room for bicyclists to pass another bicyclist without entering the adjacent motor vehicle travel lane. A buffered bicycle lane is considered a Class II bikeway.



- **Bicycle Lane:** A striped lane for 1-way bicycle travel on a street or highway. Caltrans refers to this facility as a Class II bikeway.

- **Bicycle Route:** is a shared roadway specifically identified for use by bicyclists, providing a superior route based on traffic volumes and speeds, street width, directness, and/or cross-street priority, denoted by signs only. Caltrans refers to this facility as a Class III Bikeway.

- **Protected Bicycle Lane (Cycle Track):** A bicycle lane that provides further protection from other travel lanes with a physical roadway intervention. This is considered a Class IV Bikeway.

Within the CPA, there are Class II (Bicycle Lanes) and Class III (Bicycle Routes) facilities. **Figure 4.14-5,** Existing Bicycle Network, shows the locations of the existing bicycle facilities within the CPA. The pedestrian network includes sidewalks, crosswalks, and curb ramps, as well as pedestrian amenities such as street trees and benches in some areas. Similar to many areas in the City, the CPA has an aging network of pedestrian facilities including sidewalks of varying widths. Many areas have pedestrian-friendly features such as curb-side parking, wide crosswalks at most major intersections and traffic signal modifications to ensure longer pedestrian crossing times, where warranted.

In September 2014, the Mayor's Office and LADOT released the Great Streets for Los Angeles, LADOT's first strategic plan to turn the city's essential infrastructure -- its streets and sidewalks -- into safer, more livable 21st century public spaces that accommodate everyone who uses them. Cesar Chavez Avenue between Evergreen Avenue and St. Louis Street in Boyle Heights was one of the 15 corridors identified as part Great Streets Plan. Great Streets seeks to strengthen the linkages between Cesar Chavez and the nearby Metro L Line by improving the pedestrian and bicycle facilities in the area.

4.14.3 REGULATORY FRAMEWORK

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Transportation at the state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Americans with Disabilities Act (ADA) of 1990
- Complete Streets Act
- Assembly Bill 32 (AB 32) and Senate Bill 375 (SB 375)
- California Vehicle Code (CVC)
- Senate Bill 743
- *CEQA Guidelines* Section 15064.3
- Southern California Association of Governments 2020-2045 Regional Transportation Plan / Sustainable Communities Strategy
- City of Los Angeles Mobility Plan 2035
- Los Angeles Municipal Code
- Transit Oriented Communities Guidelines
- LADOT Transportation Assessment Guidelines
- LADOT Manual of Policies and Procedures Section 321
- Vision Zero
- Citywide Design Guidelines

Federal

Americans with Disabilities Act (ADA) of 1990. Titles I, II, III, and V of the ADA have been codified in Title 42 of the United States Code, beginning at Section 12101. Title III prohibits discrimination based on disability in "places of public accommodation" (businesses and non-profit agencies that serve the public) and "commercial facilities" (other businesses). The regulation includes Appendix A through Part 36 (Standards for Accessible Design), establishing minimum standards for ensuring accessibility when designing and constructing a new facility or altering an existing facility. Examples of key guidelines include detectable warnings for pedestrians entering traffic where there is no curb, a clear zone of 48 inches for the pedestrian travel way, and a vibration-free zone for pedestrians.

State

Complete Streets Act. Assembly Bill 1358, the Complete Streets Act (Government Code Sections 65040.2 and 65302), was signed into law by Governor Arnold Schwarzenegger in September 2008. As of January 1, 2011, the law requires cities and counties, when updating the part of a local general plan that addresses roadways and traffic flows, to ensure that those plans account for the needs of all roadway users. Specifically, the legislation requires cities and counties to ensure that local roads and streets adequately accommodate the needs of bicyclists, pedestrians and transit riders, as well as motorists.

At the same time, the California Department of Transportation (Caltrans), which administers transportation programming for the State, unveiled a revised version of Deputy Directive 64 (DD-64-R1 October 2008), an internal policy document that now explicitly embraces Complete Streets as the policy covering all phases of state highway projects, from planning to construction to maintenance and repair.

Assembly Bill 32 (AB 32) and Senate Bill 375 (SB 375). With the passage of AB 32, the Global Warming Solutions Act of 2006, the State of California committed itself to reducing statewide greenhouse gas (GHG) emissions to 1990 levels by 2020. The California Air Resources Board (California ARB) is coordinating the response to comply with AB 32.

On December 11, 2008, California ARB adopted its Scoping Plan for AB 32. This scoping plan included the approval of SB 375 as the means for achieving regional transportation-related GHG targets. SB 375 provides guidance on how curbing emissions from cars and light trucks can help the state comply with AB 32.

There are five major components to SB 375. First, regional GHG emissions targets: California ARB's Regional Targets Advisory Committee guides the adoption of targets to be met by 2020 and 2035 for each Metropolitan Planning Organization (MPO) in the state. These targets, which MPOs may propose themselves, are updated every eight years in conjunction with the revision schedule of housing and transportation elements.

Second, MPOs are required to prepare a Sustainable Communities Strategy (SCS) that provides a plan for meeting regional targets. The SCS and the Regional Transportation Plan (RTP) must be consistent with each other, including action items and financing decisions. If the SCS does not meet the regional target, the MPO must produce an Alternative Planning Strategy that details an alternative plan to meet the target.

Third, SB 375 requires that regional housing elements and transportation plans be synchronized on 8-year schedules. In addition, Regional Housing Needs Assessment (RHNA) allocation numbers must conform to the SCS. If local jurisdictions are required to rezone land as a result of changes in the housing element, rezoning must take place within three years.

Fourth, SB 375 provides CEQA streamlining incentives for preferred development types. Certain residential or mixed-use projects qualify if they conform to the SCS. Transit-oriented developments (TODs) also qualify if they (1) are at least 50% residential, (2) meet density requirements, and (3) are within 0.5 mile of a transit stop. The degree of CEQA streamlining is based on the degree of compliance with these development preferences.

Finally, MPOs must use transportation and air emissions modeling techniques consistent with guidelines prepared by the California Transportation Commission (CTC). Regional Transportation Planning Agencies, cities, and counties are encouraged, but not required, to use travel demand models consistent with the CTC guidelines.

California Vehicle Code (CVC). The CVC provides requirements for ensuring emergency vehicle access regardless of traffic conditions. Sections 21806(a)(1), 21806(a)(2), and 21806(c) define how motorists and pedestrians are required to yield the right-of-way to emergency vehicles.

Senate Bill 743. On September 27, 2013, Governor Jerry Brown signed Senate Bill (SB) 743, which went into effect in January 2014. SB 743 directed the Governor's Office of Planning and Research (OPR) to develop revisions to the California Environmental Quality Act (CEQA) Guidelines by July 1, 2014 to establish new criteria for determining the significance of transportation impacts and define alternative metrics for traffic LOS. This started a process that changes transportation impact analysis under CEQA. These changes include elimination of auto delay, LOS, and other similar measures of vehicular capacity or traffic congestion as a basis for determining significant impacts for land use projects and plans in California. Additionally, as discussed further below, as part of SB 743, parking impacts for particular types of development projects in areas well served by transit are not considered significant impacts on the environment. According to the legislative intent contained in SB 743, these changes to current practice were necessary to "more appropriately balance the needs of congestion management with statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions."

On January 20, 2016, OPR released the *Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA*, which was an update to *Updating Transportation Impacts Analysis in the CEQA Guidelines, Preliminary Discussion Draft of Updates to the CEQA Guidelines Implementing Senate Bill 743*, which had been released August 6, 2014. Of particular relevance was the updated text of the proposed new CEQA Guidelines Section 15064.3 that relates to the determination of the significance of transportation impacts, alternatives, and mitigation measures. Specifically, *CEQA Guidelines* Section 15064.3, which is discussed further below, establishes VMT as the most appropriate measure of transportation impacts. In

November 2018, the California Natural Resources Agency finalized the updates to the *CEQA Guidelines* and the updated guidelines became effective on December 28, 2018.

Based on these changes, on July 30, 2019, the City of Los Angeles City Council adopted the CEQA Transportation Analysis Update, which sets forth the revised thresholds of significance for evaluating transportation impacts as well as screening and evaluation criteria for determining impacts. The CEQA Transportation Analysis Update establishes VMT as the City's formal method of evaluating a project's transportation impacts. In conjunction with this update, LADOT adopted its *Transportation Assessment Guidelines* (adopted in July 2019 and updated in July 2020), which defines the methodology for analyzing a project's transportation impacts in accordance with SB 743.

***CEQA Guidelines* Section 15064.3.** As discussed above, recent changes to CEQA include the adoption of Section 15064.3, *Determining the Significance of Transportation Impacts*. *CEQA Guidelines* Section 15064.3 establishes VMT as the most appropriate measure of transportation impacts. Generally, land use projects within 0.5 miles of either an existing major transit stop[14] or a stop along an existing high quality transit corridor[15] should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact. A lead agency has discretion to choose the most appropriate methodology to evaluate VMT, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may also use models to estimate VMT and may revise those estimates to reflect professional judgment based on substantial evidence. As discussed further below, LADOT developed City of Los Angeles VMT Calculator Version 1.3 (May 2020) (VMT Calculator) to estimate project-specific daily household VMT per capita and daily work VMT per employee for developments within City limits. The methodology for determining VMT based on the VMT Calculator is consistent with *CEQA Guidelines* Section 15064.3 and the Transportation Assessment Guidelines.

Statewide Transportation Improvement Program (STIP). Caltrans administers transportation programming for the State. Transportation programming is the public decision-making process that sets priorities and funds projects envisioned in long-range transportation plans. It commits expected revenues over a multi-year period to transportation projects. The STIP is a multi-year capital improvement program

14 "Major transit stop" is defined in Public Resources Code Section 21064.3 as a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

15 "High-quality transit corridors" are defined in Public Resources Code Section 21155 as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources.

Parking Cash Out. Assembly Bill (AB) 2109, is a state law requiring employers of 50 or more employees who lease their parking and subsidize any part of their employee parking to offer their employees the opportunity to give up their parking space and rideshare to work instead. In return for giving up their parking space, the employer pays the employee the cost of the parking space.

Regional

Southern California Association of Governments 2020-2045 Regional Transportation Plan / Sustainable Communities Strategy.[16] In compliance with SB 375, on September 3, 2020, the Southern California Association of Governments (SCAG) Regional Council adopted the Connect SoCal 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (2020-2045 RTP/SCS), a long-range visioning plan that incorporates land use and transportation strategies to increase mobility options and achieve a more sustainable growth pattern while meeting greenhouse gas reduction targets set by the California Air Resources Board (CARB). The 2020-2045 RTP/SCS contains baseline socioeconomic projections that are used as the basis for SCAG's transportation planning, as well as the provision of services by the six-county region of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. SCAG policies are directed towards the development of regional land use patterns that contribute to reductions in vehicle miles and improvements to the transportation system.

The 2020-2045 RTP/SCS builds on the long-range vision of SCAG's prior 2016-2040 RTP/SCS to balance future mobility and housing needs with economic, environmental and public health goals. A substantial concentration and share of growth is directed to Priority Growth Areas (PGAs), which include high quality transit areas (HQTAs), Transit Priority Areas (TPAs), job centers, Neighborhood Mobility Areas (NMAs) and Livable Corridors. These areas account for four percent of SCAG's total land area but the majority of directed growth. HQTAs are corridor-focused PGAs within one half mile of an existing or planned fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes (or less) during peak commuting hours. TPAs are PGAs that are within a half mile of a major transit stop that is existing or planned. Job centers are defined as areas with significant higher employment density than surrounding areas which capture density peaks and locally significant job centers throughout all six counties in the region. NMAs are PGAs with robust residential to non-residential land use connections, high roadway intersection densities, and low-to-moderate traffic speeds. Livable Corridors are arterial roadways where local jurisdictions may plan for a combination of the following elements: high-

[16] See **Appendix B, Methodology**, of this DEIR for more information on the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS

quality bus frequency; higher density residential and employment at key intersections; and increased active transportation through dedicated bikeways.

The 2020-2045 RTP/SCS' "Core Vision" prioritizes the maintenance and management of the region's transportation network, expanding mobility choices by co-locating housing, jobs, and transit, and increasing investment in transit and complete streets. Strategies to achieve the "Core Vision" include but are not limited to: Smart Cities and Job Centers, Housing Supportive Infrastructure, Go Zones, and Shared Mobility. Connect SoCal intends to create benefits for the SCAG region by achieving regional goals for sustainability, transportation equity, improved public health and safety, and enhancement of the regions' overall quality of life. These benefits include but are not limited to a five percent reduction in VMT per capita, nine percent reduction in vehicle hours traveled, and a two percent increase in work-related transit trips.

Metro 2009 Long Range Transportation Plan (LRTP). The 2009 LRTP includes funding for general categories of improvements, such as Arterial Improvements, Non-motorized Transportation, Rideshare and Other Incentive Programs, Park-and-Ride Lot Expansion, and Intelligent Transportation System (ITS) improvements for which Call for Project Applications can be submitted for projects in Los Angeles County. Metro also has a Short Range Transportation Plan to define the near-term (through year 2024) transportation priorities in Los Angeles County. In addition to the regional transportation plans, Metro has recently adopted a Complete Streets Policy and a First Last Mile Strategic Plan.

Metro Complete Streets Policy

Metro's recently adopted Complete Streets policy is reinforcing the California Complete Streets Act (AB 1358). Effective January 1, 2017, Metro is requiring that all local jurisdictions within LA County must adopt a Complete Streets Policy, an adopted city council resolution supporting Complete Streets, or an adopted general plan consistent with the California Complete Streets Act of 2008 in order to be eligible for Metro capital grant funding programs, starting with the 2017 grant cycles.

Metro Short Range Transportation Plan (SRTP). The 2014 Metro SRTP is a 10-year action plan that guides future Metro programs and projects through 2024 and advances Metro towards the long-term goals identified in the 2009 Metro LRTP. The SRTP identifies the short-term challenges, provides an analysis of our financial resources, proposes action plans for the public transportation and highway modes, and includes other project and program initiatives. In addition, it addresses sustainability, future funding strategies, and lastly, measures the Plan's performance.

Local

City of Los Angeles Mobility Plan 2035. In August 2015, the City Council adopted Mobility Plan 2035 (Mobility Plan), which serves as the City's General Plan circulation element. The City Council has adopted several amendments to the Mobility Plan since its initial adoption, including the most recent amendment on September 7, 2016.[17] The Mobility Plan incorporates "complete streets" principles and lays the policy foundation for how the City's residents interact with their streets. The Mobility Plan includes five main goals that define the City's high-level mobility priorities:

(1) Safety First;

(2) World Class Infrastructure;

(3) Access for All Angelenos;

(4) Collaboration, Communication, and Informed Choices; and

(5) Clean Environments and Healthy Communities.

Each of the goals contains objectives and policies to support the achievement of those goals.

Street classifications are designated in the Mobility Plan, and may be amended by a Community Plan, and are intended to create a balance between traffic flow and other important street functions, including transit routes and stops, pedestrian environments, bicycle routes, building design and site access, etc. The Complete Streets Design Guide, which was adopted by the City Council alongside the Mobility Plan, defines the street classifications as follows:

Arterial Streets: Major streets that serve through traffic and provide access to major commercial activity centers. Arterials are divided into two categories:

- Boulevards represent the widest streets that typically provide regional access to major destinations and include two further categories, Boulevard I and Boulevard II.
- Avenues pass through both residential and commercial areas and include three further categories, Avenue I, Avenue II, and Avenue III.

[17] Los Angeles Department of City Planning, Mobility Plan 2035: An Element of the General Plan, approved by City Planning Commission on June 23, 2016 and adopted by City Council on September 7, 2016.

Collector Streets: Generally located in residential neighborhoods and provide access to and from arterial streets for local traffic and are not intended for cut-through traffic.

Local Streets: Intended to accommodate lower volumes of vehicle traffic and provide parking on both sides of the street.

- Continuous local streets that connect to other streets at both ends, and/or
- Non-Continuous local streets that lead to a dead-end.

The Mobility Plan also identifies enhanced networks of major and neighborhood streets that facilitate multi-modal mobility within the citywide transportation system. This layered approach to complete streets selects a subset of the City's streets to prioritize travel for specific transportation modes. In all, there are four enhanced networks: the Bicycle Enhanced Network, Transit Enhanced Network, Vehicle Enhanced Network, and Neighborhood Enhanced Network. In addition to these networks, many areas that could benefit from additional pedestrian features are identified as Pedestrian Enhanced Districts.

Los Angeles Municipal Code. With regard to construction traffic, Los Angeles Municipal Code (LAMC) Section 41.40 limits construction activities to the hours from 7:00 a.m. to 9:00 p.m. on weekdays and from 8:00 a.m. to 6:00 p.m. on Saturdays and national holidays. No construction is permitted on Sundays.

LAMC Section 12.37 sets forth requirements for street dedications and improvements for new development projects. Specifically, LAMC Section 12.37 states that no building or structure shall be erected or enlarged on any property, and no building permit shall be issued therefore, on any R3 or less restrictive zone, or in any lot in the RD1.5, RD2, or R3 Zones, if the lot abuts a major or secondary highway or collector street unless one-half of the street adjacent to the subject property has been dedicated and improved to the full width to meet the standards for a highway or collector street as provided in the LAMC.

With regard to on-site bicycle parking, LAMC Section 12.21 A.16 sets forth requirements for long-term and short-term bicycle parking for residential and commercial buildings. Where there is a combination of uses on a lot, the number of bicycle parking spaces required shall be the sum of the requirements of the various uses. LAMC Section 12.21 A.16 also includes facility requirements, design standards and siting requirements for bicycle parking.

LAMC Section 12.26 J provides for Transportation Demand Management (TDM) and Trip Reduction Measures that are applicable to the construction of new non-residential gross floor area. Different TDM requirements are provided for developments in excess of 25,000 square feet of gross floor area, 50,000 square feet of gross floor area, and 100,000 square feet of gross floor area. The TDM requirements set forth

therein vary depending upon the maximum non-residential gross floor area described above and include measures such as the provision of a bulletin board, display case, or kiosk with transit information and carpool/vanpool parking spaces.

Transit Oriented Communities Guidelines. Pursuant to the voter-approved Measure JJJ, LAMC Section 12.22.A.31 was added to create the Transit Oriented Communities (TOC) Affordable Housing Incentive Program to encourage affordable housing near transit. The TOC Guidelines provide the eligibility standards, incentives, and other necessary components of the TOC Program. TOC incentive areas are tiered based on a project site's distance from transit and the type of transit.

LADOT Transportation Assessment Guidelines. As discussed above, on July 30, 2019, LADOT updated its Transportation Impact Study Guidelines, travel demand model and transportation impact thresholds based on vehicle miles traveled, pursuant to *State CEQA Guidelines* Section 15064.3, of the 2019 CEQA Updates that implement SB 743. The City established the Transportation Assessment Guidelines (TAG) that includes both CEQA thresholds (and screening criteria) and non-CEQA thresholds (and screening criteria). LADOT most recently updated the TAG in July 2020. The CEQA thresholds provide the methodology for analyzing the Appendix G transportation thresholds, including providing the City's adopted VMT thresholds. The non-CEQA thresholds provide a method to analyze projects for purposes of entitlement review and making necessary findings to ensure the project is consistent with adopted plans and policies including Mobility Plan 2035. Specifically, the TAG is intended to effectuate a review process that advances the City's vision of developing a safe, accessible, well-maintained, and well-connected multimodal transportation network. The TAG have been developed to identify land use development and transportation projects that may impact the transportation system; to ensure proposed land use development projects achieve site access design requirements and on-site circulation best practices; to define whether off-site improvements are needed; and to provide step-by-step guidance for assessing impacts and preparing Transportation Assessment Studies.[18]

LADOT Manual of Policies and Procedures Section 321. LADOT Manual of Policies and Procedures (MPP) Section 321 provides the basic criteria for the review of driveway design. As discussed in MPP Section 321, the basic principle of driveway location planning is to minimize potential conflicts between users of the parking facility and users of the abutting street system, including the safety of pedestrians.

---

18 Los Angeles Department of Transportation (LADOT) Transportation Assessment Guidelines. https://ladot.lacity.org/sites/default/files/documents/2020-transportation-assessment-guidelines_final_2020.07.27_0.pdf. Accessed [May19, 2021].

Vision Zero

The Vision Zero Los Angeles program, implemented by LADOT, represents a citywide effort to eliminate traffic deaths in the City by 2025. Vision Zero has two goals: a 20-percent reduction in traffic deaths by 2017 and zero traffic deaths by 2025. In order to achieve these goals, LADOT has identified a network of streets, called the High Injury Network, which has a higher incidence of severe and fatal collisions. The High Injury Network, which was last updated in 2018, represents 6 percent of the City's street miles but accounts for approximately two thirds (64 percent) of all fatalities and serious injury collisions involving people walking and biking.

Citywide Design Guidelines. The Citywide Design Guidelines serve to implement the Framework Element's urban design principles and are intended to be used by City of Los Angeles Department of City Planning staff, developers, architects, engineers, and community members in evaluating project applications, along with relevant policies from the Framework Element and Community Plans. The Citywide Design Guidelines were updated in October 2019 and include guidelines pertaining to pedestrian-first design which serves to reduce VMT.

General Plan Framework and Safety Elements. The Citywide General Plan Framework (Framework), an element of the City of Los Angeles General Plan, is a guide for Community Plans to implement growth and development policies by providing a comprehensive long-range view of the City as a whole. It provides a comprehensive strategy for accommodating long-term growth should it occur as predicted. Chapter 9 Infrastructure and Public Services of the Framework Element addresses fire prevention, fire protection and emergency medical services provided to the City.

The Safety Element of the General Plan identifies existing police, fire, and emergency services and the service needs of the City of Los Angeles in the event of a natural disaster. The Safety Element goals, objectives, policies, and programs are broadly stated to reflect the comprehensive scope of the Emergency Operations Organization (EOO), which is the program that implements the Safety Element. The Framework and Safety Elements include goals, objectives, and policies that are applicable to emergency services.

Great Streets for Los Angeles/LADOT Strategic Plan. In September 2014, the Mayor's Office and LADOT released the Great Streets for Los Angeles, LADOT's first strategic plan to turn the city's essential infrastructure—its streets and sidewalks—into safer, more livable 21st century public spaces that accommodate everyone who uses them. The plan builds upon Mayor Garcetti's Great Streets Initiative, which looks at Los Angeles's streets as valuable assets that can help revitalize neighborhoods across the City and make it easier for Angelenos to get around whether they walk, bike, drive, or take transit. The

plan also stresses the importance of working closely with other city and regional agencies, such as the Bureau of Street Services and Metro, to improve safe, accessible transportation services and infrastructure.

The plan focuses on Mayor Garcetti's priorities of making the city safe, prosperous, and livable with a well-run government and includes the following key goals:

- **Vision Zero:** Eliminate traffic deaths by 2025 and design streets to increase the safety of pedestrians, including adding 100 new high-visibility continental crosswalks.

- **Great Streets:** Implement changes to the 15 Great Street corridors and launch programs to reduce dangerous speeding in residential neighborhoods. Increase bike infrastructure and launch a regional bikeshare program. Expand bus service and improve its quality and connectivity with surrounding neighborhoods.

- **A 21st Century DOT:** Streamline LADOT's operations to implement needed safety and mobility projects quickly and efficiently. Enhance technologies to manage traffic, meters, and parking operations.

- **World-Class Streets for a World-Class Economy:** Real-time traffic information and more efficient allocation of the street to support local foot traffic and better manage freight traffic. Build Great Streets for vibrant and prosperous neighborhood business districts.

- **Los Angeles Fire Department (LAFD) Strategic Plan 2018-2020.** The Strategic Plan focuses on nine goals and corresponding strategic actions that guide the LAFD. The primary goals that apply to the Proposed Project include providing exceptional public safety and emergency service and implementing and capitalizing on advanced technologies. Some of the key priorities associated with these goals include:

  - Improving response times by utilizing data and metrics to identify gaps in LAFD's response strategies and exploring response time improvements through dialogue, cognitive inquiry, innovation, and follow-up;

  - Delivery of emergency medical services by expanding LAFD Emergency Medical Service (EMS) response capabilities for special events and addressing period of high vehicle traffic; and

  - Implementing advanced technologies by developing performance metrics, tracking standards, data collection, analysis and reporting procedures (FireStatLA).

The Strategic Plan also focuses on the development of an even more professional workforce and promotion of a positive work environment to address risk management issues and strengthening community relationships to improve preparedness and enhance resiliency during emergency events.

4.14.4 METRICS

This section explains the metrics used to measure the impacts of the Proposed Plan to VMT. The metrics used are from the proposed *CEQA Guidelines* from the CA State Office of Planning and Research (OPR) from December 2018.

History

Senate Bill 743 directed OPR to "prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed revisions to the guidelines adopted pursuant to Section 21083 establishing criteria for determining the significance of transportation impacts of projects within transit priority areas… Upon certification of the guidelines by the Secretary of the Natural Resources Agency pursuant to this section, automobile delay, as described solely by LOS or similar measures of vehicular capacity or traffic congestion within a transit priority area, shall not support a finding of significance pursuant to this division…"[19]

On January 20, 2016, OPR updated the *CEQA Guidelines* "Revised Proposal on Updates to the *CEQA Guidelines* on Evaluating Transportation Impacts in CEQA," the evaluation of VMT was recognized as "generally the most appropriate measure of transportation impacts." OPR also states that lead agencies may tailor their analysis to include other measures.

On November 2017, OPR proposed a new section, 15064.3, to help determine the significance of transportation impacts. This section was updated July 2, 2018, and finalized on December 28, 2018, with criteria for analyzing transportation impacts and is seen below in the section *Thresholds of Significance*. Its purpose is to describe specific elements for considering the transportation impacts of a given project given the use of VMT as the primary measurement.

Per the guidance from OPR, "a lead agency may elect to be governed by the provisions of this section immediately. Beginning on July 1, 2020, the provisions of this section shall apply statewide."[20] In order to comply with the guidelines understood to become the standard in our state, this EIR evaluates vehicle trips

---

19 SB 743, 2013-2014 CA State Cong. § 386 (2013)

20 California Natural Resources Agency. *Notice of Public Availability of Modifications to Text of Proposed Regulation and Addendum to the Initial Statement of Reasons and Informative Digest: OAL Notice File No. Z-2018-0116-12.* California, 2018

and VMT consistent with the intent of SB 743. This EIR also includes vehicular level of service (LOS) for secondary impacts to emergency services under Threshold 4.

Performance Metrics

The current metrics shift the focus from LOS to VT and VMT. These are defined as follows, with methodology specifics outlined in the following **Methodology** section:

- **Vehicle Trips (VT).** VT are defined as the number of trips undertaken in an automobile, such as in single occupancy vehicles, private automobiles, and vehicles that contain two or more travelers, such as carpools, taxis, or ride-share vehicles. A reduction in VT over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by carpools.

- **Vehicle Miles Traveled (VMT).** VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) by all land uses (e.g., residential, retail, and office) in the Proposed Plan Area. To compare scenarios, VMT per service population is used. A reduction in VMT overall and in VMT per service population can be used as an indicator of reduced reliance on vehicular travel, primarily by private automobiles.

- **Service Population.** Service Population is the sum of population and employment. It is used in this study to represent both residents and employees. Some VMT metrics focus on VMT per capita and VMT per employee as separate markers of these indications; however, VMT per service population focuses on the effects of all vehicular movement in an area. It includes not only trips that are attracted and produced by home and work trips, but those that fit in neither category (i.e., school to grocery store) as well as truck trips. It is therefore more representative of the effect of users and trips on the roadways in this CPA.

4.14.5 THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the aforementioned *CEQA Guidelines*, the Proposed Plan would have a significant impact related to transportation if it would:

- Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities.

- Conflict or be inconsistent with *CEQA Guidelines* Section 15064.3, Subdivision (b).

- Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

- Result in inadequate emergency access.

Text of *CEQA Guidelines* Section 15064.3, Subdivision (b):

> ***Land Use Projects.*** *Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.*
>
> ***Transportation Projects.*** *Transportation projects that reduce, or have no impact on, vehicle miles traveled should be presumed to cause a less than significant transportation impact. For roadway capacity projects, agencies have discretion to determine the appropriate measure of transportation impact consistent with CEQA and other applicable requirements. To the extent that such impacts have already been adequately addressed at a programmatic level, such as in a regional transportation plan EIR, a lead agency may tier from that analysis as provided in Section 15152…*
>
> ***Qualitative Analysis****. If existing models or methods are not available to estimate the vehicle miles traveled for the particular project being considered, a lead agency may analyze the project's vehicle miles traveled qualitatively. Such a qualitative analysis would evaluate factors such as the availability of transit, proximity to other destinations, etc. For many projects, a qualitative analysis of construction traffic may be appropriate.*
>
> ***Methodology.*** *A lead agency has discretion to choose the most appropriate methodology to evaluate a project's vehicle miles traveled, including whether to express the change in absolute terms, per capita, per household or in any other measure. A lead agency may use models to estimate a project's vehicle miles traveled, and may revise those estimates to reflect professional judgment based on substantial evidence. Any assumptions used to estimate vehicle miles traveled and any revisions to model outputs should be documented and explained in the environmental document prepared for the project. The standard of adequacy in Section 15151 shall apply to the analysis described in this section.*

The Proposed Plan would have an impact related to transportation if it would result in VMT that exceeds an applicable threshold of significance. OPR recommends that a per capita or per employee VMT that is fifteen percent below that of existing development regionally may be a reasonable threshold. However, the "region" identified for the City of Los Angeles is the six-county SCAG region, which is very large and not representative of the Boyle Heights CPA. Holding this CPA to that as a threshold would likely promote an increase in VMT. Therefore, for the second threshold question, as provided in the LADOT Transportation Assessment Guidelines (TAG):

- The Plan would result in average total VMT per service population in the plan horizon year that exceeds 15% below the regional average total VMT per service population from the most recent regional metric available.

- The Plan would result in average total VMT per service population in the plan horizon year that exceeds the average total VMT per service population for the "project area" for the baseline year.

4.14.6 METHODOLOGY

The transportation analysis for the Proposed Plan has been developed through a process that includes the use of the City of Los Angeles TDF Model and the development of the Boyle Heights Subarea TDF Model for the analysis of the 2016 baseline year and the future 2040 scenario as well as the use of the SCAG TDF Model for the analysis of the 2016 SCAG RTP/SCS to represent the region.[21] The City of Los Angeles TDF Model is based on the SCAG RTP/SCS model with additional enhancements and focus within the City for purposes of analyses such as community plans. This **Methodology** section describes the procedures used to assess impacts on the transportation system. It includes an overall discussion of methodology and assumptions, followed by a discussion of how the Proposed Plan is expected to perform in comparison to the thresholds described above.

Study Area and Reporting Framework

The study area is defined by the boundaries of the Boyle Heights CPA in the City of Los Angeles. This study is defined by the potential impacts of the Proposed Plan to transportation and its related elements in the study area, which includes the CPA, the City, and the surrounding areas.

VMT Methodology

In order to determine whether the socio-economic and transportation network included in the Proposed Plan would result in an impact (as outlined in **Section 4.14.5, Thresholds of Significance**), VMT calculated for 2016 Baseline and 2016 SCAG Region is compared to the 2040 Boyle Heights Plan. This is calculated using the following outputs from the City of Los Angeles and SCAG TDF Models.

Vehicle Trips (VT)

Vehicle Trips are defined as the number of trips undertaken in an automobile or a truck, such as in single-occupancy private automobiles, vehicles that contain two or more travelers, such as carpools, taxis, or ride-share vehicles, and trucks including light truck, medium truck, and heavy truck. While the total number of vehicle trips is expected to increase as growth occurs in the Boyle Heights CPA and in the region, a reduction in vehicle trips per service population over time can be used as an indicator of reduced reliance on the automobile as well as an indicator of more travel by walking, biking, taking transit, carpools, etc. A reduction in the number of vehicle trips per service population also helps meet the State's goal of reducing

[21] See **Appendix B, Methodology**, of this DEIR for more information on the 2016-2040 RTP/SCS

GHG emissions, as mandated by AB 32 and SB 375. Any increase in the number of daily vehicle trips per service population would be an undesirable outcome of the Proposed Plan but would not constitute an impact.

Vehicle trips are calculated from outputs of the Boyle Heights Subarea TDF model. Based on millions of inputs of sample data, likely trips are calculated in the TDF model. With 2040 estimated population, household, and employment values input into each model TAZ, the model develops a vehicle trip calculation for the Boyle Heights CPA.

Vehicle trips are calculated from outputs of the Boyle Heights Subarea TDF model and SCAG TDF model. With estimated population relevant to each model's year, household and employment values input into each model Transportation Analysis Zone (TAZ), the models develop a vehicle trip calculation for the Boyle Heights CPA and SCAG Region. A Transportation Analysis Zone is a spatial unit that includes socioeconomic data such as population, households, and employees of a particular region.

Vehicle Miles Traveled (VMT)

VMT is a measurement of miles traveled (e.g., private automobiles, trucks and buses) generated by all land uses (e.g., residential, retail, and office). While the total VMT is expected to increase as growth occurs in the Boyle Heights CPA and in the region, a reduction in VMT per capita over time can be used as an indicator of reduced reliance on the automobile. Reducing VMT helps meet the State's goals of reducing GHG emissions, as mandated by AB 32 and SB 375. Any increase in the total number of VMT per capita would be an undesirable outcome of the Proposed Plan and would constitute an impact. VMT was forecasted with the City of Los Angeles TDF model.

For this analysis, VMT is reported as Total Daily VMT per Service Population. The Total Daily VMT per Service Population is the total VMT divided by the number of people living or working within the CPA. This VMT is generated by both Boyle Heights residents and employees within Boyle Heights as well as travel between Boyle Heights and other areas.

The reported VMT results include both personal vehicles and truck VMT. The VMT calculation accounts for internal trip ends and trips that begin or end within the Boyle Heights CPA, as these trips are generated by or attracted to land uses within the Boyle Heights CPA. The travel behavior effects of land use changes in Boyle Heights can be understood by measuring the VMT of trips originating in and/or destined for the Boyle Heights CPA and comparing them to the 2016 Baseline and 2016 SCAG Region outputs.

VMT is calculated by multiplying the vehicle trip length by the number of trips estimated through the Boyle Heights TDF model. VMT takes in consideration population, household, and employment values, as

well as travel patterns of origins and destinations, including all of these inputs in the Boyle Heights and SCAG TDF models, which makes them sensitive to each land use and network scenario tested.

Roadway Segment and Freeway Mainline Level of Service Methodology

In addition to the VMT methodology, the Proposed Plan was also analyzed using LOS changes on road segments, as described below.

As discussed above, under SB 743, LOS as a metric for traffic congestion is not used to determine CEQA impacts. However, congestion may still be considered for safety and therefore, this information is used to inform the analysis related to emergency access, as well as for informational and historical comparison purposes.

LOS is a qualitative measure used to describe the condition of traffic flow, ranging from excellent conditions at LOS A to overloaded conditions at LOS F. LOS definitions for street segments are summarized in

Table 4.14-7, Roadway Segment Level of Service Definitions, explains that LOS can be determined by dividing demand V/C, and the resulting V/C ratio is then used to obtain the corresponding LOS. The capacity values for analyzed roadway segments were obtained from the City of Los Angeles TDF model.

Plans that involve large areas and are not expected to be fully implemented until Year 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. In addition, detailed roadway designs for improvements to individual intersections are not yet available. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known.

Table 4.14-7
Roadway Segment Level of Service (LOS) Definitions

Level of Service (LOS)	Volume to Capacity Ratio (V/C)	Description
A	0.00 – 0.60	Excellent operation. All approaches to the intersection appear quite open, turning movements are easily made, and nearly all drivers have freedom of operation.
B	>0.60 – 0.70	Very good operation. Many drivers begin to feel somewhat restricted within platoons of vehicles. This represents stable flow. An approach to an intersection may occasionally be fully utilized and traffic queues start to form.

Level of Service (LOS)	Volume to Capacity Ratio (V/C)	Description
C	>0.70 – 0.80	Good operation. Occasionally drivers may have to wait more than 60 seconds, and back-ups may develop behind turning vehicles. Most drivers feel somewhat restricted.
D	>0.80 – 0.90	Fair operation. Cars are sometimes required to wait more than 60 seconds during short peaks. There are no long-standing traffic queues. This level is typically associated with design practice for peak periods.
E	>0.90 – 1.00	Poor operation. Some long-standing vehicular queues develop on critical approaches to intersections. Delays may be up to several minutes.
F	>1.00	Forced flow. Represents jammed conditions. Backups from locations downstream or in the cross street may restrict or prevent movement of vehicles out of the intersection approach lanes; therefore, volumes carried are not predictable. Potential for stop and go type traffic flow.

Source: Transportation Research Board, Highway Capacity Manual, Special Report 209, Washington, D.C., 2000.

LOS can be determined by dividing the number of vehicles (i.e., volume (V)) by roadway capacity (C), and the resulting V/C ratio is then used to obtain the corresponding LOS. The volume-weighted V/C ratio is used in order to obtain aggregate statistics regarding the transportation conditions, allowing a comparison of different scenarios and alternatives. The weighted average V/C ratio represents typical travel conditions for the roadway network in the Project Area. The volume-weighted average V/C ratio is calculated by taking the volume of each street segment and multiplying it by its corresponding V/C ratio. This is divided by the sum of the total volumes, and essentially represents the average V/C ratio for the roadway network in the Project Area.

Travel Demand Model Development

The City of Los Angeles TDF Model provides the ability to evaluate the transportation system, use performance indicators for land use and transportation alternatives, provide information on regional pass-through traffic versus locally generated trips, and graphically display these results. The model captures planned growth in the Project Area, including special generators, such as airports and universities, and is sensitive to emerging land use trends through improved sensitivity to built environment variables. The model forecasts A.M. and P.M. peak period and daily vehicle and transit flows on the transportation network in the City. In essence, the travel demand model serves as a tool to implement, manage, and monitor the City of Los Angeles' transportation plans, projects, and programs, providing a suitable starting point for additional refinement as part of a more local application, such as the Proposed Plan.

The potential impacts associated with implementation of the Proposed Plan are evaluated using a refined version of the City of Los Angeles' Travel Demand Model within the Boyle Heights CPA and the adjacent Downtown Plan Area. The reason for including refinements to the Downtown Plan Area is that both

Community Plans are being developed in conjunction, and as such the future network modifications for each Plan Area were included in each other's refining process. The City of Los Angeles Travel Demand Forecasting Model utilizes the TransCAD Version 7.0 Build 12410 modeling software. The Model was refined within the Boyle Heights CPA for improved sensitivity in measuring the effect of land use development and transportation network changes. The model has a future horizon year of 2040 and was designed to produce daily and A.M. and P.M. peak hour vehicle and transit flows on roadways within the Project Area based on comprehensive land use and socioeconomic data (SED) and uses a conventional 4-step process of trip generation, trip distribution, modal split and assignment. For modeling purposes, the Los Angeles model area is divided into 4,109 Transportation Analysis Zones (TAZs) and the Boyle Heights CPA is divided into 60 TAZs, each with corresponding SED and connections to the roadway and transit networks.

The City of Los Angeles travel model (consistent with 2016-2040 RTP/SCS model) was applied for the Proposed Plan analysis and contains City of Los Angeles SED and updates to the transportation network within Boyle Heights based on Mobility Plan 2035, which is discussed in detail in the section below titled *Boyle Heights Plan Mobility Network*. The City Model was used to generate the 2016 Baseline and 2040 Boyle Heights Plan data for the transportation impact analysis. The SCAG TDF Model, developed by SCAG, was used to generate the 2016 SCAG Region scenario.

Impact Analysis

The purpose of the transportation analysis is to identify potential transportation system deficiencies resulting from vehicle trips generated by the employment and population growth anticipated under the Proposed Plan and the proposed transportation network improvements, and to identify feasible mitigation measures. The Boyle Heights is a long-term plan that will be implemented over many years in conjunction with already approved development projects in the study area, and regional growth and transportation projects outlined in the 2016-2040 RTP/SCS. See **Appendix B, Methodology**, for more information on the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS. The Proposed Plan is represented by the 2040 Boyle Heights scenario and is compared to 2016 Baseline and 2016 SCAG Region scenarios in order to show the potential impacts of the Proposed Plan.

The Boyle Heights Subarea TDF Model includes the entire Boyle Heights CPA and is built upon and includes the entirety of the City of Los Angeles TDF Model, which is consistent with the 2016-2040 SCAG RTP/SCS model and includes all reasonably foreseeable development and regional transportation improvements for the year 2040 in the City of Los Angeles as well as surrounding jurisdictions, such as Unincorporated LA County, Vernon, Commerce, Monterey Park, and Alhambra. Thus, the Boyle Heights Subarea TDF Model includes the regional growth forecast for both inside and outside of the CPA for the

purpose of the Future 2040 Without Project Conditions and for analyzing Future With Project Conditions. The Boyle Heights Subarea TDF Model refines the level of detail within the CPA for improved sensitivity in measuring the effects of land use and transportation network changes for the 2040 Boyle Heights Plan.

The analysis tools used to forecast future travel patterns are long-range models of travel demand. Long-range travel demand models primarily focus on forecasting auto use, with limited sensitivity to other modes of travel such as transit, bicycling, and walking. This is consistent with the traffic forecasting methods used by most cities and is consistent with the state of the transportation and traffic engineering practice. Recently, new travel behavior trends have emerged that traditional travel demand models are not designed to accommodate. Transportation and traffic experts continue to evaluate the anticipated longevity of these trends and the impact they may have on travel behavior in the future. Factors that affect long-term trends in travel behavior include recessionary effects on employment, changes in younger generations' interest in driving and vehicle ownership, baby boomer retirement choices and their continued participation in the workforce, increasing preference across generations for urban living, fuel prices, increased availability of on-demand delivery of goods and services, and greater travel options through autonomous vehicles and shared use mobility (e.g., Lyft, Uber, bikeshare programs).

The transportation analysis approach used in this EIR applies established traffic forecasting tools that have been empirically proven and previously accepted under CEQA. However, these may prove to be conservative if some of the recent trends in travel persist. It is not clear what direction the trends will take at this point. VMT per capita has been generally dropping since around 2004 but increased for many decades prior. If the trends toward higher levels of walking, bicycling, and transit use exceed what is forecast in the EIR, this could result in fewer driving-related impacts than the plan conservatively accounts for in the EIR. It is possible, however, that innovations in autonomous and driverless vehicles, transportation network companies (e.g., Lyft and Uber), and same-day delivery will increase future VMT per capita. A variety of factors contribute to VMT, and transportation technologies along with demographic trends will influence future travel behavior. It would be speculative to make assumptions about how these new technologies and changes in transportation may affect travel behavior long-term; therefore, the methodologies and travel forecasts applied in this analysis rely on the state-of-the-practice at this time as previously accepted under CEQA.

Proposed Plan Mobility Network

Mobility Plan 2035 (MP 2035) is the Mobility Element of the City of Los Angeles' General Plan. MP 2035 provides the framework for future community plan updates, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to be realized by 2035. The MP 2035 reflects policies and programs that lay the foundation for safe, accessible, and

enjoyable streets for pedestrians, bicyclists, transit users, and vehicles throughout the City of Los Angeles, including the Boyle Heights Plan Area. MP 2035 was adopted by the City in August 2015 and updated in 2016. It is compliant with the 2008 Complete Streets Act (AB 1358), which mandates that the circulation element of a City's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The Proposed Plan would enhance mobility by focusing future growth in areas well-served by transit and by establishing pedestrian-oriented development standards for new development in order to encourage transit ridership, walking, and bicycling. Mixed-use development around Metro stations and transit corridors offers residents, employees and visitors mobility choices that enable them to reduce the number and length of vehicle trips. The Proposed Plan would also amend street designations and modify the enhanced network designations consistent with the intent of MP 2035. MP 2035 anticipates that each community plan will provide updates as appropriate to that community's needs. Therefore, the Proposed Plan would be consistent with the City's MP 2035 and the Complete Streets Act.

The transportation improvements planned for the Proposed Plan primarily originated from the MP 2035. The enhanced network treatments envisioned through MP 2035 were reviewed and refined to complement the anticipated growth areas as well as the Proposed Plan's goals and policies. Since MP 2035 does not prescribe or mandate how the enhanced network treatments are implemented within each community plan, the refinements to the enhanced network treatments primarily consisted of developing potential implementation options within the Boyle Heights Plan Area.

The Proposed Plan Project List is not exhaustive but is representative of the types of improvements proposed for inclusion in the Proposed Plan. In addition, the Proposed Plan would not, itself, entitle or otherwise approve any transportation projects. Nevertheless, potential impacts of implementing the transportation improvements contained in the Project Lists were analyzed at a programmatic level as part of the Proposed Plan. Similar to the MP 2035, the Proposed Plan does not prescribe how the enhanced network treatments will be implemented within each community plan. Therefore, the enhanced network treatments in the CPA were reviewed in relation to the roadway characteristics, such as roadway width, right-of-way, street designations and adjacent land uses. **Figure 4.14-6, Future Mobility Network**, shows the following enhanced network treatments for roadways in the Proposed Plan:

- Bicycle Enhanced Network (BEN)
  - Tier 1 Protected bike lane: bicycle facilities with a physical separation from the vehicular lanes

  - Tier 2 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, anticipated to be built by 2035
  - Tier 3 bike lane: bicycle lanes painted on the roadway and adjacent to vehicular lanes, not anticipated to be built by 2035
- Transit Enhanced Network (TEN)
  - Moderate: stop enhancements and increased service; bus operates in mixed-flow with vehicles
  - Moderate Plus: moderate treatments, plus peak-period bus-only lanes
  - Comprehensive: moderate treatments, plus full-time bus-only lanes
- Neighborhood Enhanced Network (NEN)
  - Peak period or full-time parking and turning movement restrictions

lists the refinement to MP 2035 in the Boyle Heights Plan Network in the Boyle Heights Plan Area.

Parking

Parking deficits are not CEQA impacts. They are considered socio-economic impacts, rather than impacts on physical environment as defined by CEQA, unless there are secondary impacts, such as safety impacts.

Source: Source: City of Los Angeles and Mobility Plan 2035

4.14.7 IMPACTS

Threshold 4.14-1 **Would implementation of the Proposed Plan conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?**

This impact would be less than significant.

The Proposed Plan seeks to enhance access to all modes in the local circulation system, improving access on transit, roadways, bicycle, and pedestrian facilities. This is accomplished through applying new land use and zoning regulations to encourage mixing and scales of use as well as site design supportive of all modes. The Proposed Plan also implements MP 2035 with a refined lens on the Boyle Heights CPA and is consistent with the objectives of the SCAG 2016-2040 RTP/SCS and SCAG 2020-2045 RTP/SCS.[22]

The types of transportation improvements envisioned as part of the Proposed Plan are within the framework established in MP 2035. The proposed updates to the Plan are consistent with the City's municipal approach to transportation planning and apply such principles to the Proposed Plan. The proposed mobility improvements would provide transportation options and accommodations for multiple modes of travel (i.e., transit, bicycle, pedestrian, and vehicle) as part of the transportation system.

The Proposed Plan would not conflict with adopted City and state policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Therefore, a less than significant impact related to consistency with other plans with respect to transit, bicycle, or pedestrian policies would occur.

In addition to MP 2035, the Proposed Plan would support the City's Plan for a Healthy LA by creating more opportunities for people to live and work in areas of the City where travel by active transportation can be part of daily life. The implementation of active transportation facilities is anticipated to improve safety and is in alignment with the City's Vision Zero Action Plan. The existing Metro L Line stations create opportunities for the City to further enhance first- and last-mile opportunities through the creation of mobility hubs. In addition, individual development projects will need to adhere to the requirements in LADOT's adopted Transportation Assessment Guidelines. The Proposed Plan would not conflict with adopted City and state policies, plans or programs regarding public transit, bicycle, or pedestrian facilities. Therefore, a ***less than significant impact*** related to consistency with other plans with respect to this impact category would occur.

---

22 See **Appendix B, Methodology**, of this DEIR for more information on the 2016-2040 RTP/SCS and 2020-2045 RTP/SCS

Mitigation Measures

No mitigation measures are required.

Significance of Impacts after Mitigation

Less than significant.

Threshold 4.14-2 Would implementation of the Proposed Plan conflict or be inconsistent with *CEQA Guidelines* section 15064.3, subdivision (b)?

This impact would be less than significant.

The Proposed Plan would have an impact if its VMT exceeds either of the following:

1. The Plan results in average VMT per service population for the 2040 Boyle Heights Plan that exceeds 15% below the regional average total VMT per service population from 2016 SCAG Region.

2. The Plan results in average total VMT per service population for the 2040 Boyle Heights Plan that exceeds the average total VMT per service population for the Boyle Heights CPA from 2016 Baseline.

Table 4.14-9 shows vehicle trips and VMT for the 2016 SCAG Region conditions and 2040 Boyle Heights Plan conditions, and **Table 4.14-10** shows vehicle trips and VMT for the 2016 Baseline conditions and 2040 Proposed Plan conditions. VMT methodology is discussed previously in **Section 4.14.6, Methodology**.

Table 4.14-9
Future Vehicle Miles Traveled (VMT) Compared to 2016 SCAG Region

	Daily Vehicle Trips	Daily Vehicle Trips per Service Population	VMT	Daily VMT per Service Population
2016 SCAG Region Conditions	82,283,000	3.1	908,573,000	33.9
Future (2040) Proposed Plan Conditions	355,300	3.08	3,334,100	21.6
Percent Difference (2016 SCAG Region - Proposed)	N/A	0%	N/A	**-36.3%**

Source: Cambridge Systematics, 2021

Table 4.14-10
Future Vehicle Miles Traveled (VMT) Compared to 2016 Baseline

	Daily Vehicle Trips	Daily Vehicle Trips per Service Population	Total Daily VMT	Daily VMT per Service Population
2016 Baseline	262,500	2.05	2,968,900	23.21
Future Proposed Plan Conditions	355,300	2.30	3,334,100	21.60
Percent Difference (No Project - Proposed)	35%	12%	12%	-7%

Source: Cambridge Systematics, 2021

Given that service population VMT for the Proposed Plan is more than 15% below the 2016 SCAG Region and less than the 2016 Baseline for the Boyle Heights CPA, the Proposed Plan would ***have less than significant impact*** with respect to VMT.

Mitigation Measures

No mitigation measures are required.

Significance after Mitigation

Less than significant impact.

Threshold 4.14-3 Would implementation of the Proposed Plan substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

This impact would be significant and unavoidable related to off ramp queuing on State highway facilities.

The Proposed Plan describes the reasonably expected future development for a portion of the City and does not constitute a commitment to any project-specific development within the Boyle Heights CPA. Furthermore, none of the regulations included in the Proposed Plan would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards. Rather, numerous policies and programs included in the Proposed Plan emphasize transportation safety for all people using the transportation system, support implementation of transportation treatments that are designed to improve

roadway safety and help implement other City initiatives (such as Vision Zero or Safe Routes to School) which aim to improve the safety of the City's transportation facilities.

None of the transportation system improvements envisioned in the Proposed Plan or Transportation Improvement List would introduce new safety hazards or incompatible uses at intersections or along roadway segments, as most would be designed to improve safe circulation and access to the transit stations for all users. The multi-modal improvements envisioned in the Proposed Plan are intended to help minimize conflicts between pedestrians and vehicles. Furthermore, design standards in the Proposed Plan are intended to limit the number, width, and location of new driveways along major streets and in areas of high pedestrian activity, thereby improving pedestrian safety.

The implementation of bicycle and pedestrian facilities identified in the Proposed Plan Project List are anticipated to improve the safety of bicyclists and pedestrians. Automobile speed is a major factor in the severity of collisions with bicyclists and pedestrians, the most vulnerable roadway users. Collisions with a vehicle traveling at 20 miles per hour result in a five percent pedestrian fatality rate, and fatalities increase to 40, 80 and 100 percent when the vehicle speed increases to 30, 40 and 50 mph, respectively.[23] Bicycle lanes, when accompanied by travel lane reductions can help reduce overall vehicle speeds.[24] When modified from four travel lanes to two travel lanes with a two-way left-turn lane, research along 45 corridors throughout the country has found a range of 19 to 47 percent reduction in all roadway crashes. The upgrade to fully protected bicycle lanes or cycle tracks has been shown to reduce the risk of injury by 90 percent.[25]

The bicyclist and pedestrian improvements associated with the Proposed Plan and Project List are also anticipated to increase the number and visibility of bicyclists and pedestrians on the City's transportation network. Of 68 cities across California with highest per capita pedestrian and bicycle collisions, per capita injury rates to pedestrians and bicyclists are shown to fall precipitously as the number of bicyclists increases, revealing a non-linear relationship between bicycle safety and the level of bicycling.[26] This study showed as much as an eight-fold variation of collisions (expressed as a percentage of those that bike or walk to work) in comparing low and high bicycling cities. The underlying reason for this pattern is that motorists drive slower when bicyclists and pedestrians are visible either in number or frequency and drive

---

26 Jacobsen, P.L., *Safety in Numbers: More Walkers and Bicyclists, Safety Walking and Bicycling. Injury Prevention* 9~3!:205–209, 2003.

faster when few pedestrians and bicyclists are present, resulting in higher overall travel speeds. This effect of modified driving behavior is consistent with other research focused on 24 California cities that shows that higher bicycling rates among the population generally show a much lower risk of fatal crashes for all road users.[27] Comparing these low versus high bicycling communities, there was a ten-fold reduction in fatality rate for motorists, and eleven-fold reduction in fatality rate for pedestrians, and an almost fifty-fold reduction in fatality rate for bicyclists.[28]

The Proposed Plan is responding to changing demographics, a younger population desiring safe and accessible active transportation options (bicycling, walking), a growing number of residents and employees seeking alternatives to the car, and an aging population that may need to rely more and more on transportation alternatives to the automobile. In 2030, senior citizens will make up 1/5 of Los Angeles County's population. This older population (as well as children and the disabled) will benefit from longer pedestrian crossing times, shorter street crossing distances, wider, shaded sidewalks, street benches, increased transit service and separated bicycle facilities. Ultimately, nothing in the Proposed Plan is expected to significantly reduce pedestrian mobility, including but not limited to the disabled, those with strollers, and bus riders.

Freeway Analysis

As part of individual development project entitlements, the Interim Guidance for Freeway Safety Analysis released by LADOT in May 2020 requires that individual land use projects evaluate the potential for safety impacts related to freeway off ramp queuing. The specific concern relates to the possibility that the speed differential between vehicles traveling on freeway mainlines (the 5, 10, 101, and SR-60 Freeways, in particular) and vehicles queuing at freeway off-ramps may create the potential for collisions if drivers on the freeway mainline lack sufficient time to slow or stop once they are aware of a queuing situation. It is anticipated that freeway mainline traffic would slow at times when high levels of off ramp queuing occurs and that the speed differential would be sufficiently small that mainline drivers would have sufficient warning about a queuing situation; however, it is possible that queuing at individual off ramps could occur at times when mainline traffic congestion is low, thus creating a potential safety issue. Because the Proposed Plan is programmatic in nature, it does not include specific development projects or details about the size, nature, or location of individual developments. In addition, future traffic levels and speeds at individual off ramps in and near the Boyle Heights CPA cannot be predicted with any degree of certainty at this time because it is not known how conditions may change over an approximately 20-year period and

27 Marshall, Wesley E., N. W. Garrick, *Evidence on Why Bike-Friendly Cities Are Safer For All Road Users*. Environmental Practice 13 (1), March 2011.

28 *Ibid*.

what measures the City and Caltrans may implement to address any off-ramp queuing issues that arise. Therefore, any detailed analysis of potential future impacts related to off ramp queuing would be speculative. Nevertheless, queuing-related safety issues could potentially arise as additional development occurs in the Boyle Heights CPA, although it is anticipated that the City and Caltrans would address any such issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur.

As such, safety impacts related to off ramp queuing as growth occurs pursuant to the Proposed Plan are ***potentially significant***.

Mitigation Measures

Significant and unavoidable impacts have been identified in relation to the potential for project-specific ramp queuing safety impacts as growth occurs pursuant to the Proposed Plan. Potential mitigation may include transportation demand management strategies to reduce a project's trip generation, investments to active transportation infrastructure, or transit system amenities, and/or operational changes to the ramp terminal such as lane reassignment, traffic signalization, signal phasing or timing modifications, etc. However, without specific information on where safety impacts may occur as a result of freeway off ramp queuing, it is not possible to identify appropriate mitigation measures. Therefore, no feasible mitigation can be identified for the Boyle Heights CPA. It is anticipated that subsequent land use development projects that are seeking approval under the Proposed Plan will be required to study freeway queuing and safety impacts in more detail per the Interim Guidance for Freeway Safety Analysis.

Significance after Mitigation

Impacts related to highway safety as a result of design features or incompatible uses would be ***significant and unavoidable***. All other safety related issues from hazards would be ***less than significant.***

Threshold 4.14-4 Would implementation of the Proposed Plan result in inadequate emergency access?

This impact would be less than significant.

In the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD. This impact analysis provides an evaluation of impacts to emergency services as they relate to transportation. For individual development projects, this impact criterion considers whether a project would have adequate access to emergency services based on the road configuration and project design. At the Proposed Plan level,

individual project design level details, such as location of driveway location and design, are unknown. Therefore, the EIR does not consider impacts to emergency access to particular properties in the Boyle Heights CPA or particular streets based on roadway configurations. The EIR considers, at the detail available, the reasonably foreseeable impacts to roadway congestion from the Proposed Plan and the associated impacts to emergency access from any forecasted congestion.

Therefore, the discussion will first consider the Proposed Plan impacts to roadway congestion using LOS and volume-to-capacity (V/C) criteria when compared to Existing Conditions (2016) and then discuss the emergency access impacts associated with roadway congestion.

Roadway Congestion

Many factors influence the LOS and V/C analysis including, but not limited to, land use patterns, the relationship between land use and transportation, how transportation treatments are designed within the existing roadways, how and where the Proposed Plan directs anticipated growth within the CPA, and growth anticipated in the region surrounding the CPA.

Land Use Patterns. Where and how the Proposed Plan directs anticipated growth in relation to transportation will affect transportation use; therefore, land use patterns are factored into the analysis of the circulation system. The Proposed Plan would create new housing and employment opportunities, mostly in areas around existing transit systems.

Regional Background Growth. On a regional level, traffic in the Project Area is anticipated to increase in conjunction with regional population, housing, and employment growth projected to occur in the future by SCAG. This growth will occur with or without implementation of the Proposed Plan. The background growth influences the transportation analysis by accounting for the increased activity levels under the Proposed Plan conditions, although those increases would occur with or without the Proposed Plan. Background growth is included in the City of Los Angeles TDF Model.

Level of Analysis. At the aggregate Plan scale, the traffic operation results reflect the impacts related to the Proposed Plan and the number of vehicle travel lanes. However, turn lanes, signal timings, and driveways are not accounted for in the analysis at this scale. Each of these features has the potential to affect operations, delay, VMT, and rerouting of traffic at the neighborhood level. Plans that involve large areas and are not expected to be fully implemented until 2040 or beyond are not analyzed effectively by detailed intersection V/C analyses. Consequently, roadway segment analysis is commonly used to determine the average service capacity of the roadway network. Street segment capacity impacts are generally evaluated in program-

level analyses (such as community plans or long-range development projects) for which details regarding specific land use types, sizes, project access points, etc., are not known.[29]

Circulation System Analysis. As identified above, two criteria (weighted average V/C ratio and the number of street segments at LOS E or F) are used to evaluate the impacts of the Proposed Plan when compared to 2016 conditions.

Table 4.14-11 presents the volume-weighted V/C ratios and LOS results for the Proposed Plan scenario during A.M. peak period. **Figure 4.14-7** shows A.M. peak period (6 A.M. – 9 A.M.) Level of Service for Proposed Plan. For reference, the 2040 without Project V/C is presented, representing anticipated growth in 2040 without implementation of the Proposed Plan. With the implementation of the Proposed Plan and regional growth anticipated in 2040, the weighted V/C ratio worsens from 1.00 (LOS C) to 1.11 (LOS F), and the percentage of roadway segments operating at LOS E or F increases from 42 to 52 percent.

Table 4.14-11
A.M. Peak Period Roadway Operations – Proposed Plan

Transportation Metrics	Existing 2016 Conditions	Future 2040 Without Project	Future 2040 With Proposed Plan
Weighted V/C	0.72 (LOS C)	1.00 (LOS F)	1.11 (LOS F)
Percentage (%) of Street Segment at LOS E or F	17%	42%	52%
Percentage (%) of Center-Line Miles at LOS E or F	13%	35%	44%
Weighted Average V/C by Facility Type			
Boulevard / Parkway	0.72 (LOS C)	1.02 (LOS F)	1.12 (LOS F)
Avenue	0.72 (LOS C)	0.96 (LOS F)	1.40 (LOS F)
Local / Collector	0.70 (LOS C)	0.86 (LOS D)	0.82 (LOS D)

Source: Cambridge Systematics, 2021

Table 4.14-12 presents the volume-weighted V/C ratios and LOS results for the Proposed Plan scenario during PM peak period. Under Year 2040 Without Project Conditions, the weighted V/C ratio worsens from 0.74 (LOS C) to 1.03 (LOS F). The percentage of roadway segments operating at LOS E or F increases from 18 to 50 percent. For reference, the 2040 without Project V/C is presented, representing anticipated growth in 2040 without implementation of the Proposed Plan. With the implementation of the Proposed Plan and regional growth anticipated in Year 2040, the weighted V/C ratio worsens from 1.03 (LOS F) to 1.14 (LOS F). The percentage of roadway segments operating at LOS E or F also increases from 50 to 58 percent.

SOURCE: City of Los Angeles, 2021

FIGURE **4.14-8**

IMPACT SCIENCES

Proposed Plan PM Peak Period Level of Service

1264.03•05/2022

Table 4.14-12
P.M. Peak Period Roadway Operations – Proposed Plan

Transportation Metrics	Existing 2016 Conditions	Future 2040 Without Project	Future 2040 With Proposed Plan
Weighted V/C	0.74 (LOS C)	1.03 (LOS F)	1.14 (LOS F)
Percentage (%) of Street Segment at LOS E or F	18%	50%	58%
Percentage (%) of Center-Line Miles at LOS E or F	13%	47%	54%
Weighted Average V/C by Facility Type			
Boulevard / Parkway	0.74 (LOS C)	1.04 (LOS F)	1.14 (LOS F)
Avenue	0.75 (LOS C)	1.08 (LOS F)	1.44 (LOS F)
Local / Collector	0.73 (LOS C)	0.88 (LOS D)	0.89 (LOS D)

Source: Cambridge Systematics, 2021

The resulting weighted average V/C ratio (and corresponding LOS) would worsen with the Proposed Plan compared to Existing Conditions, and the number of roadway segments operating at LOS E or F would also increase in comparison to Existing Conditions.

Emergency Access Impacts Associated with Roadway Congestion

Within the City of Los Angeles, fire prevention and suppression and emergency medical services are provided by the LAFD. Public protection service and law enforcement are provided by LAPD.

While the Proposed Plan would affect segment-level LOS as shown above, there is not a direct relationship between predicted travel delay and response times as California state law does require drivers to yield the right-of-way to emergency vehicles and even permits emergency vehicles to use opposing lane of travel, the center turn lanes, or bus-only lanes. LAFD in collaboration with LADOT has developed a Fire Preemption System (FPS), a system that automatically turns traffic lights to green for emergency vehicles traveling on designated streets in the City.[30] The City of Los Angeles has over 205 miles of routes equipped with FPS. In some instances, roadway reconfigurations with the implementation of the transportation improvements as part of the enhanced network treatments could improve emergency access. For example, a roadway reconfiguration could improve emergency access where a bus-only lane or a contiguous center left-turn lane is introduced where it did not exist. Emergency vehicles are permitted to use bus-only lanes for local access to emergency destinations. People traveling by bicycle are required to pull to the side of the road to yield access to emergency providers regardless if they are traveling in a bicycle-only lane or in a

30 Los Angeles Fire Department, Bulletin No. 133, *Training Bulletin: Traffic Signal Preemption System for Emergency Vehicles*, October 2008.

standard travel lane. It is more likely that when in route to an emergency incident, general traffic will be expected to merge into the bus-only lane, permitting the emergency vehicle to pass in the through lane to the left. Emergency responders also routinely use the center left-turn lanes, or even travel in opposing travel lanes if needed. Generally, multi-lane roadways allow the emergency vehicles to travel at higher speeds and permit other traffic to maneuver out of the path of the emergency vehicle.

Knowing exactly how fire and emergency service response times will be affected calls for a great deal of speculation. As explained above, it is not possible to exactly predict the Proposed Plan impacts at the street level. This is one factor as to why it is not possible to forecast response times. The other is that, as explained above, the relationship between emergency access and traffic and potential impacts associated with emergency access is complex and involves factors such as the following:

- The proximity of LAFD and LAPD (and other) facilities to those they serve.
- The staffing and equipment at fire stations.
- The opportunity for emergency responders to use alternative routes in an area.
- The specific street configuration. LAFD, in cooperation with LADOT and LADCP, actively participates in the design of specific roadway changes in order to ensure adequate fire/emergency access is maintained. LAFD, in reviewing street and right-of-way projects, comments on particular street configuration designs, and will raise concerns if roadways present particular access challenges and can recommend no changes be done at all or alternative changes be undertaken if fire and emergency access are particularly impacted.
- As identified in the Thresholds Guide,[31] on any given project review, LAFD can implement project specific mitigation requirements, such as requiring fire retardant landscaping, prohibiting construction in fire hazard areas, requiring design features that reduce fire potential, and developing emergency response plans.
- The changing demand for service is complex. For example, with increasing populations there may be more density and more construction, though new buildings are constructed in accordance with increasingly stringent building and fire codes making them safer and more resistant to fires, such as requiring fire sprinklers. The population is aging, which may increase demand for service. But it is also feasible that the population may not need additional service, as healthcare and other technologies evolve and are improved.

---

31 City of Los Angeles, *CEQA Thresholds Guide*, 2006, page K.2-5.

- Future factors that could increase efficiencies in response, including improvements in technology and management, such as changes in deployment of equipment and staff and mutual aid agreements.

The LAFD has a mandate under the State Constitution to provide fire services as, "the protection of the public safety is the first responsibility of local government." Cal. Const. Art. XIII, Sec. 35, subd. (a)(2). LAFD "preserves life and property, promotes public safety and fosters economic growth through a commitment to prevention, preparedness, response and recovery as an all-risk life safety response provider." It is the nation's second busiest provider of Emergency Medical Services (EMS); more than 85% of LAFD's daily responses are related to EMS. The types of medical response calls received range from minor cuts to trauma and heart attacks. The call volume for structure and brush fires is less frequent.

In 2015, LAFD published a Strategic Plan 2015-2017, A Safer City, that focuses on nine goals and corresponding strategic actions that would guide the LAFD for the next three years.[32] The primary goals that are applicable to the Project include providing exceptional public safety and emergency service and implementing and capitalizing on advanced technologies. Some of the key priorities associated with these goals include:

- Improving response times by utilizing data and metrics to identify gaps in LAFD's response strategies and exploring response time improvements through dialogue, cognitive inquiry, innovation, and follow-up;

- Delivery of emergency medical services by expanding LAFD EMS response capabilities for special events and addressing periods of high vehicle traffic; and

- Identifying and implementing advanced technologies to support and improve performance metrics, tracking standards, data collection, analysis and reporting procedures (FireStatLA).

The LAFD Strategic Plan also focuses on the development of an even more professional workforce, promotion of a positive work environment to address risk management issues and strengthening community relationships to improve preparedness and enhance resiliency during emergency events.

In 2018, LAFD released the new Strategic Plan 2018-2020, A Safer City 2.0, which reports that since the previous Strategic Plan was released, LAFD has hired hundreds of new firefighters, implemented the Four Bureau Reorganization, and created innovative resources such as the Advanced Provider Response Unit (APRU), the Sober Response Unit and the Fast Response Vehicle program as well as other pilot programs. The new Strategic Plan has updated goals that are more refined. The five goals are 1) Provide exceptional

---

32 LAFD, *Strategic Plan 2015-2017*, http://www.lafd.org/news/lafd-chief-unveils-departments-strategic-plan. Accessed May 2020.

public safety and emergency service, 2) Embrace a healthy, safe and productive work environment, 3) Capitalize on Advanced Technology, 4) Enhance LAFD sustainability and community resiliency, and 5) Increase opportunities for personal growth and professional development. Goal 1 includes improving emergency response times, the delivery of EMS, resource deployment and readiness to respond to disasters. Goal 1 includes an objective to complete the Standards of Cover deployment analysis to determine the optimal distribution and concentration of resources and ensure a safe and effective response force for fire suppression, EMS and specialty response situations. The recommendations from the Standards of Cover are expected to be identified based on different geographic areas in the City; the Standards of Cover study was funded in the City's 2019-2020 budget and is expected to be completed within the next few years.[33]

In the interim, LAFD has been implementing innovative resources and pilot programs especially in relation to public health. By addressing EMS related incidents with new resources, such as specialized medical units, other resources, such as fire engines and fire trucks and associated personnel, would be able to respond to other incidents, such as fires or other emergencies. This strategy is for better resource deployment and to help reduce response times.

In preparation of the Mobility Plan 2035, the Planning Department met with LAFD staff to discuss the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff in order to understand how LAFD responds to growth and changes in traffic.[34] LAFD advised that although increasing congestion is a factor in how they address emergency response, their ongoing planning efforts, including the LAFD Strategic Plan take into account such increases in congestion and LAFD continues to plan for and maintain public safety and emergency service as required. LAFD monitors any impact on-the-ground implementation of the Proposed Plan may have on response times and make adjustments as necessary. These adjustments may or may not include redeploying resources, adding staff or building new fire stations. In more recent meetings related to the preparation of the Recirculated Draft Hollywood EIR, the Planning Department staff met with LAFD staff on the same topic due to public comments received about congestion and emergency response.[35] LAFD staff indicated that there are ongoing assessments of increases in call load or types of calls throughout the City, and LAFD continuously makes resource and deployment adjustments to address these changes, such as hiring additional medical personnel, acquiring new apparatus or flex staffing of personnel during the busiest hours of the day. LAFD staff said

33 Meeting between Department of City Planning and LAFD staff on September 3, 2019; City of Los Angeles Budget Summary FY 2019-2020: http://cao.lacity.org/budget19-20/2019-20Budget_Summary.pdf, accessed September 24, 2019.

34 Meeting between Department of City Planning and LAFD staff on September 8, 2015.

35 Meetings between Department of City Planning and LAFD staff on April 29, June 13, July 2, September 3, and September 17, 2019.

incremental changes are currently being addressed but the pending Standards of Cover is expected to have new recommendations for the long term. The Standards would include levels of staffing of firefighters and other personnel, target response times, new facilities and apparatus needed by geography, and address a City where development is expected to become denser and taller around transit infrastructure systems.

LAFD has goals for response times that are consistent with the response times stated in the National Fire Protection Association guidelines, including call processing, turnout for EMS and non-EMS calls, and travel. LAFD holds regular FireStat meetings to review response times throughout the City. These meetings include battalion chiefs and captains from the four Geographic Bureaus (Central, South, Valley, and West) and the Administrative Bureaus in the City and uses the FireStat data to exercise performance management and spot trends to adjust practices, methods or identify other solutions to maintain response times. Metrics are compared between stations and even across shifts or platoons to determine if there is an issue and to continue always to work on reducing all response times to get closer to the NFPA guidelines. If response times are shown to be increasing, battalion chiefs and captains will be tasked with identifying the reason and put in place mediations to resolve the issue. For example, if it is shown that one platoon is managing a four-minute average response and another platoon at the same station in similar conditions has an average response time of four and a half minutes, the responsible officers for the station will need to determine why one platoon is doing better than another, such as whether one platoon is taking a different route and resolve the differences to improve the slower numbers. If the factors are external to LAFD, LAFD will coordinate with other City departments, such as LADOT or ITA to adjust street light timing, or look for completely new solutions, in order to improve response times. In general, LAFD is constantly monitoring FireStat and utilizing all available resources so that appropriate and feasible response times are being maintained.

Many members of the public focus on response times as operational measures to assess system performance[36] or believe that faster response times mean better patient outcome.[37] Nationwide, the most widely referenced response time standard for advanced life support (ALS) incidents in urban settings has been for emergency responders to respond within 8 minutes and 59 seconds, when including call processing time, for 90 percent of incidents. The National Fire Protection Association *1710 Standard for the Organization and Deployment of Fire Suppression Operations, Emergency Medical Operations and Special*

36 Fitch, Jay. "Response Times: Myths, Measurement and Management." *The Journal of Emergency Medical Services*, 31 Aug. 2005. https://www.jems.com/2005/08/31/response-times-myths44-measure/, accessed March 20, 2021.

37 Ian E. Blanchard, Christopher J. Doig, Brent E. Hagel, Andrew R. Anton, David A. Zygun, John B. Kortbeek, D. Gregory Powell, Tyler S. Williamson, Gordon H. Fick & Grant D. Innes (2012) Emergency Medical Services Response Time and Mortality in an Urban Setting, Prehospital Emergency Care, 16:1, 142151. http://www.emdac.org/docs/Blanchard_EMS%20Times%20&%20Mortality_PrehospEmergCare_2012.pdf accessed March 30, 2021.

Operations to the Public by Career Fire Departments is for an ALS unit to respond within 8 minutes to 90 percent of incidents, without including call processing time (Fitch, 2010). This response goal time has been commonly cited since Dr. Mickey Eisenberg published a study in 1979, which concluded that survival from cardiac arrest is maximized if the time between collapse to receiving CPR is four minutes and the time from collapse to receiving definitive care (e.g., defibrillation) is 8 minutes, which has led to a widespread goal of an 8-minute response for ALS units responding to life-threatening emergencies (Blanchard et al., 2012).

LAFD publishes average operational response times citywide and by specific fire stations online through FIRESTATLA: http://www.lafd.org/fsla/stations-map, and was the first fire agency in the United States to release response times to the public.[38] ALS operational response times are provided for the full calendar year (January through December) starting with the year 2016 to 2019. Operational response time is the time interval that starts when first contact is made (either through 911 or the fire dispatch center) and ends when the first Standard Unit arrives on-scene. A Standard Unit has the capacity or equipment to administer the full suite of lifesaving services.[39] Average ALS operational response times for the City and for the two stations in the Boyle Heights CPA is less than the 8-minute 59-seconds standard, including call processing time, see **Table 4.14-13**.

Table 4.14-13
Operational Response Times for Advanced Life Support (ALS)

Year	Station 2 1962 East Cesar Chavez Avenue, Los Angeles, CA 90033	Station 25 2927 Whittier Boulevard, Los Angeles, CA 90023
2016	5:26	5:49
2017	5:33	6:08
2018	5:36	6:06
2019	5:36	6:06

Source: LAFD, FIRESTATLA, 2021

From the data, the average operational response times for ALS incidents for the two fire stations in the Boyle Heights CPA have generally slightly increased in recent years but remain under the 8 minutes 59 seconds standard. Based on all of the above, it is not reasonably foreseeable that the City will not continue to stay below the 8 minutes and 59 second standard for average emergency response times in the CPA in consideration of the increasing congestion in the CPA identified above. It is reasonably foreseeable that

39 LAFD, FIRESTATLA, http://www.lafd.org/how-we-calculate-results, accessed March 30, 2021.

LAFD will continue to meet its own mission statement and constitutional mandate to provide necessary fire and emergency services to the residents and visitors of the City. LAFD is currently preparing a Standards of Cover that will establish the City's response time standard and identify the facilities, equipment and staff to maintain that response time, including in consideration of increasing congestion identified above. Additionally, LAFD continues to develop, obtain and innovate new methods, resources and equipment to meet the needs of the City for fire and emergency response, including in the CPA.

Based on the above, the impact of the Proposed Plan on emergency medical services and fire protection and police protection would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance of Impacts after Mitigation

Less than significant.

4.14.8 CUMULATIVE IMPACTS

Cumulative transportation and traffic impacts consider regional population, housing, and employment growth projections prepared by SCAG as well as growth anticipated in the CPA. The RTP also includes a SCS that provides guidance on land use planning and transportation to ensure that the region meets CARBs region-specific GHG reduction goals. The RTP also includes large-scale transportation improvements to show how linking transportation and land use planning can reduce automobile trips and greenhouse gas emissions. The SCAG RTP/SCS identifies transportation corridors and transit routes, HQTAs, and a variety of strategies to be employed across the region.

MP 2035 and SCAG RTP/SCS Consistency

The adopted City of Los Angeles Mobility Plan 2035 (MP 2035) could have overlapping impacts with the Proposed Plan. In August 2015, the City of Los Angeles adopted MP 2035. MP 2035 (formerly the Transportation Element of the City's General Plan) is the transportation blueprint for the City of Los Angeles. MP 2035 identifies a number of changes to the City's circulation system, including policies, an Enhanced Complete Street System, an Action Plan, a Complete Streets Design Guide, and a revised Bicycle Plan, all of which will influence the network conditions in the CPA and adjacent areas in the City of Los Angeles.

MP 2035 provides the framework for future community plans and specific plans, which take a closer look at the transportation system in specific areas of the City and recommend more detailed implementation strategies to realize MP 2035. MP 2035 was prepared in compliance with the 2008 Complete Streets Act, which mandates that the circulation element of a city's General Plan be modified to plan for a balanced, multimodal transportation network that meets the needs of all users of streets, roads, and highways, defined to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context of the general plan.

The Proposed Plan contains a Transportation Improvement List that reflects the vision of MP 2035 and the analysis above considers two options for implementing MP 2035 in the Project Area; however, the Future transportation impact analysis does not reflect full buildout of MP 2035 in adjacent areas of the City of Los Angeles. In the remaining portion of the City of Los Angeles outside the CPA, buildout of MP 2035 was not included in the Future with Proposed Plan analysis because, although MP 2035 has been adopted, the timing of implementation has not yet been identified. However, the cumulative impacts analysis evaluates the impacts of the Proposed Plan in conjunction with full buildout of MP 2035 throughout the City of Los Angeles.

CEQA Guidelines Section 15064.3, Subdivision (b) Consistency

The Proposed Plan meets the City adopted threshold of not exceeding baseline conditions and is not more than 15 percent below the SCAG region, and therefore does not create a transportation impact itself. While this Plan cannot be used to determine the impact of individual development projects or adjacent community plans, the inclusion of the regionally used future forecasts accounts for potential cumulative impacts in this analysis. Therefore, the Proposed Plan would not have a substantial contribution to any cumulative impacts related to the VMT projections and would therefore maintain consistency with *CEQA Guidelines* Section 15064.3, Subdivision (b). Cumulative impacts are ***less than significant***.

Hazards Due to a Geometric Design Feature or Incompatible Uses

The Proposed Plan does not include any elements that would promote sharp curves, dangerous intersections, or incompatible uses that could present safety hazards, and promotes policies and programs to encourage safety of users across all modes. Although the Proposed Plan describes a reasonably expected future and cannot constitute a commitment to any project-specific development, individual projects would be expected to align with the safety principles of the Proposed Plan as well. However, queuing-related safety issues could potentially arise as additional development occurs in the Boyle Heights CPA and elsewhere in the region and, although it is anticipated that the City and Caltrans would address any such

issues as they arise, it cannot be determined with certainty that queuing-related safety issues would not occur. Thus, cumulative impacts related to freeway off ramp queuing are considered ***significant and unavoidable*** and the Proposed Plan may make a cumulatively considerable contribution to freeway safety impacts.

Cumulative impacts related to queuing-related safety issues are ***significant and unavoidable***. All other cumulative impacts related to transportation hazards are ***less than significant***.

Emergency Access

The Proposed Plan would increase traffic in the Boyle Heights CPA, which could result in potential delays for emergency vehicles. However, while the MP2035 includes proposed roadway changes, they do not provide intersection-level detail in the CPA. It is feasible that some of these improvements to the network would provide benefits to emergency access as well. As noted above, the Department of City Planning staff have discussed the LAFD Strategic Plan and its relationship to growth and traffic with LAFD staff. While LAFD acknowledged the possible effects of congestion on their efforts, their ongoing planning efforts and new Strategic Plan consider increased congestion and the possible adjustments necessary. These adjustments may include redeploying resources, adding staff, or building new fire stations as deemed necessary. LAFD will continue to monitor growth in the Boyle Heights CPA and any impact they identify will be addressed when needed. Therefore, the Proposed Plan would not have a cumulatively considerable impacts related to emergency access. Cumulative impacts are ***less than significant***.

4.15 TRIBAL CULTURAL RESOURCES

4.15.1 INTRODUCTION

This section analyzes the potential environmental effects on tribal cultural resources and evaluate impacts associated with the Proposed Plan. The Proposed Plan is evaluated in terms of whether implementation of the Boyle Heights Community Plan would impact tribal cultural resources.

4.15.2 EXISTING ENVIRONMENTAL SETTING

For a full discussion of the prehistoric and ethnographic setting of the Boyle Heights CPA, see **Section 4.4, Cultural Resources**.

Regional Setting

Prior to Spanish colonization in the mid-1500s, much of the Los Angeles region, including the CPA, was occupied by an indigenous tribe known as the Gabrielino. The name was applied by the Spanish to the indigenous people that were attached to Mission San Gabriel. Today, most contemporary Gabrielino prefer to identify themselves as Tongva. It is believed that the area has been inhabited for at least 13,000 years, though the ancestors of the Tongva people did not arrive from the Sonoran Desert until around 3,500 years ago. The area inhabited by the Tongva people was known as Tovaangar and consisted of the Los Angeles Basin, portions of the Santa Monica and Santa Ana mountains, and the Southern Channel Islands. Historical evidence and archaeological findings show an intricate material culture of carvings, paintings, baskets, and many tools and decorative objects made from stone, shell, and bone. The Tongva people were hunter-gatherers and survived on a broad diet of sea, river, and land animals, as well as a variety of plants. Primary plant resources included acorns and seeds including chia, sages, various grasses and holly-leafed cherry. The Tongva used wooden boats, harpoons, and clubs for deep-sea hunting; lines, nets, and poisons for river fishing; and traps and bow and arrows for hunting land mammals.[1]

It is estimated that there were approximately 5,000 Tongva in the Los Angeles area pre-colonization by the Spanish in 1542. It would not be until the arrival of the Mission de San Gabriel and the San Fernando Mission in 1771 that the rapid decline of indigenous people in the area began. The forced assimilation of

1 Los Angeles Almanac. *Original People of Los Angeles County*. Available online at: http://www.laalmanac.com/history/hi05.php, accessed August 31, 2020.

the now "Gabrielino" people (named for the mission) to western European culture, in conjunction with European diseases, lead quickly to the near-complete annihilation of the native people and culture.[2]

Local Setting

As the Boyle Heights CPA was inhabited by native people for presumably thousands of years, substantial numbers of tribal cultural resources have been discovered over time in the area. Various federal, State, and local regulations have been promulgated to protect archaeological sites and resources. Although the California general plan law calls for mapping of the sites, the exact location of sites is confidential, pursuant to California Government Code Section 6254.10, to protect sites from disturbance, scavenging, and vandalism.

Despite the heavy development of the CPA, there is still potential for the occurrence of unidentified tribal cultural resources within the Boyle Heights CPA. For example, it is possible that human remains would be located outside of formal cemeteries, as it was common for Native Americans to bury their own beyond the confines of the Mission grounds. However, no known informal cemetery sites are known to exist within the CPA.[3]

Native American Consultation

Approved by Governor Brown on September 25, 2014, Assembly Bill 52 (AB 52) establishes a formal notification and, when requested, consultation process for California Native American Tribes to identify potential significant impacts to Tribal Cultural Resources (TCR), as defined in PRC Section 21074, as part of CEQA. Assembly Bill 52 requires meaningful consultation with California Native American Tribes on potential impacts to TCRs, as defined in Public Resources Code Section 21074. Tribal cultural resources are sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either eligible or listed in the California Register of Historical Resources or local register of historical resources.

As part of the AB 52 process, Native American tribes must submit a written request to the City of Los Angeles to be notified of projects within their traditionally and culturally affiliated area. The City of Los Angeles must provide written, formal notification to those tribes within 14 days of deciding to undertake a project where a negative declaration or EIR will be prepared. The tribe must respond to the City of Los Angeles within 30 days of receiving this notification if they want to engage in consultation on the project,

---

2 Los Angeles Almanac. *Original People of Los Angeles County*. Available online at: http://www.laalmanac.com/history/hi05.php, accessed August 31, 2020.

3 SurveyLA. 2014. Historic Resources Survey Report- Boyle Heights Community Plan Area. Available online at: https://planning.lacity.org/odocument/b31b12ce-5c90-4165-bd8e-a899ce940b64/BoyleHeights_SurveyReport.pdf.pdf , accessed October 20, 2021.

and the City of Los Angeles must begin the consultation process within 30 days of receiving the tribe's request. Consultation concludes when either 1) the parties agree to mitigation measures to avoid a significant effect on a tribal cultural resource, or 2) a party, acting in good faith and after reasonable effort, concludes mutual agreement cannot be reached.

The City of Los Angeles sent notification letters to a list of 10 Native American contacts provided by the Native American Heritage Commission (NAHC) in compliance with AB 52 and Senate Bill (SB) 18[4] on August 11, 2017, to advise them of the Proposed Plan and afford them the opportunity to engage in government-to-government consultation pursuant to the requirements of California AB 52.[5] Those tribes include the Fernandeño Tataviam Band of Mission Indians, Gabrieleño Band of Mission Indians-Kizh Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrielino/Tongva Nation (addressed to Sam Dunlap), Gabrielino/Tongva Nation (addressed to Sandonne Goad), Gabrielino/Tongva San Gabriel Band of Mission Indians, Gabrielino-Tongva Tribe, San Fernando Band of Mission Indians, Soboba Band of Luiseño Indians, Torres Martinez Desert Cahuilla Indians. At the time of preparation of this EIR, the City of Los Angeles has received a request for consultation from one Tribal government, the Gabrielino-Tongva Tribe. No other responses were received within the 30-day consultation window or as of the date of this EIR. Tribal representatives provided information on the tribe's ancestral localities and the desire for presence on site during ground disturbance/excavation activity so that they may identify and assess the significance of any Tribal Cultural resource that may be encountered.[6] On September 23, 2019, the City of Los Angeles received a response from co-chairman of the Gabrielino-Tongva Tribe, Linda Candelaria, regarding the tribe's active participation in the government consultation process.

On September 10, 2021, the City of Los Angeles sent out AB-52 tribal consultation letters, based on an updated contact list, to the appropriate tribal representatives (see **Appendix 4.15**). These tribes include Torres Martinez Desert Cahuilla Indians, Soboba Band of Luiseno Indians, San Fernando Band of Mission Indians, Gabrielino-Tongva Tribe, Gabrielino-Tongva San Gabriel Band of Mission Indians, Gabrielino-Tongva Nation, Gabrielino Tongva Indians of California Tribal Council, Gabrieleño Band of Mission Indians – Kizh Nation, Fernando Tataviam Band of Mission Indians (addressed to Rudy Ortega) and Fernando Tataviam Band of Mission Indians (addressed to Jairo Avila). Two letters were also sent to the

Gabrielino-Tongva tribe addressed to Sam Dunlap and Linda Candelaria on July 20, 2021, in response to their 2019 letter. However, those letters sent to Mr. Dunlap and Ms. Candelaria were returned to the sender.

Sacred Lands File Search

Impact Sciences requested a Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search on December 21, 2021. The search results were positive, with recommendation that the City reach out to the Gabrieleno Band of Mission Indians – Kizh Nation for additional information.

4.15.3 REGULATORY FRAMEWORK

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Tribal Cultural Resources at the state level. As described below, these plans, guidelines, and laws include the following:

- Assembly Bill 52
- California Public Resources Code
- California Penal Code
- Senate Bill (SB) 18

State

Assembly Bill 52. AB 52 was approved on September 25, 2014. The act amended California PRC Section 5097.94, and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. The primary intent of AB 52 is to involve California Native American Tribes early in the environmental review process and to establish a category of resources related to Native Americans, known as tribal cultural resources, that require consideration under CEQA. PRC Section 21074(a)(1) and (2) defines tribal cultural resources as "sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American Tribe" that are either included or determined to be eligible for inclusion in the California Register or included in a local register of historical resources, or a resource that is determined to be a tribal cultural resource by a lead agency, in its discretion and supported by substantial evidence. A tribal cultural resource is further defined by PRC Section 20174(b) as a cultural landscape that meets the criteria of subdivision (a) to the extent that the landscape is geographically defined in terms of the size and scope of the landscape. PRC Section 20174(c) provides that a historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a "nonunique archaeological resource" as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

PRC Section 21080.3.1 requires that, within 14 days of a lead agency determining that an application for a project is complete, or a decision by a public agency to undertake a project, the lead agency provide formal notification to the designated contact, or a tribal representative, of California Native American Tribes that are traditionally and culturally affiliated with the geographic area of the project (as defined in PRC Section 21073) and who have requested in writing to be informed by the lead agency of projects within their geographic area of concern.[7] Tribes interested in consultation must respond in writing within 30 days from receipt of the lead agency's formal notification and the lead agency must begin consultation within 30 days of receiving the tribe's request for consultation.[8]

PRC Section 21080.3.2(a) identifies the following as potential consultation discussion topics: the type of environmental review necessary; the significance of tribal cultural resources; the significance of the project's impacts on the tribal cultural resources; project alternatives or appropriate measures for preservation; and mitigation measures. Consultation is considered concluded when either: (1) the parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or (2) a party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.[9]

In addition to other CEQA provisions, the lead agency may certify an EIR or adopt a MND for a project with a significant impact on an identified tribal cultural resource, only if a California Native American tribe has requested consultation pursuant to Section 21080.3.1 and has failed to provide comments to the lead agency, or requested a consultation but failed to engage in the consultation process, or the consultation process occurred and was concluded as described above, or if the California Native American tribe did not request consultation within 30 days.[10]

PRC Section 21082.3(c)(1) states that any information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information. If the lead agency publishes any information submitted by a California Native American tribe during the consultation or environmental review process, that information shall be published in a confidential appendix to the environmental document unless the tribe

7 Public Resources Code, Section 21080.3.1(b) and (c).

8 Public Resources Code, Sections 21080.3.1(d) and 21080.3.1(e)

9 Public Resources Code, Section 21080.3.2(b)

10 Public Resources Code, Section 21080.3.2(b)

that provided the information consents, in writing, to the disclosure of some or all of the information to the public.

Confidentiality does not apply to data or information that are, or become, publicly available; are already in lawful possession of the project applicant before the provision of the information by the California Native American tribe; are independently developed by the Project applicant or the Project applicant's agents; or are lawfully obtained by the Project applicant from a third party that is not the lead agency, a California Native American tribe, or another public agency.[11]

California Public Resources Code. California PRC Section 5097.98, as amended by Assembly Bill 2641, provides procedures in the event human remains of Native American origin are discovered during project implementation. PRC Section 5097.98 requires that no further disturbances occur in the immediate vicinity of the discovery, that the discovery is adequately protected according to generally accepted cultural and archaeological standards, and that further activities take into account the possibility of multiple burials. PRC Section 5097.98 further requires the Native American Heritage Commission (NAHC), upon notification by a County Coroner, designate and notify a Most Likely Descendant (MLD) regarding the discovery of Native American human remains. Once the MLD has been granted access to the site by the landowner and inspected the discovery, the MLD then has 48 hours to provide recommendations to the landowner for the treatment of the human remains and any associated grave goods. In the event that no descendant is identified, or the descendant fails to make a recommendation for disposition, or if the land owner rejects the recommendation of the descendant, the landowner may, with appropriate dignity, reinter the remains and burial items on the property in a location that will not be subject to further disturbance.

PRC Section 5097.99 prohibits acquisition or possession of Native American artifacts or human remains taken from a Native American grave or cairn after January 1, 1984, except in accordance with an agreement reached with the Native American Heritage Commission.

PRC Section 5097.5 provides protection for tribal resources on public lands, where Section 5097.5(a) states, in part, that:

> *No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.*

11 Public Resources Code, Section 21082.3(c)(2)(B).

California Penal Code. California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

California Penal Code Section 623 provides the following: "Except as otherwise provided in Section 599c, any person who, without the prior written permission of the owner of a cave, intentionally and knowingly does any of the following acts is guilty of a misdemeanor punishable by imprisonment in the county jail not exceeding one year, or by a fine not exceeding one thousand dollars ($1,000), or by both such fine and imprisonment: (1) breaks, breaks off, cracks, carves upon, paints, writes or otherwise marks upon or in any manner destroys, mutilates, injures, defaces, mars, or harms any natural material found in any cave. (2) disturbs or alters any archaeological evidence of prior occupation in any cave. (3) kills, harms, or removes any animal or plant life found in any cave. (4) burns any material which produces any smoke or gas which is harmful to any plant or animal found in any cave. (5) removes any material found in any cave. (6) breaks, forces, tampers with, removes or otherwise disturbs any lock, gate, door, or any other structure or obstruction designed to prevent entrance to any cave, whether or not entrance is gained.

Senate Bill (SB) 18. As of March 1, 2005, SB 18 (Government Code Sections 65352.3 and 65352.4) requires that, prior to the adoption or amendment of a general plan proposed on or after March 1, 2005, a city or county must consult with Native American tribes with respect to the possible preservation of, or the mitigation of impacts to, specified Native American places, features, and objects located within that jurisdiction. This section does not apply to charter cities, like the City of Los Angeles.

4.15.4 THRESHOLDS OF SIGNIFICANCE

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to tribal cultural resources if it would:

- Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:
  - Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or
  - A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section

5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, lead agency shall consider the significance of the resource to a California Native American tribe.

4.15.5 METHODOLOGY

The methodologies employed for the tribal cultural resources impacts analyses are described in the Regulatory Setting and Thresholds, above.

4.15.6 IMPACTS

Threshold 4.15-1 **Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:**

- **Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or**
- **A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.**

This impact would be less than significant with mitigation incorporated.

Effects on tribal cultural resources are undetermined, until a specific development has been proposed. This is due to fact that effects are highly dependent on both individual development site conditions and the characteristics of the proposed activity. Future discretionary development under the Proposed Plan that is subject to CEQA must comply with the requirements of AB 52, including consultation with California Native American tribes as each project is proposed which may result in the identification of tribal cultural resources. As described in **Section 4.4, Cultural Resources**, Los Angeles has a long history of Native American settlement; therefore, tribal resources could be present and development activities that could be accommodated under the Proposed Plan could have the potential to significantly impact tribal cultural resources. On February 24, 2022, the Native American Heritage Commission responded to the SLF record

search and indicated the results were positive. They recommended the lead agency reach out to the Gabrieleno Band of Mission Indians–Kizh Nation for further information. As such, grading and excavation associated with individual development projects that disturb previously undisturbed soils could potentially encounter intact tribal cultural resources. Individual discretionary projects that are subject to CEQA would be subject to AB 52 Native American consultation requirements and, as appropriate, analysis of and/or monitoring for cultural resources. However, a "by right" project would not be subject to either AB 52 or CEQA. Impacts would be ***potentially significant***.

Mitigation Measures

MM CR-1, **MM CR-2**, and **MM CR-3**

MM TC-1 **Native American Consultation and Monitoring for Discretionary Projects**. For all projects that requires a permit for grading or excavation, if a possible tribal cultural resource is uncovered during earthwork or construction, all work shall cease within a minimum distance of 50 feet from the find until a Qualified Tribal Monitor or Archaeological Monitor has been retained to evaluate the find.

Following discovery, the Applicant or Owner shall immediately contact all Native American tribes that have informed the City of Los Angeles they are traditionally and culturally affiliated with the geographic area of the Project, as well as the Department of City Planning, Office of Historic Resources (OHR). If a Qualified Tribal Monitor or Archaeological Monitor determines, pursuant to Public Resources Code Section 21074(a)(2), that the object or artifact appears to be a potential tribal cultural resource, in its discretion and supported by substantial evidence, the Applicant and Owner shall provide any affected tribe a reasonable period of time, not less than five business days, to conduct a site visit and make recommendations to the Applicant or Owner and OHR regarding the monitoring of future Ground Disturbance Activities and the treatment and disposition of any discovered tribal cultural resources. The Applicant or Owner shall implement the tribe's recommendations if the Qualified Tribal Monitor or Archaeological Monitor reasonably concludes such recommendations are reasonable and feasible.

Consistent with Public Resources Code Section 21083.2, the handling, treatment, preservation, and recordation of tribal cultural resources should occur as follows:

- The find should be preserved in place or left in an undisturbed state unless the Project would damage the resource.

- When preserving in place or leaving in an undisturbed state is not possible, excavation and recovery of the find for scientific study should occur unless testing or studies already completed have adequately recovered the scientifically consequential information from and about the resource, and this determination is documented by a Qualified Tribal Monitor or Qualified Archaeologist.

All collected artifacts and fieldwork notes, if not human remains or other mortuary objects, shall be curated at the Natural History Museum of Los Angeles County or another appropriate curatorial facility for educational purposes. If cleared by the Qualified Tribal Monitor or Archaeological Monitor, Ground Disturbance Activities may continue unimpeded on other portions of the site. Ground Disturbance Activities in the area where resource(s) were found may recommence once the identified resources are properly assessed and processed. A report that describes the resource and its disposition, as well as the assessment methodology shall be prepared by the Qualified Tribal Monitor or Archaeological Monitor, according to current professional standards and maintained pursuant to the proof of compliance requirements in Subsection I.D.6. A copy of the report shall be submitted to OHR, the South Central Coastal Information Center at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File. If requested by the City, OHR may review and approve any monitoring or mitigation plan prior to implementation.

MM TC-2 **Notices for Non-Discretionary Projects**. All projects that are seeking excavation or grading permits, prior to issuance of a permit for grading or excavation, the Department of Building and Safety shall issue the following notice and obtain a signed acknowledgement that the notice was received and read by the applicant and owner.

- Several federal and state laws regulate the treatment of tribal resources and make it criminal violation to destroy those resources. These include, but are not limited to:

  – California Penal Code Section 622.5 provides the following: "Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archeological or historical interest or value, whether situated on private lands or within any public park or place, is guilty of a misdemeanor."

  – Public Resources Code Section 5097.5(a) states, in part, that:

  – No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological

or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express written permission of the public agency having jurisdiction over the lands.

- California Code of Regulations, Title 14, Section 4307 states: "No person shall remove, injure, deface or destroy any object of paleontological, archaeological, or historical interest or value." Section 1427 "recognizes that California's archaeological resources are endangered by urban development and population growth and by natural forces…Every person, not the owner thereof, who willfully injures, disfigures, defaces, or destroys any object or thing of archaeological or historical interest or value, whether situated on private lands or within any public park of place, is guilty of a misdemeanor. It is a misdemeanor to alter any archaeological evidence found in any cave, or to remove any materials from a cave."

- Best practices to ensure that tribal cultural resources are not damaged include but are not limited to the following steps:

  - A Sacred Lands File (SLF) records search shall be requested from and conducted by the California Native American Heritage Commission (NAHC) to determine whether cultural resources associated with any Native American tribe(s) with traditional lands or cultural places located within or near the Project site have been previously identified or whether the Project area is considered sensitive for the presence of tribal cultural resources.

  - All tribes listed on the NAHC's Native American Contact List included with the SLF records search shall be contacted, informed of the Project, and given an opportunity to provide input. If the tribe provides substantial evidence of a potential for discovery of tribal cultural resources within the Project site and requests monitoring of Project excavation, grading or other Ground Disturbance Activities, a Qualified Tribal Monitor or an Archaeological Monitor shall be retained.

  - A qualified tribal monitor or archaeological monitor shall observe all ground disturbance activities within those areas identified in the records search as sensitive for the presence of tribal cultural resources in order to identify any

resources and avoid potential impacts to such resources. In the event of a possible discovery of a tribal cultural resource, the qualified tribal monitor or archaeological monitor shall have the authority to temporarily halt earthwork activities within an appropriate radius of the find, as determined by the qualified tribal monitor or qualified archaeologist to ensure the find is not damaged or any other potential tribal cultural resources on or near the project site.

- If tribal resources are uncovered (in either a previously disturbed or undisturbed area), all work should cease in the appropriate radius determined by the qualified tribal monitor and in accordance with federal, state, and local guidelines.

- Any find shall be treated with appropriate dignity and protected and preserved as appropriate with the agreement of the qualified tribal monitor and in accordance with federal, state, and local guidelines.

- The location of the tribal cultural resources find and the type and nature of the find should not be published beyond providing it to public agencies with jurisdiction or responsibilities related to the resources any affected tribal representatives.

- Following discovery, the applicant or owner shall immediately contact all Native American tribes that have informed the City of Los Angeles they are traditionally and culturally affiliated with the geographic area of the Project, as well as the Department of City Planning, Office of Historic Resources (OHR).

- The applicant and owner shall provide any affected tribe a reasonable period of time, not less than five business days, to conduct a site visit and make recommendations to the applicant or owner regarding the monitoring of future ground disturbance activities and the treatment and disposition of any discovered tribal cultural resources.

- The applicant or owner shall implement the tribe's recommendations if the qualified tribal monitor or archaeological monitor reasonably concludes such recommendations are reasonable and feasible and determined to be supported with substantial evidence.

- Consistent with Public Resources Code Section 21083.2, the handling, treatment, preservation, and recordation of tribal cultural resources shall occur as follows:

- The find shall be preserved in place or left in an undisturbed state unless the Project would damage the resource.

- When preserving in place or leaving in an undisturbed state is not possible, excavation and recovery of the find for scientific study shall occur unless testing or studies already completed have adequately recovered the scientifically consequential information from and about the resource, and this determination is documented by a Qualified Tribal Monitor or Qualified Archaeologist.

– All collected artifacts and fieldwork notes, if not human remains or other mortuary objects, shall be curated at the Natural History Museum of Los Angeles County or another appropriate curatorial facility.

– If cleared by the Qualified Tribal Monitor or Archaeological Monitor, Ground Disturbance Activities may continue unimpeded on other portions of the site. Ground Disturbance Activities in the area where resource(s) were found may recommence once the identified resources are properly assessed and processed.

– Personnel of the project should not collect or move any tribal cultural resources or associated materials or publish the location of tribal cultural resources.

Significance After Mitigation

Implementation of the above measures **MM TC-1** and **MM TC-2**, in combination with **MM CR-1**, **MM CR-2**, and **MM CR-3** in **Section 4.4, Cultural Resources**, would reduce impacts to tribal cultural resources to a less than significant level by requiring a process to identify and, if necessary, avoid and/or recover identified tribal cultural resources throughout the Boyle Heights CPA, including areas where resources have been previously identified. The impacts would be ***less than significant with mitigation***.

4.15.7 CUMULATIVE IMPACTS

Cumulative development could disturb areas that may potentially contain tribal cultural resources. The potential for impacts from individual developments is site-specific and depends on the location and nature of each individual development proposal. All future development projects, including projects in the CPA, would continue to be subject to existing federal, State, and local requirements and discretionary projects may be subject to project-specific mitigation requirements under CEQA. It is anticipated that significant cumulative tribal cultural resource impacts can be avoided in the CPA. Based on this information, the

incremental effect of the Boyle Heights CPA to tribal resources would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

4.16 UTILITIES AND SERVICE SYSTEMS

4.16.1 INTRODUCTION

This section provides an overview of the utilities and service systems and evaluates the construction and operational impacts associated with the Boyle Heights Community Plan Area (CPA). Topics are addressed separately and include **Section 4.16.2, Water Supply; Section 4.16.3, Wastewater and Stormwater; Section 4.16.4, Solid Waste;** and **Section 4.16.5, Electricity, Natural Gas, and Telecommunications Facilities**.

4.16.2 WATER SUPPLY

4.16.2.1 Existing Environmental Setting

Existing Water Supplies

Los Angeles Department of Water and Power (LADWP). LADWP manages the water supply for the City of Los Angeles. In 2016-2017, the LADWP provided an average of 438 million gallons of water per day to the 4 million residents and businesses within the City of Los Angeles.[1] The LADWP provides about 168 billion gallons of water to over 4 million residents and businesses and 681,000 customers each year. Primary sources of water for the LADWP service area include the Los Angeles Aquifer (LAA) (29% of the City's water supply), local groundwater (12% of the City's water supply), State Water Project and the Colorado River Aqueduct (supplied by Metropolitan Water District of Southern California [MWD] and makes up 57% of the City's water supply), and recycled water (2% of the City's water supply). Recycled water is beginning to become a larger part of the overall supply portfolio. Water supplies from the LAA, State Water Project, and Colorado River Aqueduct are considered imported sources because they are obtained outside of LADWP's service area. **Table 4.16-1** shows the LADWP water supplies.[2] In 2018 (last year data available), LADWP supplied approximately 521,915 acre-feet (af) of water to the City.[3]

City of Los Angeles. LADWP Water Supply in Acre Feet, https://data.lacity.org/City-Infrastructure-Service-Requests/LADWP-Water-Supply-in-Acre-Feet/qyvz-diiw/data.

Los Angeles Aqueduct (LAA). The LAA system extends approximately 340 miles from the Mono Basin to the City. From 1995 through 2004, the LAA supplied about half of the City's water needs. The City owns approximately 312,000 acres of property in the Owens Valley and appropriates groundwater from its lands in the Owens Valley pursuant to a long-term groundwater management plan with Inyo County. Snowmelt runoff from the Eastern Sierra Nevada Mountains and groundwater from the Owens Valley Groundwater Basin are collected and conveyed to the City via the LAA. LAA supplies can fluctuate yearly due to varying hydrologic conditions. In recent years, the LAA supplies have been less than the historical average because of LADWP's obligations to perform environmental restoration in Mono and Inyo Counties. The Runoff Forecast Model and the Los Angeles Aqueduct Simulation Model (LAASM) was used jointly to predict

water available from the LAA. Average long-term LAA delivery over the next 25 years is expected to be 192,000 AFY.[4]

Local Groundwater. The LADWP traditionally extracts groundwater from nine well fields on City-owned property in Owens Valley, and three local groundwater basins: San Fernando, Sylmar, and Central. Groundwater pumped from Owens Valley is used in Owens Valley and in the City. A remediation of an environmental condition occurred in the Owens Valley River and Mono Lake as a result of water diversion for the LAA, in which 182,000 af was used to raise the lake water level and mitigate dust issues. The water supply was reduced from 1998 to 2015 for environmental mitigation for the court ordered program.[5] A detailed discussion of these groundwater basins is found in **Section 4.9, Hydrology and Water Quality**, of this Draft EIR.

Local groundwater accounts for approximately eight percent of the total water supply for the City and provides up to 23 percent of the water supply during extended dry periods when imported supplies are less reliable. On average, about 95 percent (46,623 AFY) of the City's local groundwater supply was extracted from the Upper Los Angeles River Area groundwater basins, while the Central Basin provided the remaining 4 percent (3,804 AFY).

As detailed in **Table 4.16-2**, over the course of the 2014-2015 water year, LADWP pumped 87,097 af of water from the San Fernando Groundwater Basin; 16,546 af of water from the Central Groundwater Basin; 3,570 af of water from the Sylmar Groundwater Basin; 1,503 af of water from the West Coast Groundwater Basin; and 500 af of water from the Eagle Rock Groundwater Basin. In accordance with the City's long range water management plan, LADWP plans to continue production from its groundwater basins in the coming years to offset reductions in imported supplies. However, extraction from groundwater basins is limited by the water quality and overdraft protection. Both the LADWP and DWR have programs in place to monitor wells to prevent overdraft. LADWP's groundwater pumping practice is based on a "safe-yield" operation. The objective of which is to extract an amount of groundwater equal to the native and imported water that recharges the groundwater basins.

[1]2015-2020 groundwater supply based on the fiscal year (July 1 and June 30).
[2] Small quantities pumped from Sylmar and Central Basin were for water quality testing, not water supply.

Recycled Water. Recycled water is produced by the Hyperion Treatment Plant, Terminal Island Water Reclamation Plant, Donald C. Tillman Water Reclamation Plant, and the Los Angeles-Glendale Water Reclamation Plant. Recycled water is provided for landscape irrigation and commercial uses. Currently recycled water provides approximately 2% to the City's water supply. **Table 4.16-3** provides details on these treatment plants services, capacity, and average daily flows.

Table 4.16-3
Wastewater Treatment Plants in the City of Los Angeles

Wastewater Treatment Plants	Treatment Level	Capacity (AF)	Average Daily Flows (AF)
Donald C. Tillman	Tertiary to Title 22 Standards with Nitrification/Dentrification	89,600	34,000
Los Angeles-Glendale	Tertiary to Title 22 Standards with Nitrification/Dentrification	22,400	15,00
Terminal Island	Tertiary; Advanced treatment (MF/RO) of 5 mgd	33,600	14,000
Hyperion	Full secondary	504,000	288,000

Note: AF = Acre-feet

Purchased Water. The remainder of the City's water demand is supplied by purchases from the MWD. The MWD is a consortium of 26 member agencies, which includes LADWP. The MWD service area encompasses the service areas of its 26 member agencies, approximately 5,200 square miles, and includes portions of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties. LADWP purchases water from MWD to supplement its water supplies from the LAA and local groundwater basins. MWD is the largest water wholesaler for domestic and municipal uses in Southern California. MWD imports its water supplies from Northern California through the State Water Project (SWP) via the California Aqueduct, and the Colorado River through the MWD-owned Colorado River Aqueduct. Per MWD Act Section 135, each of MWD's 26 member agencies has a preferential right to purchase water from the MWD.[6] Between the fiscal years 2015/2016 to 2019/2020, the City purchased a five-year average of 42% of its water from MWD.[7]

Due to effects from dry weather conditions and environmental restrictions on water pumping operations within San Francisco Bay/Sacramento-San Joaquin River Delta (Delta), the MWD and its 26 member agencies have prepared a Water Supply Allocation Plan (WSAP). If the MWD cannot meet member water demand for any given year, it uses a formula within the WSAP to allocate water to member agencies in a fair and efficient manner.

MWD has undertaken efforts to provide additional supply reliability for the entire southern California region. MWD has worked closely with LADWP to ensure the implementation of water resource

6 The MWD Act was passed in 1928 to form the MWD and governs how the MWD operates within the state.

7 City of Los Angeles Department of Water and Power. 2021. 2020 Draft UWMP.

development plans. To meet member agencies' growing supply and reliability needs, MWD is planning improvements to the WSAP. The MWD has release a Draft Water Shortage Consistency Plan and WSAP in February 2021, which has not yet been approved.[8]

Water Supply Treatment Process

LADWP supplies water that meets or exceeds all health-related state and federal standards.[9] LADWP accomplishes such standards by: (1) filtration of the LAA supply; (2) security measures safeguarding access to water supply and storage areas; (3) control of algae growth in groundwater and reservoirs; (4) continuous disinfection of water entering mains; and (5) regular water quality testing, inspection, and cross-control prevention. LADWP was issued one citation in 2018 for violating the surface water treatment rule. LADWP addressed the citation and put measures in place to prevent this type of occurrence in the future.[10]

All water coming from the LAA, the California Aqueduct, and the Colorado River Aqueduct is filtered and treated at the Los Angeles Aqueduct Filtration Plant to ensure a safe drinking water supply. Once at the filtration plant, all water travels through screens that remove environmental debris such as twigs and dead leaves. Bacteria and other impurities that can affect taste, odor, and color are eliminated by Ozone injections, a super-charged oxygen molecule with powerful disinfecting properties. Treatment chemicals are then quickly dispersed into the water to make fine particles called "floc," which are subsequently removed via a 6-foot-deep coal filter. The final step is the addition of chlorine and fluoride which ensure lasting disinfection and strengthen tooth enamel. In May 2014, LADWP commissioned a new advanced process at the filtration plant, the Dr. Pankaj Parekh Ultraviolet (UV) Disinfection Facility, which replaces ozone as the primary disinfectant for surface water. The water goes through UV purification, which has been identified as one of the most effective methods of drinking water treatment by USEPA. Then, chlorine and ammonia are added during the final step to ensure lasting disinfection and to protect the water as it travels through the City's large distribution system.

The Los Angeles Aqueduct Filtration Plant has a water treatment capacity of up to 600 mgd. In the mid-2000's, LADWP began a comprehensive modernization of the filtration plant to upgrade and replace

equipment. The upgrade program is on-going process and will continue to deliver dependable supply of safe, quality water to its customers in an efficient and publicly responsible manner. Furthermore, LADWP continues to invest in improving drinking water quality through its Capital Improvement Program. The approved water budget in FY 2018/2019 is $1.54 billion with $891 million earmarked for capital projects.[11]

The City's groundwater supply in the San Fernando and Central Basins is generally clean. LADWP pumps from the clean parts of the basins and disinfects this groundwater with chlorine as a safeguard against microorganisms. Additionally, LADWP continuously monitors and ensures that all water meets water quality standards and results are far below the maximum contaminant levels permitted by state or federal regulations.

Water Conveyance Facilities

LADWP delivers water to its customers through a complex and expansive network water system. The system consists of large and small pipes measuring more than 6,780 miles in length throughout the City of Los Angeles. Trunk lines are pipes with a diameter greater than 20 inches that transport water from wells and aqueducts to reservoirs. These trunk lines are connected to smaller pipes called distribution mains that supply water to the customers' service connection.[12] There are about 560 miles of trunk lines citywide including the North Trunk Line, Trunk Line South, Foothill Trunk Line, Coronado Trunk Line, Century Trunk Line, and the Sunset West Trunk Line.[13,14]

According to the LADWP 2018-2019 *Water Infrastructure Plan*, for trunk lines the LADWP has long-term goals in order to accelerate design and construction of trunk line projects to replace moderately high risk trunk lines; replace approximately 40 miles of trunk lines with a high-moderate score for needing improvement; continue the corrosion protection program; continue pipe replacements required to meet drinking water regulatory compliance; enhance trunk line piping network through the use of earthquake resistant pipe; continue to work with stakeholders to communicate projects and implement mitigation measures to minimize impacts due to construction; and minimize trunk line system life cycle costs. For large valves (16 to 144 inches or greater in diameter), the LADWP's long-term goals are to maintain and

update a complete list of broken and/or difficult to operate valves; continue to the periodic valve exercise program to minimize valve damage and extend the valves' useful life; and continue the installation and renewal of large valves in conjunction with trunk line construction projects. In regard to the LAA, LADWP's long term goals are to re-coat exterior of sag pipes; construct 2 cathodic protection station a year; replace an average of 3 miles of concrete lid on the covered channels annually; re-drill and replace groundwater wells in the Owens Valley averaging 2 per year; design and build a sedimentation facility at Fairmont Reservoir to meet long-term water quality; and design mitigation for the San Andreas Fault rupture at the Elizabeth Tunnel. The LADWP also plans to replace of 266,000 feet of mainlines in the 2020/2021 fiscal year.[15] Pipeline replacements are prioritized based on the following: (1) leak history (number and type of leaks, most recent leak count, duration of leaks); (2) soil conditions (corrosivity, hillside, landslide, fault line, liquefaction); (3) age of pipe (including design and construction method used at the time of installation); (4) risk of service interruption and community disruption; and (5) coordination with Bureau of Street Services' paving schedule. Priority ratings are assigned to pipe segments based on the calculated scores of these factors. Approximately 8% of pipes are rated high risk, 1% are rated high-moderate risk, 31% are moderate risk, 43% are low-moderate risk, and 15% are low risk of failure.[16]

Water Conservation

Los Angeles consistently ranks among the lowest in per person water consumption when compared to California's largest cities.[17] This is accomplished through water metering, water rationing, public awareness and incentives, industrial process water use efficiency, and other policies, programs, and ordinances. As a result of water conservation measures, the City has reduced its water usage by 29% during FY2019/2020 compared to FY 2003/2004.[18] Furthermore, state legislation, which postdates several City water conservation ordinances, has only strengthened the City's commitment to water conservation and provides added assurance that the City will continue its leadership role in managing demand for water in the near and distant future.

Existing Water Demand

Table 4.16-4 shows the estimated daily water usage of existing land uses within the CPA. (A discussion of how estimates were determined is provided in **Section 4.16.2.4, Methodology**, below). Under Existing (2016) Conditions, the CPA used approximately 8,200,200 gallons per day (gpd) (8.2 mgd) or 9,185 afy. This demand comprises a residential water demand of approximately 5,528,944 gpd or 6,193 afy and a non-residential water demand of 2,542,904 gpd or 2,992 afy.

Table 4.16-4
Existing (2016) Water Use in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-Family [1]	4,553 du	337.2	1,535,272	1,720
Multi-Family [2]	18,211 du	219.3	3,993,672	4,473
Commercial[3]	16,833 employees	84.7	1,425,755	1,597
Industrial[3]	8,897 employees	135.1	1,201,985	1,346
Public Facilities[3]	514 employees	84.7	43,536	49
		Total	**8,200,220**	**9,185**

Source: Impact Sciences, 2020.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:
1 Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family.
2 Rates for multi-family residential include 0.3 gal/unit for landscaping, per Exhibits 2H and 2K of the 2015 UWMP.
3 Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.
***Source:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H. Available at* https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-sourcesofsupply/a-w-sos-uwmpln?_afrLoop=102021305945905&_afrWindowMode=0&_afrWindowId=1b4hbg6r9h_1#%40%3F_afrWindowId%3D1b4hbg6r9h_1%26_afrLoop%3D102021305945905%26_afrWindowMode%3D0%26_adf.ctrl-state%3Doyme0rigu_4.

4.16.2.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Utilities-Water Supply at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Clean Water Act
- Safe Drinking Water
- California Urban Water Management Plan Act

- Senate Bill 610, Senate Bill 221 and Senate Bill 7
- Senate Bill X7-7, Water Conservation Act
- California Code of Regulations
- Porter-Cologne Water Quality Control Act
- CALGreen Code.
- Plumbing Code.
- Sustainable Groundwater Management Act of 2014
- State of Drought Emergency Declaration and Executive Orders
- California Water Plan
- California Water Action Plan
- Metropolitan Water District's 2020 Urban Water Management Plan and 2015 Urban Water Management Plan
- MWD's 2015 Integrated Resources Plan
- MWD's Water Surplus and Drought Management Plan
- MWD's Water Supply Allocation Plan
- Regional Water Quality Control Board
- City of Los Angeles General Plan Framework Element
- Los Angeles Municipal Code
- LADWP Urban Water Management Plan
- Green New Deal
- One Water LA 2040 Plan
- Los Angeles Water Rate Ordinance
- Emergency Water Conservation Plan
- Model Water Efficient Landscape Ordinance
- Best Management and Low Impact Development Practices
- Retrofit on Resale Ordinance

- Supply Ordinance No. 165004 Conservation
- Landscape Ordinance No. 170978
- Existing Buildings Energy and Water Efficiency (EBEWE) Ordinance
- LAFD and Building and Safety Department Policies

Federal

Safe Drinking Water Act (SDWA). The Safe Drinking Water Act ensures the quality of Americans' drinking water. The law requires actions to protect drinking water and its sources (e.g., rivers, lakes, reservoirs, springs and groundwater wells) and applies to public water systems serving 25 or more people. It authorizes the U.S. Environmental Protection Agency (USEPA) to set national health-based standards for drinking water to protect against both naturally occurring and manmade contaminants. In addition, it oversees the states, municipalities and water suppliers that implement the standards. USEPA standards are developed as a Maximum Contaminant Level (MCL) for each chemical or microbe. The MCL is the concentration that is not anticipated to produce adverse health effects after a lifetime of exposure, based upon toxicity data and risk assessment principles. USEPA's goal in setting MCLs is to assure that even small violations for a period of time do not pose significant risk to the public's health over the long run. National Primary Drinking Water Regulations (NPDWRs) are legally enforceable standards that limit the levels of contaminants in drinking water supplied by public water systems. Secondary standards are non-enforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. USEPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable standards. California has adopted secondary standards in Title 22 of the California Code of Regulations (CCR).

State

California Urban Water Management Plan Act. The California Urban Water Management Planning Act (Water Code, Section 10610, et seq.) addresses several state policies regarding water conservation and the development of water management plans to ensure the efficient use of available supplies. The California Urban Water Management Planning Act also requires Urban Water Suppliers to develop Urban Water Management Plans (UWMPs) every five years to identify short-term and long-term demand management measures to meet growing water demands during normal, dry, and multiple-dry years. Urban Water Suppliers are defined as water suppliers that either serve more than 3,000 customers or provide more than 3,000 acre feet per year (afy) of water to customers.

Senate Bill 610 and 221, and Senate Bill 7. Two of the state laws addressing the assessment of water supply necessary to serve large-scale development projects, Senate Bill (SB) 610 and SB 221, became effective January 1, 2002. SB 610, codified in Water Code Sections 10910-10915, specifies the requirements for water supply assessments (WSAs) and their role in the California Environmental Quality Act (CEQA) process, and defines the role UWMPs play in the WSA process. SB 610 requires that, for projects subject to CEQA that meet specific size criteria, the water supplier prepare WSAs that determine whether the water supplier has sufficient water resources to serve the projected water demands associated with the projects. SB 610 provides specific guidance regarding how future supplies are to be calculated in the WSAs where an applicable UWMP has been prepared. Specifically, a WSA must identify existing water supply entitlements, water rights, or water service contracts held by the public water system, and prior years' actual water deliveries received by the public water system. In addition, the WSA must address water supplies over a 20-year period and consider normal, single-dry, and multiple-dry year conditions. In accordance with SB 610, projects for which a WSA must be prepared are those subject to CEQA that meet any of the following criteria:

- Residential developments of more than 500 dwelling units;
- Shopping centers or business establishments employing more than 1,000 persons or having more than 500,000 square feet of floor space;
- Commercial office buildings employing more than 1,000 persons or having more than 250,000 square feet of floor space;
- Hotels, motels, or both, having more than 500 rooms;
- Industrial, manufacturing, or processing plants, or industrial parks planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area
- Mixed-use projects that include one or more of the projects specified in this subdivision; or
- Projects that would demand an amount of water equivalent to or greater than the amount of water required by a 500-dwelling-unit project. (Water Code Section 912, *CEQA Guidelines* Section 15155(a).

The WSA must be approved by the public water supplier serving the project at a regular or special meeting and must be incorporated into the CEQA document. The lead agency must then make certain findings related to water supply based on the WSA.

In addition, under SB 610, a water supplier responsible for the preparation and periodic updating of an UWMP must describe the water supply projects and programs that may be undertaken to meet the total

project water use of the service area. If groundwater is identified as a source of water available to the supplier, the following additional information must be included in the UWMP: (1) a groundwater management plan; (2) a description of the groundwater basin(s) to be used and the water use adjudication rights, if any; (3) a description and analysis of groundwater use in the past 5 years; and (4) a discussion of the sufficiency of the groundwater that is projected to be pumped by the supplier.

SB 7, enacted on November 10, 2009, mandates new water conservation goals for UWMPs, requiring Urban Water Suppliers to achieve a 20 percent per capita water consumption reduction by the year 2020 statewide, as described in the "20 x 2020" State Water Conservation Plan.[19] As such, each updated UWMP must now incorporate a description of how each respective urban water supplier will quantitatively implement this water conservation mandate, which requirements in turn must be taken into consideration in preparing and adopting WSAs under SB 610.

SB 221 also addresses water supply in the land use approval process for large residential subdivision projects. However, unlike SB 610 WSAs, which are prepared at the beginning of a planning process, SB 221-required Water Supply Verification (WSV) is prepared at the end of the planning process for such projects. Under SB 221, a water supplier must prepare and adopt a WSV indicating sufficient water supply is available to serve a proposed subdivision, or the local agency must make a specific finding that sufficient water supplies are or will be available prior to completion of a project, as part of the conditions for the approval of a final subdivision map. SB 221 specifically applies to residential subdivisions of 500 units or more. However, Government Code Section 66473.7(i) exempts "…any residential project proposed for a site that is within an urbanized area and has been previously developed for urban uses; or where the immediate contiguous properties surrounding the residential project site are, or previously have been, developed for urban uses; or housing projects that are exclusively for very low and low-income households."

Senate Bill X7-7, Water Conservation Act. SB X7-7 (Water Conservation Act of 2009), codified in California Water Code Section 10608, requires all water suppliers to increase water use efficiency. Enacted in 2009, this legislation sets an overall goal of reducing per capita urban water use, compared to 2009 use, by 20 percent by December 31, 2020. The State of California was required to make incremental progress towards this goal by reducing per capita water use by at least 10 percent on or before December 31, 2015. Monthly statewide potable water savings reached 25.1 percent in February 2017 as compared to that in February 2013.[20] Cumulative statewide savings from June 2015 through February 2017 were estimated at 22.5

---

19 California State Water Resources Control Board.2010. 20 x 2020 Water Conservation Plan. Available at: https://www.waterboards.ca.gov/water_issues/hot_topics/20x2020/docs/20x2020plan.pdf, accessed May 2022.

20 State Water Resources Control Board, Fact Sheet, February 2017 Statewide Conservation Data, updated April 4, 2017.

percent.[21] Following a multi-year drought and improvements to hydrologic conditions, statewide potable water savings reached 14.7 percent in August 2017 as compared to August 2013 potable water production.[22]

California Code of Regulations Title 20. Title 20, Section 1605.3 (h) and 1505(i) of the California Code of Regulations (CCR) establishes applicable State efficiency standards (i.e., maximum flow rates) for plumbing fittings and fixtures, including fixtures such as showerheads, lavatory faucets and water closets (toilets). Among the standards, the maximum flow rate for showerheads manufactured on or after July 1, 2018 is 1.8 gpm at 80 psi; and lavatory faucets manufactured after July 1, 2016, is 1.2 gpm at 60 psi. The standard for toilets sold or offered for sale on or after January 1, 2016 is 1.28 gallons per flush.[23]

CALGreen Code. Part 11 of Title 24, the title that regulates the design and construction of buildings, establishes the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or a positive environmental impact and encouraging sustainable construction practices in the following categories: planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The CALGreen Code includes both mandatory measures as well as voluntary measures. The mandatory measures establish minimum baselines that must be met in order for a building to be approved. The mandatory measures for water conservation provide limits for fixture flow rates, which are the same as those for the Title 20 efficiency standards listed above. The voluntary measures can be adopted by local jurisdictions for greater efficiency.

Plumbing Code. Title 24, Part 5 of the California Code of Regulations establishes the California Plumbing Code. The California Plumbing Code sets forth efficiency standards (i.e., maximum flow rates) for all new federally-regulated plumbing fittings and fixtures, including showerheads and lavatory faucets. The 2019 California Plumbing Code, which is based on the 2018 Uniform Plumbing Code, has been published by the California Building Standards Commission and went into effect on January 1, 2019.

Sustainable Groundwater Management Act of 2014.[24] The Sustainable Groundwater Management Act (SGMA) of 2014, passed in September 2014, is a comprehensive three-bill package that provides a framework for the sustainable management of groundwater supplies by local authorities.[25] The SGMA requires the formation of local groundwater sustainability agencies to assess local water basin conditions and adopt locally based management plans. Local groundwater sustainability agencies were required to be formed by June 30, 2017. The SGMA provides 20 years for groundwater sustainability agencies to implement plans and achieve long-term groundwater sustainability and protect existing surface water and groundwater rights. The SGMA provides local groundwater sustainability agencies with the authority to require registration of groundwater wells, measure and manage extractions, require reports and assess fees, and request revisions of basin boundaries, including establishing new subbasins. Furthermore, SGMA requires governments and water agencies of high and medium priority basins to stop overdraft and bring groundwater basins into balanced levels of pumping and recharge. Under SGMA, these basins should reach sustainability within 20 years of implementing their sustainability plans. For the basins that are critically over-drafted the timeline is 2040. For the remaining high and medium priority basins, the deadline is 2042.

State of Drought Emergency Declaration and Executive Orders. In response to California's drought conditions, on January 17, 2014, Governor Brown declared a State of Drought Emergency and directed state officials to take numerous necessary actions with local Urban Water Suppliers and municipalities to reduce the impacts of the ongoing drought conditions that had been occurring in California since approximately 2009.[26] Subsequently, four Executive Orders were issued between April 2015 to April 2017 to address changing drought conditions and provide guidance for addressing the drought conditions.

Executive Order B-29-15 (April 2015) imposed a mandatory 25 percent statewide water reduction on potable water use by Urban Water Suppliers. It prioritized water infrastructure projects, incentivized water efficiencies, and streamlined permitting with new approval processes for water transfers and emergency drinking water projects. Executive Order B-36-15 (November 2015) called for additional actions to build on the state's response to record dry conditions and assisted recovery efforts from devastating wildfires; and Executive Order B-37-16 (May 2016) continued water use restrictions from Executive Order B-29-15 as drought conditions continued to persist. Executive Order B-37-16 called for long-term improvements to

24 Sustainable Groundwater Management Act [And Related Statutory Provisions from SB1168 (Pavley), AB1739 (Dickinson), and SB1319 (Pavley) as Chaptered], 2015 Amendments, effective January 1, 2016.

25 California Department of Water Resources. SGMA Groundwater Management. Available at: https://water.ca.gov/Programs/Groundwater-Management/SGMA-Groundwater-Management, accessed May 2022.

26 State of California, Office of Governor Edmund G. Brown, Jr., Governor Brown Declares Drought State of Emergency, January 17, 2014. Available at: https://www.ca.gov/archive/gov39/2014/01/17/news18368/index.html, accessed May 2022.

local drought preparation across the state and directed the California State Water Resources Control Board (SWRCB) to develop proposed emergency water restrictions for 2017 if the drought persists.[27]

The regulatory requirements resulting from these Executive Orders were codified in Article 22.5, Drought Emergency Water Conservation of the California Code of Regulations.

In May 2016, SWRCB adopted a revised emergency water conservation regulation, effective June 2016 through at least February 2017, which rescinded numeric reduction targets for Urban Water Suppliers, instead requiring locally developed conservation standards based upon each agency's specific circumstances.[28]

Finally, on April 7, 2017, Executive Order B-40-17 was issued to formally end the drought emergency and lifted the drought emergency in all California counties except Fresno, Kings, Tulare, and Tuolumne. In response to Executive Order B-40-17, on April 26, 2017, the SWRCB partially repealed the emergency regulation in regard to water supply stress test requirements and remaining mandatory conservation standards for urban water suppliers.[29,30] The order also rescinded two drought-related emergency proclamations and four drought-related executive orders. Cities and water districts throughout the state are required to continue reporting their water use each month. Executive Order B-40-17 continued the ban on wasteful practices, including hosing off sidewalks and running sprinklers when it rains.

California Water Plan Required by the CWC Section 10005(a), the California Water Plan is the state's strategic plan for managing and developing water resources statewide for current and future generations.[31] It provides a collaborative planning framework for elected officials, agencies, tribes, water

and resource managers, businesses, academia, stakeholders, and the public to develop findings and recommendations and make informed decisions for California's water future.

The plan, updated every five years, presents the status and trends of California's water-dependent natural resources; water supplies; and agricultural, urban, and environmental water demands for a range of plausible future scenarios. The Water Plan also evaluates different combinations of regional and statewide resource management strategies to reduce water demand, increase water supply, reduce flood risk, improve water quality, and enhance environmental and resource stewardship. The evaluations and assessments performed for the plan help identify effective actions and policies for meeting California's resource management objectives in the near term and for several decades to come.

In July 2019, DWR released the Final 2018 Update to the California Water Plan.[32] The document provides recommended actions, funding scenarios, and an investment strategy to bolster efforts by water and resource managers, planners, and decision-makers to overcome the State's most pressing water resource challenges. It reaffirms the State government's role and commitment to sustainable, equitable, long-term water resource management; and introduces implementation tools to inform decision-making. The 2018 Update recommends significant additional investment in infrastructure and ecosystem improvements to overcome challenges to sustainability; and it recommends actions to resolve systemic and institutional issues that contribute to many of the state's water challenges.[33]

California Water Action Plan. The California Water Action Plan is a roadmap for the State's journey towards sustainable water management. The first California Water Action Plan was released in January 2014 under Governor Brown's administration and updated in 2016. The California Water Action Plan discusses the challenges to water in California: uncertain water supplies, water scarcity/drought, declining groundwater supplies, poor water quality, declining native fish species and loss of wildlife habitat, floods, supply disruptions, and population growth and climate change further increasing the severity of these risks.[34]

Regional

As discussed in detail below, the Metropolitan Water District of Southern California (MWD) is a primary source of water supply within Southern California. Based on the water supply planning requirements imposed on its member agencies and ultimate customers, MWD has adopted a series of official reports on the state of its water supplies. As described in further detail below, in response to recent developments in the Sacramento Delta, the MWD has developed plans intended to provide solutions that, when combined with the rest of its supply portfolio, will ensure a reliable long-term water supply for its member agencies, including the City of Los Angeles.

Metropolitan Water District's 2020 Urban Water Management Plan. The Metropolitan Water district's (MWD) 2020 Regional UWMP addresses the future of MWD's water supplies and demand through the year 2045. The 2020 Regional UWMP provides an assessment of the MWD's water service reliability; describes and evaluates sources of water supply, efficient uses of water, demand management measures, implementation strategies, and schedule; and other relevant information and programs. In addition to the water reliability assessments, the UWMP includes an evaluation of frequent and severe periods of droughts, as described in the Drought Risk Assessment, and the preparation and adoption of the Water Shortage Contingency Plan (WSCP). The 2020 UWMP reports also identified projected supplies to meet the long-term demand within its service area.[35]

The 2020 UWMP concluded that the MWD has sufficient supply to meet the expected demands from 2025 through 2045 under a single dry year condition and a period of drought lasting five consecutive water years, as well as in a normal water year hydrologic condition. The analysis for multiple-dry year conditions, i.e., under the most challenging weather conditions such as drought and service interruptions caused by natural disasters, is presented in Table 2-5 of the 2020 UWMP. In the 2020 UWMP, the projected 2045 water demand is 1,564,000 afy, with supply projected to be 2,239,000 afy, resulting in a surplus of 675,000 afy.[36]

Metropolitan Water District's 2015 Urban Water Management Plan. The Metropolitan Water District's (MWD) 2015 Regional UWMP (RUWMP) addresses the future of MWD's water supplies and demand through the year 2040.[37] Evaluations are prepared for average year conditions, single dry-year conditions,

35 Metropolitan Water District of Southern California, 2020 Regional Urban Water Management Plan. https://www.mwdh2o.com/media/21641/2020-urban-water-management-plan-june-2021.pdf. Accessed June 2022.

36 *Ibid.*

37 Metropolitan Water District of Southern California, 2015 Regional Urban Water Management Plan, June 2016, Available at: http://www.mwdh2o.com/PDF_About_Your_Water/2.4.2_Regional_Urban_Water_Management_Plan.pdf, accessed May 2022.

and multiple dry-year conditions. The analysis for multiple-dry year conditions (i.e., under the most challenging weather conditions such as drought and service interruptions caused by natural disasters) is presented in Table 2-4 of the 2015 RUWMP.[38] The analysis in the 2015 RUWMP concluded that reliable water resources would be available to continuously meet demand through 2040.[39] In the 2015 RUWMP, the projected 2040 demand water is 2,201,000 afy, whereas the expected and projected 2040 supply is 2,941,000 afy based on current programs, and an additional 398,000 afy is expected to become available under programs under development for a potential surplus in 2040 of 1,138,000 afy.[40]

MWD has comprehensive plans for stages of actions it would undertake to address up to a 50-percent reduction in its water supplies and a catastrophic interruption in water supplies through its Water Surplus and Drought Management and Water Supply Allocation Plans. MWD has also developed an Emergency Storage Requirement to mitigate against potential interruption in water supplies resulting from catastrophic occurrences within the Southern California region and is working with the State to implement a comprehensive improvement plan to address catastrophic occurrences that could occur outside of the Southern California region. MWD is also working with the State on the Delta Risk Management Strategy to reduce the impacts of a seismic event in the Delta that would cause levee failure and disruption of State Water Project (SWP) deliveries. In addition, MWD has plans for supply implementation and continued development of a diversified resource mix, including programs in the Colorado River Aqueduct (CRA), SWP, Central Valley transfers, local resource projects, and in-region storage that enables the region to meet its water supply needs. As set forth in their 2015 UWMP, MWD will also continue investments in water use efficiency measures to help the region achieve the 20 percent per person potable water use reduction by 2020.

MWD's 2015 Integrated Resources Plan. The MWD prepares an Integrated Water Resources Plan (IRP) that provides a water management framework with plans and programs for meeting future water needs. It addresses issues that can affect future water supply such as water quality, climate change, and regulatory

39 Metropolitan Water District of Southern California, 2015 Regional Urban Water Management Plan, June 2016, Available at: http://www.mwdh2o.com/PDF_About_Your_Water/2.4.2_Regional_Urban_Water_Management_Plan.pdf, accessed May 2022.

40 Metropolitan Water District of Southern California, 2015 Regional Urban Water Management Plan, June 2016, Available at: http://www.mwdh2o.com/PDF_About_Your_Water/2.4.2_Regional_Urban_Water_Management_Plan.pdf, accessed May 2022.

and operational changes. The most recent IRP (2015 IRP) was adopted in January 2016.[41] It establishes a water supply reliability mission of providing its service area with an adequate and reliable supply of high-quality water to meet present and future needs in an environmentally and economically responsible way. Among other topics, the 2015 IRP discusses water conservation, local and imported water supplies, storage and transfers, water demand, and adaptation to drought conditions.

The 2015 IRP reliability targets identify developments in imported and local water supply, and in water conservation that, if successful, would provide a future without water shortages and mandatory restrictions under planned conditions. For imported supplies, MWD would make investments to maximize CRA deliveries in dry years. MWD would make ecologically-sound infrastructure investments to the SWP so that the water system can capture sufficient supplies to help meet average year demands and to refill the MWD storage network in above-average and wet years.

Planned actions to keep supplies and demands in balance include, among others, lowering regional residential per capita demand by 20 percent by the year 2020 (compared to a baseline established in 2009 state legislation), reducing water use from outdoor landscapes and advancing additional local supplies. IRP Table ES-1, 2015 IRP Update Total Level of Average-Year Supply Targeted (Acre-Feet), of the 2015 IRP, shows the supply reliability and conservation targets. As presented in the IRP, the total supply reliability target for each five-year increase between 2016 and 2040 would exceed the retail demand after conservation. In 2040, retail demand after conservation is estimated to be 4,273,000 acre-feet and the total supply reliability target is approximately 4,539,000 acre-feet, representing an excess of 266,000 acre-feet.[42]

MWD's Water Surplus and Drought Management Plan. In 1999, MWD incorporated the water storage contingency analysis that is required as part of any UWMP into a separate, more detailed plan, called the Water Surplus and Drought Management Plan (WSDM Plan). The overall objective of the WSDM Plan is to ensure that shortage allocation of MWD's imported water supplies is not required. The WSDM Plan provides policy guidance to manage MWD's supplies and achieve the goals laid out in the agency's IRP. The WSDM Plan separates resource actions into two major categories: Surplus Actions and Shortage Actions. The WSDM Plan considers the region to be in surplus only after MWD has met all demands for water, including replenishment deliveries. The Surplus Actions store surplus water, first inside then outside of the region. The Shortage Actions of the WSDM are separated into three subcategories: Shortage,

42 Metropolitan Water District of Southern California, Integrated Water Resources Plan – 2015 Update, Report 1518. page VIII. Available at: http://www.mwdh2o.com/PDF_About_Your_Water/2015%20IRP%20Update%20Report%20(web).pdf, accessed May 2022.

Severe Shortage, and Extreme Shortage. Each category has associated actions that could be taken as part of the response to prevailing shortage conditions. Conservation and water efficiency programs are part of MWD's resource management strategy through all categories.[43]

MWD's Water Supply Allocation Plan. While the WSDM Plan included a set of general actions and considerations for MWD staff to address during shortage conditions, it did not include a detailed water supply allocation plan or implementation approach. Therefore, in February 2008, MWD adopted a water supply plan called the Water Supply Allocation Plan (WSAP), which has since been implemented three times, most recently in April 2015 (under the new name Drought Rationing Plan). The WSAP includes a formula for determining equitable, needs-based reductions of water deliveries, with the potential application of a surcharge, to member agencies during extreme water shortages in MWD's service area conditions (i.e., drought conditions or unforeseen interruptions in water supplies).

The WSAP allows member agencies the flexibility to choose among various local supply and conservation strategies to help ensure that demands on MWD stay in balance with limited supplies. The WSAP formula addresses shortages of MWD supplies, by taking into account growth, local investments, changes in supply conditions and the demand hardening aspects of non-potable recycled water use and the implementation of conservation savings programs.[44] The allocation period covers 12 consecutive months from July of a given year through the following June.

Local

City of Los Angeles General Plan Framework Element. The Citywide General Plan Framework Element (General Plan Framework) establishes the conceptual basis for the City's General Plan. The General Plan Framework sets forth a comprehensive Citywide long-range growth strategy and defines Citywide policies regarding land use, housing, urban form and neighborhood design, open space and conservation, economic development, transportation, infrastructure and public services. Chapter 9, Infrastructure and Public Services, of the City's General Plan Framework identifies goals, objectives, and policies for City utilities including water service. Goal 9C is to provide adequate water supply, storage facilities, and delivery system to serve the needs of existing and future water needs. The goals, objectives, and policies of

the Framework that are related to water supply, storage, and delivery infrastructure are listed in **Table 4.16-5**.

Table 4.16-5
Relevant General Plan Water Supply Goals, Objectives, and Policies

Goal/Objective/ Policy	Goal/Objective/Policy Descriptions
Framework Element- Chapter 9 Infrastructure and Public Services	
Goal 9C	Adequate water supply, storage facilities, and delivery system to serve the needs of existing and future residents and businesses.
Objective 9.8	Monitor and forecast water demand based upon actual and predicted growth.
Policy 9.8.1	Monitor water usage and population and job forecast to project future water needs.
Objective 9.9	Manage and expand the City's water resources, storage facilities, and water lines to accommodate projected population increases and new or expanded industries and businesses.
Policy 9.9.1	Pursue all economically efficient water conservation measures at the local and statewide level.
Policy 9.9.2	Develop reliable and cost-effective sources of alternative water supplies, including water reclamation and exchanges and transfers.
Policy 9.9.3	Protect existing water supplies from contamination and clean up groundwater supplies so those resources can be more fully utilized.
Policy 9.9.4	Work to improve water quality and reliability of supply from the State Water Project and other sources.
Policy 9.9.5	Maintain existing rights to groundwater and ensure continued groundwater pumping availability.
Policy 9.9.6	Identify the needs for land and facilities necessary to provide an adequate and reliable water supply and develop those facilities in an environmentally and socially sensitive way.
Policy 9.9.7	Incorporate water conservation practices in the design of new projects so as not to impede the City's ability to supply water to its other users or overdraft its groundwater basins.
Policy 9.9.9	Clean or replace where necessary, deficient water distribution lines in the City.
Objective 9.10	Ensure that water supply, storage, and delivery systems are adequate to support planned development.
Policy 9.10.1	Evaluate the water system's capability to meet water demand resulting from the Framework Element's land use patterns.
Policy 9.10.2	Solicit public involvement, when appropriate, in evaluating options for the construction of new and/or expansion of existing water facilities.
Objective 9.11	Ensure, to the extent possible, the continued provision of water capacity, quality and delivery after an earthquake or other emergency.
Policy 9.11.1	Provide for the prompt resumption of water service with adequate quantity and quality of water after an emergency.

Source: City of Los Angeles, The Citywide General Plan Framework, An Element of the City of Los Angeles General Plan, re-adopted 2001.

In addition to the Framework Element, the Safety Element (adopted in 2021) has a policy that supports water conservation and local water supply. Policy 1.2.3 (Local Water): Continue to lead in water

conservation and smart water policy through improvements to per capita water use, watershed management, and wastewater and stormwater recycling.[45]

Los Angeles Municipal Code. The City has adopted several ordinances, later codified in the Los Angeles Municipal Code (LAMC), in an effort to reduce water consumption. A summary of the City's key regulations regarding water conservation is provided below.

- Ordinance Nos. 166,080, 181,288, 183,608, and 184,250—amending LAMC Chapter XII, Article 1 to clarify prohibited uses of water and modify certain water conservation requirements of the City's Emergency Water Conservation Plan. The City's Emergency Water Conservation Plan sets forth six different phases of water conservation, which shall be implemented based on water conditions. As part of these requirements, watering is limited to specific days and hours. In determining which phase of water conservation shall be implemented, LADWP monitors and evaluates the projected water supply and demand. In addition, the Emergency Water Conservation Plan includes penalties for those that violate its requirements.

- Ordinance No. 180,822—amended LAMC Chapter XII, Article 5 to establish water efficiency requirements for new development and renovation of existing buildings, and mandate installation of high efficiency plumbing fixtures in residential and commercial buildings.

- Ordinance No. 181,480—amended LAMC Chapter IX by adding Article 9 (Green Building Code) to the LAMC to incorporate various provisions of the California Green Building Standards Code. This ordinance added mandatory measures for newly constructed low-rise residential and non-residential buildings to reduce indoor water use by at least 20 percent by: (1) using water saving fixtures or flow restrictions; and/or (2) demonstrating a 20percent reduction in baseline water use.

- Ordinance Nos. 181,899 and 183,833—amended LAMC Chapter VI, Article 4.4, Section 64.72 regarding stormwater and urban runoff to include new requirements, including Low Impact Development (LID) requirements that promote water conservation.

- Ordinance No. 182,849—amended LAMC Chapter IX, Article 9 (Green Building Code) to mandate that for new water service or for additions or alterations requiring upgraded water service for landscaped areas of at least 1,000 square feet, separate sub-meters or metering devices shall be installed for outdoor potable water use. This ordinance also required that for new non-residential construction with at least

---

45 City of Los Angeles Safety Element, Chapter 3, p. 53, 2021. Available at: https://planning.lacity.org/odocument/28fd5b9f-d5f7-4460-9c97-c2974b5da199/Draft_Safety_Element.pdf, accessed May 2022.

1,000 square feet of cumulative landscaped area, weather or soil moisture–based irrigation controllers and sensors be installed.

- Ordinance No. 184,692—amended LAMC Chapter IX, Article 4 (Plumbing Code) by adopting by reference various sections of the California Plumbing Code. This ordinance also added requirements for plumbing fixtures and fixture fitting.

- Ordinance No. 184,248—amended LAMC Chapter IX, Article 4 (Plumbing Code) and Article 9 (Green Building Code) to establish citywide water efficiency standards and mandate a number of new fixture requirements and methods of construction for plumbing and irrigation systems.

The City of Los Angeles also has adopted numerous requirements related to the provision of water for purposes of fire protection. These requirements are set forth in the Fire Code (LAMC Chapter V, Article 7). LAMC Section 57.507.3.1 establishes fire water flow standards. Fire water flow requirements, as determined by the Los Angeles Fire Department (LAFD), vary by project site as they are dependent on land use (e.g., higher intensity land uses require higher flow from a greater number of hydrants), life hazard, occupancy, and fire hazard level. As set forth in LAMC Section 57.507.3.1, fire water flow requirements vary from 2,000 gallons per minute (gpm) in low density residential areas to 12,000 gpm in high density commercial or industrial areas. A minimum residual water pressure of 20 pounds per square inch (psi) is to remain in the water system with the required gpm flowing. As set forth in LAMC Section 57.507.3.1, Industrial and Commercial land uses (which the LAFD has classified the Project as) have a minimum required fire flow of 6,000 gpm to 9,000 gpm from four to six adjacent hydrants flowing simultaneously with a residual pressure of 20 psi unless otherwise determined by LAFD. LAMC Section 57.507.3.2 also addresses land use-based requirements for fire hydrant spacing and type. Land uses in the Industrial and Commercial category require one hydrant per 80,000 square feet of land with 300-foot distances between hydrants, and 2.5 inch by 4 inch double fire hydrants or 4-inch by 4-inch double fire hydrants. Regardless of land use, every first story of a residential, commercial, and industrial building must be within 300 feet of an approved hydrant.

LADWP Urban Water Management Plan. In accordance with the California Urban Water Management Planning Act, UWMPs are updated at 5-year intervals. LADWP adopted the 2020 UWMP on May 25, 2021. The 2020 UWMP complies with the Urban Water Management Planning Act, builds upon the goals and progress made in the 2015 UWMP and currently serves as the City's master plan for reliable water supply and resource management consistent with the City goals and objectives. The UWMP details LADWP's efforts to promote the efficient use and management of its water resources. LADWP's UWMP used a service area-wide methodology in developing its water demand projections. This methodology does not rely on individual development demands to determine area-wide growth. Rather, the projected growth in water

use for the entire service area was considered in developing long-term water projections for the City to the year 2045. Long range projections are based on SCAG growth projections. The 2020 UWMP is based on projections in the 2020-2045 RTP/SCS.

The 2020 UWMP takes into account a number of significant changes that have occurred since LADWP prepared its 2015 UWMP.[46] The year 2012 marked the beginning of the current multi-year drought in California. As stated above, in January 2014, Governor Brown proclaimed a drought state of emergency. In July 2014, the SWRCB implemented its Emergency Water Conservation Regulation (Emergency Regulation), as directed by Governor Brown, to take actions to reduce water use by 20 percent statewide. Later, the mandated reductions were increased to 25 percent statewide, with adjustments to account for different climates, expected growth, investment made to create drought-resilient water supplies by different cities through October 2016. In October 2014, Mayor Eric Garcetti issued Executive Directive No. 5 (ED5) Emergency Drought Response which set goals to reduce per capita water use, reduce purchases of imported potable water by 50 percent, and create an integrated water strategy to increase local supplies and improve water security considering climate change and seismic vulnerability. Lastly, in April 2015, the Mayor's Sustainable City pLAn, (updated in 2019 as the City's Green New Deal), was released establishing targets for the City over the next 20 years to strengthen and promote sustainability. The 2020 UWMP incorporates the objectives of these recent initiatives. As a result of water conservation measures, including the first ever statewide mandatory water use restrictions implemented by 2015, the City has reduced its water usage by 18 percent during FY 2019/20 compared to FY 2013/2014.

Single-family residential use decreased by 20 percent, multi-family residential use decreased by 11 percent, commercial use decreased by 23 percent, industrial use decreased by 33 percent, and government use decreased by 21 percent.[47]

The LADWP is committed to meeting all the City's current and future water needs while increasing supply reliability, reducing imported water purchases, and increasing locally produced water by continuing with the strategy to:

- Achieve significant water conservation and water use efficiency enhancements
- Increase stormwater capture capacity

---

46 Los Angeles Department of Water and Power, Water Supply Assessment, page 11.

47 Los Angeles Department of Water and Power. 2020. Urban Water Management Plan. Available at: https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf, accessed May 15, 2022.

- Maximize water reuse
- Maximize and expand groundwater production
- Maintain and increase operational integrity of the LAA and in-City water distribution systems
- Ensure continued reliability of the water supplies from the MWD through active representation of the City's interests on the MWD Board
- Meet or exceed all federal and State standards for drinking water quality

Green New Deal. The City released the first Sustainable City pLAn in April 2015,[48] which has been updated in 2019 as the City's Green New Deal. The Green New Deal includes a multi-faceted approach to developing a locally sustainable water supply to reduce reliance on imported water, reducing water use through conservation, and increasing local water supply and availability.

One Water LA 2040 Plan. In April 2018, the City prepared the One Water LA 2040 Plan (One Water LA Plan), an integrated approach to Citywide recycled water supply, wastewater treatment, and stormwater management. The new plan builds upon the City's Water IRP, which projected needs and set forth improvements and upgrades to wastewater conveyance systems, recycled water systems, and runoff management programs through the year 2020, and extends its planning horizon to 2040. The One Water LA Plan proposes a collaborative approach to managing the City's future water, wastewater treatment, and stormwater needs with the goal of yielding sustainable, long-term water supplies for Los Angeles to ensure greater resilience to drought conditions and climate change. The One Water LA Plan is also intended as a step toward meeting the Mayor's Executive Directive to reduce the City's purchase of imported water by 50 percent by 2024.[49] Major challenges addressed in the One Water LA Plan include recurring drought, climate change, and the availability of recycled water in the future in light of declining wastewater volumes.

Los Angeles Water Rate Ordinance. The City's Water Rate Ordinance was adopted in June 1995 and last amended by the City's Board of Water and Power Commissioners pursuant to Ordinance No. 184,130. Effective since April 15, 2016, this City Water Rate Ordinance restructured water rates to help further promote conservation. Specifically, the goal of the ordinance is to incentivize water conservation while

49 City of Los Angeles, Office of the Mayor, Executive Directive No. 5, Emergency Drought Response - Creating a Water Wise City, October 14, 2014, https://www.lamayor.org/sites/g/files/wph446/f/page/file/ED_5_-_Emergency_Drought_Response_-_Creating_a_Water_Wise_City.pdf?1426620015. Accessed September 2020.

recovering the higher costs of providing water to high volume users and accelerating development of sustainable local water supply. Tiered water rate schedules were established for: single-dwelling unit customers; multi-dwelling unit customers; commercial, industrial, and governmental customers and temporary construction; recycled water service; private water service; publicly sponsored irrigation, recreational, agricultural, horticultural, and floricultural uses, community gardens and youth sports. The new water rate structure increases the number of tiers from two to four for single-dwelling unit customers. In addition, this ordinance intends to maintain cost-of-service principles, incremental tier pricing based on the cost of water supply, and added pumping and storage costs.

Landscape Ordinance No. 170978. In 1996, Landscape Ordinance No. 170978 became effective with an overarching goal to improve the efficient use of outdoor water. This Ordinance was amended in 2009 to comply with the Water Conservation in Landscaping Act of 2006 and the Model Water Efficient Landscape Ordinance.

- Ordinance No. 185,198, 185,5585, and 186,789—the Existing Buildings Energy and Water Efficiency (EBEWE) Ordinance amended LAMC Chapter IX, Article 1 (Building Code) in 2017 and made public the annual energy and water consumption of all buildings over 20,000 square feet in the City. Beginning in 2017, privately owned buildings that are 20,000 square feet or more and buildings owned by the City that are 7,500 or more are required to be benchmarked, and owners must disclose annual energy and water consumption. Privately owned buildings that are 100,000 square feet or more must begin benchmarking reporting by December 1, 2017, and smaller buildings must begin reporting over the following two years. The Ordinance is designed to facilitate the comparison of buildings' energy and water consumption, and reduce building operating costs, lower energy and water consumption.

LADWP Policies. The City requires that each applicant coordinate with the LADWP in order to ensure that existing and/or planned water conveyance facilities are capable of meeting water demand/pressure requirements. In coordination with the LADWP, each applicant/contractor shall identify specific on- and off-site improvements needed to ensure that impacts related to water supply and conveyance demand/pressure requirements are addressed at the time that a water connection permit application is submitted. Water supply and conveyance demand/pressure clearance from LADWP shall be required during this time as well.

4.16.2.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to utilities and service systems if it would:

- Require or result in the relocation or construction of new or expanded water facilities, the construction of which could cause significant environmental effects; and/or

- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

4.16.2.4 Methodology

Estimates of Proposed Plan related impacts on utilities and service systems have been disclosed using the most applicable demand factors available at the time of preparation.

For purposes of **Threshold 4.16-1**, the Proposed Plan would have a significant impact if it resulted in the relocation or construction of water facilities and that relocation or construction caused a significant environmental effect, such as the demolition of a historical resource or destruction of a unique archaeological resource. Under this threshold, not having adequate facilities to serve the CPA is not in and of itself a significant impact. Rather the question is whether construction of needed facilities results in environmental impacts. Therefore, analysis involves a two-part inquiry: first, whether reasonably anticipated development under the Proposed Plan can be served by existing water facilities or if it is reasonably anticipated to cause the need for new or relocated water facilities; and second, if it will need new or relocated water facilities, whether it is reasonably anticipated that construction or relocation of such facilities will result in a significant environmental impact.

For purposes of **Threshold 4.16-2**, the Proposed Plan would have a significant impact if the City did not have adequate water supply to serve reasonably excepted development under the Proposed Plan during normal, dry and multiple dry years.

Project-generated demands were calculated using the 2016 existing level of development in the CPA, reasonably anticipated development in the CPA in 2040, and utility rates per development unit (e.g., water use per dwelling unit). Impacts were determined based on the net change relative to existing conditions (i.e., 2040 with Boyle Heights Community Plan conditions compared to 2016 baseline conditions).

Water demand rates were obtained from the LADWP's 2015 and 2020 UWMPs,[50,51] It was assumed that 20% of existing residential development is single-family, and 80% is multifamily. This provides a

---

50 Los Angeles Department of Water and Power. 2016. *2015 UWMP*. https://pw.lacounty.gov/wwd/web/Documents/2015%20Urban%20Water%20Management%20Plan%20for%20District%20No.%2029%20and%20the%20Marina%20del%20Rey%20Water%20System.pdf

51 Los Angeles Department of Water and Power. 2020. Urban Water Management Plan. Available at: https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf, accessed May 15, 2022.

conservative estimate as the Boyle Heights CPA contains fewer single-family residential units than multifamily and single-family units have higher average utility usage rates than multifamily units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

Table 4.16-6
Utility Rates

Land Use Type	2016 Daily Water Use Rate (gpd/unit)	2040 Daily Water Use Rate (gpd/unit)	2016 Daily Wastewater Use Rate[1] (gpd/unit)	2040 Daily Wastewater Use Rate (gpd/unit)[1]	Daily Solid Waste Generation Rate (tons/unit)[1]
Single-Family Residential	337.2	329.0	155.1	144.3	0.41
Multi-Family Residential	219.3	189.0	149.1	137.9	0.46
Commercial	84.7	69.0	64.4	59.8	0.00301
Industrial	135.1	121.0	132.4	123	0.00124
Public Facilities	84.7	69.0	50	46.4	0.00093

[1] City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation.
[2] Solid waste generation rates the same for 2016 and 2040.
Source: CalEEMod 2016.3.2. City of Los Angeles. 2021. 2020 Urban Water Management Plan.

State and local policies, plans, initiatives, and projects, such as SBX7-7, SB 1016, Emergency Water Conservation Plan, RENEW LA Plan and Ordinance 181519, as discussed above under **Section 4.16.2.2, Regulatory Framework**, are in place or are anticipated to be implemented over the project's time horizon that would reduce utility consumption rates over time. Water and wastewater rates were provided for 2040 as the 2015 and 2020 UWMPs provide rates for that year. These projected rates incorporate savings from codes and ordinances currently in place, but do not take into consideration planned projects, future policies, or initiatives and therefore, also provide a conservative estimate of future consumption. A qualitative discussion of planned capacity-building or supply-enhancing projects is included in the analysis.[52]

4.16.2.5 Impacts

Threshold 4.16-1 **Would implementation of the Proposed Plan require or result in the relocation or construction of new or expanded water facilities, the construction of which could cause significant environmental effects?**

52 Los Angeles Department of Water and Power. 2020. Urban Water Management Plan. Available at: https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf, accessed May 15, 2022.

This impact would be less than significant.

Table 4.16-7 summarizes estimated water demand for the Boyle Heights CPA in 2040 with implementation of the Proposed Plan. As indicated in the table, total water demand in 2040 under the Proposed Plan is estimated to be 10,732,172 gpd (approximately 10.7 mgd), or 12,022 afy. Population and employment that are reasonably anticipated under the Proposed Plan through 2040 would generate an estimated increase in demand of 2.5 mgd, or 2,836 afy, which is an increase of about 31% compared to the baseline 2016 generation of 8.2 mgd, or 9,185 afy.

Table 4.16-7
Future (2040) Water Use in the Community Plan Area

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Future Proposed Plan (2040)				
Single-Family [1]	6,623 du	329.0	2,178,967	2,441
Multi-Family [1]	26,494 du	189.0	5,007,366	5,609
Commercial[2]	21,118 jobs	69.0	1,457,142	1,632
Industrial[2]	16,207 jobs	121.0	1,961,047	2,197
Public Facilities[2]	1,850 jobs	69.0	127,650	143
		Total	**10,732,172**	**12,022**
Future No Project (2040)				
Single-Family [1]	5,600 du	329.0	1,842,400	2,064
Multi-Family [1]	22,400 du	189.0	4,233,600	4,742
Commercial[2]	12,725 jobs	69.0	878,025	984
Industrial[2]	18,190 jobs	121.0	2,200,990	2,465
Public Facilities[2]	1,059 jobs	69.0	73,071	82
			9,228,086	**9,353**

Source: City of Los Angeles Department of Water and Power, 2016. 2015 UWMP. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-sourcesofsupply/a-w-sos-uwmpln?_afrLoop=188401731408212&_afrWindowMode=0&_afrWindowId=19iw0ec604_1#%40%3F_afrWindowId%3D19iw0ec604_1%26_afrLoop%3D188401731408212%26_afrWindowMode%3D0%26_adf.ctrl-state%3D3j7vbqgs1_4.

Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:

[1] Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family. Source: Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H (LADWP 2016a).

[2] Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.

Water conservation measures would apply to new development, but existing uses are also increasingly implementing water conservation measures in response to increased regulations and pricing controls such

as limited Tier 1 (cheaper) water in drought years, and penalties for lack of reductions; therefore, this estimated net increase in water demand in the CPA may represent a conservative estimate. As discussed in **Section 4.16.2.6, Regulatory Framework**, new development facilitated by the Proposed Plan would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, which requires that new construction projects develop water budgets for landscaping, reduction of erosion and irrigation related runoff, utilization of recycled water if available, irrigation audits, development of requirements for landscape and irrigation design, and scheduling of irrigation based on localized climate. Compliance with the Water Efficiency Requirements Ordinance and Supply Ordinance No. 165004 would require new buildings to install water conservation fixtures, such as ultra-low-flush toilets, urinals, taps, and showerheads, and plumbing fixtures to obtain building permits in the City of Los Angeles.

Impacts from Construction of Facilities

Since the mid-2000s, LADWP has initiated a comprehensive modernization and upgrade program at the LAA Filtration Plant to continue and better serve its customers. Based on the water treatment capacity of 600 Mgal/d at the LAA Filtration Plant, the anticipated water demand increase of 2.5 Mgal/d as a result of the Proposed Plan would be within the capacity of the LAA Filtration Plant.

LADWP continues to invest in improving drinking water quality through its Capital Improvement Program. The approved water budget in FY 2018/2019 is $1.54 billion with $891 million earmarked for capital projects.[53] Thus, the construction of new water treatment plants is not anticipated to occur as a result of the approval of the Proposed Plan.

As development occurs incrementally throughout the Boyle Heights CPA, upgrades to water conveyance facilities may be required. LADWP installs and maintains the water distribution system. The 2018-2019 LADWP Water Infrastructure Plan establishes goals and targets for replacing and/or upgrading infrastructure. Through infrastructure projects, the LADWP would replace or upgrade major system components that are outdated or malfunctioning. With approximately 6,780 miles of mainline water pipes citywide, LADWP plans to replace approximately 500 miles in the next 10 years giving the highest priority to pipes with high risk of failure.

Without knowing the location of specific development and location of associated water feeder facilities, it is not possible to determine impacts to other specific LADWP facilities. Therefore, it is likely that the reasonably anticipated development under the Proposed Plan could exceed the capacity of water

53 City of Los Angeles Department of Water and Power, *Briefing Book 2018-2019,* https://ladwp-jtti.s3.us-west-2.amazonaws.com/wp-content/uploads/sites/3/2019/07/29154703/2018-Briefing-Book-Web-3.pdf, July 30, 2019.

conveyance facilities, or the capacity of existing and planned fire hydrants. Local water delivery lines may need to be replaced and upgraded in the vicinity of new development that is substantially more dense than existing development, and it is possible that the construction of new water lines may be necessary to serve new development in the CPA. The City requires that applicants coordinate with LADWP to ensure that existing and/or planned water conveyance facilities are capable of meeting water demand/pressure requirements.

The precise location and connection would need to be determined at the time development is proposed. Should any new connections or upgrades be required, such upgrades would be subject to subsequent environmental review. Any future line size modifications or connections would be designed in accordance with applicable provisions of the Municipal Code. In coordination with the LADWP, project applicants are required to identify specific on- and off-site improvements needed to ensure that impacts related to water supply and conveyance demand/pressure requirements are addressed prior to issuance of a certificate of occupancy. Water supply and conveyance demand/pressure clearance from LADWP are required at the time that a water connection permit application is submitted. In addition, the City requires applicants to coordinate with the LAFD and Building and Safety Department to ensure that existing and/or planned fire hydrants are capable of meeting fire flow demand/pressure requirements. The issuance of building permits is dependent upon submission, review, approval, and testing of fire flow demand and pressure requirements, as established by the LAFD and Building Safety Department prior to occupancy.

Development under the Proposed Plan could require the construction of new or upgraded water distribution facilities. However, if new facilities are determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., CEQA Guidelines Section 15302). Additionally, pipeline construction of less than one mile in existing right of ways is statutorily exempt. (PRC Section 21080.21.) To the extent that any conveyance upgrades are not exempt, the environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time. Therefore, impacts related to the construction of new water conveyance infrastructure and water treatment facilities or expansion of existing facilities under the Proposed Plan would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

Threshold 4.16-2 Would implementation of the Proposed Plan have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?

This impact would be less than significant.

The calculated increase in water demand shown in **Table 4.16-7** does not fully take into account reductions in water use by sector anticipated for the City as a whole. Given the long lifespan of the Proposed Plan, it is important to consider the City's commitment to water conservation in conjunction with supply and demand forecasts to fully evaluate the impact of the Proposed Plan on water supplies.

Passive conservation includes long-term behavioral changes in customer water use and compliance with codes and ordinances that mandate increased efficiency. As previously discussed, and as shown in **Table 4.16-7**, implementation of the Proposed Plan would have a water demand of 10,732,172 gpd (12,022 afy). Water demand under the Proposed Plan would represent a water demand increase of appropriately 31% compared to Existing (2016) Conditions water demand of 8,200,220 gpd (9,185 afy). The increase in water demand would occur incrementally over the lifespan of the Proposed Plan.

MWD and LADWP are planning for the future population growth forecasts from SCAG through a variety of programs. Central to water planning is increasing conservation. The LADWP forecasts that citywide water demand with passive water conservation efforts would be approximately 697,800 af in 2040.[54] Based on the estimated amount of water demanded by the Proposed Plan (12,022 afy), the CPA would consume approximately 1.8% of citywide water supply in 2040. LADWP completed a comprehensive Water Conservation Potential Study in 2017 that identified remaining active and passive conservation opportunities.[55] The results from this study guide LADWP's current and future water conservation planning and program development. In addition, state legislation, which postdates several City water conservation ordinances, strengthens the City's commitment to water conservation and provides added

54 LADWP. 2021. *2020 Urban Water Management Plan.*

55 LADWP. 2017. *Water Conservation Potential Study*.

assurance that the City will continue its leadership role in managing demand for water in the near and distant future.

Based on City policy, new water demand is to be met by expanding water recycling and conservation. All new development within the CPA under the Proposed Plan would be required to implement the water conservation measures described in the Regulatory Framework section. New development within the CPA would be required to comply with the Water Efficiency Requirements Ordinance, Los Angeles Green Building Code, the most current California Green Building Standard Code, and all applicable regulations in the future. Existing development within the CPA may not be required to conform to these measures, although community pressure and pricing controls are anticipated to continue to reduce water demand from existing uses.

Water conservation efforts would attenuate some of the added demand for water resources from new development as the Proposed Plan is implemented. Furthermore, during times of drought, LADWP may announce restrictions on water use for customers to as part of its emergency water conservation plan. For example, in May of 2022, Mayor Garcetti announced that LADWP would move to Phase 3 of its emergency water conservation plan, requiring customers to cut the number of outdoor watering days from three to two.[56] Efforts such as these, would help reduce water usage during times of drought.

As required by the Urban Water Management Planning Act, water suppliers are required to develop a UWMP every five years; the 2015 UWMP was the most current UWMP prepared by LADWP at the time of scoping and the 2020 UWMP was approved in May 2021. Due to ongoing and worsening water supply concerns, 2020 information is used where appropriate to present a more conservative analysis. LADWP will continue to work closely with the City of Los Angeles Department of City Planning to develop and update the UWMP every five years to identify short-term and long-term water resources management measures to meet growing water demands over a 20-year horizon. Importantly, the UWMP is prepared at a citywide scale and the Proposed Plan is not anticipated to cause the City to exceed City forecasted growth; therefore, the Proposed Plan would not exceed water demand identified in the UWMP.

Within the 2020 UWMP, LADWP's water supply reliability is assessed under three hydrologic conditions: average year (30-year median hydrology from FY 1985/86 to 2014/15); single-dry year (FY 1989/90 hydrology); and multi-dry year (FY 1987/88 to FY 1991/92 hydrology). **Table 4.16-8** summarizes the water demands and supplies during an average weather year through FY 2044/45. **Table 4.16-9** summarizes the water demands and supplies for singe dry year conditions through FY 2044/45, which represented the

---

56 LADWP. 2022. Mayor Garcetti Announces New Water Restrictions for LADWP Customers. Available at: https://www.ladwpnews.com/mayor-garcetti-announces-new-water-restrictions-for-ladwp-customers/, accessed May 2022.

planned supply portfolio to meet the City's water demands under critical hydrologic conditions. **Table 4.16-10** demonstrates the service reliability assessment for multiple dry year conditions. While the total water demand may surpass the existing/planned supplies provided by the LADWP, supplemental water purchased from the MWD will ensure sufficient supplies are provided to meet demand. While the City plans to improve its water supply reliability through investments in additional local supply development and conservation, the City has made significant investments in the MWD and will continue to rely on the MWD to meet current and future supplemental water needs. **Tables 4.16-8** through **Table 4.16-10** demonstrate that LADWP will be able to maintain reliability during normal, single, and multiple dry year periods.

Table 4.16-8

Total Supplies	**655,700**	**673,600**	**692,600**	**712,000**	**724,900**

Notes: MWD = Metropolitan Water District
Source: City of Los Angeles Department of Water and Power. 2021. 2020 Urban Water Management Plan.

Per the 2015 UWMP and 2020 UWMP, current water supplies, planned future water conservation efforts, and planned future water supplies will enable LADWP to reliably provide water that meets the demands

of the City for a 25- year planning horizon (through 2040). The 2015 UWMP indicates that water deliveries to the City totaled 513,540 afy in 2015. Projected total water demand for the City under average year conditions for year 2040 is 675,700 afy. Projected total water demand for the City for 2040 under single/multiple dry years conditions is 709,500 afy. The 2015 UWMP projects an increase of 195,960 afy (38%) in water demand between 2015 and 2040, under single/multiple dry year conditions. The 2020 UWMP was adopted in May 2021. According to the 2020 UWMP, projected total water demand for the City under average year conditions for year 2040 is 697,800 af and under a single dry year is 732,700 af. If conservation measures are applied, the total water demand in 2040 drops to 554,400 af. According to the LADWP, in 2016, 486,797 af of water were delivered (see **Table 4.16-1**) and, as result, water demand under single year dry conditions increases by 245,903 af from 2016 to 2040.

The projected net increase in water demand of 2,836 afy generated by new development facilitated by the Boyle Heights Plan would represent about 1.2% of the forecast water demand increase through 2040 under the 2020 UWMP. The 2020 UWMP water demand projections are based on SCAG projections. As discussed in **Section 4.12, Population, Housing, and Employment**, the Proposed Plan would accommodate a development capacity consistent with long-range SCAG growth projections. Because the water demand projections for the Boyle Heights CPA have been accounted for in the 2020 UWMP, and adequate supply would be available to meet estimated demand of the Boyle Heights CPA during normal and single dry year conditions and multiple dry years up to the year 2040, impacts would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.16.2.6 Cumulative Impacts

The issues of water demand and supply are region-wide in the Southern California area and transcend the boundaries of the CPA and the City. The 2020 UWMP indicates that LADWP can reliably meet the water demands of SCAG forecasted demographic growth in the City of Los Angeles through the year 2040. LADWP's infrastructure is a dynamic and complex system and its ability to provide water supply infrastructure and meet future water demands is determined on a case-by-case basis. Nonetheless, development and population increases under the Proposed Plan when combined with cumulative development could cause an increase in total water consumption. The potential for construction of new water filtration and other large-scale water facilities is not anticipated at the present time. Depending on

the location of new water supply facilities, if they are determined to be needed, impacts could occur, although they are too speculative to address in detail at the present time without knowing where development would occur.

The Boyle Heights Community Plan aims to accommodate growth projected by SCAG. As discussed above, total water demand projected by the City's 2020 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and growth projections. Per the 2020 UWMP, demographic projections for the LADWP service area include a population of 4,041,284 million persons; 1,442,766 housing units; and 1,995,597 jobs.[57]

As shown in **Table 4.16.10** above, projected total water demand for the City for 2040 under single/multiple dry year conditions is 732,700 afy in a single dry year and 712,000 afy at the end of multiple dry years. Per the 2020 UWMP, based on current water supplies, planned future water conservation, and planned future water supplies, LADWP will be able to reliably provide water to meet the demands of the City for the 25-year planning horizon identified in the 2020 UWMP. Therefore, cumulative development would not result in a cumulatively significant impact with respect to water supply. Cumulative impacts related to water supply are ***less than significant***.

The increase in water demand in the CPA and outside the CPA could potentially increase pressure on the City's water infrastructure, including water mainline and trunk lines. LADWP prepared a 2018-2019 Water Infrastructure Plan, which addresses the City's long-term goals for replacing the City's water infrastructure. The report states that LADWP plans to replace approximately 500 miles of leak-prone and high-risk water mainlines in the next 10 years, and LADWP is increasing the rate at which they replace water distribution mainline to bring the pipe replacement cycle closer to the expected pipe life cycle by year 2023.[58] The upgrading and replacement of the City's water infrastructure generally results in a statutory exemption, a categorical exemption, or the preparation of an MND. The City's environmental documents for water line replacements typically indicate less-than significant impacts, including air quality, noise, and traffic impacts. The environmental impacts of the construction and operation of water lines are localized in nature and consistent with the impacts evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. To the extent that any significant impacts could result from the unique characteristics of a specific project site, those impacts are too speculative to analyze at this time. Therefore,

---

57 City of Los Angeles Department of Water and Power. 2021. *2020 UWMP*. https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf

58 City of Los Angeles Department of Water and Power, *2017-18 Water Infrastructure Plan*, https://s3-us-west-2.amazonaws.com/ladwp-jtti/wp-content/uploads/sites/3/2018/08/06141812/2017-18-Water-Infrastructure-Plan-Web-final.pdf, accessed October 2, 2019.

the Proposed Plan would not make a cumulatively considerable contribution to impacts related to water conveyance. Based on the above information, the incremental effect of the Proposed Plan related to water supply or conveyance would not be cumulatively considerable and cumulative impacts would be ***less than significant***.

4.16.3 WASTEWATER AND STORMWATER DRAINAGE

4.16.3.1 Wastewater Existing Environmental Setting

Wastewater generated within the Boyle Heights CPA is collected and treated by the City Los Angeles Department of Public Works, Bureau of Sanitation (LASAN) wastewater conveyance and treatment infrastructure, which operates and maintains the wastewater collection and treatment for the City and 29 contract cities and agencies. The City's sewage system is composed of the Hyperion Treatment Plant (HTP) service area, the Terminal Island Water Reclamation Plant (TIWRP) service area, the Don C. Tillman Water Reclamation Plant (DCTWRP) service area, and the Los Angeles-Glendale Water Reclamation Plant (LAGWRP) service area. The City's public sewers are managed within 26 primary sewer basins and 220 secondary basins, or sewer sheds. The City operates and maintains the largest sewer network within the nation, with more than 6,700 miles of sewer lines and conveys about 400 mgd.[59] The City's primary sewer basin boundaries are based solely on sewer drainage and configuration and are independent of political boundaries. The CPA is located within or intersects the Lincoln Heights and Boyle Heights Primary Sewer Master Planning Basins, which are located within the HTP service area.

Wastewater Treatment

City wastewater is treated at several wastewater treatment facilities: the HTP located in Playa del Rey; the TIWRP located in San Pedro; the DCTWRP located in Van Nuys; and the LAGWRP located in Los Angeles, adjacent to the City of Glendale. Each of these treatment plants is capable of treating a maximum of approximately 450, 30, 80, and 20 mgd of wastewater, respectively, and experience average daily flows of 260, 15, 45, and 20 mgd, respectively.[60,61] With the exception of the Harbor area, the majority of the City's wastewater conveyance and treatment is served by the Hyperion Sanitary Sewer System. Wastewater in the Hyperion Sanitary Sewer System is treated at the HTP.

As stated previously, the HTP is located in the community of Playa del Rey which is approximately 15 miles southwest of the CPA. The HTP has a wet and dry weather treatment capacity of 450 mgd and peak

61 City of Los Angeles. *Terminal Island Water Reclamation Plant*.

wet weather flow of 800 mgd.[62] The HTP performs primary treatment of wastewater (i.e., the removal of large objects) and secondary treatment of wastewater (i.e., degradation of biological content).[63,64]

Treated wastewater from the HTP, also known as effluent, is discharged into the Santa Monica Bay through a five-mile outfall. All effluent discharges into the Santa Monica Bay are regulated by the NPDES Permit Number CA0109991.[65] The HTP outfall discharges primary and secondary treated effluent at a depth of 187 feet. The HTP also has a one-mile outfall which is in standby condition in case of an emergency. A small remaining portion of effluent is reused to recharge barrier walls. Treated sewer sludge, or biosolids are not discharged into the Santa Monica Bay. Biosolids are either reused in agriculture or used by landfills for daily cover.[66]

Wastewater Conveyance Infrastructure

The City owns, operates, and maintains an extensive wastewater collection and conveyance system that collects sewage from more than four million customers in Los Angeles, plus 29 contracting cities and agencies, over a 470-square-mile area. The City conveys the sewage to one of the four treatment facilities.[67] The collection system pipelines range in diameter from 6 inches to 150 inches and consist of approximately 6,700 miles of primary and secondary sewers. To assess and maintain the condition of this expansive system, the City actively conducts an ongoing dry- and wet-weather flow monitoring program. There are 30 automatic "real time" flow monitors and 74 additional "near time" monitors located in the primary sewer system. The monitors use either telephone lines to send data to a central location or staff will download data in the field. Additionally, flow gauging is performed at over 600 strategic locations throughout the City's secondary sewer system on either a quarterly, semi-annual, or annual cycle to monitor flow depth.

The sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers provide service to property laterals and feed into the

primary sewer lines. Primary sewers discharge into trunk, interceptor, and outfall pipes. As discussed above, all sewer lines in the CPA convey wastewater to the HTP. Tributaries to interceptor sewer systems are called sewer reaches. Sewer reaches are usually named after the street to which their alignment is closest. Primary sewers have pipes with a diameter of 15 inches or more and are found in all the sewer reaches that serve the Basin. Interceptor sewer systems consist of large sewer pipelines that control the conveyance of wastewater to treatment plants. The following major interceptor sewer systems collect wastewater from the Lincoln Heights and Boyle Heights Primary sewer basins that are located within or intersect the CPA and conveys the wastewater to the HTP: Central Outfall Sewer (COS), North Outfall Sewer (NOS) and North East Interceptor Sewer (NEIS).[68]

Sewer capacity planning is prioritized based on two ratios of sewer flow to sewer capacity (d/D): a Trigger ratio and a Relief ratio. Trigger flow is the quantity of flow, that once reached, would initiate planning for a relief or a replacement sewer. The buffer capacity is defined as the product of the estimated years to complete a new sewer project and the rate of recent flow increases in the sewer being evaluated. The Relief d/D is currently 0.75 across the City (i.e., when a sewer is at 75% of capacity) for all existing sewers, the Trigger d/D varies on a project-by-project basis because each project's tributary area has its own unique characteristics such as population growth projection, commercial and industrial discharge forecast, and other contributing factors that determine how quickly flows are projected to increase over time. The Sewer Design Manual requires all new sewers to meet a d/D of 0.5 for the projected design year (i.e., that they be at no more than 50% of capacity in their design year).[69] **Table 4.16-11** lists the sewer structural condition ranking schedule used by LASAN.

68 City of Los Angeles Department of Public Works, Bureau of Sanitation, *Sewer System Management Plan*, February 2017.

69 City of Los Angeles Department of Public Works, *Sewer System Management Plan: Hyperion Sanitary Sewer System*, May 20, 2022.

Table 4.16-11
Sewer Conditions Rank

Ranking	Description	Action
A	Very Good • Condition is almost like-new sewer reach.	No Repairs Future routine inspection
B	Good • Light Cracks localized • Light Corrosion localized • Light Roots localized	No Immediate Repairs Routine Maintenance Program. Schedule next inspection in the order of sewer system priority.
C	Fair • Moderate Cracks/Fractures • Moderate Corrosion continuous • Moderate Infiltration continuous • Moderate Roots continuous	Routine Repairs as Needed Includes planning, environmental documentation, technical investigations, design, reviews, bid and award following established priorities.
D	Poor • Severe Cracks/Fractures • Broken Reach with Holes • Severe Corrosion • Severe Infiltration/Roots	Repairs Includes regular bid and award, fast track construction, accelerate planning/design, and monitoring.
E	Emergency • Collapsed Pipe (PX) • Dirt Pipe (CPD) • Crown of Pipe Gone (CPC, CG) • Void in Backfill around pipe • Full Flow Obstruction/Blockage	Emergency Repair Initiate Special Order Procedure " Urgent Necessity"

Source: City of Los Angeles Department of Public Works, Bureau of Sanitation, Wastewater Collection System Rehabilitation and Replacement Report and Plan, June 2006, 2017.

New and rehabilitated sewers and pump stations are planned, designed, and constructed to meet the highest performance standards in the industry in accordance with the City's Sewer Design Manual. The Sewer Design Manual is a comprehensive set of criteria for planning and designing of new sewers, pump stations, force mains, and appurtenances, and for the rehabilitation of existing sewers. In conjunction with the Sewer Design Manual, the City also maintains Standard Plans, which are used to provide consistency and quality in design. All system components are designed to meet permit requirements of the various federal, state, and local agencies thereby ensuring that projects benefit from the input of all affected and interested parties, including the communities.

The Sewer Design Manual and Standard Plans are updated, maintained, and administered by LASAN. For all projects, LASAN is responsible for determining the sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. This function is part of an overall sewer connection permitting process that involves a combined effort by LASAN and Bureau of Engineering (BOE) personnel. In issuing a sewer connection permit, the BOE Development Services Division determines

if further investigation is needed to evaluate the capacity of an existing sewer line to handle the additional flow from the proposed development or project and take appropriate preemptive action to attenuate potential emergency sewer overflow incidences in the future.

In addition to preemptive sewer monitoring and permitting activities, the LASAN Wastewater Collection Systems Division also maintains up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. The procedures outline the necessary actions to provide immediate response to sewage overflows. It is City policy that, "[e]very reported sewage spill affecting public or private property within the City of Los Angeles shall be acted upon by the Division." Crew leaders are immediately notified upon receipt of a reported potential sewer overflow and are instructed to respond immediately.[70]

The effect of stringent monitoring practices and sewer design standards are apparent in that the City has not experienced any wet-weather overflows since major relief sewers were completed in 2006. However, some dry-weather overflows still occur occasionally due to tree roots, grease blockages, landslides, and vandalism. Despite these irregular overflow occurrences, the system currently has sufficient capacity to handle peak dry-weather flows.[71,72]

Water Quality Monitoring

Los Angeles is constantly monitoring the infrastructure to ensure reliable service. Dischargers are regulated under Waste Discharge Requirements (WDRs) and are required to "self -monitor," that is, to collect regular samples of their effluent and receiving waters according to a prescribed schedule to determine facility performance and compliance with their requirements. In addition to self-monitoring by dischargers, LARWQCB makes unannounced inspections and collects samples to determine compliance with discharge requirements and receiving water objectives and to provide data for enforcement actions. LARWQCB also

71 City of Los Angeles Department of Public Works, Sewer *System Management Plan: Hyperion Sanitary Sewer System,* https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdey/~edisp/cnt012544.pdf, 2011.

72 In regards to the July 2021 Hyperion Water Treatment Plant crisis in which flow of debris overwhelmed the treatment facility, the Los Angeles Sanitation Department (LASAN) identified the event as unique extraordinary event that was investigated and steps taken to insure against any such future reoccurrence and determined that the event does not change projections that LASAN has conducted based on population projections for the Hyperion Water Treatment Plan (Hyperion) and its determinations that the facility is operating at substantially below the capacity and is expected to until the year 2040. The average wastewater flow of the facility is approximately 300 million gallons per day (MGD) whereas the maximum capacity is 600 MGD, or approximately double the average wastewater flow. Therefore, considering Hyperion's current capacity and the City's ongoing conservation efforts, the facility can handle the anticipated wastewater flow associated with the projected population growth.

responds to a variety of incidents, including accidental and illegal discharges of oil from offshore pipelines, oily waste discharges, and dumping in the storm drains. Each regional board in the state prepares a biennial Water Quality Assessment (WQA) Report using data collected by regional planning, permitting, surveillance, and enforcement programs. The regional reports contain inventories of the pollutants in the major water bodies of the region.

The Flow Monitoring Expansion Program helps operations and maintenance to manage the conveyance system. Flow data is gathered to support resource allocation. LASAN continuously monitors 194 locations in major outfall, interceptors, and primary sewers (pipes 16-inch and greater in diameter) and periodically monitors over 500 locations in the primary sewers and some secondary sewers (pipes 15 inch or smaller in diameter).[73]

Existing Wastewater Generation

The estimated wastewater generation of existing land uses within the CPA is shown in **Table 4.16-12**. The CPA is estimated to currently generate approximately 5,529,302 gpd (5.5 mgd) of wastewater. Wastewater generated by the CPA represents approximately 1.2% of the HTP's current wastewater treatment capacity of 450 mgd.

Table 4.16-12
Estimated Existing (2016) Wastewater Generation in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Employees	Daily Wastewater Generation (gpd)
Residential[2]		
Single-Family	4,553 du	706,170
Multi-Family	18,211 du	2,715,260
	Residential Subtotal	***3,421,430***
Non-Residential		
Commercial	16,833 employees	1,084,045
Industrial	8,897 employees	1,177,963
Public Facilities	514 employees	25,700
	Non-Residential Subtotal	***2,287,708***
	Existing (2016) Total	**5,709,138**

Source: Impact Sciences, 2017.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd
[1] City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation.
[2] For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

73 City of Los Angeles Department of Public Works, Bureau of Sanitation, *Sewer System Management Plan*, February 2017.

4.16.3.2 Stormwater Existing Environmental Setting

The CPA is located within the Los Angeles River Watershed. The Los Angeles River Watershed covers a land area of 834 square miles. The eastern portion spans from the Santa Monica Mountains to the Simi Hills and in the west from the Santa Susana Mountains to the San Gabriel Mountains. The watershed encompasses and is shaped by the path of the Los Angeles River, which flows from its headwaters in the mountains eastward to the northern corner of Griffith Park. Here the channel turns southward through the Glendale Narrows before it flows across the coastal plain and into San Pedro Bay near Long Beach.[74]

The City's storm drain system, maintained by the County of Los Angeles Department of Public Works, is a vast network of underground pipes and open channels that were designed to prevent flooding. The City's storm drain system, maintained by the BOE, consists of an extensive network of underground pipes and open channels that were designed to prevent flooding. The City's storm drain system consists of approximately 3,300 miles of storm drains, 47 pump plants, 172 debris basins, 27 sediment placement sites, 3 seawater intrusion barriers and an estimated 82,000 catch basins that collect runoff, spreading grounds, and pumping facilities.[75] The City's system is designed to accommodate 50-year magnitude storms. During dry weather, the combined County and City storm drainage systems carry tens of millions of gallons of runoff daily.

The CPA is mostly covered with impervious surfaces—including roadways, parking lots, hardscapes, and rooftops—that generate stormwater runoff. Runoff drains from the street into the gutter and enters the system through an opening in the curb called a catch basin. Curbside catch basins are the primary points-of-entry for urban runoff. From there, runoff flows into underground tunnels that empty into Ballona Creek, which is a major flood control facility for draining stormwater from the Project Area and directing it safely to the ocean. See **Section 4.9, Hydrology and Water Quality,** for further discussion of the Ballona Creek Watershed and storm drains.

4.16.3.3 Wastewater Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Utilities-Wastewater at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Clean Water Act

---

74 County of Los Angeles Department of Public Works, *Los Angeles River Watershed*, https://dpw.lacounty.gov/wmd/watershed/la/, accessed December 2021.

75 Los Angeles County Flood Control District, https://dpw.lacounty.gov/LACFCD/web/, accessed May 2022.

- California Green Building Code
- Los Angeles Regional Water Quality Control Board (LARWQCB)
- City of Los Angeles General Plan Framework Element
- Integrated Resources Plan
- Water IRP 5-year Reviews
- Los Angeles Municipal Code
- One Water LA 2040 Plan
- Green New Deal
- Sewer System Management Plan
- Los Angeles Wastewater Capital Improvement Program

Federal

Clean Water Act (CWA). The primary goals of the Federal Clean Water Act (CWA), 33 USC §§ 1251, et seq. (CWA) are to restore and maintain the chemical, physical, and biological integrity of the nation's waters and to make all surface waters fishable and swimmable. The CWA forms the basic national framework for the management of water quality and the control of pollutant discharges. The CWA sets forth a number of objectives in order to achieve the above- mentioned goals. The CWA objectives include regulating pollutant and toxic pollutant discharges; providing for water quality which protects and fosters the propagation of fish, shellfish and wildlife; developing waste treatment management plans; and developing and implementing programs for the control of non-point sources pollution.

National Pollutant Discharge Elimination System (NPDES). The NPDES permit system was established in the CWA to regulate point source discharges into waters within the United States. Point sources are discrete conveyances such as pipes or manmade ditches. Individual homes connected to a municipal system are not required to obtain a permit under the NPDES, however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters.

State

California Green Building Code The California Green Building Standards Code, commonly referred to as the CALGreen Code, is set forth in California Code of Regulations Title 24, Part 11, and establishes voluntary and mandatory standards pertaining to the planning and design of sustainable site development and water conservation, among other issues. Under the CALGreen Code, all flush toilets are limited to 1.28

gallons per flush, and urinals are limited to 0.5 gallon per flush. In addition, maximum flow rates for faucets are established at: 2.0 gallons per minute (gpm) at 80 pounds per square inch (psi) for showerheads; 1.2 gpm at 60 psi for residential lavatory faucets; and 1.8 gpm at 60 psi for kitchen faucets.

Regional

Los Angeles Regional Water Quality Control Board (LARWQCB). The LARWQCB is one of the nine state RWQCBs that are under the purview of the SWRCB. The SWRCB sets statewide policy and, together with the nine state RWQCBs, implements State and federal laws and regulations that pertain to water quality. The LARWQCB implements state and federal laws and regulations within its jurisdiction and continuously maintains its Water Quality Control Plan (WQCP).

The LARWQCB enforces the Code of Federal Regulations Part 40, Section 122.41(m), which prohibits the bypassing of treatment facilities and sanitary sewer overflows. In addition to the Code of Federal Regulations, the sewer conveyance system is subject to regulation by the South Coast Air Quality Management District (SCAQMD), which responds to complaints regarding nuisance odors. The 10-year Los Angeles Sewers Program also regulates maintenance and construction project schedules and is currently managing approximately 150 sewer infrastructure improvement projects.

The 10-year Los Angeles Sewers Program was put into place in order to carry out the mandates of the Collection System Settlement Agreement (CSSA), which has a compliance term of 10 years. The CSSA is a settlement agreement that was reached in 2004 to resolve a lawsuit brought against the City by the Santa Monica Baykeeper and other community organizations after a number of sanitary sewer overflows occurred in the City in February 1998. The CSSA requires the City to enhance, repair, and update the sewer system and sets specific timelines for the City to complete the upgrades. It also mandates that the City spend $8.5 million in supplemental environmental enhancement projects. Pursuant to the CSSA, the City prepares annual progress reports detailing its success at meeting the terms of the agreement. The ninth progress report for FY 2012/2013, published in August 2013, indicates that the City is in full compliance with the CSSA.[76]

76 Los Angeles Department of Public Works, Bureau of Sanitation, *Collection System Settlement Agreement, Ninth Annual Report, Fiscal Year 2012-13.*

Local

City of Los Angeles General Plan (Framework). The Citywide General Plan Framework Element (General Plan Framework) establishes the conceptual basis for the City's General Plan.[77] The General Plan Framework sets forth a comprehensive Citywide long-range growth strategy and defines Citywide policies regarding land use, housing, urban form and neighborhood design, open space and conservation, economic development, transportation, infrastructure and public services.

The goals, objectives, and policies of the Framework that are related to wastewater and stormwater are listed in **Table 4.16-13**.

Table 4.16-13
Relevant General Plan Wastewater Treatment and Conveyance Goals, Objectives, and Policies

Goal/Objective/ Policy	Goal/Objective/Policy Descriptions
Framework Element- Chapter 9 Infrastructure and Public Services	
Goal 9A	Adequate wastewater collection and treatment capacity for the City and in basins tributary to City-owned wastewater treatment facilities.
Objective 9.1	Monitor and forecast demand based upon actual and predicted growth.
Policy 9.1.1	Monitor wastewater generation.
Policy 9.1.2	Monitor wastewater flow quantities in the collection system and conveyed to the treatment plants.
Policy 9.1.3	Monitor wastewater effluent discharged into the Los Angeles River, Santa Monica Bay, and San Pedro Harbor to ensure compliance with water quality requirements.
Objective 9.2	Maintain the wastewater collection and treatment system, upgrade it to mitigate current deficiencies, and improve it to keep pace with growth as measured by the City's monitoring and forecasting efforts.
Policy 9.2.1	Collect and treat wastewater as required by law and Federal, State, and regional regulatory agencies.
Policy 9.2.2	Maintain wastewater treatment capacity commensurate with population and industrial needs.
Policy 9.2.3	Provide for additional wastewater treatment capacity in the Hyperion Service Area, as it becomes necessary.
Policy 9.2.4	Continue to implement programs to upgrade the wastewater collection system to mitigate existing deficiencies and accommodate the needs of growth and development.
Policy 9.2.5	Review other means of expanding the wastewater system's capacity.
Objective 9.3	Increase the utilization of Demand Side Management (DSM) strategies to reduce system demand and increase recycling and reclamation.
Policy 9.3.1	Reduce the amount of hazardous substances and the total amount of flow entering the wastewater system.
Policy 9.3.2	Consider the use of treated wastewater for irrigation, groundwater recharge, and other beneficial purposes.
Objective 9.4	Ensure continued provision of wastewater collection and treatment after an earthquake or other emergency.

[77] City of Los Angeles Department of City Planning, Citywide General Plan Framework, An Element of the Los Angeles General Plan, July 27, 1995, https://planning.lacity.org/plans-policies/framework-element, accessed May 2022.

Goal/Objective/ Policy	Goal/Objective/Policy Descriptions
Policy 9.4.1	Restore minimal operations as soon as possible after an emergency, and full operations as soon as feasible.
Policy 9.4.2	Establish joint cooperation agreements with other jurisdictions for mutual assistance during emergencies.

Source: City of Los Angeles, The Citywide General Plan Framework, An Element of the City of Los Angeles General Plan, re-adopted 2001.

City of Los Angeles Integrated Resources Plan (IRP). The City's IRP incorporates a future vision of water, wastewater, and runoff management in the City, recognizing the relationships among all of the City's water resources activities and functions. The IRP addresses and integrates the water, wastewater, and runoff need of the City to the year 2020 and utilized comprehensive basin-wide water resources planning. The IRP consists of a Facilities Plan, a Financial Plan, and an EIR for the program. Objectives of the IRP include, but are not limited to, meeting the projected wastewater system needs of the City; complying with all regulations protecting public health and the environment; conforming to the sustainability guidelines of the City; providing for safe use of recycled water; and providing cost-effective services. In developing the alternatives to help bridge the gaps in the ability of the current water system to serve future populations, the City also allowed for application of various criteria to accommodate changes and unanticipated conditions that could be encountered during implementation of the selected alternative. The alternative ultimately selected by the City Council included a mix of projects and programs which manages future wastewater flows with the expansion of the City's Donald C. Tillman Water Reclamation Plant to 100 mgd and provides increased recycled water reuse and urban runoff management.

Water IRP 5-year Reviews. The LADPW had been monitoring implementation of the IRP and updating its projections via the preparation Water IRP 5-Year Review Final Documents. The last 5-year review, prior to preparation of the One Water LA Plan that now supersedes the 5-year reviews as discussed below, was completed in 2012.[78] Based on updated 2008 Southern California Association of Governments (SCAG) data, the estimated future flow of the Hyperion Sanitary Sewer System was forecasted as 500 mgd by 2020, and approximately 496 mgd by 2018. At the same time, IRP data in the five-year review showed that the actual Hyperion Sanitary Sewer System service area flow was less than projected by the 2008 SCAG data used for planning. Per that data, the Hyperion Sanitary Sewer System service area flow had decreased from 400 mgd in 2002 to 350 mgd in 2012.[79] This could be attributed to such factors as water conservation and the economic downturn. The five-year Report estimated reductions in flow requirements indicating that

78 City of Los Angeles Department of Public Works. 2012. Water IRP 5-Year Review Final Documents. Available at: https://planning.lacity.org/eir/CrossroadsHwd/deir/files/references/M211.pdf. Accessed June 2022.

79 *Ibid*.

there had been a reduction of wastewater flow of 26.5% relative to the amount estimated in the SCAG projection.

Los Angeles Municipal Code

Green Building Code. The City has been pursuing a number of green development initiatives intended to promote energy conservation and reductions in the amount of greenhouse gas emissions generated within the City. While these ordinances do not focus on the provision of sewer services, they do mandate the use of water conservation features in new developments. Examples of such water conservation features include, but are not limited to, low water shower heads, toilets, clothes washers and dishwashers. Because the flow through these fixtures is reduced, residual wastewater passing through is reduced, in turn reducing the demand for sewage conveyance and treatment.

The Los Angeles Municipal Code (LAMC) Chapter IX, Article 9, the Los Angeles Green Building Code (LA Green Building Code, Ordinance No. 181,480),[80] was adopted in April 2008 and provides standards and a mechanism for evaluating projects for their water conservation features during site plan review. The LA Green Building Code has been subsequently amended to incorporate various provisions of the California Green Building Standards (CALGreen) Code. The LA Green Building Code includes mandatory requirements and elective measures pertaining to wastewater for three categories of buildings, the first of which applies to this Project: (1) low-rise residential buildings; (2) non-residential and high-rise residential buildings; and (3) additions and alterations to residential and non-residential buildings.

Water Efficiency Requirements Ordinance. LAMC Chapter XII, Article 5, the Water Efficiency Requirements Ordinance (Ordinance No. 180,822),[81] effective December 1, 2009, requires the installation of efficient water fixtures, appliances, and cooling towers in new buildings and renovation of plumbing in existing buildings, to minimize the effect of water shortages for City customers and enhance water supply sustainability.

Sewer Capacity Availability Review. The LAMC includes regulations that require the City to assure available sewer capacity for new projects and to collect fees for improvements to the infrastructure system. LAMC Section 64.15 requires that the City perform a SCAR when an applicant seeks a sewer permit to connect a property to the City's sewer system, proposes additional discharge through their existing public sewer connection, or proposes a future sewer connection or future development that is anticipated to

---

80 City of Los Angeles, Ordinance No. 181480, https://www.ladbs.org/docs/default-source/publications/ordinances/l-a-green-building-code-ordinance-181480.pdf?sfvrsn=12, accessed May 2022.

81 City of Los Angeles, Ordinance No. 180822, http://clkrep.lacity.org/onlinedocs/2009/09-0510_ord_180822.pdf, accessed May 2022.

generate 10,000 gallons or more of sewage per day. A SCAR provides a preliminary assessment of the capacity of the existing municipal sewer system to safely convey a project's newly generated wastewater to the appropriate sewage treatment plant.

Sewerage Facilities Charge. LAMC Sections 64.11 and 64.12 require approval of a sewer permit, also called an "S" Permit, prior to connection to the wastewater system. LAMC Sections 64.11.2 and 64.16.1 require the payment of fees for new connections to the City's sewer system to assure the sufficiency of sewer infrastructure. New connections to the sewer system are assessed a Sewerage Facilities Charge. The rate structure for the Sewerage Facilities Charge is based upon wastewater flow strength as well as volume. The determination of wastewater flow strength for each applicable project is based on City guidelines for the average wastewater concentrations of two parameters, biological oxygen demand and suspended solids, for each type of land use. Sewerage Facilities Charge fees are deposited in the City's Sewer Construction and Maintenance Fund for sewer and sewage-related purposes, including, but not limited to, industrial waste control and water reclamation purposes.

Bureau of Engineering Special Order. The City establishes design criteria for sewer systems to assure that new infrastructure provides sewer capacity and operating characteristics to meet City standards (Bureau of Engineering Special Order No. SO 06-0691). Per the Special Order, lateral sewers, which are sewers 18 inches or less in diameter, must be designed for a planning period of 100 years. The Special Order also requires that sewers be designed so that the peak dry weather flow depth during their planning period does not exceed one-half of the pipe diameter (D) (i.e., depth-to-diameter ratio or d/D).[82]

Low Impact Development Ordinance. Under LAMC Section 64.72, all development projects in the City are required to integrate low impact development (LID) practices and standards for stormwater pollution mitigation to manage and capture stormwater runoff, to the maximum extent feasible, in priority order: infiltration, evapotranspiration, capture and use, treated through high removal efficiency biofiltration/biotreatment system of all of the runoff on site. High removal efficiency biofiltration/biotreatment systems are required to comply with the standards and requirements of the Development Best Management Practices (BMPs) Handbook.

One Water LA 2040 Plan. In April 2018, the City prepared the One Water LA 2040 Plan (One Water LA Plan), an integrated approach to Citywide recycled water supply, wastewater treatment, and stormwater

---

82 City of Los Angeles Department of Public Works, Bureau of Engineering, Special Order No. 006-0691, Planning Period, Flow, and Design Criteria for Gravity Sanitary Sewers and Pumping Plants, effective June 6, 1991, http://eng2.lacity.org/docs/sporders/1991/so00691.pdf, accessed .

management.[83] The new plan builds upon the City's Water IRP, which projected needs and set forth improvements and upgrades to wastewater conveyance systems, recycled water systems, and runoff management programs through the year 2020, and extends its planning horizon to 2040. The One Water LA Plan proposes a collaborative approach to managing the City's future water, wastewater treatment, and stormwater needs with the goal of yielding sustainable, long-term water supplies for Los Angeles to ensure greater resilience to drought conditions and climate change. The One Water LA Plan is also intended as a step toward meeting the Mayor's Executive Directive to reduce the City's purchase of imported water by 50 percent by 2024.[84] Major challenges addressed in the One Water LA Plan include recurring drought, climate change, and the availability of recycled water in the future in light of declining wastewater volumes. Volume 2 of the One Water LA Plan is the Wastewater Facilities Plan.

Green New Deal. The City released the first Sustainable City pLAn in April 2015,[85] which has been updated in 2019 as the Green New Deal. The Green New Deal includes a multi-faceted approach to developing a locally sustainable water supply to reduce reliance on imported water, reducing water use through conservation, and increasing local water supply and availability. Towards the end, the Green New Deal establishes a target of recycling 100 percent of all wastewater for beneficial reuse by 2035, which would be an improvement from the fiscal year 2017-2018, baseline of 27 percent.[86]

The Green New Deal establishes a number of milestones and initiatives:

- 2021: Produce 1.5 mgd of recycled water at HWP for use at LAWA and other local facilities;
- 2025: Recycle 17,000 AFY of water at the Tillman WRP to recharge into groundwater basin;
- 2025/2035: Increase non-potable reuse of recycled water by an additional of 6,000 AFY 2025; and an additional 8,000 AFY by 2035; and
- 2025/2035: Reduce annual sewer spills to fewer than 65 by 2025 and fewer than 60 by 2035.

Sewer System Management Plan. The State of California, via the State Water Quality Control Board's May 2, 2006, Statewide General Waste Discharge Requirements (WDRs), requires a Sewer System Management Plan (SSMP) to be prepared for all publicly owned sanitary sewer systems. The plans include measures to control and mitigate sewer spills and must be made available to the public. Accordingly, the City has prepared three SSMPs, one for each of the three separate sanitary sewer systems owned and operated by LA Sanitation: the Hyperion Sanitary Sewer System, the City of Los Angeles Regional Sanitary Sewer System (Harbor Gateway); and the Terminal Island Water Reclamation Plant Sanitary Sewer System. The City's SSMPs were last updated in January 2019 as part of a required biennial internal audit.[87] The SMMPs address the proper management, operation, and maintenance of all parts of the systems. The SSMP establishes design and performance standards for the sewer system; provides procedures for evaluating the system and providing capacity assurance; and establishes a performance standard to identify sewers in need of replacement or relief. The City's SSMP is in full compliance with the WDRs and meets applicable WDR objectives.[88]

Los Angeles Wastewater Capital Improvement Program. Every 10 years, the City of Los Angeles Department of Public Works, Bureau of Sanitation (LASAN) updates the City's 10-Year Capital Improvement Program, which identifies the wastewater system upgrades, equipment, and modifications to be funded by the City within a 10-year period. Many of these improvements are necessary in order to comply with state and CWA regulations. The most recent update, the Wastewater Capital Improvement Program Fiscal Years 2013/2014 through 2022/2023, identifies improvements scheduled through 2016 for the four treatment plants, collection system, pumping plants, and system-wide operations.

4.16.3.4 Stormwater Regulatory Framework

Federal

Clean Water Act (CWA). CWA is discussed above under "Regulatory Framework" in the Wastewater subsection.

---

87 City of Los Angeles, Department of Public Works, Department of Sanitation, Sewer System Management Plan, Hyperion Sanitary Sewer System, January 2019, https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdm1/~edisp/cnt035427.pdf. Accessed September 2020.

88 City of Los Angeles, Department of Public Works, Department of Sanitation, Sewer System Management Plan, Hyperion Sanitary Sewer System, February 2017, https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdey/~edisp/cnt012544.pdf. Overview. Accessed September 2020.

State

California Water Code Section 79747. Section 79747 of the California Water Code identifies funds available for multi-benefit stormwater management projects which may include, but are not limited to, green infrastructure, rainwater and stormwater capture projects, and stormwater treatment facilities. Development of plans for stormwater projects are required to address the entire watershed and incorporate the perspectives of communities adjacent to the affected waterways, especially disadvantaged communities.

NPDES General Construction Activity Stormwater Permit (GCASP). Pursuant to CWA section 402(p) and the Porter-Cologne Water Quality Control Act, SWRCB has issued a statewide NPDES General Permit, or GCASP, under Order No. 2009-0009-DWQ, NPDES No. CAR000002, which was adopted on September 2, 2009. The Order requires that prior to the beginning of construction activities, the permit applicant must obtain coverage under a GCASP permit by preparing and submitting a Notice of Intent along with the appropriate fee to SWRCB. Construction activities subject to GCASP include clearing, grading, and disturbances to the ground, such as stockpiling or excavation that result in soil disturbances of one acre of total land area or more.

Prior to obtaining the GCASP, an adequate Stormwater Pollution Prevention Plan (SWPPP) has to be prepared. The SWPPP specifies BMPs that will prevent construction pollutants from contacting stormwater with the intent of keeping all products of erosion from moving off-site into receiving waters. BMPs are intended to diminish impacts to the Maximum Extent Practicable (MEP), which is a standard developed by Congress to allow regulators the flexibility needed to shape programs to the site-specific nature of municipal stormwater discharges. Reducing impacts to the MEP generally relies on BMPs that emphasize pollution prevention and source control, with additional structural controls as needed. The SWPPP has two major objectives: (1) to help identify the sources of sediment and other pollutants that affect the quality of stormwater discharges and (2) to describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in stormwater as well as non-stormwater discharges. The SWPPP includes a description of: (1) the site, (2) erosion and sediment controls, (3) means of waste disposal, (4) implementation of approved local plans, (5) control of post-construction sediment and erosion control measures and maintenance responsibilities, and (6) non-stormwater management controls. Dischargers are also required to inspect their construction sites before and after storms to identify stormwater discharge associated with construction activity and to identify and implement controls where necessary.

Within the City of Los Angeles, SWPPP requirements are enforced through the City's Department of Building and Safety plan review and approval process. During the review process, development project plans are reviewed for compliance with the stormwater requirements. Plans and specifications are

reviewed to ensure that the appropriate BMPs are incorporated to address stormwater pollution prevention goals. While NPDES permits aim to reduce stormwater pollution, the permits also affect stormwater drainage since the application of BMPs would provide nonpoint source control of surface drainage. Additionally, the SWPPP describes the stormwater BMPs that would control the quality and quantity of stormwater runoff.

Local

County of Los Angeles Hydrology Manual. Drainage and flood control within the CPA is regulated by LADPW and the County of Los Angeles Department of Public Works (CLADPW). The County has jurisdiction over regional drainage facilities. The County's Hydrology Manual requires a storm drain system be designed for a 25-year storm event and that the combined capacity of a storm drain and street flow system accommodate flow from a 50-year storm event.[89]

Los Angeles Department of Public Works (LADPW) Bureau of Engineering (BOE) B-Permit (LAMC §62.106.b). Any proposed drainage improvements within the street right-of-way or any other property owned by, to be owned by, or under the control of the City requires the approval of a B-permit. Under the B-permit process, storm drain installation plans are subject to the review and approval by BOE. Additionally, any connections to the City's storm drain system from a property line to a catch basin or a storm drain pipe requires a storm drain permit from BOE.

Proposition O. Proposition O, a $500 million bond, authorized the City to fund projects that protect public health, capture stormwater for reuse and meet the federal CWA through removal and prevention of pollutants entering regional waterways. Proposition O projects include, but are not limited to, the Temescal Canyon Park Stormwater BMP, Los Angeles Zoo Parking Lot, the Westchester Stormwater BMP, Echo Park Lake Rehabilitation Project, and the Hansen Dam Recreational Area Parking Lot and Wetlands Restoration. In addition, Proposition O funds were used for the Catch Basin Screen Cover and Insert Project, which provided for the installation of catch basin inserts and screen covers throughout the City beginning in 2005 with completion on September 30, 2007 (Phase I and Phase II). Phase III began in the spring of 2008 and will retrofit approximately 34,000 remaining catch basins with opening screen covers.[90]

Low Impact Development (LID) Ordinance. The LID Ordinance was adopted by the City in 2011. The ordinance requires a variety of BMPs to manage stormwater and urban runoff and reduce runoff pollution. It

---

89 County of Los Angeles Department of Public Works, Hydrology Manual, http://dpw.lacounty.gov/wrd/Publication/engineering/2006_Hydrology_Manual/2006%20Hydrology%20Manual-Divided.pdf, January 2006.

90 City of Los Angeles Stormwater Program, *Proposition O*, http://www.lastormwater.org/green-la/proposition-o/, accessed October 8, 2019.

provides stormwater and rainwater LID strategies for development projects that require building permits in order to maintain or restore the natural hydrologic character of a development site, reduce off-site runoff, improve water quality, and provide groundwater recharge. The ordinance does not apply to development that creates, adds, or replaces less than 500 square feet of impervious area; development that involves emergency construction activity; infrastructure projects within the public right-of-way; development that involves only activity related to gas, water, cable, or electricity services on private property; development involving only restriping of permitted parking lots; and projects involving only exterior movie or television production sets, or facades on an existing developed site.

City of Los Angeles General Plan Framework Element. The General Plan Framework Element is also discussed above under "Regulatory Framework" in the Water Supply subsection. Relevant objectives and policies of the Framework Element related to stormwater drainage facilities are listed in **Table 4.16-5.**

4.16.3.5 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to stormwater if it would:

- Require or result in the relocation or construction of new or expanded wastewater treatment facilities, the construction or relocation of which could cause significant environmental effects.
- Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.
- Require or result in the relocation or construction of new or expanded stormwater drainage facilities, the construction or relocation of which could cause significant environmental effects.

4.16.3.6 Methodology

For purposes of **Threshold 4.16-3** and **Threshold 4.16-5** analysis, the Proposed Plan would have a significant impact if it resulted in the relocation or construction of wastewater or stormwater facilities and that relocation or construction caused a significant environmental effect, such as the demolition of a historical resource or destruction of a unique archaeological resource. Under these thresholds, not having adequate facilities to serve the project is not in and of itself a significant impact. Rather the question is whether construction of needed facilities results in environmental impacts. Therefore, analysis involves a two-part inquiry: first, whether reasonably anticipated development under the Proposed Plan can be served by existing facilities or if it is reasonably anticipated to cause the need for new or relocated

wastewater or stormwater facilities; and second, if it will need new or relocated wastewater or stormwater facilities, whether it is reasonably anticipated that construction or relocation of such facilities will result in a significant environmental impact. Wastewater facilities are considered in two categories: sewer treatment plants facilities and conveyance facilities. For purposes of **Threshold 4.16-4**, the Proposed Plan would have a significant impact if the City did not have adequate wastewater treatment capacity to serve the reasonably anticipated development under the Proposed Plan.

The impact analysis for wastewater treatment and conveyance is based on the analysis of the existing systems within the CPA and the analysis of anticipated effects of the CPA under the Proposed Plan. This analysis utilizes the City's LASAN sewer generation rates as CalEEMod does not currently provide wastewater generation rates. By applying the LASAN sewer generation factors to dwelling units/building areas by land use type, existing wastewater generation as well as wastewater generated for reasonably anticipated development under the Proposed Plan has been estimated. This increase in wastewater generation is compared to the existing remaining capacity at wastewater treatment facilities that serve the CPA to determine if the availability of these utilities would be able to accommodate the Proposed Plan's net demands. The analysis also evaluates the adequacy of the treatment plants serving the CPA and whether existing sewer lines can accommodate the anticipated Proposed Plan. This analysis does not rely upon, or use, population data but rather uses reasonably anticipated development (dwelling units and square footage of non-residential land uses) by 2040. Wastewater rates used to calculate the CPA's wastewater generation is provided in **Table 4.16-6**.

4.16.3.7 Impacts

Threshold 4.16-3 **Would implementation of the Proposed Plan require or result in the relocation or construction of new or expanded wastewater treatment facilities the construction of which could cause significant environmental effects?**

Threshold 4.16-4 **Would implementation of the Proposed Plan result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?**

This impact would be less than significant.

Table 4.16-14 summarizes projected wastewater generation in the Boyle Height CPA in 2040 with implementation of the Proposed Plan. As indicated in the table, total wastewater generation in 2040 is estimated to be approximately 8.0 mgd. Reasonably anticipated development under the Proposed Plan through 2040 would generate an increase of approximately 2.3 mgd of wastewater over 2016 baseline

conditions, which is an increase of about 40% compared to the baseline generation of approximately 5.7 mgd.

The HTP, which ultimately treats the City's sewage, is operating at 175 mgd below capacity on an average dry weather day.[91] The projected net increase of 2.3 mgd generated by growth under the Proposed Plan represents about 1.3% of the plant's available capacity. Therefore, the HTP has sufficient available treatment capacity to serve reasonably foreseeable development in the Boyle Heights CPA. The HTP would be able to adequately treat project-generated sewage in addition to currently generated sewage, and the treatment requirements of the RWQCB would not be exceeded.

Although the existing treatment plant would have ample capacity to accommodate increases that could occur under the Proposed Plan, the City is proactively undertaking capital improvement projects to not only maintain the existing infrastructure but also enhance and expand capacity at the treatment plants. Such projects would include rehabilitating old sewer mains and maintenance holes and replacing aging equipment and structures at treatment and pumping plants. The City maintains the Wastewater Capital Improvement Program that contains the capital projects and estimated costs for the renewal of the City's infrastructure at 10-year intervals. The Wastewater Capital Improvement Program was originally adopted in 2006 and most recently updated in 2013 and covers a FY 2013/2014 to 2022/2023. The Wastewater Capital Improvement Program was developed and evaluated according to projections and preferences contained in the IRP, which anticipates that average daily wastewater flows in year 2020 will increase to 531.4 mgal/d.

To meet anticipated increased wastewater flows, the IRP evaluates five alternatives, and identifies a preferred alternative that addresses the need for increased treatment capacity from the system but does not identify the need to build new treatment plants to meet the anticipated increase in wastewater generation. Instead, the chosen alternative favors adding capacity to existing facilities.[92] The FY 2013/2014 Wastewater Capital Improvement Program recognizes necessary projects to maintain, bolster, and expand the existing system. Multiple projects identified in the Wastewater Capital Improvement Program are upgrades for the HTP. With completion of these projects, the City will ensure that the HTP complies with RWQCB permit requirements and will refurbish various plant facilities to meet future operating requirements. Many of these upgrades are already funded and under construction and all upgrades are scheduled to be completed by 2020.

---

91 City of Los Angeles. *Hyperion Water Treatment Plant*.

92 Los Angeles Department of Public Works, Bureau of Sanitation, C*ity of Los Angeles Integrated Resources Plan*, https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdew/~edisp/cnt010386.pdf, December 2006.

Therefore, it is not foreseeable that LASAN would not have adequate capacity to serve the wastewater demands of the reasonably anticipated development from Proposed Plan or that implementation of the Proposed Plan would require construction of a new or expanded wastewater treatment plant.

As discussed above under **Section 4.16.3.2, Regulatory Framework**, reasonably anticipated development under the Proposed Plan would occur in compliance with the requirements of LAMC 64.11, 64.12 and 64.15, which establishes City standards related to wastewater discharge, peak flow, and sewer capacity. Sewer pipeline upgrades would be necessary as development occurs in the CPA. As discussed in **Section 4.16.3.1, Existing Environmental Setting**, several sewer line projects are identified within the Boyle Heights CPA. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. Routine infrastructure projects involving replacing or upgrading wastewater conveyance facilities generally would be statutorily or categorically exempt and if not would involve the preparation of a ND/MND (e.g., PRC Section 21080.21; *CEQA Guideline*s Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities would be localized in nature and consistent with the impacts that have been evaluated throughout this EIR. To the extent that any significant impacts could result from the unique characteristics of a specific site, those impacts would be speculative at this time.

As noted above, the City is proactively undertaking capital improvement projects to not only maintain the existing infrastructure but also enhance and expand capacity of treatment plants. Such projects would include rehabilitating old sewer mains and maintenance holes and replacing aging equipment and structures at treatment and pumping plants. As detailed in **Section 4.16.3.1, Existing Environmental Setting**, the City maintains the WCIP, which contains the capital projects and estimated costs for the renewal of the City's infrastructure at 10-year intervals.

Table 4.16-14
Existing (2016) and Future (2040) Estimated Wastewater Generation for the Boyle Heights Community Plan Area

Land Use	Baseline Wastewater Generation Rate (gpd/unit)	Baseline (2016) Dwelling Units or Jobs	Baseline (2016) Wastewater Generation (gpd)	2040 Wastewater Generation Rate (gpd/unit)	2040 Dwelling Units or Jobs	2040 Wastewater Generation (gpd)
Single-family Residential	155.1 gal/unit	4,553 du	706,170	144.3 gal/unit	6,623 du	955,699
Multi-family Residential	149.1 gal/unit	18,211 du	2,715,260	137.9 gal/unit	26,766 du	3,691,031
Commercial	64.4 gal/employee	16,833 jobs	1,084,045	59.8 gal/employee	21,118 jobs	1,262,856
Industrial	132.4 gal/employee	8,897 jobs	1,177,963	123.0 gal/employee	16,207 jobs	1,993,461
Public Facilities	50 gal/employee	514 jobs	25,700	46.4 gal/employee	1,859 jobs	85,840
Total 2040 with Boyle Heights Plan Wastewater Generation						**7,988,887**
Baseline 2016 Wastewater Generation						**5,709,138**
Net Change in Wastewater Generation						***+2,279,749***

Gpd = gallons per day; du = dwelling units; sf = square feet
Number of jobs per commercial and industrial land uses determined based on land use designation sizes.
Source: *Wastewater is assumed to be 100% of indoor water. Per Exhibit 2D of the 2015 UWMP, indoor water use constitutes the following percentages of overall water use: Residential single family – 46%; Residential Multi-family – 68%; Commercial – 76%; Industrial – 98%; and Government – 59%. Per the UWMP, per unit water demand is forecast to apply to new development.*

The LASAN Wastewater Engineering Services Division is responsible for determining sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. Thus, all development activities that require sewer connection permits are evaluated under the purview of existing capacity of sewer lines in the development site's vicinity at the time of development. By doing so, each new development must adhere to the most current Sewer Design Manual specifications as well as appropriate Standard Plan requirements. The Sewer Design Manual and Standard Plan are continuously updated to incorporate the most recent industry practices and materials ensuring appropriate measures are taken to accommodate any potential project. The City also has immediate response and reporting procedures in place to attend to any unexpected sewer overflows. The procedures are maintained in the Wastewater Collection Systems Division's up-to-date Sanitary Sewer Overflow Response and Reporting Procedures. Moreover, the City proactively monitors the sewer system to preemptively identify and resolve deficiencies before they become problematic. System deficiencies in need of rehabilitation are then included in the WCIP, which are attended to according to their associated priority ranking. The City would require that localized system deficiencies are adequately addressed by the responsible project. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Upgrades to sewer lines may cause temporary localized disturbance of roads, which may require re-routing of traffic and localized temporary increases in congestion, as well as temporary increases in air pollutant emissions and noise. However, such impacts would be within what is described in this EIR and upgrades would not result in long-term effects. Therefore, impacts related to construction of wastewater conveyance system upgrades would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

Threshold 4.16-5 **Would implementation of the Proposed Plan require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?**

This impact would be less than significant.

As discussed in **Section 4.9, Hydrology and Water Quality**, of this EIR, implementation of the Proposed Plan would not result in a substantial increase in impervious surfaces. Accordingly, reasonably anticipated development under the Proposed Plan would not cause a substantial increase in the peak flow rates or volumes that would exceed the drainage capacity of existing stormwater facilities. Compliance with the City's Low Impact Development (LID) Ordinance would further ensure that any future development resulting from the Proposed Plan would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Boyle Heights CPA would improve surface water quality by replacing older development with new development that incorporates LID methods.

The LASAN Watershed Protection Division is responsible for ensuring the implementation of Municipal Stormwater Permit requirements and the Wastewater Engineering Service Division is responsible for determining sewer capacity availability for new sewer connections for residential, commercial, and industrial developments. While most of the CPA is currently paved and served by the existing drainage system, implementation of the Proposed Plan could require the construction of new or upgraded stormwater drainage facilities. The construction of new stormwater drainage facilities at some point during the 20 plus year plan horizon is reasonably expected. However, at the present time, the location of such

facilities is speculative. Depending on the location of new wastewater facilities, if they are determined to be needed, construction and operational impacts could occur; however, such impacts are not foreseeable at this time. Typical infrastructure projects involving replacing or upgrading stormwater drainage lines generally include the preparation of an ND, MND, and in some cases may possibly qualify for a Categorical Exemption. Generally, construction-related impacts from such projects, including air quality, noise, and traffic impacts would be temporary in nature and less than significant. The environmental impacts of the construction and operation of new facilities are consistent with the impacts that have been evaluated throughout this EIR.

Therefore, impacts related to water drainage facilities would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.16.3.8 Cumulative Impacts

The geographic area to analyze cumulatively considerable impacts to wastewater and/or storm drains includes the entire City of Los Angeles and immediately adjacent areas served by common infrastructure. Cumulative development throughout Los Angeles would add both dwelling units and non-residential development to the City. Citywide development through 2040 would add approximately 659,000 new residents, 293,000 new households, and 345,000 new employees.[93] Cumulative impacts from this development are discussed below by impact area.

Wastewater

Growth anticipated by the Proposed Plan and citywide cumulative growth would generate an increase in wastewater. Total water demand projected by the City's 2020 UWMP accounts for population growth within its jurisdictional boundaries, which is based on SCAG's demographic data and growth projections based on SCAG's RTP. As discussed in **Section 4.12, Population and Housing**, the Proposed Plan would allow for an additional 29,000 persons, 11,000 housing units, and 13,000 jobs to the Boyle Heights CPA

93 Southern California Association of Governments. 2020. *2020 Regional Transportation Plan/Sustainable Communities Strategy*,

compared to 2016 baseline conditions. The Proposed Plan would accommodate a development capacity consistent with long-range SCAG growth projections.

The City of Los Angeles is served by four water reclamation plants, which include the HTP, the Terminal Island Reclamation Plant, the Donald C. Tillman Water Reclamation, and the Glendale Water Reclamation Plant. Combined these reclamation plants have capacity to treat 580 mgd (649,600 afy) of wastewater citywide.[94] According to the 2020 UWMP, average dry-weather wastewater influent projections for the City's wastewater treatment plants are expected to increase by approximately 15% over the next 25 years. Wastewater treatment projections of average dry-weather flows through 2040 for all four wastewater treatment plants total approximately 376 mgd (420,900 afy). Wastewater treatment projections of average dry-weather flows through 2040 for the HTP are projected to be 302 mgd (338,100 afy), an increase of 42 mgd relative to baseline average dry-weather flows of 260 mgd.[95] Growth anticipated by the Proposed Plan would increase wastewater generation by approximately 2.3 mgd, which comprises approximately 0.4% of citywide treatment capacity (580 mgd) and 0.8% of projected wastewater treatment for the HTP (302 mgd). Citywide growth would further increase wastewater generation, but such increases would not approach overall treatment capacity. Therefore, the cumulative increase in wastewater generation would not exceed the capacity of the City's wastewater treatment plant. Additionally, the City's 2006 Integrated Resources Plan incorporates a Wastewater Facilities Plan to meet future wastewater needs through the expansion of overall treatment capacity, maximizing the potential to reuse recycled water and implementation of new water conservation and technology programs.[96]

Growth anticipated by the Proposed Plan and citywide cumulative growth would contribute to an anticipated citywide increase in wastewater flow and place added demands on the wastewater conveyance system as future development takes place with the implementation of the Proposed Plan. Development under the Proposed Plan could require the construction of new or upgraded wastewater facilities. Such upgrades would likely occur within existing utility easements and would not result in new areas of disturbance. Construction of new or expanded conveyance facilities may be needed as a result of reasonably foreseeable development and, as discussed above, the City's WCIP identifies a number of sewer

---

94 Los Angeles Department of Water and Power. 2020. Urban Water Management Plan. Available at: https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf, accessed May 15, 2022.

95 Los Angeles Department of Water and Power. 2020. Urban Water Management Plan. Available at: https://www.ladwp.com/cs/groups/ladwp/documents/pdf/mdaw/nzyy/~edisp/opladwpccb762836.pdf, accessed May 15, 2022.

96 City of Los Angeles Department of Public Works, Bureau of Sanitation, *City of Los Angeles Integrated Resources Plan*, December 2006

line projects in the Boyle Heights CPA. Any future upgrades would be designed in accordance with applicable provisions of the Municipal Code and to the satisfaction of the City Engineer.

Routine infrastructure projects involving replacement or upgrade of sewer lines generally are statutorily or categorically exempt or require a ND/MND. The City's NDs for sewer line replacements indicate typical less than significant construction-related impacts, including air quality, noise, and transportation impacts. The environmental impacts of the construction and operation of sewer lines would be consistent with the impacts evaluated throughout this EIR. To the extent that any significant impacts could result from the unique characteristics of a specific project or site, those impacts are too speculative to analyze at this time. As necessary based on project and site characteristics, any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed accordingly. Regardless, impacts associated with construction of new facilities would be limited to the area in which the specific construction activity is occurring and would not contribute to any cumulative or citywide environmental impacts.

Based on the above information, the incremental effects of the Proposed Plan related to wastewater treatment and conveyance would not be cumulatively considerable and cumulative impacts would be ***less than significant.***

Stormwater Drainage

Continued compliance with the City's Low Impact Development (LID) Ordinance for all new development would ensure that any future development in Los Angeles would not increase demands on stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. As with the Boyle Heights CPA, long-term redevelopment of properties throughout the City would improve surface water quality by replacing older development with new development that incorporates LID methods. Any impacts from construction would be localized and would not contribute to cumulative impacts. Therefore, cumulative impacts related to stormwater drainage facilities would be ***less than significant***.

4.16.4 SOLID WASTE

4.16.4.1 Existing Environmental Setting

Solid Waste Conveyance Infrastructure

Los Angeles City Department of Public Works Bureau of Sanitation (LASAN) and private waste management companies are responsible for the collection, disposal, and recycling of solid waste within the

City of Los Angeles, including the CPA. LASAN collects an average of 6,652 tons per day of refuse, recyclables, yard trimmings, horse manure, and bulky items from more than 750,000 homes. Commercial and industrial areas of the City which may contain multi-family housing contract with private waste haulers to collect, dispose, and recycle solid waste.

Table 4.16-15 lists the location, permitted capacity, remaining capacity, permitted daily intake capacity, and the average daily volume of solid waste disposed of at the landfills serving the City of Los Angeles at each landfill. "Commerce Refuse to Energy and the Southeast Resource Recovery" are alternate solid waste disposal methods that help extend the landfill capacity by converting solid waste to energy that is sold to local utility companies. While they do not encounter capacity maximum issues, they are restricted in regard to the daily amount and type of solid waste that they can accept and process. Another alternate solid waste disposal method includes recycling businesses, with the most notable location being the Azusa Reclamation facility.

Table 4.16-15
Solid Waste Facilities Serving the City of Los Angeles

Facility Name	Location	Permitted Capacity (cubic yards)[1]	Remaining Capacity (tons)[2]	Permitted Daily Intake Capacity (tons/day)	Average Daily Intake (tons)	2019 Disposal (tons/year)
Class III Landfills[3]						
Antelope Valley	Palmdale	30,200,000	10,970,000	5,548	2,079	649,000
Calabasas	Agoura	69,300,000	4,320,000	3,500	870	271,000
Chiquita Canyon	Castaic	110,366,000	56,990,000	12,000	5,436	1,696,000
Lancaster	Lancaster	27,700,000	9,950,000	5,100	357	111,000
Sunshine Canyon	LA City	140,900,000	55,160,000	12,100	6,919	2,159,000

Facility/Site Summary Details: Chiquita Canyon Sanitary Landfill. https://www.dtsc-ssfl.com/files/lib_cega/ref_draft_peir/Chap4_12-Utilities_SvcSys/68417_CalRecycle_2016c_Chiquita_Cnyn_Details_Page.pdf.

Approximately 69% of the City's solid waste in 2019 (latest year data available) was disposed of at the Chiquita Canyon and Sunshine Canyon Landfills (both the City and County portions). The Class III landfill

facilities accepting waste from the City have a total permitted daily intake capacity of 43,888 tons per day and a remaining capacity of approximately 141 million tons.

Existing Solid Waste Generation

As shown in **Table 4.16-16**, existing development in the CPA currently generates an estimated 308,240 pounds of solid waste per day or 154 tons per day. The current solid waste generation calculation for the CPA does not take into account diversion of solid waste from landfills. Based on the current LASAN diversion rate of 76 percent, solid waste generated in the CPA that is actually sent to area landfills totals approximately 73,978 pounds per day or 37 tons per day.[97]

Table 4.16-16
Existing (2016) Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units/Residents or Square Footage	Annual Waste Generation Rate	Total Daily Solid Waste Generated (lbs/day)
Residential[2]			
Single-Family	17,200 residents	0.41 tons/resident	38,640
Multi-Family	18,211 du	0.46 tons/unit	45,900
	Residential Subtotal		***84,540***
Non-Residential			
Commercial	7,370,546 SF	3.01 tons/1,000 sf	121,560
Industrial	14,810,079 SF	1.24 tons/1,000 sf	100,620

4.16.4.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Utilities-Solid Waste at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA)
- California Integrated Waste Management Act of 1989 (Assembly Bill 939)
- Assembly Bill 341
- Senate Bill 1016
- Assembly Bill 1327
- Senate Bill 1374
- Assembly Bill 1826
- Zero Waste California
- California Green Building Standards
- The Los Angeles County Integrated Waste Management Plan
- City of Los Angeles General Plan Framework Element
- City of Los Angeles Solid Waste Integrated Resources Plan
- RENEW LA Plan
- Citywide Construction and Demolition Debris Recycling Ordinance
- City-Wide Exclusive Franchise System for Municipal Solid Waste Collection and Handling and Upcoming Zero Waste-LA Franchise System
- City of Los Angeles Space Allocation Ordinance
- City of Los Angeles Green Building Ordinance

Federal

Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA). Title 40 Code of Federal Regulations, Part 258 Subtitle D of the Resource Conservation and Recovery Act (RCRA) establishes minimum location standards for siting municipal solid waste landfills.

Because California laws and regulations governing the approval of solid waste landfills meet the requirements of Subtitle D, the USEPA delegated the enforcement responsibility to the State of California.

State

California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939). The California Integrated Waste Management Act of 1989 (Assembly Bill [AB] 939), as amended, was enacted to reduce, recycle, and reuse solid waste generated in the state. AB 939 requires city and county jurisdictions to divert 50 percent of the total waste stream from landfill disposal. AB 939 also requires each city and county to promote source reduction, recycling, and safe disposal or transformation. AB 939 further requires each city and county to conduct a Solid Waste Generation Study and to prepare a Source Reduction and Recycling Element to describe how it would reach these goals. The Source Reduction and Recycling Element contains programs and policies for fulfillment of the goals of AB 939, including the above-noted diversion goals, and must be updated annually to account for changing market and infrastructure conditions. As projects and programs are implemented, the characteristics of the waste stream, the capacities of the current solid waste disposal facilities, and the operational status of those facilities are upgraded, as appropriate. California cities and counties are required to submit annual reports to CalRecycle to update their progress toward the AB 939 goals.[98,99]

Assembly Bill 341. AB 341, signed on February 10, 2011, directed that no less than 75 percent of solid waste generated in California be source reduced,[100] recycled, or composted by 2020, and required CalRecycle to provide a report to the Legislature that recommends strategies to achieve the policy goal by January 1, 2014. AB 341 also mandated local jurisdictions to implement commercial recycling by July 1, 2012.

Senate Bill 1016. Senate Bill (SB) 1016 requires expressing the 50 percent solid waste diversion requirement established by AB 939 in pounds per person per day. SB 1016 changed the CalRecycle review process for each municipality's integrated waste management plan. After an initial determination of diversion requirements in 2006 and establishing diversion rates for subsequent calendar years, the Board reviews a jurisdiction's diversion rate compliance in accordance with a specified schedule. Beginning January 1, 2018,

---

98 CalRecycle is shorthand for the California Department of Resources Recycling and Recovery, a new department within the California Natural Resources Agency that administers programs formerly managed by the State's Integrated Waste Management Board and Division of Recycling.

99 California Public Resources Code, Section 41821.

100 Source reduction refers to activities designed to reduce the volume, mass, or toxicity of products throughout their life cycle. It includes the design and manufacture, use, and disposal of products with minimum toxic content, minimum volume of material, and/or a longer useful life.

the Board will be required to review a jurisdiction's source reduction and recycling element and hazardous waste element once every two years.

Assembly Bill 1327. The California Solid Waste Reuse and the Recycling Access Act of 1991 (AB 1327) is codified in Public Resources Code Sections 42900-42911. As amended, AB 1327 requires each local jurisdiction to adopt an ordinance requiring commercial, industrial, or institutional building, marina, or residential buildings having five or more living units to provide an adequate storage area for the collection and removal of recyclable materials. The size of these storage areas is to be determined by the appropriate jurisdiction's ordinance. Pursuant to AB 1327, the City of Los Angeles adopted the Space Allocation Ordinance (Ordinance No. 171,687), discussed below.

Senate Bill 1374. Signed in 2002, the Construction and Demolition Waste Materials Diversion Requirements (Senate Bill [SB] 1374) were codified in Public Resources Code Section 42919. SB 1374 requires that jurisdictions include in their annual AB 939 report a summary of the progress made in diverting construction and demolition waste. The legislation also required that CalRecycle adopt a model ordinance for diverting 50 to 75 percent of all construction and demolition waste from landfills. The model ordinance was adopted by CalRecycle on March 16, 2004.[101]

Assembly Bill 1826. AB 1826 requires jurisdictions to implement an organic waste recycling program for businesses, including outreach, education, and monitoring of affected businesses. Additionally, each jurisdiction is to identify a multitude of information, including barriers to siting organic waste recycling facilities, as well as closed or abandoned sites that might be available for new organic waste recycling facilities. AB 1826 defines "organic waste" as food waste, green waste, landscape and pruning waste, non-hazardous wood waste, and food-soiled paper waste that is mixed in with food waste. It also defines a "business" as a commercial or public entity, including, but not limited to, a firm, partnership, proprietorship, joint stock company, corporation, or association that is organized as a for-profit or nonprofit entity, or a multifamily residential dwelling consisting of five or more units. As of January 1, 2017, businesses that generate 4 cubic yards or more of organic waste per week are subject to this requirement. Commencing January 1, 2019, businesses that generate 4 cubic yards or more of commercial solid waste per week also are required to arrange for organic waste recycling services. CalRecycle may reduce this triggering threshold for organics recycling to 2 cubic yards or more of commercial solid waste per week as of January 1, 2020.

Zero Waste California. Zero Waste California is a state program launched by CalRecycle in 2002 to promote a new vision for the management of solid waste by maximizing existing recycling and reuse efforts, while

---

101 CalRecycle, Senate Bill 1374 (2002), August 24, 2018, https://www2.calrecycle.ca.gov/Docs/CIWMBMeeting/Agenda/821.

ensuring that products are designed for the environment and have the potential to be repaired, reused, or recycled. The Zero Waste California program promotes the goals of market development, recycled product procurement, and research and development of new and sustainable technologies.

California Green Building Standards. The 2019 California Green Building Standards Code, referred to as the CALGreen Code,[102] sets standards for new structures to minimize the state's carbon output. California requires that new buildings reduce water consumption, increase building system efficiencies, divert construction waste from landfills, and install low pollutant-emitting finish materials. Each local jurisdiction retains the administrative authority to exceed the new CALGreen standards. The 2019 CALGreen Code went into effect January 1, 2020.

Senate Bill 1383. Signed in 2016, SB 1383 established methane emission reduction targets to reduce emissions of short-lived climate pollutants in various sectors of the state's economy. The bill establishes statewide targets to reduce the amount of organic waste disposed statewide targets to reduce the amount of organic waste that is disposed of in landfills. The bill established targets to achieve a 50 percent reduction in the level of the statewide disposal of organic waste from the 2014 level by 2020 and a 75 percent reduction by 2025. It also sets a goal to rescue at least 20% of currently disposed edible food by 2025 and redirect that food to people in need. As of January 1, 2022, all California residences and businesses are now required to separate organic waste from other trash and non-organic recyclables and participate in an organics collection program.

Regional

The Los Angeles County Integrated Waste Management Plan. Pursuant to AB 939, each County is required to prepare and administer a CoIWMP, including preparation of an Annual Report. The CoIWMP is to comprise of the various counties' and cities' solid waste reduction planning documents, plus an Integrated Waste Management Summary Plan (Summary Plan) and a Countywide Siting Element (CSE). The Summary Plan describes the steps to be taken by local agencies, acting independently and in concert, to achieve the mandated state diversion rate by integrating strategies aimed toward reducing, reusing, recycling, diverting, and marketing solid waste generated within the County. The County's Department of Public Works is responsible for preparing and administering the Summary Plan and the CSE.

The County continually evaluates landfill disposal needs and capacity as part of the preparation of the CoIWMP Annual Report. Within each annual report, future landfill disposal needs over the next 15-year planning horizon are addressed in part by determining the available landfill capacity. The most recent annual report, the CoIWMP 2019 Annual Report, published in September 2020, provides disposal analysis

[102] Building Standards Commission, CALGreen, www.dgs.ca.gov/BSC/Codes, Accessed September 2020.

and facility capacities for 2019, as well as projections to the CoIWMP's horizon year of 2034.[103] As stated within the CoIWMP 2019 Annual Report, the County is not anticipating a solid waste disposal capacity shortfall within the next 15 years under current conditions. A variety of strategies, including mandatory commercial recycling, diversion of organic waste from landfills, and development of alternative technology facilities would ensure that the County would be able to accommodate the solid waste daily disposal demand under different scenarios through the horizon year of 2034.[104]

Local

City of Los Angeles General Plan Framework Element. The Framework Element was adopted in 1996 and recently amended in August 2001. The Framework Element is a general, long-term, programmatic document that has goals and policies that are implemented by the various individual elements of the General Plan. The goals of the Framework Element that are related to the solid waste disposal and landfills are listed in **Table 4.16-17**.

Table 4.16-17
Relevant General Plan Solid Waste Goals, Objectives, and Policies

Goal/Objective/ Policy	Goal/Objective/Policy Descriptions
Framework Element- Chapter 9 Infrastructure and Public Services	
Goal 9D	An integrated solid waste management system that maximizes source reduction and materials recovery and minimizes the amount of waste requiring disposal.
Goal 9E	Adequate Recycling Facility Development - expanded siting of facilities that enhance the City's reduction, recycling and composting efforts using methods and strategies that are economically, socially, and politically acceptable.
Goal 9F	Adequate collection, transfer and disposal of mixed solid waste - the City shall seek to ensure that all mixed solid waste that cannot be reduced, recycled or composted is collected, transferred and disposed of in a manner that minimizes adverse environmental impacts.
Goal 9G	An environmentally sound solid waste management system that protects public health, safety, and natural resources and minimizes adverse environmental impacts.
Goal 9H	A cost-effective solid waste management system that emphasizes source reduction, recycling, reuse, and market development and is adequately financed to meet operational and maintenance needs.

City of Los Angeles Solid Waste Integrated Resources Plan. LASAN developed the Solid Waste Integrated Resources Plan (SWIRP) also known as the "Zero Waste Plan," a 20-year master plan to reduce solid waste, increase recycling, and manage trash in the City through the year 2030.[105] This plan encompasses on-going solutions and programs (i.e., blue and green bin recycling, multi-family recycling, restaurant food scrap diversion, alternative technologies, hazardous waste recycling, Los Angeles Unified School District recycling program, etc.) as well as new programs to be implemented during the planning horizon. In addition, the SWIRP is the result of a mayoral directive that is in line with the City Council's RENEW LA plan, as discussed further below.[106] In May 2008, the stakeholders of the Zero Waste Plan adopted the Solid Waste Integrated Resources Plan guiding principles to help the City achieve its zero waste goals by 2030.[107] The Zero Waste Plan was reviewed by the Mayor's office but has not yet been adopted by the City Council.[108] The Solid Waste Integrated Resources Plan is intended to provide a long-term outline of the policies, programs, infrastructure, regulations, incentives, new green jobs,[109] technology, and financial strategies necessary to achieve 90-percent diversion of solid waste by 2025.[110] The term "zero waste" refers to maximizing recycling, minimizing waste, reducing consumption, and encouraging the use of products with recycled/reused materials. As noted by the City, "zero waste" is a goal and not a categorical imperative; the City is seeking to come as close to "zero waste" as possible. Based on the 2013 Zero Waste Progress Report and using the calculation methodology adopted by the State of California, the City achieved a landfill diversion rate of approximately 76 percent in 2012, exceeding Mayor Villaraigosa's goal.[111]

RENEW LA Plan. RENEW LA was adopted by the City Council in March 2006 for the purpose of facilitating a shift from solid waste disposal to resource recovery.[112] This shift is predicted to result in "zero waste" and an overall diversion level of 90 percent by 2025.[113] The plan focuses on combining key elements

113 Los Angeles Municipal Code, City Ordinance 184665, http://clkrep.lacity.org/onlinedocs/2016/16-1235-s1_ORD_184665_12-14-16.pdf.

of existing reduction and recycling programs and infrastructure with new systems and conversion technologies to achieve resource recovery (without combustion) in the form of traditional recyclables, soil amendments, and renewable fuels, chemicals, and energy. The RENEW LA Plan also calls for reductions in the quantity of residual materials disposed in landfills and their associated environmental impacts.

Citywide Construction and Demolition Debris Recycling Ordinance. Pursuant to the California Solid Waste Reuse and the Recycling Access Act of 1991 (AB 1327), the City enacted the Space Allocation Ordinance (Ordinance No. 171,687) on August 13, 1997, which is incorporated in various sections of the LAMC. The Space Allocation Ordinance requires the provision of an adequate recycling area or room for collecting and loading recyclable materials in all new construction projects, all existing multi-family residential projects of four or more units where the addition of floor area is 25 percent or more, and all other existing development projects where the addition of floor area is 30 percent or more.

City-Wide Exclusive Franchise System for Municipal Solid Waste Collection and Handling and Upcoming Zero Waste-LA Franchise System. On March 5, 2010, the City Council approved Council File 09-3029 pertaining to a Citywide Construction and Demolition Debris Recycling Ordinance (Ordinance No. 181,519) that requires LASAN to ensure that all mixed construction and demolition waste generated within City limits be taken to a City certified construction and demolition waste processor. The policy became effective in January 2011.[114] These facilities process received materials for reuse and have recycling rates that vary from 70 percent to 86 percent, thus exceeding the 70 percent reclamation standard.[115] Additionally, compliance with the Ordinance and the Los Angeles Municipal Code (LAMC) Section 66.32, which requires the haulers to meet the diversion goals, would ensure that 70 percent of solid waste generated by the City, including C&D waste, would be recycled.

City of Los Angeles Space Allocation Ordinance. Pursuant to the California Solid Waste Reuse and the Recycling Access Act of 1991 (AB 1327), the City enacted the Space Allocation Ordinance (Ordinance No. 171,687) on August 13, 1997, which is incorporated in various sections of the LAMC. The Space Allocation Ordinance requires the provision of an adequate recycling area or room for collecting and loading recyclable materials in all new construction projects, all existing multi-family residential projects of four or more units where the addition of floor area is 25 percent or more, and all other existing development projects where the addition of floor area is 30 percent or more.

114 LASanitation, Construction and Demolition Recycling.

115 City of Los Angeles Bureau of Sanitation, Strategic Programs, https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lsh-wwd-s-c/s-lsh-wwd-s-c-whp?_adf.ctrl-state=1az3pjox07_5&_afrLoop=69763588165455#!; Accessed September 2020.

City of Los Angeles Green Building Ordinance. On December 17, 2013, the Los Angeles City Council approved Ordinance No. 182,849, which amended Chapter IX, Article 9 of the LAMC to reflect local administrative changes and incorporate by reference portions of the CALGreen Code. The amended Article 9 is referred to as the "Los Angeles Green Building Code." Projects must comply with the Los Angeles Green Building Code as amended to comply with various provisions of the CALGreen Code. The City's Green Building Code creates a set of development standards and guidelines to further energy efficiency and reduction of greenhouse gases; including provisions regarding construction waste reduction, disposal and recycling. It builds upon and sets higher standards than those incorporated in CALGreen and is implemented through the building permit process.

4.16.4.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to solid waste if it would:

- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?
- Not comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

4.16.4.4 Methodology

The analysis of the Proposed Plan's impacts to solid waste focuses on whether the project would impair attainment of solid waste reduction goals by generating solid waste in excess of local standards or in excess of infrastructure capacities, or would not comply with solid waste management and reduction regulations. Project-generated demands were calculated using existing level of development in the CPA, reasonably anticipated development in 2040, and utility rates per development unit. The impact is the net change relative to existing conditions (i.e., 2040 with Proposed Plan conditions – baseline conditions).

Waste generation rates were obtained from CalEEMod. It was assumed that 20 percent of existing residential development is single-family and 80 percent is multifamily. This provides a conservative estimate as the CPA contains few single-family residential areas and single-family units have higher average utility usage rates than multi-family units. It was also assumed that the number of single-family homes would remain constant under future conditions relative to baseline conditions and all new residential development through 2040 would be multifamily.

4.16.4.5 Impacts

Threshold 4.16-6 **Would implementation of the Proposed Plan generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?**

This impact would be less than significant.

As shown in **Table 4.16-18**, reasonably anticipated development under the Proposed Plan would increase the amount of solid waste generated in the Boyle Heights CPA by approximately 516,500 lbs/day, or 258 tons per day, above existing conditions. The calculation for the Proposed Plan does not take into consideration current and planned City programs to divert solid waste from landfills. For example, compliance with LAMC Section 66.32 would ensure that at least 50% of the demolition and construction waste generated by development under the Proposed Plan would be diverted from landfills serving the City. In addition, the City will continue to implement waste reduction policies set forth by the RENEW LA Plan and the Framework Element. Based on the City's current 76% diversion rate, the amount of additional waste that would be sent to landfills is about 123,960 pounds per day or 62 tons per day.

As shown in **Table 4.16-15**, the combined daily intake capacity of landfills serving the CPA is 43,888 tons per day and the average disposal intake is 17,967 tons per day. Therefore, available capacity (25,921 tons per day) can accommodate the estimated 258 tons of daily solid waste that would be generated in the Boyle Heights CPA. Assuming no diversion, the increase in Boyle Heights CPA generated solid waste would represent about 1% of the total available daily capacity.

Based on the County of Los Angeles Countywide Integrated Waste Management Plan (CIWMP) 2019 Annual Report, Los Angeles County would be able to meet the disposal needs of all County jurisdictions through the 15-year planning period for six of seven scenarios considered.[116] Although daily capacity at area landfills is currently available (as noted above), the CIWMP Annual Report concludes that reliance on existing permitted County landfill capacity alone is insufficient to meet the County's long-term disposal needs; however, under the "status quo" scenario (i.e., solid waste disposed will continue to be managed by existing permitted in-County disposal infrastructure, and available out-of-County landfill capacity and diversion efforts by individual jurisdictions continue) and each of the other scenarios contemplated in the CIWMP Annual Report, no shortfall in capacity is expected. The "status quo" scenario is conservative insofar as it assumes no new waste reduction programs or disposal facilities and no increase in waste diversion. Based on these facts, sufficient permitted capacity is anticipated to be available to accommodate

116 County of Los Angeles Public Works. 2020. Countywide Integrated Waste Management Plan – 2019 Annual Report. Available at: https://dpw.lacounty.gov/epd/swims/ShowDoc.aspx?id=14372&hp=yes&type=PDF.

the Boyle Heights CPA's solid waste disposal needs and impacts related to solid waste would be ***less than significant***.

Table 4.16-18
Estimated (2040) Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units or Square Footage	Annual Waste Generation Rate	Total Day Solid Waste Generated (lb/day)
Residential[2]			
Single-Family	23,000 residents	0.41 tons/resident	51,680
Multi-Family	26,494 du	0.46 tons/unit	66,780
	Residential Subtotal		***118,460***
Non-Residential			
Commercial	19,844,665 SF	3.01 tons/1,000 sf	327,300
Industrial	47,682,097 SF	1.24 tons/1,000 sf	323,980
Public Facilities	10,791,956 SF	0.93 tons/1,000 sf	55,000
	Non-Residential Subtotal		***706,280***
	Proposed Plan (2040) Total		**824,740**

Source: Impact Sciences, 2017.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd; lb = pound
1 CalEEMod default solid waste generation factors for residential and non-residential uses were used to determine solid waste generation. Default solid waste generation rates available in Table 10.1 of the CalEEMod User Guide Appendix D – Default Data Tables, available at: http://www.aqmd.gov/docs/default-source/caleemod/upgrades/2016.3/05_appendix-d2016-3-1.pdf.
2 For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.
3 Square footages of non-residential land use based on area of land use designations from Chapter 4.10, Land Use. 1 acre = 43,560 sf.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

Threshold 4.16-7 Would implementation of the Proposed Plan comply with federal, state, and local statutes and regulations related to solid waste?

This impact would be less than significant.

Future development in the Boyle Heights CPA would be required to comply with LAMC Section 66.32 regarding demolition activities. Compliance with LAMC Section 66.32 would ensure that at least 50% of the demolition and construction waste generated by future development would be diverted from landfills

serving the City of Los Angeles. Additionally, implementation of the Proposed Plan would be consistent with all waste reduction goals set forth by SWIRP, RENEW LA Plan, and the Framework Element, which are discussed in the **Section 4.16.4.2, Regulatory Framework**. The Proposed Plan would not conflict with any solid waste policies and objectives in the SWIRP or Framework Element.

All solid waste-generating activities in the City of Los Angeles are subject to the requirements set forth in AB 939 and other local ordinances, such as LAMC Section 66.32. As discussed in **Section 4.16.4.1, Existing Environmental Setting**, the City already exceeds State goals with respect to reduction of solid waste generation and diversion of solid waste from landfills.[117,118] Therefore, because future development permitted under the Proposed Plan would comply with applicable solid waste policies and objectives, impacts related to compliance with federal, state, and local statutes and regulations related to solid waste would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.16.4.6 Cumulative Impacts

Solid waste management is another citywide concern, with growing solid waste disposal needs and a finite limit to landfill capacity. The geographic area to analyze cumulatively considerable impacts to solid waste includes the entire City of Los Angeles. Cumulative development throughout Los Angeles would add both dwelling units and nonresidential development to the City. Cumulative impacts from this development are discussed below by impact area.

Cumulative citywide development would increase solid waste disposal at local landfills. Landfill solid waste disposal for the City of Los Angeles totaled 4,282,012 annual tons in 2019 (11,732 daily tons).[119] It would take an almost three-fold increase of 32,156 daily tons to exceed the available intake capacity of 43,888 tons per day for the landfills serving the City of Los Angeles (which includes continued export of some waste to out-of-County landfills, but no new waste diversion programs or facility expansions). As

117 LASanitation, Recycling.

118 County of Los Angeles Public Works. 2020. Countywide Integrated Waste Management Plan – 2019 Annual Report. Available at: https://dpw.lacounty.gov/epd/swims/ShowDoc.aspx?id=14372&hp=yes&type=PDF

119 County of Los Angeles Public Works. 2020. Countywide Integrated Waste Management Plan – 2019 Annual Report. Available at: https://dpw.lacounty.gov/epd/swims/ShowDoc.aspx?id=14372&hp=yes&type=PDF

noted under **Impact 4.16-5**, the County's CIWMP 2019 Annual Report concludes that reliance on Los Angeles County landfills alone would not provide adequate capacity through 2034. However, out-of-County landfills provide adequate solid waste disposal capacity to meet future demand. Consequently, waste disposal capacity is adequate to meet cumulative solid waste disposal projections.

As discussed under **Impact 4.16-5** and above, solid waste generated citywide and in the Boyle Heights CPA would not exceed the available daily capacity of landfills serving the City and the County's CIWMP 2019 Annual Report forecasts adequate capacity through at least 2034 under the status quo scenario.

Based on the above information, the incremental effect of the Proposed Plan related to solid waste disposal facilities would not be cumulatively considerable and cumulative impacts would be ***less than significant.***

4.16.5 ELECTRICITY, NATURAL GAS, AND TELECOMMUNICATIONS

4.16.5.1 Existing Environmental Setting

Electricity

The CEC maintains a statewide database of annual electricity generation and consumption. In 2016, California produced approximately 68 percent of the electricity it used. The remainder was imported from outside the state. In 2016, total electrical generation was 290,567 gigawatt-hours (GWh) with approximately 198,227 GWh produced in-state with the remaining 92,340 GWh being imported from out-of-state sources.[120] Renewable sources accounted for approximately 27.9 percent of 2016 in-state generation.[121] Statewide electricity consumption in 2016 was estimated by the CEC to be 570,728 GWh, with Los Angeles County responsible for consuming approximately 138,828 GWh (24 percent).[122]

In 2016, LADWP supplied more than 26 million megawatt-hours (MWh) of electricity a year to approximately 1.5 million residential and business customers within the City of Los Angeles as well as 5,000 customers in Owens Valley.[123] The LADWP has a capacity of over 7,640 Megawatts (MW) with a

121 *Ibid.*

122 California Energy Commission. 2016. *Energy Consumption by County*, http://www.ecdms.energy.ca.gov/elecbycounty.aspx, accessed June 11, 2021.

123 City of Los Angeles Department of Water and Power, 2017, *Briefing Book 2017-2018*. Available online at: https://s3-us-west-2.amazonaws.com/ladwp-jtti/wp-content/uploads/sites/3/2017/09/08143247/Briefing-Book-Rolling-PDF.pdf, accessed June 11, 2021.

record peak instantaneous demand of 6,396 MW in 2014.[124] LADWP's Power Infrastructure includes 23 Generation Plants, 6,752 miles of overhead distribution lines, 3,626 miles of underground distribution cables and 160 distribution stations.[125] As a result of the shutdown of the Mohave Coal Power Plant in 2005, efficient energy solutions, ongoing repowering programs, and increased development of renewable resources, LADWP carbon dioxide (CO_2) emissions levels were 10.4 million metric tons (MMT) in 2016, 42 percent below its 1990 level (17.9 MMT). Greenhouse gas (GHG) emissions are expected to be 63 percent below 1990 levels by 2027.[126]

With the advent of energy efficiency, LADWP has developed Smart Grid L.A. in order to upgrade its power grid with communications technologies that will give customers empowerment of control of their energy uses and costs in real-time. There will be continuous communication and feedback from the power grid which will provide a balance of customer electricity demand and power production. Since 2013, the LADWP has already outfitted 52,000 residential and commercial customers with Smart Meters. The use of Smart Meters will enable the LADWP to gather information to better implement the Smart Grid LA plan.

In 2016, approximately 29 percent of power generation is from renewable sources, including biomass and biowaste, geothermal, small hydroelectric, solar, and wind energy. Specifically, wind energy provides the majority of renewable energy accounting for 11 percent of renewable energy. LADWP's eligible renewable "small hydro" resources include the Owens Gorge, the Owens Valley and Los Angeles Aqueduct hydroelectric plants. Electricity from coal-fired power sources represents approximately 19 percent of LADWP's power supply. The Navajo and the Intermountain Generating Stations, located in Arizona and Utah, respectively, supply the LADWP coal-generated electricity.[127] These stations provide low-cost base load generation to Los Angeles; however, these stations also emit twice the amount of CO_2 compared to Natural Gas. Thus, the LADWP will continue to seek replacement options to lower the LADWP's power generation CO_2 emission levels.

Electricity from natural gas-fueled power sources represents approximately 34 percent of LADWP's power supply. The natural gas fired stations, owned by the LADWP and located throughout the Los Angeles Basin, include the Harbor, Haynes, Scattergood, and Valley generating stations supply the LADWP with

---

125 *Ibid.*

126 City of Los Angeles Department of Water and Power, 2017, *Briefing Book 2017-2018*, accessed June 11, 2021.

127 City of Los Angeles Department of Water and Power, *2006 Integrated Resource Plan*, https://www.lacitysan.org/cs/groups/public/documents/document/y250/mdew/~edisp/cnt010386.pdf, accessed January 2017.

natural gas-fueled electricity. Electricity from nuclear-fueled power sources represents approximately 10 percent of LADWP's power supply. The Palo Verde Nuclear Generation Station, located in Arizona, supplies the LADWP with nuclear-generated electricity. Electricity from large hydroelectric and other unspecified power sources represents a total of approximately seven percent of the LADWP's power supply. The Castaic Pumped Storage Power Plant and the Hoover Power Plant supply LADWP with hydroelectric-generated electricity, and are located in Castaic, California and Arizona, respectively.[128]

Natural Gas

The City of Los Angeles, including the CPA, is served by the investor-owned Southern California Gas Company (SoCal Gas), a unit of Sempra Energy. SoCal Gas serves approximately 21.8 million customers through 5.9 million meters of gas lines within a 24,000-square-mile service area that includes over 500 communities in Central and Southern California.[129] The City contains existing natural gas infrastructure, including both pipelines and one storage facility (located in Playa del Rey), and in general, the majority of natural gas lines run underground to provide secure transfer and reduce risk of damage.

In 2016, a total of approximately 5,124 million therms of natural gas were consumed by SoCal Gas' customers. Of this total, residential, industrial, commercial and miscellaneous other customers consumed 2,136 million, 1,725 million, 893 million, and 313 million therms of natural gas, respectively.[130,131,] In 2020, a total of 5,231 million therms of natural gas were consumed by SoCal Gas' customers. Of this total, residential, industrial, commercial and miscellaneous other customers consumed 2,426 million, 1,616 million, 802 million, and 388 million therms of natural gas, respectively.[132] California natural gas anticipates gas demand to decline at an annual rate of 1.4 percent between 2016 and 2035 as a result of modest growth in the Natural Gas Vehicle (NGV) market, economic growth, energy efficiency standards, other sources of renewable energy, metering infrastructure and the decline in demand of commercial and industrial sectors.[133] More specifically, from 2016 to 2035, SoCal Gas residential demand is expected to decline from 239 billion cubic feet (Bcf) to 218 Bcf, reflecting an annual decline rate of 0.5 percent, and non-

131 One therm is equal to 96.7 cubic feet of natural gas.

132 California Energy Commission, *California Energy Consumption Database*, http://ecdms.energy.ca.gov/, accessed May 11, 2022.

133 California Gas and Electric Utilities, 2016 *California Gas Report*, 2016, https://www.pge.com/pipeline_resources/pdf/library/regulatory/downloads/cgr16.pdf, accessed June 8, 2021.

residential markets are expected to decline from 113 Bcf in 2016 to 105 Bcf by 2035, reflecting an annual decline rate of 0.24 percent.[134]

SoCal Gas natural gas supplies originate from sedimentary basins located in California, New Mexico (San Juan Basin), west Texas (Permian Basin), the Rocky Mountains, western Canada, and local California supplies. Interstate pipelines used by SoCalGas and San Diego Gas and Electric (SDG&E) have a natural gas upstream capacity of 6,725 million cubic feet per day (MMcf/d).[135] Additionally, SoCal Gas and SDG&E currently have firm receipt capacity (i.e., access to supply from interstate pipelines for core customers) of 3,875 MMcf/d of natural gas. Locally, SoCalGas distributes natural gas through an extensive network of approximately 41,500 miles of underground gas mains.

Underground storage of natural gas plays a vital role in balancing the region's energy supply and demand. SoCal Gas owns and operates four underground storage facilities located in Aliso Canyon, Honor Rancho, Goleta, and Playa Del Rey. These facilities have a total storage capacity of 137.1 Bcf. Stored gas is appropriated as follows: 83 Bcf is allocated to core residential, small industrial and commercial customers; 4.2 Bcf is used for system balancing; and the remainder is available to other customers. In October 2015 the storage facility in Aliso Canyon had a natural gas leak resulting in DOGGR (now CalGEM) imposing a moratorium on the storage facility with a safety review for all 114 wells within the facility. The safety review requires the wells to be thoroughly tested for safe operation or removed from operation and isolated from the underground reservoir.

Telecommunications

Telecommunication services in the City of Los Angeles are provided by various companies, such as but not limited to, AT&T, Verizon, and SBC Telecom. Telecommunication companies are regulated by California Public Utilities Commission (CPUC). A wide array of products and telecommunication services for residential and commercial uses are offered by various companies, including internet services, wireless services, television technology utilizing digital fiber optic technology, and satellite technology. A variety of telecommunication facilities exist along roadways and other areas around the City.

---

134 *Ibid.*

135 Beginning in April 2008, gas supplies to serve both SoCal Gas' and SDG&E's retail core gas demand are procured with a combined portfolio. SoCal Gas and SDG&E plan and design their systems to provide continuous service to their core customers under an extreme peak day event. The extreme peak day design criteria is defined as a 1 in 35 likelihood event for each utility's service area.

Range and service for an individual tower can vary; therefore, the towers likely serve cities outside of Los Angeles County. All cellular towers and equipment are managed by private telecommunications service providers under the jurisdiction of the Federal Communications Commission (FCC).

Communication systems located throughout the CPA include underground fiber optic cable, telephone transmission lines (overhead and underground), and cellular towers owned or leased by telecommunications service providers.

Landline telephone service in the CPA is provided by various commercial communication companies. The majority of the landline facilities are located in county- or city-owned rights-of-way and on private easements. Telecommunications lines are either copper wire or fiber optic cable and are routed overhead on utility poles and underground.

In addition to landline service, a large number of communication towers have been constructed throughout the CPA for cellular telephone service. Cellular towers have been erected along major travel corridors to meet emergency service objectives. Cellular service is available, to varying degrees, throughout the CPA.

4.16.5.2 Regulatory Framework

Federal

Federal Communications Commission (FCC). The FCC was by the Communication Act of 1934 in order to replace the outdated Federal Radio Commission. As communications expanded and television became more prominent, the role of the FCC was expanded to include regulating all forms of communication in the United States. The FCC regulates content, award station charters, and monitor innovation to make sure that all forms of communication can co-exist, including the Internet.

Telecommunications Act of 1996. The Telecommunication Act of 1996 opened up competition by local telephone companies, long distance providers, and cable companies with each other. It also reconfirms the government's commitment to universal service, in part by connecting all schools, libraries, and hospitals to the information superhighway by the end of the decade.

State

California Independent System Operator (ISO). The California ISO is an independent public benefit corporation responsible for operating California's long-distance electric transmission lines. The California ISO is led by a five-member board appointment by the Governor and is also regulated by FERC. While transmission owners and private electric utilities own their lines, the California ISO operates the transmission system independently to ensure that electricity flows comply with federal operational

standards. The California ISO analyzes current and future electrical demand and plans for any needed expansion or upgrade of the electric transmission system.

California Public Utilities Commission (CPUC). In 1911, the CPUC was established by a Constitutional Amendment as the Railroad Commission and the following year, the state Legislature passed the Public Utilities Act, expanding the Commission's regulatory authority to include natural gas, electric, telephone, and water companies as well as railroads and marine transportation companies. In 1946, the Commission was rename the CPUC. Today, in regard to telecommunications and broadband services, the CPUC develops and implements policies for the telecommunications industry, including ensuring fair, affordable universal access to necessary services; developing clear rules of the game and regulatory tools to allow flexibility without compromising due process; removing barriers that prevent a fully competitive market; and reducing or eliminating burdensome regulation.

California Energy Commission. The CEC is a planning agency which provides guidance on setting the state's energy policy. Responsibilities include forecasting electricity and natural gas demand, promoting and setting energy efficiency standards throughout the state, developing renewable energy resources and permitting thermal power plants 50 megawatts and larger. The CEC also has specific regulatory authority over publicly owned utilities to certify, monitor and verify eligible renewable energy resources procured.

Senate Bill 1389. Senate Bill (SB) 1389 (Public Resources Code Sections 25300–25323), adopted in 2002, requires the development of an integrated plan for electricity, natural gas, and transportation fuels. Under the bill, the CEC must adopt and transmit to the Governor and Legislature an Integrated Energy Policy Report every two years. In 2018, the CEC decided to write the Integrated Energy Policy Report in two volumes. The Volume I, which was published on August 1, 2018, highlights the implementation of California's innovative policies and the role they have played in moving toward a clean energy economy. Volume II, which was adopted in February 2019, identifies several key energy issues and actions to address these issues and ensure the reliability of energy resources.[136]

Senate Bill 822 (SB 822). SB 822 was signed into law in September 2018 as California's net neutrality law. SB 822 would ban internet providers from the following: blocking or throttling legal apps and websites; offering paid prioritization of content, or zero-rating (offering free data for specific apps). Shortly after SB 822 was signed, the U.S. Department of Justice filed suit against California over SB 822 on preemption grounds; California later agreed to hold off on enforcing its new net neutrality law until the U.S. Court of Appeals for the D.C. Circuit determines whether the FCC lawfully revoked its net neutrality regulations.

136 2018 Integrated Energy Policy Report Updated, Volume II, February 2019.

In February 2021, the Department of Justice dropped the lawsuit and a preliminary injunction brought against SB 822 by the telecom industry was declined. As a result, SB 822 was allowed to go into effect.

Local

City of Los Angeles Information Technology Agency. Mayor Eric Garcetti established the City of Los Angeles Information Technology Agency (ITA), which is responsible for a broad spectrum of services within 18 divisions that deliver 366 different technology services to both internal and external customers. These services range from classic IT services, such as computer support, enterprise applications, data networks, and a 24/7 data center to progressive digital services, such as TV station, 3-1-1 Call Center, public safety radio/microwave communications, helicopter avionics, enterprise social media, and more. ITA's Video Services Regulation Division regulates and monitors the compliance of video/cable TV service providers comply with local, state, and federal laws and oversees the video/cable TV service interests of City residents.

City of Los Angeles Municipal Code Section 10.5.4. Section 10.5.4 of the City's Municipal Code states that telecommunications providers are required to comply with all City, state, and federal regulations during installation and operation of equipment. Additionally, each lease, sublease, or license facilitated by telecommunications providers are required to seek approval from the City.

4.16.5.3 Thresholds of Significance

In accordance with Appendix G of the *State CEQA Guidelines*, the Proposed Plan would have a significant impact related to electricity, natural gas and telecommunications if it would:

- Require or result in the relocation or construction of new or expanded electricity, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

4.16.5.4 Methodology

The analysis of the Proposed Plan's impacts related to the potential construction and relocation of electricity, natural gas, and telecommunications facilities focuses on whether existing and projected infrastructure capacities or supplies would be sufficient to meet future demands associated with reasonably anticipated development under the Proposed Plan, and, if not, whether the construction of needed new or expanded facilities would result in significant environmental effects. Project-generated demands were calculated based on the existing level of development in the Boyle Heights CPA and the reasonably anticipated development in the CPA in 2040. Where insufficient data was available to quantify demands

(i.e., for telecommunication systems), such demands are discussed qualitatively in order to inform the impact analysis.

4.16.5.5 Impacts

Threshold 4.16-8 **Would implementation of the Proposed Plan require or result in the relocation or construction of new or expanded electricity, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.**

This impact would be less than significant.

Electricity

The City is urbanized and has a fully functional system of above-ground and underground electrical facilities, primarily found along roadways, to serve the existing and future users. In addition to electrical power conveyance lines, there are numerous electrical substations throughout the City, from which these conveyance lines flow.

As discussed in **Section 4.5, Energy**, the Proposed Plan is expected to increase annual electricity consumption. However, the analysis is conservative since future energy consumption estimates only account for compliance with existing energy efficiency standards (i.e., 2016 Title 24). Additionally, the Proposed Plan will significantly increase the housing, population, employment, and land use sizes throughout the CPA.

Future development anticipated to occur with the implementation of the Proposed Plan would be subject to Title 24, Part 6 of the California Administrative Code, the Energy Efficiency Standards for Residential and Nonresidential Buildings, which requires local jurisdictions to use energy efficient appliances, weatherization techniques, and efficient cooling and heating systems to reduce energy demand stemming from new development. In addition, future development would also be required to comply with the City of Los Angeles' Green Building Code Energy Efficiency requirements. Although the analysis contained herein does not account for future improvements in energy efficiency, development accommodated by the Proposed Plan would be expected to consume less energy than existing developments as building standards become more stringent.

Similar to other utilities, new development would result in the need for the construction or relocation of some power lines or service connections, such as the undergrounding of power lines. Impacts from such construction or relocation work would be anticipated to be less than significant based on their construction

and installation in existing right of way and other public easements that have been previously disturbed and based on existing regulatory compliance measures and review and oversight by relevant local and state agencies. Any unusual site-specific conditions that would result in significant impact would be speculative. Additionally, any project to install or relocate facilities would be subject to future environmental review and necessary mitigation to address site specific conditions. Impacts would be ***less than significant***.

Natural Gas

Natural gas would continue to be provided to new development in the City by SoCalGas. Existing natural gas infrastructure (transmission lines and high distribution lines) are provided throughout the City and is typically located underground and along roadways to convey flows to residential and commercial users. Development under the Proposed Plan would increase the demand for natural gas and may potentially require new conveyance systems to supply areas with natural gas.

As discussed in **Section 4.5, Energy**, future total annual natural gas consumption under implementation of the Proposed Plan is expected to increase. It is important to note that future energy consumption estimates, included in **Table 4.5-9**, only take into account compliance with existing energy efficiency standards (i.e., 2016 Title 24). Development accommodated by the Proposed Plan would be expected to consume less energy than existing developments as energy conservation standards become more stringent, so the estimates provided here are conservative. Further, as stated above, implementation of the Proposed Plan is expected to result in an increase in housing, population, employment, and land use sizes throughout the CPA. Specifically, as compared to existing conditions, the future conditions with the Proposed Plan are expected to result in an increase of 11,000 housing units, 29,000 residents, and 13,000 jobs.

According to the 2020, California Gas Report, natural gas demand usage is expected to continue to decrease overall throughout the state. Per the 2020 California Gas Report, it is anticipated SoCalGas will meet projected demand for natural gas resources through 2026 based on modeled forecasts.[137]

For development accommodated under the Proposed Plan, the exact locations of natural gas infrastructure would be confirmed during the design and review process. Any need for infrastructure upgrades would be accomplished through the required design review and approval of natural gas plans. Development under the Proposed Plan may necessitate the construction or relocation new or expanded natural gas distribution facilities, including new service connections or gas lines to serve housing development

[137] California Gas and Electric Utilities. 2020. *2020 California Gas Report*, https://www.socalgas.com/sites/default/files/2020-10/2020_California_Gas_Report_Joint_Utility_Biennial_Comprehensive_Filing.pdf.

projects. Impacts from such construction or relocation work would be anticipated to be less than significant based on their construction and installation in existing right of way and other public easements that have been previously disturbed and based on existing regulatory compliance measures and review and oversight by relevant local and state agencies. Any unusual site-specific conditions that would result in significant impact would be speculative. Additionally, any project to install or relocate facilities would be subject to future environmental review and necessary mitigation to address site specific conditions. Impacts would be ***less than significant***.

Telecommunications

As discussed in **Section 4.12, Population and Housing,** reasonably anticipated development in the CPA would allow for an additional 29,000 persons, 11,000 housing units, and 13,000 jobs. The telecommunication requirements for the CPA are expected to evolve as development increases and technologies change. Construction of additional telecommunications facilities or upgrades to existing facilities to meet CPA demands would be undertaken by private telecommunication service providers in accordance with applicable federal, State, and local regulations. No restrictions on the ability to provide adequate telecommunication service are anticipated, but new or expanded facilities may be needed to meet increased demand in the CPA. Such expansions would result in temporary construction-related impacts pertaining to such issues as transportation, air quality, and noise. These impacts are anticipated to be within the parameters of what is described in this EIR and any new or expanded facilities, any impacts from unique parcel or project specific conditions would be speculative. Impacts would be ***less than significant***.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Less than significant.

4.16.5.6 Cumulative Impacts

Cumulative impacts may occur if impacts from the Proposed Plan combine with similar impacts of other projects throughout the City of Los Angeles. As discussed above, new development would result in the need for the construction or relocation of some power lines or service connections, such as the undergrounding of power lines. Impacts from such construction or relocation work would be anticipated to be less than significant based on their construction and installation in existing right of way and other public easements that have been previously disturbed and based on existing regulatory compliance

measures and review and oversight by relevant local and state agencies. These impacts would be localized to the immediate project area for development associated with the Proposed Plan. As such, they would not combine with impacts from other project sites located throughout the City. Impacts would be less than significant.

Regarding natural gas facilities and infrastructure, impacts would also be localized. Impacts from such construction or relocation work would be anticipated to be less than significant based on their construction and installation in existing right of way and other public easements that have been previously disturbed and based on existing regulatory compliance measures and review and oversight by relevant local and state agencies. Impacts would be less than significant.

As citywide population and development continues to increase demand, telecommunication requirements throughout the City are expected to also increase just as would occur within the CPA. These types of impacts would be anticipated to be similar to impacts within the CPA itself, including construction impacts during infrastructure upgrades. As such, these impacts would be less than significant.

5.0 ALTERNATIVES

5.1 INTRODUCTION

As required by Section 15126.6 of the *CEQA Guidelines*, the EIR must examine a range of reasonable alternatives to the Proposed Plan that would attain most of the basic project objectives but would avoid or substantially lessen any of its significant environmental effects. The purpose of analyzing alternatives for a project is to identify and disclose ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code Section 21002.1). Per Section 15126.6(b) of the *CEQA Guidelines*:

> *"... the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly."*

While an EIR need not consider every conceivable alternative to a project, it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. The focus is on alternatives that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project (*CEQA Guidelines* Section 15126.6(f)).

5.2 PROPOSED PLAN PURPOSE AND OBJECTIVES

CEQA requires an EIR to include a statement of the objectives sought by a project proponent, in this case the City of Los Angeles. The statement of objectives should include the underlying purpose of the project. As stated in **Chapter 3.0, Project Description**, the underlying purpose and primary and secondary objectives of the Proposed Plan include the following:

Underlying Purpose: To plan for and accommodate foreseeable growth in the City, including the Boyle Heights Community Plan Area (CPA), consistent with the growth strategies of the City as provided in the Framework Element, as well as the policies of Senate Bill 375 and the Southern California Association of Governments' (SCAG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS).

The **Primary Objectives** of the Proposed Plan are as follows:

- Accommodate projected population, housing, and employment growth and focus growth into Framework identified centers and corridors located near transit, through a diverse range of housing typologies and income levels to discourage the displacement of existing residents and communities;

- Reduce greenhouse gas emissions and promote enhanced multi-modal transportation opportunities for bicyclists, pedestrians and transit users. Reduce vehicle miles traveled to meet the requirements of Senate Bill 375, Senate Bill 743, and California Assembly Bill 32;

- Maintain existing affordable housing units and promote the creation of more affordable housing units for residents with incomes below the Area Median Income (AMI);

- Strengthen vibrant mixed-use areas near transit that encourage a strong jobs/housing balance and support increased ridership, and walkability; and

- Preserve community character and neighborhood identity by strengthening and maintaining traditional character of notable residential and commercial neighborhoods and preserving stable low density neighborhoods.

- Promote a mix of compatible land uses that foster sustainability, equity, and healthy living.

- Support sustainable urban design strategies that positively contribute to an urban tree canopy across the entire plan area and support publicly accessible open space as the area evolves.

The **Secondary Objectives** of the Proposed Plan are as follows:

- Foster a safe, healthy, and environmentally sustainable region that increases access to healthy foods and healthcare services and promotes recreational open space and linkages with safe routes to schools and other routes that link people to public facilities and recreational open spaces;

- Support jobs-producing uses by maintaining industrially planned lands for employment generating uses and increase the opportunity for small business and jobs located in transit station areas and along connecting corridors;

- Improve the function and design of neighborhoods throughout the CPA by promoting a diversity of neighborhood serving uses near residential areas, discouraging a proliferation of auto related uses along pedestrian corridors, and enhancing pedestrian oriented design along corridors;

- Provide a variety of mobility options and optimize bus transit, while enhancing cyclist and pedestrian access on identified corridors and facilitating the shared use of streets and alleys in residential areas;

- Improve consistency between land use and zoning regulations where needed

- Implement the new zoning code districts and rules as applicable to this geography, through the adoption of the Boyle Heights Community Plan.

- Support public infrastructure improvements consistent with other City departments and public agencies.

5.3 SELECTION OF ALTERNATIVES

EIR alternatives analysis is required to focus on alternatives that reduce or avoid the significant environmental impacts of the Proposed Plan and feasibly attain the underlying purpose of the project and most of the Proposed Plan's primary and secondary objectives. Implementation of the Proposed Plan would result in the following significant and unavoidable impacts:

- **Air Quality**: Threshold 4.2-2: Cumulatively considerable net increase of criteria pollutant (construction NOx and operational/long-term VOC emissions) under applicable air quality standards; Operational impacts to Sensitive Receptors for TACs related to distribution facilities (project and cumulative).

- **Cultural Resources:** Threshold 4.4-1: Historic resources (project and cumulative)

- **Noise:** Threshold 4.11-1: Increase in ambient noise levels in excess of standards (construction/short-term and cumulative); Threshold 4.11-2: Excessive ground-borne vibration or ground-borne noise levels (construction/short-term and cumulative).

- **Public Services:** Threshold 4.13-4: Substantial physical deterioration of parks and recreational facilities due to increase in use (operational/long-term and cumulative).

- **Transportation and Traffic:** Safety impacts related to off-ramp queuing (operational/long-term and cumulative).

The following resources areas were found to have impacts identified as significant, but that can be reduced to a less than significant level with proposed mitigation measures:

- **Air Quality:** Threshold 4.2-3: Expose sensitive receptors to substantial pollutant concentrations from construction activities (project and cumulative).

- **Cultural Resources** (project and cumulative)**:** Threshold 4.4-2: Impact to archaeological resources (construction/short-term).

- **Geology and Soils:** Threshold 4.6-8: Destroy a unique paleontological resource or unique geological feature (construction/short-term and cumulative).

- **Hazards and Hazardous Materials** (project and cumulative)**:** Threshold 4.8-1: Transport, use or disposal of hazardous materials; Threshold 4.8-2: Upset or accident conditions involving release of

hazardous materials into the environment; Threshold 4.8-3: Emit hazardous emissions/materials within one-quarter mile of an existing/proposed school; Threshold 4.8-4: Located on site of hazardous materials.

- **Tribal Cultural Resources:** Threshold 4.15-1: Cause a substantial adverse change of a tribal/cultural resource (project and cumulative).

See **Table 2.0-3, Summary of Environmental Impacts, Mitigation Measures, and Levels of Significance After Mitigation**, in **Section 2.0, Executive Summary**, for all proposed mitigation measures.

Outside of a moratorium or regulations to slow or stop development, which would not meet the projects underlying purpose or basic objectives to accommodate forecasted growth, none of the significant unavoidable impacts identified in the EIR related to air quality, noise, cultural resources, parks and transportation, can be reduced to less than significant. Certain impacts (e.g., operational air quality, deterioration of parks) are not location specific and can only be addressed by reducing the overall amount of new development, which would not accommodate foreseeable growth. Other impacts (e.g., construction-related air quality, noise, and vibration impacts) cannot be meaningfully addressed because these construction-related impacts would occur regardless of the location, size, or nature of new development. Still other impacts (e.g., historical resources, safety related to off-ramp queuing) are location specific, but the lack of available information about individual sites at this stage of planning makes developing an alternative to address these impacts infeasible. Even limiting development to avoid significant impacts to one resource may simply divert more growth and development to other areas of the City, thus increasing the potential for similar impacts in other areas of the City. Diverting growth and development to other areas that have few transit options may even increase overall regional air pollutant emissions and vehicle miles traveled (VMT).

For the above reasons, the range of alternatives that could meaningfully address the Proposed Plan's significant environmental impacts and still meet the underlying purpose and basic project objectives is limited. The following alternatives are identified to reduce significant impacts:

- Alternative 1: Low Transit Oriented Development Potential

- Alternative 4: No Project

Alternative 2 is included to provide additional information to decision-makers on opportunities for more housing growth and its ability to provide additional environmental benefits in reducing GHG compared to the Proposed Plan. Alternative 3, also provides more housing than the Proposed Plan, and is included based on comments received during the scoping process.

- Alternative 2: High Transit Oriented Development Potential
- Alternative 3: Land Use Mix Alternative

Table 5.0-1, Growth Projection Comparison per Alternative in the Boyle Heights CPA, shows the housing, population, and employment projections under each alternative and the percentage of growth projected from 2016 through 2040, over existing baseline conditions, for each alternative.

Table 5.0-1
Growth Projection Comparison per Alternative in the Boyle Heights CPA

	Total Summary*			Percent Growth 2016-2040		
Scenario	**Housing (du)**	**Population (person)**	**Employment (job)**	**Housing (du)**	**Population (person)**	**Employment (job)**
2016 Existing/Baseline Conditions	22,000	86,000	26,000	-	-	-
SCAG 2016 RTP/SCS (2040)	27,000	93,000	35,000	23%	8%	35%
Proposed Plan	**33,000**	**115,000**	**39,000**	**43%**	**32%**	**50%**
Alternative 1 Low Transit Oriented Development Potential	30,000	105,000	38,000	30%	21%	46%
Alternative 2 High Transit Oriented Development Potential	36,000	125,000	40,000	57%	44%	54%
Alternative 3 Land Use Mix Alternative	36,000	124,000	38,000	57%	43%	46%
Alternative 4 No Project	28,000	98,000	32,000	22%	13%	23%

Notes: du = dwelling unit; SCAG = Southern California Association of Governments; RTP/SCS = Regional Transportation Plan/Sustainable Communities Strategy

5.4 ANALYSIS METHODOLOGY

The analysis compares the impacts of the Proposed Plan to those of each alternative, concluding whether the alternative's impact would be less than, similar to, or greater than that of the Proposed Plan. The analysis also concludes whether the alternative would either create or avoid a significant impact and discusses what, if any, mitigation would be required for the alternative.

5.5 COMPARATIVE IMPACT ANALYSIS

5.5.1 Alternative 1 – Low Transit Oriented Development Potential

Alternative Description

The Low Transit Oriented Development Potential (Alternative 1) assumes that future planned growth and mixed-use development is focused along the corridors instead of in the transit nodes near the L Line stations. In comparison to the Proposed Plan, Alternative 1 would reduce the development potential near the Soto Street and Indiana L Line stations by maintaining the FAR and density permitted by the existing zoning. In the blocks surrounding the Indiana Street Station, the zoning would be proposed with a 1/2000 density, in lieu of the proposed 1/800 density under the Proposed Plan. In the blocks surrounding the Soto L Line Station, primarily from Cesar Chavez Avenue to 4th Street, and St. Louis Street to Mott Street, the proposed zoning would reflect existing zoning regulations, which currently allow a combination of 1/1500, 1/800, and 1/400 densities in lieu of the proposed 1/600 density under the Proposed Plan. This Alternative would also maintain the existing land use designation and zoning around the Pico/Aliso transit node (1.5:1 FAR and Light Industrial land use designation) in lieu of the proposed 1.5:1 Base and 4:0:1 Bonus FAR, 1/400 density, and Commercial Mixed Use zoning. Bonus FAR and density accessed through the Local Affordable Housing Incentive Program would continue to be available, and changes from Residential to Commercial Mixed Use would still occur along certain corridors throughout the CPA. The decreases in intensity of the transit nodes reduces the expected development in these areas of CPA, reducing the overall reasonably expected development.

As shown in **Table 5.0-1**, the reasonably anticipated development under Alternative 1 is 30,000 housing units; 105,000 residents; and 38,000 jobs by 2040. Under Alternative 1, anticipated growth in the Boyle Heights CPA would exceed SCAG's 2040 forecasts by approximately 3,000 housing units; 12,000 residents; and 3,000 jobs. Anticipated growth in the Boyle Heights CPA would be reduced when compared to that of the Proposed Plan with a reduction in approximately 3,000 housing units (-9%); 10,000 fewer residents (-9%); and 1,000 fewer jobs (-3%) through 2040.

Alternative 1 was selected, as it would continue to meet most of the objectives of the Proposed Plan. However, due to the reduction in projected growth, FAR, and upzones, and the removal of the Pico Aliso TOD node, Alternative 1 would:

- Reduce intensity of development;
- Reduce the development potential around transit stations; and

- Reduce sustainable, equitable, and inclusive residential development; affordable housing units near transit stations; and range of housing typologies and income levels to discourage the displacement of existing residents and communities.

Therefore, Alternative 1 would only partially meet the Primary Objectives of focusing population, housing, and employment growth near transit served centers and corridors in a sustainable, equitable, healthy, and inclusive manner to discourage the displacement of existing residents and communities. Alternative 1 would meet Primary Objectives to promote enhanced multi-modal transportation opportunities and reduce VMT and promote mixed-use areas near transit to a lesser degree due to the reduction in transit-oriented development in comparison to the Proposed Plan. Alternative 1 was selected due to the expectation that it would reduce significant and unavoidable impacts associated with the Plan such as air quality, noise, and recreation.

Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 1 or the Proposed Plan would generally allow buildings of greater height, scale, and intensity. Both Alternative 1 and the Proposed Plan include height limits in certain areas to promote context-sensitive development. Compared to the Proposed Plan, Alternative 1 assumes that future planned growth and mixed-use development is focused along the corridors instead of in the transit nodes near the L Line stations and would reduce the development potential near the Soto Street and Indiana L Line stations by maintaining the FAR and density permitted by the existing zoning. Alternative 1 would also maintain the existing Light Industrial land use designation and zoning around the Pico/Aliso transit node. Similar to the Proposed Plan, Alternative 1 would still involve substantial visual changes to existing neighborhoods. Because building heights would be similar to those allowed under the Proposed Plan, impacts to scenic vistas would be similar and less than significant. In addition, as with the Proposed Plan, increased development potential may intensify the existing urban character in portions of the Boyle Heights CPA and add new sources of light and glare. Any new development would be implemented in accordance with applicable state and local plans, policies, and guidelines, including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035, and provisions of the LAMC as it relates to development standards and visual character. As with the Proposed Plan, development accommodated by Alternative 1 could introduce new sources of light and glare in the Boyle Heights CPA. Future development would comply with applicable regulations regarding permitted lighting and glare. Similarly, development in the Boyle Heights CPA accommodated by Alternative 1 may intensify the urban character in specific locations; however, it would be typical of highly urbanized neighborhoods. Alternative 1 would have less development, which would

result in fewer visual impacts than the Proposed Plan. Overall, development accommodated by Alternative 1 may benefit, and would generally enhance, the visual character of the Boyle Heights CPA. Therefore, as with the Boyle Heights CPA, impacts related to aesthetics would be less than significant.

Air Quality

Alternative 1 would result in 3,000 fewer housing units, 10,000 fewer residents, and 1,000 fewer jobs through 2040 than the Proposed Plan. As such, it would attain to a lesser degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element as well as the Proposed Plan, specifically, the policies and goals related to concentrating development in areas with access to transit and reducing VMT and associated emissions than would the Proposed Plan. Like the Proposed Plan, Alternative 1 would not increase reasonably anticipated development in the Boyle Heights CPA in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 1 would not conflict with the AQMP.

Less construction may occur overall under Alternative 1, as compared to the Proposed Plan. Therefore, Alternative 1 would result in lower overall emissions of NO_X, PM10, and PM2.5, but maximum daily emissions may be similar because the nature and magnitude of individual construction projects would be similar and would still exceed regional and local significance thresholds. Similarly, because overall less development would occur under Alternative 1, it is reasonable to assume that operational emissions would be less when compared to the Proposed Plan. Nonetheless, as discussed in **Section 4.2, Air Quality**, and shown in **Table 4.2-12**, future daily regional emissions from mobile sources under implementation of the Proposed Plan is generally expected to decrease relative to existing emissions. This is largely a result of improvements in vehicular engine efficiency technologies and fuel pollutant concentrations resulting from more stringent statewide regulations that are projected to occur between existing conditions (2016) and 2040. Because increasingly stringent state regulations related to energy efficiency and emissions control will continue to apply regardless of whether the Plan is adopted, it is reasonable to assume that under Alternative 1 future daily regional emissions from mobile sources would similarly decrease relative to existing emissions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations. **Mitigation Measures AQ-1** through **AQ-8** would be applied to the Alternative but would not be expected to reduce impacts to less than significant since emissions would remain above the SCAQMD thresholds. As with the Proposed Plan, impacts related to construction emissions for NOx would remain significant and unavoidable.

Alternative 1 would accommodate 9% less housing and 3% fewer jobs than the Proposed Plan. Nevertheless, because a 95 percent reduction from Proposed Plan VOC emissions would be needed to reduce emissions to below the SCAQMD daily threshold, the increase in development in the Boyle Heights

CPA accommodated by Alternative 1 would continue to result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to increased use of consumer products and increased energy demand, similar to the Proposed Plan. As with the Proposed Plan, impacts related to operational VOC emissions would be less but would be significant and unavoidable. Like the Proposed Plan, daily emissions of PM10 and PM2.5 from area sources and mobile sources (brake and tire wear) under Alternative 1 would fall within SCAQMD regional significance thresholds and have a less than significant impact.

Impacts to sensitive receptors from construction would be potentially significant, but application of **Mitigation Measure (MM) AQ-1** through **AQ-8**, would reduce impacts to less than significant. As with the Proposed Plan, impacts associated with Alternative 1, including impacts related to toxic air contaminants (TACs) from construction, would be less than significant. Impacts to sensitive receptors from diesel trucks associated with distribution facilities could be mitigated with implementation of **MM AQ-9** but not to a less than significant level and would therefore be significant and unavoidable. As with the Proposed Plan, impacts related to odors would be less than significant.

Alternative 1 may result in less development in the Boyle Heights CPA and thus, lower construction and operational emissions in the CPA, as compared to the Proposed Plan; however, while emissions would be less overall, they would still exceed significance thresholds for construction related NOx emissions, operational VOC emissions, and impacts to sensitive receptors from operational impacts related to distribution facilities.

Biological Resources

The Boyle Heights CPA is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors, and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks, open space, trees, and minor urban landscaping are the only sources of biological habitat in and around the Boyle Heights CPA. Both the Proposed Plan and Alternative 1 prioritize infill development in an already urbanized area of the City, thus minimizing development in areas of potential native biological habitat or wildlife corridors. Although implementation of Alternative 1 would accommodate less development potential and associated growth than the Proposed Plan, development would occur within the same footprint as the Boyle Heights CPA and would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space, or encroach upon any natural settings. Alternative 1 would not conflict with goals, policies, and programs of the General Plan Framework or the City Conservation Element. Any new development has the potential to disturb nesting birds and or protected trees in the Boyle Heights CPA. However, future development would be required to adhere to the federal Migratory Bird Treaty Act (MBTA) and/or California Fish and

Game Code (CFGC) regulations, and the LAMC Tree Preservation Ordinance (177,404). Alternative 1's impacts related to biological resources would be about the same as those of the Proposed Plan and would be less than significant without implementation of mitigation measures.

Cultural Resources

Compared to the Proposed Plan, Alternative 1 would accommodate less overall development, including in areas where historical resources are present. Therefore, the number of future projects affecting historical resources would likely be smaller and impacts to historical resources from Alternative 1 would be less than that of the Proposed Plan. Future development in the Boyle Heights CPA would continue to be subject to existing federal, state, and local requirements regarding cultural resources and human remains and discretionary projects may be subject to project-specific mitigation requirements under CEQA. However, although these regulations would provide certain protections for significant historical resources, individual developments allowed by either Alternative 1 or the Proposed Plan could potentially cause a substantial adverse change in, or disturbance of, historical resources as defined in *CEQA Guidelines* Section 15064.5. As with the Proposed Plan, impacts to historical resources would be less but would remain significant and unavoidable under Alternative 1.

Similar to the Proposed Plan, Alternative 1 may result in disturbance of areas that potentially contain archaeological resources and/or human remains. As with the Proposed Plan, **Mitigation Measures CR-1** through **CR-4** would be applied, and in combination with existing regulatory requirements, would reduce Alternative 1 impacts to archaeological resources to a less than significant level. Alternative 1 impacts to human remains would be less overall than the Proposed Plan, and less than significant based on compliance with existing regulations.

Energy

Alternative 1 would accommodate less development and associated growth than the Proposed Plan. Alternative 1 would result in 3,000 fewer housing units (-9%), 10,000 fewer residents (-9%), and 1,000 fewer jobs (-3%) through 2040. Therefore, it is reasonable to assume that implementation of Alternative 1 would result in less overall energy consumption than the Proposed Plan commensurate with the reduction in population. As discussed in **Section 4.5, Energy**, (**Table 4.5-6** through **Table 4.5-8**) implementation of the Proposed Plan would increase energy consumption in the Boyle Heights CPA above 2016 baseline conditions. However, per capita electricity and natural gas consumption would be lower in 2040 as compared to 2016 baseline conditions. The lower energy use per capita can be attributed to the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes

such as transit, bicycling, and walking. Although Alternative 1 would result in less energy consumption in the Boyle Heights CPA, the lower concentration of growth/development in the Boyle Heights CPA may result in higher levels of growth in other areas of the City where transit availability is lower and per capita VMT is higher. In this way, Alternative 1 may contribute to greater overall regional energy use than would the Proposed Plan. Like the Proposed Plan, however, Alternative 1 would not result in inefficient, wasteful, or unnecessary consumption of energy resources. In addition, neither Alternative 1 nor the Proposed Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be similar to the Proposed Plan and would remain less than significant under either Alternative 1 or the Proposed Plan.

Geology and Soils

Alternative 1 would generally accommodate development within the same footprints as the Proposed Plan. Any new development in the CPA would be exposed to existing geologic and soil hazards but would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and California Building Code (CBC) would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Boyle Heights CPA may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. Erosion would be addressed through adherence to Best Management Practices (BMPs), as required by the NPDES Construction General Permit and the Los Angeles Municipal Code (LAMC). For all geological impacts, except paleontological, impacts from Alternative 1 would be the same as the Proposed Plan and would be less than significant.

Similar to the Proposed Plan, Alternative 1 would have the potential to disturb paleontological resources for projects that involve excavation or grading in previously undisturbed soils that contain paleontological resources. Although with less overall development activity, such impacts would be less. **Mitigation Measures GEO-1**, **GEO-2**, and **GEO-3** would be applied to Alternative 1 and would reduce impacts to less than significant. Impacts from Alternative 1 related to paleontological resources would be less than the Proposed Plan and would remain less than significant with mitigation measures.

Greenhouse Gas Emissions

Development under either Alternative 1 or the Proposed Plan would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. As shown in **Table 4.7- 5** in **Section 4.7, Greenhouse Gas Emissions**, implementation of the Proposed Plan would result in a 13 percent increase in total GHG emissions in the Boyle Heights CPA by 2040 as compared to baseline conditions, but a 15 percent reduction in per capita GHG emissions. The reduction in per capita GHG emissions can be attributed to a combination of state-mandated GHG emission reduction strategies and the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. Due to the increase in total population however, future overall Boyle Heights CPA emissions would be higher than baseline emissions. Compared to what would occur under the Proposed Plan, overall Boyle Heights CPA emissions would be slightly lower under Alternative 1 due to the overall reduction in development potential and total people, however, because Alternative 1 does not include the VMT reducing strategies of the Proposed Plan, per capita emissions would be slightly higher than the Proposed Plan.

It should be noted that because Alternative 1 would accommodate less overall growth in the Boyle Heights CPA than the Proposed Plan would, it may push more population growth to other areas of the City or region where fewer transit options are available and distances between housing, jobs, and services are greater. As a result, accommodating less development in the Boyle Heights CPA under Alternative 1 may incrementally increase overall citywide or regional GHG emissions related to VMT and Alternative 1 would not be as consistent with AB 32, SB 32, SB 375 (through demonstration of conformance with the RTP/SCS), the Sustainable City pLAn and GreenLA as the Proposed Plan.

Nevertheless, neither Alternative 1 nor the Proposed Plan would conflict with state, regional, or local plans or policies related to GHG emissions or climate change. To the contrary, either Alternative 1 or the Proposed Plan would generally implement plans and policies aimed at GHG emissions reduction by accommodating relatively high density, mixed-use development in an area that is well served by transit, thus reducing per capita VMT. Alternative 1's impact would be greater than that of the Proposed Plan, though it would still be less than significant.

Hazards and Hazardous Materials

As stated in **Section 4.7, Hazards and Hazardous Materials**, the southern and western portion of the CPA is within the Exide PIA and undergoing clean up from the DTSC. However, it is possible that additional

contaminated properties are located outside of the PIA within the CPA. Grading and excavation of sites for future development outside of the PIA could result in additional contaminated soils being disturbed. If any unidentified sources of contamination are encountered during grading or excavation (from Exide or other industrial operations), earth moving activities could pose health and safety risks from exposure to hazardous materials or vapors until such time that contaminants are identified; once contamination is identified regulations for the handling, transport and disposal of contaminated materials would reduce impacts to a less than significant level. The mitigation measures identified as part of the Proposed Plan (**MM HAZ-1** through **MM HAZ-3**) would be required on the alternative to reduce impacts. Impacts would be similar to the Proposed Plan and would be less than significant with mitigation.

As with the Proposed Plan, the types of hazardous materials that could be present during operation of commercial, residential, and industrial uses associated with Alternative 1 include maintenance products (e.g., paints and solvents); oils, lubricants and refrigerants associated with building, mechanical, and HVAC systems; and grounds and landscape maintenance products formulated with hazardous substances, including fuels, cleaners and degreasers, solvents, paints, lubricants, adhesives, sealers, pesticides/herbicides, and industrial related chemicals. Based on extensive federal, state and local regulations for these products it is not foreseeable that there would be an impact from use, transport, handling or accidents.

While Alternative 1 would accommodate residential uses in proximity to industrial uses, existing and future uses would be required to comply with existing safety standards related to the handling, use and storage of hazardous materials, and applicable federal, State and local laws and regulations. Moreover, the placement of residences near industrial activity would not increase the use of hazardous materials. It would not be expected to increase, change or exacerbate any risk currently existing from industrial uses that would impact the existing residents and businesses or future residents or businesses from development of the Alternative 1. Impacts would be less than significant and similar to the Proposed Plan.

As with the Proposed Plan, redevelopment, renovation, and demolition of structures built before 1979 under Alternative 1 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development could potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. Like the Proposed Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination. This could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures**

HAZ-1 through **HAZ-3** to Alternative 1 impacts would be less than significant. Overall impacts associated with Alternative 1 would be similar to those of the Proposed Plan.

Similar to the Proposed Plan, there would be no or less than significant impacts related to airports, wildfires or emergency management plans because there are no airports, private airstrips, or wildlands in or near the Boyle Heights CPA and development under Alternative 1 would not interfere with circulation plans or emergency management plans.

Hydrology and Water Quality

The Boyle Heights CPA is urbanized and almost entirely paved and developed, with the exception of parks, green spaces, and the Los Angeles River, which is located just beyond the western boundary of the Boyle Heights CPA. Alternative 1 would accommodate slightly less overall development than the Proposed Plan and, like the Proposed Plan, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. All new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects would be required to incorporate BMPs to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the National Pollutant Discharge Elimination System (NPDES) program for industrial uses. Compliance with the City's Low Impact Development (LID) Ordinance would further ensure that any future development under Alternative 1 would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Boyle Heights CPA would improve surface water quality by replacing older development with new development that incorporates LID methods. Overall impacts associated with Alternative 1 would be similar to those of the Proposed Plan and less than significant.

Land Use and Planning

Similar to the Proposed Plan, Alternative 1 would generally allow greater building heights, scale and intensity than currently exists in portions of the Boyle Heights CPA. Alternative 1 would reduce the development potential near the Soto Street and Indiana L Line stations by maintaining the FAR and density permitted by the existing zoning. Alternative 1 would also maintain the existing Light Industrial land use designation and zoning around the Pico/Aliso transit node. Alternative 1 would accommodate urban infill development near transit, but to a lesser degree than the Proposed Plan. Like the Proposed Plan, Alternative 1 would be generally consistent with RTP/SCS policies related to the provision of urban infill

development near transit as well as with the City's General Plan and Framework Element, Mobility Plan 2035, and the Housing Element. However, as discussed under Air Quality, Alternative 1 may achieve RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Proposed Plan since the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Proposed Plan, Alternative 1 would not physically divide an established community or conflict with an applicable habitat conservation plan or natural community conservation plan. Overall, Alternative 1's impacts would be greater than the Proposed Plan but would be ***less than significant***.

Noise

Similar to the Proposed Plan, Alternative 1 would include construction activity that would result in temporary increases in ambient noise levels on an intermittent basis. Noise levels would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Sensitive receptors are located throughout the CPA and could be exposed to noise associated with construction activities related to reasonably anticipated development from the Proposed Plan. Residential uses are the primary sensitive receptors located within the CPA.

Mitigation Measures NOI-2 and **NOI-3** would be applied to Alternative 1. Additionally, construction activities occurring in the CPA are subject to the Regulatory Compliance Measures adopted pursuant to the City's noise ordinances. These measures include:

- Compliance with the Noise Ordinance No. 161.574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically infeasible.

- Compliance with LAMC Section 41.40, which restricts construction activities to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday and federal holidays, and prohibits activities on Sundays.

- Compliance with the City's Building Regulations Ordinance No. 178.048, which requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City's telephone numbers where violations can be reported. The notice shall be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public and approved by the Los Angeles Department of Building and Safety (LADBS).

- LAMC Chapter 41.40, Section 112.05 establishes performance standards for powered equipment or tools. The maximum allowable noise level for most construction equipment within 500 feet of any residential zone is 75 dBA measured at 50 feet from the noise source. This restriction holds unless compliance is not technically feasible even with the use of noise "mufflers, shields, sound barriers, and/or other noise reduction devices or techniques."

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, although **Mitigation Measures NOI-2** and **NOI-3** would be imposed on Alternative 1 and would reduce impacts to the degree feasible, Alternative 1 would result in a significant and unavoidable impact related to construction vibration.

Compared to the Proposed Plan, duration of construction and use of heavy-duty equipment in the Alternative 1 scenario would be less than the Proposed Plan due to reduced overall development potential. Therefore, although the overall impact generated by temporary construction noise under Alternative 1 would be less than that of the Proposed Plan, the impact would remain potentially significant.

Similar to the Proposed Plan, Alternative 1 would not increase operational stationary and mobile noise levels by 3 dBA CNEL or more to or within the "normally unacceptable" or clearly unacceptable" categories, or by 5 dBA or more. Therefore, impacts related to operational noise levels would be less under Alternative 1 due to less development overall and operational noise impacts would be less than significant.

It is not anticipated that new development in the Boyle Heights CPA would involve activities that would result in substantial operational vibration (e.g., blasting operations). As with the Proposed Plan, operational groundborne vibration in the vicinity of new development under Alternative 1 would be primarily generated by vehicular travel on the local roadways. According to the FTA Transit Noise and Vibration Impact Assessment guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible.[1] Accounting for additional vehicle trips that would be accommodated by the Alternative 1, traffic vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, similar to the Proposed Plan, impacts related to operational vibration under Alternative 1 would be less than significant.

Overall, operation and construction impacts from Alternative 1 would be less than those of the Proposed Plan but construction impacts from noise and vibration would remain significant and unavoidable.

---

1 FTA. Transit Noise and Vibration Impact Assessment. September 2018.

Similar to the Proposed Plan, Alternative 1 would have no impacts related to airport noise.

Population and Housing

Anticipated growth in the Boyle Heights CPA under Alternative 1 would exceed SCAG's 2040 forecasts by approximately 12,000 persons, 3,000 housing units, and 3,000 jobs. Projected growth under the Proposed Plan would exceed SCAG's 2040 growth projections by 22,000 persons, 6,000 dwelling units, and 4,000 jobs. Alternative 1 would increase the development capacity of the Boyle Heights CPA in a manner generally consistent with SCAG's housing and job projections for the Boyle Heights CPA. Like the Proposed Plan, Alternative 1 would also concentrate forecast growth in an area with a mix of jobs and housing and with transit access. While anticipated growth would exceed SCAG's forecasts for the Boyle Heights CPA, the development reasonably expected to occur under the Proposed Plan would be consistent with SCAG's citywide growth projections, and with City, regional and state policies for housing, economic development, air quality and sustainability, as well as other adopted housing growth policies. Like the Proposed Plan, Alternative 1 would not induce substantial population growth inconsistent with regional growth plans.

Similar to the Proposed Plan, Alternative 1 would not directly result in physical changes that would cause the displacement of a substantial number of people or housing, necessitating the construction of replacement housing elsewhere. Alternative 1 may cause a temporary reduction in housing stock as new buildings are built in place of older ones or as existing buildings are renovated. However, these impacts would be slightly less than under the Proposed Plan due to less overall development and impacts would be less than significant.

Public Services

With respect to fire and police services, as under the Proposed Plan, Alternative 1 would increase demand for fire and police protection service in the Boyle Heights CPA. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Boyle Heights CPA, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts. However, like the Proposed Plan, those impacts would be consistent with those already identified in this EIR for construction or operations. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns. With respect to schools, as summarized in **Table 5.0-2**, residential and non-residential development accommodated by Alternative 1 would result in approximately 16,954 new students by 2040. This is about 7 percent fewer students than would be added under the Proposed Plan. Both Alternative 1 and the Proposed Plan would create the need for new or expanded school facilities. However, under either scenario developers would be

required to pay school impact fees. As with the Proposed Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of infill development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

Table 5.0-2
Alternative 1 Anticipated Student Generation in the Boyle Heights CPA

Land Use	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential[1]	30,062 DU	6,821	1,837	3,896	583	13,137
Non-Residential[2]	78,880,086 SF	1,798	899	1,120	-	3,817
Total Students Generated by Alternative 1		8,619	2,736	5,016	583	16,954

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
Totals may not add up due to rounding.
[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du
[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, both the Proposed Plan and Alternative 1 would increase demand for library facilities. The Boyle Heights CPA is urbanized and new facilities would not involve expansion of the urban sphere beyond current boundaries and, thus, there would be no need for new or expanded infrastructure.

As under the Proposed Plan, all existing parks and recreational facilities in the CPA would remain under Alternative 1. Demand for existing recreational facilities would increase under the Alternative 1, although at a slightly lower level due to less overall development. Future development under Alternative 1 would be subject to LAMC Sections 12.33 and 17.12, which are part of the City's implementation of the Quimby Act. These ordinances require developers of residential projects (except affordable housing units and second dwelling units) to dedicate land for park and recreation purposes, or pay a fee in lieu thereof, prior to obtaining a permit. The dedication of land for park and recreation purposes or payment of fees would help to offset the demand created by future development. As the CPA currently does not have sufficient recreational areas to serve the existing population, impacts related to the Alternative 1 resulting in substantial physical deterioration of parks and recreational facilities would be less than the Proposed Plan but would remain significant and unavoidable as the increased population would increase demand for

existing recreational facilities; impacts related to providing new parks and park facilities would be less than significant. For all public service and recreation impacts the impact from Alternative 1 would be less than the Proposed Plan and would remain less than significant; except for deterioration of parks, where the impact would be less but would remain significant and unavoidable.

Transportation and Traffic

With respect to transportation, a significant impact would occur if VMT exceeds either of the following:

1. The Plan results in average VMT per service population for the 2040 Proposed Plan that exceeds 15% below the regional average total VMT per service population from 2016 SCAG Region.

2. The Plan results in average total VMT per service population for the 2040 Proposed Plan that exceeds the average total VMT per service population for the Boyle Heights CPA from 2016 Baseline.

Alternative 1 assumes that future planned growth and mixed-use development is focused along the corridors instead of in the transit nodes near the L Line stations and would reduce the development potential near the Soto Street and Indiana L Line stations by maintaining the FAR and density permitted by the existing zoning. Alternative 1 would also maintain the existing Light Industrial land use designation and zoning around the Pico/Aliso transit node. **Table 5.0-3, Comparison between Existing Traffic Conditions, The Proposed Plan and Alternative 1,** shows vehicle trips and VMT for the Proposed Plan (2040) and Alternative 1 (2040). As shown in **Table 5.0-3**, Alternative 1 has lower vehicle trips per service population (2.4 versus 3.1) and lower VMT per service population (23.4 versus 33.9) than the per service population from the 2016 SCAG Region. VMT per service population under Alternative 1 would be 23.4, while the 2016 Plan Baseline VMT per service population in the Proposed Plan Area is 23.2.

Given that service population VMT for the Alternative 1 is more than 15% below the 2016 SCAG Region and the service population VMT is greater than the 2016 Baseline for the Proposed Plan, the Alternative 1 would have a significant impact with respect to VMT and would result in impacts greater than the Proposed Plan.

Table 5.0-3
Comparison between Existing Traffic Conditions, The Proposed Plan and Alternative 1

Transportation Metric	Threshold		Proposed Plan (2040)	Alternative 1 (2040)
	2016 SCAG Region Conditions	2016 Plan Baseline Conditions		
Total Daily VT	82,283,000	262,500	355,300	339,100
Total Daily VT per Service Population	3.1	2.1	2.3	2.4
Total Daily VMT	908,573,000	2,968,900	3,334,100	3,323,000
Total Daily VMT per Service Population	**33.9**	**23.2**	**21.6**	**23.4**

Source: Cambridge Systematics, 2018

Regarding freeway queuing and safety, the specific concern relates to the possibility that the speed differential between vehicles traveling on freeway mainlines (the 5, 10, 101, and SR-60 Freeways, in particular) and vehicles queuing at freeway off-ramps may create the potential for collisions if drivers on the freeway mainline lack sufficient time to slow or stop once they are aware of a queuing situation. Alternative 1 would increase trips in the CPA beyond current levels but because Alternative 1 would result in less population growth than the Proposed Plan, this alternative may result in reduced vehicle queuing at freeways ramps compared to the Proposed Plan. As such, Alternative 1 impacts with regard to transportation safety impacts related to freeway off-ramp queuing would also be significant, but slightly less than the Proposed Plan.

Similar to the Proposed Plan, Alternative 1 would not result in significant impacts related to increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access.

Tribal Cultural Resources

Development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Alternative 1 would generally accommodate development in the same areas that could be developed under the Proposed Plan. Although less development is expected under this Alternative which could result in incrementally fewer impacts. Although neither Alternative 1 nor the Proposed Plan includes specific development projects, new development accommodated by either scenario may disturb areas that potentially contain tribal resources. Similar to the Proposed Plan, all future

development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on an EIR, includes consultation with California Native American tribes. **Mitigation Measures MM CR-1** through **MM CR-3** in Section 4.4, Cultural Resources, and **MM TC-1** and **MM TC-2** in **Section 4.15, Tribal Cultural Resources**, would be imposed on Alternative 1 and would reduce Alternative 1 impacts to a less than significant level. Therefore, similar to the Proposed Plan, Alternative 1's impact would be less than the Proposed Plan and would be less than significant with mitigation incorporated.

Utilities and Service Systems

Alternative 1 would result in 3,000 fewer housing units, 10,000 fewer persons, and 1,000 fewer jobs through 2040 than the Proposed Plan. Under Alternative 1, water use would increase from the baseline and would result in 11,104 afy of water use annually (see **Table 5.0-4** below), this would be less than the Proposed Plan which would generate 12,022 afy. Therefore, impacts would remain less than significant and would be less than the Proposed Plan.

Table 5.0-4
Alternative 1 Water Use in the Community Plan Area

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-Family [1]	6,012 du	329.0	1,977,948	2,216
Multi-Family [1]	24,050 du	189.0	4,545,450	5,092
Commercial[2]	20,790 jobs	69.0	1,434,510	1,607
Industrial[2]	15,094 jobs	121.0	1,826,374	2,046
Public Facilities[2]	1,850 jobs	69.0	127,650	143
		Alternative 1 Total	**9,911,932**	**11,104**

Source: City of Los Angeles Department of Water and Power, 2016. 2015 UWMP. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-sourcesofsupply/a-w-sos-uwmpln?_afrLoop=188401731408212&_afrWindowMode=0&_afrWindowId=19iw0ec604_1#%40%3F_afrWindowId%3D19iw0ec604_1%26_afrLoop%3D188401731408212%26_afrWindowMode%3D0%26_adf.ctrl-state%3D3j7vbqgs1_4.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:
[1] Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family.
***Source:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H (LADWP 2016a).*
[2] Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area utilizing the same ratio as under the proposed plan. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.

As under the Proposed Plan, growth under Alternative 1 would generate increased wastewater compared to the baseline. The Proposed Plan is estimated to generate approximately 7,369,671 gpd (7.4 mgd) of

wastewater representing approximately 1.6% of the HTP's current wastewater treatment capacity of 450 mgd. As Alternative 1 would reduce development overall, wastewater generation would also be reduced compared to the Proposed Plan. Impacts would remain less than significant but would be slightly less than the Proposed Plan.

Table 5.0-5
Estimated Alternative 1 Wastewater Generation in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Employees	2040 Wastewater Generation Rate (gpd/unit)	Daily Wastewater Generation (gpd)
Residential[2]			
Single-Family	6,012 du	144.3	867,532
Multi-Family	24,050 du	137.9	3,316,495
		Residential Subtotal	**4,184,027**
Non-residential			
Commercial	20,790 employees	59.8	1,243,242
Industrial	15,094 employees	123.0	1,856,562
Public Facilities	1,850 employees	46.4	85,840
		Non-Residential Subtotal	**3,185,644**
		Alternative 1 Total	**7,369,671**

Source: Impact Sciences, 2022.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd
1 City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation. 2 For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

As development occurs in the Boyle Heights CPA, upgrades to water conveyance systems may be required. Local water delivery lines may need to be replaced and upgraded in the vicinity of new development that is substantially more dense than existing development, and it is possible that the construction of new water lines may be necessary to serve new development under Alternative 1. However, if new facilities are determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption or Statutory Exemption. The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. Therefore, since

development under Alternative 1 would be lower than under the Proposed Plan, impacts related to the construction of new water conveyance infrastructure and wastewater treatment facilities or expansion of existing facilities under Alternative 1 would be incrementally lower and impacts would be less than significant.

Based on City policy, new water demand is to be met by expanding water recycling and conservation. As under the Proposed Plan, all new development under Alternative 1 would be required to implement applicable water conservation measures. These measures include Water Efficiency Requirements Ordinance, Los Angeles Green Building Code, the most current California Green Building Standard Code, and all applicable regulations in the future. As discussed in *Section 4.16, Utilities and Service Systems*, under the Proposed Plan adequate supply would be available to meet estimated demand of the Boyle Heights CPA during normal and single dry year conditions and multiple dry years up to the year 2040. Therefore, due to the lower development under Alternative 1, there would be lower impacts to overall water supplies available to serve the project and impacts would be less than significant.

Table 5.0-6
Estimated Alternative 1 Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units or Square Footage	Annual Waste Generation Rate	Total Day Solid Waste Generated (lb/day)
Residential[2]			
Single-Family	21,000 residents	0.41 tons/resident	47,160
Multi-Family	24,050 du	0.46 tons/unit	60,620
		Residential Subtotal	**107,780**
Non-residential			
Commercial	19,591,916 SF	3.01 tons/1,000 sf	323,140
Industrial	48,496,214 SF	1.24 tons/1,000 sf	329,500
Public Facilities	10,791,956 SF	0.93 tons/1,000 sf	55,000
		Non-Residential Subtotal	**707,640**
		Alternative 1 Total	**815,420**

Source: Impact Sciences, 2022.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd; lb = pound
1 CalEEMod default solid waste generation factors for residential and non-residential uses were used to determine solid waste generation. Default solid waste generation rates available in Table 10.1 of the CalEEMod User Guide Appendix D – Default Data Tables, available at: http://www.aqmd.gov/docs/default-source/caleemod/upgrades/2016.3/05_appendix-d2016-3-1.pdf
2 For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

Development under Alternative 1 would reduce the amount of residential solid waste produced compared to the Proposed Plan but would increase non-residential solid waste. As a result, total solid waste under Alternative 1 would be greater than the Proposed Plan (as shown above). Nonetheless, impacts would remain less than significant but would be greater than the Proposed Plan.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 1, but improvements to Boyle Heights Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Plan and impacts analyzed in this EIR for infill development. Overall impacts associated with Alternative 1 would be less with less development and demand and would be less than significant.

Conclusion

Alternative 1 would accommodate less development overall and thus accommodate less growth in the Boyle Heights CPA, as compared to the Proposed Plan. Due to the overall lower development potential under Alternative 1 in comparison to the Proposed Plan, fewer historical resources are likely to be disturbed, and impacts related to historical resources would be less than that of the Proposed Plan. Similarly, reduced development potential under Alternative 1 compared to the Proposed Plan, would result is lesser impacts related to construction and operational air quality and noise, construction vibration, and deterioration of existing parks. Nevertheless, despite accommodating less development potential as compared to the Proposed Plan, Alternative 1 would result in the same impact conclusions as the Proposed Plan in most impact categories. However, Alternative 1 would result in a significant VMT impact that the Proposed Plan would not have. Therefore, while the following significant unavoidable impacts from the Proposed Plan would result under Alternative 1: historical resources, air quality, construction noise and vibration, transportation safety impacts related to freeway off-ramp queuing, VMT, and recreational facilities.

5.5.2 Alternative 2 – High Transit Oriented Development Potential

Alternative Description

Alternative 2 would modify the Proposed Plan by allowing greater development potential around the following L Line transit stations: Soto, Pico/Aliso, and Indiana. Alterative 2 would allow a higher base FAR than the Proposed Plan (3:1 instead of 1.5:1 FAR) and the bonus FAR would increase to 4.5:1 as compared to 4:1 FAR. Additional density would be permitted in the blocks surrounding the Soto Street Metro Station, primarily from Cesar Chavez Avenue to 4th Street, and St. Louis Street to Mott Street, where 1/400 density would be permitted in lieu of the proposed 1/600. Additional density incentives within the TOD areas

would increase development potential, and redevelopment would be more likely as a result of the delta from existing regulations to proposed bonus regulations. Alternative 2 increases the total number of housing, population, and employment as compared to the Proposed Plan.

As shown in **Table 5.0-1**, under Alternative 2 the Boyle Heights CPA is projected to reach a population of 125,000 residents, 36,000 housing units, and 40,000 jobs by 2040. SCAG projects growth of the Boyle Heights CPA to reach 93,000 residents, 27,000 housing units, and 35,000 jobs by 2040. Therefore, Alternative 2 would accommodate SCAG's population, housing, and job growth forecasts in the Boyle Heights CPA. Alternative 2 would accommodate more overall development and associated growth than the Proposed Plan. Alternative 2 would result in 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) through 2040 than the Proposed Plan.

Alternative 2 was selected to consider the potential regional benefits from increasing future development potential in areas with good transit access and where housing, jobs, and amenities are near one another. Additional regional benefits include reduced VMT and GHG emissions, improved accessibility to public transit, and increased housing and development of additional diverse housing types. It would also meet most of the project objectives, although some to a lesser or greater degree. It would meet the Primary Objective to promote vibrant mixed-use areas near transit to a greater degree than the Proposed Plan, due to the overall increase in development potential in TOD areas. For the same reasons, Alternative 2 would result in a greater amount of affordable housing units than the Proposed Plan since it would allow greater bonus FAR and density in exchange for on-site affordable units. Therefore, Alternative 2 would meet the Primary Objective to provide a diverse range of housing typologies and income levels in housing projects located in centers and corridors located near transit to a greater degree than the Proposed Plan. However, since Alternative 2 would increase development and increase FAR and overall development capacity beyond what is considered in the Proposed Plan, it would not meet the Primary Objective to preserve community character and neighborhood identity by allowing for increased density that may not be in context with the existing scale.

Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 2 or the Proposed Plan would generally allow greater scale and intensity, Alternative 2 would permit greater development than the Proposed Plan in the TOD areas. Under this alternative, greater development potential would be permitted around the Soto, Pico/Aliso, and Indiana L Line Stations, specifically a higher base FAR than the Proposed Plan (3:1 instead of 1.5:1 FAR) and the bonus FAR would increase to 4.5:1 as compared to 4:1 FAR. Compared to the

Proposed Plan, Alternative 2 may result in incrementally greater impacts to visual character and obstruction of scenic views, due to increased development intensity and changes to land use designations. Nevertheless, future development would be implemented in accordance with applicable state and local plans, policies and guidelines including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035 and provisions of the LAMC as it relates to development standards and visual character. Scenic views would still be available from publicly accessible locations, similar to the Proposed Plan. As with the Proposed Plan, Alternative 2 could introduce new sources of light and glare in the Boyle Heights CPA. However, development in most of the Boyle Heights CPA already experiences high levels of nighttime lighting and glare, such that any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted lighting and glare. Overall, development accommodated by Alternative 2 would be greater than the Proposed Plan, but impacts would remain less than significant.

Air Quality

Alternative 2 would accommodate greater overall development and associated growth than the Proposed Plan. Like the Proposed Plan, Alternative 2 would not increase reasonably anticipated development in the Boyle Heights CPA in a way that would be inconsistent with SCAG's growth forecasts for the CPA; therefore, Alternative 2 would not conflict with the AQMP. Because Alternative 2 would accommodate more overall growth in the Boyle Heights CPA than the Proposed Plan, it would attain to a greater degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals related to concentrating development in areas with access to transit and reducing vehicle miles traveled and associated emissions than would the Proposed Plan. Therefore, as with the Proposed Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant.

Maximum daily construction emissions would be similar to what would occur under the Proposed Plan since the types and magnitudes of individual construction projects would be similar. As with the Proposed Plan, it is reasonable to assume that development would result in increased construction emissions of NOx, PM10, and PM2.5, and NOx and that specific reduction in emissions below the SCAQMD significance thresholds cannot be demonstrated in the absence of individual project details. It is reasonable to assume that construction activities for an individual large development project in the CPA or multiple medium and smaller projects could generate emissions that would exceed the SCAQMD regional significance threshold for NO_x despite emission reductions and the imposition of **Mitigation Measure AQ-1** through **AQ-8** on Alternative 2. Therefore, impacts related to criteria air pollutants during construction would be greater than the Proposed Plan under Alternative 2 and would be significant and unavoidable.

Because development capacity would increase under Alternative 2, it is reasonable to assume that operational emissions would also increase compared to the Proposed Plan. It should be noted that because Alternative 2 would accommodate more development than the Proposed Plan, it may limit growth that would occur elsewhere in the City or region in locations that have less access to transit and less of a mix of jobs and housing. As a result, overall citywide and regional VMT and associated emissions may incrementally lessen under this scenario. Therefore, as discussed in **Section 4.2, Air Quality**, and shown in **Table 4.2-12**, future daily regional emissions from mobile sources under implementation of the Proposed Plan is generally expected to decrease relative to existing emissions due primarily to more stringent statewide regulations. It is reasonable to assume that under Alternative 2 future daily regional emissions would generally decrease relative to existing emissions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations. Impacts related to operational emissions from mobile sources would be less than significant and unavoidable.

The increase in development in the Boyle Heights CPA accommodated by Alternative 2 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to heavily expanded use of consumer products and increased energy demand, similar to the Proposed Plan. **Mitigation Measure AQ-1** would be applied to this alternative but, similar to the Proposed Plan, would not be expected to reduce impacts to a less than significant level. Operational emissions of VOC from Alternative 2 would be greater than the Proposed Plan and would be significant and unavoidable.

As with the Proposed Plan, impacts related to construction emissions would be significant and unavoidable. As with the Proposed Plan, impacts associated with Alternative 2, including impacts related to toxic air contaminants (TACs) from distribution center truck activity, would be significant as the alternative would still allow distribution centers in portions of the Boyle Heights CPA intended for industrial uses. **Mitigation Measure AQ-9** would apply to Alternative 2 to reduce impacts to sensitive receptors related to distribution facilities, but without project details, significant unavoidable impacts could still occur. **Mitigation Measure AQ-1** through **AQ-8** would apply to Alternative 2 and would be expected to reduce impacts to sensitive receptors from construction impacts to less than significant. As with the Proposed Plan, impacts related to odors would be less than significant.

Biological Resources

The Boyle Heights CPA is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological habitat in and around the Boyle Heights CPA. Both the Proposed Plan and Alternative 2 prioritize infill development in an already urbanized area of the City, thus, minimizing development in areas of potential

native biological habitat or wildlife corridors. As with the Proposed Plan, Alternative 2 would not foreseeably result in modification of the portions of the Los Angeles River because neither includes components that would affect the existing use, zoning, or land use designation of the Los Angeles River. As with the Proposed Plan, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Boyle Heights CPA. Therefore, future development would require adherence with federal MBTA and/or the CFGC regulations, and the LAMC Tree Preservation Ordinance (177,404). In addition, Alternative 2 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 2 would not conflict with goals, policies, or programs of the General Plan Framework or the City Conservation Element. Alternative 2 would include a greater amount of development than the Proposed Plan and may result in greater impacts related to biological resources; however, the impacts would remain less than significant.

Cultural Resources

Alternative 2 would permit greater scale and intensity in the CPA than would the Proposed Plan and, therefore, may result in greater impacts to cultural resources, including demolition or alteration of a historical resource or its setting, or disturb areas that may potentially contain archaeological resources and/or human remains. Future developments in the Boyle Heights CPA would continue to be subject to existing federal, state, and local requirements regarding archeological resources and human remains and may be subject to project-specific mitigation requirements under CEQA. As with the Proposed Plan, existing requirements and **Mitigation Measures CR-1** through **CR-4** would reduce impacts to archaeological resource associated with Alternative 2 to a less than significant level. Similar to Proposed Plan, Alternative 2 impacts to human remains would be less than significant based on anticipated compliance with existing regulations.

Although existing regulations provide certain protections for significant historical resources, individual developments allowed by either Alternative 2 or the Proposed Plan could potentially cause a substantial adverse change in or disturbance of historical resources as defined in *CEQA Guidelines* Section 15064.5. Therefore, as with the Proposed Plan, impacts to historical resources would be significant and unavoidable under Alternative 2, and greater than the Proposed Plan.

Energy

Alternative 2 would accommodate greater overall development and associated growth than the Proposed Plan. Alternative 2 would result in 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) through 2040 than the Proposed Plan. Therefore, it is reasonable to assume that overall,

implementation of Alternative 2 would result in greater overall energy consumption as compared to the Proposed Plan. As discussed under **Impact 4.5-1** in **Section 4.5, Energy**, (**Table 4.5-6** through **Table 4.5-8**) implementation of the Proposed Plan would result in increased energy consumption in the Boyle Heights CPA above 2016 baseline conditions. Although Alternative 2 may result in greater energy consumption in the Boyle Heights CPA overall, the Proposed Plan would result in lower per capita electricity and natural gas consumption for year 2040, as compared to 2016 baseline conditions. The lower per capita energy use that would occur can be attributed to the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. As a result, the higher overall development intensity would foreseeably reduce per capita VMT and energy consumption in the City and region by concentrating more future growth in areas well served by transit and where housing, jobs, and services are in close proximity to one another. Thus, Alternative 2 would result in incrementally reduced impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy. Like the Proposed Plan, Alternative 2 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. Neither Alternative 2 nor the Proposed Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be less than significant under Alternative 2, as with the Proposed Plan.

Geology and Soils

As with the Proposed Plan, Alternative 2 would generally accommodate development in the same footprints as existing structures in the Boyle Heights CPA. Any new development in the Boyle Heights CPA would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Boyle Heights CPA may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. For all geological impacts except paleontological, as discussed below, impacts would remain less than significant for Alternative 2.

Similar to the Proposed Plan, Alternative 2 would have potential to disturb paleontological resources for projects that involve excavation or grading in previously undisturbed soils that contain paleontological

resources. Although with increased development activity, such impacts would be greater than the Proposed Plan. **Mitigation Measures GEO-1**, **GEO-2**, and **GEO-3** would be applied to Alternative 2 and would reduce impacts to less than significant. Impacts from Alternative 2 related to paleontological resources would be greater than the Proposed Plan but would remain less than significant with mitigation measures.

Greenhouse Gas Emissions

Alternative 2 would accommodate more development and associated growth than the Proposed Plan. Implementation of Alternative 2 would result in an increase of 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) through 2040 beyond that anticipated under the Proposed Plan. Either the Proposed Plan or Alternative 2 would generate GHG emissions through individual project construction and operation. **Section 4.7, Greenhouse Gas Emissions**, **Table 4.7-5** compares current annual GHG emissions for the Boyle Heights CPA to 2040 emissions. Implementation of the Proposed Plan would result in a 13 percent increase in total GHG emissions in the Boyle Heights CPA by 2040 as compared to baseline conditions, but a 15 percent reduction in per capita GHG emissions. The reduction in per capita GHG emissions below baseline conditions can be attributed to a combination of state-mandated GHG emission reduction strategies and the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. It is reasonable to assume that under Alternative 2 future per capita emissions would also be lower than existing 2016 baseline emissions due to improved energy efficiency and reduced per capita VMT. Thus, the per capita and net reduction in GHG emissions under Alternative 2 would demonstrate compliance with regional, state, and federal efforts to reduce climate impacts from development and transportation. Although Alternative 2 may result in greater GHG emissions in the Boyle Heights CPA, the more intense development under Alternative 2 may contribute to an incremental reduction in Citywide and regional GHG VMT and related GHG emissions by concentrating more future growth in an area well served by transit and where housing, jobs, and services are in close proximity to one another. Overall, impacts under Alternative 2 would be less than the Proposed Plan and would be less than significant.

Hazards and Hazardous Materials

As stated in **Section 4.7, Hazards and Hazardous Materials**, the southern and western portion of the CPA is within the Exide PIA and undergoing clean up from the DTSC. However, it is possible that additional contaminated properties are located outside of the PIA within the CPA. Grading and excavation of sites for future development outside of the PIA could result in additional contaminated soils being disturbed. If any unidentified sources of contamination are encountered during grading or excavation (from Exide or other

industrial operations), earth moving activities could pose health and safety risks from exposure to hazardous materials or vapors until such time that contaminants are identified; once contamination is identified regulations for the handling, transport and disposal of contaminated materials would reduce impacts to a less than significant level. The mitigation measures identified as part of the Proposed Plan (**HAZ-1** through **HAZ-3**) would be required to reduce impacts. Impacts would be similar to the Proposed Plan.

As with the Proposed Plan, the types of hazardous materials that could be present during operation of commercial, residential, and industrial uses associated with Alternative 2, include maintenance products (e.g., paints and solvents); oils, lubricants and refrigerants associated with building, mechanical, and HVAC systems; and grounds and landscape maintenance products formulated with hazardous substances, including fuels, cleaners and degreasers, solvents, paints, lubricants, adhesives, sealers, pesticides/herbicides, and industrial related chemicals. Similar to the Proposed Plan, federal, state and local regulations will ensure less than significant impacts from these products.

While Alternative 2 would accommodate residential uses in proximity to industrial uses, existing and future uses would be required to comply with existing safety standards related to the handling, use and storage of hazardous materials, and applicable federal, State and local laws and regulations. Moreover, the placement of residences near industrial activity would not increase the use of hazardous materials. It would not be expected to increase, change or exacerbate any risk currently existing from industrial uses that would impact the existing residents and businesses or future residents or businesses from development of the Alternative 1. Impacts would be less than significant and similar to the Proposed Plan.

As with the Proposed Plan, redevelopment, renovation, and demolition of structures built before 1979 under Alternative 2 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development could potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. Like the Proposed Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination. This could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures HAZ-1** through **HAZ-3** to Alternative 2 impacts would be less than significant.

Similar to the Proposed Plan, there would be no or less than significant impacts related to airports, wildfires or emergency management plans because there are no airports, private airstrips, or wildlands in or near

the Boyle Heights CPA and development under Alternative 2 would not interfere with circulation plans or emergency management plans.

Hydrology and Water Quality

The Boyle Heights CPA is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is adjacent to the CPA boundary. Similar to the Proposed Plan, Alternative 2 would accommodate development within the existing development footprint. Therefore, implementation of Alternative 2 would not substantially alter drainage patterns that would result in substantial erosion, siltation, or flooding on- or off-site. Any new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects would be required to incorporate BMPs to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the CPA would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, Alternative 2 would result in less than significant impacts with respect to hydrology and water quality, similar to those of the Proposed Plan.

Land Use and Planning

As with the Proposed Plan, Alternative 2 would allow development of greater scale and intensity than currently exists in portions of the CPA. Alternative 2 would modify the Proposed Plan by allowing greater development potential around the 1st and Soto, Pico/Aliso, and Indian L Line Stations, and allow a higher base and bonus FAR. Additional density would be permitted in the blocs surrounding the Soto Street Metro Station, as well as within the TOD areas. Alternative 2 would also allow for more intense upzoning in the residential areas around 1st Street and Soto Street.

Compared to the Proposed Plan, Alternative 2 would increase development intensity and related growth in the Boyle Heights CPA. Alternative 2 would meet objectives related to strengthening vibrant mixed-use areas near transit that encourage a strong jobs/housing balance to a greater degree than the Proposed Plan. In addition, by concentrating more development in Boyle Heights, this alternative may incrementally reduce growth elsewhere in the City where transit options and mixed uses are more limited. Either Alternative 2 or the Proposed Plan would be consistent with policies and objectives contained in the

RTP/SCS with respect to high density, transit-oriented development. Similar to the Proposed Plan, Alternative 2 would also be generally consistent with the City's General Plan and Framework Element, Mobility Plan 2035, Air Quality Element and Housing Element. Like the Proposed Plan, Alternative 2 would not physically divide an established community or conflict with an applicable habitat conservation plan or natural community conservation plan. As with the Proposed Plan, impacts would be less than significant under Alternative 2.

Noise

Similar to the Proposed Plan, Alternative 2 would include construction activity that would result in temporary increases in ambient noise levels on an intermittent basis. Noise levels would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Sensitive receptors are located throughout the CPA and could be exposed to noise associated with construction activities related to reasonably anticipated development from the Proposed Plan. Residential uses are the primary sensitive receptors located within the CPA.

Construction activities occurring in the CPA are subject to the Regulatory Compliance Measures adopted pursuant to the City's noise ordinances. These measures include:

- Compliance with the Noise Ordinance No. 161.574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically infeasible.

- Compliance with LAMC Section 41.40, which restricts construction activities to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday and federal holidays, and prohibits activities on Sundays.

- Compliance with the City's Building Regulations Ordinance No. 178.048, which requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City's telephone numbers where violations can be reported. The notice shall be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public and approved by the Los Angeles Department of Building and Safety (LADBS).

- LAMC Chapter 41.40, Section 112.05 establishes performance standards for powered equipment or tools. The maximum allowable noise level for most construction equipment within 500 feet of any residential zone is 75 dBA measured at 50 feet from the noise source. This restriction holds unless

compliance is not technically feasible even with the use of noise "mufflers, shields, sound barriers, and/or other noise reduction devices or techniques."

Compared to the Proposed Plan, duration of construction and use of heavy-duty equipment in the Alternative 2 scenario would be greater than the Proposed Plan due to increased overall development potential. The overall impact generated by temporary construction noise under Alternative 2 would be greater than that of the Proposed Plan and the impact would remain significant and unavoidable.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, although **Mitigation Measures NOI-2** and **NOI-3** would be imposed on Alternative 2 and would reduce impacts to the degree feasible, Alternative 2 would result in a significant and unavoidable impact related to construction vibration. Overall impacts from Alternative 2 would be significant and unavoidable even with imposition of **Mitigation Measures NOI-1** through **MM NOI-3** for construction noise and vibration and would incrementally greater than those of the Proposed Plan due to the overall increased development potential.

Alternative 2 would not be expected to increase operational stationary noise within the "normally unacceptable" or clearly unacceptable" categories based on land use compatibility standards in the City's Noise Element and existing operational and building regulations. For mobile noise levels, a 3 dBA increase in noise requires a doubling of noise from the source (i.e., doubling of traffic volume) which would not occur under either the Proposed Plan or Alternative 2. Therefore, while impacts related to operational noise levels would be incrementally greater than both the baseline and the Proposed Plan under Alternative 2, operational noise impacts would be less than significant.

It is not anticipated that new development in the Boyle Heights CPA would involve activities that would result in substantial operational vibration (e.g., blasting operations). As with the Proposed Plan, operational groundborne vibration in the vicinity of new development under Alternative 2 would be primarily generated by vehicular travel on the local roadways. According to the FTA Transit Noise and Vibration Impact Assessment guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible.[2] Accounting for vehicle trips that would be accommodated by the Alternative 2, traffic vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, similar to the Proposed Plan, impacts related to operational vibration under Alternative 2 would be less than significant.

---

2 FTA. Transit Noise and Vibration Impact Assessment. September 2018.

Similar to the Proposed Plan, Alternative 2 would have no impacts related to airport noise.

Population and Housing

Alternative 2 would account for 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) than would be accommodated through 2040 under the Proposed Plan. Therefore, like the Proposed Plan, Alternative 2 would increase the development capacity of the CPA in a manner that accommodates SCAG growth projections for the Boyle Heights CPA. To an even greater degree than the Proposed Plan, Alternative 2 would exceed SCAG's forecast growth and the increase would be concentrated in areas with a mix of jobs and housing and with good transit access. The increased growth would further several of SCAG's regional goals to provide additional housing within proximity to transit. While Alternative 2 exceeds the planned population growth, it would not result in unplanned growth for the same reasons as the Proposed Plan. There is adequate infrastructure in the plan area and the growth accommodates citywide growth which is what DWP, LASAN and other service providers plan for, as opposed to community plan growth.

Although Alternative 2 would accommodate new development and redevelopment projects in the Boyle Heights CPA that would likely result in some temporary displacement of existing housing units and residents, it would increase the housing stock of the Boyle Heights CPA overall and could therefore lead to an increase in temporary displacement of existing housing units and residents than the Proposed Plan. As with the Proposed Plan, population and housing impacts would be less than significant under Alternative 2.

Public Services and Recreation

Alternative 2 would accommodate more overall development and associated growth than the Proposed Plan. Alternative 2 would result in an increase of 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) beyond that anticipated through 2040 under the Plan. With respect to fire and police services, either scenario would accommodate new development that would increase demand for fire and police protection service in the Boyle Heights CPA. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Boyle Heights CPA, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. However, depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts similar to those of other types of infill development analyzed in this EIR. However, project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5.0-7** residential and non-residential development accommodated by Alternative 2 would result in an estimated 19,567 new students by 2040. Of this total, an estimated 9,976 would enroll in elementary school, 3,101 would enroll in middle school, 5,791 would enroll in high school, and 699 would enroll in special day classes. Alternative 2 would result in approximately 7 percent increase in students as compared to the Proposed Plan. As such, Alternative 2 would accommodate development that would increase the student population of the Boyle Heights CPA and would create the need for new or expanded school facilities, but to a greater extent than the Proposed Plan. As with the Proposed Plan, developers would be required to pay applicable school impact fees. As with the Proposed Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of infill development.

Table 5.0-7
Alternative 2 Anticipated Student Generation in the Boyle Heights CPA

Land Use	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential[1]	36,043 DU	8,178	2,202	4,671	699	15,750
Non-Residential[2]	78,899,910 SF	1,798	899	1,120	-	3,817
Total Students Generated by Alternative 2		9,976	3,101	5,791	699	19,567

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
Totals may not add up due to rounding.
[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du
[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 2 or the Proposed Plan would increase demand for library facilities. However, it is not anticipated that this increased demand will be substantial enough to cause an exceedance of capacity at existing facilities in the CPA and would not require the construction of new or expanded facilities.

Compared to the Proposed Plan, Alternative 2 would accommodate more intense development and associated growth, thus requiring more public services in Boyle Heights. However, this may reduce development elsewhere in the City, resulting in less need for expansion of public services in other areas. Overall, impacts under Alternative 2 would be less significant, as with the Proposed Plan.

Alternative 2 would accommodate more development and associated growth than the Proposed Plan. As with the Proposed Plan, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the CPA. The City's Public Recreation Plan states that to meet long-range recreational standards, a project must have a minimum of two acres of neighborhood and community recreational facilities for every 1,000 persons and a minimum of two acres of neighborhood and local recreational facilities for every 1,000 persons. Under Alternative 2, the Boyle Heights CPA population is projected to increase to approximately 125,000 residents by 2040, thereby decreasing the ratio of parks to residents to approximately 0.4 acre per 1,000 residents.

Future development under the Proposed Plan would be subject to LAMC Sections 12.33 and 17.12, which are part of the City's implementation of the Quimby Act. These ordinances require developers of residential projects (except affordable housing units and second dwelling units) to dedicate land for park and recreation purposes, or pay a fee in lieu thereof, prior to obtaining a permit. The dedication of land for park and recreation purposes or payment of fees would help to offset the demand created by future development under the Proposed Plan. In addition, LAMC Section 12.21 (G) establishes open space requirements for residential projects. This would partially mitigate impact related to the deterioration of facilities. Nevertheless, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the Boyle Heights CPA, implementation of either Alternative 2 or the Proposed Plan could accelerate the deterioration of existing parks in and around the Boyle Heights CPA. Such impacts to existing recreational facilities would be significant and unavoidable under either Alternative 2 or the Proposed Plan but the impacts would be greater for Alternative 2. Impacts related to construction of new parks and all other public services would be greater for Alternative 2 but would remain less than significant.

Transportation and Traffic

Table 5.0-8, Comparison between Existing Traffic Conditions, The Proposed Plan and Alternative 2, shows vehicle trips and VMT for the 2016 SCAG Region, 2016 Baseline and 2040 Alternative 2. As shown in **Table 5.0-8**, compared to the 2016 SCAG Region, Alternative 2 has lower vehicle trips per service population (2.2 versus 3.1) and lower VMT per service population (20.3 versus 33.9). VMT per service population under Alternative 2 would be 20.3, while the 2016 Baseline VMT per service population in the CPA is 23.2.

Given that service population VMT for the Alternative 2 is more than 15% below the 2016 SCAG Region and it has less service population VMT than the 2016 Baseline for the CPA, Alternative 2 would ***have less than significant impact*** with respect to VMT. This would be similar to the Proposed Plan but have less impacts.

Table 5.0-8
Comparison between Existing Traffic Conditions, Proposed Plan and Alternative 2

Transportation Metric	Threshold		Proposed Boyle Heights Plan (2040)	Alternative 2 (2040)
	2016 SCAG Region Conditions	2016 Plan Baseline Conditions		
Total Daily VT	82,283,000	262,500	355,300	370,400
Total Daily VT per Service Population	3.1	2.1	2.3	2.2
Total Daily VMT	908,573,000	2,968,900	3,334,100	3,349,700
Total Daily VMT per Service Population	**33.9**	**23.2**	**21.6**	**20.3**

Source: Cambridge Systematics, 2018

Regarding freeway safety queuing, Alternative 2 would reduce overall VMT, however, as with the Proposed Plan, it is expected freeway queuing would continue to occur and impacts to traffic safety related to highway off-ramps would remain significant. However, this impact would be incrementally greater compared to the Proposed Plan as a result of more overall trips.

Similar to the Proposed Plan, Alternative 2 would not result in significant impacts related to increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. Impacts to emergency services would remain less than significant and would be similar to the Proposed Plan.

Tribal Cultural Resources

Development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Although neither the Proposed Plan nor Alternative 2 includes specific development projects, any new development accommodated by either scenario may disturb areas that potentially contain tribal resources. Alternative 2 could have incrementally greater impacts to the Proposed Plan as it would have greater development. As with the Proposed Plan, all future development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects subject to CEQA review would be required to comply with AB 52, which for projects relying on a an EIR, includes consultation with California Native American tribe. Imposition of **Mitigation Measures CR-1** through **CR-3** in **Section 4.4, Cultural Resources,** and **MM TC-1** and **MM TC-2** in **Section 4.15, Tribal Cultural Resources**, on Alternative 2 would reduce Alternative 2 impacts to a less than significant level.

Therefore, as with the Proposed Plan, impacts associated with Alternative 2 would be less than significant with mitigation incorporated, but greater than the Proposed Plan.

Utilities and Service Systems

Alternative 2 would accommodate more development and associated growth than the Proposed Plan. Alternative 2 would result in an increase of 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 more jobs (+3%) beyond that anticipated through 2040 under the Plan.

As shown in the table below, future water use with Alternative 2 would be 12,781 afy, which would be slightly greater than the Proposed Plan's water use of 12,022 afy. Sufficient water supply would remain to serve Alternative 2. Therefore, impacts would be less than significant but slightly greater than the Proposed Plan.

Table 5.0-9
Alternative 2 Water Use in the Community Plan Area

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-Family[1]	7,209 du	329.0	2,371,761	2,657
Multi-Family[1]	28,834 du	189.0	5,449,626	6,104
Commercial[2]	21,738 jobs	69.0	1,499,922	1,680
Industrial[2]	16,207 jobs	121.0	1,961,047	2,197
Public Facilities[2]	1,850 jobs	69.0	127,650	143
		Alternative 2 Total	**11,460,006**	**12,781**

Source: City of Los Angeles Department of Water and Power, 2016. 2015 UWMP. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-sourcesofsupply/a-w-sos-uwmpln?_afrLoop=188401731408212&_afrWindowMode=0&_afrWindowId=19iw0ec604_1#%40%3F_afrWindowId%3D19iw0ec604_1%26_afrLoop%3D188401731408212%26_afrWindowMode%3D0%26_adf.ctrl-state%3Dj7vbqgs1_4.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:
[1] Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family. Source: Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H (LADWP 2016a).
[2] Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area utilizing the same ratio as under the proposed plan. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.

As development occurs in the Boyle Heights CPA, upgrades to water conveyance systems may be required. Local water delivery lines may need to be replaced and upgraded in the vicinity of new development that is substantially more dense than existing development, and it is possible that the construction of new water lines may be necessary to serve new development under Alternative 2. However, if new facilities are

determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption or Statutory Exemption. The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR for infill development. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. Any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed. Therefore, impacts related to the construction of new water conveyance infrastructure and wastewater treatment facilities or expansion of existing facilities under Alternative 2 would be incrementally greater, but impacts would remain less than significant.

As shown in the table below, wastewater generation in the CPA would increase under Alternative 2 to 8,261,912 gpd. Estimated wastewater generation under this alternative would be greater than the Proposed Plan estimated wastewater generation of 7,988,887 gpd. Sufficient capacity would continue to be available at local wastewater treatment plants. As a result, impacts would be less than significant but greater than the Proposed Plan.

Table 5.0-10
Estimated Alternative 2 Wastewater Generation in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Employees	2040 Wastewater Generation Rate (gpd/unit)	Daily Wastewater Generation (gpd)
Residential[2]			
Single-Family	7,209 du	144.3	1,040,259
Multi-Family	28,834 du	137.9	3,976,209
		Residential Subtotal	**5,016,468**
Non-residential			
Commercial	21,738 employees	59.8	1,303,042
Industrial	16,207 employees	123.0	1,856,562
Public Facilities	1,850 employees	46.4	85,840
		Non-Residential Subtotal	**3,245,444**
		Alternative 2 Total	**8,261,912**

Source: Impact Sciences, 2022; Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd

[1] City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation. 2 For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

The City plans for increased water demand based on the SCAG growth forecasts. Additionally, based on City policy, new water demand is to be met by expanding water recycling and conservation. As under the Proposed Plan, all new development under Alternative 2 would be required to implement applicable water conservation measures. These measures include Water Efficiency Requirements Ordinance, Los Angeles Green Building Code, the most current California Green Building Standard Code, and all applicable regulations in the future. As discussed in **Section 4.16, Utilities and Service Systems**, under the Proposed Plan adequate supply would be available to meet estimated demand of the Boyle Heights CPA during normal and single dry year conditions and multiple dry years up to the year 2040. Therefore, despite the increased development resulting in new water demand, Alternative 2 is not anticipated to induce unplanned growth that will impact water supplies Citywide. Alternative 2 may result in the need for upgraded service lines, but overall capacity demand on water and wastewater service will be slightly greater the Proposed Plan and less than significant.

Table 5.0-11
Estimated Alternative 2 Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units or Square Footage	Annual Waste Generation Rate	Total Day Solid Waste Generated (lb/day)
Residential[2]			
Single-Family	25,000 residents	0.41 tons/resident	56,160
Multi-Family	28,834 du	0.46 tons/unit	72,680
		Residential Subtotal	**128,840**
Non-residential			
Commercial	20,425,858 SF	3.01 tons/1,000 sf	336,880
Industrial	47,682,097 SF	1.24 tons/1,000 sf	323,980
Public Facilities	10,791,956 SF	0.93 tons/1,000 sf	55,000
		Non-Residential Subtotal	**718,860**
		Alternative 2 Total	**844,700**

Source: Impact Sciences, 2022.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd; lb = pound
[1] *CalEEMod default solid waste generation factors for residential and non-residential uses were used to determine solid waste generation. Default solid waste generation rates available in Table 10.1 of the CalEEMod User Guide Appendix D – Default Data Tables, available at: http://www.aqmd.gov/docs/default-source/caleemod/upgrades/2016.3/05_appendix-d2016-3-1.pdf*
[2] *For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.*

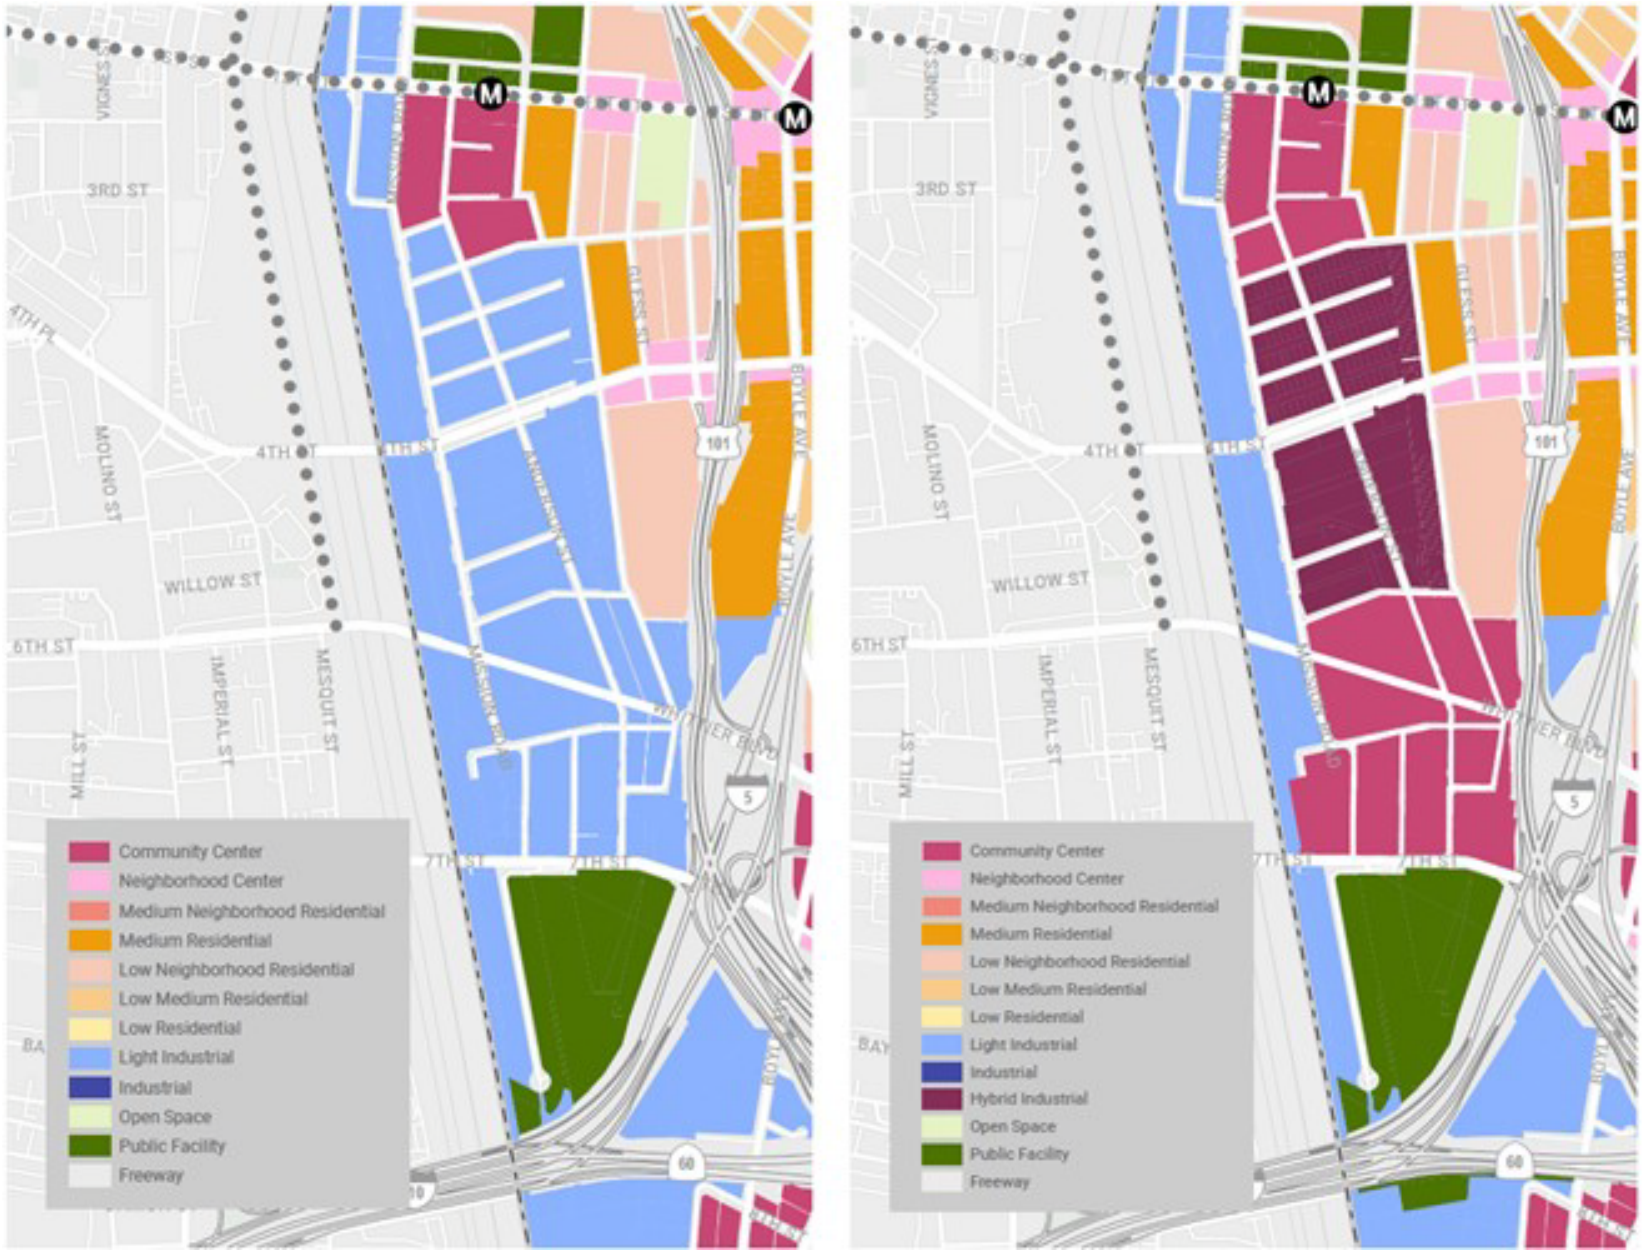
Similarly, development under Alternative 2 (see table above) would increase the amount of solid waste produced compared to the Proposed Plan. As a result, solid waste impacts would be greater than the Proposed Plan but would remain less than significant.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 2, but improvements to Boyle Heights CPA distribution and telecommunications facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the CPA and impact analyzed in this EIR. As with the Proposed Plan, impacts associated with Alternative 2 would be less than significant.

Conclusion

Alternative 2 would accommodate increased development overall compared to the Proposed Plan in the CPA, but not in the City. Alternative 2 would result in the same impact conclusions as the Proposed Plan in all impact categories. Unavoidable significant impacts under this alternative would occur with regards to historical resources, air quality (construction and operation), construction noise and vibration, recreational facilities, and traffic safety related to highway off-ramps, and due to higher overall development, these impacts would occur to a greater degree than under the Proposed Plan. VMT impacts and GHG impacts would remain LTS and would be further improved by Alternative 2 compared to the Proposed Plan.

5.5.3 Alternative 3 – Land Use Mix Alternative



Alternative Description

The "Land Use Mix" Alternative was included based on public input on the Proposed Plan to consider mixed-use development along the western portion of the CPA near the Los Angeles River. Generally, this alternative would make the same recommendations as the Proposed Plan but would change the land use designations near the Los Angeles River-adjacent 'riverside areas' to Light Industrial, Hybrid Industrial, and Community Center. This alternative would permit mixed-use development in an area that the Proposed Plan designates and zones for industrial uses. From 3rd Street to 6th Street and Mission Road to Clarence Street, the proposed land use designation would change to Hybrid Industrial, and this area would be zoned with a 1.5:1 Base FAR and 3.0:1 Bonus FAR, with a density of 1/800. New residential construction would be permitted in this area, but a minimum of 1.0:1 FAR would be required for jobs-producing uses. Between 6th Street and 7th Street, Mission Road to Highway 101, the land use designation would be changed to Community Center, and the zoning would allow a 1.0:1 Base FAR with a 4.0:1 Bonus, and 1/400 density. These blocks would be zoned with a traditional mixed-use zone that permits residential and commercial uses but does not permit industrial uses. **Figure 5.0-1** shows the changes under the Land Use Mix Alternative compared to the Proposed Plan. Alternative 3 was included to inform decision makers and foster public participation on an alternative that could result in higher community benefits by allowing greater residential and commercial development in the Boyle Heights CPA.

As shown in **Table 5.0-1**, under Alternative 3 the Boyle Heights CPA is projected to have a population of 124,000 residents, with 36,000 housing units, and 38,000 jobs in 2040. SCAG projects a population of 93,000 residents in 2040 along with 27,000 housing units and 35,000 jobs in the Boyle Heights CPA. Therefore, Alternative 3 would exceed SCAG's population, housing units, and job growth forecasts in the CPA. Alternative 3 would result in 3,000 more housing units (9%), 9,000 more persons (8%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan.

Alternative 3 was included based on comments during scoping and its ability to consider potential regional environmental benefits and because it would meet all of the main project objectives, although some to a lesser or greater degree than the Proposed Plan. It would meet the Primary Objective to provide a diverse range of housing typologies and income levels to a greater degree than the Proposed Plan, due to the increased potential for residential and mixed-use development near the Los Angeles River. For the same reasons, Alternative 3 would meet the Secondary Objective to support jobs-producing uses by maintaining industrially planned lands for employment generating to a lesser degree than the Proposed Plan.

Figure 5.0-1 shows proposed changes to General Plan Land Use Designations in Alternative 3 (right) compared to Proposed Plan (left). Changes include Hybrid Industrial land use between 3rd and 6th streets and Community Center land use between 6th and 7th streets.

SOURCE: City of Los Angeles, 2021

FIGURE **5.0-1**

IMPACT SCIENCES

Alternative 3 – Land Use Mix Alternative

Impact Analysis

Aesthetics

Compared to existing conditions, either Alternative 3 or the Proposed Plan would generally allow similar scale and intensity. Alternative 3 would permit similar development as the Proposed Plan in the TOD areas, along commercial corridors, and in residential neighborhoods, but would allow residential and mixed use development in the area near the Los Angeles River. Under Alternative 3, the Boyle Heights CPA would have increased residential and commercial development capacity as compared to the Proposed Plan, but as there are no scenic corridors in the Los Angeles River area that would be affected, impacts would be similar to the Proposed Plan. Further, future development would be implemented in accordance with applicable state and local plans, policies and guidelines including but not limited to the City's General Plan Framework, Conservation Element, Mobility Plan 2035, and provisions of the LAMC as it relates to development standards and visual character. Scenic views would still be available from publicly accessible locations, similar to the Proposed Plan. As with the Proposed Plan, Alternative 3 could introduce new sources of light and glare in the Boyle Heights CPA. However, development in most of the Boyle Heights CPA already experiences high levels of nighttime lighting and glare, including the area by the Los Angeles River. In addition, future development would comply with applicable regulations regarding permitted lighting and glare. Overall, aesthetic impacts from development accommodated by Alternative 3 would be similar to the Proposed Plan, and impacts would remain less than significant.

Air Quality

Alternative 3 would accommodate greater overall development and associated growth than the Proposed Plan. Alternative 3 would result in 3,000 more housing units (9%), 9,000 more persons (8%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan. Like the Proposed Plan, Alternative 3 would not increase reasonably anticipated development in the Boyle Heights CPA in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 3 would not conflict with the AQMP. Because Alternative 3 would accommodate more overall growth in the CPA than would the Proposed Plan and would attain to a greater degree the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals. While the additional growth would not be in the TOD areas, Alternative 3 would still reduce overall VMT per service person compared to the Proposed Plan. Therefore, as with the Proposed Plan, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be less than significant and less than the Proposed Plan.

Maximum daily construction emissions would be similar to what would occur under the Proposed Plan since the types and magnitudes of individual construction projects would be similar. As with the Proposed

Plan, it is reasonable to assume that development would result in increased construction emissions of NOx, PM10, and PM2.5. Nonetheless, as discussed in **Section 4.2, Air Quality**, and shown in **Table 4.2-12**, future daily regional emissions from mobile sources under implementation of the Proposed Plan is generally expected to decrease relative to existing emissions due primarily to more stringent statewide regulations. It is reasonable to assume that under Alternative 3 future daily regional emissions would generally decrease relative to existing emissions due to improvements in vehicular engine efficiency technologies and fuel pollutant concentrations and would be less than significant. Impacts related to criteria air pollutant emissions during construction would be greater than the Proposed Plan and would be significant and unavoidable. **Mitigation Measures AQ-1** to **AQ-8** would be applied to this alternative but, similar to the Proposed Plan, impacts would remain significant and unavoidable.

As with the Proposed Plan, **Mitigation Measure AQ-9** would be applied but impacts related to TACs during operation from distribution facilities would be significant and unavoidable without specific project details. The impacts would be less than the Proposed Plan, as there would be a reduction in industrial zones and where distribution centers would be permitted under Alternative 3. As a result, there would be a reduction in truck activity and potentially industrial emissions in the CPA but impacts would remain significant and unavoidable. As to construction impacts to sensitive receptors, **Mitigation Measures AQ-1** to **AQ-8** would apply to Alternative 3, reducing any potential impacts to sensitive receptors from construction to a less than significant level.

The increase in development in the CPA accommodated by Alternative 3 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to heavily expanded use of consumer products and increased energy demand, similar to the Proposed Plan. However, similar to the Proposed Plan, there are no mitigation measures for operational VOCs emissions, and impacts would be significant and unavoidable and greater than the Proposed Plan due to greater population.

It should be noted that because Alternative 3 would accommodate more development than the Proposed Plan in the Boyle Heights CPA, it may limit growth that would occur elsewhere in the City or region in locations that have less access to transit and less of a mix of jobs and housing. As a result, overall citywide and regional VMT and associated emissions would foreseeably incrementally lessen under this scenario. As with the Proposed Plan, impacts related to odors would be less than significant.

Biological Resources

The Boyle Heights CPA is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors and habitat that would support special status plant or animal species. The Los Angeles River, as well as small portions of parks and open space, trees and minor urban landscaping are the only sources of biological

habitat in and around the Boyle Heights CPA. Both the Proposed Plan and Alternative 3 prioritize infill development in already urbanized area of the City, thus, minimizing development in areas of potential native biological habitat or wildlife corridors. As with the Proposed Plan, Alternative 3 would not foreseeably result in modification of the portions of the Los Angeles River because neither plan includes components that would affect the existing use, zoning, or land use designation of the Los Angeles River. As with the Proposed Plan, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Boyle Heights CPA. Therefore, future development would require adherence with federal MBTA and/or the CFGC regulations, and the LAMC Tree Preservation Ordinance (177,404). In addition, Alternative 3 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 3 would not conflict with goals, policies, or programs of the General Plan Framework or the City Conservation Element. As with the Proposed Plan, Alternative 3, impacts related to biological resources would be less than significant and would be similar to the Proposed Plan.

Cultural Resources

Alternative 3 would permit greater scale and intensity near the riverside area than the Proposed Plan would, and, therefore, may result in impacts to cultural resources, including demolition or alteration of a historical resource or its setting, or disturb areas that may potentially contain archaeological resources and/or human remains. Future developments in the Boyle Heights CPA would continue to be subject to existing federal, state, and local requirements regarding cultural resources and human remains and may be subject to project-specific mitigation requirements under CEQA. As with the Proposed Plan, existing requirements and imposition of **Mitigation Measures CR-1** through **CR-4** would reduce impacts to archaeological resource associated with Alternative 3 to a less than significant level. Similar to Proposed Plan, Alternative 3 impacts to human remains would be less than significant based on anticipated compliance with existing regulations.

Although existing regulations provide certain protections for significant historical resources, individual developments allowed by either Alternative 3 or the Proposed Plan could potentially cause a substantial adverse change in, or disturbance of historical resources as defined in *CEQA Guidelines* Section 15064.5. Therefore, as with the Proposed Plan, impacts to historical resources would be significant and unavoidable under Alternative 3 and similar to the Proposed Plan.

Energy

Alternative 3 would accommodate greater overall development and associated growth than the Proposed Plan. Alternative 3 would result in in 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan. Therefore, it is reasonable to assume that overall, implementation of Alternative 3 would result in greater overall energy consumption as compared to the Proposed Plan. As discussed under **Impact 4.5-1** in **Section 4.5, Energy**, (**Table 4.5-6** through **Table 4.5-8**) implementation of the Proposed Plan would result in increased energy consumption in the Boyle Heights CPA above 2016 baseline conditions. However, the Proposed Plan would result in lower per capita electricity and natural gas consumption for year 2040, as compared to 2016 baseline conditions. The lower per capita energy use that would occur can be attributed to the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. Although Alternative 3 would result in greater energy consumption in the Boyle Heights CPA overall, the higher overall development intensity may reduce per capita VMT and energy consumption in the City and region. Thus, Alternative 3 would result in incrementally reduced impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy. Like the Proposed Plan, Alternative 3 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. Neither Alternative 3 nor the Proposed Plan would conflict with applicable federal, state, and local energy conservation policies aimed at decreasing reliance on fossil fuels and increasing reliance on renewable energy sources. Overall, impacts would be less than significant under Alternative 3, and less than the Proposed Plan.

Geology and Soils

As with the Proposed Plan, Alternative 3 would generally accommodate development in the same footprints as existing structures in the Boyle Heights CPA. Any new development in the Boyle Heights CPA would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Boyle Heights CPA may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. For all geological impacts except paleontological, as discussed below, impacts would remain less than significant for Alternative 3.

Similar to the Proposed Plan, Alternative 3 would have the potential to disturb paleontological resources for projects that involve excavation or grading in previously undisturbed soils that contain paleontological resources. Although with more overall development activity, such impacts would be greater than the Proposed Plan. **Mitigation Measures GEO-1**, **GEO-2**, and **GEO-3** would be applied to Alternative 3 and would reduce impacts to less than significant. Impacts from Alternative 3 related to paleontological resources would be greater than the Proposed Plan but would remain less than significant with mitigation measures.

Greenhouse Gas Emissions

Alternative 3 would accommodate more development and associated growth than the Proposed Plan. Alternative 3 would result in in 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan. Therefore, it is reasonable to assume that overall, implementation of Alternative 3 would result in greater overall energy consumption and associated GHG emissions, as compared to the Proposed Plan; however, as with energy, per capita emissions would be lower. **Section 4.7, Greenhouse Gas Emissions**, **Table 4.7-5** compares current annual GHG emissions for the Boyle Heights CPA to 2040 emissions. Implementation of the Proposed Plan would result in a 13 percent increase in total GHG emissions in the Boyle Heights CPA by 2040 and a 15 percent reduction in per capita GHG emissions, compared to 2016 baseline conditions. The reduction in per capita GHG emissions below baseline conditions can be attributed to a combination of state mandated GHG emission reduction strategies and the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking. It is reasonable to assume that under Alternative 3 future per capita emissions would also be lower than existing 2016 baseline emissions due to improved energy efficiency and reduced per capita VMT. Thus, the per capita and net reduction in GHG emissions under Alternative 3 would demonstrate compliance with regional, state, and federal efforts to reduce climate impacts from development and transportation. Overall, impacts would be less than significant under Alternative 3 and less than the Proposed Plan.

Hazards and Hazardous Materials

The southern and western portion of the CPA is within the Exide PIA and undergoing clean up from the DTSC. However, it is possible that additional contaminated properties are located outside of the PIA within the CPA. Grading and excavation of sites for future development outside of the PIA could result in additional contaminated soils being disturbed. If any unidentified sources of contamination are encountered during grading or excavation (from Exide or other industrial operations), earth moving activities could pose health and safety risks from exposure to hazardous materials or vapors until such time

that contaminants are identified; once contamination is identified regulations for the handling, transport and disposal of contaminated materials would reduce impacts to a less than significant level. The mitigation measures identified as part of the Proposed Plan (**HAZ-1** through **HAZ-3**) would be required to reduce impacts. Impacts would be similar to the Proposed Plan.

As with the Proposed Plan, the types of hazardous materials that could be present during operation of commercial, residential, and industrial uses associated with Alternative 3, include maintenance products (e.g., paints and solvents); oils, lubricants and refrigerants associated with building, mechanical, and HVAC systems; and grounds and landscape maintenance products formulated with hazardous substances, including fuels, cleaners and degreasers, solvents, paints, lubricants, adhesives, sealers, pesticides/herbicides, and industrial related chemicals. Thus, similar to the Proposed Plan impacts are expected to be less than significant based on federal state and local regulations on these products.

While Alternative 3 would accommodate residential uses in proximity to industrial uses and would introduce residential uses into an area where industrial uses are present, existing and future uses would be required to comply with existing safety standards related to the handling, use and storage of hazardous materials, and applicable federal, State and local laws and regulations. Moreover, the placement of residences near industrial activity would not increase the use of hazardous materials. It would not be expected to increase, change or exacerbate any risk currently existing from industrial uses that would impact the existing residents and businesses or future residents or businesses from development of the Alternative 3. Impacts would be less than significant and similar to the Proposed Plan. As with the Proposed Plan, redevelopment, renovation, and demolition of structures built before 1979 under Alternative 3 could potentially involve asbestos or lead but asbestos and lead would not be released into the atmosphere with compliance of existing regulations. In addition, future development could potentially occur in Methane Zones and Methane Buffer Zones and near oil wells. Compliance with applicable regulations would reduce such impacts to a less than significant level. Like the Proposed Plan, grading and construction activity could potentially result in the release of soil and/or groundwater contamination. This could potentially affect schools or involve a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, create a significant hazard to the public or the environment. However, with imposition of **Mitigation Measures HAZ-1** through **HAZ-3** to Alternative 3 impacts would be less than significant. Because it is not possible to know exactly which sites would be redeveloped and if those sites are contaminated, overall impacts associated with Alternative 3 would be similar to those of the Proposed Plan.

Similar to the Proposed Plan, there would be no or less than significant impacts related to airports, wildfires or emergency management plans because there are no airports, private airstrips, or wildlands in or near

the Boyle Heights CPA and development under Alternative 3 would not interfere with circulation plans or emergency management plans.

Hydrology and Water Quality

The Boyle Heights CPA is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is located adjacent to the western boundary of the CPA. Similar to the Proposed Plan, Alternative 3 would generally accommodate development within the same footprint as existing structures in the Boyle Heights CPA. Therefore, implementation of Alternative 3 would not substantially alter drainage patterns that would result in substantial erosion, siltation, or flooding on- or off-site. Any new development would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, any new development projects would be required to incorporate BMPs to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of properties in the Boyle Heights CPA would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, Alternative 3 would result in less than significant impacts with respect to hydrology and water quality, similar to those of the Proposed Plan.

Land Use and Planning

As with the Proposed Plan, Alternative 3 would allow development of greater scale and intensity than currently exists in portions of the Boyle Heights CPA. This alternative would permit mixed-use development in an area that the Proposed Plan designates and zones for industrial uses. From 3rd Street to 6th Street and Mission Road to Clarence Street, the proposed Land Use Designation would change to Hybrid Industrial. This area would be permitted to build new residential construction if a minimum of 1.0:1 FAR is set aside for jobs-producing uses. Between 6th Street and 7th Street, Mission Road to the freeway, the land use designation would be changed to Community Center. These blocks would be zoned with a traditional mixed-use zone that permits residential and commercial uses but does not permit industrial uses. Alternative 3 could result in higher community benefits by allowing greater residential and commercial development in the Boyle Heights CPA than the Proposed Plan.

Compared to the Proposed Plan, Alternative 3 would increase development intensity and related growth in the Boyle Heights CPA. This will meet objectives related to accommodating projected population, housing, and employment growth in Framework identified centers and corridors located near transit. In addition, by concentrating more development Boyle Heights, this alternative may incrementally reduce growth elsewhere in the City where transit options and mixed uses are more limited. However, Alternative 3 would meet the Secondary Objective to support jobs-producing uses by maintaining industrially planned lands for employment generating uses to a lesser degree than the Proposed Plan. Either Alternative 3 or the Proposed Plan would be consistent with policies and objectives contained in the RTP/SCS with respect to high density, transit-oriented development. Similar to the Proposed Plan, Alternative 3 would also be generally consistent with the City's General Plan and Framework Element, Mobility Plan 2035, Air Quality Element and Housing Element. Like the Proposed Plan, Alternative 3 would not physically divide an established community or conflict with an applicable habitat conservation plan or natural community conservation plan. As with the Proposed Plan, impacts would be less than significant under Alternative 3.

Noise

Similar to the Proposed Plan, Alternative 3 would include construction activity that would result in temporary increases in ambient noise levels on an intermittent basis. Noise levels would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Sensitive receptors are located throughout the CPA and could be exposed to noise associated with construction activities related to reasonably anticipated development from the Proposed Plan. Residential uses are the primary sensitive receptors located within the CPA.

Mitigation Measures NOI-2 and **NOI-3** would be applied to Alternative 3. Additionally, construction activities occurring in the CPA are subject to the Regulatory Compliance Measures adopted pursuant to the City's noise ordinances. These measures include:

- Compliance with the Noise Ordinance No. 161.574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically infeasible.

- Compliance with LAMC Section 41.40, which restricts construction activities to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday and federal holidays, and prohibits activities on Sundays.

- Compliance with the City's Building Regulations Ordinance No. 178.048, which requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed

by code or any discretionary approval for the site, and City's telephone numbers where violations can be reported. The notice shall be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public and approved by the Los Angeles Department of Building and Safety (LADBS).

- LAMC Chapter 41.40, Section 112.05 establishes performance standards for powered equipment or tools. The maximum allowable noise level for most construction equipment within 500 feet of any residential zone is 75 dBA measured at 50 feet from the noise source. This restriction holds unless compliance is not technically feasible even with the use of noise "mufflers, shields, sound barriers, and/or other noise reduction devices or techniques."

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. Thus, although **Mitigation Measures NOI-2** and **NOI-3** would be imposed on Alternative 3 and would reduce impacts to the degree feasible, similar to the Proposed Plan, Alternative 3 would result in a significant and unavoidable impact related to construction vibration. Alternative 3 would result in similar levels of construction vibration impacts as the Proposed Plan because the Los Angeles River area proposed for additional development is currently primarily industrial uses that are not considered sensitive to vibration impacts.

Compared to the Proposed Plan, duration of construction and use of heavy-duty equipment in the Alternative 3 scenario would be greater than the Proposed Plan due to increased overall development potential. The overall impact generated by temporary construction noise under Alternative 3 would be greater than that of the Proposed Plan and the impact would remain significant and unavoidable, even with implementation of **Mitigation Measures NOI-1** through **NOI-3**.

Alternative 3 would not be expected to increase operational stationary noise within the "normally unacceptable" or clearly unacceptable" categories based on land use compatibility standards in the City's Noise Element and existing operational and building standards. For mobile noise levels, a 3 dBA increase in noise requires a doubling of noise from the source (i.e., doubling of traffic volume) which would not occur under either the Proposed Plan or Alternative 3. Operational noise impacts would be less than significant and would be similar to the Proposed Plan as the additional residential units would be located in the industrial area which is not a noise sensitive use.

It is not anticipated that new development in the Boyle Heights CPA would involve activities that would result in substantial operational vibration (e.g., blasting operations). As with the Proposed Plan, operational

groundborne vibration in the vicinity of new development under Alternative 3 would be primarily generated by vehicular travel on the local roadways. According to the FTA Transit Noise and Vibration Impact Assessment guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible.[3] Accounting for vehicle trips that would be accommodated by the Alternative 3, traffic vibration levels would be similar to existing conditions and not perceptible by sensitive receptors. Therefore, similar to the Proposed Plan, impacts related to operational vibration under Alternative 3 would be less than significant.

Similar to the Proposed Plan, Alternative 3 would have no impacts related to airport noise.

Population and Housing

Alternative 3 would result in 3,000 more housing units (9%), 9,000 more persons (8%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan. Therefore, like the Proposed Plan, Alternative 3 would increase the development capacity of the Boyle Heights CPA in a manner that accommodates SCAG growth projections for the Boyle Heights CPA. To an even greater degree than the Proposed Plan, Alternative 3 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access and would also expand areas where new residential and mixed-use development would be permitted along the western portion of the CPA near the Los Angeles River. Alternative 3 would also result in additional community benefits by allowing greater residential, including affordable units, and commercial development in the Boyle Heights CPA. The increased growth would further several of SCAG's regional goals to provide additional housing within proximity to transit. Additionally, SCAG's growth projections are citywide, not based on the CPA. Growth under Alternative 3 would not exceed citywide population growth projections and would not induce unplanned citywide growth.

Alternative 3 would accommodate new development and redevelopment projects in an area of the Boyle Heights CPA that does not have residential uses currently. As such, there would be no additional temporary displacement of housing from this alternative. Further, this alternative would accommodate more housing overall thereby reducing the need for housing in other parts of the City that could result in displacement. Therefore, Alternative 3 would allow for additional construction of housing in an urbanized area, which would offset displacement of existing housing throughout the City. As more housing would be located in the CPA, it would reduce the potential for unplanned growth elsewhere in the City. As a result, population and housing impacts would be less than significant under Alternative 3 and similar to the Proposed Plan.

---

3 FTA. Transit Noise and Vibration Impact Assessment. September 2018.

Public Services

Alternative 3 would accommodate more overall development and associated growth than the Proposed Plan. Alternative 3 would result in 3,000 more housing units (9%), 9,000 more persons (8%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan. With respect to fire and police services, the additional population growth would increase demand for fire and police protection service in the Boyle Heights CPA. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the Boyle Heights CPA, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. However, depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts similar to those of other types of infill development analyzed in this EIR. However, project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5.0-12** residential and non-residential development accommodated by Alternative 3 would result in an estimated 19,641 new students by 2040. Of this total, an estimated 10,021 would enroll in elementary school, 3,098 would enroll in middle school, 5,814 would enroll in high school, and 708 would enroll in special day classes. Alternative 3 would result in an approximately 7.5 percent increase in students as compared to the Proposed Plan. As such, Alternative 3 would accommodate development that would increase the student population of the Boyle Heights CPA and would create the need for new or expanded school facilities, but to a greater extent than the Proposed Plan. As with the Proposed Plan, developers would be required to pay applicable school impact fees. As with the Proposed Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

Table 5.0-12
Alternative 3 Anticipated Student Generation in the Boyle Heights CPA

Land Use	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential[1]	36,529 DU	8,288	2,232	4,734	708	15,962
Non-Residential[2]	76,026,801 SF	1,733	866	1,080	-	3,679
Total Students Generated by Alternative 3		10,021	3,098	5,814	708	19,641

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
Totals may not add up due to rounding.

[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du

[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 3 or the Proposed Plan would increase demand for library facilities. However, the Boyle Heights CPA is served by library facilities and would not require the construction of new or expanded facilities under either the Proposed Plan or Alternative 3.

Compared to the Proposed Plan, Alternative 3 would accommodate more intense development and associated growth, thus requiring more public services in Boyle Heights. However, this may reduce development elsewhere in the City, resulting in less need for expansion of public services in other areas. Overall, impacts under Alternative 3 would be less than significant, as with the Proposed Plan; however, due to the incremental increase in population, impacts would be slightly greater under Alternative 3.

Recreation

Alternative 3 would accommodate more development and associated growth than the Proposed Plan. As with the Proposed Plan, any new development would increase the use of existing park and recreational facilities throughout the City, including in and around adjacent to the Boyle Heights CPA. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 3, the Boyle Heights CPA population is projected to increase to approximately 124,000 residents by 2040, thereby decreasing the ratio of parks to residents to

approximately 0.4 acres per 1,000 residents. Therefore, impacts to park and recreation facilities would be incrementally greater under Alternative 3 as compared to the Proposed Plan.

Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. This would partially mitigate impact related to the deterioration of facilities. Nevertheless, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the Boyle Heights CPA, implementation of either Alternative 3 or the Proposed Plan could accelerate the deterioration of existing parks in and around the Boyle Heights CPA. Such impacts to existing recreational facilities would be significant and unavoidable under either Alternative 3 or the Proposed Plan, but greater with Alternative 3. Impacts related to construction of new parks would be greater due to the increase in population but remain less than significant.

Transportation and Traffic

With respect to transportation, a significant impact would occur if the total daily VMT per service population were to increase above the 2016 Baseline or if there is inconsistency with the SCAG RTP/SCS. **Table 5.0-13** shows vehicle trips and VMT for the 2016 SCAG Region, 2016 Baseline and 2040 Alternative 3. As shown in **Table 5.0-13**, compared to the 2016 SCAG Region conditions, Alternative 3 has lower vehicle trips per service population (2.3 versus 3.1) and lower VMT per service population (20.8 versus 33.9). VMT per service population under Alternative 3 would be 20.8, while the 2016 Baseline VMT per service population in the Boyle Heights CPA is 23.2.

Given that service population VMT for the Alternative 3 is more than 15% below the 2016 SCAG Region and it has less service population VMT than the 2016 Baseline for the Boyle Heights CPA, the Alternative 3 would ***have no significant impact*** with respect to VMT. Further, because the VMT per service population would be lower than the Proposed Plan, impacts with Alternative 3 would be reduced compared to the Proposed Plan.

Table 5.0-13
Comparison between Existing Traffic Conditions, The Proposed Plan and Alternative 3

Transportation Metric	Threshold		Proposed Plan (2040)	Alternative 3 (2040)
	2016 SCAG Region Conditions	2016 Plan Baseline Conditions		
Total Daily VT	82,283,000	262,500	355,300	369,400
Total Daily VT per Service Population	3.1	2.1	2.3	2.3
Total Daily VMT	908,573,000	2,968,900	3,334,100	3,364,300
Total Daily VMT per Service Population	**33.9**	**23.2**	**21.6**	**20.8**

Source: Cambridge Systematics, 2018

Similar to the Proposed Plan, under Alternative 3, freeway safety impacts related to off ramp queuing would continue to occur and be significant and unavoidable. While Alternative 3 would have lower overall per capita VMT compared to the Proposed Plan, it would increase overall VMT and more overall trips.

Similar to the Proposed Plan, Alternative 3 would not result in significant impacts related to increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. Impacts to emergency services would remain less than significant and would be similar to the Proposed Plan.

Tribal Cultural Resources

Development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Although neither the Proposed Plan nor Alternative 3 includes specific development projects, any new development accommodated by either scenario may disturb areas that potentially contain tribal resources. Alternative 3 could have incrementally greater impacts to the Proposed Plan as it would have greater development. As with the Proposed Plan, all future development projects would continue to be subject to existing federal, state, and local requirements and discretionary projects subject to CEQA review would be required to comply with AB 52, which for projects relying on a [mitigated] negative declaration or an EIR, includes consultation with California Native American tribe. Imposition of **Mitigation Measures CR-1** through **CR-3** in **Section 4.4, Cultural Resources**, and **MM TC-1** and **MM TC-2** in **Section 4.15, Tribal Cultural Resources**, to Alternative 3 would reduce Alternative 3

impacts to a less than significant level. Therefore, impacts associated with Alternative 3 would be less than significant with mitigation incorporated, but greater than the Proposed Plan.

Utilities and Service Systems

Alternative 3 would accommodate more development and associated growth than the Proposed Plan. Alternative 3 would result in 3,000 more housing units (+9%), 10,000 more persons (+9%), and 1,000 fewer jobs (-3%) by 2040 as compared to the Proposed Plan.

As shown in the table below, Alternative 3 would result in slightly greater annual water demand than the Proposed Plan (12,647 afy compared to 12,022 afy). Sufficient water supplies would be available to serve the CPA under Alternative 3, therefore impacts would be less than significant but slightly greater that the Proposed Plan.

Table 5.0-14
Alternative 3 Water Use in the Community Plan Area

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-Family [1]	7,306 du	329.0	2,403,674	2,692
Multi-Family [1]	29,223 du	189.0	5,523,147	6,187
Commercial[2]	23,288 jobs	69.0	1,606,872	1,800
Industrial[2]	13,467 jobs	121.0	1,629,507	1,825
Public Facilities[2]	1,850 jobs	69.0	127,650	143
		Alternative 3 Total	**11,290,850**	**12,647**

Source: City of Los Angeles Department of Water and Power, 2016. 2015 UWMP. https://www.ladwp.com/ladwp/faces/ladwp/aboutus/a-water/a-w-sourcesofsupply/a-w-sos-uwmpln?_afrLoop=188401731408212&_afrWindowMode=0&_afrWindowId=19iw0ec604_1#%40%3F_afrWindowId%3D19iw0ec604_1%26_afrLoop%3D188401731408212%26_afrWindowMode%3D0%26_adf.ctrl-state%3D3j7vbqgs1_4.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:
[1] Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family. Source: Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H (LADWP 2016a).
[2] Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area utilizing the same ratio as under the proposed plan. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.

As development occurs in the Boyle Heights CPA, upgrades to water conveyance systems may be required. Local water delivery lines may need to be replaced and upgraded in the vicinity of new development that is substantially more dense than existing development, and it is possible that the construction of new water lines may be necessary to serve new development under Alternative 3. However, if new facilities are

determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption (e.g., *CEQA Guidelines* Section 15302). The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. Any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed. Therefore, impacts related to the construction of new water conveyance infrastructure and wastewater treatment facilities or expansion of existing facilities under Alternative 3 would be incrementally greater, but impacts would remain less than significant.

As shown in the table below, estimated water usage in the CPA would be less for residential but greater for non-residential uses (see **Table 4.16-14, Existing [2016] and Future [2040] Estimated Wastewater Generation for the Boyle Heights Community Plan Area**). While sufficient capacity would exist at the HTP, impacts would be less than significant, but slightly greater than the Proposed Plan.

Table 5.0-15
Estimated Alternative 3 Wastewater Generation in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Employees	2040 Wastewater Generation Rate (gpd/unit)	Daily Wastewater Generation (gpd)
Residential[2]			
Single-Family	7,306 du	144.3	1,054,256
Multi-Family	29,223 du	137.9	4,029,852
		Residential Subtotal	**5,084,108**
Non-residential			
Commercial	23,288 employees	59.8	1,392,622
Industrial	13,467 employees	123.0	1,656,441
Public Facilities	1,850 employees	46.4	85,840
		Non-Residential Subtotal	**3,134,903**
		Alternative 3 Total	**8,219,011**

Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd
1 City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation. 2 For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

The City plans for increased water demand around SCAG growth forecasts for the City not plan areas. Additionally, based on City policy, new water demand is to be met by expanding water recycling and conservation. As under the Proposed Plan, all new development under Alternative 3 would be required to implement applicable water conservation measures. These measures include Water Efficiency Requirements Ordinance, Los Angeles Green Building Code, the most current California Green Building Standard Code, and all applicable regulations in the future. As discussed in Section 4.16, *Utilities and Service Systems*, under the Proposed Plan adequate supply would be available to meet estimated demand of the Boyle Heights CPA during normal and single dry year conditions and multiple dry years up to the year 2040. Therefore, despite the increased development resulting in new water demand, Alternative 3 is not anticipated to induce unplanned growth that will impact water supplies Citywide. Alternative 3 may result in the need for upgraded service lines, but overall capacity demand on water and wastewater service will be greater than Proposed Plan and less than significant.

Similarly, development under Alternative 3 would increase the amount of solid waste, and the proposed distribution of land uses would result in slightly increased overall solid waste generation compared to the Proposed Plan (824,740 lb/day compared to 841,240 lb/day with Alternative 3). As a result, solid waste impacts would be slightly higher than the Proposed Plan and would remain less than significant.

Table 5.0-16
Estimated Alternative 3 Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units or Square Footage	Annual Waste Generation Rate	Total Day Solid Waste Generated (lb/day)
Residential[2]			
Single-Family	24,800 residents	0.41 tons/resident	55,720
Multi-Family	29,223 du	0.46 tons/unit	73,660
		Residential Subtotal	**129,380**
Non-residential			
Commercial	22,026,407 SF	3.01 tons/1,000 sf	363,280
Industrial	43,208,439 SF	1.24 tons/1,000 sf	293,580
Public Facilities	10,791,956 SF	0.93 tons/1,000 sf	55,000
		Non-Residential Subtotal	**711,860**
		Alternative 3 Total	**841,240**

Source: Impact Sciences, 2022.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd; lb = pound
[1] CalEEMod default solid waste generation factors for residential and non-residential uses were used to determine solid waste generation. Default solid waste generation rates available in Table 10.1 of the CalEEMod User Guide Appendix D – Default Data Tables, available at: http://www.aqmd.gov/docs/default-source/caleemod/upgrades/2016.3/05_appendix-d2016-3-1.pdf
[2] For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 3, but improvements to Boyle Heights CPA distribution and telecommunications facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the CPA. As with the Proposed Plan, impacts associated with Alternative 3 would be less than significant.

Conclusion

Alternative 3 would accommodate increased development overall compared to the Proposed Plan in the CPA. Since Alternative 3 would have greater overall development than the Proposed Plan, it would result in greater impacts to public services and utilities as these topic areas are largely driven by population and Alternative 3 would increase the number of housing units and population compared to the Proposed Plan. Alternative 3 would allow new housing opportunities in the area of the CPA closest to Downtown Los Angeles, which is a major employment center and transit hub for the wider region. Due to the proximity to Downtown Los Angeles and new infrastructure investments in the riverside area, specifically the new 6th Street Viaduct Replacement Project and 6th Street PARC Project, if Alternative 3 were to be adopted it is reasonably foreseeable that new housing development within the CPA would likely occur in the riverside area, which could lessen overall impacts to temporary construction (air quality and noise) in other areas of the CPA. Alternative 3 would result in the same impact conclusions as the Proposed Plan in all impact categories. Unavoidable significant impacts under this alternative would occur with regards to historical resources, air quality, construction noise and vibration, recreational facilities, and traffic safety related to highway off-ramps. However, due to its more efficient land use, Alternative 3 would result in lesser impacts to VMT, land use, GHG, air quality, and energy.

5.5.4 Alternative 4 – No Project

Alternative Description

The No Project Alternative involves continued implementation of the existing 1998 Boyle Heights Community Plan. Under this alternative, the current 1998 Boyle Heights Community Plan would continue to apply and existing plans and policies would continue to accommodate development in accordance with existing General Plan designations. This Alternative would assume that the Proposed Plan, new zoning designations, and the Boyle Heights CPIO, which includes a Local Affordable Housing Incentive Program and review procedures for projects that involve properties that have been identified as an eligible historical resource, are not adopted for Boyle Heights.

As shown in **Table 5.0-1**, under the current plan the Boyle Heights CPA is projected to accommodate a population of 98,000 residents, 28,000 housing units, and 32,000 jobs by 2040. SCAG projects growth of the

Boyle Heights CPA to reach 93,000 residents, 27,000 housing units, and 35,000 jobs by 2040. Therefore, employment growth in the Boyle Heights CPA would fall below SCAG's forecasts under current plans, while forecast population and housing growth would be accommodated for the CPA. Overall, current land use patterns limit population and housing growth in the Boyle Heights CPA, as compared with the Proposed Plan and would likely cause development to occur elsewhere in the region to meet the 2040 SCAG projections for population and housing. This may increase regional emissions of air pollutants and greenhouse gases as well as increased regional energy consumption, VMT, and population displacements.

Alternative 4 is included in because the *CEQA Guidelines* require the analysis of a "no project" alternative. The analysis of Alternative 4 treats the alternative as a "new" project similar to the other alternatives and discusses potentially "significant" impacts. It should be noted that Alternative 4 (i.e., the continuation of the existing Plan) would not require any new discretionary approval from the City and, therefore, would not technically have any new impacts under CEQA, nor would the City have a mechanism for imposing the mitigation measures proposed for the Proposed Plan and other project alternatives.

Alternative 4 would meet some of the primary project objectives, including: preserving community character by maintaining traditional character of neighborhoods and maintain existing affordable housing units. It would partially meet the primary objective of accommodating projected population, housing, and employment growth; however, as noted above, employment growth in the Boyle Heights CPA would fall below SCAG's forecasts under this alternative. Alternative 4 would also meet the secondary project objective of supporting jobs-producing uses by maintaining industrially planned lands for employment generating uses.

Due to limitations placed on development in the Boyle Heights CPA under existing plans and policies, Alternative 4 would not be consistent with several primary objectives, such as accommodating population growth into Framework identified centers and corridors located near transit and strengthening vibrant mixed-use areas near transit that encourage a strong jobs/housing balance and support increased ridership, and walkability. It would also fail to fulfill the following secondary objectives: increase the opportunity for small business and jobs located in transit station areas and along connecting corridors; improve the function and design of neighborhoods throughout the CPA by promoting a diversity of neighborhood serving uses near residential areas, discouraging a proliferation of auto related uses along pedestrian corridors, and enhancing pedestrian oriented design along corridors; and implement the new zoning code districts and rules as applicable to this geography, through the adoption of the Proposed Plan.

Although Alternative 4 would partially fulfill other objectives, it would meet the following objectives to a lesser degree than the Proposed Plan would: reduce vehicle miles traveled to meet the goals of the Senate Bill 375, Senate Bill 743, and California Assembly Bill 32 to reduce carbon emissions; and support jobs-

producing uses by maintaining industrially planned lands for employment generating uses and increase the opportunity for small business and jobs located in transit station areas and along connecting corridors.

Impact Analysis

Aesthetics

Under Alternative 4, development would continue under current planned land use patterns in the Boyle Heights CPA. Existing development primarily consists of residential uses with small-scattered pockets of open space and corridors of commercial uses. The western and southern edges of the CPA include industrial uses. Within the CPA, most buildings are considered low-rise, except for a few mid-rise buildings such as the Sears building and buildings associated with the White Memorial Medical Center. Compared to the Proposed Plan, Alternative 4 would generally accommodate less overall building height, scale, and intensity.

The current General Plan land use designations would accommodate development with less overall height, scale and intensity, as compared to the Proposed Plan, and thus may result in fewer changes in visual character, or obstruction of scenic views. Development under existing plan would be implemented in accordance with applicable state and local plans, policies and guidelines including, but not limited to, the City's General Plan Framework, Conservation Element, Mobility Plan 2035, and provisions of the LAMC as it relates to development standards, and visual character. Like the Proposed Plan, Alternative 4 could introduce new sources of light and glare in the Boyle Heights CPA. And while future development in the CPA would follow the existing land use designations, nighttime lighting and glare could still increase with new development permitted under the existing land use and zoning designations. Nonetheless, any additional effects would be incremental. In addition, future development would comply with applicable regulations regarding permitted light and glare. Overall, similar to the Proposed Plan, development accommodated by Alternative 4 may benefit, and would generally enhance, the visual character of the CPA, and impacts related to aesthetics would be less than significant and would be less overall compared to the Proposed Plan.

Air Quality

Alternative 4 would accommodate less overall development and associated growth than the Proposed Plan. Alternative 4 would result in 5,000 fewer housing units (-15%), 17,000 fewer residents (-15%), and 7,000 fewer jobs (-18%) through 2040 than would be anticipated under the Proposed Plan. Like the Proposed Plan, Alternative 4 would not increase reasonably anticipated development in the Boyle Heights CPA in a way that would be inconsistent with growth forecasts and, therefore, would not exceed the assumptions in the AQMP. However, the reduced level of growth in the CPA under Alternative 4 would

likely mean that more growth would occur elsewhere in the City or the region. This may increase regional impacts related to air quality as a function of VMT if growth occurs in areas with fewer transit options and longer distances between jobs, housing, and services. Like the Proposed Plan, Alternative 4 would not increase reasonably anticipated development in the Boyle Heights CPA in a way that would be inconsistent with SCAG's growth forecasts for the City; therefore, Alternative 4 would not conflict with the AQMP. However, because Alternative 4 would accommodate less overall growth in the Boyle Heights CPA than would the Proposed Plan, it would attain the policy goals of the RTP/SCS, AQMP, and City General Plan Framework Element and Air Quality Element goals related to concentrating development in areas with access to transit and reducing VMT and associated emissions to a lesser degree than the Proposed Plan. Therefore, impacts related to conflicting with or obstructing implementation of an applicable air quality plan would be greater than the Proposed Plan but would remain less than significant.

As with the Proposed Plan, it is reasonable to assume that development would result in increased construction emissions of NOx. Although less construction may occur overall under Alternative 4 (i.e., a 15% reduction in the number of housing units) compared to the Proposed Plan, maximum daily emissions would be similar to what would occur under the Proposed Plan since the nature and magnitude of individual construction projects would be similar. Similarly, because less development would occur under Alternative 4, it is reasonable to assume that overall operational emissions would be less as compared to the Proposed Plan. Nevertheless, because a 95 percent reduction in VOC emissions would be needed to bring VOC emissions under the SCAQMD threshold under the Proposed Plan, the increase in development in the Boyle Heights CPA accommodated by Alternative 4 would result in daily emissions of VOC that would exceed the SCAQMD regional significance thresholds due to expanded use of consumer products and increased energy demand. Mitigation measures required for the Proposed Plan would also reduce impacts associated with this alternative. However, because this alternative would not be subject to mitigation measures proposed in the Proposed Plan, criteria pollutant emissions would be potentially higher than the Proposed Plan. Additionally, exposure of sensitive receptors to temporary construction emissions could be significant and unavoidable without the mitigation measure and impacts from toxic air contaminants (TACs) from distribution center truck activity would be greater than that of the Boyle Heights CPA and would be significant and unavoidable. Large individual projects would likely be subject to additional environmental review, which may impose mitigation measures addressing temporary construction emissions. Exposure to odors would also be similar to the less than significant impact identified for the Proposed Plan. Under the No Project, impacts related to construction and operational emissions, and as well exposure of sensitive receptors to temporary construction emissions would be significant and greater than the Proposed Plan.

Biological Resources

The Boyle Heights CPA is urbanized and generally lacks riparian habitat, wetlands, wildlife corridors, habitat, or Significant Ecological Areas. However, there are nine special status animal and nine special status plant species within the Boyle Heights CPA and its vicinity. The Los Angeles River, as well as small portions of parks and open spaces, trees and minor urban landscaping are the only sources of biological habitat in and around the Boyle Heights CPA. Current City Plans and the Proposed Plan prioritize infill development, thus minimizing development in areas of potential native biological habitat or wildlife corridors. Implementation of current plans, like the Proposed Plan, would not foreseeably result in modification of the portions of the Los Angeles River, as the plans do not include components that would affect the existing use, zoning, or land use designations of the Los Angeles River. Although implementation of Alternative 4 would involve less overall development and associated growth than the Proposed Plan, the Proposed Plan would include policies to improve access to the river, along with zoning code changes that would ensure future heavy industrial development would not be located near the Los Angeles River. Alternative 4 would not include these zoning changes. However, the man-made concrete-lined nature of the river through the Boyle Heights CPA ensures that sensitive communities are not present in the Boyle Heights CPA. Further, any new development has the potential to disturb sensitive plant or animal species such as nesting birds and heritage or protected trees in the Boyle Heights CPA. Therefore, any future development would require adherence with the federal MBTA, the CFGC, and the LAMC Tree Preservation Ordinance (177,404). Alternative 4 would not interfere with natural resources, degrade the sustainability of natural resources in the region, disrupt existing open space or encroach upon any natural settings. Therefore, Alternative 4 would not conflict with goals, policies, and programs of the General Plan Framework or the City Conservation Element. As with the Proposed Plan, the impacts to biological resources would be less than significant. Alternative 4 would result in less development overall, therefore reducing the overall potential for impacts compared to the Proposed Plan.

Cultural Resources

As with the Proposed Plan, Alternative 4 may result in demolition or alteration of historical resources or their setting or disturb areas that may potentially contain archaeological resources. Alternative 4 would accommodate development consistent with current land use designation and patterns and, as such, may result in slightly reduced impacts to historical resources and associated settings as compared to the Proposed Plan. Either Alternative 4 or the Proposed Plan would have the potential to disturb archaeological resources and/or human remains. All future development projects would continue to be subject to existing federal, state, and local requirements with respect to cultural resources and discretionary projects may be subject to project-specific mitigation requirements under CEQA. With the Proposed Plan, implementation of **Mitigation Measures CR-1** through **CR-4** would reduce the potential to disturb archaeological resources

and human remains. However, because this alternative would not be subject to mitigation measures proposed in the Proposed Plan, the potential for disturbance would be greater than under the Proposed Plan and would be significant and unavoidable. In addition, although existing regulations provide certain protections for significant historical resources, individual developments allowed by Alternative 4 could potentially cause a substantial adverse change in or disturbance of historical resources as defined in *CEQA Guidelines* Section 15064.5. While there would be less development overall reducing the overall potential for impacts, this alternative would not be subject to mitigation measures proposed for the Proposed Plan, including the CPIO's review procedures for projects that involve properties that have been identified as an eligible historical resource. The potential for disturbance of cultural resources would be greater than under the Proposed Plan, and significant and unavoidable.

Energy

As compared to the Proposed Plan, development under Alternative 4 would result in less transportation energy use and less electricity and natural gas consumption than the Proposed Plan in 2040. However, on a per capita basis, Alternative 4 would result in more transportation energy use and more electricity and natural gas consumption than the Proposed Plan for year 2040. In addition, Alternative 4 would result in 2040 per capita electricity and natural gas consumption higher than under the baseline conditions, while the Proposed Plan would result in lower per capita electricity and natural gas consumption in 2040 as compared to baseline conditions. **Section 4.5, Energy**, **Table 4.5-6** through **Table 4.5-8** compares current energy consumption to 2040 energy consumption. Implementation of the Proposed Plan would result in a 16 percent decrease in transportation energy use from baseline conditions, a 112 percent increase in electricity consumption, and a 65 percent increase in natural gas consumption. Implementation of Alternative 4 would result in a one percent decrease in transportation energy use from baseline conditions, a 132 percent increase in electricity consumption, and a 75 percent increase in natural gas consumption. The lower per capita energy use that would occur under the Proposed Plan can be attributed in part to the fact that implementation of the Proposed Plan would lower per capita VMT due to the location of jobs and housing in close proximity to each other and creation of substantial opportunities to use such transportation modes as transit, bicycling, and walking.

Because Alternative 4 would consume less energy overall, but more energy than the Proposed Plan on a per capita basis, it may result in incrementally greater impacts with respect to the inefficient, unnecessary, or wasteful direct or indirect consumption of energy as compared to the Proposed Plan. Nevertheless, as within the Proposed Plan, Alternative 4 would not result in energy demands that exceed the existing or planned capacity for the service area or the wider Southern California region. In addition, neither Alternative 4 nor the Proposed Plan would conflict with applicable federal, state, or local energy sources. Overall, impacts would be less than significant under Alternative 4, as with the Proposed Plan.

Geology and Soils

Implementation of Alternative 4 and Proposed Plan would generally accommodate development in the same footprints as existing structures in the Boyle Heights CPA. Any new development in the Boyle Heights CPA under either Alternative 4 or the Proposed Plan would be exposed to existing geologic and soil hazards; however, it would not increase the potential for such hazards or create new hazards. Compliance with existing regulatory requirements and policies, including the LAMC and CBC would reduce impacts from adverse effects related to seismic activity and ground shaking, liquefaction, on or off-site landslides, ground failure; or adverse effects related to expansive soil, or to a geologic unit or soil that is unstable or would become unstable as a result of the project and result in landslide, lateral spreading, liquefaction or collapse. In some cases, future development in the Boyle Heights CPA may reduce the potential for property damage and/or safety concerns by replacing older structures with new structures built to current seismic standards. For all geological impacts except paleontological, as discussed below, impacts would remain less than significant for Alternative 4.

Similar to the Proposed Plan, Alternative 4 would have the potential to disturb paleontological resources. With the Proposed Plan, implementation of **Mitigation Measures GEO-1** through **GEO-3** would reduce the potential to disturb or damage paleontological resources. However, because this alternative would not be subject to mitigation measures proposed for the Proposed Plan, the potential for disturbance of paleontological resources would be greater than under the Proposed Plan and would be significant and unavoidable.

Greenhouse Gas Emissions

Development accommodated by either Alternative 4 or the Proposed Plan would generate GHG emissions through individual project construction and operation. GHG emissions would be generated by direct sources such as motor vehicles, natural gas consumption, solid waste handling/treatment, and indirect sources such as electricity generation. **Section 4.7, Greenhouse Gas Emissions**, **Table 4.7-5** compares current annual GHG emissions for the Boyle Heights CPA to 2040 emissions with and without the Proposed Plan. Implementation of Alternative 4 would result in a 7 percent increase in total GHG emissions in the Boyle Heights CPA in 2040 and a 5 percent reduction in per capita GHG emissions compared to 2016 baseline conditions. Implementation of the Proposed Plan would result in a 13 percent increase in total GHG emissions in the Boyle Heights CPA in 2040 and a 15 percent reduction in per capita GHG emissions. Under either Alternative 4 or the Proposed Plan, future per capita emissions would be lower than under 2016 baseline emissions due to improved energy efficiency and reduced per capita VMT. The per capita reduction in GHG emissions demonstrates compliance with regional, state, and federal efforts to reduce

climate impacts from development and transportation. Overall, impacts would be less than significant under Alternative 4, as with the Proposed Plan.

Although Alternative 4 would result in fewer GHG emissions than the Proposed Plan in the Boyle Heights CPA, it would accommodate less intense development and associated growth in the Boyle Heights CPA, which may result in more population and housing growth elsewhere in the City and region where fewer transit options are available and the distances between residences, jobs, and services are greater. As a result, overall citywide and regional GHG emissions as a function of VMT may increase and Alternative 4 would not be as consistent with climate goals outlined in AB 32, SB 32, SB 375 (through demonstration of conformance with the RTP/SCS), and the City's Green New Deal, resulting in a significant impact. Overall GHG emissions would be incrementally greater than those of the Proposed Plan.

Hazards and Hazardous Materials

Development under the City's General Plan would continue under the current planned land use pattern in the City. Alternative 4 would involve no change to planned land use patterns and would involve less overall development capacity and associated growth than would occur under the Proposed Plan. The southern and western portion of the CPA is within the Exide Preliminary Investigation Area (PIA). As discussed above, it is possible that properties outside the PIA are also contaminated but have not yet been tested. The Proposed Plan includes **Mitigation Measures HAZ-1** through **HAZ-3** which would reduce the potential risk associated with accidental release of contaminated soils. Because Alternative 4 would not be subject to these mitigation measures, impacts would likely be greater than the Proposed Plan. It is possible that larger projects would undergo soil testing and identification through the due diligence or environmental review process, thereby reducing impacts. Nonetheless, impacts would be significant without mitigation.

Moreover, similar to the Proposed Plan, Alternative 4 has the potential for upset or accident conditions involving hazardous materials release from transport, use, or disposal of hazardous materials and may be developed on a site which is included on a list of hazardous materials sites. However, because this alternative would not be subject to mitigation measures proposed in the Proposed Plan, the potential for exposure to contaminants to the public due to possible construction on hazardous sites, and release of hazardous emissions which could potentially affect schools would be greater than under the Proposed Plan and would be significant and unavoidable.

Similar to the Proposed Plan, this alternative would pose no or less than significant issues related to airports or emergency management plans because there are no airports or private airstrips in or near the CPA, and development under Alternative 4 would not interfere with circulation plans or emergency management

plans. No wildland fire hazard areas are present in Boyle Heights; therefore, no impacts related to wildland fire risks would occur.

Hydrology and Water Quality

The Boyle Heights CPA is urbanized and almost entirely paved and developed except for parks, green spaces, and the Los Angeles River, which is located near the western boundary of the Boyle Heights CPA. Alternative 4 would accommodate development in a manner consistent with current land use patterns and, therefore, would not substantially alter drainage patterns or result in substantial erosion, siltation, or flooding on- or off-site. Development accommodated by either Alternative 4 or the Proposed Plan would be subject to federal, state, and local requirements that prevent violations of water quality standards or waste discharge requirements and support the preservation and expansion of pervious surfaces. In addition, new development projects under either Alternative 4 or the Proposed Plan would be required to incorporate Best Management Practices to manage stormwater and reduce runoff during construction and operation, and industrial sources would be subject to additional stormwater management and discharge requirements under the NPDES program for industrial uses. Compliance with the City's LID Ordinance would further ensure that any future development resulting from either this alternative or the Proposed Plan would not require construction of new stormwater drainage facilities and or expansion of existing facilities beyond specific improvements needed for individual development projects. In the long-term, redevelopment of sites in the Boyle Heights CPA under either Alternative 4 or the Proposed Plan would improve surface water quality by replacing older development with new development that incorporates LID methods. Therefore, like the Proposed Plan, Alternative 4 would not adversely affect conditions with respect to hydrology and water quality and impacts would be less than significant.

Land Use and Planning

Under Alternative 4, development would continue under current planned land use patterns in the City. This alternative would not accommodate the greater building heights, scale and intensity that could occur in portions of the CPA under the Proposed Plan, especially in areas located near Metro stations and bus stops. As a result, Alternative 4 would be less consistent with RTP/SCS policies related to the provision of high intensity and transit-oriented development as well as with the City's General Plan and Framework Element, Mobility Plan 2035. It would also be inconsistent with the Housing Element, which calls for the CPA to accommodate the RHNA. As discussed under Air Quality, Alternative 4 may implement RTP/SCS, AQMP, and Air Quality Element policies related to concentrating development near transit and reducing regional VMT to a lesser degree than the Proposed Plan since the lower overall development totals may result in increased development elsewhere in the City and incrementally higher regional VMT. Like the Proposed Plan, Alternative 4 would not physically divide an established community or conflict with an

applicable habitat conservation plan, natural community conservation plan. Overall, like the Proposed Plan, this alternative would not conflict with existing land use plans and policies or divide a community. Overall, impacts related to land use would be greater under Alternative 4 than the Proposed Plan but would remain less than significant.

Noise

Similar to the Proposed Plan, Alternative 4 would include construction activity that would result in temporary increases in ambient noise levels on an intermittent basis. Noise levels would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers. Sensitive receptors are located throughout the CPA and could be exposed to noise associated with construction activities related to reasonably anticipated development from the Proposed Plan. Residential uses are the primary sensitive receptors located within the CPA.

Construction activities occurring in the CPA are subject to the Regulatory Compliance Measures adopted pursuant to the City's noise ordinances. These measures include:

- Compliance with the Noise Ordinance No. 161.574, and any subsequent ordinances, which prohibit the emission or creation of noise beyond certain levels at adjacent uses unless technically infeasible.

- Compliance with LAMC Section 41.40, which restricts construction activities to the hours of 7:00 a.m. to 6:00 p.m. Monday through Friday, and 8:00 a.m. to 6:00 p.m. on Saturday and federal holidays, and prohibits activities on Sundays.

- Compliance with the City's Building Regulations Ordinance No. 178.048, which requires a construction site notice to be provided that includes the following information: job site address, permit number, name and phone number of the contractor and owner or owner's agent, hours of construction allowed by code or any discretionary approval for the site, and City's telephone numbers where violations can be reported. The notice shall be posted and maintained at the construction site prior to the start of construction and displayed in a location that is readily visible to the public and approved by the Los Angeles Department of Building and Safety (LADBS).

- LAMC Chapter 41.40, Section 112.05 establishes performance standards for powered equipment or tools. The maximum allowable noise level for most construction equipment within 500 feet of any residential zone is 75 dBA measured at 50 feet from the noise source. This restriction holds unless compliance is not technically feasible even with the use of noise "mufflers, shields, sound barriers, and/or other noise reduction devices or techniques."

Compared to the Proposed Plan, duration of construction and use of heavy-duty equipment in the Alternative 4 scenario would be incrementally reduced compared to the Proposed Plan due to reduced overall development potential. Therefore, although the overall impact generated by temporary construction noise under Alternative 4 would be less than that of the Proposed Plan, the impact would remain significant and unavoidable.

All construction would be required to comply with the appropriate Regulatory Compliance Measures as well as LAMC Chapter 41.40, Section 112.05. Nevertheless, maximum noise levels generated by construction equipment under Alternative 4 could potentially involve two subterranean levels or more construction durations of 18 months or more, use of large, heavy-duty equipment rated 300 horsepower or greater, or the potential for impact pile driving. In addition, **Mitigation Measure NOI-1** for the Proposed Plan would not apply. Individual projects requiring additional environmental review may be subject to mitigation measures, but impacts from temporary construction noise resulting from implementation of Alternative 4 would be significant and unavoidable and be greater than that of the Proposed Plan.

Any future construction activity, specifically pile driving, could potentially generate vibration exceeding the 90 VdB threshold for buildings extremely susceptible to building damage (e.g., historical structures). Although mitigation is available to minimize the potential effects of vibration, it cannot be assured that construction-related vibration would not result in building damage. **Mitigation Measure NOI-2** and **NOI-3** would not apply and thus, construction-related vibration would be greater to that of the Proposed Plan, and significant and unavoidable impact.

Alternative 4 would not be expected to increase operational stationary noise within the "normally unacceptable" or clearly unacceptable" categories based on land use compatibility standards in the City's Noise Element based on existing operational and building standards. For mobile noise levels, a 3 dBA increase in noise requires a doubling of noise from the source (i.e., doubling of traffic volume) which would not occur under either the Proposed Plan or Alternative 4. Therefore, while impacts related to operational noise levels would be incrementally greater than both the baseline and the Proposed Plan under Alternative 4, operational noise impacts would be less than significant.

It is not anticipated that new development in the Boyle Heights CPA would involve activities that would result in substantial operational vibration levels (e.g., blasting operations). Like the Proposed Plan, operational groundborne vibration in the vicinity of new development associated with Alternative 4 would be primarily generated by vehicular travel on the local roadways. According to the FTA Transit Noise and Vibration Impact Assessment guidance document, rubber tires and suspension systems dampen vibration levels from trucks to a level that is rarely perceptible. Accounting for additional vehicle trips that would be

accommodated by Alternative 4, traffic vibration levels would be similar to existing conditions and not perceptible.

Similar to the Proposed Plan, Alternative 4 would have no impacts related to airport noise.

Population and Housing

The population forecast for Alternative 4 is below SCAG's RTP/SCS; however, Alternative 4 would concentrate forecast growth in an area with a mix of jobs and housing and with good transit access. As such, although it would not implement RTP/SCS policies related to jobs/housing balance and concentrating growth and development near transit to the same degree that the Proposed Plan would, it would not result in significant impacts related population or housing growth. Alternative 4 would have less potential to displace housing than the Plan but would also include less replacement housing. Like the Proposed Plan, Alternative 4 would result in an overall increase in housing that would more than offset any housing displacement that may occur. It should be noted, however, that limiting housing development in the Boyle Heights CPA as would occur under Alternative 4 may result in increased housing development elsewhere in the City, which could potentially increase temporary displacement of existing housing in other Los Angeles neighborhoods. Like the Plan, Alternative 4 would not induce substantial population growth inconsistent with the regional growth plans. Overall, impacts related to population and housing would be less than significant under Alternative 4, as with the Proposed Plan.

Public Services

Implementation of Alternative 4 would involve less overall development and associated growth than the Proposed Plan. Nevertheless, the increased growth under either scenario may require additional public facilities to serve new residents. With respect to fire and police services, either Alternative 4 or the Proposed Plan would accommodate new development that would increase demand for fire and police protection service. This may result in the need for new or expanded fire and police facilities. Based on the urbanized character of the CPA, it is anticipated that new or expanded facilities could be built without creating significant environmental impacts. Depending on the location or nature of new facilities, the construction of needed new facilities could potentially result in impacts; however, like the Proposed Plan, those impacts would be consistent with those already identified in this EIR for construction or operations of infill development. Project-specific environmental analysis under CEQA would be required to address any site-specific environmental concerns.

With respect to schools, as summarized in **Table 5.0-17**, residential and non-residential development accommodated by Alternative 4 would result in approximately 15, 459 new students by 2040. Of this total, an estimated 7,875 would enroll in elementary school, 2, 462 would enroll in middle school, 4,575 would

enroll in high school, and 547 would enroll in special day classes. Overall Alternative 4 would result in approximately 15 percent less students as compared to the Proposed Plan. As such, Alternative 4 would accommodate development that would increase the student population of the Boyle Heights CPA and would create the need for new or expanded school facilities, but to a lesser extent than the Proposed Plan. As with the Proposed Plan, developers would be required to pay applicable school impact fees. As with the Proposed Plan, any impacts associated with new school construction would be similar to those analyzed and identified in the EIR for other types of development, any site-specific impacts would be speculative and would be addressed by LAUSD as part of a project-level CEQA review.

Table 5.0-17
Alternative 4 Anticipated Student Generation in the Boyle Heights CPA

Land Use	Units	Student Generation				
		Elementary School (TK-5)	Middle School (6-8)	High School (9-12)	SDC	Total Students Generated
Residential[1]	28,200 DU	6,398	1,723	3,655	547	12,323
Non-Residential[2]	64,805,603 SF	1,477	739	920	-	3,136
Total Students Generated by Alternative 4		7,875	2,462	4,575	547	15,459

Note: du = dwelling units; sf = square feet; TK = Transitional Kindergarten; SDC = Specialized Day Care
Totals may not add up due to rounding.
[1] Student generation rates for residential use is based on Level 1 – Developer Fee Justification Study for Los Angeles Unified School District (LAUSD 2017d). Residential Generation Rates: Elementary: 0.2269/du, Middle School: 0.0611/du, High School: 0.1296 /du, SDC: 0.0194/du
[2] Student generation rates for non-residential use is based on the average of office and retail/service student generation rates for a conservative estimate, taken from the LAUSD Commercial/Industrial Development School Fee Justification Study, September 2010 (LAUSD 2010). Non-residential Generation Rates: Elementary: 0.0228/1,000 sf, Middle School: 0.0114/1,000 sf, High School: 0.0142/1,000 sf. Non-residential uses include commercial, industrial, and public facilities.

With respect to libraries, either Alternative 4 or the Proposed Plan would increase demand for library facilities. However, the City of Los Angeles is well served by library facilities and would not require the construction of new or expanded facilities.

Overall, impacts related to public services would be less than significant under Alternative 4, less than the Proposed Plan.

Recreation

Implementation of Alternative 4 would involve less overall development and associated population increases than the Proposed Plan. However, any new development would increase the use of existing park

and recreational facilities throughout the City, including in and around adjacent to the Boyle Heights CPA. The City of Los Angeles Public Recreation Plan states that in order to meet long-range local recreational standards, the City should maintain a minimum of two acres of neighborhood facilities and two acres of community recreational facilities for every 1,000 persons, or a combination of neighborhood and community facilities adding up to four acres. Under Alternative 4, the Boyle Heights CPA population is projected to increase to approximately 98,000 residents, thereby reducing the ratio of parks to residents to approximately 0.5 acres per 1,000 residents. Developers of residential projects would be required to pay park impact fees, dedicate land, include outdoor amenity spaces, or pay in-lieu Quimby fees to fund new park and recreational facilities. This would partially mitigate impacts related to deterioration of facilities. However, due to the substantial population growth that would result from future development and lack of development capacity for new parks in the CPA, implementation of either Alternative 4 or Proposed could accelerate the deterioration of existing parks in and around the CPA. This potential would be incrementally less for Alternative 4. As with the Proposed Plan, Alternative 4 would not be expected to result in the construction of substantial new park acreage. As with the Proposed Plan, impacts related to deterioration of parks would be less but would remain significant and unavoidable.

Transportation and Traffic

With respect to transportation, a significant impact would occur if the total daily VMT per service population under the Proposed Plan, or a proposed alternative, were to increase above the 2016 Baseline Condition or if there is inconsistency with the SCAG RTP/SCS. **Table 5.0-18** shows vehicle trips and VMT for the 2016 SCAG Region conditions, 2016 Baseline conditions and 2040 Alternative 4 conditions. As shown in **Table 5.0-18**, compared to the 2016 SCAG Region conditions, Alternative 4 has lower vehicle trips per service population (2.3 versus 3.1) and lower VMT per service population (25.4 versus 33.9). VMT per service population under Alternative 4 would be 25.4, while the 2016 Baseline VMT per service population in the Boyle Heights CPA is 23.2.

Given that service population VMT for the Alternative 4 is more than 15% below the 2016 SCAG Region but it does have more service population VMT than the 2016 Baseline for the Boyle Heights CPA, the Alternative 4 would have a ***significant impact*** with respect to VMT.

Table 5.0-18
Comparison between Existing Traffic Conditions, Proposed Plan and Alternative 4

Transportation Metric	Threshold		Proposed Plan (2040)	Alternative 4 (2040)
	2016 SCAG Region Conditions	2016 Plan Baseline Conditions		
Total Daily VT	82,283,000	262,500	355,300	301,200
Total Daily VT per Service Population	3.1	2.1	2.3	2.3
Total Daily VMT	908,573,000	2,968,900	3,334,100	3,302,000
Total Daily VMT per Service Population	**33.9**	**23.2**	**21.6**	**25.4**

Source: Cambridge Systematics, 2018

While Alternative 4 would have lower increase to overall VMT and trips, the overall per capita VMT would be greater than the Proposed Plan.

Similar to the Proposed Plan, under Alternative 4, freeway safety impacts related to off ramp queuing would continue to occur as the overall population and trips would increase and impacts would be significant and unavoidable, although less.

Similar to the Proposed Plan, Alternative 4 would not result in significant impacts related to increased hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), or result in inadequate emergency access. Impacts to emergency services would remain less than significant and would be similar to the Proposed Plan.

Tribal Cultural Resources

As described in **Section 4.4, Cultural Resources**, Los Angeles has a long history of Native American occupation, and any development activities that include ground disturbance have the potential to significantly impact tribal cultural resources. Effects on tribal cultural resources are only known once a specific development has been proposed because the effects are highly dependent on both the individual development site conditions and the characteristics of the proposed activity. Development accommodated by either Alternative 4 or the Proposed Plan may disturb areas that potentially contain tribal resources. Similar to the Proposed Plan, all future development projects under Alternative 4 would continue to be subject to existing federal, state, and local requirements and discretionary projects, subject to CEQA review would be required to comply with AB 52, which for projects relying on an EIR, would require consultation with California Native American tribes. Implementation of **Mitigation Measures CR-1** through **CR-3** in

Section 4.4, Cultural Resources, and **MM TC-1** and **MM TC-2** in **Section 4.15, Tribal Cultural Resources**, would reduce the potential to disturb tribal cultural resources. However, this alternative would not be subject to mitigation measures proposed in the Proposed Plan. Therefore, the potential for disturbance of tribal cultural resources would be greater than under the Proposed Plan and significant and unavoidable. Individual projects that would be subject to additional environmental review may impose mitigation measures to address impacts to tribal cultural resource.

Utilities and Service Systems

Alternative 4 would result in 5,000 fewer housing units (-15%), 17,000 fewer residents (-15%), and 7,000 fewer jobs (-18%) through 2040 than the Proposed Plan. Due to the reduction in overall development, the No Project alternative would result in less annual water demand than the Proposed Plan (see table below). As a result, impacts would be less than significant and less than the Proposed Plan.

Table 5.0-19
Alternative 4 Water Use in the Community Plan Area

Land Use	Dwelling Units or Jobs	Daily Water Use Rate (gpd/unit)	Daily Water Demand (gpd)	Annual Water Demand (afy)
Single-Family [1]	5,640 du	329.0	1,855,560	2,078
Multi-Family [1]	22,560 du	189.0	4,263,840	4,776
Commercial[2]	17,280 jobs	69.0	1,192,320	1,336
Industrial[2]	13,120 jobs	121.0	1,587,520	1,778
Public Facilities[2]	1,504 jobs	69.0	103,776	116
			Alternative 4 Total	**10,084**

Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd Totals may not round up due to rounding:
1 Single-family and multi-family units were estimated by assuming that 20% of total household units are single-family and 80% multi-family.
***Source:** Water demand rates were obtained from the LADWP's 2015 Urban Water Management Plan (UWMP), Exhibit 2H (LADWP 2016a).*
2 Jobs for commercial, industrial, and public facilities based on the existing land use designations and total employment in the area utilizing the same ratio as under the proposed plan. Commercial/Public Facilities accounts for the estimated employment based on percentage of non-residential land use for both land use types.

Wastewater generation would also be less under the No Project alternative (see table below). As with the Proposed Plan, impacts would be less than significant, but impacts would be slightly reduced compared to the Proposed Plan.

Table 5.0-20
Estimated Alternative 4 Wastewater Generation in the Boyle Heights Community Plan Area[1]

Land Use	Dwelling Units or Employees	2040 Wastewater Generation Rate (gpd/unit)	Daily Wastewater Generation (gpd)
Residential[2]			
Single-Family	5,640 du	144.3	813,852
Multi-Family	22,560 du	137.9	3,111,024
		Residential Subtotal	**3,924,876**
Non-residential			
Commercial	17,280 employees	59.8	1,033,344
Industrial	13,120 employees	123.0	1,613,760
Public Facilities	1,504 employees	46.4	69,786
		Non-Residential Subtotal	**2,716,890**
		Alternative 4 Total	**6,641,766**

Source: Impact Sciences, 2022.
Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd
[1] *City of Los Angeles Bureau of Sanitation sewer generation rates are utilized to determine daily wastewater generation.*
[2] *For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.*

As under the Proposed Plan, growth under Alternative 4 would generate increased wastewater. As development occurs in the Boyle Heights CPA, upgrades to water conveyance systems may be required. Local water delivery lines may need to be replaced and upgraded in the vicinity of new development that is substantially more dense than existing development, and it is possible that the construction of new water lines may be necessary to serve new development under Alternative 4. However, if new facilities are determined to be necessary at some point in the future, the construction of such infrastructure would not be expected to result in significant environmental impacts since it typically involves replacement of lines in the same locations as existing lines. Routine infrastructure projects involving replacing or upgrading water distribution facilities, such as trunk lines, generally include the preparation of a ND/MND and in some cases may possibly qualify for a Categorical Exemption or Statutory Exemption. The environmental impacts of the construction and operation of these new or upgraded facilities are consistent with the impacts that have been evaluated throughout this EIR for other infill development. Specifically, the EIR analyzes anticipated effects of citywide growth related to air quality, noise, traffic, and other environmental impact areas. Any such upgrades would be subject to subsequent environmental review, wherein potential impacts, if any, would be addressed. Therefore, since development under Alternative 4 would be lower than under the Proposed Plan, impacts related to the construction of new water conveyance infrastructure

and wastewater treatment facilities or expansion of existing facilities under Alternative 4 would be incrementally lower and impacts would be less than significant.

Similarly, development under Alternative 4 would reduce the amount of solid waste produced compared to the Proposed Plan (see table below). As a result, solid waste impacts would be less than the Proposed Plan and remain less than significant.

Table 5.0-21
Estimated Alternative 4 Solid Waste Generation in the Community Plan Area[1]

Land Use	Dwelling Units or Square Footage	Annual Waste Generation Rate	Total Day Solid Waste Generated (lb/day)
Residential[2]			
Single-Family	19,600 residents	0.41 tons/resident	44,040
Multi-Family	22,560 du	0.46 tons/unit	56,860
		Residential Subtotal	**100,900**
Non-residential			
Commercial	16,395,818 SF	3.01 tons/1,000 sf	270,420
Industrial	39,466,612 SF	1.24 tons/1,000 sf	268,160
Public Facilities	3,045,863 SF	0.93 tons/1,000 sf	15,520
		Non-Residential Subtotal	**554,100**
		Alternative 4 Total	**655,000**

Note: gpd = gallons per day; du= dwelling units; sf = square feet; afy = acre feet per year; 1 gpd = 0.0011 afy; 1 mgd = 1,000,000 gpd; lb = pound
[1] *CalEEMod default solid waste generation factors for residential and non-residential uses were used to determine solid waste generation. Default solid waste generation rates available in Table 10.1 of the CalEEMod User Guide Appendix D – Default Data Tables, available at: http://www.aqmd.gov/docs/default-source/caleemod/upgrades/2016.3/05_appendix-d2016-3-1.pdf*
[2] *For a conservative analysis, residential uses consist of 20% single family uses and 80% multi-family uses.*

Based on City policy, new water demand is to be met by expanding water recycling and conservation. As under the Proposed Plan, all new development under Alternative 4 would be required to implement applicable water conservation measures. These measures include Water Efficiency Requirements Ordinance, Los Angeles Green Building Code, the most current California Green Building Standard Code, and all applicable regulations in the future. As discussed in **Section 4.16, Utilities and Service Systems**, under the Proposed Plan adequate supply would be available to meet estimated demand of the Boyle Heights CPA during normal and single dry year conditions and multiple dry years up to the year 2040. Therefore, due to the lower development under Alternative 4, there would be lower impacts to overall water supplies available to serve the project and impacts would be less than significant.

Electrical and natural gas supplies are not expected to be adversely affected by development under Alternative 4, but improvements to Proposed Area distribution and telecommunication facilities may be needed. Temporary traffic, air quality, and noise impacts associated with construction of such improvements would be within the parameters described for the Proposed Plan. Overall, impacts related to utilities and service systems would be less than significant under Alternative 4, as with the Proposed Plan.

Conclusion

Alternative 4 would include less development capacity overall and thus less growth in the Boyle Heights CPA, as compared to the Proposed Plan. Nevertheless, as with the Proposed Plan, Alternative 4 would result in significant impacts to: cumulatively considerable net increase of criteria pollutant (construction NOx and operational/long-term VOC emissions), sensitive receptors from TACs related to distribution facilities, historic resources, ambient and ground-borne noise levels related to construction, deterioration of parks and recreational facilities, and safety impacts related to off-ramp queuing. Because this alternative would not be subject to mitigation measures proposed in the Proposed Plan, including the CPIO's review procedures for projects that involve properties that have been identified as an eligible historical resource, the level of impact would be greater than under the Proposed Plan despite the lower overall intensity of development in the Boyle Heights CPA under this alternative and would have additional significant and unavoidable impacts to archaeological, paleontological, conformance with state climate action goals, hazardous (contaminated sites), transportation (VMT) and tribal resources. In addition, limiting development potential in Boyle Heights may induce higher levels of growth in other areas of the City and region that have fewer transit options and longer distances between housing, jobs, and services. As such, Alternative 4 may incrementally increase related air pollutant and GHG emissions.

5.6 ENVIRONMENTALLY SUPERIOR ALTERNATIVE

CEQA requires identification of the environmentally superior alternative among the options studied. In general, the environmentally superior alternative is the alternative that would be expected to generate the fewest adverse impacts. If the No Project Alternative (Alternative 4) is identified as environmentally superior, then another environmentally superior alternative shall be identified among the other alternatives.

As shown in **Table 5.0-22**, Alternatives 1 and 4 would incrementally reduce impacts for multiple issue areas compared to the Proposed Plan. This is because Alternative 1 and 4 would both reduce overall development levels in the CPA. However, none of these alternatives would avoid any of the significant and unavoidable impacts of the Proposed Plan and in fact, Alternatives 1 and 4 would result in a new significant impact

(VMT). Alternative 4 would involve the lowest overall level of growth and development in the CPA. However, because Alternative 4 would not be subject to the mitigation measures proposed in the Proposed Plan, it may result in higher greater overall impacts than the Proposed Plan for certain issues. In addition, by limiting growth in the CPA, Alternative 4 could cause more forecasted growth and associated development to occur in other areas of the City or region that have less access to transit and longer distances between housing, jobs, and services. In this way, Alternative 4 may also result in greater in overall regional VMT and associated air pollutant and GHG emissions.

Among the other alternatives, Alternative 3, the Land Use Mix Alternative would include the same high level of TOD development as the Proposed Plan with the added benefit of increased housing for the region and reducing VMT. Since Alternative 3 would have greater overall development than the Proposed Plan, it would result in greater impacts to public services and utilities as these topic areas are largely driven by population and Alternative 3 would increase the number of housing units and population compared to the Proposed Plan. Although this alternative would not reduce any of the significant impacts of the Proposed Plan, it would meet the project objectives, even if to a lesser degree for some, it has more environmental benefits related to greenhouse gases and energy use and sustainable development patterns than the other alternatives. Alternative 3 would allow new housing opportunities in the area of the CPA closest to Downtown Los Angeles, which is a major employment center and transit hub for the wider region. Due to the proximity to Downtown Los Angeles and new infrastructure investments in the riverside area, specifically the new 6th Street Viaduct Replacement Project and 6th Street PARC Project, if Alternative 3 were to be adopted it is reasonably foreseeable that new housing development within the CPA would likely occur in the riverside area, which could lessen overall impacts to temporary construction (air quality and noise) in other areas of the CPA. Based on the ability to result in incrementally reduced environmental impacts and meet project objectives, the Land Use Mix Alternative (Alternative 3) is the Environmentally Superior Alternative.

Table 5.0-22
Impact Comparison of Alternatives

Resource Area	Alternatives			
	Low TOD	High TOD	Land Use Mix	No Project
Aesthetics	-	+	=	-
Air Quality	-	+	-/=	+

Utilities/Service Systems	+	+	-/+	-

+ Increased level of impact to the Proposed Plan
- Decreased level of impact to the Proposed Plan
= Similar level of impact to the Proposed Plan
Significant and unavoidable impacts are bolded and red. Note that impacts are identified as "significant and unavoidable" if the physical effect associated with the alternative would be equivalent to a "significant impact" only if the alternative involved a new discretionary action.

5.7 ALTERNATIVES CONSIDERED BUT REJECTED

Section 15126.6(c) of the *CEQA Guidelines* requires than an EIR identify those alternatives that were considered but rejected by the lead agency because they either did not meet the objectives of the project, were considered infeasible, or would not avoid or substantially lessen one or more significant effects of the proposed plan. Alternative 3 addresses increased housing development as was suggested during EIR scoping. No other alternatives were identified that would feasibly attain most of the basic project objectives but would also avoid or substantially lessen the significant effects of the project. The City considered

several configurations of land uses within the CPA based on the many years of outreach, engagement, and stakeholder feedback.

One Alternative that was considered but rejected was land use and zoning changes for the existing Wyvernwood Garden Apartments site. This site is currently developed with over 1,000 housing units and over the last few decades has seen redevelopment interest. Due to the large size of the site and the relatively low density of the existing development, zoning and land use changes to accommodate more housing on this site could meet plan objectives to accommodate more housing in the Plan Area. However, this site is also home to several thousand residents and the existing housing stock is subject to the Rent Stabilization Ordinance. In addition, this site is located farther from fixed rail transit and closer to industrial uses, therefore, there are many Project Objectives that this Alternative would not meet. This Alternative would not be consistent with several of the Proposed Plan's primary objectives, including maintaining existing affordable housing units, and preserving community character and neighborhood identity by strengthening and maintaining the traditional character of notable residential neighborhoods.

Another Alternative that was considered but rejected was consideration of increasing residential density in the western half of the CPA, particularly north of 4th Street. This Alternative would require upzoning much of the existing medium and lower density residential blocks around Mariachi Plaza, along Boyle Avenue, and north of Cesar Chavez west of Soto Street. While this Alternative would meet Project Objectives to increase housing within the CPA, it may lead to greater impacts, particularly on historic resources, as this area is where most Survey LA identified historic and planning districts are located. This alternative would not be consistent with the Proposed Plan's primary objective of preserving community character and neighborhood identify by strengthening and maintaining traditional character of notable residential neighborhoods and preserving stable low-density neighborhoods.

6.0 OTHER CEQA CONSIDERATIONS

6.1 INTRODUCTION

Section 15126 of the *California Environmental Quality Act (CEQA) Guidelines* requires that all phases of a project must be considered when evaluating its impact on the environment. As part of this analysis, in addition to the impact analysis done in **Chapter 4.0** and the alternative analysis in **Chapter 5.0**, the EIR must also analyze and identify (1) significant irreversible environmental effects that would result from implementation of the Proposed Plan, (2) growth-inducing impacts of the Proposed Plan, and (3) any secondary impacts from the proposed mitigation measures identified in **Chapter 4.0**. These impacts are analyzed in this Chapter.

6.2 SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL EFFECTS

Section 15126.2(c) of the *CEQA Guidelines* requires a discussion of any significant irreversible environmental changes that would be caused by the Proposed Plan. Specifically, Section 15126.2(c) states:

> *Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also irreversible damage can result from environmental accidents associated with the project. Irreversible commitments of resources should be evaluated to assure that such current consumption is justified.*

Generally, a project would result in significant irreversible environmental changes if any of the following would occur:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;
- The project involves uses in which irreversible damage could result from any potential environmental accidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Resources that would be consumed as a result of implementation of the Proposed Plan include water, electricity, natural gas, and fossil fuels; however, the amount and rate of consumption of these resources would not result in significant environmental impacts related to the unnecessary, inefficient, or wasteful

use of resources (see **Section 4.5, Energy,** and **Section 4.16, Utilities and Service Systems**). In addition, construction activities related to the reasonably anticipated development would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobile and construction equipment. However, use of such resources would not be unusual as compared to other construction projects and would not substantially affect the availability of such resources.

With respect to operation activities, compliance with applicable building codes, as well as mitigation measures, would ensure that natural resources are conserved or recycled to the maximum extent feasible. Reasonably anticipated development of the Proposed Plan would be subject to the energy conservation requirements of the California Energy Code (Title 24, Part 6 of the California Code of Regulations, California's Energy Efficiency Standards for Residential and Nonresidential Buildings), the California Green Building Standards Code (Title 24, Part 11 of the California Code of Regulations), and the Los Angeles Green Building Code (LAMC Chapter IX, Article 9). The California Energy Code provides energy conservation standards for all new and renovated commercial and residential buildings constructed in California. This Code applies to the building envelope, space-conditioning systems, and water-heating and lighting systems of buildings and appliances and provides guidance on construction techniques to maximize energy conservation. Minimum efficiency standards are given for a variety of building elements, including appliances; water and space heating and cooling equipment; and insulation for doors, pipes, walls, and ceilings. The Code emphasizes saving energy at peak periods and seasons and improving the quality of installation of energy efficiency measures. The California Green Building Standards Code sets targets for energy efficiency; water consumption; dual plumbing systems for potable and recyclable water; diversion of construction waste from landfills; and use of environmentally sensitive materials in construction and design, including ecofriendly flooring, carpeting, paint, coatings, thermal insulation, and acoustical wall and ceiling panels. New developments would also be required to comply with the Los Angeles Green Building Code, which contains mandatory measures for residential and non-residential uses, particularly those related to energy efficiency (i.e., renewable energy, indoor and outdoor water use, and water reuse systems).

It is also likely that in response to greenhouse gas (GHG) reduction mandates, new technologies or systems will emerge, or will become more cost-effective or user-friendly, that will further reduce the reliance of the Community Plan Area (CPA) development upon renewable natural resources. Further, the Proposed Plan provides for enhancements and increased densities and intensities around transit nodes and corridors, building on the existing transportation network in the CPA. This kind of transit focused infill development helps to reduce vehicle miles traveled (VMT) and accordingly, GHGs.

However, even with implementation of conservation measures, consumption of natural resources would generally increase with implementation of the Proposed Plan due to population increases.

In summary, implementation of the Proposed Plan would involve irreversible environmental changes to existing natural resources, such as the commitment of energy and water resources as a result of the operation and maintenance of future development. However, the Proposed Plan would not involve wasteful or unjustifiable use of energy or other resources, and energy conservation efforts would also occur with new construction. New development accommodated by the Proposed Plan would be constructed and operated in accordance with specifications contained in Title 24 of the California Code of Regulations and local green building requirements, as discussed in **Section 4.5, Energy.** Therefore, the use of energy related to the Proposed Plan would occur in an efficient manner.

6.3 GROWTH INDUCING IMPACTS

Section 15126.2(d) of the *CEQA Guidelines* requires that growth inducing impacts of a Proposed Plan be considered. Growth inducing impacts are characteristics of a project that could directly or indirectly foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. According to the *CEQA Guidelines*, such projects include those that would remove obstacles to population growth (e.g., a major expansion of a wastewater treatment plant). In addition, as set forth in the *CEQA Guidelines*, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects. The *CEQA Guidelines* also state that it must not be assumed that growth in an area is necessarily beneficial, detrimental, or of little significance to the environment. Generally, a project is considered to result in growth inducing effects if it results in one of the following:

- The extension of infrastructure (sewer, water, etc.) to an area currently undeveloped and/or lacking adequate infrastructure, thus removing an obstacle to growth; and/or
- The provision of housing or employment to an area currently undeveloped or lacking in adequate housing or employment.

The Boyle Heights CPA is an urbanized community with road, water, sewer, storm drain, and other infrastructure in place. As discussed above, the Boyle Heights Community Plan is intended to encourage development around existing infrastructure to ensure that infrastructure is used efficiently and in a manner that reduces the environmental impacts of development.

As analyzed in **Section 4.12, Population, Housing, and Employment**, of this Draft EIR, the Proposed Plan would accommodate the City's forecasted growth in population and employment in the CPA. However,

such growth would not induce growth outside the Boyle Heights CPA beyond what is anticipated to result from the Plan itself. In addition, the corridor-focused approach to concentrating new development is consistent with state policy aimed at meeting housing needs while reducing vehicle trips and improving air quality. As a result, the Proposed Plan would better accommodate projected population and housing demand with the proposed land use and zoning changes in place. Although it is possible that the expected population growth in the Boyle Heights CPA would exceed the SCAG forecasts for this area, the Proposed Plan would not induce significant population growth, but rather would serve to accommodate projected citywide growth in a more distributed and sustainable manner.

Because growth in the Boyle Heights CPA would involve high density, mixed-use infill development in a transit accessible area, it is actually anticipated to reduce per capita VMT and associated air pollutant and GHG emissions relative to development in other areas of the City. Further, concentrating development in the urbanized CPA would generally avoid impacts to agricultural, biological, and mineral resources while redevelopment of properties with new development built to current standards would generally improve surface water quality and reduce the potential for substantial seismic damage. The Proposed Plan would not result in unplanned growth in the CPA, as the Proposed Plan's underlying purpose is to accommodate the City's forecasted growth while implementing the policies and goals of the Framework Element and SCAG's RTP/SCS.

In conclusion, the Proposed Plan is anticipated to satisfy a portion of the anticipated population growth in the region in an efficient manner consistent with State, regional, and City policies. The Boyle Heights Community Plan would be consistent with the projected growth forecast for the Los Angeles region and regional policies to reduce urban sprawl. To that end, it would efficiently use existing infrastructure, reduce regional congestion, and improve air quality.

6.4 POTENTIAL SECONDARY EFFECTS

CEQA Guidelines Section 15126.4(a)(1)(D) states that, "[i]f a mitigation measure would cause one or more significant effects in addition to those that would be caused by the project as proposed, the effects of the mitigation measures shall be discussed but in less detail than the significant effects of the project as proposed." In accordance with the *CEQA Guidelines*, the following provides a discussion of the potential impacts that could occur from implementation of the proposed mitigation measures.

Boyle Heights Community Plan

Air Quality

Mitigation Measure **MM AQ-1** through **MM AQ-8** would reduce regional and local emissions generated by various construction activities, including equipment operation and truck trips, through best management practices. Implementation of this measure would have a beneficial impact on reducing air quality impacts and these measures which are in large part procedural would not result in adverse secondary impacts. Any downstream impacts from increased use of Tier 4 equipment or other equipment would be speculative. Mitigation Measure **MM AQ-9** would require health risk assessment and, as necessary, limitations and design features to avoid significant health risks. This mitigation measure is a procedural action that would not result in physical changes in the environment that could result in secondary impacts

Biological Resources

Although the impact conclusion related to nesting birds is found to be less than significant, **MM BIO-1** and **MM BIO-2** are required to add additional protections to ensure compliance with the existing federal and state regulations. Mitigation Measure **MM BIO-1** requires development projects to follow set protocol if an active bird nest if discovered during a pre-construction bird nest survey or is discovered inadvertently during earthwork or construction-related activities to ensure that sensitive species and/or habitats are not adversely affected. **MM BIO-2** requires that development projects include an acknowledgement on their project plans to comply with the federal regulations related to active bird nests and of best practices recommended by qualified biologist to avoid impacts to active nests, including checking for nests prior to construction. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

Cultural Resources

Mitigation Measures **MM CR-1**, **MM CR-2,** and **MM CR-3** would provide for the recovery of any significant archaeological resources that cannot be preserved in place. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

Geology

Mitigation Measures **MM GEO-1, MM GEO-2,** and **MM GEO-3** would ensure that potential paleontological resources are identified and either further avoided or recovered. These mitigation measures

are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

Hazards and Hazardous Materials

Mitigation Measure **MM HAZ-1** and **MM HAZ-3** would require preliminary investigation for hazardous materials potential on all Boyle Heights CPA excavation and grading sites. Mitigation measure **MM HAZ-2** would require soil sampling for discretionary projects that involve any ground and/or soil disturbance in order to determine the presence and extent of contamination, and to identify a remediation plan, if required by the relevant regulatory agency. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts. Contaminated sites would be required to comply with all local, state, and federal regulations and would ensure that contaminated sites undergo remediation prior to development activities. Contamination is often localized and **MM HAZ-1 through MM HAZ-3** would further reduce impacts such that the Proposed Plan would not make a cumulatively considerable contribution to impacts related to contaminated sites. Any potential remediation of contamination would be required to comply with regulations and regulatory agency oversight, which may require subsequent environmental review. Any impacts from remediation would be speculative at this time.

Noise

Mitigation Measures **MM NOI-1, MM NOI-2, MM NOI-3, MM NOI-4,** and **MM NOI-5** involve requirements and restrictions regarding specific construction equipment to minimize temporary construction impacts.

Mitigation Measure **MM-NOI-6** involves the preparation of project specific noise studies for certain projects located within 500 feet of noise-sensitive land uses. Furthermore, the project applicant shall be required to comply with all measures identified and recommended by the Noise Study. Project specific impacts due to measures identified in the Noise Study would be speculative at this time.

Mitigation Measures **MM-NOI-7** and **MM-NOI-8** involve specific construction-related measures to substantially reduce vibration levels. Mitigation Measure **MM-NOI-6** requires the implementation of mufflers, shields, sound barriers and/or any other available noise reduction device or techniques. Mitigation Measure **MM-NOI-7** requires the use of drilled piles or vibratory pile drivers, with exception of locations where underlying geology renders this equipment infeasible. These measures would reduce construction noise at nearby receptors such as residential uses. These measures would not result in additional secondary impacts as the use of these devices and techniques would be temporary and limited to the construction phase.

Tribal Cultural Resources

Mitigation Measures **MM-TR-1** and **MM-TR-2** would ensure that tribal resources are identified and either further avoided or recovered. These mitigation measures are procedural actions that would not result in physical changes in the environment that could result in secondary impacts.

7.0 EFFECTS NOT FOUND TO BE SIGNIFICANT

This section addresses issues for which the Proposed Plan were determined to have no potential for significant effects. The items discussed below are included in the environmental checklist in Appendix G of the *California Environmental Quality Act (CEQA) Guideline*s. Items not addressed in this section are addressed in **Sections 4.1** through **4.16** of this Environmental Impact Report (EIR).

7.1 AGRICULTURE AND FORESTRY RESOURCES

Thresholds of significance for agricultural and forest resource impacts focus on conflicts with existing zoning for agricultural or forest uses and Williamson Act contracts, and the potential to involve any changes in the existing environment that could result in conversion of farmland or forest land to non-agricultural or non-forest use. Specific questions pertaining to agricultural and forest resources from Appendix G of the *CEQA Guidelines* are as follows:

- Would the project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- Would the project conflict with existing zoning for agricultural use, or a Williamson Act contract?
- Would the project conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?
- Would the project result in the loss of forest land or conversion of forest land to non-forest use?
- Would the project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Boyle Heights Community Plan Update Impact

The Boyle Heights Community Plan Area (CPA) is urbanized and fully developed. The California Department of Conservation, Division of Land Protection, lists Prime Farmland, Unique Farmland, and Farmland of Statewide Importance under the general category of "Important Farmland." The Boyle Heights CPA is listed as Urban and Built-Up Land by the Farmland Mapping and Monitoring Program

and contains no agricultural land.[1] Per the Department of Conservation's Los Angeles County Williamson Act Map, the entire Boyle Heights CPA is located in Non-Enrolled Land, which is defined as land not enrolled in Williamson Act contract.[2] Implementation of the Boyle Heights Community Plan would have no impact on existing agricultural resources, would not result in the conversion of agricultural farmland, and would not be located on Williamson Act contract land.

Per the City of Los Angeles Conservation Element, the only substantial conifer and big tree forests in the vicinity of Los Angeles are located outside the City's boundaries in the Angeles National Forest and on the north slope of the Santa Susana Mountains. As discussed in **Section 4.3, Biological Resources**, the Boyle Heights CPA includes street trees and some heritage trees in public parks. However, these individual trees species are planted, nonnative trees that do not constitute forests. Because no forests are located in or adjacent to the Boyle Heights CPA, the Proposed Plan would have no impact to forest land or forestry resources.

7.2 MINERAL RESOURCES

Thresholds of significance for mineral resource impacts focus on whether the Proposed Plan could result in the loss of availability of known mineral resources. Specific questions from Appendix G of the *CEQA Guidelines* are as follows:

- Would the project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

- Would the project result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan?

The Surface Mining and Reclamation Act of 1975 (SMARA) requires the state geologist (Division of Mines and Geology) to identify and classify all mineral deposits in California. In 1979, the state Board of Mining and Geology adopted guidelines that require local general plans to reference identified mineral deposits and sites that are identified for conservation. In addition, the Board identified urban areas where irreversible land uses (development with structures) preclude mineral extraction.

The City of Los Angeles General Plan provides growth and development policies by providing a comprehensive long-range view of the City as a whole. The Conservation Element of the General Plan

---

1 California Department of Conservation. California Important Farmland Finder. Available online at: https://maps.conservation.ca.gov/DLRP/CIFF/ .

2 California Department of Conservation. The Williamson Act Status Report. 2022. Available online at: https://www.conservation.ca.gov/dlrp/wa/Documents/stats_reports/2022%20WA%20Status%20Report.pdf

consists of an identification and analysis of the existing natural resources in the City of Los Angeles. Policies of the Conservation Element include the preservation of mineral resources and of the access to these resources. Much of the area within the Mineral Resource Zone (MRZ) sites in Los Angeles was developed with structures prior to the MRZ classification and, therefore, is unavailable for extraction.

The Department of Conservation's Mineral Land Classification Map for the Los Angeles Quadrangle shows that most of the Boyle Heights CPA is identified as MRZ-3, a classification for an area which the significance of mineral deposits cannot be evaluated from available data.[3] Along the Los Angeles River, on the western portion of the Boyle Heights CPA, the area is classified as MRZ-2. An MRZ-2 area is "an area underlain by mineral deposits where geologic data indicate that significant measured or indicated resources are present or where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists." Per the most recent Department of Conservation maps, there are no active mine operations in the Boyle Heights CPA.[4]

Boyle Heights Community Plan Update Impact

As stated above, there are no active mines in the Boyle Heights CPA and the Proposed Plan would not facilitate any new mining activity. The MRZ-2 areas mapped within the CPA are currently fully developed with residential, commercial, and industrial uses, as well as parks, open space, and public facilities in addition to freeways and streets. According to the California Department of Conservation Division of Mines and Geology's *Guidelines for Classification and Designation of Mineral Lands*, the uses listed below fall under the category of Economic Exclusion, which are land uses that are considered generally incompatible with mining and have been excluded from areas containing available aggregate resources:

A. Residential areas, and areas committed to residential development

B. Commercial areas with land improvements (buildings)

C. Industrial areas (buildings and adjacent needed storage and parking facilities)

D. Major public or private engineering project including freeways, railroads, and major power transmission lines

E. Small areas isolated by urbanization

---

3 California Department of Conservation. 1979. Mineral Land Classification Map Special Report 143 Plate 2.12: Los Angeles Quadrangle. Available online at: https://www.conservation.ca.gov/cgs/Documents/Publications/Special-Reports/SR_143-MLC-Report04.pdf.

4 California Department of Conservation. Mines Online. Available online at: https://maps.conservation.ca.gov/mol/index.html.

Resource recovery does not currently occur in the Boyle Heights CPA, and as a result of the aforementioned development, these areas are economically excluded, and not considered aggregate resource areas by the California Department of Conservation, Division of Mines and Geology.

The existing City of Los Angeles Conservation Element has policies that pertain to the loss of a known and/or locally important mineral resource. These policies include Conservation Element Sand and Gravel Resources Policies 1 and 2, which seek to implement the provisions of the SMARA (Public Resources Code Sections 2710 et seq.) so as to establish extraction operations at appropriate sites; to minimize operation impacts on adjacent uses, ecologically important areas and groundwater; to protect the public health and safety; and require appropriate restoration, reclamation and reuse of closed sites. The Boyle Heights CPA does not contain any sand or gravel resource recovery and thus would not hinder extraction of such resources. No conflict with Conservation Element objectives or policies would result from Plan implementation. Implementation of the Boyle Heights Community Plan would not result in a significant impact due to the loss of availability of a known mineral resource that would be of value to the region and the residents of the state or the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan, or other land use plan.

Oil Deposits

Los Angeles is located in Oil and Gas District 1, which covers the following counties: Los Angeles, Orange, San Bernardino, Riverside, San Diego, and Imperial. The California Department of Conservation Geologic Energy Management Division (CalGEM) provides information regarding oil and gas wells and other types of related facilities throughout the state. The Boyle Heights CPA contains the State Designated Boyle Heights Oil Field, which is now listed as abandoned.[5] The Boyle Heights Oil Field contained thirteen wells that are currently plugged and not in operation.[6] Five other wells are located within the CPA that are currently listed as being idle and not currently used for extraction.

The City of Los Angeles Conservation Element Oil and Gas policies 1, 2, and 3 intend to conserve petroleum resources and enable appropriate, environmentally sensitive extraction of petroleum deposits so as to protect petroleum resources for the use of future generations, and to reduce the City's dependency on imported petroleum and petroleum products. The Boyle Heights CPA would not preclude continued oil extraction from existing CPA wells, but Proposed Plan implementation would likely phase out oil

production over time through voluntary action as development occurs.[7] This phase out would not conflict with City policy because continued oil extraction in the urbanized Boyle Heights CPA would not be consistent with the objective of conducting environmental sensitive extraction and because current oil extraction in the Boyle Heights CPA is not vital to meeting the State's or region's energy needs. Moreover, as discussed in **Section 4.5, Energy**, Plan implementation would generally reduce energy demand by facilitating energy-efficient infill and mixed-use development that would comply with City green building requirements and minimize per capita vehicle miles traveled (VMT).

Potential hazards associated with development or construction on or adjacent to active oil fields are discussed in **Section 4.8, Hazards and Hazardous Materials**.

7.3 WILDFIRE

Thresholds of significance in Appendix G of the *CEQA Guidelines* for wildfire focus on impacts that could occur on lands in very high fire severity zones. There are no high fire severity zones in the Boyle Heights CPA.[8] Therefore, there are no impacts from wildfire from the Proposed Plan.

NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT AND NOTICE OF SCOPING MEETING FOR THE BOYLE HEIGHTS COMMUNITY PLAN UPDATE

TO: Agencies, Organizations, and Interested Parties **DATE:** September 2, 2016

The City of Los Angeles Department of City Planning (DCP), as the Lead Agency under the California Environmental Quality Act (CEQA) will prepare an Environmental Impact Report (EIR) for the proposed Boyle Heights Community Plan Update project (Community Plan Update or "CPU"), which is further described below. The City is requesting identification of environmental issues and information that you or your organization believes should be considered in the EIR.

REVIEW AND RESPONSE PERIOD: September 2, 2016 through October 7, 2016

NOTICE OF SCOPING MEETING: Pursuant to California Public Resources Code Section 21083.9 and California Code of Regulations, Title 14 ("CEQA Guidelines") section 15082(c) the Lead Agency will conduct a scoping meeting for the purpose of soliciting oral and written comments from interested parties requesting notice, responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved federal agencies, as to the appropriate scope and content of the EIR.

SCOPING MEETING: The City will hold a scoping meeting for the Proposed Plan to receive comments on the scope and content of the proposed EIR. You are welcome to attend the meeting and present environmental information that you believe should be considered in the EIR. The scoping meeting is scheduled as follows:

Date: September 13, 2016
Time: 6PM-8:30PM
Place: Boyle Heights City Hall, 2130 E. 1st Street, Los Angeles, 90033

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate. The meeting facility and its parking are wheelchair accessible. Sign language interpreters, assistive listening devices, or other auxiliary aides and/or services may be provided upon request. Other services, such as translation between English and other languages, may also be provided upon request. To ensure availability of services, please make your request no later than three working days (72 hours) prior to the meeting by calling Kiran Rishi at 213-978-1169.

RESPONSIBLE AND TRUSTEE AGENCIES: The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the Proposed Plan, in accordance with the CEQA Guidelines, Section 15082(b). Your agency will need to use the EIR prepared by the City when considering any permits that your agency

must issue or other project approvals. As such, your responses to this Notice of Preparation (NOP), at a minimum shall identify: (1) The significant environmental issues and reasonable alternative and mitigation measures that your agency will need to have explored in the EIR; and (2) Whether your agency will be a responsible or trustee agency for this project.

PROJECT LOCATION: The Boyle Heights Community Plan Area (CPA) is located immediately east of Downtown and the Los Angeles River, and flanks the eastern boundary of the City of Los Angeles. Its boundaries are approximately defined by the San Bernardino Freeway/Interstate 10 (10 Freeway) and Marengo Street on the north, the Union Pacific and Santa Fe Railroad tracks on the south, Indiana Street on the east, and the Los Angeles River on the west. The southern and eastern borders of the CPA align with the city limits of Los Angeles; the City of Vernon is located to the south and the unincorporated community of East Los Angeles is located to the east of the CPA respectively, while the Los Angeles communities of Lincoln Heights and El Sereno are located to the north, and the industrial districts of Downtown are located to the west. The Plan area is approximately 6 square miles. The Boyle Heights CPA is shown within the regional context in **Figure 1**.

PROJECT BACKGROUND: The Boyle Heights Community Plan is one of 35 Community Plans, which comprise the Land Use Element of the General Plan. The Land Use Element is one of the seven State-mandated elements of the General Plan that also include noise, transportation, and conservation among others. The Boyle Heights Community Plan (the land use plan for Boyle Heights) is being updated consistent with California Government Code Section 65302 which identifies the seven required elements of a General Plan.

The Boyle Heights Community Plan was last updated in 1998 to meet needs through the year 2010. Since then significant changes have occurred, most notably, the completion of the Gold Line Extension to the Eastside in 2009 along 1st Street. In addition, other changes that have occurred along the 1st Street corridor is the construction of a new high school (Mendez Learning Center) adjacent to the Pico/Aliso Gold Line Station, and mixed-use/mixed-income projects along other community corridors.

PROJECT DESCRIPTION: The proposed project is the update of the Boyle Heights Community Plan ("Proposed Plan") and the adoption of necessary updates to land use, zoning, plan text, and other ordinances to implement those updates. The draft land use diagram **(Figure 2)** represents land use designations that accommodate forecasted housing, population, and employment growth in the CPA for the next 20 to 25 years. The Proposed Plan directs future growth to already urbanized areas of the CPA. The proposed changes largely follow the current pattern of land use development reflecting City policies to direct growth where it can be supported by existing transportation infrastructure. The Proposed Plan promotes a balance of housing units and jobs near transit where different types of land uses (e.g. commercial and residential) can be provided to reduce the length and number of vehicle trips.

The Proposed Plan includes limited changes to Land Use Designations, as well as zone changes to accomplish the following goals: 1) retain existing single- and multiple-family residential uses and add new zoning regulations to protect the existing form and add design standards for appropriate neighborhood massing; 2) retain neighborhood-serving commercial uses and add new zoning regulations for improved street frontage and pedestrian oriented design standards; 3) retain light industrial districts to prioritize jobs producing uses and add new zoning regulations for improved transitions between residential and industrial uses; 4) add new zoning regulations for improved river access and standards for building form and orientation; 5) encourage mixed-use and equitable transit-oriented development; 6) preserve the historic character and commercial building forms for

historically know Brooklyn Avenue Corridor, which is now Cesar E. Chavez Avenue and preserve the residential building forms in the Prospect Park and Hollenbeck Park neighborhoods; and 7) new zoning regulations to protect identified historic resources.

The Proposed Plan's policies complement the proposed zoning and land use designations; and they are geared towards the preservation of historic, low-density multi-family housing, the promotion of the Los Angeles River as a community amenity, the preservation of employment generating land uses, and the preservation and strengthening of commercial areas and neighborhood serving uses. Policies included in the Proposed Plan would also encourage the following goals: 1) protect historic structures: 2) preserve neighborhood character; 3) encourage well designed, quality development projects that complement and enhance the existing neighborhood character of the community; and 4) preserve the Boyle Heights mixed-density urban environment.

Notable features of the Proposed Plan are provided below.

- Preserve existing lower density neighborhoods by maintaining lower density land use designations and by limiting the building envelope for new infill developments in areas with an established, historic character. Potential growth will be directed away from established, low-density residential neighborhoods and towards commercial areas with access to public transit and existing medium residential density.
- New zoning regulations that include incentives for public amenities that benefit the local community that address the need for in-fill developments that fit within the Boyle Heights context along major corridors. Some of these corridors are First Street, Whittier Boulevard, Soto St, and other identified commercial nodes, in accordance with the General Plan Framework guiding policy to focus growth in higher-intensity, transit-adjacent (rail and bus) mixed-use commercial centers.
- High pedestrian volume corridors (e.g. Soto Street) are promoted as safe routes to school connectors and new zoning regulations include standards that require pedestrian oriented frontages and active ground floors at the street level to ensure safe walkable spaces.

ISSUES TO BE ADDRESSED IN THE EIR: Based on the project description and the Lead Agency's understanding of the environmental issues associated with the Proposed Plan, it is anticipated that implementation of the Proposed Plan has the potential to result in significant environmental effects associated with some or all of the following topics, which will be analyzed in detail in the EIR:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Geology and Soils
- Greenhouse Gas Emissions
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Noise
- Population, Housing, and Employment
- Public Services and Recreation
- Transportation/Circulation
- Utilities/Service Systems

The City acknowledges that Exide contamination exists in the CPA, and this issue will be identified in the discussion of existing conditions; and to the extent development could exacerbate the impacts associated with contamination, the EIR will identify mitigation measures to address the exacerbation.

Currently, the City has determined the Proposed Plan will not result in significant impacts in the following impact categories: Agriculture and Forestry Resources, and Mineral Resources. As such, currently the City is not intending to analyze in the EIR impacts in these environmental topic areas. An initial study was not prepared for this project, as permitted by CEQA Guidelines, section 15060(d).

Alternatives to be analyzed in the EIR are to be defined and analyzed consistent with the requirements of CEQA Guidelines, Section 15126.6. The specific alternatives to be evaluated in the EIR may include, but are not limited to, the "No Project" alternative, as required by CEQA and alternative land use configurations.

DOCUMENT AVAILABILITY: The Notice of Preparation and draft Proposed Plan materials can be viewed on the City of Los Angeles Department of City Planning website at: www.planning.lacity.org. To locate a copy of the Notice of Preparation online, click on Environmental Review on the left side of the Department of City Planning website and then click on the Notice of Preparation & Public Scoping Meetings link. Also, to review draft proposed materials, please visit our bilingual google website, and click on the "Meetings and Outreach" tab, here are the links:

English: www.sites.google.com/site/boyleheightsncp/meetings-outreach
Español: www.sites.google.com/site/boyleheightsncp/meetings-outreach/meetings-outreach-spanish

SUBMITTAL OF WRITTEN COMMENTS: The Lead Agency solicits comments regarding the scope, content, and specificity of the EIR from all responsible agencies, agencies with jurisdiction by law, trustee agencies, and involved agencies and interested parties requesting notice. Please send your written/typed comments (including a name, telephone number, contact information, email if applicable, and case no.) to the following:

City of Los Angeles Department of City Planning
ATTN: Haydee Urita-Lopez, City Planner
Case Numbers: CPC-2016-2905-CPU and ENV-2016-2906-EIR

AVISO DE PREPARACION DE UN REPORTE DE IMPACTOS AMBIENTALES Y AVISO DE JUNTA PARA AVERIGUAR EL AMBITO DE LOS IMPACTOS AMBIENTALES DEL LA ACTUALIZACION DE EL PLAN DE BOYLE HEIGHTS

ATENCION: Agencias, Organizaciones y Partes Interesadas **Fecha:** 2ndo de septiembre del 2016

Como la agencia primaria bajo la Ley de Calidad Ambiental de California ("CEQA"), el Departamento de Planificación Urbana (DCP) preparará un reporte de impactos ambientales ("EIR") para el proyecto propuesto del plan de la comunidad de Boyle Heights (actualización del Plan de comunidad o "CPU" por sus siglas en ingles), que se describe a continuación. La ciudad está solicitando la identificación de problemas y temas ambientales y la información que usted o su organización cree que se debe considerar en el reporte de impactos ambientales ("EIR").

PERÍODO DE COMENTARIOS Y RESPUESTAS: 2 ndo de septiembre hasta el 7 de octubre del 2016

AVISO DE ESTA JUNTA PARA AVERIGUAR EL AMBITO DE LOS IMPACTOS AMBIENTALES: Acuerdo con la sección 21083.9 del código de Recursos Públicos del estado de California y el código de regulaciones de California, título 14 ("directrices de CEQA") sección 15082(c), la agencia primaria llevará a cabo una junta de evaluación con el fin de solicitar comentarios verbales y por escrito de las partes interesadas que solicitaron el aviso, agencias responsables, y agencias con jurisdicción en la ley, administradoras/es de agencias fiduciarias y agencias federales implicadas, en cuanto al alcance apropiado y el contenido del "EIR".

ALCANCE DE ESTA JUNTA PARA AVERIGUAR EL AMBITO DE LOS IMPACTOS AMBIENTALES: La ciudad llevará a cabo esta junta para el Plan propuesto, para recibir comentarios sobre el alcance y contenido del "EIR" propuesto. Usted es bienvenida/o a asistir a la reunión y presentar información ambiental que Usted cree que se debe considerar en el "EIR". La junta es:

Fecha: 13 de septiembre de 2016
Hora: 6:00p.m. – 8:30p.m.
Lugar: Boyle Heights City Hall, 2130 E. 1st Street, Los Angeles 90033

Como una entidad cubierta bajo el título II de la ley de Americanas/os con incapacidades, la Ciudad de Los Angeles no discrimina. El lugar de reunión y aparcamiento son accesible en silla de ruedas. Intérpretes de lengua de signos, dispositivos de audición asistida, otros ayudantes auxiliares o servicios pueden suministrarse bajo pedido. Otros servicios, como traducción entre inglés y otros idiomas, también pueden suministrarse bajo pedido. Para asegurar la disponibilidad de servicios, por favor haga su solicitud no más tarde de tres días hábiles (72 horas) antes de la reunión comuníquese por teléfono con Kiran Rishi al (213) 978-1169.

AGENCIAS RESPONSABLES Y ADMINISTRADORAS/ES DE AGENCIAS: La ciudad pide opiniones de la agencia sobre el alcance y contenido de la información ambiental relevante a responsabilidades legales de la agencia en relación con el Plan propuesto, de acuerdo con las directrices de "CEQA", sección 15082(b). Su agencia tendrá que utilizar el "EIR" preparado por la ciudad al considerar cualquier permiso que su agencia debe emitir u otras aprobaciones de proyectos. Como tal, sus respuestas a esta noticia de preparación ("NOP"), como mínimo deberán identificar lo siguiente: (1) las cuestiones ambientales significativas y alternativa razonable y medidas de mitigación que su Agencia tendrían que hubiese explorado en el "EIR"; y (2) si la agencia se encargará o un administrador/a de la Agencia para este proyecto.

UBICACIÓN DEL PROYECTO: El área geográfica del Plan de la comunidad de Boyle Heights ("CPA") se encuentra inmediatamente al este del centro de la ciudad y el río de Los Ángeles y bordea el límite de la ciudad de Los Angeles hacia el este. Sus límites se definen aproximadamente por la autopista/interestatal 10 de San Bernardino (10 "Freeway") y la calle Marengo al norte, las calles Santa Fe y la Union Pacific al sur, la calle de Indiana al este y el río de Los Angeles al oeste. Las fronteras meridionales y orientales de esta área se alinean con los límites de la ciudad de Los Angeles; la ciudad de Vernon se encuentra al sur y el la comunidad "no-incorporada" del Este de Los Angeles está situada al este de esta área respectivamente, mientras que hace el norte se ubican comunidades de Lincoln Heights y El Sereno, y los distritos industriales del centro de los Angeles se encuentran al oeste. El área mide aproximadamente 6 millas cuadradas. El área geográfica del Plan de la comunidad de Boyle Heights se muestra en el contexto regional en la **Figura 1**.

INFORMACION SOBRE ANTECEDENTES DEL PROYECTO: El Plan Comunitario de Boyle Heights es uno de los 35 planes comunitarios, que comprenden el elemento de usos terrenales del Plan General de la Ciudad. El elemento de usos terrenales es uno de los 7 elementos del Plan General que también incluyen ruido, transporte y conservación entre otros. Se actualiza el Plan de la comunidad de Boyle Heights (el uso de la tierra plan de Boyle Heights) consistente con el código del Gobierno de California sección 65302 que identifica los siete elementos necesarios y requeridos de un Plan General.

El Plan de comunidad de Boyle Heights fue actualizado en 1998 para satisfacer las necesidades hasta el año 2010. Desde entonces han ocurrido cambios significativos, en particular, la construcción y apertura de la extensión de la Línea Dorada "Metro Gold Line" para la zona este en el 2009, a lo largo de la calle Primera "1st Street". Además, otros cambios que han ocurrido a lo largo del corredor comunitario de la calle Primera "Ist Street", es la construcción de una nueva escuela secundaria (centro de aprendizaje de Méndez) junto a la estación del "Gold Line" Pico/Aliso y proyectos de usos mixtos/ingresos mixtos a lo largo de otros corredores de la comunidad.

DESCRIPCIÓN DEL PROYECTO: El proyecto es la actualización del Plan de la comunidad de Boyle Heights ("Plan propuesto") y la aprobación de actualizaciones necesarias para el uso de la tierra, zonificación, plan de texto y otras ordenanzas para implementar estas actualizaciones. El diagrama **(Figura 2)** ilustra los usos terrenales propuestos y representa las designaciones de uso de tierra que satisfacen los pronósticos de crecimiento para la vivienda, población y empleo en esta área para los próximos 20 a 25 años. El Plan propuesto dirige el crecimiento futuro de las áreas ya urbanizadas del área geográfica del plan. Los cambios propuestos en gran parte siguen el patrón actual de desarrollo de uso de tierra que refleja las pólizas de la ciudad al dirigir crecimiento hace donde el crecimiento pueda ser apoyado por infraestructura de transporte existente. El Plan propuesto promueve un equilibrio de viviendas y puestas de trabajo/empleos cerca de tránsito donde se pueden proporcionar diferentes tipos de usos de la tierra (por ejemplo, comerciales y residenciales) para reducir la longitud y el número de viajes en carro.

El Plan propuesto incluye cambios limitados a las designaciones de uso de tierra, así como cambios de zona para cumplir los siguientes objetivos: (1) conservar usos residenciales unifamiliares y usos residenciales de familias múltiples existentes y añadir nuevos reglamentos de zonificación para proteger la forma existente y proporcionar estándares de diseño que son apropiados para la formación del vecindario; (2) conservar usos comerciales útiles en servir a vecinos/as ("el vecindario local") y añadir nuevas normas de zonificación para mejorar la fachada de la calle y normas de diseño que sean más orientadas hace el uso peatonal; (3) retener distritos industriales "light"/livianos para priorizar usos que fomenten o produzcan trabajos y añadir nuevas normas de zonificación para las transiciones mejoradas del uso residencial e industrial; (4) agregar nuevos reglamentos de zonificación para mejoramientos de acceso al área del "Rio" y las normas para la construcción de forma y la orientación de edificios; (5) fomentar el desarrollo orientado al tránsito mixto y equitativo; (6) preservar el carácter histórico y formas de edificio comercial para la calle "Brooklyn" hoy conocida como "Cesar Chavez Avenue" y conservar las formas y caracteres residenciales en los barrios y colonias de la área de "Prospect Park" y "Hollenbeck Park"; y (7) nueva zonificación que incluya normas de protección para recursos históricos identificados.

Las pólizas propuestas del Plan complementan la zonificación propuesta y designaciones de usos terrenales; estas pólizas también están orientadas a la preservación de las viviendas históricamente multi-familiares y bajas en densidad (unifamiliares), la promoción del río de Los Angeles como un servicio de la comunidad, la preservación de usos terrenales que generan empleos, y la preservación y fortalecimiento de áreas comerciales vecinales ("con usos que son útiles para el vecindario local"). Las pólizas incluidas en el Plan Propuesto también animarían los siguientes objetivos: (1) proteger estructuras históricas; (2) preservar el carácter de esta comunidad; (3) promover proyectos de desarrollo bien diseñados, y de buena calidad que complementan y elevan el carácter existente de la comunidad; y (4) preservar el ambiente urbano de densidad mixta de Boyle Heights.

A continuación se proporcionan características notables del Plan Propuesto.

- Preservar las áreas residenciales de densidad baja y mantener designaciones de uso terrenales también con densidad baja, y limitar la escala o forma de edificios para nuevos desarrollos en áreas con un carácter histórico establecido. Crecimiento potencial será dirigido lejos de áreas residenciales con baja densidad, y dirigidos hacia las zonas comerciales con acceso a transporte público y áreas residenciales que ya existen con densidad media.
- Nuevas reglas de zonificación que incluyen incentivos para los servicios públicos que benefician a la comunidad local, y que abordan la necesidad de desarrollos que encajan con el contexto de Boyle Heights a lo largo de los corredores principales. Algunos de estos corredores son la calle Primera "1st Street", el bulevar Whittier "Whittier Boulevard", la calle Soto y otros corredores y áreas comerciales identificadas, según el marco del Plan General que guía el crecimiento hace puntos de enfoque con mayor intensidad, y promoción de tránsito adyacente (metro y autobús) con usos mixtos en centros comerciales.
- Corredores de alto volumen peatonal (por ejemplo la calle Soto) son promovidos como rutas seguras que se conectan con las escuelas, y nuevas normas de zonificación que requieren fachadas peatonales y que se active la planta baja ("nivel de la calle") para promover espacios seguros para peatones.

TEMAS A TRATAR EN EL REPORTE DE IMPACTOS DEL AMBIENTE "EIR": Basándose en la descripción del proyecto y el entendimiento de los problemas ambientales asociados con el Plan propuesto, se prevé que la aplicación del Plan propuesto tiene el potencial de resultar en efectos ambientales significativos asociados con algunos o todos de los siguientes temas, que serán analizados en detalle en el "EIR":

- Estética
- Calidad del Aire
- Recursos Biológicos
- Recursos Culturales
- Geología y Suelos
- Emisiones de Gases de efecto Invernadero
- Materiales Peligrosos y Riesgosos
- Hidrología y Calidad del Agua
- Uso de la tierra y la Planificación
- Ruido
- Población, Vivienda y Empleo
- Servicios Públicos y Recreación
- Transporte/Circulación
- Sistemas de Utilidades/Servicios

La ciudad reconoce que existe contaminación de Exide en el área geográfica del plan y esta cuestión se identificará en la discusión de las condiciones existentes; y en la medida en que el desarrollo podría exacerbar los impactos asociados con la contaminación, el "EIR" identificará las medidas de mitigación para hacer frente a la exacerbación.

En la actualidad, la ciudad ha determinado que el Plan propuesto no resultará en impactos significativos en las siguientes categorías de impacto: Agricultura y Recursos Forestales, y Recursos Minerales. Como tal, actualmente, la Ciudad no pretende analizar los impactos en el "EIR" en estos temas ambientales. Un estudio inicial no estaba preparado para este proyecto, lo permitido por las pautas de CEQA, sección 15060(d).

Alternativas a analizarse en el "EIR" deben ser definidas y analizadas consistente con los requisitos de las directrices de la ley Ambiental "CEQA", sección 15126.6. Las alternativas específicas a ser evaluadas en el "EIR" pueden incluir, pero no se limitan a, la alternativa "Sin proyecto", como exige el la ley Ambiental "CEQA" y configuraciones de uso alternativo de la tierra.

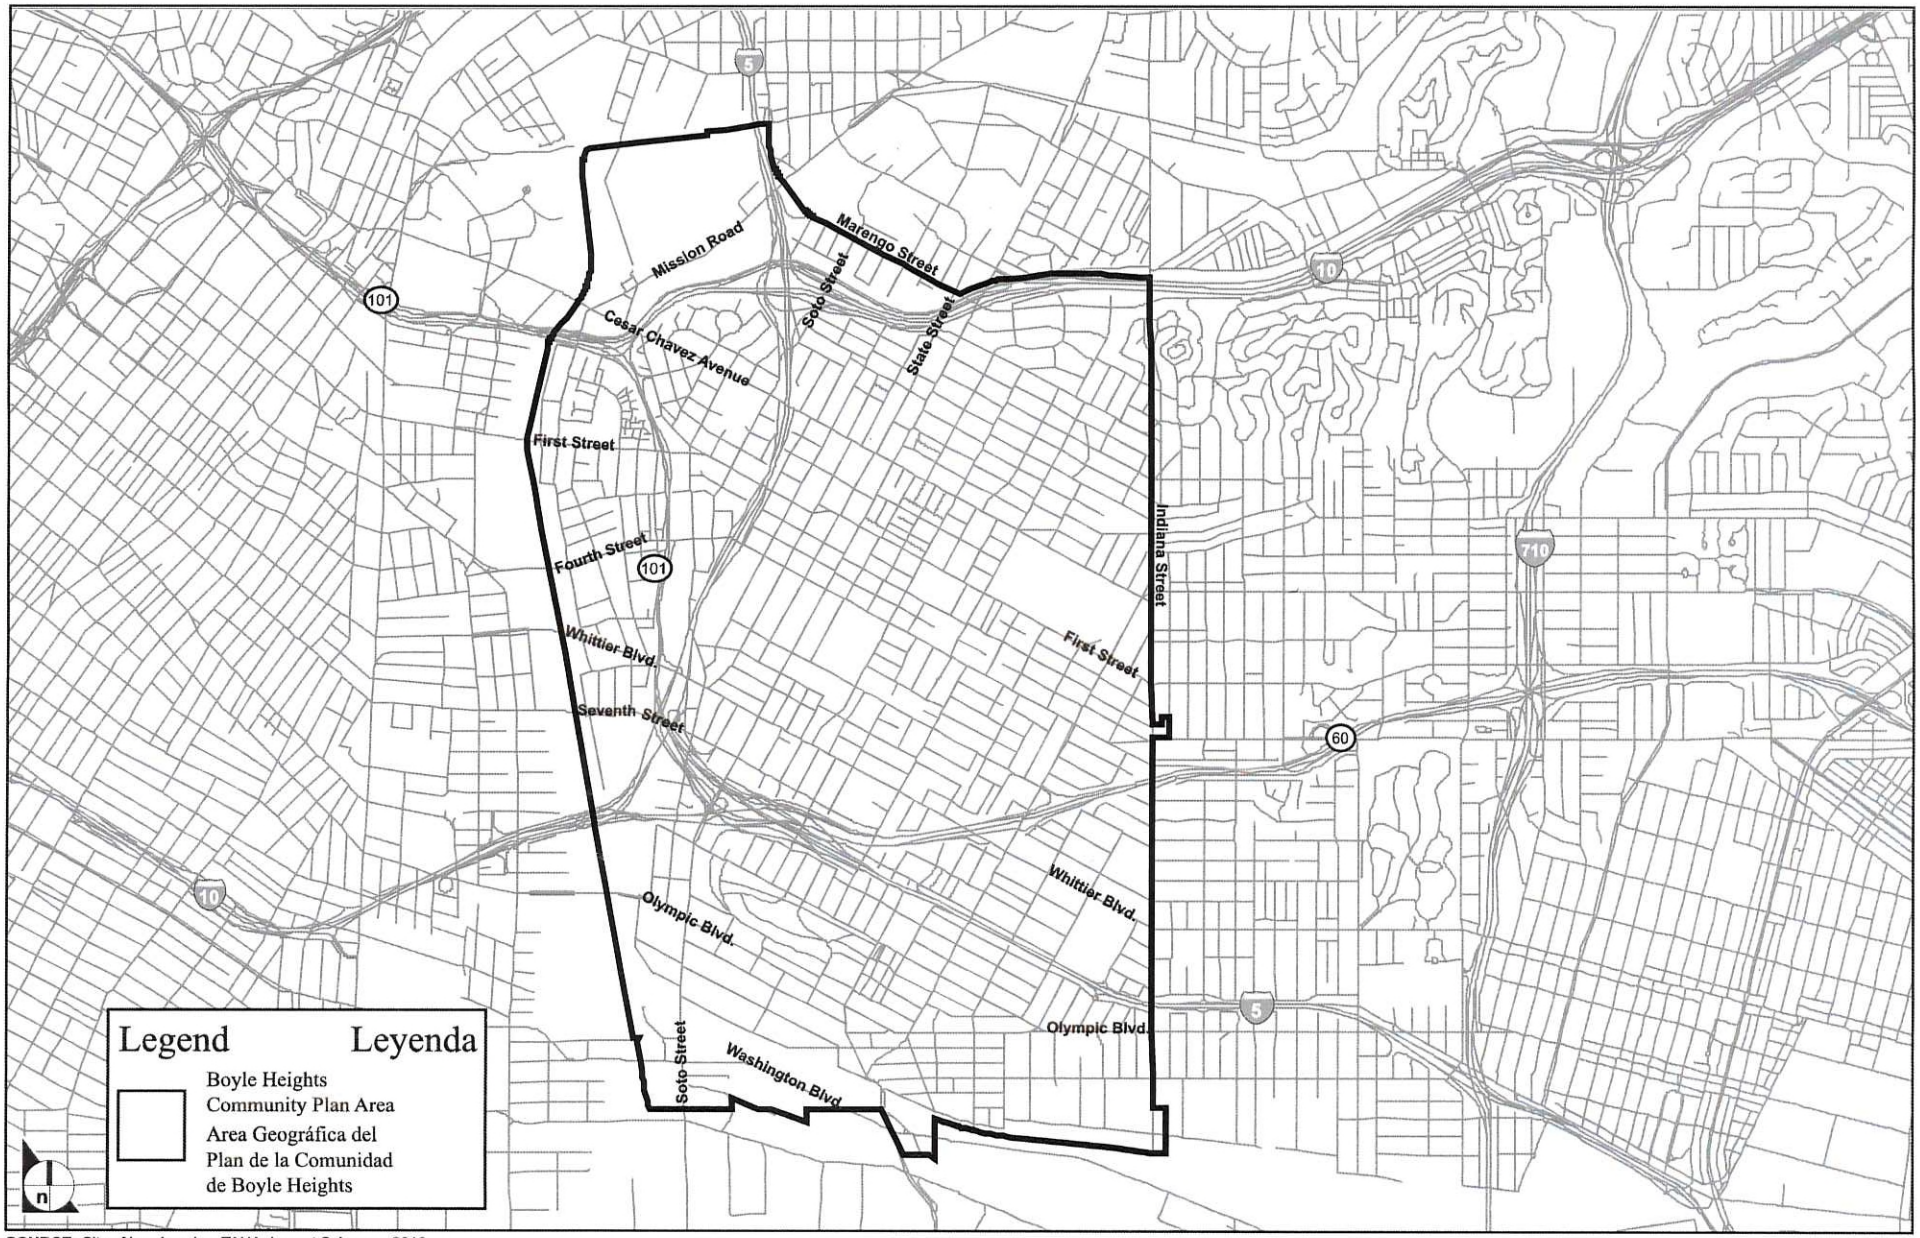
LA DISPONIBILIDAD DEL DOCUMENTO: El aviso de la preparación y los materiales para el proyecto del Plan propuesto pueden verse en el la página de internet de la ciudad de Los Ángeles Departamento de Planificación Urbana en esta dirección: www.planning.lacity.org . Para localizar una copia de la notificación de preparación en la internet, haga "clic" en "Enviromental Review" (revisión ambiental) en el lado izquierdo de la Página Web del Departamento de Planificación Urbana, y luego haga "clic" en "Notice of Preparation & Scoping Meetings" (noticias de preparación y enlace de juntas para averiguación). También, para revisar los materiales del proyecto propuesto, por favor visite nuestro sitio de internet bilingüe de google, y haga clic en "Meetings and Outreach" (reuniones y enlace), aquí están las páginas de internet:

Inglés: www.sites.Google.com/site/boyleheightsncp/Meetings-Outreach
Español: www.sites.Google.com/site/boyleheightsncp/Meetings-Outreach/Meetings-Outreach-Spanish

PRESENTACIÓN DE OBSERVACIONES ESCRITAS ("proveer comentarios por escrito"): La Agencia primaria, solicita comentarios sobre el alcance, ámbito, contenido y especificaciones al "EIR" de agencias del todo responsables, agencias con jurisdicción por la ley, administradoras/es de agencias de fideicomisario, agencias involucradas, y partes interesadas que solicitaron aviso. Envíenos sus comentarios por escrito a mano o escribir a máquina (incluyendo su nombre, número de teléfono, información de contacto, correo electrónico si es conveniente) a la siguiente dirección:

Ciudad de Los Angeles Departamento de Planificación Urbana
ATTN: Haydee Urita-Lopez, Planificadora de la Ciudad ("City Planner")
Número de Caso: CPC-2016-2905-CPU y ENV-2016-2906-EIR
200 N. Spring Street, Room 667
Los Angeles, CA 90012

Teléfono: (213) 978-1325
Correo electrónico: haydee.urita-lopez@lacity.org



Conformidad con la sección CEQA 15082, este aviso de preparación se está circulando por un período de 30 días de comentario; la ciudad de Los Angeles pide comentarios escritos lo más temprano que sea posible, pero no más tarde de las 5:00p.m. (de la tarde) el 7 de octubre del 2016.

Comments: I have a suggestion for the "Industrial Districts" portion of this EIR scoping meeting. There is a proposed "buffer zone along Olympic Blvd. My suggestion is that a report or study be conducted to determine the various metals in the area over where the proposed buffer zone will be. Then within that study or report, illustrate how the buffer zone would reduce, if at all, the metals in the air over the buffer zone. The buffer zone may not be a large enough buffer. Don't sell the communities health short over the desire to please these hazardous businesses.

THANK YOU

Comments: (3) Overall proposed land use: Agree completely with the idea of enforcing a unifying design aesthetic on new construction. Might be too late for my block but would benefit area at large (3) commercial zoning: The main thing we are missing is parking. Lots of good mom+pop shops but not enough parking for people from outside BH or even from other parts of BH to visit. (3) residential zoning: Parking again. Permit parking creates as many problems as it solves. Must crack down on people parking multiple vehicles (for sale?) as personal vehicles (3) residential zoning - keep density down! More units are needed but there's smart ways of doing it. (3) Promote pathways to ownership. Help make renters Owners.

THANK YOU

Comments: I am concerned regarding height levels of new developments especially along the L.A. River & near Mariachi Plaza. I/We enjoy our view of the city from our house & do not wish to see monstrousities such as those that now exist along the west bank in the Art's District.

At mariachi plaza, the concern is in regards to current density issues, such as parking & amenities, specially for the elderly. Buildings there should be maintained at the 2-3 story max limit on ~~future residential~~ reflect current housing. Not overshadow them.

The Boyle Heights Community Plan should include a stance on "setbacks" Reflecting fire safety, child safety (specifically on blind spots), an enough distance from our neighbors for general comfort levels. As well as to maintain ~~the~~ the look & feel of current homes.

OVER

THANK YOU

Comentarios:

(cont)

Parking currently is an issue. Residents have limited parking. Often having to park more than 10 blocks from their homes. High development housing ~~exac~~ causes increase loss of public parking. Parking is also an issue for bussiness around Mariachi Plaza & along Brooklyn. Community events also ~~that~~ strain residential parking. ~~As does~~ This parking issue also results in an increase in ticketing & during street sweeping day. As current residents are unable to find parking that has effectively been cut in half.

For public safety, blind spots exist for drivers along Chavez between Bridge St & Echandia (traveling East) where cars speed, unable to see the ~~ped~~ crosswalk barely missing pedestrians. And safety ~~along~~ on first street along the goldline ~~next~~ next to residential & a school.

GRACIAS

Comments: The plan that is presented is well put together. The one thing I would request is a close look at open/green space, especially since there is a call to increase living housing units along the Gold Line and Cesar Chavez. Boyle Heights already lacks green space, especially since the largest zoned open space is a cemetary (which isn't very green since the drought). I would ask for a mitigation of parks and open space.

I would also ask to make sure there is a requirement for public open space development along the LA river.

Thank you for your time and work.

THANK YOU

Comments:

- Restrictive truck routes should be created and enforced to limit exposure to toxic issues from trucks for residents, including idling. This is especially an issue for residential areas adjacent to industries in the southern & western portions of Boyle Heights.
- Soil sampling for lead should be conducted at least up to 4½ miles from Exide to assess & mitigate impacts from future development projects in Boyle Heights.
- Toxic facilities & traffic issues should be part of the scoping process so resident knowledge (especially historic info of pre CEQA facilities) is incorporated into studies for the draft EIR.

THANK YOU

Comments:

- We need a Specific Plan for the industrial areas along the LA River
- No land uses should be allowed by right. Industrial uses should require mandatory Conditional use Permit process. All housing developments, regardless of levels, should require affordable housing units proportional to the per center of low-income families in the area. Each additional level, beyond 2, should require a 25% increase of affordable housing units, up to 4 levels, 5 level developments should require 100% affordable housing units.
- Heavy industry zoning adjacent to housing near olympic, and especially along union pacific approaching Indiana, should be rezoned to reduce toxic exposure to residents. The

Comments: Estoy de acuerdo en los incentivos de ~~la~~ Vivienda economica en terrenos de metro en la plaza de Mariachi plaza. tambien sedeban incluir el incentivo. porque esta sarca del tren la vivienda economica. para que las personas. pobres puedan usar el metro. que es un trasiporte publico y asi no se usen los carros.
No sotros, la comunidad de Boyle, H. necesitamos la vivienda economica es una Gran necesidad para muchas familias de muy bajos ingresos. no queremos vivienda de lujo.
ojala Tomen en cuenta nuestras peticiones para la vivienda, ecomomica, que es una necesidad, no un lujo.

Please select one:

☐ Resident ☐ Business Owner ☐ Property Owner

☐ Organization ☒ Other community garden volunteer

Comments:

I'm writing this in support and fierce advocation of proyecto Jardin as a community building space that should be valorized as such. Ensuring that the garden is considered a green space will secure that the community-building through gardening continues on. Part of your plan talks about "conserving neighborhood character", and ensuring the permanency of the garden as a green space will do that. Additionally, I'm writing in support of removing the Mariachi plaza from historic zone to the community corridor - to maximize transit oriented development, increasing the rider usage of public transit.

THANK YOU

Comentarios:

Mariachi plaza empty lot should be moved from the historical Zoning to the Community Corridor Zoning. By making move it will maximize TOD to create an impact in our environment. Preserve industrial land for jobs. NO housing development.

GRACIAS

Comments: ~~I THINK~~ SOMETIMES ~~E~~NDIVIDUALS HAVE THE BEST INTENTIONS. BUT WHEN TIS A BUNCH OF FOLX FROM OUTSIDE THE COMMUNITY, COMING IN TO A COMMUNITY LIKE BOYLE HEIGHTS WANTING TO MAKE CHANGES TO IMPROVE THE COMMUNITY IT MAY CAUSE SOME CONFLICT FOR RESIDENTS. ~~of~~ THERE WILL BE SOME UNINTENDED CONSEQUENCES FOR RESIDENTS AND THESE FOLX WILL NOT BE ABLE TO HELP. SOMEHOW, THERE NEEDS TO BE AN INCREASE IN COMMUNITY INVOLVEMENT (THE REAL COMMUNITY-NOT THE SELL OUTS). ~~THE~~ THERE'S A BUNCH OF FOLX FROM OUTSIDE COMMUNITIES IN THIS MEETING TO MAKE DECISIONS FOR ANOTHER COMMUNITY. THIS PROJECT NEEDS TO BE 100% DONE BY FOLX WHO LIVE WITHIN THE BOYLE HEIGHTS COMMUNITY. (WE HAVE OUR BEST INTEREST) IN BUILDING MORE HOUSES IS NOT GOING TO SOLVE EVICTION-DISPLACEMENT-GENTRIFICATION. INCARCERATING MORE YOUTH IS NOT GOING TO STOP CRIME.

THANK YOU

Comments: Thanks for having this meeting. Although I have to say, it was kind of confusing what the plans were, but I did get it. What I would really like to see though, is the community become greener. So please, more trees, around industrial and housing areas. AND also, if you are going to build more housing, make it affordable for the people already living here, that it is affordable to our income.

Also, if you could have better communication with us when having these kind of meetings, that would be great, because not a lot of people in the community know about these meetings. In fact only few of us know.

And also be **clear** of is actually going to happen here in Boyle Heights in the future.

THANK YOU

Comments:

parking → we need to build underground
how does the plan address this? (and)

industrial → maintain industrial use only along LA river (✓)

community / nodes → (X) concern about the ongoing projects will already be completed before 2018, the expected finalization of this community plan update

(X?) meaning more private investment and less affordable housing will be set up as the case anyways

Cesar Chavez → highly impacted, how can we improve this transit area for everyone - bicyclists? pedestrians? drivers

THANK YOU

Comments: I am interested in The H. Preservation Overlay and if Soto St. homes have been ID'd as historical. My wife's grandmother had her office at 1185 S. Soto St. and she was one of the founders of the Japanese American Hospital on Cummings / 1st St. as an example. Also I'm on the board of the BHH Society and concerned that we are losing many historical homes which are the essence of Boyle Heights. Feel Free TO contact me or the organization

Comments: Preserve Wyvernwood. It is a historic, cultural resource.

Proposed projects (Wyvernwood, Sears) will increase density 5 times. Traffic, & emissions, will also increase to levels ~~that exceed~~ beyond what is tolerable.

Preserves 1187 RSO Units that the city needs.

SAVE WYVERNWOOD!!

THANK YOU

Comments: Boyle Heights ~~has~~ is a high density neighborhood, while the community plan touches on residential, commercial, & industrial, there is a lack of green space in the area. Green space to include a dog park & lounging opportunities for health & wellness activities.
My suggestion: convert industrial zones into green spaces. For mixed residential/commercial zones, rooftops should be green spaces for residents. Boyle Heights needs and deserves MORE green space

THANK YOU

Comments: I believe the Mariachi Plaza Empty Lot on Bailey and Pennsylvania should not be considered as a historical site, but rather be moved to the "Community Corridors" section. Moving this lot would create an Enviromental impact by allowing for an increase of Housing developments.

We are in a housing crisis, and limiting this particular site would impact our community, and those in need of Access to housing, and the environment impact created by lack of housing is having homeless folks out in the Streets and more people driving cars.

THANK YOU

Comentarios:

La vivienda accesible es una necesidad primordial en los terrenos cercanos al transito urbano, ya que con el uso de autos es un impacto ala calidad del Aire. Tambien es muy importante tomar en cuenta las opiniones y sugerencias de los residentes y personas afectadas en los diferentes aspectos.

Sinceramente
Guille

Comments: Transit Oriented developments should be accessible and affordable, ensuring the public transit is utilized, as opposed to driving vehicles, which pollut our environment.

I'd like to have the empty lot owned by Metro on Mariachi Plaza to Moved from the historical zoning, to be moved to the "Community Corridors" zoning section.

Maximizing the transit oriented development for ~~a~~ accessible and affordable housing. Maximizing this Metro lot would allow for less pollution to be emitted into our environment.

THANK YOU

Comments: I WANT TO SEE MORE clean energy: ELECTRIC VEHICLES, CHARGING STATIONS, SOLAR POWER; SOLAR POWERED PHONE CHARGING; SOLAR & SHADE @ BUS STOPS.

HOW CAN WE INCENTIVIZE SMALL "GRANNY FLATS" or "TINY HOMES"?
+ MAKE THEM SOLAR, BATTERY, GREY WATER, GREEN/COOL ROOF; NET ZERO ENERGY/WASTE?
+ BONUS FOR AFFORDABILITY
+ ADD MORE HOUSING & MINIMIZE IMPACT

- MINIMIZE DUMPING → VIDEO MONITORING OF HIGH DUMPING AREAS
- GREEN ALLEYS → ADD VEGITATION, GREEN PAVEMENT, enforce NO dumping.
- MORE VEGITATION ALONG FREEWAY OFFRAMPS, OVERPASSES THAT CUT THROUGH THE COMMUNITY → MINIMIZE POLLUTION & DUST
- PET WASTE STATIONS!
- ATTRACT clean energy COMPANIES → BRING jobs to INDUSTRIAL AREAS

THANK YOU

Comments:

- One of my concerns is in the designations being placed in the Industrial Section of B.H.
  → How can we ensure jobs created are for BH Residents?
  → How can we ensure that LA RIVER-Related investments support existing BH Residents
- Can the community plan incorporate a general theme of affordability of housing and commercial spaces?
- What is the maximum percentage of affordable housing we can require in incentives? How can we ensure they support BH residents primarily?

THANK YOU

Comments on the community plan

2 messages

Emmanuel Deleage Wed, Sep 21, 2016 at 5:12 PM
To: Haydee Urita-Lopez <haydee.urita-lopez@lacity.org>

Hi Haydee,

My comments on the Boyle Heights Community plan, is that I think there needs to be a thought out strategy for more parking, especially within walking distance of commercial corridors, like 1st Street. The one on Chicago St, south of Cesar Chavez is a very good example of what we need more.
This will help support the local businesses, which will help support local jobs, and keep the mom and pop stores around.

Thanks

ADJACENT CONSTRUCTION DESIGN MANUAL

1.0 INTRODUCTION

1.1 Parties planning construction over, under or adjacent to a Metropolitan Transportation Authority (MTA) facility or structure are advised to submit for review seven (7) copies of their drawings and four (4) copies of their calculations showing the relationship between their project and the MTA facilities, for MTA review. The purpose of the MTA review is to reduce the chance of conflict, damage, and unnecessary remedial measures for both MTA and the parties. Parties are defined as developers, agencies, municipalities, property owners or similar organizations proposing to perform or sponsor construction work near MTA facilities.

1.2 Sufficient drawings and details shall be submitted at each level of completion such as Preliminary, In-Progress, Pre-final and Final, etc. to facilitate the review of the effects that the proposed project may or may not have on the MTA facilities. An MTA review requires internal circulation of the construction drawings to concerned departments (usually includes Construction, Operations, Maintenance, and Real Estate). Parties shall be responsible for all costs related to drawing reviews by MTA. MTA costs shall be based upon the actual hours taken for review at the hourly rate of pay plus overhead charges. Drawings normally required for review are:

A. Site Plan

B. Drainage Area Maps and Drainage Calculations

C. Architectural drawings

D. Structural drawings and calculations

E. Civil Drawings

F. Utility Drawings

G. Sections showing Foundations and MTA Structures

H. Column Load Tables

I. Pertinent Drawings and calculations detailing an impact on MTA facilities

J. A copy of the Geotechnical Report.

K. Construction zone traffic safety and detour plans: Provide and regulate positive traffic guidance and definition for vehicular and pedestrian traffic adjacent to the construction site to ensure traffic safety and reduce adverse traffic circulation impact.

L. Drawings and calculations should be sent to:

MTA Third Party Administration (Permits Administration)
Los Angeles County Metropolitan Transportation Authority
One Gateway Plaza
Los Angeles, California 90012

1.3 If uncertainty exists on the possible impacts a project may have on the MTA facilities, and before submitting a formal letter requesting a review of a construction project adjacent to the Metro System, the party or his agent may contact the MTA Third Party Administrator (Permits). The Party shall review the complexity of the project, and receive an informal evaluation of the amount of detail required for the MTA review. In those cases, whereby it appears the project will present no risk to MTA, the Third Party Administrator (Permits) shall immediately route the design documents to Construction, Operations, Maintenance, and Real Estate departments for a preliminary evaluation. If it is then confirmed that MTA risk is not present, the Administrator shall process an approval letter to the party.

1.4 A period of 30 working days should be allowed for review of the drawings and calculations. Thirty (30) work days should be allowed for each successive review as required. It is noted that preliminary evaluations are usually produced within 5 working days.

1.5 The party shall reimburse the MTA for any technical review or support services costs incurred that are associated with his/her request for access to the Metro Rail System

1.6 The following items must be completed before starting any construction:

A. Each part of the project's design may be reviewed and approved by the MTA. The prime concern of the MTA is to determine the effect of the project on the MTA structure and its transit operations. A few of the other parts of a project to be considered are overhead protection, dust protection, dewatering, and temporary use of public space for construction activities.

B. Once the Party has received written acceptance of the design of a given project then the Party must notify MTA prior to the start of construction, in accordance with the terms of acceptance.

1.7 Qualified Seismic, Structural and Geotechnical Oversight

The design documents shall note the name of the responsible Structural Engineer and Geotechnical Engineer, licensed in the State of California.

2.0 REVIEW PROCEDURE

2.1 All portions of any proposed design that will have a direct impact on an MTA facility or structure will be reviewed to assure that the MTA facility or structure is not placed in risk at any time, and that the design meets all applicable codes and criteria. Any portion of the proposed design that is to form part of an MTA controlled area shall be designed to meet the MTA Design Criteria and Standards.

2.2 Permits, where required by the local jurisdiction, shall be the responsibility of the party. City of L.A. Dept. of Bldg. and Safety and the Bureau of Engineering permit review shall remain in effect. Party shall refer to MTA Third Party Administration policies and procedures, THD5 for additional information.

2.3 Monitoring of the temporary support of excavation structures for adjacent construction shall be required in all cases for excavations within the geotechnical zone of influence of MTA structures. The extent of the monitoring will vary from case to case.

2.4 Monitoring of the inside of MTA tunnels and structures shall be required when the adjacent

excavation will unload or load the MTA structure or tunnel. Monitoring of vertical and horizontal distortions will include use of extensometers, inclinometers, settlement reference points, tiltmeters, groundwater observation wells, tape extensometer anchor points and load cells, as appropriately required. Acceptable limits of movement will depend on groundwater conditions, soil types and also the length of service the stations and tunnels have gone through. Escorts will be required for the survey parties entering the Metro operating system in accordance with MTA Operating Rules and Procedures. An MTA account number will be established and the costs for the escort monitoring and surveying service will be billed directly to the party or his agent as in section 1.2.

2.5 The calculations submitted for review shall include the following:

A. A concise statement of the problem and the purpose of the calculation.

B. Input data, applicable criteria, clearly stated assumptions and justifying rationale.

C. References to articles, manuals and source material shall be furnished with the calculations.

D. Reference to pertinent codes and standards.

E. Sufficient sketches or drawing references for the work to be easily understood by an independent reviewer. Diagrams indicating data (such as loads and dimensions) shall be included along with adequate sketches of all details not considered standard by MTA.

F. The source or derivation of all equations shall be shown where they are introduced into the calculations.

G. Numerical calculations shall clearly indicate type of measurement unit used.

H. Identify results and conclusions.

I. Calculations shall be neat, orderly, and legible.

2.6 When computer programs are used to perform calculations, the following information shall accompany the calculation, including the following:

A. Program Name.

B. Program Abstract.

C. Program Purpose and Applications.

D. Complete descriptions of assumptions, capabilities and limitations.

E. Instructions for preparing problem data.

F. Instructions for problem execution.

G. List (and explanation) of program acronyms and error messages.

H. Description of deficiencies or uncorrected errors.

I. Description of output options and interpretations.

J. Sample problem(s), illustrating all input and output options and hardware execution statements. Typically, these problems shall be verified problems.

K. Computer printout of all supporting calculations.

L. The "User's Manual" shall also include a certification section. The certification section shall describe the methods and how they cover the permitted options and uses of the program.

2.7 Drawings shall be drawn, to scale, showing the location and relationship of proposed adjacent construction to existing MTA structures at various stages of construction along the entire adjacent alignment. The stresses and deflections induced in the existing MTA structures should be provided.

2.8 The short-term and long-term effects of the new loading due to the adjacent construction on the MTA structures shall be provided. The soil parameters and other pertinent geotechnical criteria contained in existing contract documents for the affected structure, plus any additional conditions shall be used to analyze the existing MTA structures.

2.9 MTA structures shall be analyzed for differential pressure loadings transferred from the adjacent construction site.

3.0 MECHANICAL CRITERIA

3.1 Existing services to MTA facilities, including chilled water and condenser water piping, potable and fire water, storm and sanitary sewer, piping, are not to be used, interrupted nor disturbed without written approval of MTA.

3.2 Surface openings of ventilation shafts, emergency exits serving MTA underground facilities, and ventilation system openings of surface and elevated facilities are not to be blocked or restricted in any manner. Construction dust shall be prevented from entering MTA facilities.

3.3 Hot or foul air, fumes, smoke, steam, etc., from adjacent new or temporary facilities are not to be discharged within 40 feet of existing MTA ventilation system intake shafts, station entrances or portals. Tunnel ventilation shafts are both intake and discharge structures.

3.4 Clear access for the fire department to the MTA fire department connections shall be maintained at all times. Construction signs shall be provided to identify the location of MTA fire department connections. No interruption to fire protection water service will be permitted at any time.

3.5 Modifications to existing MTA mechanical systems and equipment, including ventilation shafts, required by new connections into the MTA System, shall only be permitted with prior review and approval by MTA. If changes are made to MTA property as built drawings shall be provided reflecting these changes.

At the option of MTA, the adjacent construction party shall be required to perform the field tests necessary to verify the adequacy of the modified system and the equipment performance. This verification shall be performed within an agreed time period jointly determined by MTA and the Party on a case by case basis. Where a modification is approved, the party shall be held responsible to maintain original operating capacity of the equipment and the system impacted by the modification.

4.0 OPERATIONAL REQUIREMENTS

4.1 GENERAL

A. Normal construction practices must be augmented to insure adequate safety for the general public entering Metro Stations and riding on Metro Trains and Buses. Design of a building, structure, or facility shall take into account the special safety considerations required for the construction of the facility next to or around an operating transit system.

B. Projects which require working over or adjacent to MTA station entrances shall develop their construction procedures and sequences of work to meet the following minimum requirements:

1. Construction operations shall be planned, scheduled and carried out in a way that will afford the Metro patrons and the general public a clean, safe and orderly access and egress to the station entrance during revenue hours.

2. Construction activities which involve swinging a crane and suspended loads over pedestrian areas, MTA station entrances and escalators, tracks or Metro bus passenger areas shall not be performed during revenue hours. Specific periods or hours shall be granted on a case-by-case basis.

3. All cranes must be stored and secured facing away from energized tracks, when appropriate.

4. All activity must be coordinated through the MTA Track Allocation process in advance of work activity.

4.2 OVERHEAD PROTECTION - Station Entrances

A. Overhead protection from falling objects shall be provided over MTA facilities whenever there is possibility, due to the nature of a construction operation, that an object could fall in or around MTA station entrances, bus stops, elevators, or areas designed for public access to MTA facilities. Erection of the overhead protection for these areas shall be done during MTA non-revenue hours.

1. The design live load for all overhead protection shall be 150 pounds per square foot minimum. The design wind load on the temporary structures shall be 20 pounds per square foot, on the windward and leeward sides of the structure.

2. The overhead protection shall be constructed of fire rated materials. Materials and equipment shall not be stored on the completed shield. The roof of the shield shall be constructed and maintained watertight.

B. Lighting in public areas and around affected MTA facilities shall be provided under the overhead protection to maintain a minimum level of twenty-five (25) footcandles at the escalator treads or at the walking surface. The temporary lighting shall be maintained by the Party.

C. Wooden construction fencing shall be installed at the boundary of the areas with public access. The fencing shall be at least eight-feet high, and shall meet all applicable code requirements.

D. An unrestricted public access path shall be provided at the upper landing of the entrance escalator-way in accordance with the following:

1. A vertical clearance between the walking surface and the lowest projection of the shield shall be 8'-0".

2. A clear pedestrian runoff area extending beyond the escalator newel shall be provided, the least dimension of which shall be twenty (20) feet.

3. A fifteen (15) foot wide strip (other than the sidewalk) shall be maintained on the side of the escalator for circulation when the escalator is pointed away from a street corner.

4. A clear path from any MTA emergency exit to the public street shall be maintained at all times.

E. Temporary sidewalks or pedestrian ways, which will be in use more than 10 days, shall be7constructed of four (4") inch thick Portland cement concrete or four(4") inches of asphaltic concrete placed and finished by a machine.

4.3 OVERHEAD PROTECTION - Operating Right-of-Way Trackage

A. MTA Rail Operations Control Center shall be informed of any intent to work above, on, or under the MTA right-of-way. Crews shall be trained and special flagging operations shall be directed by MTA Rail Operations Control Center. The party shall provide competent persons to serve as Flaggers. These Flaggers shall be trained and certified by MTA Rail Operations prior to any work commencing. All costs incurred by MTA shall be paid by the party.

B. A construction project that will require work over, under or adjacent to the at grade and aerial MTA right-of-way should be aware that the operation of machinery, construction of scaffolding or any operation hazardous to the operation of the MTA facility shall require that the work be done during non-revenue hours and authorized through the MTA Track Allocation process.

C. MTA flagmen or inspectors from MTA Operations shall observe all augering, pile driving or other work that is judged to be hazardous. Costs associated with the flagman or inspector shall be borne by the Party.

D. The party shall request access rights or track rights to perform work during non-revenue hours. The request shall be made through the MTA Track Allocation process.-

4.4 OTHER METRO FACILITIES

A. Access and egress from the public streets to fan shafts, vent shafts and emergency exits must be maintained at all times. The shafts shall be protected from dust and debris. See

Exhibit A for details.

B. Any excavation in the vicinity of MTA power lines feeding the Metro System shall be through hand excavation and only after authorization has been obtained through the MTA Track Allocation process. MTA Rail Operations Control Center shall be informed before any operations commences near the MTA power system.

C. Flammable liquids shall not to be stored over or within 25 feet horizontally of MTA underground facilities. If installed within 25 to 100 feet horizontally of the structure, protective encasement of the tanks shall be required in accordance with NFPA STD 130. Existing underground tanks located within 100 feet horizontally of MTA facilities and scheduled to be abandoned are to be disposed of in accordance with Appendix C of NFPA STD 130. NFPA STD 130 shall also be applied to the construction of new fuel tanks.

D. Isolation of MTA Facilities from Blast

Subsurface areas of new adjacent private buildings where the public has access or that cannot be guaranteed as a secure area, such as parking garages and commercial storage and warehousing, will be treated as areas of potential explosion. NFPA 130, Standard for Fixed Guideway Transit Systems, life safety separation criteria will be applied that assumes such spaces contain Class I flammable, or Class II or Class III Combustible liquids. For structural and other considerations, isolation for blast will be treated the same as seismic separation, and the more restrictive shall be applied.

E. Any proposed facility that is located within 20 feet radius of an existing Metro facility will require a blast and explosion study and recommendations to be conducted by a specialist who is specialized in the area of blast force attenuation. This study must assess the effect that an explosion in the proposed non-Metro facility will have on the adjacent Metro facility and provide recommendations to prevent any catastrophic damage to the existing Metro facility. Metro must approve the qualifications of the proposed specialist prior to commencement of any work on this specialized study.

4.5 SAFETY REGULATIONS

A. Comply with Cal/OSHA Compressed Air Safety Orders Title 8, Division 1, Chapter 4, Subchapter 3. Comply with California Code of Regulations Title 8, Title 29 Code of Federal Regulations; and/or the Construction Safety and Health Manual (Part F) of the contract whichever is most stringent in regulating the safety conditions to be maintained in the work environment as determined by the Authority. The Party recognizes that government promulgated safety regulations are minimum standards and that additional safeguards may be required

B. Comply with the requirements of Chemical Hazards Safety and Health Plan, (per 29 CFR 1910.120 entitled, (Hazardous Waste Operations and Emergency Response) with respect to the handling of hazardous or contaminated wastes and mandated specialty raining and health screening.

C. Party and contractor personnel while within the operating MTA right-of-way shall

coordinate all safety rules and procedures with MTA Rail Operations Control Center.

D. When support functions and electrical power outages are required, the approval MUST be obtained through the MTA Track Allocation procedure. Approval of the support functions and power outages must be obtained in writing prior to shutdown.

5.0 CORROSION

5.1 STRAY CURRENT PROTECTION

A. Because stray currents may be present in the area of the project, the Party shall investigate the site for stray currents and provide the means for mitigation when warranted.

B. Installers of facilities that will require a Cathodic Protection (CP) system must coordinate their CP proposals with MTA. Inquiries shall be routed to the Manager, Third Party Administration.

C. The Party is responsible for damage caused by its contractors to MTA corrosion test facilities in public right-of-way.

Re: Scope and Content of the Proposed EIR for the Boyle Heights Community Plan Update

Dear Ms. Urita-Lopez:

Home to a majority of Latino immigrants, Boyle Heights is an economically and ethnically vital enclave, experiencing a recent surge of public and private investments. The community has benefited from millions of dollars in infrastructure improvements, mostly funded by the local transit authority's Metro Gold Line light rail and other proposed capital transit projects. Today, the smart growth strategies proposed in the Boyle Heights Community Plan Update aim to facilitate and encourage transit oriented development with the highest densities proposed in and around key transit nodes. While this plan and the corresponding investment have the potential to bring much needed resources and revitalization to Boyle Heights, it also has the potential to displace long-time residents from their homes. Preserving housing affordability, extensive community networks as well as creating new opportunities that support economic progress for all can ensure that existing residents remain in their neighborhood and reap the benefits of new services, development and amenities including access to affordable housing choices.

Boyle Heights has historically been a working class neighborhood where the median household income is $27,847 or approximately 35% of the Area Median Income (AMI) for a family of four. Most recently, amid the soaring real estate market citywide, middle and high income households have moved into the neighborhood creating increasing rental and displacement pressures in Boyle Heights. As the enforcement agency of the City's Rent Stabilization Ordinance (RSO), HCIDLA is invested in protecting the RSO provisions and its corresponding stock of housing that tends to offer rents below market-rate levels. In addition, HCIDLA encourages the implementation of sound land use incentives and zoning to that address the acute need for affordable housing.

Our select comments strive to preserve housing affordability and create new affordability within reach of the existing community residents in the proposed Environmental Impact Report (EIR) for Boyle Heights.

Rent Stabilization Ordinance and Housing Development

The City must ensure that the Boyle Heights Community Plan Update approval process does not supersede or undermine the provisions of the Rent Stabilization Ordinance (RSO). The majority (88%) of Boyle Heights' multi-family housing stock is subject to the RSO (15,466 RSO units out of a total of 17,652 multifamily units); many are in small 2 to 4 unit properties. The 2nd largest rent stabilized development in the city, Wyvernwood, is located in Boyle Heights and includes 1,187 RSO units built in 1938. Discussions about redeveloping and up-zoning this large RSO property continues to take place amid today's heated market. Further, RSO unit losses are accelerating with 1,073 units lost citywide in 2015 alone and continuing to rise in 2016. To guarantee adherence to all RSO laws and regulations, all administrative processes for removal of RSO units, tenant relocation assistance, re-rental of RSO units and future exemptions from the RSO must be approved by the HCIDLA rather than any another agency (i.e. Planning Department or Commission) or discretionary action. In addition, for all large-scale housing developments proposed, the EIR should craft a review and approval process that is inclusive of the HCIDLA at the earliest stages of large the developments.

New Affordable Housing Must Match the Community's Needs

Smart growth strategies without the right housing affordability requirements may be counterproductive as new density surrounding transit development tends to only offer market-rate rents that exceed what existing residents or very lower-income transit dependent families can afford to rent, this is especially true in Boyle Heights. Approximately 70% of workers who commute by transit earn less than $25,000 a year. The City must preserve the long-term tenants that have invested in this community and meaningfully retain high transit ridership, by insuring that the new affordable housing remain at rent levels attainable and affordable by existing and future residents. Incentives for serving households at 80% AMI ($66,400 for a family of four) for example are not necessarily adequate for this community. To adequately meet the affordable housing needs of residents, new covenanted affordable housing units must be set-aside at rent levels affordable to extremely low-income and very low-income families and individuals.

Preserve Affordability

The combined impact of increased zoning capacity through the Community Plan Update, the regional connector and the Sixth Street Viaduct Replacement Project will facilitate public access and transit access to Boyle Heights, making the area a more desirable place to live over time and contribute to a real estate market with increased profit potential. Preserving the existing stock of restricted affordable housing must be a key priority for the continuance of lower cost housing in this neighborhood. Including a no net loss provision of both restricted affordable housing and RSO housing will require preservation and production goals that proactively secure housing for those most in need.

Equitable Development

Boyle Heights presents a classic case of gentrification, where there is an opportunity to be gained through the investment and redevelopment of the existing community and thereafter generating significant tax flow to the City. The downside is that the economics of this neighborhood suggest that few current residents would be able to rent or purchase in the newly revitalized neighborhood given higher rental market rate rental housing product being developed in the community. As such, an

evaluation and recommendation of sound land use tools is necessary. Proper land use tools that require and retains affordable housing options as well as an overall sustainable neighborhood of opportunity can help promote the equitable development of this community. Following are the land use tools that should be evaluated for possible implementation in the Boyle Heights Community Plan Update.

- ✓ The Boyle Heights Community Plan Update should consider a financing mechanism such as a *Community Revitalization Investment Authority* (*CRIA*) that diverts tax increment to infrastructure projects and requires a 25 percent set-aside for affordable housing. This financing mechanism can contribute to community development practices that are equitable and inclusive of people and families of varying income levels, especially those that have long invested in Boyle Heights.

- ✓ Another alternative in the near future is the newly considered *Transit Oriented Neighborhood Initiative* (*TONI*) that proposes to allow cities to use sales tax increment to fund revitalization efforts and requires an affordable housing set-aside.

- ✓ A tool that is already available is Inclusionary Zoning on for-sale units and condo-conversions. The decision in the *California Building Industry Association v. City of San Jose (2015)* case makes clear that the goal of enhancing the community's welfare by making housing available for low and moderate income households through land use regulations is legally permissible. The California Supreme Court's decision presents an opportunity to increase the supply of affordable homeownership and promote economic diversity in the Boyle Heights neighborhood. This type of program would require the development of for-sale affordable units without a public subsidy.

If the city's policy is to create opportunities for the broader community to partake in a neighborhood with enhanced amenities and overall sustainable development, mechanisms- through density incentives, value capture and preservation provisions, to name a few- must be put in place and must be properly calibrated to the target population thereby ensuring that long-term community residents can benefit from such investment. HCIDLA urges you to shape the Updated Boyle Heights Community Plan in a manner that is most beneficial to the current and future residents and stakeholders with the foresight to achieve an overall sustainable and equitable development of Boyle Heights. If you have any questions, please do not hesitate to follow up with Marisol Romero in our office at

RE: Comment on Boyle Heights Community Plan

Dear Ms. Urita-Lopez,

I would like to thank you for your efforts in organizing and executing the EIR scoping meeting for the Boyle Heights Community Plan. After reviewing the relevant information, I was glad to learn that 18 of 19 LAUSD school sites in Boyle Heights are within two blocks of an established transit corridor.

My office has three comments on environmental topics that should be analyzed in the EIR.

First, the five southern-most elementary schools in Boyle Heights are proximate to areas zoned for heavy industry (Christopher Dena Elementary, Carmen Lomas Garza Primary Center, Soto Street Elementary, Sunrise Elementary, and Lorena Street Elementary). In particular, Dena and Garza are within five blocks of these heavy-industry zoned areas. The EIR should report on the impact these heavy-industry zoned areas can have on these elementary schools.

Second, with two major freeway junctions in Boyle Heights, many of our schools in the area are close or next to freeways. I would like the EIR to address how planned housing, population, and employment growth in Boyle Heights and the surrounding region may impact the air quality for students attending schools so close to freeways in Boyle Heights.

Third, I would like to see the City of Los Angeles and the Department of City Planning establish a plan for keeping LAUSD and our Boyle Heights school principals informed of future development and the effects such development can have on traffic, congestion, and detours in a given area. Parents and school buses picking up and dropping off kids to school occurs daily and increases traffic during certain times of the day in many areas. We would like to know how, through collaboration with the LAUSD, we can better mitigate traffic impacts in the area.

In each of these areas, it would be helpful to know about ways local governments, community-based organizations, and community members can be actively involved in mitigating the

potential hazards of heavy industry and traffic that affect many of our students' environments.

I appreciate your outreach to my office. Should you have any additional questions or concerns, please contact my Director of Special Projects, Francisco Sánchez, at or via email at .

In the spirit of hope,

Mónica García

RE: Boyle Heights Community Plan Update – City of Los Angeles – Notice of Preparation of a Draft Environmental Impact Report – CPC-2016-2905-CPU and ENV-2016-2906-EIR

Dear Ms. Urita-Lopez:

Thank you for the opportunity to comment on the Boyle Heights Community Plan Update relating to the approximately 6-square mile Boyle Heights Community Plan Area in the City of Los Angeles. This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (Metro) concerning issues that are germane to our agency's statutory responsibility in relation to our facilities and services that may be affected by the proposed project.

Project Description:

The proposed project is the update of the Boyle Heights Community Plan and the adoption of necessary updates to land use, zoning, plan text, and other ordinances to implement those updates. The Proposed Plan promotes a balance of housing units and jobs near transit where different types of land uses can be provided to reduce the length and number of vehicle trips. The Proposed Plan's policies complement the proposed zoning and land use designations; and they are geared towards the preservation of historic, low-density multi-family housing, the promotion of the Los Angeles River as a community amenity, the preservation of employment generating land uses, and the preservation and strengthening of commercial areas and neighborhood serving uses. Policies included in the Proposed Plan would also encourage the following goals: 1) protect historic structures; 2) preserve neighborhood character; 3) encourage well designed, quality development projects that complement and enhance the existing neighborhood character of the community; and 4) preserve the Boyle Heights mixed-density urban environment.

Metro Comments:

Bus Operations:
Several Metro bus lines operate within the Community Plan area. Metro has standard language that relates to construction activity adjacent to bus transit facilities. As a result, we want to be sure to maintain Metro bus stop zones in the corridor as well as Metro bus layover zones. Metro recommends that the Community Plan include language that informs future development activity within the Community Plan area of Metro's notification procedures and considerations for projects located in close proximity to a Metro facility that may impact Metro bus operations.

Gold Line Light Rail Operations:
The Metro Gold Line light rail currently operates weekday peak service as often as every five minutes in both directions and that trains may operate, in and out of revenue service, 24 hours a day, seven days a week, in the ROW proximate to the proposed project. Metro has an Adjacent Construction Design Manual that describes the Metro's development project review process and considerations for project siting as it relates to Metro facilities. Metro suggests that the project sponsor include policy language or guidance in the Community Plan that clearly denotes development occurring within 100 feet of a Metro facility will require Metro review and approval, including compliance with Metro's Development Guidelines, and that a recorded Noise Easement Deed in favor of Metro is required, and that any noise mitigation required for projects must be borne by the developers of those projects and not Metro. In particular, because of the proximity to the Metro Gold Line light rail, increased traffic at railroad grade crossings must be considered in the Community Plan. Provisions for transit priority treatments should be considered to make the development welcoming to transit access.

Metrolink Commuter Rail Operations:
Please note that the Southern California Regional Rail Authority (SCRRA) operates the Metrolink commuter rail network on its San Bernardino line at the northern boundary of the Boyle Heights Community Plan on Metro owned right of way. Metrolink, along with Union Pacific Freight trains, also operate along the east bank of the Los Angeles River which is noted as your western limits of the Community Plan. In particular, SCRRA has Right of Way Encroachment Procedures for any construction activities adjacent to these rail lines. These can be found on the Metrolink website at www.metrolinktrains.com. Metro recommends that the Community Plan include language that informs future development activity within the Community Plan area of SCRRA's notification procedures and considerations for projects located in close proximity to the rail right of ways that may impact Metrolink rail operations. Metro recommends that all plans for developments adjacent to the active rail lines should be submitted to Metro Regional Rail and SCRRA for review to ensure compliance with SCRRA safety and design requirements.

Transit Orientation and Active Transportation:
Metro strongly recommends that the Community Plan include a minimum five (5) foot setback from the Metro ROW to assure that property owners can maintain their property without entering Metro property, as well as policies encouraging transit-supportive public realm improvements, such as wide sidewalks, bus shelters, comfortable seating, landscaping (i.e., street trees that provide continuous shade along transit access routes); way finding signage (directing pedestrians to transit stops and stations, and from transit facilities to points of interest in the surrounding neighborhood); and enhanced, ADA-compliant street crossing elements adjacent to transit stops and stations (i.e., enhanced crosswalks, crossing signals, and accessible ramps).

In addition, the Community Plan has various policies in place that support active transportation and multi-modalism. Metro recommends that the Community Plan update incorporates the following:

1. Coordination with Metro to implement Bike Share along Gold Line eastside corridor.
2. Provide bikeways that connect to the 1st Street bike lanes to develop a network of bicycle facilities.
3. Provide safe and convenient connections for pedestrians, people riding bicycles, and users of Metro systems and other transit services to and from the project.
4. Provide wayfinding signage to facilitate the usage of amenities for pedestrians, people riding bicycles, and transit services including Metro and others.

5. Promote the use of bicycles by:
    a. Providing adequate short-term bicycle parking amenities such as bicycle racks and/or curbside bicycle corrals on-site and/or in the public right-off-way.
    b. Considering providing adequate secure long-term bicycle parking for employees.

Land Use Recommendations:
In order to effectively realize the reductions in vehicle trips and lengths needed to promote a balance of housing units and jobs near transit envisioned by the Community Plan update, Metro recommends and supports the goals of encouraging quality development projects and strengthening of commercial areas and neighborhood serving uses throughout Boyle Heights. In particular, Metro has a number of surplus properties which are currently vacant for which we are currently preparing development guidelines that will serve to assist the City and the Boyle Heights community in achieving these goals. The first group of properties is located immediately adjacent to Mariachi Plaza at the intersection of Pennsylvania Avenue and Bailey Street (attachment). The second group consists of properties at the intersection of Cesar E. Chavez Avenue and Fickett and Cesar E. Chavez and Soto (attachment).

Since February, 2016, Metro has engaged in an extensive outreach process in the Boyle Heights community in order to obtain feedback on a vision for these sites. While very concerned about the nature of any development, the Boyle Heights community clearly desires to achieve these goals by locating affordable housing, locally serving commercial uses, a supermarket and additional open space to accommodate a street vendor hub, and by maintaining the Mariachi's presence and a park with both active and passive uses.

As the City guides Boyle Heights through its community planning and zoning process, Metro recommends the City prioritize achieving these goals by supporting the community's vision for these particular locations. With regard to the Mariachi Plaza site, retaining the current zoning of RD 1.5 would not help promote a balance of housing units and jobs near transit because it would negatively impact the financial feasibility of affordable housing projects. That negative impact must be avoided in Boyle Heights, which has one of the lowest median incomes of any community in the County of Los Angeles. Additionally, market forces and trends have already caused the displacement of affordable housing and one of the lowest vacancy rates in the City of Los Angeles. In order to promote a balance of housing units and jobs near transit envisioned by the update, the Boyle Heights community desires to provide more opportunities for affordable housing projects in Boyle Heights, and recognizes that the resulting higher density is appropriate. Therefore, Metro recommends the property be rezoned to R3-1 in order to accommodate the community's vision. Additionally, an R3-1 zoning would be compatible with a Transit Oriented Community given its location immediately adjacent to the Mariachi Plaza Gold Line Station.

The properties at Cesar E Chavez and Fickett and Cesar E Chavez and Soto are currently zoned C2-1 and R3-1. Through the community engagement process a vision for the site at Fickett includes: affordable housing, open space, and a locally serving supermarket. The site at Soto has completed the community engagement process and will soon enter the entitlement phase. The project will consist of 77 affordable housing units and ground floor retail. The current zoning and plan designation meets the needs of accomplishing the vision and objectives for both sites. Therefore, we recommend no changes to the existing zone/plan designation at these sites.

If you have any questions regarding this response, please contact Elizabeth Carvajal at or by email at **Metro looks forward to reviewing the Draft EIR. Please send it to the following address:**

Sincerely,

Elizabeth Carvajal

RE: Boyle Heights Community Plan Update ADDENDUM – City of Los Angeles – Notice of Preparation of a Draft Environmental Impact Report – CPC-2016-2905-CPU and ENV-2016-2906-EIR

Dear Ms. Urita-Lopez:

On October 5, 2016, the Los Angeles County Metropolitan Transportation Authority (Metro) sent the City of Los Angeles Department of Planning a response to the Notice of Preparation of a Draft Environmental Impact Report on the Boyle Heights Community Plan Update. This letter is an addendum to Metro's original letter response.

Project Description:

The proposed project is the update of the Boyle Heights Community Plan and the adoption of necessary updates to land use, zoning, plan text, and other ordinances to implement those updates. The Proposed Plan promotes a balance of housing units and jobs near transit where different types of land uses can be provided to reduce the length and number of vehicle trips. The Proposed Plan's policies complement the proposed zoning and land use designations; and they are geared towards the preservation of historic, low-density multi-family housing, the promotion of the Los Angeles River as a community amenity, the preservation of employment generating land uses, and the preservation and strengthening of commercial areas and neighborhood serving uses. Policies included in the Proposed Plan would also encourage the following goals: 1) protect historic structures; 2) preserve neighborhood character; 3) encourage well designed, quality development projects that complement and enhance the existing neighborhood character of the community; and 4) preserve the Boyle Heights mixed-density urban environment.

Addendum:

In an original letter response dated October 5, 2016, Metro included a *Land Use Recommendations* section regarding the Metro-owned properties immediately adjacent to Mariachi Plaza at the intersection of Pennsylvania Avenue and Bailey Street (attachment). Through an extensive community outreach process in 2016, the Boyle Heights community expressed a clear desire for affordable housing, locally-serving commercial uses, and additional open space to accommodate a street vendor hub at the Mariachi Plaza site.

In order to achieve these community goals for the Mariachi Plaza site and to promote a balance of housing and jobs near transit, Metro originally recommended rezoning the properties from the current zoning of RD 1.5 to R3-1. However, upon further evaluation of the existing land uses at Mariachi Plaza, Metro would like to amend this and instead recommend that the properties be rezoned as RAS-3 or a similar zone that supports mixed-use development. An RAS-3 zone accommodates the community's vision for both more affordable housing opportunities and locally-serving commercial uses, and supports Metro's goal of creating and enhancing Transit Oriented Communities.

If you have any questions regarding this response, please contact Elizabeth Carvajal at or by email at **Metro looks forward to reviewing the Draft EIR. Please send it to the following address:**

Sincerely,

Elizabeth Carvajal
Sr. Manager, Transportation Planning

RE: Boyle Heights Community Plan Update
Notice of Preparation
SCH# 2016091010
GTS#07-LA-2016-00127

Dear Mr. Urita-Lopez:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The project includes an update to the Boyle Heights Community Plan and adoption of necessary land use, zoning, plan text and other ordinance changes to implement the update. The proposed plan directs future growth to already urbanized areas and largely follows current pattern of land use development that focuses growth where it can be supported by existing transportation infrastructure.

Based on the information received, Caltrans has the following comments:

In the sub-heading "Walking" of the "Mobility" section of the draft Goals and Policies, it is stated the City will consider introducing angled parking along 1st Street to provide additional parking opportunities. However, the City's Mobility Plan 2035 identifies 1st Street as part of a Bicycle Enhanced Network (BEN) and is planned for protected bike lanes. With limited right-of-way, it may be difficult to fit both angled parking and protected bike lanes. If properly accommodated, though, bicycling can be a viable alternative to driving for local trips and reduce the need for additional car-parking. Also, implementing parking management technology and measures can encourage space turn over to more efficiently utilize existing spaces without adding more parking spaces.

In the sub-heading "Motorized Vehicles" in the "Mobility" section of the draft Goals and Policies, the Community Plan states it will support traffic calming measures that maintain pedestrian and bicycle circulation. If proposed traffic calming involves introducing new streetscape elements then there is an opportunity to enhance pedestrian and bicycle circulation instead of simply maintaining. The "Motorized Vehicles" section also states the Community Plan will require major developments to mitigate traffic impacts on residential neighborhoods. Possible traffic mitigations can include providing car-sharing vehicles and transit passes for residents of new developments, taking full advantage of the City's bicycle parking ordinance, and/or reducing car parking requirements. Measures that reduce the need for individual vehicle ownership and promote alternative modes of travel can reduce the number of car trips generated by a new development. For example, intersections

identified as "nodes" in the Plan where public transit is strong, there are opportunities to develop robust transit hubs with secure, safe, and convenient bicycle parking.

In general, consideration should be given to implementing multi-modal safety measures that improve conditions for all road users and reduce vehicle miles traveled. This includes measures such as road diets, bike lanes, and other traffic calming elements. Please note the Federal Highway Administration (FHWA) recognizes the road diet treatment as a proven safety countermeasure, and the cost of a road diet can be significantly reduced if implemented in tandem with routine street resurfacing.

When considering implementation of innovative bicycle infrastructure, the City should consult resources such as the National Association of Transportation Officials' (NACTO) Urban Bikeway Design Guide, or FHWA Separated Bike Lane Planning and Design Guide, to assist in the design process. Caltrans formally endorsed the NACTO Guide in 2014 and the FHWA released its guide in 2015. Also, the State's Highway Design Manual now contains provisions for protected bike lanes under "Design Information Bulletin Number 89: Class IV Bikeway Guidance (Separated Bikeways / Cycle Tracks)."

Current Caltrans policies related to sustainable transportation and traffic safety support the endeavors of the Community Plan to create active transportation links and focusing growth along quality transit corridors. Caltrans is aware of challenges that the region faces in identifying viable solutions to alleviating congestion on State and Local facilities. With limited room to expand vehicular capacity, the Community Plan should incorporate multi-modal transportation elements that will actively promote alternatives to car use and better manage existing parking assets. Prioritizing and allocating space to efficient modes of travel such as bicycling and public transit can allow streets to transport more people in a fixed amount of right-of-way.

Also, existing research on parking suggests that increasing the amount of automobile parking spaces in new and existing developments not only encourages and enables more driving, but also increases the cost of housing. The City should be mindful of the role parking plays in generating automobile use and explore alternatives that permit developments to reduce the amount of parking provided.

If you have any questions or concerns regarding these comments, please contact project coordinator, Severin Martinez at (or and refer to GTS# 07-LA-2016-00127.

Sincerely,

DIANNA WATSON
Branch Chief, Community Planning & LD IGR Review

Fwd: Comment re: Boyle Heights Community Plan Update

---------- Forwarded message ----------
From: **Tabaian, Lindsay**
Date: Fri, Oct 7, 2016 at 4:59 PM
Subject: Comment re: Boyle Heights Community Plan Update

We submit the following comment to the Boyle Heights Community Plan Update on behalf of the Seventh Street Warehouse, LLC ("Seventh Street"):

Seventh Street is the owner of a 4.58-acre parcel of property located in Boyle Heights at the following street address: 2155-2185 E. 7th Street & 670 S. Mission Road, Los Angeles, CA 90023 (the "Property"). The Property is uniquely located along the Riverfront, directly adjacent to both the L.A. River and the 6th Street viaduct. It is currently designated "limited industrial" in the draft Boyle Heights Community Plan Update.

Seventh Street is considering various development alternatives that would capitalize on the highest and best uses of this Property in a manner consistent with the stated goals of the Los Angeles River Master Plan and beneficial to the Boyle Heights community. Although no decision has been made regarding which development option to pursue, the restrictions imposed by the Property's "limited commercial" Community Plan designation would greatly restrict the owner's ability to pursue those options.

We would hope that the Community Plan Update would allow for flexibility as to both uses and density in this area, in addition to the permitted industrial and job-creating uses.

More flexible uses and density will serve the Boyle Heights community and be consistent with the LA River Master Plan by allowing development that will activate the Riverfront, provide access to the River, make the Riverfront walkable for pedestrians, reduce greenhouse gas emissions, provide open space, create "community corridors", foster job creation and encourage other related community benefits.

Thank you,

Lindsay Tabaian

RE: Notice of Preparation (NOP) for the Boyle Heights Community Plan Update (ENV-2016-2906-EIR)

Dear Ms. Urita-Lopez,

On behalf of the Los Angeles Conservancy, thank you for the opportunity to comment on the City's Notice of Preparation (NOP) of a Draft Environmental Impact Report (Draft EIR) for the Boyle Heights Community Plan Update (CPU). Along with our community partners, the Conservancy has long played an active role in preserving and protecting historic resources in Boyle Heights. Our comments are intended to help guide the discussions and planning for the rich cultural heritage and historic resources that define the community's character.

We appreciate that the Proposed Plan prioritizes the preservation of historic structures, retention of existing neighborhood character, and the construction of compatible infill development, and we look forward to greater detail in the forthcoming Draft EIR. Our goal is to ensure that the new Plan includes adequate long-term protections for identified historic; mitigates adverse impacts; and develops meaningful tools and incentives to shape future growth without sacrificing the community's irreplaceable heritage. We believe that the recently adopted West Adams-Baldwin Hills-Leimert Community Plan sets a strong precedent for the treatment of historic resources and encourage similar policies in the Proposed Plan for Boyle Heights.

I. Proposed Plan should clearly identify and map known historic resources in relation to development goals and land use changes

With development dating to the 1870s, Boyle Heights is one of the oldest communities in Los Angeles and contains a diverse collection of historic residential, commercial, and industrial properties. Few historic resources, however, have been formally protected at the national, state, or local levels. According to Historic Places LA, the City's online inventory of historic resources, the Plan Area currently contains nineteen Los Angeles Historic-Cultural Monuments and no Historic

Preservation Overlay Zones (HPOZs). Six properties have been individually listed in the National Register of Historic Places and California Register of Historical Resources. The CPU therefore offers a unique opportunity to incentivze and plan for more proactive, robust protections in the future.

Identifying and locating all known historic resources is the first step in demonstrating the ways in which the Plan may impact these resources. The Plan should clearly incorporate findings from SurveyLA – both graphically and in data form – in order to articulate the relationships between development goals and historic resources. The findings should include resources identified in the SurveyLA report for Boyle Heights, as well as resources identified in the City's Ethnic/Cultural Context Statements that are located within the Plan boundaries.

We strongly encourage the inclusion of maps illustrating the locations of all identified historic resources, including existing and eligible HCMs, properties listed in or eligible for the National and California Registers, and potential historic districts. These should be overlaid with any proposed land use changes or any Floor Area Ratio (FAR) Incentive Area(s) put forth in the proposed Plan. Inclusion of such graphic representations would greatly increase the understanding of how the Plan will impact various types of historic resources and districts, and hopefully facilitate development of more nuanced and specific planning tools to protect them.

The NOP specifically highlights the Brooklyn Avenue Corridor and neighborhoods surrounding Prospect Park and Hollenbeck Park as having high concentrations of historic resources. While we concur with their significance and support the development of new zoning regulations to protect their historic character, we urge the City to analyze and plan for historic resources throughout the Community Plan Area.

II. The Draft EIR should evaluate Proposed Plan's potential impacts on historic resources and assess a range of alternatives and mitigation measures

A key policy under the California Environmental Quality Act (CEQA) is the lead agency's duty to "take all action necessary to provide the people of this state with historic environmental qualities and preserve for future generations examples of major periods of California history."[1] CEQA "requires public agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects."[2]

Courts often refer to the EIR as "the heart" of CEQA because it provides decision makers with an in-depth review of projects with potentially significant environmental impacts and analyzes a range of alternatives that reduce those impacts.[3] If there are known impacts, the DEIR should evaluate a "range of reasonable

---

[2] *Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d 30, 41, italics added; also see PRC Secs. 21002, 21002.1.
[3] *County of Inyo v. Yorty* (1973) 32 Cal.App.3d 795; *Laurel Heights Improvement Association v. Regents of the University of California* (1993) 6 Cal.4th 1112, 1123.

alternatives…which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project."[4]

The NOP states that impacts to cultural resources are anticipated as a result of the Proposed Plan. As part of the forthcoming study in the Draft EIR, we strongly encourage the inclusion of a technical report or historic assessment to substantiate any conclusions. This analysis would help clarify how proposed development incentives may increase activities in areas with historic resources and would serve as the basis for preservation alternatives and/or mitigation measures that could substantially lessen or avoid adverse impacts.

At a minimum, direct and cumulative impacts of height district, zoning, and plan amendment changes proposed for and adjacent to areas with identified national, state, or local historic districts should be evaluated. The impacts of these types of changes on potential districts as a whole, as well as individually eligible resources, should be assessed and mitigated in the upcoming Draft EIR. We strongly recommend the inclusion of land use policies that direct development pressures away from historic resources. Furthermore, a map with the land use and zone changes overlaid with identified and potential historic resources could pinpoint areas for additional study.

The Proposed Plan should also incorporate policies from other Community Plans, such as the West Adams Plan, that will help mitigate potential impacts to historic resources. It should encourage compliance with the *Secretary of the Interior's Standards for the Treatment of Historic Properties* for historically sensitive structures; promote and incentivize adaptive reuse; and require evaluation of potential significance by the Office of Historic Resources for projects involving buildings forty-five years of age or older. In order to prevent preemptive demolitions and discourage vacant lots, the Plan should also require applicants to submit plans for replacement projects prior to the issuance of a demolition permit for buildings older than forty-five years.

We understand that the Draft EIR will analyze a range of zoning tools to manage change in older and historic neighborhoods in Boyle Heights, and we strongly encourage further study of conservation districts to complement the City's HPOZ program. Conservation districts, which help preserve and enhance older neighborhoods by regulating lot size, building height, setbacks, streetscapes, and other neighborhood features, could be appropriate for areas that retain distinctive character, but may not be eligible for historic designation. The tool should establish clear guidelines regarding the scale and overall design of new construction in order to conserve the existing neighborhood setting and ensure greater compatibility between old and new.

About the Los Angeles Conservancy:
The Los Angeles Conservancy is the largest local historic preservation organization in the United States, with nearly 6,500 members throughout the Los Angeles area. Established in 1978, the Conservancy works to preserve and revitalize the significant architectural and cultural heritage of Los Angeles County through advocacy and education.

FORM GEN. 160 (Rev. 8-12)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

RECEIVED SEP 2 0 2016

DATE: September 13, 2016

TO: Vincent P. Bertoni, Director of Planning
Department of City Planning

Attn: Conni Pallini-Tipton, Senior City Planner
Department of City Planning

FROM: Ali Poosti, Division Manager
Wastewater Engineering Services Division
LA Sanitation

SUBJECT: **NOTICE OF PREPARATION OF A DRAFT ENVIROMENTAL IMPACT REPORT AND NOTICE OF SCOPING MEETING FOR THE BOYLE HEIGHTS COMMUNITY PLAN UPDATE**

This is in response to your September 2, 2016 letter requesting a review of your proposed project. The Boyle Heights Community Plan Update is bounded on the north by the San Bernardino Freeway/Interstate 10 and Marengo Street, on the west by the Los Angeles River and the east by Indiana Street, and on the south by the Union Pacific and Santa Fe Railroad tracks. LA Sanitation has conducted a preliminary evaluation of the potential impacts to the wastewater and stormwater systems for the proposed project.

WASTEWATER REQUIREMENT

This memo is in response to your letter requesting wastewater service information for the proposed project area. LA Sanitation, Wastewater Engineering Service Division (WESD), has conducted a preliminary evaluation of the existing sewer structural condition and capacity within the vicinity of your proposed project location.

The City of Los Angeles sewer system consists of primary sewers (16-inches and larger in diameter) and secondary sewers (less than 16-inches in diameter). The secondary sewers service the property laterals and feed into the primary sewer lines. The primary sewers in turn discharge to the trunk, interceptor, and outfall pipes. The wastewater is ultimately conveyed to the Hyperion Treatment plant which has sufficient capacity for current and future development.

At this stage your project description lacks sufficient detail for us to conduct a thorough capacity analysis as description for individual proposed developments are needed to asses sewage generation. However, we have enclosed as much information as possible in the form of our latest Sewer Basin Plans, sewer gauging and condition assessment that covers your project area.

PRIMARY SEWERS

The primary sewer master plan report discusses the projected hydraulic capacity condition and needs of the basin in detail. The hydraulic capacity assessment is based upon modeling which makes use of flow gauging together with projected estimates of future wastewater generation. The condition assessment is based on closed circuit television (CCTV) inspection data.

CCTV inspection ultimately results in a rank or grade that reflects the structural condition and determines the course of action to follow. The structural condition ranks are described in Table 1.

Table 1: Structural Condition Ranks

Ranking	Description	Action
A	Pipe is in very good condition.	No action required.
B	Pipe is in good condition.	No action required.
C	Pipe is in fair condition.	Lower priority for rehabilitation project. Conduct another CCTV inspection in five years.
D	Pipe is in poor condition.	Schedule for rehabilitation.
E	Pipe requires emergency repair or replacement.	Issue emergency contract for repair/replacement.

Based on the structural conditions, most of the primary sewer lines in the Boyle Heights Community Plan Update are in good condition. Although there are nine on –going rehabilitation projects currently being planned and designed shown in Table 2:

Table 2: Capital Improvement Projects

Project Name	Start Date	End Date	Phase
NOS Rehab Unit 7 - Wilson to LA River (NOS Unit 6)	12/1/2016	11/30/2019	Bid & Award
PP 606 - Dacotha Generator Replacement (7223, 7229, 7230, 7232)	6/3/2016	8/31/2017	Construction
SSRP N09 Lorena St. & Whittier Blvd.	1/18/2017	3/14/2018	Design
DAR 04 Northeast LA / Eagle Rock / Lincoln Heights	3/15/2017	9/14/2018	Design
SSRP N04 Washington Bl & Soto St (C944)	9/1/2018	2/29/2020	Design
SSRP P01B Daly St & North Main St	6/2/2018	7/31/2019	Pre-Design
NOS Rehab Unit 9 - Aliso to 6th	8/2/2023	7/31/2025	Pre-Design
CS- Dacotah Carbon Scrubber Facility Upgrade	9/1/2018	9/1/2019	Pre-Design
CS- Richmond Carbon Scrubber Facility Upgrade	9/1/2018	9/1/2019	Pre-Design

Capacity

Based on existing gauging information, the primary sewers within the proposed project location have no current conveyance capacity constraints. The current approximate flow level (d/D) in the primary sewer are shown in Figure 1 and Table 3.

Table 3: Primary Existing Gauging Data

MH #	Pipe Location	Gauged d/D (%)	Gauged Date
51514137	FICKETT ST	57	5/4/2014
53806063	PICO BL	45	5/22/2014

Table 3: Primary Existing Gauging Data			
MH #	Pipe Location	Gauged d/D (%)	Gauged Date
53802156	CAMULOS ST	33	5/26/2014
53802151	8TH ST	31	5/28/2014
51505006	MISSION RD R/W	32	5/28/2014
51505015	MISSION RD	39	5/28/2014
51509135	EASE N/O WHITTIER BLVD	27	6/15/2014
51509088	MISSION RD	33	8/9/2013
51509177	MISSION RD	15	8/13/2013
51513001	MISSION RD	60	8/19/2013
51510108	BOYLE AVE R/W	60	6/8/2014
53806120	SOTO ST	67	7/2/2014
51502093	MISSION RD R/W	55	7/11/2014

The hydraulic capacity modeling analysis indicates no additional hydraulic relief projects are needed at this time.

SECONDARY SEWERS

The secondary sewer renewal program discusses the projected hydraulic capacity condition and needs of the basin in detail. The hydraulic capacity assessment is based upon modeling which makes use of flow gauging together with projected estimates of future wastewater generation. The condition assessment is based on closed circuit television (CCTV) inspection data.

Based on the structural conditions, most of the secondary sewer lines in the Boyle Heights Community Plan Update are in good condition. Although there are four on –going rehabilitation projects currently being planned and designed are shown in Table 4:

Table 4: Secondary Capital Improvement Projects			
Project Name	Start Date	End Date	Phase
SSRP N09 Lorena St. & Whittier Blvd.	1/18/2017	3/14/2018	Design
DAR 04 Northeast LA / Eagle Rock / Lincoln Heights	3/15/2017	9/14/2018	Design
SSRP N04 Washington Bl & Soto St (C944)	9/1/2018	2/29/2020	Design
SSRP P01B Daly St & North Main St	6/2/2018	7/31/2019	Pre-Design

Our latest CCTV inspection results indicate most of the secondary sewers in the project area are in fairly good condition. Figure 2 shows the current conditions of the sewers within the project study area. The remaining Secondary Sewer Plan Reports with in the area are currently pending and will be completed in the near future.

Capacity

Based on existing gauging information, the secondary sewers within the proposed project location have no current conveyance capacity constraints. The current approximate flow level (d/D) in the secondary sewer basins are shown in Figure 1 and Table 5.

Table 5: Secondary Existing Gauging Data			
MH #	Pipe Location	Gauged d/D (%)	Gauged Date
53803144	CONCORD ST	58	5/4/2014
53802151	8TH ST	31	5/28/2014
51502114	CUMMINGS ST R/W	38	5/28/2014
51515081	4TH ST	17	2/25/2014
51510108	BOYLE AVE R/W	60	6/8/2014
53806023	PICO BL	16	7/2/2014
53802143	SOTO ST	10	7/3/2014
53801074	RIO VISTA AV	23	7/5/2014
51502039	LORD ST	25	7/11/2014
51502093	MISSION RD R/W	55	7/11/2014
51510016	VENICE BL	22	7/11/2014
51502057	STATE ST	48	7/14/2014
51512030	INDIANA ST	44	10/3/2014
51512031	INDIANA ST	28	10/3/2014
53807072	CALZONA ST	44	1/6/2015
53807166	16TH ST	60	1/6/2015
53807185	CALZONA ST	37	1/6/2015

The hydraulic capacity modeling analysis indicates no additional hydraulic relief projects are needed at this time.

SUMMARY

A more detailed review of your project, or individual elements of your project, will be required as your project progresses and sufficient details are developed. At that time you will need to submit a Sewer Capacity Availability Request (SCAR) and will need to provide detailed project information showing the exact building location, type, use, and occupancy along with the projected wastewater flow rates and the proposed sewer connection. If the public sewer has insufficient capacity for any proposed building project then the developer will be required to build public sewers to a point in the sewer system with sufficient capacity. A final approval for sewer capacity and connection permit will be made at that time.

If you have any questions, please call Eduardo Perez of my staff at (323) 342-6207.

STORMWATER REQUIREMENTS

LA Sanitation, Watershed Protection Division (WPD) is charged with the task of ensuring the implementation of the Municipal Stormwater Permit requirements within the City of Los Angeles. We anticipate the following requirements would apply for this project.

POST-CONSTRUCTION MITIGATION REQUIREMENTS

The project requires implementation of stormwater mitigation measures. These requirements are based on Stormwater Low Impact Development (LID) requirements. The projects that are subject to LID are required to incorporate measures to mitigate the impact of stormwater runoff. The requirements are

outlined in the guidance manual titled "*Development Best Management Practices Handbook – Part B: Planning Activities*". Current regulations prioritize infiltration, capture/use, and then biofiltration as the preferred stormwater control measures. The relevant documents can be found at: www.lastormwater.org. It is advised that input regarding LID requirements be received in the early phases of the project from WPD's plan-checking staff.

GREEN STREETS

The City is developing a Green Street Initiative that will require projects to implement Green Street elements in the parkway areas between the roadway and sidewalk of the public right-of-away to capture and retain stormwater and urban runoff to mitigate the impact of stormwater runoff and other environmental concerns. The goals of the Green Street elements are to improve the water quality of stormwater runoff, recharge local ground water basins, improve air quality, reduce the heat island effect of street pavement, enhance pedestrian use of sidewalks, and encourage alternate means of transportation. The Green Street elements may include infiltration systems, biofiltration swales, and permeable pavements where stormwater can be easily directed from the streets into the parkways and can be implemented in conjunction with the LID requirements.

CONSTRUCTION REQUIREMENTS

The project is required to implement stormwater control measures during its construction phase. All projects are subject to a set of minimum control measures to lessen the impact of stormwater pollution. In addition for projects that involve construction during the rainy season that is between October 1 and April 15, a Wet Weather Erosion Control Plan is required to be prepared. Also projects that disturb more than one-acre of land are subject to the California General Construction Stormwater Permit. As part of this requirement a Notice of Intent (NOI) needs to be filed with the State of California and a Storm Water Pollution Prevention Plan (SWPPP) needs to be prepared. The SWPPP must be maintained on-site during the duration of construction.

If there are questions regarding the stormwater requirements, please call Kosta Kaporis at (213) 485-0586, or WPD's plan-checking counter at . , . . . WPD's plan-checking counter can also be visited at

GROUNDWATER DEWATERING REUSE OPTIONS

The Los Angeles Department of Water and Power (LADWP) is charged with the task of supplying water and power to the residents and businesses in the City of Los Angeles. One of the sources of water includes groundwater. The majority of groundwater in the City of Los Angeles is adjudicated, and the rights of which are owned and managed by various parties. Extraction of groundwater within the City from any depth by law requires metering and regular reporting to the appropriate Court-appointed Watermaster. LADWP facilitates this reporting process, and may assess and collect associated fees for the usage of the City's water rights. The party performing the dewatering should inform the property owners about the reporting requirement and associated usage fees.

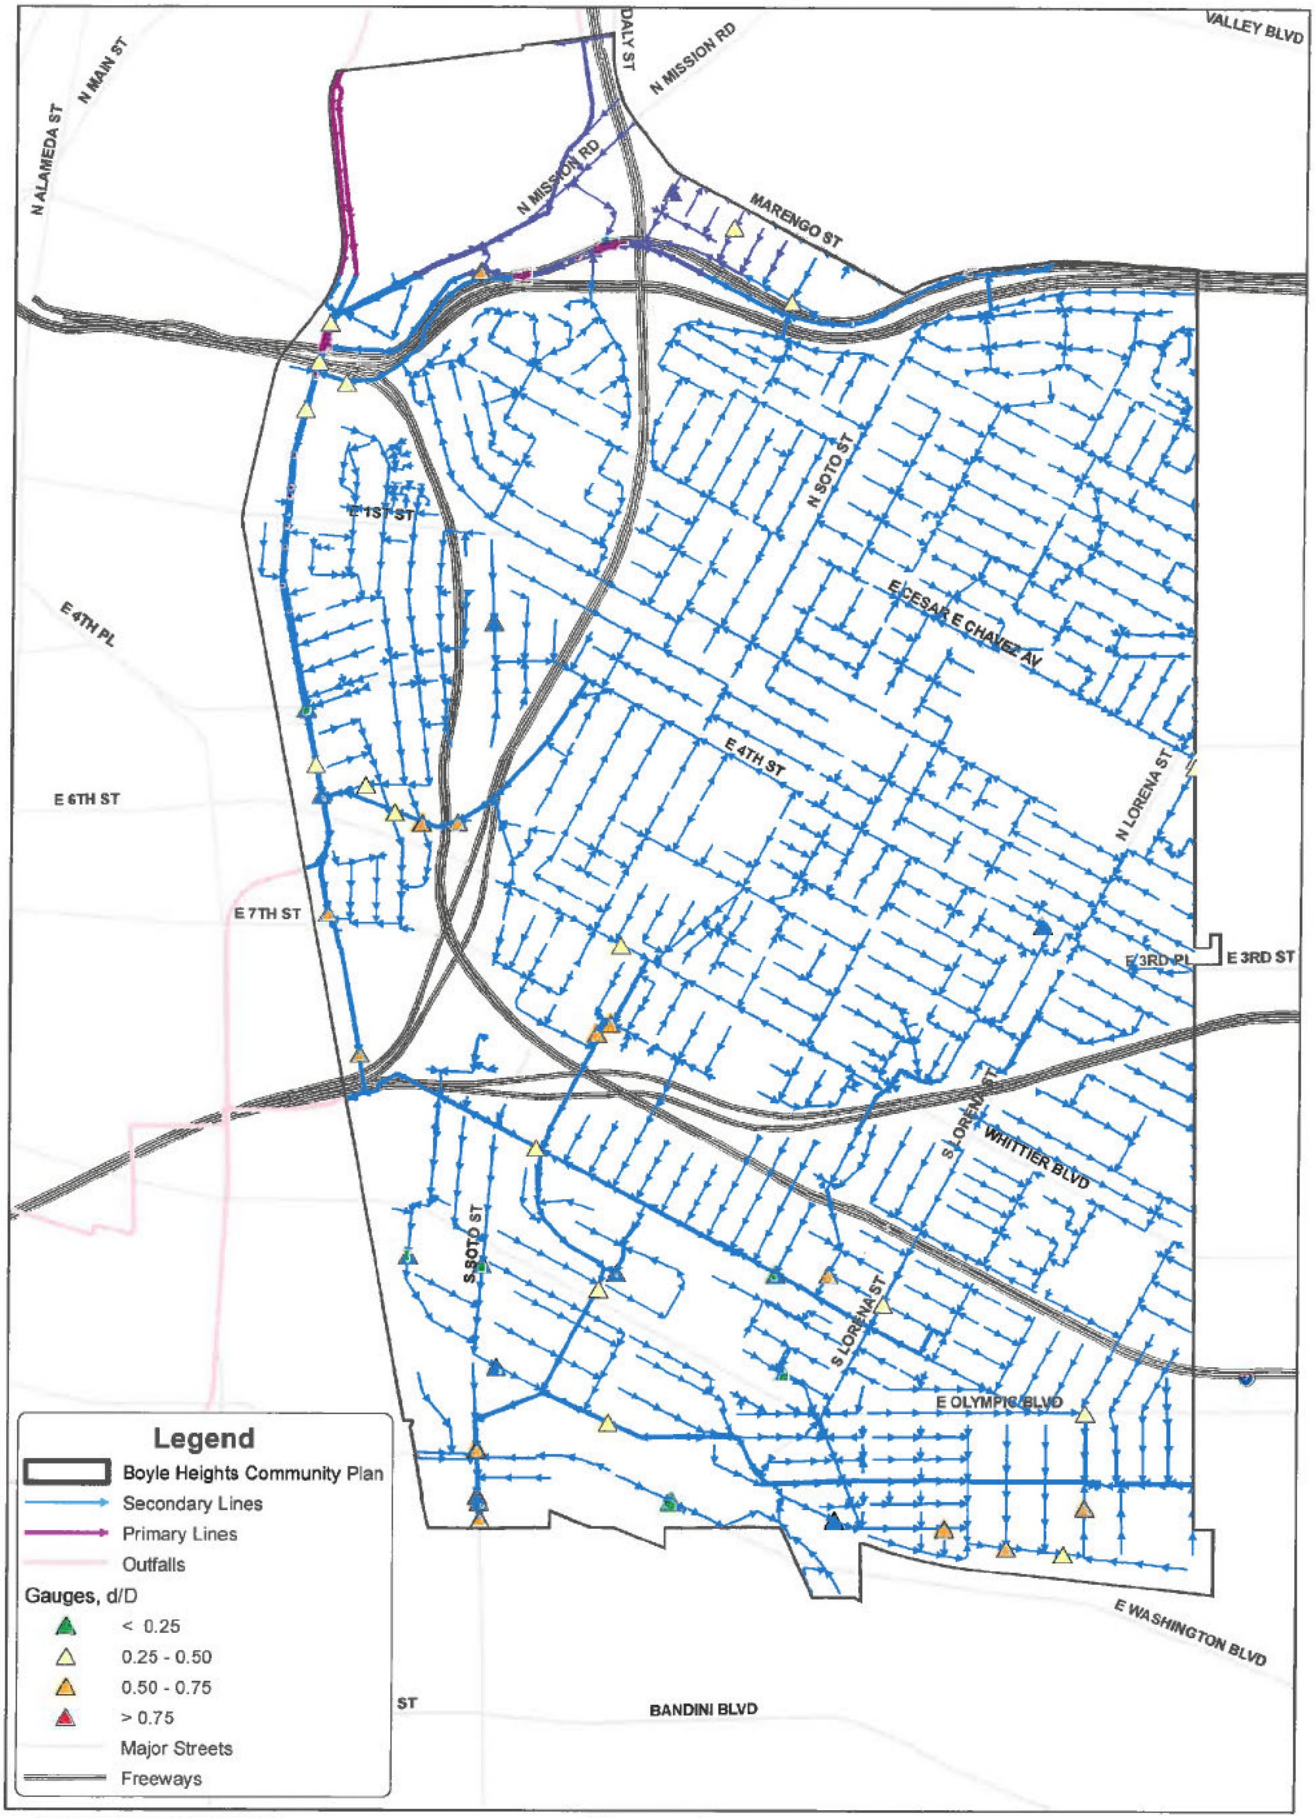
On April 22, 2016 the City of Los Angeles Council passed Ordinance 184248 amending the City of Los Angeles Building Code, requiring developers to consider beneficial reuse of groundwater as a conservation measure and alternative to the common practice of discharging groundwater to the storm drain (SEC. 99.04.305.4). It reads as follows: "Where groundwater is being extracted and discharged, a system for

onsite reuse of the groundwater, shall be developed and constructed. Alternatively, the groundwater may be discharged to the sewer."

Groundwater may be beneficially used as landscape irrigation, cooling tower make-up, and construction (dust control, concrete mixing, soil compaction, etc.). Different applications may require various levels of treatment ranging from chemical additives to filtration systems. When onsite reuse is not available the groundwater may be discharged to the sewer system. This allows the water to be potentially reused as recycled water once it has been treated at a water reclamation plant. If groundwater is discharged into the storm drain it offers no potential for reuse. The onsite beneficial reuse of groundwater can reduce or eliminate costs associated with sewer and storm drain permitting and monitoring. Opting for onsite reuse or discharge to the sewer system are the preferred methods for disposing of groundwater.

To help offset costs of water conservation and reuse systems, LADWP offers the Technical Assistance Program (TAP), which provides engineering and technical assistance for qualified projects. Financial incentives are also available. Currently, LADWP provides an incentive of $1.75 for every 1,000 gallons of water saved during the first two years of a five-year conservation project. Conservation projects that last 10 years are eligible to receive the incentive during the first four years. Other water conservation assistance programs may be available from Metropolitan Water District of Southern California. To learn more about available water conservation assistance programs, please contact LADWP Rebate Programs 1-888-376-3314 and LADWP TAP 1-800-544-4498, selection "3".

For more information related to beneficial reuse of groundwater, please contact Greg Reed, Manager of Water Rights and Groundwater Management, at



SOLID RESOURCE REQUIREMENTS

The City has a standard requirement that applies to all proposed residential developments of four or more units or where the addition of floor areas is 25 percent or more, and all other development projects where the addition of floor area is 30 percent or more. Such developments must set aside a recycling area or room for onsite recycling activities. For more details of this requirement, please contact Daniel Hackney of the Special Project Division at

Los Angeles, CA 90012

RE: Boyle Heights Community Plan Update
SCH # 2016091010
Vic. LA-10, LA-05, LA-60, LA-101
LA-2016-00127-AL-NOP

Dear Ms. Urita-Lopez:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The project is the update of the Boyle Heights Community Plan and the adoption of necessary updates to land use, zoning, plan text, and other ordinances to implement these updates. The draft land use represents land use designations that accommodate forecasted housing, population, and employment growth in the CPA for the next 20 to 25 years.

As confirmed during your telephone conversation with Mr. Alan Lin on September 28, 2016, the City will prepare the transportation impact study based on Vehicle Miles Traveled (VMT). Please note that the Freeway Impact Analysis Screening Criteria Agreement, between the City of Los Angeles and Caltrans District 7, dated October 1, 2013 and Amendment dated December 15, 2015 is no longer valid to apply for this project.

Caltrans' mission is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability. The Local Development-Intergovernmental Review (LD-IGR) program reviews land use projects and plans through the lenses of our mission and state planning priorities of infill, conservation, and travel-efficient development. To ensure a safe a safe and efficient transportation system, we encourage early consultation and coordination with local jurisdictions and project proponents on all development projects that utilize the multimodal transportation network. The following comments are based on information included in the NOP.

In developing this community plan, Caltrans encourages the City to integrate transportation and land use in a way that reduces Vehicle Miles Traveled (VMT) and Greenhouse Gas (GHG) emissions by facilitating the provision of more proximate goods and services to shorten trip lengths, and achieve a high level of non-motorized travel and transit use. As such, we encourage the City evaluate the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications in order to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements.

A queuing analysis of the off-ramps within the project boundaries should be conducted to ensure that safety issues are addressed, such that rear end accidents on the mainline can be avoided. The total queue length of the off-ramp should be calculated by the actual length of the off-ramp between the terminuses to the gore point with some safety factor or referenced to Highway Design Manual at 23' point (Figure 504.2A Single Lane Freeway Entrance) or any other sufficient methods. The queue length should be calculated from the traffic counts and the percent of truck assignments (data from Caltrans) to the ramp with a passenger car equivalent factor. The analyzed result may need to be calibrated with actual signal timing when necessary. It is also recommended that the City determine whether the existing, existing plus project, and project-related plus cumulative traffic are expected to cause long queues on the off-ramps.

Caltrans requests that an analysis of the community plan impacts and mitigation include information regarding the City's local impact fee program. The analysis should identify if those programs include improvements to State facilities relating to safety issues, pedestrian, bicycle and transit infrastructure or that could be considered representative of the project's likely TDM mitigation measures. If no such fee exists, we would appreciate exploring with you the establishment of local VMT-based transportation impact fee programs.

Senate Bill 743 (2013) mandated that CEQA review of transportation impacts of proposed developments be modified by eliminating consideration of delay- and capacity- based metrics such as level of service (LOS) and instead focusing analysis on another metric of impact. The Governor's Office of Planning and Research (OPR) is currently updating its CEQA Guidelines to implement SB 743 (https://www.opr.ca.gov/s_sb743.php) and is proposing that vehicle miles traveled be the primary metric used in identifying transportation impacts.

The Office of Planning and Research (OPR) has released a separate "Technical Advisory" outlining recommended techniques for measuring impacts with this new metric, which applies statewide. General Plan Guidelines (https://www.opr.ca.gov/s_generalplanguidelines.php) are also concurrently being updated to align with state policy, including SB 743.

The City should refer the project's traffic consultant to OPR's website, guidelines on evaluating transportation impacts in CEQA:

https://www.opr.ca.gov/docs/Revised_VMT_CEQA_Guidelines_Proposal_January_20_2016.pdf

We are looking forward to work with Lead Agencies to address transportation deficiencies and enhancements through policies at the planning level and through mitigation fee programs. We would like to encourage Lead Agencies to share plans and projects for review that directly abuts the State Highway System (SHS), are in vicinity of a State Highway, or projects for which Caltrans must approve and issue an encroachment permit.

Caltrans would like to request a Scoping Meeting for this project, please feel free to contact Mr. Alan Lin the project coordinator at and refer to LA-2016-00127-AL-NOP.

Sincerely,

DIANNA WATSON
IGR/CEQA Branch Chief
Community Planning & LD IGR Review

RE: SCH# 2016091010; Boyle Heights Community Plan Update Project, Notice of Preparation for Draft Environmental Impact Report, Los Angeles County, California

Dear Ms. Urita-Lopez:

The Native American Heritage Commission has received the Notice of Preparation (NOP) for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code § 21000 et seq.), specifically Public Resources Code section 21084.1, states that a project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, § 15064.5 (b) (CEQA Guidelines Section 15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an environmental impact report (EIR) shall be prepared. (Pub. Resources Code § 21080 (d); Cal. Code Regs., tit. 14, § 15064 subd.(a)(1) (CEQA Guidelines § 15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources with the area of project effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a **separate category of cultural resources**, "tribal cultural resources" (Pub. Resources Code § 21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code § 21084.3 (a)). **AB 52 applies to any project for which a notice of preparation or a notice of negative declaration or mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. § 800 et seq.) may also apply.

The NAHC recommends **lead agencies consult with all California Native American tribes** that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments. **Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.**

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a **lead agency** shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:
    - **a.** A brief description of the project.
    - **b.** The lead agency contact information.
    - **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code § 21080.3.1 (d)).
    - **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code § 21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A **lead agency** shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code § 21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. (Pub. Resources Code § 21080.3.1(b)).
    a. For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code § 65352.4 (SB 18). (Pub. Resources Code § 21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:
    a. Alternatives to the project.
    b. Recommended mitigation measures.
    c. Significant effects. (Pub. Resources Code § 21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:
    a. Type of environmental review necessary.
    b. Significance of the tribal cultural resources.
    c. Significance of the project's impacts on tribal cultural resources.
    d. If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code § 21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code sections 6254 (r) and 6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code § 21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:
    a. Whether the proposed project has a significant impact on an identified tribal cultural resource.
    b. Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code section 21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code § 21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:
    a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or
    b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code § 21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code section 21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code section 21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code § 21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code section 21084.3 (b). (Pub. Resources Code § 21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:
    a. Avoidance and preservation of the resources in place, including, but not limited to:
        i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
   i. Protecting the cultural character and integrity of the resource.
   ii. Protecting the traditional use of the resource.
   iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code § 21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a nonfederally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code § 815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code § 5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An environmental impact report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:
    a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code sections 21080.3.1 and 21080.3.2 and concluded pursuant to Public Resources Code section 21080.3.2.
    b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.
    c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code section 21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code § 21082.3 (d)).

    This process should be documented in the Cultural Resources section of your environmental document.

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires **local governments** to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code § 65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code § 65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code section 65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code sections 5097.9 and 5097.993 that are within the city's or county's jurisdiction. (Gov. Code § 65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (http://ohp.parks.ca.gov/?page_id=1068) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have been already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
    a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
    b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
    a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, section 15064.5(f) (CEQA Guidelines section 15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
    b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
    c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code section 7050.5, Public Resources Code section 5097.98, and Cal. Code Regs., tit. 14, section 15064.5, subdivisions (d) and (e) (CEQA Guidelines section 15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

To: Reviewing Agencies

Re: Boyle Heights Community Plan Update
SCH# 2016091010

Attached for your review and comment is the Notice of Preparation (NOP) for the Boyle Heights Community Plan Update draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Haydee Urita-Lopez
City of Los Angeles
200 N. Spring Street, Room 667
Los Angeles, CA 90012

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at

Sincerely,

Scott Morgan
Director, State Clearinghouse

Project Title Boyle Heights Community Plan Update
Lead Agency Los Angeles, City of

Type NOP Notice of Preparation

Description The project is the update of the Boyle Heights Community Plan and the adoption of necessary updates to land use, zoning, plan text, and other ordinances to implement these updates. The proposed plan directs future growth to already urbanized areas of the CPA. The proposed changes largely follow the current pattern of land use development reflecting City policies to direct growth where it can be supported by existing transportation infrastructure. The proposed plan promotes a balance of housing units and jobs near transit where different types of land uses (e.g., commercial and residential) can be provided to reduce the length and number of vehicle trips.

ROSENHEIM & ASSOCIATES, INC.

October 7, 2016

Ms. Haydee Urita-Lopez
Los Angeles Department of City Planning
200 N. Spring Street, Room 721
Los Angeles, CA 90012

Via Email: haydee.urita@lacity.org

Dear Ms. Urita-Lopez

Thank you for the opportunity to comment on the proposed scope of analysis for the Boyle Heights Community Plan Update, Environmental Impact Report.

It is my understanding that the City is planning a sizable public park underneath the Sixth Street Viaduct between the Los Angeles River and Clarence Street. The Sixth Street Viaduct includes bicycle and pedestrian access from Boyle Heights to the Arts District, with a planned bike ramp and pedestrian access located in the park. The significant expenditure of public funds for both the iconic viaduct and the new park warrant serious consideration as to the future designation of the lands at the gateway of the viaduct and the proposed park. As currently conceived in the community plan, the area around the proposed park remains industrial/warehouse in nature. Consistent with forward thinking land planning practices, a park such as the one proposed, including the associated bike and pedestrian enhancements, should serve a more intense and active mixed-use community.

Industrial/warehouse uses tend to be inconsistent and incompatible with public parks and their intended purpose, which is to serve the residential community in which they are located. Retaining industrial and warehouse land-use categories around this proposed park do not maximize the City's tremendous public investment in these facilities. Therefore, it would be very appropriate for the environmental document being prepared in association with the Boyle Heights Community Plan update to consider the inclusion of residential and mixed-use land-use designations and zoning within 1,500 feet of the proposed park.

By providing residential and mixed-use land-use designations and zoning within proximity to the proposed park the city would also be celebrating the function of the new and iconic Sixth Street Viaduct, and providing housing in a location with strong bicycle and pedestrian connections to the surrounding community. These two very important public investments should be used to encourage much need housing and job growth in this unique area of the Boyle Heights.

For these reasons I respectfully request that the Boyle Heights Community Update, Environmental Impact Report consider residential and mixed-use land use designations and zinging within 1500 feet of the park proposed to be located in the area under the Sixth Street Viaduct between the Los Angeles River and Clarence Street.

Thank you very much for your consideration of this request.

Sincerely,

Brad M. Rosenheim

RE: SCAG Comments on the Notice of Preparation of a Draft Environmental Impact Report for the Boyle Heights Community Plan Update [SCAG NO. IGR8990]

Dear Ms. Urita-Lopez,

Thank you for submitting the Notice of Preparation of a Draft Environmental Impact Report for the Boyle Heights Community Plan Update ("proposed project") to the Southern California Association of Governments (SCAG) for review and comment. SCAG is the authorized regional agency for Inter-Governmental Review (IGR) of programs proposed for Federal financial assistance and direct Federal development activities, pursuant to Presidential Executive Order 12372. Additionally, SCAG reviews the Environmental Impact Reports of projects of regional significance for consistency with regional plans pursuant to the California Environmental Quality Act (CEQA) and CEQA Guidelines.

SCAG is also the designated Regional Transportation Planning Agency under state law, and is responsible for preparation of the Regional Transportation Plan (RTP) including the Sustainable Communities Strategy (SCS) pursuant to Senate Bill (SB) 375. As the clearinghouse for regionally significant projects per Executive Order 12372, SCAG reviews the consistency of local plans, projects, and programs with regional plans.[1] Guidance provided by these reviews is intended to assist local agencies such as local jurisdictions and project proponents to take actions that help contribute to the attainment of the regional goals and policies in the RTP/SCS.

SCAG staff has reviewed the Notice of Preparation of a Draft Environmental Impact Report for the Boyle Heights Community Plan Update in Los Angeles County. The proposed project includes adoption of necessary updates to land use, zoning, plan text, and other ordinances necessary to implement the update which will accommodate forecasted housing, population and employment growth in the approximately 6-square mile Boyle Heights Community Plan Area for the next 20-25 years.

When available, please send environmental documentation to SCAG's *office in Los Angeles or by email to* providing, at a minimum, the full public comment period for review. If you have any questions regarding the attached comments, please contact the Inter-Governmental Review (IGR) Program, attn.: Lijin Sun, Senior Regional Planner, at . Thank you.

Sincerely,

Ping Chang

Ping Chang
Acting Manager, Compliance and Performance Monitoring

[1] Lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the 2016 RTP/SCS for the purpose of determining consistency for CEQA. Any "consistency" finding by SCAG pursuant to the IGR process should not be construed as a determination of consistency with the 2016 RTP/SCS for CEQA.

COMMENTS ON THE NOTICE OF PREPARATION OF A DRAFT ENVIRONMENTAL IMPACT REPORT FOR THE BOYLE HEIGHTS COMMUNITY PLAN UPDATE [SCAG NO. IGR8990]

CONSISTENCY WITH RTP/SCS

SCAG reviews environmental documents for regionally significant projects for their consistency with the adopted RTP/SCS. For the purpose of determining consistency with CEQA, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency with the RTP/SCS.

2016 RTP/SCS GOALS

The SCAG Regional Council adopted the 2016 RTP/SCS in April 2016. The 2016 RTP/SCS seeks to improve mobility, promote sustainability, facilitate economic development and preserve the quality of life for the residents in the region. The long-range visioning plan balances future mobility and housing needs with goals for the environment, the regional economy, social equity and environmental justice, and public health (see http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx). The goals included in the 2016 RTP/SCS may be pertinent to the proposed project. These goals are meant to provide guidance for considering the proposed project within the context of regional goals and policies. Among the relevant goals of the 2016 RTP/SCS are the following:

SCAG 2016 RTP/SCS GOALS	
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*
RTP/SCS G3:	*Ensure travel safety and reliability for all people and goods in the region*
RTP/SCS G4:	*Preserve and ensure a sustainable regional transportation system*
RTP/SCS G5:	*Maximize the productivity of our transportation system*
RTP/SCS G6:	*Protect the environment and health for our residents by improving air quality and encouraging active transportation (e.g., bicycling and walking)*
RTP/SCS G7:	*Actively encourage and create incentives for energy efficiency, where possible*
RTP/SCS G8:	*Encourage land use and growth patterns that facilitate transit and active transportation*
RTP/SCS G9:	*Maximize the security of the regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies**
	**SCAG does not yet have an agreed-upon security performance measure.*

For ease of review, we encourage the use of a side-by-side comparison of SCAG goals with discussions of the consistency, non-consistency or non-applicability of the goals and supportive analysis in a table format. Suggested format is as follows:

SCAG 2016 RTP/SCS GOALS		
Goal		Analysis
RTP/SCS G1:	*Align the plan investments and policies with improving regional economic development and competitiveness*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
RTP/SCS G2:	*Maximize mobility and accessibility for all people and goods in the region*	*Consistent: Statement as to why;* *Not-Consistent: Statement as to why;* *Or* *Not Applicable: Statement as to why;* *DEIR page number reference*
etc.		etc.

2016 RTP/SCS STRATEGIES

To achieve the goals of the 2016 RTP/SCS, a wide range of land use and transportation strategies are included in the 2016 RTP/SCS. Technical appendances of the 2016 RTP/SCS provide additional supporting information in detail. To view the 2016 RTP/SCS, please visit: http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. The 2016 RTP/SCS builds upon the progress from the 2012 RTP/SCS and continues to focus on integrated, coordinated, and balanced planning for land use and transportation that the SCAG region strives toward a more sustainable region, while the region meets and exceeds in meeting all of applicable statutory requirements pertinent to the 2016 RTP/SCS. These strategies within the regional context are provided as guidance for lead agencies such as local jurisdictions when the proposed project is under consideration.

DEMOGRAPHICS AND GROWTH FORECASTS

Local input plays an important role in developing a reasonable growth forecast for the 2016 RTP/SCS. SCAG used a bottom-up local review and input process and engaged local jurisdictions in establishing the base geographic and socioeconomic projections including population, household and employment. At the time of this letter, the most recently adopted SCAG jurisdictional-level growth forecasts that were developed in accordance with the bottom-up local review and input process consist of the 2020, 2035, and 2040 population, households and employment forecasts. To view them, please visit http://www.scag.ca.gov/Documents/2016GrowthForecastByJurisdiction.pdf. The growth forecasts for the region and applicable jurisdictions are below.

	Adopted SCAG Region Wide Forecasts			Adopted City of Los Angeles Forecasts		
	Year 2020	Year 2035	Year 2040	Year 2020	Year 2035	Year 2040
Population	19,663,000	22,091,000	22,138,800	4,017,000	4,442,500	4,609,400
Households	6,458,000	7,325,000	7,412,300	1,441,400	1,618,900	1,690,300
Employment	8,414,000	9,441,000	9,871,500	1,899,500	2,104,100	2,169,100

MITIGATION MEASURES

SCAG staff recommends that you review the Final Program Environmental Impact Report (Final PEIR) for the 2016 RTP/SCS for guidance, as appropriate. SCAG's Regional Council certified the Final PEIR and adopted the associated Findings of Fact and a Statement of Overriding Considerations (FOF/SOC) and Mitigation Monitoring and Reporting Program (MMRP) on April 7, 2016 (please see: http://scagrtpscs.net/Pages/FINAL2016PEIR.aspx). The Final PEIR includes a list of project-level performance standards-based mitigation measures that may be considered for adoption and implementation by lead, responsible, or trustee agencies in the region, as applicable and feasible. Project-level mitigation measures are within responsibility, authority, and/or jurisdiction of project-implementing agency or other public agency serving as lead agency under CEQA in subsequent project- and site- specific design, CEQA review, and decision-making processes, to meet the performance standards for each of the CEQA resource categories.

Notice of Preparation of a CEQA Document for the
Boyle Heights Community Plan Update Project
(Case Numbers: CPC-2016-2905-CPU and ENV-2016-2906-EIR)

The South Coast Air Quality Management District (SCAQMD) staff appreciates the opportunity to comment on the above-mentioned document. The SCAQMD staff's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the Draft EIR. Please send the SCAQMD a copy of the Draft EIR upon its completion. Note that copies of the Draft EIR that are submitted to the State Clearinghouse are not forwarded to the SCAQMD. Please forward a copy of the Draft EIR directly to SCAQMD at the address in our letterhead. **In addition, please send with the Draft EIR all appendices or technical documents related to the air quality and greenhouse gas analyses and electronic versions of all air quality modeling and health risk assessment files. These include original emission calculation spreadsheets and modeling files (not Adobe PDF files). Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation will require additional time for review beyond the end of the comment period.**

Air Quality Analysis

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. More recent guidance developed since this Handbook was published is also available on SCAQMD's website here: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993). SCAQMD staff also recommends that the Lead Agency use the CalEEMod land use emissions software. This software has recently been updated to incorporate up-to-date state and locally approved emission factors and methodologies for estimating pollutant emissions from typical land use development. CalEEMod is the only software model maintained by the California Air Pollution Control Officers Association (CAPCOA) and replaces the now outdated URBEMIS. This model is available free of charge at: www.caleemod.com.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD staff requests that the lead agency quantify criteria pollutant emissions and compare the results to the recommended regional significance thresholds found here: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf. In addition to analyzing regional air quality impacts, the SCAQMD staff recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LSTs can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a Draft EIR document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("*Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*") can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included.

In addition, guidance on siting incompatible land uses (such as placing homes near freeways) can be found in the California Air Resources Board's *Air Quality and Land Use Handbook: A Community Perspective*, which can be found at the following internet address: http://www.arb.ca.gov/ch/handbook.pdf. CARB's Land Use Handbook is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process.

Finally, should the proposed project include equipment that generates or controls air contaminants, a permit may be required and the SCAQMD should be listed as a responsible agency and consulted. The assumptions in the submitted Draft EIR would also be the basis for permit conditions and limits. Permit questions can be directed to the SCAQMD Permit Services staff at , who can provide further assistance.

Project Specific Comments – Sensitive Receptors Near Freeways

While the health science behind recommendations against placing sensitive receptors close to high volume urban roads and freeways is clear, SCAQMD staff recognizes the many factors Lead Agencies must consider when siting uses such as new housing. The lead agency should consider the limitations of enhanced filtration (HVAC systems with enhanced Maximum Efficiency Reporting Value – MERV filters) for the project, especially from traffic on high volume urban roadways or a freeway. For example, these filters have no ability to filter out any toxic gasses from vehicle exhaust; have higher long-term costs related to the required regular maintenance of the filters; and it is assumed that the HVAC units and the filters operate 100 percent of the time while residents are indoors. It is critical that any proposed mitigation must be carefully evaluated prior to determining if the health risks would be brought below CEQA significance thresholds. The presumed effectiveness and feasibility of proposed mitigation should therefore be evaluated and the Draft EIR document should also quantitatively demonstrate with substantial evidence the effectiveness of any proposed mitigation on any potentially significant impact.

Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate these impacts. Pursuant to CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed. Mitigation Measure resources are available on the SCAQMD CEQA Air Quality Handbook website: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook

Data Sources

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at Much of the information available through the Public Information Center is also available via the SCAQMD's webpage (http://www.aqmd.gov).

The SCAQMD staff is available to work with the lead agency to ensure that project emissions are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact Gordon Mize, Air Quality Specialist by e-mail at

Sincerely,

Jillian Wong

PUBLIC COMMENTS

Speaker 1: Mary Lugo

Okay, so…

Moderator:

Oh, I'm, sorry, I didn't catch your name.

Mary Lugo:

Oh, Mary Lugo. M-A-R-Y L-U-G-O. And so, two (2) of my major concerns, number one (1), being that, uhm.. between the street of- on 1st. Street between Soto and Mott Street, there are vehicles that are going at uhm.., high speed. And I believe that may be on 1st. and Pickett St. There should be a crosswalk for uhm.., you know one of the blinking lights. Ah, cause children like my son, you know when he goes to the school in the morning cars are going at a high speed of rate. Well, he gets scared crossing so he has to go all… I mean, it's not far for him to walk to Soto St. or Mott, but you know, it makes it easy and accessible for him to cross the street right there on Pickett so he can just go directly to the school. So, because of the vehicle's that's fast, the, the… how fast they are travelling down on 1St. Street either east or west bound, they, should maybe be a cross walk there. That you know that should be enforced. **[PAUSE]**

Moderator:

Uhm.., to try to have a cross walk at either the uhm.. 1st. Pickett. And then with regards to 1st. and Mott, you said, there are cars are travelling fast?

Mary Lugo:

No, no there is a light there.

Moderator:

Okay.

Mary Lugo:

There is a street light there, but the thing is that between Soto and Mott, there's no cross walk. So when people are even walking, there's a liquor store, right on the corner of 1st. and Pickett. So even if people, like myself when I wanna go the liquor store, I pretty much have to dodge cars. You know just to, even cross the street to the liquor store. So if there were to be a cross walk there, uhm.., or a ped- pedestrian cross walk, it will probably make it easier for people to avoid getting hit. Yeah. **[PAUSE]**

And ah, my second concern was ah… public prom- uhm..- public parking. So in the areas, like for instance, like my mom. She lives on the street of 2nd Street and St. Louis between St. Louis and Cummings. There's a lot of vehicle's there that… yeah, it's, public parking I understand that. But there are vehicle's that park there with excessive trash, in the… in the back of their trucks. And on my block which is, Pennsylvania Avenue between uhm..… Mott and Pickett Street. There's lot of vehicle's also that live and park in the area. Now, where I attend school, is in Monterrey Park, in the area, there's permanent parking and I feel that maybe, uhm..- the City of Boyle Heights or the community should have certain areas where there should be permanent parking for that street. So ah, maybe you know, the community could get involved in purchasing these, ah- raise money for one. For the City of Boyle Heights having ah- permanent parking and so like that, certain people could only park on those streets that purchase those… permits. Which should be at a reasonable price and it will cover for the whole year and for that vehicle, so they can't go and put it for different vehicles.

Moderator:

With regards to ah, permanent parking…

Mary Lugo:

Mhm…

Moderator:

That's with Department of Public Transportation…

Mary Lugo:

Mhm.

Moderator:

If you'd like, I can provide you with some contact information.

Mary Lugo:

Yeah, please. Yeah, yeah 'cause ah- Heidi told me that I should put my comment in regards to that here.

Moderator:

Yeah of course.

Mary Lugo:

Yeah. Okay.

Moderator:

But I also want to get you some…

Mary Lugo:

Perfect.

Moderator:

…a, a number free to contact.

Mary Lugo:

Okay.

Moderator:

But we also take your comments here.

Mary Lugo:

Okay, alright, perfect.

Moderator:

Do you have any other comments or is that…

Mary Lugo:

Uhm.. no that was pretty much it. I mean, ah- I'm trying to do myself what I can in my block of like, talking to the neighbors of them speaking out instead of being scared you know with the

gang members there. Like there's nothing to talk of about I mean, nothing to fear of. Like myself, I'm, very verbally spoken, so I'll say what's on my mind. And they really don't matter to me so, I tell them whatever you guys feel that should be addressed that you know. And that's one of the issues that everyone in that block has is, the parking. Because, people that park between Matthews and Pickett Street along Pennsylvania Avenue on the eastside they're getting their tires popped… ah- poked or, or deflated. Because there's residents there who say "if you don't live on this block, we're gonna stab your tires". Which I think is ridiculous. So maybe, if it that's enforced, with the permanent parking, it's like no one can say anything cause people are reserving parking spaces of others and it should be… you know, it's public parking. But, it that would get enforced, then maybe that will uhm..- actually give [unintelligible] to a lot of people. Yeah. That's it.

Moderator:

Okay, thank you.

Speaker 2: Emmanuel De Elias:

Hi my name is Emmanuel De Elias and ah- I have several comments. Uhm.., one of which is, ah, I would like to see ah, the encouragement- of development of green space. More green space uhm.., perhaps planting more trees. I'm happy that the, the LA River project calls for uhm..- restoring that, that [unintelligible] River that I think… more green trees and more ah- vegetation that can absorb all the carbon dioxide from the freeways and that… you know, being closer to Vernon and downtown. Ah, but I think Boyle Heights needs more trees and green space. Uhm.., I would also like to see an easing of parking restrictions for small business, restaurants, theatres, coffee shops, retail. Because there's lack of parking in Boyle Heights. Ah, so it would be good to ah, ease those restrictions. I also think, we should restore ah, more bus lines, like, the 30 and 31 along 1st street. And with the Gold line, ah- unfortunately a lot of the bus lines are taken away. Uhm..and I think, there, there needs to be ah- more parking in Boyle

Heights. Not necessarily a structure, but like on Chicago Street near Cesar Chavez, there's like a sort of a lot with various meters that could be more parking options in there. I think that would enhance the small business, the local business that are there uhm..... and those are my comments.

[END OF PUBLIC COMMENTS]

APPENDIX B

Methodology

APPENDIX B. METHODOLOGY

POPULATION, HOUSING AND EMPLOYMENT

This section describes the data sources and methodologies employed in the identification of the Draft EIR Existing Conditions and Future Projections, both of which are used to assess potential impacts of the Proposed Plan. This section also explains how reasonably expected population, housing, and employment under the Proposed Plan are derived and how the Proposed Plan addresses anticipated growth.[1]

The Draft EIR evaluates the potential environmental impacts related to anticipated changes in population, housing and employment based upon information from a variety of sources including, the United States Census Bureau (U.S. Census), California Department of Finance (DOF), California Employment Development Department (EDD), the Southern California Association of Governments (SCAG), the City of Los Angeles Department of City Planning (DCP), the City of Los Angeles General Plan Framework Element (Framework) and associated documents. Since each of these sources may use different methods of data collection and analysis and/or different timeframes, the data do not always arrive at precisely the same results. Accordingly, the demographic data used in the analysis may vary somewhat, depending upon the source cited. Despite the variations, the data used in this Draft EIR represent the best available data sources during the Draft EIR preparation and provide a reasonable estimate of the population, housing, and employment characteristics of the Boyle Heights Community Plan Area (CPA).

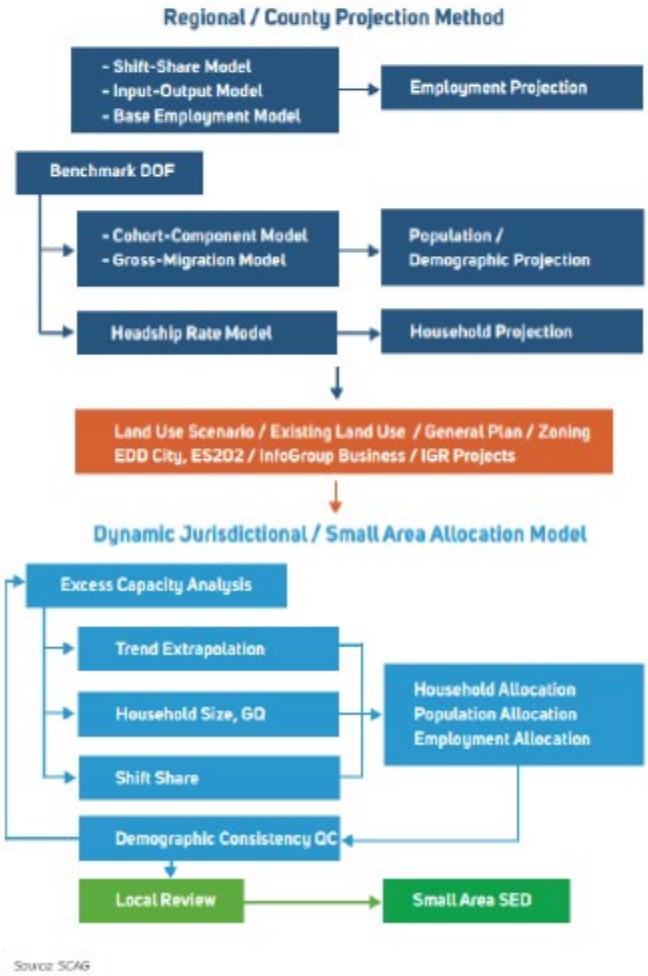
EXISTING CONDITIONS

Existing Conditions or Baseline Conditions for the purposes of environmental analysis of a community plan update, can be described in demographic terms (population, housing, and employment or in terms of development characteristics (square feet of development, height of structures or number of housing units). The City has the discretion to determine the best data source for Existing Conditions. For Existing Conditions, DCP, as the City's professional planning agency and the department responsible for reviewing and preparing the Draft EIR, uses demographic data that is published and public data referenced and used by multiple agencies in planning for the City and region. Obtaining accurate development characteristics at the parcel level for each Community Plan Area has in recent decades became possible through geographic information systems (GIS), however the technology still presents practical difficulties in verifying precise, detailed data at the lot and parcel level for CPAs for a city the size of Los Angeles. The size of the City at over 478 square miles (including 5 square miles of water area) results in duplicate, incomplete, and/ or unverified data that is time and cost prohibitive to verify at present. Reasonable efforts are made to collect and use the most complete and current data at the time of the Draft EIR analysis recognizing the constraints, limitations and margins of error associated with data sources.

[1] Nothing in this document is intended to contradict or control the particular data or methodology used in the EIR. This methodology was developed by DCP in its review and preparation of Draft EIRs for the Community Plan Update program and is provided in the appendices to supplement and support the Draft EIR

The leading source of demographic data is the U.S. Census. The Census data collected between April and October of 2020 was taken during an extraordinary once in a hundred-year pandemic and is not as likely to represent normal conditions. It is reasonable to assume that a population drop noted in the 2020 Census for Boyle Heights was partially due to undercounting and the COVID-19 pandemic. While Census data is typically the most reliable representation of socioeconomic data, such as housing and population, for discrete geographic areas, it is only available on a decennial basis, i.e., 2000, 2010, and 2020. While it is preferable to utilize decennial census data for analysis, it is not always possible to align planning processes with the release of decennial census data. Consequently, other sources are consulted to employ the most current information as well as to provide a benchmark for the Existing Condition year. In the interim years, the U.S. Census Bureau gathers more detailed socioeconomic data through other surveys, such as the American Community Survey (ACS) program, which provides data on an annual basis for certain geographies. For example, the ACS provides annual estimates for incorporated cities but does not provide annual estimates for Community Plan Areas. There is a lag time between when the data is collected and when it is released for both Census products. Both the decennial Census and ACS data are subject to sampling variability.

SCAG, as the Regional Transportation Planning Agency (RTPA) and the Metropolitan Planning Organization (MPO), publishes demographic estimates and projections through the long-range Regional Transportation Plan/ Sustainable Communities Strategy (RTP/SCS), which is updated by SCAG every four years. Census and ACS data are utilized by SCAG to prepare regional demographic estimates and forecasts. In addition to estimating existing demographics, the RTP/SCS provides a vision for future transportation investments throughout the region. Using demographic growth forecasts and economic trends that project out over a 20-year period or "horizon," typically, the RTP/SCS considers the role of transportation in regional planning in the broader context of economic, environmental, and quality-of-life goals for the region. Therefore, SCAG data are often utilized by planning agencies in the region for consistency with the goals and demographic data of the RTP/ SCS.



■ Baseline Existing Conditions (SCAG)

SCAG is the regional demographer for a six-county region that includes Los Angeles County. In that capacity it has an established methodology for estimating population, housing, and employment for the region and as well as projecting future population, housing, and employment at a jurisdictional or citywide level. SCAG utilizes various sources to determine existing or baseline population, housing, and employment. This method is used for deriving annual estimates of population, housing, and employment for years that are not a Census year.

SCAG's small area growth forecasting process is applied to develop baseline year estimates and future year socioeconomic data at the Transportation Analysis Zone (TAZ) level. The approach is utilized by SCAG to distribute jurisdictional level population, housing and employment estimates and projections into TAZs. Population figures are estimates derived from households and are generally viewed to be a more accurate representation at a jurisdictional level where multiple data sources are consulted. It is generally less precise to estimate population numbers for smaller areas, and or for areas where boundaries do not precisely match census reporting divisions, such as at the Community Plan Area level than at recognized jurisdictional boundary levels.

The following is the list of SCAG data sources and diagram of SCAG's process excerpted from the 2016 RTP/SCS Background Document Report.

SCAG DATA SOURCES:
SCAG's existing land use data
SCAG's General Plan Database, processed based on jurisdictional General Plans
SCAG's 2012 RTP/SCS growth forecast
SCAG's 2016 RTP/SCS jurisdictional level population, household and employment
2013 Longitudinal Employer-Household Dynamics (LEHD), Origin-Destination, Employment Statistics from the Census Bureau
Employment Development Department (EDD) 2012, 3rd quarter jurisdictional jobs by sector
2011 InfoGroup firm-based employment data
SCAG Intergovernmental Review (IGR) data
Digital Mapping Product (DMP) parcel data (2010-2012) and new construction data (2010-2012)
2010 Decennial Census Summary File 1 (SF1)

Source: SCAG

See the following SCAG publication for the full methodology employed to determine estimates and forecasts of population, housing, and employment data:

https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_scsbackgrounddocumentation.pdf?1606074233

■ How DCP Verifies Existing Conditions

DCP has regularly tracked growth and development activity in the City. As part of the regional planning process, local planning departments (including DCP) work together with SCAG to develop demographic estimates for the City of Los Angeles and the Southern California region approximately every four years. SCAG publishes regional transportation and sustainability plans (RTP/ SCSs) every four years. SCAG's Regional Council adopted the most recent RTP/SCS – the 2020 RTP/SCS in September 2020. However, the cycles of RTP preparation do not regularly coincide with the release of Census data. Because of the time involved in preparing the RTP/SCS, there is a lag between the time the Census data is released or demographic estimate is prepared and the time that SCAG makes demographic estimates available through the RTP/SCS. An additional lag occurs between the time the Planning Department receives SCAG 's demographics estimates for the baseline and forecasts for the horizon year, and the time a draft community plan and EIR are completed. Therefore, interpolations of data utilizing a previous point in time and future point may be necessary.

Furthermore, the DCP 's planning process for the community plan updates is comprehensive, the updates are long-term projects that take several years to complete. The planning process focuses on addressing land use changes at the parcel level to both resolve inconsistencies in land use regulations as well as to fulfill City objectives. For the Boyle Heights Community Plan Update, the Notice of Preparation (NOP) was released in 2016, and the 2016/2040 SCAG RTP/SCS data was used to inform the baseline existing conditions. At that time, the latest available Decennial Census data at the time of the NOP preparation was for the year 2010. The 2010 Census data provided a snapshot in time and was used as a reference to benchmark data along with other sources. Given the number of years that had lapsed between the release of the 2010 Census and the NOP, the Census data no longer reflected the best available data for 2016, the NOP publication year. Growth occurred in the years after the Great Recession and consequently, the 2016 SCAG RTP/SCS data[2] was utilized for Existing Conditions. [See discussion below under the heading Post 2016 Demographic Data, Project Baseline, and Projections for a discussion of demographic data released post issuance of the NOP.]

Although CEQA does not require a lead agency to change the baseline year for Draft EIR analysis every time a government agency at the state, federal, or local level issues a projection for a future condition or issues an estimate for those years subsequent to the Draft EIR baseline year, the DCP does review new data or projections released subsequent to the publication of the NOP to verify that it would not substantively affect the analysis or conclusions for significant impacts that are correlated or reliant upon population,

[2] As the 2016 RTP/SCS utilizes a baseline year of 2012, 2016 baseline year demographic estimates were interpolated (an annual average growth rate was applied) to estimate existing conditions. The interpolation method was corroborated by SCAG as a suitable methodology to estimate existing conditions.

housing or employment data. For instance, the City used Los Angeles County Assessor data to benchmark and analyze the general distribution patterns and totals for housing estimates in the Community Plan Area (CPA). This system of utilizing SCAG data and comparing or benchmarking it with other available data represents a best practice approach to obtaining and using complete and most current data. Multiple sources were also consulted (i.e. Employment Development Department, Origin-Destination, and American Community Survey, Business Installment data from InfoGroup) to verify demographic totals for the Community Plan Area. See Table 1. These sources are used as benchmarks or control totals whereas Assessor data is used for distribution because it is regularly updated and available at small geographic levels.

Table 1: Comparison of Demographic Estimates for the Boyle Heights CPA

Data Source	Households[2]	Population	Employment
2010 Census	22,000 households	85,000	n/a
2020 Census	23,000 households	82,000	n/ a
SCAG 2016 (interpolated) (from the 2016 RTP/SCS)	22,000 households	86,000	26,000
SCAG 2016 (from the 2020 RTP/SCS)	22,000 households	83,000	27,000
ACS (2012 - 2016 average)[1]	22,000 households,	87,000	n / a
ACS (2015-2019 average) [1]	23,000 households,	90,000	n/a
Assessor Parcel Data (2016)	22,000 housing units	n/ a	n/ a

Note: A lag time for the public release of most of the data sources, such as Census and ACS is typical. All numbers are rounded to the nearest one thousand.

1. US Census Bureau, 2012 -2019 American Community Survey
2. Households account for all occupied housing units, whereas housing units accounts for both occupied and vacant housing units

FUTURE PROJECTIONS

The Boyle Heights Community Plan Update is intended to plan for anticipated growth by 2040 (the planning horizon year), and consequently uses the adopted 2016-2040 SCAG RTP/SCS (2016 RTP/SCS) as a resource for both the baseline (also called Existing Conditions) population, housing and employment estimates and future projections for the 2040 horizon year.

The 2016 RTP/SCS projection for 2040 factors in recent and past trends, key demographic and economic assumptions, and local, regional, state or national policies. The Great Recession had a significant impact on household, population, and employment trends. Growth is still anticipated in SCAG's six-county region but

at a slower pace. SCAG's projection assumes that regional growth will be approximately 0.7 percent per year on average for households and population. Employment is forecast to grow two percent each year until 2020, before stabilizing at 0.7 percent per year.[3]

■ Projections (SCAG)

SCAG prepares regional and jurisdictional forecasts or projections. Regional employment forecasts are based on a set of national employment forecasts using a shift-share model. The population forecast uses the cohort-component model, which adds to the existing population conditions the projected number of persons living in group quarters, births, and persons moving into the region and subtracts the number of projected deaths and persons moving out of the region. Households are forecast by multiplying the projected residential population by projected headship rates, or the share of householders in population cohorts based on age-sex-racial/ethnic specific household formation levels. Regional demographic-economic assumptions were also considered in the forecasts and cover issues such as fertility rate, domestic migration, international immigration, and labor force participation rates.

For the jurisdictional forecast, also known as small area forecast, SCAG derives household growth rates and household sizes based on historical trends and the amount of potential development from jurisdictions' general plans and land uses. Population projections are based on household growth and size. Future employment numbers for jurisdictions are based on the share of the county's employment by sector. The major data sources used to develop the jurisdictional forecast include: California Department of Finance (DOF) population and household estimates; California Employment Development Department (EDD) jobs reported by industry; 2010 Census and the latest American Community Survey (ACS) data; Regional Housing Needs Assessment (RHNA) growth projections for 2014 through 2021; and 2014 Business Installment data from Infogroup. Local jurisdictions also provided input and comments to SCAG and adjustments were made.

For the City of Los Angeles, SCAG distributes the total citywide number among all of the city's Community Plan Areas by Transportation Analysis Zones (TAZs), again derived from past trends and building upon/compared to TAZ projections of previous adopted Regional Transportation Plans. DCP reviews the proposed SCAG projections based on knowledge of the Community Plan Area and may give feedback based on local knowledge of development trends and development activity observed during the process of developing the RTP/SCS and its projections. An example of input could be advising SCAG to reflect growth in areas with existing or planned transit infrastructure, areas with flexible land use regulations that can allow higher levels of growth and away from hillsides or historic single-family neighborhoods. This local feedback can also include further input based on the effects of local policymaking, such as General Plan or Community Plan updates, and the mandates of federal and state plans, which are also taken into consideration during the local review process.

See the following SCAG publications for the methodology employed to determine estimates of population, housing, and employment data for the region:

How Community Plans Consider SCAG Projections

The City of Los Angeles uses SCAG's projections to plan for the future. The Department of City Planning considers SCAG projections for housing, population, and employment as targets in its long- range planning efforts for Community Plan Areas when updating community plans. SCAG provides the demographic expertise in developing regional and citywide projections and works with DCP planners and demographers to refine those projections and their distribution throughout the city, as described previously. At a minimum, community plan updates meet SCAG projections for the City and each CPA but in some cases may exceed those projections for certain CPAs depending on circumstances such as market demand, development trends, new legislation, the introduction of transit or other infrastructure, etc. This may occur because the available data or information SCAG used during the time it prepared projections changed or because new information became available later. In this respect, the most recently adopted SCAG projections are viewed as targets, and DCP ultimately determines the distribution of citywide growth through adherence to the General Plan Framework and Community Plans goals, objectives, and policies while the citywide projections are being accommodated.

Table 2 on the next page compares the allocations of population estimates by seven geographic planning areas within the City of Los Angeles for 2016, and the population projections at the horizon year 2040. Using SCAG's 2016 RTP/SCS as the source, the City of Los Angeles as a whole is projected to grow by 17% in population during this time (an increase of 678,000), which over the course of 23 years, is approximately 0.7% growth per year.

The table indicates that the East Los Angeles Geographic Planning Area, which includes the Boyle Heights, Northeast Los Angeles, and Silver Lake – Echo Park – Elysian Valley CPAs, is currently home to approximately 10% of the citywide population, and it is projected that in 2040 the region will continue to be home to approximately 10% of the citywide population.

It is generally assumed that CPAs would continue to grow consistent with SCAG assumptions of approximately 0.7% growth per year on average across the region and would still need to accommodate at least marginal levels of growth (i.e., it was not assumed that any CPAs would have less population than current existing conditions levels).

Table 2: Projections by CPA Geography						
Geographic Planning Area	**2016 Estimated Population[1]**	**% of Citywide 2016 Population**	**2040 Projected Population[2]**	**% of Citywide 2040 Projected Population**	**Projected Population Growth (2016 – 2040)**	**% Citywide Growth Distribution (2016-2040)**
City of Los Angeles	3,931,000	100	4,609,000	100	678,000	100
South Valley	751,000	19	876,000	19	125,000	18
South Los Angeles	751,000	19	874,000	19	123,000	19
North Valley	716,000	18	795,000	17	79,000	12
Central	684,000	17	904,000	20	220,000	32
West Los Angeles	428,000	11	497,000	11	69,000	10
East Los Angeles	402,000	10	449,000	10	47,000	7
Harbor	200,000	5	214,000	5	14,000	2

Note: Projection numbers are rounded to the nearest one thousand.
1. The 2016 estimates were based on the SCAG 2016 RTP/SCS and were interpolated to 2016.
2. The 2040 projected population is from SCAG's 2016 RTP/SCS.

HOW GROWTH IS ADDRESSED THROUGH PLANNING AND ZONING

In preparing community plan updates, land use and zoning changes are proposed that will allow for projected growth to be accommodated while meeting the policies of the Framework Element and the Sustainable Community Strategies. During the planning process, technical land use analysis including the study of development trends, and consideration of General Plan policies is conducted to identify appropriate locations and levels of future development. DCP evaluates the geographic distribution of land use designations and zoning within a Community Plan Area to see where development potential is warranted. Some areas are expected to remain largely unchanged over time, such as open space areas. In other areas, development could occur as infill development and re-development, such as in multi-family residential areas. There are also some areas where development is directed, such as near transit stations and major corridors with bus lines, to increase access to transit, reduce vehicle miles of travel and thereby reduce greenhouse gas emissions and advance the climate change goals of the city and the region. Land use designation and/or zoning are applied to implement the updated land use policies of the Boyle Heights Community Plan.

Existing regulations as well as components of the Proposed Plan will ensure that growth is adequately addressed over the next 20 years. For example, under the Proposed Plan's zoning new developments would be subject to form and frontage regulations that are designed to achieve compatibility with the existing visual character of the neighborhoods within the Boyle Heights Community Plan Area. Specifically, building height limitations and step-back requirements, where appropriate, would help to provide cohesive height and bulk transitions across future structures within the CPA.A new project must meet the use and design regulations established in the New Zoning Code and comply with applicable Environmental Standards to receive approval. Some of the design requirements will result from the planning process and some will result from the environmental review process.

For example, regulations set through the zoning could include limitations on building height or step-back requirements in certain specific areas of the Plan Area. An environmental standard might require shielding of light source so as to direct light away from adjacent residential uses. These are examples that represent the types and range of regulations that can be applied to reduce potential impacts of new development.

PROPOSED PLAN'S REASONABLY ANTICIPATED DEVELOPMENT

After preparing the Community Plan Update, separate from the demographic projections is the determination of the Reasonably Anticipated Development of the Community Plan Update, or what is reasonably expected to be built out under the Proposed Plan during the planning horizon. On a citywide basis, DCP's goal is to align citywide Reasonably Expected Development for all of the Community Plans with the total SCAG projection for the City to be consistent with other departments and agencies who plan for and provide public services and infrastructure to the city.

Planners use their educational and professional experience and expertise of land use and zoning standards to make assumptions about where development is likely to occur and at what scale, and create assumptions about the amount of residential, commercial, and industrial development that will occur during the life of the plan to determine the Reasonably Anticipated Development.

These assumptions are established through research and analysis of existing development trends, existing conditions on the ground, project entitlement and building permit data, geographic and historic constraints, age of existing buildings, and the development potential between the existing built conditions and what uses and development intensities the new regulations would allow. Factors such as existing and planned infrastructure improvements are also considered.

Although the Project Planners do significant research relying on a multitude of data sets and market trends are considered while establishing assumptions, determining the Reasonably Anticipated Development involves making a lot of assumptions. Although the Planning Team are experts on the Community Plan Area and on the City's land use and zoning plans and laws, the Proposed Plan, with its policies, zoning, and land use changes do not grant permits for or construct any developments. Future unforeseen market changes that either incentivize or inhibit development are unknown at this time, leaving uncertainty in the process of developing assumptions. The Planning Team, including City Planners, Senior City Planners, and a Principal City Planner, use their expertise and the data sets available at the time of EIR preparation to inform the assumptions used in this analysis. These data sets include, but are not limited to the following:

- Real world conditions through field surveys by the Project Planners of every block of the Plan Area to assess vacancy and existing uses
- Assessor data for the entire Plan Area to determine existing unit counts and existing uses
- Uses (residential, commercial, industrial) and development intensities (height, density, FAR) allowed by the existing General Plan land use designations, zoning, and any zoning overlays and Specific Plans.
- Planning entitlements and building permits to assess market trends

- Proposed General Plan land use designations and General Plan objectives and policies and Zoning regulations for the Proposed Plan and Draft EIR Alternatives
- Other applicable regulations or physical conditions that could constrain potential development (such as, historic preservation protections, topography, flood plains, sensitive habitats, institutional facilities, open space)
- Other State or local programs or regulatory schemes active in the Plan Area that are intended to incentivize or facilitate potential development (such as, Community Benefits Programs, reductions in parking near transit infrastructure, tax incentive areas)

Utilizing these data sets and its collective expertise, the Community Planning team make and apply assumptions to the acreage within the Community Plan area, to determine the amount of Reasonably Anticipated Development from the Proposed Plan of residential units and non-residential square footage (commercial and industrial) that could be built during the life of the plan. For example, residential land area is multiplied by dwelling units per acre to generate an assumed dwelling unit count, and non-residential land area is multiplied by development potential, applying industry standards of employment density to calculate the total number of employees.

Ultimately, market factors dictate the level of development that occurs. Experience shows that only a percentage of the properties within a CPA will be redeveloped within the horizon year, typically 20- 25 years, and that even the sites that do redevelop are not always developed to maximum levels allowed by the by-right zoning and various incentive systems available. For this reason, 100 percent build out is a theoretical scenario and is not analyzed, but rather a more reasonable expected level of development is used both to guide proposed land use changes and analyze the potential environmental impacts of those changes. Community planners conduct the analysis of Reasonably Anticipated Development to analyze what level of development would reasonably occur during the life of the plan. While some jurisdictions may conduct a “full build out” analysis, the Boyle Heights Community Plan Area is a highly urbanized area where the most common form of development is infill development. Conducting a full build out analysis would assume that each parcel is wholly redeveloped during the 20 year life of the plan, which is unrealistic due to development constraints including existing historic structures and recently completed developments that are unlikely to be redeveloped. A number of factors serve to constrain development, including:

- Physical site constraints (topography, geology, etc.)
- Zoning regulations (requirements for open space, yards, setbacks and height that sometimes limit the maximum development on a site to levels below what the zoning would otherwise permit)
- Public review process
- Environmental factors and constraints (adjacent uses, sensitive uses, local, state and federal laws)
- Historic preservation goals and regulations
- Historical development patterns
- Land values
- Market factors, (economy, financial lending practices, etc.)

DCP considers these factors in using its best judgement, based on the education, experience and knowledge of its Planning Team, to determine the Reasonably Anticipated Development for the Proposed Plan. Revisions to the Reasonably Anticipated Development from the onset of the Community Plan Update may occur considering the multi-year time frame that community plans take to update.

SCAG 's METHODOLOGY DOCUMENTATION REPORTS

SCAG Methodology for RTP/ SCS 2016 is available online at:

- scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_scsbackgrounddocumentation.pdf?1606074233
- scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs_demographicsgrowthforecast.pdf?1606073557

POST 2016 DEMOGRAPHIC DATA, PROJECT BASELINE, AND PROJECTIONS

Notwithstanding the differences in numbers shown in Table 1 for the 2016-2040 SCAG RTP/SCS and the 2020 U.S. Census and 2020-2045 SCAG RTP/SCS of 3,000-4,000 persons, the City finds it is not necessary or appropriate to update the baseline population figure in the Draft EIR with the Census numbers, for the following reasons.

CEQA Guidelines Section 15125(a) provides the general rule for baselines:

> *An EIR must include a description of the physical environmental conditions in the vicinity of the project. This environmental setting will normally constitute the baseline physical conditions by which the Lead Agency determines whether an impact is significant. The description of the environmental setting will normally constitute the baseline conditions by which a Lead Agency determines whether an impact is significant. The description of the environmental setting shall be no longer than is necessary to provide an understanding of the significant effects of the proposed project and its alternatives. The purpose of this requirement is to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.*
>
> *...*
>
> *(1) Generally, the lead agency should describe physical environmental conditions as they exist at the time the notice of preparation is published . . . . . Where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency define existing conditions by referencing historic conditions, or conditions expected when the project becomes operational, or both, that are supported with substantial evidence.*

As an initial matter, population, housing, and employment is a portion of the physical environmental setting described for an EIR, including others such as, the built environment (e.g., building heights, valued aesthetic resources, and public infrastructure), and the natural environment (e.g., air quality, watershed, the natural scenic resources, wildlife), and other physical characteristics (e.g., average vehicle trips, ambient noise characteristics, public services provided). The City, like most lead agencies, uses the Appendix G questions in the CEQA Guidelines to determine if its projects result in significant impacts to the environment. Population, housing, and employment, as an environmental setting is relevant and

used in the following impact sections to analyze impacts: air quality, greenhouse gas (GHG), energy, transportation, noise from mobile sources, population, housing and employment, utilities, and public services (including recreation). The City published the Notice of Preparation (NOP) for the Proposed Plan in September 2016.

SCAG is designated as a Metropolitan Planning Organization (MPO) responsible for carrying out federal and statutory duties within its six-county region, which includes Los Angeles County. SCAG is responsible for producing socio-economic estimates and projections, and the data is used in SCAG's RTP/SCS. The 2016-2040 RTP/SCS envisioned growing more compact communities in existing urban areas with efficient public transit and safe mobility opportunities. Major policy themes include integrating transportation investments and future land use patterns, striving for sustainability, providing more transportation choices, and supporting economic growth with infrastructure. Many municipalities and government agencies utilize the most recently adopted SCAG RTP/SCS data for purposes of planning, which for the preparation and analysis of the Proposed Plan was the 2016-2040 RTP/SCS. It is Los Angeles City Planning's practice to use SCAG RTP/SCS demographic data as a benchmark or as a reference point for recent estimates and projections locally; many other agencies and jurisdiction also use SCAG demographics data to plan for local change and growth.

As stated above, the NOP for the Proposed Plan was released in September 2016, and therefore the adopted 2016-2040 RTP/SCS was used to reference housing and population data for 2016 (the baseline year) and 2040 (the horizon year). For this RTP/SCS, SCAG utilized demographic data (households, population, and employment) from a baseline year of 2012 and made projections for 2040. To address the time gap between 2012 and 2016, the demographic data from 2012 were interpolated to estimate 2016 existing conditions. The estimated 2016 population was approximately 86,000 persons and total households was approximately 22,000. As previously mentioned, annual demographics data are not immediately available and there is usually a lag time in the data release. Therefore, the interpolated population numbers using an annual average growth rate represented the most reasonable estimate available in 2016.

Published demographic data is widely available, including from private companies and university researchers, but they are usually for specific purposes, such as market research or academic publications. Each one has their own methodologies and assumptions but often, the data involves using Census Bureau products, including the decennial census count and ACS estimates of socioeconomic characteristics. There are limited, official demographics data available from government agencies, namely the Census Bureau and locally, SCAG for the region it serves. In addition to preparing the RTP/SCS, SCAG publishes local profile reports for each city in its jurisdiction, once every two years. Other MPOs have their own demographic data. There are also specific federal or state government agencies that publish more topical demographics data, such as employment, labor, agriculture, health/disease, and education/children. Demography is a specialized field of study, and technical expertise is required to calculate models and growth forecasts/projections. As shown in Table 1, the different sources often have provided different results. Demographics data produced by SCAG and the Census Bureau is used because they are the best available sources.

During the preparation of the EIR, SCAG adopted Connect SoCal (2020-2045 RTP/SCS) in summer 2020. This latest adopted RTP/SCS used a baseline year of 2016. For the Boyle Heights CPA, SCAG utilized a 2016 estimated population of approximately 83,000 persons and estimated households of 22,000, which is noted in Table 3 below. This difference is approximately 3 percent from the estimated 86,000 persons in the Proposed Plan's EIR baseline. The estimated households for the latest adopted RTP/SCS and the Proposed Plan's EIR baseline was consistent at approximately 22,000 households. Since 2016, there has not been a substantial increase in either dwelling units nor jobs within the Boyle Heights CPA that would necessitate a different baseline value. Building permit data shows that since 2016 approximately 700 housing units have been permitted, of which approximately 110 units were Accessory Dwelling Units (ADUs). Building demolition permits of approximately 120 housing units were also issued. This total indicates the total units for which building permits for new housing construction or demolition have been issued by the City. It does not necessarily mean that all the permitted units have been built or demolished. A total of approximately 700,000 square feet of new non-residential square footage has been permitted since 2016, and approximately 500,000 square feet of this total is attributed to the conversion of a cold storage business to office and warehouse uses.

Table 3
Comparison of 2016 data in 2016 and 2020 RTPs within Boyle Heights CPA

	Adopted 2016-2020 RTP/SCS (2016)	Adopted 2020-2045 RTP/SCS (2016 Baseline)	% Difference 2016 to 2020
Population	86,000	83,000	-3%
Households	22,000	22,000	-4%
Employment	26,000	27,000	2%

As previously discussed, the SCAG 2016-2040 RTP/SCS and SCAG 2020-2045 RTP/SCS also provide projections for horizon years for 2040 and 2045, respectively. While the most recently adopted RTP/SCS includes a horizon year of 2045, the Proposed Plan continues to plan for 2040, for consistency with the 2016-2040 RTP/SCS utilized for the baseline conditions. As noted in Table 4 below, projections for the Proposed Plan do not vary substantially between the 2016 and 2020 RTPs. Further, when conducting the analysis, Transportation Analysis Zone (TAZ) boundaries are often utilized and the boundaries can be adjusted by SCAG across the CPA or City from one RTP cycle to the next. Therefore the same RTP is utilized for baseline conditions and projections, to ensure analysis is conducted using the same boundaries for baseline and future conditions.

Table 4 Comparison of projections in 2016 and 2020 RTPs within Boyle Heights CPA			
	Adopted 2016-2020 RTP/SCS (2040 projection)	Adopted 2020-2045 RTP/SCS (2045 projection)	% Difference 2040 to 2045
Population	93,000	95,000	2%
Households	27,000	28,000	4%
Employment	35,000	33,000	-6%

As time has passed, additional demographics data have been released by the ACS, which is published by the U.S. Census Bureau. The ACS is a nationwide social, economic, housing, and demographics survey that focuses on the characteristics of the population, not to provide counts of the population[4]. Each month approximately 295,000 randomly selected addresses receive requests to complete questionnaires out of more than 140 million eligible addresses; this represents about two percent of all addresses. From these responses and in person surveys, as needed when households do not provide responses, data is collected and analyzed to inform the demographic estimates. There are uncertainties within the sample data, including sampling error.

The most recent 2019 ACS 5-year data released in 2020 for Boyle Heights showed an increase in households to approximately 23,000 as well as an increase in population number to approximately 90,000. It should be noted however that the ACS cautions against comparing ACS data when there is an overlapping time period[5], such as in this case; the 2016 ACS covered the years 2012-2016 whereas the 2019 ACS covered the years 2015-2019. This is because using pooled data from overlapping time periods to look for trends may be challenging for multi-year estimates but comparing 5-year estimates that do not overlap is acceptable. In general, slowing growth over the past decade is a trend acknowledged by demographers but there has not been any projections or discussions of stagnant growth or loss in California or the SCAG region. Expert demographers have presented data in the last few years during SCAG's Annual Demographic Workshops affirming that population will continue to grow in the state and in the SCAG region over the next few decades but at slower rates than in past decades[6].

At the time of preparation of the EIR, the 2020 U.S. Census was released. The 2020 U.S. Census shows a population of approximately 82,000 people and 23,000 households for the Boyle Heights CPA, which shows an increase in households and a decrease in population compared to EIR's 2016 baseline. There are several reasons to be concerned about the reliability of the 2020 U.S. Census. First, it was undertaken during a global pandemic, which resulted in many people losing their jobs, needing to telecommute, and being quarantined or following Safer at Home orders, and even some people, tragically getting very sick and dying. Second, there have been concerns with the impact on responses to the Census based on the Trump Administration's widely publicized attempt to put a citizenship question on the Census.

[4] U.S. Census Bureau, *Understanding and Using American Community Survey Data: What All Data Users Need to Know* (2020); https://www.census.gov/content/dam/Census/library/publications/2020/acs/acs_general_handbook_2020.pdf, accessed June 15, 2021.
[5] U.S. Census Bureau, *Understanding and Using American Community Survey Data: What All Data Users Need to Know* (2020); https://www.census.gov/content/dam/Census/library/publications/2020/acs/acs_general_handbook_2020.pdf, accessed June 15, 2021.
[6] SCAG, *Annual Demographic Workshop: See presentations* available on https://scag.ca.gov/demographics and https://scag.ca.gov/past-demographic-workshops, including from the State Department of Finance.

The City finds that using the 2016 baseline of 86,000 people provides the most accurate picture practically possible because it was supported with substantial evidence when the City released the NOP based on the best available data source at the time, the 2016 RTP/SCS. The City finds it is reasonable to assume that a population drop noted in the 2020 Census was partially due to undercounting and the COVID-19 pandemic. According to the Census Bureau's 2020 Post-Enumeration Survey Estimation Report, which was released in March 2022, the 2020 Census undercounted Black, Latino, and Native American residents.[7] According to the report, these groups – mostly concentrated in cities – were undercounted in the 2020 Census figures. This could have contributed to the noted population decline as compared to the ACS Survey. Therefore, relying on existing conditions in 2016 using the 2016-2040 SCAG RTP/SCS provides the most accurate picture practically possible of the project's impacts.

INTRODUCTION & COMMUNITY PROFILE

Draft Summer 2022

THIS PAGE IS INTENTIONALLY LEFT BLANK

READERS' GUIDE

The Community Plan is a document that represents the land use vision and values for a distinct geography. A main function of the Community Plan is to guide decision-making with respect to land uses. This includes guidance for legislative decisions, such as adoption of overlay zones or supplemental development regulations, as well as amendments to the land use or zoning maps. The goals and policies, together with the General Plan Land Use Map are intended to guide decision-making. Community Plan goals and policies are intended to be supportive of one another. However, it is important to recognize that goals and policies are sometimes in competition and may entail trade-offs. The singular pursuit of one goal or policy may, in some cases, inhibit the achievement of other goals or policies. For example, the Community Plan includes policies that recognize the need to minimize water consumption in light of limited water resources. However, to eliminate the watering of sites being graded for permitted development or to eliminate landscape irrigation may conflict with objectives relating to maintenance of air quality or community design and beautification. Thus, when implementing the Community Plan, decision-makers must strike a balance between competing goals and policies, recognizing that all objectives cannot be fully implemented all the time. In relation to any decision, some goals and policies may be more compelling than others. It is up to the decision-makers to balance and weigh the applicability and merits of the goals and policies on any given project, program, or action.

Goals

A goal is a statement that describes a desired future condition or "end" state. Goals are change and outcome oriented, achievable over time, though not driven by funding. Each goal in the Community Plan begins with an abbreviated chapter title followed by the number of the goal (e.g., LU.1).

Policies

A policy is a clear statement that guides a specific course of action for decision makers to achieve a desired goal. Policies may refer to existing programs or call for the establishment of new ones. Each policy in the Plan is labeled with the abbreviated chapter title, the goal they refer to, and a unique number (e.g., LU.1.1).

Programs

An implementation program is an action, procedure, program or technique that carries out goals and policies. Implementation programs are comprehensive in nature, encompassing amendments of existing and preparation of new plans, ordinances, and development and design standards; modification of City procedures and development review and approval processes; and interagency coordination. Completion of a recommended implementation program will depend on a number of factors such as citizen priorities, finances, and staff availability. These recommendations are suggestions to future City decision makers as ways to implement the goals and policies contained in this Community Plan. The listing of recommended implementation programs in the Community Plan does not obligate the City to accomplish them. Chapter 5 contains a list of all the Community Plan's implementation programs. They are grouped by general topic and individually numbered (e.g., P1).

PLAN VISION

The Boyle Heights community was built by generations of immigrants, fostering a sense of pride in the work ethic, rich cultural identity, and community activism of those who call it home.

Boyle Heights is a historic and cultural treasure with a diverse local economy that has the potential to bring prosperity and opportunity to current residents and to future generations.

Building upon its distinctive, pedestrian friendly, traditional neighborhood character, this community envisions a plan that is supportive of environmental quality, economic vitality, and urban design that promotes neighborhoods that are safe for all users.

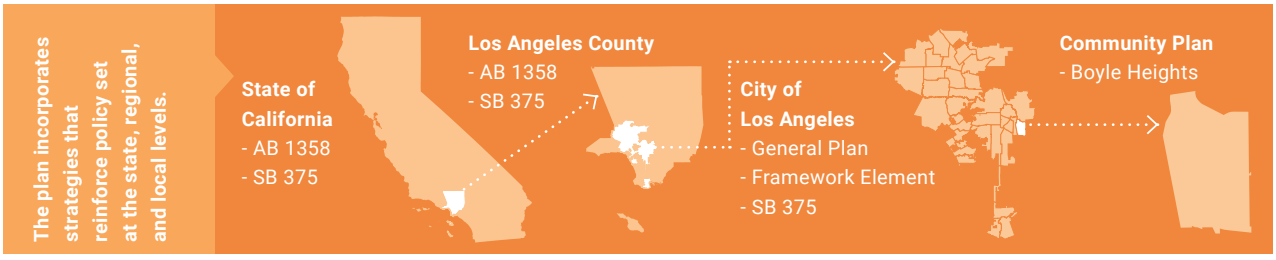
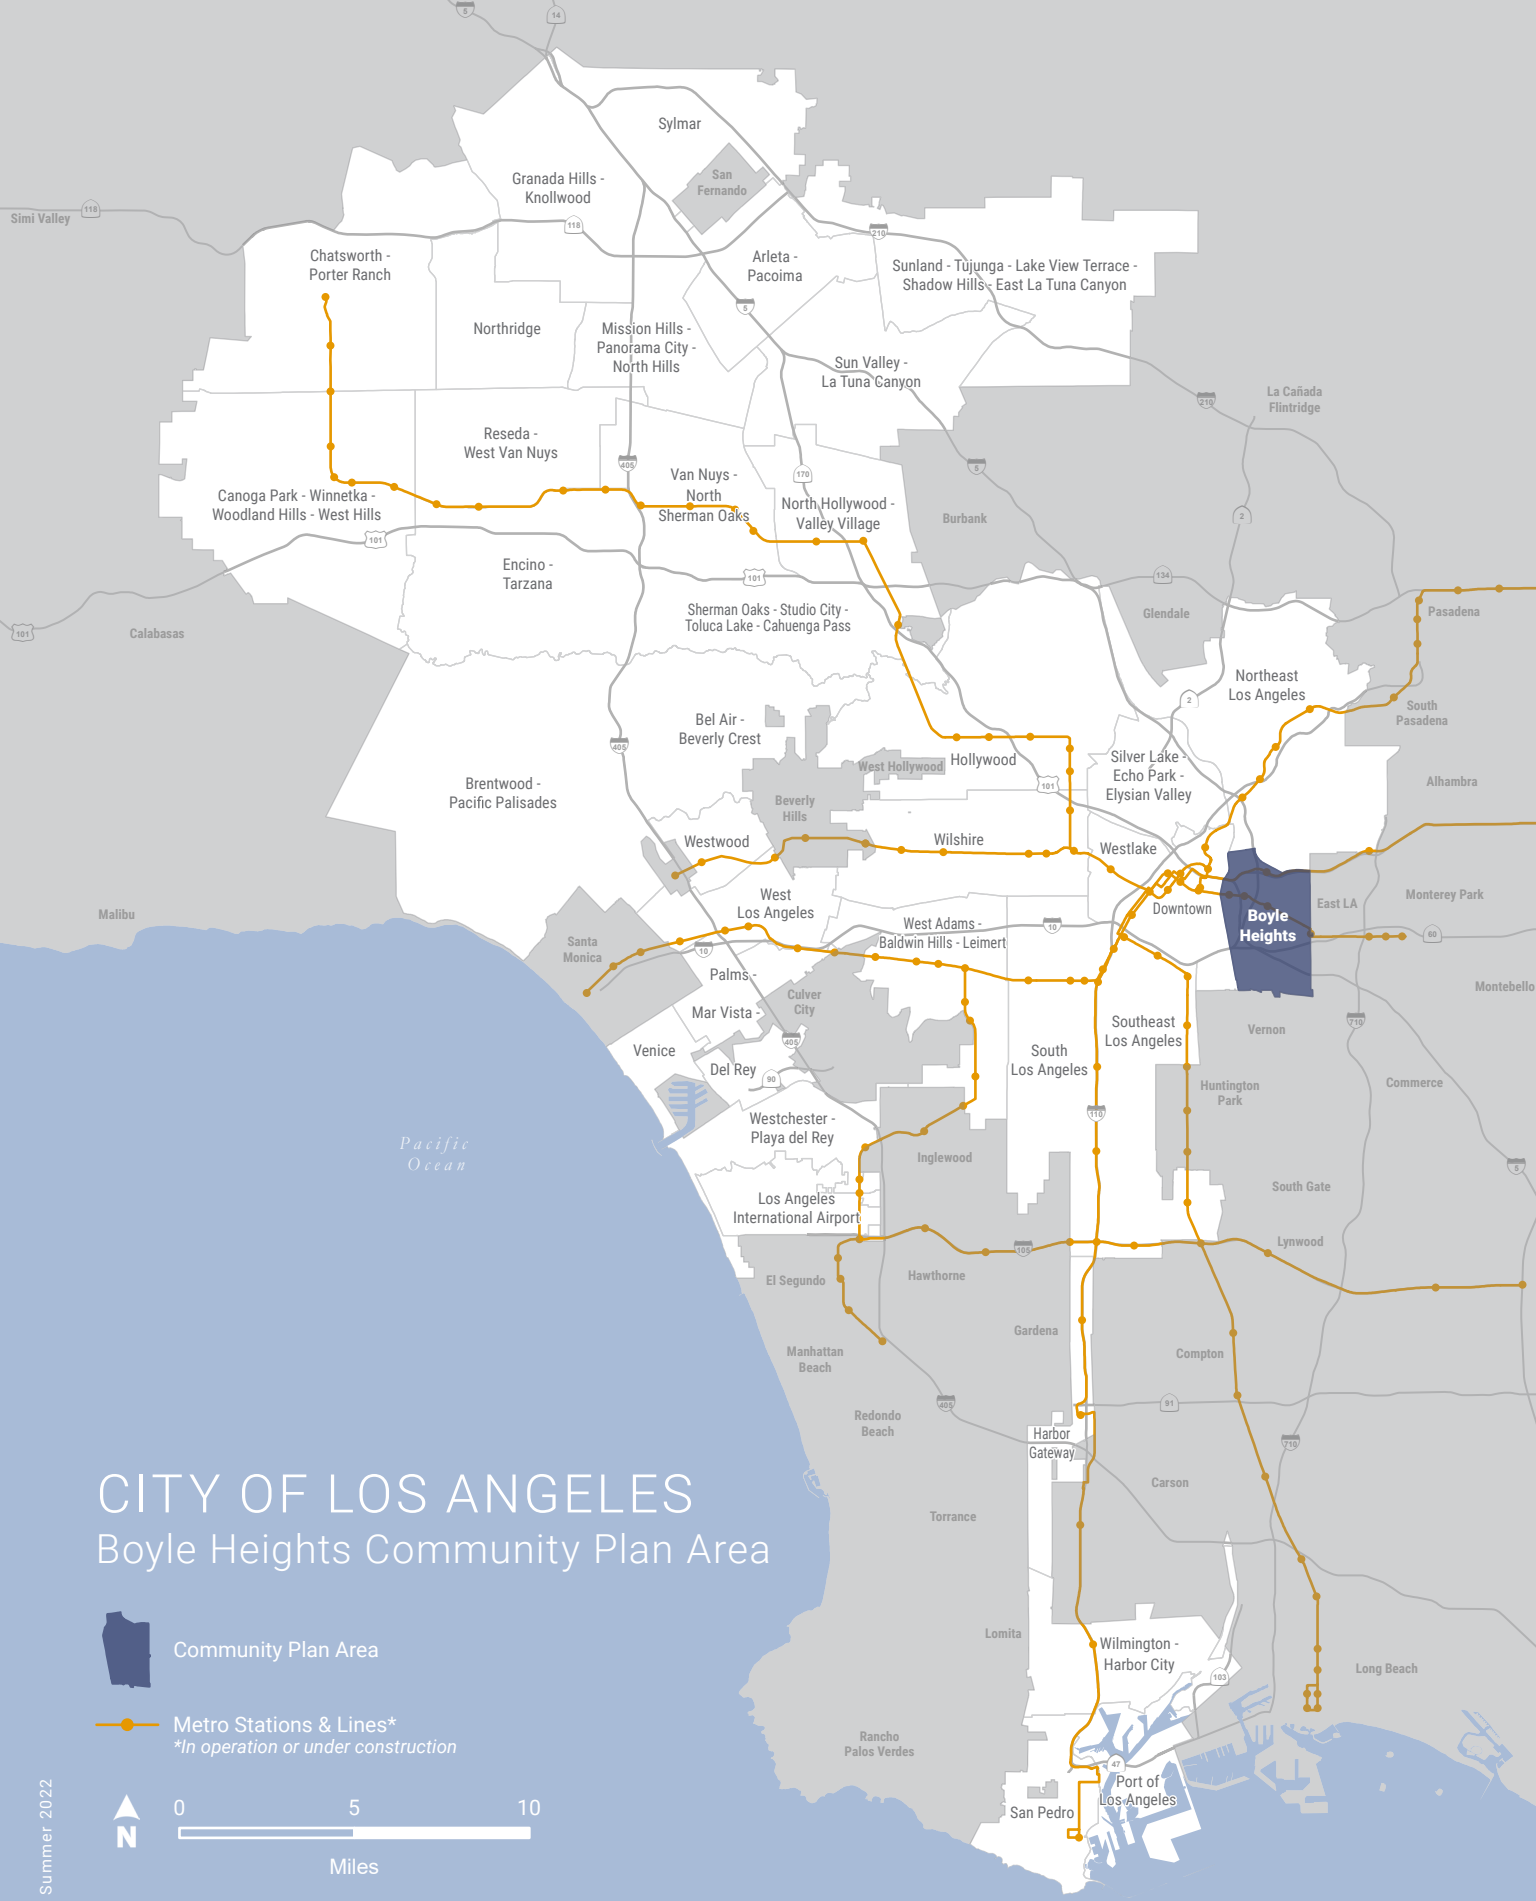
BACKGROUND AND RELATIONSHIP TO OTHER PLANS

The Boyle Heights Community Plan constitutes one of thirty-five plans that comprise the City's General Plan Land Use Element. Including a number of elements, such as Framework, Mobility, Open Space, and Safety, the General Plan is the City's fundamental policy document and defines how physical and economic resources are to be managed and utilized over time. Decisions by the City regarding the use of land, the design and character of buildings and open spaces, the conservation of existing housing and contextual infill of new housing, and the provision of supporting infrastructure are guided by the General Plan Land Use Element.



In addition to the Land Use Element, the City has adopted a Framework Element of the General Plan that establishes how Los Angeles will grow in the future, providing a citywide context for updates to Community Plans and the citywide elements. The Framework is focused around seven guiding principles: grow strategically; conserve existing residential neighborhoods; balance the distribution of land uses; enhance neighborhood character through better development standards; create more small parks, pedestrian districts, and public plazas; improve mobility and access; and identify a hierarchy of commercial districts and centers.



The development pattern described in the Framework Element provides direction and guidance for the city as a whole, as well as in neighborhoods such as Boyle Heights. Framework's growth strategy for Boyle Heights is focused around transit and established mixed-use boulevards while maintaining the stability of residential neighborhoods. The Boyle Heights Community Plan includes large portions of the region's industrial core along its western and southern borders, which will continue to be prioritized for jobs and industry, while ensuring compatibility with adjacent neighborhoods. Appendix A of this document includes further discussion regarding the relationship between the Boyle Heights Community Plan and the City's General Plan.

California state Legislation such as the Complete Streets Act of 2007 (Assembly Bill 1358) and Landmark Land Use and Greenhouse Gas State Law of 2008 (Senate Bill 375) established greenhouse gas reduction and better integration of multimodal transportation and land use planning as statewide priorities. Emission reduction is achieved through strategic infill development near transit and jobs, reducing the number of vehicle miles traveled. This Plan increases mobility options by planning for more jobs, housing, and amenities near transportation resources and each other, improving mobility options for residents to access jobs or visit family, while reducing reliance on single-occupant automobiles.

The Community Plan's importance lies in its ability to shape positive community change and provide guidance that results in equitable and sustainable land use that balances the physical character and social urban fabric of the community with citywide policies and regional initiatives. Development of the Boyle Heights Community Plan was a multi-year collaborative effort with broad public participation from community stakeholders. The input received through workshops, focus groups, office hours, and collaboration with community-based organizations and the Neighborhood Council served as the policy foundation for the Plan.

Overall, the Plan guides future growth toward the most transit-served areas, directing development away from residential neighborhoods to achieve and balance regional sustainability goals and neighborhood stability.

COMMUNITY PROFILE

As one of the City's earliest suburbs, Boyle Heights has a long and rich history of accommodating generations of immigrants who in-turn have built successful businesses and resilient neighborhoods. Boyle Heights today is a predominantly residential community, supported by vibrant commercial corridors and industrial districts. The majority of households include children, which makes schools, recreational facilities, and safe streets an important part of the lives of residents. While 23% of residents are homeowners, the majority of residents are renters and are especially affected by the changing dynamics of the housing market that often result in gentrification and displacement. The local economy is primarily driven by small businesses in the form of retail and services for residents, as well as wholesale and distribution tied to the regional economy.

BOYLE HEIGHTS TODAY IS:

IS A MAJORITY RENTERS

74% of total occupied units are renter occupied

26% of total occupied units are owner occupied

CONTAINS OLDER HOUSING STOCK

42% of buildings were built before 1940

71% of all multi-unit housing was built before 1978

HAS A VARIETY OF EMPLOYMENT INDUSTRIES

34% Manufacturing, Transportation, Warehousing

28% Health Care and Social Assistance

16% Retail, Food Services

3% Professional, Scientific, Administrative, and Technical Services

8% Education Services

4% Management and Administration

8% Other Industries

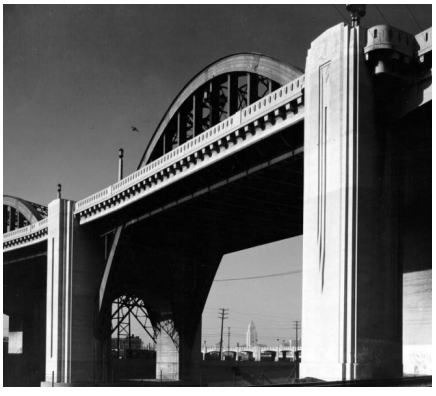
HISTORIC DEVELOPMENT PATTERNS

EARLY DEVELOPMENT
1870s–1900s

View looking west on 1st Street at Boyle Avenue (ca. 1895), California State Library Image Archive

- First bridges and cable railway lines built across the LA River
- Early land subdivisions establish Boyle Heights as a residential suburb
- Development of early commercial districts along First Street, Brooklyn Avenue (now Cesar E. Chavez), and Stephenson Avenue (now Whittier Boulevard)



POPULATION CHANGES
1920s - 1940s

Boyle Heights "Temporary Home", Jewish Museum of the American West

- Due to the absence of racially restrictive covenants, Boyle Heights becomes an important community for African Americans and for immigrants arriving to the City
- In 1939 fed-sponsored Home Owner's Loan Corp (HOLC) redlined the neighborhood, creating an enduring legacy of disinvestment
- Los Angeles was the center of "Mexican Repatriation," where mass deportations of anywhere from 400,000 to 2,000,000 Mexicans and Mexican-Americans took place between 1929 and 1936
- During World War 2, the forced removal and incarceration of more than 100,000 ethnic Japanese, most of which were U.S. citizens, devastated communities in Los Angeles and throughout the West Coast

INDUSTRIAL EXPANSION
1920s–1940s

6th Street Bridge, Los Angeles Public Library

- Streetcars are the primary form of urban transportation
- Major industrial expansion modernizes rail facilities, as well as factory and warehouse districts along the River and south of Olympic Blvd. Wyvernwood is constructed as workforce housing to support this expansion
- The Army Corp of Engineers channelizes the LA River

MID CENTURY/POSTWAR
1940s–1960s

Estrada Courts Housing Project, Housing Authority of the City of Los Angeles, California

- The Federal public housing program builds Pico Aliso, Pico Gardens, and Estrada Courts
- Thousands of residents are displaced and parts of neighborhoods demolished for the construction of the regional freeway system and East LA interchange
- Streetcar lines are converted to bus lines
- Students protest inequalities in the public education system and call for improved facilities and culturally relevant school curriculum during the East LA Chicano Student Walkouts or "Blowouts"

1970s–1980s

Store in Boyle Heights (ca. 1986), Los Angeles Public Library

- Economic conditions and civil unrest in Mexico and Central America lead to increased immigration to Los Angeles. Boyle Heights remains an important location that allows for new immigrants to connect with established networks
- Regional suburbanization results in disinvestment in older neighborhoods

1990s–2010s

Gold Line at Pico/Aliso Station, Allen J. Schaben / Los Angeles Times

- Aliso Village and Pico Gardens housing projects are redeveloped through the Federal Hope VI program
- Felicitas & Gonzalo Mendez High School built
- Development shifts to infill development in older urbanized areas of the city
- Gold Line Eastside extension opens in Boyle Heights
- Exide battery recycling plant in neighboring City of Vernon closes
- Revitalization of Downtown LA leads to growing concerns over gentrification and displacement in Boyle Heights
- The Clean Up Green Up (CUGU) Ordinance, an environmental justice policy that established "green zones" in Boyle Heights, Pacoima, and Wilmington, is adopted

**For more information on key moments that have shaped the cultural landscape and built environment in Boyle Heights throughout the decades, please see the forthcoming Staff Report*

GUIDING PRINCIPLES

The following core themes and principles represent ongoing guidance for the Boyle Heights Community Plan.

PROMOTE HOUSING AFFORDABILITY

- Increase housing opportunities around transit
- Encourage residential infill that contributes to the affordable housing supply
- Safeguard existing households against displacement

PROMOTE VIBRANT NEIGHBORHOOD AND COMMERCIAL DISTRICTS

- Create transit corridors that are accessible to all users
- Provide a mix of housing, jobs, and services that embrace and enhance community identity
- Encourage high quality design and contextual transitions to residential neighborhoods
- Strengthen and support existing businesses in commercial corridors

PRESERVE AND CELEBRATE BOYLE HEIGHTS' CULTURAL HERITAGE

- Ensure that new development enhances the cultural identity of the neighborhood and respects the multi-faceted history of Boyle Heights
- Encourage and preserve existing business uses that serve residents' daily needs
- Preserve sites with identified historic significance

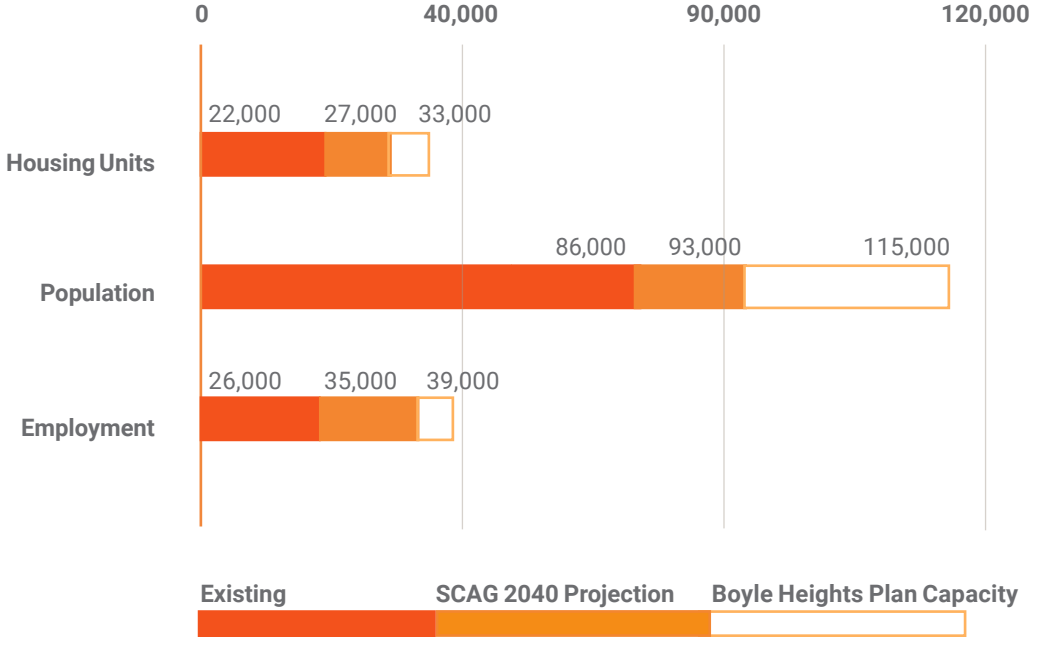
FOSTER A THRIVING, HEALTHY, AND SUSTAINABLE COMMUNITY

- Mitigate and limit the impacts of air pollution from car traffic and noxious uses that are detrimental to the health and welfare of the community
- Integrate neighborhood serving uses into the neighborhood fabric
- Treat the Los Angeles River as a community amenity

PRESERVE INDUSTRIAL LAND FOR ECONOMIC STABILITY

- Prioritize industrial land for uses that support the regional economy and local jobs
- Prevent health impacts to local communities through the location and design of industrial land uses
- Improve land use compatibility by creating buffers and better transitions between intense uses and sensitive uses, such as residential neighborhoods

CREATE A NETWORK OF SAFE AND ACCESSIBLE STREETS



- Prioritize safety for all users of the street and public realm
- Expand transit service
- Improve bike infrastructure

TRENDS AND PROJECTIONS

The State of California requires that regions plan for changes in population, housing, and employment. If growth is projected, each City must accommodate a share of the region's anticipated growth. These projections are developed by the Southern California Association of Governments (SCAG), which forecasts population and job growth for the cities and counties in the six-county Southern California region.

The City must then accommodate, or create the "capacity" for these projected levels of population, housing, and employment through its Community Plans. SCAG's 2040 population and housing forecasts for Los Angeles' Community Plan Areas are based on several factors, including historic and recent growth trends. The Department of City Planning allocates the citywide population and housing forecasts, consistent with the Framework Element and other City policies.

TABLE 1.1: PROJECTIONS & PLAN CAPACITY*

*Plan capacity is the reasonable expected development anticipated to occur as a result of the proposed Plan by the Plan's horizon year.

GENERAL PLAN LAND USE DESIGNATIONS

General Plan Land Use Designations express a variety of goals, policies, and zoning tools to support each condition. The proposed General Plan Land Use Designations reflect the relationship between land use, physical built form, and functional aspects that differentiate one area from another. Each designation includes a description of the range of intensity, height, and typical uses that characterize an area, contributing to its identity and sense of place.

Description

232
Net Acres

8%
of Plan Area

Community Center

Community Centers are vibrant places of activity typically located along commercial corridors, in concentrated nodes, or adjacent to major transit hubs. The building form ranges from Very Low Rise to Low Rise. The use range is broad and may include commercial, residential, institutional facilities, cultural and entertainment facilities, and neighborhood-serving uses. The residential density generally ranges from 1 unit per 800 square feet of lot area to 1 unit per 400 square feet of lot area.

140
Net Acres

5%
of Plan Area

Neighborhood Center

Neighborhood Center areas are focal points for surrounding residential neighborhoods and include uses that serve the needs of residents and employees.The building form is Low Rise and is characterized by pedestrian-scale commercial development. Uses generally include a mix of residential and commercial uses, such as local businesses and services. The residential density generally ranges from 1 unit per 800 square feet of lot area to 1 unit per 400 square feet of lot area.

70
Net Acres

3%
of Plan Area

Medium Neighborhood Residential

Medium Neighborhood Residential areas are primarily residential and may integrate limited local-serving commercial uses; these neighborhoods are adjacent and connected to commercial and employment areas. The building form ranges from Very Low Rise to Low Rise, and buildings are typically oriented toward the street. The residential density ranges from is 1 unit per 800 square feet of lot area to 1 unit per 600 square feet of lot area.

12
Net Acres

<1%
of Plan Area

Medium Residential

Medium Residential areas provide a concentration of multi-unit housing and are typically located near commercial or employment centers. Supportive institutional uses may also be provided in certain Residential Use Districts. The building form is Very Low Rise. The residential density is 1 unit per 800 square feet of lot area.

Description

993
Net Acres

33%
of Plan Area

Low Neighborhood Residential

Low Neighborhood Residential areas are primarily residential and may integrate limited local-serving commercial uses; these neighborhoods are adjacent and connected to commercial and employment areas. The building form is Very Low Rise and buildings are typically oriented towards the street. The residential density generally ranges from 2 units per lot to 1 unit per 1,500 square feet of lot area.

76
Net Acres

3%
of Plan Area

Low Medium Residential

Low Medium Residential areas provide multi-unit housing, ranging from duplexes to small scale apartments, generally near neighborhood-serving uses. The building form is Very Low Rise. The residential density generally ranges from 2 units per lot to 1 unit per 1,500 square feet of lot area.

23
Net Acres

<1%
of Plan Area

Low Residential

Low Residential areas provide single unit housing, typically set away from centers of activity. The building form is Very Low Rise. The minimum size of each lot is 5,000 square feet and residential density is limited to one unit per lot.

281
Net Acres

10%
of Plan Area

Light Industrial

Light Industrial areas preserve and sustain industrial activity while serving as a jobs base. The building form is Low Rise and the site layout typically varies to accommodate a range of industries. Uses include manufacturing, warehouse and distribution, research and development, office, and limited commercial. Housing is generally not permitted in Light Industrial areas but limited residential uses may be allowed, for example, through adaptive reuse of existing buildings.

469
Net Acres

16%
of Plan Area

Industrial

Industrial areas are centers of industrial activity while serving as a regional jobs base. The building form is Low Rise. Site layout and development in these areas are flexible to accommodate a range of vehicles, equipment and industries. Uses include office, warehouse, distribution, heavy manufacturing, recycling and waste transfer, utilities , and mining. The Industrial designation does not allow residential uses.

Description

145
Net Acres

5%
of Plan Area

Open Space

Open Space areas primarily serve as public recreational sites or parks but can include reservoirs and nature reserves. These largely open areas are intended for passive and active outdoor recreation, public gathering, and education. The building form, if there are accessory structures or buildings on site, typically facilitates recreational and/or communal activities, such as playground equipment, restrooms, and community centers. The Open Space designation does not allow residential uses.

190
Net Acres

7%
of Plan Area

Public Facility

Public Facilities areas serve as centers of life, promoting governmental, institutional, and cultural functions. These areas provide for the use and development of land typically owned by government agencies. The building form varies in size and structure, with a variety of site layouts and flexible building designs that support civic activity and an active public realm. Uses may include government offices, libraries, schools, service systems and housing.

382
Net Acres

13%
of Plan Area

Public Facilities - Freeways

Public Facilities-Freeways comprises land dedicated to freeways that exist within the Plan Area, including storage and parking uses, that is owned by the California Department of Transportation (Caltrans).

Chapter 2

LAND USE & URBAN FORM

Boyle Heights has land uses ranging from densely populated residential neighborhoods served by vibrant commercial corridors, to developed industrial land along the Plan Area's western and southern edges. Community life prospers amidst this complex and dynamic place that includes a combination of diverse land uses and buildings that are almost a century old.

This chapter defines goals and policies for land use planning that expands opportunities for housing in areas well served by transit, preserves land for industry and jobs while ensuring land use compatibility, and reinforces the neighborhood qualities that contribute to a strong sense of community in Boyle Heights.

Land use planning can address an expansive range of interrelated topics that shape the quality of life within a community, including housing, jobs, urban form, cultural resources, and environmental and economic sustainability.

The policies in the following chapter articulate a strategy for land use planning that will accommodate anticipated growth while ensuring that Boyle Heights remains a place of opportunity with access to affordable housing and gainful employment, and where community life prospers.

GOALS AND POLICIES

HOUSING AND COMPLETE NEIGHBORHOODS

This Plan envisions Boyle Heights as a community that can continue to be a source of affordable housing for existing residents and future generations, affirming its legacy as a community of rooted families, new immigrants, and a growing youth population.

The Plan also seeks to rectify past planning policies that perpetuated racially motivated exclusionary practices that have had lasting negative impacts on neighborhoods and communities of color.

In support of this goal, Plan policies encourage the preservation of existing housing units at affordable levels while accommodating infill housing to expand opportunities to new residents and growing families.

Plan policies seek to expand opportunities for affordable housing around major stations at densities that facilitate accessible streets for all users, lively public spaces, a diversity of small businesses, and increased transit ridership. The Plan encourages new housing to be designed to facilitate positive health outcomes, and reflect the diverse living arrangements and income levels of the community while discouraging the displacement of existing residents. In addition, the Plan supports the evolution of homeownership models to promote increased access to generational wealth, an important step in addressing decades of exclusionary zoning practices in the community.

Finally, the Plan recognizes the important role that neighborhoods play in the quality of life of residents. Policies encourage uses such as corner stores, or tienditas, that provide the surrounding neighborhood with fresh groceries and basic household goods, while also providing a local destination for residents. This can increase opportunities for existing small business entrepreneurship and social interactions among neighbors to reinforce a sense of community. It can also help reduce the spread of disease during a public health crisis by providing essential household goods within a short distance.

LU GOAL 1

NEW HOUSING DEVELOPMENTS INCREASE THE SUPPLY OF QUALITY HOUSING THAT IS AFFORDABLE AND ACCESSIBLE TO HOUSEHOLDS WITH INCOME LEVELS THAT REFLECT THOSE OF THE BOYLE HEIGHTS COMMUNITY.

LU 1.1
Support residential infill developments that increase the supply of affordable housing on-site that is for rent or for sale.

LU 1.2
Incentivize new development to contribute towards the community's extremely-low, very-low, and low-income housing needs.

LU 1.3
Ensure that each recently occupied housing unit demolished as a result of new development is replaced on-site, and offered back to former residents at rent levels previously paid.

LU 1.4
Discourage permits from being issued for the demolition of multi-unit buildings until a project providing an equivalent or greater number of units is approved.

LU 1.5
Utilize public land and funding for the development of supportive housing projects and affordable housing for extremely-low, very-low, and low-income households.

LU GOAL 2

NEIGHBORHOODS CONTINUE TO PROVIDE AFFORDABLE AND SECURE HOUSING TO EXISTING AND FUTURE RESIDENTS.

LU 2.1
Discourage projects or renovations that decrease the number of existing residential units on site.

LU 2.2
Limit the conversion of existing affordable and rent stabilized units into for-sale units in order to avoid reducing the supply of affordable rental units locally.

LU 2.3
Discourage significant rent increases when not commensurate with substantial property improvements that result in improved living conditions for tenants.

LU 2.4
Prioritize preservation and maintenance of the existing multi-unit housing stock as the foundation of the community's affordable housing supply.

LU 2.5
Support property owners in their efforts to operate and maintain affordable housing units in good and safe condition.

LU 2.6
Support well-designed projects that modify, reconfigure, or add-on to existing residential buildings to accommodate additional housing units to alleviate overcrowding and avoid displacement.

LU 2.7
Foster effective collaboration and coordination between City departments and tenant organizations working in Boyle Heights to more quickly identify displacement and eviction threats and effectively respond with adequate resources and strategies.

LU GOAL 3

RESIDENTIAL DEVELOPMENTS SUPPORT THE DIVERSE HOUSING NEEDS OF THE BOYLE HEIGHTS COMMUNITY.

LU 3.1
Promote the development of residential units with three or more bedrooms to support larger households and multigenerational living.

LU 3.2
Encourage multi-unit housing developments to provide a diverse range of unit types and unit sizes including those suitable for larger households, single room occupants, independent seniors, and affordable fee simple ownership.

LU 3.3
Encourage multi-unit housing developments to provide amenities for children, such as outdoor play areas and childcare facilities.

LU 3.4
Promote the development of new housing for seniors and persons with disabilities within short walking distance of public transportation, commercial uses, recreational amenities, and health care facilities.

LU 3.5
Expand opportunities for property ownership to lower and moderate income households by supporting the creation of smaller lots and homes for sale.

LU 3.6
Increase opportunities for affordable homeownership for low and moderate income households by expanding homebuyer assistance programs provided by the City.

LU 3.7
Develop strategies to assist community land trusts and affordable housing developers with property acquisitions.

LU 3.8
Support dwelling unit types that meet the needs of the community and create opportunities for resident interactions and connection to the public realm.

LU 3.9
Promote more affordable ownership opportunities and ownership retention strategies, with an emphasis on stability and wealth building for communities that have historically been prevented from wealth building through discriminatory practices such as redlining.

LU GOAL 4

NEW HOUSING OPPORTUNITIES ARE MAXIMIZED NEAR TRANSIT AT DENSITIES THAT SUPPORT A DIVERSITY OF SMALL BUSINESSES, PUBLIC SPACES, AND INCREASED TRANSIT RIDERSHIP.

LU 4.1
Permit greater development scale and density around transit if a project provides high quality housing that is affordable and accessible to the surrounding community.

LU 4.2
Ensure that a significant portion of new housing around transit is affordable to low-income households in order to accommodate the City's core transit riders.

LU 4.3
Encourage higher concentrations of housing around transit where residents can benefit from greater access to commercial uses, jobs, and schools.

LU GOAL 5

NEIGHBORHOODS PROVIDE RESIDENTS WITH ACCESS TO ESSENTIAL COMMERCIAL AND PUBLIC AMENITIES WITHIN A MULTI-MODAL ACCESSIBLE ENVIRONMENT.

LU 5.1
Ensure that neighborhoods include the educational, recreational, and civic facilities necessary for social engagement and empowerment.

LU 5.2
Promote community use of existing facilities at school sites through joint use partnerships between the relevant City departments and the Los Angeles Unified School District.

LU 5.3
Support the establishment of corner stores that provide fresh groceries and basic household goods within comfortable walking and rolling distance for all users of the surrounding neighborhood.

LU 5.4
Ensure that small businesses located within residential neighborhoods are providing a positive service to the community by enhancing the health and well-being of residents and operating as good neighbors.

LU 5.5
Support the provision of appropriately scaled childcare, community care, eldercare, and healthcare facilities

that enable neighborhoods to serve all members of the community throughout every stage of life.

LU 5.6
Promote the clustering of public facilities, such as libraries, parks, schools, and auditoriums in order to establish more integrated community centers.

LU 5.7
Improve resident's access to basic needs and amenities, such as food, household goods, open space, and health and wellness facilities.

COMMUNITY CENTERS AND CORRIDORS

Boyle Heights' mixed-use corridors play a central role in community life. The rows of small shopfronts that characterize Boyle Heights' most successful mixed-use corridors accommodate a dynamic mix of local businesses that cater to the local community and help support a vibrant and inclusive public realm.

The Plan seeks to reinforce the essential qualities of the community's most successful mixed-use corridors and apply them to future development. The Plan's strategy of encouraging additional housing around the community's transit stations and along major corridors reinforces the qualities that help sustain an active commercial street. The Plan encourages mixed-use development that combines multi-unit residential apartments with commercial ground floor spaces designed to accommodate small tenant spaces for small businesses and enhance the experience along the street for all users.

Policies in this section identify the priorities for mixed-use development and detail the features that have helped make the most successful commercial areas in Boyle Heights places where residents and businesses come together and community life prospers.

LU GOAL 6

AREAS SERVED BY TRANSIT SUPPORT A DYNAMIC MIX OF COMMERCIAL ACTIVITY, COMMUNITY SERVICES, JOBS, AND AFFORDABLE HOUSING.

LU 6.1
Promote developments around transit stations that add value to the community by providing a mix of multi-unit housing, neighborhood-serving commercial uses, and community amenities

LU 6.2
Encourage developments around transit stations to provide commercial tenant spaces along the full length of a building's ground floor frontage.

LU 6.3
Maximize the benefits of transit by concentrating higher residential and employment densities within several blocks of each of the community's major transit stations.

LU 6.4
Encourage and support mobile sidewalk vending in plazas and along streets surrounding major transit stations to foster a vibrant pedestrian environment.

LU GOAL 7

COMMUNITY MIXED-USE CORRIDORS PROVIDE OPPORTUNITIES FOR LOCAL BUSINESSES AND NEIGHBORHOOD SERVING USES ADJACENT TO WALKABLE AND ACCESSIBLE RESIDENTIAL NEIGHBORHOODS.

LU 7.1
Accommodate additional housing capacity along and adjacent to key mixed-use corridors while prioritizing ground floor areas for commercial uses and amenities that serve the immediate neighborhood.

LU 7.2
Ensure that established neighborhood corridors, such as Cesar E. Chavez Avenue, Wabash Avenue, First

Street, and Indiana Street, continue to provide small commercial spaces for neighborhood serving uses.

LU GOAL 8

GROUND FLOOR SPACES ALONG CORRIDORS SUPPORT COMMUNITY LIFE BY PROVIDING A PLEASANT AND ENGAGING SETTING.

LU 8.1
Encourage projects to dedicate ground floor space to uses that generate street level activity, such as neighborhood retail, grocery stores, restaurants, food stands, and local services.

LU 8.2
Design ground floor spaces that embrace the street and engage users by employing features such as large windows, recessed or shaded entryways, outdoor seating, and eye-level displays.

LU 8.3
Encourage smaller individual tenant spaces to accommodate a greater number and diversity of businesses or larger spaces that accommodate multiple tenants over spaces that serve a single tenant.

LU 8.4
When active commercial uses are not feasible within ground floor areas consider providing flexible spaces designed for community amenities, including but not limited to:

- shared workspace
- afterschool programming
- adult education center
- fitness center
- daycare center
- cooking facilities
- community office space
- indoor recreation and leisure
- community health facilities

LU 8.5
Discourage the introduction of new uses on corridors that detract from a healthy and active pedestrian street life, particularly vehicle repair and servicing, businesses featuring drive-throughs, fueling stations, and storage facilities.

LU GOAL 9

PARKING FACILITIES THAT ARE DESIGNED TO SUPPORT VIBRANT, ACCESSIBLE STREETS FOR ALL USERS AND REDUCE EXPOSURE TO VEHICLE RELATED HAZARDS.

LU 9.1
Encourage parking to be located away from the pedestrian right-of-way and behind an active frontage with access taken from the rear of buildings where possible.

LU 9.2
Discourage new driveways along pedestrian-oriented streets when access to a site can be reasonably accommodated from an alley or cross-access easement.

LU 9.3
Discourage new driveways along streets with existing bike lanes when access to a site can be reasonably accommodated from an alley.

LU 9.4
Consider further reductions in parking requirements for projects when located within walking distance of major transit stations and bus stops.

LU 9.5
Discourage projects from providing parking in excess of the minimum required in locations where reliable public transit options exist as a viable alternative to private vehicle use.

LU 9.6
Encourage electric vehicle charging stations to be provided in all new parking facilities.

JOBS AND ECONOMIC DEVELOPMENT

The Plan recognizes the diversity of jobs and industries located in Boyle Heights as a major economic asset to the local community and the region. This includes the established commercial districts that support many local businesses, a major hospital facility, and the industrial corridor along the Plan Area's western and southern boundaries. The Plan highlights Boyle Heights' diverse industries an opportunity to build a just economy that improves the lives of local residents and workers.

The Plan identifies the small affordable tenant spaces that most local businesses occupy as an important feature that enables commercial districts to provide numerous opportunities for a diversity of small business. The Plan's policies encourage the retention of existing small tenant spaces for local business and for tenant spaces within new mixed-use and commercial projects to be made available to small local business. Policies in support of small local businesses extend to mobile sidewalk vendors who provide affordable fresh food and contribute to a vibrant street life.

The Plan includes policies to preserve industrial land in Boyle Heights for uses that rely on flexible industrial space and access to the region's freight network to provide the region with the specialized goods, services, and jobs. The Plan seeks to protect the viability of industrial land with policies to support a dynamic mix of productive uses that provide opportunities to the surrounding community.

LU GOAL 10

THE CHARACTER AND CULTURE OF BOYLE HEIGHTS IS REPRESENTED THROUGH ITS THRIVING COMMUNITY OF LOCAL ENTREPRENEURS AND SMALL BUSINESSES.

LU 10.1
Maximize opportunities for small and local businesses along corridors by limiting the size of new commercial tenant spaces to help maintain affordability and promote diversity.

LU 10.2
Encourage mixed-use and commercial developments to provide commercial tenant spaces that are appropriately scaled for neighborhood-serving small businesses.

LU 10.3
Promote efforts to safeguard legacy businesses and cultural institutions that reflect the history and character of Boyle Heights.

LU 10.4
Develop programs and strategies that provide support to established commercial tenants facing closure due to rent increases.

LU 10.5
Encourage the retention of existing small businesses that strengthen the local economic base of the Community Plan Area to avoid displacement of small businesses.

LU 10.6
Projects that involve the demolition or disruption of occupied commercial tenant spaces are encouraged to accommodate displaced businesses at their former locations at rent levels previously paid.

LU 10.7
Develop programs that increase resident participation in the local economy through strategies to assist local entrepreneurs and minority owned businesses in need of capital funding to establish or expand small businesses in the community.

LU GOAL 11

STREET VENDING CONTRIBUTES TO THE VIBRANCY OF THE PUBLIC REALM AND EXPANDS ACCESS TO GOODS AND SERVICES THROUGHOUT THE COMMUNITY

LU 11.1
Recognize the important role street vending plays as a viable enterprise for many residents who provide the community with affordable merchandise and fresh food in a manner that enhances street life.

LU 11.2
Assist sidewalk vendors with efforts to comply with the rules and regulations of the City's Sidewalk Vending Program.

LU 11.3
Support street vending through the provision of cleaning, preparation, and disposal facilities at locations where street food vending is prioritized by the community.

LU GOAL 12

INDUSTRIAL LAND SUPPORTING PRODUCTION AND DISTRIBUTION USES IS PRESERVED AND IMPROVED AS A LOCAL SOURCE OF EMPLOYMENT OPPORTUNITY AND ECONOMIC PROSPERITY.

LU 12.1
Maintain existing industrial land for both traditional and emerging industries that provide sources of employment for the local workforce as well as opportunities for small business creation and expansion.

LU 12.2
Maintain industrial land, facilities, and infrastructure necessary for warehousing and distribution centers to serve the region expeditiously and reliably.

LU 12.3
Support the continued use and function of industrial districts for wholesale activities to ensure that businesses in Boyle Heights and throughout Los Angeles have direct access to goods from around the world.

LU 12.4
Attract and sustain uses involved in textile manufacturing in support of the region's fashion industry and as a source of local jobs.

LU 12.5
Enhance the role food and beverage processors and distributors play locally by encouraging related businesses to cluster around a food hub that integrates growers, producers, wholesalers, retailers, and food markets within a publicly accessible setting.

LU 12.6
Ensure that industrial districts provide a balance of large facilities and small workplaces in order to accommodate a diverse set of industries and support businesses at all stages of growth.

LU 12.7
Discourage uses that detract from the productive function of industrial districts, such as single-use residential development and large, free-standing retail establishments.

LU 12.8
Discourage new distribution centers and other uses that generate high volumes of truck traffic from locating in areas without direct access to the Metro Countywide Significant Truck Arterial Network.

LU GOAL 13

INDUSTRIAL LAND LOCATED ADJACENT TO THE LOS ANGELES RIVER RAIL AREAS PROVIDES A DYNAMIC CONCENTRATION OF "CAREER LADDER" AND LOCAL JOBS AND SMALL BUSINESSES.

LU 13.1
Promote the area surrounding the Pico/Aliso Metro Station as a suitable location for new employment generating uses that can benefit from the proximity to transit, existing warehouse and production space, and future connections to recreational amenities along the Los Angeles River.

LU 13.2
Develop programs and strategies that provide support with establishing small businesses involved in clean and green technology and environmental sciences in Boyle Heights.

LU 13.3
Encourage uses that integrate indoor agricultural practices, such as hydroponic or aeroponic farming, to locate in existing warehouse and industrial space near the Los Angeles River.

LU 13.4
Ensure that continued investment in infrastructure and amenities along the Los Angeles River results in sustainable economic development with equitable outcomes for current residents of Boyle Heights.

LU 13.5
Explore strategies to bolster employment uses and small businesses, such as Adaptive Reuse of buildings and Live/Work uses with Community Benefits.

LU GOAL 14

THE LOCAL WORKFORCE IS EQUIPPED WITH THE EDUCATION AND TRAINING TO CONTRIBUTE TO AND BENEFIT FROM ECONOMIC DEVELOPMENT IN BOYLE HEIGHTS.

LU 14.1
Encourage new industries locating in Boyle Heights to engage and partner with the local workforce when looking for skilled employees.

LU 14.2
Pursue and strengthen partnerships between industries and educational institutions in order to equip students with the skills necessary to find gainful employment following graduation.

LU 14.3
Encourage local employers to make apprenticeship and paid internship opportunities available to the local workforce.

LU 14.4
Maintain and increase the commercial employment base for community residents through local hiring requirements, living wage requirements, job resource centers, and job training.

LU 14.5
Encourage new development to incorporate public Wi-Fi infrastructure to increase digital inclusion efforts for residents, workers, and students.

URBAN FORM

The placement, form, and orientation of buildings throughout the neighborhoods and streets of Boyle Heights help shape the daily experiences and social lives of all members of the community. Places like Cesar E. Chavez Avenue and Mariachi Plaza are examples of the essential role urban form plays in shaping how people experience and value the built environment. Similarly, the front yards and porches that greet many of Boyle Heights' neighborhood streets play a role in supporting connections between neighbors and fostering a larger sense of community.

Boyle Heights is rich with examples of places where social life thrives in the form of rows of narrow shopfronts with welcoming entrances, or homes with front yards designed and used as outdoor living rooms. The Plan includes policies to encourage building features that better connect activity within the building with street level activity.

LU GOAL 15

BUILDINGS ARE DESIGNED AND ORIENTED IN A MANNER THAT CONTRIBUTES TO BOYLE HEIGHTS' VIBRANT STREETS AND PLAZAS.

LU 15.1
Focus building massing and orientation along major streets, sidewalks and public spaces in order to establish a well-defined setting for streel level activity and public life.

LU 15.2
Encourage building design and orientation that establishes a strong, seamless, and active streetwall.

LU 15.3
Design buildings to include features that add visual interest, such as recessed entrances, open shop front bays, arcades, columns, niches, seating, canopies, and awnings.

LU 15.4
Encourage corner plazas for buildings on corner sites in order to foster pockets of gathering and activity.

LU 15.5
Configure buildings around interior courtyards, outdoor passages (paseos), and arcades that can be seamlessly integrated with the public realm.

LU 15.6
Integrate underutilized alleys into the pedestrian network by activating frontages along alleyways and providing passageways that establish safe connections to parallel streets.

LU GOAL 16

BUILDING LAYOUT AND DESIGN THAT CREATES A CONNECTION BETWEEN THE BUILDING INTERIOR LIFE AND THE PUBLIC REALM.

LU 16.1
Encourage buildings to be designed with larger street facing outdoor rooms, situated partially within the mass of the building to provide a comfortable transition between the street and private interior while providing a sense of privacy.

LU 16.2
Activate ground floor spaces and direct interior activity toward the street by locating workspaces, service counters, and seating within partial or full view of the street.

LU 16.3
Limit vehicle entrances to buildings and parking facilities to the minimum number required and encourage the entrances to be sited along side streets or alleys to avoid disruptions to pedestrian movement along primary corridors.

LU 16.4
Structured parking should be sited away from the street and wrapped with active frontages and habitable spaces that maintain the visual rhythm, pedestrian scale, and vitality of the street.

LU 16.5
Place utilities, storage facilities, and refuse collection away from building facades that front public streets and ensure that all equipment and storage facilities are well integrated into the building design and fully screened from view.

LU GOAL 17

NEW DEVELOPMENT EMBRACES THE DISTINCT PHYSICAL CHARACTER AND LOCAL CONTEXT OF BOYLE HEIGHTS.

LU 17.1
Design larger buildings to distinguish a base, middle, and top by employing changes in massing, fenestration, and building materials.

LU 17.2
Promote building facade design that reinforces the visual rhythm and historic development patterns by incorporating elements such as columns or pilasters, and frequent window and door placement.

LU 17.3
Encourage buildings to use design elements such as cornices, window bays, building materials, and fenestration, in a pattern, scale, and proportion that makes the building relatable from the street.

LU 17.4
Incorporate architectural details, building material, and ornamentation that reflect the local context and historic development patterns in Boyle Heights.

LU 17.5
Support residential projects that follow traditional bungalow court and courtyard apartment style architecture and site layout.

CULTURAL AND HISTORIC RESOURCES

Boyle Heights is one of Los Angeles' earliest residential suburbs and is a community with deep roots and a rich history. With the majority of its existing buildings built between 1900 and 1930 it is a history that remains highly visible, and is reinforced by a community that has enriched the built environment of Boyle Heights with cultural expression and meaning.

The Plan seeks to protect and embrace the character of many of Boyle Heights' significant historic places by encouraging the preservation and restoration of identified

historic resources, while providing design guidance for new development while not creating financial hardship for homeowners or small businesses.

LU GOAL 18

BOYLE HEIGHTS' CULTURAL HERITAGE ENDURES THROUGH THE PRESERVATION AND RESTORATION OF CULTURAL INSTITUTIONS AND HISTORIC RESOURCES THAT PROVIDE CONTEXT FOR IMPORTANT SOCIAL AND CULTURAL THEMES THAT HAVE SHAPED THE COMMUNITY.

LU 18.1
Prioritize the preservation and restoration of historic resources identified through the Los Angeles Historic Resources Survey (SurveyLA).

LU 18.2
Protect individually significant historic resources and districts in Boyle Heights from demolition or adverse alteration.

LU 18.3
Provide design standards that guide infill development in areas with an identified historic character to ensure that new buildings reinforce the historic scale and key architectural features of the area.

LU 18.4
Forge partnerships with relevant neighborhood organizations to advance preservation efforts in the community and document oral histories through educational and informational programs.

LU 18.5
Promote the restoration and reuse of vacant and/or deteriorating historic buildings for new uses that benefit the community and reinforce the site's historic and cultural legacy.

LU 18.6
Promote the preservation of remaining examples of bungalow courtyard and garden apartment architecture.

LU 18.7
Protect legacy businesses and cultural institutions from displacement.

LU GOAL 19

VIBRANT COMMERCIAL DISTRICTS AND PUBLIC PLACES THAT EXHIBIT A STRONG CULTURAL IDENTITY ARE REINFORCED THROUGH IMPROVED URBAN DESIGN AND ACTIVATION.

LU 19.1
Uphold the historic and cultural integrity of Cesar E. Chavez Avenue, also known as the historic "Brooklyn Avenue Neighborhood Corridor," by promoting restoration and reuse of existing early 20th Century brick buildings.

LU 19.2
Ensure that new development along Cesar E. Chavez Avenue, also known as the historic "Brooklyn Avenue Neighborhood Corridor," reinforces the visual rhythm and underlying historic development pattern of the overall street through narrow shopfront bays, recessed entrances, and storefront awnings.

LU 19.3
Ensure that the area surrounding Mariachi Plaza continues to function as a vibrant cultural and community hub where local music and art are strongly expressed in the public realm and by local businesses.

LU 19.4
Support contextual infill development around Mariachi Plaza that reinforces the site's status as an important social and cultural resource for the community of Boyle Heights.

LU 19.5
Expand on the important role that El Mercado has played in fostering local commerce and culture by encouraging market related activity to extend along First Street and Lorena Street.

LU 19.6
Encourage future projects to build upon the commercial and cultural activity centered at El Mercado by incorporating additional space for market activities to take place.

LU 19.7
Promote greater integration and improved permeability between the indoor marketplace of El Mercado and surrounding streets.

LU 19.8
Pursue opportunities for the development of centralized parking structures to relieve individual uses from providing on-site parking, and prioritize excess surface parking lots for public space.

LU GOAL 20

DISTINCTIVE INDUSTRIAL ARCHITECTURE THAT IS REPRESENTATIVE OF EARLY INDUSTRIAL DEVELOPMENT IN BOYLE HEIGHTS IS PRESERVED AND RESTORED FOR CONTINUED PRODUCTIVE USE.

LU 20.1
Maintain the visual rhythm and underlying historic lot pattern of historic industrial streets, such as Anderson Street, 11th Street, and 12th Street.

LU 20.2
Encourage the restoration and adaptive reuse of distinctive industrial architecture dating from the first half of the 20th century.

LU 20.3
Support the adaptive reuse of the historic Sears building in a manner that preserves the architectural integrity of the structure as a landmark while incorporating uses that provide employment and economic benefits to Boyle Heights.

LU 20.4
Ensure that the redevelopment of surface parking areas surrounding the Sears building occurs in a manner that provides active frontages along Olympic Boulevard and Soto Street.

LU 20.5
Encourage buildings along Olympic Boulevard and Soto Street to include pathways that break up large blocks and serve to integrate the Sears site into the surrounding urban fabric.

LU 20.6
Ensure that future infill development around the Sears building reinforces its physical status as a popular landmark.

LU GOAL 21

EVERGREEN CEMETERY IS VALUED AND EXPERIENCED AS AN EDUCATIONAL MEMORIAL THAT CONTEXTUALIZES LOS ANGELES' MULTICULTURAL HISTORY.

LU 21.1
Improve the pedestrian accessibility of Evergreen Cemetery through additional public gateways, streetscape landscaping, designated pathways, seating alcoves, and wayfinding signage designed in a manner that is compatible with the cemetery's historic significance.

LU GOAL 22

ART ENRICHES THE PUBLIC REALM BY INVITING PEOPLE TO CONNECT WITH THE CULTURAL, HISTORICAL, SPIRITUAL, AND SOCIAL CONTEXT OF THE COMMUNITY.

LU 22.1
Support efforts to preserve and restore the rich inventory of murals found throughout Boyle Heights.

LU 22.2
Encourage mural work by local artists along blank building surfaces along alleyways and side streets.

LU 22.3
Encourage new development to incorporate public art along building facades and in outdoor areas.

LU 22.4
Grant opportunities to local artists from Boyle Heights when commissioning artwork for both the public realm and private projects.

LU 22.5
Consider opportunities for multiple forms of public art, including but not limited to seating, lighting, landscaping, shade structures, sculptures, and imagery incorporated into outdoor installations.

PUBLIC HEALTH, WELLNESS AND SUSTAINABILITY

Land use, urban form, and building design should be considered from the perspective of the health of residents and the environment. Issues of public health, wellness, and sustainability are especially salient because residents in Boyle Heights experience some of the worst air pollution in the state. The pollution resulting from land use planning and freeway construction during the second half of the 20th Century, has led to high rates of asthma, among other negative health outcomes. These public health inequities have been exacerbated in Boyle Heights during the COVID-19 pandemic, resulting in higher mortality rates. The Plan reinforces ongoing efforts to redress past practices and encourages development that is flexible and adaptable to the health and wellness needs of the community.

Despite the challenges presented by land use conflicts in Boyle Heights, the Plan establishes a direction for sustainable urban development to minimize impacts to the environment and improve health outcomes for Boyle Heights residents. The Plan reinforces ongoing efforts to rectify past land use planning that enabled polluting industrial uses to operate in close proximity to residential areas through sensitive zoning and more robust industrial development standards. The Plan also includes policies for building design and landscaping based on the local environment.

By directing new housing and commercial development around transit the Plan will enable more residents to access commercial uses, fresh food, jobs, and schools as pedestrians and transit riders. This will also help reduce vehicle miles traveled and the resulting emissions, positively affecting overall air quality in Boyle Heights and the greater region.

LU GOAL 23

INDUSTRIAL LAND USES ARE SITED AND DESIGNED IN A MANNER THAT PRIORITIZES THE HEALTH AND SAFETY OF LOCAL RESIDENTS.

LU 23.1
Ensure that industrial land uses are safe for human health and the environment through proper containment of pollutants and mitigation of potential health risks.

LU 23.2
Promote the phasing out or relocation of facilities used for the handling of potentially hazardous chemicals or toxic substances near residential uses and schools, and discourage any further expansion of existing facilities.

LU 23.3
Encourage upgrades to street and alleys in industrial areas to include features that help infiltrate and treat contaminated runoff through the application of Best Management Practices for stormwater treatment.

LU 23.4
Promote efforts that ensure businesses in Boyle Heights have access to the City's Clean-Up Green-Up implementation programs, such as financial incentives and technical support programs.

LU 23.5
Discourage potentially disruptive or hazardous industrial uses along streets that serve as boundaries between industrial areas and residential neighborhoods.

LU 23.6
Ensure that all new or rehabilitated industrial facilities permitted near a residential use incorporate the appropriate screening, landscaping, and enclosure provisions necessary for preventing exposure to activities that generate odor, noise, dust, smoke, gas, fumes, cinder, or refuse matter.

LU GOAL 24

IMPROVED SITE PLANNING, BUILDING DESIGN, AND LANDSCAPE BUFFERING ALONG FREEWAYS AND ARTERIAL ROADS WITH HIGH TRAFFIC HELP REDUCE NEGATIVE HEALTH IMPACTS OF VULNERABLE RESIDENTS.

LU 24.1
Ensure that residential buildings constructed or rehabilitated in close proximity to a freeway incorporate features that help protect residents from pollutants, such as air filtration systems, double-paned windows, and landscaping with densely planted vegetation proven to filter particulate matter pollution.

LU 24.2
Discourage the siting of outdoor recreational areas intended for children adjacent to freeways, such as yards and playgrounds in schools, daycares, and community facilities.

LU 24.3
Increase landscape buffering and enhance noise barriers along freeways throughout Boyle Heights using soundwall design and densely planted vegetation proven to filter particulate matter pollution.

LU 24.4
Discourage freeway widening or the expansion or enlargement of the freeway network through Boyle Heights.

LU 24.5
Ensure that freeway on and off-ramp intersections are safe for all users through signalized and painted crossings, pedestrian lighting, and a well-maintained sidewalk clear of debris and visual obstructions.

LU GOAL 25

A BUILT ENVIRONMENT THAT PRIORITIZES PEOPLE OVER CARS AND REDUCES THE NEGATIVE HEALTH AND ENVIRONMENTAL IMPACTS OF DRIVING WHILE INCREASING PHYSICAL ACTIVITY AND EQUITABLE ACCESS TO GOODS AND SERVICES.

LU 25.1
Promote the siting and design of commercial development in a manner that encourages users to access and engage with each building as a pedestrian, while deprioritizing accommodations for single occupancy vehicles.

LU 25.2
Concentrate new housing around transit where residents can benefit from greater access to commercial uses, jobs, and schools without the need for an automobile.

LU 25.3
Expand opportunities for small, locally serving businesses to properly locate within neighborhoods in order to place the daily needs of residents within comfortable walking distance of their homes and schools.

LU 25.4
Encourage front yard design that enables residents to socialize and engage with the surrounding neighborhood.

LU 25.5
Enhance circulation around and within buildings through prominent entryways, open floor plans, visible stairwells, natural light, and interior communal areas that can be seamlessly integrated with the public realm.

LU GOAL 26

NEW DEVELOPMENT IS DESIGNED TO MINIMIZE IMPACTS TO THE ENVIRONMENT AND ENHANCE THE HEALTH AND WELLBEING OF RESIDENTS.

LU 26.1
Design and orient buildings around passive heating and cooling techniques that provide comfortable living environments year-round with minimal energy consumption.

LU 26.2
Encourage residential projects to orient buildings around outdoor living spaces such as a courtyard, patio, terrace, or garden that provides a connection to nature for the health and wellbeing of residents.

LU 26.3
Encourage building designs that minimize exposure to air pollution by incorporating air filtration systems, double-paned windows, and landscaping with densely planted vegetation proven to filter particulate matter pollution, especially when located adjacent to a freeway and high traffic arterial roads.

LU 26.4
Encourage paved areas such as driveways, walkways, and outdoor spaces to be designed with permeable surfaces in order to increase water infiltration and reduce runoff.

LU 26.5
Strive for the use of native, drought-tolerant plants that support biodiversity in all landscaping.

LU 26.6
Incentivize and lower barriers for indoor recreation facilities like gyms, and community centers that are accessible to the general public.

LU GOAL 27

RESIDENTS ARE EMPOWERED TO ACCESS, GROW, AND ENJOY FRESH AND LOCALLY SOURCED NUTRITIOUS FOOD.

LU 27.1
Encourage neighborhood corner shops and grocery stores to maintain a well-stocked selection of fresh produce and nutritious foods, and stock and display nutritious products in a visible location.

LU 27.2
Attract new full-service grocery stores to Boyle Heights that base sales primarily on perishable items, such as fresh produce.

LU 27.3
Establish procedures that streamline the development review and permitting process for grocery stores.

LU 27.4
Expand opportunities for farmers' markets in public plazas, surface parking lots, and through temporary street closures in order to provide neighborhoods with access to fresh and nutritious foods on a regular basis.

LU 27.5
Pursue opportunities to provide permanent community gardens, in collaboration with community residents and community-based organizations, by considering sites on vacant or underutilized land, surface parking lots, parkways, and alleyways.

LU 27.6
Encourage new developments to provide community gardens.

LU 27.7
Promote the use of front yards, parkways and open space for urban agriculture.

LU 27.8
Support sidewalk vendors that provide fresh food in convenient locations for residents, employees, and students.

LU GOAL 28

A HEALTHY AND GROWING URBAN FOREST PROVIDES THE COMMUNITY WITH CLEANER AIR, COOLER STREETS, AND A MORE PEDESTRIAN-FRIENDLY PUBLIC REALM.

LU 28.1
Encourage the planting of shade trees in the public right-of-way and on private property in order to mitigate urban heat island effects and contribute to the health of the community's urban forest.

LU 28.2
Preserve and nurture mature trees and when projects call for the removal of mature trees on private property pursue creative strategies to integrate them into the layout and design of new development. (Also see: PO Goal 4, Chapter 4)

LU GOAL 29

ACCESSIBLE AND CULTURALLY RELEVANT SPACES AND HEALTHCARE FACILITIES THAT ENHANCE AND SUPPORT THE OVERALL WELLNESS OF LOCAL RESIDENTS.

LU 29.1
Encourage the development of healthcare facilities and spaces throughout the plan area that are tailored to meet the needs of local residents.

LU 29.2
Support the development of more open and public space opportunities that facilitate space for multiple activities, including those at a safe distance from other users, and an overall more active lifestyle.

Draft Summer 2022

Metro
Mariachi Plaza
Bailey St

Chapter 3

MOBILITY & CONNECTIVITY

Boyle Heights' layout of compact neighborhood blocks enables most residents to conveniently access commercial uses and transit services located along the community's major streets. Boyle Heights is well served by transit, with four Metro Rail stations and three Rapid Bus lines. This transit network provides the framework for the Plan's land use strategy of focusing development around transit.

This chapter provides policies aimed at leveraging Boyle Heights' compact neighborhood grid and existing transit services to enhance pedestrian, bicycle and transit connections throughout the community. The Plan intends to improve access for all residents to transit and local neighborhood amenities, enhance the social atmosphere along streets, and reduce noise and pollution from vehicular traffic with a focus on physical safety from vehicle related collisions.

While the Plan prioritizes pedestrian, transit, and bicycle mobility, the plan also includes policies that address goods movement and parking. It is the Plan's objective to ensure that goods movement and automobile parking safely and efficiently serves the needs of residents and businesses without compromising mobility for pedestrians, bicyclists, and transit users.

GOALS AND POLICIES

MC GOAL 1

AN INTEGRATED STREET AND TRANSIT NETWORK THAT PROVIDES SAFE AND EFFICIENT MOBILITY OPTIONS FOR ALL USERS.

MC 1.1
Promote the establishment of Mobility Hubs at major transit stations and intersections in Boyle Heights to increase mobility options for residents and employees and to enhance first mile/last mile connections.

MC 1.2
Improve the function of Soto Street as the community's primary multimodal north-south corridor and promote establishment of Mobility Hubs at intersections with major east-west corridors.

MC 1.3
Ensure that major destinations within the community are sufficiently equipped with, bus shelters, safe pedestrian crossings, bicycle parking, and wayfinding signage.

MC 1.4
Enhance connectivity around major transit stations and intersections by pursuing opportunities to provide efficient and intuitive pathways through large blocks that follow desired pedestrian routes.

MC 1.5
Improve the travel experience for bus riders by ensuring bus stops provide sufficient shelter and seating, and are equipped with real-time passenger information display systems.

MC 1.6
Encourage the development of dedicated bus lanes on Soto Street and Whittier Boulevard in order to improve transit reliability and efficiency.

MC 1.7
Redesign and improve streets in Boyle Heights with the primary objective of improving pedestrian and bicycle safety and mobility.

MC 1.8
Prioritize locations on the High Injury Network, as designated by LADOT, for safety improvements in order to achieve high-impact reductions in injuries and fatalities.

MC 1.9
Maximize safety around schools for all users of the public realm.

MC 1.10
Employ traffic calming measures along Collector Streets passing through neighborhoods to discourage vehicle traffic from traveling at unsafe speeds in predominantly residential areas.

MC 1.11
Refer development projects within 100 feet of a Metro facility to Metro for their review and approval, including compliance with the Metro Adjacent Development Handbook.

MC GOAL 2

A STREET NETWORK THAT OFFERS A SAFE AND PLEASANT ENVIRONMENT FOR ALL USERS OF SIDEWALKS AND THE PUBLIC RIGHT OF WAY.

MC 2.1
Prioritize safe and comfortable pedestrian crossings at major intersections and along corridors by implementing improvements such as:

- leading pedestrian intervals
- scramble crosswalks
- right turn limitations for vehicles at red lights
- raised pedestrian crossings
- pedestrian crossing facilities at midblock locations

MC 2.2
Accommodate sidewalk widening through the reduction of vehicular lanes along street segments with high user volumes, as feasible.

MC 2.3
Improve landscaping along sidewalks with low maintenance shade trees and varied drought-tolerant planting in parkways to create a pleasant and interesting walking environment.

MC 2.4
Improve the pedestrian experience under freeway overpasses and bridges by incorporating pedestrian lighting, landscaping, and public art.

MC 2.5
Improve City response times to address illegal dumping, sidewalk and street cleaning, and pavement repair.

MC GOAL 3

ALLEYWAYS ARE RECONCEIVED AS ATTRACTIVE AND CONVENIENT ROUTES FOR PEDESTRIANS AND CYCLISTS TO MOVE SAFELY AND LEISURELY THROUGH BLOCKS.

MC 3.1
Prioritize improvements to alleyways that provide convenient linkages between neighborhoods, corridors, schools, and parks.

MC 3.2
Improve prioritized alleyways with permeable walking surfaces and streetscape amenities such as pedestrian lighting, landscaping, and public art while maintaining functionality for goods movement.

MC GOAL 4

A COMPREHENSIVE BICYCLE NETWORK THAT ALLOWS RIDERS TO TRAVEL SAFELY AND COMFORTABLY THROUGHOUT BOYLE HEIGHTS AND TO ADJACENT COMMUNITIES.

MC 4.1
Prioritize the completion of a comprehensive bicycle lane network that enables all riders to safely and comfortably reach the community's schools, job centers, and transit stations by bike from any neighborhood in Boyle Heights.

MC 4.2
Promote implementation of dedicated bicycle signals at key intersections as a component of a comprehensive bicycle lane network.

MC 4.3
Ensure that bicycle parking and storage facilities are provided at public facilities and transit centers.

MC 4.4
Encourage residential uses and employers to provide bicycle amenities such as storage, repair stations, and showers to encourage cycling as a convenient and desirable form of transportation.

MC GOAL 5

A PARKING STRATEGY THAT EFFICIENTLY MANAGES PARKING RESOURCES AND SERVES THE NEEDS OF BUSINESSES AND RESIDENTS WHILE ENCOURAGING NON-VEHICULAR TRAVEL.

MC 5.1
In consultation with local businesses, support the creation of parking management districts in areas of high demand to coordinate the use of shared parking facilities among multiple uses.

MC 5.2
Adjust parking meter pricing and time limits in response to demand to encourage efficient turnover of parking spaces.

MC 5.3
Prioritize people over cars and allow flexibility in parking requirements to allow for al fresco outdoor dining and parklets to better serve the local business community.

MC GOAL 6

AN EFFICIENT GOODS MOVEMENT SYSTEM THAT ACCOMMODATES THE NEEDS OF RESIDENTS AND LOCAL BUSINESSES WITHOUT IMPACTING QUALITY OF LIFE.

MC 6.1
Ensure that loading zones are provided in commercial districts to reduce conflicts between other users of the street.

MC 6.2
Preserve truck access in industrial areas and along the Metro Countywide Significant Truck Arterial Network when not in direct conflict with the safety of pedestrians and cyclists.

MC 6.3
Discourage the use of Lorena Street and Soto Street north of 8th Street by freight vehicles in compliance with the Metro Countywide Significant Truck Arterial Network.

MC 6.4
Encourage the preservation and maintenance of alleys for loading and truck traffic.

Chapter 4

PUBLIC REALM & OPEN SPACE

Boyle Heights is home to several of the City's great public spaces. Hollenbeck Park provides residents with a scenic natural landscape that invites recreation and relaxation. Mariachi Plaza serves as the community's outdoor living room, where informal gatherings, music, art, and civic events showcase the rich culture of Boyle Heights. Some of the most important public spaces in a neighborhood are the streets, sidewalks, and bicycle infrastructure. These not only facilitate the movement of vehicles, cyclists, and pedestrians, but also serve as paths of travel that have the potential to support residents in building a sense of community through social interaction. Beyond providing infrastructure, the public realm serves as a space for civic engagement, demonstrations, protest, and public participation, and serves as a gathering space that has proven essential during the course of the COVID-19 pandemic.

The Plan provides policies that seek to enhance the quality of the public realm throughout Boyle Heights through design and landscaping and identifies opportunities to expand access to high quality public spaces for people with and array of ability and mobility needs.

By broadening the application of public realm and open space strategies to include major streets, the Los Angeles River, and local cemeteries, the Plan envisions a diverse and integrated network of pedestrian pathways, paseos, plazas, green spaces, and landscaped streets that foster social life and support community identity.

GOALS AND POLICIES

PO GOAL 1

PARKS AND GREEN SPACES PROVIDE EACH NEIGHBORHOOD WITH SCENIC NATURAL SETTINGS FOR RECREATION, RELAXATION AND SOCIAL GATHERING.

PO 1.1
Encourage parks to incorporate active and passive recreational features, including landscaped circuit paths for walking and exercise, play areas for children, open fields for sports, shaded tree groves for relaxation, and picnic areas for gathering.

PO 1.2
Encourage new development to create public and semi-public open space.

PO 1.3
Improve the safety, visibility and accessibility of parks and open spaces by ensuring that perimeters are free of obstructions like overgrown landscaping and fencing and that adequate lighting is provided at night.

PO 1.4
Coordinate with local residents to provide culturally relevant and engaging recreational programming at public parks and open space facilities.

PO 1.5
Ensure that parks and open spaces are adequately equipped with public amenities such as drinking fountains and well maintained restrooms.

PO 1.6
Pursue opportunities to establish new public parks through partnerships with state and local agencies, and community-based organizations.

PO 1.7
Advance opportunities to repurpose vacant or underutilized lots, including publicly owned sites, for parks and open space.

PO 1.8
Explore ways to connect neighborhoods divided by freeways through the development of freeway cap parks and pedestrian improvements to freeway underpasses, as feasible.

PO GOAL 2

STREETS AND PLAZAS PLAY A CENTRAL ROLE IN COMMUNITY LIFE BY PROVIDING SAFE, FLEXIBLE, AND DESIRABLE PUBLIC SPACES FOR SOCIALIZING AND GATHERING.

PO 2.1
Enhance the pedestrian experience along corridors by expanding sidewalk space and incorporating seating, landscaping, and opportunities for street vending and outdoor dining into the streetscape.

PO 2.2
Provide more opportunities for accessible public spaces along streets in the form of plazas and paseos that are designed to encourage social activity.

PO 2.3
Prioritize space at major intersections for civic plazas that function as highly accessible focal points in the community.

PO 2.4
Design plazas as communal gathering places that provide opportunities for markets, music, art and community events.

PO 2.5
Encourage new development to provide publicly accessible outdoor amenity space that is designed to transition seamlessly into the public realm.

PO GOAL 3

THE LOS ANGELES RIVER SERVES AS A NATURAL AND RECREATIONAL PUBLIC AMENITY THAT IS WELL-CONNECTED TO SURROUNDING NEIGHBORHOODS.

PO 3.1
Create a network of linked public spaces along the rail-River corridor that provide safe and attractive public access to the Los Angeles River through gateways, plazas, paseos, and pedestrian paths by repurposing underutilized alleys and decommissioned rail spurs.

PO 3.2
Design urban trails and paths that connect the eastside to the river adjacent areas using pervious paving and native, drought-tolerant, and watershed friendly landscaping to encourage biodiversity and maximize water recapture.

PO 3.3
Utilize bridges spanning the Los Angeles River as opportunities for placemaking that highlight the history of the community's relationship to the River.

PO 3.4
Provide convenient and visually interesting paths of travel for pedestrians from nearby neighborhoods and transit stations to destinations along the River.

PO GOAL 4

A STREETSCAPE THAT CONTRIBUTES TO BOYLE HEIGHTS' OVERALL URBAN FOREST THAT HELPS REDUCE THE HEAT ISLAND EFFECT, IMPROVES AIR QUALITY, AND ENHANCES AESTHETICS.

PO 4.1
Encourage and promote the retention of trees through education, outreach and incentives offered by the Bureau of Street Services.

PO 4.2
Support the Bureau of Street Services in reducing conflicts between trees and infrastructure through proper tree selection.

PO 4.3
Increase planting of thick canopy trees and dense vegetation near and along freeways using species proven to filter particulate matter pollution.

PO 4.4
Facilitate the planting and maintenance of street trees, which provide shade and give scale to residential and commercial streets in all neighborhoods.

PO 4.5
Enhance tree planting and landscaping in parkways, medians, and neighborhood gateways as a placemaking strategy.

PO GOAL 5

CEMETERIES SERVE AS SAFE AND ACCESSIBLE PLACES WITHIN NEIGHBORHOODS.

PO 5.1
Improve the accessibility of cemeteries as part of the community's open spaces network where the public can visit and appreciate a peaceful park-like setting.

PO 5.2
Support the use of cemeteries for cultural events and holiday celebrations.

PO 5.3
Enhance the recreational path around Evergreen Cemetery with improved lighting and consider extending the path along the access roads within the cemetery grounds.

PO GOAL 6

PARKS AND PUBLIC SPACES ARE ESSENTIAL IN FACILITATING SPACE FOR CHANGING PUBLIC HEALTH NEEDS

PO 6.1
Promote open and public spaces that are flexible and adaptable to serve the health and wellness needs of the community during disasters and other local emergencies.

Chapter 5

IMPLEMENTATION

The Community Plan establishes a comprehensive and long-range vision for the future of Boyle Heights. The goals and policies presented by the Plan express this vision and guide its implementation, which occurs through both private developments and public investments. The Community Plan generally identifies policies that are limited to the authorities that can be implemented under the jurisdiction of the City of Los Angeles (all departments) and does not prescribe the actions of other agencies such as the City's school districts.

The Community Plan is implemented through a variety of tools and methods, which include: zoning and other City ordinances; and Community Plan programs. The zoning ordinances adopted along with the Community Plan represent implementation tools that go into effect upon adoption of the Plan and can be implemented directly by the City. Community Plan Programs are programs that identify strategic actions that the City and other public agencies can take to implement the Plan. The implementation of these programs tends to rely on coordination among City Departments and between the City and external agencies, often requires approval and allocation of funding by the City Council and other decision-makers, and are expected to occur over the life of the Plan. This chapter discusses how the Community Plan policies and programs are implemented in land use decision-making. In particular, this chapter details existing and aspirational future programs, shown in a series of tables, which implement the goals and policies found throughout the Community Plan.

THE IMPLEMENTATION PROCESS

The goals and policies in the Boyle Heights Plan are implemented through a variety of actions, including regulation and development review; financing and budgeting; and interdepartmental and interagency coordination.

Many Community Plan policies are implemented through regulations, such as zoning, adopted by the City based on the City's "police power" to protect the public health, safety, and welfare of its citizens. Some zoning ordinances may also create a development review process that provides for City review of individual project proposals and authorizes the City to approve, deny, or condition projects based on their consistency with the Community Plan. Other programs are implemented at the time of Community Plan adoption, such as zone changes to regulations, community plan implementation overlay districts, supplemental use districts, specific plans, and design overlays. Coordination among City departments is critical to the successful implementation of many Community Plan policies, such as park planning and streetscape improvements. While the Community Plan policies and implementation programs are limited to authorities that can be implemented under the jurisdiction of the City of Los Angeles, implementation of some Plan policies may also require coordination and joint actions with numerous local, regional, state, and federal agencies. These agencies provide services, facilities, or funding and administer regulations that directly or indirectly affect many issues addressed in the Community Plan. These external governmental agencies, such as the California Department of Transportation (CALTRANS), the Los Angeles Unified School District, water service providers, the Los Angeles County Metropolitan Transportation Authority (METRO), among others, also look to the Community Plans for their planning and guidance in decision-making.

Among others, the Plan is implemented in the following ways: goals and policies are used as guidance for discretionary decisions requiring land use consistency findings; zoning of land to apply the desired land use regulations to property throughout Boyle Heights; adoption of development incentives that are intended to generate affordable housing and other public benefits in exchange for greater development rights. The following section provides a description of each of the Community Plan's implementation features, followed by a brief explanation of the process for amending the Community Plan.

GOALS AND POLICIES

The Community Plan's goals and policies play an important role in shaping decisions around land use and public infrastructure.

The Community Plan can be used by the public, staff and ultimately decision-makers to guide and inform the land use decision making process. City actions on discretionary projects involving land use may require a finding that the action is consistent or in conformance with the General Plan. Department of City Planning staff and City Planning Department decision makers, such as the Director of Planning, Area and City Planning Commissions, and zoning administrators, among others, refer to and cite policies from the Community Plan text and the Land Use Map of the Community Plan when making findings of consistency on land use decisions. The goals and policies of the Community Plan are particularly important when development projects are proposed that are beyond the scope of the underlying zoning regulations, requiring variances or zone changes.

GENERAL PLAN LAND USE DESIGNATIONS

Regulating the use and development of land is an important means by which the City exercises its authority to protect the public health, safety, and welfare of its citizens, and implement the plan. The Plan Land Use Designations are designated on the General Plan Land Use Map and establish the permitted range of intensities, uses, and densities, where applicable in the Plan Area. Each General Plan Land Use Designation identifies corresponding form and use districts in the City's Zoning Ordinances. The Land Use Designations are implemented through these form and use districts applied at the parcel level.

ZONING REGULATIONS

The Community Plan's primary implementation tool is the comprehensive package of zoning regulations that govern how land can be used and developed throughout Boyle Heights. The zone assigned to each property prescribes the physical parameters new structures must adhere to, the types of uses that can occur, and the intensity that each use can occur. The zones and supporting development standards adopted as part of the Community Plan are effectuated as ordinances in Los Angeles Municipal Code, or as specific plans, overlay districts adopted under LAMC procedures. The parameters of each zone assigned in Boyle Heights have been strategically devised to ensure that they shape development in a manner that is compatible with the vision established by the Plan. The Plan's zoning regulations are implemented incrementally as each proposed building project and land use change within Boyle Heights is evaluated by the City for approval. The City applies zoning regulations as one of the primary metrics for evaluating whether a project or proposal is appropriate for a particular location. Projects that do not require discretionary review under any zoning ordinance are ministerial if they comply with all zoning regulations. In most cases non-discretionary or "by-right" projects are reviewed solely by the Los Angeles Department of Building and Safety, where the majority of the development regulations enacted by the Plan are enforced. Generally, projects that surpass a specified size or scope require discretionary review under Project Review and will require adoption of the discretionary findings by the designated decision maker to ensure that the project is in conformance with the General and Community Plans and compatible with adjacent properties.

COMMUNITY BENEFITS SYSTEM

This Plan establishes allowable development ranges through base and maximum Floor Area Ratios (FAR) assigned to each zone, and base and maximum heights assigned to some zones. Maximum FAR and height may be achieved through participation in the Community Benefits Program described in Article 9 of the LAMC. Development exceeding base development rights may be permitted in accordance with the Community Benefits Program to meet the primary objectives of this Plan by providing affordable housing.

COMMUNITY PLAN AMENDMENTS

Changes to the Community Plan may be proposed from time to time to address changing conditions, new opportunities, and unforeseen circumstances. As such, the Community Plan must be a living, flexible document, allowing for changes that ultimately assist in enhancing and implementing the community's vision. It is necessary, therefore, to establish a fair, orderly, and well-defined process to govern how amendments occur.

Community Plans are part of the City's General Plan and thus, any changes to the Community Plan are considered General Plan amendments. Amendments may propose a change in the land use designation for a particular property or changes to the Community Plan's policies and text. Amendments to the General Plan are subject to an established public review process.

IMPLEMENTATION PROGRAMS

Coordination among City departments and external agencies is critical to the successful implementation of many Community Plan policies, such as park planning and streetscape improvements. While many Community Plan policies are implemented through land use regulations and incentives enforced by the City based on its mandate to protect the health, safety and welfare of its inhabitants, implementation of some Plan policies may also require coordination and joint actions with numerous local, regional, state, and federal agencies. These agencies provide services, facilities, or funding and administer regulations that directly or indirectly affect many issues addressed in the Community Plan. These external governmental agencies, such as the California Department of Transportation (CALTRANS), the Los Angeles Unified School District, water service providers, the Los Angeles County Metropolitan Transportation Authority (METRO), among others, also look to the Community Plans for their planning and guidance in decision making. This section provides a series of tables describing future programs.

SOURCES OF FUNDING

It is important to note that program implementation is contingent, among other policy and resources considerations, on the availability of adequate funding, which is likely to change over time due to economic conditions, the priorities of federal, state and regional governments and funding agencies, and other conditions. The programs should be reviewed periodically and prioritized, where and when necessary, to reflect funding limitations.

READER'S GUIDE TO THE FUTURE IMPLEMENTATION ACTIONS' TABLE

The tables provided in this section organize programs into two broad categories: existing programs and resources, and future programs. Existing programs and resources are currently in effect and may already be playing an important role in addressing one or more of the plan's objectives. The list identifies opportunities to expand or continue existing programs in the Plan Area. Future programs are included as an advisory resource directed at public agencies responsible for devising improvements or prioritizing projects within Boyle Heights. Future programs described in the tables are aspirational and are put forth for further consideration as part of the ongoing effort to implement the Plan. The tables identify each program with a distinct reference number (i.e. P1), followed by a description of the intent and scope of the program, and a reference to the Community Plan policies that the program is expected to implement. Lastly, the tables identify the agency primarily responsible for implementing the program, as well as any agencies necessary for supporting the program's implementation

ACRONYMS FOR AGENCIES

BSL - Bureau of Street Lighting
BOE - Bureau of Engineering
BOS - Bureau of Sanitation
BSS - Bureau of Street Services
CAO - City Administrative Officer
CalHFA - California Housing Finance Agency
CalTrans - California Department of Transportation
CD - Council District
CDD - Community Development Department
CoDRP - County Department of Recreation and Parks
DCP - Department of City Planning
DOD - Department on Disability
DPW - Department of Public Works
DPSS - Department of Public Social Services
DTSC - Department of Toxic Substance Control
EMD - Emergency Management Department
EWDD - Employment and Workforce Development Department
LA-DLA - Los Angeles Designated Local Authority
LADBS - Los Angeles Department of Building and Safety
LADOA - Los Angeles Department of Aging
LADOT - Los Angeles Department of Transportation
LADWP - Los Angeles Department of Water and Power
LAFD - Los Angeles Fire Department
LAFPC - Los Angeles Food Policy Council
LAHD - Los Angeles Housing Department
LAPD - Los Angeles Police Department
LAPL - Los Angeles Public Library Development Department
LAUSD - Los Angeles Unified School District
METRO - Metropolitan Transit Authority
NC - Neighborhood Council
OHR - Office of Historic Resources
RAP - Recreation and Parks
SAN - Bureau of Sanitation
SCAG - Southern California Association of Governments

Draft Summer 2022

FUTURE IMPLEMENTATION ACTIONS

ESTABLISHED PROGRAMS

*(see explanation on p. 51)

Program Number	Description	Policy Reference	Coordinating Agency
Land Use: Housing and Complete Neighborhoods			
P1.	**State Housing Laws**: Coordinate with the Los Angeles Housing Department (LAHD) to respond to new requirements from state laws for housing and affordable housing, as needed.	LU 1.3; LU 1.4; LU 2.1; LU 2.3; LU 2.4; LU 2.7; LU 3.6; LU 3.7	LAHD
Land Use: Cultural and Historic Resources			
P2.	**Survey LA Findings - Eligible Historic Resources**: Support local efforts to protect and restore historic resources, including efforts to establish Historic Preservation Overlay Zones (HPOZs) or other conservation district overlays for eligible areas of Boyle Heights identified in the findings of the Los Angeles Historic Resources Survey.	LU 18.1; LU 18.2; LU 18.3; LU 18.4; LU 18.5; LU 18.6	DCP (OHR)
Land Use: Wellness and Sustainability			
P3.	**Healthy Neighborhood Markets**: Coordinate with the Los Angeles Food Policy Council to expand the Healthy Neighborhood Market Network (HNMN) to existing neighborhood markets in Boyle Heights and promote investment in new grocery locations via the FreshWorks fund.	LU 5.3; LU 5.4; LU 27.1; LU 27.2; LU 27.3	LAFPC, California FreshWorks
Mobility and Connectivity			
P4.	**Mobility Hubs**: Prioritize the development of Soto Station as a Central Mobility Hub with multi-modal supportive infrastructure such as bicycle facilities, bus shelters, wayfinding signage, safe pedestrian connections, comfortable outdoor seating areas, and active commercial uses that together enhance the transit user experience. Consider Mobility Hub improvements to other major transit stations in Boyle Heights, such as Mariachi Plaza Station, Pico/Aliso Station, and Indiana Station.	MC 1.1; MC 1.2; MC 1.3; MC 1.4; MC 1.5; MC 2.1; PO 2.1; PO 2.3; PO 2.4	Metro, LADOT

Draft Summer 2022

Program Number	Description	Policy Reference	Coordinating Agency
P5.	First/Last-mile: Collaborate with Metro to develop First/Last Mile Strategic Plans for key transit station areas in Boyle Heights with the objective of improving the experience of using transit by establishing safe and recognizable routes to and from transit stations.	MC 1.1; MC 1.2; MC 1.3; MC 1.4; MC 1.5; MC 1.7; MC 2.1; MC 2.2; MC 2.4; MC 3.1; MC 3.2; MC 4.1; MC 4.2; MC 4.3; PO 2.1	Metro, LADOT
P6.	DASH Service: Encourage the ongoing assessment and revision of DASH services to reach areas of Boyle Heights with public transportation service gaps, and expansion of DASH service hours to nights and weekends throughout all of Boyle Heights.	MC 1.1; MC 1.5	LADOT
P7.	Cycle Tracks: Prioritize the installation of protected cycle tracks on the following street segments: - Mission Road between Marengo Street and 1st Street - 1st Street from the 1st Street Bridge over the Los Angeles River to Indiana Street - 4th Street from the 4th Street Bridge over the Los Angeles River to Velasco Street - 3rd Place between Velasco Street and Indiana Street - Olympic Boulevard between Soto Street and Lorena Street	MC 1.7; MC 4.1; MC 4.2	LADOT
P8.	Bike Lanes: Prioritize the installation of bicycle lanes or buffered bicycle lanes on the following street segments: - Mission Road between Cesar E. Chavez Avenue and Jesse Street - Echandia Street between Cesar E. Chavez Avenue and Pleasant Avenue - Boyle Avenue between 1st Street and 8th Street - Lorena Street between Indiana Street and Grande Vista Avenue - Forest Avenue between Wabash Avenue and Cesar E. Chavez Avenue - 7th Street between the 7th Street Bridge over the Los Angeles River and Soto Street - Whittier Boulevard from the 6th Street Bridge over the Los Angeles River to Indiana Street - Soto Street between Marengo Street and the City boundary with the City of Vernon	MC 1.7; MC 4.1; MC 4.2	LADOT
P9.	Freight Truck Network: Ensure that the Countywide Strategic Truck Arterial Network (CSTAN) is adhered to by truck drivers through traffic enforcement, road signage and signaling in order to minimize noise, vibration and air quality impacts on sensitive land uses.	LU 12.8; MC 6.2; MC 6.3	Metro,LADOT, Caltrans, LAPD

Draft Summer 2022

Program Number	Description	Policy Reference	Coordinating Agency
P10.	**Safe Routes to School**: Prioritize additional Safe Routes to School interventions around schools located near the High Injury Network in Boyle Heights.	LU 24.5; MC 1.7; MC 1.8; MC 1.9; MC 1.10; MC 2.1; MC 2.2; MC 2.4; MC 3.1	LADOT, LAUSD, Caltrans, Metro
P11.	**Metro Review: Inform future development in close proximity to Metro facilities that may impact Metro bus operations of notification procedures and considerations of projects.**	**LU 4.3; LU 6.1; LU 6.2; LU9.4; LU 9.5; LU 25.2; MC 1.1; MC 1.4; MC 1.11; MC 4.1**	**Metro**
Public Realm and Open Space			
P12.	**People Street Pedestrian Plazas and Parklets**: Encourage partnerships between LADOT and community groups in Boyle Heights to apply for Plaza or Parklet projects that enhance social life and strengthen community identity.	PO 1.6; PO 1.7; PO 2.1; PO 2.2; PO 2.3; PO 2.4	LADOT
P13.	**LA River Revitalization**: Consistent with the LA River Revitalization Master Plan and associated design and implementation plans, restore and revitalize an 11-mile stretch of the Los Angeles River, while prioritizing public access to this public resource in densely populated communities such as Boyle Heights.	LU 13.1; PO 1.2; PO 1.4; PO 1.6; PO 1.7; PO 3.1; PO 3.2; PO 3.3; PO 3.4;	LACDPW, BOE, RAP, Arts Parks, and River Committee, LA River Cooperation Committee US Army Corps of Engineers
P14.	**Financing LA River Improvements**: Explore opportunities to direct funds for capital projects along the Los Angeles River in Boyle Heights through revenue generated from existing or proposed Enhanced Infrastructure Financing Districts (EIFD) established to help implement the Los Angeles River Revitalization Masterplan.	PO 1.2; PO 1.4; PO 1.6; PO 1.7; PO 3.1; PO 3.2; PO 3.3; PO 3.4;	EWDD, CAO, BOE, Council Office, Arts, Parks, and River Committee

Draft Summer 2022

FUTURE IMPLEMENTATION ACTIONS

PROPOSED PROGRAMS

*(see explanation on p. 51)

Program Number	Description	Policy Reference	Coordinating Agency
Land Use: Housing and Complete Neighborhoods			
P15.	Right to Return: Explore the creation of a right to return program to ensure tenants of any residential unit subject to the Rent Stabilization Ordinance (RSO) or an On-Site Restricted Affordable Unit that is demolished or vacated for purposes of a proposed development project shall be granted First Right to Return for the replacement units.	LU 1.3; LU 1.4; LU 2.1	LAHD
P16.	No Net Loss Program: Explore the creation of a no net loss program to minimize the displacement of residents and ensure that there is no loss of affordable rental housing, covenanted or not, including affordable rent-stabilized units. This can be achieved through the preservation of existing affordable housing, covenanted or not, or the production of new affordable housing.	LU 1.1; LU 1.3; LU 1.4; LU 2.1; LU 2.2; LU 2.6	LAHD City Attorney
P17.	Community Land Trusts: A Community Land Trust is a community-based non-profit organization designed to ensure community stewardship of land by purchasing or holding land and removing it from the speculative real estate market. Encourage partnerships that seek to implement community land trust projects in Boyle Heights. Work with the community to develop programs and provisions that advantage efforts by local organizations to acquire land for the development of affordable housing and open space, or the protection of small businesses and renters.	LU 1.5; LU 3.7; LU 10.3; LU 10.4; LU 10.5	Council Office, CAO, DCP
P18.	Housing Market Study: Conduct a housing market study to evaluate value capture strategies, local and state incentive programs, and/or inclusionary zoning strategies with the objective of increasing the stock of affordable housing for low-income households in Boyle Heights.	LU 1.1; LU 4.1; LU 4.2; LU 6.3	DCP, LAHD, City Attorney
Land Use: Jobs and Economic Development			
P19.	Small Business Assistance and Retention: Continue to develop and promote agency programs that assist small business owners and entrepreneurs in the form of low-interest loan programs, management assistance, business retention efforts, and the establishment of incubation centers. Develop a process to offer right of return for small businesses displaced due to new development at similar rents prior to displacement.	LU 5.3; LU 10.2; LU 10.3; LU 10.4; LU 10.5; LU 10.6; LU 10.7; LU 11.2; LU 11.3; LU 13.2	CAO, EWDD

Draft Summer 2022

Program Number	Description	Policy Reference	Coordinating Agency
P20.	Business Outreach and Mentorship Programs: Develop partnerships to create business outreach programs targeting local schools for student and adult participation in business apprenticeship and internship programs, as well as work with the LAUSD's Mentorship Programs.	LU 13.2; LU 14.1; LU 14.2; LU 14.3; LU 14.4	LAUSD, EWDD
P21.	LA River Land Use Study: Conduct a study of land use trends and land use alternatives along the Los Angeles River, including an assessment of the impacts that new residential development could have on local housing and employment markets, to inform future planning efforts.	LU 13.1; LU 13.4; LU 13.5	DCP
P22.	Food Hub Study: Conduct a study of the local food industry in Boyle Heights as the basis of a future economic development strategy designed to support and grow local businesses involved in the wholesale, processing, cultivation, preparation, and serving of food.	LU 11.1; LU 11.3; LU 12.1; LU 12.2; LU 12.3; LU 12.5; LU 13.3; LU 27.1; LU 27.8	DCP, LAFPC, EWDD, Mayor's Office
Land Use: Wellness and Sustainability			
P23.	Incentives for Healthy Food: Develop a land use incentive strategy that increases the availability of fresh and nutritious produce in neighborhood markets and grocery stores throughout Boyle Heights.	LU 5.3; LU 5.4; LU 27.1; LU 27.2; LU 27.3; LU 27.4; LU 27.5	DCP, LAFPC
P24.	Air-Quality Monitoring: Create an air quality monitoring program that uses metrics such as PM10 and ozone to identify ambient level pollutants and their location on a neighborhood level.	LU 23.1; LU 23.6; LU 24.1; LU 24.2; LU 24.4	AQMD
P25.	Street Tree Tracking: Create a publicly accessible database that displays the tree types within the City's public rights-of-way. Ensure that this database is utilized to significantly increase the tree canopy in Boyle Heights to improve air quality and reduce the urban heat island effect locally.	LU 24.3; LU 28.1; PO 4.1; PO 4.2; PO 4.3; PO 4.4; PO 4.5; MC 2.3	BSS
P26.	Tree Planting and Maintenance Partnerships: Develop partnerships between public agencies, community groups, local businesses, and private developers to increase trees in the public right-of-way, resulting in tree planting and maintenance programs for specified parkways, landscaped medians, and community gateways.	LU 24.1; LU 24.3; LU 28.2; LU 28.1; PO 4.1; PO 4.2; PO 4.3; PO 4.4; PO 4.5; MC 2.3	BSS
Mobility and Connectivity			
P27.	Bus Rapid Transit Study: Bus Rapid Transit (BRT) is a high-quality bus service that provides faster, more reliable and convenient service through the use of several key attributes, including, dedicated bus lanes, branded vehicles and stations, higher frequency, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. Study the feasibility of upgrading bus routes on Soto Street and Whittier Boulevard to BRT.	MC 1.5; MC 1.6	Metro

Draft Summer 2022

Program Number	Description	Policy Reference	Coordinating Agency
P28.	Pedestrian Priority District: Conduct a study for a potential pedestrian priority district in Boyle Heights where enhanced pedestrian safety improvements and innovative treatments are implemented. These treatments include scramble crosswalks, raised crosswalks, and right light turn on red light prohibitions in order to reinforce pedestrian safety and comfort.	LU 24.5; MC 1.3; MC 1.4; MC 1.7; MC 2.1; MC 2.2; MC 2.3; MC 2.4; MC 3.1; MC 3.2; PO 2.1; PO 2.3; PO 2.4	LADOT
P29.	Traffic Calming Study: Conduct a study of driver behavior and pedestrian safety on Collector Streets throughout Boyle Heights and prioritize traffic calming measures on streets where potential pedestrian/vehicle conflicts are found to be the greatest.	MC 1.10	LADOT, BOE
P30.	Demand Responsive Parking: Support the implementation of parking meter demand pricing and time limits in commercial areas of high parking demand in order to increase turnover, enabling more customers to visit local businesses.	MC 5.2	LADOT
Public Realm and Open Space			
P31.	Streetscape Improvements: Identify specific pedestrian friendly streetscape improvements to prioritize along and around Boyle Heights' major mixed-use corridors; consider improvements such as mid-block pedestrian crossings, curb extensions, seating, landscaping, shade trees, and pedestrian lighting.	MC 1.3; MC 1.4; MC 1.7; MC 2.1; MC 2.2; MC 2.3; MC 2.4; MC 3.1; MC 3.2; PO 2.1; PO 2.2; PO 2.3; PO 2.4; PO 4.4; PO 4.5	LADOT, BOE, BSS
P32.	Alley Improvement Program Study: Conduct a study of existing alleyways throughout Boyle Heights as the basis for preparing an Alley Improvement Plan to coordinate alley improvements with new development. Prioritize improvements based on proximity to public transit stations, opportunities to create flexible recreation spaces, and connections to parks, schools, the Los Angeles River and other public resources.	LU 15.6; LU 22.2; LU 27.5; MC 3.1; MC 3.2; PO 3.1	BSS, DWP
P33.	Neighborhood Green Streets: Develop a network of well-landscaped pedestrian routes along Boyle Heights' less trafficked neighborhood streets. Such a network would feature high quality landscaping, shade trees, streetscaping, and wayfinding that provides pedestrians with safe and attractive routes linking the community's open spaces, recreational centers, cemeteries, and the Los Angeles River.	LU28.1; MC 2.3; MC 2.4; PO 3.1; PO 3.2; PO 3.4; PO 4.4; PO 4.5; PO 5.1	LADOT, BOE, BSS, BOS

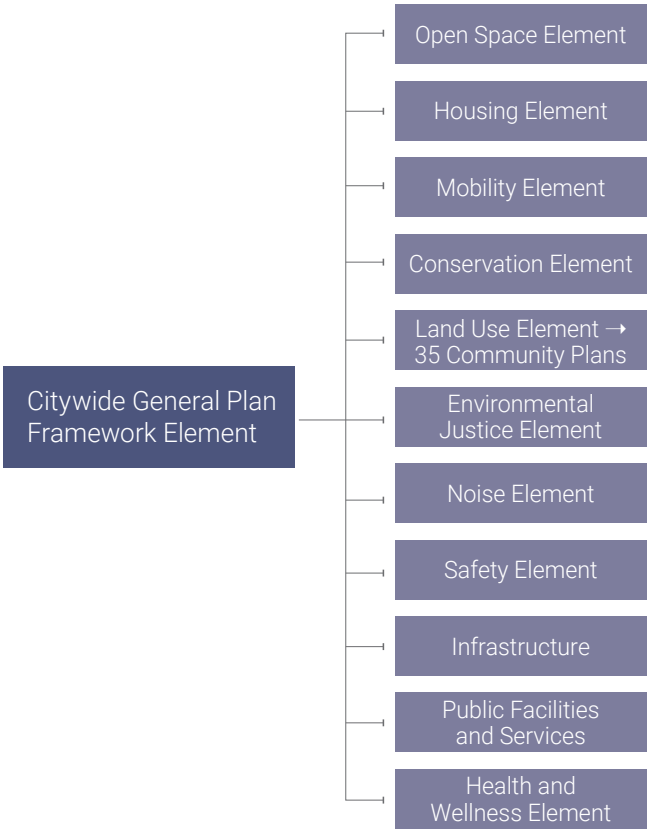
RELATIONSHIP TO OTHER PLANS



Draft Summer 2022

RELATIONSHIP TO THE GENERAL PLAN

California state law requires that cities prepare and adopt a comprehensive, integrated, long-term General Plan to direct future growth and development. The General Plan is the fundamental document of a city. It defines how a city's physical and economic resources are to be managed and utilized over time. Decisions by a city with regard to the use of its land, design and character of buildings and open spaces, conservation of existing and provision of new housing, provision of supporting infrastructure and public and human services, and protection of residents from natural and human-caused hazards are guided by the General Plan.

State law requires that the General Plan contain eight elements: land use, transportation, housing, conservation, open space, noise, safety and environmental justice. Cities may also choose to incorporate additional elements to more directly address other locally significant issues. There must be internal consistency among the elements. In Los Angeles, thirty-five Community Plans, comprise the City's land use element. In addition, the City has adopted additional non mandated elements in "Framework Element," discussed below.

CITYWIDE GENERAL PLAN FRAMEWORK ELEMENT

The City's General Plan Framework Element is the citywide plan that established the guide for how Los Angeles will grow in the future. Adopted in 1996, the Framework Element is a strategy for long-range growth and development, setting a citywide context for the update of Community Plans and citywide elements. The Framework Element responds to State and Federal mandates to plan for the future by providing goals, policies, and objectives on a variety of topics, such as land use, housing, urban form, open space, transportation, infrastructure, and public services. The Framework Element's key guiding principles, summarized below, are advanced at the community-level through the Community Plans.

The City's commercial areas serve a variety of roles and functions, from small neighborhood gathering places with local cafes and shops to major job centers and entertainment hubs. Although these areas are typically designated for commercial use, they contain residential and mixed use buildings as well.

FRAMEWORK ELEMENT GUIDING PRINCIPLES

Grow strategically. Should the City's population continue to grow, as is forecasted by the Southern California Association of Governments (SCAG), growth should be focused in a number of higher-intensity commercial and mixed-use districts, centers, and boulevards, particularly in proximity to transportation corridors and transit stations. This type of smart, focused growth links development with available infrastructure and encourages more walkable, transit-friendly neighborhoods, helping to ease our reliance on the automobile, and minimize the need for new, costly infrastructure.

Conserve existing residential neighborhoods. By focusing much of the City's growth in centers and along commercial corridors, the City can better protect the existing scale and character of nearby single- and multi-family neighborhoods. The elements that contribute to the unique character of different residential neighborhoods should be identified and preserved whenever possible.

Balance the distribution of land uses. Maintaining a variety of land uses is crucial to the long-term sustainability of the City. Commercial and industrial uses contribute to a diverse local economy, while residential uses provide necessary housing for the community. Integrating these uses within smaller geographical areas can better allow for a diversity of housing types, jobs, services, and amenities.

Enhance neighborhood character through better development standards. Better development standards are needed to both improve the maintenance and enhancement of existing neighborhood character, and ensure high quality design in new development. These standards are needed for all types of development; residential, commercial, and industrial uses.

Create more small parks, pedestrian districts, and public plazas. While regional parks and green networks are an important component of the City's open space strategy, more small-scale, urban open spaces must be developed as well, as they are crucial to the quality of life of the City's residents. There are many opportunities at the community level to create public "pocket" parks as part of new developments, to enhance pedestrian orientation in key commercial areas, and to build well-designed public plazas.

Improve mobility and access. The City's transportation network should provide adequate accessibility to jobs, services, amenities, open space, and entertainment, and maintain acceptable levels of mobility for all those who live, work, travel, or move goods in Los Angeles. Attainment of this goal necessitates a comprehensive program of physical infrastructure improvements, traffic systems management techniques, and land use and behavioral changes that reduce vehicle trips. An emphasis should be placed on providing for and supporting a variety of travel modes and users of all ages and abilities, including walking, bicycling, public transit, and driving.

Identify a hierarchy of commercial districts and centers. The Framework Element provides an overall structure and hierarchy for the City's commercial areas. This hierarchy, has helped shape the development and urban form of the City and will continue to do so in the future. Understanding this hierarchy helps us better understand the roles that these different types of "activity centers" play within our communities so that their unique characteristics can be enhanced.

RELATIONSHIP TO MOBILITY PLAN 2035

In 2008, the California State Legislature adopted AB1358, The Complete Streets Act, which requires local jurisdictions to "a plan for a balanced multimodal transportation network that meets the needs of all users of streets, roads, and highways, defines to include motorists, pedestrians, bicyclists, children, persons with disabilities, seniors, movers of commercial goods, and users of public transportation, in a manner that is suitable to the rural, suburban, or urban context."

Mobility Plan 2035 provides the citywide policy foundation for achieving a transportation system that balances the needs of all road users. As a 2015 update to the City's General Plan Circulation Element, Mobility Plan 2035 incorporates "complete streets" principles and lays the policy foundation for how future generations of Angelenos interact with their streets.

The City's transportation system will continue to evolve to fit the context of the time and situation. Today we are faced with environmental constraints, public health issues, regional inequity, and some of the longest, traffic delays in the nation. The way Mobility Plan 2035 addresses these issues through policy initiatives today will set the stage for the way we move in the future.

Mobility Plan 2035 includes goals that are equal in weight and define the City's high-level mobility priorities. Each of the goals and objectives (targets used to help measure the progress of the Mobility Plan 2035) and policies (broad strategies that guide the City's achievement of the Plan's five goals):

- Safety First
- World Class Infrastructure
- Access for All Angelenos
- Collaboration, Communication, and Informed Choices
- Clean Environments & Healthy Communities

These goals represent a confluence of transportation and public health policy that can create opportunities to address the historic inequities in the City that have starkly limited quality of life in low income communities. By placing a citywide emphasis on safety, access, and health, the City can begin to equalize the playing field and first address socioeconomically disadvantaged areas with the highest need to connect people to more prospects of success through mobility.

While the Mobility Plan 2035 provides a citywide approach to enhancing safe, accessible transportation options, the Boyle Heights Community Plan provides the opportunity for more focused and nuanced transportation discussion at the community level. Localized recommendations that complement the citywide policies and address community-specific transportation conditions are described in Chapter 3 of the Boyle Heights Community Plan.

RELATIONSHIP TO OTHER AGENCY PLANS

There are a variety of non-City agencies and organizations that function within the Boyle Heights Community Plan Area. In varying degrees, these agencies through research and advocacy, guide and influence planning

decisions across a wide spectrum of interests affecting land use within the Community Plan Area. In each case, the community plans and use of land by other agencies must be consistent with the Community Plan in which they are located.

This required consistency holds true for capital improvement programs, development entitlements, and other actions pertaining to the City's physical development. Relevant plans in the Boyle Heights Community Plan include Redevelopment Project Areas, established by the former CRA.

Los Angeles County Metropolitan Transportation Authority (Metro)

Metro is the state-chartered regional transportation planning and public transportation operating agency for the County of Los Angeles, and is the successor agency to the former Southern California Rapid Transit District. The agency develops and oversees transportation plans, policies, funding programs, and both short-term and long-range solutions that address the County's increasing mobility, accessibility and environmental needs. The Boyle Heights Community Plan Area is home to the Gold (L) Line light rail transit line. The Gold (L) Line currently links East LA to Downtown, Northeast LA and the San Gabriel Valley. Under the Regional Connector project, the Gold (L) Line from East LA and Boyle Heights will connect to the existing Expo (E) Line, creating a through transit line from East LA to Santa Monica. Metro's Connect US Plan, which aims to improve historical and cultural connections in downtown Los Angeles will enhance pedestrian and bicycle travel through and between communities, including Boyle Heights. The Eastside Access Improvement Project, which is part of the Connect US Plan, includes enhancements to improve pedestrian and bicycle access at the Gold Line stations in Boyle Heights. Metro operates the five Metro transit stations in the Boyle Heights Community Plan Area.

Community Redevelopment Agency of Los Angeles, A Designated Local Authority

The Community Redevelopment Agency (CRA/LA) was established in 1948 pursuant to California State Law (Code Section 33000) to attract private investment into economically depressed communities. Although Assembly Bill ABx1-26 dissolved the Agency in 2012, the land use authorities granted in the Redevelopment Project Area Plans (Redevelopment Plans) remain effective and will continue to be administered by Los Angeles CIty Planning, consistent with the City Council's September 2019 action to assume the land use authority related to all unexpired Redevelopment Plans. At the time of adoption, the Boyle Heights Community Plan Area includes one unexpired Redevelopment Plan, the Adelante Eastside Redevelopment Plan, which will remain in effect until its expiration in March, 2031.

The Redevelopment Plan for the Project Area was adopted by the Los Angeles City Council on March 24, 1999, in part to preserve the industrial and commercial uses within the community through rehabilitation efforts and new construction of buildings. The approximately 2,200 acre industrial and commercial redevelopment project contains the areas south of Olympic Boulevard to the city limits of Vernon from the Los Angeles River to Indiana Street; North Main Street east to Valley Boulevard and Alhambra Avenue to the city limits of Alhambra; and all east - west commercial streets in Boyle Heights such as Cesar Chavez Avenue, First Street, Fourth Street and Whittier Boulevard from the Los Angeles River to Indiana Street. The purpose of the project is the preservation of industrial and commercial uses within the community to promote a stable industrial base to provide jobs for the community, and enhance the existing shopping areas to provide commercial options for residents. The purpose of the Redevelopment Plan's regulations was generally to encourage economic development and a broad range of employment opportunities, promote the rehabilitation and preservation of historic structures, facilitate a built environment founded in strong urban design principles, provide for various housing needs, and promote the provision of public and social services.

Redevelopment Plans were historically implemented by the Community Redevelopment Agency of the City of Los Angeles (Agency). In 2012, the Dissolution Act (Assembly Bill x1 26) dissolved the Agency, along with all other redevelopment agencies in the State, and the CRA/LA, a Designated Local Authority (DLA), became the successor to the Agency. The DLA's role under the Dissolution Act is to wind down the enforceable financial obligations of the Agency. The DLA also assumed responsibility for administering the still active Redevelopment Plans, including those provisions related to the use and development of land in the Redevelopment Plans area. In November 2019, at the request of the City Council under a provision in State law, all "land use related plans and functions" of the Redevelopment Plans transferred to the City of Los Angeles.

Section 1100 of the Adelante-Eastside Redevelopment Plan states that in the event that an applicable Community Plan is amended so as to change the land uses permitted within the Project Area, the land uses specified for the Project Area in the applicable Community Plan as so amended, shall supersede the land use designations in this Redevelopment Plan.

The Boyle Heights Community Plan, comprehensively updated on _____ , with its implementing zoning ordinances, includes contemporary land use and zoning strategies to address economic development and a broad range of employment opportunities, promote the rehabilitation and preservation of historic structures, facilitate a built environment founded in strong urban design principles, provide for various housing needs, and promote the provision of public and social services. The Boyle Heights Community Plan, with its implementing ordinances, provides a complete vision and regulatory scheme for the land uses in the Project Area. The provisions of the Redevelopment Plan intended to regulate, control, or shape the use and development of land in the Redevelopment Plan area, including without limitation, Sections 400 through 410, 500 through 522, and 700 as well as related implementing plans that are in conflict with the Boyle Heights Community Plan and its implementing ordinances because they, (1) prohibit what is allowed under the Boyle Heights Community Plan and its implementing ordinances; or (2) allow what is prohibited under the Boyle Heights Community Plan or its implementing zoning ordinances; or (3) add undesirable additional regulations, processes, costs, and burdens on the City, property owners, and developers that impede or prevent beneficial and urgently needed housing and other desirable uses in the Redevelopment Plan area. As such, any provision in the Redevelopment Plan that purports to regulate, control, or shape the development of land in the Project Area, is in conflict with, and does not conform to, the allowed land uses in the Boyle Heights Community Plan.

Los Angeles Unified School District (LAUSD)

Public schools in the City of Los Angeles are under the jurisdiction of the Los Angeles Unified School District (LAUSD). The LAUSD provides public education for over 900,000 students at 557 schools in eight local districts. The LAUSD is subject to the overview of the State of California Legislature and is entirely independent of the City of Los Angeles' governance. Decision-making and budgeting are done by elected governing boards, and site and construction standards are established by the State Department of Education (Section 39000 of the Government Code).

The LAUSD develops an annual Planning and Development Branch Strategic Execution Plan, which describes goals and progress for school site planning. However, pursuant to State laws, the LAUSD is not required to obtain review of their public school projects from the Department of City Planning prior to obtaining any necessary permits. The LAUSD's estimate of future enrollment levels and school needs is determined through the evaluation of the capacity of each LAUSD school to accommodate the projected future population, and the analysis of school-by-school enrollment trends. In 2000, the LAUSD began a $20 billion building and modernization program. By 2008, the school district had completed 180 new schools.

The Los Angeles Unified School District currently operates 25 schools in the Boyle Heights Community Plan Area. Of these schools, 20 are elementary, three are middle, and three are high schools. Additionally, since the Charter School legislation was established in 1992, approximately 8 new charter schools have opened in Boyle Heights. While these are privately operated schools, they receive public funds and are considered to be under the jurisdiction of the LAUSD.

County of Los Angeles

2016 LAEDC Bioscience Implementation Plan. Los Angeles County Economic Development Corporation (LAEDC) was founded in 1981 as a nonprofit, public-benefit organization to harness the power of the private sector in collaboration with L.A. County, to guide economic development and create more widely shared prosperity. LAEDC collaborates with all stakeholders in the region including education, business, and government. In 2016, LAEDC completed a biosciences industry growth implementation plan as a commissioned project by the County of Los Angeles. The research, recommendations, and action items contained in the implementation plan facilitate the infrastructure and relationships that are essential to growth of the industry cluster, with the goal of creating greater economic opportunity for residents of L.A. County and Southern California..

University of Southern California

The 2016 USC Health Science Campus Master Plan. serves as the guiding vision for the future of the campus over the next 25 years. It also considers the potential needs for future academic, research and clinical space to properly grow and develop the academic medical center, which includes a medical school, hospitals, clinics, school of pharmacy, and other allied health divisions. The master plan boundaries include Valley Boulevard to the north, Soto Street to the east, Zonal Avenue to the south and Mission Road to the east. Though most of the master plan's geographical boundary overlaps with the Northeast Los Angeles Community Plan, the USC Health Science Campus is immediately adjacent to the Boyle Heights Community Plan and residents actively participate in the outreach process for this master plan as it moves forward.

Army Corps of Engineers

The Los Angeles River Ecosystem Restoration Project, led by the Army Corps of Engineers, includes ecosystem restoration along 11 miles of the Los Angeles River from approximately Griffith Park to downtown Los Angeles while maintaining existing levels of flood risk management. Though the Boyle Heights Community Plan Area boundary stops at the railroad tracks adjacent to the Los Angeles River, the Army Corps of Engineers efforts include outreach and implementation on both sides of the Los Angeles River. One of those plans is the "Los Angeles River Ecosystem Restoration Project - Alternative 20", which is currently an active plan that includes overlap with the Boyle Heights Community Plan boundary. The project will include riparian planting in the channels as habitat corridors, diverting flow into channels, widening tributaries, and possibly removing concrete. The Project focuses on Union Pacific's LA Trailer and Container Intermodal Facility (Also known as "Piggyback Yard"), the last active rail yard spanning 120 acres on the east bank of the river. It seeks to construct a channel through the parcel as a means to divert the main channel flows, wetlands restoration, parkland restoration, and flood detention.

Summer 2022 Draft

CHAPTER I – FUNCTION OF THE CPIO DISTRICT

Section I-1. BOYLE HEIGHTS CPIO DISTRICT AUTHORITY AND BOUNDARIES

Pursuant to Los Angeles Municipal Code (LAMC) Chapter 1A Section 8.2.2, the City Council establishes the Boyle Heights Community Plan Implementation Overlay District (Boyle Heights CPIO District). The boundaries of the Boyle Heights CPIO District are contained within the boundaries of the Boyle Heights Community Plan Area (Community Plan Area) as adopted on _____(Council File No._____) and shown on Figures 1-4.

Figure 1. Subarea A - Community Benefits Program

Figure 2. Subarea B – Historic Resources Subarea

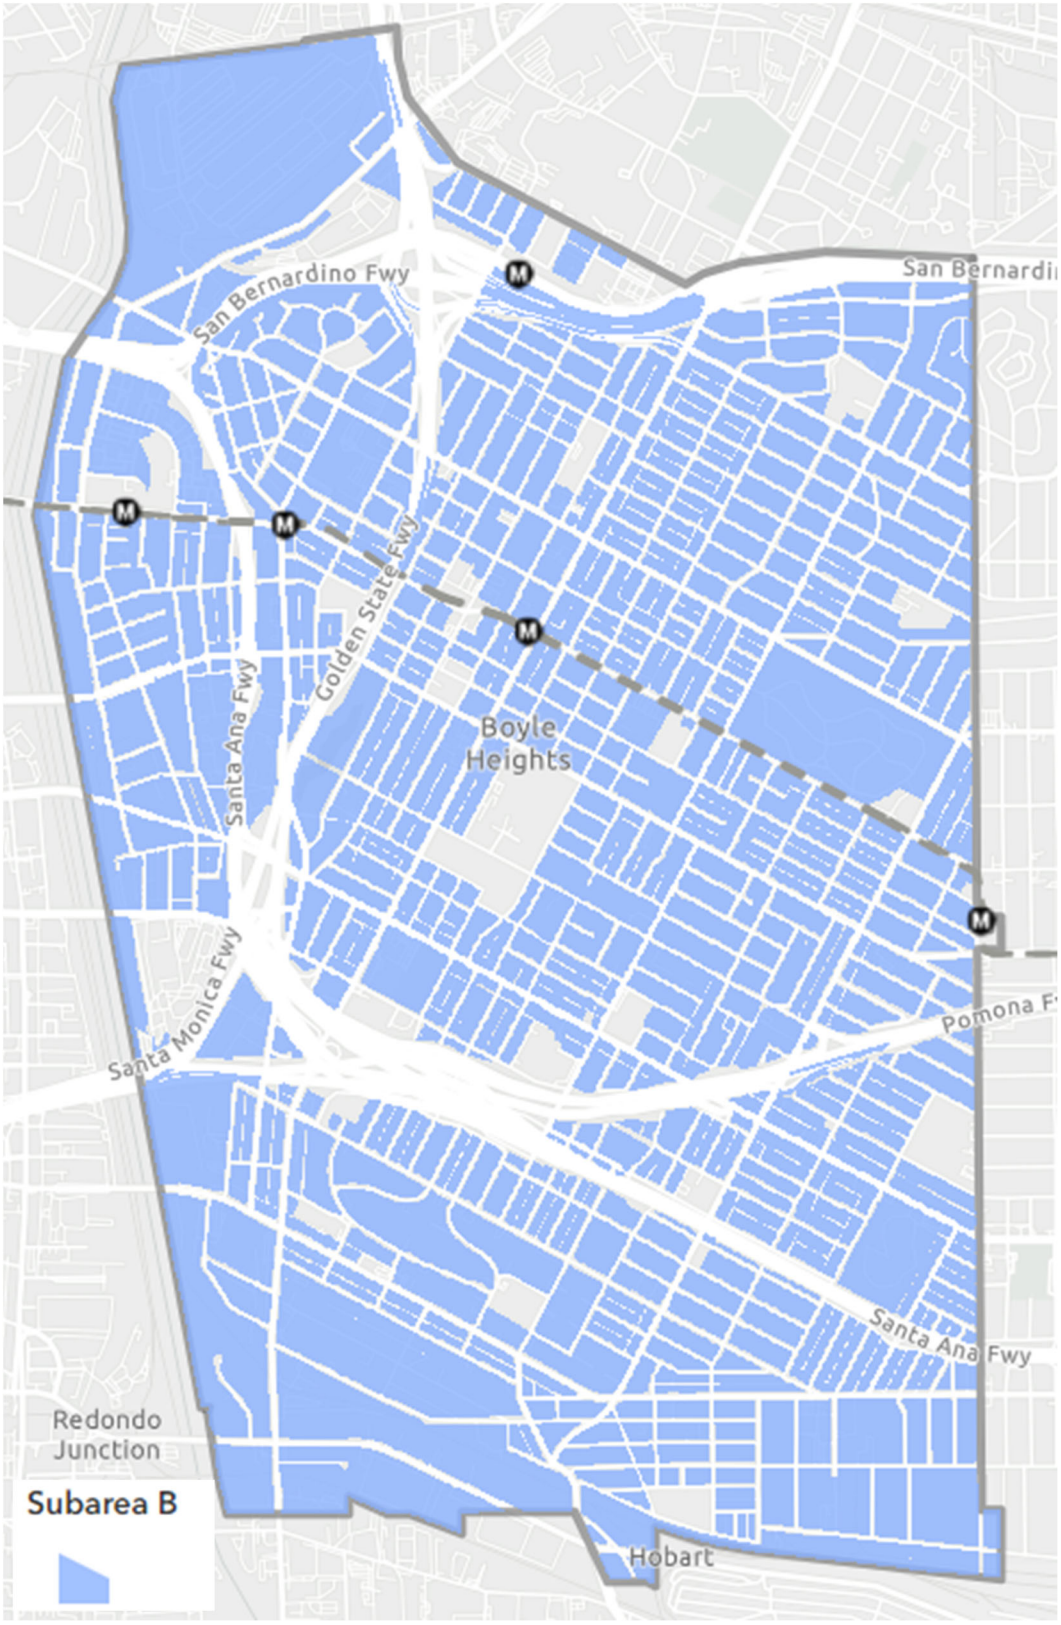

Figure 3. Subarea C – Soil Sampling Subarea

Figure 4. Subarea D – Public Lands

Section I-2. PURPOSE

The purposes of the Boyle Heights CPIO District are as follows:

I. To implement the goals and policies of the Boyle Heights Community Plan.

II. To create development incentives that facilitate the production of affordable housing and are tailored to the neighborhood context.

III. To encourage mixed-income and affordable housing development and minimize potential residential displacement.

IV. To create approval processes, including a ministerial administrative clearance process, which enables mixed-income housing infill development that will positively impact communities in conformance with these regulations.

V. To preserve and protect neighborhood identity, including protecting cultural and historic resources and distinctive character defining elements of existing urban form.

VI. To ensure safe ground disturbance practices in areas where soil contaminants may exist.

Section I-3. SUBAREAS

The Boyle Heights CPIO District contains four Subareas as shown on Figures 1-4 and as precisely delineated by solid boundary lines on the CPIO District Boundary Maps, attached to the ordinance establishing the Boyle Heights CPIO District. The Subareas consist of contiguous or non-contiguous parcels characterized by common overarching Community Plan themes, goals, and policies, and are grouped by a common boundary. The Subareas are described below.

Community Benefits Program Subarea A

The Community Benefits Program (CBP) Subarea A applies to areas within Boyle Heights that allow multi-unit residential development. Subarea A strives to introduce more affordable housing development wherever multi-unit residential development is allowed. This Subarea includes an incentive structure that prioritizes mixed-income and 100 percent affordable housing. Within the Subarea, unique zones tailor the incentives to the surrounding context, offering greater intensities of height, FAR, and density around fixed rail transit stations and bus corridors.

Historic Resources Subarea B

The purpose of this subarea, which includes neighborhoods that have an abundance of historically and architecturally significant buildings, is to guide the ongoing maintenance and rehabilitation of these structures through an additional level of review.

Soil Sampling Subarea C

The purpose of this subarea, which includes the entirety of the Community Plan Area, is to ensure that soil contaminants are identified and mitigated prior to ground disturbance.

Public Lands Subarea D

The purpose of Subarea D is to support development of community serving uses and affordable housing on publicly owned land.

Section I-4. DEFINTIONS

100 Percent Affordable Housing. A project in which 100 percent of the residential dwelling units, excluding any manager unit(s), are Restricted Affordable Units as defined by the LAMC Chapter 1A.

Demolition. Throughout the CPIO, site activities that constitute Demolition are defined and determined by the Department of Building and Safety. For the purpose of implementing Chapter III, site activities that include the removal of building components, such that only exterior walls remain is considered Demolition.

Eligible Historic Resources. A building, structure, object, site, landscape, or natural feature identified as an individual resource or as a contributor to a historic district under a local, state or federal designation program; or identified as a contributor to an eligible historic district through SurveyLA (The Los Angeles Historic Resources Survey), or another historical resource survey, completed subsequent to the effective date of the CPIO, and completed by a person meeting the Secretary of the Interior's Professional Qualification Standards for Historic Preservation and accepted as complete by the Director, in consultation with the Office of Historic Resources (OHR). This term does not include a non-contributor to an eligible historic district.

Mixed-income Housing. A project comprising a mix of market-rate and Restricted Affordable Units.

Project. Within Subarea A, a “Project” shall mean any construction, erection, alteration of, or addition to a structure that would exceed the Base Floor Area and Base Height allowances authorized under the subject site’s Form District.

Within Subarea B, a “Project” shall mean any activity that requires the issuance of a building, grading, demolition, or change of use permit on any site that is an Eligible Historic Resource, unless the work consists solely of interior work such as tenant improvements or interior rehabilitation/repair.

Within Subarea C, a “Project” shall mean any activity that involves ground disturbance or requires a grading or excavation permit.

Within Subarea D, a “Project” shall mean any new construction located on a publicly owned lot that requests a transfer of floor area to transfer unused permitted floor area to another legally defined lot located within Subarea D.

Within all Subareas, a “Project” shall also mean the demolition of any habitable structure pursuant to Section I-6.C.4 of this CPIO.

Rehabilitation. The act or process of returning a property to a state of utility, through repair or Alteration, which makes possible an efficient contemporary use while preserving those portions or features of the property which are significant to its Historical, architectural and Cultural values.

Restoration. The act or process of accurately recovering the form, features and details of a property as it appeared at a particular period of time by means of the removal of later work or by the replacement of missing earlier work.

Restricted Affordable Unit. A Dwelling Unit for which rental amounts are restricted so as to be affordable to and occupied by Extremely-Low, Very-Low, or Lower income households, as determined by the Los Angeles Housing Department or its successor agency.

Section I-5. RELATIONSHIP TO OTHER ZONING REGULATIONS

A. For properties within the boundaries of the Boyle Heights Community Plan, the Citywide Transit Oriented Communities Guidelines (TOC) shall be superseded by the provisions and requirements contained within this ordinance. The incentives contained within this ordinance and LAMC Ch. 1A Sec. 9.3.1 shall act as the TOC Area for those properties located within a one-half mile radius of a Major Transit Stop, as defined in subsection (b) of Section 21195 of the California Public Resources Code. For properties beyond the one-half mile radius of a Major Transit Stop and outlined in the Subarea map below, the Community Benefits Program is available as an optional incentive program for Eligible Housing Developments.

B. Nothing in the Boyle Heights CPIO District is intended to override or conflict with any regulations in the LAMC or other ordinance establishing a park or Quimby fee or park or open space dedication requirement, including any provisions related to credits or fee and dedication calculations.

C. Projects providing Restricted Affordable Units to fully utilize the Affordable Housing Local Incentive Program shall be considered exempt from the Affordable Housing Linkage Fee.

D. Nothing in this Boyle Heights CPIO District is intended to override or conflict with any regulations in the LAMC that would otherwise require a conditional use permit.

E. Nothing in this Boyle Heights CPIO District is intended to override or conflict with any bicycle parking regulations.

F. Nothing in this Boyle Heights CPIO District is intended to override or conflict with the regulations set forth in LAMC Chapter 1A 9.2.1 that provide bonuses, waivers, and incentives for certain affordable housing projects. Projects that utilize bonuses, waivers, and incentives under LAMC Chapter 1A 9.2.1 shall not be eligible for the provisions contained within this ordinance.

Section I-6. REVIEW PROCEDURES

A. **Prohibition of Issuance of DBS Permits Prior to CPIO Approval**. The Department of Building and Safety (DBS) shall not issue a permit for any Eligible Housing Development within a Boyle Heights CPIO subarea (in whole, or in part), that seeks to utilize the bonuses, waivers, and incentives contained herein, unless the Project has been reviewed and approved in accordance with this Section I-6.

B. **CPIO Approval**. All Projects within a Boyle Heights CPIO District Subarea (in whole or in part) shall obtain an Administrative Clearance to demonstrate compliance with the Boyle Heights CPIO District. Projects within the Boyle Heights CPIO District Subarea A that request only Base Incentives pursuant to LAMC Ch. 1A Sec. 9.3.2.C. shall be considered ministerial and shall not be required to file an application with the Department of City Planning. All Projects within Boyle Heights CPIO District Subarea A that request Additional Incentives under LAMC Ch. 1A Sec. 9.3.2.D shall follow the Procedures in Sec. 9.2.1.1.G.2. An application for a CPIO Approval shall be reviewed and approved pursuant to LAMC Section 13B.3.1(Administrative Review), including as its requirements are modified and supplemented below:

1. **Content of Application for a CPIO Approval**. An applicant shall provide, at a minimum, two sets of detailed permit drawings and any other exhibits deemed necessary to demonstrate compliance with all applicable provisions of the CPIO District.

2. **Administrative Clearance**.

   a. **Director Approval**. The Director shall grant an Administrative Clearance after reviewing the Project and finding that it is in compliance with all applicable provisions of the Boyle Heights CPIO District as indicated by a plan stamped by the Department of City Planning.

   b. **Non-Appealable Ministerial Approval**. The approval of an Administrative Clearance is not subject to appeal and is not discretionary for purposes of CEQA Guidelines Sections 15060(c)(1) and 15268.

3. **Director's Determination**. In addition to the requirements in Section I-6 C.2 above, and LAMC Chapter 1A Section 13.4.5, Projects subject to Subarea B shall file for a Director's Determination. The Director or the Director's designee shall have initial decision-making authority to grant a CPIO Director's Determination, with an appeal to the Area Planning Commission in accordance with the procedures set forth in LAMC Chapter 1A Section 13.4.5.

4. **CPIO Approval Compliance**. No demolition permit shall be issued for any Project unless building permits for a replacement development on the site have been issued, and any necessary land use entitlements have been granted.

   a. Notwithstanding the above this prohibition shall not apply to any structure deemed hazardous by the Department of Building and Safety.

   b. Furthermore, this prohibition shall not apply to structures that are considered uninhabitable.

Section I-7. ENVIRONMENTAL STANDARDS PROCEDURES

The Environmental Standards in Appendix A are included in the Boyle Heights CPIO District to implement the Mitigation & Monitoring Program included as part of the Boyle Heights Community Plan update and reviewed in the City of Los Angeles Boyle Heights Community Plan Environmental Impact Report (Case No. ENV-2016-2906-EIR), certified on XX, XX, XXXX.

Any Project subject to discretionary review within the CPIO Boundaries shall comply with

all applicable Environmental Standards as set forth in Appendix A, subject to the following rules.

A. **Applicability of Environmental Standards**. A Project does not need to comply with any Environmental Standard that is not relevant to the scope of activities involved with the Project. For example, a Project that proposes only minor façade alterations and no grading shall not be subject to Environmental Standards that apply to grading activities (such as noise and vibration standards). The decision maker, in his or her reasonable discretion, shall determine those Environmental Standards that apply to a particular Project.

B. **Plans**. Compliance with all applicable Environmental Standards listed in Appendix A shall be demonstrated on the plans as project features (that is, features that are physically built into the Project such as an air filtration system) or as operational features on a sheet within the plans (that is, features that are carried out either during the construction of the Project, or over the life of the project, such as the use of paints, sealants, and other building materials that yield low air pollutants).

C. **Modification of Environmental Standards**. Modifications of Environmental Standards do not require the processing of a CPIO Adjustment or CPIO Exception. The Director (or appeal body on appeal) may modify or not require an Environmental Standard listed in Appendix A for any Project when: (1) the Director finds in writing, based upon substantial evidence, the Environmental Standard is not necessary to mitigate an impact, including because of the existence of a similar or more effective regulation that applies to the Project; (2) the City complies with CEQA Guidelines, Section 15162, including by preparing an addendum or subsequent environmental clearance to the Boyle Heights Community Plan EIR to analyze the impacts from the modifications to the Environmental Standards; or (3) the City prepares a new CEQA clearance for the Project. No CPIO Approval shall be issued for a Project with a modified Environmental Standard until this subsection has been complied with. The modification of an Environmental Standard is not independently appealable unless an appeal of an entitlement or CEQA determination is otherwise available through this CPIO District, the LAMC, or CEQA.

Section I-8. CEQA CLEARANCE

For purposes of CEQA compliance for subsequent projects approved with a CPIO Approval, including, but not limited to, consideration of a CEQA clearance pursuant to Government Code Section 65457, Public Resources Code Section 21155.4; or CEQA Guidelines, Sections 15183 or 15183.3, the Boyle Heights CPIO District shall operate and be treated as a specific plan, zoning ordinance, and a prior plan level decision for which and EIR was certified.

Section I-9. SEVERABILITY

If any portion, subsection, sentence, clause or phrase of this ordinance is for any reason held by a court of competent jurisdiction to be invalid, such a decision shall not affect the validity of the remaining portions of this ordinance. The City Council hereby declares that it would have passed this ordinance and each portion or subsection, sentence, clause and phrase herein, irrespective of the fact that any one or more portions, subsections, sentences, clauses or phrases be declared invalid.

CHAPTER II – COMMUNITY BENEFITS PROGRAM SUBAREA

COMMUNITY BENEFITS PROGRAM SUBAREA

A – BOYLE HEIGHTS COMMUNITY BENEFITS PROGRAM SUBAREA A

OVERVIEW

The Community Benefits Program (CBP) Subarea, shown on Figure I, strives to introduce more affordable housing development throughout the Plan Area. This Subarea includes a tiered incentive structure that prioritizes mixed-income and 100 percent affordable housing and seeks to ensure replacement units on the project site. Within the Subarea, unique zones tailor the incentives to the surrounding context, offering greater height, FAR, and density incentives around fixed rail transit stations and bus corridors.

Section II. LOCAL AFFORDABLE HOUSING INCENTIVE PROGRAM

II – 1. For properties within the boundaries of the Boyle Heights Community Plan, where this CPIO District applies, optional development incentives are available for Eligible Housing Developments that meet the requirements outlined in LAMC Ch. 1A Sec. 9.3.1. Within the boundaries of the Boyle Heights Community Plan, the Citywide Transit Oriented Communities (TOC) Guidelines shall be superseded by the provisions and requirements contained within this ordinance.

II – 2. ELIGIBILITY. A Housing Development shall be eligible for Local Affordable Housing Incentives Pursuant to Sec. 9.3.2. within Subarea A of the CPIO if it meets all of the following requirements:

1. **On-Site Restricted Affordable Units**. Within the boundaries of the Boyle Heights CPIO District Community Benefits Program Subarea A, a Housing Development shall provide On-Site Restricted Affordable Units at levels outlined in **Set B** of LAMC Ch. 1A 9.3.2. The minimum number of On-Site Restricted Affordable Units shall be calculated based upon the total number of units in the final project.

2. **Dwelling Unit Mix and Location**. For projects located in Subarea A, a minimum of 30% of the dwelling units for an Eligible Housing Development shall be two bedrooms or larger, and HCID shall determine the location of the restricted affordable units within the development.

II – 3. Base Incentives. An Eligible Housing Development that meets the requirements outlined in Section II. above shall be eligible for the Base Incentives for **Set B** established in LAMC Ch. 1A 9.3.2.C. Projects utilizing Base Incentives only shall follow the procedures in Section I-6.C. of this ordinance.

1. For properties located within Subarea A, a Housing Development shall be eligible for a 75% decrease in the required parking for residential uses, as outlined in Ch. 1A 9.3.2.C.4.a.

II – 4. Additional Incentives. In addition to the applicable Base Incentives, an Eligible Housing Development that meets the requirements outlined in Section II. above may be granted up to three (3) of the additional incentives listed in LAMC Ch. 1A 9.3.2.D by following the procedures in LAMC Ch. 1A 9.3.3.D

CHAPTER III – HISTORIC PRESERVATION SUBAREA

HISTORIC PRESERVATION SUBAREA

B – HISTORIC PRESERVATION SUBAREA B

OVERVIEW

The purpose of this subarea, which includes neighborhoods that have an abundance of historically and architecturally significant buildings, is to maintain the eligibility of individual historic resources and historic districts, and guide the ongoing maintenance and rehabilitation of these structures.

III – 1. Eligible Historic Resource Evaluation. Prior to any other CPIO Approval being issued, a Project in this subarea that involves an Eligible Historic Resource shall comply with the following review procedures:

A. Non-Demolitions. For any Project that does not involve the demolition of an Eligible Historic Resource, no CPIO Approval shall be issued until one of the following occurs:

i. The Director, in consultation with the Office of Historic Resources, determines, based upon substantial evidence, that the Eligible Historic Resource is not an historical resource, as defined by Public Resources Code Section 21084.1; or,

ii. The Director, in consultation with the Office of Historic Resources, determines, based upon substantial evidence, that the Project is consistent with the Secretary of Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings; or,

iii. A Director's Determination pursuant to Section I-6.C.3 of this CPIO, and Environmental review in compliance with CEQA was completed for the Project, including if necessary, the adoption of a statement of overriding considerations.

B. Demolitions. For any Project that involves the demolition of an Eligible Historic Resource, no CPIO Approval shall be issued until one of the following occurs:

i. The Director, in consultation with the Office of Historic Resources, determines, based upon substantial evidence, that the Eligible

Historic Resource is not an historical resource, as defined by Public Resources Code Section 21084.1; or

ii. A Director's Determination pursuant to Section I-6.C.3 of this CPIO, and, Environmental review in compliance with CEQA was completed on the Project, including if necessary, the adoption of a statement of overriding considerations.

a. No Director's Determination shall be issued for Demolition or removal of any building or structure, within a National Register Historic District, within Subarea B, that is designated as a Contributing Element, and the application shall be denied unless the Owner can demonstrate to the Director that the owner would be deprived of all economically viable use of the property. In making its determination, the Director shall consider any evidence presented concerning the following:

1. An opinion regarding the structural soundness of the structure and its suitability for continued use, renovation, Restoration or Rehabilitation from a licensed engineer or architect who meets the Secretary of the Interior's Professional Qualification Standards as established by the Code of Federal Regulation, 36 CFR Part 61. This opinion shall be based on the Secretary of the Interior's Standards for Architectural and Engineering Documentation with Guidelines;

2. An estimate of the cost of the proposed, demolition, and replacement project and an estimate of the cost that would be incurred to execute a Secretary of the Interior's Standards for Rehabilitation alternative to the project, as identified in a Project Environmental Impact Report (EIR), or in the absence of an EIR, when appropriate under CEQA, as identified by the Director of Planning in consultation with the Cultural Heritage Commission or its designee;

3. An estimate of the market value of the property in its current condition; after completion of the proposed Demolition and replacement project; and after any expenditure necessary to execute a Secretary of the Interior's Standards for

Rehabilitation alternative to the project, as identified in a Project Environmental Impact Report (EIR), or in the absence of an EIR, when appropriate under CEQA, as identified by the Director of Planning in consultation with the Cultural Heritage Commission or its designee;

4. An estimate from architects, developers, real estate consultants, appraisers, or other real estate professionals experienced in Rehabilitation as to the economic feasibility of Restoration, renovation or Rehabilitation of any existing structure or objects. This shall include tax incentives and any special funding sources, or government incentives which may be available.

C. CEQA Review for Eligible Historic Resources. In complying with this Section III-I, if at any time the Director, in consultation with the Office of Historic Resources, determines the Eligible Historic Resource is not a historical resource as defined by Public Resources Code Section 21084.1, approval of the Project (involving no other discretionary approvals) shall be a ministerial approval for purposes of CEQA, including CEQA Guidelines, Section 15268.

CHAPTER IV – SOIL SAMPLING SUBAREA

SOIL SAMPLING SUBAREA

C – Soil Sampling Subarea C

OVERVIEW

The purpose of Subarea C is to facilitate cleanup of contaminated soils and minimize public health risk by requiring soil sampling for projects that include ground disturbance. Any project within this Subarea is subject to soil sampling prior to ground disturbance to reduce health impacts to Boyle Heights residents.

IV – 1. Eligibility. Any project conducting excavation, grading, or other types of ground or soil disturbance must conduct a soil test to determine if elevated levels of lead or arsenic are present.

IV – 2. Clearance. Prior to building permit issuance, soil test results must be provided to Building & Safety demonstrating that elevated levels of lead or arsenic are not present.

IV – 3. If elevated levels of lead or arsenic are present, the project must comply with any requirements from LADBS and coordinate with other agencies as necessary.

CHAPTER V – PUBLIC LANDS SUBAREA

PUBLIC LANDS DEVELOPMENT STANDARDS SUBAREA

D – Public Lands Development Standards Subarea D

OVERVIEW

The purpose of **Subarea D** is to regulate development on publicly owned lands and allow for floor area to be transferred between publicly-owned properties in the Community Plan Area, to support and facilitate public serving uses and affordable housing.

V – 1. Transfer of Floor Area. Any owner(s) of a legally defined lot located within Subarea D may transfer unused permitted floor area to another legally defined lot within Subarea D, pursuant to the procedures of this section.

A. Floor Area. Total floor area in the Public Lands Subarea D shall not exceed 3.0:1 FAR and no individual site shall exceed 4.0:1 FAR through a transfer of floor area.

B. Limitation. Any project constructed with transferred floor area must comply with all regulations set forth in this Subarea.

C. Procedures. Projects seeking the transfer of unused permitted floor area, within the floor area cap, shall apply for an Administrative Clearance pursuant to the provisions of Section I-6 C.2 of this CPIO.

Chapter VI – Mandatory Inclusionary Zoning Subarea

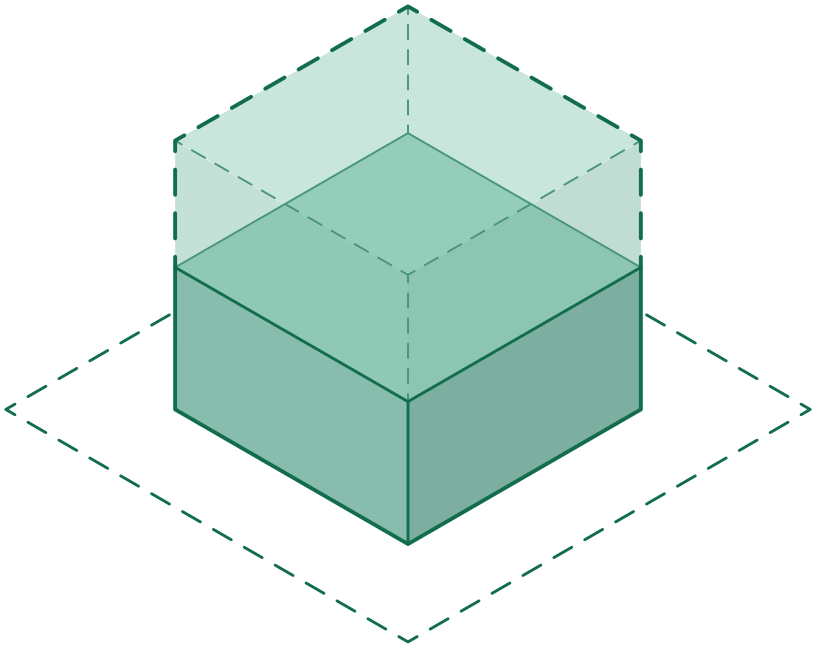
MANDATORY INCLUSIONARY ZONING SUBAREA

E – Mandatory Inclusionary Zoning Subarea E

[RESERVED]

APPENDIX A – ENVIRONMENTAL STANDARDS

OVERVIEW



As described in Section I-7 of the CPIO District, these Environmental Standards are included to implement the Mitigation & Monitoring Program included as part of the Boyle Heights Community Plan update and reviewed in the Boyle Heights Environmental Impact Report (Case No. ENV-2016-2906-EIR), certified by the City Council.

In addition to Projects in Subareas that are required to comply with these Environmental Standards, any other discretionary project in the boundaries of the Boyle Heights Community Plan Area that seeks to rely on the Boyle Heights EIR for its CEQA clearance (including through tiering, preparing an addendum, supplemental EIR or a statutory infill exemption), may incorporate or impose the following Environmental Standards on the project. Compliance may be achieved through covenant, conditions, plan notations, or other means determined reasonably effective by the Director of Planning or the decision-maker.

DIV. 2A.1. ORIENTATION

SEC. 2A.1.1. RELATIONSHIP TO ZONE STRING

A zone string is composed of the following districts:

The Form District is a separate and independent component of each zone.

SEC. 2A.1.2. HOW TO USE ARTICLE 2 (FORM)

A. Identify the Applied Form District

The first component in a zone string identifies the Form District applied to a property.

B. Form District Standards

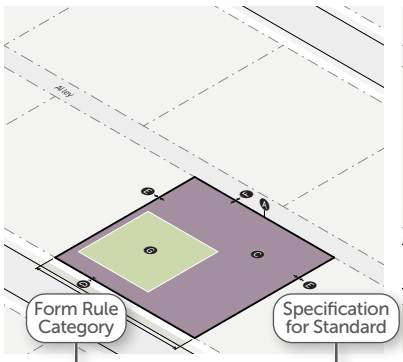
Form Districts standards are outlined in *Part 2B. (Form Districts)*. Each Form District page identifies the standards specific to that Form District.

C. Interpreting Form District Standards

Each standard on a Form District page in *Part 2B. (Form Districts)* provides a reference to *Part 2C. (Form Rules)* where the standard is explained in detail.

Form District Example:

Zone String



[LM2-MU2-5] [RG1-FA]

Form Standard

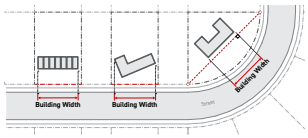
DIV. 2C.6. **BUILDING MASS**

SEC. 2C.6.1. **BUILDING WIDTH**

The maximum allowed width of any building or collection of buildings on a on a lot.

A. **Intent**



To promote fine-grained patterns of development and prevent long buildings that are significantly out of context with traditional patterns, by breaking wide buildings into multiple, clearly distinguished building widths and encourage larger projects to provide open space for pedestrians and recreation.

B. **Applicability**

1. Building width requirements apply to all frontage lot line-facing buildings or structures on a lot.
2. Building width requirements apply only to portions of buildings or structures located above the ground floor elevation
3. Building width requirements do not apply to exceptions listed in Sec. 2C.6.3.F (Exceptions).

C. **Measurement**

Building width is measured horizontally and parallel to each street lot line from one end of a an applicable building or collection of buildings to the opposite end.

SEC. 2A.1.3. FORM DISTRICT GRAPHICS

A. General

Illustrations and graphics are included in Article 2 (Form) only to assist users in understanding the intent and requirements of the text. In the event a conflict occurs between the text of Article 2 (Form) and any illustration or graphic, the text prevails.

B. Lot Parameter Graphics

1. Lot Boundary

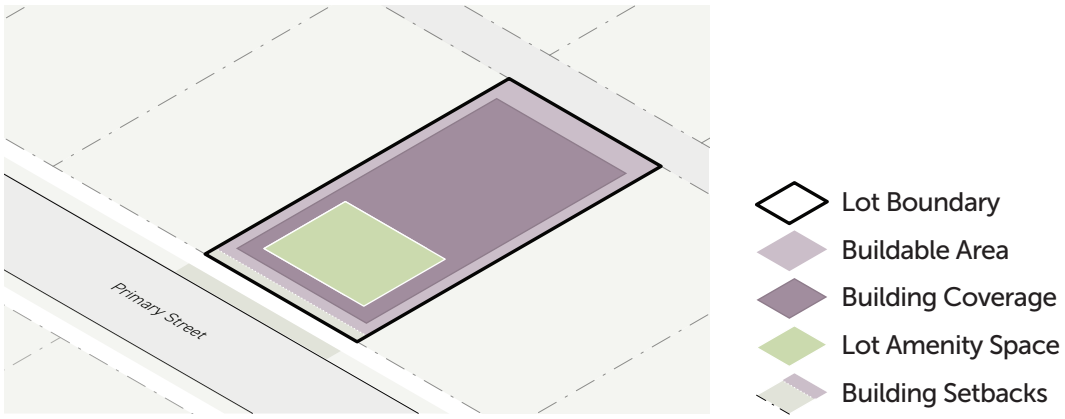
This line represents the perimeter of the subject lot, serving as a reference for both lot area and lot width.

2. Buildable Area

This shape represents the area on a lot where buildings are allowed, reduced by required building setbacks, or the lot boundary when no setback is required.

3. Building Setbacks

The area between a lot boundary and the minimum required setback, represented with a dotted white line and bounded by the buildable area.



4. Building Coverage

This shape represents the total building coverage allowed in proportion to the lot area, but does not reflect any requirement as to the location or configuration of any buildings or structures.

5. Lot Amenity Space

This shape represents the total lot amenity space required in proportion to the lot area, but does not reflect any requirement as to the location or configuration of any amenity space.

LOT PARAMETER DIAGRAM

C. Bulk and Mass Graphics

1. General

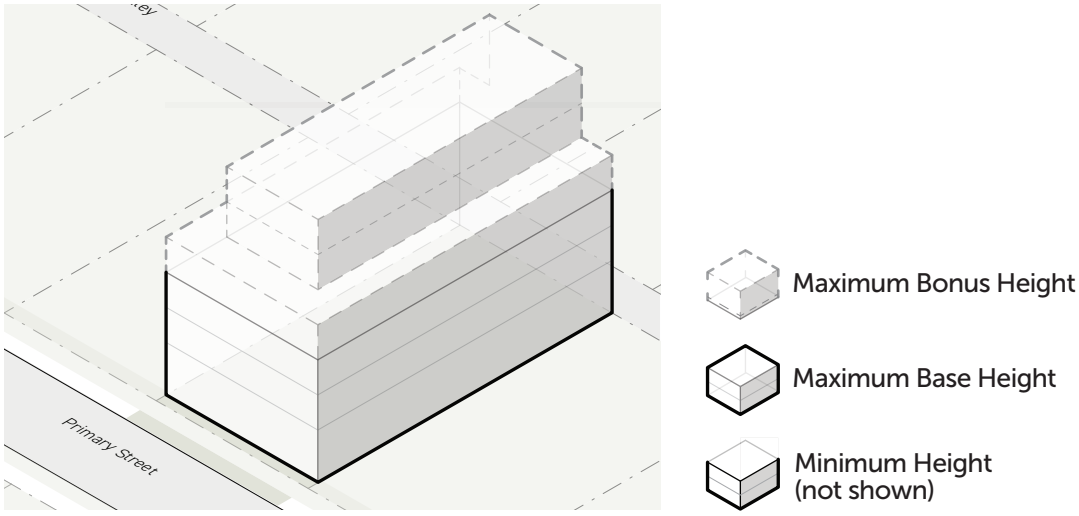
a. Bulk and mass graphics represent the volume where a building is allowed to be located by showing the maximum height allowed for the entire buildable area. The volume does not represent the massing of an allowed building. Other standards, such as maximum building coverage and floor area ratio (FAR), may limit the ability for a building to fill the full volume.

b. Form Districts that include a maximum height standard and those that do not include a height limit are represented differently in the bulk and mass diagram.

2. Districts with a Maximum Height Standard

a. Maximum Bonus Height

Maximum bonus height represents the maximum number of stories allowed beyond the number of stories allowed by the maximum base height in stories.



b. Maximum Base Height

Maximum base height represents the number of stories allowed without providing public benefits in trade for additional height according to *Article 9 (Public Benefit Systems)*.

c. Minimum Height

Minimum height represents the lowest number of stories required.

BULK & MASS DIAGRAM - DISTRICT WITH MAXIMUM HEIGHT

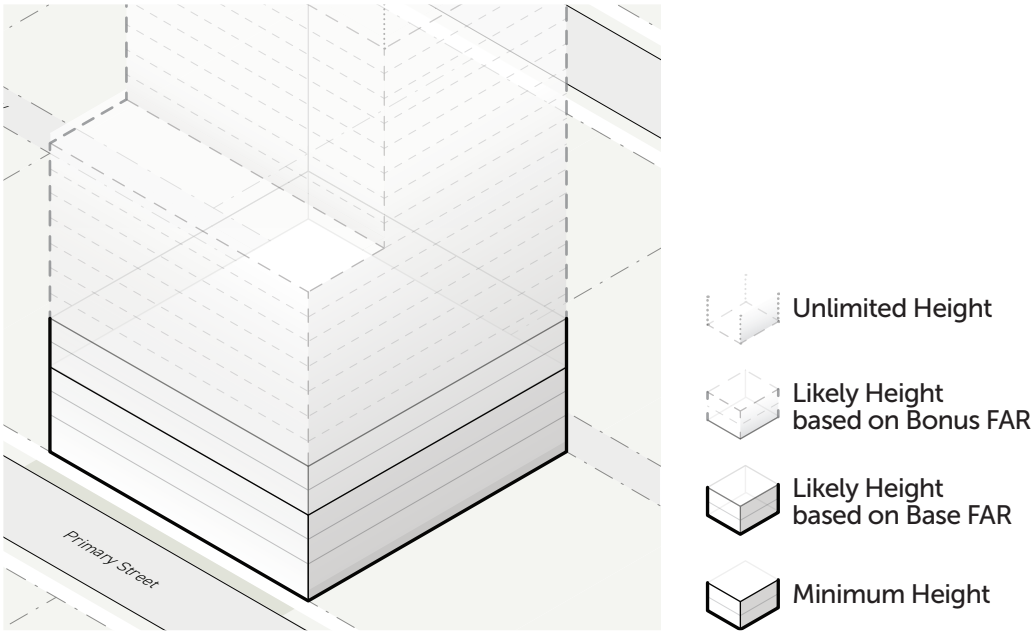
3. Districts with no Maximum Height Standard

a. Unlimited Height

This volume represents the building height allowed, in addition to the likely height of the building based on maximum Base FAR.

b. Likely Height Based on Bonus FAR

This volume represents the likely building height based on the maximum allowed Bonus FAR, in addition to the likely height of the building based on maximum Base FAR.



c. Likely Height Based on Base FAR

This volume represents the likely building height based on the maximum allowed Base FAR, in addition to the minimum required height of the building.

d. Minimum Height

This volume represents the minimum number of stories required.

BULK & MASS DIAGRAM - DISTRICT WITHOUT HEIGHT LIMIT

SEC. 2A.1.4. FORM DISTRICT NAMING CONVENTION

There are three different types of naming conventions for Form Districts. Each Form District name is composed of a variety of components that are specific to that district.

A. Rural and Estate Form Districts

[Reserved]

B. House Form Districts

[Reserved]

C. All Other Form Districts

All other Form District names are composed of three components:

1. FAR Category

The first component of each Form District name is a floor area ratio (FAR) category. FAR categories group all districts within a range of maximum allowed FAR. FAR categories are organized as follows:

a. Very Low-Rise (>0.65-1.5 FAR)

b. Low-Rise (>1.5-4.0 FAR)

c. Mid-Rise (>4.0-6.0 FAR)

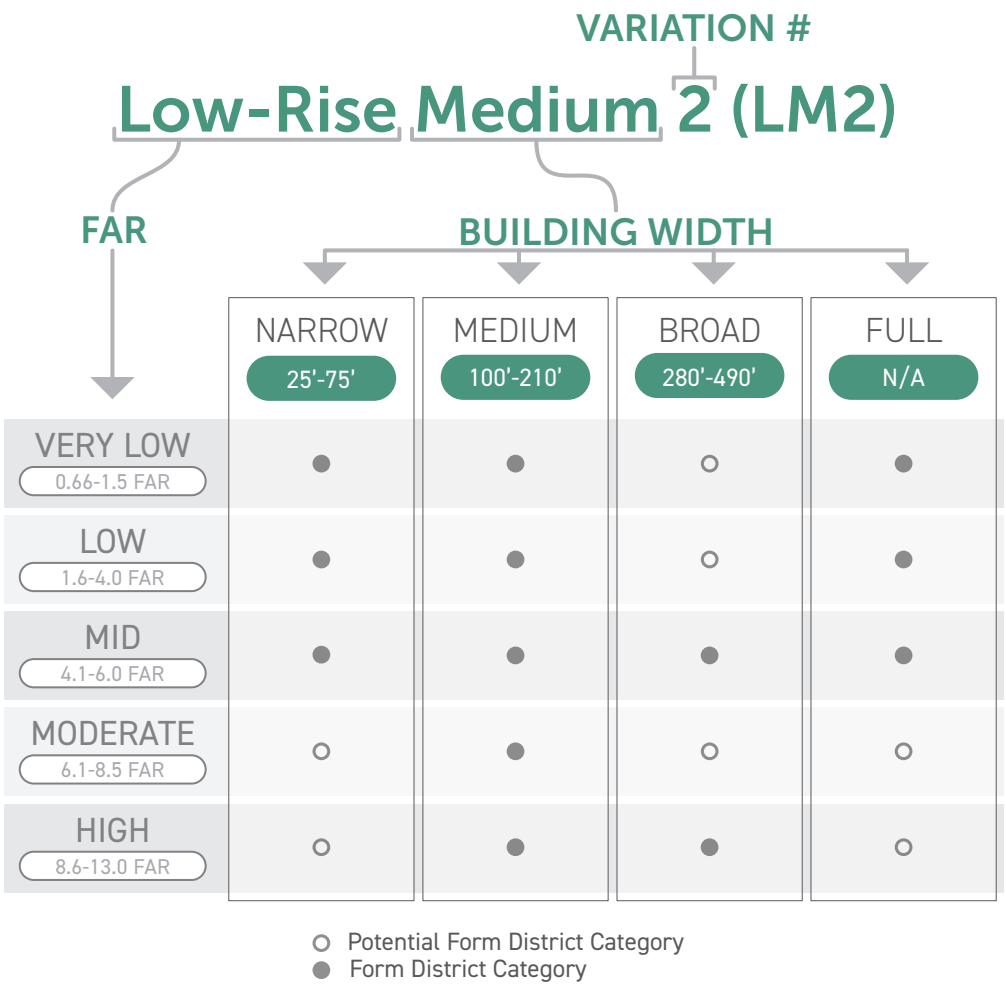
d. Moderate-Rise (>6.0-8.5 FAR)

e. High-Rise (>8.5-13.0 FAR)

2. Building Width Category

The second component of each Form District name is a building width category. Building Width categories group all districts within a range of maximum allowed building width. Each building width category are organized as follows:

a. Narrow (25'-75')



b. Medium (100'-210')

c. Broad (280'-490')

d. Full (no building width maximum)

3. Variation Number

The last component of each Form District is a variation number. All Form Districts are numbered in the order they fall within Article 2 (Form).

VARIATION #

DIV. 2A.2. OPENING PROVISIONS

SEC. 2A.2.1. FORM INTENT

The intent of Article 2 (Form) is to regulate the placement, scale, and intensity of buildings and structures on a lot in order to ensure building forms are compatible with their context and promote projects that support community goals.

SEC. 2A.2.2. FORM APPLICABILITY

A. General

All projects filed after the effective date of this Zoning Code (Chapter 1A.) shall comply with the Form District standards in Article 2 (Form), as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Project Activities

1. Categories of Form rules apply to a projects based on what types of project activities are proposed, as shown in the table below. Typically, more than one project activity will apply to a proposed project (for example, an addition that expands an existing use includes both new construction and a use modification).

FORM RULE CATEGORIES		PROJECT ACTIVITIES: New Construction	Major Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 2C.1.	Lot Size	○	○	●	○	○	○	○	○	○
Div. 2C.2.	Coverage	●	○	●	○	○	○	○	○	○
Div. 2C.3.	Amenity	●	○	●	●	○	●	○	○	○
Div. 2C.4.	Floor Area Ratio & Height	●	●	●	○	○	○	○	○	○
Div. 2C.5.	Upper-Story Bulk	●	●	○	○	○	○	○	○	○
Div. 2C.6.	Building Mass	●	○	○	○	○	○	○	○	○

● = Rules generally apply to this project activity
○ = Rules are not applicable

2. Project activities are defined in *Sec. 14.1.15. (Project Activities)*.

3. Where a category of Form rules are listed as generally applicable in the table above, and the applied *Form District (Part 2B)* provides standards in that Form rule category, the project activity shall meet all applicable Form standards within that Division. This general applicability

may be further specified for each standard in the applicability provisions in *Part 2C. (Form Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a category of Form rules is listed as not applicable in the table above, no standards from that Form rule category apply to the project activity.

C. Applicable Components of Lots, Buildings, and Structures

1. Form Districts apply to all portions of a lot.
2. Form Districts apply to all portions of buildings and structures on a lot.
3. Specific Form standards and rules may further limit which components of buildings, structures and lots are required to comply with the rules in *Part 2C. (Form Rules)*.

D. Nonconformity

Article 12. (Nonconformity) provides relief from the requirements of Article 2 (Form) for existing lots, site improvements, buildings, structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current district standards or use permissions. No project activity may decrease conformance with any Form District standard unless otherwise specified by *Division 12.2. (Form)*. Consider the following examples:

1. An addition to the side of an existing building: Where a proposed addition increases the total building width beyond the maximum building width allowed by the applied Form District, the addition is not allowed.
2. An addition to the top of an existing building: Where the height of the existing structure does not meet the street step-back standard specified by the applied Form District, all additional floor area shall be located behind the minimum step-back, but no modifications to the existing upper stories are required.

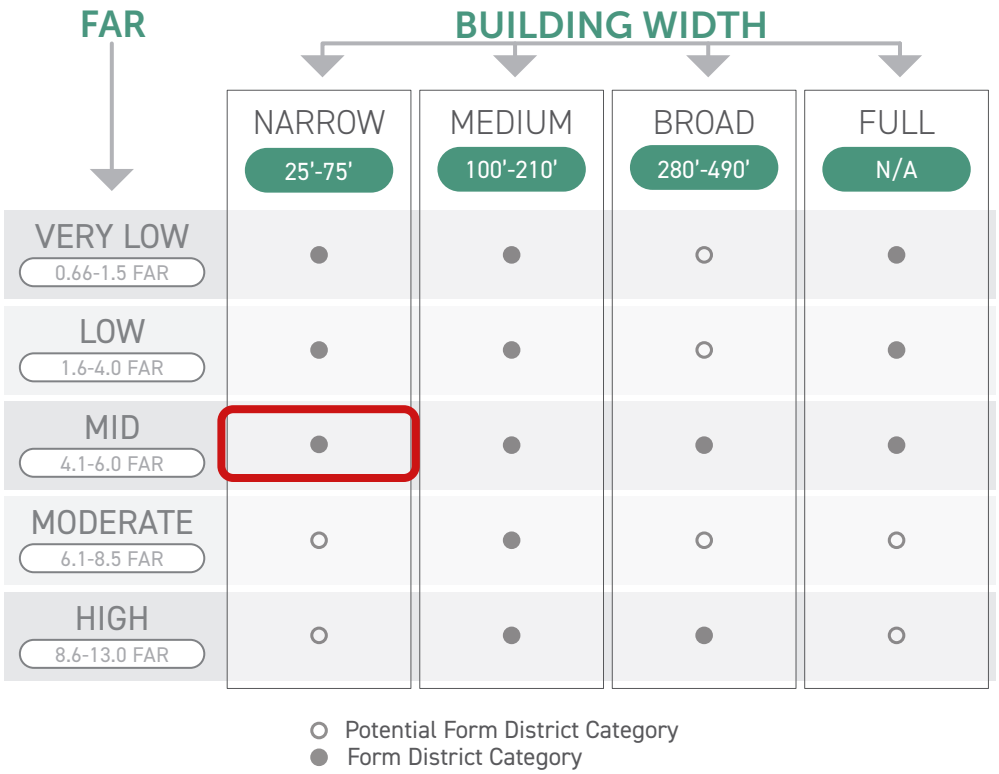
DIV. 2B.10. LOW-RISE BROAD FORM DISTRICTS

[Reserved]

DIV. 2B.11. LOW-RISE FULL FORM DISTRICTS

Each Low-Rise Full Form District occurs within the ranges specified below. The "Low" FAR category allows a range of 1.6 FAR to 4.0 FAR. The "Full" building width category has no maximum building width for the district.

SEC. 2B.11.1. LOW-RISE FULL 1 (LF1)



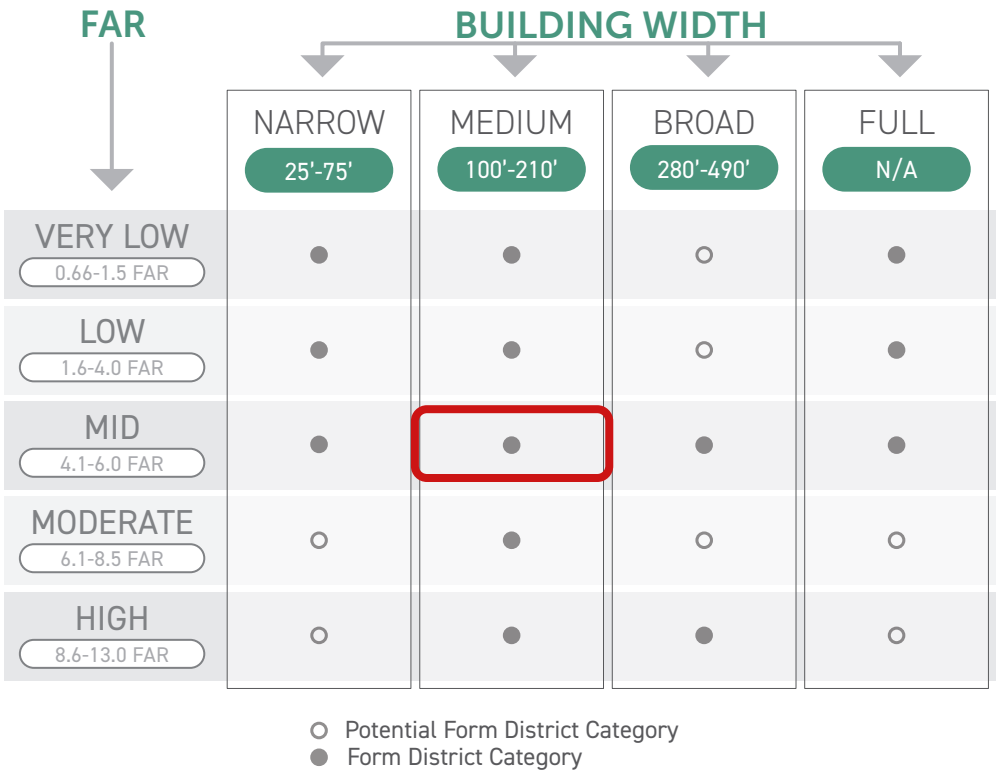
[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.11.2. LOW-RISE FULL 2 (LF2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.12. MID-RISE NARROW FORM DISTRICTS

Each Mid-Rise Narrow Form District occurs within the ranges specified below. The "Mid" FAR category allows a range of 4.1 FAR to 6.0 FAR. The "Narrow" building width category allows a range of 25 to 75 feet of building width.

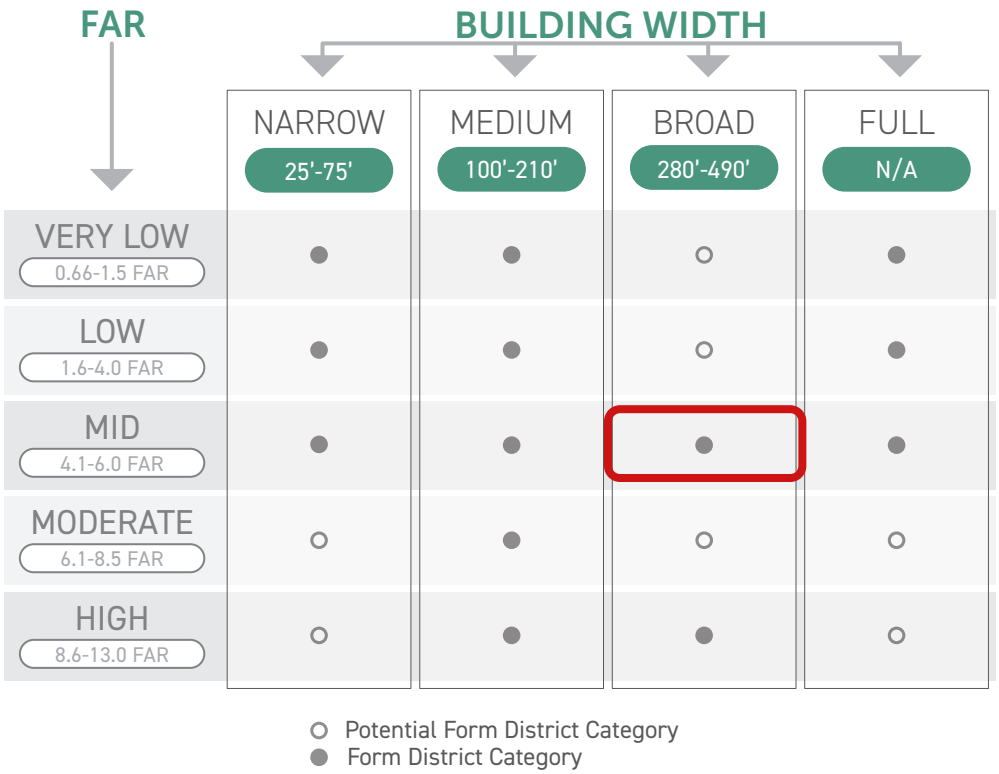


SEC. 2B.12.1. MID-RISE NARROW 1 (MN1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.13. MID-RISE MEDIUM FORM DISTRICTS

Each Mid-Rise Medium Form District occurs within the ranges specified below. The "Mid" FAR category allows a range of 4.1 FAR to 6.0 FAR. The "Medium" building width category allows a range of 100 to 210 feet of building width.



SEC. 2B.13.1. MID-RISE MEDIUM 1 (MM1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.14. MID-RISE BROAD FORM DISTRICTS

Each Mid-Rise Broad Form District occurs within the ranges specified below. The "Mid" FAR category allows a range of 4.1 FAR to 6.0 FAR. The "Broad" building width category allows a range of 280 to 490 feet of building width.

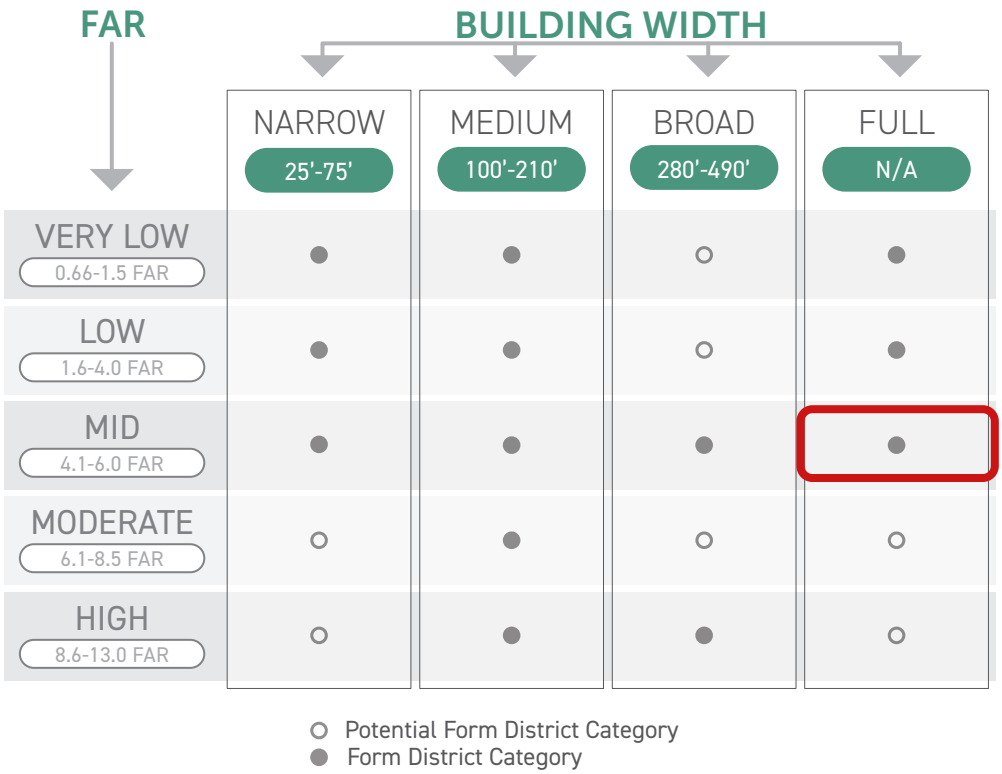
SEC. 2B.14.1. MID-RISE BROAD 1 (MB1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.14.2. MID-RISE BROAD 2 (MB2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.14.3. MID-RISE BROAD 3 (MB3)



[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

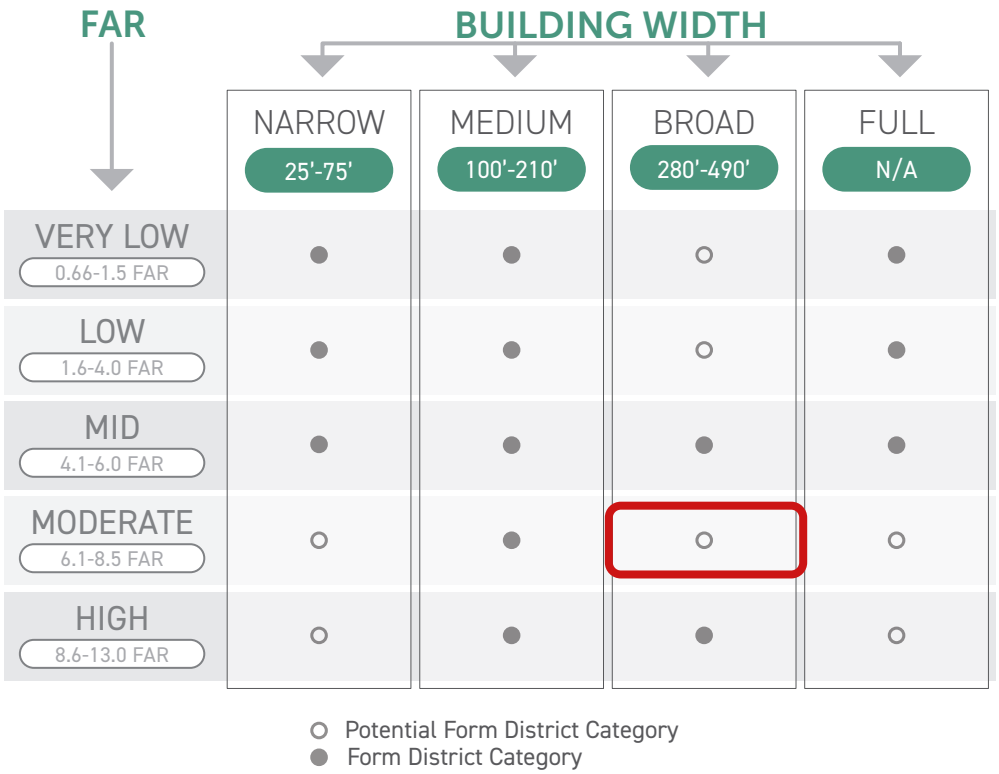
SEC. 2B.14.4. MID-RISE BROAD 4 (MB4)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.15. MID-RISE FULL FORM DISTRICTS

Each Mid-Rise Full Form District occurs within the ranges specified below. The "Mid" FAR category allows a range of 4.1 FAR to 6.0 FAR. The "Full" building width category has no maximum building width for the district.

SEC. 2B.15.1. MID-RISE FULL 1 (MF1)



[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.16. MODERATE-RISE MEDIUM FORM DISTRICTS

[Reserved]

DIV. 2B.17. MODERATE-RISE BROAD FORM DISTRICTS

Each Moderate-Rise Broad Form District occurs within the ranges specified below. The "Moderate" FAR category allows a range of 6.1 FAR to 8.5 FAR. The "Broad" building width category allows a range of 280 to 490 feet of building width.

SEC. 2B.17.1. MODERATE-RISE MEDIUM 1 (DM1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.17.2. MODERATE-RISE MEDIUM 2 (DM2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

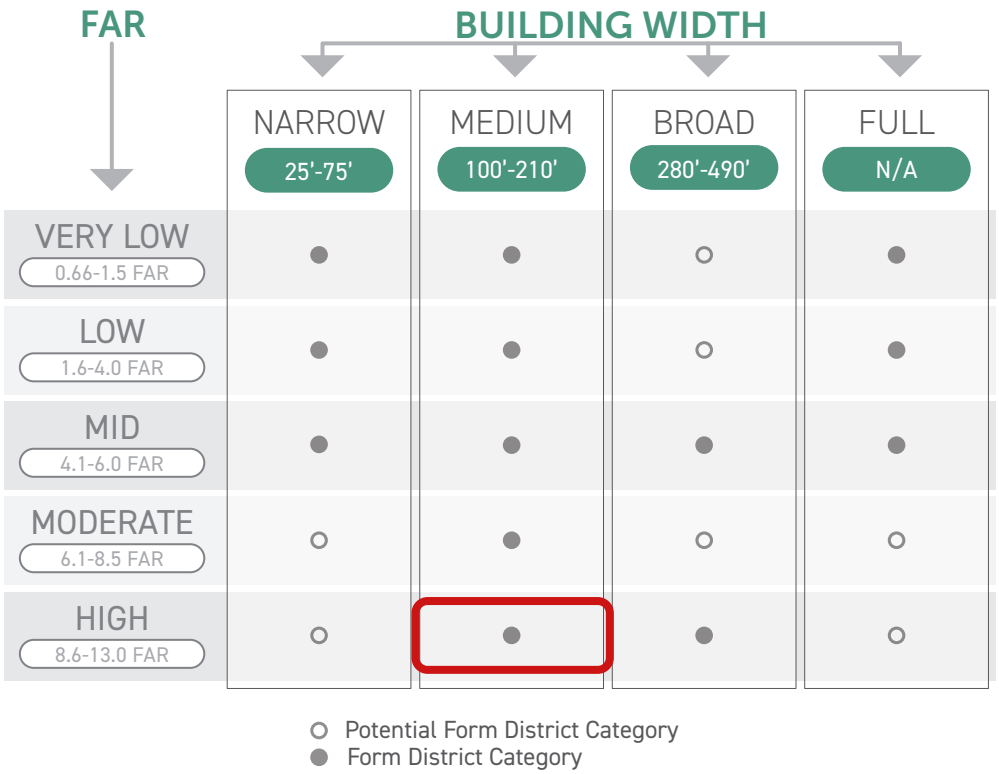
SEC. 2B.17.3. MODERATE-RISE MEDIUM 3 (DM3)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.17.4. MODERATE-RISE MEDIUM 4 (DM4)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.17.5. MODERATE-RISE MEDIUM 5 (DM5)



[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

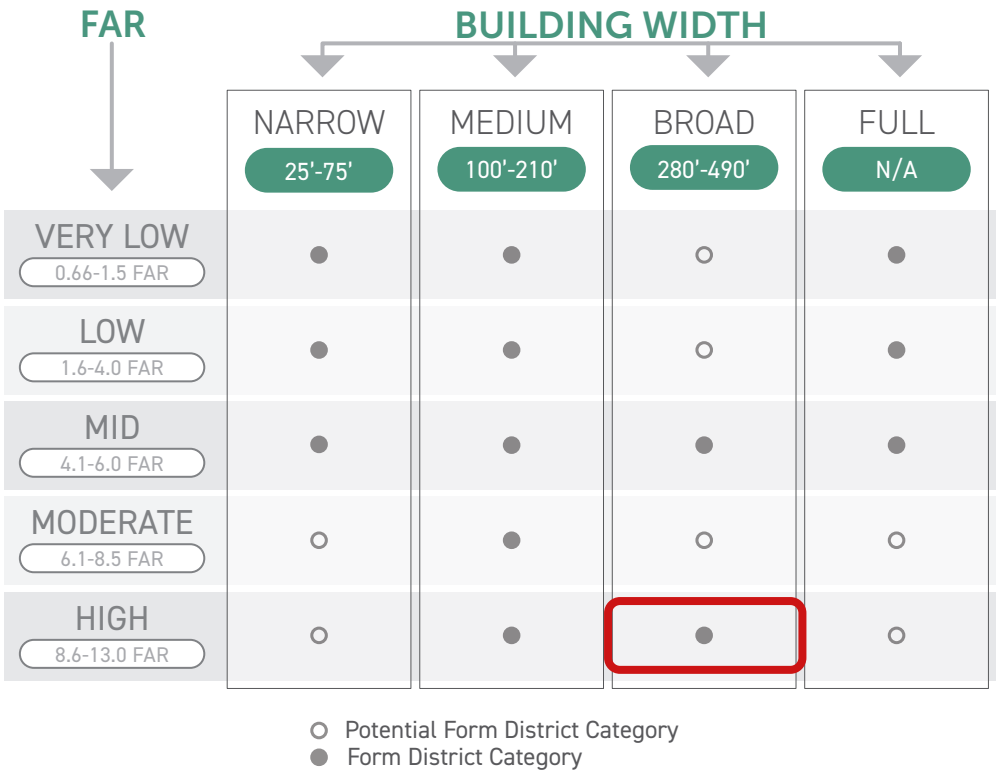
DIV. 2B.18. MODERATE-RISE FULL FORM DISTRICTS

[Reserved]

DIV. 2B.19. HIGH-RISE MEDIUM FORM DISTRICTS

Each High-Rise Medium Form District occurs within the ranges specified below. The "High" FAR category allows a range of 8.6 FAR to 13.0 FAR. The "Medium" building width category allows a range of 100 to 210 feet of building width.

SEC. 2B.19.1. HIGH-RISE MEDIUM 1 (HM1)



[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2B.19.2. HIGH-RISE MEDIUM 2 (HM2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2B.20. HIGH-RISE BROAD FORM DISTRICTS

Each High-Rise Broad Form District occurs within the ranges specified below. The "High" FAR category allows a range of 8.6 FAR to 13.0 FAR. The "Broad" building width category allows a range of 280 to 490 feet of building width.

SEC. 2B.20.1. HIGH-RISE BROAD 1 (HB1)

SEC. 2C.1.2. LOT WIDTH

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2C.1.3. SUB-LOT AREA

The total area within the boundaries of a sub-lot.

A. Intent

To ensuring lots are large enough to accommodate automobile parking and provide a semi-public ground story pedestrian access to promote walkability, activate semi-public spaces, and support personalization and community.

B. Applicability

Minimum sub-lot area requirements apply to all sub-lots that include a dwelling unit within a small lot subdivision.

C. Standards

No sub-lot may have an area less than the minimum specified in the applied Alternate Typology (Part 7B).

D. Measurement

1. Sub-lot area is measured as the total area within the boundary of a sub-lot, measured horizontally.
2. Sub-lot area includes all portions of a lot allocated for required easements.
3. Sub-lot area includes all shared access easements.
4. Sub-lot area does not include portions of a lot required for land dedication with the exception of required street corner dedications and dedications for street widening according to Sec. 10.1.8. (Lots Affected By Street Widening).

E. Exceptions

Where no motor vehicle use areas are provided within the boundaries of a sub-lot, the minimum sub-lot area may be reduced to 450 square feet.

F. Relief

A reduction in required sub-lot area may be requested as a variance in accordance with Sec. 13B.5.3. (Variance).

SEC. 2C.1.4. SUB-LOT WIDTH

The horizontal dimension of a sub-lot along a street lot line or a shared pedestrian accessway.

A. Intent

To ensuring lots are large enough to accommodate automobile parking and provide a semi-public ground story pedestrian access to promote walkability, activate semi-public spaces, and support personalization and community.

B. Applicability

Minimum sub-lot width requirements apply to all sub-lots that include a dwelling unit within a small lot subdivision.

C. Standards

No sub-lot may have a width less than the minimum specified in the applied Alternate Typology (Part 7B).

D. Measurement

1. Where a sub-lot abuts a frontage lot line, sub lot width is measured following the geometry of the frontage lot line.
2. Where a sub-lot does not abut a frontage lot line, sub lot width is measured as the narrowest horizontal dimension of the sub-lot.
3. Sub-lot area includes all shared access easements.

E. Exceptions

Where no motor vehicle use areas are provided within the boundaries of a sub-lot, the minimum sub-lot area may be reduced to 450 square feet.

F. Relief

A reduction in required sub-lot area may be requested as a variance in accordance with Sec. 13B.5.3. (Variance)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 2C.3.3. AMENITY DESIGN STANDARDS

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 2C.4. FLOOR AREA RATIO & HEIGHT

Portions of this Division displayed in grey text are being introduced Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU.

SEC. 2C.4.1. FLOOR AREA RATIO (FAR)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

The measurement of the total floor area of all buildings on a lot in relation to the size of the lot.

A. Intent

To regulate the bulk and massing of buildings on a lot.

B. Applicability

Floor area ratio standards apply to all portions of a lot, and all buildings and structures located on a lot, provided the area counts as floor area according to *Sec. 14.1.7. (Floor Area)*.

C. Standards

1. Base

A lot shall not exceed the maximum base floor area ratio without meeting the requirements of an incentive program outlined in *Article 9. (Public Benefit Systems)*.

2. Bonus

A lot may exceed the base floor area ratio up to the maximum bonus floor area ratio for projects participating in a community benefits program, pursuant to *Div. 9.3. (Community Benefits Program)*. Projects participating in other incentive programs intended to implement State law, including Density Bonus (*Sec. 9.2.1.*), the Permanent Supportive Housing Incentive Program (*Sec. 9.4.1.*), or the Accessory Dwelling Unit Incentive Program (*Sec. 9.5.1.*), may only exceed the maximum bonus floor area of the applied Form District if they meet the eligibility and program requirements needed to qualify for additional benefits beyond the established maximum bonus floor area.

D. Measurement

1. Floor area ratio is calculated by dividing the total floor area on a lot by the lot area.
2. For the measurement of floor area, see *Sec. 14.1.7. (Floor Area)*.
3. For the purpose of calculating FAR, portions of a lot designated for private streets may be counted as lot area. For the measurement of lot area, see *Sec. 2C.1.1. (Lot Area)*.
4. For the purpose of calculating FAR, lot area is the same as buildable area referred to in *Section 104(e) (Floor Area Restriction) of the City of Los Angeles Charter*.

5. The Downtown Community Plan Implementation Overlay (CPIO) may define and measure buildable area differently than outlined in *Sec. 2C.4.1.* for the purpose of calculating the maximum floor area using bonus FAR.

E. Relief

1. Additional FAR may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

2. For projects that include multiple parcels having different applied *Form Districts (Part 2B)*, floor area averaging across the development site may be requested, in accordance with *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*.

a. Supplemental Findings

In addition to the findings in *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also find that the project meets the following conditions:

i. The project meets the definition of unified development,

ii. All lots included in the project have a *Commercial-Mixed (Div. 5B.6.)*, *Commercial (Div. 5B.7.)*, *Industrial-Mixed (Div. 5B.8)*, or *Industrial Use Districts (Div. 5B.9.)* applied, or the project is located entirely in the Downtown Community Plan Area and all lots included in the project have a *Residential-Mixed (Div. 5B.5.)*, *Commercial-Mixed (Div. 5B.6.)*, *Commercial (Div. 5B.7.)*, *Industrial-Mixed (Div. 5B.8)*, or *Industrial Use Districts (Div. 5B.9.)* applied.

iii. Where any individual lot exceeds the maximum floor area ratio specified by the applied *Form District (Part 2B)*, the total floor area across all lots included in the unified development shall not exceed the sum of the maximum floor areas allowed across all lots as calculated based on the maximum floor are ratio specified by each applied *Form District (Part 2B)*.

b. Supplemental Procedures

If the Zoning Administrator approves floor area averaging, then the applicants shall file a covenant running with the land with the Department of Building and Safety, prior to the issuance of any building permits, that specified the following:

i. The operation and maintenance of the development as a unified development is continued into perpetuity;

ii. The floor area used and the remaining unbuilt floor area, if any, is allocated to each lot;

iii. The unifying design elements are maintained and continued into perpetuity; and

iv. An individual or entity is specified to be responsible and accountable for compliance and the fee for the annual inspection of compliance by the Department of Building and Safety, required pursuant to *LAMC Sec. 19.11. (Annual Inspection of Compliance with Floor Area Ratio Averaging and Residential Density Transfer Covenants)*.

DIV. 2C.6. BUILDING MASS

Portions of this Division displayed in grey text are being introduced Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU.

SEC. 2C.6.1. BUILDING WIDTH

The horizontal dimension of any building or collection of abutting buildings on a lot.

A. Intent

1. To promote fine-grained patterns of development and prevent long buildings that are significantly out of context with traditional patterns by breaking wide buildings into multiple, clearly distinguished building widths.

2. To encourage larger projects to provide open space for pedestrians and recreation.

B. Applicability

1. Building width requirements apply to all frontage lot line-facing buildings or structures on a lot.

2. Building width requirements apply only to portions of buildings and structures located above the ground floor elevation.

3. Building width requirements do not apply to exceptions listed in *Sec. 2C.6.1.F. (Exceptions)*.

C. Standards

1. No applicable building or collection of abutting buildings located on the same lot shall be wider than the maximum building width specified by the applied *Form District (Part 2B)*.

2. Buildings that are located on separate lots, share no interior circulation, and are structurally independent, are considered separate buildings for the purpose of measuring building width.

3. Buildings located on different *sub-lots*, within the same *Small Lot Subdivision (Div. 7B.3.1.)*, that are separated by less than 6 feet are considered part of the same building for the purpose of measuring building width.

4. A building on a corner lot within the build-to zone area of overlap is allowed to exceed the maximum building width by up to 40 feet along both primary and side street lot lines.

4. In order to establish buildings on the same lot as separate buildings for the purpose of measuring maximum building width, a building break meeting the standards in *Sec. 2C.2.6.1.E. (Building Break)* shall be provided between the buildings.

D. Measurement

1. Building width is measured horizontally and parallel to each primary street lot line and side street lot line from one end of an applicable building or collection of abutting buildings to the opposite end.

2. For frontage lot line-facing, see *Sec. 14.1.6. (Facing)*.

3. For measuring building width on irregular lot lines, see *Sec. 14.1.14. (Parallel or Perpendicular to irregular Lot line)*.

E. Building Break

1. Standards

a. All buildings and collections of abutting buildings located on the same lot shall be separated by at least the minimum building break dimension in order to establish them as separate buildings for the purpose of measuring building width.

b. No building or structure shall encroach into the building break, except where allowed in *Sec. 2C.6.1.F. (Exceptions)*.

2. Measurement

A building break is measured perpendicular to the outermost surface of each applicable portion of a building both vertically and horizontally.

F. Exceptions

1. Encroachments

The following are allowed to encroach into the building break, as listed below:

ALLOWED HORIZONTAL ENCROACHMENTS	
Architectural Details *(Sec. 14.1.5.A.1.a.)*	
Encroachment (max)	2′
Clear width (min)	3′
Roof Projections *(Sec. 14.1.5.A.1.b.)*	
Encroachment (max)	2.5′
Clear width (min)	3′
Unenclosed Structures *(Sec. 14.1.5.A.1.d. - Sec. 14.1.5.A.1.d.)*	
Encroachment (max)	5′
Clear width (min)	3′
Mechanical/Electrical Equipment *(Sec. 14.1.5.A.1.f. - Sec. 14.1.5.A.1.g.)*	
Encroachment (max)	1.5′
Clear width (min)	3′

2. Building Break Outdoor Amenity Space Alternative

As an alternative to a building break, a street-facing outdoor amenity space that meets the following standards may be used to establish buildings or collections of abutting buildings as separate buildings for the purpose of measuring maximum building width:

a. The outdoor amenity space shall meet the design standards for outdoor amenity space in *Sec. 2C.3.3.A. (Outdoor Amenity Space)*.

b. The outdoor amenity space width shall be at least 2 times the minimum building break dimension specified in the applied *Form District (Part 2B)*, measured parallel to the applicable street lot line.

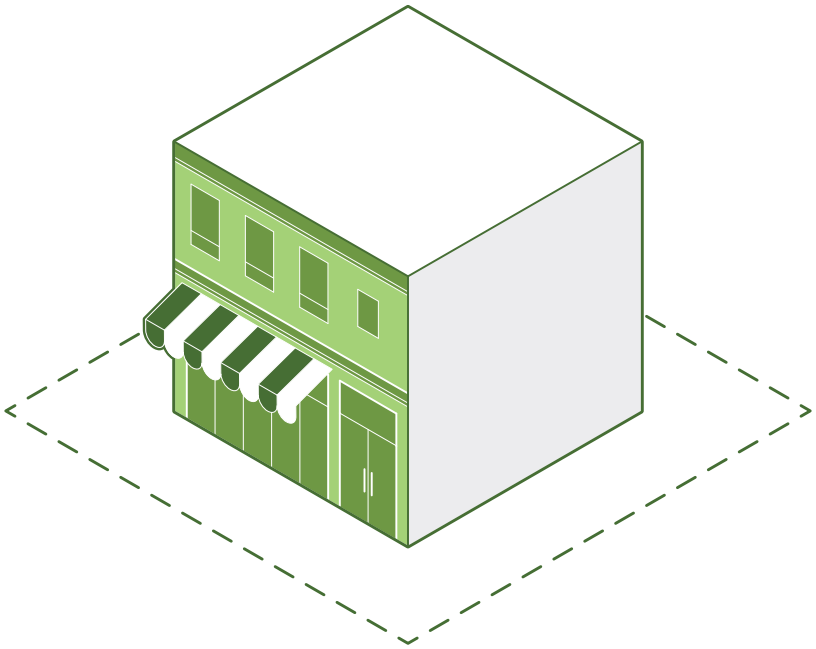
c. The outdoor amenity space width shall not be greater than the maximum building width, measured parallel to the applicable street lot line.

d. The outdoor amenity space depth shall be at least 5 times the minimum building break dimension specified in the applied *Form District (Part 2B)*, measured perpendicular to the street lot line.

e. A minimum of 75% of the outdoor amenity space area shall meet the design standards in *Sec. 2C.3.3.C. (Pedestrian Amenity Space)*.

f. The outdoor amenity space may count toward the required minimum build-to width required by the applied *Frontage District (Part 3B)*, provided it meets the requirements of *Sec. 3C.1.3.E. (Build-to Width Exceptions)*.

g. Any portion of the outdoor amenity space may count toward lot amenity space in *Sec. 2C.3.1. (Lot Amenity Space)* and residential amenity space in *Sec. 2C.3.2. (Residential Amenity Space)*, provided it meets all applicable standards.



G. Relief

1. Increased building width of 20% or less or reduced building break of 20% or less may be requested in accordance with *Sec. 13B.5.2. (Adjustments)*.

2. Increased building width or reduced building break may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

Sec. 3A.2.2. Frontage Applicability 3-11

DIV. 3A.1. ORIENTATION

SEC. 3A.1.1. RELATIONSHIP TO ZONE STRING

A zone string is composed of the following districts:

The Frontage District is a separate and independent component of each zone.

SEC. 3A.1.2. HOW TO USE ARTICLE 3 (FRONTAGE)

A. Identify the Applied Frontage District

The second component in a zone string identifies the Frontage District applied to a property.

B. Frontage District Standards

Frontage District standards are outlined in *Part 3B. (Frontage Districts)*. Each Frontage District page identifies the standards specific to that Frontage District.

C. Interpreting Frontage District Standards

Each Frontage rule category on a Frontage District page in *Part 3B. (Frontage Districts)* provides a reference to *Part 3C. (General Frontage Rules)* or *Part 3D. (Character Frontage Rules)*, where the standards within that rule category are explained in detail. *Part 3D. (Character Frontage Rules)* may reference *Part 3C. (General Frontage Rules)* for standards that are common to both Character Frontages and General Frontages.

Frontage District Example:

Learn More About Your Rules

Part 3C (General Frontage Rules)

DIV. 3C.6. **GROUND STORY**

SEC. 3C.6.1. **GROUND STORY HEIGHT**

The floor-to-floor height of the story of a building having its finished floor elevation nearest to the finished ground surface.

A. **Intent**

To promote active uses that are directly connected the public realm, and ensure high-quality ground-story spaces that are adaptable and appropriate to their context.

B. **Applicability**

Ground story height standards apply to all portions of the ground story of a structure located within the first 15 feet of a frontage applicable facade, measured inward and perpendicular to the facade.

C. **Standards**

All occupiable space on the ground story shall have floor-to-floor height of no less than the ground story height minimum.

D. **Measurement**

1. Ground story height is measured vertically from the top of the finished ground floor to the top of the finished floor above.
2. Where no story exists above, ground story height is the shortest vertically distance from the top of the finished ground floor to the top of the ceiling or roof structure above.
3. For determining the ground story, see *Sec. 14.1.1.10. (Ground Story Determination).*

E. **Relief**

1. A reduction in required ground story height of 1 foot or less may be requested in accordance with *Sec. 13.7.2 (Adjustments).*
2. Deviation from ground story height standards may be requested as a variance in accordance

SEC. 3A.1.3. FRONTAGE DISTRICT GRAPHICS

A. General

Illustrations and graphics are included in Article 3 (Frontage) only to assist users in understanding the purpose and requirements of the text. In the event a conflict occurs between the text of Article 3 (Frontage) and any illustration or graphic, the text prevails.

B. Lot Graphics

1. Lot Boundary

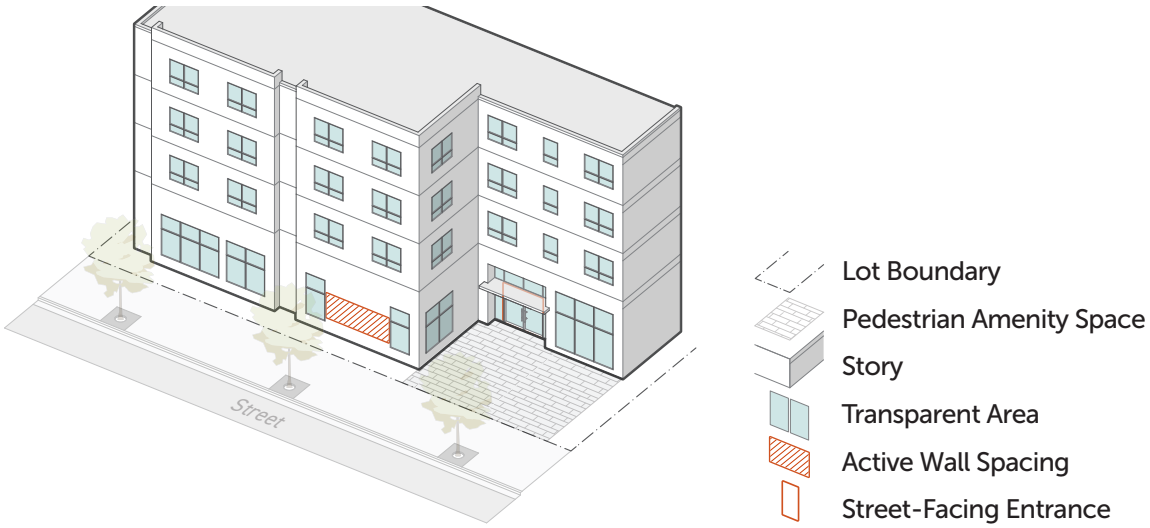
This line represents the perimeter of the subject lot, serving as a reference for build-to width.

2. Build-To Zone

This blue hatched shape represents the area on a lot, near the frontage lot line, that buildings are required to occupy according to the minimum build-to width specified by the applied *Frontage District (Part 3B)*.

3. Occupied Build-To Zone

The portion of the build-to zone with a blue rather than white background represents the width of the build-to zone that counts toward build-to width based on the location of buildings or the location of pedestrian amenity spaces. The location of the occupied build-to zone is not a requirement, but rather an example of one conforming site configuration.



4. Pedestrian Amenity Space

This green shape represents the largest pedestrian amenity space allowed to count toward build-to width according to the maximum pedestrian amenity allowance specified by the applied *Frontage District (Part 3B)*. The location of the pedestrian amenity space is not a requirement, but rather an example of one conforming site configuration.

5. Building Footprint

This shape represents the building footprint for the front portion of a lot including the portion of a building occupying the build-to zone, serving as a reference for build-to width. The building footprint does not represent the required placement of a building, but rather an example that meets the build-to standards of the applied *Frontage District (Part 3B)*.

C. Facade Graphics

1. Lot Boundary

This line represents the perimeter of the subject lot, serving as a reference for build-to width.

2. Pedestrian Amenity Space

This paver-patterned shape represents the pedestrian amenity space shown in the corresponding lot graphic, demonstrating the relationship between pedestrian amenity space activation requirements, and the standards of the applied *Frontage District (Part 3B)*.

3. Story

This volume represents a story of a building, serving as a reference for story height and ground floor elevation standards. The volume includes a line at the top and bottom of each story, and an additional line near the top of each story indicating the bottom of a floor plate. The bottom of the floor plate is only depicted on the side of the building.

4. Transparent Area

This shape represents door and window openings on frontage applicable facades, serving as a reference for transparency standards. The location of the transparent area is not a requirement, but rather an example of one conforming facade composition.

5. Active Wall Spacing

This red-hatched shape represents one example measurement of active wall spacing, including the regulated facade area between 1 set of door or window openings. This shape does not represent all applicable facade areas.

6. Street-Facing Entrance

This red outline represents a street-facing door openings, serving as a reference for street-facing entrance and entrance spacing standards. The locations of the street-facing entrances are not a requirement, but rather an example of one conforming facade composition.

D. Character Frontage Graphics

Character Frontage Districts (Div. 3B.9.) include a wider variety of graphics, but use the same approach to representation established by the lot graphics and facade graphics. In addition to the elements depicted in lot and frontage graphics, Character Frontage Districts represent articulation techniques, focal entry features, and exterior materials.

1. Articulation Techniques

Articulation standards often include a variety of regulatory elements, including, but not limited to, vertical and horizontal banding, building layers, and articulating elements. While articulating elements are not annotated in Character Frontage District graphics, building layers are represented with a red outline and banding is represented using a black outline around a translucent white shape.

2. Focal Entry Features and Exterior Materials

a. Focal entry features are represented by a dashed red outline surrounding the area on a facade used to meet the requirements of one of the allowed focal entry features specified by the applied *Frontage District (Part 3B)*. The location of the focal entry feature is not a requirement, but rather an example of one conforming facade composition.

b. Primary and secondary exterior materials are represented using a variety of colors and textures intended to represent one or more of the allowed exterior materials specified by the applied *Frontage District (Part 3B)*.

SEC. 3A.1.4. FRONTAGE DISTRICT NAMING CONVENTION

All Frontage District names are composed of two components: frontage category and variation number.

A. Frontage Category

The first component of each Frontage District is a frontage category. Frontage categories group all districts with similar characteristics. Frontage categories are organized as follows:

1. Drive
2. Multi-Unit
3. General
4. Shopfront
5. Market
6. Large Format
7. Warehouse
8. Dual
9. Character

B. Variation Number

The last component of each Frontage District is a variation number. All Frontage Districts are numbered in the order they fall within Article 3 (Frontage).

DIV. 3A.2. OPENING PROVISIONS

SEC. 3A.2.1. FRONTAGE INTENT

The intent of Article 3 (Frontage) is to regulate the portions of a lot and exterior building facades that impact the public realm. Frontage Districts help ensure that projects respond to the public realm in a contextually appropriate manner. Districts range from minimal standards for Warehouse Frontages to a robust set of standards for Shopfront Frontages which require projects to support a high-quality public realm that is active, comfortable, safe, and visually interesting, with strong connections between the public realm and uses inside buildings.

SEC. 3A.2.2. FRONTAGE APPLICABILITY

A. Project Applicability

All projects filed after the effective date of this Zoning Code (Chapter 1A) must comply with the Frontage District standards and rules in Article 3 (Frontage), as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Project Activities

1. Categories of Frontage rules apply to a project based on what types of project activities are proposed, as shown in the table below. Typically, more than one project activity will apply to a proposed project (for example, a street-facing addition concealing a portion of an existing building facade includes both new construction and a facade modification).

2. For all Frontage Districts, with the exception of Character Frontage Districts, Frontage rule categories apply to project activities as shown in the table below:

	PROJECT ACTIVITIES								
FRONTAGE RULE CATEGORIES	New Construction	Major Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 3C.1. Build-To	●	●	○	○	○	○	○	○	○
Div. 3C.2. Parking	●	●	○	●	○	○	○	○	○
Div. 3C.3. Landscaping	●	●	●	●	○	○	○	○	○
Div. 3C.4. Transparency	●	●	○	○	●	○	○	○	○
Div. 3C.5. Entrances	●	●	○	○	●	○	○	○	○
Div. 3C.6. Ground Story	●	○	○	○	○	○	○	○	○

● = Rules generally apply to this project activity
○ = Rules are not applicable

3. For Character Frontage Districts, Character Frontage rule categories apply to project activities as shown in the table below:

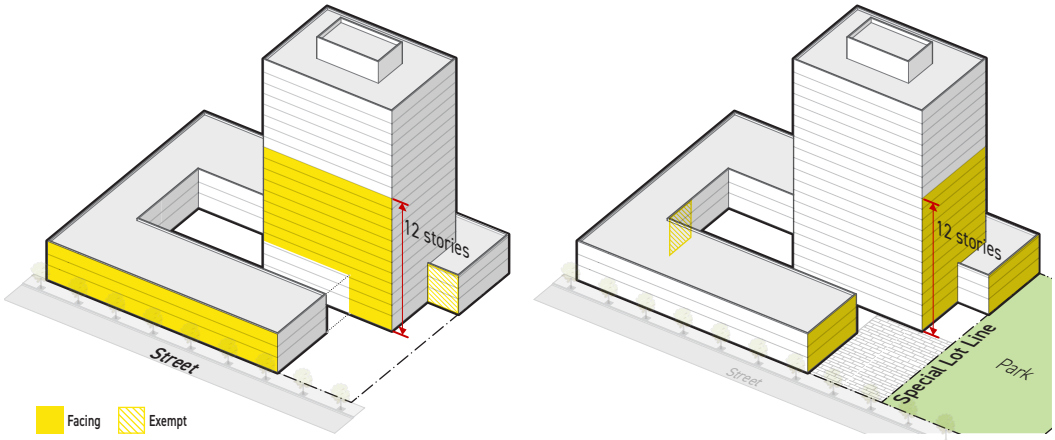
CHARACTER FRONTAGE RULE CATEGORIES		PROJECT ACTIVITIES								
		New Construction	Major Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 3D.1.	Build-To	●	●	○	○	○	○	○	○	○
Div. 3D.2.	Parking	●	●	○	●	○	○	○	○	○
Div. 3D.3.	Landscaping	●	●	●	●	○	○	○	○	○
Div. 3D.4.	Ground Floor Elevation	●	○	○	○	○	○	○	○	○
Div. 3D.5.	Story Height	●	○	○	○	○	○	○	○	○
Div. 3D.6.	Articulation	●	●	○	○	●	○	○	○	○
Div. 3D.7.	Features	●	○	○	○	●	○	○	○	○
Div. 3D.8.	Entrances	●	●	○	○	●	○	○	○	○
Div. 3D.9.	Transparency	●	●	○	○	●	○	○	○	○
Div. 3D.10.	Exterior Materials	●	●	○	○	●	○	○	○	○
Div. 3D.11.	Roof Design	●	●	○	○	●	○	○	○	○

● = Rules generally apply to this project activity
○ = Rules are not applicable

4. Project activities are defined in *Sec. 14.1.15. (Project Activities)*.

5. Where a category of Frontage rules is listed as generally applicable in the tables above, and the applied *Frontage District (Part 3B)* provides specifications for a standard in that Frontage rule category, the project activity shall meet all applicable Frontage standards within that Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 3C (General Frontage Rules)* and *Part 3D (Character Frontage Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a category of Frontage rules is listed as not applicable in the table above, no standards from that Frontage rule category apply to the project activity.

C. Applicable Components of Lots, Buildings, and Structures

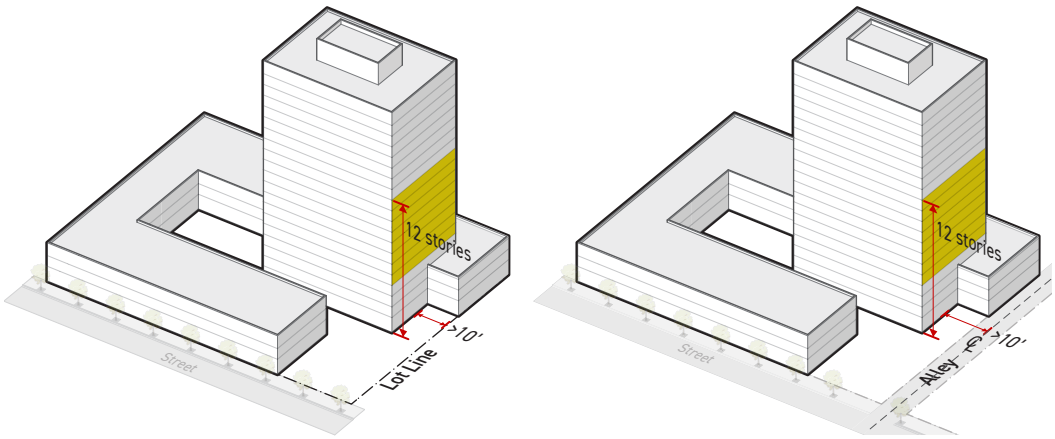


1. General

Frontage standards apply only to the applicable facades, applicable portions of a lot, and applicable building depth, as specified in the following examples in *Sec. 3A.2.2.C.2 (Frontage Applicable Facades)*. Specific Frontage District standards or rules may further limit which components of buildings and lots are required to comply with the standard within *Part 3C. (Frontage Rules)* and *Part 3D. (Character Frontage Rules)*.

2. Frontage Applicable Facades

Frontage standards apply to the following facades up to the top of the 12th story:

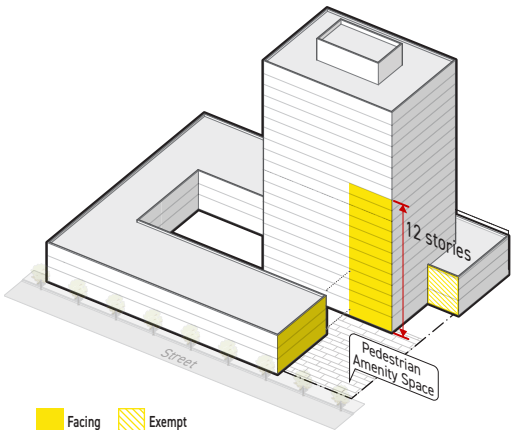


a. Frontage Lot Line-Facing Facades

i. Facades that face a frontage lot line, including *street-facing facades (Sec. 14.1.6.D.)*, and when a *Dual Frontage District (Div. 3B.8.)* is applied, special lot line-facing facades.

ii. These facades shall meet the standards specified by the applied *Frontage District (Part 3B)* for the frontage lot line that the facade faces (primary street lot line, side street lot line or special lot line).

b. Lot Line-Facing Facades (Non-Frontage Lot Line)



i. *Lot line-facing facades (Sec. 14.1.6.B.)* that do not face a frontage lot line and are:

a) Located vertically above the top of the 4th story; and

b) Located 10 feet or more from a common lot line or centerline of an alley, measured horizontally.

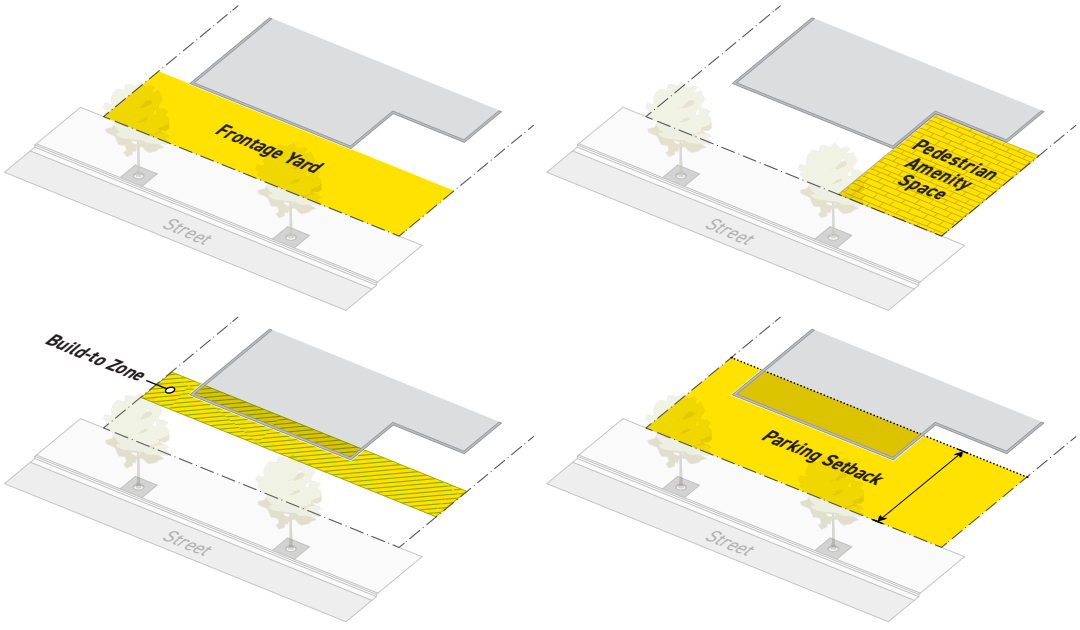
ii. Lot Line-Facing Facades (Non-Frontage Lot Line) facades shall meet the standards specified by the applied *Frontage District (Part 3B)* for the side street lot line.

c. Pedestrian Amenity Space-Facing Facades

i. Facades that face a pedestrian amenity space, see *Sec. 14.1.6.C. (Pedestrian Amenity Space-Facing Facades)*.

ii. These facades shall meet the standards specified by the applied *Frontage District (Part 3B)* for the frontage lot line that the pedestrian amenity space abuts. Where the pedestrian amenity space abuts multiple frontage lot lines, the standards specified for the frontage lot line that abuts the pedestrian amenity space for the greatest length applies.

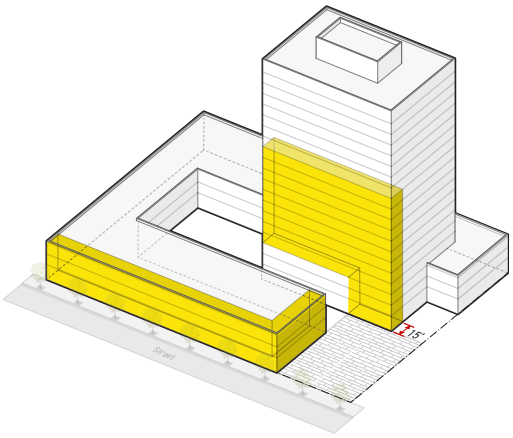
3. Frontage Applicable Portions of a Lot



Frontage District standards apply to the following portions of a lot:

a. Frontage yards, see *Sec. 14.1.16. (Yards)*;

b. Pedestrian amenity spaces (*Sec. 2C.3.3.C*);



c. Build-to zones; and

d. *Parking setbacks (Sec. 3C.2.1)*.

4. Frontage Applicable Building Depth

Frontage District standards apply to portions of a building interior within 15 feet of a *frontage lot line-facing (Sec. 3A.2.2.C.2.a.)* or *pedestrian amenity space-facing (Sec. 3A.2.2.C.2.c.)* frontage applicable facade.

D. Nonconformity

Article 12. (Nonconformities) provides relief from the requirements of *Article 3. (Frontage)* for existing lots, site improvements, buildings and structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current district standards or use permissions. No project activity may decrease conformance with any Frontage standard unless otherwise specified by *Division 12.3. (Frontage Exceptions)*. Consider the following examples:

1. Closing an existing window opening: Where the proposed facade modification reduces ground story transparency below the minimum required by the applied *Frontage District (Part 3B)*, the facade alteration is not allowed.

2. An addition or new detached structure to the side of a building: Where the applicable facades on the existing structure do not meet the Frontage District transparency standards, all applicable facades of the addition or new detached structure are required to meet the transparency standards, but no alteration of existing facades is required.

Sec. 3B.9.1. Historic Core (CHC1) 3-31

Sec. 3B.9.2. Daylight Factory (CDF1) 3-31

Sec. 3B.9.3. Daylight Factory / River (CDR1) 3-31

Sec. 3B.9.4. Character Commercial (CC1) 3-32

Sec. 3B.9.5. Character Residential 1 (CR1) 3-36

DIV. 3B.1. DRIVE FRONTAGES

Drive Frontages control the location of vehicular access, require planted front yards, and provide flexible provisions for privacy through a combination of setbacks, frontage yard fences, and wall standards.

[Reserved]

DIV. 3B.2. MULTI-UNIT FRONTAGES

Multi-Unit Frontages require higher ground floor elevation, relatively low transparency, and frequent entrance spacing. This allows for greater privacy for tenants located on the ground story while retaining an interplay between the private and public realms. Frequent entrances activate the public realm with pedestrian activity and visual interest.

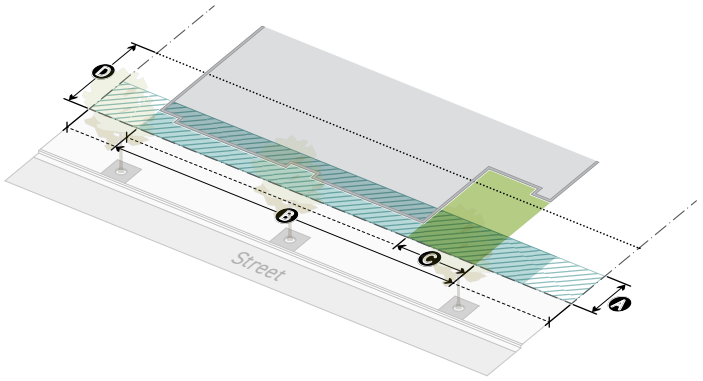
Nonresidential	-2'/2'	-2'/2'

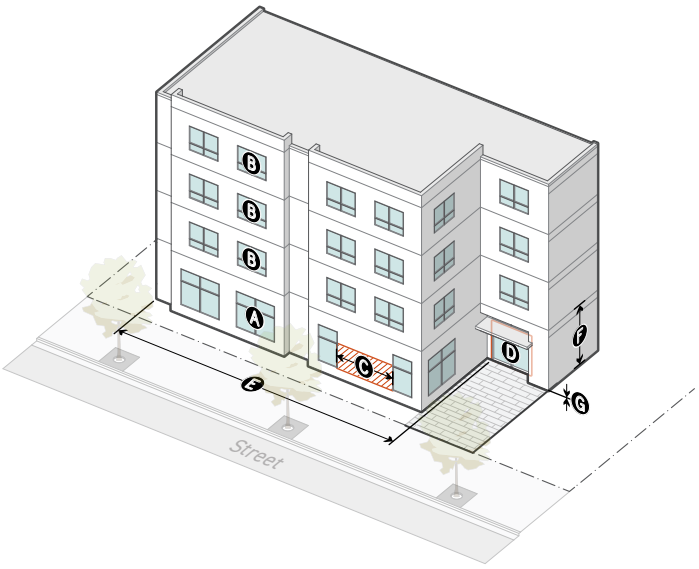
DIV. 3B.3. GENERAL FRONTAGES



General Frontages require moderate to high build-to widths while allowing a wide range of modifications for pedestrian amenity spaces. These Frontage Districts have a moderate transparency requirement with flexible entrance spacing standards while ensuring a high-quality pedestrian environment and providing flexibility for a variety of ground story tenants.

SEC. 3B.3.1. GENERAL 1 (G1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]



SEC. 3B.3.2. GENERAL 2 (G2)

	Residential	-2'/5'	-2'/5'
	Nonresidential	-2'/5'	-2'/5'

DIV. 3B.4. SHOPFRONT FRONTAGES

Shopfront Frontages require high build-to widths, high levels of transparency, frequent entrance spacing, and ground floor elevation at or near sidewalk grade. This promotes a legible street wall and activates the public realm with pedestrian activity and visual interest. The at-grade ground floor elevation allows for an increased connection between the interior uses and the pedestrian space.

SEC. 3B.4.1. SHOPFRONT 1 (SH1)

	Nonresidential	-2'/2'	-2'/2'

DIV. 3B.5. MARKET FRONTAGES

Market Frontages require high build-to widths and frequent entrances integrated as market stalls and shopfront bays. These entry feature options, paired with frequent entry spacing, activates the public realm with pedestrian activity and visual interest in areas where market stalls are the dominant pattern.

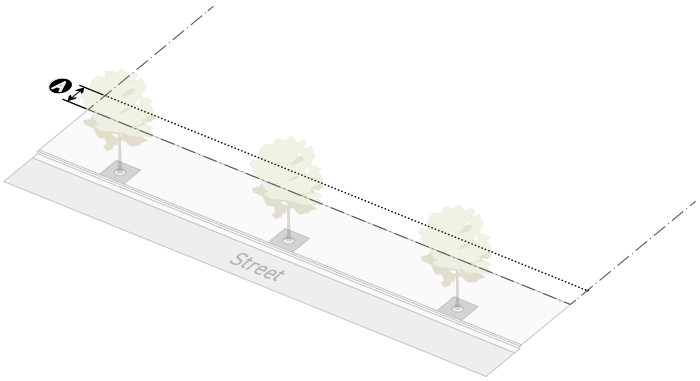
SEC. 3B.5.1. MARKET 1 (MK1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 3B.6. LARGE FORMAT FRONTAGES

Large Format Frontages require moderate build-to widths and infrequent entrance spacing. These Frontage Districts are designed to accommodate large tenants and controlled access in a manner that promotes a walkable street edge.

[Reserved]



DIV. 3B.7. WAREHOUSE FRONTAGES

The Warehouse Frontages have few standards and allow for a high level of flexibility. These Frontage Districts are designed for freight service. Warehouse Frontages are intended for areas where pedestrian-friendly environments are not a priority.

DIV. 3B.9. CHARACTER FRONTAGES

Character Frontages provide standards for facade articulation, entry features, window design, siding materials, and roof form, in order to reinforce the prevailing architectural characteristics of the city's historically and culturally significant neighborhoods and districts.

SEC. 3B.9.1. HISTORIC CORE (CHC1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 3B.9.2. DAYLIGHT FACTORY (CDF1)

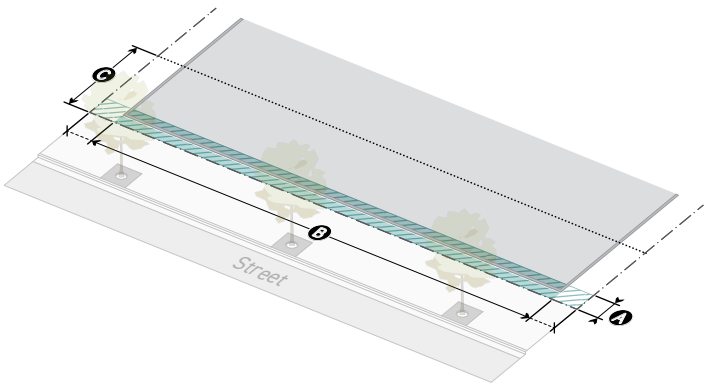
SEC. 3B.9.3. DAYLIGHT FACTORY / RIVER (CDR1)



[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 3B.9.4. CHARACTER COMMERCIAL (CC1)

A. Intent

The Character Commercial 1 Frontage provides standards intended to reinforce the prevailing architectural characteristics of streetcar oriented commercial districts established during the late 19th and early 20th centuries. Such districts are characterized by one and two story brick buildings containing rows of small storefronts that were originally built to serve some of the city's earliest neighborhoods. Key features include the decorative application of brick, shopfront and roofline cornices, recessed entrances, and large shopfront windows. Buildings that retain the qualities of early commercial districts adhere to a well-defined street wall with high ground floor activation. By providing a set of targeted design standards that regulate these key features the Character Commercial 1 Frontage ensures that new development contributes to the established architectural character of the city's earliest commercial districts.

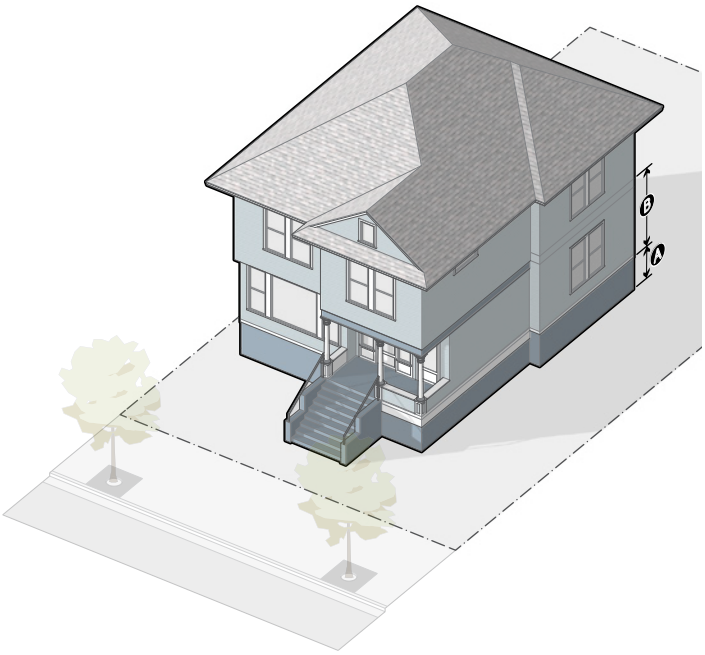
SEC. 3B.9.5. CHARACTER RESIDENTIAL 1 (CR1)

A. Intent



The Character Residential 1 Frontage provides standards intended to reinforce the prevailing architectural characteristics of the city's residential neighborhoods established throughout the late 19th and early 20th centuries. Such neighborhoods are characterized by an eclectic mix of residential architecture, including Late-Victorian, Queen Anne, and Craftsman architectural styles. Together these styles share some unifying characteristics, such as building forms articulated by a prominent pitched roof or series of pitched roofs, entries featuring a covered front porch, and textured exterior wall surfaces of lap or shingle siding. Other common neighborhood characteristics include homes setback behind a front yard and parking areas hidden from view behind the main building. By providing a set of targeted design standards that regulate these key features the Character Residential 1 Frontage ensures that new development contributes to the established architectural character of the city's earliest residential neighborhoods.

DIV. 3C.1. BUILD-TO

Portions of this Division displayed in gray text are being introduced Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU.

SEC. 3C.1.1. APPLICABLE STORIES

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 3C.1.2. BUILD-TO DEPTH

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Build-To -

SEC. 3C.1.3. BUILD-TO WIDTH

The cumulative building width that shall occupy the build-to zone, relative to the width of the lot at the frontage lot line.

A. Intent

To ensure that buildings enclose the public realm with a legible and consistent street wall, spatially defining an outdoor room, and promoting a strong visual and physical connection between uses inside buildings and the public realm.

B. Applicability

Build-to width standards apply to the following:

1. Where a minimum height is specified in the applied *Form District (Part 2B)*, build-to width applies to all above-grade stories up to the minimum height in stories standard in accordance with Sec. 2C.4.3. (Height in Stories).

2. Where an applicable stories standard exists, build-to width applies to all stories located above-grade up to the applicable stories.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Build-To -

3. Where both an applicable stories standard and a minimum height are specified, build-to width applies to whichever standard requires the greatest number of stories located in the build-to zone.

4. Where no applicable stories standard is specified in the applied *Frontage District (Part 3B)* and no minimum height standard is specified in the applied *Form District (Part 2B)*, build-to width applies only to the ground story.

C. Standards

1. Buildings shall occupy the build-to zone for a cumulative width no less than that specified by the applied *Frontage District (Part 3B)*.

2. When build-to width is specified as "building-based", the build-to zone shall be occupied by buildings for no less than 50% of the width of the building having the greatest total floor area on the lot.

3. On a corner lot, a chamfered corner no more than 20 feet in width along both street lot lines qualifies as building width in the build-to zone for all applicable stories even where it extends outside of the build-to zone. Chamfered corner width is measured parallel to the frontage lot line.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Build-To -

4. Portions of building width providing motor vehicle access to a motor vehicle use area through the ground story of a building do not qualify as building width in the build-to zone.

D. Measurement

The build-to width is a percentage measured as the sum of the widths of all portions of buildings occupying the build-to zone divided by the total lot width.

CALCULATION

$$\frac{\text{A1+A2 (Building width in build-to range)}}{\text{B (Total Lot Width)}} = \text{Build-to Width}$$

1. Building width is measured parallel to the frontage lot line. For measuring building width on a complex lot, see *Sec. 14.1.14. (Parallel or Perpendicular to Irregular Lot Line)*.

2. Lot width is measured along the frontage lot line. For measuring width of a complex lot, see *Sec. 14.1.14. (Parallel or Perpendicular to Irregular Lot Line)*.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Build-To -

E. Exceptions

1. Outdoor amenity spaces meeting the design standards for *pedestrian amenity space (Sec. 2C.3.3.C.2)* count toward required minimum build-to width in accordance with *Sec. 3C.1.4. (Pedestrian Amenity Allowance)*.

2. A building break that includes an open space meeting the design standards for pedestrian amenity space in *Sec. 2C.3.3.C.2 (Pedestrian Amenity Space)* counts toward the minimum build-to width required by the applied *Frontage District (Part 3B)* according to *Sec. 3C.1.4. (Pedestrian Amenity Allowance)*.

3. Where vehicle access is permitted to be taken through the frontage lot line based on the vehicle access package in *Sec. 4C.2.1. (Automobile Access Packages)* specified by the applied *Development Standards District (Part 4B)* and providing access prevents a building from achieving the required build-to width, a reduced build-to width may be allowed, provided the portion of the lot in the build-to zone used for vehicle access is no wider than the minimum required drive aisle width plus an additional 4 feet of width for clearance. See *Div. 4C.2. (Automobile Access)*.

F. Relief

1. Up to a 10% reduction to the total required width of building occupying the build-to zone may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.

2. A reduced minimum build-to width may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Parking -

SEC. 3C.2.2. PARKING BETWEEN BUILDING & STREET

The location of motor vehicle use areas between a building and the public realm.

A. Intent

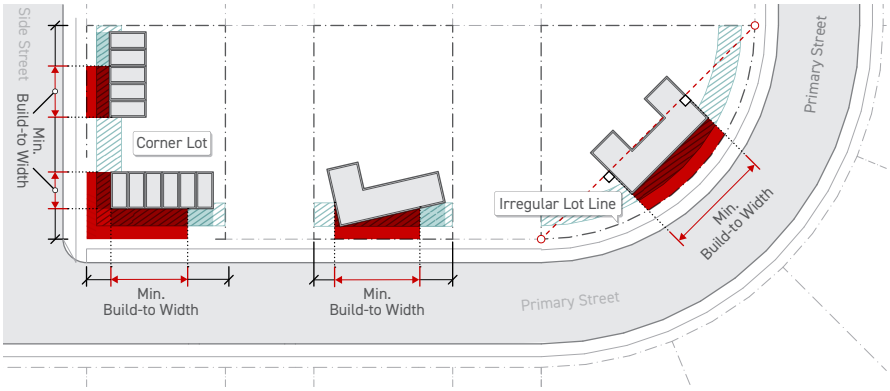
To control the impact of motor vehicle-dominated areas on the pedestrian experience especially where buildings do not line the majority of the public realm, and to promote a comfortable, safe, engaging, and attractive streetscape, with pedestrian access to active uses and landscaping between the public realm and street-oriented buildings.

B. Applicability

Where specified by the applied *frontage district (Part 3B)*, parking between the building and the street requirements apply to frontage yards and *frontage applicable building depth (Sec. 3A.2.2.C.4)* on the ground story.

C. Standards

1. Where the applied *frontage district (Part 3B)* specifies "No":



a. No motor vehicle use area may be located between a building that occupies the build-to zone and the frontage lot line, for the portion of the building width provided to comply with a build-to width requirement.

b. No motor vehicle use area may be located on the ground story of a building or structure within the frontage applicable building depth for the portion of the building width provided to comply with a build-to width requirement.

2. Where the applied *frontage district (Part 3B)* specifies "Yes", no additional limitations to the location of motor vehicle use areas are required to comply with parking between the building and street standards.

D. Measurement

1. The area between a building width and the street is determined as the entire area on a lot bordered by the applicable *street-facing facade (Sec. 14.1.6.D.)* and frontage lot line, for the applicable building width. For corner lots, the area between the building and the street also includes the portion of the lot beyond the width of the building nearest to the intersection, up to the intersecting street lot line.

2. For measuring building width see *Sec. 2C.6.1.D.*

3. For frontage lot line-facing, see *Sec. 14.1.6. (Facing)*.

4. For *street-facing facade*, see *Sec. 14.1.6.D.(Street-Facing Facade)*.

E. Exceptions

A driveway located between a street-facing building facade and the frontage lot line may be allowed provided all of the following conditions are met:

1. The automobile access package (*Sec. 4C.2.1)* specified by the applied *Development Standards District (Part 4B)* allows automobile access to be taken through the frontage lot line associated with a parking setback; and

2. The driveway is no wider than the minimum allowed width. See *Div. 4C.2. (Automobile Access)*.

F. Relief

1. A reduction in the width of the area of the lot or building depth required to comply with parking between building and street standards of 15% or less may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.

2. Modifications to parking between building and street standards may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Articulation -

SEC. 3D.6.2. BASE-TOP

The base-top articulation requirement is composed of two separate and coordinated articulating elements designed to visually break a building facade up into two separately legible layers.

A. Intent

To visually break a building facade up into two separately legible building layers.

B. Applicability

Base-top standards apply to all frontage applicable facades located on all build-to applicable stories specified by the applied *Frontage District (Part 3B)*. See *Sec. 3A.2.2.C.2. (Frontage Applicable Facades)*.

C. Standards

1. General

One articulating element option shall be provided for each building layer in accordance with the building layer standards below. See *Sec. 3D.6.5. (Articulating Elements)*.

2. Building Layers

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Articulation -

a. **Base**

i. The base building layer shall include between 1 and 3 contiguous stories starting with the ground story and continuing upward.

ii. At least one of the following articulating elements shall be applied along the top of the base layer, creating a transition between the base and top layers:

a) *Sec. 3D.6.5.C.1. (Material Change)*;

b) *Sec. 3D.6.5.C.2. (Belt Course)*; or

c) *Sec. 3D.6.5.C.3. (Shopfront Cornice)*.

iii. The articulating element shall extend for the full width of the facade and be located no higher than the top of the uppermost story included in the layer.

b. **Top**

i. The top building layer shall include at least twice as many stories as the base building layer and include all remaining above-grade stories not included in the base building layer or include all remaining above-grade stories upto a street stepback of no less than 15 feet in depth. If the building is less than 3 stories, or less than 3 stories without a street stepback of at least 15 feet in depth, the top layer may be composed of 1 story regardless of the height of the base layer.

ii. A roofline cornice articulating element shall be applied to the top building layer when the top building layer is the topmost story of the building or the topmost story before a street step-back. See *Sec. 3D.6.5.C.4 (Roofline Cornice)*.

iii. The roofline cornice shall extend for the full width of the facade and be located along the top of the topmost story included in the building layer.

iv. When the top building layer does not include the topmost story of the building or the topmost story before a street step-back, at least one of the following articulating elements shall be applied along the top of the top layer, creating a transition between the top building layer and any story above:

a) *Sec. 3D.6.5.C.1. (Material Change)*; or

b) *Sec. 3D.6.5.C.2. (Belt Course)*.

v. The articulating element shall extend for the full width of the building and be located along the top of the topmost story included in the building layer.

D. **Measurement**

For measurement of stories see *Sec. 2C.4.3. (Height in Stories)*.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Articulation -

E. Exceptions

Where the applied *Form District (Part 2B)* requires a street stepback depth of 10 feet or greater, the top building layer may terminate at the topmost story below the street stepback. No articulating element is required above the top building layer.

F. Relief

1. Base-top standards may be met through alternative compliance in accordance with *Sec. 13B.5.1. (Alternative Compliance)*.
2. A deviation from number of stories in building layers of 1 story may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
3. Deviation from any base-top standard may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

DIV. 3D.11. ROOF DESIGN

Portions of this Division displayed in gray text are being introduced Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Roof Design -

SEC. 3D.11.1. ROOF FORM

The shape of the external upper covering of a building, including the frame for supporting the roofing.

A. Intent

To ensure that building forms contribute to the established architectural character of surrounding neighborhoods or districts.

B. Applicability

a. Where specified by the applied *Character Frontage District (Div. 3B.7)*, roof form standards apply to the roof of all frontage lot line facing buildings and structures on a lot.

b. A minimum of 70% of the total roof area of each applicable building or structure shall meet roof form standards, measured horizontally.

C. Standards

1. General

All building and structures shall have a roof form listed as a roof form option in the applied *Frontage District (Part 3B)*.

2. Roof Form Options

a. Flat

A roof with a maximum pitch of 2:12 (2 inch of vertical rise for every 12 inches of horizontal span). Flat roof forms include roofs with parapets up to 6 feet in height.

b. Pitched

A roof composed of 2 or more sloping planes where all roof planes slope up from the exterior perimeter of the building or structure and connect with another roof plane at a central ridge. All roof planes shall have a minimum pitch of 3:12 (3 inch of vertical rise for every 12 inches of horizontal span). Examples of pitched roof forms include hipped, gabled, and gambrel roofs.

D. Measurement

1. Roof pitch is measured by calculating a roof's vertical rise in inches divided by a foot of its horizontal span and is represented as a ratio.

2. Roof form is measured as compliant or non-compliant based on whether it meets the standards and definition of one of the roof form options allowed by the applied *Frontage District (Part 3B)*.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Roof Design -

E. Relief

1. Up to a 10% reduction to the total required roof area having an allowed roof form may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
2. A deviation from roof form dimensional standard of 10% or less may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
3. Deviation from any roof form standard may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*

F. Measurement

1. Roof pitch is measured by calculating a roof's vertical rise in inches divided by a foot of its horizontal span and is represented as a ratio.
2. Roof form is measured as compliant or non-compliant based on whether it meets the standards and definition of one of the roof form options allowed by the applied *Frontage District (Part 3B)*.

G. Relief

1. Up to a 10% reduction to the total required roof area having an allowed roof form may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
2. A deviation from roof form dimensional standard of 10% or less may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
3. Deviation from any roof form standard may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

[FORM - FRONTAGE - STANDARDS] [USE - DENSITY]
- Roof Design -

SEC. 3D.11.2. ROOF MATERIALS

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 3D.11.3. OVERHANG

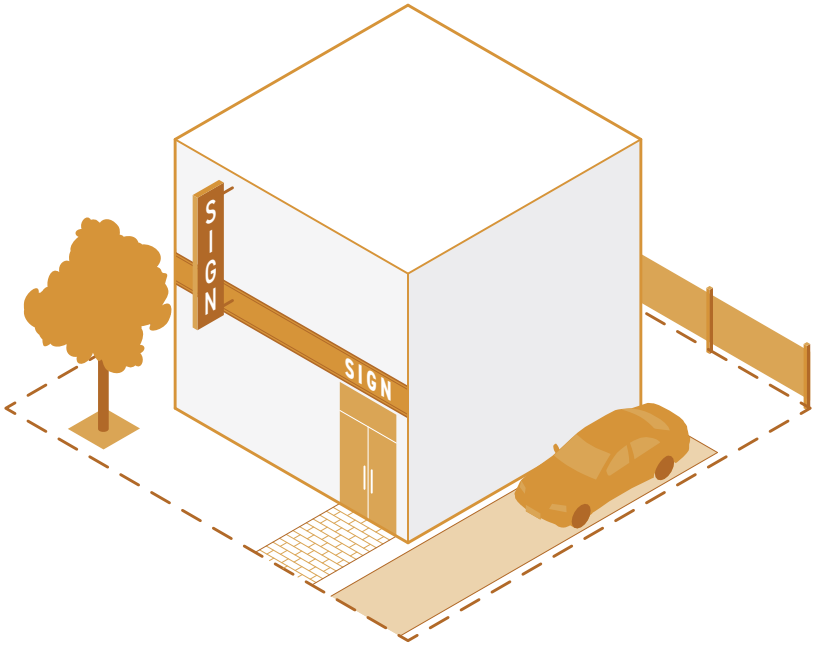
A. Intent

To ensure that a building's roof design contribute to the established architectural character of surrounding neighborhoods or districts.

B. Applicability

Where specified by the applied *Character Frontage District (Div. 3B.7),* overhang standards apply to all portions of a roof used to comply with *Sec. 3D.11.1. (Roof Form).*

C. Standards



Applicable portions of the roof plane shall extend horizontally beyond the building footprint by no less than the minimum overhang dimension specified by the applied *Character Frontage District (Div. 3B.7)* for all portions of the perimeter of the building footprint.

D. Measurement

Overhang is measured horizontally and perpendicular to the building facade from the face of the outermost building facade to the outer edge of the roof plane for the full perimeter of the building or structure .

E. Relief

1. Up to a 15% reduction to the minimum overhang dimension may be requested in accordance with *Sec. 13B.5.2. (Adjustment)*.
2. Deviation from overhang standards may be requested as a variance in accordance with *Sec. 13B.5.3. (Variance)*.

DIV. 4A.1. ORIENTATION

SEC. 4A.1.1. RELATIONSHIP TO ZONE STRING

A zone string is composed of the following districts:

The Development Standards District is a separate and independent component of each zone.

SEC. 4A.1.2. HOW TO USE ARTICLE 4 (DEVELOPMENT STANDARDS)

A. Identify the Applied Development Standards District

The third component in a zone string identifies the Development Standards District applied to a property.

B. Development Standards District Regulations

Development Standards District regulations are located in *Part 4B. (Development Standards Districts)*. Each Development Standards District page identifies the requirements specific to that Development Standards District.

C. Interpreting Development Standards District Regulations

Each standard or standards package on a Development Standards District page in *Part 4B. (Development Standards Districts)* provides a reference to *Part 4C. (Development Standards Rules)* where the standard or standards package is explained in detail. Additionally, *Part 4C. (Development Standards Rules)* includes general standards that apply across all Development Standards Districts.

Development Standards District Example:

Part 4B (Development Standards Districts)

DIV. 4B.5. **DISTRICT 5**

SEC. 4B.5.1. **INTENT**

Development Standards District 5 prioritizes the pedestrian experience. Development Standards District 5 prioritizes the pedestrian experience. Pedestrian access standards facilitate pedestrian circulation by improving pedestrian access from the public realm to the interior of buildings through frequent, direct and convenient access to building entrances. Parking for automobiles is not mandated, contributing to a dynamic and walkable environment. When parking is provided, it must meet high design standards to ensure pedestrian mobility, safety, and comfort are not hindered. On-site signs are sized and located to support a pedestrian-oriented public realm.

Learn More About Your Rules

Part 4C (Development Standards Rules)

DIV. 4C.4. AUTOMOBILE PARKING
SEC. 4C.4.1. AUTOMOBILE PARKING STALLS

A. Intent

To accommodate the arrival to a site by automobile at a level appropriate to the demand generated by a particular use within different mobility contexts without creating detrimental effects on surrounding properties or public right-of-way.

B. Applicability

Required automobile parking stall standards apply all uses on a lot.

C. Standards

1. General

a. All uses subject to the parking requirements of this Division must provide the minimum number of automobile parking stalls for the applicable parking set - A, B, C, D or E. Part 4B, [Development Standard Districts] specifies the applicable parking set requirement for each Zone.

b. When a site or lot is used for a combination of uses, the parking requirements are the sum of the requirements for each use, and no parking stall for one use may be included in the calculation of parking requirements for any other use, except as allowed in Sec. 4C.4.2.C.2, [Reduction for Shared Parking].

c. For electric vehicle charging space requirements, see the Green Building Code (LAMC, Chapter 9, Article 9).

2. Required Automobile Parking Table

a. When the Required Automobile Parking Table lists multiple parking stall requirement options, the greater number of required parking stalls is required.

b. Uses are defined in Part 5D (Use Definitions).

Except for standards specified by the Development Standards District, standards in Part 4C apply to all lots according to the corresponding applicability statement.

SEC. 4A.1.3. DEVELOPMENT STANDARDS DISTRICT NAMING CONVENTION

All Development Standards District names are identified as a number. All Development Standards Districts are numbered in the order they fall within this Article.

DIV. 4A.2. OPENING PROVISIONS

SEC. 4A.2.1. DEVELOPMENT STANDARDS INTENT

The intent of Article 4 (Development Standards) is to regulate site design, including location and characteristics of access, parking, landscape and other site features. Development Standards Districts consist of a combination of regulations that are appropriate to a variety of contexts ranging from auto-oriented to pedestrian-oriented.

SEC. 4A.2.2. DEVELOPMENT STANDARDS APPLICABILITY

A. General

All projects filed after the effective date of this Zoning Code (Chapter 1A) shall comply with the Development Standards Districts and Rules in this Article, as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Project Activities

Categories of Development Standards rules apply to a project based on what types of project activities are proposed, as shown in the table below. Typically, more than one project activity will apply to a proposed project (for example, an addition that expands an existing use includes both new construction and a use modification).

DEVELOPMENT STANDARDS RULES CATEGORIES		PROJECT ACTIVITIES								
		New Construction	Major Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 4C.1.	Pedestrian Access	●	●	●	●	●	○	○	○	○

Div. 4C.13.	Environmental Protection	●	●	○	●	○	○	○	○	○
Div. 4C.14.	Development Review	●	○	○	●	○	●	○	○	○

● = Rules generally apply to this project activity

○ = Rules are not applicable

1. Project activities are defined in *Sec. 14.1.15. (Project Activities)*.

2. Where a category of Development Standards rules is listed as generally applicable in the table above, the project activity shall meet all applicable Development Standards standards within the Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 4C. (Development Standards Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a category of Development Standards rules is listed as not applicable in the table above, no standards from that Development Standards Rule category apply to the project activity.

C. Nonconformity

Article 12. (Nonconformity) provides relief from the requirements of Article 4 (Development Standards) for existing lots, site improvements, buildings, structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current district standards or use permissions. No project activity may decrease conformance with any Development Standard regulation unless otherwise specified by *Division 12.4. (Development Standards Exceptions)*. Consider the following examples:

1. Extending a fence in a side yard: Where the existing, legally established fence located in a side yard is taller than the maximum height allowed by the fences and walls type specified by the applicable Frontage District, all new portions of fence built in the front yard have to meet the maximum fence and wall height standard, but no existing fence alteration is required.

2. Converting parking stalls to outdoor dining: Where the proposed site alteration and change of use reduces the amount of parking below the number of parking stalls specified by the applicable Development Standards District, the conversion is not allowed.

D. Applicable Components of Lots and Structures

1. Development Standards Districts apply to all portions of a lot.

2. Development Standards Districts apply to all portions of buildings and structures on a lot.

3. Specific Development Standards District standards and rules may further limit which components of structures and lots are required to comply with the rules in *Part 4C. (Development Standards Rules)*.

DIV. 4B.1. DISTRICT 1

[Reserved]

DIV. 4B.2. DISTRICT 2

[Reserved]

DIV. 4B.3. DISTRICT 3

SEC. 4B.3.1. INTENT

Development Standards District 3 prioritizes the pedestrian experience while enabling mobility for motor vehicles. Pedestrian access standards ensure easy access from the public-right-of-way to building entrances, facilitating pedestrian movement. Required automobile parking is moderate in order to ensure sites can accommodate some vehicular access within a walkable environment. Parking facilities must meet design standards to ensure pedestrian mobility, safety, and comfort are not hindered, and buildings provide active frontages along primary streets. On-site signs are sized and located to support a pedestrian-oriented public realm.

See *Part 4C. (Development Standards Rules)* for additional development standards that apply.

DIV. 4B.4. DISTRICT 4

SEC. 4B.4.1. INTENT

Development Standards District 4 prioritizes the pedestrian experience. Pedestrian access standards facilitate pedestrian circulation by improving pedestrian access from the public realm to the interior of buildings through frequent, direct and convenient access to building entrances. Required automobile parking is limited to allow uses to orient primarily toward pedestrian traffic in a walkable and transit rich environment. Parking facilities must meet high design standards to ensure pedestrian mobility, safety, and comfort are not hindered, and buildings provide active frontages along each segment of the public right-of- way. On-site signs are sized and located to support a pedestrian-oriented public realm.

Sec. 5A.2.4. Relationship to Density Districts 5-10

DIV. 5A.1. ORIENTATION

SEC. 5A.1.1. RELATIONSHIP TO ZONE STRING

A zone string is composed of the following Districts:

[FORM- FRONTAGE - STANDARDS] [**USE** - DENSITY]

Use District

The Use District is a separate and independent component of each zone.

SEC. 5A.1.2. HOW TO USE ARTICLE 5 (USE)

A. Identify the Applied Use District

The fourth component in a zone string identifies the Use District applied to a property.

B. Determine What Uses are Permitted

1. Reference the Use District Table

Each Use District outlines the permissions levels and use limitations for all uses in a table that is organized by a uniform list of use categories and uses.

2. Reference the Use Permissions

Permission levels are outlined in *Div. 5C.2. (Use Permissions)*, and a key is also included in the footer of each page of the Use District table for each Use District.

3. Reference the Use Definitions

Refer to *Div. 5C.1. (Use Definitions)* to confirm the definition of any use listed in each Use District.

C. Identify Use Standards

Use District standards are outlined in *Div. 5C.3. (Use Standards)*. Each Use District page identifies the applicable standards specific to each use within that Use District.

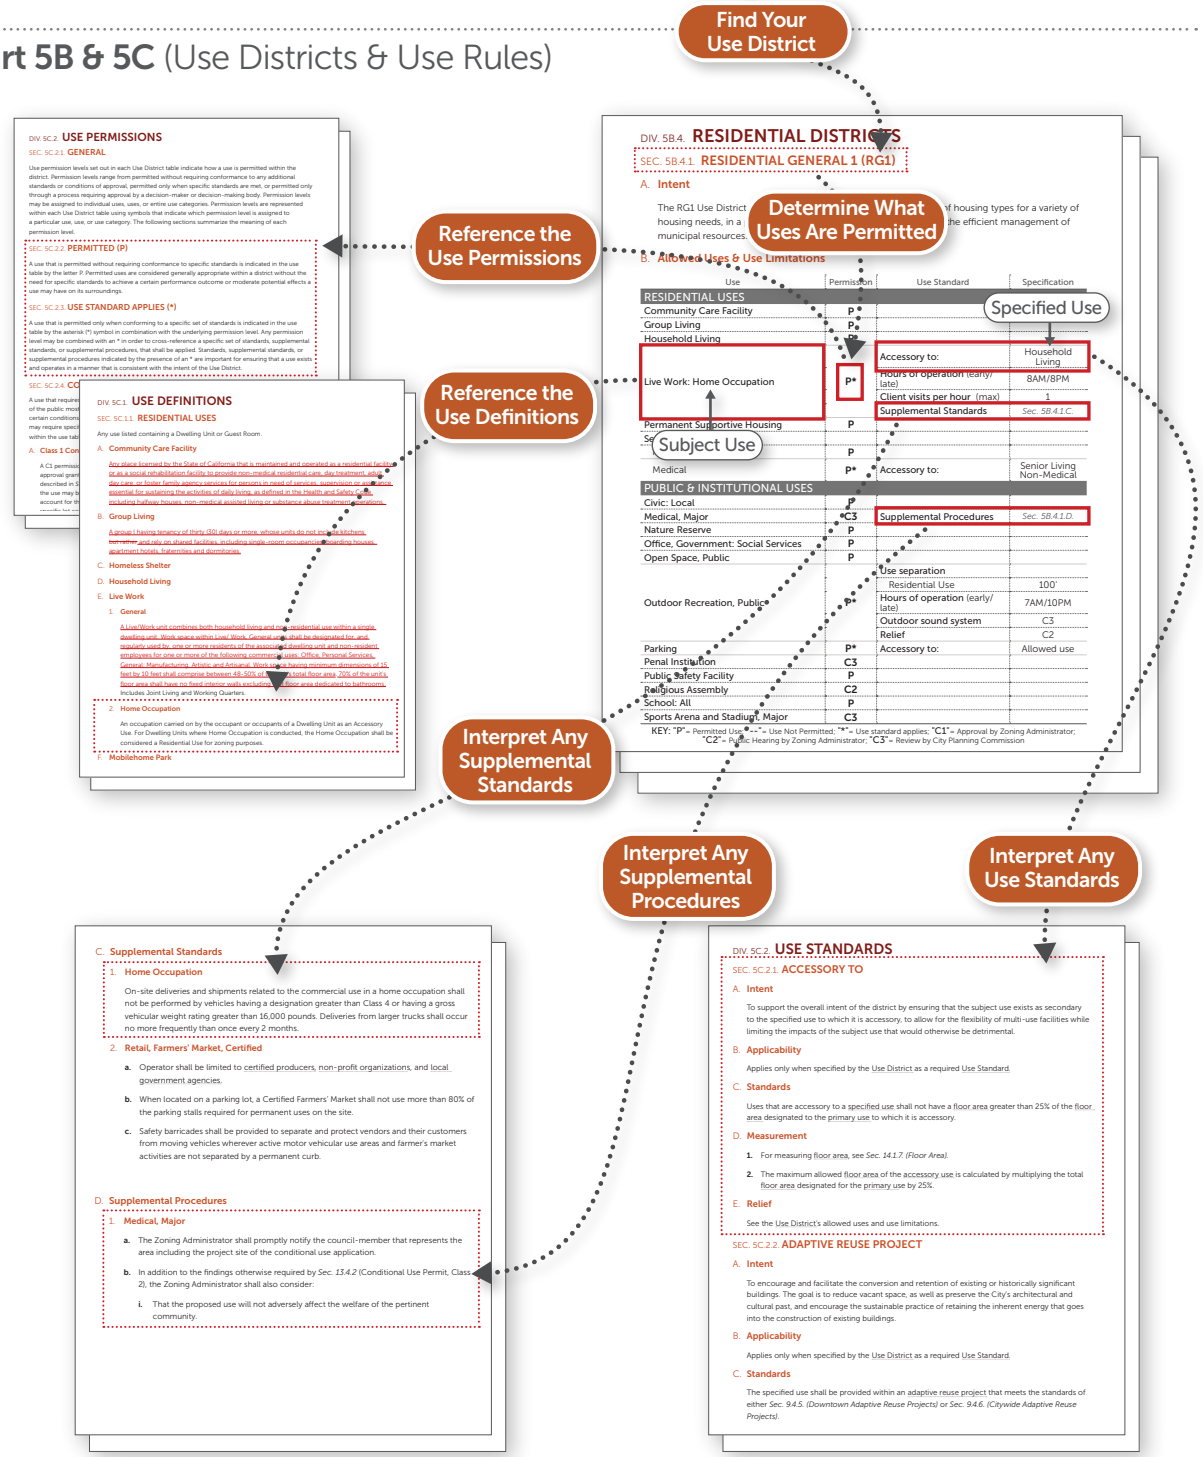
1. Identify Supplemental Standards

When identified as a use standard on the Use District table, supplemental standards are required. The required supplemental standards for each use are outlined after the allowed uses and standards table for each Use District established in *Part 5B. (Use Districts)*.

2. Identify Supplemental Procedures

When identified as a use standard on the Use District table, supplemental procedures are required. The required supplemental procedures for each use are outlined after the supplemental standards for each Use District established in *Part 5B. (Use Districts)*.

D. Interpret Use Standards



Each use standard on a Use District page in *Part 5B. (Use Districts)* corresponds with a Section in *Part 5C. (Use Rules)*, where the use standard is explained in detail.

Use District Example:

Zone String

[LLM2-MU2-5] [**RG1** -FA]

Part 5B & 5C (Use Districts & Use Rules)

SEC. 5A.1.3. USE DISTRICT NAMING CONVENTION

All Use District names are comprised of two components: a Use District Category and a variation number.

A. Use District Category

The first component of each Use District name is a Use District Category. Use District Category group all districts with similar characteristics. Use District Category are organized as follows:

1. Open Space
2. Agricultural
3. Residential
4. Residential-Mixed
5. Commercial-Mixed
6. Commercial
7. Industrial-Mixed
8. Industrial
9. Public

B. Variation Number

The last component of each Use District name is a variation number. All Use Districts are numbered in the order they fall within Article 5 (Use).

DIV. 5A.2. OPENING PROVISIONS

SEC. 5A.2.1. USE INTENT

The intent of Article 5 (Use) is to establish the Use Districts, Use Standards, and Use Definitions in order to regulate the activities on a lot, and to mitigate any potential impacts within a lot and on surrounding property as a result of those activities.

SEC. 5A.2.2. USE APPLICABILITY

A. General

1. Most lots, operations, and facilities will contain more than one use. No use that is not permitted by the Use District shall be allowed with the exception of incidental uses as established in *Sec. 5A.1.2.A.4. (Incidental Uses)*.

2. All projects filed after the effective date of this Zoning Code (Chapter 1A) shall comply with the Use District standards and all other provisions in Article 5 (Use), as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Project Activities

1. Categories of Use rules apply to a project based on what types of project activities are proposed, as shown in the table below. Typically, more than one project activity will apply to a proposed project (for example, an addition will also include a use modification).

USE RULE CATEGORY		PROJECT ACTIVITIES								
		New Construction	Major Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 5C.1.	**Use Definitions**	●	○	○	○	○	●	●	○	○
Div. 5C.2.	**Use Permissions**	●	○	○	○	○	●	●	○	○
Div. 5C.3.	**Use Standards**	●	●	●	●	○	●	●	○	○

● = Rules generally apply to this project activity
○ = Rules are not applicable

2. Project activities are defined in *Sec. 14.1.15. (Project Activities)*.

3. Where a category of the Use rules are listed as generally applicable in the table above, the project activity shall meet all applicable Use standards within that Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 5C. (Use Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a category of Use rules is listed as not applicable in the table above, no standards from that Use rule category apply to the project activity.

C. Applicable Components of Lots, Buildings, and Structures

1. Use regulations apply to all portions of a lot.

2. Use regulations apply to all portions of buildings and structures on a lot.

3. Specific use regulations may further limit which components of buildings and lots are required to comply with *Part 5C (Use Rules)*.

D. Nonconformity

Article 12. (Nonconformity) provides relief from the requirements of Article 5 (Use) for existing lots, site improvements, buildings, structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current Use District standards or use permissions. For lots with uses nonconforming as to the provisions of *Div. 5C.2. (Use Permissions)*, *Div. 5C.3. (Use Standards)*, or *Div. 5C.1. (Use Definitions)* specified by the applied *Use District (Part 5B)*, no project activity may decrease the conformance with any regulations specified in Article 5 (Use), unless otherwise specified by *Div. 12.6. (Nonconforming Use)*. Consider the following examples:

1. An addition to an existing counter service business: Where the current total floor area of the use exceeds the maximum allowed commercial tenet size of the applied Use District, the addition is not allowed; however, the existing nonconforming tenet area is allowed to be continued.

2. Building a screening wall along the edge of a motor vehicle use area at a gas station: Where fueling station is not a permitted use in applied Use District, the screening wall site modification is allowed because it does not decrease the degree of non-conformity.

3. Demolition of a brewery facility where an accessory restaurant use remains: Where the restaurant is allowed only accessory to food and beverage manufacturing, this major demolition is not allowed unless the restaurant use is discontinued.

E. Incidental Uses

1. A use may be allowed as an incidental use, provided the Zoning Administrator determines it is incidental to and directly associated with an allowed use.

2. The Zoning Administrator shall consider the following characteristics when determining whether a use is incidental to and directly associated with an allowed use:

   a. The use is customarily associated with the permitted use;

   b. The use is subordinate in both intent and size to the permitted use;

   c. The use is located on the same lot as the permitted use;

   d. The use is abutting, adjacent to, or integrated within the use area of the permitted use;

   e. The impact of the use is not detrimental when compared to the impact of the permitted use.

3. Where a use standard specifies the use is allowed only when incidental to a specified use, the subject use may not be allowed incidental to any other use except the specified use. See *Sec. 5C.3.14. (Incidental To)* for more standards rules.

SEC. 5A.2.3. RELATIONSHIP TO FORM, FRONTAGE, & DEVELOPMENT STANDARDS

Regardless of allowed uses, the form of a building, its architectural elements, and site improvements are regulated by Form, Frontage, and Development Standards Districts which shall be met. For example, an eating & drinking use might be allowed, but the Development Standard regulations may prohibit drive-through facilities.

SEC. 5A.2.4. RELATIONSHIP TO DENSITY DISTRICTS

Use Districts that contain provisions for Residential Uses do not include regulations regarding the number of dwelling units that are permitted. The Density District component of the zone-string, as described in *Article 6 (Density)*, is the mechanism that regulates the number of dwelling units permitted on any lot.

PART 5B. USE DISTRICTS

Div. 5B.1. Open Space Districts 5-12
Sec. 5B.1.1. Open Space 1 (OS1) 5-12

Div. 5B.2. Agricultural Districts 5-19
Sec. 5B.2.1. Agricultural 1 (A1) 5-19

Div. 5B.3. Residential Districts 5-20
Sec. 5B.3.1. Residential 1 (RG1) 5-20
Sec. 5B.3.2. Residential 2 (RG2) 5-21

Div. 5B.4. Residential-Mixed Districts 5-28
Sec. 5B.4.1. Residential-Mixed 1 (RX1) 5-28
Sec. 5B.4.2. Residential-Mixed 2 (RX2) 5-37

Div. 5B.5. Commercial-Mixed Districts 5-44
Sec. 5B.5.1. Commercial-Mixed 1 (CX1) 5-44
Sec. 5B.5.2. Commercial-Mixed 2 (CX2) 5-45
Sec. 5B.5.3. Commercial-Mixed 3 (CX3) 5-56
Sec. 5B.5.4. Commercial-Mixed 4 (CX4) 5-69
Sec. 5B.5.5. Commercial-Mixed 5 (CX5) 5-70

Div. 5B.6. Commercial Districts 5-81

Div. 5B.7. Industrial-Mixed Districts 5-82
Sec. 5B.7.1. Industrial-Mixed 1 (IX1) 5-82
Sec. 5B.7.2. Industrial-Mixed 2 (IX2) 5-82
Sec. 5B.7.3. Industrial-Mixed 3 (IX3) 5-82
Sec. 5B.7.4. Industrial-Mixed 4 (IX4) 5-82
Sec. 5B.7.5. Industrial-Mixed 5 (ix5) 5-83

Div. 5B.8. Industrial Districts 5-99
Sec. 5B.8.1. Industrial 1 (I1) 5-99
Sec. 5B.8.2. Industrial 2 (I2) 5-100
Sec. 5B.8.3. Industrial 3 (I3) 5-122

Div. 5B.9. Public Districts 5-138
Sec. 5B.9.1. Public 1 (P1) 5-138
Sec. 5B.9.2. Public 2 (P2) 5-143

DIV. 5B.1. OPEN SPACE DISTRICTS

Open Space Use Districts regulate open spaces to be preserved as natural resources or used for outdoor recreation opportunities.

SEC. 5B.1.1. OPEN SPACE 1 (OS1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

A. Intent

The OS1 Use District is intended to protect and preserve natural resources, provide outdoor recreation opportunities, and facilitate the efficient management of municipal resources.

C. Supplemental Standards

1. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

2. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

DIV. 5B.2. AGRICULTURAL DISTRICTS

Agricultural Use Districts emphasize agriculture-related uses while also allowing for residential uses.

SEC. 5B.2.1. AGRICULTURAL 1 (A1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

DIV. 5B.3. RESIDENTIAL DISTRICTS

Residential Use Districts emphasize residential uses and only allow a minimal amount of compatible services and amenities.

SEC. 5B.3.1. RESIDENTIAL 1 (RG1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.3.2. RESIDENTIAL 2 (RG2)

A. Intent

The RG2 Use District is intended to accommodate a wide variety of housing types for a variety of housing needs in a predominantly residential setting supported by local civic and recreational uses providing resources to a residential community.

C. Supplemental Standards

1. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

2. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

3. Recycling Facility, Collection

a. All recycled goods, temporary installations, debris, trash, and any other material associated with the use, shall be placed or stored in a fully covered and enclosed recycling collection facility and not be left or stored outdoors beyond the hours of operation.

b. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, telephone number, hours of operation, and a notice that no material shall be left outside the enclosure, and each recycling receptacle shall clearly indicate the type of material to be deposited.

4. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

5. Animal Keeping, Bees

a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.

b. A water source for bees shall be provided at all times on the lot where the bees are kept.

D. Supplemental Procedures

1. Recycling Facilities, Collection

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

DIV. 5B.4. RESIDENTIAL-MIXED DISTRICTS

Residential-Mixed Use Districts emphasize residential uses and only allow a minimal amount of compatible services and amenities and limited commercial uses.

SEC. 5B.4.1. RESIDENTIAL-MIXED 1 (RX1)

A. Intent

The RX1 Use District is intended to accommodate a wide variety of housing types for a variety of housing needs, in a primarily residential setting supported by neighborhood-serving commercial uses and facilitate the efficient management of municipal resources.

C. Supplemental Standards

1. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

2. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

3. Recycling Facility, Collection

a. All recycled goods, temporary installations, debris, trash and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling collection facility and not be left or stored outdoors beyond the hours of operation.

b. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, telephone number, hours of operation, and a notice that no material shall be left outside the enclosure, and each recycling receptacle shall clearly indicate the type of material to be deposited.

4. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

5. Animal Keeping, Bees

a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.

b. A water source for bees shall be provided at all times on the lot where the bees are kept.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the proposed use will not adversely affect the welfare of the pertinent community.

ii. That the granting of the application will not result in an undue concentration of premises for the sale or dispensing for consideration of alcoholic beverages, including beer and wine, in the area of the City involved, giving consideration to applicable State laws and to the California Department of Alcoholic Beverage Control's guidelines for undue concentration; and also giving consideration to the number and proximity of these establishments within a 1,000-foot radius of the lot, the crime rate in the area (especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct), and whether revocation or nuisance proceedings have been initiated for any use in the area.

iii. That the proposed use will not detrimentally affect nearby residentially zoned communities in the area of the City involved, after giving consideration to the distance of the proposed use from sensitive uses, and other establishments dispensing alcoholic beverages, including beer and wine.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Recycling Facilities, Collection

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

SEC. 5B.4.2. RESIDENTIAL-MIXED 2 (RX2)

A. Intent

The RX2 Use District is intended to accommodate a wide variety of housing types for a variety of housing needs in a primarily residential setting supported by neighborhood-serving commercial uses, local civic and recreational uses providing resources to a residential community. The district generally limits commercial uses to corner sites and a 1,500 square foot establishment size.

D. Supplemental Procedures

1. Recycling Facilities, Collection

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

DIV. 5B.5. COMMERCIAL-MIXED DISTRICTS

Commercial-Mixed Use Districts promote neighborhoods with a mixture of uses including commercial and residential.

SEC. 5B.5.1. COMMERCIAL-MIXED 1 (CX1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.5.2. COMMERCIAL-MIXED 2 (CX2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

A. Intent

The CX2 Use District allows for commercial uses generally within a 50,000 square foot establishment size on the ground story, as well as a wide range of housing types. The Use District is intended to support a broad range of residential, commercial, and civic facility uses to serve surrounding neighborhoods as well as visitors to the area. Public and institutional services and amenities are also allowed.

C. Supplemental Standards

1. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

2. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

3. Lodging

A Lodging use shall not be permitted where it requires a change of use from any residential use.

4. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

5. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

6. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use*

Permit), finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider, the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses

4. Recycling Facilities, Collection

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

SEC. 5B.5.3. COMMERCIAL-MIXED 3 (CX3)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

A. Intent

The CX3 Use District allows for primarily commercial uses. This District is intended to accommodate a variety of uses, mixing housing with small and large-scale commercial amenities and services.

C. Supplemental Standards

1. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

2. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

3. Lodging

A lodging use shall not be permitted where it requires a change of use from any residential use.

4. Motor Vehicle Services, Car Wash

Bay doors and other building entrances and exits designed and intended for motor vehicles shall not face any residential use or school unless the residential use or school is located more than 100 feet from the car wash facility.

5. Motor Vehicle Services, Fueling Station

An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading and unloading of fuel, vehicles, goods, and any other activities requiring the use of commercial vehicles for transportation.

6. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

7. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

8. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses

4. Retail, Firearms

In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider the number of firearms available for sale at the lot.

5. Retail, Large Format

a. In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new large format retail uses are required to prepare an economic impact analysis report for submission to the Department of City Planning and the Economic & Workforce Development Department for review in conjunction with its application to the Department of City Planning. The Economic & Workforce Development Department shall complete its review of the report within 60 days after receipt of the report from the applicant. The report shall identify the following:

i. The economic impact on retail businesses within a 3-mile radius, based on the potential to divert or expand the local or regional customer base. Data portraying the existing customer volume of the study area, as well as the anticipated customer volume of the study area, shall be included in the report.

ii. The destruction or demolition of any buildings, structures, facilities, or site area containing any of the following uses: any Residential Use, Civic Facility, School, Nature Reserve, Public Open Space, Nature Reserve, or Public Recreation.

iii. Contribution to local retail market in terms of providing lower in cost or higher in quality goods and services than currently available to residents within a 3-mile radius. A survey of goods and services offered by retail uses within a 3-mile radius shall be included within the report.

iv. The number of permanent jobs displaced or created as a direct result of the project. Permanent jobs shall be categorized by employment sector within the report.

v. Fiscal impact on City tax revenue, either positive or negative.

vi. Viability of future reuse of the project site in the event the business vacates the premises based on factors such as building design, site layout, and lease terms requiring the lot to remain vacant for a significant amount of time.

vii. Reasonable expectation that employment solicitation by day laborers will occur at or around the lot.

viii. Measures to mitigate any materially adverse impacts identified within the report.

b. If determined by the City Planning Commission, or the City Council on appeal, that based on the findings of the report, or any other information received before or at a public hearing, that there is a reasonable expectation that employment solicitation by day laborers will occur at or around the lot, then the following measures may be required to the satisfaction of the City Planning Commission, or the City Council on appeal:

i. The project shall accommodate employment solicitation by day laborers with dedicated congregation space that meets the following criteria:

a) Is sufficient in size based on reasonably expected users;

b) Located along, but clear of a pedestrian accessway leading to a primary entrance; and

c) Is covered to provide adequate shelter from the weather.

ii. Amenities including publicly accessible sources of drinking water, toilet and trash facilities, tables, and seating areas shall also be made available during business hours of operation.

iii. A signage plan, indicating the location of signs at appropriate locations throughout the lot, directing users to dedicated congregation areas and amenities.

6. Recycling Facilities, All

An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

SEC. 5B.5.4. COMMERCIAL-MIXED 4 (CX4)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.5.5. COMMERCIAL-MIXED 5 (CX5)

A. Intent

The CX5 Use District is intended to support the clustering of small-scale retail, dining, personal service, office, entertainment, cultural and institutional uses catering to immediately surrounding neighborhoods, as well as a wide range of housing types. The district generally limits commercial uses to a 5,000 square foot establishment size on the ground story.

C. Supplemental Standards

1. Home Occupation

On-site deliveries and shipments related to the commercial use in a home occupation shall not be performed by vehicles having a gross vehicular weight rating designation greater than Class 4 or greater than 16,000 pounds. Deliveries from larger trucks shall occur no more frequently than once every 2 months.

2. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

3. Lodging

A Lodging use shall not be permitted where it requires a change of use from any residential use.

4. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

5. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

6. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider, the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider, the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. The Zoning Administrator shall promptly notify the council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider, the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

4. Recycling Facilities, All

An annual site inspection shall be conducted by LADBS pursuant to Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).

DIV. 5B.6. COMMERCIAL DISTRICTS

Commercial Use Districts cater to light industrial and commercial uses including ones that may create more significant impacts, such as vehicle repair and fueling stations.

[Reserved]

DIV. 5B.7. INDUSTRIAL-MIXED DISTRICTS

Industrial-Mixed Use Districts accommodate a mixture of light industrial, office, and research and development activity, with limited residential uses and other compatible uses.

SEC. 5B.7.1. INDUSTRIAL-MIXED 1 (IX1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.7.2. INDUSTRIAL-MIXED 2 (IX2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.7.3. INDUSTRIAL-MIXED 3 (IX3)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.7.4. INDUSTRIAL-MIXED 4 (IX4)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.7.5. INDUSTRIAL-MIXED 5 (IX5)

A. Intent

The IX5 District is intended to accommodate light industrial uses, office space, and research and development activity. The Use District also allows a wide range of commercial uses. Residential uses are limited to Joint Living and Work Quarters and Supportive Housing.

C. Supplemental Standards

1. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

2. Motor Vehicle Services, General

a. Bay doors and other building entrances and exits designed and intended for motor vehicle access shall meet the following standards:

i. Shall remain closed except during the allowed hours of operation, and

ii. Shall not face any frontage lot line.

b. An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading, unloading and any other activities requiring the use of commercial vehicles for transportation.

c. All client vehicles being serviced by a general motor vehicle service use shall be stored on-site.

3. Motor Vehicle Services, Car Wash

Bay doors and other building entrances and exits designed and intended for motor vehicles shall not face any residential use or school unless the residential use or school is located more than 100 feet from the car wash facility.

4. Motor Vehicle Services, Fueling Station

An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading and unloading of fuel, vehicles, goods and any other activities requiring the use of commercial vehicles for transportation.

5. Outdoor Storage, Cargo Container

a. The entire lot shall be graded pursuant to *Chapter 9, Division 70 (Grading, Excavation and Fills) of the LAMC*.

b. All driveways, accessways, and parking areas shall be covered with a decomposed granite, crushed gravel, or similar material and be treated with dust control methods.

c. All containers shall be empty and cleaned of any residue which may pose any kind of physical or health risk.

6. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

7. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

8. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)* finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

9. Animal Keeping, Bees

a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.

b. A water source for bees shall be provided at all times on the lot where the bees are kept.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses

4. Retail, Firearms

In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider the number of firearms available for sale at the lot.

5. Retail, Large Format

a. In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new large format retail uses are required to prepare an economic impact analysis report for submission to the Department of City Planning and the Economic & Workforce Development Department for review in conjunction with its application to the Department of City Planning. The Economic & Workforce Development Department shall complete its review of the report within 60 days after receipt of the report from the applicant. The report shall identify the following:

i. The economic impact on retail businesses within a 3-mile radius based on the potential to divert or expand the local or regional customer base. Data portraying the existing customer volume of the study area as well as the anticipated customer volume of the study area shall be included in the report.

ii. The destruction or demolition of any buildings, structures facilities or site area containing any of the following uses: any Residential Use, Civic Facility, School, Nature Reserve, Public Open Space, or Public Recreation.

iii. Contribution to local retail market in terms of providing lower in cost or higher in quality goods and services than currently available to residents within a 3-mile radius. A survey of goods and services offered by retail uses within a 3-mile radius shall be included within the report.

iv. The number of permanent jobs displaced or created as a direct result of the project. Permanent jobs shall be categorized by employment sector within the report.

v. Fiscal impact on City tax revenue, either positive or negative.

vi. Viability of future reuse of the project site in the event the business vacates the premises based on factors such as building design, site layout, and lease terms requiring the lot to remain vacant for a significant amount of time.

vii. Reasonable expectation that employment solicitation by day laborers will occur at or around the lot.

viii. Measures to mitigate any materially adverse impacts identified within the report.

b. If determined by the City Planning Commission, or the City Council on appeal, that based on the findings of the report, or any other information received before or at a public hearing that there is a reasonable expectation that employment solicitation by day laborers will occur at or around the lot then the following measures may be required to the satisfaction of the City Planning Commission, or the City Council on appeal:

i. The project shall accommodate employment solicitation by day laborers with dedicated congregation space that meets the following criteria:

a) Is sufficient in size based on reasonably expected users;

b) Located along but clear of a pedestrian accessway leading to a primary entrance; and

c) Is covered to provide adequate shelter from the weather.

ii. Amenities including publicly accessible sources of drinking water, toilet and trash facilities, tables, and seating areas shall also be made available during business hours of operation.

iii. A signage plan, indicating the location of signs at appropriate locations throughout the lot directing users to dedicated congregation areas and amenities.

6. Outdoor Storage, Cargo Container

a. The stacking of cargo containers more than 20 feet high shall only be permitted if a structural analysis done by a licensed engineer or architect in the State of California is submitted to and approved by the Los Angeles Department of Building and Safety (LADBS).

b. An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers or Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).*

7. Salvage Yard

An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

8. Recycling Facilities, All

An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

DIV. 5B.8. INDUSTRIAL DISTRICTS

SEC. 5B.8.1. INDUSTRIAL 1 (I1)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.8.2. INDUSTRIAL 2 (I2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

A. Intent

The I2 District allows heavy commercial, light industrial, and heavy industrial uses as well as a limited amount of commercial activity. This District is intended to support employment and accommodate the most intense industrial activities while minimizing potential disruptions to surrounding uses.

C. Supplemental Standards

1. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

2. Motor Vehicle Services, General & Commercial Vehicle

a. Bay doors and other building entrances and exits designed and intended for motor vehicle access shall meet the following standards:

i. Shall remain closed except during the allowed hours of operation, and

ii. Shall not face any frontage lot line.

b. An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading, unloading, and any other activities requiring the use of commercial vehicles for transportation.

c. All client vehicles being serviced by a general motor vehicle service use shall be stored on-site.

3. Motor Vehicle Services, Car Wash

Bay doors and other building entrances and exits designed and intended for motor vehicles shall not face any residential use or school unless the residential use or school is located more than 100 feet from the car wash facility.

4. Motor Vehicle Services, Fueling Station

An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading and unloading of fuel, vehicles, goods, and any other activities requiring the use of commercial vehicles for transportation.

5. Outdoor Storage, Cargo Container

a. The entire lot shall be graded pursuant to *Chapter 9, Division 70 (Grading, Excavation and Fills) of the LAMC*.

b. All driveways, accessways, and parking areas shall be covered with a decomposed granite, crushed gravel, or similar material and be treated with dust control methods.

c. All containers shall be empty and cleaned of any residue which may pose any kind of physical or health risk.

6. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

7. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

8. Recycling Facilities, Sorting & Processing

All leachates shall be collected, controlled, disposed of, and shall not be allowed to remain at the lot at any time.

9. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)* finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

10. Waste Facility, Green Waste

All leachates shall be collected, controlled, disposed of, and shall not be allowed to remain at the lot at any time.

11. Waste Facility, Hazardous Waste

All leachates shall be collected, controlled, disposed of, and shall not be allowed to remain at the lot at any time.

12. Waste Facility, Solid Waste

All leachates shall be collected, controlled, disposed of, and shall not be allowed to remain at the lot at any time.

13. Animal Keeping, Bees

a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.

b. A water source for bees shall be provided at all times on the lot where the bees are kept.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

vi.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

4. Retail, Firearms

In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider the number of firearms available for sale at the lot.

5. Retail, Large Format

a. In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new large format retail uses are required to prepare an economic impact analysis report for submission to the Department of City Planning and the Economic & Workforce Development Department for review in conjunction with its application to the Department of City Planning. The Economic & Workforce Development Department shall complete its review of the report within 60 days after receipt of the report from the applicant. The report shall identify the following:

i. The economic impact on retail businesses within a 3-mile radius based on the potential to divert or expand the local or regional customer base. Data portraying the existing customer volume of the study area as well as the anticipated customer volume of the study area shall be included in the report.

ii. The destruction or demolition of any buildings, structures, facilities, or site area containing any of the following uses: any Residential Use, Civic Facility, School, Nature Reserve, Public Open Space, or Public Recreation.

iii. Contribution to local retail market in terms of providing lower in cost or higher in quality goods and services than currently available to residents within a 3-mile radius. A survey of goods and services offered by retail uses within a 3-mile radius shall be included within the report.

iv. The number of permanent jobs displaced or created as a direct result of the project. Permanent jobs shall be categorized by employment sector within the report.

v. Fiscal impact on City tax revenue, either positive or negative.

vi. Viability of future reuse of the project site in the event the business vacates the premises based on factors such as building design, site layout, and lease terms requiring the lot to remain vacant for a significant amount of time.

vii. Reasonable expectation that employment solicitation by day laborers will occur at or around the lot.

viii. Measures to mitigate any materially adverse impacts identified within the report.

b. If determined by the City Planning Commission, or the City Council on appeal, that based on the findings of the report, or any other information received before or at a public hearing that there is a reasonable expectation that employment solicitation by day laborers will occur at or around the lot then the following measures may be required to the satisfaction of the City Planning Commission, or the City Council on appeal:

i. The project shall accommodate employment solicitation by day laborers with dedicated congregation space that meets the following criteria:

a) Is sufficient in size based on reasonably expected users;

b) Located along but clear of a pedestrian accessway leading to a primary entrance; and

c) Is covered to provide adequate shelter from the weather.

ii. Amenities including publicly accessible sources of drinking water, toilet and trash facilities, tables, and seating areas shall also be made available during business hours of operation.

iii. A signage plan, indicating the location of signs at appropriate locations throughout the lot directing users to dedicated congregation areas and amenities.

6. Outdoor Storage, Cargo Container

a. The stacking of cargo containers more than 20 feet high shall only be permitted if a structural analysis done by a licensed engineer or architect in the State of California is submitted to and approved by the Los Angeles Department of Building and Safety (LADBS).

b. An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers or Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).*

7. Manufacturing, Heavy, Petroleum and Coal Product Manufacturing

In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new petroleum-based oil refineries and existing refineries expanding operations beyond the current property lines are required to:

a. Comply with all of the required Unified Programs (Unified Hazardous Waste and Hazardous Materials Management Regulatory Program). California Environmental Reporting System (CERS) database submittals may serve as proof of compliance.

b. Submit a health assessment of the project for the surrounding vicinity identifying pollution and population indicators, such as, but not limited to, those analyzed in the California Communities Environmental Health Screening Tool; the number of people affected by the project; short term or permanent impacts caused by the project; likelihood that impacts will occur; and recommended mitigation measures.

c. Submit a health assessment of the project for the surrounding vicinity identifying pollution and population indicators, such as, but not limited to, those analyzed in the California Communities Environmental Health Screening Tool; the number of people affected by the project; short term or permanent impacts caused by the project; likelihood that impacts will occur; and recommended mitigation measures.

d. Submit a truck routing plan that minimizes the incidence of a commercial truck traveling past residences, churches, schools, hospitals, public playgrounds, nursing homes, daycare centers, and other similar uses.

8. Salvage Yard

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

9. Recycling Facilities, All

An annual site inspection shall be conducted by LADBS pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials*

Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).

10. Resource Extraction, General

In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new resource extraction facilities and existing resource extraction facilities expanding operations beyond the current property lines are required to:

a. Comply with all of the required Unified Programs (Unified Hazardous Waste and Hazardous Materials Management Regulatory Program). California Environmental Reporting System (CERS) database submittals may serve as proof of compliance.

b. Submit a health assessment of the project for the surrounding vicinity identifying pollution and population indicators, such as, but not limited to, those analyzed in the California Communities Environmental Health Screening Tool; the number of people affected by the project; short term or permanent impacts caused by the project; likelihood that impacts will occur; and recommended mitigation measures.

c. Submit a health assessment of the project for the surrounding vicinity identifying pollution and population indicators, such as, but not limited to, those analyzed in the California Communities Environmental Health Screening Tool; the number of people affected by the project; short term or permanent impacts caused by the project; likelihood that impacts will occur; and recommended mitigation measures.

d. Submit a truck routing plan that minimizes the incidence of a commercial truck traveling past residences, churches, schools, hospitals, public playgrounds, nursing homes, child care centers, and other similar uses.

11. Waste Facility, Hazardous Waste

In addition to the other findings required by *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, the City Planning Commission shall make all of the following findings:

a. That the proposed location of the facility will not result in an undue concentration of waste processing facilities in the immediate area, will not create a cumulative impact with special consideration given to the location of waste facilities already permitted, and will support the equitable distribution of these facilities citywide.

b. That the facility will not detrimentally affect nearby residential uses and other sensitive land uses, taking into consideration the number and proximity of residential buildings, churches, schools, hospitals, public playgrounds, nursing homes, daycare centers, and other similar uses within a 1,500-foot radius of the proposed lot.

c. That the facility operator will provide community benefits as determined appropriate to businesses and residents likely to be impacted by this facility, taking into consideration the location of the proposed lot and nearby uses.

12. Waste Facility, Solid Waste

In addition to the other findings required by *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, the City Planning Commission shall make all of the following findings:

a. That the proposed location of the facility will not result in an undue concentration of waste processing facilities in the immediate area, will not create a cumulative impact with special consideration given to the location of waste facilities already permitted, and will support the equitable distribution of these facilities citywide.

b. That the facility will not detrimentally affect nearby residential uses and other sensitive land uses, taking into consideration the number and proximity of residential buildings, churches, schools, hospitals, public playgrounds, nursing homes, daycare centers, and other similar uses within a 1,500-foot radius of the proposed lot.

c. That the facility operator will provide community benefits as determined appropriate to businesses and residents likely to be impacted by this facility, taking into consideration the location of the proposed lot and nearby uses.

SEC. 5B.8.3. INDUSTRIAL 3 (I3)

A. Intent

The I3 District is intended to support a wide range of commercial and industrial uses that support commerce, manufacturing, goods movement, and warehousing. Industrial uses are regulated to ensure disruptions to abutting uses and nearby communities are minimized.

C. Supplemental Standards

1. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

2. Motor Vehicle Services, General & Commercial Vehicle

a. Bay doors and other building entrances and exits designed and intended for motor vehicle access shall meet the following standards:

i. Shall remain closed except during the allowed hours of operation, and

ii. Shall not face any frontage lot line.

b. An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading, unloading and any other activities requiring the use of commercial vehicles for transportation.

c. All client vehicles being serviced by a general motor vehicle service use shall be stored on-site.

3. Motor Vehicle Services, Car Wash

Bay doors and other building entrances and exits designed and intended for motor vehicles shall not face any residential use or school unless the residential use or school is located more than 100 feet from the car wash facility.

4. Motor Vehicle Services, Fueling Station

An off-street loading area, in compliance with development standard requirements for loading areas (*Sec. 4C.2.2.3.*), shall be provided to adequately accommodate all loading and unloading of fuel, vehicles, goods and any other activities requiring the use of commercial vehicles for transportation.

5. Outdoor Storage, Cargo Container

a. The entire lot shall be graded pursuant to *Chapter 9, Division 70 (Grading, Excavation and Fills) of the LAMC*.

b. All driveways, accessways, and parking areas shall be covered with a decomposed granite, crushed gravel, or similar material and be treated with dust control methods.

c. All containers shall be empty and cleaned of any residue which may pose any kind of physical or health risk.

6. Recycling Facility, Collection

a. All deposited goods and materials, temporary installations, debris, trash, and any other material associated with the use shall be placed or stored in a fully covered and enclosed recycling facility, and not be left or stored outdoors beyond the hours of operation.

b. Collection facilities shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection facility, a tamper-resistant locking mechanism shall secure the opening of the collection facility.

d. The receptacle, container, or bin in which goods and materials are stored shall be fabricated of durable, noncombustible, and waterproof materials.

e. The recycling collection facility enclosure shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the facility with the Department of Building and Safety.

7. Recycling Facility, Donation Bin

a. No more than one collection bin shall be located on any lot.

b. Collection bins shall be emptied in accordance with their posted pick-up schedule, and the area surrounding the collection bins shall be maintained free of overflow goods and materials, litter, debris, posted bills, and graffiti at all times.

c. In order to prevent unauthorized access to the collection bin, a tamper-resistant locking mechanism shall secure the opening of the collection bin.

d. The collection bin shall be fabricated of durable, noncombustible, and waterproof materials.

e. Collection bins shall be illuminated between sunset and sunrise by a light source providing at least 1 footcandle of light.

f. The collection bin shall be clearly identified with the operator's name, address, and telephone number, the lot owner's name, address of the lot, the types of items or materials that may be deposited, the pick-up schedule, a notice that no material shall be left outside the enclosure, and instructions to call 311 to register any complaint regarding the collection bin with the Department of Building and Safety.

8. Resource Extraction, Exploratory Core Hole

The maximum duration of a permit for exploratory core holes shall not exceed 200 days. However, where the Zoning Administrator, pursuant to *Sec. 13B.2.2. (Class 2 Conditional Use Permit)* finds that drilling, testing, and proper abandonment cannot reasonably be completed within 200 days due to depth, deviation, or quantity of temporary geological exploratory core holes, the maximum duration may be increased to a total of 365 days.

9. Animal Keeping, Bees

a. Bee keeping operator shall be registered as a beekeeper with the Los Angeles County Agricultural Commission.

b. A water source for bees shall be provided at all times on the lot where the bees are kept.

D. Supplemental Procedures

1. Alcohol Service

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow alcohol service for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

2. Bar

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses.

c. Permission for multiple approvals to allow bars for three or more tenant spaces may be applied for under a single conditional use permit entitlement, subject to the following:

i. Tenant spaces are maintained under a single ownership within a unified complex comprising a combined floor area of 10,000 square feet or greater on the same site.

ii. The entitlement application for multiple conditional use permits shall be subject to processes and procedures required by Sec. 13B.2.2. (Class 2 Conditional Use Permit).

iii. Project Review shall be completed for each individual tenant space resulting in approval for each individual tenant space prior to the establishment of the proposed use within the subject tenant space.

iv. Applications shall detail the square footage of each tenant space, suite or unit number, hours of operation, and specific nature of proposed use for each tenant-operator space.

v. Each individual tenant space shall be separately addressed with applicable site-specific conditions. Any change in tenant-operator shall be required to apply for Project Review in order to evaluate the applicability of existing conditions and review any potential changes in site operations and conditions.

3. Retail, Alcohol

a. In addition to the notification otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall promptly notify the Council-member that represents the area including the project site of the conditional use application.

b. In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider:

i. That the granting of the application will not result in an undue concentration of uses that dispense alcoholic beverages within a 1,000-foot radius of the lot according to the California Department of Alcoholic Beverage Control's guidelines for undue concentration.

ii. Consider the existing crime rate nearby, especially those crimes involving public drunkenness, the illegal sale or use of narcotics, drugs or alcohol, disturbing the peace, and disorderly conduct, and whether revocation or nuisance proceedings have been initiated for any similar use in the area.

iii. That the proposed use will not detrimentally affect nearby Residential Use Districts or sensitive uses

4. Retail, Firearms

In addition to the findings otherwise required by *Sec. 13B.2.2. (Class 2 Conditional Use Permit)*, the Zoning Administrator shall also consider the number of firearms available for sale at the lot.

5. Retail, Large Format

a. In addition to a Conditional Use Permit with approval by the City Planning Commission, pursuant to *Sec. 13B.2.3. (Class 3 Conditional Use Permit)*, new large format retail uses are required to prepare an economic impact analysis report for submission to the Department

of City Planning and the Economic & Workforce Development Department for review in conjunction with its application to the Department of City Planning. The Economic & Workforce Development Department shall complete its review of the report within 60 days after receipt of the report from the applicant. The report shall identify the following:

i. The economic impact on retail businesses within a 3-mile radius based on the potential to divert or expand the local or regional customer base. Data portraying the existing customer volume of the study area as well as the anticipated customer volume of the study area shall be included in the report.

ii. The destruction or demolition of any buildings, structures facilities or site area containing any of the following uses: any Residential Use, Civic Facility, School, Nature Reserve, Public Open Space, or Public Recreation.

iii. Contribution to local retail market in terms of providing lower in cost or higher in quality goods and services than currently available to residents within a 3-mile radius. A survey of goods and services offered by retail uses within a 3-mile radius shall be included within the report.

iv. The number of permanent jobs displaced or created as a direct result of the project. Permanent jobs shall be categorized by employment sector within the report.

v. Fiscal impact on City tax revenue, either positive or negative.

vi. Viability of future reuse of the project site in the event the business vacates the premises based on factors such as building design, site layout, and lease terms requiring the lot to remain vacant for a significant amount of time.

vii. Reasonable expectation that employment solicitation by day laborers will occur at or around the lot.

viii. Measures to mitigate any materially adverse impacts identified within the report.

b. If determined by the City Planning Commission, or the City Council on appeal, that based on the findings of the report, or any other information received before or at a public hearing that there is a reasonable expectation that employment solicitation by day laborers will occur at or around the lot then the following measures may be required to the satisfaction of the City Planning Commission, or the City Council on appeal:

i. The project shall accommodate employment solicitation by day laborers with dedicated congregation space that meets the following criteria:

a) Is sufficient in size based on reasonably expected users;

b) Located along but clear of a pedestrian accessway leading to a primary entrance; and

c) Is covered to provide adequate shelter from the weather.

ii. Amenities including publicly accessible sources of drinking water, toilet and trash facilities, tables, and seating areas shall also be made available during business hours of operation.

iii. A signage plan, indicating the location of signs at appropriate locations throughout the lot directing users to dedicated congregation areas and amenities.

6. Outdoor Storage, Cargo Container

a. The stacking of cargo containers more than 20 feet high shall only be permitted if a structural analysis done by a licensed engineer or architect in the State of California is submitted to and approved by the Los Angeles Department of Building and Safety (LADBS).

b. An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers or Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards).*

7. Manufacturing Heavy, Salvage Yard

An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

8. Recycling Facilities, All

An annual site inspection shall be conducted by LADBS, pursuant to *Sec. 13B.10.3. (Annual Inspection Monitoring - Auto Dismantling Yards, Junk Yards, Scrap Metal or Recycling Materials Processing Yards, Recycling Collection Centers, Buyback Centers, Recycling Materials Sorting Facilities, and Cargo Container Storage Yards)*.

DIV. 5B.9. PUBLIC DISTRICTS

Public Use Districts promote public and institutional uses and allow a limited amount of compatible uses.

SEC. 5B.9.1. PUBLIC 1 (P1)

A. Intent

The P1 Use District allows for government buildings, structures, offices, and services facilities. This District is intended to provide regulations for the use and development of land owned by a government agency. For most uses, district permissions assume those of the most restrictive adjoining use district.

C. Supplemental Standards

1. Wireless Facility, All

The wireless facility shall meet all applicable standards required by *Sec. 4C.12.4. (Wireless Telecommunication Facilities)*.

SEC. 5B.9.2. PUBLIC 2 (P2)

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5B.9.2. PUBLIC 2 (P2)

A. Intent

The P2 Use District allows for government buildings, structures, offices, and services facilities. This District is intended to provide regulations for the use and development of land owned by a government agency. For most uses, district permissions assume those of the most permissive adjoining use district.

B. Allowed Uses & Use Limitations

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 5C.3.15. LOT ELIGIBILITY

A. Intent

To limit subject uses only to lots having specific qualities required in order to ensure the use is appropriately sited within its surroundings and complies with the intent of the Use District.

B. Applicability

Applies only when specified by the Use District as a required use standard.

C. Standards

1. Alley Abutting: Where the applied Use District specifies 'Alley Abutting' for the lot eligibility standard, the subject use may be permitted when the subject use is located on a lot that abuts an alley having a width of 15 feet or greater.

2. Boulevard or Avenue Fronting: Where the applied Use District specifies 'Boulevard or Avenue Fronting' for the lot eligibility standard, the subject use may be permitted when the subject use is located on a lot sharing a lot line with a street designated as a Boulevard or Avenue.

3. Industrial Collector Fronting: Where the applied Use District specifies 'Industrial Collector Fronting' for the lot eligibility standard, the subject use may be permitted when the subject use is located on a lot sharing a lot line with a street designated as a Industrial Collector.

4. Corner Lot: Where the applied Use District specifies 'Corner Lot' for the lot eligibility standard, the subject use may be permitted when the subject use is located on a lot located at the intersection of two streets.

5. Minimum Lot Area: Where the applied Use District specifies 'Minimum Lot Area' for the lot eligibility standard, the subject use may be permitted when the subject use is located on a lot having an area that is equal to or greater than the minimum area specified by the applied Use District.

D. Measurement

1. Alley width is measured as the narrowest horizontal distance between opposite edges of a designated alley.

2. For lot line determination see *Sec. 14.1.12 (Lot Line Determination)*.

3. For lot area measurement see *Sec. 2C.1.1.D. (Lot Area, Measurement)*.

E. Relief

See the allowed uses and use limitations of the applied *Use District (Part 5B)*.

SEC. 5C.3.16. MINIMUM FLOOR AREA

Sec. 6A.2.5. Relationship to Form Districts 6-8

DIV. 6A.1. ORIENTATION

SEC. 6A.1.1. RELATIONSHIP TO ZONE STRING

A zone string is composed of the following districts, as established in *Sec. 1.5.2. (Zoning Map)*:

The Density District is a separate and independent component of each zone.

SEC. 6A.1.2. HOW TO USE ARTICLE 6 (DENSITY)

A. Identify the Density District

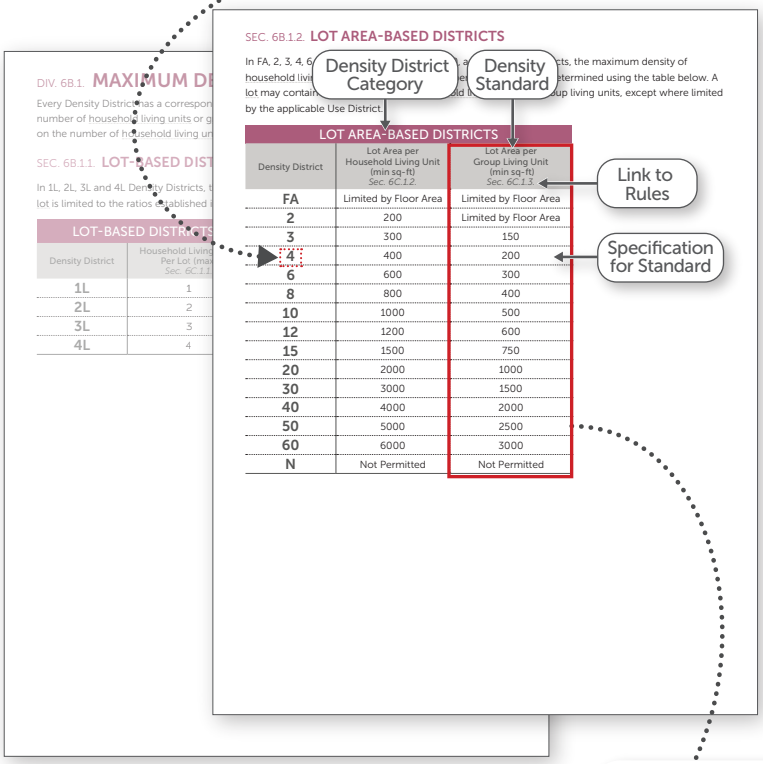
The fifth component in a zone string identifies the Density District for a property.

B. Density District Standards

Density Districts standards are located in *Part 6B. (Density Districts)*. Each Density District identifies the standards specific to that Density District.

C. Interpreting Density District Standards

Each standard in a Density District in *Part 6B. (Density Districts)* provides a reference to *Part 6C. (Density Rules)* where the standard is explained in detail.



Form District Example:

Zone String

[LM2-MU2-5] [RG1-**4**]

60	6000	3000
N	Not Permitted	Not Permitted

Learn More About Your Rules

Part 6C (District Rules)

SEC. 6C.1.3. LOT AREA PER GROUP LIVING UNIT

The maximum number of group living units allowed on a lot based on lot area.

A. **Intent**

The intent of regulating the number of group living units based on lot area is to provide a method that ensures there is a specified maximum ratio of group living units in relation to the size of a lot.

B. **Applicability**

Lot area per guest room applies to any project that includes group living units in a lot area-based Density District.

C. **Standards**

The number of group living units on a lot shall not exceed the maximum established by the applicable Density District in *Sec. 6B.1.2. (Lot Area-Based Districts)*.

D. **Measurement**

1. The maximum number of group living units is calculated by dividing the lot area by the group living units per lot area value as outlined in *Sec. 6B.1.2. (Lot Area-Based Districts)*, and can be provided in conjunction with any household living units if permitted on a lot as calculated in *Sec. 6C.1.2. (Lot Area per Household Living Unit)*.
2. Lot area is counted only once - for either a household living unit or a group living unit.
3. Fractions of units do not count toward an additional household living unit or guest room, except as permitted in *Article 9. (Public Benefit Programs)*.
4. When density is designated as Limited by Floor Area, there is no maximum density. Group living units are limited only by the physical constraints of the applicable Form District and are subject to the dimensional requirements in *Chapter 9. (Building Regulations)*.
5. When density is designated as Not Permitted, household living units or group living units are not permitted.

E. **Exceptions**

Accessory dwelling units, compliant with *Sec. 5C.9.1. (Accessory Dwelling Units)* and Sec.

SEC. 6A.1.3. DENSITY DISTRICT NAMING CONVENTION

There are two categories of Density Districts, lot-based and lot area-based.

A. Lot-Based Districts

Lot-Based Districts names include a number, representing the maximum quantity of household dwelling units that are allowed on a lot, followed by the letter "L".

B. Lot Area-Based Districts

With the exception of the "FA" and "N" Density Districts, lot-based Density District names are a number that represents how many hundreds of square feet of lot area are required per household dwelling unit or efficiency dwelling unit. The FA Density District is an abbreviation for "Floor Area", indicating that floor area is the only practical limit to density in this district and that the effective minimum lot area per household dwelling unit or efficiency dwelling unit is 0 square feet. The N Density District is an abbreviation for "Not Permitted", indicating that no household dwelling units or efficiency dwelling units are allowed in this Density District.

DIV. 6A.2. OPENING PROVISIONS

SEC. 6A.2.1. DENSITY INTENT

The intent of *Article 6 (Density)* is to establish Density Districts, a mechanism that regulates the number of household dwelling units or efficiency dwelling units permitted on any lot, otherwise known as density. Density Districts allow for a wide variety of zoning approaches to housing.

SEC. 6A.2.2. DENSITY APPLICABILITY

A. General

All projects filed after the effective date of this Zoning Code shall comply with the Density Standards in Article 6 (Density), as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Project Activities

1. Categories of Density rules apply to a project based on what types of project activities are proposed, as shown in the table below. Typically, more than one project activity will apply to a proposed project (for example, an addition that expands an existing use includes both new construction and a use modification).

	PROJECT ACTIVITIES								
DENSITY RULE CATEGORY	New Construction	Demolition	Lot Modification	Site Modification	Facade Modification	Use Modification	Temporary Use	Renovation	Maintenance & Repair
Div. 6C.1 **Maximum Density**	●	○	●	○	○	●	○	○	○

● = Rules generally apply to this project activity
○ = Rules are not applicable

2. Project Activities are defined in *Sec. 14.1.15. (Project Activities).*

3. Where a category of Density rules are listed as generally applicable in the table above, and the applied Density District (*Part 6B)* provides specifications for a standard in that Density rule category, the project activity shall meet all applicable Density standards within that Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 6C. (Density Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a Division of the Density District rules is listed as not applicable in the table above, no standards from that Density rule category apply to the project activity.

C. Nonconformity

Nonconformity provides relief from the requirements of Article 6 (Density) for existing lots, site improvements, buildings and structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current district standards or use permissions. No project activity may decrease conformance with any Density Standards in Article 6 (Density) for a nonconforming use, unless otherwise specified by *Div. 12.7. (Nonconforming Density)*.

SEC. 6A.2.3. RELATIONSHIP TO USE DISTRICTS

A. When household dwelling units or efficiency dwelling units are permitted by a Use District in *Part 5B. (Use Districts)*, the Density Districts in *Article 6 (Density)* establish limits on the number of household dwelling units or efficiency dwelling units.

B. Some Use Districts in *Part 5B. (Use Districts)* establish additional requirements for household dwelling units and efficiency dwelling units in addition to those in *Article 6 (Density)*.

SEC. 6A.2.4. RELATIONSHIP TO PUBLIC BENEFIT SYSTEMS

Affordable housing incentive programs, outlined in *Article 9. (Public Benefit Systems)*, offer a variety of methods to obtain additional density (in excess of the limits established in *Article 6 (Density)* and the applied Density District) in exchange for different affordability levels and types of affordable housing.

SEC. 6A.2.5. RELATIONSHIP TO FORM DISTRICTS

Form Districts do not directly limit density, but do establish requirements that may result in physical constraints that could impact the number of household dwelling units or efficiency dwelling units that can be accommodated on a lot.

PART 6B. DENSITY DISTRICTS

Div. 6B.1. Maximum Density 6-10
Sec. 6B.1.1. Lot-Based Districts 6-10
Sec. 6B.1.2. Lot Area-Based Districts 6-11

DIV. 6B.1. MAXIMUM DENSITY

Every Density District has a corresponding maximum density. The maximum density either limits the number of dwelling units allowed based on lot area or indicates a flat limit on the number of dwelling units allowed per lot.

SEC. 6B.1.1. LOT-BASED DISTRICTS

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

In 1L, 2L, 3L and 4L Density Districts, the maximum number of dwelling units permitted on a lot is limited according to the table below.

LOT-BASED DISTRICTS	
Density District	Dwelling Units Per Lot (max) *Sec. 6C.1.1.*
1L	1
2L	2
3L	3
4L	4

SEC. 6B.1.2. LOT AREA-BASED DISTRICTS

[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

In FA, 2, 3, 4, 6, 8, 10, 12, 15, 20, 25, 30, 40, 50, 60, and N Density Districts, the maximum density of household dwelling units and efficiency dwelling units permitted on a lot is limited according to the table below. A lot may contain any combination of household dwelling units and efficiency dwelling units.

LOT AREA-BASED DISTRICTS		
Density District	Lot Area per Household Dwelling Unit (min SF) *Sec. 6C.1.2.*	Lot Area per Efficiency Dwelling Unit (min SF) *Sec. 6C.1.3.*
FA	Limited by Floor Area	Limited by Floor Area
2	200	100
3	300	150
4	400	200
6	600	300
8	800	400
10	1000	500
12	1200	600
15	1500	750
20	2000	1000
25	2500	1250
30	3000	1500
40	4000	2000
50	5000	2500
60	6000	3000
N	Not Permitted	Not Permitted

DIV. 7A.1. ORIENTATION

SEC. 7A.1.1. RELATIONSHIP TO ZONE STRING

Alternative Typologies may be used on lots where all districts in the applied zone string are listed as eligible districts in the eligibility table of the proposed Alternate Typology. The proposed Alternate Typology either supersedes or defers to the standards of the underlying applied zone string districts as specified by the proposed Alternate Typology.

SEC. 7A.1.2. HOW TO USE ARTICLE 7 (ALTERNATE TYPOLOGIES)

A. Determine Eligibility

Review each component in a zone string against the eligible districts for an Alternate Typology.

B. Form Standards

Form regulations are outlined in subsection D. of each Alternate Typology.

C. Frontage Standards

Frontage regulations are outlined in subsection E. of each Alternate Typology.

D. Development Standards

Development Standards regulations are outlined in subsection F. of each Alternate Typology.

E. Use Standards

Use regulations are outlined in subsection G. of each Alternate Typology.

F. Density Standards

Density regulations are outlined in subsection H. of each Alternate Typology.

G. Interpret Standards

Each standard in an Alternate Typology in *Part 7B. (Alternate Typologies)* provides a reference to *Part 7C. (Alternate Typology Rules)* where each standard is explained in detail.

Zone String Example:

Zone String

[LM2-MU2-5] [RG1-FA]

Part 7B (Alternate Typology)

Learn More About Your Rules

Part 7C (Alternate Typology Rules)

SEC. 7A.1.3. ALTERNATE TYPOLOGY GRAPHICS

A. General

1. Illustrations and graphics are included in Article 7 (Alternate Typologies) only to assist users in understanding the intent and requirements of the text. In the event a conflict occurs between the text of Article 7 (Alternate Typologies) and any illustration or graphic, the text prevails.
2. To interpret the Form standard graphics in Article 7 (Alternate Typologies) see *Sec. 2A.1.4.C. (Interpreting Form District Standards)*.
3. To interpret the Frontage standard graphics in Article 7 (Alternate Typologies) see *Sec. 3A.1.4. (Interpreting Frontage District Standards)*.

SEC. 7A.1.4. ALTERNATE TYPOLOGY NAMING CONVENTION

Alternate Typology names are composed of two components: a typology category and a variation number.

A. Typology Category

The first component of each Alternate Typology is a typology category. Typology categories group all typologies with similar allowed uses, characteristics, and intent. Typology categories are organized as follows:

1. Civic Institution
2. Corner Store
3. Small Lot Subdivision
4. Drive-Through
5. Fueling Station

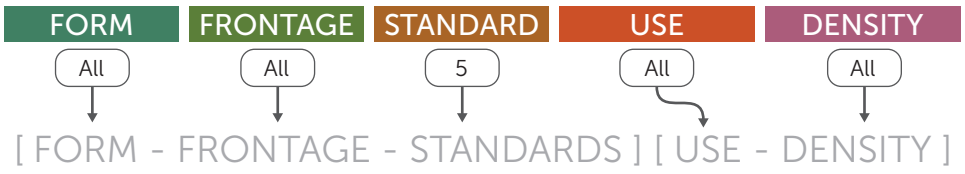
B. Variation Number

The last component of each Alternate Typology name is a variation number. Alternate Typologies are numbered based on the Development Standard Districts in which they are eligible, starting with Development Standards District 5 and ending Development Standards District 1.

DIV. 7A.2. OPENING PROVISIONS

SEC. 7A.2.1. ALTERNATE TYPOLOGIES INTENT

There are certain cases where the desired physical form for a specific type of development is prohibited by the zoning applied to a lot. In those cases, Alternate Typologies provide an option to override specific standards in the underlying zoning that may otherwise prohibit the desired form. In exchange for providing greater flexibility on particular standards, Alternate Typologies require other higher standards that promote the desired form and ensure projects are contextually appropriate.



SEC. 7A.2.2. ALTERNATE TYPOLOGIES APPLICABILITY

A. General

All projects approved using an Alternate Typology and filed after the effective date of this Zoning Code (Chapter 1A) shall comply with the applicable Alternate Typology Standards in Article 7 (Alternate Typologies), as further specified below. For vested rights, see *Sec. 1.4.5. (Vested Rights)*, and for continuance of existing development, see *Sec. 1.4.6. (Continuance of Existing Development)*.

B. Eligibility

Alternate Typologies are only allowed in eligible districts. Each Alternate Typology provides an eligibility table that lists all zoning districts where the Alternate Typology is allowed. Any lot within one of the eligible zone districts may use the Alternate Typology. When an eligible district is listed with "_", all variations of the district are eligible (for example, RN_ includes RN1, RN2 and any other RN variation).

C. Project Activities

1. Alternate Typology standards apply to project activities as shown in the applicability tables in Part A of the Zone String Articles, 2-6. More than one project activity may apply to a project (for example, an addition may also include the expansion of a use).

2. Where a rule is listed as generally applicable in the applicability tables in Part A of the Zone String Articles, 2-6, the project activity shall meet the applicable Alternate Typology rules within the Division. This general applicability may be further specified for each standard in the applicability provisions in *Part 2C. (Form Rules)*, *Part 3C. (Frontage Rules)*, *Part 3D. (Character Frontage Rules)*, *Part 4C. (Development Standards Rules)*, *Part 5C. (Frontage Rules)*, and *Part 6C. (Frontage Rules)*. Project applicability may also be modified by *Article 12. (Nonconformities)*. Where a Division of the Alternate Typology rules is listed as not applicable in the applicability tables of the Zone String articles, 2-6, the standards within the Division do not apply to the project activity.

3. For more information about project activities, see *Sec. 14.1.15. (Project Activities)*.

D. Applicable Components of Buildings and Lots

1. Alternate Typology regulations apply to all portions of a lot.

2. Alternate Typology regulations apply to all portions of buildings and structures on a lot.

3. Specific Alternate Typology regulations may further limit which components of buildings and lots are required to comply with the rules in *Part 7C. (Alternate Typology Rules)*.

E. Nonconformity

1. Where an existing lot, site, building, or structure is nonconforming as to the standards specified by the underlying applied zone string districts, a project is eligible to use Alternate Typology for proposed project activities, provided that the uses on the lot will conform to the use standards of the proposed Alternate Typology once the proposed project is complete. Once any project activity is approved under the rules of an Alternate Typology, no future project activity on that lot may decrease the conformance with any Alternate Typology standard in *Article 7 (Alternate Typologies)*, except as specified by the following provision.

2. *Article 12. (Nonconformity)* provides relief from the requirements of *Article 7 (Alternate Typologies)*, for existing lots, site improvements, buildings, structures, and uses that conformed to the zoning regulations, if any, at the time they were established, but do not conform to current district standards or use permissions. No proposed project activity using an Alternate Typology may decrease the conformance with any Form, Frontage, Development Standards, Use, or Density standard in *Article 7 (Alternate Typologies)*, unless otherwise specified in *Div. 12.2. (Form Exceptions)*, *Div. 12.3. (Frontage Exceptions)*, *Div. 12.4. (Development Standards Exceptions)*, *Div. 12.5. (Use Exceptions)*, or *Div. 12.6. (Density Exceptions)*.

SEC. 7A.2.3. RELATIONSHIP TO ZONING DISTRICTS

A. Where a standard is listed in an Alternate Typology, the specification listed for the standard in the Alternate Typology supersedes the specification listed in the underlying zone string districts for the same standard.

B. The underlying zone string district standard applies where an Alternate Typology:

1. Defers to the underlying districts (for example, "Set by Form District");

2. Provides no specification for a standard listed by the underlying zone string districts; or

3. Does not list a standard that is listed by the underlying zone string districts.

SEC. 7A.2.4. RELATIONSHIP TO SPECIFIC PLANS & SUPPLEMENTAL DISTRICTS

A. Alternate Typologies do not supersede the requirements of Specific Plans or Supplemental Districts.

B. Special Districts are not eligible to use Alternate Typologies.

PART 7B. ALTERNATE TYPOLOGIES

Div. 7B.1. Civic Institution 7-12
Sec. 7B.1.1. Civic Institution 1 7-12
Sec. 7B.1.2. Civic Institution 2 7-13

Div. 7B.2. Corner Store 7-18

DIV. 7B.1. CIVIC INSTITUTION

SEC. 7B.1.1. CIVIC INSTITUTION 1

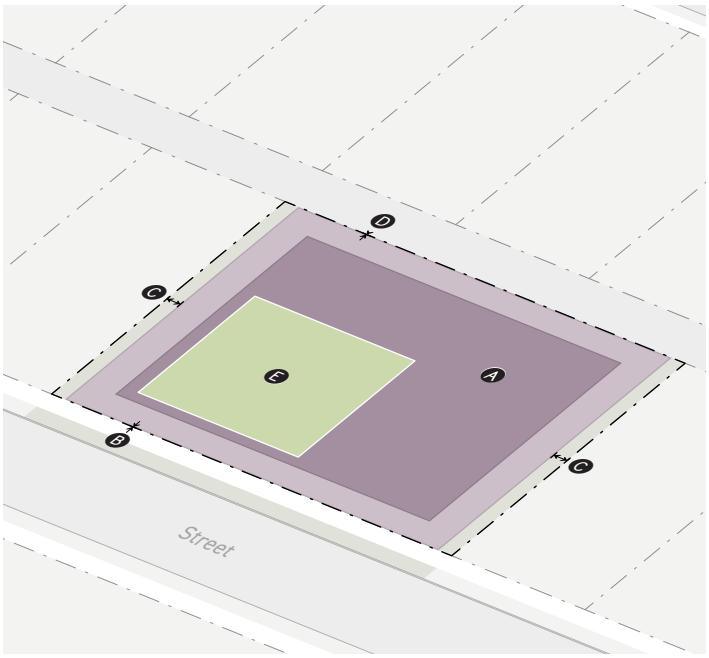
[Introduced with the Downtown Community Plan via CPC-2014-1582-CA and CPC-2017-432-CPU]

SEC. 7B.1.2. CIVIC INSTITUTION 2

A. Eligible Districts

FORM	FRONTAGE	STANDARD	USE	DENSITY
All	All	1, 2, 3, & 4	All	All

B. Intent



The Civic Institution 2 Alternate Typology is intended to promote placemaking through architectural monuments and publicly accessible spaces. This Alternate Typology allows greater design flexibility for civic institutions to differentiate civic assets from the surrounding urban fabric, while maintaining standards essential for ensuring all projects actively contribute to a highly walkable urban environment.

C. Review

Administrative review is required, see *Sec. 14.5.1. (Administrative Review)*.

	Ground floor elevation (min/max)	n/a	n/a

*Ground story window and door glazing may be screened for up to 50% of the glazed area.

F. Development Standards

Set by applied *Development Standard District (Part 4B.)*.

G. Use Standards

1. For a minimum of 20 years after the issuance of a Certificate of Occupancy, no less than 75% of the total floor area on the lot shall be designated for one or more of the following uses:
    a. Civic Facility: All (examples include community centers, museums, and libraries);
    b. Office, Government;
    c. Public Safety Facility (examples include fire and police stations);
    d. Religious Assembly (examples include churches, mosques, synagogues, and temples);
    e. School: K-12;
    f. School: Post-Secondary;
    g. Social Services; and
    h. Transit Station.
2. Once 20 years have elapsed, all floor area on the lot may be designated for any use allowed in the applied *Use District (Part 5B)*.
3. For additional Use District standards, see the applied Use District (Part 5B).

H. Density Standards

Set by the applied Density District (Part 6B.).

DIV. 7B.2. CORNER STORE

SEC. 7B.2.1. CORNER STORE 1

A. Eligibility

1. Eligible Districts

FORM	FRONTAGE	STANDARD	USE	DENSITY
All	All	3 & 4	RX_	All

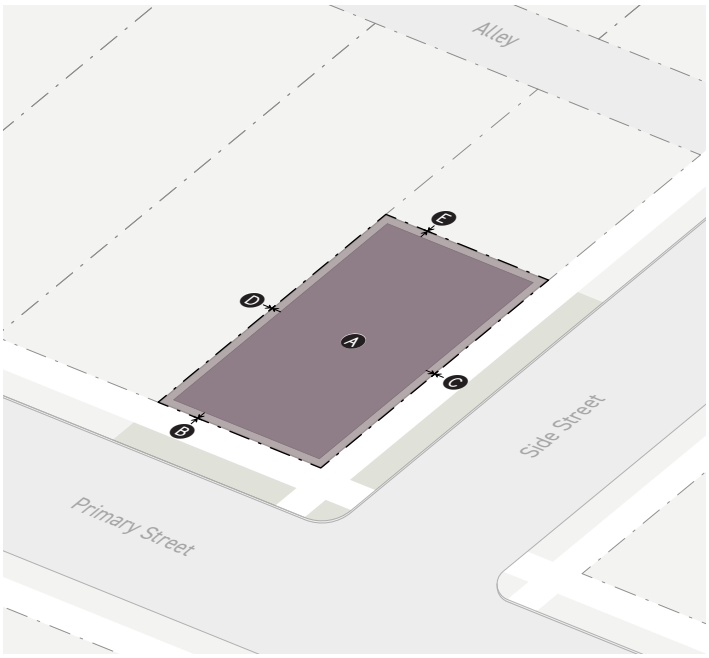
2. Eligible Lots

The Corner Store 1 Alternate Typology is eligible only on lots meeting the following standards:

a. Shall have an area no greater than 10,000 square feet, and

b. Shall be a corner lot.

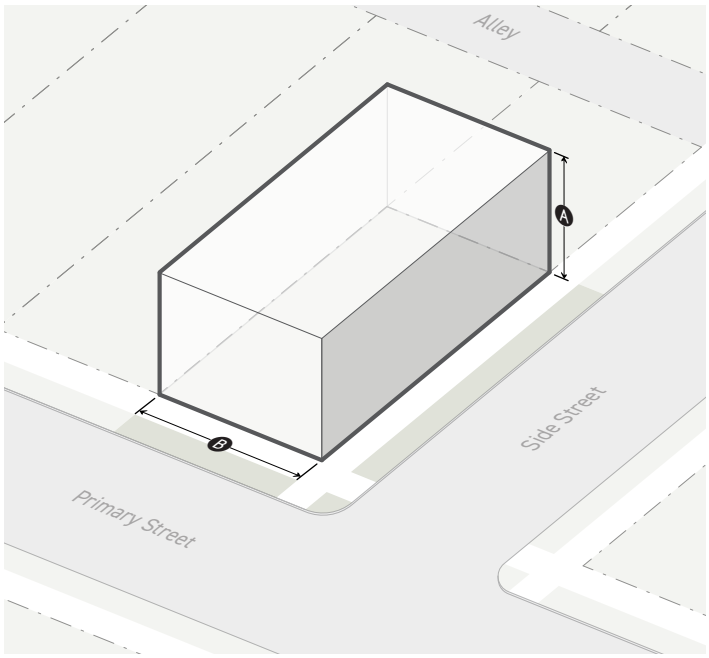
B. Intent



The Corner Store 1 Alternate Typology is intended to accommodate small-scale, community serving commercial uses in a scale appropriate for predominantly residential settings. This Alternate Typology intends to improve the walkability of residential neighborhoods, provide surrounding residents with amenities within a convenient distance of their homes, and support community-oriented small businesses development.

C. Review

Administrative review is required, see *Sec. 14.5.1. (Administrative Review)*.



D. Form Standards

1. Lot Parameters

Nonresidential (min)	14'	14'
Ground floor elevation (min/max)		
Residential	-2'/5'	-2'/5'
Non-residential	-2'/2'	-2'/2'

F. Development Standards

Set by applied *Development Standard District (Part 4B.)*.

G. Use Standards

1. For a minimum of 10 years after the issuance of a Certificate of Occupancy, a minimum of 500 square feet of ground story floor area shall be designated for General Commercial Uses. Where the total building coverage on the lot is less than 1,500 square feet, the minimum ground story floor area designated for General Commercial Uses may be less than 500 square feet but shall be no less than 33% of the total building coverage.

2. Once 10 years have elapsed, the required ground story floor area designated for General Commercial Uses may be designated for any use allowed in the applied *Use District (Part 5B)*.

3. Any floor area provided beyond the minimum required for General Commercial Uses may be designated for any use allowed in the applicable Use District.

4. For additional Use rules, see the applied *Use District (Part 5B)*.

H. Density Standards

Set by the applied *Density District (Part 6B.)*.

I. Relief

A reduction of up to 5 years to the amount of time that commercial floor area is required to be occupied by a General Commercial Use may be reduced up to 5 years requested in accordance with Sec. 13.B.2.2. (Class 2 Conditional Use Permit).

DIV. 7B.3. SMALL LOT SUBDIVISION

SEC. 7B.3.1. SMALL LOT 1

A. Eligibility

1. Eligible Districts

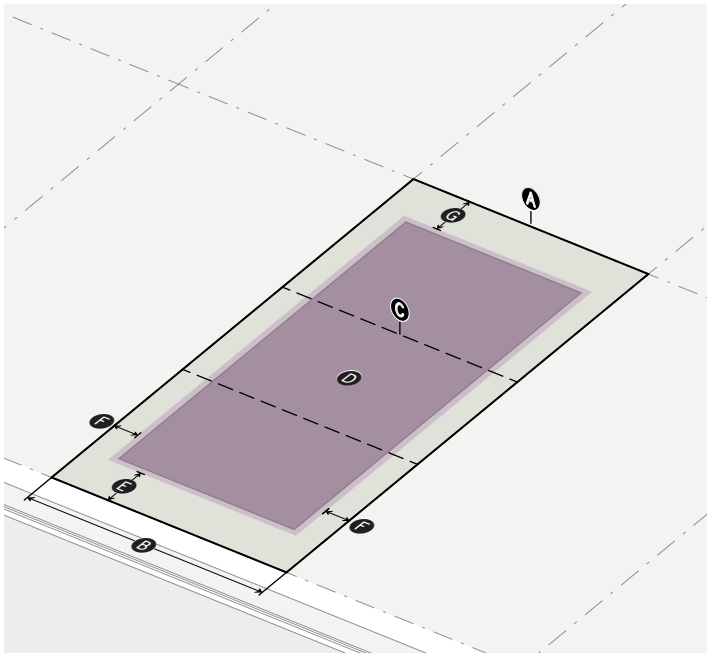
FORM	FRONTAGE	STANDARD	USE	DENSITY
V_ & L_	MU_, G_, LF_, & WH_	1, 2, 3, & 4	RG_, RX_, C_, CX_, & IX_	FA through 25

2. Eligible Lots

Small Lot Subdivision 1 Alternate Typology is eligible on lots having a lot width no greater than 80 feet. For lots greater than 80 feet wide, see *Small Lot Subdivision 2 Alternate Typology (Sec. 7B.3.2.)*.

B. Intent

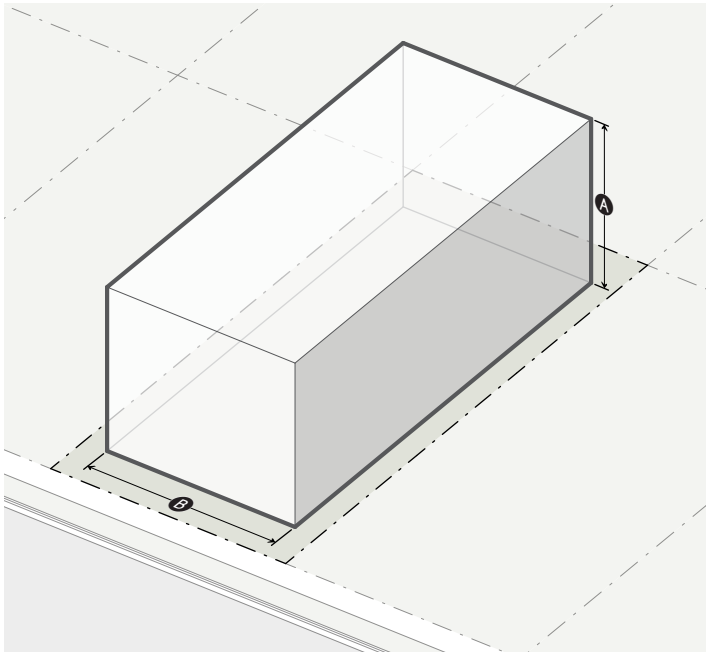
The Small Lot Subdivision 1 Alternate Typology is intended to encourage the development of fee-simple property ownership in a compact urban form. This Alternate Typology modifies standard subdivision rules to provide greater flexibility, while maintaining standards essential for ensuring all projects actively contribute to a highly walkable urban environment.



C. Review

1. Administrative review is required, see *Sec. 14.5.1. (Administrative Review)*.

2. If the project involves a subdivision it shall be reviewed pursuant to the applicable provisions of *Article 11 (Division of Land)*.



D. Form Standards

1. Lot Parameters

LOT SIZE	Sec. 7C.1.1.

Non-residential	-2'/2'	-2'/2'

F. Development Standards

1. Pedestrian Access

In addition to any site access pedestrian standards specified by the applied *Development Standards District (Part 4B)*, small lot subdivisions shall meet the following pedestrian access standards:

a. Small lot subdivisions shall provide a shared pedestrian accessway meeting the following standards:

i. Shall have a minimum width of 4 feet.

ii. Shall connect from the sidewalk, or other publicly accessible pedestrian facility along the frontage lot line, to all common open spaces, mailboxes, trash enclosures, and each required pedestrian entrance.

iii. Shall be accessible to users of all sub-lots included in the small lot subdivision.

iv. Shall be physically separated from and uninterrupted by motor vehicle use areas except where required to cross a drive aisle or driveway. Physical separation methods may include, curbs of no less than 4 inches in height, a planting area having no horizontal dimension less than 18 inches, or bollards, raised planters or similar containment methods, no less than 12 inches in height and separated by no more than 5 feet.

b. Each unit that does not include a street-facing entrance accessible from a pedestrian accessway, shall provide a pedestrian entrance that meets the following standards:

i. Shall face the required shared pedestrian accessway.

ii. Shall provide an entry feature meeting the standards for one of the allowed entry features options specified by the the *Small Lot Subdivison 1 Frontage Standards table (Sec. 7B.3.1.E.)*. For the purposes of meeting entry feature standards, a pedestrian access that faces a linked pedestrian access way shall be considered a street-facing entrance

2. Additional Rules

For additional Development Standards rules, see the applied *Development Standard District (Part 4B.)* and *Development Standards Rules (Part 4C)*.

G. Use Standards

Set by the applied *Use District (Part 5B.)*.

H. Density Standards

Set by the applied *Density District (Part 6B.)*.

APPENDIX G

Inventory of CRA Mitigation Measures

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
Land Use	LU-1: Commercial Development. The development of sites within commercial corridors shall consider the effects of commercial or housing development on adjacent residential properties. Towards this end, screening, setbacks, landscaping, transitional building heights, the location of loading docks and delivery areas, and appropriate improvements to selected intersections and roadway segments shall be designed to minimize adverse effects and/or nuisances.	Not necessary and infeasible. The mitigation is inconsistent with current City policy, as well as the policies and programs in the proposed Boyle Heights Community Plan. The mitigation measure is derived from an older zoning system, and does not comport with the various new and more detailed Use Districts and Development Standards that are proposed as part of the Project. These new zoning regulations better manage the compatibility between residential and commercial uses, and that are proposed to be applied to by-right projects. Further, the mitigation measure is inconsistent with the City, and the Boyle Heights Community Plan's goal to reduce Vehicle Miles Traveled by facilitating a more robust mix of uses within proximity to transit resources located throughout the Community Plan Area.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to scenic quality.
	LU-2 Industrial Development. The development on vacant sites within industrial areas shall consider the effects of industrial developments on nearby residential and sensitive public uses (e.g., schools and hospitals) within or next to the proposed Project Area. Similar to commercial development, design considerations shall be incorporated to minimize adverse effects on adjacent sensitive uses.	Not necessary and infeasible. The mitigation is inconsistent with the policies and programs proposed under the Proposed Plan. The Proposed Plan restricts traditional industrial uses that have historically necessitated buffering to a smaller geography (in the northwestern and southern portion or the Plan Area) than applied under the Redevelopment Plan. The Proposed Plan also proposes more contemporary Development Standards for both more traditional industrial uses, as well as newer light industrial that address buffering between residential and industrial uses.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to scenic quality.
	LU-3 Mixed-Use Development. Development siting criteria and design criteria shall be established for the location of residential uses within a commercial zone (e.g., mixed use situations), to minimize potential land use conflicts and nuisances.	Not necessary and infeasible. The mitigation is inconsistent with current City policy, as well as the policies and programs proposed under the Proposed Plan. The mitigation measure is based on an older zoning system and policy direction, and is not consistent with the new and more detailed Use Districts and Development Standards that are proposed as part of the Project. These new regulations and updated policy direction better manage the compatibility between residential and commercial uses and the regulations are proposed to be applied to by-right projects. Further, the mitigation measure is inconsistent with the City and the Proposed Plan's goal to reduce Vehicle Miles Traveled through regulations that allow a mix of uses within proximity to transit resources located throughout the Community Plan Area. Lastly, the City can continue to identify and mitigate project-specific light, glare, and noise effects consistent with project review (same as the current Site Plan Review) and other similar discretionary approval processes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impacts related to scenic quality.
	LU-4 Zoning Consistency. All new development proposals shall be submitted to CRA for determination of conformance with the Redevelopment Plan and to the Building and Safety Department of the City of Los Angeles for a determination of consistency with the existing General Plan zoning designation for the site, unless the proposed development is otherwise exempted from the need for a consistency determination pursuant to the Planning and Zoning Code ordinances. Prior to the issuance of a building permit, new development that is found to be inconsistent with existing zoning shall obtain the necessary zone change for the project site, conditional use permits, use variance, or other action as required by the ordinances of the City's Planning and Zoning Code.	Not necessary and infeasible. Prior to the issuance of a building permit, all new development proposals are submitted to the Department of Building and Safety to determine if it is consistent with the applicable zoning regulations, and if the project is inconsistent with existing zoning and/or requires a conditional use permit, it is submitted to the LA City Planning for additional review and entitlement processing.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans, policies and zoning.
	LU-5 Truck Routes. Truck routes shall be identified and visible signs installed. Truck and employee parking prohibition signs shall be posted in adjacent residential neighborhoods or other sensitive land uses such as school sites, as needed to prevent intrusions into such sensitive areas.	Not necessary and infeasible. Sec. 80.36.1 (Restricted Use of Certain Streets) of the Los Angeles Municipal Code notes that the Department of Transportation is authorized to erect signs prohibiting vehicles over 6,000 pounds that cause traffic congestion, create a hazard to life or property, or detrimentally affect public welfare, and when alternate routes are available. In addition, as part of AB 617 (California Safe Schools) two sites in the CPA (Clarence between 4th & 6th St., and the freeway underpass on Whittier between Fresno and Lorena) were approved for CARB "No Idling" signage with the intent to reduce air pollution .	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and sections 4.14 (Transportation and Traffic) for less than significant impacts related to traffic and congestion, and 4.2 (Air Quality) related to impacts of substantial pollutant concentration exposure on sensitive receptors.
	LU-6 Los Angeles River Master Plan. The Community Redevelopment Agency shall review the LARMP and coordinate with the County of Los Angeles to ensure consistency between the Adelante Eastside Redevelopment Plan and the LARMP.	Not necessary and infeasible. The Proposed Plan's zoning includes new Form Districts and Use Districts that provide a set of uses and design standards that implement the vision and intent of the LARMP. The zoning includes regulations to ensure that uses are oriented toward the river, and provide landscaping, pedestrian connections, and building frontages along the river.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to scenic quality.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
Housing, Population, and Employment	HPE-1: Relocation Assistance. Displaced residential and business property owners and tenants shall receive assistance under the established state and local relocation assistance procedures as explained below: Residential Displacement. Housing displacement would occur in situations where a residential property on industrially zoned land located adjacent to an industrial area is needed for industrial expansion. Such displacement could occur through private initiative with or without assistance from the CRA. In instances where a private developer purchases the property without CRA assistance, the private developer would be required, in accordance with the City of Los Angeles Municipal Code and state law, to provide relocation assistance to tenants displaced by the purchase, in addition to compensating the property owner for the sale of the property. In general, the City of Los Angeles Planning and Zoning Code states that the party responsible for the displacement would pay a standard per-unit relocation assistance fee to each household, in order to assist such tenants in meeting costs of relocation, higher rents for replacement housing, and related expenses of moving. In cases where the CRA provides financial assistance to the developer, the displaced tenant would receive relocation assistance pursuant to city and state relocation policies and CRA relocation policies developed specifically for the proposed Redevelopment Project Area. In cases where a public entity is involved in the acquisition, the State of California Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1974, revised effective January 1, 1991, (California Government Code, Chapter 16, Sections 7260-7277) would apply. This state law establishes a uniform policy for the fair and equitable treatment of persons, as well as businesses, displaced as a direct result of programs or projects undertaken by a public entity. The Relocation Assistance Act shall be administered in a manner that is consistent with fair housing requirements and that assures all persons their rights under Title VUI (Public Law 90-284), commonly known as the Civil Rights Act of 1968 and Title VI of the Civil Rights Act of 1964. Efforts will be made to find suitable replacement housing within the proposed Redevelopment Project Area when the tenant desires to remain in the community. In all residential acquisitions, attempts would be made by the potential developer and CRA to purchase the residential property from the property owner through a negotiated agreement. If a	Not necessary and infeasible. The impact being addressed by this mitigation measure is a social economic impact and not a CEQA impact. There is no substantial evidence to support significant environmental impacts related to residential and business tenant displacement. These mitigation measures relate to relocation assistance that is only applicable to Redevelopment Agencies. As a matter of policy the City finds that using City funds to provide relocation assistance to residential tenants and business property owners and tenants is not the best use of City funds or a desirable public policy. However, as a matter of policy, the City has established multiple programs to support housing opportunities for a range of incomes, including the following: City's Just Cause Eviction Ordinance - Just cause eviction statutes are laws that stipulate specific reasons and conditions for which tenants can legally be evicted for. These are called “just causes” which can include failure to pay rent or violations of lease term. The City of Los Angeles’ Rent Stabilization Ordinance (RSO) protects tenants from excessive rent increases, while allowing landlords a reasonable return on their investments. These ordinances limit rent increases to certain percentages, but California state law allows landlords to raise rents to the market rate once the unit becomes vacant. The City of Los Angeles’ Condominium Conversion Regulation – The converting of rental units to condominiums impacts the City’s vital rental housing supply and has removed vital housing stock from the rental market. Tenant relocation assistance regulations prohibit landlords from removing tenants from units until they are adequately relocated. Regulations also prohibit conversions unless the city or regional vacancy rate is five percent or less. This regulation is to preserve the supply of housing and protect tenants affected by conversions. SB 330 - Establishes the Housing Crisis Act of 2019, which accelerates housing production in California by streamlining the permitting and approval processes. It also provides protections for occupants by requiring that existing units be replaced by equivalent new units and occupants can live in the existing units up to six months prior to demolition. Occupants also must receive relocation assistance, have first right-of-return, and can move	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.12 (Population and Housing) less than significant impacts related to unplanned growth and net loss or displacement of housing.
	HPE-2: Replacement of Affordable Housing. Many of the dwelling units that would be displaced may provide affordable housing. These units shall be replaced on a 1.25:1 ratio basis (1.25 new replacement units for each unit displaced) so as to assure no net loss in affordable housing.	Infeasible and Unnecessary. As shown in the Draft EIR in Section 4.12, the Proposed Plan is not expected to result in significant environmental impacts from reasonably anticipated development as a result of a loss of housing. This measure addresses socio-economic impacts without evidence of it resulting indirectly in a significant impact to the physical environment. As such, it is not a CEQA impact. Per the City's Rent Stabilization Ordinance, removal of rent-controlled units under the state’s Ellis Act must either have a one-for-one replacement with affordable units or ensure that 20% of new units are affordable - whichever number is higher. In addition, SB 330 requires that new housing development projects replace all existing or demolished affordable Protect Units. Protected Units are those residential dwelling units that are or were within the 5 years prior to the owner’s application for a Replacement Unit Determination: (1) subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of lower or very low income, (2) subject to any form of rent or price control through a public entity’s valid exercise of its police power within the 5 past years, (3) occupied by lower or very low income households (an affordable Protected Unit), or (4) that were withdrawn from rent or lease per the Ellis Act, within the past 10 years.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.12 (Population and Housing) less than significant impacts related to unplanned growth and net loss or displacement of housing.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
Urban Design/Visual Quality	V-1 Urban Design Review and Guidelines. If the proposed Adelante Eastside Redevelopment Project is adopted, the CRA shall review all new developments to ensure that all applicable Planning and Zoning Code provisions and Landscape Ordinance provisions are adhered to and implemented. Individual projects shall be reviewed on a case-by-case basis to ensure that proposed project plans incorporate appropriate building heights, setbacks, lot coverage, landscaping, and design. On a case-by-case basis, where appropriate, the CRA should also develop flexible design guidelines for certain areas to ensure that design and aesthetic mitigation measures are incorporated to enhance the visual character of the proposed Project Area.	Not necessary and Infeasible. The City Planning Department and the Department of Building and Safety are responsible for reviewing all new development to ensure that it complies with all applicable Planning and Zoning Code provisions and Landscape Ordinance provisions, which include regulations such as building heights, setbacks, lot coverage, landscaping, and design standards. New development would be subject to neighborhood-specific Form, Frontage, and Development Standard provisions, under the proposed new zoning system. Therefore, the more subjective design guidelines envisioned by the mitigation measure are unnecessary (and furthermore the adoption of Design Guidelines is not permissible under SB330). The Form Districts regulate lot size, lot coverage, outdoor amenity space, floor area ratio and building height, and upper-story bulk and building mass. Frontage Standards regulate facade treatment requirements, design and spacing of building entrances, front yard landscaping, blank wall width, and ground story height. Development Standards which vary by neighborhood also enhance design. The mitigation measure regarding the development of design guidelines is inconsistent with a ministerial review process although it applies to ministerial projects because it allows CRA staff to review and determine appropriate design for numerous basis including environmental impacts. As a matter of policy, the City finds adopting and implementing additional processes and design standards for visual compatibility, other than those already existing, and those in the Proposed Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to visual compatibility.
	V-2 Design Standards. Design Standards shall be developed and adopted to assure compatibility between new and pre-existing development in terms of scale and appearance.	Infeasible. The mitigation measure says that CRA shall develop design standards, however they were not adopted. As a matter of policy the City finds adopting and implementing additional processes and design standards, including for aesthetic and scale, than those proposed with the Proposed Plan (through Form and Frontage Districts, and Development Standards) and those already existing, including site plan review, are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes. Additionally, per SB 743--a bill that is intended to reduce GHG through encouragement of development around transit--aesthetic impacts are not considered CEQA impacts for infill projects within a transit priority area (TPA). A large portion of the Adelante Eastside Redevelopment Plan that is within the Boyle Heights CPA is in a TPA.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to visual compatibility.
	V-3 Commercial Corridors. New developments along commercial corridors shall be coordinated with adjacent developments by use of similar design treatments, streetscape improvements, and rehabilitation of adjacent structures.	Not necessary and Infeasible. New development would be subject to neighborhood-specific Form, Frontage, and Development Standard provisions, under the proposed new zoning system. Therefore, the more subjective design guidelines envisioned by the mitigation measure are unnecessary (and furthermore the adoption of Design Guidelines is not permissible under SB330). The Form Districts regulate lot size, lot coverage, outdoor amenity space, floor area ratio and building height, and upper-story bulk and building mass. Frontage Standards regulate facade treatment requirements, design and spacing of building entrances, front yard landscaping, blank wall width, and ground story height. Development Standards which vary by neighborhood also enhance design. As a matter of policy, the City finds adopting and implementing additional processes and design standards for visual compatibility, other than those already existing, and those in the Proposed Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to visual compatibility.
	V-4 Community Focal Points. New development shall incorporate community focal points and design that encourage pedestrian activity into building plans (e.g., building arcades, pedestrian-friendly building entrances, building facades oriented toward the street, fountains and courtyards, and outdoor eating areas). New development along commercial corridors in Boyle Heights should incorporate neighborhood identity and places for socializing.	Not necessary and Infeasible. New development would be subject to neighborhood-specific Form, Frontage, and Development Standard provisions, under the proposed new zoning system. Therefore, the more subjective design guidelines envisioned by the mitigation measure are unnecessary (and furthermore the adoption of Design Guidelines is not permissible under SB330). The Form Districts regulate lot size, lot coverage, outdoor amenity space, floor area ratio and building height, and upper-story bulk and building mass. Frontage Standards regulate facade treatment requirements, design and spacing of building entrances, front yard landscaping, blank wall width, and ground story height. Development Standards which vary by neighborhood also enhance design. As a matter of policy, the City finds adopting and implementing additional processes and design standards for visual compatibility, other than those already existing, and those in the Proposed Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans, policies and zoning, and Section 4.1 (Aesthetics) less than significant impact related to visual character and compatibility.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	V-5 Existing Visual Resources. To the extent feasible, existing urban design, architectural, historical, or landscape resources in the proposed Project Area shall be retained.	Not necessary and Infeasible. Historical resources will be subject to additional review and regulations. The City's Cultural Heritage Ordinance requires that all projects that include a designated Historic Cultural Monument are required to be reviewed by the Office of Historic Resources and the Cultural Heritage Commission. Any discretionary project, including those that require project review (same as the current Site Plan Review), are required to undergo CEQA review to determine if they will impact a historic resource and to mitigate significant impacts or the City will need to prepare an Environmental Impact Report and adopt a statement of overriding considerations before causing a significant impact. The City finds as a matter of policy, including any additional processes, including additional delay to additional properties, to the review and approval of projects for the purposes of historical resource protections, than those in the Proposed Plan or in existing City regulations, including those for Historical Cultural Monuments and the Building and Safety code requirements, and protections for existing urban design, architectural or landscape resources, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) no or less than significant impacts related to inconsistency with land use plans and policies, Section 4.1 (Aesthetics) less than significant impact related to visual character and compatibility; and Section 4.4 (Cultural Resources) for potentially significant and unavoidable impacts related to historical resources.
	V-6 Landscaping Treatment. Street trees or median street trees removed by new development shall be replaced on at least a one-for-one basis. New development shall also adhere to Landscape Ordinance (No. 170,978), effective January 1997 or ordinances adopted subsequent thereto.	Not necessary. Street trees and median trees are in the public right of way and will be provided and maintained by the City of Los Angeles (Streets LA). Requirements of the Landscape Ordinance are part of regulatory framework.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies, Section 4.1 (Aesthetics) less than significant impact related to visual character, compatibility; and scenic vistas.
	V-7 Curb-side Parking. Off-street parking shall be incorporated into development plans to minimize on street parking and to improve the visual appearance of the streetscape in commercial areas of high pedestrian activity.	Not necessary and Infeasible. The Proposed Plan follows contemporary City policy direction, such as the Mobility Plan 2035, which seeks to balance off-street parking supply with other transportation and land use objectives. As a matter of policy, the City finds that making the additional changes called for in this mitigation measure, including restricting parking, is unnecessary and undesirable, would not be a good use of limited City resources for street improvements or interventions, and would not result in desirable parking services, street configuration or street operations.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies, Section 4.1 (Aesthetics) less than significant impact related to visual character and compatibility, and 4.14 (Transportation and Traffic) for less than significant impacts related to traffic and congestion
	V-8 Industrial Development. New industrial developments shall be designed to harmonize with adjacent industrial uses and be enhanced with appropriate landscaping and design guidelines. Where new developments abut residential uses, landscape buffers and streetscape enhancements should be incorporated.	Not necessary. The Proposed Plan contains zoning requirements for landscaping, buffering, and other design requirements for new industrial uses. In addition, Clean Up Green Up (CUGU) regulations are incorporated into the new zoning to limit new industrial uses near residential or other sensitive uses.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) no or less than significant impacts related to inconsistency with land use plans and policies, Section 4.1 (Aesthetics) less than significant impact related to visual character and compatibility.
	V-9 Metro L Line Station. Future commercial and/or residential developments near Metro stations shall harmonize with adjacent land uses in terms of the uses proposed, scale, height, and massing of new developments. Pedestrian linkages should be provided through enhanced public rights-of-way, streetscape designs, and pedestrian amenities.	Not necessary. The proposed Plan's policies and zoning address future commercial and/or residential development near the Metro L stations. Development scale, height, and massing near Metro stations, corridors and transit services are regulated through Form Districts. Commercial and residential uses near transit is addressed through Use Districts, and Frontage Districts regulate how development addresses pedestrian linkages to the public right of way.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) \less than significant impacts related to inconsistency with land use plans and policies, Section 4.1 (Aesthetics) less than significant impact related to visual character and compatibility, and 4.14 (Transportation and Traffic) for less than significant impacts related to traffic and congestion
	V-10 Future developments shall consider significant views, within the proposed Project Area, to ensure that they are protected and also enhanced in certain cases through proper site planning.	Not necessary and infeasible. New development would be subject to neighborhood-specific Form Districts, Frontage and Development Standard provisions under the proposed new zoning system, and thus the more subjective design guidelines to minimize adverse viewshed impacts envisioned by the mitigation measure are unnecessary. The City finds as a matter of policy, including any additional processes, to the review and approval of projects for the purposes of protecting significant views, than those in the Boyle Heights Plan or in existing City regulations, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to visual compatibility.
	V-11 All new developments shall adhere to the height district and building setbacks restrictions as noted in local community/district plans and harmonize with adjacent development patterns to avoid or minimize adverse shade and shadow-impacts. Building stepbacks should be considered in the design of new multi-story developments that are to be built adjacent to residences.	Not necessary and infeasible. New development would be subject to neighborhood-specific Form Districts, Frontage and Development Standard provisions under the proposed new zoning system, and thus the more subjective design guidelines to minimize adverse shade and shadow-impacts envisioned by the mitigation measure are unnecessary.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related visual compatibility.
	V-12: New development shall adhere to lighting standards and requirements of the City's Planning and Zoning Code and Landscape Ordinance to avoid adverse light or glare impacts. Ornamental and security lighting associated with future developments shall be oriented to avoid or minimize illumination of adjacent residential properties. Illuminated signs shall be prohibited on the portion of the commercial building facades facing residences. Individual projects should be reviewed on a case-by-case basis to ensure that building signs and lighting do not cause objectionable levels of light or glare in adjacent residential areas. Street lighting illumination, equipment, and spacing shall meet the standards adopted by the City of Los Angeles Bureau of Street Lighting of the Department of Public Works.	Not necessary and infeasible. New development would be subject to neighborhood-specific Form, Frontage and Development standards provisions, under the proposed new zoning system, and thus the more subjective design guidelines to minimize light or glare impacts from specific projects as envisioned by the mitigation measure are unnecessary.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.10 (Land Use) less than significant impacts related to inconsistency with land use plans and policies and Section 4.1 (Aesthetics) less than significant impact related to light and shade.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
Cultural Resources	Archaeological Resources	CR-1 Although there are no known prehistoric archaeological sites identified within the Project Area, construction activity that involves any major ground disturbance has the potential to disturb, scatter, or relocate archaeological resources. Therefore, it is recommended that a Society of Professional Archaeologists-qualified archaeologist be contacted immediately should unanticipated cultural resource remains be encountered during development or construction-related activities within the limits of the proposed Project Area.	Not necessary. The DEIR Section 4.4 Cultural Resources addresses impacts for projects on cultural resources, through 4.4-2(a) through 4.4-2(d), which are equal or more effective than this mitigation measure. Protocol for the discovery of human remains is already part of the regulatory framework. See California Health and Safety Code Section 7050.5(b).	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources, and Section 4.16 (Tribal Resources) for less than significant impacts with mitigation related to archeological resources and human remains discovery during construction.
	Historic/ Architectural Resources	CR-2 To the extent feasible, existing architectural and historic resources shall not be demolished and shall be incorporated into future development.	Infeasible. The City's Cultural Heritage Ordinance requires that all projects that include a designated Historic Cultural Monument be reviewed by the Office of Historic Resources and the Cultural Heritage Commission. Any discretionary project, including those that require project review (same as the current Site Plan Review), are required to undergo CEQA review to determine if they will impact a historic resource and to mitigate significant impacts or the City will need to prepare an Environmental Impact Report and adopt a statement of overriding considerations before causing a significant impact. The City finds as a matter of policy, including any additional processes, including additional delay to additional properties, to the review and approval of projects for the purposes of historical resource protections, than those in the Boyle Heights Plan or in existing City regulations, including those for Historical Cultural Monuments and the Building and Safety code requirements, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources.
		CR-3 An historic resources move-on program should be established by the Agency or City, whereby a displaced historic residential building could be moved to more suitable vacant lots and rehabilitated. Such a program would mitigate demolition when incorporation of historic resources into new development is not feasible.	Infeasible. The City's Cultural Heritage Ordinance requires that all projects that include a designated Historic Cultural Monument be reviewed by the Office of Historic Resources and the Cultural Heritage Commission. Any discretionary project, including those that require project review (same as the current Site Plan Review), are required to undergo CEQA review to determine if they will impact a historic resource and to mitigate significant impacts or the City will need to prepare an Environmental Impact Report and adopt a statement of overriding considerations before causing a significant impact. The City finds as a matter of policy, including any additional processes, including additional delay to additional properties, to the review and approval of projects for the purposes of historical resource protections, than those in the Boyle Heights Plan or in existing City regulations, including those for Historical Cultural Monuments and the Building and Safety code requirements, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources.
		CR-4 Rehabilitation of architecturally or historically significant buildings shall meet the U.S. Secretary of the Interior's Standards for Rehabilitation.	Not Necessary. The City's Cultural Heritage Ordinance requires all projects that include a designated Historic Cultural Monument or discretionary projects that include eligible historical resources be subject to Office of Historic Resources review. Historic Cultural Monuments require Cultural Heritage Commission review for proposed exterior and interior alterations in accordance with the Secretary of the Interior's Standards for Rehabilitation. As a matter of policy, the City finds including any additional processes, including additional delay to properties, or the review and approval of projects for the purposes of historical resource protections, other than those already existing, including processes for Historical Cultural Monuments, HPOZs, and the Building and Safety code requirements, and those proposed in the Boyle Heights Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character.
		CR-5 New developments greater than one story shall be set back or stepped back from adjacent one-story significant architectural or historic resources to avoid or minimize adverse shade and shadow impacts.	Not necessary and infeasible. Under the Proposed Plan and zoning system, several neighborhood-specific Form Districts include bulk plane requirements and upper story stepbacks. Additional design standards to minimize adverse impacts to significant architectural or historic resources envisioned by the mitigation measure are unnecessary and undesirable and would not result in desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character and light and shade.
		CR-6 New developments adjacent to significant historic or architectural resources shall be compatible in size, scale, materials, fenestration, and massing.	Infeasible. The Boyle Heights Plan proposes zoning standards that include height limitations and contextual infill facade standards in certain eligible historic districts within the Plan area. As a matter of policy, the City finds adopting further design standards, other than those already existing are unnecessary and undesirable (and furthermore the adoption of Design Guidelines is not permissible under SB330) and would not result in an efficient use of City resources or result in desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character and scenic vistas.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	CR-7 The City of Los Angeles Bureau of Street Lighting, with the assistance of future project developers, shall consider retaining, upgrading, and refurbishing historic streetlamps in order to preserve the historic character of the community and to provide adequate lighting to motorists and pedestrians.	Infeasible. This mitigation addresses an individual project-level concern. Any discretionary project, such as City street work improvements or larger private development projects that would be required to do street work improvements that could impact eligible historic resource, including street improvements, such as street lamps, would require CEQA review and mitigation measures to avoid impacts to historical resources as defined by CEQA. Any additional policy intervention to retain, upgrade, or refurbish "historic" street lamps in ministerial projects including the adoption of design standards is not desirable. Moreover, the measure is not needed to avoid impacts to aesthetics because the City does not find as a policy matter that the loss of such street lights will result in a significant aesthetic impact. Additionally, a significant portion of the Plan Area is within a Transit Priority Area which would not have an aesthetic impact for reasonably foreseeable development.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character and light and shade.
	CR-8 Vacant building reuse that could affect historic resources shall be undertaken with careful consideration given to finding compatible uses, protecting the integrity of properties' settings, ensuring long-term access to properties, and ensuring that there would not be substantial alteration without consideration of existing historic features.	Not Necessary. The City's Cultural Heritage Ordinance requires all projects that include a designated Historic Cultural Monument or discretionary projects that include eligible historical resources be subject to Office of Historic Resources review. Historic Cultural Monuments require Cultural Heritage Commission review for proposed exterior and interior alterations in accordance with the Secretary of the Interior's Standards for Rehabilitation. As a matter of policy, the City finds including any additional processes, including additional delay to properties, or the review and approval of projects for the purposes of historical resource protections, other than those already existing, including processes for Historical Cultural Monuments and the Building and Safety code requirements, and those proposed in the Boyle Heights Plan are unnecessary and undesirable, and would not result in an efficient use of City resources or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character and compatibility.
	CR-9 Partial mitigation for demolition could include but not be limited to documentation of the resource, monetary contributions to preservation related activities or programs, or incorporation of character defining historic features into the new development	Infeasible. The City finds as a matter of policy, including any additional processes that could add delays to additional properties, to the review and approval of projects for the purposes of historical resource protections, than those in the Proposed Plan or in existing City regulations, including those for Historical Cultural Monuments and the Building and Safety code requirements, is unnecessary and undesirable and would not result in an efficient use of City resources or desirable land use outcomes	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.4 (Cultural Resources) of the DEIR for the potentially significant and unavoidable impacts related to historical resources and Section 4.1 (Aesthetics) for the less than significant impacts to visual character.
Traffic and Circulation	TC-1 Measures to Reduce Travel Demand. The following mitigation measures are proposed to eliminate or minimize the traffic impacts of the proposed project at the affected intersections. A review of travel demand data and bus ridership patterns for this area indicates that a higher percentage of residents and workers use transit to travel to, from and within the study area than the region as a whole. Although a shuttle bus system similar to the DASH system that is operated in downtown Los Angeles and other high activity centers of the City would be an appropriate addition to the proposed Adelante Redevelopment Project Area, the size and geographic breadth of the area is such that such a system would require multiple routes. It is, therefore, recommended that this shuttle bus system operate around each of the three Metro Rail Red Line station areas, once the stations are in operation, and offer service to adjacent residential areas. This service should be in addition to the existing regional service provided by the MTA and should operate during the midday as well as the morning and evening peak hours. In addition, existing through bus services should be improved by increasing service frequencies and adding limited stop services on longer routes. Ride sharing to major destinations and centers and among through trip travelers should also be encouraged. These proposed improvements would be appropriate for all three proposed project alternatives. Under the requirements of the 1993 City of Los Angeles Ordinance No. 168,700, developers/owners of all new non-residential developments in excess of 25,000 square feet are required to incorporate physical transportation demand management (TDM) measures into the development. Depending upon the size of the project, these measures include information kiosks/bulletin boards, preferential carpool/vanpool parking, bicycle parking and access, and bus stop improvements. In addition to the ordinance requirements, the LADOT traffic study guidelines provide that a more comprehensive program of TDM measures may be required if trip reductions due to TDM are identified as a project mitigation measure. Thus, it is recommended that a TDM program be developed for the proposed Project Area in which developers/owners of commercial office projects in excess of 25,000 square feet, or commercial retail or industrial projects in excess of 50,000 square feet, in the proposed Project Area would be required to prepare, submit, and implement TDM plans. In addition to the TDM ordinance requirements, the proposed TDM program for the proposed Redevelopment Plan would need to include additional	Infeasible and Not Necessary. As a policy matter, the City finds that adopting any additional programs or requirements to address single vehicle occupancy, other than those included in the Proposed Plan and existing regulations is unnecessary and undesirable, would not be a good use of limited City resources and would not result in good public policy related to addressing transportation issues in the City. Adopting any additional programs or requirements for the preparation of TDM is an inefficient use of resources and would not result in the best transportation outcomes. Any update to the City's TDM program would be most efficiently handled as a separate work program and cover a larger area. In 1993, the City of Los Angeles adopted its first Transportation Demand Management (TDM) Ordinance, which requires non-residential developments of more than 25,000 square feet to implement a limited set of TDM strategies. Since then, transportation options have expanded, including the regional rail and bike networks, new options such as bike share, carshare, and rideshare services, and alternatives such as telecommuting. The City is currently in the process of updating the TDM Ordinance. The proposed update to the TDM Ordinance will apply to more projects than the current ordinance, including residential developments, and increases flexibility by offering a menu of more than 40 TDM strategies.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	TC-2 Measures to Increase Capacity. The improvement program for this project also includes measures to increase the capacity of the roadway system at specific locations. The objective of the mitigation measure analysis was to identify physical improvements that could be implemented within the existing roadway right-of-way. Improvements involving right-of-way acquisition were not considered since the study area is a built-up area with little or no easily available right-of-way for roadway improvements.	Infeasible. Since the adoption of this CRA plan, the City's policies related to mobility and circulation have substantially changed with the adoption of Mobility Plan 2035 in 2015, SB 743, and the Complete Streets Act and the movement away from vehicular travel towards a multi-modal travel. Since the adoption of the CRA plan, the Boyle Heights Plan area has seen significant transportation investments and has many rail improvements underway such as the Metro L(Gold) line expansion. As a policy matter, the City finds adopting any additional programs or requirements to encourage multimodal uses other than those improvements underway and proposed in the MIP, those proposed in the Mobility 2035 plan, the Boyle Heights Plan and the MIP, is unnecessary and undesirable, would not be a good use of limited City resources, and would not result in good public policy related to addressing transportation issues in the City.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Minimum/Infill Development Alternative. The following improvements are recommended for the Minimum/Infill Development Alternative:	N/A	N/A
	Mission Road and Marengo Street - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Soto Street and Charlotte Street - Restripe the eastbound Charlotte Street approach to provide an exclusive right-turn lane. This would result in a shared left turn/ through lane and an exclusive right-turn lane in the eastbound direction.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. Charlotte Street has been restriped to create an exclusive right turn lane. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Marengo Street - Restripe the northbound and southbound Soto Street approaches to provide the following: one left-tum lane, one shared left turn/ through lane, one through lane, and one exclusive right-tum lane in the northbound direction and one left-tum lane, one shared left-tum/through lane, and one shared through/right-tum lane in the southbound direction. The north and south approaches are currently operating as a split phase, therefore no changes to the signal phasing would be necessary.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. The Plan also includes policies to improve the function of Soto Street and discourage freight vehicles from using Soto Street in compliance with the Metro Countywide Significant Truck Arterial Network. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Olympic Boulevard - Provide westbound and eastbound exclusive right-turn lanes on Olympic Boulevard. Because the Sears site located on the northeast and southwest comers is within the proposed Redevelopment Project Area, it is assumed that right-of-way could be obtained. The resulting configurations in both the westbound and eastbound direction would be one left-tum lane, three through lanes, and one right-tum lane.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. To accommodate for an additional lane as recommended by the mitigation measure, would require a street widening. Street widenings are not consistent with the City's Mobility Plan 2035 or contemporary policy direction to reduce VMT. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Washington Boulevard - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Lorena Street and Whittier Boulevard - Restripe the northbound Lorena Street approach to provide an exclusive right-tum lane. This would result in the following configuration: one left-tum lane, two through lanes, and one right-tum lane in the northbound direction. The I-hour parking, 8 a.m. - 6 p.m., restriction on the east side of the south leg would need to be changed to 8 a.m. - 4 p.m. for the four spaces nearest the intersection.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. The Plan also includes policies to improve the function of Lorena Street and discourage freight vehicles from using Lorena Street in compliance with the Metro Countywide Significant Truck Arterial Network. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Indiana Street and Cesar E. Chavez Avenue - Install a two-phase traffic signal. Also, restripe the northbound Indiana Street approach to provide one left-tum lane and one shared though/right-tum lane. Given the close proximity to the signal at Lorena Street, coordination between the two signals would be necessary. It should be noted that this location is projected to operate at unacceptable levels under cumulative base conditions and installation of the traffic signal would be needed even without the development of the project.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, or traffic signals is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Indiana Street and Whittier Boulevard - Provide an exclusive right-turn lane on the eastbound Whittier Boulevard approach. This improvement would require restriping both the east and west legs of the intersection in order to keep the east/west direction aligned. The improvement would also require removing approximately two on-street parking spaces on the south side of the west leg.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, including adding additional lanes at intersections, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Traffic and Transportation) on less than significant impacts related to the circulation system.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area	Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	SR 60 Westbound Ramps and Third Street - Install a two-phase traffic signal. It should be noted that this location is projected to operate at unacceptable levels under cumulative base conditions and installation of the traffic signal would be needed even without the development of the project.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure including installing additional traffic signals, is inconsistent, and not a desirable street configuration and would not be a good use of limited City resources for street improvements. It is also not consistent with interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer or contemporary policy direction to reduce VMT.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	TC-2 Measures to Increase Capacity. The improvement program for this project also includes measures to increase the capacity of the roadway system at specific locations. The objective of the mitigation measure analysis was to identify physical improvements that could be implemented within the existing roadway right-of-way. Improvements involving right-of-way acquisition were not considered since the study area is a built-up area with little or no easily available right-of-way for roadway improvements.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure including increasing capacity of the roadway system at specific locations, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration. It would not be a good use of limited City resources for street improvements, and not consistent with interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Moderate Development Alternative. The improvements recommended for the Moderate Development Alternative include those discussed above for the Minimum/Infill Development Alternative, plus the following:	N/A	N/A
	Mission Road and Cesar E. Chavez Avenue - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Mission Road and First Street - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Soto Street and Wabash Avenue - Restripe the westbound Wabash Avenue approach to provide a shared left-turn/right-turn lane and an exclusive right-turn lane.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Fourth Street - Restripe the eastbound Fourth Street approach to provide the following: one left-turn lane, two through lanes, and one right-turn lane.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Whittier Boulevard - Restripe the westbound Whittier Boulevard approach to provide an exclusive right-turn lane. This would result in one left-turn lane, two through Janes, and one right-turn Jane in the westbound direction. This improvement would require removing on-street parking (approximately four spaces) on the north side of the westbound Whittier Boulevard approach.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Soto Street and Eighth Street - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Lorena Street and First Street - Provide an exclusive right-turn lane on the northbound Lorena Street approach. This improvement would require restriping both the north and south legs of the intersection in order to keep the north/south direction aligned. The improvement would also require removing approximately four on-street parking spaces on the west side of the south leg and two spaces on the west side of the north leg.	Infeasible. The Boyle Heights Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. The Plan also includes policies to improve the function of Lorena Street and discourage freight vehicles from using Lorena Street in compliance with the Metro Countywide Significant Truck Arterial Network. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Indiana Street and Olympic Boulevard - Restripe the northbound and southbound Indiana Street approaches to provide the following: one left-turn lane and one shared through/right-turn lane in both directions. The improvement would also require removing approximately two on-street parking spaces on the west side of the north leg, four spaces on the west side of the south leg, and four spaces on the east side of the south leg.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
	Downey Road/Grande Vista and Washington Boulevard - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A
	Soto Street and 26th Street - No physical mitigation measures are considered to be feasible at this location.	N/A. No mitigation measure is proposed in the CRA EIR.	N/A

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		TC-2 Measures to Increase Capacity. The improvement program for this project also includes measures to increase the capacity of the roadway system at specific locations. The objective of the mitigation measure analysis was to identify physical improvements that could be implemented within the existing roadway right-of-way. Improvements involving right-of-way acquisition were not considered since the study area is a built-up area with little or no easily available right-of-way for roadway improvements. Maximum Probable Development Alternative. The improvements recommended for the Maximum Probable Development Alternative include those discussed above for the Minimum and Moderate Development Alternatives, plus the following: Soto Street and Cesar E. Chavez Avenue - Restripe the eastbound Cesar E. Chavez Avenue approach to provide an exclusive right-tum lane. This would result in two through lanes and a right-tum lane in the eastbound direction. It should be noted that the improvement would result in a substandard 10-foot right-tum lane, however on the westbound approach of this intersection there currently exists a 10-foot right tum lane.	Infeasible. The Proposed Plan envisions mobility improvements consistent with contemporary City policy, such as Mobility Plan 2035. As a policy matter, the City finds that making the additional changes called for in this mitigation measure, is inconsistent with contemporary policy direction to reduce VMT, and not a desirable street configuration and would not be a good use of limited City resources for street improvements or interventions including pursuant to policies in the Mobility Plan to encourage multi-modal travel and use of right of way and making streets safer.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and see specifically, Section 4.14 (Transportation and Traffic) on less than significant impacts related to the circulation system.
Air Quality	Construction	AQ-1 All construction contractors shall comply with SCAQMD regulations, including Rule 402 which specifies that no there be no dust impacts offsite sufficient to cause a nuisance. SCAQMD Rule 403, which restricts visible emissions from construction, Rule 1403, which specifies actions to control asbestos emissions from demolition and Rule 1113, which regulates architectural coatings. Measures (a) through (h) below are required by SCAQMD Rule 403 for projects that are subject tot he rule. These measures shall apply to any individual development project proposed under the Redevelopment Plan, even those that may be exempt from Rule 403. Construction contractors shall also provide documentation that they will comply with all applicable SCAQMD regulations and the mitigation measures identified below. a. Moisten soil and debris piles prior to grading. b. Water exposed surfaces at least twice a day under calm conditions and as often as needed in order to maintain a surface crust and prevent the release of visible emissions from the construction site. c. Treat any area that will be exposed for extended periods with a soil conditioner to stabilize soil or temporarily plant with vegetation. d. Wash mud-covered tires and under-carriages of trucks leaving construction sites. e. Provide for street sweeping, as needed, on adjacent roadways to remove dirt dropped by construction vehicles or mud that would otherwise be carried off by trucks departing project sites. f. Securely cover loads of dirt with a tight fitting tarp on any truck leaving the construction sites to dispose of excavated soil. g. Cease grading during periods when winds exceed 25 miles pet hour. h. Provide for permanent sealing of all graded areas, as applicable, at the earliest practicable time after soil disturbance. i. Keep debris piles wet after demolition to prevent lead particles from becoming airborne.	Not necessary. This is already part of the regulatory framework as a requirement under SCAQMD's Rule 403 (fugitive dust).	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.2 for air quality impacts, including additional requirements of MM AQ1 to go beyond SCAGMC requirements to address air impacts from construction.
		AQ-2 All contractors shall: a. Maintain construction equipment in peak operating condition so as to reduce operation emissions. b. Use low-sulfur diesel fuel in all equipment. c. Use electric equipment whenever practicable. d. Shut off engines when not in use. e. Recommend that construction workers wear masks during demolition to avoid breathing lead particles.	Not necessary. This is already part of the regulatory framework (SCAQMD).	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.2 for air quality impacts, including additional requirements of MM AQ1 to go beyond SCAGMC requirements to address air impacts from construction.
	Operational	TC-1 (TDM Mitigation Measure identified above) The TDM mitigation measures (measure TC-1) identified in Section 3.6, Traffic and Circulation, would reduce vehicular traffic and resulting mobile emissions.	See previous comment for Mitigation Measure TC-1.	
Noise (MMs will reduce the impact to less than significant)		NO-1 The projects constructed within the proposed Project Area shall comply with applicable City noise regulations.	Not necessary and infeasible. This is part of the regulatory framework. The Los Angeles Municipal Code (LAMC) limits construction between 7:00 a.m. and 9:00 p.m. on weekdays, and between 8:00 a.m. and 6:00 p.m. when activities would be located within 500 feet of residences on any Saturdays or anytime on Sundays or federal holidays. As a policy matter, the City finds imposing additional limitations on construction hours of operation other than those in the Noise Ordinance and Section 41.40 is unnecessary and undesirable and would not result in good public policy related to construction in the City.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.11 (Noise) for less than significant impacts from permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		NO-2 For individual projects within the proposed Project Area, a procedure shall be established by the CRA requiring developers to notify adjacent property owners and tenants, particularly residences and schools, of time periods when there would be noisy construction activities. Appropriate mitigation, if required, would then be established.	Not necessary and infeasible. This is part of the regulatory framework. LAMC Ch. IV, Article 1 Sec. 41.40 Construction Noise; LAMC CH. XI Sec. 112.05 Power tools; LAMC Sec. 111.03 Ambient Noise; LAMC Sec. 112.02 HVAC system noise. As a policy matter, the City finds adopting additional noise requirements other than those in the Noise Ordinance and Section 41.40 and/or imposing additional review and standard requirements on approval of development projects and development of land is unnecessary and undesirable and would not result in good public policy related to construction in the City or be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.11 (Noise) for less than significant impacts from permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise.
		NO-3 During construction, the contractors for projects within the proposed Project Area shall muffle and shield intakes and exhaust, shroud and shield impact tools, and use electric- powered rather than diesel-powered construction equipment, as feasible.	Not necessary. This is already required as part of the regulatory framework (SCAQMD). As a policy matter, the City finds adopting additional noise requirements other than those in the Noise Ordinance and Section 41.40 and/or imposing additional review and standard requirements on approval of development projects and development of land is unnecessary and undesirable and would not result in good public policy related to construction in the City or be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.11 (Noise) for less than significant impacts from permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise.
		NO-4 During construction of individual development projects within the proposed Project Area, truck haul routes (demolition waste, dirt excavation, cement, materials delivery) shall be designated by the appropriate City and state bodies.	Not necessary. This is already required as part of the regulatory framework. The Citywide Construction and Demolition (C&D) Waste Recycling Ordinance requires all mixed construction and demolition waste generated within city limits be taken to City certified C&D waste processors. LA Sanitation (LASAN) is responsible for the C&D waste recycling policy. All haulers and contractors responsible for handling C&D waste must obtain a Private Waste Hauler Permit from LASAN prior to collecting, hauling and transporting C&D waste, and C&D waste can only be taken to City certified C&D processing facilities.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.11 (Noise) for less than significant impacts from permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise.
		NO-5 As projects are designed and developed within the proposed Project Area, truck loading and trash pickup areas shall be located as far away as possible from adjacent residences. These facilities shall use screening walls or be enclosed.	Infeasible. The City's noise ordinance regulates excessive noise, including around residential areas. Additionally, discretionary projects can be reviewed for noise under environmental review or Site Plan Review, if applicable. As a policy matter, the City finds adopting any additional regulations, requirements or review of projects to address noise, including for ministerial and discretionary projects, is not desirable or necessary and would not be an efficient use of City resources or result in good land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.11 (Noise) for less than significant impacts from permanent noise increases due to stationary and mobile operational activities; significant and unavoidable impacts generated by temporary construction noise.
Public Services	Fire	PS-1 Fire-flows shall be closely monitored by the Department of Water and Power to ensure that they do not fall below the minimum requirements. Improvements to the water system that may be required to provide adequate fire-flow levels may be charged to developers of individual projects within the area.	Not necessary and infeasible. Fire safety issues, including requirements for fire-flow levels are governed by the Fire Code, which applies to all projects. Additionally, projects of a certain size that require Site Plan Review are already referred to Los Angeles Fire Department (LAFD) for review of plans; and would therefore be subject to review. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address fire-flow levels is unnecessary and undesirable and would not be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13 (Public Services) for less than significant impacts on fire-flow demands.
		PS-2 Intersection improvement measures should be implemented as discussed in Section 3.6, Traffic and Circulation, to improve intersection traffic operations and thereby improve initial emergency response capabilities.	See discussion under Traffic and Circulation.	See discussion under Traffic and Circulation.
		PS-3: The LAFD requires that several measures concerning emergency access be incorporated into new developments that may be approved within the proposed Project Area. For the following measures, access requirements for aboveground floors shall be interpreted as being the horizontal travel distance from the street, driveway, alley, or designated fire lane to the main entrance or exit of individual units. • Any person owning or having control of any facility, structure, group of structures, or premises shall provide and maintain LAFD access (Section 57.09.03, Subsection B of the L.A. Fire Code). • No building or portion of a building shall be constructed more than 150 feet from the edge of the roadway of any improved street, access road, or designated fire lane, (Section 57.09.03, Subsection B of the L.A. Fire Code). 1. , • Every first-story dwelling unit, first-story guest room, and all first-story portions of any commercial or industrial building must be within 300 feet of an approved fire hydrant (Section 57.09.06, Subsection B-1 of the L.A. Fire Code). • The maximum distance between fire hydrants on roads and fire lanes in a regional commercial area is 300 feet. • Fire Jane width shall not be less than 30 feet clear to sky. When a fire Jane must accommodate the operation of LAFD aerial ladder apparatus or where fire hydrants are installed, those portions shall not be Jess than 28 feet in width. • Access for LAFD apparatus and personnel to enter into all structures shall be required. • Fire lanes, where required, and dead-ending streets, shall terminate in a cul-de-sac, or other approved turning area. No dead-ending street or fire lane shall be greater than 700 feet in length or secondary access shall be required.	Not necessary. Fire safety issues would already be addressed by LAMC 16.05 Site Plan Review that applies to discretionary projects and by Fire Code requirements that apply to all projects. Projects of a certain size that require Site Plan Review (SPR) are already referred to LAFD for review of plans; and would be subject to design review conditions of approval by way of a Director's determination and an environmental clearance. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address fire hazards other than what is already required by the Fire Code is unnecessary and undesirable and would not be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.1 (Fire Protection and Emergency Services) for less than significant impacts on performance objectives for fire protections.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		PS-4 In addition to measures concerning access, the LAFD also states that the following measures be incorporated into the proposed project to reduce the impact on fire protection services: • The proposed project shall comply with all applicable state and local codes and ordinances and the guidelines found in the General Plan of the City of Los Angeles (C.P.C. 19708). • Definitive plans and specifications shall be submitted to the LAFD and requirements for necessary permits satisfied prior to commencement of future site development. • Installation of a sprinkler system, in any newly constructed structures, as required by the Los Angeles City Fire Code, Section 57 .118.11.	Not necessary. Fire safety issues would already be addressed by LAMC 16.05 Site Plan Review that applies to discretionary projects and by Fire Code requirements that apply to all projects. Projects of a certain size that require Site Plan Review (SPR) are already referred to LAFD for review of plans; and would be subject to design review conditions of approval by way of a Director's determination and an environmental clearance. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address fire hazards other than what is already required by the Fire Code is unnecessary and undesirable and would not be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, 4.13.1 (Fire Protection and Emergency Services) for less than significant impacts on performance objectives for fire protections.
	Police	PS-5 Intersection improvement measures should be implemented as discussed in Section 3.6 of this EIR to improve intersection traffic operations and thereby improve initial emergency response capabilities.	See discussion under Traffic and Circulation.	See discussion under Traffic and Circulation.
		PS-6 The following mitigation measures to improve security in new developments are included in the City's current development review procedures. At the individual development project level, the project sponsor shall consult with the LAPD's Crime Prevention Unit on the design and implementation of a security plan for the development. A security plan shall consider: • Use of private security guards and video surveillance to monitor and patrol the project site during project construction and operation; • Design of entryways, elevators, lobbies, and parking areas with good illumination and minimum dead space to eliminate areas of concealment; • Provision of solid core doors with deadbolt locks to all offices, shops, and hotel units. • Maximum accessibility for emergency service personnel and vehicles into each structure's design.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features such as private security and video surveillance is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		The following additional measures would be implemented on a project-by-project basis where appropriate: PS-7 Private security guards and video surveillance shall be employed as appropriate to provide additional security.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features such as private security and video surveillance is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-8 All commercial and industrial buildings shall be equipped with robbery/burglar alarms which shall be monitored by a central receiving station.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features such as robbery/burglar alarms is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-9 Parking areas shall be open to public view.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-10 Security lighting shall be full cutoff fixtures that minimize glare from the light source and provide light downward and inward to structures to maximize visibility.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features such as security lighting is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-11 The following specific measures should be incorporated into proposed developments to strengthen crime prevention: • Video cameras and security guards should be used to patrol parking areas. A security guard to patrol office floors should also be considered. • Consultation with the Police Department's crime prevention unit concerning crime prevention features appropriate to the particular design of the project. • Control employee parking areas with an electronic card-key gate, in conjunction with a closed-circuit television system. • Provide sufficient off-street parking for all building employees and anticipated patrons and visitors.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features such as video cameras and additional security measures is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-12 All businesses desiring to sell or allow consumption of alcoholic beverages within the proposed Project Area shall be reviewed by the LAPD per established or applicable regulations or procedures.	Not necessary. Projects that apply for a new alcohol permit will be required to file a Conditional Use Permit with City Planning and obtain the required alcohol permits with the Alcoholic Beverage Control (ABC), and the application is sent to the LAPD for their input.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.
		PS-13 All new developments shall provide the appropriate police division commanding officer with a detailed diagram of the project, which should include access routes, unit numbers, and any information that would facilitate police response.	Not necessary and infeasible. As a policy matter, the City finds adopting additional review requirements and standards for ministerial projects to address security features is unnecessary and undesirable and would not be an efficient use of City resources. Additionally, the City determines when new or expanded facilities are needed to provide police services.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.2 (Police Protection Services) for less than significant impacts related to emergency response capabilities and police protection services.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	Schools	PS-14 To minimize student safety concerns due to construction traffic, construction vehicles shall not be parked or be staged next to school sites to the greatest extent feasible and haul trucks shall not be routed past District schools except when schools are not in session. Construction sites shall be properly fenced, secured, and illuminated.	Not necessary and infeasible. The City of Los Angeles has partnered with LAUSD on Vision Zero Los Angeles, which is an initiative to eliminate traffic deaths in the City. Safe Routes to School is a key component of Vision Zero Los Angeles. Since the launch of the Safe Routes to School Strategic Plan in 2011, the LAUSD and the City of Los Angeles have formed a close partnership that focuses on enabling and encouraging children to walk and bicycle safely to school. These efforts have culminated in the Safe Routes to School Action Plan, which identifies steps to increase safety and decrease deaths and serious injuries. A number of traffic safety improvements are currently being implemented at Breed Street Elementary and Sheridan Street Elementary schools. As a policy matter, the City finds adopting additional processes, review and requirements to address construction traffic is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably expected development under the Proposed Plan, and specifically, Section 4.13.3 (Public Schools) that are less than significant impacts related to schools.
	Libraries	None	None	N/A
	Park and Recreational Facilities	PS-16 Where feasible and appropriate, open space in existing public facilities, such as school grounds, should be available for after-hour recreational use.	Infeasible. The Proposed Plan includes policies for ongoing interagency coordination with other departments and agencies on joint use of recreation facilities, as well as park acquisition and maintenance, and park access. Quimby fees, which fund parks, are required for development projects that include new residential dwelling units and the City has park fees. In addition, this is a policy/future program and not a mitigation measure.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Boyle Heights Community Plan, and specifically Section 4.13.4 (Parks and Recreation) -potentially significant impacts related to the deterioration of existing parks.
		PS-17 For commercial development in the proposed Project Area, design guidelines should require some usable open space to be included in landscaped areas.	Not necessary. The Proposed Plan includes zoning standards with required amenity and open space provisions for residential and non-residential buildings within the Plan Area.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Boyle Heights Community Plan, and specifically Section 4.13.4 (Parks and Recreation) -potentially significant impacts related to the deterioration of existing parks.
Utilities	Water Infrastructure / Water Supply	UT-1 During the next 5 to 15 years when most of the development in the proposed project would occur, it may become necessary for individual developments to make a fair share contribution to replace and upgrade the water delivery infrastructure as determined by the DWP, although at present this is not expected to be necessary.	Not necessary. Development projects of a certain size are required to complete a Water Supply Assessment for the Department of Water and Power's review and approval. The assessment determines whether the projected water demand associated with a proposed project is included as part of the most recently adopted Urban Water Management Plan. Specifically, a water supply assessment shall identify existing water supply entitlements, water rights, or water service contracts held by the public water system, and prior years' water deliveries received by the public water system.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically , Section 4.15.1 (Water Supply) less than significant impacts related to water infrastructure and supply.
		UT-2 Any construction or development within Metropolitan right-of-way shall comply with Metropolitan Water District of Southern California restrictions (loading restrictions, tree planting restrictions, etc.).	Not necessary. Applicants of future development projects will continue to be required to coordinate and comply with the Metropolitan Water District's construction, project development, and project siting requirements, as applicable.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.1 (Water Supply) - less than significant impacts related to water infrastructure and supply.
		UT-3 Projects within the proposed Project Area shall satisfy and/or exceed water conservation measures mandated by Ordinance No. 166,080 and Ordinance No. 165,004. • Use of reclaimed water during grading and construction for dust control, soil compaction, and concrete mixing. • Mandatory reduction of water consumption by 15 percent. • Installation of toilet tank conservation devices. • Landscaping with drought-tolerant/indigenous species (xeriscape). • Installation of other water saving devices such as faucets and showers for new development, as well as the retrofit of fixtures for existing developments that may be included within the proposed reinvestment projects.	Not necessary. The City has programs supporting water conservation, consistent with State law. Projects would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, and Supply Ordinance No. 165004 to reduce water consumption, in order to obtain building permits in the City of Los Angeles. As a policy matter, the City finds adopting additional processes, review and requirements to address utilities for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.1 (Water Supply less than significant impacts related to water infrastructure and supply.
		UT-4 In addition, the City of Los Angeles DWP recommends the following water conservation measures: • Automatic sprinkler systems should be set to irrigate landscaping during early morning hours or during the evening to reduce water losses from evaporation. However, care must be taken to reset sprinklers to water less often in cooler months and during the rainfall season so that water is not wasted by excessive landscape irrigation. • All landscaped areas in the proposed project shall be provided with an irrigation water system separate from the potable water system to allow future use of reclaimed water. • Drip irrigation systems should be used for any proposed irrigation systems. • Future site-specific developments in the proposed Project Area shall comply with improvements determined by the Fire Department as necessary to satisfy fire-flow requirements (see Section 3.9 Fire Protection).	Not necessary. The City has programs supporting water conservation, consistent with State law. Projects would be required to comply with the City's water conservation ordinances, such as the Model Water Efficient Landscape Ordinance, and Supply Ordinance No. 165004 to reduce water consumption, in order to obtain building permits in the City of Los Angeles. As a policy matter, the City finds adopting additional processes, review and requirements to address utilities for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.1 (Water Supply) - less than significant impacts related to water infrastructure and supply.
	Wastewater & Sewage Treatment	UT-5 All new development shall comply with the requirements of the City's Sewer Ordinance No. 166,060, Water Conservation Ordinances Nos. 165,004 165,615, 166,808, and any related subsequent ordinances.	Not necessary. This is part of the regulatory framework to enact water conservation regulations.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.2 (Wastewater and Stormwater Drainage)- less than significant impacts related to wastewater and sewage treatment.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		UT-6 For all new development, the Bureau of Engineering Planning and Scheduling Department shall send written confirmation regarding the availability of sewage treatment capacity to the Regional Water Quality Control Boards. A copy of this letter must be sent to the Regional Board prior to the approval of individual development projects, as required by law.	Not necessary and Infeasible. This mitigation measure requires ministerial projects to complete a sewer capacity study which is inconsistent with a ministerial process. A Sewer Capacity Availability Review (SCAR) is generally required for projects expected to exceed 10,000 gpd, or a request from a property owner seeking to increase their discharge through their existing connection by 10,000 gpd or more, or any groundwater related project that discharges 10,000 gpd or more, or any proposed or future development for a project that could result in a discharge of 10,000 gpd or more. LAMC Section 64.11 and 64.12 require approval of a sewer permit prior to connection to the wastewater system; LAMC 64.15 requires that a Sewer Capacity Availability Request (SCAR) be performed by LADBS when a sewer permit is sought for a new connection to the City's wastewater system or in the event that a proposed increase in discharge to a public wastewater line or proposed future development is anticipated to generate 10,000 gallons or more of wastewater per day. Additionally, as discussed in the DEIR, DWP has a program from upgrading sewer lines, that would include Sunset Boulevard. As a policy matter, the City finds adopting additional programs, requirements or standards related to sewer capacity or changing its sewer upgrade program from the existing programs, requirements and standards is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes or improved sewer system for the City and would not be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.2 (Wastewater and Stormwater Drainage)- less than significant impacts related to wastewater and sewage treatment.
		UT-7 At the time specific major development proposals for projects within the proposed Project Area are submitted, a detailed study of condition and capacity of local sewer lines and the sewage increase due to the project(s) shall be prepared with assistance from the Bureau of Engineering.	Not necessary. A Sewer Capacity Availability Review (SCAR) is generally required for projects expected to exceed 10,000 gpd, or a request from a property owner seeking to increase their discharge through their existing connection by 10,000 gpd or more, or any groundwater related project that discharges 10,000 gpd or more, or any proposed or future development for a project that could result in a discharge of 10,000 gpd or more. LAMC Section 64.11 and 64.12 require approval of a sewer permit prior to connection to the wastewater system; LAMC 64.15 requires that a Sewer Capacity Availability Request (SCAR) be performed by LADBS when a sewer permit is sought for a new connection to the City's wastewater system or in the event that a proposed increase in discharge to a public wastewater line or proposed future development is anticipated to generate 10,000 gallons or more of wastewater per day. Additionally, as discussed in the DEIR, DWP has a program from upgrading sewer lines, that would include Sunset Boulevard. As a policy matter, the City finds adopting additional programs, requirements or standards related to sewer capacity or changing its sewer upgrade program from the existing programs, requirements and standards is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes or improved sewer system for the City and would not be an efficient use of City resources.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.2 (Wastewater and Stormwater Drainage)- less than significant impacts related to wastewater and sewage treatment.
	Storm Drainage	UT-8 Stormwater discharges from each project site shall meet, at a minimum, all applicable requirements of the State Regional Water Quality Control board and National Pollutant Discharge Elimination System (NPDES) Permit requirements (Order number 96054 NPDES Permit CAS614001 was issued by the California Regional Water Quality Control Board to the County and local agencies), and shall comply with implementation of these requirements through responsible City and County of Los Angeles agencies.	Not necessary. All future developments in the Community Plan Area would be required to comply with the LID Ordinance and Stormwater and Urban Runoff Pollution Control Ordinance, which require the inclusion of BMPs in a project's design to prevent, control, and reduce stormwater pollutants. The City's Stormwater and Urban Runoff Pollution Control Ordinance requires future development to comply with the SUSMP requirements, if applicable and integrate LID practices and standards for stormwater pollution mitigation, and maximize open, green, and pervious space on all development consistent with the City's landscape ordinance and other related requirements. As a policy matter, the City finds adopting additional processes, review and requirements to address stormwater discharge or the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.2 (Wastewater and Stormwater Drainage)- less than significant impacts related to stormwater drainage.
		UT-9 A drainage plan shall be developed to the satisfaction of the City Engineer for review and approval, prior to development of any drainage improvements at individual large-scale project sites.	Not necessary. Future development would be required to comply with Division 18, Soils and Foundations, of the LABC, which adopted Chapter 18 of the CBC by reference. Therefore, future development would be required to comply with the CBC regarding the minimum standards for structural design and site development. An acceptable degree of soil stability can be achieved for soil materials by the CBC-required incorporation of soil treatment programs (replacement, grouting, compaction, drainage control, etc.) in the excavation and construction plans to address site-specific soil conditions and on-site drainage. Adherence to these requirements would achieve accepted safety standards relative to unstable geologic units or soils.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.15.2 (Wastewater and Stormwater Drainage)- less than significant impacts related to stormwater drainage.
	Solid Waste Disposal	UT-10 In accordance with AB 939 and the City's Solid Waste Management Plan, major new development projects within the proposed Project Area shall prepare and submit a Source Reduction and Recycling Plan (SRRP) to the Planning Department, prior to the approval of building permits, documenting and outlining the incorporation of an on site recycling/conservation program(s).	Not necessary. As of July 1, 2012 AB 341 has required Mandatory Commercial Recycling in California. Businesses, public entities that subscribe to waste collection services, and multi-family residential properties with five or more units are required to have a recycling program.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.15.3 (Solid Waste) for less than significant impacts related to solid waste.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		UT-11 The SRRP should include, but not necessarily be limited to, the following items: • Contracting with solid waste removal firms that will recycle all glass, aluminum, and paper products. • Providing space in the project for a solid waste storage area, to allow for source separation bins for newsprint, paper, bottles, and cans to be removed by appropriate trash recycling firms. • (for large employment generators) Instituting an employee participation recycling program whereby employees are given containers/bins to separate newsprint, white and/or colored paper for regular custodian collection and deposit into the larger separation containers to be removed by appropriate trash recycling firms. • (for large employment generators) Purchasing glass and aluminum recycling machines for prominent placement in lunchrooms (e.g., next to soda machines) or other easily accessible locations. • (for large employment generators) Instituting an employee educational program which would, through a series of brief educational sessions, outline various methods whereby employees can further contribute to methods of recycling/conservation in the office and home (e.g., contracting with firms for purchase of recycled paper, use of two-sided reports, replacement of styrofoam cups with ceramic coffee mugs, etc.).	Not necessary. As of July 1, 2012 AB 341 has required Mandatory Commercial Recycling in California. Businesses, public entities that subscribe to waste collection services, and multi-family residential properties with five or more units are required to have a recycling program.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.15.3 (Solid Waste) for less than significant impacts related to solid waste.
		UT-12 To minimize construction waste, it is recommended that project developers submit a brief plan as part of the SRRP outlining how demolition and construction debris shall be recycled during the demolition and construction phase. This plan shall include a proposed layout for source separation of materials and recycling bins at the project site and shall identify one or more prospective contractors specializing in demolition and construction waste management to be responsible for maximizing the recycling of waste materials during the demolition and construction phase.	Not necessary. Impacts related to solid waste generation would be less than significant. In addition, the California Green Building Code (CALGreen) has requirements for residential and non-residential buildings, including newly constructed projects, additions and alterations. The requirements include diversion of at least 50 percent of the construction waste generated during new building construction (CALGreen Sections 4.408 and 5.408). Additionally, the Citywide Construction and Demolition (C&D) Waste Recycling Ordinance requires all mixed construction and demolition waste generated within city limits be taken to City certified C&D waste processors. LA Sanitation (LASAN) is responsible for the C&D waste recycling policy. All haulers and contractors responsible for handling C&D waste must obtain a Private Waste Hauler Permit from LASAN prior to collecting, hauling and transporting C&D waste, and C&D waste can only be taken to City certified C&D processing facilities.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.15.3 (Solid Waste) for less than significant impacts related to solid waste.
Energy	Electricity & Natural Gas Consumption	EN-1 During the design process, large-scale site developers shall consult with Department of Water and Power and Southern California Gas Company regarding possible energy conservation measures. Each large-scale site developer should incorporate measures which would exceed minimum Title XXIV standards.	Not necessary. All building permits are required to comply with Title 24 (California Building Standards Code), which includes energy efficiency requirements for residential and nonresidential buildings, including newly constructed projects, additions and alterations.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.5 (Energy)- less than significant impacts related to energy consumption.
	Gasoline and Diesel Fuel Consumption	No mitigation required	N/A	N/A
Geology & Seismicity	Oil Fields	GS-1 Improperly abandoned oil wells shall be identified during the geotechnical investigations for project facilities and properly abandoned. If methane gas is present, its occurrence shall be monitored and protective design measures shall be identified. If any structure is to be located over or in the proximity of a previously plugged and abandoned well, that well may require plugging to current Division of Oil, Gas and Geothermal Resources specifications. Section 3208. I of the Public Resources Code authorizes the State Oil and Gas Supervisor to order reabandonment of any previously plugged and abandoned well when construction of any structure over or in the proximity of the well could result in a hazard. In addition, if the well requiring plugging or reabandonment is on an adjacent property and near the common property line, the Division recommends that the structure be set back sufficiently to allow future access to the well. Additionally, designers shall consider potential gas migration into occupied levels and identify protective monitoring and design mitigation measures. If any plugged and abandoned or unrecorded wells are damaged or uncovered during excavation or grading, remedial plugging operations may be required. If such damage or discovery occurs, the Division's district office must be contacted to obtain information on the requirements for and approval to perform remedial operations.	Not necessary. LAMC Section 91.6105 prohibits the development of specific uses and buildings in proximity to an oil well casing. These include schools, sanitariums, an assembly occupancy (i.e., gather place for 50 or more people), fuel manufacturing plant, or public utility generating, receiving, or distributing electricity, and buildings more than 400 square feet in area and tall than 36 feet in height. In addition, in accordance with LAMC Section 91.7109.2, any abandoned oil well encountered during construction is required to be evaluated by the Fire Department and may be required to be re-abandoned in accordance with applicable rules and regulations of the California Division of Oil, Gas, and Geothermal Resources (CALGEM).	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically, Section 4.8 (Hazards and Hazardous Materials) - less than significant impacts related to oil wells

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	Soils	GS-2 The impacts of corrosive soils shall be mitigated by sampling and chemical testing of site soils by the geotechnical engineer. The geotechnical report shall include recommendations regarding the cement type necessary to protect concrete foundations and should identify measures to protect metal pipes and conduits placed in the ground.	Not necessary. The California Building Code has requirements (CBC Appendix J) for all grading, excavation, and earthwork construction, and prohibits grading from occurring without first having obtained a permit from the local jurisdiction, which would be the Department of Building and Safety. Section J104.3 of the California Building Code requires the preparation of a geotechnical report that notes the nature and distribution of existing soils, conclusions and recommendations for grading procedures, soil design criteria for any structures or embankments required to accomplish the proposed grading, and where necessary, slope stability studies, and recommendations and conclusions regarding site geology. This applies to projects that include grading, excavation, and earthwork and not just for construction of a new building. To extent this mitigation measure is to address impacts from existing conditions to future residents of the project, those are not CEQA impacts pursuant to CBIA v. BAAQMD.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically see Section 4.6 (Geology and Soils)- less than significant impacts related to geology and soils.
	Ground Shaking	GS-3 Construction of new development shall conform to all applicable provisions of the Los Angeles Municipal Code, including the revised (1992 as amended) Division 23, Section 2312 of the Building Code. The information regarding ground motion and spectra response determined from the dynamics analysis shall be implemented in the seismic design of future buildings. Future construction shall conform to the Uniform Building Code's earthquake design criteria for Seismic Zone 4, as well as the 1990 Recommended Lateral Force requirements and Commentary by the Structural Engineers Association of California.	Not necessary. This is currently part of the regulatory framework. The Los Angeles Municipal Code, including the revised (1992 as amended) Division 23, Section 2312 of the Building Code, establishes regulations for proper earthquake design and engineering and requires dynamic analysis for structures that are over 160 feet in height. The information regarding ground motion and spectra response determined from the dynamics analysis would be implemented in the seismic design of the buildings.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.6 (Geology and Soils)- less than significant impacts related geology and seismic hazards.
	Liquefaction and Seismically Induced Settlement	GS-4 If moderate to high liquefaction potential within the proposed Project Area or earthquake induced subsidence potential is confirmed by geotechnical analyses, then mitigation should be implemented. Appropriate mitigation, which could include the use of soil improvement techniques such as stone columns or dynamic compaction, or use of deep foundations, is dependent on site-specific conditions, which will be identified by geotechnical investigation	Not necessary. The California Building Code has requirements (CBC Appendix J) for all grading, excavation, and earthwork construction, and prohibits grading from occurring without first having obtained a permit from the building official. Section J104.3 requires the preparation of a geotechnical report that notes the distribution of existing soils, conclusions and recommendations for grading procedures, soil design criteria for any structures or embankments required to accomplish the proposed grading, and where necessary, slope stability studies, and recommendations and conclusions regarding site geology. This applies to projects that include grading, excavation, and earthwork and not just for construction of a new building. To extent that this MM is to address impacts from existing conditions to future residents of the project, those are not CEQA impacts pursuant to CBIA v. BAAQMD.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, and specifically Section 4.6 (Geology and Soils)- less than significant impacts related geology and seismic hazards.
Hydrology	Groundwater	H-1 A hydrological assessment shall be prepared for all proposed projects in areas with a high groundwater table. This assessment shall assess effects on associated aquifers as well as pumping and dewatering requirements.	Not necessary and Infeasible. The State Water Resources Board already requires Phase I storm water regulations review for all projects that meet a certain threshold. In addition, future developments in the Plan Area would be required to comply with the LID Ordinance and Stormwater and Urban Runoff Pollution Control Ordinance, which require the inclusion of Best Management Practices in a project's design to prevent, control, and reduce stormwater pollutants. The City's Stormwater and Urban Runoff Pollution Control Ordinance requires future development to comply with the SUSMP requirements, if applicable and integrate LID practices and standards for stormwater pollution mitigation, and maximize open, green, and pervious space on all development consistent with the City's landscape ordinance and other related requirements. As a policy matter, the City finds adopting additional processes, review and requirements to address the high groundwater table in the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, specifically Section 4.9 (Hydrology)- less than significant impacts related to the degradation of ground water, Section 4.6 (Geology and Soils)- less than significant impacts related to geology and soils and Section 4.15 (Utilities & Service Systems)- less than significant impacts related to stormwater drainage.
		H-2 In the event that groundwater is encountered during construction, a dewatering system shall be installed and special shoring installation techniques implemented, as required by local building codes and regulations, to reduce the potential for the caving of sandy soils. If high groundwater levels affecting foundations, basement walls, or floor slabs are encountered, special remedial measures should be incorporated as part of the project design in compliance with the requirements of local codes. The hydrostatic design or sub drain system should be subject to review and approval by the Los Angeles Department of Building and Safety.	Not necessary. This is already part of the regulatory framework. The Los Angeles Municipal Code sets forth requirements for construction activities and facility operations of development and redevelopment projects to comply with the requirements of the NPDES permit and SUSMP requirements. New development, including their associated construction activities and facility operations, are required to comply with the Land Development requirements of the Los Angeles County MS4 permit through integrating LID practices and standards for stormwater pollution mitigation, and maximize open, green and pervious space on all developments and redevelopments consistent with the City's Landscape Ordinance and other related requirements in the Development Best Management Practices Handbook. The LID Ordinance applies first to a project in lieu of SUSMP. If a large project cannot meet the requirements of the LID Ordinance, then SUSMP measures are applied.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, specifically Section 4.9 (Hydrology and Water Quality)- less than significant impacts related to the degradation of ground and surface water, and Section 4.15 (Utilities & Service Systems)- less than significant impacts related to stormwater drainage.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
	Surface Waters	H-3 State Water Resources Control Board Phase I storm water regulations require construction activities disturbing fewer than 5 acres that are part of a large common plan of development to obtain a General Permit. Individual projects may be required to obtain a Phase II NPDES General Permit (Phase II General Permit). As a component of the Phase II General Permit, a storm Water Pollution Prevention Plan shall specifically identify Best Management Practices to mitigate water quality impacts on receiving waters due to surface water runoff from the project site. The implementation of Best Management Practices or pollution and erosion control measures may include the placement of sandbags around basins, construction of a berm to keep runoff from flowing into the construction site, and keeping motor vehicles at a safe distance from the edge of excavation. Additional measures include the use of proper grading techniques; appropriate sloping, shoring, and bracing of the construction site; and covering or stabilizing topsoil stockpiles.	Not necessary and infeasible. This is already part of the regulatory framework. The State Water Resources Board already requires Phase I storm water regulations review for all projects that meet a certain threshold. In addition, future developments in the Plan Area would be required to comply with the LID Ordinance and Stormwater and Urban Runoff Pollution Control Ordinance, which require the inclusion of Best Management Practices in a project's design to prevent, control, and reduce stormwater pollutants. The City's Stormwater and Urban Runoff Pollution Control Ordinance requires future development to comply with the SUSMP requirements, if applicable and integrate LID practices and standards for stormwater pollution mitigation, and maximize open, green, and pervious space on all development consistent with the City's landscape ordinance and other related requirements. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Project, specifically Section 4.9 (Hydrology and Water Quality)- less than significant impacts related to the degradation of ground and surface water, Section 4.6 (Geology and Soils)- less than significant impacts related to geology and soils, Section 4.8 (Hazards and Hazardous Materials) related to less than significant impacts related to water pollution, and Section 4.15 (Utilities & Service Systems)- less than significant impacts related to stormwater drainage.
Hazardous Materials	Hazardous Waste	HM-1 If there is a low potential for encountering hazardous waste, the following shall be performed; Available environmental records shall be reviewed by a qualified professional, a thorough historical land use assessment shall be completed, and a site inspection shall be performed. Visual inspection should look for evidence of spills or discharge of hazardous substances (stains; corroded drains, floors, or pavement) and insure any hazardous materials, including asbestos and lead-based paint, are removed prior to site work or demolition. Sampling and testing of potentially contaminated soil or building materials may be required to complete the mitigation. Results of the site inspection or sampling may lead to further site investigation and assessment.	Not necessary. The Proposed Plan DEIR has a similar mitigation measure (MM HM1) that requires full database research for projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial or, previously had a gas station or dry-cleaning facility on-site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-2 If there is a moderate potential for encountering hazardous waste, Site inspection shall be performed to verify current conditions and perform additional sampling judged necessary by the record review. Leaking underground storage tank sites where new basements, subterranean parking, or deep (greater than 5 feet) foundation excavations are planned should consider drilling test holes and collecting samples as confirmation of remediation. Discoveries of residual contamination may require additional remediation or a risk assessment that considers the future use. Sites with underground storage tanks where the status and/or number of tanks is not reported should undergo further record review to determine the status, condition, contents, and· number of tanks. Inactive underground storage tank sites may have old tanks in poor condition and, therefore, should be thoroughly evaluated for condition and possible leaks. Development of sites with non-leaking underground storage tanks should include tank removal according to local regulations. Inspection during tank and piping removal and soil sampling should verify tank and piping integrity. Discovery of unknown contamination will require remedial plans.	Not necessary. The Proposed Plan DEIR has a similar mitigation measure (MM HM1) that requires full database research for projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial or, previously had a gas station or dry-cleaning facility on-site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. The DEIR also includes a As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to soil contamination
		HM-3 If there is a high potential for encountering hazardous waste, the following shall occur: Available records shall be reviewed, a site inspection shall be performed, and responsible parties shall be contacted to determine whether remediation plans are in progress, and if so, is progress compatible with the proposed development plans and schedule. Where practical, remediation may continue during planning or be included or enhanced by the development plans. Abandoned sites or sites judged to be not fully characterized may require further investigation and preparation of remedial plans.	Not necessary. The Proposed Plan DEIR has a similar mitigation measure (MM HM1) that requires full database research for projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial or, previously had a gas station or dry-cleaning facility on-site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-4 Qualified professionals and technicians shall perform the necessary research, field observations, exploratory work, construction, demolition and removal of hazardous materials.	Not necessary. This mitigation measure is already part of the regulatory framework and would therefore already be required in the event that hazardous materials are found on a project site.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-5 At sites where underground storage tanks are suspected, the presence of such tanks must be proved. If tanks are present, they should be removed; and the necessary sampling, laboratory testing and technical analyses should be performed to evaluate the presence of contaminants in the soil and groundwater. The procedures shall be performed by a qualified environmental professional in conformance with applicable city, state, and federal standards and guidelines. Several generations of study through remediation may be required at such sites.	Not necessary. The Proposed Plan DEIR has a similar mitigation measure (MM HM1) that requires full database research for projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial or, previously had a gas station or dry-cleaning facility on-site. This initial database search could result in the need to complete a Phase I and Phase II Assessment. As noted in the regulatory framework, SCAQMD's Rule 1166 requires that SCAQMD review and approve a mitigation program prior to any excavation of a underground storage tank. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste and Section 4.6 (Geology and Soils) for less than significant impacts related to geology and soils.

Adelante Eastside Redevelopment Project Final Program EIR Mitigation Measures

Impact Area		Mitigation Measure	Reason for Deleting Mitigation Measures	Impact of Removing Mitigation Measure
		HM-6 The applicant shall provide the Fire Department with a summary of all local, county, state and federal required remediation activities relating to the removal of contaminated soil and/or underground tanks, if any, and submit evidence of compliance prior to the beginning of construction.	Not necessary. This is already part of the regulatory framework under the Los Angeles Fire Code.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste and Section 4.6 (Geology and Soils) for less than significant impacts related to geology and soils.
		HM-7 Periodic monitoring of development sites, as appropriate, shall be conducted during demolition and excavation. Proper steps shall be taken to assure against improper runoff or air releases.	Not necessary. This is already part of the regulatory framework under the Los Angeles Fire Code. The LAFD monitors the storage of hazardous materials for compliance with local requirements. Specifically, businesses and facilities that store more than threshold quantities of hazardous materials as defined by the California Health and Safety Code are required to file an Accidental Risk Prevention Program with the LAFD.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste and Section 4.2 (Air Quality) for less than significant impacts with mitigation related to air quality.
		HM-8 If excavation of contaminated soils is required at an individual site, the proper sponsor shall prepare an Excavation Management Plan or mitigation plan and submit it for approval to the SCAQMD Executive Officer, and obtain an SCAQMD Rule I 150/l 166 permit, depending on the contamination, and implement any specified air quality monitoring requirements.	Not necessary. This is already part of the regulatory framework under SCAQMD's Rule 1166, which requires that an approved mitigation plan be obtained from SCAQMD prior to commencing excavation of a underground storage tank; excavation of piping which has stored VOCs; excavation or grading of soil containing VOC material including gasoline, diesel, crude oil, lubricant, waste oil, adhesive, paint, stain, solvent, resin, monomer, and/or any other material containing VOCs; the handling or storage of VOC-contaminated soil at or from an excavation or grading site; or the treatment of VOC-contaminated soil at a facility.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste and Section 4.6 (Geology and Soils) for less than significant impacts related to geology and soils and Section 4.2 (Air Quality) for less than significant impacts with mitigation related to air quality.
		HM-9 If abandoned or plugged oil or gas wells are located on any sites proposed for modification, the Division of Oil, Gas and Geothermal Resources must be contacted to provide a review of the site. If any such wells have not been abandoned or plugged to current standards of the Division, reabandonment may be required. Procedures for this process are available from the Division.	Not necessary. On January 1, 2020 the Division of Oil, Gas and Geothermal Resources (DOGGR) was renamed to the Geologic Energy Management Division (CalGEM). Existing law requires that a property owner of a site that contains abandoned or plugged oil or gas wells obtain approval from the State Oil and Gas Supervisor or district deputy of CalGEM before making any modifications.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste, and oil or gas wells.
		HM-10 Use of transportation rights-of-way or vacant properties suspected to have been parts of such rights-of-way may require pesticide and herbicide characterization studies. Similarly, agricultural lands (if any) may require such studies.	Not necessary and Infeasible. The CPA does not include agricultural lands. The DEIR includes a mitigation measure that requires full database research for discretionary projects that involve construction-related soil disturbance located on land that is currently or was historically zoned as industrial. This initial database search could result in the need to complete a Phase I and Phase II Assessment. As a policy matter, the City finds adopting additional processes, review and requirements to address hazardous materials, including a pesticide characterization study for previous transportation rights-of-way, for the approval of development projects or construction is unnecessary and undesirable and would not result in good public policy or desirable land use outcomes.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-11 Prior to property acquisition, owners should provide disclosure statements regarding site history; improvements; and storage, handling and disposal of hazardous materials.	Not necessary. California Civil Code (Section 1102) requires the sale of real property of 1 to 4 dwelling units disclose the history of hazardous material use on site. California Health and Safety Code 25359.7 requires that an owner of a nonresidential real property disclose the history of hazardous materials use on the site prior to the sale, lease, or rental of the property. Failure to do so will subject the owner to actual damages and any other redress provided by law, and the owner may be liable for a civil penalty.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-12 If unknown contamination is encountered at any site, regardless of its prior status, all work at the site should be stopped until the nature, associated hazards and possible extent of the contamination and its impacts are understood and work can proceed safely. Remedial plans will be required at such sites.	Not necessary. This is already part of the regulatory framework under the Fire Code. The LAFD is designated as the enforcement agency for the City that regulates hazardous material and can refer the case to the appropriate County, State or Federal agency, including SCAQMD and DTSC. When unanticipated contamination is detected on a property, required action may include the work stoppage, temporary site closure, and notification to appropriate agencies. Significant contaminated sites will likely require a Phase I and Phase II Site Assessment.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
		HM-13 For individual development projects, the project sponsor shall develop a source control program for facilities handling hazardous materials designed to prevent or minimize release of hazardous materials into the environment. This program shall include engineering modifications, inspection, operation and maintenance programs, as appropriate.	Not necessary. This is already part of the regulatory framework under the Fire Code. The LAFD monitors the storage of hazardous materials in the City for compliance with local requirements. Specifically, businesses and facilities that store more than threshold quantities of hazardous materials as defined in California Health and Safety Code Chapter 6.95 are required to file an Accidental Risk Prevention Program with LAFD. This program includes information such as emergency contacts, phone numbers, facility information, chemical inventory, and hazardous materials handling and storage locations.	See the DEIR, Chapter 4, generally, for all impacts caused by the reasonably anticipated development under the Proposed Plan, and specifically, see Section 4.8 (Hazards & Hazardous Materials) - less than significant impacts with mitigation related to hazardous waste.
