VCP:
Facility ID: 60000524
Site Type: Voluntary Cleanup
Site Type Detail: Voluntary Cleanup
Site Mgmt. Req.: NONE SPECIFIED
Acres: 0.3
National Priorities List: NO
Cleanup Oversight Agencies: SMBRP
Lead Agency: SMBRP
Lead Agency Description: DTSC - Site Cleanup Program
Project Manager: Jess Villamayor
Supervisor: Philip Chandler
Division Branch: Cleanup Chatsworth
Site Code: 301288
Assembly: 50
Senate: 26
Special Programs Code: CLRRA Liability Immunity (AB 389)
Status: Certified O&M - Land Use Restrictions Only
Status Date: 02/15/2011
Restricted Use: YES
Funding: Responsible Party
Lat/Long: 34.08508 / -118.3334
APN: 5533037001
Past Use: METAL PLATING - CHROME, METAL PLATING - OTHER, METAL PLATING - CHROME, METAL PLATING - OTHER
Potential COC: 30027, 30108, 30153, 40001, 30005, 30013, 30022, 30027, 30028, 30067, 30108, 30136, 30154, 30156, 30407, 30587, 30594
Confirmed COC: 30022,30027,30067,30108,30136,30154,30156,30407,30005,30013,30587, 30594,, ,30108,30153,30027
Potential Description: CSS, IA, SOIL, SV, CSS, IA, OTH, SOIL, SV
Alias Name: 5533037001
Alias Type: APN
Alias Name: 110033613187
Alias Type: EPA (FRS #)
Alias Name: 301288
Alias Type: Project Code (Site Code)
Alias Name: 60000524
Alias Type: Envirostor ID Number

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1
Completed Date: 03/12/2007
Comments: Mailed out comments with cover letter on SCR to RP.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Community Profile
Completed Date: 07/27/2007
Comments: Community Profile is completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

VEILING PLATING (Continued) **S108407637**

Completed Document Type: Preliminary Endangerment Assessment Workplan
Completed Date: 07/13/2007
Comments: Workplan acceptable, fieldwork to begin 7/18/2007.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 07/19/2007
Comments: Soil gas and metals sampling completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 11/29/2007
Comments: Final report submitted, further characterization required.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 09/10/2008
Comments: Approved with comments.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/12/2008
Comments: Two groundwater wells installed and sampled, and a two port soil vapor probe.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Supplemental Site Investigation Report
Completed Date: 10/14/2009
Comments: Extent is not fully defined, but risk evaluation and removal action workplan can be started.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: AB 389 Response Plan
Completed Date: 06/03/2010
Comments: Response Plan approved.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 02/26/2010
Comments: TCE Model accepted.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 12/15/2009
Comments: DTSC modeled residual Chromium VI and has determined a cleanup number of 120 ppm Total Chromium in soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

VEILING PLATING (Continued) **S108407637**

Completed Document Type: Fieldwork
Completed Date: 06/19/2010
Comments: Field activities completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/28/2010
Comments: Not reported

Completed Area Name: PROJECT WIDE

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/13/2018

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/13/2018

Next Scheduled EDR Contact: 10/15/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/13/2018

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/22/2018

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

UTM Y (Meters):	3773792.0
Elevation:	367 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

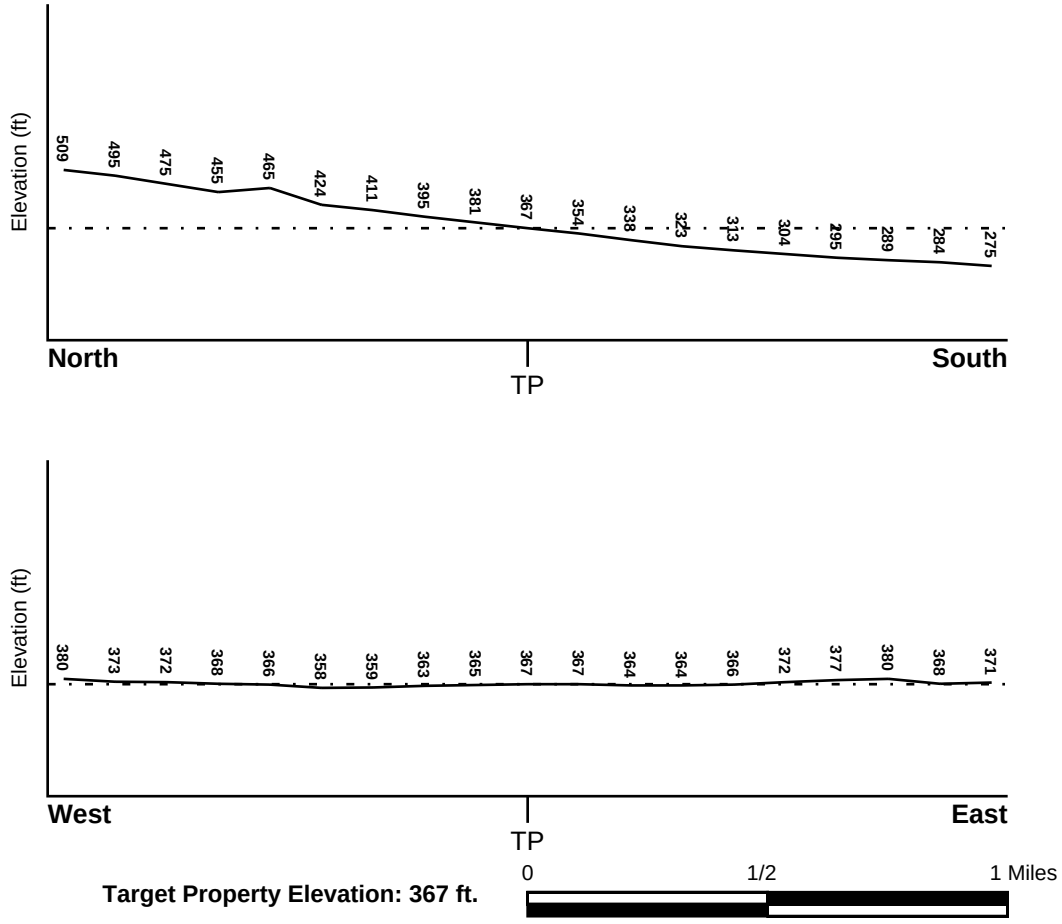
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1605F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile SSW	SW
1G	1/2 - 1 Mile SSW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☒ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason _____

Date 11/7/85 Owner's Signature [signature]

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Insurance Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

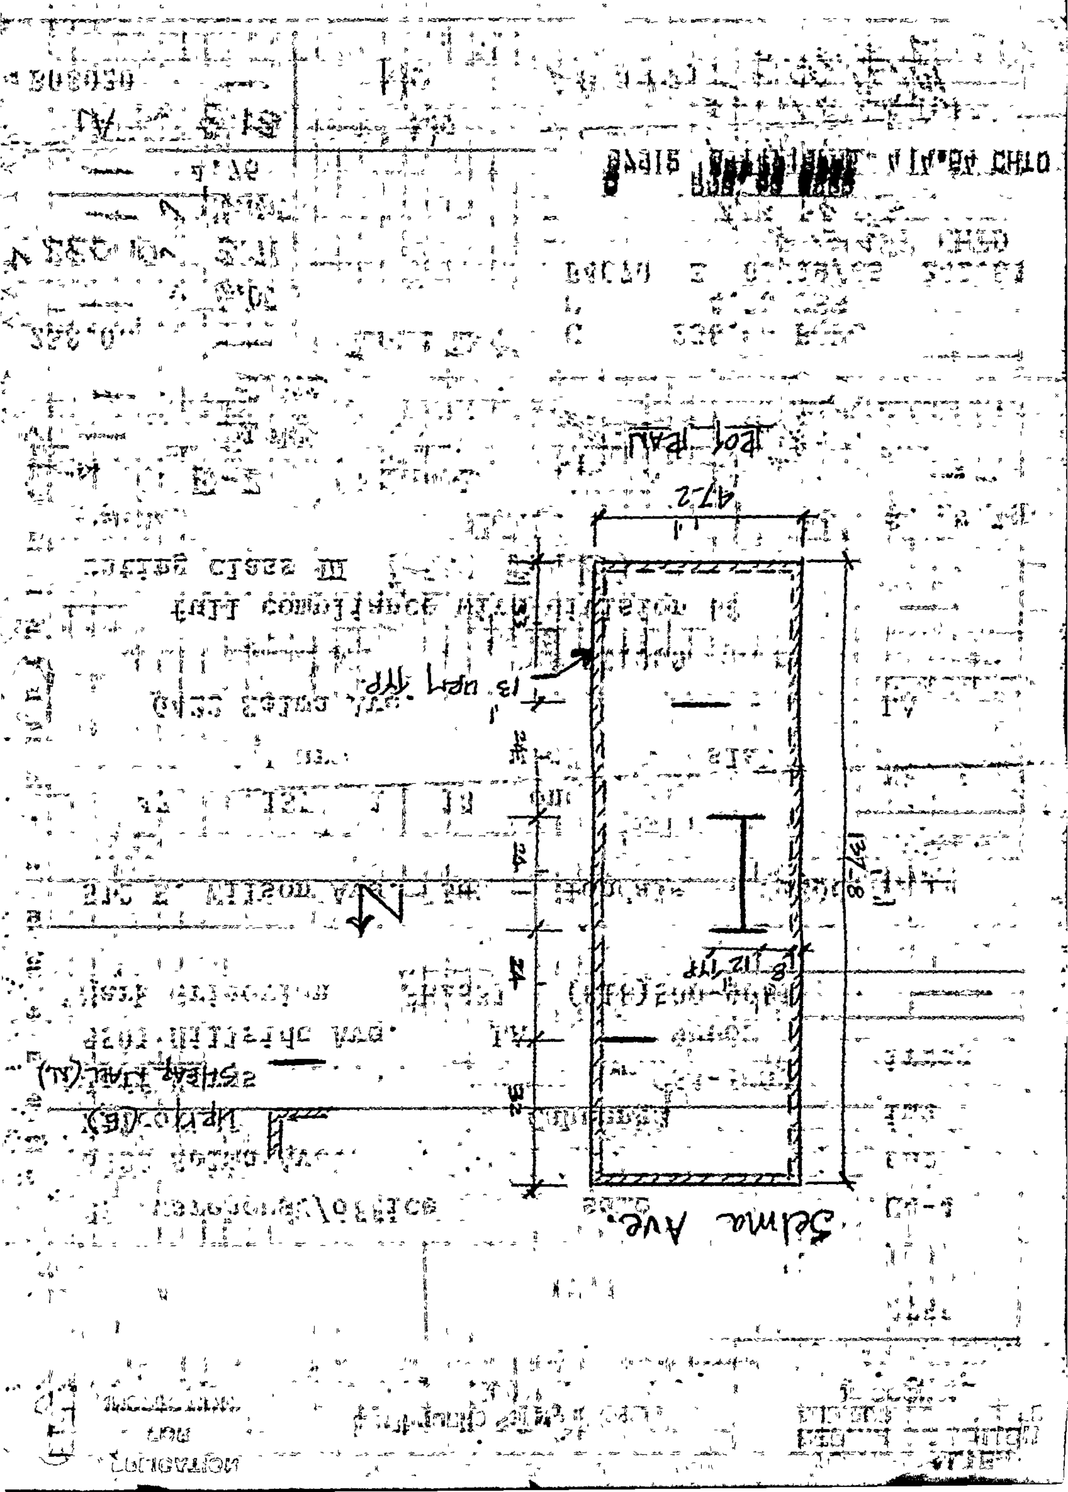
19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date _____ Applicant's Signature [signature]

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).



Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Subject: Re: file request

Good Morning,

Please be certain that the databases were used during this search. If the address could not be located utilizing our databases, we then would have no records for that property. No records were found for this address.

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: ***(6422 SELMA AVE LOS ANGELES 90028)***

This search revealed that no records were found for the above noted address(es).

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destoyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at *310-348-1781.*

Experience

Carol Noland is a Project Manager in the Environmental Advisory Service of Valuation & Advisory Services. She has over 27 years of experience as an Environmental Professional performing Phase I Environmental Site Assessments throughout the United States, with primary experience in California and other western States. She has conducted over 3,000 Phase I ESAs on various types of properties, including large-scale industrial and manufacturing sites, as well as commercial, residential, and agricultural properties. She is also experienced in conducting radon sampling, asbestos surveys, lead-based paint testing, and lead-in-water testing.

Ms. Noland's skill and experience in the research, evaluation, and summarizing of various historical **land use sources and regulatory records provide her with the ability to identify and provide practical responses to open environmental issues on due diligence studies.**

Professional Affiliations/Accreditations

- **EPA Certified Asbestos Building Inspector**
- **NRSB Radon Measurement Specialist, # 9SS0048**

Education

- **University of Dayton**
  - **Bachelor of Arts, History**
- **Arizona State University**
  - **Master of Arts, History**

Experience

Mr. Pritchard is an Environmental Professional (EP) with more than 20 years of experience as an environmental consultant. Mr. Pritchard is a Director (Environmental Site Assessment Division) in CBRE's - Assessment & Consulting Services - West Coast Region; more specifically, southern California. He has in depth knowledge of regulatory guidelines and compliance requirements with the USEPA, ASTM and numerous local government agencies throughout the country. He has reviewed/managed over 3,000 Phase I Environmental Site Assessments (ESAs), and performed over 1,000 Phase I ESAs on various types of real estate to include commercial office and retail, multi-family residential, and industrial and light industrial developments. He has also performed Phase I ESAs throughout the continental U.S., Hawaii and Baja Mexico. In addition, he conducts third party reviews, government agency file reviews and asbestos and lead-based paint surveys as well as designs Operations and Maintenance (O&M) programs for same.

Mr. Pritchard's approach focuses on maximizing research and technical resources for early resolution of potential environmental issues before moving into the next phase. He has been responsible for the rapid development of practical alternatives to address open environmental issues on due diligence studies. His environmental skills and training enable him to provide timely recommendations tailored to the specific needs of real estate transactions. He is experienced in dealings with regulatory agencies and multi-party transactions. He has also managed day-to-day office operations and provided quality control along with staff training and mentoring.

In 2016 (winter), Scott was awarded CBRE's Ambassador Award. The award is presented to only a handful of the hundreds of nominees that embody CBRE's RISE values and who demonstrate leadership, show initiative, possess determination and provide superior service.

Re: Phase I Environmental Site Assessment
1550 North Wilcox Avenue
Los Angeles, California 90028
IVI Project No.: PC40812281

Dear Mr. Suri:

IVI Assessment Services, Inc. ("IVI") is pleased to submit this copy of our Phase I Environmental Site Assessment on the above-referenced property. This report outlines the findings of IVI's site reconnaissance, historical land use research, review of governmental records, interviews, and our Pre-Survey Questionnaire.

I declare that, to the best of my professional knowledge and belief, I meet the definition of *environmental professional* as defined in § 312.10 of 40 CFR 312 and I have the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the *subject property*. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please contact the undersigned at **(914) 694-9600 Extension 1933** or by email at Michael.Kennedy@ivi-intl.com should you have any questions.

Sincerely,

IVI Assessment Services, Inc.

Michael Kennedy
Environmental Professional

This report documents IVI's findings from our Phase I Environmental Site Assessment on 1550 North Wilcox Avenue, Los Angeles, California (the "Subject"). The property, which is situated in an urban area characterized by residential, retail and institutional land uses, consists of an approximately 0.53-acre parcel improved with two 89-year-old (built in 1925 but currently being gut renovated) buildings including a three-story 25,770 SF hotel building and a single story 9,945 SF detached garage building. Prior to the construction of the existing improvements, the property was occupied by two residential buildings from at least 1907 until 1913 when there were three residential buildings located onsite; four dwellings were located onsite by 1919. The Subject is currently being converted to an extended living facility.

The purpose of this Phase I Environmental Site Assessment was to assess existing site conditions and render an opinion as to the identified or potential presence of recognized environmental conditions in connection with the property within the scope and limitations of ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13 and the limitations identified herein. Exceptions to or deletions from the scope of work are described in Section 2.0.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Subject; however the following item of environmental concern was identified which warrants mention:

Former Onsite Cleaners

Based on historical City Directory information, 1546 North Wilcox Avenue (an alternate site address) was listed as occupied by North Wilcox Avenue Malley Tailors & Cleaners in 1951 and occupied by Elegant Cleaners & Tailors in 1967. IVI conducted historical building permit research at the Los Angeles Department of Building and Safety concerning the former onsite dry cleaner in an effort to determine if dry cleaning was performed on-site or if this was a drop-off only establishment; however, the available historical permits reviewed contained no information regarding this former business. Accordingly, it is unknown whether or not dry cleaning was historically conducted on-site. Furthermore, it should be noted that, according to Mr. Paul Baynton, the onsite general contractor associated with the current renovations, soil from the former onsite cleaners' tenant location was excavated to a depth of 18 inches and removed from the property during grading/renovation activities. Mr. Baynton stated that no stained soils or odors were encountered during excavation. Notwithstanding the foregoing, despite all reasonable research efforts it cannot be determined definitively if dry cleaning was conducted on the site and IVI considers this to be a data gap.

2.1 General

IVI was retained by Menlo Partners/Hawkins Way Capital, LLC ("Client" or "User") to prepare a Phase I Environmental Site Assessment, in conformance with ASTM International's Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process E 1527-13 on the Subject in accordance with our Agreement dated August 27, 2014.

2.2 Purpose and Scope

2.2.1 Purpose

The purpose of this report is to identify Recognized Environmental Conditions in connection with the property, using the methodology recommended by ASTM International in order for a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser defenses to CERCLA liability and/or to help understand potential environmental conditions that could materially impact the operation of the business associated with the Subject. Specifically, this methodology is referred to as *Standard Practice for Environmental Site Assessments: Phase l Environmental Site Assessment Process* Designation: E 1527-13.

The term Recognized Environmental Conditions is defined by ASTM Standard E 1527-13 as "...the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

2.2.2 Scope

In general, the scope of this assessment consisted of reviewing readily available information and environmental data relating to the property; interviewing readily available persons knowledgeable about the site; reviewing readily available maps, aerial photographs and records maintained by federal, state, and local regulatory agencies; and conducting a site visit.

Of importance, the client is advised that federal, state, and local laws may impose environmental assessment obligations beyond the scope of this practice. Client is also notified that there are likely to be other legal obligations with regard to hazardous substances or petroleum products discovered on the Subject that are not addressed in this practice and that may pose risks of civil and/or criminal sanctions for non-compliance.

The specific scope of this assignment included the following:

2.2.2.1 Performing a site reconnaissance to characterize on-site conditions and assess the site's location with respect to surrounding property uses and natural surface features. In addition, IVI conducted a reconnaissance of the surrounding roads and readily accessible adjacent properties to identify obvious potential environmental conditions on neighboring properties. Photographs taken as part of the site reconnaissance are provided in Appendix A.

The site visit was conducted on September 3, 2014, by Mr. Jeff Randle representing IVI. The site was represented by Mr. Mike Foley, Director of Construction Management with Hawkins Way Capital. It was sunny and the temperature was approximately 80° F at the time of our site survey. IVI conducted the site reconnaissance in a systematic manner focusing initially on the exterior, which was surveyed in a grid pattern. IVI also surveyed a representative sampling of the interior spaces in a systematic manner.

2.2.2.2 Interviewing persons familiar with the property to obtain information on present and previous on-site activities potentially resulting in the environmental degradation of the site or adjoining properties. A Pre-Survey Questionnaire to be filled out and returned to IVI was provided to someone knowledgeable about the site. A blank copy of the Pre-Survey Questionnaire is provided in Appendix B.

The following table presents a summary of the individuals contacted or to whom requests for documentation were made as part of this assessment:

Name	Affiliation	Telephone No.
Mr. Mike Foley	Site Contact, Director of Construction Management with Hawkins Way Capital	(208) 720-1009
Ms. Denise Mascoro	Los Angeles County Department of Public Works - Environmental Programs Division	(626) 458-3517
Public Information Representative	Los Angeles Department of Water and Power (LADWP)	(800) 342-5397
Public Information Representative	Los Angeles Department of Building and Safety	(213) 482-6899
Katie Rosas	Los Angeles Fire Department	(213) 482-7115

2.2.2.3 If provided, reviewing of information such as previously prepared appraisals, building plans and specifications, and environmental reports.

2.2.2.4 Reviewing readily available historical documents, such as topographic maps, aerial photographs, city directories, Sanborn Fire Insurance Maps and atlases, to identify previous activities on and in the vicinity of the Subject. Copies of these documents are included in Appendix C.

2.2.2.5 Reviewing readily available environmental databases maintained by federal, state, and local agencies within the approximate minimum search distances as described within the Regulatory Review Section 6.0 of this report. A copy of the Computerized Environmental Report, provided by Environmental Data Resources, Inc. can be referenced in Appendix D.

2.2.2.6 Conducting a "Tier I" (non-intrusive) Vapor Encroachment Screening (VES) on the Subject in accordance with the methodology set forth in ASTM E 2600-10 "*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*". During the VES, the Area of Concern (AOC) was minimized using the methodology taught in the ASTM Screening for Vapor Encroachment onto Property Involved in Real Estate Transactions Training Course.

2.2.2.7 Conducting a visual survey of readily accessible common areas to identify the presence of the most obvious and common types of suspect asbestos containing materials (ACM). The basis for "suspect" determination is taken from the materials listed in Appendix G of the United States Environmental Protection Agency (USEPA) publication Managing Asbestos in Place (also known as the Green Book). All building materials listed within Appendix G of the Green Book are considered to be suspect ACMs at the Subject. This screening is not intended to be used for demolition, abatement, renovation, or repair work.

THIS LIMITED SURVEY IS NOT TO BE CONSTRUED AS A COMPREHENSIVE ASBESTOS SURVEY, WHICH OFTEN ENTAILS DESTRUCTIVE TESTING OR THE SURVEY OF AREAS BEHIND WALLS, ABOVE CEILINGS, IN TENANT SPACES AND IN OTHER TYPICALLY INACCESSIBLE AREAS. MOREOVER, IVI DOES NOT WARRANT THAT ALL ACMs AT THE SUBJECT HAVE BEEN IDENTIFIED.

2.2.2.8 Reviewing published radon occurrence maps to determine whether the site is located in an area with a propensity for elevated radon concentrations.

2.2.2.9 An analysis of mold and/or mold issues was beyond the scope of this report.

2.2.2.10 Assessing the age of the Subject to determine whether it is predisposed to contain lead-based paint. During our walkthrough survey, IVI noted the condition of the paint observed. Note, a compliance audit for lead paint was not conducted. NOTWITHSTANDING, THIS SCAN FOR LEAD-BASED PAINT SHOULD NOT BE CONSTRUED AS AN IN-DEPTH LEAD-BASED PAINT SURVEY.

2.2.2.11 Testing, if any, was designed solely to meet the requirements of the client's scope of work, not to meet any local, State or Federal regulations and shall not be utilized as such.

2.3 Data Gaps

According to § 3.2.21 of ASTM Standard E 1527-13, a data gap is a lack of or inability to obtain information required by the ASTM Standard despite good faith efforts to gather same. Data gaps may result from incompleteness in any of the activities required by the ASTM Standard. The following data gaps occurred in connection with this report:

Data Gap	Explanation	Significance of Gap
Site History	History not conducted back to a time when the site was undeveloped land (See § 5)	Low - not likely to alter Report's conclusions due to IVI's search of standard historical sources of information such as aerial photographs, historic topographic maps, city directory abstracts, Sanborn Fire Insurance Maps, reviews of previous investigations and interviews with knowledgeable individuals who were familiar with the property.
Site History	Site history not conducted in 5-year intervals (See § 5)	Low - not likely to alter Report's conclusions due to IVI's search of standard historical sources of information such as aerial photographs, historic topographic maps, city directory abstracts, Sanborn Fire Insurance Maps, reviews of previous investigations and interviews with knowledgeable individuals who were familiar with the property.

Data Gap	Explanation	Significance of Gap
User Interview	AAI User Questionnaire not returned to IVI	Low - not likely to alter Report's conclusions
Current Owner or Operator Interview	Pre-survey Questionnaire not returned to IVI	Low - not likely to alter Report's conclusions
Former Owner or Operator Interview	Unable to interview former site owner or operator due to inability to locate	Low - not likely to alter Report's conclusions
Governmental Records	FOIAs not returned (See § 8.6)	Unknown - However, if receipt of FOIAs alters the Report's conclusion, the client will be notified
Former Cleaner	A dry cleaner was identified during our historical review although it could not be determined if the operation was on-site or if it was a drop-off only	Medium - Despite all reasonable research efforts it cannot be determined definitively if dry cleaning was conducted on the site and IVI considers this to be a data gap

Salient Assignment Information	
IVI Project No.:	PC40812281
Street Address:	1550 North Wilcox Avenue
City, State and Zip:	Los Angeles, California 90028
Primary Use:	Hotel/Extended Living and Garage
Year Built and Age of Improvements:	1925; 89 years-old; currently being gut renovated
Site Area:	0.53 Acres
Building Size:	25,770 SFG - Hotel Building (As per Assessor) 9,945 SFG - Garage Building (As per Assessor)
Reported Number of Units:	2; Hotel and Garage
Number of Buildings:	Two

4.1 Property Location

The site is located at 1550 North Wilcox in Los Angeles, Los Angeles County, California and is identified on local tax maps as Parcel No. 5546-013-002. The full address range is 1546-1554 North Wilcox. Please refer to the Site Plan and maps provided within Appendix C.

4.2 Surrounding Land Use

The property is located in a suburban setting characterized by residential, retail and institutional land uses. The following is a tabulation of surrounding property usage:

Direction	Adjacent Properties	Surrounding Properties
North	6430 Selma Avenue - Hollywood Walk-In Clinic and associated asphalt-paved parking lot	Commercial/Retail buildings
South	1520 North Wilcox Avenue – Hornburg Land Rover car dealership/service center	Commercial/Retail buildings
East	6422 Selma Avenue - Concept Art art studio 1541 Cahuenga Boulevard - Silverman Productions television/movie studio	Commercial/Retail buildings
West	6500-6526 Selma Avenue – Vacant building 1545 North Wilcox Avenue – Office building 1541 Hollywood Sound Systems studio building	Residential, Commercial/Retail

4.3 Physical Site Setting

4.3.1 Size and Shape of Parcel

The property is irregular in shape and 0.53-acres in size.

4.3.2 Topography

The site is essentially level and at the same approximate topographic gradient as the surrounding properties. The topography of the area is best described as flat. According to the United States Geological Survey (USGS) *Hollywood, CA* 7.5 Minute Series topographic map, the Subject's topographic elevation is approximately 368' above mean sea level (msl).

4.3.3 Surface Waters and Wetlands

Surface Waters

There are no surface water bodies or streams on or adjacent to the Subject. The closest open surface water to the Subject is the Hollywood Reservoir, which is located approximately 1.25 miles to the north.

Wetlands

IVI reviewed a wetlands map of the subject area prepared using the US Department of the Interior, Fish and Wildlife Service's Internet Wetland Interactive Mapper. The source material used to produce the National Wetlands Inventory digital data for these maps was prepared primarily by stereoscopic analysis of high altitude aerial photographs. Based on this review, IVI did not identify any federally regulated wetlands on the subject property. Additionally, IVI did not observe vegetation characteristic of wetlands on the subject site.

4.3.4 Soils, Geology and Groundwater

Soils

According to the EDR report, which uses information issued by the United States Department of Agriculture, Soil Conservation Service, the soils of the area are referred to as Urban Land complex and Hanford Association. Urban Land complex are those soils in which the soil's original structure and content have been so altered by human activities it has lost its original characteristics and is thus unidentifiable. Hanford soils consist of well drained soils on flood plains and alluvial fans.

Geology

There are no predominant geological surface features such as rock outcroppings on the Subject. The subject property is located within the Hollywood Syncline which is a down warped area between the Santa Monica Mountains to the north and the La Brea Plain to the south. The syncline plunges to the southwest where it may be displaced by the Inglewood Fault. Northeast of Western Avenue the flexure becomes ill-defined and is apparently broken up by unfaulted blocks of the Tertiary bedrock. According to the State of California, Los Angeles Sheet (1962), the site is underlain by Quaternary Alluvium consisting of weakly consolidated clay, silt, sand, and gravel.

Groundwater

Under natural, undisturbed conditions, shallow groundwater flow generally follows the topography of the land surface and on this basis, the topography suggests that groundwater flow across the site is in a southerly direction. However, localized conditions can alter flow direction and thus the presumed flow may not coincide with the actual in the subject area. Shallow groundwater in the vicinity of the site is anticipated to be encountered at a depth of over 20' below ground surface.

4.4 Site Improvements

4.4.1 Utilities

The Subject is served with the following utilities:

Water:	Los Angeles Department of Water & Power
Sanitary Sewer:	City of Los Angeles Public Works Department
Storm Sewer:	City of Los Angeles Public Works Department
Electric:	Los Angeles Department of Water & Power
Natural Gas:	The Gas Company

According to the most recent water quality report published by the Los Angeles Department of Water and Power, the water supplied to the Subject meets federal and state water quality standards.

Sheet runoff flows topographically and discharges to the municipal stormwater management system.

4.4.2 Building Description

The Subject is improved with an 89-year-old, three-story hotel building, which is currently undergoing major renovations to convert the building to an extended living facility. The Subject is also improved with an 89-year-old, one-story garage building, which is currently undergoing major renovations to upgrade the building. The buildings are concrete slab-on-grade construction. The superstructures consist of a combination of CMU and wood and light-gauge metal framing with intermittent steel columns supporting roof structures consisting of wood joist. The sidewall system consists of a combination of painted CMU and stucco. The roofing systems consist of asphalt roofing in a flat design.

Interior finishes include floor coverings of ceramic floor tile, carpet, and concrete floors; walls of painted gypsumboard and painted concrete block and ceilings typically consist of painted gypsumboard.

Heating and cooling is provided via RTUs. The hotel building is provided with one new traction elevator installed in 2014.

4.5 Current Property Use

The Subject is developed with a hotel and garage. The following table summarizes the site's tenants and their activities:

Tenant	Description of Operation
Hotel Building	Undergoing major renovation
Garage Building	Undergoing major renovation

Based on the operations currently conducted at the Subject, significant quantities of hazardous waste are not generated. The current on-site activities are not suspected to have degraded the environmental quality of the subject site.

4.6 Environmental Permits

Based on our research, no environmental permits such as wastewater discharge, National Pollutant Discharge Elimination System (NPDES), air emissions, or petroleum bulk storage (PBS) tank registrations are required at the Subject.

4.7 Plans and Specifications

Neither building drawings nor specifications were provided for our review.

5.1 Historical Summary

Based on historical Sanborn Fire Insurance Map review, the property was occupied by two residential buildings from at least 1907 until 1913 when there were three residential buildings located onsite; four dwellings were located onsite by 1919.

The property was developed to a hotel building and associated garage building that were completed by 1925. Currently, the property is undergoing major renovations including gutting the garage building and changing the hotel building into an extended living facility. Prior onsite land uses for the current buildings include hotel operations, a parking garage, various residential tenants, various beauty shops, a church, a sign manufacturer, two tailor and cleaner businesses, a computer shop, Polytronics Company Electronic Servicing, and a doctor's office

The current renovations are to be completed by the end of September 2014 with an opening date of October 2014.

5.2 Topographic Maps

IVI reviewed historic USGS *Hollywood, CA* 7.5 Minute Series topographic maps of the Subject area provided by EDR. The following maps were provided for our review:

Year Revised	Subject Property	Surrounding Properties
1926	Two small structures were depicted in the northwestern corner of the Subject; the hotel building is depicted in its present location; no garage building is depicted	Small structures are depicted to the north, west, northwest, and south; a large structure is depicted to the northeast; structures are depicted adjacent to Cahuenga Boulevard to the east; Wilcox and Selma Avenues are depicted in their present locations
1953	The Subject is depicted as developed with no specific structures depicted	Wilcox and Selma Avenues are depicted in their present locations; areas to the north, east, south, and west are depicted as developed; a post office building is depicted on the northwest corner of Wilcox and Selma Avenues
1966	Similar to the previous topographic map reviewed	Similar to the previous topographic map reviewed
1972	Similar to the previous topographic map reviewed	Similar to the previous topographic map reviewed
1981	Similar to the previous topographic map reviewed	Similar to the previous topographic map reviewed
1994	Similar to the previous topographic map reviewed	Similar to the previous topographic map reviewed

The topographic maps do not identify industrial facilities, landfills or wetlands on or adjacent to the subject site.

5.3 Historical Maps

Sanborn Fire Insurance Maps (Sanborn Maps)

IVI had a search conducted for Sanborn Maps, which reference the property. The findings of this review are summarized below:

Year	Subject Property	Adjacent and Surrounding Properties
1907	Two dwellings in the southern portion of the Subject and a small unidentified structure in the northern portion (no addresses listed)	North: Vacant land and two small structures followed by Selma Avenue East: Japanese lodging South: Dwellings West: Wilcox Avenue followed by dwellings
1913	Three dwellings (1540, 1542 &1544 Wilcox Avenue)	North: Similar to the previous map reviewed East: Vacant garage South: Similar to the previous map reviewed West: Similar to the previous map reviewed
1919	Four dwellings and a garage (1540-1544 1/2 Wilcox Avenue)	North: Similar to the previous map reviewed East: Hollywood Buick Service and Japanese lodgings South: Similar to the previous map reviewed West: Similar to the previous map reviewed
1950	Hotel, three stores, and a restaurant occupy the building on the western portion of the subject property. A garage occupies the eastern portion of the subject property (1554-1552½ Wilcox Avenue)	North: Stores and auto service East: Machine shop, lodging, and a furniture warehouse South: Dwellings West: Wilcox Avenue followed by a commercial printing structure, the Hollywood Citizen News Building (printing and editorial and composing rooms), the Wilcox Hotel which contains stores, a drug store, and lobby)
1955	No significant changes (1546-1552½ Wilcox Avenue)	North: Stores and auto service East: Similar to the previous map reviewed South: Similar to the previous map reviewed West: Similar to the previous map reviewed
1960	Similar to the previous map reviewed	Similar to the previous map reviewed

Year	Subject Property	Adjacent and Surrounding Properties
1966	Similar to the previous map reviewed	North: Similar to the previous map reviewed East: Furniture warehouse and parking lot South: Similar to the previous map reviewed West: Similar to the previous map reviewed
1970	Similar to the previous map reviewed	Similar to the previous map reviewed

5.4 Aerial Photographs

Aerial photographs frequently provide visual documentation of site conditions at the time of the photographs. Activities such as dumping or industrial use of a site can often be discerned through the examination of aerial photographs. IVI reviewed historic aerial photographs provided by EDR. The following is a synopsis of the aerial photographs reviewed:

Year	Subject Property	Adjacent and Surrounding Properties
1928	Present day hotel and garage buildings are depicted	Commercial and /or residential structures to the north, east, south, and west; Wilcox Avenue is located west of the property.
1938	Similar to present day land uses	Similar to the previous aerial photograph reviewed
1948	Similar to present day land uses	Similar to the previous aerial photograph reviewed
1954	Similar to present day land uses	Similar to the previous aerial photograph reviewed with different commercial structures to the East
1964	Similar to present day land uses	Similar to the previous aerial photograph reviewed
1977	Similar to present day land uses	Similar to the previous aerial photograph reviewed with the addition of a parking lot to the East
1981	Similar to present day land uses	Similar to the previous aerial photograph reviewed with a new commercial structure to the East
1989	Similar to present day land uses	Similar to the previous aerial photograph reviewed
1994	Similar to present day land uses	Similar to present day land uses
2005	Similar to present day land uses	Similar to present day land uses
2010	Similar to present day land uses	Similar to present day land uses
2012	Similar to present day land uses	Similar to present day land uses

5.5 Chain-of-Ownership

A copy of the Subject's Chain-of-Title has not been provided to IVI for review.

5.6 Previous Reports

IVI reviewed a previous environmental assessment prepared on the adjacent property to the east. The information obtained was not verified for accuracy by IVI and a critique of the report was beyond the scope of this assessment. The following documents were provided for review:

- *Phase I Environmental Site Assessment* for "The Gilbert Hotel, 1544-1554 Wilcox Avenue, Los Angeles, Los Angeles County, California, 90028" and dated April 12, 2012, prepared by AEI Consultants (AEI), on behalf of Hawkins Way Capital, LLC. According to the AEI Phase I:

  "AEI's assessment has revealed the following RECs associated with the subject property or nearby properties: Based on a review of historical records, North Wilcox Avenue Malley Tailors & Cleaners and Elegant Cleaners & Tailors occupied the 1546 Wilcox Avenue subject property unit in 1951 and 1967, respectively. No other information was found regarding these businesses other than the city directory search, and as a result, it is not known whether these potential dry cleaners were pickup and drop-off locations, or if dry cleaning was actually performed onsite. Dry cleaning operations typically use chlorinated solvents, particularly tetrachloroethylene (PCE), during the dry cleaning process. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with onsite operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and migrate to groundwater beneath a facility. Based on this information, the presence of a potential dry cleaning facility on the subject property represents evidence of a recognized environmental condition."

  "AEI's assessment has revealed the following BERs associated with the subject property or nearby properties: Due to the age of the subject property buildings, there is a potential that asbestos-containing materials (ACMs) are present. All observed suspect ACMs were in good condition and are not expected to pose a health and safety concern to the occupants of the subject property at this time. In the event that building renovation or demolition activities are planned, an asbestos survey adhering to Asbestos Hazard Emergency Response Act (AHERA) sampling protocol should be performed prior to demolition or renovation activities that may disturb suspect ACMs."

  "Due to the age of the subject property buildings, there is a potential that lead-based paint (LBP) is present. All observed painted surfaces were in good condition and are not expected to pose a health and safety concern to the

occupants of the subject property at this time. Local regulations may apply to lead-based paint in association with building demolition/renovations and worker/occupant protection. Actual material samples would need to be collected or an XRF survey performed in order to determine if LBP is present. It should be noted that construction activities that disturb materials or paints containing any amount of lead may be subject to certain requirements of the Occupational Safety and Health Administration (OSHA) lead standard contained in 29 CFR 1910.1025 and 1926.62."

"AEI recommends a subsurface investigation to determine if the former occupancy of the 1546 Wilcox Avenue subject property unit by potential dry cleaning businesses has resulted in a release to the subsurface."

No historical recognized environmental conditions or de minimis environmental conditions were identified by AEI.

5.7 City Directories

Historical City Directories obtained from EDR were reviewed for the years 1924, 1929, 1933, 1937, 1942, 1950, 1951, 1954, 1956, 1958, 1960, 1962, 1964, 1965, 1966, 1967, 1970, 1971, 1975, 1976, 1980, 1981, 1985, 1986, 1990, 1991, 1995, 2000, 2006, 2008, and 2013. These directories provide site occupant listings by address. This review yielded the following information:

Year	Subject Property	Surrounding Properties
1924	1554 Wilcox Ervin Hawk	Numerous commercial and residential listings
1929	1550 North Wilcox Avenue Fredrick Arvin, Southwestern Load Association Mark Arth Physician Residential listings 1552 Wilcox Dorothy Deutsch Tailor 1554 Wilcox Dale Irene	Numerous commercial and residential listings

2008	1550 North Wilcox Avenue Black and White Beauty Salon	Numerous commercial and residential listings
2013	1550 North Wilcox Avenue Black and White Beauty Salon	Numerous commercial and residential listings

Based on historical City Directory information, 1546 North Wilcox Avenue (an alternate site address) was listed as occupied by North Wilcox Avenue Malley Tailors & Cleaners in 1951 and occupied by Elegant Cleaners & Tailors in 1967. IVI conducted historical building permit research at the Los Angeles Department of Building and Safety concerning the former onsite dry cleaner in an effort to determine if dry cleaning was performed on-site or if this was a drop-off only establishment; however, the available historical permits reviewed contained no information regarding this former business. Accordingly, it is unknown whether or not dry cleaning was historically conducted on-site. Furthermore, it should be noted that, according to Mr. Paul Baynton, the onsite general contractor associated with the current renovations, soil from the former onsite cleaners' tenant location was excavated to a depth of 18 inches and removed from the property during grading/renovation activities. Mr. Baynton stated that no stained soils or odors were encountered during excavation. Notwithstanding the foregoing, despite all reasonable research efforts it cannot be determined definitively if dry cleaning was conducted on the site and IVI considers this to be a data gap.

5.8 Interviews

Site contact Mr. Mike Foley, Director of Construction Management, Hawkins Way Capital, LLC, who has been involved with the property for the past two years, was unaware of any recognized environmental conditions associated with the Subject.

Mr. Paul Baynton, onsite general contractor associated with the current renovations, who has been involved with the property for the past two years, was unaware of any recognized environmental conditions associated with the Subject. According to Mr. Baynton, soil from the former onsite cleaners' tenant location was excavated to a depth of 18 inches and removed from the property during grading/renovation activities. Mr. Baynton stated that no stained soils or odors were encountered during excavation. Mr. Baynton also stated that lead paint abatement concerning door trim paint was performed at the Property and that asbestos containing material abatement concerning hotel building lobby floor tiles also took place onsite.

5.9 Municipal Records

Tax Assessor Records

According to the tax assessor records reviewed, the present Subject buildings were constructed by 1925 on a 0.53-acre parcel. The buildings are slab-on-grade structures which have all public utilities.

Building Department Records

IVI reviewed building permits and records for the Subject at the Los Angeles Building and Safety Department. According to Los Angeles Building Department files, records for the subject were available from 1922 when the property was developed into the present onsite land uses. The subject buildings were originally constructed for hotel and parking garage land uses. Numerous permits have been issued concerning the subject's development. No environmentally related permits or applications of concern were found for current land uses. No building permits were identified concerning the nature of former onsite cleaners at 1546 Wilcox Avenue.

5.10 Internet Search

IVI conducted a cursory internet search for the Subject's name and address using the Google search engine on September 2, 2014.
No environmentally related information was identified on the first page of the Google search results.

A copy of regulatory database information contained within a Computerized Environmental Report (CER) provided by Environmental Data Resources, Inc. (EDR) appears in Appendix D. The CER is a listing of sites identified on select federal and state standard source environmental databases within the approximate minimum search distance specified by ASTM Standard Practice for Environmental Site Assessments E 1527-13. IVI reviewed each environmental database to determine if certain sites identified in the CER are suspected to represent a material negative environmental impact to the Subject. The following table lists the number of sites by regulatory database within the prescribed minimum search distance appearing in the CER.

Databases Reviewed	Approximate Minimum Search Distance (AMSD)	Number of Sites Within AMSD
Federal National Priorities List (NPL) Site List	One-Mile	0
Federal Delisted NPL Site List	One-Half Mile	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	One-Half Mile	0
Federal CERCLIS No Further Remedial Action Planned (NFRAP) Sites	One-Half Mile	0
Federal Resource Conservation and Recovery Information System (RCRIS) Treatment, Storage, and Disposal (TSD) List	One-Half Mile	0
Federal RCRIS Generators List	On-Site and Adjoining Properties	0
Federal Corrective Action Tracking System (CORRACTS)	One-Mile	0
Federal Emergency Response Notification System (ERNS) List	On-Site	0
Federal Institutional/Engineering Control Registries	On-Site	0
California and Tribal Lists of NPL Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Mile	17
California and Tribal Lists of CERCLIS Equivalent Hazardous Waste Sites Identified for Investigation and/or Remediation	One-Half Mile	0
California and Tribal Landfills or Solid Waste Facilities List	One-Half Mile	0
California and Tribal Registered Underground Storage Tank (RUST) Facility List	On-Site and Adjoining Properties	1
California and Tribal Leaking UST/Spill List	One-Half Mile	16
California and Tribal Institutional/Engineering Control Registries	On-Site	0
California and Tribal Voluntary Cleanup Sites	One-Half Mile	1
California and Tribal Brownfields Sites	One-Half Mile	0

The CER identified 11 "Orphan Sites". "Orphan Sites" are those sites that could not be mapped or "geocoded" due to inadequate address information. Please refer to the CER for a list of these "Orphan Sites". IVI attempted to locate these sites via a review of street maps, vehicular reconnaissance and/or interviews with people familiar with the area. "Orphan Sites" that were identified in this manner were analyzed in their respective regulatory database below.

A description of the databases reviewed by IVI and an analysis of sites identified within the prescribed search area are presented below.

6.1 Federal Databases

NPL

The NPL database is a listing of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or "Superfund"). A site must be on the NPL to receive money from the Trust Fund for Remedial Action.

Analysis/Comment: The CER did not identify NPL sites within the AMSD.

Delisted NPL Site List

The EPA may delete a final NPL site if it determines that no further response is required to protect human health or the environment, under Section 300.425(e) of the National Contingency Plan (55 FR 8845, March 8, 1990). Sites that have been deleted from the NPL remain eligible for further Superfund-financed remedial action in the unlikely event that conditions in the future warrant such action. Partial deletions can also be conducted at NPL sites.

Analysis/Comment: The CER did not identify Delisted NPL sites within the AMSD.

CERCLIS

CERCLIS is the USEPA's system for tracking potential hazardous-waste sites within the Superfund program. A site's presence on CERCLIS does not imply a level of federal activity or progress at a site, nor does it indicate that hazardous conditions necessarily exist at the location. Within one year of being entered into CERCLIS, the USEPA performs a preliminary assessment of a site. Based upon the results of the preliminary assessment, the USEPA may conduct additional investigation, which could lead to a site being listed on the NPL.

Analysis/Comment: The CER did not identify CERCLA sites within the AMSD.

CERCLIS No Further Remedial Action Planned (NFRAP) Sites

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from the CERCLIS list. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to warrant Federal Superfund Action or NPL consideration.

Analysis/Comment: The CER did not identify CERCLA NFRAP sites within the AMSD.

RCRIS TSD

The RCRIS TSD contains information pertaining to those facilities that treat, store, or dispose of hazardous waste. While these facilities represent some form of hazardous waste activity, they are most significant if determined to be out of compliance or to have violations.

Analysis/Comment: The CER did not identify RCRIS TSD facilities within the AMSD.

RCRIS Generators

IVI reviewed the list of sites, which have filed notification with the USEPA in accordance with RCRA requirements. These sites include generators of hazardous waste regulated under RCRA. Under RCRA, hazardous waste generators are classified by the quantity of hazardous waste generated in a calendar month into the following categories: Large Quantity Generator (LQG), greater than 1,000 kilograms (kg); Small Quantity Generator (SQG), 100 to 1,000 kg; and Conditionally-Exempt Small Quantity Generator (CESQG), less than 100 kg. RCRA Generators, while they represent some form of hazardous waste activity, are most significant if they are determined to have Class I Violations or to be non-compliant.
Analysis/Comment: The CER did not identify RCRIS Generator facilities within the AMSD.

Corrective Action Tracking System (CORRACTS)

CORRACTS is a list of facilities that are found to have had hazardous waste releases and require RCRA corrective action activity, which can range from site investigations to remediation.

Analysis/Comment: The CER did not identify CORRACTS sites within the AMSD.

ERNS

The ERNS is a database of notifications of oil discharges and hazardous substance releases made to the Federal government. These notifications are used by "On-Scene Coordinators" to determine an emergency response and release prevention. When a call is made to the National Response Center or one of the 10 USEPA Regions, a report is created containing all of the release information that the caller provided. This report is transferred to an appropriate agency to evaluate the need for a response and the records are electronically transferred to the ERNS database. As such, if a reported release of oil or a hazardous substance is deemed to require a response, it should also be listed in the appropriate federal or state environmental database such as CERCLIS, state equivalent CERCLIS, or state leaking underground storage tank or spills lists.

Analysis/Comment: The CER did not identify the Subject on the ERNS database.

Federal Institutional Control/Engineering Control Registries

These Federal registries contain listings of those sites which have either engineering and/or institutional controls in place. Engineering controls include various physical control devices such as fences, caps, building slabs, paved areas, liners and treatment methods to eliminate pathways for regulated substances to enter the environment or affect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions (Activity and Use Limitations) are generally required as part of institutional controls.

Analysis/Comment: The CER did not identify the Subject on the Federal Institutional or Engineering Control registries.

6.2 California Environmental Protection Agency (Cal/EPA) Databases

EnviroStor, HIST Cal-Sites, Response and Tribal NPL Equivalent Hazardous Waste Sites (HWS)

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for

reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

The HIST Cal-Sites database is a list of facilities subject to investigation concerning likely or threatened releases of hazardous substances. These sites are either being actively remediated, or are currently under evaluation for further action, if necessary. This database has been replaced by EnviroStor and is no longer being updated.

The Response database is a list of confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Tribal CERCLIS Equivalent HWS list is an inventory of toxic sites listed by Tribal Environmental and Health Authorities. These sites are either under remediation, or are currently under evaluation for further action, if necessary.

Analysis/Comment: The CER identified seventeen EnviroStor sites within the AMSD.

The seventeen properties are all located a sufficient distance (all over 0.43-mile) and hydraulically crossgradient or downgradient from the Subject; and as such, are not be reasonably suspect of having impacted same.

California and Tribal CERCLIS Equivalent Hazardous Waste Sites (HWS)

Analysis/Comment: The CER did not identify any California and/or Tribal CERCLIS Equivalent Hazardous Waste sites within the AMSD.

California and/or Tribal Solid Waste Facilities (SWF) List

The SWF list is an inventory of active, closed and inactive landfills and other sites that manage solid wastes.

Analysis/Comment: The CER did not identify any SWF sites within the AMSD.

California and/or Tribal Registered Underground Storage Tanks (UST), HIST USTs and SWEEPS UST Facility Lists

The UST facility list is an inventory of registered liquid bulk storage tanks. The HIST UST database, aka the Hazardous Substance Storage Container Database, is a historical listing of UST sites. The SWEEPS UST database, aka the Statewide Environmental Evaluation and Planning System, is a list of USTs that was

updated and maintained by a company contacted by the State Regional Water Quality Control Board in the early 1980's. This listing is no longer updated or maintained but has historical significance.

Inclusion of a site on these lists does not necessarily constitute environmental contamination, but instead merely indicates the presence of registered bulk storage tanks.

Analysis/Comment: The CER identified the following Registered Storage Tank sites within the AMSD:

Property Name/ Address	Distance	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Unknown - 1545 North Wilcox Ave. (listed twice)	70 Feet	West	Cross-gradient	Inactive

This address is currently occupied by an office building. This facility was not cross-referenced on any databases that report releases or spills, such as the LUST, SLIC or SHWS databases. Based on this information, this listing is not suspected to have impacted the Subject.

California and Tribal Leaking Underground Storage Tanks (LUST) List and Spills, Leaks, Investigations and Cleanups (SLIC) Records

The LUST list is an inventory of reported spills and leaks, both active and inactive maintained by the various California Regional Water Quality Control Boards. It includes stationary and non-stationary source spills reported to state and federal agencies, including remediated and contaminated leaking UST sites. SLIC records, which are maintained by the various Regional Water Quality Control Boards, document unauthorized discharges from spills and leaks from sources other than UST and other regulated sites.
Analysis/Comment: The CER identified sixteen LUST/SLIC sites within the AMSD. Of these sixteen sites, fourteen are located over 0.22-mile crossgradient to downgradient from the Subject; and as such, are not suspected to have impacted same. The remaining two sites are discussed below:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Sunset Landmark	0.1	South-Southwest	Downgradient	Case Closed
Texaco #0374 (Former)	0.1	Southeast	Downgradient	Case Closed

According to the database, both of the above tabulated listings are identified as located approximately 0.1 mile downgradient from the Subject and are listed as Case Closed. Additionally, from review of the database, it does not appear that contamination from these facilities have impacted the Subject. Based on the above, IVI has no significant concern with regards to these facilities.

California Deed Restriction Listing and Tribal Institutional Control/Engineering Control Registries

The DTSC SMBRP list includes sites remediated under the program's oversight that have active deed restrictions. The DTSC Hazardous Waste Management Program Facility Sites (HWMP) list includes current and former hazardous waste facilities with deed/Land Use Restrictions that have been recorded with the County. The type of land use restrictions includes deed notices, deed restrictions, or a land use restriction that binds current and future owners.

The Tribal Institutional Control/Engineering Control Registries contain listings of those sites which have either engineering and/or institutional controls in place. Engineering controls include various physical control devices such as fences, caps, building slabs, paved areas, liners and treatment methods to eliminate pathways for regulated substances to enter the environment or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions (Activity and Use Limitations) are generally required as part of institutional controls.

Analysis/Comment: The CER did not identify the Subject on the SMBRP, HWMP or Tribal Institutional or Engineering Control registries.

California and Tribal Voluntary Cleanup Program (VCP) Sites

The California VCP properties list includes "low" threat level properties with either confirmed or unconfirmed releases and the project proponents have requested that the DTSC oversee the investigation and cleanup.

Analysis/Comment: The CER identified the following VCP site within the AMSD:

Property Name/ Address	Distance (Mile)	Direction	Presumed Hydrogeologic Relationship	Regulatory Status
Snow White Cleaners – 1246 North Vine Street	0.43	South-southeast	Downgradient	Inactive

According to the database, this site is a former dry cleaning facility with restricted land use and is identified as located a significant distance (approximately 0.43 mile downgradient) from the Subject. Additionally, from a review of the database, it does not appear that contamination from this facility has impacted the Subject. Based on the above, IVI has no significant concern with regards to this facility. This facility is also listed in the DEED database below.

California and Tribal Brownfield Sites

A Brownfield site was defined in the 2002 Small Business Liability Relief and Brownfields Revitalization Act (Brownfields Law) as "real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant". In connection with the passage of the Brownfields Law, the Environmental Protection Agency grants awards to states and tribes for activities under Section 128 (a).

Analysis/Comment: The CER did not identify any Brownfields sites within the AMSD.

Local Lists of Landfill / Solid Waste Disposal Sites

SWRCY: A listing of recycling facilities in California.

Analysis/Comment: The CER did not identify any SWRCY sites within the AMSD.

Notify 65

Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

Analysis/Comment: The CER did not identify any Notify 65 sites within the AMSD.

HWP

Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.

Analysis/Comment: The CER did not identify any HWP sites within the AMSD.

Land Use Records; DEED

The use of recorded land use restrictions is one of the methods of DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Analysis/Comment: The CER identified 1 DEED site within the AMSD.

This property is located a sufficient distance (over 43-mile) and hydraulically downgradient from the Subject; and as such, is not be reasonably suspect of having impacted same. This facility is also listed in the VCP database above.

RCRA NonGen / NLR

RCRA NonGen / NLR: RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Analysis/Comment: The CER identified 1 RCRA NonGen / NLR site within the AMSD.

This property is located a sufficient distance (over 23-mile) and hydraulically downgradient from the Subject; and as such, is not be reasonably suspect of having impacted same.

6.3 EDR Proprietary Databases

EDR Manufactured Gas Plants

This database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to the 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of wastes. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

***Analysis/Comment*:** The CER did not identify the Subject or any adjacent properties on the manufactured gas plant database.

EDR Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

***Analysis/Comment*:** The CER did not identify the Subject or any adjacent properties on the historic auto stations database.

EDR Historic Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

***Analysis/Comment*:** The CER did not identify the Subject or any adjacent properties on the historic cleaners database.

7.1 Chemical Storage and Usage

IVI did not observe any significant quantities of hazardous chemicals stored on-site although construction materials were noted. As the property was undergoing major renovations at the time of the site visit, housekeeping was generally considered satisfactory. The chemicals, which are stored in their original containers, do not appear to represent an impact to the environmental quality of the site provided that they are used as intended, properly handled, and the regulations pertaining to their usage are followed.

7.2 Bulk Storage Tanks

Underground Storage Tanks (USTs)

No USTs were identified on the subject property and no common indicators of USTs such as vent pipes, fill ports, manways, pavement cuts, fuel gauges or dispensers were observed. In addition, according to Mr. Paul Baynton, onsite general contractor associated with the current renovations, there are no USTs on-site. Further, there were no regulatory listings for on-site USTs and no USTs have reportedly been closed or abandoned.

Aboveground Storage Tanks (ASTs)

No ASTs were observed and IVI did not identify any equipment, which should require such tanks. Moreover, visual indicators of former site ASTs, such as tank cradles, secondary containment structures, tank pedestals, etc., were not observed. In addition, according to the site contact, there are no ASTs on-site.

7.3 Site Waste and Wastewater

Solid Waste

Non-hazardous solid waste is disposed of in dumpsters and is removed from the Subject on a regular basis by a private carting firm. Potential sources of contamination, such as waste oil or automobile batteries, were not observed in the vicinity of the dumpsters.

Sanitary Sewage

Sanitary sewage disposal is provided by the municipality. IVI did not observe any sources of wastewater or liquid discharge into the sewer other than sanitary sewage.

Hazardous Waste

No hazardous waste was observed or reported to be generated on the Subject. Furthermore, IVI's review of the USEPA's database of sites regulated under RCRA did not identify the Subject as a current generator of hazardous waste.

7.4 Stained Soil, Stained Pavement, or Stressed Vegetation

There was no evidence of significant soil staining, stained pavement, or stressed vegetation observed on-site.

7.5 Liquid Discharges

No visible evidence of liquid discharges, suspected to represent an environmental concern were observed during our survey.

7.6 Pools of Liquid

IVI did not observe significant standing surface water or pools containing liquids likely to be hazardous substances or petroleum products.

7.7 Pits, Ponds, or Lagoons

No pits, ponds or lagoons suspected of containing hazardous substances or petroleum products were identified on-site.

7.8 Wells

IVI did not identify on-site dry wells, irrigation wells, injection wells, observation wells, monitoring wells, potable water wells, recovery wells or abandoned wells.

7.9 On-Site Fill

Based on our observations, other than typical engineered fill used in foundation construction, it does not appear that a significant amount of fill has been imported onto the Subject.

7.10 Drums and Containers for Storing Waste

With the exception of non-hazardous solid waste containers, IVI did not identify containers suspected of storing waste. With respect to the non-hazardous solid waste containers, no significant environmental concerns were noted.

7.11 Floor Drains and Sumps

IVI did not identify any floor drains or sumps that were stained, emitting foul odors, or connected to an on-site sewage disposal system, or located adjacent to chemical storage areas.

7.12 Odors

IVI did not identify strong, pungent, or noxious odors suspected to represent an environmental concern.

7.13 Air Emissions

IVI did not identify processes or equipment that emit noticeable vapors or fumes.

7.14 Polychlorinated Biphenyls (PCBs)

IVI observed one utility-owned, electrical vault transformer on the west side of the hotel building within the courtyard area. According to Mr. Baynton, the vault transformer was recently installed as part of the ongoing renovations. Based on its age, it is unlikely that the transformer, which was not labeled, contains PCBs. In any event, the electrical equipment is presumed to be in excellent condition based on its recent installation.

7.15 Asbestos-Containing Material (ACM)

Based on the ongoing major renovations of the hotel and garage buildings, it is unlikely that appreciable quantities of asbestos containing materials remain. Mr. Baynton stated that asbestos containing material abatement concerning hotel building lobby floor tiles took place onsite. However, it is noted that although unlikely, the newly installed non-friable materials, such as resilient floor finish assemblies, caulking, and mastics, could still contain trace asbestos. These non-friable materials are in good condition and the potential for fiber release is low.

7.16 Lead-in-Drinking Water

Based on our conversations with utility personnel, the water at the Subject is not expected to contain elevated levels of lead.

7.17 Radon

Based on statistical information maintained within the U.S. Department of the Interior and U.S. Geological Survey's *Geologic Radon Potential,* dated 1993, radon concentrations in the Subject's County average 0.7 picocuries per liter (pCi/L), which is below the 4.0 pCi/L action level established by the USEPA and places the Subject in an EPA Radon Zone 3. Based solely on this data, it is unlikely that radon represents an environmental concern at this time.

7.18 Lead-Based Paint (LBP)

It is unlikely that LBP exists in locations and quantities suspected to represent an environmental concern based on the gut renovation activities. Mr. Baynton stated that lead paint abatement concerning door trim paint was performed at the Property.

8.0 INTERVIEWS

8.1 Questionnaires

IVI sent a Pre-Survey Questionnaire and an AAI User Questionnaire to the site contact and the User, respectively. The purpose of these questionnaires was to disclose any previous or existing hazardous waste or toxic material conditions, which may not have been apparent at the time of our site reconnaissance and to satisfy the User interview all appropriate inquiry requirements.

As of this writing, neither the site contact nor the User have returned the completed questionnaires.

8.2 User

8.2.1 Title Records

A copy of the Subject's Chain-of-Title has not been provided to IVI for review.

8.2.2 Environmental Clean Up Liens and Activity and Use Limitations (AULs)

The User has not returned the AAI User Questionnaire.

8.2.3 Specialized Knowledge

The User has not returned the AAI User Questionnaire.

8.2.4 Relationship of Purchase Price to Fair Market Value Due to Contamination in Connection with the Subject

The User has not returned the AAI User Questionnaire.

8.2.5 Common Knowledge or Reasonably Ascertainable Information

The User has not returned the AAI User Questionnaire.

8.2.6 Purpose for Conducting the Phase I Environmental Site Assessment

The User has not returned the AAI User Questionnaire.

8.2.7 Proceedings Involving the Property

The User has not returned the AAI User Questionnaire.

8.3 Key Site Manager

8.3.1 Historic Site Use

Site contact Mr. Mike Foley, Director of Construction Management, Hawkins Way Capital, LLC, who has been involved with the property for the past two years, was unaware of land use prior to the construction of the onsite hotel and garage buildings.

8.3.2 Proceedings Involving the Property

Mr. Foley, had no knowledge of pending, threatened, or past litigation, administrative proceedings, or notices from governmental agencies regarding violations of environmental laws regarding hazardous substances or petroleum products.

8.4 Occupants

Onsite tenants were unavailable for interview.

8.5 Past Owners

IVI was unable to locate the site's former owner.

8.6 Local Regulatory Agency Interviews and/or File Reviews

Fire Department

IVI has sent a request to the Los Angeles Fire Department for environmental information pertaining to the subject property. As of this writing, the Fire Department has not responded to our request. Should receipt of a response from the Fire Department change the conclusions of this report, the Client will be notified in writing by IVI.

Health Department

IVI has sent a request to the Los Angeles County Environmental Programs Division for environmental information pertaining to the subject property. As of this writing, the Health Department has not responded to our request. Should receipt of a response from the Health Department change the conclusions of this report, the Client will be notified in writing by IVI.

Tax Assessor

According to the tax assessor records reviewed, the present Subject buildings were constructed by 1925 on a 0.53-acre parcel. The buildings are slab-on-grade structures which have all public utilities.

Building Department Records

IVI reviewed building permits and records for the Subject at the Los Angeles Building and Safety Department. According to Los Angeles Building Department files, records for the subject were available from 1922 when the property was developed into the present onsite land uses. The subject buildings were originally constructed for hotel and parking garage land uses. Numerous permits have been issued concerning the subject's development. No environmentally related permits or applications of concern were found for current land uses. No building permits were identified concerning the nature of former onsite cleaners at 1546 Wilcox Avenue.

9.0 VAPOR ENCROACHMENT SCREENING

IVI conducted a "Tier I" (non-intrusive) Vapor Encroachment Screening (VES) on the Subject in accordance with the methodology set forth in ASTM E 2600-10 "*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*". During the VES, the Area of Concern (AOC) was minimized using the methodology taught in the ASTM Screening for Vapor Encroachment onto Property Involved in Real Estate Transactions Training Course. The purpose of the Tier I VES is to conduct an initial screen to identify, to the extent feasible, the potential for a vapor encroachment condition (VEC) in connection with the Subject with respect to chemicals of concern that may migrate as vapors into the subsurface of the Subject as a result of contaminated soil and groundwater on or near the property.

This VES utilized readily available data sources previously discussed in this Phase I ESA to include the type of soils, geology and groundwater characteristics of the Subject area (refer to Section 4.3) as well as known or potentially contaminated sites as identified on Federal, State, tribal and local databases. IVI also utilized previously discussed standard historical sources of information to identify potential historical sources of contamination on the Subject and surrounding properties which may be indicative of a VEC. This data collection and analysis was coupled with our site reconnaissance of the Subject and surrounding properties. Based upon the results of our data collection, reconnaissance and analysis, a summary of our Tier I VES findings is presented in the table below:

Potential for Vapor Encroachment to Impact the Subject	
Area of Concern	**Conclusion**
Subject Property Operations or Existing Conditions	None identified (Refer to Sections 4.0 Site Description and 7.0 Site Reconnaissance)
Historical Uses of the Subject Property	Dry cleaner identified (Refer to Section 5.0 Historical Use)
Adjoining Property Operations or Existing Conditions	None identified (Refer to Section 4.2 Surrounding Land Use)
Historical Uses of Adjoining Properties or Nearby Properties	None identified (Refer to Section 5.0 Historical Use)
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in Approximate Minimum Search Distance (AMSD)	Several Identified (Detailed within Section 6.0 Regulatory Review), but none of concern.

A dry cleaner was identified on-site historically although it could not be determined if the dry cleaning activities were actually conducted on-site or this was a drop-off only facility.

Otherwise, impacted off-site properties were identified in IVI's regulatory database review. However, based upon hydrogeology, groundwater flow direction and the furthest known extents of the contamination, none of these properties are suspected of having petroleum or chemical contaminant plumes that would be identified as a VEC and as such, a VEC can be ruled out.

IVI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard Practice E1527-13 of 1550 North Wilcox Avenue, Los Angeles, California. Any exceptions to, or deletions from, the standard practice are described within Section 2.0 of this report.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the Subject; however the following item of environmental concern was identified which warrants mention:

Former Onsite Cleaners

Based on historical City Directory information, 1546 North Wilcox Avenue (an alternate site address) was listed as occupied by North Wilcox Avenue Malley Tailors & Cleaners in 1951 and occupied by Elegant Cleaners & Tailors in 1967. IVI conducted historical building permit research at the Los Angeles Department of Building and Safety concerning the former onsite dry cleaner in an effort to determine if dry cleaning was performed on-site or if this was a drop-off only establishment; however, the available historical permits reviewed contained no information regarding this former business. Accordingly, it is unknown whether or not dry cleaning was historically conducted on-site. Furthermore, it should be noted that, according to Mr. Paul Baynton, the onsite general contractor associated with the current renovations, soil from the former onsite cleaners' tenant location was excavated to a depth of 18 inches and removed from the property during grading/renovation activities. Mr. Baynton stated that no stained soils or odors were encountered during excavation. Notwithstanding the foregoing, despite all reasonable research efforts it cannot be determined definitively if dry cleaning was conducted on the site and IVI considers this to be a data gap.

11.1 This report has been prepared in compliance with the ASTM standard entitled "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" E1527-13.

11.2 The observations described in this report were made under the conditions stated herein. The conclusions presented in the report were based solely upon the services described therein, and not on scientific tasks or procedures beyond the scope of described services within the constraints imposed by the client. The work described in this report was carried out in accordance with the Terms and Conditions of the contract.

11.3 In preparing this report, IVI has relied on certain information provided by federal, state, and local officials and other parties referenced therein, and on information contained in the files of governmental agencies, that were readily available to IVI at the time of this assessment. Although there may have been some degree of overlap in the information provided by these various sources, IVI did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment. Observations were made of the site and of the structures on the site as indicated in this report. Where access to portions of the site or to structures on the site was unavailable or limited, IVI renders no opinion as to the presence of direct or indirect evidence relating to petroleum substances, hazardous substances, or both, in that portion of the site and structure. In addition, IVI renders no opinion as to the presence of indirect evidence relating to hazardous material or oil, where direct observation of the ground surface, interior walls, floors, ceiling or a structure is obstructed by objects or materials, including snow, covering on or over these surfaces.

11.4 As part of this assessment, IVI submitted requests for information via the Freedom of Information Act (FOIA) to various governmental agencies. As of the preparation of this report these requests may not have been fulfilled. The conclusions of this report are subject to change upon receipt of a response from these FOIA requests.

11.5 IVI does not represent that the site referred to herein contains no petroleum or hazardous or toxic substances or other conditions beyond those observed by IVI during the site walkthrough.

11.6 IVI has produced this document under an agreement between IVI and Menlo Partners/Hawkins Way Capital, LLC. All terms and conditions of that agreement are included within this document by reference. Any reliance upon this document, or upon IVI's performance of services in preparing this document, is conditioned upon the relying party's acceptance and acknowledgement of the limitations, qualifications, terms, conditions and indemnities set forth in that agreement, and property ownership/management disclosure limitations, if any. It is not to be relied upon by any party other than Menlo Partners/Hawkins Way Capital, LLC nor used for any purpose other than that specifically stated in our Agreement or within this Report's Introduction section without IVI's advance and express written consent. The Phase I report is only valid if completed within 180 days of an acquisition or the transaction necessitating the report.

11.7 **TIME LIMITATION TO ENACT CLAIM AGAINST IVI** If in the opinion of the client, or any third party claiming reliance on IVI's report or services, that IVI was negligent or in breach of contract, such aforementioned parties shall have one year from the date of IVI's site visit to make a claim.

11.8 Unless specifically identified within Section 2, Chinese drywall, indoor air quality and any other non-ASTM scope issues as identified in ASTM E1527-13, Section 13.1.5, are excluded from the scope of this assessment.

Re: Phase I Site Assessment
Retail Building
1550 Wilcox
Los Angeles, California
IVI Project No. PC40812281

Dear Property Manager

On behalf of Menlo Partners / Hawkins Way Capital, LLC, IVI has been retained to conduct a Phase I Site Assessment of the above referenced property.

Attached is our Pre-Survey Questionnaire, which we are requesting that someone knowledgeable with the property complete and return by fax to our office. Your quick response to provide this information will facilitate both the commencement of our survey and the completion of our report. Furthermore, these documents, along with your responses, will appear as exhibits in our report.

Sincerely,

IVI ASSESSMENT SERVICES, INC.

Michael Kennedy
Senior Project Manager

Phase I Environmental Site Assessment
Pre-Survey Questionnaire

Someone familiar with the site should complete this questionnaire prior to our site visit. For those questions that are not applicable, please respond "N/A", and "U/K" for those questions in which the answer is not known. If you have any questions about how to answer any of the questions, please call IVI. If additional pages for responses are necessary, please attach hereto and reference it to the appropriate question number. Upon completing this form, please fax it to the above fax number. This document and your written response will be included as an exhibit in the final report.

Subject Name: 1550 Wilcox

Project Manager: Jeff Randle

Street: 1550 Wilcox

Telephone Number

2. How long has the preparer been familiar with the site or facility?
If less than five years, who held the position prior?

3. Property Owner/Occupant Information

_____
Owner's Name

_____
Owner's Address

_____
Occupant's Name

_____
Occupant's Address

VALUATION REDUCTION

Was/is the purchase price of the Subject property significantly less than the purchase price of comparable properties due to environmental conditions? Yes o No o U/K o

If yes, please explain below.

B. Property Description

1. Land

a. Size of Parcel? _____ Acres

b. Shape of Parcel? o Rectangular o Irregular ¨ Other

c. Are there any surface waters or wetlands on the site? Yes o No o U/K o

d. Is there a well on the site? Yes o No o U/K o

If so, what type of well is it?:

Drinking Water	o
Irrigation	o
Monitoring	o
Dry Well	o

Have contaminants in excess of governmental guidelines been identified in the water? Yes o No o

e. Was or is there a septic system on the property? Yes o No o U/K o

Ó IVI International, Inc

If so, is the septic system currently in use? Yes o No o

f. Has fill been imported onto the Subject? Yes o No o U/K o

g. Are there currently or has there previously been waste treatment or disposal pits, ponds, or lagoons on the site? Yes o No o U/K o

h. Where is the site's stormwater discharged to? _____

B. PROPERTY DESCRIPTION – continued

2. Site Improvements This includes all buildings ¨ N/A

a. Describe the size (square foot) of the existing building(s).

b. How old is the building(s)?

c. Describe the heating and cooling system.

d. Who provides the following utilities?

Water: _____

Sanitary Sewer: _____

Storm Drainage: _____

Natural Gas: _____

Electric: _____

e. Are there any floor drains on the site? Yes o No o U/K o

If so, where do they discharge to?

3. Site History

a. Were there any buildings or other improvements on the property prior to the existing improvements? Yes o No o U/K o

If so, what were they?

b. Is or has the property been used for industrial or agricultural purposes, or as a gasoline station, auto repair, dry cleaner, junkyard, or landfill? Yes o No o U/K o

If so, please describe.

Ó IVI International, Inc

B. PROPERTY DESCRIPTION – continued

4. Site Operations

To the best of your knowledge, do any of the following operations take place on the Subject or have ever taken place on the Subject:

Ÿ	Dry Cleaning:	Yes o	No o
Ÿ	Battery Storage/Sales:	Yes o	No o
Ÿ	Paint Storage/Sales:	Yes o	No o
Ÿ	Petroleum Storage/Sales:	Yes o	No o
Ÿ	Photo or X-Ray Finishing:	Yes o	No o
Ÿ	Electronic Equipment Assembly or Manufacturing:	Yes o	No o
Ÿ	Solvent Storage or Sales:	Yes o	No o
Ÿ	Chemical Manufacturing/Sales:	Yes o	No o
Ÿ	Automobile Storage, Repair, or Disposal:	Yes o	No o
Ÿ	Agriculture:	Yes o	No o
Ÿ	Medical or Dental Offices:	Yes o	No o

5. Previous Studies/Documentation

a. Do you have any knowledge of previously prepared Environmental Site Assessment Reports, asbestos surveys, lead-based paint studies or testing (soil, groundwater, tank tightness testing, lead-based paint testing, asbestos testing, indoor air quality, mold (bacteria and fungi testing), etc.) conducted on the site? If so, please either provide copies of the reports or list the title, date, preparer and recipient of such report(s) below:

o I have no knowledge of any environmental related studies or reports prepared on the Subject.

b. Are you in possession of a title report, site drawings, building drawings and specifications and/or a survey for the site? Yes o No o

If so, please provide copies of same.

Please provide all available environmental information from yours or your Client's records including, but not limited to, documentation in connection with any pending or threatened public or private proceedings or litigation with respect to environmental liability, environmental permits and permit applications, underground and above ground tank registration and information (including removal and testing of such tanks), environmental reports, asbestos, lead-based paint or indoor air quality studies, spill information and compliance information and programs.

Ó IVI International, Inc

C. SURROUNDING PROPERTIES

1. Has any adjoining properties been used for industrial purposes, or as a gasoline station, auto repair shop, junkyard, dry cleaner or landfill? Yes o No o U/K o

If so, please explain.

2. Are you aware of any contamination conditions on adjoining or nearby properties? Yes o No o U/K o

3. Are there any open surface waters or wetlands adjacent to the site? Yes o No o U/K o

4. Are you aware of any active or former waste treatment or disposal pits, ponds, or lagoons on adjacent or nearby sites? Yes o No o U/K o

5. Is any neighboring property engaged in the storing, transporting or disposal of hazardous waste, or chemicals? Yes o No o U/K o

D. REGULATORY

1. Are you aware of any pending, threatened, or past litigation relevant to *hazardous substances* or *petroleum products* in, on, or from the *property*? Yes o No o U/K o

If so, please explain.

2. Are you aware of any pending, threatened, or past administrative proceedings relevant to *hazardous substances* or *petroleum products* in, on, or from the *property*? Yes o No o U/K o

If so, please state the circumstances.

3. Are you aware of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to *hazardous substances* or *petroleum products*? Yes o No o U/K o

If so, please explain.

E. ASBESTOS

1. Do you have knowledge of any materials or substances on the site that are known or suspected to contain asbestos? Yes o No o U/K o

If so, what materials and where are they located?

Ó IVI International, Inc

E. ASBESTOS – continued

2. Has an inspection for asbestos ever been conducted on the Subject? Yes o No o U/K o

3. Has asbestos been removed from the Subject? Yes o No o U/K o

4. Does the building have:

- Spray-on or troweled-on fireproofing, insulation or finishes? Yes o No o U/K o
- Insulation on piping, boilers, tanks, chillers, or other mechanical equipment? Yes o No o U/K o
- Transite used in cooling towers, exterior walls, ceilings fascia panels, etc.? Yes o No o U/K o
- Resilient floor tile? Yes o No o U/K o
- Suspended acoustical ceiling tiles? Yes o No o U/K o
- A built-up or rolled roofing system? Yes o No o U/K o

F. PCBs

1. Are there any on-site electrical transformers? Yes o No o U/K o

If so, do any of the transformers contain PCBs? Yes o No o U/K o

Who owns the transformers and where are they located?

2. Did any on-site transformers formerly contain PCBs, but later had the dielectric fluid replaced? Yes o No o U/K o

3. Is there any hydraulic equipment such as elevators or automotive lifts on-site? Yes o No o U/K o

If so, who services the equipment?

Are you aware of any hydraulic fluid leaks or evidence of leakage such as unexplained fluid loss in connection with the hydraulic equipment? Yes o No o U/K o

Ó IVI International, Inc

F. Storage Tanks

1. Are there any (active or inactive) Underground Storage Tanks (UST) or Aboveground Storage Tanks (AST) on the site? Yes o No o U/K o

If so, please fill out the following schedule:

Active or Inactive Tanks

Location of Tank	Size of Tank (Gallons)	AST or UST	Tank Contents	Age of Tank (Years)	Does the Tank Have Corrosion Protection? (Yes/No)	Does the Tank Have Leak Detection? (Yes/No)	Is the Tank In-Use? (Yes/No)

Have any of the tanks been tightness tested? Yes o No o U/K o

1. Do you have any knowledge of tanks that were either removed or closed in-place at the site? Yes o No o U/K o

If so, please fill out the following schedule:

Tanks Removed or Closed In-Place

Location of Former Tank	Size of Tank (Gallons)	AST or UST	Tank Contents	Tank Removal Company	Year Tank Was Removed

Ó IVI International, Inc

H. LEAD

1. Are you aware of any lead-based paint (LBP) applications on the site? Yes o No o U/K o

2. Has LBP testing been conducted? Yes o No o U/K o

3. Have there been any reported incidences of children with elevated blood lead levels residing at the site? Yes o No o U/K o

4. Are there any children younger than 7 years old residing at the site or frequenting the site on a daily basis? Yes o No o U/K o

5. Have any LBP abatements been conducted? Yes o No o U/K o

6. Has the water been tested for lead? Yes o No o U/K o

If so, please provide a copy of the results

I. HAZARDOUS MATERIALS

1. Are hazardous materials or chemicals stored or used on-site? Yes o No o U/K o

If so, please fill out the following schedule (attach separate page if more room is required):

Schedule of Hazardous or Toxic Substances Stored On-Site

Material Type	Quantity (Gallons)	Location

2. Are there any hazardous or medical waste or fluids generated or used that employ an outside service for their periodic supply and removal? Yes o No o U/K o

If so, please provide the name, address, & telephone number of the disposal company and the facility generating the waste.

J. INDOOR AIR QUALITY

1. Have strong mold odors and/or mold staining been observed onsite? Yes o No o U/K o

2. Has there been any employee or tenant reports of symptoms consistent with mold contamination or other indoor air quality concerns? Yes o No o U/K o

3. Are you aware of elevated radon gas concentrations on-site? Yes o No o U/K o

Ó IVI International, Inc

K. AAI USER QUESTIONNAIRE

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfield's Revitalization Act of 2001 (the "*Brownfield's Amendments*"), the user must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30 and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

1. Did a search of recorded land title records (or judicial records where

Appropriate, See Note 1 below) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law? **Yes** ☐ **No** ☐ **NA** ☐

Note 1 – In certain jurisdictions, federal, tribal, state or local statutes, or regulations specify that environmental liens and Activity and Use Limitations (AULs) be filed in judicial records rather than in land title records. In such cases, judicial records must be searched for environmental liens and AULs.

2. Did a search of recorded land title records (or judicial records where appropriate, see Note 1 above) identify any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the property and/or have been filed or recorded against the property under federal, tribal, state or local law? **Yes** ☐ **No** ☐ **NA** ☐

3. Do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? **Yes** ☐ **No** ☐ **NA** ☐

4. Does the purchase price paid for this property reasonably reflect the fair market value of the property? **Yes** ☐ **No** ☐ **NA** ☐

If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? **Yes** ☐ **No** ☐ **NA** ☐

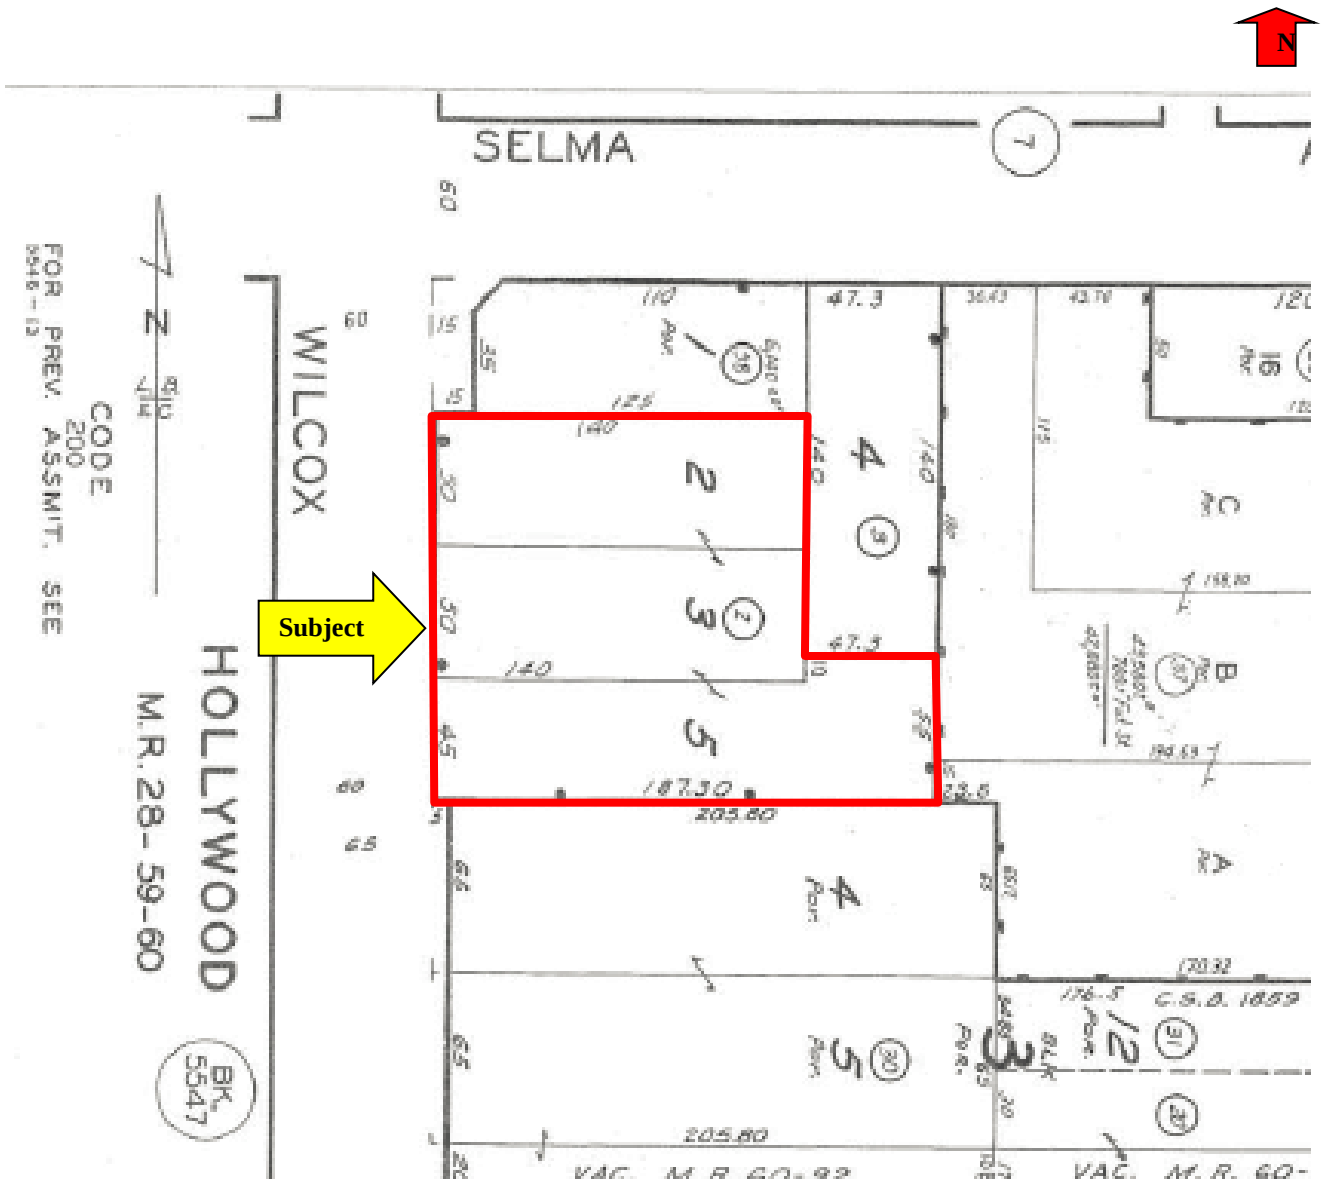
5. Are you aware of commonly known or reasonably ascertainable information about the properly that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example:

(a.) Do you know the past uses of the property? **Yes** ☐ **No** ☐ **NA** ☐

(b.) Do you know of specific chemicals that are present or once were present at the property? **Yes** ☐ **No** ☐ **NA** ☐

(c.) Do you know of spills or other chemical releases that have taken place at the property? **Yes** ☐ **No** ☐ **NA** ☐

(d.) Do you know of any environmental cleanups that have taken place at the property? **Yes** ☐ **No** ☐ **NA** ☐



6. Based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of releases at the property? **Yes** ☐ **No** ☐ **NA** ☐

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, and dated 07/30/2014 has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 14 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 60 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 46 EDR US

EXECUTIVE SUMMARY

Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D009
Waste name: MERCURY

Waste code: P001
Waste name: 2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%

Waste code: P042
Waste name: 1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-

Waste code: P075
Waste name: NICOTINE, & SALTS

Waste code: P081
Waste name: NITROGLYCERINE (R)

Violation Status: No violations found

Latitude:	34.106255
Longitude:	-118.32997
Case Type:	Cleanup Program Site
Case Worker:	GJH
Local Agency:	Not reported
RB Case Number:	0793
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE)
Site History:	The current building structure that houses Lido Cleaners was constructed prior to 1928. Lido Cleaners, a dry cleaning business has occupied the site since 1943. The 3,400 square-foot building contains a dry cleaning machine in the rear of the building. Based on the information submitted, the subsurface soil and groundwater at the site have been mainly impacted with volatile organic compounds (VOCs). Depth to groundwater was encountered in December 2007 between 22 and 25 feet below ground surface. Perchloroethylene (PCE), trichloroethene (TCE) 1,2dichloroethene (1,2-DCE) and 1,3-dichloropropene (1,3-DCP) were detected in soil matrix and underlying groundwater. The peak concentration of the main contaminant, PCE, in groundwater was 9,400 micrograms per liter (a%g/L) on December 26, 2007. The releases of chemicals from dry cleaning operations at the site have degraded the groundwater quality and beneficial uses of the State's waters

Case Type:	Cleanup Program Site
Case Worker:	JB
Local Agency:	Not reported
RB Case Number:	1186
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Tetrachloroethylene (PCE)
Site History:	Paragon cleaners is located on the northeast corner of the intersection of Vine Street and Fountain Avenue. Ground water has been impacted by the contaminant PCE due to operations at the dry cleaners. The dry cleaner has been in operation since 1961, and in 2006, switched to "green" chemicals. The site owner has filed for financial hardship status and is requesting financial assistance from the state for assessment and cleanup.

Description:	The La Pietre Site is located at 6648, 6650 West Lexington Avenue, and 6649, 6665 W. Santa Monica Blvd, in West Hollywood, LA County. The Site is approximately 3.9 acres in size, and is located in a commercial/residential area. The Site was operated by the Union Ice Company from approximately 1919 until the mid-1980's. A portion of the Site was used as a lumber yard. Small quantities of waste oil, solvents, and pressurized gas cylinders were stored onsite. Vehicle maintenance/repair occurred onsite. Also, unpermitted USTs containing fuels were located onsite. The present condition of these USTs is unknown, but Union Ice personnel thought they had been removed prior to vacating the Site. The Site is currently occupied by a dance club, a warehouse, and commercial parking. A Phase I/II were completed in mid-2005 to assess soil, soil vapor, and groundwater. Low concentrations of VOC's, namely TCE and PCE, were detected in soil, soil vapor, and groundwater, with VOC concentrations increasing with depth in the soil column. Two groundwater samples reported 3.8 ppb of TCE, 19 ppb of PCE, and 2.2 ppb of cis 1,2-DCE in an upgradient location, while a downgradient location reported 8.2 ppb of TCE, 48 ppb of PCE, 6.3 ppb of cis 1,2-DCE, and 0.66 ppb of Freon 12.The Original VCA included 3.9 acres of parcels 553-202-2024, 553-202-2025, 553-202-2010,and 553-202-2008. APN: 553-202-2019 was not part of the original VCA however investigations were conducted at this parcel too and considered part of the original site. In November 2012, a VCA was signed to remove the "Kodak Parcel" from the La Pietra Site. DTSC reviewed the documents submitted and in December 2012, DTSC issued a No Further Action towards 553-202-2008 and 553-202-2010 known as 6677 Santa Monica Boulevard & 1120 North Las Palmas Avenue. The remaining parcels require further investigation.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 10/01/2001
Comments: Not reported

CENTRAL LOS ANGELES HS #1 AKA METROMEDIA (Continued) **S107736102**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 12/12/2001
Comments: Approximately 136 cubic yards of soil were removed. Based on confirmation sampling, the estimated mean for surface soil based on 95% UCL was 0.860 mg/kg and for subsurface 1.91 mg/kg. Based on this, residual arsenic levels are below the cleanup goal.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/07/2001
Comments: RAW/CEQA - DTSC approved the Removal Action Workplan for the removal of arsenic contaminated soil. CEQA completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 07/02/2002
Comments: DTSC has determined that all appropriate response actions have been completed, that all acceptable engineering practices were implemented and that no further removal/remedial action is necessary, specific only to the removal around the underground storage tank. Additional sampling will be conducted post- demolition near on-site hydraulic elevators and residential structures. For Arsenic only. FA for hydraulic elevators and lead

Completed Area Name: PROJECT WIDE

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Longitude (West):	118.3307 - 118° 19' 50.52''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	377249.3
UTM Y (Meters):	3773793.0
Elevation:	367 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	34118-A3 HOLLYWOOD, CA
Most Recent Revision:	1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

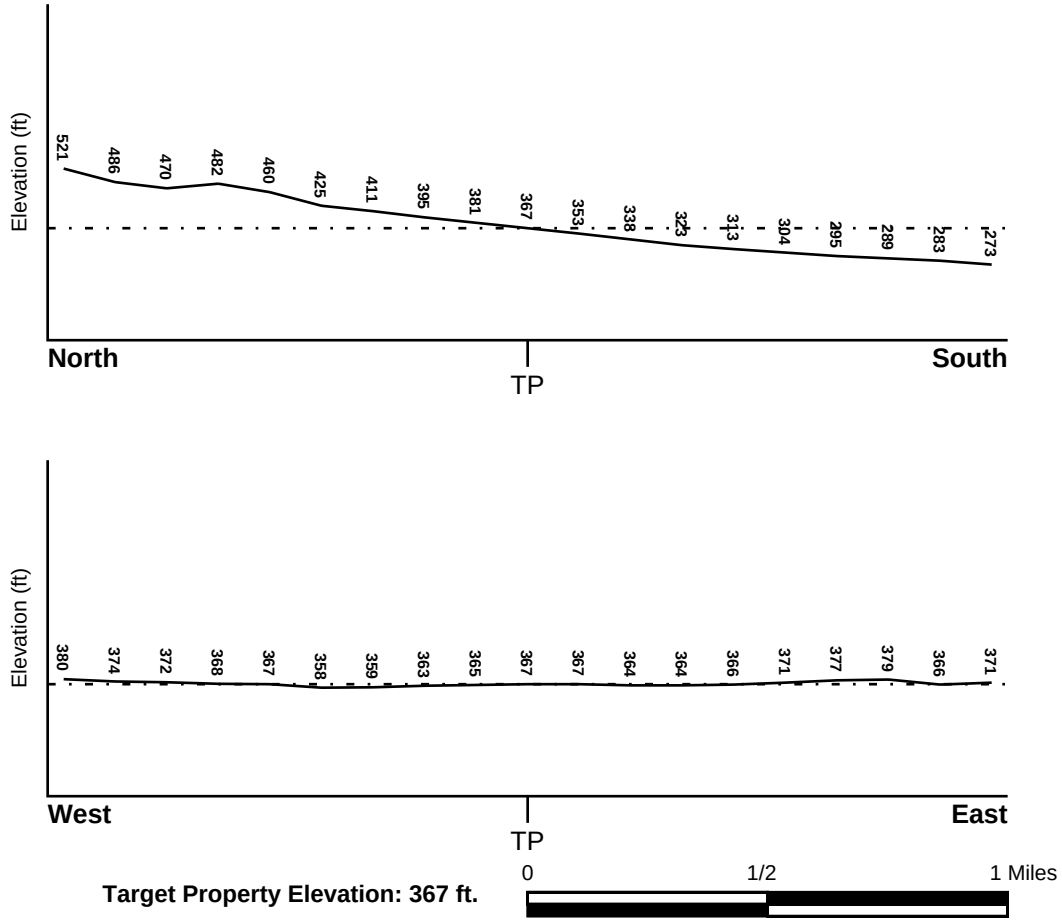
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
LOS ANGELES, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06037C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
1	1/2 - 1 Mile SSW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

IVI has been commissioned to conduct a Phase I Environmental Site Assessment on the above referenced property.

In accordance with the Freedom of Information Act, IVI is requesting information with respect to the above referenced site. Specifically, IVI is requesting the following information:

1. Does City of Los Angeles Fire Department have records of any active or inactive above or underground storage tanks at Subject? If yes, please provide copies of any documents/reports regarding same and fill out the table below (attach additional sheets if required): Yes **o** No **o**

Tank Type Above or Underground	Tank Capacity (Gallons)	Tank Contents	Leaker? (Yes/No)	Tank Status Active/Inactive

2. Is City of Los Angeles Fire Department aware of any leaking above or underground storage tanks on or around Subject? If so, please provide copies of any documents/reports regarding same. Yes **o** No **o**

3. Do you have any records of hazardous, toxic, or flammable materials or wastes used or stored at Subject? Yes **o** No **o**

4. Have you responded to any fires or hazardous materials spills on or around Subject? If so, please explain: Yes **o** No **o**

Please let me know if there are any costs associated with processing this request prior to processing. Your response can either be faxed to **914.694.1335** or mailed to us at the location identified above. In addition, please indicate IVI's project number (PC40812281) on all correspondence. Thank you in advance for your assistance and cooperation.

A Noise and Vibration Technical Appendix

1.0 INTRODUCTION

The noise and vibration technical report describes the existing noise and vibration environment of the proposed residential project at 6422 Selma Avenue and 1540 Wilcox Avenue in the City of Los Angeles. This study evaluates the potential noise and vibration impacts of the Proposed Project pursuant to the California Environmental Quality Act (CEQA). This analysis considers both the temporary noise and vibration impacts that would result from Project construction and the long-term impacts associated with the operation of the Project.

1.1 PROJECT LOCATION

The Project Site is located at 1540 Wilcox Avenue (Wilcox Site) and 6422 Selma Avenue (Selma Site) in the Hollywood Community Plan Area within the City of Los Angeles. The rectangular-shaped Project Site is approximately 0.35 acres and is bounded by Selma Avenue to the north, Schrader Boulevard to the west, Wilcox Avenue to the east and Sunset Boulevard to the south. Infrastructure wise, there is a commercial building located immediately south of the project site, and multi-family housing buildings immediately west of the site on the corner of Wilcox and Selma Avenue.

1.2 PROJECT DESCRIPTION

The Project Site is currently developed with a one-story commercial building currently occupied by a small business, and a one-story storage building which is vacant. The buildings were constructed in 1909 and 1925, respectively. The Project would demolish the existing one-story storage building, retain and refurbish the front third of the one-story commercial building fronting Selma Avenue, demolish the rest of the building, and construct a new 15-story multi-family residential building containing 45 4-bedroom residential units and 36 on-site parking spaces. The Proposed Project would rise to a maximum building height of approximately 180 feet and five inches (180'-5"), and would include a total square footage of approximately 67,599 square feet, with a Floor Area Ratio (FAR) of 4.5 to 1, providing twelve residential levels above two levels of at- and above-grade stacked parking, and ground-floor residential amenity space. A total of 15 percent of the proposed residential units (six units) would be designated as restricted affordable housing for Very Low Income Households.

Vehicle parking for the Project will be provided in a ground floor parking garage with a lift system, which will include 36 parking spaces. Vehicular access to the Project is proposed via the existing entrance on Selma Ave. The existing building at 6422 Selma Ave. will be partially converted into the parking garage entryway and bicycle storage, retaining the building's façade and first third of the original structure.

2.0 ENVIRONMENTAL SETTING

2.1 FUNDAMENTALS OF NOISE AND VIBRATION

Noise

Noise is usually defined as unwanted sound that is an undesirable byproduct of society's normal day-to-day activities. Sound becomes unwanted when it interferes with normal activities, when it causes actual physical harm, and/or when it has adverse effects on health. Noise is measured on a logarithmic scale of sound pressure level known as a decibel (dB). The human ear does not respond uniformly to sounds at all frequencies. For example, the human ear is less sensitive to low and high frequencies than medium frequencies, which more closely correspond with human speech. In response to the sensitivity of the human ear to different frequencies, the A-weighted noise level (or scale), which corresponds better with people's subjective judgment of sound levels, has been developed. This A-weighted sound level, referenced in units of dB(A), is measured on a logarithmic scale such that a doubling of sound energy results in a 3 dB(A) increase in noise level. Typically, changes in a community noise level of less than 3 dB(A) are not noticed by the human ear. Changes from 3 to 5 dB(A) may be noticed by some individuals who are sensitive to changes in noise. A greater than 5 dB(A) increase is readily noticeable, while the human ear perceives a 10 dB(A) increase in sound level to be a doubling of sound.

On the A-weighted scale, the range of human hearing extends from approximately 3 to 140 dB(A). **Table 1, A-Weighted Decibel Scale**, provides examples of A-weighted noise levels from common sources. Noise sources occur in two forms: (1) point sources, such as stationary equipment or individual motor vehicles; and (2) line sources, such as a roadway with a large number of point sources (motor vehicles). Sound generated by a point source typically diminishes (attenuates) at a rate of 6 dB(A) for each doubling of distance from the source to the receptor at acoustically "hard" sites and 7.5 dB(A) at acoustically "soft" sites.[1] For example, if a noise source produces a noise level of 89 dB(A) at a reference distance of 50 feet, the noise level would be 83 dB(A) at a distance of 100 feet from the noise source, 77 dB(A) at a distance of 200 feet, and so on. Noise generated by a mobile source will decrease by approximately 3 dB(A) over hard surfaces and 4.5 dB(A) over soft surfaces for each doubling of distance.

[1] Federal Highway Administration, *Highway Noise Fundamentals*, (1980) 97. Examples of "hard" or reflective sites include asphalt, concrete, and hard and sparsely vegetated soils. Examples of acoustically "soft" or absorptive sites include soft, sand, plowed farmland, grass, crops, heavy ground cover, etc.

Table 1
A-Weighted Decibel Scale

Typical A-Weighted Sound Levels	Sound Level (dB(A), Leq)
Threshold of Pain	140
Jet Takeoff at 100 Meters	125
Jackhammer at 15 Meters	95
Heavy Diesel Truck at 15 Meters	85
Conversation at 1 Meter	60
Soft Whisper at 2 Meters	35

Source: United States Occupational Safety & Health Administration, Noise and Hearing Conservation Technical Manual, 1999.

Sound levels also can be attenuated by man-made or natural barriers (e.g., sound walls, berms, ridges), as well as elevational differences. Noise is most audible when traveling by direct line-of-sight, an interrupted visual path between the noise source and noise receptor. Barriers, such as walls or buildings that break the line-of-sight between the source and the receiver, can greatly reduce noise levels from the source since sound can only reach the receiver by diffraction. Sound barriers can reduce sound levels by up to 20 dB(A) or more. However, if a barrier is not high or long enough to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

Solid walls and berms may reduce noise levels by 5 to 10 dB(A) depending on their height and distance relative to the noise source and the noise receptor.[2] Sound levels may also be attenuated 3 dB(A) by a first row of houses and 1.5 dB(A) for each additional row of houses.[3] The minimum noise attenuation provided by typical structures in California is provided in **Table 2, Building Noise Reduction Factors**.

Sound Rating Scales

Various rating scales approximate the human subjective assessment to the "loudness" or "noisiness" of a sound. Noise metrics have been developed to account for additional parameters, such as duration and cumulative effect of multiple events. Noise metrics are categorized as single event metrics and cumulative metrics, as summarized below.

In order to simplify the measurement and computation of sound loudness levels, frequency weighted networks have obtained wide acceptance. The A-weighted scale, discussed above, has become the most prominent of these scales and is widely used in community noise analysis. Its advantages are that it has shown good correlation with community response and is easily measured. The metrics used in this analysis are all based upon the dB(A) scale.

Equivalent Noise Level

Equivalent Noise Level (Leq) is the sound level corresponding to a steady-state A-weighted sound level containing the same total energy as several single event noise exposure level events during a given sample period. Leq is the "acoustic energy" average noise level during the period of the sample. It is based on the observation that the potential for noise annoyance is dependent on the total acoustical energy content of the noise. The equivalent noise level is expressed in units of dB(A). Leq can be measured for any period, but is typically measured for 15 minutes, 1 hour, or 24 hours. Leq for a 1-hour period is used by the Federal Highway Administration (FHWA) for assessing highway noise impacts. Leq for 1 hour is referred to as the Hourly Noise Level (HNL) in the California Airport Noise Regulations and is used to develop Community

Noise Equivalent Level values for aircraft operations. Construction noise levels and ambient noise measurements in this section use the Leq scale.

Community Noise Equivalent Level

Community Noise Equivalent Level (CNEL) is a 24-hour, time-weighted energy average noise level based on the A-weighted decibel. It is a measure of the overall noise experienced during an entire day. The term "time-weighted" refers to the penalties attached to noise events occurring during certain sensitive periods. In the CNEL scale, 5 dB are added to measured noise levels occurring between the hours of 7:00 p.m. and 10:00 p.m. For measured noise levels occurring between the hours of 10:00 p.m. and 7:00 a.m., 10 dB are added. These decibel adjustments are an attempt to account for the higher sensitivity to noise in the evening and nighttime hours and the expected lower ambient noise levels during these periods. Existing and projected future traffic noise levels in this section use the CNEL scale.

Day-Night Average Noise Level

The day-night average sound level (Ldn) is another average noise level over a 24-hour period. Noise levels occurring between the hours of 10:00 p.m. and 7:00 a.m. are increased by 10 decibels (dB). This noise is weighted to take into account the decrease in community background noise of 10 dB(A) during this period. Noise levels measured using the Ldn scale are typically similar to CNEL measurements.

Adverse Effects of Noise Exposure

Noise is known to have several adverse effects on humans, which has led to laws and standards being set to protect public health and safety, and to ensure compatibility between land uses and activities. Adverse effects of noise on people include hearing loss, communication interference, sleep interference, physiological responses, and annoyance. Each of these potential noise impacts on people is briefly discussed in the following narrative.

Hearing Loss

Hearing loss is generally not a community noise concern, even near a major airport or a major freeway. The potential for noise-induced hearing loss is more commonly associated with occupational noise exposures in heavy industry, very noisy work environments with long-term exposure, or certain very loud recreational activities (e.g., target shooting and motorcycle or car racing). The Occupational Safety and Health Administration (OSHA) identifies a noise exposure limit of 90 dB(A) for 8 hours per day to protect from hearing loss (higher limits are allowed for shorter duration exposures). Noise levels in neighborhoods, even in very noisy neighborhoods, are not sufficiently loud enough to cause hearing loss.

Communication Interference

Communication interference is one of the primary concerns in environmental noise. Communication interference includes speech disturbance and intrusion with activities such as watching television. Noise can also interfere with communications such as within school classrooms. Normal conversational speech is in the range of 60 to 65 dB(A) and any noise in this range or louder may interfere with speech.

Sleep Interference

Noise can make it difficult to fall asleep, create momentary disturbances of natural sleep patterns by causing shifts from deep to lighter stages, and cause awakening. Noise may even cause awakening that a person may or may not be able to recall.

Physiological Responses

Physiological responses are those measurable effects of noise on people that are realized as changes in pulse rate, blood pressure, and other physical changes. Studies to determine whether exposure to high noise levels can adversely affect human health have concluded that, while a relationship between noise and health effects seems plausible, there is no empirical evidence of the relationship.

Annoyance

Annoyance is an individual characteristic and can vary widely from person to person. Noise that one person considers tolerable can be unbearable to another of equal hearing capability. The level of annoyance depends both on the characteristics of the noise (including loudness, frequency, time, and duration), and how much activity interference (such as speech interference and sleep interference) results from the noise. However, the level of annoyance is also a function of the attitude of the receiver. Personal sensitivity to noise varies widely. It has been estimated that 2% to 10% of the population is highly susceptible to annoyance from any noise not of their own making, while approximately 20% are unaffected by noise. Attitudes may also be affected by the relationship between the person affected and the source of noise, and whether attempts have been made to abate the noise.

2.2 NOISE SENSITIVE RECEPTORS

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as natural parks and recreation areas, historic sites, and cemeteries are considered sensitive to increases in exterior

noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. Noise-sensitive receptors surrounding the project site include the Dream Hotel to the northeast of the Project Site across Selma Avenue, the Gilbert Hotel to the west adjacent to the Project Site along Wilcox Avenue, the Wilcox Hotel to the north of the Project Site.

Vibration

Vibration consists of waves transmitted through solid material. Groundborne vibration propagates from a source through the ground to adjacent buildings by surface waves. Vibration may comprise a single pulse, a series of pulses, or a continuous oscillatory motion. The frequency of a vibrating object describes how rapidly it is oscillating and is measured in hertz (Hz). Most environmental vibrations consist of a composite, or "spectrum" of many frequencies, and are generally classified as broadband or random vibrations. The normal frequency range of most groundborne vibration that can be felt generally starts from a low frequency of less than one Hz to a high of about 200 Hz. Vibration is often measured in terms of the peak particle velocity (PPV) in inches per second (in/sec) when considering impacts on buildings or other structures, as PPV represents the maximum instantaneous peak of vibration that can stress buildings. Because it is a representation of acute vibration, PPV is often used to measure the temporary impacts of short-term construction activities that could instantaneously damage built structures. Vibration is often also measured by the Root Mean Squared (RMS) because it best correlates with human perception and response. Specifically, RMS represents "smoothed" vibration levels over an extended period of time and is often used to gauge the long-term chronic impact of a project's operation on the adjacent environment. RMS amplitude is the average of a signal's squared amplitude. It is most commonly measured in decibel notation (VdB).

Vibration energy attenuates as it travels through the ground, causing the vibration amplitude to decrease with distance away from the source. High frequency vibrations reduce much more rapidly than low frequencies, so that in the far-field from a source, the low frequencies tend to dominate. Soil properties also affect the propagation of vibration. When groundborne vibration interacts with a building, there is usually a ground-to-foundation coupling loss (i.e., the foundation of the structure does not move in sync with the ground vibration), but the vibration can also be amplified by the structural resonances of the walls and floors. Vibration in buildings is typically perceived as rattling of windows or items on shelves, or the motion of building surfaces. At high levels, vibration can result in damage to structures.

Manmade groundborne vibration is generally limited to areas within a few hundred feet of certain types of construction activities, especially pile driving. Road vehicles rarely create enough groundborne vibration to be perceptible to humans unless the road surface is poorly maintained and there are potholes or bumps. If traffic induces perceptible vibration in buildings, such as window rattling or shaking of small loose items

(typically caused by heavy trucks in passing), then it is most likely an effect of low-frequency airborne noise or ground characteristics. Human annoyance by vibration is related to the number and duration of events. The more events or the greater the duration, the more annoying it will be to humans.

2.3 EXISTING CONDITIONS

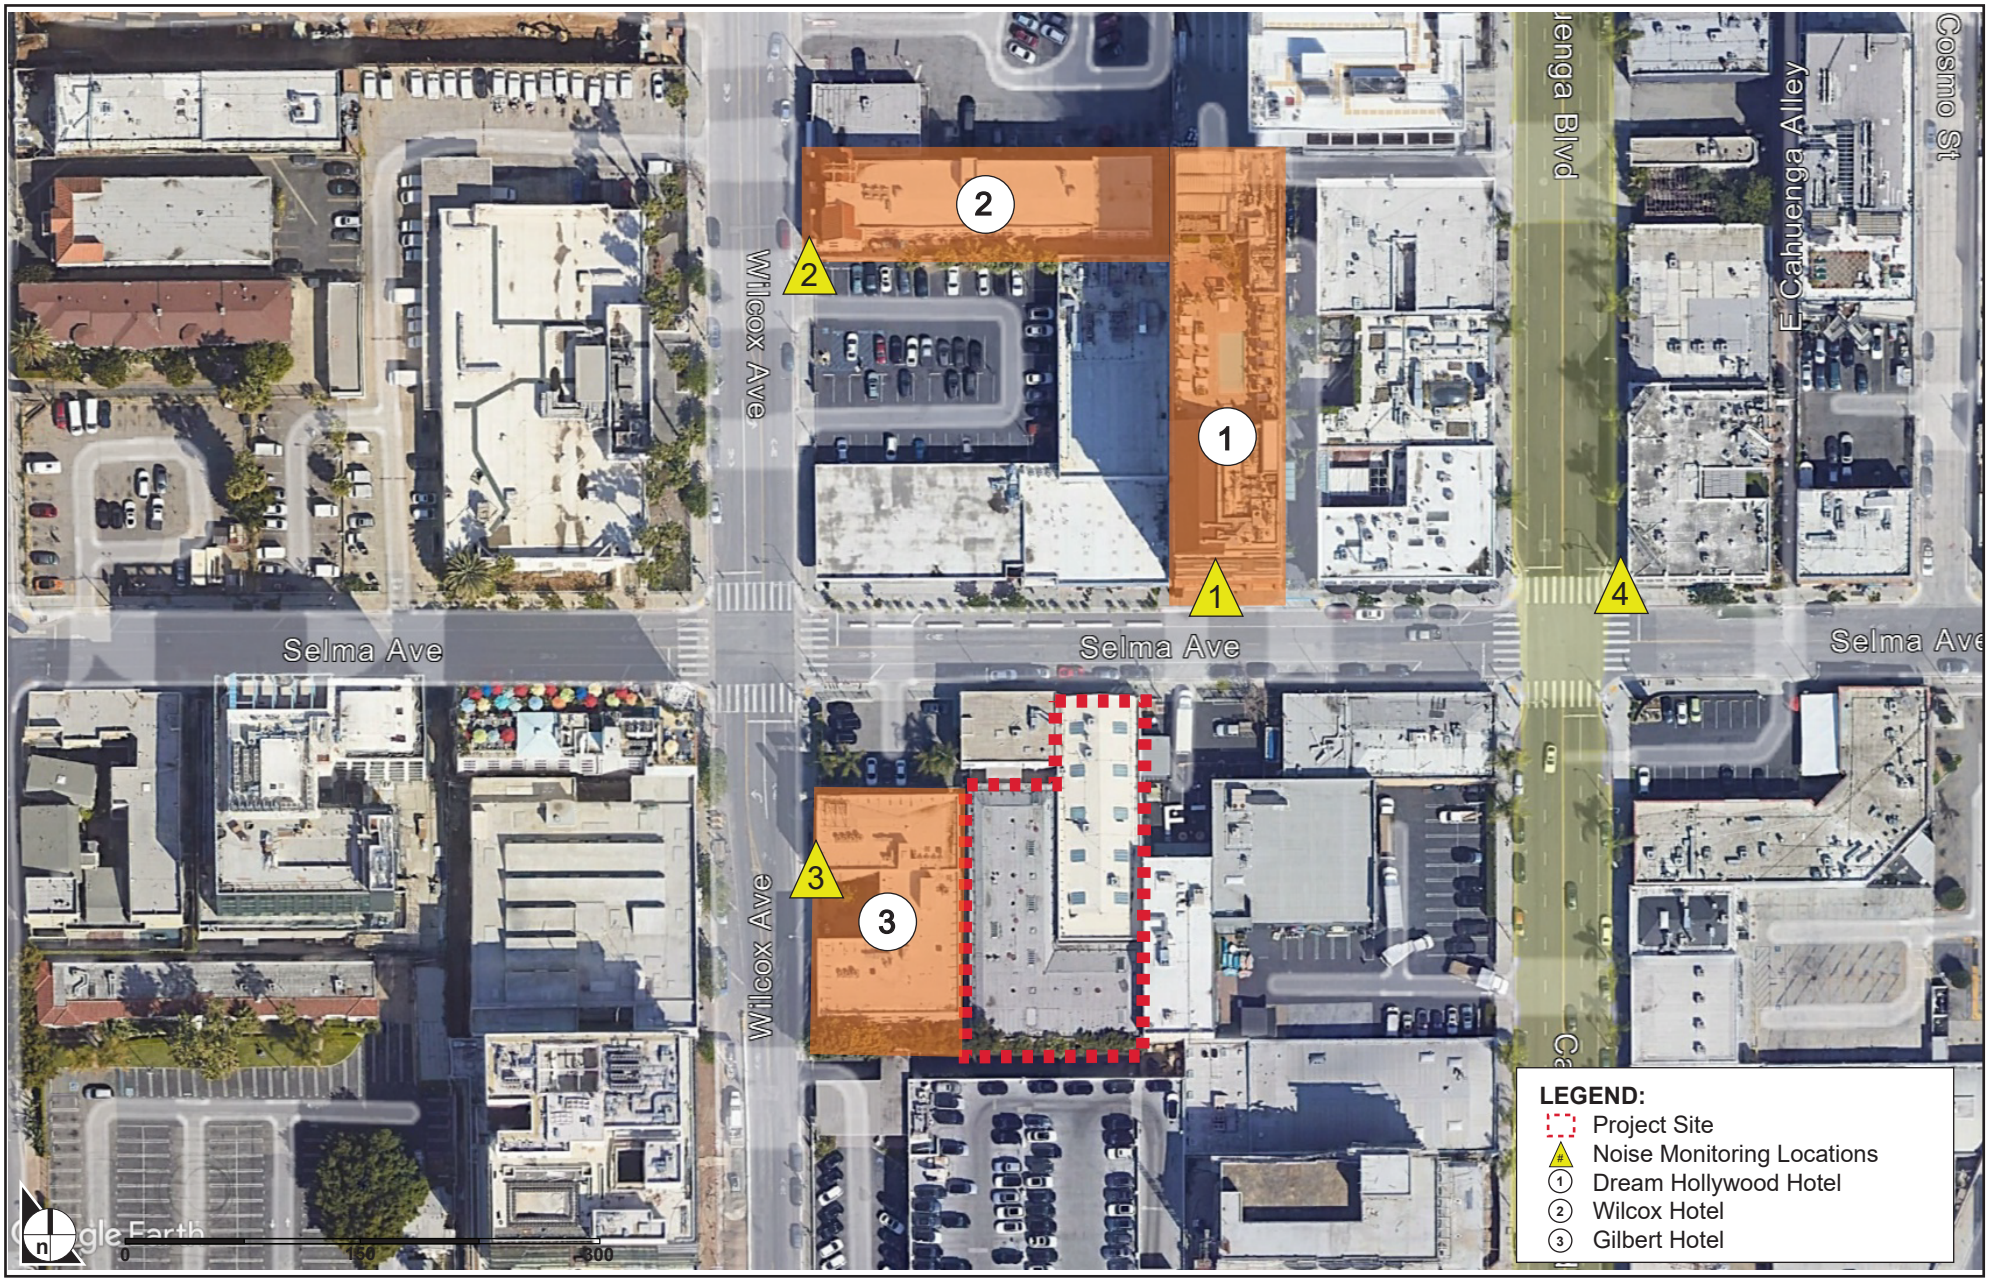
Noise

A noise monitoring survey was completed to establish existing noise levels in the vicinity of the project site. Transportation noise is the main source of noise in urban environments, largely from the operation of internal combustion engines and frictional contact between vehicles and ground and air.[4] It should be noted that due to the ongoing Coronavirus pandemic, traffic volumes are likely lower than usual. Therefore, noise measurements that were conducted in February 2021 are likely lower than pre-pandemic conditions and therefore conservative measurements for the existing noise environment. **Figure 1, Noise Monitoring Locations** maps the noise measurement locations relative to the project site. The existing average daily noise levels are presented in **Table 4, Ambient Sound-Level Readings.**

Table 4
Ambient Sound-Level Readings

Noise Measurement Location #	Street Address	dB(A) Leq
Location #1	6417 Selma Ave (Dream Hollywood Hotel)	75.8
Location #2	1622 Wilcox Ave (Wilcox Hotel)	62.4
Location #3	1550 Wilcox Ave (Gilbert Hotel)	68.6
Location #4	6371 Selma Ave (commercial uses)	70.0

Source: Impact Sciences, Inc., February 2021



Vibration

The only sources of groundborne vibration in the Project Site vicinity are heavy-duty vehicles (e.g., refuse trucks, delivery trucks, and school buses) traveling on local roadways. Trucks and buses typically generate groundborne vibration velocity levels of around 63 VdB, and these levels could reach 72 VdB where trucks

4 World Health Organization, https://www.who.int/docstore/peh/noise/Comnoise-2.pdf accessed July 2, 2020.

and buses pass over bumps in the road.[5] In terms of PPV levels, a heavy-duty vehicle traveling at a distance of 50 feet can result in a vibration level of approximately 0.001 inch per second.

3.0 REGULATORY FRAMEWORK

3.1 STATE REGULATIONS

Title 24, California Code of Regulations

The California Noise Insulation Standards of 1988 (California Code of Regulations Title 24, Section 3501 et seq.) require that interior noise levels from the exterior sources not exceed 45 dB(A) Ldn/community noise equivalent level (CNEL)[6] in any habitable room of a multi-residential use facility (e.g., hotels, motels, dormitories, long-term care facilities, and apartment houses and other dwellings, except detached single-family dwellings) with doors and windows closed. Where exterior noise levels exceed 60 dB(A) CNEL/Ldn, an acoustical analysis is required to show that the building construction achieves an interior noise level of 45 dB(A) CNEL/Ldn or less.

3.2 LOCAL PLANS AND POLICIES

City of Los Angeles Municipal Code

The LAMC provides two types of noise standards that are relevant to this analysis: 1) construction noise standards, and 2) general noise ordinance standards. The construction noise standards apply only to construction activities, while the general noise ordinance standards apply to noise generated by land use activities. **Table 5** shows the State's noise and land use compatibility chart.

Construction Noise Standards

The City of Los Angeles Municipal Code (LAMC) has established noise regulations for both short-term construction activities and long-term operation of a project. The LAMC regulates noise from any powered equipment or powered hand tool in a residential zone (or within 500 feet) at a distance of 50 feet between 7:00 AM and 10:00 PM to the following:

- 75 dB(A) for construction, industrial, and agricultural machinery including crawler-tractors, dozers, rotary drills and augers, loaders, power shovels, cranes, derricks, motor graders, paving machines, off-highway trucks, ditchers, trenchers, compactors, scrapers, wagons, pavement breakers, compressors and pneumatic or other powered equipment;

6 Measurements are based on Ldn or CNEL.

- 75 dB(A) for powered equipment of 20 horse-power or less intended for infrequent use in residential areas, including chain saws, log chippers and powered hand tools;

- 65 dB(A) for powered equipment intended for repetitive use in residential areas, including lawn mowers, backpack blowers, small lawn and garden tools.[7]

These noise limits do not apply where compliance is deemed technically infeasible. Specifically, such activities are allowed when it is demonstrated that compliance is not possible "despite the use of mufflers, shields, sound barriers, and/or other noise reduction device or techniques during the operation of the equipment."[8]

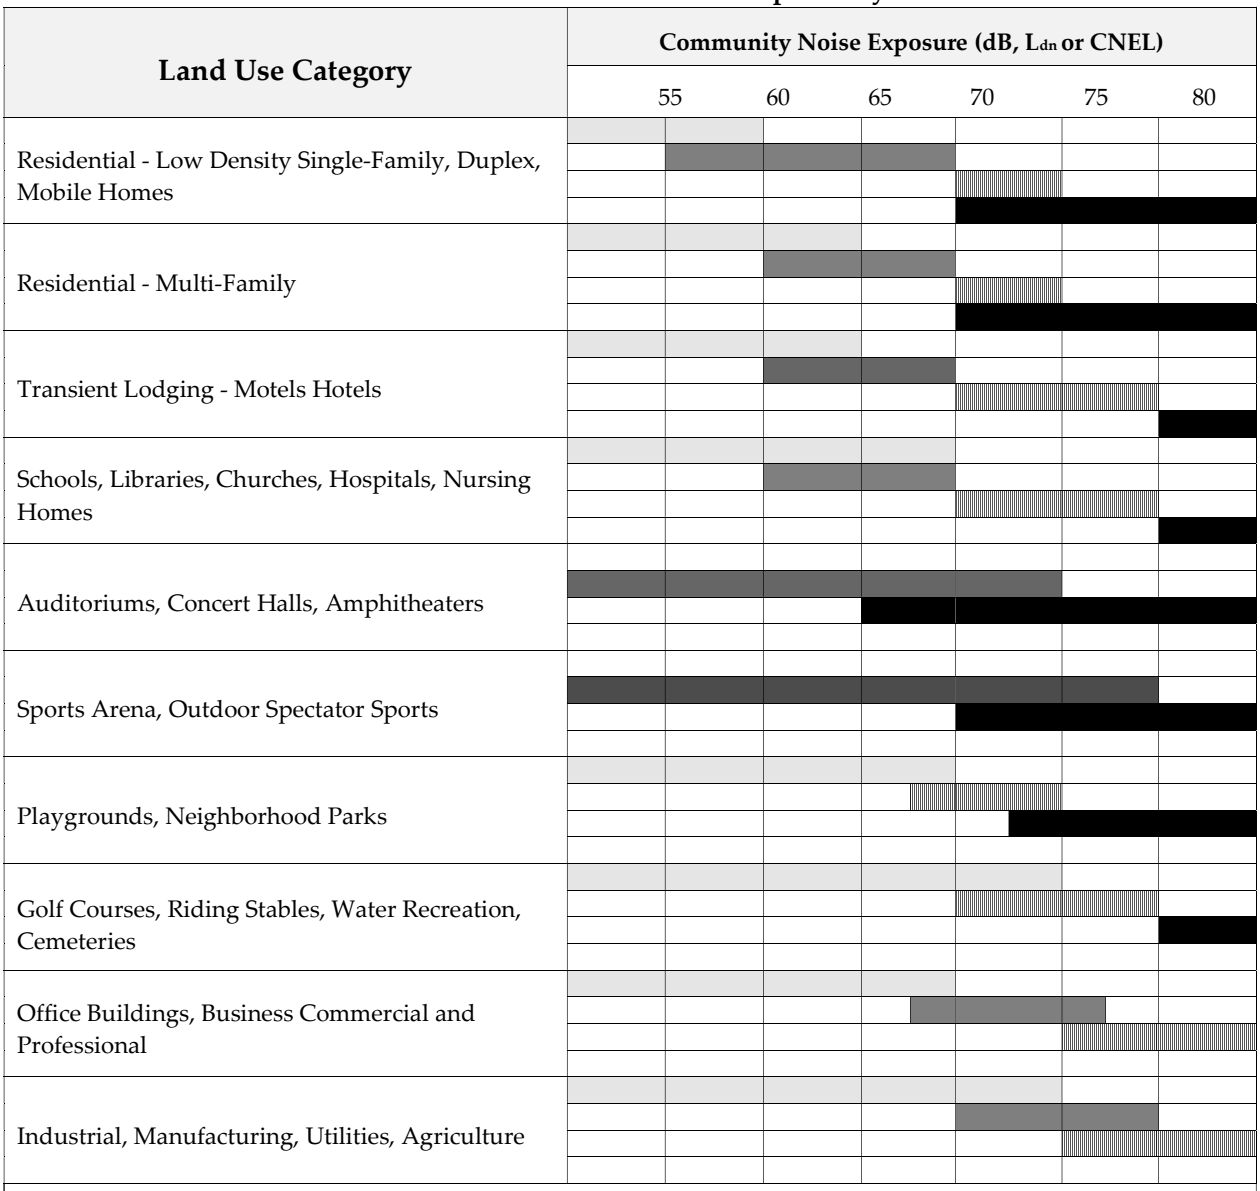
Section 41.40 of the LAMC also prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday.[9] This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. Construction noise intruding onto property zoned for manufacturing or industrial uses is exempt from these standards.

General Noise Ordinance

LAMC Chapter XI, "Noise Regulation," regulates noise from non-transportation noise sources such as commercial or industrial operations, mechanical equipment or residential activities. Although these regulations do not apply to vehicles operating on public rights-of-way, the regulations do apply to noise generated by vehicles on private property, such as truck operations at commercial or industrial facilities. The exact noise standards vary depending on the type of noise source, but the allowable noise levels are generally determined relative to the existing ambient noise levels at the affected location. LAMC Section 111.01 (a) defines the ambient noise as "the composite of noise from all sources near and far in a given environment, exclusive of occasional and transient intrusive noise sources and of the particular noise source or sources to be measured. Ambient noise shall be averaged over a period of at least 15 minutes."

Section 112.01 of the LAMC would prohibit any amplified noises, especially those from outdoor sources (e.g., outdoor speakers, stereo systems, etc.) from exceeding the ambient noise levels of adjacent properties by more than 5 dB(A). Amplified noises would also be prohibited from being audible at any distance greater than 150 feet from the Project's property line.

---



7 City of Los Angeles, Municipal Code Chapter XI-Noise Regulation (Section 112.05), 1986.

8 Ibid.

9 City of Los Angeles, Municipal Code Chapter IV-Public Welfare (Section 41.40), 1984.

LAMC Section 112.02 (a) would prevent project HVAC systems and other mechanical equipment from elevating noise levels at neighboring residences by more than 5 dB(A).

Table 5
State of California Noise/Land Use Compatibility Matrix

Source: California Office of Planning and Research, General Plan Guidelines - Noise Element Guidelines (Appendix C), 2003.

4.0 NOISE AND VIBRATION ANALYSIS

4.1 THRESHOLDS OF SIGNIFICANCE

The impacts of the proposed project related to noise would be considered significant if they would exceed any of the following Thresholds of Significance, in accordance with Appendix G of the *California Environmental Quality Act (CEQA) Guidelines*:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
    - Construction noise impacts would be significant if the Project violates Section 41.40 of the LAMC, which prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday. This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. In addition, construction noise impacts would be significant if as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 A-weighted decibels (dBA) at a distance of 50 feet from the noise source. However, this noise limitation does not apply where compliance is technically infeasible. Technically infeasible means that the above noise limitation cannot be complied with despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. While the Project Site is not located within 500 feet of a residential zone, this analysis has conservatively applied this standard as there are hotels located in the vicinity.
    - Operational noise impacts would be significant if the ambient noise level measured at the property line of affected uses increases by 3 dB(A) CNEL to or within the "normally unacceptable" or "clearly unacceptable" category, or if the ambient noise level measured at the property line of affected uses increases by 5 dB(A) CNEL or more. These "normally unacceptable" and "clearly unacceptable" categories refer to those outlined by the State's noise and land-use compatibility chart, shown in Table 5.
    - .
- Generation of excessive groundborne vibration or groundborne noise levels;

- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

4.2 METHODOLOGY

Noise levels associated with project-related construction activities were calculated using the FHWA Roadway Construction Noise Model (RCNM) and evaluated with existing ambient noise levels to determine new ambient noise levels with construction activities. The California Emissions Estimator Model (CalEEMod) construction equipment assumptions were used to develop a construction equipment list used for RCNM inputs. Noise levels were compared to the City's noise ordinance which includes provisions regarding construction noise levels.

Traffic noise in the project area was estimated using average daily traffic information obtained for the project to get a percentage of increase to traffic volumes. Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.[10]

4.3 PROJECT IMPACTS AND MITIGATION MEASURES

Impact NOI-1 **Would the proposed project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project site in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies? (*Less than Significant with Mitigation*)**

Construction Impacts

Temporary on-Site Construction Activity Noise

During all construction phases, noise-generating activities could occur at the Project site between the hours of 7:00 A.M. and 9:00 P.M. Monday through Friday, in accordance with Section 41.40(a) of the LAMC. On-site activities could include the use of heavy equipment such as excavators and loaders, as well as smaller equipment such as saws, hammers, and pneumatic tools.

10 California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Protocol.* September 2013.

Noises from demolition and grading activities are typically the foremost concern when evaluating a project's construction noise impacts, as these activities often require the use of heavy-duty, diesel-powered earthmoving equipment. The types of heavy equipment required for these activities may include excavators, bulldozers, front-end loaders, graders, backhoes, and scrapers.

For this Project, construction noise levels were estimated using the FHWA Roadway Construction Noise Model (RCNM) based on the Project's anticipated construction equipment identified in the Project's Air Quality and Greenhouse Gas Technical Report provided as Appendix B to the SCEA. The Project's peak estimated unmitigated construction noise levels are shown in **Table 6, Construction Noise Impacts at Off-Site Sensitive Receptors – Unmitigated** and summarized below.

Table 6
Construction Noise Impacts at Off-Site Sensitive Receptors (without Mitigation)

Receptor	Maximum Construction Noise Level (dB(A) L_{eq})	Existing Ambient Noise Level (dB(A) L_{eq})	Above LAMC 75 dB(A) Limit?
Location #1 - 6417 Selma Ave (Dream Hollywood Hotel)	74.6	75.8	No
Location #2 - 1622 Wilcox Ave (Wilcox Hotel)	68.2	62.4	No
Location #3 - 1550 Wilcox Ave (Gilbert Hotel)	84.2	68.6	Yes
Location #4 - 6371 Selma Ave (commercial uses)	69.2	70.0	No

Source: Impact Sciences, 2021
Note: Measurement Location #4 is a commercial use and not considered a sensitive use but is show for information purposes regarding ambient noise level increases at the intersection of Cahuenga Blvd. and Selma Ave.

As stated previously, construction noise impacts would be significant if, as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 A-weighted decibels (dBA) at a distance of 50 feet from the noise source. However, this noise limitation does not apply where compliance is technically infeasible. Technically infeasible means that the above noise limitation cannot be complied with despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of the equipment. Although the estimated unmitigated construction-related noise levels associated with the Project could exceed the noise standard of 75 dBA at 50 feet from the noise source as outlined in LAMC Section 112.05, the Project would implement all technically feasible reduction measures in compliance with the standards set forth in LAMC Section 112.05. Specifically, **Mitigation Measure NOI-1**, which requires the use of improved mufflers and silencers, would

achieve an approximately 10 dBA reduction.[11] The Project would also implement additional techniques to reduce construction noise levels as required by the LAMC. For example, construction activities would be scheduled so as to avoid operating several pieces of equipment simultaneously, which causes high noise levels. Further, noise and groundborne vibration construction activities whose specific location on the site are flexible (e.g., operation of compressors or generators, cement mixing, and general truck idling) will be conducted as far as possible from the nearest noise- and vibration-sensitive land uses. However, given the fluid dynamics of a construction site, this analysis conservatively does not take any quantified reduction associated with these techniques. See **Table 7, Construction Impacts at Off-Site Sensitive Receptors (with Mitigation)**, below which illustrates the effectiveness of **Mitigation Measure NOI-1**. With the implementation of **Mitigation Measure NOI-1**, construction noise levels would be reduced in a manner consistent with the LAMC, and impacts would be less than significant.

Mitigation Measures:

MM-NOI-1: Noise-generating equipment operated at the Project Site shall be equipped with noise control devices, such as mufflers, lagging (enclosures for exhaust pipes), and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. All equipment shall be properly maintained to assure that no additional noise, due to worn or improperly maintained parts, would be generated.[12]

11 Based on information from the United States Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971. Per Table V, Noise Control For Construction Equipment therein, use of improved mufflers/silencers would achieve approximately 10 dBA reduction.

12 See United States Environmental Protection Agency, Noise from Construction Equipment and Operations, Building Equipment and Home Appliances, PB 206717, 1971. Per Table V, Noise Control For Construction Equipment therein, use of improved mufflers/silencers would achieve approximately 10 dBA reduction.

Temporary Off-Site Construction Activity Noise

Construction haul trucks would generate noise off-site during site demolition and would peak during grading. This would include removal of materials from the project site, base materials, and demolished materials. While this vehicle activity would increase ambient noise levels along the haul route, ambient noise levels would not be expected to significantly increase ambient noise levels by 3 dB(A) or greater at any noise sensitive land use. Studies have shown that a 3 dB(A) increase in sound level pressure is barely detectable by the human ear.

A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.[13] While this vehicle activity would marginally increase ambient noise levels along the haul route, it would not be expected to significantly increase ambient noise levels by 5 dB(A) or greater at any noise sensitive land uses. A 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant.

13 California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Protocol.* September 2013.

Average daily traffic (ADT) counts from the City of Los Angeles Department of Transportation were used to estimate the existing traffic along Selma Avenue near the project site. Traffic counts indicate average daily traffic along Selma Avenue near the project site to be approximately 2,759 vehicles per day.[14]

The demolition phase for project construction would average approximately 16 haul truck trips per day. Because haul trucks generate more noise than traditional passenger vehicles, a 19.1 passenger car equivalency (PCE) was used to convert haul truck trips to a reference level conversion to an equivalent number of passenger vehicles.[15] Therefore, 16 haul truck trips would account for approximately 305 PCE trips per day during the demolition phase. This would account for approximately 11.1 percent of the daily traffic that passes through Selma Avenue near the project site. Since it would take a doubling (i.e. a 100 percent increase) of roadway traffic volume to increase noise levels by 3 dB(A), the addition of haul trucks from the project would not increase traffic to levels capable of producing 3 dB(A) ambient noise increases.

Though the addition of haul trucks would alter the fleet mix of the Project haul route, their minimal addition to local roadways would not nearly double those roads' traffic volumes, let along augment their traffic to levels capable of producing 5 dB(A) ambient noise increases. As a result, off-site construction noise impacts related to haul trips would be considered less than significant.

Operational Impacts

Operational Traffic Noise

As discussed above, a 3 dB(A) increase in roadway noise levels requires an approximate doubling of roadway traffic volume, assuming that travel speeds and fleet mix remain constant. A 3 dB(A) noise level increase is the minimum noise level increase required for a human to perceive a change in ambient noise.

Traffic volumes in the project area were obtained from the Los Angeles Department of Transportation traffic count information. Traffic counts indicate average daily traffic along Selma Avenue near the project site to be approximately 2,759 vehicles per day.[16]

14 City of Los Angeles Department of Transportation. May 2015. 2 Nu-Metrics Traffic Analyzer Study Computer Generated Summary Report. Available at: https://navigatela.lacity.org/dot/traffic_data/survey_data/selma.bet.wilcoxandschrader.eb.1.150521-num.pdf, accessed April 13, 2021.

15 Caltrans, Technical Noise Supplement Table 3-3, 2013.

16 City of Los Angeles Department of Transportation. May 2015. 2 Nu-Metrics Traffic Analyzer Study Computer Generated Summary Report. Available at: https://navigatela.lacity.org/dot/traffic_data/survey_data/selma.bet.wilcoxandschrader.eb.1.150521-num.pdf, accessed April 13, 2021.

Trip generation information for the Proposed Project was added to average daily traffic volumes for to determine whether traffic increased enough to result in an audible noise level increase. The DOT Traffic Count shows that near the project site, Selma Avenue has a daily traffic volume of approximately 2,759 vehicles. The Project is estimated to have a net increase of 126 daily vehicle trips. An increase of 126 trips would account for approximately 4.6 percent of the average daily traffic volume near the Project Site. This volume is not nearly the doubling (i.e., 100 percent increase) of traffic volume required for a 3 dB(A) increase in noise. This increase in traffic volumes compared to current counts is not significant enough to cause an audible increase in traffic noise and impacts would be less than significant.

Operational Stationary Noise

Regulatory compliance with LAMC Sec.112.02 would ultimately ensure that noises from sources such as heating, air conditioning, and ventilation systems not increase ambient noise levels at neighboring occupied properties by more than 5 dB(A). Given this regulation, ambient noise levels, and the relatively quiet operation of modern HVAC systems, these on-site noise sources would not be capable of causing the ambient noise levels of nearby uses to increase by 3 dB(A) CNEL to or within their respective "normally unacceptable" or "clearly unacceptable" noise categories, or by 5 dB(A) or greater overall.

Parking noise typically generates noise levels of approximately 60 dB(A) at 50 feet. However, parking from the project would occur on the first two levels of the residential building with the driveway along Selma Avenue. Parking noise from within the structure would likely be inaudible, or at the very least considerably attenuated at nearby receptors. These parking noises would not exceed the normally acceptable level of noise identified in **Table 5**. Therefore, parking noise would result in a less than significant impact.

Impact NOI-2 **Would the proposed project result in the generation of excessive groundborne vibration or groundborne noise levels? *(Less than Significant with Mitigation).***

The Federal Transit Administration provides groundborne vibration impact criteria with respect to building damage during construction activities. PPV, expressed in inches per second, is used to measure building vibration damage. Construction vibration damage criteria are assessed based on structural category (e.g. reinforced-concrete, steel, or timber). FTA guidelines consider 0.2 inch/sec PPV to be the significant impact level for non-engineered timber and masonry buildings. Structures or buildings constructed of reinforced concrete, steel, or timber have a vibration damage criterion of 0.5 inch/sec PPV pursuant to FTA guidelines.[17]

17 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual. September* 2018.

Groundborne vibration generated by construction activities associated with the proposed project would affect sensitive uses located in close proximity to the project site. **Table 8, Vibration Levels at Off-Site Sensitive Uses from Project Construction** shows the estimated vibration velocities for nearby sensitive receptors.

Table 8
Vibration Levels at Off-Site Sensitive Uses from Project Construction (without mitigation)

Sensitive Uses Off-Site	Distance to Project Site (ft.)	Receptor Significance Threshold PPV (in/sec)	Estimated PPV (in/sec)
Location #1 - 6417 Selma Ave (Dream Hollywood Hotel)	150	0.5	0.006
Location #2 - 1622 Wilcox Ave (Wilcox Hotel)	315	0.2	0.002
Location #3 - 1550 Wilcox Ave (Gilbert Hotel)	10	0.2	0.352
Location #4 - 6371 Selma Ave (commercial uses)	280	0.5	0.002

Source: Impact Sciences, 2021.

The vibration velocities predicted to occur at the nearest sensitive receptors at the Gilbert Hotel would be 0.352 in/sec PPV. It should be noted that this would be a worst-case scenario when potential heavy construction equipment would be located near the closest boundary to the Gilbert Hotel. Furthermore, construction equipment does not typically operate on the property line edge but is set back which would further reduce vibration impacts. Nevertheless, due to the close proximity of the Gilbert Hotel to the project site, **Mitigation Measure NOI-2** would be required to reduce potential construction vibration impacts on off-site receptors to a less than significant level.

Furthermore, the Historic Resources Assessment Report for the Proposed Project noted that vibration impacts from Project construction could potentially impact the existing on-site structure (Baker Garage) at 6422 Selma Avenue, which is noted to be closely tied to both the history of early Hollywood and the development of the automobile in Los Angeles. **Mitigation Measure NOI-2** would ensure that vibration impacts to both off-site and on-site receptors are less than significant.

Mitigation Measures:

MM-NOI-2: Prior to the start of construction, surveys shall be performed to document the conditions of the masonry of the remaining walls at 6422 Selma Avenue as well as the Gilbert Hotel

building. A structural monitoring program shall be implemented and recorded during construction to ensure that ground borne vibration levels do not exceed 0.12 inches per second, PPV. The structural monitoring plan shall include documentation, consisting of video and/or photographic documentation of accessible and visible areas on the exterior of the buildings. A historic architect (meeting the SOI's Professional Qualification Standards) or structural engineer with experience with historic masonry buildings shall establish baseline structural conditions of the building and prepare the shoring design. Additionally, a qualified acoustical engineer shall be retained to review the proposed construction equipment and develop and implement a vibration monitoring program capable of documenting the construction-related ground vibration levels at the Project site during demolition and excavation phases where heavy construction equipment (e.g., large bulldozer and drill rig) would be operating within 15 feet of the affected buildings.

The vibration monitoring system shall measure and continuously store the peak particle velocity (PPV) in inch/second. Vibration data shall be stored on a one-second interval. The system shall also be programmed for two preset velocity levels: a warning level of 0.07 inch/second (PPV) and a regulatory level of 0.12 inch/second (PPV). The system shall also provide real-time alert when the vibration levels exceed either of the two preset levels.

- In the event the warning level of 0.07 inch/second (PPV) is triggered, the contractor shall identify the source of vibration generation and provide steps to reduce the vibration level, including but not limited to halting/staggering concurrent activities and utilizing lower vibratory techniques.

- In the event the regulatory level of 0.12 inch/second (PPV) is triggered, the contractor shall halt the construction activities and visually inspect the Baker Garage for any damage. Results of the inspection must be logged. The contractor shall identify the source of vibration generation and provide steps to reduce the vibration level. Vibration measurement shall be made with the new construction method to verify that the vibration level is below the warning level of 0.07 inch/second (PPV). Construction activities may then restart.

- In the event damage occurs to historic finish materials due to construction vibration, such materials shall be repaired in consultation with a qualified preservation consultant.

The structure-monitoring program shall be submitted to the Department of Building and Safety and received into the case file for the associated discretionary action permitting the Project prior to initiating any construction activities.

Implementation of **Mitigation Measure NOI-2** would require the development of a vibration monitoring program. The program would include real time monitoring of vibration levels which would alert when vibration levels reach a warning level of 0.07 in./sec. PPV and a regulatory level of 0.12 in./sec. PPV. Therefore, vibration impacts associated with building damage due to construction activities would result in a less than significant impact with mitigation.

Impact NOI-3 **For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise? *(No Impact).***

The project site is not in the vicinity of a private airstrip or airport land use plan. Likewise, the project site is not located within an airport land use plan or within two miles of a public airport or public use airport. The nearest airport is the Bob Hope Airport located approximately 6.5 miles to the north of the Project Site. As such, the project would not expose people residing or working in the project area to excessive airport-related noise levels. No impact would occur from the proposed project and no further analysis is required.

APPENDIX G

Transportation Assessment

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

6422 W Selma Av
DOT Case No. CEN20-49948

Date: February 18, 2021

To: Susan Jimenez, Administrative Clerk
Department of City Planning

From: Wes Pringle, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION ASSESSMENT FOR THE PROPOSED RESIDENTIAL PROJECT LOCATED AT 6422 WEST SELMA AVENUE (PAR-2020-5614-VHCA/ADM-2020-5245-TOC)**

The Department of Transportation (DOT) has reviewed the trip generation and vehicle miles traveled (VMT) screening assessment prepared by Linscott, Law & Greenspan, Engineers (LLG), dated February 2, 2021, for the proposed 6422 Selma Residential project located at 6422 West Selma Avenue in the Central Area Planning Commission (APC) and a Transit Oriented Community (TOC) Tier 3.

The 6422 Selma Residential project, located southeast of the intersection of Selma Avenue and Wilcox Avenue, will remodel and expand the existing one-story office building at 6422 West Selma Avenue (see **Attachment A** into a tower, demolish the storage building on the adjacent 1550 Wilcox Avenue, and construct a 14-story building. The lot line will be adjusted following the 1550 Wilcox demolition in order for this portion of 1550 Wilcox Avenue to become part of the proposed project site. The proposed project will be comprised of 40 multi-family dwelling units, five affordable housing family-type dwelling units, 38 vehicle parking spaces, and 45 (40 long-term and 5 short-term) bicycle parking spaces. Access to the building will be provided via a driveway along Selma Avenue as illustrated in **Attachment B**.

In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a VMT analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, the access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG).

A trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips threshold requiring further analysis. Using the City of Los Angeles VMT Calculator Version 1.3 tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project does not exceed the net 250 daily vehicle trips threshold. A copy of the VMT calculator screening page is provided as **Attachment C** to this report.

DOT concurs with the conclusion of the analysis that the project trip generation does not meet the trip threshold to require a traffic impact analysis. Therefore, DOT will not require the preparation of a traffic impact analysis for this project.

Please note this DOT assessment does not constitute approval of the driveway dimensions and internal circulation schemes. Those require separate review and approval and should be coordinated with DOT's Citywide Planning Coordination Section (201 N. Figueroa Street, 5th Floor, Room 550, at 213-482-7024).

If you have any questions, please contact Eileen Hunt of my staff at (213) 972-8481.

Project Screening Summary

Existing Land Use	Proposed Project
47 Daily Vehicle Trips	172 Daily Vehicle Trips
349 Daily VMT	1,028 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	125 Net Daily Trips
The net increase in daily VMT ≤ 0	679 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	0.000 ksf

The proposed project is not required to perform VMT analysis.

Measuring the Miles

MEMORANDUM

To:	Eileen Hunt Los Angeles Department of Transportation	Date:	February 2, 2021
From:	Clare M. Look-Jaeger, P.E. CL-Jaeger Chin S. Taing, PTP, RSP1 CST Linscott, Law & Greenspan, Engineers	LLG Ref:	1-19-4328-2
Subject:	**6422 Selma Residential Project – Trip Generation and Vehicle Miles Traveled (VMT) Screening Assessment (6422 Selma Avenue)**		

Linscott, Law & Greenspan, Engineers (LLG) has prepared this memorandum to summarize the trip generation and VMT screening assessment for the proposed 6422 Selma Residential project ("proposed project" herein). The trip generation and VMT screening assessment includes a comparison of potential traffic generation between the proposed project and the existing use on the project site located at 6422 Selma Avenue. The project is also related to a planning application to provide a lot line adjustment between the two properties (i.e., 6422 Selma Avenue and 1540-1552 Wilcox Avenue site) following the demolition of the storage building on the Wilcox site.

Briefly, it is concluded that the proposed 6422 Selma Residential project is expected to generate seven (7) net new vehicle trips (i.e., 3 fewer inbound trips and 10 additional outbound trips) during the weekday AM peak hour when compared with the current occupancy of the existing site. During the weekday PM peak hour, the proposed project is expected to generate eight (8) net new vehicle trips (i.e., 9 additional inbound trips and 1 fewer outbound trip) when compared with the current occupancy of the existing site. Using the City's current VMT calculator, over a 24-hour period, the proposed project is forecast to result in 125 additional daily trip ends during a typical weekday when compared with the current occupancy of the existing site. However, as the project is expected to generate less than 250 net new average daily trips (ADT), LLG has concluded that no further analysis is required for purposes of satisfying the requirements of the California Environmental Quality Act (CEQA).

This trip generation assessment includes a description of existing project site conditions, a summary of the proposed project description, a summary of the existing site and proposed project trip generation forecasts, and a comparison of the subject trip generation forecasts.

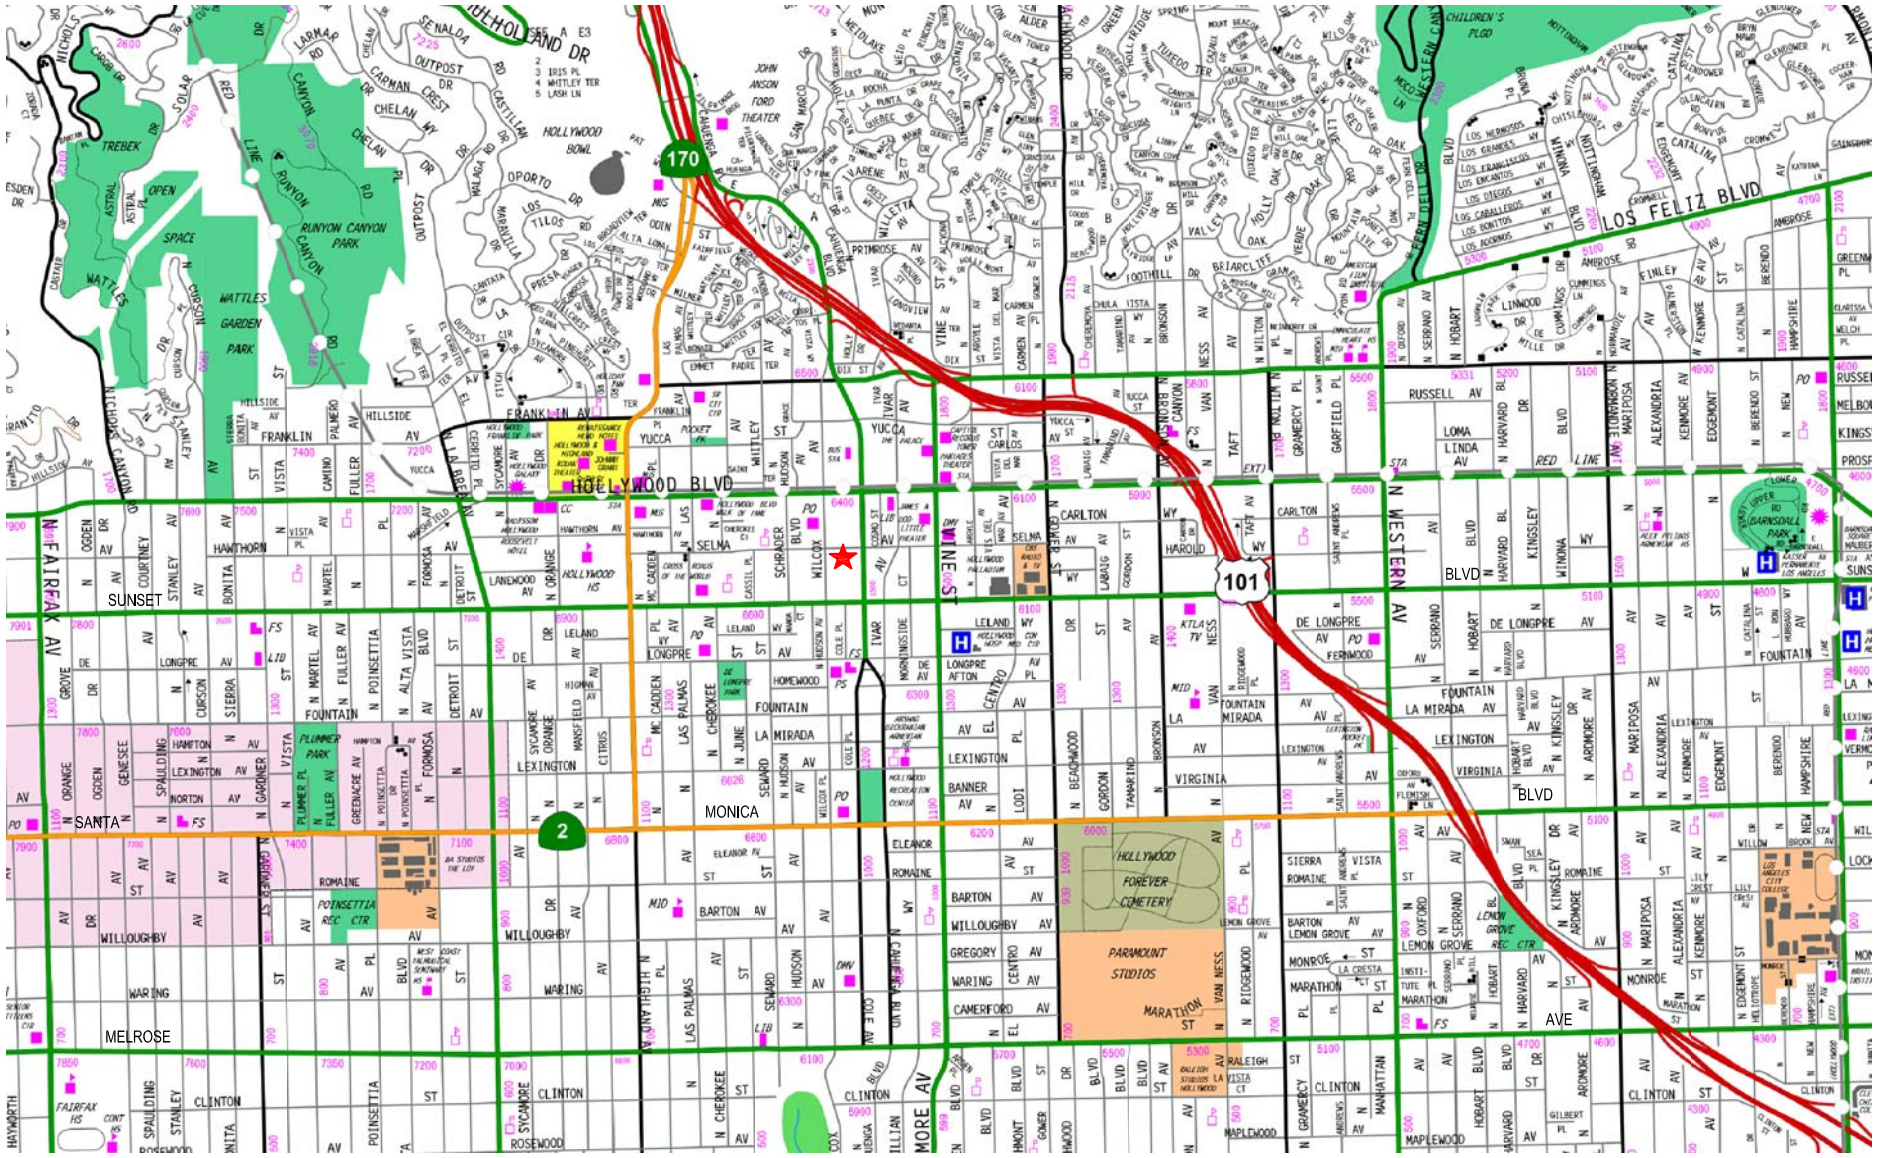
EXISTING CONDITIONS



The proposed project site is located at 6422 Selma Avenue in the Hollywood Community Plan area of the City of Los Angeles, California. The proposed project site is generally bounded by Selma Avenue to the north, commercial uses to the south, an existing video production studio to the east, and an urgent care center and the Gilbert Hotel to the west. The proposed project site and general vicinity are shown in ***Figure 1***. An aerial photograph of the project site and vicinity is displayed in ***Figure 2***.

The existing Selma site is currently developed with a one-story office building of approximately 6,522 square feet. As mentioned previously, the project is also related to the adjacent 1550 Wilcox Avenue site which is currently developed with the three-story, 68-room Gilbert Hotel and a one-story storage building of approximately 9,945 square feet.

The proposed Selma site is planned to comprise a total of 15,022 square feet, following the demolition of the storage building on the Wilcox site and lot line adjustment of that area to the Selma site. The existing office building on the Selma site will be remodeled and expanded to accommodate the proposed tower. The exterior façade of the historic building will remain.

Based on the guidelines set forth in LADOT's transportation assessment guidelines, an existing use trip generation credit may be applied to a project to account for the vehicle trips generated by the existing use(s) if the existing use has been occupied for at least six consecutive months within the past two years. As the existing site office space on the Selma site is occupied and operational, a trip generation credit for the existing office use is appropriate for purposes of forecasting the net new project trip generation. No trip generation credit was taken for the storage building on the Wilcox site as the use is considered ancillary storage space for the adjacent Gilbert Hotel building. Furthermore, since no changes are proposed to the Gilbert Hotel building in connection with the development of the proposed project at the Selma site, no additional trips are anticipated in connection with the continued use on the Wilcox site.

As noted previously, the proposed project is located within the Hollywood Community Plan area of the City of Los Angeles. The Hollywood Community Plan area covers 25 square miles, extending roughly south of the Cities of Burbank and Glendale and the Ventura Freeway, west of I-5 Freeway, north of Melrose Avenue, and east of the Cities of West Hollywood and Beverly Hills. The Metro Red Line is a subway line that provides service through the Hollywood area of the City of Los

Angeles and connects the Hollywood area with the San Fernando Valley and Downtown Los Angeles. Extensive transit service is currently provided in the vicinity of the project and is summarized in ***Table 1***. The Metro Red Line Hollywood/Vine station is located at 6250 Hollywood Boulevard, which is less than one-half mile northeast of the project site. During the weekday AM and PM peak hours, the Metro Red subway line provides headways of 10 minutes per train (i.e., approximately six Red Line trains) in the northbound and southbound directions.

PROJECT DESCRIPTION

The proposed project consists of an infill development with market rate multi-family and affordable housing residential units on the Selma site. The 14-story building comprises 67,564 square feet and provides 12 residential levels above two levels of stacked parking with ground floor residential amenity space. The residential project components are summarized as follows:

- Market Rate Multi-Family Use: 40 dwelling units
- Affordable Housing Use: 5 family-type dwelling units

The ground floor project site plan for the proposed project is displayed in ***Figure 3***. All of the residential units are proposed as four-bedroom units, with an open plan concept in the common areas to maximize interior space and flexibility. Parking is provided on the lower two levels of the building with direct access via one driveway along the south side of Selma Avenue. A total of 38 parking spaces is planned to be provided through a stacked parking system which is accessible on the ground floor level only. The parking supply provided at the Selma site also includes 12 off-site parking spaces for the adjacent 1540-1552 Wilcox Avenue site, designated via a covenant. The project will also provide 40 long-term and 5 short-term residential bicycle parking spaces.

This project is also related to the application to allow for the demolition of the existing storage building located at the Wilcox site. A lot line adjustment is also requested such that following the demolition of the storage building, this portion of the Wilcox site would become part of the Selma site. No changes or improvements are proposed to the Gilbert Hotel building. Following the lot line adjustment, the proposed Selma site would comprise approximately 15,022 square feet.

PROJECT TRIP GENERATION

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Traffic volumes to be generated by the proposed 6422 Selma Residential project were forecast for the

weekday AM and PM peak hours, and over a 24-hour period. Generation rates provided in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*[1] were utilized to forecast project traffic generation for the proposed project and existing site use, with the exception of the affordable housing dwelling units. Traffic volumes expected to be generated by the market-rate multi-family residential dwelling units land use component was based upon the following ITE trip generation average rates:

- ITE Land Use Code 222: Multi-Family Housing (High-Rise)

The multi-family housing (high-rise) trip generation rates employed for analysis purposes are conservative in that they reflect a general urban/suburban area and these rates are higher than those developed by the City of Los Angeles Department of Transportation (LADOT) for dense multi-use urban areas. As the ITE publication does not provide trip rates for a land use such as the project's affordable housing residential land use component, it was deemed appropriate to forecast the trips expected to be generated by the affordable housing land use component using trip rates published by LADOT in the City's transportation assessment guidelines[2] (TAG) which are directly applicable to the proposed project. The LADOT trip generation rates for affordable housing projects were developed based on vehicle trip count data collected at affordable housing sites in the City of Los Angeles during year 2016. The LADOT affordable housing trip rates include three different housing type categories: affordable family housing; affordable senior housing, and affordable special needs and supportive housing. In this instance, the affordable family housing category is directly applicable to the proposed project which will provide housing for permanent long-term tenants designed to enable individuals and families at risk of homelessness to ensure that they remain housed and live as independently as possible. LADOT's affordable family housing category trip rates are summarized as follows:

<u>Affordable Family Housing</u>

- Average AM Peak Hour Trip Rate: 0.52 trips per dwelling unit; 38% inbound and 62% outbound
- Average PM Peak Hour Trip Rate: 0.38 trips per dwelling unit; 55% inbound and 45% outbound

In addition to the proposed project trip generation forecasts, forecasts also were made for the existing project site land use. The following ITE land use category trip

[1] Institute of Transportation Engineers *Trip Generation Manual*, 10th Edition, Washington, D.C., 2017.
[2] *Transportation Assessment Guidelines*, City of Los Angeles Department of Transportation, July 2020.

generation rates were used to forecast traffic volumes associated with the existing site commercial land use:

- ITE Land Use Code 710: General Office

The trip generation forecast for the proposed 6422 Selma Residential project is summarized in ***Table 2***. As presented in *Table 2*, the proposed project is expected to generate seven (7) net new vehicle trips (i.e., 3 fewer inbound trips and 10 additional outbound trips) during the weekday AM peak hour. During the weekday PM peak hour, the proposed project is expected to generate eight (8) net new vehicle trips (i.e., 9 additional inbound trips and 1 fewer outbound trip) when compared with the current occupancy of the existing site. As mentioned previously, since no changes are proposed to the Gilbert Hotel building in connection with the development of the proposed project at the Selma site, no additional trips are anticipated in connection with the continued use on the Wilcox site.

PROJECT VEHICLE MILES TRAVELED (VMT) ANALYSIS SCREENING

The Los Angeles Department of City Planning (LADCP) and LADOT updated the Transportation Section of the City's California Environmental Quality Act (CEQA) Thresholds Guide to comply with and implement Senate Bill (SB) 743. On September 27, 2013, Governor Brown signed SB 743. Under SB 743, the focus of transportation analysis pursuant to CEQA shifts from driver delay, or level of service, to reduction of vehicle miles traveled, reduction in greenhouse gas emissions, creation of multimodal networks and promotion of mixed-use developments. In December 2018, the California Natural Resources Agency certified and adopted amendments to the CEQA Guidelines implementing SB 743 with a target implementation date of July 1, 2020. City staff presented the CEQA Appendix G environmental checklist update to the City Council, which led to the adoption of new VMT-based significance thresholds and its subsequent incorporation into the City's CEQA Threshold Guide. In the course of this update, LADOT has developed a VMT Calculator tool to "screen" projects if a VMT analysis is required, and if so, then to estimate project-specific daily household VMT per capita and daily work VMT per employee for land use development projects. This tool is intended to be used for development projects within the City of Los Angeles, and the VMT methodology is tailored to the TAG.

A copy of the completed VMT screening analysis worksheet is attached to this memorandum. Based on the results using the City's VMT calculator, a formal VMT assessment is not required to be performed since the net new ADT (i.e., 125 ADT)

[1] Source: City of Los Angeles Department of Transportation (LADOT), July 2020; and ITE "Trip Generation Manual", 10th Edition, 2017.
[2] Trips are one-way traffic movements, entering or leaving.
[3] Transit and walk adjustments are based on the project site's proximity to Metro bus and rail transit opportunities.

does not exceed the daily trip threshold of 250 ADT established as the screening criteria in the TAG.

SUMMARY AND CONCLUSIONS

Based on the above net new vehicle trip generation forecasts (i.e., comparing the existing site to the proposed project), it is concluded that no further analysis is required since the project is expected to generate less than 250 net new ADT.

Please feel free to call us with any questions or comments at 626.796.2322.

SUSTAINABLE COMMUNITIES ENVIRONMENTAL ASSESSMENT FOR THE FOUND RESIDENCES PROJECT (ENV-2022-1049-SCEA)

MITIGATION MONITORING AND REPORTING PROGRAM

A. INTRODUCTION

This Mitigation Monitoring and Reporting Program ("MMRP") has been prepared pursuant to Public Resources Code Section 21081.6, which requires a Lead Agency to adopt a "reporting or monitoring program for changes to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment." In addition, Section 15097(a) of the *State CEQA Guidelines* requires that a public agency adopt a program for monitoring or reporting mitigation measures and project revisions, which it has required to mitigate or avoid significant environmental effects. This MMRP has been prepared in compliance with the requirements of CEQA, Public Resources Code Section 21081.6 and Section 15097 of the *State CEQA Guidelines*.

The City of Los Angeles (City) is the Lead Agency for the Project and, therefore, is responsible for administering and implementing the MMRP. A public agency may delegate reporting or monitoring responsibilities to another public agency or to a private entity that accepts the delegation; however, until mitigation measures have been completed, the lead agency remains responsible for ensuring that implementation of the mitigation measures occurs in accordance with the program.

A Sustainable Communities Environmental Assessment (SCEA) has been prepared to address the potential environmental impacts of the Project. The evaluation of the Project's impacts takes into consideration project design features and identifies mitigation measures to avoid or reduce potentially significant environmental impacts. This MMRP is designed to monitor implementation of the project design features and mitigation measures identified for the Project.

B. PURPOSE

It is the intent of this MMRP to:

1. Verify compliance with the project design features and mitigation measures identified in the SCEA;
2. Provide a framework to document implementation of the identified project design features and mitigation measures;
3. Provide a record of mitigation requirements;
4. Identify monitoring and enforcement agencies;
5. Establish and clarify administrative procedures for the clearance of project design features and mitigation measures;
6. Establish the frequency and duration of monitoring; and
7. Utilize the existing agency review processes wherever feasible.

C. ORGANIZATION

As shown on the following pages, each required project design feature and mitigation measure for the proposed Project is listed and categorized by impact area, with an accompanying identification of the following:

- **Monitoring Phase**: The phase of the proposed Project during which the project design feature or mitigation measure shall be monitored;
- **Enforcement Agency**: The agency with the power to enforce the project design featureor mitigation measure;
- **Monitoring Agency**: The agency to which reports involving feasibility, compliance, implementation and development are made;
- **Monitoring Frequency**: The frequency at which the project design feature or mitigation measure shall be monitored; and
- **Action Indicating Compliance**: The action of which the Enforcement or Monitoring Agency

indicates that compliance with the required project design feature or mitigation measure has been implemented.

D. ADMINISTRATIVE PROCEDURES AND ENFORCEMENT

This MMRP shall be enforced throughout all phases of the Project. The Applicant shall be responsible for implementing each project design feature and mitigation measure and shall be obligated to provide verification, as identified below, to the appropriate monitoring and enforcement agencies that each project design feature and mitigation measure has been implemented. The Applicant shall maintain records demonstrating compliance with each project design feature and mitigation measure listed below. Such records shall be made available to the City upon request.

During the construction phase and prior to the issuance of building permits, the applicant shall retain an independent Construction Monitor (either via the City or through a third-partyconsultant), approved by Los Angeles City Planning, who shall be responsible for monitoring implementation of project design features and mitigation measures during construction activities consistent with the monitoring phase and frequency set forth in this MMRP.

The Construction Monitor shall also prepare documentation of the Applicant's compliance with the project design features and mitigation measures during construction every 90 days in a form satisfactory to Los Angeles City Planning. The documentation must be signed by the Applicant and Construction Monitor and be included as part of the Applicant's Compliance Report. The Construction Monitor shall be obligated to immediately report to the Enforcement Agency any non-compliance with mitigation measures and project design features within two business days if the Applicant does not correct the non-compliance within a reasonable time of notification to the Applicant by the monitor or if the non-compliance is repeated. Such non-compliance shall be appropriately addressed by the Enforcement Agency.

E. PROGRAM MODIFICATION

The Project shall be in substantial conformance with the project design features and mitigation measures contained in this MMRP. The enforcing departments or agencies may determine substantial conformance with project design features and mitigation measures in the MMRP in their reasonable discretion. If the department or agency cannot find substantial conformance, a

project design feature or mitigation measure may be modified or deleted as follows: the enforcing department or agency, or the decision maker for a subsequent discretionary project-related approval, complies with *State CEQA Guidelines* Sections 15162 and 15164, including by preparing an addendum or subsequent environmental clearance to analyze the impacts from the modifications to or deletion of the project design features or mitigation measures. Any addendum or subsequent CEQA clearance shall explain why the project design feature or mitigation measure is no longer needed, not feasible, or the other basis for modifying or deleting the project design feature or mitigation measure. Under this process, the modification or deletion of a project design feature or mitigation measure shall not require a modification to any project discretionary approval unless the Director of Planning also finds that the change to the project design features or mitigation measures results in a substantial change to the Project or the non-environmental conditions of approval.

F. MITIGATION MONITORING AND REPORTING PROGRAM

1. Aesthetics

Project Design Features

No specific project design features with regards to aesthetics are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to aesthetics are identified in the SCEA.

2. Agriculture

Project Design Features

No specific project design features with regards to agriculture are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to agriculture are identified in the SCEA.

3. Air Quality

Project Design Features

No specific project design features with regards to air quality are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to air quality are identified in the SCEA.

4. Biological Resources

Project Design Features

No specific project design features with regards to biological resources are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to biological resources are identified in the SCEA.

5. Cultural Resources- Historic Resources

Project Design Features

The garage at 6422 Selma Avenue would be incorporated into the first floor of the new residential Project and become the entrance for pedestrian and vehicular traffic. The first third of the north (primary) and west façades of the garage would be retained and braced during construction to prevent damage to the brick walls and features. Additionally, most of the east façade would be retained. The south (rear) and portions of the west façades would be demolished resulting in 33% of the original brick walls removed, with 63% remaining in place and 4% removed and rebuilt in the original location. One-third of the wood trusses (four) would be retained in place. An additional four trusses would be removed during construction and reinstalled in their original locations. Two of the original trusses would be preserved and reinstalled in different locations and one truss would be removed. The current roof is not original, but 35% of this material would remain in place. The rest of the roof would either be removed (26%) or reconstructed (39%) and sheathed in sheet metal to differentiate it from the current roof. For the north, east, and partial west wall that would be retained, damaged brick would be repaired or, if beyond repair,

replaced in-kind. On portions of the new north wall surrounding the entrance to the new lobby, a layer of brick veneer would be applied using brick salvaged from the portions of the original walls to be demolished. A brick-veneer header would be installed above the lobby opening and the brick-veneer wall would extend west of the lobby to the control room. The first third of the garage's interior space would be returned to its original use for automobile parking.

The openings of the north façade would be altered to more closely reflect their original uses. The east bay was probably a window originally although photographic evidence is not available. It was turned into a door in the 1940s and further altered with the marble and glass brick at a later date. The marble and glass block would be removed, and a more appropriate glazed door and window installed. The central bay, which is currently also filled in with glass block and marble, would be returned to the vehicular entrance depicted in the only known historic photograph of the building. The west bay, which was originally a window, was converted to roll-up door. This bay would become a pedestrian entrance and restore a sense of the symmetry of the original primary façade. Additionally, the Project includes the removal of the paint on the brick surround and primary façade.

Mitigation Measures

MM CUL-1: Prior to any demolition or construction activity, the garage at 6422 Selma Avenue will be documented to Historic American Buildings Survey (HABS) Level 2 standards, according to the outline format described in the *Historic American Building Survey Guidelines for Preparing Written Historical Descriptive Data*. Photographic documentation should follow the Photographic Specification–Historic American Building Survey, including 10-15 archival quality, large-format photographs of the exterior and interior of the building and its architectural elements. Construction techniques and architectural details should be documented, especially noting the measurements, hardware, and other features that tie architectural elements to a specific date. If original architectural plans are located, they should be archivally reproduced, following HABS standards. Three copies of the HABS documentation package, with one copy including original photo negatives, will be produced, with at least one copy placed in an archive or history collection accessible to the general public.

Monitoring Phase: Pre-Construction

Enforcement Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit

Action Indicating Compliance: Inclusion of HABS documentation package, with one copy including original photo negatives, with at least one copy placed in an archive or history collection accessible to the general public

MM CUL-2: Additional review of the project by Los Angeles City Planning's Office of Historic Resources (OHR) will only be required if, during construction, more than 10% of the materials currently proposed for retention cannot be retained as planned. For example, if after removal and storage of the wooden trusses it is discovered that 5% more of the wood must be replaced prior to reinstallation, no additional review will be required and the wood elements of the truss that require replacement will be made in-kind. However, if 15% more of the brick walls must be removed than is currently planned (33%), subsequent review of the construction plans would be required by OHR.

Monitoring Phase: Pre-Construction

Enforcement Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit

Action Indicating Compliance: Inclusion in building permit specifications

MM CUL-3: Develop at least two interpretative signs or murals that would communicate the significance of the garage at 6422 Selma Avenue to the Hollywood community. This could consist of a permanent interpretive exhibit that would incorporate information from historic photographs, HABS documentation, or other materials to highlight the building's association with the automobile and the significance of the

automobile to Hollywood. The interpretive signs should be developed by a team that includes a Secretary of the Interior (SOI) qualified historian. At least one of the signs should be located near the Selma entrance to the garage to be accessible by the general public. The second mural could be located on the interior of the garage.

Monitoring Phase: Pre-Construction

Enforcement Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of building permit

Action Indicating Compliance: Inclusion in building permit specifications; installation of interpretive signs or murals at Project Site

MM CUL-4: Prior to the start of construction, surveys shall be performed to document the conditions of the masonry of the remaining walls at 6422 Selma Avenue as well as the Gilbert Hotel building. A structural monitoring program shall be implemented and recorded during construction to ensure that ground borne vibration levels do not exceed 0.12 inches per second, peak particle velocity (PPV). The structural monitoring plan shall include documentation, consisting of video and/or photographic documentation of accessible and visible areas on the exterior of the buildings. A historic architect (meeting the SOI's Professional Qualification Standards) or structural engineer with experience with historic masonry buildings shall establish baseline structural conditions of the building and prepare the shoring design. Additionally, a qualified acoustical engineer shall be retained to review the proposed construction equipment and develop and implement a vibration monitoring program capable of documenting the construction-related ground vibration levels at the Project Site during demolition and excavation phases where heavy construction equipment (e.g., large bulldozer and drill rig) would be operating within 15 feet of the affected buildings.

The vibration monitoring system shall measure and continuously store the PPV in inch/second. Vibration data shall be stored on a one-second interval. The system

shall also be programmed for two preset velocity levels: a warning level of 0.07 inch/second (PPV) and a regulatory level of 0.12 inch/second (PPV). The system shall also provide real-time alert when the vibration levels exceed either of the two preset levels.

- In the event the warning level of 0.07 inch/second (PPV) is triggered, the contractor shall identify the source of vibration generation and provide steps to reduce the vibration level, including but not limited to halting/staggering concurrent activities and utilizing lower vibratory techniques.

- In the event the regulatory level of 0.12 inch/second (PPV) is triggered, the contractor shall halt the construction activities and visually inspect the Baker Garage for any damage. Results of the inspection must be logged. The contractor shall identify the source of vibration generation and provide steps to reduce the vibration level. Vibration measurement shall be made with the new construction method to verify that the vibration level is below the warning level of 0.07 inch/second (PPV). Construction activities may then restart.

- In the event damage occurs to historic finish materials due to construction vibration, such materials shall be repaired in consultation with a qualified preservation consultant.

The structure-monitoring program shall be submitted to the City of Los Angeles Department of Building and Safety (LADBS) and received into the case file for the associated discretionary action permitting the Project prior to initiating any construction activities.

Monitoring Phase: Pre-Construction and Construction

Enforcement Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit, employment of a continuous vibration monitoring system during construction activities

Action Indicating Compliance: Inclusion in grading and building permit specifications

6. Cultural Resources- Archaeological Resources

Project Design Features

No specific project design features with regards to archaeological resources are identified in the SCEA.

Mitigation Measures

MM CUL-5: Inadvertent Discovery of Archaeological Resources

- If any archaeological materials are encountered during the course of Project development, all further development activity in the vicinity of the materials shall halt and:
- The services of an archaeologist shall then be secured by contacting the South Central Coastal Information Center (657-278-5395) located at California State University Fullerton, or a member of the Society of Professional Archaeologist (SOPA) or a SOPA-qualified archaeologist, who shall assess the discovered material(s) and prepare a survey, study, or report evaluating the impact;
- The archaeologist's survey, study or report shall contain a recommendation(s), if necessary, for the preservation, conservation, or relocation of the resource; and
- The Project Applicant shall comply with the recommendations of the evaluating archaeologist, as contained in the survey, study, or report.
- Project development activities may resume once copies of the archaeological survey, study or report are submitted to:

  South Central Coastal Information Center
  Department of Anthropology
  McCarthy Hall 477
  CSU Fullerton
  800 North State College Boulevard
  Fullerton, CA 92834

- Prior to the issuance of any building permit, the Project Applicant shall submit a letter to the case file indicating what, if any, archaeological reports have been submitted, or a statement indicating that no material was discovered.
- A covenant and agreement binding the Project Applicant to this condition shall be recorded prior to the issuance of a grading permit.

Monitoring Phase: Pre-Construction and Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit, ongoing during Constriction

Action Indicating Compliance: Inclusion in grading permit specifications; inspection of exposed cultural materials by a qualified archaeologist and stop of work during inspection; a copy of the archaeological survey, study or report is submitted to the South Central Coastal Information Center (SCCIC) Department of Anthropology if applicable

7. Energy

Project Design Features

No specific project design features with regards to energy are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to energy are identified in the SCEA.

8. Geology and Soils

Project Design Features

No specific project design features with regards to geology and soils are identified in the SCEA.

Mitigation Measures

MM GEO-1: In the event that paleontological resources are unearthed during ground-disturbing

activities, the City of Los Angeles Department of Building and Safety will be notified immediately, and all work will cease in the area of the find until a qualified paleontologist evaluates the find. Construction activity may continue unimpeded on other portions of the Project Site. The paleontologist shall determine the location, the time frame, and the extent to which any monitoring of earthmoving activities shall be required. The found deposits would be treated in accordance with federal, State, and local guidelines, including those set forth in California PRC § 21083.2.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in grading permit specifications; Submittal of paleontological remains, reports and surveys to the Los Angeles County Natural History Museum

9. Greenhouse Gas Emissions

Project Design Features

No specific project design features with regards to greenhouse gas emissions are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to greenhouse gas emissions are identified in the SCEA.

10. Hazards and Hazardous Materials

Project Design Features

No specific project design features with regards to hazards and hazardous materials are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to hazards and hazardous materials are identified in the SCEA.

11. Hydrology and Water Quality

Project Design Features

No specific project design features with regards to hydrology and water quality are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to hydrology and water quality are identified inthe SCEA.

12. Land Use and Planning

Project Design Features

No specific project design features with regards to land use and planning are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to land use and planning are identified in the SCEA.

13. Mineral Resources

Project Design Features

No specific project design features with regards to mineral resources are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to mineral resources are identified in the SCEA.

14. Noise

Project Design Features

No specific project design features with regards to noise are identified in the SCEA.

Mitigation Measures

MM NOI-1: Noise-generating equipment operated at the Project Site shall be equipped with noise control devices, such as mufflers, lagging (enclosures for exhaust pipes), and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. All equipment shall be properly maintained to assure that no additional noise, due to worn or improperly maintained parts, would be generated.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Periodic field Inspections

Action Indicating Compliance: Inclusion in grading permit specifications; Field Inspection Sign-Off

MM NOI-2: Prior to the start of construction, surveys shall be performed to document the conditions of the masonry of the remaining walls at 6422 Selma Avenue as well as the Gilbert Hotel building. A structural monitoring program shall be implemented and recorded during construction to ensure that ground borne vibration levels do not exceed 0.12 inches per second, peak particle velocity (PPV). The structural monitoring plan shall include documentation, consisting of video and/or photographic documentation of accessible and visible areas on the exterior of the buildings. A historic architect (meeting the SOI's Professional Qualification Standards) or structural engineer with experience with historic masonry buildings shall establish baseline structural conditions of the building and prepare the shoring design. Additionally, a qualified acoustical engineer shall be retained to review the proposed construction equipment and develop and implement a vibration monitoring program capable of documenting the construction-related ground vibration levels at the Project Site during demolition and excavation phases

where heavy construction equipment (e.g., large bulldozer and drill rig) would be operating within 15 feet of the affected buildings.

The vibration monitoring system shall measure and continuously store the PPV in inch/second. Vibration data shall be stored on a one-second interval. The system shall also be programmed for two preset velocity levels: a warning level of 0.07 inch/second (PPV) and a regulatory level of 0.12 inch/second (PPV). The system shall also provide real-time alert when the vibration levels exceed either of the two preset levels.

- In the event the warning level of 0.07 inch/second (PPV) is triggered, the contractor shall identify the source of vibration generation and provide steps to reduce the vibration level, including but not limited to halting/staggering concurrent activities and utilizing lower vibratory techniques.

- In the event the regulatory level of 0.12 inch/second (PPV) is triggered, the contractor shall halt the construction activities and visually inspect the Baker Garage for any damage. Results of the inspection must be logged. The contractor shall identify the source of vibration generation and provide steps to reduce the vibration level. Vibration measurement shall be made with the new construction method to verify that the vibration level is below the warning level of 0.07 inch/second (PPV). Construction activities may then restart.

- In the event damage occurs to historic finish materials due to construction vibration, such materials shall be repaired in consultation with a qualified preservation consultant.

The structure-monitoring program shall be submitted to the City of Los Angeles Department of Building and Safety (LADBS) and received into the case file for the associated discretionary action permitting the Project prior to initiating any construction activities.

Monitoring Phase: Pre-Construction and Construction

Enforcement Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Agency: Los Angeles City Planning's Office of Historic Resources and Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit, employment of a continuous vibration monitoring system during construction activities

Action Indicating Compliance: Inclusion in grading and building permit specifications

15. Population and Housing

Project Design Features

No specific project design features with regards to population and housing are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to population and housing are identified in the SCEA.

16. Public Services - Fire Protection

Project Design Features

No specific project design features with regards to fire protection are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to fire protection are identified in the SCEA.

17. Public Services - Police Protection

Project Design Features

No specific project design features with regards to police protection are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to police protection are identified in the SCEA.

18. Public Services - Schools

Project Design Features

No specific project design features with regards to schools are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to schools are identified in the SCEA.

19. Public Services - Parks

Project Design Features

No specific project design features with regards to parks are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to parks are identified in the SCEA.

20. Public Services - Libraries

Project Design Features

No specific project design features with regards to libraries are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to libraries are identified in the SCEA.

21. Recreation

Project Design Features

No specific project design features with regards to recreation are identified in the SCEA.

Mitigation Measures

No specific mitigation measures with regards to recreation are identified in the SCEA.

22. Transportation

Project Design Features

No specific project design features with regards to transportation are identified in theSCEA.

Mitigation Measures

No specific mitigation measures with regards to transportation are identified in the SCEA.

23. Tribal Cultural Resources

Project Design Features

No specific project design features with regards to tribal cultural resources are identified in the SCEA.

Mitigation Measures

MM TCR-1: Prior to commencing any ground disturbance activities at the Project Site, the Applicant, or its successor, shall retain archeological monitors and tribal monitors that are qualified to identify subsurface tribal cultural resources. Ground disturbance activities shall include excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, removing peat, clearing, driving posts, auguring, backfilling, blasting, stripping topsoil or a similar activity at the project site. Any qualified tribal monitor(s) shall be approved by the Gabrieleno/Tongva San Gabriel Band of Mission Indians tribe. Any qualified archaeological monitor(s) shall be approved by OHR.

1. The qualified archeological and tribal monitors shall observe all ground disturbance activities on the Project Site at all times the ground disturbance activities are taking place. If ground disturbance activities are simultaneously occurring at multiple locations on the Project Site, an archeological and tribal monitor shall be assigned to each location where the ground disturbance activities are occurring. The on-site monitoring shall end when the ground disturbing activities are completed, or when the archaeological and tribal monitor both indicate that the site has a low potential for impacting tribal cultural resources.

2. Prior to commencing any ground disturbance activities, the archaeological monitor in consultation with the tribal monitor, shall provide Worker Environmental Awareness Program (WEAP) training to construction crews involved in ground disturbance activities that provides information on regulatory requirements for the protection of tribal cultural resources. As part of the WEAP training, construction crews shall be briefed on proper procedures to follow should a crew member discover tribal cultural resources during ground disturbance activities. In addition, workers will be shown examples of the types of resources that would require notification of the archaeological monitor and tribal monitor. The Applicant shall maintain on the Project Site, for City inspection, documentation establishing the training was completed for all members of the construction crew involved in ground disturbance activities.

3. In the event that any subsurface objects or artifacts that may be tribal cultural resources are encountered during the course of any ground disturbance activities, all such activities shall temporarily cease within the area of discovery, the radius of which shall be determined by a qualified archeologist, in consultation with a qualified tribal monitor, until the potential tribal cultural resources are properly assessed and addressed pursuant to the process set forth below:

4. Upon a discovery of a potential tribal cultural resource, the Applicant, or its successor, shall immediately stop all ground disturbance activities and contact the following: (1) all California Native American tribes that have informed the City they are traditionally and culturally affiliated with the geographic area of the proposed project; (2) and OHR.

5. If OHR determines, pursuant to Public Resources Code Section 21074 (a)(2), that the object or artifact appears to be a tribal cultural resource in its discretion and supported by substantial evidence, the City shall provide any affected tribe a reasonable period of time, not less than 14 days, to conduct a site visit and make recommendations to the Applicant, or its successor, and the City regarding the monitoring of future ground disturbance activities, as well as the treatment and disposition of any discovered tribal cultural resources.

6. The Applicant, or its successor, may recommence ground disturbance activities outside of a specified radius of the discovery site, so long as this radius has been reviewed by both the qualified archaeologist and qualified tribal monitor and determined to be reasonable and appropriate.

7. The Applicant, or its successor, may recommence ground disturbance activities inside of the specified radius of the discovery site only after it has complied with all of the recommendations developed and approved pursuant to the process set forth in paragraphs 2 through 5 above.

8. Copies of any subsequent prehistoric archaeological study, tribal cultural resources study or report, detailing the nature of any significant tribal cultural resources, remedial actions taken, and disposition of any significant tribal cultural resources shall be submitted to the SCCIC at California State University, Fullerton and to the Native American Heritage Commission for inclusion in its Sacred Lands File.

9. Notwithstanding paragraph 8 above, any information that the Department of City Planning, in consultation with the City Attorney's Office, determines to be confidential in nature shall be excluded from submission to the SCCIC or provided to the public under the applicable provisions of the California Public Records Act, California Public Resources Code, section 6254(r), and handled in compliance with the City's Assembly Bill 52 Confidentiality Protocols.

Monitoring Phase: Pre-Construction and Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Once at plan check prior to issuance of grading permit; ongoing during Construction

Action Indicating Compliance: Inclusion in grading and building permit specifications; inspection of exposed cultural materials by a qualified archaeologist; and stop of work during inspection; a copy of the archaeological survey, study or report is submitted to the SCCIC Department of Anthropology if applicable

MM TCR-2: In the event that archaeological resources are unearthed during ground-disturbing activities, the archaeological monitor shall be empowered to halt or redirect ground-disturbing activities away from the vicinity of the find so that the find can be evaluated. Work shall be allowed to continue outside of the vicinity of the find. All archaeological resources unearthed by Project construction activities shall be evaluated by the archaeologist. The Applicant shall coordinate with the archaeologist and the City to develop an appropriate treatment plan for the resources if they are determined to be potentially eligible for the California Register or potentially qualify as unique archaeological resources pursuant to CEQA. In the event the archaeological resources are prehistoric, the archaeological monitor shall coordinate with the Applicant and the City to retain a Native American Representative from the Gabrieleno/Tongva San Gabriel Band of Mission Indians tribe to help determine the appropriate treatment for the resources and whether Native American construction monitoring is warranted in the area of the find thereafter. If avoidance of the resource is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource from the Project Site.

Monitoring Phase: Construction

Enforcement Agency: Department of Building and Safety

Monitoring Agency: Department of Building and Safety

Monitoring Frequency: Ongoing during construction

Action Indicating Compliance: Inclusion in building permit specifications; inspection of exposed cultural materials by a qualified archaeologist; and stop of work during inspection; consultation with the Gabrieleno/Tongva San Gabriel Band of Mission Indians tribe if applicable

24. Utilities

Project Design Features

No specific project design features with regards to utilities are identified in the SCEA.

Mitigation Measures

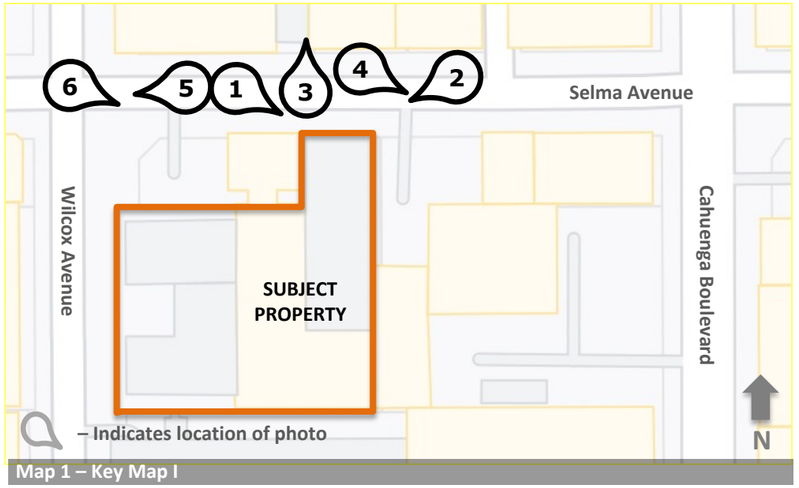
No specific mitigation measures with regards to utilities are identified in the SCEA.

25. Wildfire

Project Design Features

No specific project design features with regards to wildfire are identified in the SCEA.

Mitigation Measures



No specific mitigation measures with regards to wildfire are identified in the SCEA.

RE: City of Los Angeles's FOUND Residences – 6422 Selma Avenue Project [CPC-2022-1048-DB-HCA; ENV-2022-1049-SCEA]

Dear More Song,

On behalf of the Southwest Mountain States Regional Council of Carpenters ("**Southwest Mountain States Carpenters**" or "**SWMSRCC**"), my Office is submitting these comments for the City of Los Angeles's ("**City**") Sustainable Communities Environmental Assessment ("**SCEA**") for the FOUND Residences – 6422 Selma Avenue Project ("**Project**").

The Southwest Mountain States Carpenters is a labor union representing 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of SWMSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Mountain States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Mountain States Carpenters incorporates by reference all comments raising issues regarding the Sustainable Communities Environmental Assessment submitted prior to certification of the SCEA for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Mountain States Carpenters requests that the City provide advance notice for any and all notices or hearings referring or related to the Project, including notices issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010), and any applicable state or local municipal code, rules, or regulations. California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. As such, we request such advance notice to be both e-mailed and mailed to us.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of

> construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

> include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Mountain States Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. SWMSRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Mountain States Carpenters' experience with safe construction site work practices, SWMSRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.

- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be

allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Mountain States Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to

[6] *See also* The Center for Construction Research and Training, North America's Building Trades Unions (April 27 2020) NABTU and CPWR COVIC-19 Standards for U.S Constructions Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("**CEQA Guidelines**"), § 15002, subd. (a)(1).[8] At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. Background Concerning Environmental Impact Reports

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the

[7] For details concerning Southwest Carpenters' ICRA training program, *see* https://icrahealthcare.com/.

[8] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the "fair argument" standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail*

Botanical Gardens Found., Inc. v. City of Encinitas (1994) 29 Cal.App.4th 1597, 1602; *Friends of "B" St.* v. *City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that "may have a significant effect on the environment." Public Resources Code ("**PRC**") § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

"Significant effect upon the environment" is defined as "a substantial or potentially substantial adverse change in the environment." PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a "low threshold" for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen,* 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of*

Los Angeles (1982) 134 Cal.App.3d 491; *Friends of "B" St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

Finally, CEQA procedures reflect a preference for resolving doubts in favor of environmental review. See Pub. Res. Code, § 21080(c) (an EIR may be disposed of only if there is no substantial evidence, in light of the entire record before the lead agency, that the project may have a significant effect on the environment or revisions in the project); CEQA Guidelines §§ 15061(b)(3) (common sense exemption only where it can be seen *with certainty*); 15063(b)(1) (prepare an EIR if the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial]; 15064, subd. (h) (the agency must consider cumulative impacts of past, current, and probable future projects); 15070 (a negative declaration may be prepared only if there is no substantial evidence, in light of the whole record, that the project may have a significant effect on the environment, or project revisions would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and there is no substantial evidence, in light of the whole record, that the project as revised may have a significant effect on the environment); *No Oil, Inc., supra,* 13 Cal.3d at p. 83-84 (significant impacts are to be interpreted so as to afford the fullest possible protection).

IV. THE PROJECT DOES NOT MEET THE CRITERIA FOR THE USE OF A SUSTAINABLE COMMUNITIES ENVIRONMENTAL ASSESSMENT

A. Background Concerning Transit Priority Projects and Sustainable Communities Environmental Assessments

Senate Bill ("**SB**") 375 provides CEQA-based incentives and streamlining for certain residential, mixed-use, and transportation-oriented developments. SB 375 includes two optional CEQA streamlining options for local lead agencies.

First, under SB 375, residential and mixed-use projects that (1) are consistent with the use designation, density, building intensity, and applicable policies specified in a California Air Resources Board ("**CARB**")-approved sustainable communities strategy ("**SCS**") or alternative planning strategy ("**APS**") and (2) incorporate mitigation measures required by an "applicable prior environmental document," which may

include the environmental impact report for the regional transportation plan, need not "reference, describe or discuss (1) **growth-inducing impacts; or** (2) any **project-specific or cumulative impacts** from **cars** and **light-duty truck trips** generated by the project on **global warming** or the **regional transportation network**". PRC §21159.28(a).

Notably, under PRC §21159.28(a), SCEA does not exempt agencies from their duty to review all other impacts of the project, including but not limited to impacts to historical resources. As to all those impacts, CEQA continues to require studies and mitigation, as well as an EIR to thoroughly assess all feasible mitigation measures and alternatives.

"The EIR is often referred to as the ""heart"" of CEQA." *County of Butte v. Department of Water Resources* (2022) 13 Cal.5th 612, 627. "Ideally, an EIR serves "to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided." (Pub. Resources Code, § 21002.1, subd. (a).) The document must include a description of the proposed project and its environmental setting and discussions of (1) the possible environmental effects of the project, (2) feasible measures to mitigate any significant, adverse environmental effects of the project, (3) the comparative environmental effects of a range of reasonable alternatives to the proposed project, including a "no project" alternative, and (4) the cumulative impact of the project's various environmental effects (CEQA Guidelines, §§ 15124, 15126, 15126.4, 15126.6, 15130.) An EIR may also include a discussion of the economic and social effects of the project. (*Id.*, § 15131.) Given the role it plays and its required analysis, the EIR is commonly referred to as an "informational document." (Pub. Resources Code, § 21061; CEQA Guidelines, § 15121.) It serves to inform decision makers and the general public about the nature and environmental impact of a proposed project, feasible ways to reduce that impact (often through the mechanism of mitigation measures), and possible alternatives to the project. (Pub. Resources Code, § 21061.)." *Id.*

Second, Transit Priority Projects ("**TPP**") may qualify for a total CEQA exemption or a Sustainable Communities Environmental Assessment. PRC § 21155.1-21155.2. First and foremost, a TPP is a specific project that must: (1) be consistent with a CARB-approved SCS or APS; (2) contain at least 50 percent residential use, and if the project contains between 26 percent and 50 percent nonresidential uses, then a floor area ratio of not less than 0.75; (3) have a minimum net density of 20 units per acre; and (4) be

located **within one-half mile** of a **major transit stop** or **high-quality transit corridor** included in a regional transportation plan. PRC § 21155(a)-(b), emph. added.

TPP Exemption or SCPE

If a legislative body of a city or county finds, after conducting a public hearing, that a transit priority project meets all of the requirements in subdivisions (a) and (b) and one of the requirements of subdivision (c) of PRC § 21155.1, the TPP is declared to be a sustainable communities project and will be fully exempt from CEQA. PRC § 21155.1. At a minimum, the legislative body of a city or county must find that the project can be adequately served by existing utilities and that:

(1) the project site does not contain wetlands or riparian areas or have significant value as wildlife habitat,

(2) the project does not have a significant effect on historical resources,

(3) the project buildings are energy efficient,

(4) landscaping is designed to achieve 25 percent less water usage, and

(5) the project does not present a risk of public health exposure in violation of state or federal law.

PRC § 21155.1.

SCEA

Alternatively, if a TPP project does not qualify for an exemption, a TPP may be reviewed through a SCEA provided, *inter alia*, that: (1) an initial study identifies "all significant or potentially significant impacts of the transit priority project… based on substantial evidence in light of the whole record" PRC § 21155.2(b)(1); (2) the SCEA shall contain "measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the project required to be identified in the initial study" PRC § 21155.2(b)(2).

Simply put, a SCEA is similar to a negative declaration in that the lead agency must identify and analyze all potentially significant or significant effects of the project and mitigate them to a level of less than significant. See PRC § 21155.2(b).

A SCEA may be approved by the lead agency after conducting a public hearing, reviewing the comments received, and finding that: (A) all potentially significant or significant effects required to be identified in the initial study have been identified and

analyzed, (B) with respect to each significant effect on the environment required to be identified in the initial study, either of the following apply: (i) changes or alterations have been required in or incorporated into the project that avoid or mitigate the significant effects to a level of insignificance, and (ii) those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency. PRC §21155.2(b)(5).

The lead agency's decision to review and approve a transit priority project with a sustainable communities environmental assessment" is "reviewed under the substantial evidence standard." PRC § 21155.2(b)(7). As such, any SCEA determination or finding made by the agency has to be supported by substantial evidence, where "[s]ubstantial evidence is not argument, speculation, unsubstantiated opinion or narrative, [or] evidence that is clearly erroneous or inaccurate ...." See, PRC § 21080(e)(2); see also, Guidelines, § 15384(a).

B. The Project is Not Within a Transit Priority Area

Under PRC Section 21099(b)(3), a transit priority area is "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a transportation improvement program or applicable regional transportation plan."

i. The Project is Not Located within a Transit Priority Area Because the SCAG's HQTA Designation is Neither Reliable Nor Binding

According to the SCEA, the Project Site is located within both a High Quality Transit Area ("**HQTA**") and Transit Priority Area. SCEA, III SCEA Eligibility, p. III-19. Yet, CEQA provides for streamlining with SCEA only if the Project is truly a TPP; i.e., first and foremost "within one-half mile of a **major transit stop** or high-quality transit **corridor** [HQCT] included in a regional transportation plan." PRC § 21155(b), emph. added.

As explained below, SCAG itself distinguishes an HQT**A** (referenced and relied upon by the City) from an HQT**C**, and the Project Site's being located within SCAG's HQT**A** has no bearing under CEQA or its Guidelines regarding TPPs; neither does that qualify as substantial evidence required for SCEA to show that the Project qualifies as a TPP as the precondition for SCEA.

A HQTA is a planning tool that is part of SCAG RTP/RTS, a regional plan. HQTAs are broadly defined as places with convenient public transit service prioritized by local jurisdictions that are suitable for housing, jobs and services growth.

Per SCAG's own *summary* and *disclaimer*:

> "**Summary**
>
> The High Quality Transit Areas (HQTAs) is within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours.
>
> This is the High Quality Transit Areas (HQTAs) in the SCAG Region for plan year 2045, developed for the Final Connect SoCal (the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)). SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code. The definitions of a "major transit stop" and a "high-quality transit corridor" are as follows:
>
> A. Major transit stop: A site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (CA Public Resource Code Section 21064.3). It also includes major transit stops that are included in the applicable regional transportation.
>
> B. High-quality transit corridor (HQTC): A corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.
>
> Further explanation of the methodology for identifying HQTCs and major transit stops is included in the Connect SoCal Transit Technical Report Appendix.
>
> **PLEASE NOTE** that SCAG has made one modification to its methodology of HQTAs development to exclude the one-half mile areas

around freeway-running HQTCs where there are no bus stops; the one-half mile areas around bus stops serving those freeway HQTCs remain.

Major transit stops and HQTCs are based on the 2045 plan year transit network of Connect SoCal. **PLEASE NOTE** that SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years. However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG. Users should consult with the appropriate transit provider(s) to obtain the latest information on planned transit routes, stop locations, and service intervals. This data is intended for planning purposes only, and SCAG shall incur no responsibility or liability as to the completeness, currentness, or accuracy of this information. SCAG assumes no responsibility arising from use of this information by individuals, businesses, or other public entities. The information is provided with no warranty of any kind, expressed or implied, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Users should consult with the appropriate transit provider(s) to obtain the latest information on transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption or streamlining."[9] (Bold emphasis orig.; underlining added.)

SCAG claims that its GIS Map "SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code.

However, for its criteria, "SCAG uses the total population of bus trips during the combined seven–hour morning and afternoon peak periods to determine the peak frequency at a bus stop. This is done for each bus route, by direction. The peak frequency is calculated by dividing 420 minutes (the seven–hour peak converted to minutes) by the total peak bus trips. This average frequency should be 15 minutes or less in order to qualify. [emphasis added]"[10]

[9] See, https://gisdata-scag.opendata.arcgis.com/datasets/SCAG::high-quality-transit-areas-hqta-2045-scag-region/about, accessed April 3, 2023

[10] See, https://scag.ca.gov/sites/main/files/file-attachments/twg101619fullagn.pdf?1602535716

In addition, SCAG itself does not allow for combining routes to qualify for bus interval frequencies, but does so in certain situations:

> "Corridors with Multiple Overlapping Bus Routes
>
> Separate but overlapping bus routes that do not individually meet the 15-minute threshold **may not** be combined in order to qualify as an HQTC. However, based on RTTAC feedback, there are certain corridors where overlapping "line families" or local/bus rapid transit (BRT) lines are **intended** to function **as one bus route**. On these corridors, transit riders **typically** board the first bus available, whether it be a local, express, or BRT line. For these **line families** or **local/BRT corridors**, SCAG uses the combined routes to calculate the frequency." (*Ibid,* emph. added.)

A recent ruling from the court as against the City of Los Angeles found that combining bus routes to meet the peak-hour 15-minute intervals and to thereby qualify for a major transit stop is improper and does not qualify as substantial evidence that a particular intersection is a major transit stop as defined and contemplated by CEQA and other relevant rules and regulations, including the City's own definitions of a major transit stop. (See, **Exhibit D**, esp. pp. 16-19. [*HI Point Neighbors' Association v City of Los Angeles*; Filed March 9, 2023; LASC # 21STCP02223.])

As quoted above, SCAG provides a disclaimer and notes that its "maps and data are intended for planning purposes only. . . . [and] recommends that [l]ocal jurisdictions . . . consult with the appropriate transit provider(s) to obtain the latest information on transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption[s] or streamlining." As such, these SCAG maps do not outright designate a parcel as having certain location within transit priority areas, and this data depiction is not made for purposes of evaluating a Project's environmental impacts under CEQA.

Moreover, as noted by SCAG, its maps and bus service intervals need to be verified by public agencies for currentness and accuracy. There is no evidence in the record City had performed such a verification. Our own research similarly suggests that there is no qualifying major transit stop or transit priority corridor within the ½ mile of the Project site either as required by CEQA and PRC section 21155(b).

Accordingly, the ZIMAS TPA classification, as well as SCAG's Transit Priority Area or High Quality Transit Area or Corridor, for the purposes cited in the SCEA, are irrelevant and non-binding; they are also unsupported by substantial evidence.

Therefore, the SCEA has failed to demonstrate that the Project is located within an HQTC or a major transit stop, and failed to meet the **first and foremost** critical precondition to qualify as a TPP and SCEA under CEQA. PRC section 21155(b).

C. The Project May Have a Significant Effect on Historical Resources

The proposed Project calls for the demolition of several structures. SCEA II Project Description, p. II-7. According to the Project Application filed with the City, the Applicant indicated that a ninety-five-year-old (95) commercial structure will be removed or demolished.

According to the Cultural Resources report prepared for the SCEA, the Baker Garage structure located at the Project Site was not recommended as eligible under the California Register of Historical Resources ("**CRHR**"). SCEA Appendix C, p. 52. The Cultural Resources report, however, did recommend that the Baker Garage is eligible under the City of Los Angeles Historical-Cultural Monuments ("**HCM**") criteria 1 and 3, but did not recommend it to be eligible as a contributing resource to any historic district or eligible as a contributor to any potential historic district. *Id.* at p. 53.

Furthermore, the Cultural Resources report directly concludes that "[a]lthough the new construction and parts of the proposed renovation for the garage conform with many of the *Standards*, the loss of some of the materials, features, character, and spatial relationships of the historic building means the project does not fully comply with *Standards*. Therefore, the proposed Found Residences Project will result in an adverse change in the significance of a historical resource and significant impacts pursuant to CEQA Section 21084.1." SCEA Appendix C, p. 59.

However, Public Resources Code section 21084.1 states:

> [a] project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. For purposes of this section, an historical resource is a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources …. The fact that a resource is not listed in, or determined to be eligible for listing in, the California Register of

> Historical Resources, not included in a local register of historical resources, or not deemed significant pursuant to criteria set forth in subdivision (g) of Section 5024.1 shall not preclude a lead agency from determining whether the resources may be an historical resources for purposes of this section.

CEQA Guidelines Section 15064.5(a)(4) further echoes that, stating:

> [t]he fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

As such, pursuant to both PRC section 21084.1 and CEQA Guidelines section 15064.5, the fact that a project is not listed, determined to be, or registered as a historical resource does not preclude an agency's determination that the project is a historical resource.

In turn, CEQA Guidelines § 15064.5(a)(3) provides that a resource may be treated as historical and further mandates:

> Generally, a resource **shall be** considered by the lead agency to be "historically significant" if the resources meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4852) including the following:
>
> (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
>
> (B) Is associated with the lives of persons important in our past;
>
> (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
>
> (D) Has yielded, or may be likely to yield, information important in prehistory or history.

(Emph. added.)

As such, based on the fact that the Project site's 95-year-old building was expressly found as meeting criteria 1 and 3 to qualify as a historical monument HCM and also would admittedly have adverse impacts on historical resources, the City's ultimate use of a SCEA is improper since the SCEA, unlike an EIR, does not allow for identification of all feasible mitigation measures and alternatives, including alternatives sites. Indeed, there is substantial evidence that the 95-year-old structure may, among other things, "embod[y] the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values." CEQA Guidelines section 15064.5(a)(3)(C).

Accordingly, the Project may result in significant impacts to historical resources and the City must prepare an EIR to study and mitigate those impacts.

D. The Project Cannot Be Evaluated Under a SCEA Because the SCEA Fails to Incorporate All Feasible Mitigation Measures from Prior Environmental Impact Reports

Section 21155.2 of the Cal. Public Resources Code requires that a transit priority project incorporate all feasible mitigation measures, performance standards, or criteria from prior applicable environmental impact reports. However, the Project's SCEA expressly rejects many, if not most, of the applicable mitigation measures identified in SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("**2020-2045 RTP/SCS**" or "**Connect SoCal**"; and its respective Plan Environmental Impact Report[11] without making a feasibility determination.

First, the SCEA fails to incorporate SCAG's provided feasible mitigation measures; instead, it claims it complies with those based on its compliance with various standard regulations and would thereby reduce the Project's impacts to less than significant levels, obviating the need for SCAG's Mitigation Measures.

For example, for SCAG's Mitigation Measure PMM-GEO-1, the SCEA states that:

[11] SCAG (Sept. 3, 2020) A Resolution of the Southern California Association of Governments (SCAG) Adopting the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Addendum and Approving Connect SoCal in its Entirety, Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_ revisedmmrp.pdf?1606004474 at pp. 2 – 52.

> the Proposed Project already complies to this Mitigation Measure as it is subject to the building construction protocols for reducing seismic hazards as provided in the Los Angeles Municipal Code and applicable regulations. Compliance would help avoid or reduce the potentially significant effects on the potential for projects to result in the exposure of people and infrastructure to the effects of earthquakes, seismic related ground-failure, liquefaction, and seismically induced landslides, that are in the jurisdiction and responsibility of public agencies, regulatory agencies, and/or Lead agencies. The Proposed Project would also comply with all seismic standards provided in the California Building Code . . .

SCEA, Appendix A, p. A-21.

In other words, the SCEA conflates SCAG's Mitigation Measures with simply compliance with the law and suggests that the City or the Applicant had a legal option not to comply with the law or that SCAG's Mitigation Measures contain no further requirement. As a result of such erroneous assumptions, the SCEA fails to assess the need for or the feasibility of implementing SCAG's Mitigation Measure PMM-GEO-1.

Similarly, for Mitigation Measure PMM HYD-1, the SCEA states that "[f]ull compliance with the LID Plan, SUSMP, and implementation of design-related best management practices would ensure operation of the Proposed Project would not violate any water quality standards and discharge requirements or otherwise substantially degrade water quality" and thus concludes that the Project "would result in a less than significant impact" and that "[n]o mitigation is required and this mitigation measure is not applicable." SCEA, Appendix A, p. A-30.

Stated otherwise, the SCEA relies on standard and non-site-specific regulatory compliance measures to conclude that the project would have no impacts and therefore no further mitigation measures or SCAG's Mitigation Measures are required. Not so. According to CEQA Guidelines section 15064(b)(2), "[c]ompliance with the threshold does not relieve a lead agency of the obligation to consider substantial evidence indicating that the project's environmental effects may still be significant." See also, *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 885 ("Thresholds of significance are not used to determine automatically whether a given effect will or will not be significant. Instead, thresholds of significance are indicative only that an environmental effect that crosses the threshold "'will *normally* be determined to be significant,'" while

effects not crossing the threshold "'*normally* will be determined to be less than significant'" by the agency".)

Moreover, it is well-settled that "[c]ompliance with the law is not enough to support a finding of no significant impact under . . . CEQA." *Californians for Alternatives to Toxics v. Department of Food & Agriculture* (2005) 136 Cal. App. 4th 1, 15 – 17 (finding that a lead agency "abused its discretion by relying on DPR's regulatory scheme as a substitute for performing its own evaluation of the environmental impacts of using pesticides."). *See also*, *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project); *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210-211 ("Although the Building Code applies to all nonresidential buildings, it does not extend beyond the buildings themselves. It addresses the building's envelope, exterior lighting, and signage").

Further, bare conclusions or opinions of the agency are not sufficient to satisfy an agency's obligation under CEQA to support its environmental findings. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 403 – 404 ["To facilitate CEQA's informational role, the EIR must contain facts and analysis, not just the agency's bare conclusions or opinions. . . . [to] enable[] the decision-makers and the public to make an 'independent, reasoned judgment' about a proposed project." (*Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 935 [(quoting *Santiago County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 831.]")

Second and similarly, the SCEA unlawfully fails to incorporate feasible mitigation measures simply on the basis that the SCEA did not identify a potentially significant impact. For example, for PMM AES-1, the SCEA concludes that the Mitigation Measures is not applicable and finds that the "proposed project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to PRC § 21099." SCEA Appendix A, p. A-1. Similarly, for Mitigation Measure PMM AQ-1, the SCEA states that upon compliance with the South Coast Air Quality Management District ("**SCAQMD**"), the Mitigation Measure's requirements would be satisfied and concludes that because the impacts on Air Quality were found to be less than significant, the Mitigation Measure is not required. SCEA Appendix A, p. A-5.

The Project is required to incorporate all of SCAG's feasible mitigation measures, regardless of whether the SCEA itself identifies a potentially significant impact. PRC § 21155.2 subd. (a) is unambiguous in stating that transit priority projects must incorporate "**all feasible mitigation measures**, performance standards or criteria set forth in prior environmental impact reports," irrespective of whether the SCEA finds a less than significant impact. The SCEA fails to address the feasibility of measures not incorporated into the Project, and thus fails to meet the requirements of PRC § 21155.2.

E. Background Concerning SCAG's RTP/SCS

Senate Bill No. 375 requires regional planning agencies to include a sustainable communities strategy in their regional transportation plans. Gov. Code § 65080, sub.(b)(2)(B).) PRC § 21155(a) provides that the chapter 4.2 on the "Implementation of the Sustainable Communities Strategy," which includes both PRC § 21155.1 (TTP exemption) and PRC § 21155.2 (SCEA) provisions, "applies only to a transit priority project that is consistent with …. applicable policies specified for the project area in either a sustainable communities strategy or an **alternative planning strategy**, for which the State Air Resources Board, pursuant to subparagraph (H) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code, has accepted a **metropolitan planning organization's determination** that the sustainable community strategy or the **alternative planning strategy** would, if implemented, achieve the greenhouse gas emission reduction targets." [Emphasis added.]

The metropolitan planning organization for the Project area is SCAG and its respective planning strategy is incorporated in the RTP/SCS:

> Southern California Association of Governments (SCAG) is the largest MPO in California, covering six counties and 191 cities in the Southern California region. It is the transportation planning agency responsible for developing and implementing the long-range regional transportation plan, known as the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).
>
> The 2016 RTP/SCS continues to emphasize the key land use and transportation strategies in the first SCS that support a more sustainable future for the SCAG region. SCAG anticipates new growth will occur within existing urban boundaries with higher density development instead of sprawling outward. The 2016 SCS continues on the course set by the

> 2012 SCS to direct transportation investments within existing urbanized areas to support a more compact urban form. It includes an extensive regional bus and bus rapid transit (BRT) system, improved commuter and light rail service, an expanded regional bicycle network, improved pedestrian infrastructure, dedicated highway lanes for carpool and express buses, and several transportation demand management programs that reduce the number of vehicle trips.[12]

Moreover, CEQA Guidelines § 15125(d) provides that the agency "shall discuss any inconsistencies between the proposed project and … regional plans. Such regional plans include … regional transportation plans." Thus, CEQA requires analysis of any inconsistencies between the Project and the relevant RTP/SCS plan.

In April 2016, SCAG adopted the 2016 – 2040 Regional Transportation Plan/Sustainable Communities Strategy ("**2016-2040 RTP/SCS**"),[13] which includes policies and strategies to help the region achieve GHG emission reductions that would reduce the region's per capita transportation emissions by eight percent by 2020 and 18 percent by 2035.[14] SCAG's RTP/SCS plan is based upon the same requirements outlined in CARB's 2017 Scoping Plan and SB 375.

[13] Southern California Association of Governments ("SCAG") (April 2016) The 2016-2040 Regional Transportation Plan / Sustainable Communities Strategy: A Plan for Mobility, Accessibility, Sustainability and a High Quality of Life ("SCAG 2016-2040 RTP/SCS"), *available at* https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs.pdf?1606005557.

[14] *Id.* At pp. 8, 15, 153, 166.

On September 3, 2020, SCAG adopted the 2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy, titled Connect SoCal.[15] The 2020 RTP / SCS adopts policies and strategies aimed at reducing the region's per capita greenhouse gas emissions by 8% below 2005 per capita emissions levels by 2020 and 19% below 2005 per capita emissions levels by 2035.[16]

For both the 2016-2040 and the 2020-2045 RTP/SCS and Connect SoCal, SCAG prepared Program Environmental Impact Reports ("**PEIRs**") that include Mitigation Monitoring and Reporting Programs ("**MMRP**") that list project-level environmental mitigation measures that directly and/or indirectly relate to a project's GHG impacts and contribution to the region's GHG emissions.[17] These environmental mitigation measures serve to help local municipalities when identifying mitigation to reduce impacts on a project-specific basis that can and should be implemented when they identify and mitigate project-specific environmental impacts.

F. The SCEA Fails to Demonstrate Consistency with SCAG's RTP/SCS

A review of the RPT/SCS demonstrates that the proposed Project is inconsistent with several of its measures, including but not limited to, the analysis below:

[15] SCAG (Sept 2020) Connect SoCal: The 2020 – 2045 Regional Transportation Plan / Sustainable Communities Strategy of the Southern California Association of Governments (SCAG Connect SoCal"), available at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocalplan_0.pdf?1606001176.

SCAG RTP/SCS 2020-2045[18]	
Air Quality Project Level Mitigation Measures – PMM-AQ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Minimize land disturbance.	Here, the SCEA fails to discuss the feasibility of minimizing land disturbance. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.	Here, the SCEA fails to require suspending grading and earth moving when wind gusts exceed 25 mph. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
c) Cover trucks when hauling dirt.	Here, the SCEA fails to require trucks to be covered during dirt hauling. This is particularly critical where, as here, the Project involves a massive demolition of a 95-year-old structure. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

[18] 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_revisedmmrp.pdf?1606004474

d) Stabilize the surface of dirt piles if not removed immediately.	The SCEA fails to discuss the feasibility of stabilizing the surface of dirt piles if not removed immediately. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.	Here, the SCEA fails to evaluate the feasibility of limiting vehicular paths on unpaved surfaces and stabilizing any temporary roads. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
f) Minimize unnecessary vehicular and machinery activities.	Here, the SCEA fails to evaluate the feasibility of minimizing unnecessary vehicular and machinery activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	The SCEA fails to specifically require the Project to sweep paved streets at least once per day where there is evidence that dirt has been carried onto the roadway. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.	Here, the SCEA fails to mention or evaluate the feasibility of revegetating disturbed land, including vehicular paths created during construction. The SCEA also fails to mention avoiding future off-road vehicular activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.	Here, the SCEA fails to evaluate the feasibility of requiring contractors to assemble comprehensive inventory lists of all heavy-duty off- road equipment that could be use dan aggregate of 40 or more hours for the Project. The SCEA also fails to mention or evaluate the feasibility of preparing a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
k) Ensure that all construction equipment is properly tuned and maintained.	Here, the SCEA fails to discuss the feasibility of ensuring that all construction equipment is properly tuned and maintained. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
l) Minimize idling time to 5 minutes or beyond regulatory requirements—saves fuel and reduces emissions.	Here, the SCEA fails to discuss the feasibility of minimizing idling time to 5 minutes or beyond regulatory requirements. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	Here, the SCEA fails to discuss the feasibility of providing an operational water truck on-site at all times or using watering trucks to minimize As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.	Here, the SCEA fails to discuss the feasibility of utilizing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.	Here, the SCEA fails to evaluate the feasibility of developing a traffic plan to minimize traffic flow interference from construction activities. As such, we are unable to verify that the listed measures will be implemented, monitored, and enforced on the Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB	Here, the SCEA fails to evaluate the feasibility of requiring that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-

Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.	road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. The SCEA also fails to mention or discuss arranging appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
Greenhouse Gas Project Level Mitigation Measures – PMM-GHG-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building codes and other applicable laws, into project design including: i. Use energy efficient materials in building design, construction, rehabilitation, and retrofit. ii. Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems.	Here, while the SCEA states that the Project would comply with the CARB 2017 Scoping Plan and SCAG's 2020 Connect SoCal Plan, the SCEA fails to integrate Green Building measures. Specifically, the SCEA fails to discuss using energy efficient materials; installing energy- efficient lighting, heating, and cooling systems, water heaters, equipment, and control systems; reducing lighting, heating, and cooling needs by taking advantage of light-colored roofs and sunlight; incorporating passive environmental control systems; using high-efficiency lighting and cooking devices; incorporating passive solar design; using high-reflectivity building

iii. Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, and sunlight. iv. Incorporate passive environmental control systems that account for the characteristics of the natural environment. v. Use high-efficiency lighting and cooking devices. vi. Incorporate passive solar design. vii. Use high-reflectivity building materials and multiple glazing. viii. Prohibit gas-powered landscape maintenance equipment. ix. Reduce wood burning stoves or fireplaces. x. Provide bike lanes accessibility and parking at residential developments.	materials; prohibiting gas-powered landscape maintenance equipment; reducing wood burning stoves or fireplaces; and/or providing bike lanes accessibility and parking. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination. (SCEA Appendix A, pp. A-22-23.)
b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines.	Here, the SCEA fails to mention or utilize measures described in Appendix F of the State CEQA Guidelines. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

c)Include off-site measures to mitigate a project's emissions.	Here, the SCEA fails to mention or discuss the feasibility of including off-site measures to mitigate the Project's emissions. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
d) Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction and operation of projects to minimize GHG emissions, including but not limited to: i. Use energy and fuel-efficient vehicles and equipment; ii. Deployment of zero- and/or near zero emission technologies; iii. Use lighting systems that are energy efficient, such as LED technology; iv. Use the minimum feasible amount of GHG- emitting construction materials; v. Use cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; vi. Incorporate design measures to reduce energy consumption and increase use of renewable energy; vii. Incorporate design measures to reduce water consumption;	Here, the SCEA fails to evaluate the feasibility of incorporating BACT during design, construction, and operation of the Project. Specifically, the SCEA fails to mention or evaluate the feasibility of using energy and fuel-efficient vehicles and equipment; deploying zero- and/or near zero emission technologies; using the minimum feasible amount of GHG-emitting construction materials; using cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; incorporating design measures to reduce energy consumption and increase use of renewable energy; using lighter- colored pavement where feasible; and/or soliciting bids that include the concepts listed above. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

viii. Use lighter-colored pavement where feasible; and ix. Solicit bids that include concepts listed above.	
Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following: i. Increase bicycle carrying capacity on transit and rail vehicles; ii. Increase access to common goods and services, such as groceries, schools, and day care; iii. Incorporate affordable housing into the project; iv. Incorporate the neighborhood electric vehicle network; v. Orient the project toward transit, bicycle and pedestrian facilities; vi. Improve pedestrian or bicycle networks, or transit service; vii. Provide traffic calming measures; viii. Provide bicycle parking; ix. Limit or eliminate park supply; x. Unbundle parking costs;	Here, the SCEA fails to evaluate the feasibility of incorporating measures that include transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies. Specifically, the SCEA fails to mention or evaluate the feasibility of increasing bicycle carrying capacity on transit and rail vehicles; increasing access to common goods and services, such as groceries, schools, and day care; incorporating affordable housing into the project; orienting the project toward transit, bicycle and pedestrian facilities; improving pedestrian or bicycle networks, or transit service; providing traffic calming measures; providing bicycle parking; limiting or eliminating park supply; unbundling parking costs; providing parking cash-out programs; and/or implementing or providing access to commute reduction programs. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

xi. Provide parking cash-out programs; and xii. Implement or provide access to commute reduction program	
f. Incorporate bicycle and pedestrian facilities into project designs and maintaining these facilities; and planning for and building local bicycle projects that connect with the regional network;	Here, the SCEA fails to evaluate the feasibility of incorporating bicycle and pedestrian facilities into Project design and maintaining these facilities. The SCEA also fails to mention or discuss the feasibility of planning for and building local bicycle projects that connect with the regional network. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
g. Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations;	Here, the SCEA fails to provide incentives for construction and transit facilities within the development to improve transit access to rail and bus routes. The SCEA also fails to mention or provide dedicated shuttle service to transit stations. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

h. Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;	Here, the SCEA fails to discuss the feasibility of or designate a percentage of parking spaces for ride- sharing or high-occupancy vehicles. The SCEA also fails to mention or discuss the feasibility of providing adequate passenger loading and unloading for those vehicles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
j. Land use siting and design measures that reduce GHG emissions, including: iii. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles	Here, the SCEA fails to discuss measures that increase vehicle efficiency, including encouraging the use of zero and low emissions vehicles, and/or reducing the carbon content of fuels, and/or charging for electric bicycles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

As the table above indicates, the SCEA fails to provide sufficient information and analysis to determine the Project's consistency with numerous measures under SCAG's 2020-2045 *RTP/SCS*.

G. The SCEA Fails to Adequately Assess and Mitigate Impacts on Noise

If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." CEQA Guidelines § 15092(b)(2)(A–B).

The SCEA here finds that the construction of the Project would have the potential to result in significant noise impacts at off-site sensitive receptor locations from on-site

construction activities via construction equipment. SCEA Appendix F, p. 17. These impacts are particularly detrimental given that the SCEA identifies at least four (4) sensitive receptor locations, Locations #1-4, within 500 feet of the Project Site. *Id.* Accordingly, the SCEA imposes mitigation measures such as MM NOI-1 which calls for the implementation of noise control devices, such as mufflers, lagging, and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. SCEA Appendix F, p. 18.

However, the SCEA's mitigation measure is problematic for at least two (2) reasons. First, the assumed elevation (at ground level) of the noise source is not defined. *Id.* This information is crucial because it is key to the performance of the noise control devices. The Project proposes a fifteen-story (15) multi-family residential building. SCEA II Project Description, p. II-1. Thus, for example, assuming the noise control device sits on the ground floor at the perimeter of the job site, it would not adequately mitigate noise sources elevated above the ground level as construction of the building progresses. The mitigation measures must be revised to fully explain how the noise control devices would be used to mitigate noise impacts at a minimum of 15 dBA for elevated sources during construction of the fifteen-story (15) building.

Further, the SCEA is not clear on where, if at all, noise-control barriers would be placed and whether those would be movable and adjustable to ensure all construction noise is mitigated.

Second and likewise, MM NOI-1 addresses only receivers at ground level but does not address elevated receivers, such as the seventh floor of the Hollywood Hotel at sensitive receptor Location #1 or the third floor of the Wilcox Hotel at sensitive receptor Location #2. SCEA Appendix F, p. 17. Furthermore, the SCEA does not recognize other nearby buildings, such as, for example, the Goya Studios Sound Stage or the hotel Mama Shelter Los Angeles, which could very well count as sensitive receptors and be impacted by the noise from the Project's construction.

Therefore, the SCEA should be revised and recirculated to account for the foregoing issues and potential construction and operational noise impacts individually and cumulatively with other related projects as defined by CEQA.

V. CONCLUSION

The Southwest Mountain States Carpenters requests that the City prepare an EIR to fully assess the Project's impacts, including impacts on the historical resources, or, in the alternative, the City should revise and recirculate the Project's SCEA to address the aforementioned concerns.

If the City has any questions or concerns, feel free to contact this Office.

Sincerely,

Stephanie Papayanis

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.

SUPERIOR COURT OF CALIFORNIA, COUNTY OF LOS ANGELES

Civil Division

Central District, Stanley Mosk Courthouse, Department 54

21STCP02223 March 9, 2023
HI POINT NEIGHBORS' ASSOCIATION, AN UNINCORPORATED ASSOCIATION vs CITY OF LOS ANGELES, A MUNICIPAL CORPORATION 4:05 PM

Judge: Honorable Maurice A. Leiter
Judicial Assistant: N. Marshalian
Courtroom Assistant: None

CSR: None
ERM: None
Deputy Sheriff: None

APPEARANCES:

For Plaintiff(s): No Appearances

For Defendant(s): No Appearances

NATURE OF PROCEEDINGS: Ruling on Submitted Matter

The Court, having taken the matter under submission on 03/06/2023 for Non-Jury Trial, now rules as follows:

Ruling on Submitted Matter

Trial Date: March 6, 2023
Department 54, Judge Maurice Leiter
First Amended Petition for Writ of Mandate
Moving Party: Petitioner, Hi Point Neighbors' Association
Responding Parties: Respondent, City of Los Angeles; Real Party in Interest, Hi Point M, LLC

Ruling: THE FIRST AMENDED PETITION FOR WRIT OF MANDATE IS GRANTED IN PART AND DENIED IN PART.

The Court posted its tentative decision on this matter on February 28, 2023. Trial (in the form of oral argument) was held on March 6, 2023, after which the Court took the matter under submission. This is the Court's ruling on the merits.

I. STATEMENT OF FACTS

A. Measure JJJ, Transit Oriented Communities Affordable Housing Incentive Program

On November 8, 2016, Los Angeles County voters adopted Measure JJJ. (AR 6655-6676.) Measure JJJ sought to address the acute shortage of affordable housing for unhoused and low-income persons, following the dissolution of the Community Redevelopment Agency (which had

provided funding for low- and moderate-income housing), and considering the County's outdated General Plan and zoning designations, which failed to address affordable housing challenges. (AR 6656.)

Measure JJJ contained an incentive program to encourage the development of affordable housing. It sought to spur development of affordable housing in strategic locations, such as near major transit stops, where residents are susceptible to displacement as property values and rents rise. (Ibid.) And it created the Transit Oriented Communities ("TOC") Affordable Housing Incentive Program to provide developers with incentives to develop affordable housing in transit-oriented neighborhoods. (AR 6657.)

On December 13, 2016, the Los Angeles Municipal Code was amended to codify Measure JJJ and the TOC Affordable Housing Incentive Program, in Municipal Code section 12.22 A.31. (Resp. Request for Judicial Notice ("Resp. RJN"), Ex. B at pp. 75-77.) This Code section provides incentives to housing developments "located within a one-half mile radius [2,640 feet] of a Major Transit Stop," defined by California Public Resources Code section 21064.3 as "[t]he intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute hours." (Id., Ex. B at p. 75; AR 6947; Pub. Resources Code, § 21064.3, subd. (c).) The incentives include residential density increases and parking reductions. (Id., Ex. B at p. 76.) It directs, "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning [to] prepare TOC Affordable Housing Incentive Program Guidelines ("TOC Guidelines") that provide the eligibility standards, incentives, and other necessary components of this TOC Incentive Program described herein." (Ibid.)

On May 25, 2017, the Los Angeles City Planning Commission adopted TOC Guidelines. (AR 6939.) The TOC Guidelines specify that only affordable housing developments located within a one-half mile radius of a "major transit stop" qualify for the incentives. (AR 6947.) They establish a "Tier" system, which provides a ranking (Tier 1-4) to each eligible affordable housing based on its proximity to a "major transit stop." (Ibid.) Pertinent to the matter before the Court, the TOC Guidelines provide that affordable housing developments will be ranked as "Tier 3" where (a) the development is located within 750 feet of an intersection of a Regular Bus and Rapid Bus Line; or (b) the development is located within 1,500 feet of an intersection of two Rapid Bus lines. (AR 6948.) The TOC Guidelines define a "Rapid Bus" as "a higher-quality bus service that may include dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes Metro Bus Rapid Transit line, Metro Rapid

700 lines, Metro Orange and Silver Lines, Big Blue Rapid lines, and the Rapid 6 Culver City. (Ibid.)

The TOC Guidelines state that all eligible affordable housing developments will receive "Base Incentives," which are residential density increases (an increase in the number of dwelling units permitted under the applicable zoning ordinance, and an increase in the floor area ratio permitted under the applicable zoning ordinance), and parking reductions (a decrease in the number of parking spaces required under the applicable zoning ordinance). (AR 6950, 6952-6954.) The degree of the reduction and/or increase permitted is determined by Tier ranking. (Ibid.) And the TOC Guidelines provide that eligible affordable housing developments may be granted "[u]p to three Additional Incentives" (AR 6950.), including reductions in yards/setbacks, decreases in open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.)

B. Project and Project Site

The proposed project at issue here concerns a rectangular-shaped lot at 1447 South Hi Point Street in Los Angeles ("Project Site"), near the intersection of Pico Boulevard and Fairfax Avenue. (AR 18.) The Project Site is approximately 8,839 square feet and currently has a single-family residence. (Ibid.) The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O, with a land use designation of "Medium Residential." (Ibid.) Under its current zoning, building height is limited to 35 feet, articulation is required every 30 feet for building facades exceeding 40 feet, and balconies above the first floor which have a line of sight to adjacent homes are prohibited. (Ibid.)

The proposed Project would demolish the single-family home and construct a five-story, 57-foot-high multi-family residential development above one level of subterranean parking. (AR 18.) It will contain 20 multi-family dwelling units: two one-bedroom units, ten two-bedroom units, and eight three-bedroom units. (Ibid.) It would provide 24 parking spaces, 20 long-term bicycle parking spaces, and two short-term bicycle parking spaces. (Ibid.) The building will encompass approximately 20,093 square feet in total building area, with a floor area ratio of approximately 3.78:1. (Ibid.)

The properties surrounding the Project Site generally are commercial, single-family residences, and multi-family residential uses. (AR 18.) Properties abutting the Project Site to the west are zoned [Q]R3-1-O and contain three- and four-story apartment buildings. (Ibid.) Properties to the

east of the Project Site, across Hi Point Street, are also zoned [Q]R3-1-O and are developed with one- to four- story single-family homes, condominiums, and small lot buildings. (Ibid.) Properties to the north of the Project Site are zoned [Q]R3-1-O and C4-1-O and include both single-family and multi-family residential structures, as well as a McDonald's Drive-Thru restaurant and a commercial strip mall. (Ibid.) Properties to the south of the Project Site, across Saturn Street, are zoned [Q]R3-1-O and R1R3-RG-O and include a mix of single-family residences and multi-story apartment buildings. (Ibid.)

Public buses operate nearby on Pico Boulevard and Fairfax Avenue. (AR 2959.)

C. Administrative History and Approval

On February 27, 2020, Hi Point M, LLC ("Real Party in Interest") submitted a "Transit-Oriented Communities Referral Form" to the Department of City Planning, which asked the Department to determine whether the Project qualified for incentives under the TOC Affordable Housing Incentive Program and, if so, under which "Tier" the Project may be categorized. (AR 619.) On the same day, the Department concluded that the Project qualified for incentives, because the Project was within a half-mile radius of a "Major Transit Stop." The Department noted, "Santa Monica [Big Blue Bus] 7" and "[Rapid] 7" travel through the intersection [at Pico and Fairfax] and have service intervals of less than 15 minutes. (Ibid.) The Department also noted that "Local Line 217" and "Rapid 780" travel through the intersection and have service intervals of 14.4 minutes and 12.7 minutes, respectively. (Ibid.) The Department concluded the Project qualified for "Tier 3" categorization because it was (a) within 750 feet of an intersection of a Regular Bus and Rapid Bus Line, or (b) within 1,500 feet of an intersection of two Rapid Bus lines. (AR 619, 6948.)

On May 24, 2020, Real Party in Interest submitted a "Department of City Planning Application" requesting approval of the Project and the issuance of incentives under the TOC Affordable Housing Incentive Program. (AR 646-652.) Real Party in Interest sought: (a) 70% Density Bonus; (b) 50% Floor Area Ratio increase, (c) Parking reduction to .5 spots per unit; (d) 22 feet height increase; (e) 25% open space reduction; and (f) 30% side yard setback reduction. (AR 647.)

On December 30, 2020, the Director of the Department of City Planning approved the application. (AR 2954-2955.) The Director determined the Project is in a "Tier 3" Incentive Area and approved these "Base Incentives:" (a) a density increase of 70 percent, which equates to a

maximum density of 21 residential dwelling units; (b) a maximum floor area ration of 4.5 to 1, representing a 50 percent increase in the floor area ratio of the underlying residential zone; and (c) .5 automobile parking spaces per unit. (AR 2955-2956.) The Director also approved these "Additional Incentives:" (a) a 30 percent reduction in the required width of two side yards to provide a minimum setback of five feet eight inches in lieu of the minimum eight feet; (b) an increase of 22 feet in building height, equal to a maximum building height of 57 feet, with limited additional height permitted for roof structures, stairwells, elevator shafts, etc. as permitted by the Los Aneles Municipal Code; and (c) a maximum reduction of 25 percent in the required amount of open space. (AR 2956.) And the Director concluded that the Project was exempt from CEQA pursuant to the "Class 32" Categorical Exemption. (AR 2954.)

On January 13, 2021, nearby residents filed a total of five appeals from the Director's approval of the Project. (AR 22.) The residents' appeals challenged: (a) The Director's conclusion the Project is located in a "Tier 3" TOC Affordable Housing Incentive Area; (b) The Director's conclusion the Project is exempt from CEQA pursuant to the "Class 32" Categorical Exemption, because the Project will have significant impacts on noise and traffic conditions; (c) whether The Project complies with the Qualified "Q" Conditions of the Project Site's [Q]R3-1-O zoning; and (d) whether the height of the Project is incompatible with the surrounding neighborhood and will result in loss of sunlight, properly values, and community character. (AR 22-25.)

In response to these appeals the Department of City Planning drafted an "Appeals Recommendation Report", which recommended that the appeals be denied. (AR 22-25.) The Report concluded that: (a) While the Project Site may not be located within 750 feet from a Major Transit Stop, "the project [remains] qualified for Tier 3 TOC status by proximity to a Major Transit Stop involving the intersection of two or more rapid bus routes located within 1,500 feet of the subject property" (rapid bus routes, Santa Monica Big Blue Bus Rapid 7 Line and Metro Rapid Line 780); (b) The Project is exempt from CEQA as it satisfied the five requirements applicable to the "Class 32" Categorical Exemption; (c) The Project is in compliance with the Qualified "Q" Condition; and (d) The Project's height is not incompatible with the surrounding neighborhood. (AR 22-25.)

On April 8, 2021, the City Planning Commission adopted the Department of City Planning's recommendation and denied the appeals. (AR 288.)

On April 13, 2021, two residents filed a CEQA appeal of the "Class 32" Categorical Exemption finding. (Ibid.) On August 31, 2021, the Planning and Land Use Management ("PLUM")

Committee, following a hearing, recommended the City Council deny the residents' appeal. (AR 295-296.) On September 15, 2021, the City Council adopted the PLUM Committee's recommendation and denied the CEQA appeal. (AR 317.)

II. THE PETITION AT ISSUE HERE

On July 12, 2021, Hi Point Neighbors' Association ("Petitioner") filed a Verified Petition for Writ of Mandate against City of Los Angeles ("Respondent"). On November 10, 2021, Petitioner filed the operative Verified First Amended Petition for Writ of Mandate. This Petition has three causes of action: (1) Violation of Local Zoning—As Applied Challenge to TOC Guidelines; (2) Violation of Local Zoning Law—Project Inconsistent with TOC Guidelines; and (3) Violation of California Environmental Quality Act—Improper Adoption of Exemption.

III. REQUEST FOR JUDICIAL NOTICE

Petitioner's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a), (b), and (h).

Respondent's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a) and (b).

Real Party in Interest's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

Respondent's Supplemental Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

IV. STANDARD OF REVIEW

Each of the three causes of action require a different standard of review.

A. First Cause of Action: As-Applied Challenge to TOC Guidelines

The First Cause of Action is a challenge to the TOC Guidelines. Petitioner argues the TOC Guidelines are invalid as exceeding the scope of Measure JJJ. (FAP, ¶¶ 32-33.) First, Petitioner contends the "Tiers" in the TOC Guidelines were not permitted by Measure JJJ. (FAP, ¶ 35.)

Second, Petitioner contends the "Additional Incentives" in the TOC Guidelines exceed the incentives permitted by Measure JJJ. (FAP, ¶¶ 32-33.) Third, Petitioner argues the TOC Guidelines improperly allow open space reductions and height increases which override [Q] Conditions (such as design guidelines) applicable to the Project Site by Ordinance Number 168193. (FAP, ¶ 38.) Petitioner contends the TOC Guidelines are invalid as exceeding those authorized by Measure JJJ.

These are both facial and as-applied challenges. Petitioner challenges the TOC Guidelines as not authorized by Measure JJJ, and challenges them on the ground that their application resulted in the issuance of invalid "conditions of approval" to the Project. (FAP, ¶ 37.) A facial challenge to a statute or local ordinance contends "'the alleged defect is in the [O]rdinance itself, not in the manner or circumstances in which it is being applied.'" (County of Sonoma v. Superior Court (2010) 190 Cal.App.4th 1312, 1324.) "'In evaluating a facial challenge, a court considers "only the text of the [challenged enactment] itself,"' and conducts statutory interpretation to determine the enactment's validity. (Beach & Bluff Conservany v. City of Solana Beach (2018) 28 Cal.App.5th 244, 264.) An as-applied challenge asserts the enforcement of a particular statute or ordinance is invalid. (Howard Jarvis Taxpayers Assn. v. Weber (2021) 67 Cal.App.5th 488, 496.)

The California Supreme Court similarly found a combined facial and as-applied challenge in Travis v. County of Santa Cruz (2004) 33 Cal.4th 757, 767.) The Ordinance at issue there permitted County residents to develop a second dwelling unit on their property so long as the rent charged for the second dwelling unit did not exceed that established by the Section 8 Program or Chapter 17.1 of the County Code, whichever higher, and the resident of the second dwelling unit was a low-income resident, an elderly resident, or a family member of the owner of the unit. (Id. at p. 763.) Travis owned a residential property in the County of Santa Cruz. (Id. at p. 764.) He was granted a permit to construct a second dwelling unit on his proper, subject to the rent and resident conditions imposed by the Ordinance. (Ibid.) Travis filed a Petition for Writ of Mandate against the County of Santa Cruz, challenging the Ordinance on the ground that it violated state law and is unconstitutional.

The Supreme Court found that the petition presented a facial challenge to the Ordinance as invalid and unconstitutional. It also presented an as-applied challenge to the Ordinance, as it placed allegedly improper conditions on his second dwelling unit. (Travis, supra, 33 Cal.4th at p. 767.)
The interpretation of a legislative enactment and the determination of the enactment's validity is reviewed de novo. (Beach & Bluff Conservancy, supra, 28 Cal.App.5th at p. 264.) To prevail on

an as applied challenge, a plaintiff must demonstrate that the application of the statute deprived the individual of a protected right. (Allen v. City of Sacramento (2015) 234 Cal.App.4th 41, 56.) In either case, the Court begins from "'the strong presumption that the ordinance is . . . valid.' [Citations.]" (Building Industry Assn. of Bay Area v. City of San Ramon (2016) 4 Cal.App.5th 62, 90.) The court "'resolve[s] all doubts in favor of the validity of the ordinance.' [Citation.]" (Ibid.) Unless conflict between the two provisions is "clear and unmistakable", the court must uphold the ordinance. (Ibid.) Petitioner bears the burden of demonstrating the ordinance is invalid. (Ibid.)

B. Second Cause of Action: Challenge to Respondent's Tier 3 Finding under TOC Guidelines

The Second Cause of Action alleges that Respondent's conclusion that the Project qualifies for "Tier 3" is not supported by the evidence. (FAP, ¶¶ 39-60.) It is undisputed that this cause of action is governed by Code of Civil Procedure section 1094.5. (Code Civ. Proc., § 1094.5.)

Code of Civil Procedure "section 1094.5, subdivision (c), does not establish a single standard for judicial review of the evidentiary basis for agency determinations." (Bixby v. Pierno (1971) 4 Cal.3d 130, 137; Code Civ. Proc., § 1094.5, subd. (c).) It articulates two possible standards of review: independent judgment and substantial evidence. (Code Civ. Proc., § 1094.5, subd. (c).) The independent judgment standard applies where an administrative agency's decision "substantially affects a fundamentally vested right." (Bixby, supra, 3 Cal.3d at p. 144.) In all other scenarios, where an agency's decision does not "substantially affect a fundamentally vested right," the substantial evidence standard applies. (Ibid.) "The courts must decide on a case-by-case basis whether an administrative decision or class of decisions substantially affects fundamental vested rights . . . ." (Ibid.)

Petitioner does not advance any substantive arguments that approval of the Project "substantially affects a fundamentally vested right." Petitioner's Opening Brief contains a single, conclusory sentence asserting that the Second Cause of Action is subject to independent judgment review. (OB, at p. 12:19-26.) The Court disagrees. The substantial evidence standard of review is applicable to Petitioner's Second Cause of Action.

Under the substantial evidence standard of review the Court must "examine all relevant evidence in the entire record, considering both the evidence that supports the administrative decision and the evidence against it, in order to determine whether or not the agency decision is supported by 'substantial evidence.'" [Citation.]" (Desmond v. County of Contra Costa (1993) 21 Cal.App.4th

330, 335.) "[T]he petitioner in an administrative mandamus proceeding has the burden of proving that the agency's decision was invalid and should be set aside, because it is presumed that the agency regularly performed its official duty. When the standard of review is the substantial evidence test . . . it is presumed that the findings and actions of the administrative agency were supported by substantial evidence. [Citations.]" (Desmond, supra, 21 Cal.App.4th at pp. 335-336.) The court's review "is not designed to rectify an imprudent decision by an administrative agency. Administrative mandamus is not to be used to control the discretion of an administrative body, but only to ensure that it was not abused. [Citations.] It is for the agency to weigh the preponderance of conflicting evidence, 'as we may reverse its decision only if, based on the evidence before [the agency], a reasonable person could not have reached the conclusion reached by [the agency].' [Citations.]" (Young v. City of Coronado (2017) 10 Cal.App.5th 408, 419.)

C. Third Cause of Action: Challenge to Respondent's CEQA Exemption Finding

The Third Cause of Action is brought under the California Environmental Quality Act ("CEQA"). "CEQA is a comprehensive scheme designed to provide long-term protection to the environment." (Mt. Lion Found. v. Fish & Game Com. (1997) 16 Cal.4th 105, 112.) "In enacting CEQA, the Legislature declared its intention that all public agencies responsible for regulating activities affecting the environment give prime consideration to preventing environmental damage when carrying out their duties." (Ibid.) "CEQA is to be interpreted to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (Ibid.)

"In order to ensure that the long-term protection of the environment, consistent with the provision of a decent home and suitable living environment for every Californian, shall be the guiding criterion in public decisions, CEQA and its implementing administrative regulations (CEQA Guidelines) establish a three-tier process to ensure that public agencies inform their decisions with environmental considerations." (Muzzy Ranch Co. v. Solano County Airport Land Use Com'n (2007) 41 Cal.4th 372, 379-80.)

The Court's inquiry here involves the "second tier." "The second tier concerns exemptions from CEQA review." (Muzzy Ranch Co., supra, 41 Cal.4th at p. 380.) In enacting CEQA, the California Legislature recognized that not all "projects" will have a significant effect on the environment, and, therefore, should not be subject to the regulations imposed by CEQA. (Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086, 1100-1101.) The

Legislature instructed the Office of Planning and Research to "prepare and develop proposed guidelines for the implementation of [CEQA]", which "shall include a list of classes of projects that have been determined not to have a significant effect on the environment and that shall be exempt from [CEQA review]. In adopting the guidelines, the Secretary of the Natural Resources Agency shall make a finding that the listed classes of projects referred to in this section do not have a significant effect on the environment." (Pub. Resources Code, §§ 21083, 21084.) "In response to [the California Legislature's] mandate," the Secretary of the Natural Resources Agency has concluded that thirty-three (33) categories of "projects" "do not have a significant effect on the environment" and "are declared to be categorically exempt from the provisions of CEQA." (CEQA Guidelines, §15300.) Where a public agency properly finds that a proposed "project" falls into one of the thirty-three (33) categorical exemptions articulated within the CEQA Guidelines, "no further environmental review is necessary." (Muzzy Ranch, supra, 41 Cal.4th at 380.) "The agency need only prepare and file a notice of exemption (see CEQA Guidelines, §§ 15061, subd. (d), 15062, subd. (a)), citing the relevant statute or section of the CEQA Guidelines and including a brief statement of reasons to support the finding of an exemption (id., § 15062, subd. (a)(4))." (Ibid.)

An agency's finding that a proposed project is categorically exempt from CEQA review is reviewed for a prejudicial abuse of discretion. (Pub. Resources Code, § 21168.5. "Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Ibid.; see also Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal.4th 412, 435.) "'[O]nce an agency . . . determines, based on substantial evidence in the record, that the project falls within a categorical exemption . . ., the burden shifts to the challenging party . . . to "'produce substantial evidence . . .'" [citations] . . . that one of the exceptions to [the] categorical exemption applies.' [Citation.]" (CREED-21 v. City of San Diego (2015) 234 Cal.App.4th 488, 514; see Berkeley Hillside, supra, 60 Cal.4th at p. 1105 ["As to projects that meet the requirements of a categorical exemption, a party challenging the exemption has the burden of producing evidence supporting an exception."].)
V. ANALYSIS

Petitioner challenges Respondent's approval of the Project on three grounds. First, Petitioner contends Respondent's award of "Additional Incentives" pursuant to the TOC Guidelines was improper because the Guidelines are invalid on their face and as applied. Second, Petitioner argues that Respondent's finding that the Project qualifies for "Tier 3" incentives is not supported by substantial evidence. Third, Petitioner says Respondent's determination that the

Project qualifies for a "Class 32" Categorical Exemption under CEQA is not supported by substantial evidence. The Court addresses each claim in turn.

A. First Cause of Action—Petitioner's Challenge to TOC Guidelines

Petitioner raises three facial and as-applied challenges to the TOC Guidelines. Petitioner contends the TOC Guidelines' "Tier" system was not contemplated by Measure JJJ. Second, Petitioner says Measure JJJ did not contemplate the award of "Additional Incentives." Third, Petitioner contends the incentives are inconsistent with the [Q] Conditions applicable to the Project Site.

Before reaching these arguments, the Court addresses Respondent's argument that the first cause of action is barred by the statute of limitations.

1. Petitioner's First Cause of Action is Not Barred by Statute of Limitations

Respondent argues that First Cause of Action is untimely under Government Code section 65009, subdivision (c)(1)(B), which creates a 90-day statute of limitations period for actions or proceedings challenging several types of local planning and zoning decisions. (Gov. Code, § 65009, subd. (c)(1).) Pertinent here are actions described in Government Code section 65009, subdivision (c)(1)(B) and (c)(1)(E):

(c)(1) Except as provided in subdivision (d), no action or proceeding shall be maintained in any of the following cases by any person unless the action or proceeding is commenced and service is made on the legislative body within 90 days after the legislative body's decision:
. . .

(B) To attack, review, set aside, void, or annul the decision of a legislative body to adopt or amend a zoning ordinance.
. . .

(E) To attack, review, set aside, void, or annul any decision on the matters listed in Sections 65901 and 65903, or to determine the reasonableness, legality, or validity of any condition attached to a variance, conditional use permit, or any other permit.

(Gov. Code, § 65009, subd. (c)(1)(B), (c)(1)(E).) The Court of Appeal in County of Sonoma v.

Superior Court (2010) 190 Cal.App.4th 1312, 1324 stated: "[t]he limitations periods set out in the statute are triggered by specific acts of local land use planning authorities. [Citation.] For the actions described in section 65009, subdivision (c)(1) the 90-day limitations period begins to run from the date on which the challenged decision is made. [Citation.] Thus, where a party brings a facial challenge to a zoning ordinance, [the limitations period described in Government Code section 65009, subdivision (c)(1)(B) is applicable, and] the limitation period begins to run on the date the ordinance becomes effective. [Citation.] If a party challenges conditions attached to a conditional use permit or other permit, [the limitations period described in Government Code section 65009, subdivision (c)(1)(E) is applicable, and] the limitations period runs from the date of final administrative action on the permit." (County of Sonoma, supra, 190 Cal.App.4th at p. 1324.) Therefore, to determine when the statute of limitations begins to run, "one must determine what specific governmental act or acts the [party] . . . sought to challenge." (Ibid.)

Respondent argues that Petitioner's First Cause of Action presents only a facial challenge to the TOC Guidelines, that subdivision (c)(1)(B) is applicable, and the statute of limitations period began to run when TOC Guidelines were adopted on May 25, 2017. (AR 6939.)

As discussed, the First Cause of Action is both a facial challenge and an as-applied challenge to the TOC Guidelines. It claims the TOC Guidelines exceed the scope of Measure JJJ, and also claims the application of the TOC Guidelines to the Project resulted in "conditions of approval" unauthorized by Measure JJJ. While the facial challenge is barred by subdivision (c)(1)(B), the as-applied challenge is timely under subdivision (c)(1)(E).

The "Additional Incentives" awarded to the Project are contained in the "Director's Determination" as "Conditions for Approval." These became final on April 13, 2021, when the Department of City Planning issued a Letter of Determination denying the appeals filed against the Director's approval of the award of "Additional Incentives." (AR 289.) Petitioner was required to file the Petition within 90 days, or July 12, 2021. (Ibid.; Gov. Code, § 65009, subd. (c)(1)(E).) Petitioner filed the original Petition on July 12, 2021.

The Court recognizes that Petitioner's as-applied challenge includes arguments that also would apply to a facial challenge: the Court must determine whether the "Additional Incentives" and "Tier" system are permitted by Measure JJJ. The Court may do so in considering the as-applied challenge. (Travis, supra, 33 Cal.4th at pp. 768-769 ["That the Ordinance could have been facially attacked in an appropriate action at an earlier time, before it was applied to Travis' property, does not make section 65009 subdivision (c)(1)(E) inapplicable to Travis's claim for

removal of invalid conditions. This is not a case in which the plaintiff complains of injury solely from a law's enactment. [Citation.] Travis complains of injury arising from, and seeks relief from, not simply the Ordinance's enactment or continued presence in the County Code, but the County's imposition on his second unit permit of conditions required by the Ordinance. Having brought his action in a timely way after application of the Ordinance to him, Travis may raise in that action a facial attack on the Ordinance's validity."].)

2. TOC Guideline's Creation of "Tiers" is Not Beyond Measure JJJ

Petitioner focuses on Section 6 of Measure JJJ, which discusses one of the incentives available to affordable housing developments under the TOC Affordable Housing Incentive Program. (AR 6673.) It states, in part,

Residential Density Increase. An Eligible Housing Development shall be granted increased residential density at rates that shall meet or exceed a 35% increase. In establishing density allowances, the Department of City Planning may allow adjustments to minimum square feet per dwelling unit, floor area ratio, or both, and may allow different levels of density increase depending on the Project's base zone and density.

(AR 6673-6674 [emphasis added].) Petitioner contends Measure JJJ prohibits varying levels of incentives on any basis other than "the Project's base zone and density." (Ibid.) According to Petitioner, "Base Incentives" and "Additional Incentives" based on the Project's proximity to transit—the "Tier" system—is beyond the authority granted by Measure JJJ.

There are several weaknesses in this argument. First, the italicized language relied on by Petitioner is applicable only to one form of incentive (Residential Density Increase); it is not an overarching limitation to all incentives, as Petitioner suggests. Second, Measure JJJ does not expressly prohibit differing incentives based on a criterion other than a Project's base zone and density. Third, Measure JJJ intended to provide flexibility to the Director of the Department of City Planning in drafting the TOC Guidelines. It expressly give the Director discretion to draft the TOC Guidelines and establish "eligibility standards, incentives, and other necessary components of this TOC Incentive Program . . . ." (AR 6673 [emphasis added].) Measure JJJ also states that the Director "shall" draft the TOC Guidelines "consistent with [those] purpose[s]". (AR 6673.) A stated purpose of the TOC Affordable Housing Incentive Program is to encourage the development of affordable housing in transit-rich neighborhoods. (AR 6656-6657.) The Tiers in the TOC Guidelines and the award of more favorable incentives to

developments in closest proximity to major transit stops furthers the purpose of Measure JJJ.

The TOC Guidelines' "Tier" system is not inconsistent with or beyond the scope of Measure JJJ.

3. TOC Guideline's "Additional Incentives" Are Not Beyond Measure JJJ

Petitioner focuses next on the "Additional Incentives" authorized by the TOC Guidelines. Those include reductions in otherwise required yards/setbacks, decreases in required open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.) Petitioner argues that Measure JJJ did not contemplate the "Additional Incentives."

Measure JJJ expressly contemplates the "Base Incentives" included in the TOC Guidelines. (AR 6673-6674.) But Measure JJJ does not prohibit the Director from including additional incentives. Indeed, Measure JJJ allows the Director to draft incentives; those are not limited to the Base Incentives. (AR 6673.) Measure JJJ expressly provides: "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning shall prepare TOC Affordable Housing Incentive Program Guidelines ('TOC Guidelines') that provide the . . . incentives . . . of this TOC Incentive Program . . . ." (Ibid.)

The "Additional Incentives" in the TOC Guidelines are not inconsistent with Measure JJJ.

4. TOC Guidelines and "Q" Qualified Conditions

The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O. (AR 18.) The "Q" Qualified Condition, established by Ordinance Number 168.193, limits building height to 35 feet, requires articulation at every 30 feet for building facades exceeding 40 feet, and prohibits balconies above the first floor which have a line of sight to adjacent existing single-family uses. (Ibid.) Petitioner contends the TOC Guidelines improperly violate the "Q" Qualified Condition by awarding incentives in excess of permissible height and articulation. (OB, at p. 17:1-7.)

The Court is unpersuaded this argument provides grounds to invalidate the TOC Guidelines. The premise of Petitioner's First Cause of Action is that the TOC Guidelines are invalid because they are inconsistent with Measure JJJ. But this argument does not concern inconsistency with Measure JJJ; instead it claims a purported inconsistency with the "Q" Qualified Condition. (OB, at p. 17:1-7.) Petitioner's argument concerning the "Q" Qualified Condition does not show that

"the TOC Guidelines [are] inconsistent with Measure JJJ," as alleged in the First Cause of Action. (FAP, ¶ 38.)

The Petition as to the First Cause of Action is DENIED.

B. Second Cause of Action— Petitioner's Challenge to Respondent's Tier 3 Finding under TOC Guidelines

Petitioner's Second Cause of Action contends that approval of "Tier 3" TOC Incentives is not supported by substantial evidence. (OB, at p. 14:6-15:11.)

As discussed, a proposed development will be placed in "Tier 3" if it is within 1,500 feet of a "Major Transit Stop" which includes the intersection of two "Rapid Buses." (AR 2089.) The TOC Guidelines define a "Rapid Bus" as "a higher quality bus service that may include several key attributes, including dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes, but is not limited to, Metro Bus Rapid Transit lines, Metro Rapid 700 lines, Metro Orange and Silver Lines, Big Blue Bus Rapid lines and the Rapid 6 Culver City bus." (Ibid.)

On April 8, 2021, the City Planning Commission denied the various appeals filed by residents challenging the Director of City Planning's determination that the Project qualifies as "Tier 3." (AR 14-15.) The Commission concluded the Project is located less than 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where two Rapid Bus lines intersect. (AR 22.) The two Rapid Bus lines are Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780. (AR 22, 286.)

Petitioner does not appear to dispute that Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet the definition of "Rapid Bus[es]." And Petitioner does not appear to dispute that the Project is located within 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 intersect. Rather, Petitioner questions whether Respondent's finding that where the Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet, at the intersection of Pico Boulevard and Fairfax Avenue, qualifies as a "Major Transit Stop." (OB, at pp. 15:11-16:2.) Petitioner points out that the intersection of two or more bus lines will be considered a "Major Transit Stop" only where those bus lines have "a service interval of 15 minutes or less during the morning and afternoon peak commute hours."

(AR 6947.) Petitioner contends the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak hours, the intersection of the two Rapid bus lines therefore do not meet the definition of "Major Transit Stop," and the Project did not qualify for "Tier 3." (OB, at pp. 15:11-16:2.)

The Court agrees. Respondent's finding is not supported by substantial evidence in the administrative record. Indeed, substantial evidence in the administrative record shows the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak commute hours.

The administrative record includes the bus schedule for Metro Rapid 780 effective as of March 17, 2020. (AR 22 ["[T]he definition of a Major Transit Stop was subsequently clarified through City Planning on August 19, 2020 to apply only to transit schedules in place as of March 17, 2020 . . . ."]; OB, at p. 15:15-21.) Appendix A of the TOC Guidelines outlines the methodology for determining whether a particular bus line has a service interval frequency of 15 minutes or less. (Ibid.) To determine whether a bus line has an average service interval frequency of 15 minutes or less, one must first determine the number of trips the bus line completes during "peak" morning hours and "peak" afternoon hours, and then divide the number of trips made during "peak" morning and afternoon hours by 420. (AR 6958-6959.) 420 represents the total number of minutes during the peak hours of 6:00 AM to 9:00 AM (morning "peak" hours) and 3:00 PM to 7:00 PM (afternoon "peak" hours). (AR 619 [footnote 2], 6958-6959.) Appendix A specifies that the calculation must be completed separately for each direction the bus line travels. "If one or both directions fail to meet the 15 minutes frequency limit, the entire bus line is ineligible for a Major Transit Stop." (Ibid.)

Metro Rapid 780 travels eastbound and westbound. (AR 1982.) The Court finds it makes approximately 12 eastbound trips during the morning "peak" hours, and approximately 12 eastbound trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) Dividing the total number of eligible "peak" hour trips (24 total trips) by 420 yields an average service interval for Metro Rapid 780 Eastbound of approximately 17.5 minutes, which is above the 15-minute requirement for a "Major Transit Stop". (AR 6947.)

Metro Rapid 780 westbound yields similar results. It makes approximately 11 trips during the morning "peak" hours, and approximately 12 trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) The Court divides the total of 23 "peak" hour trips by 420, yielding in an average service interval for Metro Rapid 780 Westbound of approximately 17.5 minutes.

These calculations are greater than the 15-minute requirement for a "Major Transit Stop." (AR 6947.) The Metro Rapid 780 Bus Line is ineligible for inclusion in a Major Transit Stop and does not support Respondent's "Tier 3" finding. (AR 6959.)

Respondent's Opposition does not address this argument, nor does it refer to any portion of the administrative record which provides a calculation different than the Court's, or those provided during the residents' appeals.

Real Party in Interest's remaining arguments are unpersuasive.

Real Party in Interest argues the "Tier 3" category does not contain a 15-minute service requirement. But an overarching eligibility requirement for the TOC Affordable Housing Incentive Program is proximity to a "Major Transit Stop," which is defined as the intersection of two or more bus lines "with a service interval of 15 minutes or less during the morning and afternoon peak commute periods." (AR 6947.) While the definition of "Tier 3" does not itself mention the 15-minute service interval requirement, this requirement is located under the heading "Type of Major Transit Stop." It follows that the "Two Rapid Buses" which intersect must qualify for inclusion within a "Major Transit Stop," and must satisfy the 15-minute service interval requirement. (Ibid.)

Real Party in Interest also argues that the 15-minute service requirement is met if the Court "combines" the intervals of service provided by Metro Rapid 780 and Metro Local Line 217. (Real Party in Interest's Opposition Brief ("RPI Opp."), at pp. 8:12-9:3.) Real Party contends that Metro Rapid 780 and Metro Local Line 217 "follow the same [bus] route from the intersection of Venice and Fairfax to the intersection of Hollywood and New Hampshire." (Id., at p. 8:19-21.) According to Real Party, if the Court were to combine the number of trips made by both bus line during "peak" morning and afternoon commute hours, and divide by 420, the average service interval would be less than 15 minutes. (Id., at p. 8:19-23.)

There are two problems with this argument. First, Real Party in Interest provides no clear authority for the proposition that bus lines may be so combined. Los Angeles Municipal Code section 12.22 A.31 and the TOC Guidelines are silent on whether bus lines may be combined to meet the 15-minute service interval requirement. (AR 6945-6957.) The sample calculation in Appendix A of the TOC Guidelines considers only whether a single bus line meets the 15-minute service interval requirement. While neither expressly prohibits Respondent from combining

multiple bus lines, neither allows it. Real Party in Interest has not shown that Los Angeles Municipal Code section 12.22 A.31 or the TOC Guidelines allow combining bus lines to satisfy the 15-minute service interval requirement.

Second, even if the Municipal Code or the TOC Guidelines could be read to permit combining bus lines, the administrative record does not show that Respondent combined these bus lines in making its determination. Respondent's finding that the intersection of Pico Boulevard and Fairfax Avenue qualifies as a "Major Transit Stop" is vague, without analysis. (AR 22.) Neither the Director's Determination (AR 2959, 2962) nor the Appeal Recommendation Report (AR 20, 22) discusses how the intersection of Pico Boulevard and Fairfax Avenue satisfies the 15-minute service interval requirement. They merely state the conclusion that the intersection qualifies. Neither appears to contemplate combining bus lines to make this determination. (Ibid.) The Transit-Oriented Affordable Housing Referral Form (AR 619) is similarly vague, merely naming bus lines and concluding the 15-minute service interval requirement has been satisfied. (AR 619.)

The Court's inquiry "will be limited to a determination of whether or not the findings are supported by substantial evidence in light of the whole record." (Strumsky v. San Diego County Employees Retirement Assn. (1974) 11 Cal.3d 28, 32.) Respondent must "set forth findings to bridge the analytical gap between the raw evidence and ultimate decision or order." (Sky Posters, Inc. v. Department of Transportation (2022) 78 Cal.App.5th 644, 667-668 ["Reference, in section 1094.5, to the reviewing court's duty to compare the evidence and ultimate decision to 'the findings' . . . leaves no room for the conclusion that the Legislature would have been content to have a reviewing court speculate as to the administrative agency's basis for decision."].)

The administrative record contains no finding that the intersection of Pico Boulevard and Fairfax Avenue constitutes a Major Transit Stop because Respondent combined bus lines to satisfy the 15-minute service interval requirement. The Court will not infer that Respondent made such a finding or speculate on whether it might have done so. [1]

[1] On the eve of trial, Respondent filed a Request for Judicial Notice of a Department of City Planning Director's Determination approving TOC Incentives for an unrelated project. Respondent contends this shows that bus lines are routinely combined to satisfy the 15-minute service interval requirement for a "Major Transit Stop." This document does not show that the Municipal Code or the TOC Guidelines permit combining bus lines, or that such a calculation was made for the project before the Court.

Respondent's finding the Project qualifies for "Tier 3" categorization and incentives, based on the conclusion that the Project is within 1,500 feet of a "Major Transit Stop" including the intersection of "Two Rapid Buses," is not supported by substantial evidence. A writ of mandate setting aside the "Tier 3" incentives awarded under the TOC Affordable Housing Incentive Program is warranted. The Petition as to the Second Cause of Action is GRANTED.

C. Third Cause of Action—Petitioner's Challenge to Respondent's "Class 32" Categorical Exemption Finding

The Third Cause of Action challenges Respondent's finding that environmental review pursuant to CEQA is not required because the Project qualifies for a "Class 32" Categorical Exemption. (FAP, ¶¶ 61-69.) First, Petitioner argues the Project does not satisfy the first and fourth conditions of CEQA Guidelines section 15332. (CEQA Guidelines, § 15332; OB, at pp. 17-24.) Second, Petitioner contends the "unusual circumstances" and/or "cumulative effects" exceptions apply and prohibit the Categorical Exemption. (Id., at p.24-25.)

1. The Record Contains Substantial Evidence That the Project Satisfies the Conditions for a "Class 32" Categorical Exemption

CEQA Guidelines section 15332 lists five conditions that must be satisfied to qualify for a "Class 32" Categorical Exemption. (Ibid.) It states:

Class 32 consists of projects characterized as in-fill development meeting the conditions described in this section.

(a) The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

(b) The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban areas.

(c) The project site has no value as habitat for endangered, rare or threatened species.

(d) Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

(e) The site can be adequately served by all required utilities and public services.

Petitioner focuses on subdivisions (a) and (d). Petitioner argues the Project fails to satisfy (a) because substantial evidence demonstrates the Project is inconsistent with the general plan and zoning designations applicable to the Project Site. Petitioner argues the Project fails to satisfy (d) because substantial evidence demonstrates the Project would have a significant effect on noise and air quality.

a. Subdivision (a)—Substantial Evidence Supports the Finding that the Project is Consistent with Applicable General Plan and Zoning Designations

Petitioner argues the Project fails to comply with the applicable "Q" Qualified Conditions. As discussed, the Project Site is within the Wilshire Community Plan Area; it is zoned [Q]R3-1-O, with a corresponding land use designation of "Medium Residential." (AR 18.) The "Q" Qualified Conditions impose various land use requirements, including these:

Section 2. Pursuant to Section 12.32-K of the Los Angeles Municipal Code and the amendments thereto, the following limitations are hereby imposed upon the use of that property shown in Section 1 hereof which are subject to the Permanent "Q" Qualified Classification.

1. Covenant: Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns. Further, the agreement must be submitted to the Planning Department for approval before being recorded. After recordation, a copy bearing the Recorder's number and date must be given to the City Planning Department for attachment to the subject file.

. . .

3. Building Mass: For any building façade greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet.

. . .

5. Energy Conservation: Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project.

. . .

10. Open Space: A minimum of 100 square feet of usable open space shall be provided for each dwelling unit. Parking area, driveways, front yard setback areas and rooftops shall not be included as open space. To be considered as usable open space[,] the project shall meet the following criteria:

a. Private Open Space: Patios and yards (located at ground level or the first habitable room level) which are part of a single dwelling unit and are enclosed by solid screen material at least four feet in height may eb included as usable open space provided said areas have a horizontal dimension of at least 15 feet in width.

b. Common Usable Open Space: Each common usable open space area . . . shall have an average width of 20 feet with no width less than 15 feet at any point.

. . .

Common open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning.

A minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees[.]

(AR 2289-2291.)

Petitioner argues the Project is inconsistent with these conditions because: (a) The Conditions of Approval failed to require Real Party in Interest to record the contemplated covenant before any permits may be issued; (b) The Project failed to provide articulation at every 30 feet of the building height; (c) The Conditions of Approval do not require Real Party in Interest to consult with the Department of Water and Power and the Southern California Gas Company prior to the construction of the Project to determine energy conservation designs; and (d) The Project fails to

provide the requisite open space per dwelling unit.

Respondent argues that the Project is not required to comply with all the "Q" Qualified Conditions. According to Respondent, the requirements of the "Q" Qualified Conditions may be amended by the "Base Incentives" and "Additional Incentives" under the TOC Affordable Housing Incentive Program. (Ibid.) Respondent's reading of the "Q" Qualified Conditions and the TOC Affordable Housing Incentive Program is supported by the Los Angeles Municipal Code.

On August 18, 1992, Ordinance Number 168193 codified the "Q" Qualified Conditions. (AR 2294.) It amended Los Angeles Municipal Code section 12.04 (entitled "Zones-Districts-Symbols") by effectively re-zoning the Project Site and neighboring properties, placing a "Q" designation in the zoning classification (i.e., "[Q] R3-1-O"). (AR 2288.) Those properties zoned with the "Q" designation would be subject to the land-use requirements and limitations in the "Q" Qualified Conditions. (AR 2287-2288.)

Los Angeles Municipal Code section 12.22 enumerates approximately 35 "[e]xceptions" to the land use restrictions and requirements in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22 [entitled, "Exceptions."].) Where an "[e]xception" is applicable, a property may be used in a way different than the zone permits. (L.A. Municipal Code, § 12.22.) It is undisputed that the TOC Affordable Housing Incentive Program is included in Los Angeles Municipal Code section 12.22 A.31, as one of the 34 specified "[e]xceptions" to the zoning land-use restrictions in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22, subd. A.31.) While the "Q" Qualified Conditions are applicable to the Project Site as a zoning designation, the Project may stray from their requirements by virtue of the Project's eligibility for the TOC Affordable Housing Incentive Program. (Ibid; Bay Area Citizens v. Association of Bay Area Governments (2016) 248 Cal.App.4th 966, 999 [" ' "If the statutory language is clear, our task is at an end, for there is no need for judicial construction." ' "].)

The Court now turns to the "Q" Qualified Conditions, and finds the project is not inconsistent with those conditions.

i. Section 2, Subsection 1 of "Q" Qualified Condition -- "Covenant"

Section 2, subsection 1 of the "Q" Qualified Conditions states: "Prior to the issuance of any

permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns." (AR 2289.) Petitioner contends the Project fails to comply with this section because Respondent failed to include, as a condition of approval for the Project, a requirement that Real Party in Interest record the covenant. (OB, at pp. 21:23-22:3.)

The Court is not persuaded the Project is inconsistent with this section. Petitioner has failed to demonstrate that the covenant was not recorded by Real Party in Interest's various predecessors. The "Q" Qualified Conditions were created more than 30 years ago. (AR 2294.) This section does not require all owners of the Project Site to record the contemplated covenant. (AR 2289.) It merely requires the owner of the Project Site who requests a permit first following the effective date of the Ordinance to record the contemplated covenant, which will then "run with the land." (AR 2289.) Petitioner fails to show a prior owner of the Project Site had not recorded the covenant.

ii. Section 2, Subsection 3 of "Q" Qualified Conditions --"Building Mass"

Section 2, subsection 3 of the "Q" Qualified Conditions provides: "For any building greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet." (AR 2289.) Petitioner contends the Project fails to provide sufficient articulation in relation to the building's length. (OB, at pp. 17:28-18:2.) Specifically, Petitioner argues that, while the southern elevation of the Project is approximately 132 feet in length (which would require approximately four articulations pursuant to the "Q" Qualified Conditions), the Project provides only "one articulation 20 feet, 8 inches from the western façade." (Ibid.)

Substantial evidence in the administrative record supports Respondent's conclusion the Project is consistent with this section. The plans depict approximately five corridors on the southern façade, which are exposed and visible from the exterior with a glass railing. (AR 187, 195.) The Department of City Planning determined the five exposed corridors provide sufficient articulation for the building's length. (AR 24.) Petitioner argues that the exposed corridors do not constitute sufficient "modulation of the façade because "the [term] "façade" is defined as the boundary of an exterior walls of the structure, which are not changed by exposed corridors." (OB, at p. 18:5-7.)

Petitioner's definition of the term "façade" comes not from the definitions provided within the "Q" Qualified Conditions but from "LawInsider.com." (Petitioner's Request for Judicial Notice, Ex. 1.) The Court is not persuaded that this definition governs. And the Court must give "great weight" to the Department of City Planning's determination that the exterior corridors provide a sufficient modulation of the building's "façade." (Berkley Hills Watershed Coalition v. City of Berkley (2019) 31 Cal.App.5th 880, 896 ["a city's interpretation of its own ordinance, '"is entitled to great weight unless it is clearly erroneous or unauthorized."']).

iii. Section 2, Subsection 5 of "Q" Qualified Conditions --"Energy Conservation"

Section 2, subsection 5 of the "Q" Qualified Conditions provides: "Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project." (AR 2289.) Petitioner contends there is no evidence demonstrating Real Party in Interest consulted with either the Department of Water and Power or the Southern California Gas Company regarding feasible energy conservation features for the Project. (OB, at p. 22:6-11.)

The Project is not inconsistent with this section. Under Section 2, subsection 5 consultation with the Department of Water and Power and the Southern California Gas Company is required "prior to the construction of any project." (AR 2289.) It does not require consultation before obtaining approval for the Project, only before construction. Real Party was not required to consult with either the Department of Water and Power or the Southern California Gas Company for the purpose of obtaining approval for the Project.

iv. Section 2, Subsection 10 of "Q" Qualified Conditions -- "Open Space"

Petitioner maintains the Project is incompatible with various "Open Space" requirements in Section 2, subsection 10 of the "Q" Qualified Conditions.

Petitioner first focuses on the mandate that all patios and yards which are "private open space" must "have a horizontal dimension of at least 15 feet in width." (AR 2290.) Petitioner argues that, while the Plans say the Project provides 50 square feet of "private open space" of patios and yards, the patios are not 15 feet in width. (OB, at p. 19:7-10.) Petitioner cites to the Project Plans, on pages 184 through 186 of the administrative record. (Ibid.; AR 184-186.) But the Plans referenced do not display the measurements of the relevant patios on the first floor, and the

legend provides no further guidance. (Ibid.) Petitioner has not proved this contention. [2]

Petitioner next focuses on the requirement that "[c]ommon open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning." (AR 2291.) Petitioner contends "no amenities are provided for the 950 square feet of rear yard space shown on the Plans." (OB, at p. 19:11-12.) But the 950 square feet of rear yard space clearly provides picnic tables and benches. (AR 182.) These are "recreational amenities" pursuant to the "Q" Qualified Conditions (i.e., "[c]ommon open space areas shall incorporate recreational amenities such as . . . picnic tables, benches . . . .") (AR 2291.)

Petitioner then points to the mandate that "[e]ach common usable open space area shall have a total area of at least 400 square feet and shall have an average width of 20 feet with no width less than 15 feet at any point." (AR 2291.) Petitioner contends the "rear yard area has an average width less than 20 feet with widths as narrow as 4 feet[.]" But the Project Plans unambiguously state the rear yard of the Project is approximately 20 square feet in width. (AR 182.)

Next, Petitioner directs us to the requirement that "rooftops shall not be included as open space." (AR 2290.) Petitioner says the "fifth floor garden," which is approximately 592 square feet, may not be counted towards the "open space requirement" because it is "located on the roof of the fourth story." (OB, at p. 19:17-18.) The Court is unpersuaded that the fifth-floor garden may not be counted towards the minimum open space requirements. Notably, following review of the Project's Plans, the fifth-floor garden is not on the rooftop of the Project, as Petitioner would suggest, but is on an exposed deck on the fifth floor. (AR 6540.) The rooftop is above the fifth floor. (AR 6541.)

[2] Even if Petitioner demonstrated the patios are less than 15 feet in width, this would be insufficient to demonstrate the Project has failed to provide the requisite amount of open space. Due to an "Additional Incentive" provided to the Project (25 percent reduction in the amount of open space), the Project is required to provide approximately 1,500 in open space. (AR 15.) The Plans show the Project provides approximately 2,492 square feet in open space. (AR 181.)

Petitioner also points to the requirement that "[a] minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees . . . ." (AR 2291.) Petitioner contends "the Project fails to landscape 50 percent of common open space as virtually none of the open space that meets the [Q] Conditions provides landscaping." (OB, at pp. 19:23-20:1 [emphasis added].) The Court already has concluded the open space provided by the Project complies with the "Q" Qualified Conditions.

Petitioner's contention that the Project fails to qualify for a "Class 32" Categorical Exemption because it is inconsistent with the "Q" Qualified Conditions is unpersuasive. Substantial evidence demonstrates the Project is sufficiently "consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations."

b. Subdivision (d)—Substantial Evidence Supports the Finding the Project Would Not Result in Significant Effects to Air Quality or Noise

CEQA Guidelines section 15332(d) requires that "[a]pproval of the project not result in any significant effects relating to traffic, noise, air quality, or water quality." Petitioner argues that Respondent's determination the Project will not have a substantial effect on noise and air quality is not supported by substantial evidence.

i. Air Quality Impacts and Greenhouse Gas Emissions

Petitioner's argument concerning air quality centers on the Greenhouse Gas ("GHG") emissions resulting from the Project. (OB, at p. 22:12-24.) Respondent concluded the Project would not have a significant effect upon air quality. (AR 23.) Respondent based its conclusion on "a March 2020 . . . Air Quality Technical Report prepared by ZMassociates Environmental Corporation International." (Ibid.) The ZM Report assessed the Project's effect on air quality by employing the South Coast Air Quality Management District ("SCAQMD") Final Localized Significance Threshold Methodology, published in July 2008. (AR 6621.) Noting that the "Regional Construction Threshold" for Localized Significance with respect to GHG emissions is 3,000 CO2e/year, the ZM Report concluded the GHG emissions created by the Project would be only 70.69 CO2e/year. (AR 6624.) Petitioner contends this finding is erroneous because the SCAQMD "threshold for significance" employed by the ZM Report is outdated, and a more recent "threshold for significance" should have been used. (OB, at p. 22:14-24.) Relying on a report prepared by the consulting entity SWAPE, Petitioner argues the suggested "SCAQMD

2035 efficiency target of 3.0 MT CO2e/SP/year" should have been employed to assess the Project's impact upon GHG emissions. (Ibid.)

Respondent makes two arguments in response. First, Respondent contends the air quality assessment does not require analysis of potential GHG emissions. (Resp. Opp., at pp. 10:24-11:4.) Respondent contends subdivision (d) merely requires it to analyze potential substantial impacts to "air quality." Respondent cites to Appendix G of the CEQA Guidelines, which is a sample "Environmental Checklist Form" that may be used to conduct an initial study of a Project's potential environmental impacts. (CEQA Guidelines, Appendix G.) The sample includes a list of "[e]nvironmental [f]actors" which may be "[p]otentially [a]ffected" by a project's development; it shows "Air Quality" and "Greenhouse Gas Emissions" in separate categories. (Ibid.) Second, if the Court concludes GHG emissions fall within the scope of an analysis of air quality impacts, Respondent contends the standard used in the ZM Report is appropriate.

The Court is not persuaded by Respondent's interpretation of the language of subdivision (d). Although "Air Quality" and "Greenhouse Gas Emissions" are listed separately in Appendix G, this also shows that analysis of GHG emissions is relevant in considering whether the Project will have a significant impact on air quality. Indeed, the ZM Report, on which Respondent relies, analyzes GHG emissions. (AR 6624.) Moreover, Respondent has provided no case law or statue supporting its contention that an analysis of air quality would not include an analysis of GHG emissions.

Respondent's second argument is meritorious. As stated, Petitioner contends Respondent employed an outdated "threshold of significance." (OB, at p.22:14-24.) But CEQA Guidelines section 15064.4 expressly states that an agency has "discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligibly take into account the project's incremental contribution to climate change." (CEQA Guidelines, § 15064.4, subd. (c).) This discretion reflects "the existing CEQA principle that there is no iron-clad definition of 'significance.'[Citation.]." (Center for Biological Diversity v. Department of Fish & Wildlife (2015) 62 Cal.4th 204, 221.) At oral argument, Petitioner conceded that Respondent has discretion to determine the most appropriate model or methodology to assess the Project's impact on GHG emissions.

The Court is not persuaded that Respondent's use of the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) was an abuse of discretion.

Petitioner has not shown that the threshold of significance employed by Respondent was superseded by the threshold of significance set forth by the SCAQMD. As noted, Petitioner relies on a recommendation by the consulting entity SWAPE, which opines that Respondent should have used the SCAQMD 2035 efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year. (AR 3158-3159.) SWAPE cites to a publication by a separate non-profit agency named Association of Environmental Professionals. (AR 3158, fn. 22.) But this publication does not establish that SCAQMD adopted this new threshold of significance for GHG emissions, or that they supersede the threshold used by Respondent. (Ibid.) Rather, this publication is a recommended "action plan" based on the opinions of its authors, the Association of Environmental Professionals. (Ibid.) This does not establish that Respondent abused its discretion in applying the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) to assess the Project's impact upon GHG emissions.

Respondent did not commit an abuse of discretion by concluding CEQA Guidelines section 15332(d) was satisfied, and the Class 32 Categorical Exemption properly may be applied.

ii. Construction and Operational Noise Impacts

Petitioner's challenge to Respondent's determination concerning noise impacts centers on construction-related noise and operational noise.

Petitioner challenges Respondent's conclusion that construction-related noise will not exceed the maximum decibel limit in Los Angeles Municipal Code section 112.05 of approximately 75 dB(A). The Court is not persuaded by Petitioner's contentions. Substantial evidence in the administrative record, including the expert conclusions in the ZM Report, supports Respondent's conclusion. (AR 6619.) The ZM Report states: "[d]ue to the small project size, the limited number of construction vehicles, limited number of construction equipment, and small size of construction equipment compared to much larger projects, the proposed project will not result in exceedance of City of Los Angeles noise ordinances." (Ibid.)

Petitioner challenges this with an opposing expert report produced by Project opponents during an administrative hearing. (OB, at pp. 23:1-24:1.) This report was prepared by RK Engineering; it concludes the construction-related noise caused by the Project "would result in expected noise levels ranging from 78.5 dB(A) to 117 dB(A)." (AR 3333.) But differing expert opinion is not determinative in a substantial evidence review. (We Advocate Through Environmental Review v. County of Siskiyou (2022) 78 Cal.App.5th 683, 699 [holding, "' "a disagreement among

experts does not make an EIR inadequate"' " and is not determinative in a substantial evidence review].)

Petitioner's arguments concerning operational noise fare no better. Respondent's conclusion is supported by factual findings reached by Department of City Planning staff in a Recommendation Report. (AR 91.) The Department of City Planning concluded: "[n]oise generated through human conversation and activities (particularly in outdoor recreational spaces, such as balconies and patios), landscape maintenance, or trash collection would not exceed the recommended noise compatibility guidelines. Any new stationary sources of noise, such mechanical HVAC equipment, installed on the proposed development will be required to comply with LAMC Sections 112.02 and 112.05 which prohibit noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level at neighboring occupied properties by more than five dBA. In addition, the project is not expected to generate a substantial number of vehicle trips which could in turn generate additional noise. The proposed project is expected to generate a negligible increase in ambient noise from operation." (Ibid.)

Petitioner questions the Department of City Planning's findings, citing to a differing expert report which concludes" "it is highly probable that a noise level exceedance would occur from mechanical equipment operating on the project site." (AR 3333.) Again, differing expert opinions are insufficient and this one also appears speculative. (We Advocate Through Environmental Review, supra, 78 Cal.App.5th at p. 699; CEQA Guidelines, § 15384, subd. (a) [substantial evidence does not include "speculation"].)

2. Petitioner Has Failed to Demonstrate the "Unusual Circumstances" Exception or the "Cumulative Impacts" Exception are Applicable

Petitioner argues that the "unusual circumstances" and/or "cumulative impacts" exception apply. (OB, at pp. 24:16-25:18.) Under the CEQA statutory scheme, the thirty-three categorical exemptions are not absolute. (North Coast Rivers Alliance v. Westlands Water Dist. (2014) 227 Cal.App.4th 832, 850 (North Coast Rivers).) They "are subject to exceptions that defeat the use of the exemption." (Ibid.) Where an exception to an exemption applies, the public agency "must 'conduct an initial study to determine if the project may have a significant effect on the environment.' [Citation.]" (Muzzy Ranch, supra, 41 Cal.4th at p. 381.) It is Petitioner's burden to show such an exception applies. (CREED 21, supra, 234 Cal.App.4th at p. 514.)

a. "Unusual Circumstances" Exception

The "unusual circumstances" exception of CEQA Guidelines section 15300.2, provides: "[a] categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (State CEQA Guidelines, § 15300.2, subd. (c).)

The California Supreme Court in Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086 sets forth a two-part, "bifurcated approach" to determine whether a public agency abused its discretion in concluding an "unusual circumstances" exception was inapplicable. (Id. at pp. 1114-1115.) First, the reviewing court must review the administrative record to determine whether there is substantial evidence supporting Respondent's determination that the Project does not present unusual circumstances. A project presents "unusual circumstances" when it will have a significant effect on the environment. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.) Second, the court determines whether the evidence presents a "fair argument" of "a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Berkeley Hillside, supra, 60 Cal.4th at p. 1114.) A "fair argument" may be made where the administrative record includes substantial evidence reflecting "'it [could] be "fairly argued"' " that "there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Id. at p. 1112.)

Petitioner focuses on construction-related noise and GHG emissions, arguing that substantial evidence demonstrates these are "unusual circumstances."

The Court concludes substantial evidence in the record fails to demonstrate the Project presents "unusual circumstances." Petitioner has failed to establish the Project encompasses "unusual" features which would cause a significant effect on the environment. The Court already has determined Petitioner's arguments concerning noise and GHG emissions are unavailing. Petitioner has failed to satisfy the first prong of the "bifurcated approach" of Berkeley Hillside. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.)

In this case, the second prong of the Berkeley Hillside analysis dovetails with the first. Substantial evidence does not present a "fair argument" the Project will have a significant impact on the environment.

The Court concludes Petitioner has failed to satisfy that the "unusual circumstances" exception

applies.

b. "Cumulative Impacts" Exception

The "cumulative impacts" exception, in CEQA Guidelines section 15300.2, subdivision (b), provides: "[a]ll exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant." "'Cumulative impacts' refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." (CEQA Guidelines, § 15355.) "The individual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines, § 15355, subd. (a).) "The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impact can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines, § 15355, subd. (b).) The challenging party has the "burden to produce evidence that there was a fair argument that the cumulative impact exception applied." (Aptos Residents Assn. v. County of Santa Cruz (2018) 20 Cal.App.5th 1039, 1052.)

Petitioner argues that three other developments near the Project have been approved by Respondent and "likely [will] be developed concurrently" with the Project, resulting in a significant cumulative impact to air quality. (OB, at p. 25:4-18.) The development projects are: (a) 1444 Hi Point Street (VTT-74364-SL); (b) 1437 Hi Point Street (DIR-2009-2189-SPR-DB); and (c) 1500 Hi Point Street ((DIR-2020-1870-TOC-HCA). (Ibid.) Petitioner cites to the SWAPE Report, which concludes the additional projects and the development at the Project Site "will occur in close proximity at the same time, thus resulting in a potentially significant cumulative impact." (AR 3152-3153.)

Petitioner has failed to demonstrate a fair argument that the cumulative impacts of successive projects, including the Project at issue here, would have a significant effect on the environment. The contentions in the SWAPE Report appear to be speculative. Petitioner fails to confirm whether the additional development projects will occur at the same time as the development of the Project Site, suggesting only that they "would likely be developed" at the same time. (OB, at p. 25:9-10.) And while the SWAPE Report concludes: "[the] projects at 1447 and 1500-1512 ½ South Hi Point Street will occur in close proximity at the same time[,]" the Report fails to articulate any facts—such as a development schedule for the referenced projects—supporting

this conclusion. (AR 3152.)

The Court finds no prejudicial abuse of discretion in Respondent's determination of a categorical exemption. The Petition as to the Third Cause of Action is DENIED.

VI. CONCLUSION

Petitioner's First Amended Writ of Mandate is GRANTED in part and DENIED in part. It is DENIED with respect to the First and Third Causes of Action. It is GRANTED with respect to the Second Cause of Action.

A writ of mandate is issued ordering Respondent to vacate and set aside approval of the Project, including Respondent's award of "Tier 3" TOC Incentives under the TOC Affordable Housing Incentive Program.

Petitioner shall submit a proposed writ of mandate within 10 days.

Order to Show Cause Re: Submission of Proposed Judgment is scheduled for 03/23/2023 at 08:30 AM in Department 54 at Stanley Mosk Courthouse.

The Ruling is filed this date.

The clerk gives notice as reflected in the certificate of mailing. Plaintiff is to give notice to any additional interested parties not reflected in the certificate of mailing.

Certificate of Mailing is attached.

Los Angeles, CA 90012
Em: more.song@lacity.org

RE: City of Los Angeles's FOUND Residences – 6422 Selma Avenue Project [CPC-2022-1048-DB-HCA; ENV-2022-1049-SCEA]

Dear More Song,

On behalf of the Southwest Mountain States Regional Council of Carpenters ("**Southwest Mountain States Carpenters**" or "**SWMSRCC**"), my Office is submitting these comments for the City of Los Angeles's ("**City**") Sustainable Communities Environmental Assessment ("**SCEA**") for the **May 23, 2023** Hearing Officer Public Hearing on behalf of the City Planning Commission for the FOUND Residences – 6422 Selma Avenue Project ("**Project**").

The Southwest Mountain States Carpenters is a labor union representing 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of SWMSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Mountain States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124

Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Mountain States Carpenters incorporates by reference all comments raising issues regarding the Sustainable Communities Environmental Assessment submitted prior to certification of the SCEA for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Mountain States Carpenters requests that the City provide advance notice for any and all notices or hearings referring or related to the Project, including notices issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010), and any applicable state or local municipal code, rules, or regulations. California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. As such, we request such advance notice to be both e-mailed and mailed to us.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced

---

[1] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

[2] South Coast Air Quality Management District (May 7, 2021) Certify Final Environmental Assessment and Adopt Proposed Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions Program, and Proposed Rule 316 – Fees for Rule 2305, Submit Rule 2305 for Inclusion Into the SIP, and Approve Supporting Budget Actions, *available at* http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10.

> communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

---

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Mountain States Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. SWMSRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Mountain States Carpenters' experience with safe construction site work practices, SWMSRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.

- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

[6] *See also* The Center for Construction Research and Training, North America's Building Trades Unions (April 27 2020) NABTU and CPWR COVIC-19 Standards for U.S Constructions Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works (2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

Southwest Mountain States Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("**CEQA Guidelines**"), § 15002, subd. (a)(1).[8] At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. Background Concerning Environmental Impact Reports

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the

[7] For details concerning Southwest Carpenters' ICRA training program, *see* https://icrahealthcare.com/.

[8] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the "fair argument" standard under

which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of "B" St.* v. *City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that "may have a significant effect on the environment." Public Resources Code ("**PRC**") § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

"Significant effect upon the environment" is defined as "a substantial or potentially substantial adverse change in the environment." PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a "low threshold" for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen,* 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of*

San Diego (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of "B" St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

Finally, CEQA procedures reflect a preference for resolving doubts in favor of environmental review. See Pub. Res. Code, § 21080(c) (an EIR may be disposed of only if there is no substantial evidence, in light of the entire record before the lead agency, that the project may have a significant effect on the environment or revisions in the project); CEQA Guidelines §§ 15061(b)(3) (common sense exemption only where it can be seen *with certainty*); 15063(b)(1) (prepare an EIR if the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial]; 15064, subd. (h) (the agency must consider cumulative impacts of past, current, and probable future projects); 15070 (a negative declaration may be prepared only if there is no substantial evidence, in light of the whole record, that the project may have a significant effect on the environment, or project revisions would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and there is no substantial evidence, in light of the whole record, that the project as revised may have a significant effect on the environment); *No Oil, Inc., supra,* 13 Cal.3d at p. 83-84 (significant impacts are to be interpreted so as to afford the fullest possible protection).

IV. THE PROJECT DOES NOT MEET THE CRITERIA FOR THE USE OF A SUSTAINABLE COMMUNITIES ENVIRONMENTAL ASSESSMENT

A. Background Concerning Transit Priority Projects and Sustainable Communities Environmental Assessments

Senate Bill ("**SB**") 375 provides CEQA-based incentives and streamlining for certain residential, mixed-use, and transportation-oriented developments. SB 375 includes two optional CEQA streamlining options for local lead agencies.

First, under SB 375, residential and mixed-use projects that (1) are consistent with the use designation, density, building intensity, and applicable policies specified in a California Air Resources Board ("**CARB**")-approved sustainable communities strategy

("**SCS**") or alternative planning strategy ("**APS**") and (2) incorporate mitigation measures required by an "applicable prior environmental document," which may include the environmental impact report for the regional transportation plan, need not "reference, describe or discuss (1) **growth-inducing impacts; or** (2) any **project-specific or cumulative impacts** from **cars** and **light-duty truck trips** generated by the project on **global warming** or the **regional transportation network**". PRC §21159.28(a).

Notably, under PRC §21159.28(a), SCEA does not exempt agencies from their duty to review all other impacts of the project, including but not limited to impacts to historical resources. As to all those impacts, CEQA continues to require studies and mitigation, as well as an EIR to thoroughly assess all feasible mitigation measures and alternatives.

"The EIR is often referred to as the ""heart"" of CEQA." *County of Butte v. Department of Water Resources* (2022) 13 Cal.5th 612, 627. "Ideally, an EIR serves "to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided." (Pub. Resources Code, § 21002.1, subd. (a).) The document must include a description of the proposed project and its environmental setting and discussions of (1) the possible environmental effects of the project, (2) feasible measures to mitigate any significant, adverse environmental effects of the project, (3) the comparative environmental effects of a range of reasonable alternatives to the proposed project, including a "no project" alternative, and (4) the cumulative impact of the project's various environmental effects (CEQA Guidelines, §§ 15124, 15126, 15126.4, 15126.6, 15130.) An EIR may also include a discussion of the economic and social effects of the project. (*Id.*, § 15131.) Given the role it plays and its required analysis, the EIR is commonly referred to as an "informational document." (Pub. Resources Code, § 21061; CEQA Guidelines, § 15121.) It serves to inform decision makers and the general public about the nature and environmental impact of a proposed project, feasible ways to reduce that impact (often through the mechanism of mitigation measures), and possible alternatives to the project. (Pub. Resources Code, § 21061.)." *Id.*

Second, Transit Priority Projects ("**TPP**") may qualify for a total CEQA exemption or a Sustainable Communities Environmental Assessment. PRC § 21155.1-21155.2. First and foremost, a TPP is a specific project that must: (1) be consistent with a CARB-approved SCS or APS; (2) contain at least 50 percent residential use, and if the project

contains between 26 percent and 50 percent nonresidential uses, then a floor area ratio of not less than 0.75; (3) have a minimum net density of 20 units per acre; and (4) be located **within one-half mile** of a **major transit stop** or **high-quality transit corridor** included in a regional transportation plan. PRC § 21155(a)-(b), emph. added.

1. TPP Exemption or SCPE

If a legislative body of a city or county finds, after conducting a public hearing, that a transit priority project meets all of the requirements in subdivisions (a) and (b) and one of the requirements of subdivision (c) of PRC § 21155.1, the TPP is declared to be a sustainable communities project and will be fully exempt from CEQA. PRC § 21155.1. At a minimum, the legislative body of a city or county must find that the project can be adequately served by existing utilities and that:

(1) the project site does not contain wetlands or riparian areas or have significant value as wildlife habitat,

(2) the project does not have a significant effect on historical resources,

(3) the project buildings are energy efficient,

(4) landscaping is designed to achieve 25 percent less water usage, and

(5) the project does not present a risk of public health exposure in violation of state or federal law.

PRC § 21155.1.

2. SCEA

Alternatively, if a TPP project does not qualify for an exemption, a TPP may be reviewed through a SCEA provided, *inter alia*, that: (1) an initial study identifies "all significant or potentially significant impacts of the transit priority project… based on substantial evidence in light of the whole record" PRC § 21155.2(b)(1); (2) the SCEA shall contain "measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the project required to be identified in the initial study" PRC § 21155.2(b)(2).

Simply put, a SCEA is similar to a negative declaration in that the lead agency must identify and analyze all potentially significant or significant effects of the project and mitigate them to a level of less than significant. See PRC § 21155.2(b).

A SCEA may be approved by the lead agency after conducting a public hearing,

reviewing the comments received, and finding that: (A) all potentially significant or significant effects required to be identified in the initial study have been identified and analyzed, (B) with respect to each significant effect on the environment required to be identified in the initial study, either of the following apply: (i) changes or alterations have been required in or incorporated into the project that avoid or mitigate the significant effects to a level of insignificance, and (ii) those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency. PRC §21155.2(b)(5).

The lead agency's decision to review and approve a transit priority project with a sustainable communities environmental assessment" is "reviewed under the substantial evidence standard." PRC § 21155.2(b)(7). As such, any SCEA determination or finding made by the agency has to be supported by substantial evidence, where "[s]ubstantial evidence is not argument, speculation, unsubstantiated opinion or narrative, [or] evidence that is clearly erroneous or inaccurate ...." See, PRC § 21080(e)(2); see also, Guidelines, § 15384(a).

B. <u>The Project is Not Within a Transit Priority Area</u>

Under PRC Section 21099(b)(3), a transit priority area is "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a transportation improvement program or applicable regional transportation plan."

i. The Project is Not Located within a Transit Priority Area Because the SCAG's HQTA Designation is Neither Reliable Nor Binding

According to the SCEA, the Project Site is located within both a High Quality Transit Area ("**HQTA**") and Transit Priority Area. SCEA, III SCEA Eligibility, p. III-19. Yet, CEQA provides for streamlining with SCEA only if the Project is truly a TPP; i.e., first and foremost "within one-half mile of a **major transit stop** or high-quality transit **corridor** [HQCT] included in a regional transportation plan." PRC § 21155(b), emph. added.

As explained below, SCAG itself distinguishes an HQT**<u>A</u>** (referenced and relied upon by the City) from an HQT**<u>C</u>**, and the Project Site's being located within SCAG's HQT**<u>A</u>** has no bearing under CEQA or its Guidelines regarding TPPs; neither does that qualify as substantial evidence required for SCEA to show that the Project qualifies as a TPP as the precondition for SCEA.

A HQTA is a planning tool that is part of SCAG RTP/RTS, a regional plan. HQTAs are broadly defined as places with convenient public transit service prioritized by local jurisdictions that are suitable for housing, jobs and services growth.

Per SCAG's own *summary* and *disclaimer*:

> "**Summary**
>
> The High Quality Transit Areas (HQTAs) is within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours.
>
> This is the High Quality Transit Areas (HQTAs) in the SCAG Region for plan year 2045, developed for the Final Connect SoCal (the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)). SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code. The definitions of a "major transit stop" and a "high-quality transit corridor" are as follows:
>
> A. Major transit stop: A site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (CA Public Resource Code Section 21064.3). It also includes major transit stops that are included in the applicable regional transportation.
>
> B. High-quality transit corridor (HQTC): A corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.
>
> Further explanation of the methodology for identifying HQTCs and major transit stops is included in the Connect SoCal Transit Technical Report Appendix.
>
> **PLEASE NOTE** that SCAG has made one modification to its methodology of HQTAs development to exclude the one-half mile areas

around freeway-running HQTCs where there are no bus stops; the one-half mile areas around bus stops serving those freeway HQTCs remain.

Major transit stops and HQTCs are based on the 2045 plan year transit network of Connect SoCal. **PLEASE NOTE** that SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years. However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG. Users should consult with the appropriate transit provider(s) to obtain the latest information on planned transit routes, stop locations, and service intervals. This data is intended for planning purposes only, and SCAG shall incur no responsibility or liability as to the completeness, currentness, or accuracy of this information. SCAG assumes no responsibility arising from use of this information by individuals, businesses, or other public entities. The information is provided with no warranty of any kind, expressed or implied, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Users should consult with the appropriate transit provider(s) to obtain the latest information on transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption or streamlining."[9] (Bold emphasis orig.; underlining added.)

SCAG claims that its GIS Map "SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code.

However, for its criteria, "SCAG uses the total population of bus trips during the combined seven–hour morning and afternoon peak periods to determine the peak frequency at a bus stop. This is done for each bus route, by direction. The peak frequency is calculated by dividing 420 minutes (the seven–hour peak converted to minutes) by the total peak bus trips. This average frequency should be 15 minutes or less in order to qualify. [emphasis added]"[10]

[9] See, https://gisdata-scag.opendata.arcgis.com/datasets/SCAG::high-quality-transit-areas-hqta-2045-scag-region/about, accessed April 3, 2023

[10] See, https://scag.ca.gov/sites/main/files/file-attachments/twg101619fullagn.pdf?1602535716

In addition, SCAG itself does not allow for combining routes to qualify for bus interval frequencies, but does so in certain situations:

> "Corridors with Multiple Overlapping Bus Routes
>
> Separate but overlapping bus routes that do not individually meet the 15-minute threshold **may not** be combined in order to qualify as an HQTC. However, based on RTTAC feedback, there are certain corridors where overlapping "line families" or local/bus rapid transit (BRT) lines are **intended** to function **as one bus route**. On these corridors, transit riders **typically** board the first bus available, whether it be a local, express, or BRT line. For these **line families** or **local/BRT corridors**, SCAG uses the combined routes to calculate the frequency." (*Ibid,* emph. added.)

A recent ruling from the court as against the City of Los Angeles found that combining bus routes to meet the peak-hour 15-minute intervals and to thereby qualify for a major transit stop is improper and does not qualify as substantial evidence that a particular intersection is a major transit stop as defined and contemplated by CEQA and other relevant rules and regulations, including the City's own definitions of a major transit stop. (See, **Exhibit D**, esp. pp. 16-19. [*HI Point Neighbors' Association v City of Los Angeles*; Filed March 9, 2023; LASC # 21STCP02223.])

As quoted above, SCAG provides a disclaimer and notes that its "maps and data are intended for planning purposes only. . . . [and] recommends that [l]ocal jurisdictions . . . consult with the appropriate transit provider(s) to obtain the latest information on transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption[s] or streamlining." As such, these SCAG maps do not outright designate a parcel as having certain location within transit priority areas, and this data depiction is not made for purposes of evaluating a Project's environmental impacts under CEQA.

Moreover, as noted by SCAG, its maps and bus service intervals need to be verified by public agencies for currentness and accuracy. There is no evidence in the record City had performed such a verification. Our own research similarly suggests that there is no qualifying major transit stop or transit priority corridor within the ½ mile of the Project site either as required by CEQA and PRC section 21155(b).

Accordingly, the ZIMAS TPA classification, as well as SCAG's Transit Priority Area or High Quality Transit Area or Corridor, for the purposes cited in the SCEA, are irrelevant and non-binding; they are also unsupported by substantial evidence.

Therefore, the SCEA has failed to demonstrate that the Project is located within an HQTC or a major transit stop, and failed to meet the **first and foremost** critical precondition to qualify as a TPP and SCEA under CEQA. PRC section 21155(b).

C. The Project May Have a Significant Effect on Historical Resources

The proposed Project calls for the demolition of several structures. SCEA II Project Description, p. II-7. According to the Project Application filed with the City, the Applicant indicated that a ninety-five-year-old (95) commercial structure will be removed or demolished.

According to the Cultural Resources report prepared for the SCEA, the Baker Garage structure located at the Project Site was not recommended as eligible under the California Register of Historical Resources ("**CRHR**"). SCEA Appendix C, p. 52. The Cultural Resources report, however, did recommend that the Baker Garage is eligible under the City of Los Angeles Historical-Cultural Monuments ("**HCM**") criteria 1 and 3, but did not recommend it to be eligible as a contributing resource to any historic district or eligible as a contributor to any potential historic district. *Id.* at p. 53.

Furthermore, the Cultural Resources report directly concludes that "[a]lthough the new construction and parts of the proposed renovation for the garage conform with many of the *Standards*, the loss of some of the materials, features, character, and spatial relationships of the historic building means the project does not fully comply with *Standards*. Therefore, the proposed Found Residences Project will result in an adverse change in the significance of a historical resource and significant impacts pursuant to CEQA Section 21084.1." SCEA Appendix C, p. 59.

However, Public Resources Code section 21084.1 states:

> [a] project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. For purposes of this section, an historical resource is a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources …. The fact that a resource is not listed in, or determined to be eligible for listing in, the California Register of

> Historical Resources, not included in a local register of historical resources, or not deemed significant pursuant to criteria set forth in subdivision (g) of Section 5024.1 shall not preclude a lead agency from determining whether the resources may be an historical resources for purposes of this section.

CEQA Guidelines Section 15064.5(a)(4) further echoes that, stating:

> [t]he fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

As such, pursuant to both PRC section 21084.1 and CEQA Guidelines section 15064.5, the fact that a project is not listed, determined to be, or registered as a historical resource does not preclude an agency's determination that the project is a historical resource.

In turn, CEQA Guidelines § 15064.5(a)(3) provides that a resource may be treated as historical and further mandates:

> Generally, a resource **shall be** considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4852) including the following:
>
> (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
>
> (B) Is associated with the lives of persons important in our past;
>
> (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
>
> (D) Has yielded, or may be likely to yield, information important in prehistory or history.

(Emph. added.)

As such, based on the fact that the Project site's 95-year-old building was expressly found as meeting criteria 1 and 3 to qualify as a historical monument HCM and also would admittedly have adverse impacts on historical resources, the City's ultimate use of a SCEA is improper since the SCEA, unlike an EIR, does not allow for identification of all feasible mitigation measures and alternatives, including alternative sites. Indeed, there is substantial evidence that the 95-year-old structure may, among other things, "embod[y] the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values." CEQA Guidelines section 15064.5(a)(3)(C).

Accordingly, the Project may result in significant impacts to historical resources and the City must prepare an EIR to study and mitigate those impacts.

D. The Project Cannot Be Evaluated Under a SCEA Because the SCEA Fails to Incorporate All Feasible Mitigation Measures from Prior Environmental Impact Reports

Section 21155.2 of the Cal. Public Resources Code requires that a transit priority project incorporate all feasible mitigation measures, performance standards, or criteria from prior applicable environmental impact reports. However, the Project's SCEA expressly rejects many, if not most, of the applicable mitigation measures identified in SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("**2020-2045 RTP/SCS**" or "**Connect SoCal**"; and its respective Plan Environmental Impact Report[11] without making a feasibility determination.

First, the SCEA fails to incorporate SCAG's provided feasible mitigation measures; instead, it claims it complies with those based on its compliance with various standard regulations and would thereby reduce the Project's impacts to less than significant levels, obviating the need for SCAG's Mitigation Measures.

For example, for SCAG's Mitigation Measure PMM-GEO-1, the SCEA states that:

[11] SCAG (Sept. 3, 2020) A Resolution of the Southern California Association of Governments (SCAG) Adopting the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Addendum and Approving Connect SoCal in its Entirety, Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_ revisedmmrp.pdf?1606004474 at pp. 2 – 52.

> the Proposed Project already complies to this Mitigation Measure as it is subject to the building construction protocols for reducing seismic hazards as provided in the Los Angeles Municipal Code and applicable regulations. Compliance would help avoid or reduce the potentially significant effects on the potential for projects to result in the exposure of people and infrastructure to the effects of earthquakes, seismic related ground-failure, liquefaction, and seismically induced landslides, that are in the jurisdiction and responsibility of public agencies, regulatory agencies, and/or Lead agencies. The Proposed Project would also comply with all seismic standards provided in the California Building Code . . .

SCEA, Appendix A, p. A-21.

In other words, the SCEA conflates SCAG's Mitigation Measures with simply compliance with the law and suggests that the City or the Applicant had a legal option not to comply with the law or that SCAG's Mitigation Measures contain no further requirement. As a result of such erroneous assumptions, the SCEA fails to assess the need for or the feasibility of implementing SCAG's Mitigation Measure PMM-GEO-1.

Similarly, for Mitigation Measure PMM HYD-1, the SCEA states that "[f]ull compliance with the LID Plan, SUSMP, and implementation of design-related best management practices would ensure operation of the Proposed Project would not violate any water quality standards and discharge requirements or otherwise substantially degrade water quality" and thus concludes that the Project "would result in a less than significant impact" and that "[n]o mitigation is required and this mitigation measure is not applicable." SCEA, Appendix A, p. A-30.

Stated otherwise, the SCEA relies on standard and non-site-specific regulatory compliance measures to conclude that the project would have no impacts and therefore no further mitigation measures or SCAG's Mitigation Measures are required. Not so. According to CEQA Guidelines section 15064(b)(2), "[c]ompliance with the threshold does not relieve a lead agency of the obligation to consider substantial evidence indicating that the project's environmental effects may still be significant." See also, *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 885 ("Thresholds of significance are not used to determine automatically whether a given effect will or will not be significant. Instead, thresholds of significance are indicative only that an environmental effect that crosses the threshold "'will *normally* be determined to be significant,'" while

effects not crossing the threshold "'*normally* will be determined to be less than significant'" by the agency".)

Moreover, it is well-settled that "[c]ompliance with the law is not enough to support a finding of no significant impact under . . . CEQA." *Californians for Alternatives to Toxics v. Department of Food & Agriculture* (2005) 136 Cal. App. 4th 1, 15 – 17 (finding that a lead agency "abused its discretion by relying on DPR's regulatory scheme as a substitute for performing its own evaluation of the environmental impacts of using pesticides."). *See also*, *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project); *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210-211 ("Although the Building Code applies to all nonresidential buildings, it does not extend beyond the buildings themselves. It addresses the building's envelope, exterior lighting, and signage").

Further, bare conclusions or opinions of the agency are not sufficient to satisfy an agency's obligation under CEQA to support its environmental findings. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 403 – 404 ["To facilitate CEQA's informational role, the EIR must contain facts and analysis, not just the agency's bare conclusions or opinions. . . . [to] enable[] the decision-makers and the public to make an 'independent, reasoned judgment' about a proposed project." (*Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 935 [(quoting *Santiago County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 831.]")

Second and similarly, the SCEA unlawfully fails to incorporate feasible mitigation measures simply on the basis that the SCEA did not identify a potentially significant impact. For example, for PMM AES-1, the SCEA concludes that the Mitigation Measure is not applicable and finds that the "proposed project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to PRC § 21099." SCEA Appendix A, p. A-1. Similarly, for Mitigation Measure PMM AQ-1, the SCEA states that upon compliance with the South Coast Air Quality Management District ("**SCAQMD**"), the Mitigation Measure's requirements would be satisfied and concludes that because the impacts on Air Quality were found to be less than significant, the Mitigation Measure is not required. SCEA Appendix A, p. A-5.

The Project is required to incorporate all of SCAG's feasible mitigation measures, regardless of whether the SCEA itself identifies a potentially significant impact. PRC § 21155.2 subd. (a) is unambiguous in stating that transit priority projects must incorporate "**all feasible mitigation measures**, performance standards or criteria set forth in prior environmental impact reports," irrespective of whether the SCEA finds a less than significant impact. The SCEA fails to address the feasibility of measures not incorporated into the Project, and thus fails to meet the requirements of PRC § 21155.2.

E. Background Concerning SCAG's RTP/SCS

Senate Bill No. 375 requires regional planning agencies to include a sustainable communities strategy in their regional transportation plans. Gov. Code § 65080, sub.(b)(2)(B).) PRC § 21155(a) provides that the chapter 4.2 on the "Implementation of the Sustainable Communities Strategy," which includes both PRC § 21155.1 (TTP exemption) and PRC § 21155.2 (SCEA) provisions, "applies only to a transit priority project that is consistent with …. applicable policies specified for the project area in either a sustainable communities strategy or an **alternative planning strategy**, for which the State Air Resources Board, pursuant to subparagraph (H) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code, has accepted a **metropolitan planning organization's determination** that the sustainable community strategy or the **alternative planning strategy** would, if implemented, achieve the greenhouse gas emission reduction targets." [Emphasis added.]

The metropolitan planning organization for the Project area is SCAG and its respective planning strategy is incorporated in the RTP/SCS:

> Southern California Association of Governments (SCAG) is the largest MPO in California, covering six counties and 191 cities in the Southern California region. It is the transportation planning agency responsible for developing and implementing the long-range regional transportation plan, known as the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).
>
> The 2016 RTP/SCS continues to emphasize the key land use and transportation strategies in the first SCS that support a more sustainable future for the SCAG region. SCAG anticipates new growth will occur within existing urban boundaries with higher density development instead of sprawling outward. The 2016 SCS continues on the course set by the

> 2012 SCS to direct transportation investments within existing urbanized areas to support a more compact urban form. It includes an extensive regional bus and bus rapid transit (BRT) system, improved commuter and light rail service, an expanded regional bicycle network, improved pedestrian infrastructure, dedicated highway lanes for carpool and express buses, and several transportation demand management programs that reduce the number of vehicle trips.[12]

Moreover, CEQA Guidelines § 15125(d) provides that the agency "shall discuss any inconsistencies between the proposed project and … regional plans. Such regional plans include … regional transportation plans." Thus, CEQA requires analysis of any inconsistencies between the Project and the relevant RTP/SCS plan.

In April 2016, SCAG adopted the 2016 – 2040 Regional Transportation Plan/Sustainable Communities Strategy ("**2016-2040 RTP/SCS**"),[13] which includes policies and strategies to help the region achieve GHG emission reductions that would reduce the region's per capita transportation emissions by eight percent by 2020 and 18 percent by 2035.[14] SCAG's RTP/SCS plan is based upon the same requirements outlined in CARB's 2017 Scoping Plan and SB 375.

See, similarly, (1) ARB Executive Order accepting the Southern California Association of Governments' (SCAG) determination that the Final SCS would meet the region's GHG emissions reduction targets (June 2016); (2) CARB staff's technical evaluation of SCAG's Final Sustainable Communities Strategy (June 2016); (3) 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy, adopted April 2016.

[13] Southern California Association of Governments ("SCAG") (April 2016) The 2016-2040 Regional Transportation Plan / Sustainable Communities Strategy: A Plan for Mobility, Accessibility, Sustainability and a High Quality of Life ("SCAG 2016-2040 RTP/SCS"), *available at* https://scag.ca.gov/sites/main/files/file-attachments/f2016rtpscs.pdf?1606005557.

[14] *Id.* At pp. 8, 15, 153, 166.

On September 3, 2020, SCAG adopted the 2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy, titled Connect SoCal.[15] The 2020 RTP / SCS adopts policies and strategies aimed at reducing the region's per capita greenhouse gas emissions by 8% below 2005 per capita emissions levels by 2020 and 19% below 2005 per capita emissions levels by 2035.[16]

For both the 2016-2040 and the 2020-2045 RTP/SCS and Connect SoCal, SCAG prepared Program Environmental Impact Reports ("**PEIRs**") that include Mitigation Monitoring and Reporting Programs ("**MMRP**") that list project-level environmental mitigation measures that directly and/or indirectly relate to a project's GHG impacts and contribution to the region's GHG emissions.[17] These environmental mitigation measures serve to help local municipalities when identifying mitigation to reduce impacts on a project-specific basis that can and should be implemented when they identify and mitigate project-specific environmental impacts.

F. The SCEA Fails to Demonstrate Consistency with SCAG's RTP/SCS

A review of the RPT/SCS demonstrates that the proposed Project is inconsistent with several of its measures, including but not limited to, the analysis below:

[15] SCAG (Sept 2020) Connect SoCal: The 2020 – 2045 Regional Transportation Plan / Sustainable Communities Strategy of the Southern California Association of Governments (SCAG Connect SoCal"), available at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocalplan_0.pdf?1606001176.

SCAG RTP/SCS 2020-2045[18]	
Air Quality Project Level Mitigation Measures – PMM-AQ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Minimize land disturbance.	Here, the SCEA fails to discuss the feasibility of minimizing land disturbance. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.	Here, the SCEA fails to require suspending grading and earth moving when wind gusts exceed 25 mph. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
c) Cover trucks when hauling dirt.	Here, the SCEA fails to require trucks to be covered during dirt hauling. This is particularly critical where, as here, the Project involves a massive demolition of a 95-year-old structure. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

[18] 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_revisedmmrp.pdf?1606004474

d) Stabilize the surface of dirt piles if not removed immediately.	The SCEA fails to discuss the feasibility of stabilizing the surface of dirt piles if not removed immediately. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.	Here, the SCEA fails to evaluate the feasibility of limiting vehicular paths on unpaved surfaces and stabilizing any temporary roads. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
f) Minimize unnecessary vehicular and machinery activities.	Here, the SCEA fails to evaluate the feasibility of minimizing unnecessary vehicular and machinery activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	The SCEA fails to specifically require the Project to sweep paved streets at least once per day where there is evidence that dirt has been carried onto the roadway. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.	Here, the SCEA fails to mention or evaluate the feasibility of revegetating disturbed land, including vehicular paths created during construction. The SCEA also fails to mention avoiding future off-road vehicular activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.	Here, the SCEA fails to evaluate the feasibility of requiring contractors to assemble comprehensive inventory lists of all heavy-duty off- road equipment that could be use dan aggregate of 40 or more hours for the Project. The SCEA also fails to mention or evaluate the feasibility of preparing a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
k) Ensure that all construction equipment is properly tuned and maintained.	Here, the SCEA fails to discuss the feasibility of ensuring that all construction equipment is properly tuned and maintained. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
l) Minimize idling time to 5 minutes or beyond regulatory requirements—saves fuel and reduces emissions.	Here, the SCEA fails to discuss the feasibility of minimizing idling time to 5 minutes or beyond regulatory requirements. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	Here, the SCEA fails to discuss the feasibility of providing an operational water truck on-site at all times or using watering trucks to minimize As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.	Here, the SCEA fails to discuss the feasibility of utilizing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.	Here, the SCEA fails to evaluate the feasibility of developing a traffic plan to minimize traffic flow interference from construction activities. As such, we are unable to verify that the listed measures will be implemented, monitored, and enforced on the Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB	Here, the SCEA fails to evaluate the feasibility of requiring that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-

Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.	road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. The SCEA also fails to mention or discuss arranging appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
Greenhouse Gas Project Level Mitigation Measures – PMM-GHG-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building codes and other applicable laws, into project design including: i. Use energy efficient materials in building design, construction, rehabilitation, and retrofit. ii. Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems.	Here, while the SCEA states that the Project would comply with the CARB 2017 Scoping Plan and SCAG's 2020 Connect SoCal Plan, the SCEA fails to integrate Green Building measures. Specifically, the SCEA fails to discuss using energy efficient materials; installing energy- efficient lighting, heating, and cooling systems, water heaters, equipment, and control systems; reducing lighting, heating, and cooling needs by taking advantage of light-colored roofs and sunlight; incorporating passive environmental control systems; using high-efficiency lighting and cooking devices; incorporating passive solar design; using high-reflectivity building

iii. Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, and sunlight. iv. Incorporate passive environmental control systems that account for the characteristics of the natural environment. v. Use high-efficiency lighting and cooking devices. vi. Incorporate passive solar design. vii. Use high-reflectivity building materials and multiple glazing. viii. Prohibit gas-powered landscape maintenance equipment. ix. Reduce wood burning stoves or fireplaces. x. Provide bike lanes accessibility and parking at residential developments.	materials; prohibiting gas-powered landscape maintenance equipment; reducing wood burning stoves or fireplaces; and/or providing bike lanes accessibility and parking. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination. (SCEA Appendix A, pp. A-22-23.)
b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines.	Here, the SCEA fails to mention or utilize measures described in Appendix F of the State CEQA Guidelines. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

c)Include off-site measures to mitigate a project's emissions.	Here, the SCEA fails to mention or discuss the feasibility of including off-site measures to mitigate the Project's emissions. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
d) Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction and operation of projects to minimize GHG emissions, including but not limited to: i. Use energy and fuel-efficient vehicles and equipment; ii. Deployment of zero- and/or near zero emission technologies; iii. Use lighting systems that are energy efficient, such as LED technology; iv. Use the minimum feasible amount of GHG- emitting construction materials; v. Use cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; vi. Incorporate design measures to reduce energy consumption and increase use of renewable energy; vii. Incorporate design measures to reduce water consumption;	Here, the SCEA fails to evaluate the feasibility of incorporating BACT during design, construction, and operation of the Project. Specifically, the SCEA fails to mention or evaluate the feasibility of using energy and fuel-efficient vehicles and equipment; deploying zero- and/or near zero emission technologies; using the minimum feasible amount of GHG-emitting construction materials; using cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; incorporating design measures to reduce energy consumption and increase use of renewable energy; using lighter- colored pavement where feasible; and/or soliciting bids that include the concepts listed above. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

viii. Use lighter-colored pavement where feasible; and ix. Solicit bids that include concepts listed above.	
Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following: i. Increase bicycle carrying capacity on transit and rail vehicles; ii. Increase access to common goods and services, such as groceries, schools, and day care; iii. Incorporate affordable housing into the project; iv. Incorporate the neighborhood electric vehicle network; v. Orient the project toward transit, bicycle and pedestrian facilities; vi. Improve pedestrian or bicycle networks, or transit service; vii. Provide traffic calming measures; viii. Provide bicycle parking; ix. Limit or eliminate park supply; x. Unbundle parking costs;	Here, the SCEA fails to evaluate the feasibility of incorporating measures that include transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies. Specifically, the SCEA fails to mention or evaluate the feasibility of increasing bicycle carrying capacity on transit and rail vehicles; increasing access to common goods and services, such as groceries, schools, and day care; incorporating affordable housing into the project; orienting the project toward transit, bicycle and pedestrian facilities; improving pedestrian or bicycle networks, or transit service; providing traffic calming measures; providing bicycle parking; limiting or eliminating park supply; unbundling parking costs; providing parking cash-out programs; and/or implementing or providing access to commute reduction programs. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

xi. Provide parking cash-out programs; and xii. Implement or provide access to commute reduction program	
f. Incorporate bicycle and pedestrian facilities into project designs and maintaining these facilities; and planning for and building local bicycle projects that connect with the regional network;	Here, the SCEA fails to evaluate the feasibility of incorporating bicycle and pedestrian facilities into Project design and maintaining these facilities. The SCEA also fails to mention or discuss the feasibility of planning for and building local bicycle projects that connect with the regional network. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
g. Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations;	Here, the SCEA fails to provide incentives for construction and transit facilities within the development to improve transit access to rail and bus routes. The SCEA also fails to mention or provide dedicated shuttle service to transit stations. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

h. Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;	Here, the SCEA fails to discuss the feasibility of or designate a percentage of parking spaces for ride- sharing or high-occupancy vehicles. The SCEA also fails to mention or discuss the feasibility of providing adequate passenger loading and unloading for those vehicles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
j. Land use siting and design measures that reduce GHG emissions, including: iii. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles	Here, the SCEA fails to discuss measures that increase vehicle efficiency, including encouraging the use of zero and low emissions vehicles, and/or reducing the carbon content of fuels, and/or charging for electric bicycles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

As the table above indicates, the SCEA fails to provide sufficient information and analysis to determine the Project's consistency with numerous measures under SCAG's 2020-2045 *RTP/SCS*.

G. The SCEA Fails to Adequately Assess and Mitigate Impacts on Noise

If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." CEQA Guidelines § 15092(b)(2)(A–B).

The SCEA here finds that the construction of the Project would have the potential to result in significant noise impacts at off-site sensitive receptor locations from on-site

construction activities via construction equipment. SCEA Appendix F, p. 17. These impacts are particularly detrimental given that the SCEA identifies at least four (4) sensitive receptor locations, Locations #1-4, within 500 feet of the Project Site. *Id.* Accordingly, the SCEA imposes mitigation measures such as MM NOI-1 which calls for the implementation of noise control devices, such as mufflers, lagging, and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. SCEA Appendix F, p. 18.

However, the SCEA's mitigation measure is problematic for at least two (2) reasons. First, the assumed elevation (at ground level) of the noise source is not defined. *Id.* This information is crucial because it is key to the performance of the noise control devices. The Project proposes a fifteen-story (15) multi-family residential building. SCEA II Project Description, p. II-1. Thus, for example, assuming the noise control device sits on the ground floor at the perimeter of the job site, it would not adequately mitigate noise sources elevated above the ground level as construction of the building progresses. The mitigation measures must be revised to fully explain how the noise control devices would be used to mitigate noise impacts at a minimum of 15 dBA for elevated sources during construction of the fifteen-story (15) building.

Further, the SCEA is not clear on where, if at all, noise-control barriers would be placed and whether those would be movable and adjustable to ensure all construction noise is mitigated.

Second and likewise, MM NOI-1 addresses only receivers at ground level but does not address elevated receivers, such as the seventh floor of the Hollywood Hotel at sensitive receptor Location #1 or the third floor of the Wilcox Hotel at sensitive receptor Location #2. SCEA Appendix F, p. 17. Furthermore, the SCEA does not recognize other nearby buildings, such as, for example, the Goya Studios Sound Stage or the hotel Mama Shelter Los Angeles, which could very well count as sensitive receptors and be impacted by the noise from the Project's construction.

Therefore, the SCEA should be revised and recirculated to account for the foregoing issues and potential construction and operational noise impacts individually and cumulatively with other related projects as defined by CEQA.

V. CONCLUSION

The Southwest Mountain States Carpenters requests that the City prepare an EIR to fully assess the Project's impacts, including impacts on the historical resources, or, in the alternative, the City should revise and recirculate the Project's SCEA to address the aforementioned concerns.

If the City has any questions or concerns, feel free to contact this Office.

Sincerely,

Stephanie Papayanis

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[4] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14-15.
[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[9] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[10] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Disclaimer

SWAPE has received limited discovery. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

Sincerely,

Matt Hagemann, P.G., C.Hg.

Paul E. Rosenfeld, Ph.D.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Email: mhagemann@swape.com

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

SUPERIOR COURT OF CALIFORNIA, COUNTY OF LOS ANGELES

Civil Division

Central District, Stanley Mosk Courthouse, Department 54

21STCP02223 March 9, 2023
HI POINT NEIGHBORS' ASSOCIATION, AN UNINCORPORATED ASSOCIATION vs CITY OF LOS ANGELES, A MUNICIPAL CORPORATION 4:05 PM

Judge: Honorable Maurice A. Leiter
Judicial Assistant: N. Marshalian
Courtroom Assistant: None

CSR: None
ERM: None
Deputy Sheriff: None

APPEARANCES:

For Plaintiff(s): No Appearances

For Defendant(s): No Appearances

NATURE OF PROCEEDINGS: Ruling on Submitted Matter

The Court, having taken the matter under submission on 03/06/2023 for Non-Jury Trial, now rules as follows:

Ruling on Submitted Matter

Trial Date: March 6, 2023
Department 54, Judge Maurice Leiter
First Amended Petition for Writ of Mandate
Moving Party: Petitioner, Hi Point Neighbors' Association
Responding Parties: Respondent, City of Los Angeles; Real Party in Interest, Hi Point M, LLC

Ruling: THE FIRST AMENDED PETITION FOR WRIT OF MANDATE IS GRANTED IN PART AND DENIED IN PART.

The Court posted its tentative decision on this matter on February 28, 2023. Trial (in the form of oral argument) was held on March 6, 2023, after which the Court took the matter under submission. This is the Court's ruling on the merits.

I. STATEMENT OF FACTS

A. Measure JJJ, Transit Oriented Communities Affordable Housing Incentive Program

On November 8, 2016, Los Angeles County voters adopted Measure JJJ. (AR 6655-6676.) Measure JJJ sought to address the acute shortage of affordable housing for unhoused and low-income persons, following the dissolution of the Community Redevelopment Agency (which had

provided funding for low- and moderate-income housing), and considering the County's outdated General Plan and zoning designations, which failed to address affordable housing challenges. (AR 6656.)

Measure JJJ contained an incentive program to encourage the development of affordable housing. It sought to spur development of affordable housing in strategic locations, such as near major transit stops, where residents are susceptible to displacement as property values and rents rise. (Ibid.) And it created the Transit Oriented Communities ("TOC") Affordable Housing Incentive Program to provide developers with incentives to develop affordable housing in transit-oriented neighborhoods. (AR 6657.)

On December 13, 2016, the Los Angeles Municipal Code was amended to codify Measure JJJ and the TOC Affordable Housing Incentive Program, in Municipal Code section 12.22 A.31. (Resp. Request for Judicial Notice ("Resp. RJN"), Ex. B at pp. 75-77.) This Code section provides incentives to housing developments "located within a one-half mile radius [2,640 feet] of a Major Transit Stop," defined by California Public Resources Code section 21064.3 as "[t]he intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute hours." (Id., Ex. B at p. 75; AR 6947; Pub. Resources Code, § 21064.3, subd. (c).) The incentives include residential density increases and parking reductions. (Id., Ex. B at p. 76.) It directs, "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning [to] prepare TOC Affordable Housing Incentive Program Guidelines ("TOC Guidelines") that provide the eligibility standards, incentives, and other necessary components of this TOC Incentive Program described herein." (Ibid.)

On May 25, 2017, the Los Angeles City Planning Commission adopted TOC Guidelines. (AR 6939.) The TOC Guidelines specify that only affordable housing developments located within a one-half mile radius of a "major transit stop" qualify for the incentives. (AR 6947.) They establish a "Tier" system, which provides a ranking (Tier 1-4) to each eligible affordable housing based on its proximity to a "major transit stop." (Ibid.) Pertinent to the matter before the Court, the TOC Guidelines provide that affordable housing developments will be ranked as "Tier 3" where (a) the development is located within 750 feet of an intersection of a Regular Bus and Rapid Bus Line; or (b) the development is located within 1,500 feet of an intersection of two Rapid Bus lines. (AR 6948.) The TOC Guidelines define a "Rapid Bus" as "a higher-quality bus service that may include dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes Metro Bus Rapid Transit line, Metro Rapid

700 lines, Metro Orange and Silver Lines, Big Blue Rapid lines, and the Rapid 6 Culver City. (Ibid.)

The TOC Guidelines state that all eligible affordable housing developments will receive "Base Incentives," which are residential density increases (an increase in the number of dwelling units permitted under the applicable zoning ordinance, and an increase in the floor area ratio permitted under the applicable zoning ordinance), and parking reductions (a decrease in the number of parking spaces required under the applicable zoning ordinance). (AR 6950, 6952-6954.) The degree of the reduction and/or increase permitted is determined by Tier ranking. (Ibid.) And the TOC Guidelines provide that eligible affordable housing developments may be granted "[u]p to three Additional Incentives" (AR 6950.), including reductions in yards/setbacks, decreases in open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.)

B. Project and Project Site

The proposed project at issue here concerns a rectangular-shaped lot at 1447 South Hi Point Street in Los Angeles ("Project Site"), near the intersection of Pico Boulevard and Fairfax Avenue. (AR 18.) The Project Site is approximately 8,839 square feet and currently has a single-family residence. (Ibid.) The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O, with a land use designation of "Medium Residential." (Ibid.) Under its current zoning, building height is limited to 35 feet, articulation is required every 30 feet for building facades exceeding 40 feet, and balconies above the first floor which have a line of sight to adjacent homes are prohibited. (Ibid.)

The proposed Project would demolish the single-family home and construct a five-story, 57-foot-high multi-family residential development above one level of subterranean parking. (AR 18.) It will contain 20 multi-family dwelling units: two one-bedroom units, ten two-bedroom units, and eight three-bedroom units. (Ibid.) It would provide 24 parking spaces, 20 long-term bicycle parking spaces, and two short-term bicycle parking spaces. (Ibid.) The building will encompass approximately 20,093 square feet in total building area, with a floor area ratio of approximately 3.78:1. (Ibid.)

The properties surrounding the Project Site generally are commercial, single-family residences, and multi-family residential uses. (AR 18.) Properties abutting the Project Site to the west are zoned [Q]R3-1-O and contain three- and four-story apartment buildings. (Ibid.) Properties to the

east of the Project Site, across Hi Point Street, are also zoned [Q]R3-1-O and are developed with one- to four- story single-family homes, condominiums, and small lot buildings. (Ibid.) Properties to the north of the Project Site are zoned [Q]R3-1-O and C4-1-O and include both single-family and multi-family residential structures, as well as a McDonald's Drive-Thru restaurant and a commercial strip mall. (Ibid.) Properties to the south of the Project Site, across Saturn Street, are zoned [Q]R3-1-O and R1R3-RG-O and include a mix of single-family residences and multi-story apartment buildings. (Ibid.)

Public buses operate nearby on Pico Boulevard and Fairfax Avenue. (AR 2959.)

C. Administrative History and Approval

On February 27, 2020, Hi Point M, LLC ("Real Party in Interest") submitted a "Transit-Oriented Communities Referral Form" to the Department of City Planning, which asked the Department to determine whether the Project qualified for incentives under the TOC Affordable Housing Incentive Program and, if so, under which "Tier" the Project may be categorized. (AR 619.) On the same day, the Department concluded that the Project qualified for incentives, because the Project was within a half-mile radius of a "Major Transit Stop." The Department noted, "Santa Monica [Big Blue Bus] 7" and "[Rapid] 7" travel through the intersection [at Pico and Fairfax] and have service intervals of less than 15 minutes. (Ibid.) The Department also noted that "Local Line 217" and "Rapid 780" travel through the intersection and have service intervals of 14.4 minutes and 12.7 minutes, respectively. (Ibid.) The Department concluded the Project qualified for "Tier 3" categorization because it was (a) within 750 feet of an intersection of a Regular Bus and Rapid Bus Line, or (b) within 1,500 feet of an intersection of two Rapid Bus lines. (AR 619, 6948.)

On May 24, 2020, Real Party in Interest submitted a "Department of City Planning Application" requesting approval of the Project and the issuance of incentives under the TOC Affordable Housing Incentive Program. (AR 646-652.) Real Party in Interest sought: (a) 70% Density Bonus; (b) 50% Floor Area Ratio increase, (c) Parking reduction to .5 spots per unit; (d) 22 feet height increase; (e) 25% open space reduction; and (f) 30% side yard setback reduction. (AR 647.)

On December 30, 2020, the Director of the Department of City Planning approved the application. (AR 2954-2955.) The Director determined the Project is in a "Tier 3" Incentive Area and approved these "Base Incentives:" (a) a density increase of 70 percent, which equates to a

maximum density of 21 residential dwelling units; (b) a maximum floor area ration of 4.5 to 1, representing a 50 percent increase in the floor area ratio of the underlying residential zone; and (c) .5 automobile parking spaces per unit. (AR 2955-2956.) The Director also approved these "Additional Incentives:" (a) a 30 percent reduction in the required width of two side yards to provide a minimum setback of five feet eight inches in lieu of the minimum eight feet; (b) an increase of 22 feet in building height, equal to a maximum building height of 57 feet, with limited additional height permitted for roof structures, stairwells, elevator shafts, etc. as permitted by the Los Aneles Municipal Code; and (c) a maximum reduction of 25 percent in the required amount of open space. (AR 2956.) And the Director concluded that the Project was exempt from CEQA pursuant to the "Class 32" Categorical Exemption. (AR 2954.)

On January 13, 2021, nearby residents filed a total of five appeals from the Director's approval of the Project. (AR 22.) The residents' appeals challenged: (a) The Director's conclusion the Project is located in a "Tier 3" TOC Affordable Housing Incentive Area; (b) The Director's conclusion the Project is exempt from CEQA pursuant to the "Class 32" Categorical Exemption, because the Project will have significant impacts on noise and traffic conditions; (c) whether The Project complies with the Qualified "Q" Conditions of the Project Site's [Q]R3-1-O zoning; and (d) whether the height of the Project is incompatible with the surrounding neighborhood and will result in loss of sunlight, properly values, and community character. (AR 22-25.)

In response to these appeals the Department of City Planning drafted an "Appeals Recommendation Report", which recommended that the appeals be denied. (AR 22-25.) The Report concluded that: (a) While the Project Site may not be located within 750 feet from a Major Transit Stop, "the project [remains] qualified for Tier 3 TOC status by proximity to a Major Transit Stop involving the intersection of two or more rapid bus routes located within 1,500 feet of the subject property" (rapid bus routes, Santa Monica Big Blue Bus Rapid 7 Line and Metro Rapid Line 780); (b) The Project is exempt from CEQA as it satisfied the five requirements applicable to the "Class 32" Categorical Exemption; (c) The Project is in compliance with the Qualified "Q" Condition; and (d) The Project's height is not incompatible with the surrounding neighborhood. (AR 22-25.)

On April 8, 2021, the City Planning Commission adopted the Department of City Planning's recommendation and denied the appeals. (AR 288.)

On April 13, 2021, two residents filed a CEQA appeal of the "Class 32" Categorical Exemption finding. (Ibid.) On August 31, 2021, the Planning and Land Use Management ("PLUM")

Committee, following a hearing, recommended the City Council deny the residents' appeal. (AR 295-296.) On September 15, 2021, the City Council adopted the PLUM Committee's recommendation and denied the CEQA appeal. (AR 317.)

II. THE PETITION AT ISSUE HERE

On July 12, 2021, Hi Point Neighbors' Association ("Petitioner") filed a Verified Petition for Writ of Mandate against City of Los Angeles ("Respondent"). On November 10, 2021, Petitioner filed the operative Verified First Amended Petition for Writ of Mandate. This Petition has three causes of action: (1) Violation of Local Zoning—As Applied Challenge to TOC Guidelines; (2) Violation of Local Zoning Law—Project Inconsistent with TOC Guidelines; and (3) Violation of California Environmental Quality Act—Improper Adoption of Exemption.

III. REQUEST FOR JUDICIAL NOTICE

Petitioner's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a), (b), and (h).

Respondent's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a) and (b).

Real Party in Interest's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

Respondent's Supplemental Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

IV. STANDARD OF REVIEW

Each of the three causes of action require a different standard of review.

A. First Cause of Action: As-Applied Challenge to TOC Guidelines

The First Cause of Action is a challenge to the TOC Guidelines. Petitioner argues the TOC Guidelines are invalid as exceeding the scope of Measure JJJ. (FAP, ¶¶ 32-33.) First, Petitioner contends the "Tiers" in the TOC Guidelines were not permitted by Measure JJJ. (FAP, ¶ 35.)

Second, Petitioner contends the "Additional Incentives" in the TOC Guidelines exceed the incentives permitted by Measure JJJ. (FAP, ¶¶ 32-33.) Third, Petitioner argues the TOC Guidelines improperly allow open space reductions and height increases which override [Q] Conditions (such as design guidelines) applicable to the Project Site by Ordinance Number 168193. (FAP, ¶ 38.) Petitioner contends the TOC Guidelines are invalid as exceeding those authorized by Measure JJJ.

These are both facial and as-applied challenges. Petitioner challenges the TOC Guidelines as not authorized by Measure JJJ, and challenges them on the ground that their application resulted in the issuance of invalid "conditions of approval" to the Project. (FAP, ¶ 37.) A facial challenge to a statute or local ordinance contends "'the alleged defect is in the [O]rdinance itself, not in the manner or circumstances in which it is being applied.'" (County of Sonoma v. Superior Court (2010) 190 Cal.App.4th 1312, 1324.) "'In evaluating a facial challenge, a court considers "only the text of the [challenged enactment] itself,"' and conducts statutory interpretation to determine the enactment's validity. (Beach & Bluff Conservany v. City of Solana Beach (2018) 28 Cal.App.5th 244, 264.) An as-applied challenge asserts the enforcement of a particular statute or ordinance is invalid. (Howard Jarvis Taxpayers Assn. v. Weber (2021) 67 Cal.App.5th 488, 496.)

The California Supreme Court similarly found a combined facial and as-applied challenge in Travis v. County of Santa Cruz (2004) 33 Cal.4th 757, 767.) The Ordinance at issue there permitted County residents to develop a second dwelling unit on their property so long as the rent charged for the second dwelling unit did not exceed that established by the Section 8 Program or Chapter 17.1 of the County Code, whichever higher, and the resident of the second dwelling unit was a low-income resident, an elderly resident, or a family member of the owner of the unit. (Id. at p. 763.) Travis owned a residential property in the County of Santa Cruz. (Id. at p. 764.) He was granted a permit to construct a second dwelling unit on his proper, subject to the rent and resident conditions imposed by the Ordinance. (Ibid.) Travis filed a Petition for Writ of Mandate against the County of Santa Cruz, challenging the Ordinance on the ground that it violated state law and is unconstitutional.

The Supreme Court found that the petition presented a facial challenge to the Ordinance as invalid and unconstitutional. It also presented an as-applied challenge to the Ordinance, as it placed allegedly improper conditions on his second dwelling unit. (Travis, supra, 33 Cal.4th at p. 767.)
The interpretation of a legislative enactment and the determination of the enactment's validity is reviewed de novo. (Beach & Bluff Conservancy, supra, 28 Cal.App.5th at p. 264.) To prevail on

an as applied challenge, a plaintiff must demonstrate that the application of the statute deprived the individual of a protected right. (Allen v. City of Sacramento (2015) 234 Cal.App.4th 41, 56.) In either case, the Court begins from "'the strong presumption that the ordinance is . . . valid.' [Citations.]" (Building Industry Assn. of Bay Area v. City of San Ramon (2016) 4 Cal.App.5th 62, 90.) The court "'resolve[s] all doubts in favor of the validity of the ordinance.' [Citation.]" (Ibid.) Unless conflict between the two provisions is "clear and unmistakable", the court must uphold the ordinance. (Ibid.) Petitioner bears the burden of demonstrating the ordinance is invalid. (Ibid.)

B. Second Cause of Action: Challenge to Respondent's Tier 3 Finding under TOC Guidelines

The Second Cause of Action alleges that Respondent's conclusion that the Project qualifies for "Tier 3" is not supported by the evidence. (FAP, ¶¶ 39-60.) It is undisputed that this cause of action is governed by Code of Civil Procedure section 1094.5. (Code Civ. Proc., § 1094.5.)

Code of Civil Procedure "section 1094.5, subdivision (c), does not establish a single standard for judicial review of the evidentiary basis for agency determinations." (Bixby v. Pierno (1971) 4 Cal.3d 130, 137; Code Civ. Proc., § 1094.5, subd. (c).) It articulates two possible standards of review: independent judgment and substantial evidence. (Code Civ. Proc., § 1094.5, subd. (c).) The independent judgment standard applies where an administrative agency's decision "substantially affects a fundamentally vested right." (Bixby, supra, 3 Cal.3d at p. 144.) In all other scenarios, where an agency's decision does not "substantially affect a fundamentally vested right," the substantial evidence standard applies. (Ibid.) "The courts must decide on a case-by-case basis whether an administrative decision or class of decisions substantially affects fundamental vested rights . . . ." (Ibid.)

Petitioner does not advance any substantive arguments that approval of the Project "substantially affects a fundamentally vested right." Petitioner's Opening Brief contains a single, conclusory sentence asserting that the Second Cause of Action is subject to independent judgment review. (OB, at p. 12:19-26.) The Court disagrees. The substantial evidence standard of review is applicable to Petitioner's Second Cause of Action.

Under the substantial evidence standard of review the Court must "examine all relevant evidence in the entire record, considering both the evidence that supports the administrative decision and the evidence against it, in order to determine whether or not the agency decision is supported by 'substantial evidence.'" [Citation.]" (Desmond v. County of Contra Costa (1993) 21 Cal.App.4th

330, 335.) "[T]he petitioner in an administrative mandamus proceeding has the burden of proving that the agency's decision was invalid and should be set aside, because it is presumed that the agency regularly performed its official duty. When the standard of review is the substantial evidence test . . . it is presumed that the findings and actions of the administrative agency were supported by substantial evidence. [Citations.]" (Desmond, supra, 21 Cal.App.4th at pp. 335-336.) The court's review "is not designed to rectify an imprudent decision by an administrative agency. Administrative mandamus is not to be used to control the discretion of an administrative body, but only to ensure that it was not abused. [Citations.] It is for the agency to weigh the preponderance of conflicting evidence, 'as we may reverse its decision only if, based on the evidence before [the agency], a reasonable person could not have reached the conclusion reached by [the agency].' [Citations.]" (Young v. City of Coronado (2017) 10 Cal.App.5th 408, 419.)

C. Third Cause of Action: Challenge to Respondent's CEQA Exemption Finding

The Third Cause of Action is brought under the California Environmental Quality Act ("CEQA"). "CEQA is a comprehensive scheme designed to provide long-term protection to the environment." (Mt. Lion Found. v. Fish & Game Com. (1997) 16 Cal.4th 105, 112.) "In enacting CEQA, the Legislature declared its intention that all public agencies responsible for regulating activities affecting the environment give prime consideration to preventing environmental damage when carrying out their duties." (Ibid.) "CEQA is to be interpreted to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (Ibid.)

"In order to ensure that the long-term protection of the environment, consistent with the provision of a decent home and suitable living environment for every Californian, shall be the guiding criterion in public decisions, CEQA and its implementing administrative regulations (CEQA Guidelines) establish a three-tier process to ensure that public agencies inform their decisions with environmental considerations." (Muzzy Ranch Co. v. Solano County Airport Land Use Com'n (2007) 41 Cal.4th 372, 379-80.)

The Court's inquiry here involves the "second tier." "The second tier concerns exemptions from CEQA review." (Muzzy Ranch Co., supra, 41 Cal.4th at p. 380.) In enacting CEQA, the California Legislature recognized that not all "projects" will have a significant effect on the environment, and, therefore, should not be subject to the regulations imposed by CEQA. (Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086, 1100-1101.) The

Legislature instructed the Office of Planning and Research to "prepare and develop proposed guidelines for the implementation of [CEQA]", which "shall include a list of classes of projects that have been determined not to have a significant effect on the environment and that shall be exempt from [CEQA review]. In adopting the guidelines, the Secretary of the Natural Resources Agency shall make a finding that the listed classes of projects referred to in this section do not have a significant effect on the environment." (Pub. Resources Code, §§ 21083, 21084.) "In response to [the California Legislature's] mandate," the Secretary of the Natural Resources Agency has concluded that thirty-three (33) categories of "projects" "do not have a significant effect on the environment" and "are declared to be categorically exempt from the provisions of CEQA." (CEQA Guidelines, §15300.) Where a public agency properly finds that a proposed "project" falls into one of the thirty-three (33) categorical exemptions articulated within the CEQA Guidelines, "no further environmental review is necessary." (Muzzy Ranch, supra, 41 Cal.4th at 380.) "The agency need only prepare and file a notice of exemption (see CEQA Guidelines, §§ 15061, subd. (d), 15062, subd. (a)), citing the relevant statute or section of the CEQA Guidelines and including a brief statement of reasons to support the finding of an exemption (id., § 15062, subd. (a)(4))." (Ibid.)

An agency's finding that a proposed project is categorically exempt from CEQA review is reviewed for a prejudicial abuse of discretion. (Pub. Resources Code, § 21168.5. "Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Ibid.; see also Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal.4th 412, 435.) "'[O]nce an agency . . . determines, based on substantial evidence in the record, that the project falls within a categorical exemption . . ., the burden shifts to the challenging party . . . to "'produce substantial evidence . . .'" [citations] . . . that one of the exceptions to [the] categorical exemption applies.' [Citation.]" (CREED-21 v. City of San Diego (2015) 234 Cal.App.4th 488, 514; see Berkeley Hillside, supra, 60 Cal.4th at p. 1105 ["As to projects that meet the requirements of a categorical exemption, a party challenging the exemption has the burden of producing evidence supporting an exception."].)
V. ANALYSIS

Petitioner challenges Respondent's approval of the Project on three grounds. First, Petitioner contends Respondent's award of "Additional Incentives" pursuant to the TOC Guidelines was improper because the Guidelines are invalid on their face and as applied. Second, Petitioner argues that Respondent's finding that the Project qualifies for "Tier 3" incentives is not supported by substantial evidence. Third, Petitioner says Respondent's determination that the

Project qualifies for a "Class 32" Categorical Exemption under CEQA is not supported by substantial evidence. The Court addresses each claim in turn.

A. First Cause of Action—Petitioner's Challenge to TOC Guidelines

Petitioner raises three facial and as-applied challenges to the TOC Guidelines. Petitioner contends the TOC Guidelines' "Tier" system was not contemplated by Measure JJJ. Second, Petitioner says Measure JJJ did not contemplate the award of "Additional Incentives." Third, Petitioner contends the incentives are inconsistent with the [Q] Conditions applicable to the Project Site.

Before reaching these arguments, the Court addresses Respondent's argument that the first cause of action is barred by the statute of limitations.

1. Petitioner's First Cause of Action is Not Barred by Statute of Limitations

Respondent argues that First Cause of Action is untimely under Government Code section 65009, subdivision (c)(1)(B), which creates a 90-day statute of limitations period for actions or proceedings challenging several types of local planning and zoning decisions. (Gov. Code, § 65009, subd. (c)(1).) Pertinent here are actions described in Government Code section 65009, subdivision (c)(1)(B) and (c)(1)(E):

(c)(1) Except as provided in subdivision (d), no action or proceeding shall be maintained in any of the following cases by any person unless the action or proceeding is commenced and service is made on the legislative body within 90 days after the legislative body's decision:
. . .

(B) To attack, review, set aside, void, or annul the decision of a legislative body to adopt or amend a zoning ordinance.
. . .

(E) To attack, review, set aside, void, or annul any decision on the matters listed in Sections 65901 and 65903, or to determine the reasonableness, legality, or validity of any condition attached to a variance, conditional use permit, or any other permit.

(Gov. Code, § 65009, subd. (c)(1)(B), (c)(1)(E).) The Court of Appeal in County of Sonoma v.

Superior Court (2010) 190 Cal.App.4th 1312, 1324 stated: "[t]he limitations periods set out in the statute are triggered by specific acts of local land use planning authorities. [Citation.] For the actions described in section 65009, subdivision (c)(1) the 90-day limitations period begins to run from the date on which the challenged decision is made. [Citation.] Thus, where a party brings a facial challenge to a zoning ordinance, [the limitations period described in Government Code section 65009, subdivision (c)(1)(B) is applicable, and] the limitation period begins to run on the date the ordinance becomes effective. [Citation.] If a party challenges conditions attached to a conditional use permit or other permit, [the limitations period described in Government Code section 65009, subdivision (c)(1)(E) is applicable, and] the limitations period runs from the date of final administrative action on the permit." (County of Sonoma, supra, 190 Cal.App.4th at p. 1324.) Therefore, to determine when the statute of limitations begins to run, "one must determine what specific governmental act or acts the [party] . . . sought to challenge." (Ibid.)

Respondent argues that Petitioner's First Cause of Action presents only a facial challenge to the TOC Guidelines, that subdivision (c)(1)(B) is applicable, and the statute of limitations period began to run when TOC Guidelines were adopted on May 25, 2017. (AR 6939.)

As discussed, the First Cause of Action is both a facial challenge and an as-applied challenge to the TOC Guidelines. It claims the TOC Guidelines exceed the scope of Measure JJJ, and also claims the application of the TOC Guidelines to the Project resulted in "conditions of approval" unauthorized by Measure JJJ. While the facial challenge is barred by subdivision (c)(1)(B), the as-applied challenge is timely under subdivision (c)(1)(E).

The "Additional Incentives" awarded to the Project are contained in the "Director's Determination" as "Conditions for Approval." These became final on April 13, 2021, when the Department of City Planning issued a Letter of Determination denying the appeals filed against the Director's approval of the award of "Additional Incentives." (AR 289.) Petitioner was required to file the Petition within 90 days, or July 12, 2021. (Ibid.; Gov. Code, § 65009, subd. (c)(1)(E).) Petitioner filed the original Petition on July 12, 2021.

The Court recognizes that Petitioner's as-applied challenge includes arguments that also would apply to a facial challenge: the Court must determine whether the "Additional Incentives" and "Tier" system are permitted by Measure JJJ. The Court may do so in considering the as-applied challenge. (Travis, supra, 33 Cal.4th at pp. 768-769 ["That the Ordinance could have been facially attacked in an appropriate action at an earlier time, before it was applied to Travis' property, does not make section 65009 subdivision (c)(1)(E) inapplicable to Travis's claim for

removal of invalid conditions. This is not a case in which the plaintiff complains of injury solely from a law's enactment. [Citation.] Travis complains of injury arising from, and seeks relief from, not simply the Ordinance's enactment or continued presence in the County Code, but the County's imposition on his second unit permit of conditions required by the Ordinance. Having brought his action in a timely way after application of the Ordinance to him, Travis may raise in that action a facial attack on the Ordinance's validity."].)

2. TOC Guideline's Creation of "Tiers" is Not Beyond Measure JJJ

Petitioner focuses on Section 6 of Measure JJJ, which discusses one of the incentives available to affordable housing developments under the TOC Affordable Housing Incentive Program. (AR 6673.) It states, in part,

Residential Density Increase. An Eligible Housing Development shall be granted increased residential density at rates that shall meet or exceed a 35% increase. In establishing density allowances, the Department of City Planning may allow adjustments to minimum square feet per dwelling unit, floor area ratio, or both, and may allow different levels of density increase depending on the Project's base zone and density.

(AR 6673-6674 [emphasis added].) Petitioner contends Measure JJJ prohibits varying levels of incentives on any basis other than "the Project's base zone and density." (Ibid.) According to Petitioner, "Base Incentives" and "Additional Incentives" based on the Project's proximity to transit—the "Tier" system—is beyond the authority granted by Measure JJJ.

There are several weaknesses in this argument. First, the italicized language relied on by Petitioner is applicable only to one form of incentive (Residential Density Increase); it is not an overarching limitation to all incentives, as Petitioner suggests. Second, Measure JJJ does not expressly prohibit differing incentives based on a criterion other than a Project's base zone and density. Third, Measure JJJ intended to provide flexibility to the Director of the Department of City Planning in drafting the TOC Guidelines. It expressly give the Director discretion to draft the TOC Guidelines and establish "eligibility standards, incentives, and other necessary components of this TOC Incentive Program . . . ." (AR 6673 [emphasis added].) Measure JJJ also states that the Director "shall" draft the TOC Guidelines "consistent with [those] purpose[s]". (AR 6673.) A stated purpose of the TOC Affordable Housing Incentive Program is to encourage the development of affordable housing in transit-rich neighborhoods. (AR 6656-6657.) The Tiers in the TOC Guidelines and the award of more favorable incentives to

developments in closest proximity to major transit stops furthers the purpose of Measure JJJ.

The TOC Guidelines' "Tier" system is not inconsistent with or beyond the scope of Measure JJJ.

3. TOC Guideline's "Additional Incentives" Are Not Beyond Measure JJJ

Petitioner focuses next on the "Additional Incentives" authorized by the TOC Guidelines. Those include reductions in otherwise required yards/setbacks, decreases in required open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.) Petitioner argues that Measure JJJ did not contemplate the "Additional Incentives."

Measure JJJ expressly contemplates the "Base Incentives" included in the TOC Guidelines. (AR 6673-6674.) But Measure JJJ does not prohibit the Director from including additional incentives. Indeed, Measure JJJ allows the Director to draft incentives; those are not limited to the Base Incentives. (AR 6673.) Measure JJJ expressly provides: "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning shall prepare TOC Affordable Housing Incentive Program Guidelines ('TOC Guidelines') that provide the . . . incentives . . . of this TOC Incentive Program . . . ." (Ibid.)

The "Additional Incentives" in the TOC Guidelines are not inconsistent with Measure JJJ.

4. TOC Guidelines and "Q" Qualified Conditions

The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O. (AR 18.) The "Q" Qualified Condition, established by Ordinance Number 168.193, limits building height to 35 feet, requires articulation at every 30 feet for building facades exceeding 40 feet, and prohibits balconies above the first floor which have a line of sight to adjacent existing single-family uses. (Ibid.) Petitioner contends the TOC Guidelines improperly violate the "Q" Qualified Condition by awarding incentives in excess of permissible height and articulation. (OB, at p. 17:1-7.)

The Court is unpersuaded this argument provides grounds to invalidate the TOC Guidelines. The premise of Petitioner's First Cause of Action is that the TOC Guidelines are invalid because they are inconsistent with Measure JJJ. But this argument does not concern inconsistency with Measure JJJ; instead it claims a purported inconsistency with the "Q" Qualified Condition. (OB, at p. 17:1-7.) Petitioner's argument concerning the "Q" Qualified Condition does not show that

"the TOC Guidelines [are] inconsistent with Measure JJJ," as alleged in the First Cause of Action. (FAP, ¶ 38.)

The Petition as to the First Cause of Action is DENIED.

B. Second Cause of Action— Petitioner's Challenge to Respondent's Tier 3 Finding under TOC Guidelines

Petitioner's Second Cause of Action contends that approval of "Tier 3" TOC Incentives is not supported by substantial evidence. (OB, at p. 14:6-15:11.)

As discussed, a proposed development will be placed in "Tier 3" if it is within 1,500 feet of a "Major Transit Stop" which includes the intersection of two "Rapid Buses." (AR 2089.) The TOC Guidelines define a "Rapid Bus" as "a higher quality bus service that may include several key attributes, including dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes, but is not limited to, Metro Bus Rapid Transit lines, Metro Rapid 700 lines, Metro Orange and Silver Lines, Big Blue Bus Rapid lines and the Rapid 6 Culver City bus." (Ibid.)

On April 8, 2021, the City Planning Commission denied the various appeals filed by residents challenging the Director of City Planning's determination that the Project qualifies as "Tier 3." (AR 14-15.) The Commission concluded the Project is located less than 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where two Rapid Bus lines intersect. (AR 22.) The two Rapid Bus lines are Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780. (AR 22, 286.)

Petitioner does not appear to dispute that Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet the definition of "Rapid Bus[es]." And Petitioner does not appear to dispute that the Project is located within 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 intersect. Rather, Petitioner questions whether Respondent's finding that where the Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet, at the intersection of Pico Boulevard and Fairfax Avenue, qualifies as a "Major Transit Stop." (OB, at pp. 15:11-16:2.) Petitioner points out that the intersection of two or more bus lines will be considered a "Major Transit Stop" only where those bus lines have "a service interval of 15 minutes or less during the morning and afternoon peak commute hours."

(AR 6947.) Petitioner contends the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak hours, the intersection of the two Rapid bus lines therefore do not meet the definition of "Major Transit Stop," and the Project did not qualify for "Tier 3." (OB, at pp. 15:11-16:2.)

The Court agrees. Respondent's finding is not supported by substantial evidence in the administrative record. Indeed, substantial evidence in the administrative record shows the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak commute hours.

The administrative record includes the bus schedule for Metro Rapid 780 effective as of March 17, 2020. (AR 22 ["[T]he definition of a Major Transit Stop was subsequently clarified through City Planning on August 19, 2020 to apply only to transit schedules in place as of March 17, 2020 . . . ."]; OB, at p. 15:15-21.) Appendix A of the TOC Guidelines outlines the methodology for determining whether a particular bus line has a service interval frequency of 15 minutes or less. (Ibid.) To determine whether a bus line has an average service interval frequency of 15 minutes or less, one must first determine the number of trips the bus line completes during "peak" morning hours and "peak" afternoon hours, and then divide the number of trips made during "peak" morning and afternoon hours by 420. (AR 6958-6959.) 420 represents the total number of minutes during the peak hours of 6:00 AM to 9:00 AM (morning "peak" hours) and 3:00 PM to 7:00 PM (afternoon "peak" hours). (AR 619 [footnote 2], 6958-6959.) Appendix A specifies that the calculation must be completed separately for each direction the bus line travels. "If one or both directions fail to meet the 15 minutes frequency limit, the entire bus line is ineligible for a Major Transit Stop." (Ibid.)

Metro Rapid 780 travels eastbound and westbound. (AR 1982.) The Court finds it makes approximately 12 eastbound trips during the morning "peak" hours, and approximately 12 eastbound trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) Dividing the total number of eligible "peak" hour trips (24 total trips) by 420 yields an average service interval for Metro Rapid 780 Eastbound of approximately 17.5 minutes, which is above the 15-minute requirement for a "Major Transit Stop". (AR 6947.)

Metro Rapid 780 westbound yields similar results. It makes approximately 11 trips during the morning "peak" hours, and approximately 12 trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) The Court divides the total of 23 "peak" hour trips by 420, yielding in an average service interval for Metro Rapid 780 Westbound of approximately 17.5 minutes.

These calculations are greater than the 15-minute requirement for a "Major Transit Stop." (AR 6947.) The Metro Rapid 780 Bus Line is ineligible for inclusion in a Major Transit Stop and does not support Respondent's "Tier 3" finding. (AR 6959.)

Respondent's Opposition does not address this argument, nor does it refer to any portion of the administrative record which provides a calculation different than the Court's, or those provided during the residents' appeals.

Real Party in Interest's remaining arguments are unpersuasive.

Real Party in Interest argues the "Tier 3" category does not contain a 15-minute service requirement. But an overarching eligibility requirement for the TOC Affordable Housing Incentive Program is proximity to a "Major Transit Stop," which is defined as the intersection of two or more bus lines "with a service interval of 15 minutes or less during the morning and afternoon peak commute periods." (AR 6947.) While the definition of "Tier 3" does not itself mention the 15-minute service interval requirement, this requirement is located under the heading "Type of Major Transit Stop." It follows that the "Two Rapid Buses" which intersect must qualify for inclusion within a "Major Transit Stop," and must satisfy the 15-minute service interval requirement. (Ibid.)

Real Party in Interest also argues that the 15-minute service requirement is met if the Court "combines" the intervals of service provided by Metro Rapid 780 and Metro Local Line 217. (Real Party in Interest's Opposition Brief ("RPI Opp."), at pp. 8:12-9:3.) Real Party contends that Metro Rapid 780 and Metro Local Line 217 "follow the same [bus] route from the intersection of Venice and Fairfax to the intersection of Hollywood and New Hampshire." (Id., at p. 8:19-21.) According to Real Party, if the Court were to combine the number of trips made by both bus line during "peak" morning and afternoon commute hours, and divide by 420, the average service interval would be less than 15 minutes. (Id., at p. 8:19-23.)

There are two problems with this argument. First, Real Party in Interest provides no clear authority for the proposition that bus lines may be so combined. Los Angeles Municipal Code section 12.22 A.31 and the TOC Guidelines are silent on whether bus lines may be combined to meet the 15-minute service interval requirement. (AR 6945-6957.) The sample calculation in Appendix A of the TOC Guidelines considers only whether a single bus line meets the 15-minute service interval requirement. While neither expressly prohibits Respondent from combining

multiple bus lines, neither allows it. Real Party in Interest has not shown that Los Angeles Municipal Code section 12.22 A.31 or the TOC Guidelines allow combining bus lines to satisfy the 15-minute service interval requirement.

Second, even if the Municipal Code or the TOC Guidelines could be read to permit combining bus lines, the administrative record does not show that Respondent combined these bus lines in making its determination. Respondent's finding that the intersection of Pico Boulevard and Fairfax Avenue qualifies as a "Major Transit Stop" is vague, without analysis. (AR 22.) Neither the Director's Determination (AR 2959, 2962) nor the Appeal Recommendation Report (AR 20, 22) discusses how the intersection of Pico Boulevard and Fairfax Avenue satisfies the 15-minute service interval requirement. They merely state the conclusion that the intersection qualifies. Neither appears to contemplate combining bus lines to make this determination. (Ibid.) The Transit-Oriented Affordable Housing Referral Form (AR 619) is similarly vague, merely naming bus lines and concluding the 15-minute service interval requirement has been satisfied. (AR 619.)

The Court's inquiry "will be limited to a determination of whether or not the findings are supported by substantial evidence in light of the whole record." (Strumsky v. San Diego County Employees Retirement Assn. (1974) 11 Cal.3d 28, 32.) Respondent must "set forth findings to bridge the analytical gap between the raw evidence and ultimate decision or order." (Sky Posters, Inc. v. Department of Transportation (2022) 78 Cal.App.5th 644, 667-668 ["Reference, in section 1094.5, to the reviewing court's duty to compare the evidence and ultimate decision to 'the findings' . . . leaves no room for the conclusion that the Legislature would have been content to have a reviewing court speculate as to the administrative agency's basis for decision."].)

The administrative record contains no finding that the intersection of Pico Boulevard and Fairfax Avenue constitutes a Major Transit Stop because Respondent combined bus lines to satisfy the 15-minute service interval requirement. The Court will not infer that Respondent made such a finding or speculate on whether it might have done so. [1]

[1] On the eve of trial, Respondent filed a Request for Judicial Notice of a Department of City Planning Director's Determination approving TOC Incentives for an unrelated project. Respondent contends this shows that bus lines are routinely combined to satisfy the 15-minute service interval requirement for a "Major Transit Stop." This document does not show that the Municipal Code or the TOC Guidelines permit combining bus lines, or that such a calculation was made for the project before the Court.

Respondent's finding the Project qualifies for "Tier 3" categorization and incentives, based on the conclusion that the Project is within 1,500 feet of a "Major Transit Stop" including the intersection of "Two Rapid Buses," is not supported by substantial evidence. A writ of mandate setting aside the "Tier 3" incentives awarded under the TOC Affordable Housing Incentive Program is warranted. The Petition as to the Second Cause of Action is GRANTED.

C. Third Cause of Action—Petitioner's Challenge to Respondent's "Class 32" Categorical Exemption Finding

The Third Cause of Action challenges Respondent's finding that environmental review pursuant to CEQA is not required because the Project qualifies for a "Class 32" Categorical Exemption. (FAP, ¶¶ 61-69.) First, Petitioner argues the Project does not satisfy the first and fourth conditions of CEQA Guidelines section 15332. (CEQA Guidelines, § 15332; OB, at pp. 17-24.) Second, Petitioner contends the "unusual circumstances" and/or "cumulative effects" exceptions apply and prohibit the Categorical Exemption. (Id., at p.24-25.)

1. The Record Contains Substantial Evidence That the Project Satisfies the Conditions for a "Class 32" Categorical Exemption

CEQA Guidelines section 15332 lists five conditions that must be satisfied to qualify for a "Class 32" Categorical Exemption. (Ibid.) It states:

Class 32 consists of projects characterized as in-fill development meeting the conditions described in this section.

(a) The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

(b) The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban areas.

(c) The project site has no value as habitat for endangered, rare or threatened species.

(d) Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

(e) The site can be adequately served by all required utilities and public services.

Petitioner focuses on subdivisions (a) and (d). Petitioner argues the Project fails to satisfy (a) because substantial evidence demonstrates the Project is inconsistent with the general plan and zoning designations applicable to the Project Site. Petitioner argues the Project fails to satisfy (d) because substantial evidence demonstrates the Project would have a significant effect on noise and air quality.

a. Subdivision (a)—Substantial Evidence Supports the Finding that the Project is Consistent with Applicable General Plan and Zoning Designations

Petitioner argues the Project fails to comply with the applicable "Q" Qualified Conditions. As discussed, the Project Site is within the Wilshire Community Plan Area; it is zoned [Q]R3-1-O, with a corresponding land use designation of "Medium Residential." (AR 18.) The "Q" Qualified Conditions impose various land use requirements, including these:

Section 2. Pursuant to Section 12.32-K of the Los Angeles Municipal Code and the amendments thereto, the following limitations are hereby imposed upon the use of that property shown in Section 1 hereof which are subject to the Permanent "Q" Qualified Classification.

1. Covenant: Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns. Further, the agreement must be submitted to the Planning Department for approval before being recorded. After recordation, a copy bearing the Recorder's number and date must be given to the City Planning Department for attachment to the subject file.

. . .

3. Building Mass: For any building façade greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet.

. . .

5. Energy Conservation: Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project.

. . .

10. Open Space: A minimum of 100 square feet of usable open space shall be provided for each dwelling unit. Parking area, driveways, front yard setback areas and rooftops shall not be included as open space. To be considered as usable open space[,] the project shall meet the following criteria:

a. Private Open Space: Patios and yards (located at ground level or the first habitable room level) which are part of a single dwelling unit and are enclosed by solid screen material at least four feet in height may eb included as usable open space provided said areas have a horizontal dimension of at least 15 feet in width.

b. Common Usable Open Space: Each common usable open space area . . . shall have an average width of 20 feet with no width less than 15 feet at any point.

. . .

Common open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning.

A minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees[.]

(AR 2289-2291.)

Petitioner argues the Project is inconsistent with these conditions because: (a) The Conditions of Approval failed to require Real Party in Interest to record the contemplated covenant before any permits may be issued; (b) The Project failed to provide articulation at every 30 feet of the building height; (c) The Conditions of Approval do not require Real Party in Interest to consult with the Department of Water and Power and the Southern California Gas Company prior to the construction of the Project to determine energy conservation designs; and (d) The Project fails to

provide the requisite open space per dwelling unit.

Respondent argues that the Project is not required to comply with all the "Q" Qualified Conditions. According to Respondent, the requirements of the "Q" Qualified Conditions may be amended by the "Base Incentives" and "Additional Incentives" under the TOC Affordable Housing Incentive Program. (Ibid.) Respondent's reading of the "Q" Qualified Conditions and the TOC Affordable Housing Incentive Program is supported by the Los Angeles Municipal Code.

On August 18, 1992, Ordinance Number 168193 codified the "Q" Qualified Conditions. (AR 2294.) It amended Los Angeles Municipal Code section 12.04 (entitled "Zones-Districts-Symbols") by effectively re-zoning the Project Site and neighboring properties, placing a "Q" designation in the zoning classification (i.e., "[Q] R3-1-O"). (AR 2288.) Those properties zoned with the "Q" designation would be subject to the land-use requirements and limitations in the "Q" Qualified Conditions. (AR 2287-2288.)

Los Angeles Municipal Code section 12.22 enumerates approximately 35 "[e]xceptions" to the land use restrictions and requirements in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22 [entitled, "Exceptions."].) Where an "[e]xception" is applicable, a property may be used in a way different than the zone permits. (L.A. Municipal Code, § 12.22.) It is undisputed that the TOC Affordable Housing Incentive Program is included in Los Angeles Municipal Code section 12.22 A.31, as one of the 34 specified "[e]xceptions" to the zoning land-use restrictions in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22, subd. A.31.) While the "Q" Qualified Conditions are applicable to the Project Site as a zoning designation, the Project may stray from their requirements by virtue of the Project's eligibility for the TOC Affordable Housing Incentive Program. (Ibid; Bay Area Citizens v. Association of Bay Area Governments (2016) 248 Cal.App.4th 966, 999 [" ' "If the statutory language is clear, our task is at an end, for there is no need for judicial construction." ' "].)

The Court now turns to the "Q" Qualified Conditions, and finds the project is not inconsistent with those conditions.

i. Section 2, Subsection 1 of "Q" Qualified Condition -- "Covenant"

Section 2, subsection 1 of the "Q" Qualified Conditions states: "Prior to the issuance of any

permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns." (AR 2289.) Petitioner contends the Project fails to comply with this section because Respondent failed to include, as a condition of approval for the Project, a requirement that Real Party in Interest record the covenant. (OB, at pp. 21:23-22:3.)

The Court is not persuaded the Project is inconsistent with this section. Petitioner has failed to demonstrate that the covenant was not recorded by Real Party in Interest's various predecessors. The "Q" Qualified Conditions were created more than 30 years ago. (AR 2294.) This section does not require all owners of the Project Site to record the contemplated covenant. (AR 2289.) It merely requires the owner of the Project Site who requests a permit first following the effective date of the Ordinance to record the contemplated covenant, which will then "run with the land." (AR 2289.) Petitioner fails to show a prior owner of the Project Site had not recorded the covenant.

ii. Section 2, Subsection 3 of "Q" Qualified Conditions --"Building Mass"

Section 2, subsection 3 of the "Q" Qualified Conditions provides: "For any building greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet." (AR 2289.) Petitioner contends the Project fails to provide sufficient articulation in relation to the building's length. (OB, at pp. 17:28-18:2.) Specifically, Petitioner argues that, while the southern elevation of the Project is approximately 132 feet in length (which would require approximately four articulations pursuant to the "Q" Qualified Conditions), the Project provides only "one articulation 20 feet, 8 inches from the western façade." (Ibid.)

Substantial evidence in the administrative record supports Respondent's conclusion the Project is consistent with this section. The plans depict approximately five corridors on the southern façade, which are exposed and visible from the exterior with a glass railing. (AR 187, 195.) The Department of City Planning determined the five exposed corridors provide sufficient articulation for the building's length. (AR 24.) Petitioner argues that the exposed corridors do not constitute sufficient "modulation of the façade because "the [term] "façade" is defined as the boundary of an exterior walls of the structure, which are not changed by exposed corridors." (OB, at p. 18:5-7.)

Petitioner's definition of the term "façade" comes not from the definitions provided within the "Q" Qualified Conditions but from "LawInsider.com." (Petitioner's Request for Judicial Notice, Ex. 1.) The Court is not persuaded that this definition governs. And the Court must give "great weight" to the Department of City Planning's determination that the exterior corridors provide a sufficient modulation of the building's "façade." (Berkley Hills Watershed Coalition v. City of Berkley (2019) 31 Cal.App.5th 880, 896 ["a city's interpretation of its own ordinance, '"is entitled to great weight unless it is clearly erroneous or unauthorized."']).

iii. Section 2, Subsection 5 of "Q" Qualified Conditions --"Energy Conservation"

Section 2, subsection 5 of the "Q" Qualified Conditions provides: "Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project." (AR 2289.) Petitioner contends there is no evidence demonstrating Real Party in Interest consulted with either the Department of Water and Power or the Southern California Gas Company regarding feasible energy conservation features for the Project. (OB, at p. 22:6-11.)

The Project is not inconsistent with this section. Under Section 2, subsection 5 consultation with the Department of Water and Power and the Southern California Gas Company is required "prior to the construction of any project." (AR 2289.) It does not require consultation before obtaining approval for the Project, only before construction. Real Party was not required to consult with either the Department of Water and Power or the Southern California Gas Company for the purpose of obtaining approval for the Project.

iv. Section 2, Subsection 10 of "Q" Qualified Conditions -- "Open Space"

Petitioner maintains the Project is incompatible with various "Open Space" requirements in Section 2, subsection 10 of the "Q" Qualified Conditions.

Petitioner first focuses on the mandate that all patios and yards which are "private open space" must "have a horizontal dimension of at least 15 feet in width." (AR 2290.) Petitioner argues that, while the Plans say the Project provides 50 square feet of "private open space" of patios and yards, the patios are not 15 feet in width. (OB, at p. 19:7-10.) Petitioner cites to the Project Plans, on pages 184 through 186 of the administrative record. (Ibid.; AR 184-186.) But the Plans referenced do not display the measurements of the relevant patios on the first floor, and the

legend provides no further guidance. (Ibid.) Petitioner has not proved this contention. [2]

Petitioner next focuses on the requirement that "[c]ommon open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning." (AR 2291.) Petitioner contends "no amenities are provided for the 950 square feet of rear yard space shown on the Plans." (OB, at p. 19:11-12.) But the 950 square feet of rear yard space clearly provides picnic tables and benches. (AR 182.) These are "recreational amenities" pursuant to the "Q" Qualified Conditions (i.e., "[c]ommon open space areas shall incorporate recreational amenities such as . . . picnic tables, benches . . . .") (AR 2291.)

Petitioner then points to the mandate that "[e]ach common usable open space area shall have a total area of at least 400 square feet and shall have an average width of 20 feet with no width less than 15 feet at any point." (AR 2291.) Petitioner contends the "rear yard area has an average width less than 20 feet with widths as narrow as 4 feet[.]" But the Project Plans unambiguously state the rear yard of the Project is approximately 20 square feet in width. (AR 182.)

Next, Petitioner directs us to the requirement that "rooftops shall not be included as open space." (AR 2290.) Petitioner says the "fifth floor garden," which is approximately 592 square feet, may not be counted towards the "open space requirement" because it is "located on the roof of the fourth story." (OB, at p. 19:17-18.) The Court is unpersuaded that the fifth-floor garden may not be counted towards the minimum open space requirements. Notably, following review of the Project's Plans, the fifth-floor garden is not on the rooftop of the Project, as Petitioner would suggest, but is on an exposed deck on the fifth floor. (AR 6540.) The rooftop is above the fifth floor. (AR 6541.)

[2] Even if Petitioner demonstrated the patios are less than 15 feet in width, this would be insufficient to demonstrate the Project has failed to provide the requisite amount of open space. Due to an "Additional Incentive" provided to the Project (25 percent reduction in the amount of open space), the Project is required to provide approximately 1,500 in open space. (AR 15.) The Plans show the Project provides approximately 2,492 square feet in open space. (AR 181.)

Petitioner also points to the requirement that "[a] minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees . . . ." (AR 2291.) Petitioner contends "the Project fails to landscape 50 percent of common open space as virtually none of the open space that meets the [Q] Conditions provides landscaping." (OB, at pp. 19:23-20:1 [emphasis added].) The Court already has concluded the open space provided by the Project complies with the "Q" Qualified Conditions.

Petitioner's contention that the Project fails to qualify for a "Class 32" Categorical Exemption because it is inconsistent with the "Q" Qualified Conditions is unpersuasive. Substantial evidence demonstrates the Project is sufficiently "consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations."

b. Subdivision (d)—Substantial Evidence Supports the Finding the Project Would Not Result in Significant Effects to Air Quality or Noise

CEQA Guidelines section 15332(d) requires that "[a]pproval of the project not result in any significant effects relating to traffic, noise, air quality, or water quality." Petitioner argues that Respondent's determination the Project will not have a substantial effect on noise and air quality is not supported by substantial evidence.

i. Air Quality Impacts and Greenhouse Gas Emissions

Petitioner's argument concerning air quality centers on the Greenhouse Gas ("GHG") emissions resulting from the Project. (OB, at p. 22:12-24.) Respondent concluded the Project would not have a significant effect upon air quality. (AR 23.) Respondent based its conclusion on "a March 2020 . . . Air Quality Technical Report prepared by ZMassociates Environmental Corporation International." (Ibid.) The ZM Report assessed the Project's effect on air quality by employing the South Coast Air Quality Management District ("SCAQMD") Final Localized Significance Threshold Methodology, published in July 2008. (AR 6621.) Noting that the "Regional Construction Threshold" for Localized Significance with respect to GHG emissions is 3,000 CO2e/year, the ZM Report concluded the GHG emissions created by the Project would be only 70.69 CO2e/year. (AR 6624.) Petitioner contends this finding is erroneous because the SCAQMD "threshold for significance" employed by the ZM Report is outdated, and a more recent "threshold for significance" should have been used. (OB, at p. 22:14-24.) Relying on a report prepared by the consulting entity SWAPE, Petitioner argues the suggested "SCAQMD

2035 efficiency target of 3.0 MT CO2e/SP/year" should have been employed to assess the Project's impact upon GHG emissions. (Ibid.)

Respondent makes two arguments in response. First, Respondent contends the air quality assessment does not require analysis of potential GHG emissions. (Resp. Opp., at pp. 10:24-11:4.) Respondent contends subdivision (d) merely requires it to analyze potential substantial impacts to "air quality." Respondent cites to Appendix G of the CEQA Guidelines, which is a sample "Environmental Checklist Form" that may be used to conduct an initial study of a Project's potential environmental impacts. (CEQA Guidelines, Appendix G.) The sample includes a list of "[e]nvironmental [f]actors" which may be "[p]otentially [a]ffected" by a project's development; it shows "Air Quality" and "Greenhouse Gas Emissions" in separate categories. (Ibid.) Second, if the Court concludes GHG emissions fall within the scope of an analysis of air quality impacts, Respondent contends the standard used in the ZM Report is appropriate.

The Court is not persuaded by Respondent's interpretation of the language of subdivision (d). Although "Air Quality" and "Greenhouse Gas Emissions" are listed separately in Appendix G, this also shows that analysis of GHG emissions is relevant in considering whether the Project will have a significant impact on air quality. Indeed, the ZM Report, on which Respondent relies, analyzes GHG emissions. (AR 6624.) Moreover, Respondent has provided no case law or statue supporting its contention that an analysis of air quality would not include an analysis of GHG emissions.

Respondent's second argument is meritorious. As stated, Petitioner contends Respondent employed an outdated "threshold of significance." (OB, at p.22:14-24.) But CEQA Guidelines section 15064.4 expressly states that an agency has "discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligibly take into account the project's incremental contribution to climate change." (CEQA Guidelines, § 15064.4, subd. (c).) This discretion reflects "the existing CEQA principle that there is no iron-clad definition of 'significance.'[Citation.]." (Center for Biological Diversity v. Department of Fish & Wildlife (2015) 62 Cal.4th 204, 221.) At oral argument, Petitioner conceded that Respondent has discretion to determine the most appropriate model or methodology to assess the Project's impact on GHG emissions.

The Court is not persuaded that Respondent's use of the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) was an abuse of discretion.

Petitioner has not shown that the threshold of significance employed by Respondent was superseded by the threshold of significance set forth by the SCAQMD. As noted, Petitioner relies on a recommendation by the consulting entity SWAPE, which opines that Respondent should have used the SCAQMD 2035 efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year. (AR 3158-3159.) SWAPE cites to a publication by a separate non-profit agency named Association of Environmental Professionals. (AR 3158, fn. 22.) But this publication does not establish that SCAQMD adopted this new threshold of significance for GHG emissions, or that they supersede the threshold used by Respondent. (Ibid.) Rather, this publication is a recommended "action plan" based on the opinions of its authors, the Association of Environmental Professionals. (Ibid.) This does not establish that Respondent abused its discretion in applying the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) to assess the Project's impact upon GHG emissions.

Respondent did not commit an abuse of discretion by concluding CEQA Guidelines section 15332(d) was satisfied, and the Class 32 Categorical Exemption properly may be applied.

ii. Construction and Operational Noise Impacts

Petitioner's challenge to Respondent's determination concerning noise impacts centers on construction-related noise and operational noise.

Petitioner challenges Respondent's conclusion that construction-related noise will not exceed the maximum decibel limit in Los Angeles Municipal Code section 112.05 of approximately 75 dB(A). The Court is not persuaded by Petitioner's contentions. Substantial evidence in the administrative record, including the expert conclusions in the ZM Report, supports Respondent's conclusion. (AR 6619.) The ZM Report states: "[d]ue to the small project size, the limited number of construction vehicles, limited number of construction equipment, and small size of construction equipment compared to much larger projects, the proposed project will not result in exceedance of City of Los Angeles noise ordinances." (Ibid.)

Petitioner challenges this with an opposing expert report produced by Project opponents during an administrative hearing. (OB, at pp. 23:1-24:1.) This report was prepared by RK Engineering; it concludes the construction-related noise caused by the Project "would result in expected noise levels ranging from 78.5 dB(A) to 117 dB(A)." (AR 3333.) But differing expert opinion is not determinative in a substantial evidence review. (We Advocate Through Environmental Review v. County of Siskiyou (2022) 78 Cal.App.5th 683, 699 [holding, "' "a disagreement among

experts does not make an EIR inadequate"' " and is not determinative in a substantial evidence review].)

Petitioner's arguments concerning operational noise fare no better. Respondent's conclusion is supported by factual findings reached by Department of City Planning staff in a Recommendation Report. (AR 91.) The Department of City Planning concluded: "[n]oise generated through human conversation and activities (particularly in outdoor recreational spaces, such as balconies and patios), landscape maintenance, or trash collection would not exceed the recommended noise compatibility guidelines. Any new stationary sources of noise, such mechanical HVAC equipment, installed on the proposed development will be required to comply with LAMC Sections 112.02 and 112.05 which prohibit noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level at neighboring occupied properties by more than five dBA. In addition, the project is not expected to generate a substantial number of vehicle trips which could in turn generate additional noise. The proposed project is expected to generate a negligible increase in ambient noise from operation." (Ibid.)

Petitioner questions the Department of City Planning's findings, citing to a differing expert report which concludes" "it is highly probable that a noise level exceedance would occur from mechanical equipment operating on the project site." (AR 3333.) Again, differing expert opinions are insufficient and this one also appears speculative. (We Advocate Through Environmental Review, supra, 78 Cal.App.5th at p. 699; CEQA Guidelines, § 15384, subd. (a) [substantial evidence does not include "speculation"].)

2. Petitioner Has Failed to Demonstrate the "Unusual Circumstances" Exception or the "Cumulative Impacts" Exception are Applicable

Petitioner argues that the "unusual circumstances" and/or "cumulative impacts" exception apply. (OB, at pp. 24:16-25:18.) Under the CEQA statutory scheme, the thirty-three categorical exemptions are not absolute. (North Coast Rivers Alliance v. Westlands Water Dist. (2014) 227 Cal.App.4th 832, 850 (North Coast Rivers).) They "are subject to exceptions that defeat the use of the exemption." (Ibid.) Where an exception to an exemption applies, the public agency "must 'conduct an initial study to determine if the project may have a significant effect on the environment.' [Citation.]" (Muzzy Ranch, supra, 41 Cal.4th at p. 381.) It is Petitioner's burden to show such an exception applies. (CREED 21, supra, 234 Cal.App.4th at p. 514.)

a. "Unusual Circumstances" Exception

The "unusual circumstances" exception of CEQA Guidelines section 15300.2, provides: "[a] categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (State CEQA Guidelines, § 15300.2, subd. (c).)

The California Supreme Court in Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086 sets forth a two-part, "bifurcated approach" to determine whether a public agency abused its discretion in concluding an "unusual circumstances" exception was inapplicable. (Id. at pp. 1114-1115.) First, the reviewing court must review the administrative record to determine whether there is substantial evidence supporting Respondent's determination that the Project does not present unusual circumstances. A project presents "unusual circumstances" when it will have a significant effect on the environment. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.) Second, the court determines whether the evidence presents a "fair argument" of "a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Berkeley Hillside, supra, 60 Cal.4th at p. 1114.) A "fair argument" may be made where the administrative record includes substantial evidence reflecting "'it [could] be "fairly argued"' " that "there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Id. at p. 1112.)

Petitioner focuses on construction-related noise and GHG emissions, arguing that substantial evidence demonstrates these are "unusual circumstances."

The Court concludes substantial evidence in the record fails to demonstrate the Project presents "unusual circumstances." Petitioner has failed to establish the Project encompasses "unusual" features which would cause a significant effect on the environment. The Court already has determined Petitioner's arguments concerning noise and GHG emissions are unavailing. Petitioner has failed to satisfy the first prong of the "bifurcated approach" of Berkeley Hillside. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.)

In this case, the second prong of the Berkeley Hillside analysis dovetails with the first. Substantial evidence does not present a "fair argument" the Project will have a significant impact on the environment.

The Court concludes Petitioner has failed to satisfy that the "unusual circumstances" exception

applies.

b. "Cumulative Impacts" Exception

The "cumulative impacts" exception, in CEQA Guidelines section 15300.2, subdivision (b), provides: "[a]ll exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant." "'Cumulative impacts' refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." (CEQA Guidelines, § 15355.) "The individual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines, § 15355, subd. (a).) "The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impact can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines, § 15355, subd. (b).) The challenging party has the "burden to produce evidence that there was a fair argument that the cumulative impact exception applied." (Aptos Residents Assn. v. County of Santa Cruz (2018) 20 Cal.App.5th 1039, 1052.)

Petitioner argues that three other developments near the Project have been approved by Respondent and "likely [will] be developed concurrently" with the Project, resulting in a significant cumulative impact to air quality. (OB, at p. 25:4-18.) The development projects are: (a) 1444 Hi Point Street (VTT-74364-SL); (b) 1437 Hi Point Street (DIR-2009-2189-SPR-DB); and (c) 1500 Hi Point Street ((DIR-2020-1870-TOC-HCA). (Ibid.) Petitioner cites to the SWAPE Report, which concludes the additional projects and the development at the Project Site "will occur in close proximity at the same time, thus resulting in a potentially significant cumulative impact." (AR 3152-3153.)

Petitioner has failed to demonstrate a fair argument that the cumulative impacts of successive projects, including the Project at issue here, would have a significant effect on the environment. The contentions in the SWAPE Report appear to be speculative. Petitioner fails to confirm whether the additional development projects will occur at the same time as the development of the Project Site, suggesting only that they "would likely be developed" at the same time. (OB, at p. 25:9-10.) And while the SWAPE Report concludes: "[the] projects at 1447 and 1500-1512 ½ South Hi Point Street will occur in close proximity at the same time[,]" the Report fails to articulate any facts—such as a development schedule for the referenced projects—supporting

this conclusion. (AR 3152.)

The Court finds no prejudicial abuse of discretion in Respondent's determination of a categorical exemption. The Petition as to the Third Cause of Action is DENIED.

VI. CONCLUSION

Petitioner's First Amended Writ of Mandate is GRANTED in part and DENIED in part. It is DENIED with respect to the First and Third Causes of Action. It is GRANTED with respect to the Second Cause of Action.

A writ of mandate is issued ordering Respondent to vacate and set aside approval of the Project, including Respondent's award of "Tier 3" TOC Incentives under the TOC Affordable Housing Incentive Program.

Petitioner shall submit a proposed writ of mandate within 10 days.

Order to Show Cause Re: Submission of Proposed Judgment is scheduled for 03/23/2023 at 08:30 AM in Department 54 at Stanley Mosk Courthouse.

The Ruling is filed this date.

The clerk gives notice as reflected in the certificate of mailing. Plaintiff is to give notice to any additional interested parties not reflected in the certificate of mailing.

Certificate of Mailing is attached.

Re: Comments on the Sustainable Communities Environmental Assessment for the FOUND Residences Project (Case Nos. ENV-2022-1049-SCEA; CPC-2022-1048-DB-HCA; AA-2019-476-PMEX).

Dear Mr. Song:

We are writing on behalf of Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") to provide comments on the Sustainable Communities Environmental Assessment ("SCEA") prepared by the City of Los Angeles ("City") for the FOUND Residences Project (Case Nos. ENV-2022-1049-SCEA; CPC-2022-1048-DB-HCA) ("Project"), proposed by 6422 Selma Owner, LLC ("Applicant").

The Project proposes the demolition of an existing one-story storage building and the refurbishment of portions of the existing one-story historic commercial building on the Project Site to develop a 15-story building with 45 4-bedroom residential units. The Project would encompass a total floor area of up to 67,599 square feet resulting in a Floor Area Ratio ("FAR") of 4.5:1 and would have a maximum building height of 180 feet and five inches (180'-5"). The Project site is an approximately 15,022 square foot (0.35 acre) site located at 6422 Selma Avenue, and portions of 1540-1552 N. Wilcox Avenue, Lots 2, 3, 4, and 5 of Tract No. 1754, Assessor Parcel Numbers (APN) 5546-013-002 and 5546-013-003.

The Project seeks discretionary approvals from the City, including approval of Base and Additional Incentives pursuant to Los Angeles Municipal Code ("LAMC") Section 12.22 A.31 and the Transit Oriented Communities Affordable Housing Incentive Program Guidelines ("TOC Guidelines"). These Incentives include (1) an increase in FAR to 4.5:1 in lieu of the permitted base FAR of 3.0:1, (2)

printed on recycled paper

reductions in the required side and rear yard setbacks, (3) a 19% reduction in the required open space, and (4) a reduction in drive aisle width. The Project also seeks a Lot Line Adjustment (Case No. AA-2019-476-PMEX) and Hollywood Redevelopment Project Area ("RPA") administrative clearance.

We reviewed the SCEA and its technical appendices with the assistance of air quality and health risk expert James Clark, Ph.D.[1] We also received technical assistance from noise expert Ani Toncheva.[2] The City must separately respond to these technical comments.

Based upon our review of the SCEA and supporting documentation, we conclude that the SCEA fails to comply with the requirements of CEQA. As explained more fully below, the SCEA does not accurately disclose potentially significant air quality, energy, and noise impacts. The SCEA also fails to disclose potentially significant health risk impacts due to exposure from diesel particulate matter ("DPM"). The SCEA also includes errors in its project description by being inconsistent regarding the Project's stationary sources of air emissions. As a result of its shortcomings, the SCEA lacks substantial evidence to support its conclusions that impacts are less than significant and fails to properly mitigate the Project's significant environmental impacts. The City cannot approve the Project until the errors and omissions in the SCEA are remedied in a Sustainable Communities Environmental Impact Report ("SCEIR")[3] that is recirculated for public review and comment.

I. STATEMENT OF INTEREST

CREED LA is an unincorporated association of individuals and labor organizations that may be adversely affected by the potential public and worker health and safety hazards, and the environmental impacts of the Project. The coalition includes the Sheet Metal Workers Local 105, International Brotherhood of Electrical Workers Local 11, Southern California Pipe Trades District Council 16, and District Council of Iron Workers of the State of California, along with their members, their families, and other individuals who live and work in the City of Los Angeles.

[1] Dr. Clark's technical comments and curricula vitae are attached hereto as **Exhibit A** ("Clark Comments").
[2] Ms. Toncheva's technical comments and curricula vitae are attached hereto as **Exhibit B** ("Toncheva Comments").
[3] Pub. Res. Code § 21155.2(c)(2).

printed on recycled paper

Individual members of CREED LA and its member organizations live, work, recreate, and raise their families in the City of Los Angeles and surrounding communities. Accordingly, they would be directly affected by the Project's environmental and health and safety impacts. Individual members may also work on the Project itself. They will be first in line to be exposed to any health and safety hazards that exist onsite.

CREED LA seeks to ensure a sustainable construction industry over the long-term by supporting projects that have positive impacts for the community, and which minimize adverse environmental and public health impacts. CREED LA has an interest in enforcing environmental laws that encourage sustainable development and ensure a safe working environment for its members. Environmentally detrimental projects can jeopardize future jobs by making it more difficult and more expensive for business and industry to expand in the region, and by making the area less desirable for new businesses and new residents. Indeed, continued environmental degradation can, and has, caused construction moratoriums and other restrictions on growth that, in turn, reduce future employment opportunities.

II. LEGAL BACKGROUND

CEQA requires that an agency analyze the potential environmental impacts of its proposed actions in an environmental impact report ("EIR") (except in certain limited circumstances).[4] The EIR is the very heart of CEQA.[5] "The foremost principle in interpreting CEQA is that the Legislature intended the act to be read so as to afford the fullest possible protection to the environment within the reasonable scope of the statutory language."[6]

CEQA has two primary purposes. First, CEQA is designed to inform decision makers and the public about the potential, significant environmental effects of a project.[7] "Its purpose is to inform the public and its responsible officials of the environmental consequences of their decisions before they are made. Thus, the EIR "protects not only the environment but also informed self-government."[8] The EIR has been described as "an environmental 'alarm bell' whose purpose it is to alert the

printed on recycled paper

public and its responsible officials to environmental changes before they have reached ecological points of no return."[9]

Second, CEQA requires public agencies to avoid or reduce environmental damage when "feasible" by requiring "environmentally superior" alternatives and all feasible mitigation measures.[10] The EIR serves to provide agencies and the public with information about the environmental impacts of a proposed project and to "identify ways that environmental damage can be avoided or significantly reduced."[11] If the project will have a significant effect on the environment, the agency may approve the project only if it finds that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns."[12]

A. Streamlined Environmental Review for Transit Priority Projects

CEQA allows for the streamlining of environmental review for "transit priority projects" meeting certain criteria.[13] To qualify as a transit priority project, a project must

1) contain at least 50 percent residential use, based on total building square footage and, if the project contains between 26 percent and 50 percent nonresidential uses, a floor area ratio of not less than 0.75;
2) provide a minimum net density of at least 20 dwelling units per acre; and
3) be within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan.[14]

A transit priority project is eligible for CEQA's streamlining provisions where it is:

> consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy, for which the State Air Resources Board ... has accepted a metropolitan planning organization's

[14] Pub. Res. Code § 21155(b).

printed on recycled paper

> determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.[15]

On September 3, 2020, the Regional Council of the Southern California Association of Governments ("SCAG") adopted the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("2020-2045 RTP/SCS"), which was accepted by the California Air Resources Board ("CARB"). The final program EIR for the 2020-2045 RTP/SCS was certified on May 7, 2020.

If "all feasible mitigation measures, performance standards, or criteria set forth in the prior applicable environmental impact reports and adopted in findings made pursuant to Section 21081" are applied to a transit priority project, the project is eligible to conduct environmental review using a SCEA or an SCEIR.[16] A SCEA must contain an initial study which "identif[ies] all significant or potentially significant impacts of the transit priority project … based on substantial evidence in light of the whole record."[17] The initial study must also "identify any cumulative effects that have been adequately addressed and mitigated pursuant to the requirements of this division in prior applicable certified environmental impact reports."[18] The SCEA must then "contain measures that either avoid or mitigate to a level of insignificance all potentially significant or significant effects of the project required to be identified in the initial study."[19] The SCEA is not required to discuss growth inducing impacts or any project specific or cumulative impacts from cars and light-duty truck trips generated by the project on global warming or the regional transportation network.[20]

After circulating the SCEA for public review and considering all comments, a lead agency may only approve the SCEA with findings that all potentially significant impacts have been identified and mitigated to a less-than-significant level.[21] A lead agency's approval of a SCEA must be supported by substantial evidence.[22]

In this case, the City failed to conduct a proper analysis of the Project's noise, air quality, energy, and public health impacts. Furthermore, the SCEA fails to

mitigate the significant effects of the Project, rendering the SCEA incomplete. The City must prepare a SCEIR in order to fully analyze and mitigate the Project's impacts.

III. THE PROJECT DESCRIPTION IS INADEQUATE

The SCEA does not meet CEQA's requirements because it fails to include an accurate and complete Project description, rendering the entire analysis inadequate. California courts have repeatedly held that "an accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR."[23] CEQA requires that a project be described with enough particularity that its impacts can be assessed.[24] Without a complete project description, the environmental analysis under CEQA is impermissibly limited, thus minimizing the project's impacts and undermining meaningful public review.[25] Accordingly, a lead agency may not hide behind its failure to obtain a complete and accurate project description.[26]

CEQA Guidelines section 15378 defines "project" to mean "the whole of an action, which has a potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment."[27] "The term "project" refers to the activity which is being approved and which may be subject to several discretionary approvals by governmental agencies. The term project does not mean each separate governmental approval."[28] Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "*reasonably foreseeable* consequence[s] of the initial project."[29] "If a[n]…EIR…does not adequately apprise all interested parties of the true scope of the project for intelligent weighing of the environmental consequences of the project, informed decision-making cannot occur under CEQA and the final EIR is inadequate as a matter of law."[30]

A. The SCEA is Internally Inconsistent Regarding Whether it Includes a Stationary Generator

The SCEA and its air quality/greenhouse gas study assume that the Project would not include a stationary back-up generator.[31] Dr. Clark reviewed the CalEEMod outputs provided in the air study, and found that no generator is included in the analysis.[32] But Dr. Clark observes that the design drawings from the SCEA's project description show a generator on the second floor, as shown in the figure below.[33]

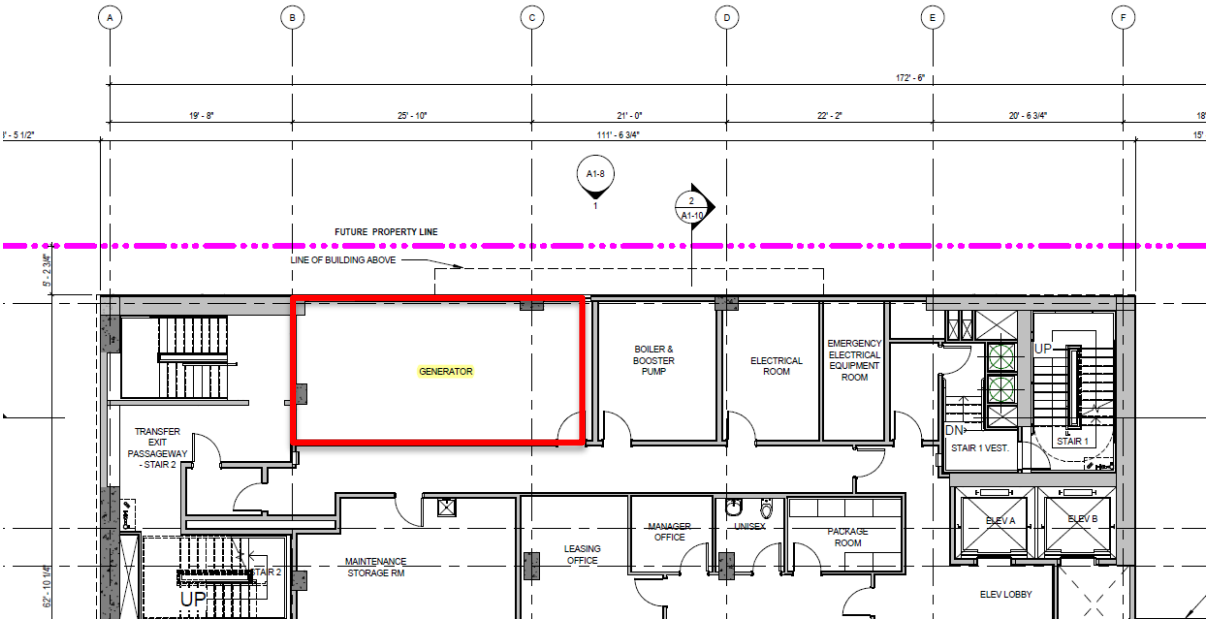

Figure 1: Second Floor Design Showing Generator System

Generators can emit criteria air pollutants, greenhouse gases, and toxic air contaminants. Backup generators commonly rely on fuels such as natural gas or

printed on recycled paper

diesel,[34] and thus can significantly impact public health through DPM emissions.[35] Diesel back-up generators emit significant amounts of Nitrogen Oxides (NOx), sulfur dioxides (SO2), particulate matter (PM10), carbon dioxide (CO2), carbon monoxide (CO), and volatile organic compounds (VOC).[36] Omission of a generator system results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts.[37]

Besides being included in the Project's design plans, back-up generators are a reasonably foreseeable consequence of the Project due to increasingly common Public Safety Power Shutoff ("PSPS") events and extreme heat events. Extreme heat events ("EHE") are defined as periods where in the temperatures throughout California exceed 100 degrees Fahrenheit.[38] From January 2019 through December 2019, Southern California Edison reported 158 of their circuits underwent a PSP

printed on recycled paper

event.[39] In Los Angeles County, two circuits had 4 PSPS events during that period, lasting an average of 35 to 38 hours. The total duration of the PSPS events lasted between 141 hours to 154 hours in 2019. According to the California Public Utilities Commission (CPUC) de-energization report[40] in October 2019, there were almost 806 PSPS events that impacted almost 973,000 customers (~7.5% of households in California) of which ~854,000 of them were residential customers. The California Air Resources Board estimates that with 973,000 customers impacted by PSPS events in October 2019, approximately 125,000 back-up generators were used by customers to provide electricity during power outage.[41] The widespread use of back-up generators to adapt to PSPS and EHE events suggests that back-up generators are a reasonably foreseeable consequence of the Project.

In sum, as shown by the inconsistency between the Project design plans and text, the Project lacks "an accurate, stable and finite project description," and thus fails to meet CEQA's standards.[42] The inconsistencies regarding the Project's generator affects the quality of the SCEA's analysis, as omission of the Project's generator results in an underestimation of the Project's air quality, greenhouse gas, and health risk impacts.[43] An SCEIR must be prepared that resolves this project description inconsistency, and corrects the affected impacts analyses to accurately disclose the Project's potentially significant impacts.

IV. THE SCEA FAILS TO ADEQUATELY ANALYZE, QUANTIFY, AND MITIGATE THE PROJECT'S POTENTIALLY SIGNIFICANT IMPACTS

An SCEA must fully disclose all potentially significant impacts of a project, and must implement all feasible mitigation to reduce those impacts to less than significant levels. The lead agency's significance determination with regard to each impact must be supported by accurate scientific and factual data.[44] An agency

printed on recycled paper

cannot conclude that an impact is less than significant unless it produces rigorous analysis and concrete substantial evidence justifying the finding.[45]

Moreover, the failure to provide information required by CEQA is a failure to proceed in the manner required by law.[46] Challenges to an agency's failure to proceed in the manner required by CEQA, such as the failure to address a subject required to be covered in an EIR or to disclose information about a project's environmental effects or alternatives, are subject to a less deferential standard than challenges to an agency's factual conclusions.[47]

Even when the substantial evidence standard is applicable to agency decisions to certify an EIR and approve a project, reviewing courts will not 'uncritically rely on every study or analysis presented by a project proponent in support of its position. A clearly inadequate or unsupported study is entitled to no judicial deference.'"[48]

A. The SCEA Fails to Disclose and Mitigate Potentially Significant Air Quality and Health Risk Impacts

1. The SCEA Fails to Disclose Potentially Significant Health Risks from Project Emissions

The SCEA acknowledges that the Project's construction activities would generate Toxic Air Contaminant ("TAC") emissions. Specifically, the Project's construction and operation would generate DPM, a type of TAC.[49] DPM would be emitted during construction by heavy equipment and diesel trucks, and during operations by the Project's backup generator.[50] DPM has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[51] The SCEA acknowledges that DPM is carcinogenic.[52] The Project's emissions of DPM would impact numerous sensitive receptors, including residents directly adjacent to the Project site at the Gilbert

printed on recycled paper

Hotel.[53] But the SCEA fails to adequately analyze and mitigate this potentially significant health risk.

CEQA requires analysis of human health impacts. CEQA Guidelines Section 15065(a)(4) provides that the City is required to find a project will have a significant impact on the environment and require an EIR if the environmental effects of a project will cause a substantial adverse effect on human beings. The Supreme Court has also explained that CEQA requires the lead agency to disclose the health consequences that result from exposure to a project's air emissions.[54] Courts have held that an environmental review document must disclose a project's potential health risks to a degree of specificity that would allow the public to make the correlation between the project's impacts and adverse effects to human health.[55]

In *Bakersfield Citizens for Local Control v. City of Bakersfield*, the court found that the EIRs' description of health risks were insufficient and that after reading them, "the public would have no idea of the health consequences that result when more pollutants are added to a nonattainment basin."[56] Likewise, in *Sierra Club*, the California Supreme Court held that the EIR's discussion of health impacts associated with exposure to the named pollutants was too general and the failure of the EIR to indicate the concentrations at which each pollutant would trigger the identified symptoms rendered the report inadequate.[57] Some connection between air quality impacts and their direct, adverse effects on human health must be made. As the Court explained, "a sufficient discussion of significant impacts requires not merely a determination of whether an impact is significant, but some effort to explain the nature and magnitude of the impact."[58] CEQA mandates discussion, supported by substantial evidence, of the nature and magnitude of impacts of air pollution on public health.[59]

For development projects like this one, the Office of Environmental Health Hazard Assessment's ("OEHHA") risk assessment guidelines also recommend a formal health risk analysis ("HRA") for short-term construction exposures to TACs lasting longer than 2 months and exposures from projects lasting more than 6

printed on recycled paper

months should be evaluated for the duration of the project.[60] In an HRA, lead agencies must first quantify the concentration released into the environment at each of the sensitive receptor locations through air dispersion modeling, calculate the dose of each TAC at that location, and quantify the cancer risk and hazard index for each of the chemicals of concern.[61] Following that analysis, then the City can make a determination of the relative significance of the emissions. The SCEA acknowledges that "[t]he amount to which the receptors are exposed (a function of concentration and duration of exposure) is the primary factor used to determine health risk (i.e., potential exposure to TAC emission levels that exceed applicable standards)."[62] The significance threshold for this Project is that a significant health risk impact occurs if the Project would expose sensitive receptors to air contaminants that exceed the maximum incremental cancer risk of 10 in one million.[63]

The City failed to conduct this analysis. Despite acknowledging that exposure is the primary factor used to determine health risk, the SCEA does not quantify sensitive receptors' exposure to DPM emitted during Project construction and operation. Regarding construction emissions of DPM, the SCEA's qualitative analysis instead offers that the health risk would be less than significant because the use of diesel-powered construction equipment would be temporary and episodic, and that the proposed project site is only 0.35-acres.[64] But merely explaining that certain health risk factors are lower for this Project than others does not disclose the health consequences that result from exposure to this Project's air emissions.[65] Regarding health risk from Project operation, the SCEA reasons that the Project would only generate few diesel truck trips, and would not include a stationary generator.[66] This analysis fails to disclose sensitive receptors' exposure to pollutants.

The City also reasons that because the Project's emissions would not exceed Localized Significance Thresholds ("LSTs"), the Project's localized air quality impacts would not expose sensitive receptors to substantial air pollutant

printed on recycled paper

concentrations. LSTs are based on the number of pounds of emissions per day that can be generated by a project that would cause or contribute to adverse localized air quality impacts.[67] But LSTs only apply to four pollutants: NO_x, CO, PM_{10}, and $PM_{2.5}$. LSTs do not apply to DPM and other TACs, and thus do not disclose the magnitude of the Project's emissions and resultant health impacts.[68] Thus, the SCEA's analysis of LSTs is no substitute for the SCEA's failure to analyze health risk impacts from exposure to TACs.

The SCEA fails to comply with CEQA by failing to provide the necessary information to evaluate the health risk impacts of the Project. Due to the proximity of the nearest sensitive receptors to construction and operational sources of DPM, there is no dispute that the Project may result in potentially significant health risk impacts. The City must prepare an HRA to evaluate the magnitude of the Project's health risk impacts in accordance with CEQA.

2. The SCEA's Analysis of Exposure of Sensitive Receptors to Substantial Air Pollutant Concentrations is Not Supported by Substantial Evidence

The City's conclusion that operational emissions would not result in a significant health risk lacks the support of substantial evidence. The City claims that the Project would generate few diesel truck trips, and would not include a stationary generator.[69] But the Project's design drawings include a stationary back-up generator.[70] Backup generators commonly rely on fuels such as natural gas or diesel,[71] and thus can significantly impact public health through DPM emissions.[72]

This demand for reliable back-up power has health impacts of its own. Of particular concern are health effects related to emissions from diesel back-up engines. Diesel particulate matter (DPM) has been identified as a toxic air contaminant, composed of carbon particles and numerous organic compounds, including over forty known cancer-causing organic substances. The majority of

printed on recycled paper

Without quantifying the emissions from the Project's backup generator in conjunction with the Project's other operational emissions, the SCEA's finding of a less-than-significant operational air quality impact thus lacks substantial evidence. The SCEA's analytical flaw must be corrected in an SCEIR.

Similarly, the SCEA's air study omits any reference to a fire pump. The text of the SCEA states that the Project includes a fire pump system.[73] Fire pumps are used to increase the pressure of a water source when that source is not adequate for the system it is supplying. Fire pumps are commonly found in buildings that tend to have a high-pressure demand such as high-rises. Fire pumps typically use diesel fuel as a power source. The emissions from fire pumps include criteria pollutants such as oxides of nitrogen, volatile organic compounds (VOCs), carbon monoxide (CO), and particulate matter less than 10 microns (PM_{10}) and PM less than 2.5 microns ($PM_{2.5}$); and air toxins such as diesel particulate matter (DPM).[74]

But Dr. Clark reviewed the CalEEMod outputs provided in the air study, and found that no fire pump system is included in the analysis. This assumption is in contrast to the text of the SCEA, and the design drawings from the description section of the SCEA, which show a fire pump system on the ground floor.[75]

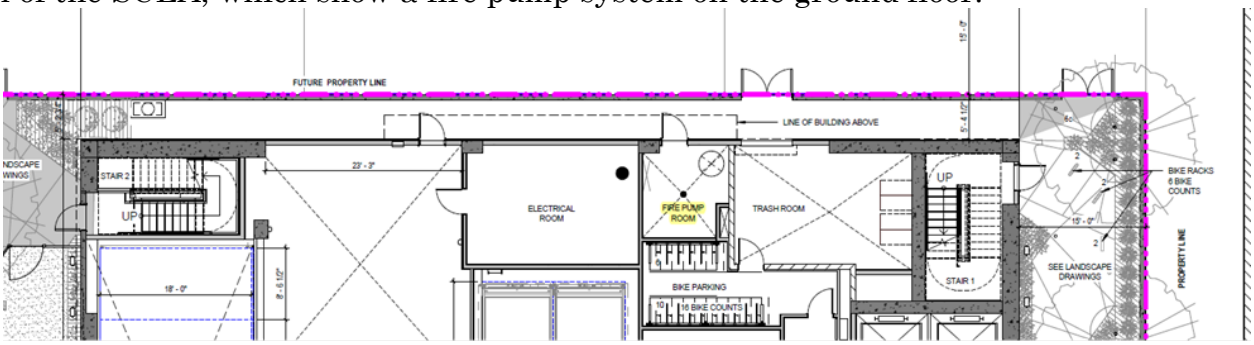

Figure 2: Ground Floor Design Showing Fire Pump System

By failing to include this source of DPM in the SCEA's analysis, the SCEA's disclosure and analysis of the Project's public health impacts is inadequate.

As a result of these analytical flaws, the SCEA also failed to conduct a Localized Operational Significance Analysis. The SCEA states "[a]ccording to the

---

DPM is small enough to be inhaled deep into the lungs and make them more susceptible to injury. Much of the back-up power produced during PSPS events is expected to come from engines regulated by CARB and California's 35 air pollution control and air quality management districts (air districts)").

[74] Clark Comments, pg. 5.

[75] Clark Comments, pg. 4.

printed on recycled paper

SCAQMD LST methodology, LSTs would apply to the operational phase of a Proposed Project only if the project includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site."[76] The SCEA thus reasons that, because no stationary source is proposed, a Localized Operational Significance Analysis is inapplicable.[77] But as discussed above, a back-up generator is included in the Project's design, the SCEA does not contain a mitigation measure or proposed condition of approval prohibiting the use of a backup generator, and use of a backup generator during Project operation is reasonably foreseeable due to increasingly common PSPS events and EHEs. Additionally, a fire pump is directly stated to be part of the Project. Thus, an SCEIR must be prepared that includes this analysis.

3. The SCEA Underestimates Air Quality Impacts By Failing to Consider Generator and Fire Pump Emissions

As explained above, the Project includes a fire pump system, and it is reasonably foreseeable that it includes a back-up generator. As discussed earlier and in Dr. Clark's comments, the emissions from fire pumps include criteria pollutants such as oxides of nitrogen, volatile organic compounds (VOCs), carbon monoxide (CO), and particulate matter less than 10 microns (PM_{10}) and PM less than 2.5 microns ($PM_{2.5}$); and air toxins such as diesel particulate matter (DPM).[78]

But the SCEA's air study omits any reference to a fire pump or a back-up generator. Dr. Clark reviewed the CalEEMod outputs provided in the air study, and found that no fire pump system or operational back-up generator included in the analysis. By failing to include these sources of criteria pollutants in the air study's CalEEMod analysis, the Project fails to disclose the full extent of the Project's criteria air pollutants. As a result, the SCEA's significance finding regarding criteria pollutant emissions is not supported by substantial evidence. This potentially significant impact must be analyzed in an SCEIR.

4. The Project Conflicts With Policies Regarding Air Quality and Health Risk

The CEQA Guidelines provide that a significant air quality impact would occur when a project "[c]onflict[s] with or obstruct implementation of the applicable air quality plan."[79] Further, the Guidelines provide that a significant impact would

[76] SCEA, pg. IV-44.
[77] *Id.*
[78] Clark Comments, pg. 5.
[79] CEQA Guidelines, Appendix G, subd. III.

printed on recycled paper

occur if a project conflicts with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project adopted for the purpose of avoiding or mitigating an environmental effect.[80]

Policy 1.3.1 of the City of Los Angeles' General Plan Air Quality Element provides: "[m]inimize particulate emissions from construction sites."[81] But here, the Project does not attempt to minimize DPM emissions from the Project's construction, or even set minimum emissions standards for construction equipment. Nor does the SCEA adopt any of the mitigation measures recommended in PMM AQ-1. And the Project does not provide evidence that the particulate emissions measures in PMM AQ-1 or elsewhere are infeasible or ineffective. Thus, the Project fails to "minimize" PM emissions within the meaning of Policy 1.3.1.

Policy 5.3.1 of the Air Quality Element provides: "Support the development and use of equipment powered by electric or low-emitting fuels." Here, the SCEA does not propose or evaluate the feasibility of electric or low-emission equipment during construction. Nor does the Project propose or evaluate the feasibility of utilizing existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. During operations, the Project does not evaluate the feasibility of using a clean fuel stationary generator. And the SCEA does not include any other discussion regarding the use of electric/low-emitting equipment. Due to the failure to analyze these options, the Project is inconsistent with Policy 5.3.1. The SCEA must be revised to include analysis evaluating these and other low-emitting fuel measures.

B. The SCEA Fails to Adequately Analyze the Project's Potentially Significant Energy Impacts

The SCEA does not include sufficient investigation into energy conservation measures that might be available or appropriate for the Project. CEQA requires an environmental document to discuss mitigation measures for significant environmental impacts, including "measures to reduce the wasteful, inefficient, and unnecessary consumption of energy."[82] The CEQA Guidelines require discussion of energy conservation measures when relevant, and provide examples in Appendix F:[83]

---

[80] CEQA Guidelines, Appendix G, subd. X.
[81] SCEA, pg. IV-28.
[82] Pub. Resources Code, § 21100(b)(3); *Tracy First v. City of Tracy* (2009) 177 Cal.App.4th 912, 930.
[83] 14 Cal. Code Regs., § 15126.4(a)(1)(C) (stating "'Energy conservation measures, as well as other appropriate mitigation measures, shall be discussed when relevant.").

printed on recycled paper

1) Potential measures to reduce wasteful, inefficient and unnecessary consumption of energy during construction, operation, maintenance and/or removal. The discussion should explain why certain measures were incorporated in the project and why other measures were dismissed.
2) The potential of siting, orientation, and design to minimize energy consumption, including transportation energy, increase water conservation and reduce solid waste.
3) The potential for reducing peak energy demand.
4) Alternate fuels (particularly renewable ones) or energy systems.
5) Energy conservation which could result from recycling efforts.

Courts have rejected EIRs that fail to include adequate analysis investigation into energy conservation measures that might be available or appropriate for a project.[84] In *California Clean Energy Commission v. City of Woodland* ("*CCEC*"),[85] the Court of Appeal reviewed an EIR for a shopping center. The EIR concluded that, due to the proposed project's compliance with Title 24 guidelines and regulations, the project would be expected to have a less-than-significant impact regarding the wasteful, inefficient, or unnecessary consumption of energy. But the lead agency's EIR did not include discussion regarding the different renewable energy options that might be available or appropriate for the project. The Court held "the City's EIRs failed to comply with the requirements of Appendix F to the Guidelines by not discussing or analyzing renewable energy options."[86] The lead agency argued that compliance with the Building Code sufficed to address energy impact concerns for the project.[87] But the Court explained:

> Although the Building Code addresses energy savings for components of a new commercial construction, it does not address many of the considerations required under Appendix F of the CEQA Guidelines… These considerations include whether a building should be constructed at all, how large it should be, where it should be located, whether it should incorporate renewable energy resources, or anything else external to the building's envelope. Here, a requirement that Gateway II comply with the Building Code does not, by itself, constitute an adequate assessment of mitigation measures that can be taken to address the energy impacts during construction and operation of the project.[88]

1. The SCEA Fails to Adequately Analyze Potentially Significant Operational Natural Gas Impacts

Here, the SCEA explains that Project operations would result in the consumption of natural gas, but reasons that CALGreen building standards will ensure that energy impacts will be less than significant.[89] As explained above, Courts have held that this level of analysis does not meet CEQA's standards.

Rather, substantial evidence demonstrates that residential natural gas use contributes significantly to climate change, and has health risks on residents.[90] In a 1992 meta-analysis of studies on this topic, scientists at the EPA and Duke University found that nitrogen dioxide exposure that is comparable to that from a gas stove increases the odds of children developing a respiratory illness by about 20 percent.[91] Since then, numerous other studies have documented the effects of gas stove exposure on respiratory health. A 2013 meta-analysis of 41 studies found that gas cooking increases the risk of asthma in children and that NO_2 exposure is linked with currently having a wheeze.[92] Most recently, a study published last December found that 12.7 percent of childhood asthma cases in the U.S. can be attributed to gas stove use.[93] In sum, residential natural gas use has impacts on public health and the environment that are not disclosed in the SCEA – the SCEA's compliance with the Project's consistency with CALGreen building standards do not address this impact. An SCEIR must be prepared to analyze this potentially significant impact.

Similarly, the SCEA's discussion does not include a discussion of feasible measures to reduce natural gas consumption, as required by Appendix F of the CEQA Guidelines. An SCEIR must be prepared that evaluates feasible mitigation measures. These measures include building electrification measures, such as replacing gas stoves with electric stoves.

printed on recycled paper

2. The SCEA Fails to Adequately Analyze Operational Consumption of Electricity

The SCEA reasons that consumption of electricity would be less than significant due to compliance with Title 24, CALGreen Building Standards, and the LA Green Building Code. As explained above, courts have held that this level of analysis does not meet CEQA's standards – the SCEA must also include discussion regarding the different renewable energy options that might be available or appropriate for the project.

Here, the SCEA fails to analyze whether onsite solar generation is feasible, or how much of the Project site could support onsite solar generation (i.e. the extent of the potential solar zone). This investigation is necessary to adequately evaluate the potential for increased energy efficiency and reduced waste, as required by CEQA Guidelines Appendix F.

3. The SCEA Fails to Adequately Analyze Construction Energy Consumption

The SCEA's discussion of energy conservation measures also violates CEQA Guidelines Appendix F in regards to offroad equipment used in the construction and operation of the Project. The SCEA does not propose or evaluate the feasibility of electric or low-emission equipment during construction. Nor does the SCEA propose or evaluate the feasibility of utilizing existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. Thus, the SCEA "fail[s] to comply with the requirements of Appendix F to the Guidelines by not discussing or analyzing renewable energy options."[94] Therefore, an SCEIR must be prepared.

C. The SCEA Fails to Adequately Analyze and Mitigate Significant Noise and Vibration Impacts

1. The SCEA's Construction Noise Threshold is Not Supported by Substantial Evidence

The SCEA states that "construction noise impacts would be significant if noise from construction equipment exceeds a maximum noise level of 75 dBA at a distance of 50 feet from the sound source."[95] The SCEA's construction noise

[94] *CCEC*, 225 CA4th 173, 213.
[95] SCEA pg. IV-136 (citing LAMC Section 112.05).

printed on recycled paper

threshold is not supported by substantial evidence because it fails to reflect significant noise increases over existing levels. The CEQA Guidelines state that a project would normally have a significant effect on the environment if the project would result in "generation of a substantial temporary or permanent increase in ambient noise levels."[96]

In *King and Gardiner Farms, LLC v. County of Kern et al.*,[97] the Fifth District Court of Appeal held that the County inappropriately applied a single threshold for determining the significance of the project's noise impacts. To determine whether implementation of an ordinance would cause significant noise impacts, the County used a quantitative threshold of 65 dBA DNL, meaning that the ordinance would not cause a significant noise impact if noise levels stayed below that threshold. The court held that the County's use of a single threshold violated CEQA because the threshold did not measure the increase in noise levels over ambient levels. Comments on the EIR, as well as the County's own noise report that was appended to the Draft EIR, suggested using an increase of 5 dBA to determine whether the increase in noise above ambient levels constituted a significant impact. But the County did not do so. Instead, the County argued that it was entitled to substantial deference in selecting the significance thresholds. Although the court agreed that the County is entitled to deference in its choice of significance thresholds, the court held that the County's use of an absolute noise threshold for evaluating all ambient noise impacts violated CEQA because it did not provide a "complete picture" of the noise impacts that may result from implementation of the ordinance.

Here, the SCEA similarly relies on a single quantitative threshold to determine the significance of construction noise. As in *King and Gardiner Farms*, this approach is inadequate. And, even if 75 dBA were the sole applicable threshold, CREED LA's noise consultant finds that all of the Project's construction equipment exceeds the LAMC 75 dBA Lmax at 50 feet criteria, resulting in a significant undisclosed and unmitigated impact.[98] Therefore, in order to evaluate construction noise impacts, an SCEIR should be prepared to consider an ambient-based threshold in addition to the 75 dBA criteria.

[96] SCEA, pg. IV-136.
[97] (2020) 45 Cal.App.5th 814.
[98] Toncheva Comments, pg. 1.

printed on recycled paper

2. The Project's Construction Activities would Generate a Substantial Increase in Ambient Noise Levels

Substantial evidence shows that the Project's construction noise impacts are significant when an adequate threshold is applied that considers increase over ambient noise levels. As stated in the SCEIR, a change of 5 dB over ambient "is readily noticeable, while the human ear perceives a 10 dB(A) increase in sound level to be a doubling of sound."[99] Referring to the SCEA's own estimates, Ms. Toncheva presents evidence showing that estimated construction noise at the Mark Twain Hotel across Selma Avenue would exceed 5 dB over existing levels, and estimated construction noise at the Gilbert Hotel would exceed over 10 dB over existing levels.[100] Based on the information in the SCEA, these noise increases would constitute a substantial increase in the ambient environment. Thus, substantial evidence shows that, before mitigation, the project would result in "generation of a substantial temporary or permanent increase in ambient noise levels."[101]

The SCEA claims these impacts would be mitigated by MM NOI-1, which requires the use of improved mufflers and silencers, achieving an approximately 10 dBA reduction.[102] Assuming a 10 dBA reduction was feasible, the Project's estimated construction noise at the Gilbert Hotel would still exceed 5 dB over existing levels (74.2 over 68.6 dBA). Thus, substantial evidence shows that, even after mitigation, the project would result in "generation of a substantial temporary or permanent increase in ambient noise levels."[103] This impact could occur throughout the Project's 24-month construction period,[104] and could be louder if additional equipment is used. This significant impact must be identified and mitigated in an SCEIR. Ms. Toncheva's comments discuss feasible mitigation measures.[105]

3. The Project's Construction Noise Impacts are Greater than Disclosed in the SCEA

The SCEA's analysis of the Project's construction noise impacts contains errors, and is thus not supported by substantial evidence. Ms. Toncheva observes that the distances and attenuation from shielding used in the SCEA construction noise analysis are further away than the closest demolition and grading activity will

[99] SCEA, Appendix F, pg. 2; Toncheva Comments, pg. 1-2.

[104] SCEA, pg. II-11 (Project is anticipated to be constructed over period of approximately 24 months).
[105] Toncheva Comments, pg. 2.

printed on recycled paper

take place.[106] Ms. Toncheva measured the distances between these construction activities and sensitive receptors, finding that the SCEA overestimated the distances (and thus the attenuation of noise).[107] When accurate distances are used, Ms. Toncheva found that estimated construction noise levels at the closest distance to sensitive receptors are 2 to 16 dB higher than the Leqs reported in the SCEA.[108]

Ms. Toncheva also observes that the construction noise analysis assumes there is an existing concrete wall that would attenuate impacts by 5 dBA,[109] but this wall is not visible in Google Earth or the existing site plans provided in the Project Description Section.[110] This analytical issue may result in construction noise impacts being underestimated.

Ms. Toncheva also identified two sensitive receptors directly adjacent to the Project site that were not considered in the SCEA study: Goya Studios sound stages and Hollywood Clinic walk-in urgent care are. These receptors may be especially sensitive to noise, but were not discussed in the SCEA. Ms. Toncheva explains that while the sound stages are likely isolated from noise, the urgent care facility is noise sensitive due to patient comfort needs.[111]

In sum, the Project's significant construction noise impacts are likely greater than analyzed in the SCEA and the SCEA omitted an analysis of noise impacts on some of the closest sensitive receptors. An SCEIR must be prepared to adequately disclose and mitigate these impacts.

4. Mitigation Measure NOI-1 Will Not Reduce Construction Noise Impacts to a Less Than Significant Level

The SCEA states that MM NOI-1 would reduce the Project's construction noise impacts to a less-than-significant level. MM NOI-1 provides:

> Noise-generating equipment operated at the Project Site shall be equipped with noise control devices, such as mufflers, lagging (enclosures for exhaust pipes), and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. All equipment shall be properly maintained to assure that

[111] Toncheva Comments, pg. 3.

printed on recycled paper

no additional noise, due to worn or improperly maintained parts, would be generated.[112]

CEQA requires mitigation measures to be supported by substantial evidence that they will be effective.[113] But the SCEA lacks substantial evidence to claim MM NOI-1 would reduce noise impacts to the extent claimed (10 dBA). Ms. Toncheva explains that the source noise levels used by standard construction noise analyses, such as the SCEA's,[114] come from the FHWA Construction Noise Handbook.[115] Source noise levels from the Handbook represent contemporary equipment that are already equipped with mufflers. Ms. Toncheva reasons that a mitigation measure that requires mufflers could not realistically be expected to achieve a 10 dB reduction below the source noise levels, which represent contemporary equipment that are already equipped with mufflers. Thus, the effectiveness of MM NOI-1 is not supported by substantial evidence.

Ms. Toncheva also explains that mufflers would not mitigate all sources of construction noise from the Project – mufflers are only effective for machinery powered by internal combustion engines, not operational noise produced during work such as sawing.[116] As a result, noise impacts from concrete saws (estimated at 90 dBA at 50 feet) would be unmitigated by MM NOI-1, and would remain significant.[117]

Ms. Toncheva's comments discuss additional feasible mitigation that should be required for the Project, including noise barriers that could provide 10 to 15 dB of reduction.[118] An SCEIR must be prepared that identifies feasible construction noise mitigation.

5. The Project's Vibration Impacts Exceed Criteria for Annoyance

The SCEA finds that the Project would exceed groundborne vibration impact criteria with respect to building damage during construction activities.[119] And the SCEA identifies mitigation (MM NOI-2) to reduce building damage associated with

[118] *Id.*
[119] SCEA, Appendix F, pg. 21.

printed on recycled paper

vibration impacts to a less-than-significant level.[120] But the SCEA fails to analyze the level of disruption to neighboring residences and businesses from vibration impacts that exceed annoyance thresholds. Analysis and mitigation of building damage from vibration does not reflect the impacts of vibration on sensitive receptors' interior operations, human annoyance, or health. Ms. Toncheva explains that the FTA Guidelines provide annoyance criteria for residences and buildings where people normally sleep (such as hotels) of 72 VdB and criteria for buildings where vibration would interfere with interior operations (such as recording studios and labs) of 65 VdB.[121] An SCEIR must be prepared that analyzes whether the Project's vibration impacts would exceed annoyance criteria for neighboring sensitive receptors.

Ms. Toncheva observes that in addition to not providing annoyance calculations (VdB levels) at sensitive receptors, the SCEA does not disclose all of the sensitive receptors that would be impacted by vibration. The SCEA acknowledges that there are several hotels in close proximity to the Project site, such as the Dream Hollywood Hotel, Mark Twain Hotel, and Gilbert Hotel, which are recognized in the SCEA.[122] But the SCEA does not make reference to the Goya Studios sound stages or Hollywood Walk-in Clinic, which are directly adjacent to the project site.[123] Ms. Toncheva explains that while the sound stages may be isolated from noise, the urgent care facility is noise sensitive due to patient comfort needs.[124] An SCEIR must be prepared that discloses and mitigates the Project's vibration impacts on these sensitive receptors.

Substantial evidence shows that vibration impacts would exceed significance thresholds for annoyance. Ms. Toncheva's comments present the distances at which use of construction equipment would exceed the FTA significance thresholds:[125]

Table 4 Estimated Construction Vibration Levels

Equipment	FTA Reference Level at 25 feet (PPV / VdB)	Distance to 0.2 PPV, feet	Distance to 65 VdB, feet	Distance to 72 VdB, feet
Large Bulldozer	0.089 / 87	13	131	77

[120] SCEA, Appendix F, pg. 24.
[121] Toncheva Comments, pg. 3.
[122] SCEA, Appendix F, pg. 7.
[123] Toncheva Comments, pg. 3.
[124] Toncheva Comments, pg. 3.
[125] Toncheva Comments, pg. 4.

printed on recycled paper

Equipment	FTA Reference Level at 25 feet (PPV / VdB)	Distance to 0.2 PPV, feet	Distance to 65 VdB, feet	Distance to 72 VdB, feet
Small Bulldozer	0.003 / 58	2	15	9
Loaded Trucks	0.076 / 86	12	121	71
Vibratory Roller	0.21 / 94	23	281	164

Ms. Toncheva explains that any work closer than these distances will be above the threshold of significance. Here, sensitive receptors are as close as 10 feet from Project construction.[126] Thus, without mitigation, the Project would have a significant vibration impact. An SCEIR must be prepared that identifies construction techniques to reduce vibration levels near sensitive receptors. Ms. Toncheva states that feasible mitigation may include using smaller equipment closer to sensitive receptors during demolition work.[127]

VII. CONCLUSION

The Project would result in potentially significant impacts to public health from TACs, which were not adequately analyzed and mitigated to less than significant levels. The Project also failed to adequately analyze and mitigate impacts from energy use and noise. Moreover, the SCEA fails to meet CEQA's informational and analytical standards by failing to provide a stable project description.

For the foregoing reasons, we respectfully request that the City of Los Angeles to prepare and circulate an SCEIR which discloses all of the Project's potentially significant impacts and requires all feasible mitigation measures to reduce the Project's significant environmental and public health impacts.

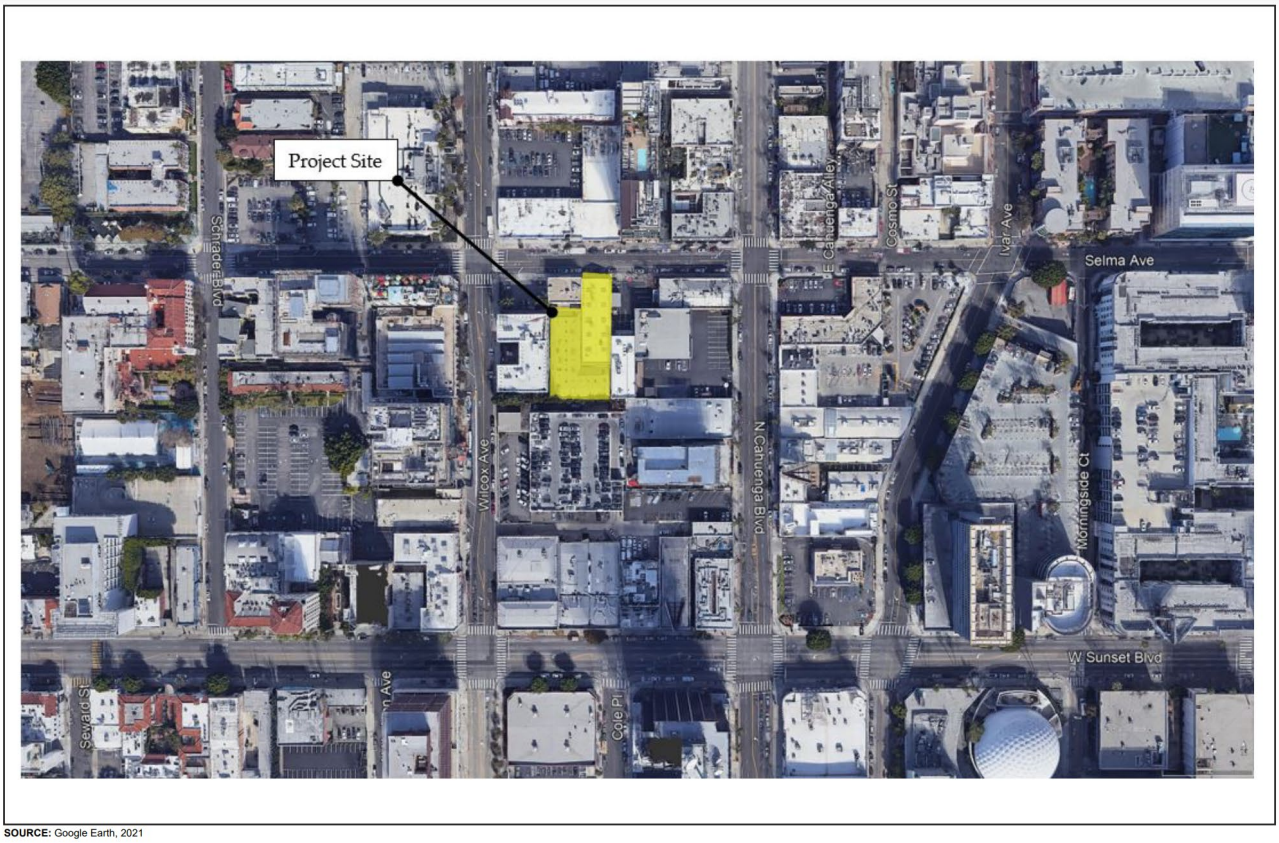
Adams Broadwell Joseph & Cardozo
601 Gateway Boulevard, Suite 1000
South San Francisco, CA 94080

Attn: Mr. Aidan Marshall

Subject: Comments On Found Residences Project, Sustainable Communities Environmental Assessment (SCEA), Case Number: ENV-2022-1049-SCEA, CPC-2022-1048-DB-HCA



At the request of Adams Broadwell Joseph & Cardozo (ABJC), Clark and Associates (Clark) has reviewed materials related to the March 2023 City of Los Angeles (the City) SCEA of the above referenced project.

Clark's review of the materials in no way constitutes a validation of the conclusions or materials contained within the plan. If we do not comment on a specific item this does not constitute acceptance of the item.

Project Description:

According to the March 2023 SCEA, the Found Residences Project (the "Project") encompasses an area of approximately 15,022 square feet (0.35 acre), inclusive of the area to be incorporated following the requested lot line adjustment (the "Project Site"). 6422 Selma Owner, LLC (the "Applicant") proposes the demolition of the existing one-story storage building and the retention and refurbishment of portions of the existing one-story historic commercial building on the Project Site to develop a 15-story building with 45 4-bedroom residential units. The Project would encompass a total floor area of up to 67,599 square feet resulting in a Floor Area Ratio (FAR) of 4.5:1 and would have a maximum building height of 180 feet and five inches (180'-5"). In total, the Project would provide 6,456 square feet of

common open space which includes two ground floor courtyards, and three common-space terraces (on floors 13 and 14, and the roof). The Project will consist of twelve residential levels above two levels of at- and above-grade stacked parking, a roof terrace, and a basement area containing a 50,000 gallon fire water storage tank, a fire pump room, and two elevator pits. The Project also includes 10 common-space living-rooms with balconies (on floors 3-12), and private balconies (on floors 3-14). The Project would provide up to 36 parking spaces, with vehicle access provided via a two-way driveway on Selma Avenue. In addition, the Project would provide 44 bicycle spaces including five short term spaces, and 39 long term spaces located within an enclosed bicycle storage area on the ground level..

SOURCE: Google Earth, 2021

FIGURE 1

IMPACT SCIENCES

Proposed Project Site

1340.002•04/2021

The Project Site is located in a highly urbanized location surrounded by a mix of land uses including commercial, multi-family residential, institutional, and office space, roughly bounded by

Selma Avenue to the north, Sunset Boulevard to the south, Cahuenga Boulevard to the east, and Wilcox Avenue to the west. The Project Site is located approximately 0.82 miles west from Interstate Highway 101 (US 101); in the Project vicinity.

The Project is anticipated to be constructed over a period of approximately 24 months, with completion anticipated in January of 2026. Grading activities would include approximately 9,196 cubic yards of soil being exported from the Project Site. Construction hours would occur in accordance with the LAMC requirements, which prohibit construction between the hours of 9:00 P.M. and 7:00 A.M. Monday through Friday, 6:00 P.M. and 8:00 A.M. on Saturday, and at any time on Sunday.

Specific Comments

1. The Air Quality Analysis Of Operational Emissions Is Incomplete And Fails To Include Emissions From The Fire Pump System and Generators That Will Be Installed Onsite.

According to the Air Quality Analysis prepared by Impact Sciences[1] for the Project, operational emissions were calculated using the CalEEMOD (Version 2020.4.0) software. Included in the analysis are area source emissions and mobile source emissions. Not included in the analysis are emissions from the fire flow pump system or the back-up generator that will be installed. According to the Air Quality Analysis, [2] the project does not propose any stationary generators on-site.

In the CalEEMod outputs provided in the Air Quality, Greenhouse Gas, and Energy Impact Study prepared by Impact Science[3], no fire pump system or generator are included in the analyses.

User Defined Equipment

This is clearly in contrast to the design drawings from the description section of the SCEA which show a fire pump system on the ground floor and a generator on the second floor.

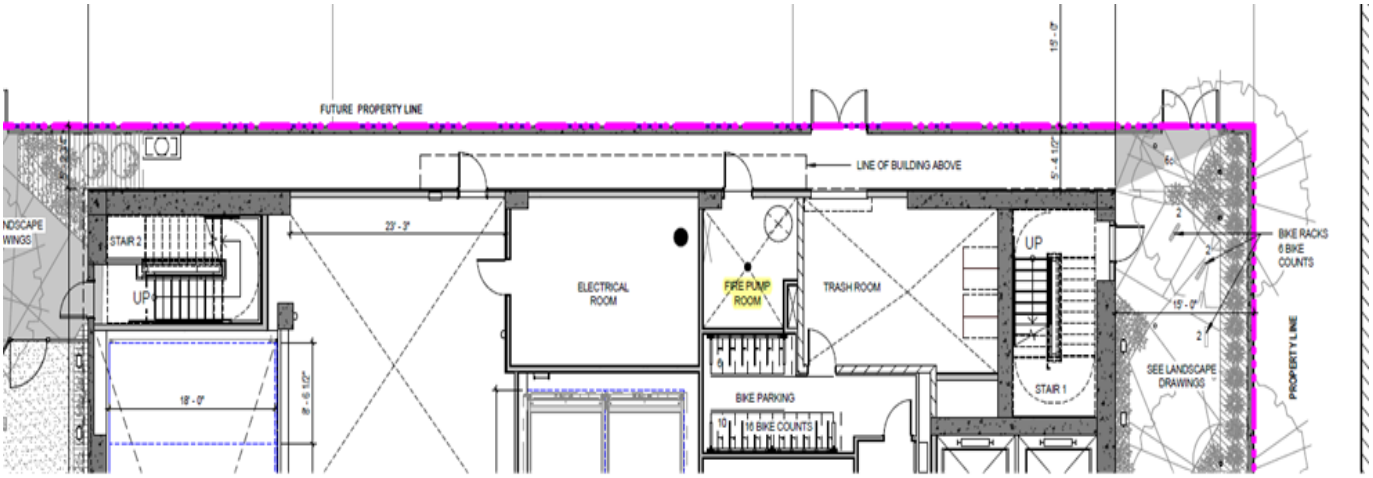

Figure 2: Ground Floor Design Showing Fire Pump System

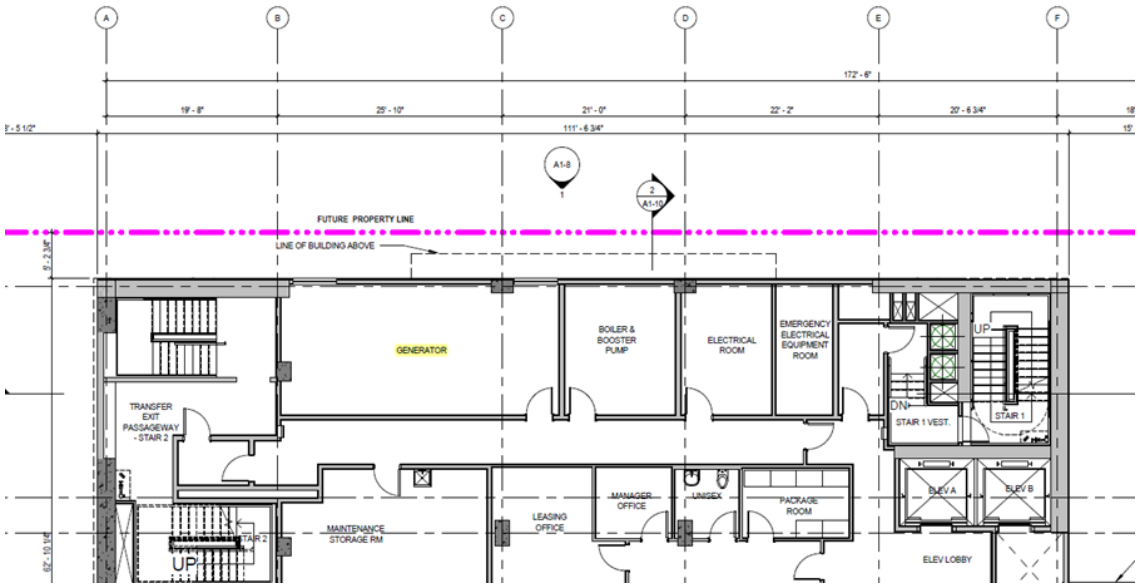

Figure 3: Second Floor Design Showing Generator System

Fire pumps and back-up generators (BUGs) use diesel fuel as a power source. The emissions from the pumps and BUGS would include criteria pollutants such as oxides of nitrogen, volatile organic compounds (VOCs), carbon monoxide (CO), and particulate matter less than 10 microns (PM_{10}) and PM less than 2.5 microns ($PM_{2.5}$); and air toxins such as diesel particulate matter (DPM). Emissions from combustion engines for stationary uses, including diesel generators, are generally regulated by the U.S. Environmental Protection Agency (U.S. EPA) and the California Air Resources Board (CARB). Engine emission standards are promulgated in a tiered system (I through IV final) that designates maximum pollutant emissions.

Unlike Off-Road Diesel-Powered Engines for Mobile Sources (currently utilizing Tier 4 Interim and Final technology which reduce $PM_{2.5}$ emissions by 90% and more), diesel back-up generators and fire pump systems generally have U.S. EPA Tier II ratings and need to be outfitted with diesel particulate filters to achieve additional $PM_{2.5}$ reductions. In, addition, diesel-powered generator engines should be fueled using ultra-low sulfur diesel fuel with a maximum sulfur content of 15 parts per million (ppm). If higher rated diesel generators are available, the City must require that the proponent purchase and maintain the generator that will achieve the highest amount of DPM reduction.

According to the California Public Utilities Commission (CPUC) de-energization report from

2019 there were almost 806 Public Safety Power Shutoff (PSPS) events that impacted almost 973,000 customers (~7.5% of households in California) of which ~854,000 of them were residential customers, and the rest were commercial/industrial/medical baseline/other customers. CARB's data also indicated that on average each of these customers had about 43 hours of power outage in October 2019. Using the actual emission factors for each diesel BUG engines in the air district's stationary BUGs database, CARB staff calculated that the 1,810 additional stationary generators (like those proposed for the Project) running during a PSPS in October 2019 generated *126 tons of NOx, 8.3 tons or particulate matter, and 8.3 tons of DPM* (emphasis added).

It is clear from the CPUC's analysis that BUGs and fire pump systems produce significant quantities of criteria and toxic air pollutants that were not accounted for in the City's analysis. The City's analysis is therefore incomplete and must be corrected in a Sustainable Communities Environmental Impact Report ("SCEIR") for the Project.

2. The City's Air Quality Analysis Fails To Include A Quantitative Health Risk Analysis Of All Of The Toxic Air Contaminants From The Construction Phase And The Operational Phase Of The Project For The Nearest Sensitive Receptor(s)

Diesel exhaust, in particular DPM, is classified by the State of California as a TAC. TACs, including DPM[4], contribute to a host of respiratory impacts and may lead to the development of various cancers. Failing to quantify those impacts places the community at risk for unwanted adverse health impacts. *Even brief exposures to the TACs could lead to the development of adverse health impacts over the life of an individual*.

Diesel exhaust contains nearly 40 toxic substances, including TACs, and may pose a serious public health risk for residents in the vicinity of the facility. TACs are airborne substances that are capable of causing short-term (acute) and/or long-term (chronic or carcinogenic, i.e., cancer causing) adverse human health effects (i.e., injury or illness). TACs include both organic and inorganic chemical substances. The current California list of TACs includes approximately 200 compounds, including particulate emissions from diesel-fueled engines.

[4] Because DPM is a TAC, it is a different air pollutant than criteria particulate matter (PM) emissions such as PM10, PM2.5, and fugitive dust. DPM exposure causes acute health effects that are different from the effects of exposure to PM alone.

Diesel exhaust has been linked to a range of serious health problems including an increase in respiratory disease, lung damage, cancer, and premature death.[5,6,7] Fine DPM is deposited deep in the lungs in the smallest airways and can result in increased respiratory symptoms and disease; decreased lung function, particularly in children and individuals with asthma; alterations in lung tissue and respiratory tract defense mechanisms; and premature death.[8] Exposure to DPM increases the risk of lung cancer. It also causes non-cancer effects including chronic bronchitis, inflammation of lung tissue, thickening of the alveolar walls, immunological allergic reactions, and airway constriction.[9] DPM is a TAC that is recognized by state and federal agencies as causing severe health risk because it contains toxic materials, unlike $PM_{2.5}$ and PM_{10}.[10]

The inherent toxicity of TACs requires the City to first quantify the concentration released into the environment at each of the sensitive receptor locations through air dispersion modeling, calculate the dose of each TAC at that location, and quantify the cancer risk and hazard index for each of the chemicals of concern. Following that analysis, then the City can make a determination of the relative significance of the emissions.

These receptors would be exposed to TACs released during Project construction and operation, including DPM. No effort is made in the SCEA to quantify the potential health impacts from DPM generated by construction activities or operational activities from the Project on these sensitive receptors. The City therefore lacks supporting evidence for its conclusion that the Project would not result in significant health effects. The City's failure to perform such an analysis is clearly a major

[8] California Air Resources Board, Initial Statement of Reasons for Rulemaking, Proposed Identification of Diesel Exhaust as a Toxic Air Contaminant, Staff Report, June 1998.

[9] Findings of the Scientific Review Panel on The Report on Diesel Exhaust as adopted at the Panel's April 22, 1998 Meeting.

[10] Health & Safety Code § 39655(a) (defining "toxic air contaminant" as air pollutants "which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health. A substance that is listed as a hazardous air pollutant pursuant to subsection (b) of Section 112 of the federal act (42 U.S.C. Sec. 7412 (b)) is a toxic air contaminant.")

flaw in the SCEA and may be placing the residents of the adjacent structures at risk from the construction phase of the Project.

The City must assess the air quality impacts for all TACs that will be released during the construction and operational phases of the project. CARB[11] defines diesel exhaust as a complex mixture of inorganic and organic compounds that exists in gaseous, liquid, and solid phases. CARB and U.S. EPA identify 40 components of the exhaust as suspected human carcinogens, including formaldehyde, 1,3-butadiene, and benzo[a]pyrene. The inhalation unit risk factor identified by OEHHA for use in risk assessments is for the particulate matter (DPM) fraction of diesel exhaust and not the vapor phase components identified by CARB and U.S. EPA.

There is notable precedent requiring a quantitative analysis of TACs from diesel exhaust in CEQA documents. Moreover, the absence of this analysis renders the SCEA's Air Quality Analysis incomplete. In a 2017 Notice of Preparation of a CEQA Document For the Los Robles Apartments Project, SCAQMD[12] noted that:

"In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis") can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysishandbook/mobile-source-toxics-analysis. An analysis of all toxic air contaminant impacts due to the use of equipment potentially generating such air pollutants should also be included." This is a common and feasible analysis that is routinely performed for development projects like the Found Residence Project.

Here, the City's analysis ignores the presence of TACs being emitted with diesel exhaust during the construction and operational phases of the project without making any attempt to quantify all of the impacts. This omission is a continuing flaw that must be addressed by the City. The results should then be presented in a SCEIR prior to approving any agreements with the Applicant or issuing

any permits for the Project.

3. The Project Air Quality Analysis Attempts To Compare The Project Emissions Against An Outdated SCAQMD Analysis Of Cancer Risk In The Area

Under the Existing Health Risk section of the Air Quality Analysis, Impact Sciences states that In the air quality analysis of the Project prepared by Impact Sciences[13], the background health risk for the project site is approximately 1,150 in 1,000,000 based on the MATES IV study. According to the results of the SCAQMD's MATES V study, the health risk in the South Coast Air Basin (SCAB) has decreased by 54% since 2012 (date of MATES IV study). Using the MATES V Cancer Risk website[14] it is clear that the decrease (54.8% decrease) in zip code 90028 (area of Project site) is slightly greater than that for the rest of the SCAB. In the figure below it is clear that the largest contributor to cancer risk is from diesel particulate matter (DPM), approximately 65.4% or 340 in 1,000,000. The remaining 34.6% of the health risk comes from benzene, formaldehyde, arsenic and other chemicals. SCAQMD notes in its Cancer Risk website that:

- Benzene and 1,3-Butadiene - Benzene and 1,3-butadiene are emitted predominantly from gasoline-powered mobile sources.
- Arsenic - Sources of arsenic include paved road dust, construction dust, mineral processes, metal processes, refineries and fuel combustion.
- Formaldehyde - Formaldehyde is emitted from mobile sources and is also formed as a secondary pollutant through chemical reactions of VOCs in the atmosphere.
- Acrolein - Acrolein is formed from combustion processes and reaction of other VOCs in the atmosphere.

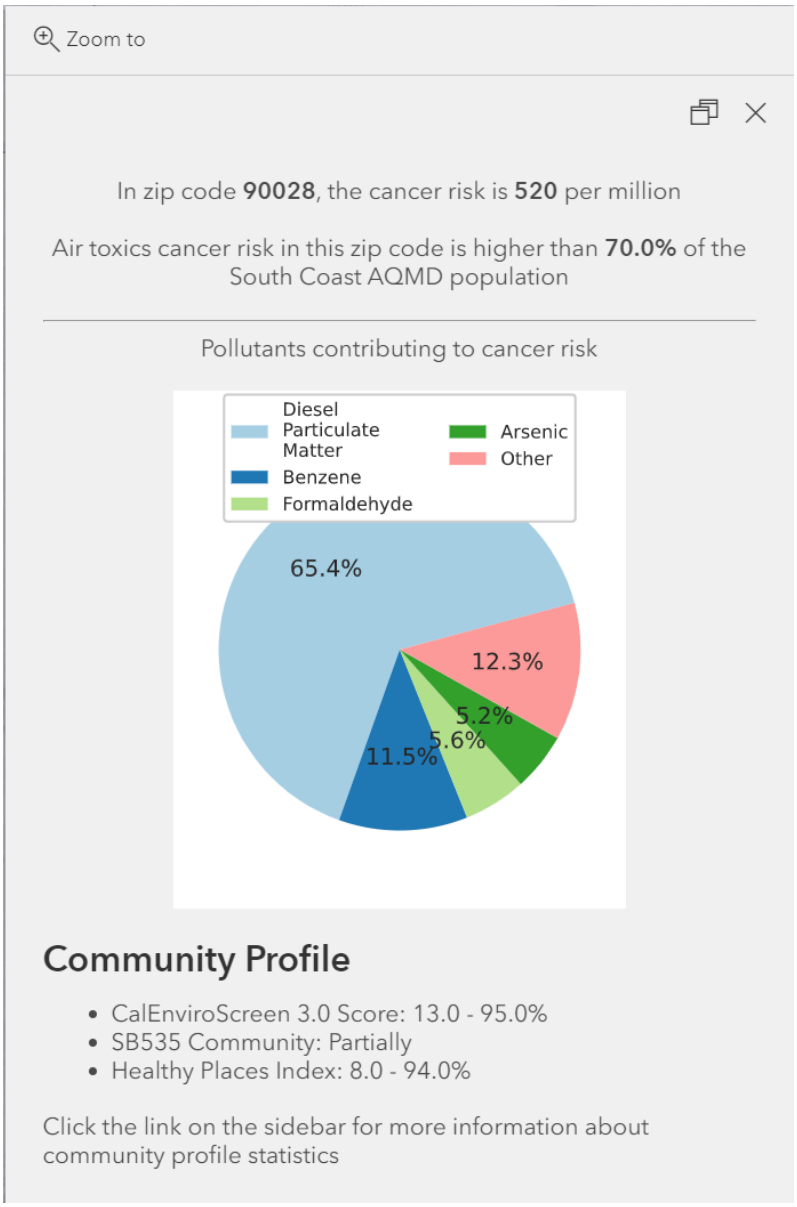

Figure 4: Cancer Risk Breakdown From SCAQMD's MATES V Study of Project Site

The City must correct this mistake in an SCEIR detailing the additional burden that the Project will have on an already impacted area.

4. The City's Air Quality Analysis Fails To Include A Quantitative Health Risk Analysis Of The Impacts Of Toxic Air Contaminants From The Construction and Operational Phases Of The Project For The Nearest Sensitive Receptor(s)

According to the City of Los Angeles' 2019 Air Quality and Health Effects Guidance, airborne pollutants that may be expected to result in an increase in mortality or serious illness or which may pose a present or potential hazard to human health, and include both carcinogens and non-carcinogens defined as TACs.[15] Diesel exhaust, in particular DPM, is classified by the State of California as a TAC. The determination of a significance threshold is based on a ***quantitative risk analysis*** that requires the City to perform a multistep, quantitative health risk analysis for TACs. [16] Despite this clear guidance, no effort is made in the SCEIR to quantify the potential health impacts from the construction and operational phase activities from the Project on these sensitive receptors.

Instead, the SCEIR incorrectly states that for operational emissions, the SCEIR similarly states that the Project would not pose a significant operational health risk because LSTs would not be exceeded.[17] This statement is in contrast to the acknowledged releases of VOCs from vehicles (which include benzene and 1,3-butadiene) entering and exiting the site during the operational phase of the Project and the release of DPM during the construction phase of the Project.

According to SCAQMD[18], LSTs are only applicable to criteria pollutants: oxides of nitrogen (NO_X), carbon monoxide (CO), particulate matter less than 10 microns in aerodynamic diameter (PM_{10}) and particulate matter less than 2.5 microns in aerodynamic diameter ($PM_{2.5}$), not to TACs. LSTs represent the maximum emissions from a project that are not expected to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard, and are developed based on the ambient concentrations of that pollutant for each source receptor area and distance to the nearest sensitive receptor.

For TACs, there are no LSTs, nor levels of significance based on the pounds per day. According to the City of Los Angeles' 2019 Air Quality And Health Effects Guidance airborne pollutants that may be expected to result in an increase in mortality or serious illness or which may pose a present or potential hazard to human health, and include both carcinogens and non-carcinogens are defined as toxic air contaminants.[19] Instead, the determination of a significance threshold is based

[17] SCEIR. Air Quality Analysis. Pg 36..

[18] http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/localized-significance-thresholds

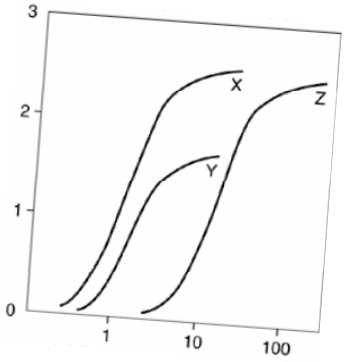
[19] City of Los Angeles. 2019. Air Quality and Health Effects Guidance. Pg 6.

on a ***quantitative risk analysis*** that requires the City to perform a multistep, quantitative health risk analysis for TACs. [20]

The City failed to perform this analysis, and therefore lacks supporting evidence for its conclusion that the Project would not result in significant health effects. The City's failure to perform such an analysis is clearly a major flaw in the SCEIR and may be placing the residents of the adjacent structures at risk from the construction and operational phases of the Project.

Conclusion

The facts identified and referenced in this comment letter lead me to reasonably conclude that the Project could result in significant impacts if allowed to proceed. An SCEIR should be prepared to address these substantial concerns.



Sincerely,

[20] City of Los Angeles. 2019. Air Quality and Health Effects Guidance. Pg 9, pg 36.

James J. J. Clark, Ph.D.

Principal Toxicologist

Toxicology/Exposure Assessment Modeling

Risk Assessment/Analysis/Dispersion Modeling

Education:

Ph.D., Environmental Health Science, University of California, 1995

M.S., Environmental Health Science, University of California, 1993

B.S., Biophysical and Biochemical Sciences, University of Houston, 1987

Professional Experience:

Dr. Clark is a well recognized toxicologist, air modeler, and health scientist. He has 20 years of experience in researching the effects of environmental contaminants on human health including environmental fate and transport modeling (SCREEN3, AEROMOD, ISCST3, Johnson-Ettinger Vapor Intrusion Modeling); exposure assessment modeling (partitioning of contaminants in the environment as well as PBPK modeling); conducting and managing human health risk assessments for regulatory compliance and risk-based clean-up levels; and toxicological and medical literature research.

Significant projects performed by Dr. Clark include the following:

LITIGATION SUPPORT

Case: James Harold Caygle, et al, v. Drummond Company, Inc. Circuit Court for the Tenth Judicial Circuit, Jefferson County, Alabama. Civil Action. CV-2009

Client: Environmental Litgation Group, Birmingham, Alabama

Dr. Clark performed an air quality assessment of emissions from a coke factory located in Tarrant, Alabama. The assessment reviewed include a comprehensive review of air quality standards, measured concentrations of pollutants from factory, an inspection of the facility and detailed assessment of the impacts on the community. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Rose Roper V. Nissan North America, et al. Superior Court of the State Of California for the County Of Los Angeles – Central Civil West. Civil Action. NC041739

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to multiple chemicals, including benzene, who later developed a respiratory distress. A review of the individual's medical and occupational history was performed to prepare an exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to respiratory irritants. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: O'Neil V. Sherwin Williams, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to petroleum distillates who later developed a bladder cancer. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Summary judgment for defendants.

Case: Moore V., Shell Oil Company, et al. Superior Court of the State Of California for the County Of Los Angeles

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to chemicals while benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Raymond Saltonstall V. Fuller O'Brien, KILZ, and Zinsser, et al. United States District Court Central District of California

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to benzene who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a quantitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Richard Boyer and Elizabeth Boyer, husband and wife, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-7G.

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: JoAnne R. Cook, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-9R

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of an individual exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Patrick Allen And Susan Allen, husband and wife, and Andrew Allen, a minor, V. DESCO Corporation, et al. Circuit Court of Brooke County, West Virginia. Civil Action Number 04-C-W

Client: Frankovitch, Anetakis, Colantonio & Simon, Morgantown, West Virginia.

Dr. Clark performed a toxicological assessment of a family exposed to chlorinated solvents released from the defendant's facility into local drinking water supplies. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to chlorinated solvents. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Michael Fahey, Susan Fahey V. Atlantic Richfield Company, et al. United States District Court Central District of California Civil Action Number CV-06 7109 JCL.

Client: Rose, Klein, Marias, LLP, Long Beach, California

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Settlement in favor of plaintiff.

Case: Constance Acevedo, et al., V. California Spray-Chemical Company, et al., Superior Court of the State Of California, County Of Santa Cruz. Case No. CV 146344

Dr. Clark performed a comprehensive exposure assessment of community members exposed to toxic metals from a former lead arsenate manufacturing facility. The former manufacturing site had undergone a DTSC mandated removal action/remediation for the presence of the toxic metals at the site. Opinions were presented regarding the elevated levels of arsenic and lead (in attic dust and soils) found throughout the community and the potential for harm to the plaintiffs in question.

Case Result: Settlement in favor of defendant.

Case: Michael Nawrocki V. The Coastal Corporation, Kurk Fuel Company, Pautler Oil Service, State of New York Supreme Court, County of Erie, Index Number I2001-11247

Client: Richard G. Berger Attorney At Law, Buffalo, New York

Dr. Clark performed a toxicological assessment of an individual occupationally exposed to refined petroleum hydrocarbons who later developed a leukogenic disease. A review of the individual's medical and occupational history was performed to prepare a qualitative exposure assessment. The exposure assessment was evaluated against the

known outcomes in published literature to exposure to refined petroleum hydrocarbons. The results of the assessment and literature have been provided in a declaration to the court.

Case Result: Judgement in favor of defendant.

SELECTED AIR MODELING RESEARCH/PROJECTS

Client – Confidential

Dr. Clark performed a comprehensive evaluation of criteria pollutants, air toxins, and particulate matter emissions from a carbon black production facility to determine the impacts on the surrounding communities. The results of the dispersion model will be used to estimate acute and chronic exposure concentrations to multiple contaminants and will be incorporated into a comprehensive risk evaluation.

Client – Confidential

Dr. Clark performed a comprehensive evaluation of air toxins and particulate matter emissions from a railroad tie manufacturing facility to determine the impacts on the surrounding communities. The results of the dispersion model have been used to estimate acute and chronic exposure concentrations to multiple contaminants and have been incorporated into a comprehensive risk evaluation.

Client – Los Angeles Alliance for a New Economy (LAANE), Los Angeles, California

Dr. Clark is advising the LAANE on air quality issues related to current flight operations at the Los Angeles International Airport (LAX) operated by the Los Angeles World Airport (LAWA) Authority. He is working with the LAANE and LAX staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client – City of Santa Monica, Santa Monica, California

Dr. Clark is advising the City of Santa Monica on air quality issues related to current flight operations at the facility. He is working with the City staff to develop a comprehensive strategy for meeting local community concerns over emissions from flight operations and to engage federal agencies on the issue of local impacts of community airports.

Client: Omnitrans, San Bernardino, California

Dr. Clark managed a public health survey of three communities near transit fueling facilities in San Bernardino and Montclair California in compliance with California Senate Bill 1927. The survey included an epidemiological survey of the effected communities, emission surveys of local businesses, dispersion modeling to determine potential emission concentrations within the communities, and a comprehensive risk assessment of each community. The results of the study were presented to the Governor as mandated by Senate Bill 1927.

Client: Confidential, San Francisco, California

Summarized cancer types associated with exposure to metals and smoking. Researched the specific types of cancers associated with exposure to metals and smoking. Provided causation analysis of the association between cancer types and exposure for use by non-public health professionals.

Client: Confidential, Minneapolis, Minnesota

Prepared human health risk assessment of workers exposed to VOCs from neighboring petroleum storage/transport facility. Reviewed the systems in place for distribution of petroleum hydrocarbons to identify chemicals of concern (COCs), prepared comprehensive toxicological summaries of COCs, and quantified potential risks from carcinogens and non-carcinogens to receptors at or adjacent to site. This evaluation was used in the support of litigation.

Client – United Kingdom Environmental Agency

Dr. Clark is part of team that performed comprehensive evaluation of soil vapor intrusion of VOCs from former landfill adjacent residences for the United Kingdom's Environment

Agency. The evaluation included collection of liquid and soil vapor samples at site, modeling of vapor migration using the Johnson Ettinger Vapor Intrusion model, and calculation of site-specific health based vapor thresholds for chlorinated solvents, aromatic hydrocarbons, and semi-volatile organic compounds. The evaluation also included a detailed evaluation of the use, chemical characteristics, fate and transport, and toxicology of chemicals of concern (COC). The results of the evaluation have been used as a briefing tool for public health professionals.

EMERGING/PERSISTENT CONTAMINANT RESEARCH/PROJECTS

Client: Ameren Services, St. Louis, Missouri

Managed the preparation of a comprehensive human health risk assessment of workers and residents at or near an NPL site in Missouri. The former operations at the Property included the servicing and repair of electrical transformers, which resulted in soils and groundwater beneath the Property and adjacent land becoming impacted with PCB and chlorinated solvent compounds. The results were submitted to U.S. EPA for evaluation and will be used in the final ROD.

Client: City of Santa Clarita, Santa Clarita, California

Dr. Clark is managing the oversight of the characterization, remediation and development activities of a former 1,000 acre munitions manufacturing facility for the City of Santa Clarita. The site is impacted with a number of contaminants including perchlorate, unexploded ordinance, and volatile organic compounds (VOCs). The site is currently under a number of regulatory consent orders, including an Immanent and Substantial Endangerment Order. Dr. Clark is assisting the impacted municipality with the development of remediation strategies, interaction with the responsible parties and stakeholders, as well as interfacing with the regulatory agency responsible for oversight of the site cleanup.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of perchlorate in environment. Dr. Clark evaluated the production, use, chemical characteristics, fate and transport, toxicology, and remediation of perchlorate. Perchlorates form the basis of solid rocket fuels and have recently been detected in water supplies in the United States. The results of this research

were presented to the USEPA, National GroundWater, and ultimately published in a recent book entitled *Perchlorate in the Environment.*

Client – Confidential, Los Angeles, California

Dr. Clark is performing a comprehensive review of the potential for pharmaceuticals and their by-products to impact groundwater and surface water supplies. This evaluation will include a review if available data on the history of pharmaceutical production in the United States; the chemical characteristics of various pharmaceuticals; environmental fate and transport; uptake by xenobiotics; the potential effects of pharmaceuticals on water treatment systems; and the potential threat to public health. The results of the evaluation may be used as a briefing tool for non-public health professionals.

PUBLIC HEALTH/TOXICOLOGY

Client: Brayton Purcell, Novato, California

Dr. Clark performed a toxicological assessment of residents exposed to methyl-tertiary butyl ether (MTBE) from leaking underground storage tanks (LUSTs) adjacent to the subject property. The symptomology of residents and guests of the subject property were evaluated against the known outcomes in published literature to exposure to MTBE. The study found that residents had been exposed to MTBE in their drinking water; that concentrations of MTBE detected at the site were above regulatory guidelines; and, that the symptoms and outcomes expressed by residents and guests were consistent with symptoms and outcomes documented in published literature.

Client: Confidential, San Francisco, California

Identified and analyzed fifty years of epidemiological literature on workplace exposures to heavy metals. This research resulted in a summary of the types of cancer and non-cancer diseases associated with occupational exposure to chromium as well as the mortality and morbidity rates.

Client: Confidential, San Francisco, California

Summarized major public health research in United States. Identified major public health research efforts within United States over last twenty years. Results were used as a briefing tool for non-public health professionals.

Client: Confidential, San Francisco, California

Quantified the potential multi-pathway dose received by humans from a pesticide applied indoors. Part of team that developed exposure model and evaluated exposure concentrations in a comprehensive report on the plausible range of doses received by a specific person. This evaluation was used in the support of litigation.

Client: Covanta Energy, Westwood, California

Evaluated health risk from metals in biosolids applied as soil amendment on agricultural lands. The biosolids were created at a forest waste cogeneration facility using 96% whole tree wood chips and 4 percent green waste. Mass loading calculations were used to estimate Cr(VI) concentrations in agricultural soils based on a maximum loading rate of 40 tons of biomass per acre of agricultural soil. The results of the study were used by the Regulatory agency to determine that the application of biosolids did not constitute a health risk to workers applying the biosolids or to residences near the agricultural lands.

Client – United Kingdom Environmental Agency

Oversaw a comprehensive toxicological evaluation of methyl-*tertiary* butyl ether (M*t*BE) for the United Kingdom's Environment Agency. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of M*t*BE. The results of the evaluation have been used as a briefing tool for public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of *tertiary* butyl alcohol (TBA) in municipal drinking water system. TBA is the primary breakdown product of M*t*BE, and is suspected to be the primary cause of M*t*BE toxicity. This evaluation will include available information on the production, use, chemical characteristics, fate and transport in the environment, absorption, distribution, routes of detoxification, metabolites, carcinogenic potential, and remediation of TBA. The results of the evaluation were used as a briefing tool for non-public health professionals.

Client – Confidential, Los Angeles, California

Prepared comprehensive evaluation of methyl *tertiary* butyl ether (MTBE) in municipal drinking water system. MTBE is a chemical added to gasoline to increase the octane

rating and to meet Federally mandated emission criteria. The evaluation included available data on the production, use, chemical characteristics, fate and transport, toxicology, and remediation of MTBE. The results of the evaluation have been were used as a briefing tool for non-public health professionals.

Client – Ministry of Environment, Lands & Parks, British Columbia

Dr. Clark assisted in the development of water quality guidelines for methyl tertiary-butyl ether (MTBE) to protect water uses in British Columbia (BC). The water uses to be considered includes freshwater and marine life, wildlife, industrial, and agricultural (e.g., irrigation and livestock watering) water uses. Guidelines from other jurisdictions for the protection of drinking water, recreation and aesthetics were to be identified.

Client: Confidential, Los Angeles, California

Prepared physiologically based pharmacokinetic (PBPK) assessment of lead risk of receptors at middle school built over former industrial facility. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client: Kaiser Venture Incorporated, Fontana, California

Prepared PBPK assessment of lead risk of receptors at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

RISK ASSESSMENTS/REMEDIAL INVESTIGATIONS

Client: Confidential, Atlanta, Georgia

Researched potential exposure and health risks to community members potentially exposed to creosote, polycyclic aromatic hydrocarbons, pentachlorophenol, and dioxin compounds used at a former wood treatment facility. Prepared a comprehensive toxicological summary of the chemicals of concern, including the chemical characteristics, absorption, distribution, and carcinogenic potential. Prepared risk characterization of the carcinogenic and non-carcinogenic chemicals based on the exposure assessment to quantify the potential risk to members of the surrounding community. This evaluation was used to help settle class-action tort.

Client: Confidential, Escondido, California

Prepared comprehensive Preliminary Endangerment Assessment (PEA) of dense non-aqueous liquid phase hydrocarbon (chlorinated solvents) contamination at a former printed circuit board manufacturing facility. This evaluation was used for litigation support and may be used as the basis for reaching closure of the site with the lead regulatory agency.

Client: Confidential, San Francisco, California

Summarized epidemiological evidence for connective tissue and autoimmune diseases for product liability litigation. Identified epidemiological research efforts on the health effects of medical prostheses. This research was used in a meta-analysis of the health effects and as a briefing tool for non-public health professionals.

Client: Confidential, Bogotá, Columbia

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of a 13.7 hectares plastic manufacturing facility in Bogotá, Colombia The risk assessment was used as the basis for the remedial goals and closure of the site.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally cadmium) and VOCs from soil and soil vapor at 12-acre former crude oilfield and municipal landfill. The site is currently used as a middle school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and was used as the basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Managed remedial investigation (RI) of heavy metals and volatile organic chemicals (VOCs) for a 15-acre former manufacturing facility. The RI investigation of the site included over 800 different sampling locations and the collection of soil, soil gas, and groundwater samples. The site is currently used as a year round school housing approximately 3,000 children. The Remedial Investigation was performed in a manner

that did not interrupt school activities and met the time restrictions placed on the project by the overseeing regulatory agency. The RI Report identified the off-site source of metals that impacted groundwater beneath the site and the sources of VOCs in soil gas and groundwater. The RI included a numerical model of vapor intrusion into the buildings at the site from the vadose zone to determine exposure concentrations and an air dispersion model of VOCs from the proposed soil vapor treatment system. The Feasibility Study for the Site is currently being drafted and may be used as the basis for granting closure of the site by DTSC.

Client: Confidential, Los Angeles, California

Prepared comprehensive human health risk assessment of students, staff, and residents potentially exposed to heavy metals (principally lead), VOCs, SVOCs, and PCBs from soil, soil vapor, and groundwater at 15-acre former manufacturing facility. The site is currently used as a year round school housing approximately 3,000 children. The evaluation determined that the site was safe for the current and future uses and will be basis for regulatory closure of site.

Client: Confidential, Los Angeles, California

Prepared comprehensive evaluation of VOC vapor intrusion into classrooms of middle school that was former 15-acre industrial facility. Using the Johnson-Ettinger Vapor Intrusion model, the evaluation determined acceptable soil gas concentrations at the site that did not pose health threat to students, staff, and residents. This evaluation is being used to determine cleanup goals and will be basis for regulatory closure of site.

Client –Dominguez Energy, Carson, California

Prepared comprehensive evaluation of the potential health risks associated with the redevelopment of 6-acre portion of a 500-acre oil and natural gas production facility in Carson, California. The risk assessment was used as the basis for closure of the site.

Kaiser Ventures Incorporated, Fontana, California

Prepared health risk assessment of semi-volatile organic chemicals and metals for a fifty-year old wastewater treatment facility used at a 1,100-acre former steel mill. This evaluation was used as the basis for granting closure of the site by lead regulatory agency.

ANR Freight - Los Angeles, California

Prepared a comprehensive Preliminary Endangerment Assessment (PEA) of petroleum hydrocarbon and metal contamination of a former freight depot. This evaluation was as the basis for reaching closure of the site with lead regulatory agency.

Kaiser Ventures Incorporated, Fontana, California

Prepared comprehensive health risk assessment of semi-volatile organic chemicals and metals for 23-acre parcel of a 1,100-acre former steel mill. The health risk assessment was used to determine clean up goals and as the basis for granting closure of the site by lead regulatory agency. Air dispersion modeling using ISCST3 was performed to determine downwind exposure point concentrations at sensitive receptors within a 1 kilometer radius of the site. The results of the health risk assessment were presented at a public meeting sponsored by the Department of Toxic Substances Control (DTSC) in the community potentially affected by the site.

Unocal Corporation - Los Angeles, California

Prepared comprehensive assessment of petroleum hydrocarbons and metals for a former petroleum service station located next to sensitive population center (elementary school). The assessment used a probabilistic approach to estimate risks to the community and was used as the basis for granting closure of the site by lead regulatory agency.

Client: Confidential, Los Angeles, California

Managed oversight of remedial investigation most contaminated heavy metal site in California. Lead concentrations in soil excess of 68,000,000 parts per billion (ppb) have been measured at the site. This State Superfund Site was a former hard chrome plating operation that operated for approximately 40-years.

Client: Confidential, San Francisco, California

Coordinator of regional monitoring program to determine background concentrations of metals in air. Acted as liaison with SCAQMD and CARB to perform co-location sampling and comparison of accepted regulatory method with ASTM methodology.

Client: Confidential, San Francisco, California

Analyzed historical air monitoring data for South Coast Air Basin in Southern California and potential health risks related to ambient concentrations of carcinogenic metals and volatile organic compounds. Identified and reviewed the available literature and calculated risks from toxins in South Coast Air Basin.

IT Corporation, North Carolina

Prepared comprehensive evaluation of potential exposure of workers to air-borne VOCs at hazardous waste storage facility under SUPERFUND cleanup decree. Assessment used in developing health based clean-up levels.

SUBJECT: Comments on FOUND Residences Project Noise Study

Dear Mr. Marshall

Per your request, we have reviewed the Found Residences Project Sustainable Communities Environmental Assessment (SCEA) in the City of Los Angeles, California. The proposed project involves the demolition of an existing one-story storage building and the retention and refurbishment of portions of an existing one-story historic commercial building to develop a new, 15-story multi-family residential building with parking. The Noise and Vibration Impact Analysis is contained in Section 13 of the SCEA, with supplemental calculations in Appendix F Noise and Vibration Report (Noise Study).

The Project is surrounded by noise sensitive uses – across Selma Avenue to the north, The Dream Hollywood Hotel and the Wilcox Hotel and to the east, directly adjacent to the site, The Gilbert Hotel. Goya Studios sound stages and Hollywood Clinic walk-in urgent care are directly adjacent to the project site and were not considered in the SCEA study.

There are several errors and omissions in the SCEA construction noise and vibration analysis. Correcting these would potentially identify several significant impacts, which require mitigation.

Construction Noise Exceeds Threshold Criteria

As established in the SCEA, construction noise impacts would be significant if noise from construction equipment exceeds a maximum noise level of 75 dBA at a distance of 50 feet from the sound source, per LAMC Section 112.05 [SCEA page IV-136]. This is an Lmax limit, representing the highest sound level that occurs during a stated time period.

SCEA Table IV.13-5 shows estimated construction noise levels at each receptor. The second column incorrectly labels average (Leq) levels as "maximum" levels and incorrectly compares these estimates at the sensitive receptor to Lmax criteria at 50 feet [SCEA page IV-139 and 140]. Table IV.13-5 does not show the list of equipment included in the construction noise levels, but the body of the text identifies demolition and grading as the expected noisiest activities and equipment for these activities is expected to include excavator, bulldozer, front-end loader, grader, backhoe, and scraper [SCEA page IV-139]. Demolition often also includes concrete saws. Table 1 below shows Lmax levels for anticipated construction equipment at 50 feet, based on the FHWA Construction Noise Handbook. **All of the equipment exceeds the LAMC 75 dBA Lmax at 50 feet criteria.**

CEQA Guidelines state that a project would normally have a significant effect on the environment if the project would result in "generation of a substantial temporary or permanent increase in ambient noise levels" [SCEA page IV-136]. **Therefore, in order to evaluate construction noise impacts, the SCEA should look at an ambient-based threshold in addition to the 75 dBA LAMC criteria.** The

SCEA operational analysis uses a 5 dB over ambient threshold [SCEA page IV-136]. **A 10-dBA increase is judged by most people as a doubling of the sound level.** Table 2 below summarizes the existing ambient noise levels and estimated construction noise levels in the SCEA as shown in SCEA Table IV.13-5. **Estimated construction noise at the Mark Twain Hotel across Selma Avenue is more than 5 dB over the existing levels and estimated construction noise at the Gilbert, which is adjacent to the site, is over 10 dB above the existing and would result in a substantial increase in the ambient environment.**

Table 1: Construction Equipment Lmax and Usage Factors

Construction Activity	Equipment	Lmax at 50ft, dBA per FHWA	Usage Factor per FHWA	Over LAMC?
Demolition	Excavator	85	40%	YES
	Front-end Loader	80	40%	YES
	Backhoe	84	40%	YES
Grading	Dozer	85	40%	YES
	Grader	85	40%	YES
	Scraper	85	40%	YES
	Concrete Saw	90	20%	YES

Table 2: SCEA Estimated Construction Noise Levels at Sensitive Receptors

Receptor Location	Existing Ambient Noise, dBA	Construction Noise Leq, dBA	Over ambient, dB
1. Dream Hollywood Hotel	75.8	74.6	n/a
2. Mark Twain Hotel	62.4	68.2	6
3. Gilbert Hotel	68.6	84.2	16
4. Commercial Uses on Selma	70.0	69.2	n/a

SCEA Table IV.13-6 presents Leq levels with various noise attenuation methods, including a 10dB reduction from industrial mufflers for equipment with diesel engines [SCEA page IV-140]. The source noise levels used by standard construction noise analysis come from the FHWA Construction Noise Handbook, and those data represent contemporary equipment that are already equipped with mufflers. Therefore, the 10dB reduction for mufflers (Mitigation Measure NOI-1) is unsubstantiated and unrealistic. The FHWA Construction Noise Special Report on Measurement, Prediction, and Mitigation indicates that mufflers are only effective for machinery powered by internal combustion engines, not operational noise produced during work such as sawing. Based on FHWA Lmax level of 90 dBA at 50 feet for concrete saws, 15 dB of reduction are needed for that operation to meet the LAMC criteria. Noise barriers at the perimeter of the site could provide 10 to 15 dB of reduction, depending on site geometry and barrier construction. However, contractors are often reluctant to employ barriers because they slow production, and Mitigation Measure NOI-1 does not expressly require the use of barriers. [SCEA page IV-141]. The Applicant is therefore not obligated to use them, and the City cannot credit noise reductions resulting from the use of noise barriers**. The SCEA lacks**

substantial evidence that the proposed mitigation measured will both reduce noise levels below the applicable threshold and be feasible to deploy, and construction noise impacts remain significant.

Errors and Omissions in the Construction Noise Analysis

There are several errors and omissions in the SCEA's construction noise analysis. Correcting these would result in even higher Leq construction levels. Appendix F shows the distances and attenuation from shielding used in the SCEA construction noise analysis [Noise Study page 37]. These distances are further away than the closest demolition and grading activity will take place. There is a footnote indicating an existing concrete wall, which is not visible in Google Earth Aerials or the existing site plans provided in the Project Description Section [SCEA Figure II-5]. Goya Studios sound stages and Hollywood Clinic walk-in urgent care are directly adjacent to the project site and were not considered in the SCEA study. The sound stages are likely isolated from noise, however the urgent care facility is noise sensitive due to patient comfort needs.

Table 3 below shows average (Leq) noise levels from demolition and grading activities at the sensitive receptors, calculated using the equipment listed in the SCEA [SCEA page IV-139], the closest distances to activities as measured in Google Earth, and Usage Factors from the FHWA Construction Noise Handbook. **Estimated construction noise levels at the closest distance to sensitive receptors are 2 to 16 dB higher than the Leqs reported in the SCEA.**

Table 3: Estimated Construction Noise Levels at Sensitive Receptors for Demolition and Grading Work

Receptor Location	SCEA Leq Construction Noise Levels, dBA	Closest distance to receptor, ft	Demotion Leq, dBA	Grading Leq, dBA
1. Dream Hollywood Hotel	74.6	70	81	83
2. Mark Twain Hotel	68.2	250	70	72
3. Gilbert Hotel / Hollywood Clinic	84.2	10	98	100
4. Commercial Uses on Selma	69.2	280	69	71

Construction Vibration Exceeds Threshold Criteria

SCEA Table IV.13-7 shows estimated PPV construction vibration levels, which are used to assess building damage, at the four sensitive receptors identified in the study [SCEA page IV-145]. Appendix F shows a sample calculation, indicating that FTA Transit Noise and Vibration Assessment 2006 (FTA Guidelines) reference level for a large bulldozer was used [Noise Study page 38]. Table IV.13-7 does not include annoyance calculations (VdB levels) at sensitive receptors or other equipment that may be on site (for example, compaction is often needed during foundation work). The SCEA does not show estimated levels at Goya Studios sound stages or Hollywood Walk-in Clinic, which are directly adjacent to the project site.

FTA Guidelines provide annoyance criteria for residences and buildings where people normally sleep (such as hotels) of 72 VdB and criteria for buildings where vibration would interfere with interior operations (such as recording studios and labs) of 65 VdB. Table 4 below provides screening distances to damage and annoyance criteria for equipment that may be used on the project site. **Any work closer than these distances will be above the threshold of significance. The SCEA should**

discuss construction techniques to reduce vibration levels near sensitive receptors. This may include using smaller equipment closer to sensitive receptors during demolition work.

Table 4 Estimated Construction Vibration Levels

Equipment	FTA Reference Level at 25 feet (PPV / VdB)	Distance to 0.2 PPV, feet	Distance to 65 VdB, feet	Distance to 72 VdB, feet
Large Bulldozer	0.089 / 87	13	131	77
Small Bulldozer	0.003 / 58	2	15	9
Loaded Trucks	0.076 / 86	12	121	71
Vibratory Roller	0.21 / 94	23	281	164

Conclusions

There are several errors and omissions in the SCEA construction noise and vibration analysis. Correcting these would potentially identify several significant impacts, which require mitigation.

Please feel free to contact me with any questions on this information.

Very truly yours,

Re: Agenda Item 2 – Supplemental Comments on the FOUND Residences Project (Case Nos. ENV-2022-1049-SCEA; CPC-2022-1048-DB-HCA; AA-2019-476-PMEX).

Dear Mr. Song:

We are writing on behalf of Coalition for Responsible Equitable Economic Development Los Angeles ("CREED LA") to provide supplemental comments on the Sustainable Communities Environmental Assessment ("SCEA") prepared by the City of Los Angeles ("City") for the FOUND Residences Project (Case Nos. ENV-2022-1049-SCEA; CPC-2022-1048-DB-HCA) ("Project"), proposed by 6422 Selma Owner, LLC ("Applicant"). The Project will be considered at the May 23, 2023 Hearing Officer Hearing as Agenda Item 2.[1]

The Project proposes the demolition of an existing one-story storage building and the refurbishment of portions of the existing one-story historic commercial building on the Project Site to develop a 15-story building with 45 4-bedroom residential units. The Project would encompass a total floor area of up to 67,599 square feet resulting in a Floor Area Ratio ("FAR") of 4.5:1 and would have a maximum building height of 180 feet and five inches (180'-5"). The Project site is an approximately 15,022 square foot (0.35 acre) site located at 6422 Selma Avenue, and portions of 1540-1552 N. Wilcox Avenue, Lots 2, 3, 4, and 5 of Tract No. 1754, Assessor Parcel Numbers (APN) 5546-013-002 and 5546-013-003.

CREED LA filed comments on the SCEA on April 10, 2023. CREED LA's SCEA comments explained that the SCEA prepared for the Project fails to comply

[1] May 23, 2023 Hearing Officer Agenda, available at https://planning.lacity.org/dcpapi/meetings/document/74490.

printed on recycled paper

with the requirements of CEQA, and that a Sustainable Communities Environmental Impact Report ("SCEIR")[2] is required for the Project.

The SCEA fails to accurately disclose the Project's potentially significant air quality, greenhouse gas ("GHG"), and health risk impacts by failing to consider emissions from the onsite back-up generator, which is a reasonably foreseeable use at the Project site. CREED LA's SCEA comments explained that, although the SCEA and its air quality/greenhouse gas study assume that the Project would not include a stationary back-up generator,[3] the design drawings from the SCEA's project description show a generator on the second floor.[4] Further, use of a back-up generator is a reasonably foreseeable consequence of the Project due to increasingly common Public Safety Power Shutoff events and extreme heat events which result in temporary power outages that necessitate a back-up power source.[5] In addition to these factors, the comments herein show that a back-up generator is also a reasonably foreseeable consequence of the Project due to requirements in the California Building Standards Code, Los Angeles Building Code, and Los Angeles Fire Code which require high-rises like the Project to provide a back-up power source.

In sum, the SCEA underestimates air quality, GHG, and health risk impacts by failing to consider emissions from an onsite back-up generator. The City therefore lacks substantial evidence to conclude that these impacts would be less than significant based on compliance with the mitigation measures and criteria of the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("2020-2045 RTP/SCS").[6] Instead, the Project meets the requirements of Public Resources Code Section 21155.2(c)(2) to prepare an SCEIR to address these impacts. The City cannot approve the Project until the errors and omissions in the SCEA are remedied in an SCEIR[7] that is recirculated for public review and comment.

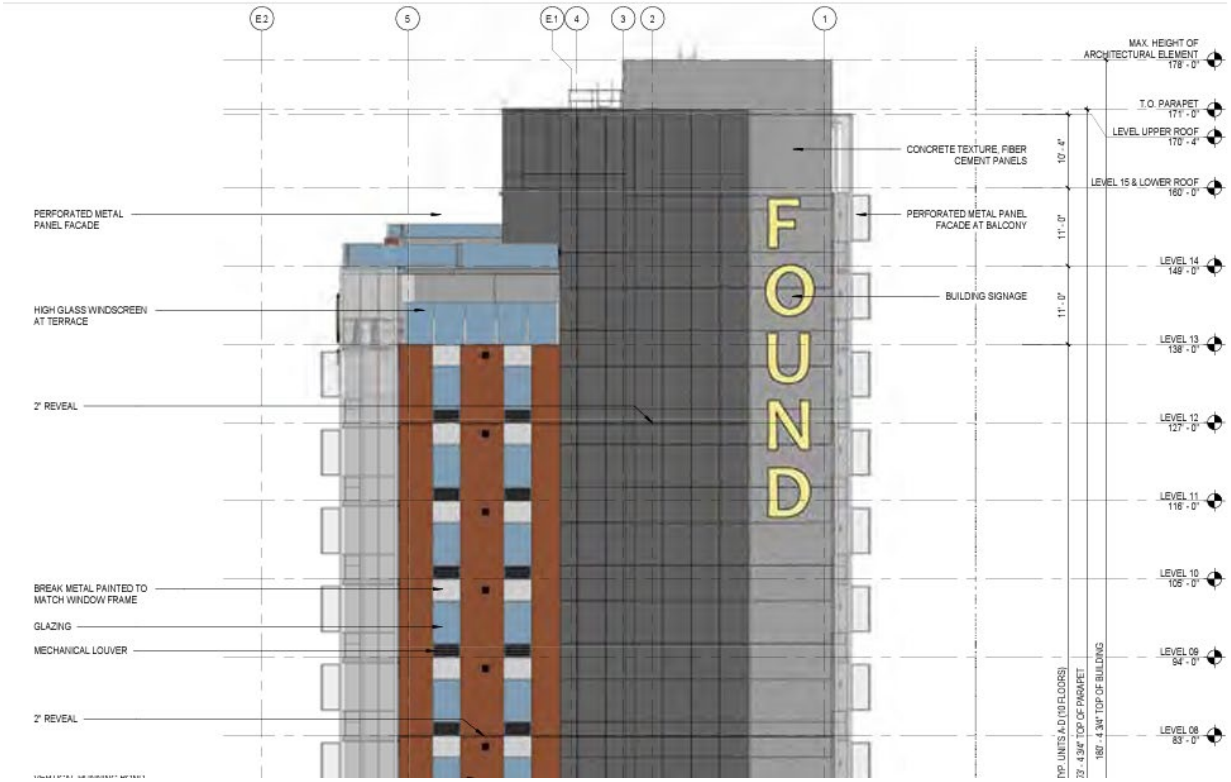
I. A Back-Up Generator is a Reasonably Foreseeable Consequence of the Project



CREED LA's SCEA comments explained that the SCEA failed to include back-up generator emissions in its air quality, greenhouse gas, and health risk analyses. Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "*reasonably foreseeable* consequence[s] of the initial project."[8] The City has not resolved this issue with any additional analysis. As explained previously, a back-up generator is a reasonably foreseeable consequence of the Project due to the Project's design and because of increasingly common Public Safety Power Shutoff events and extreme heat events. Back-up generator emissions must be analyzed in the Project's CEQA document.

In addition, the Project must supply standby and emergency power, as required by the California Building Standards Code, Los Angeles Building Code, and the Los Angeles Fire Code (the Los Angeles Building Code replicates the California Building Standards Code's provisions on emergency power, and the Los Angeles Fire Code's provisions are very similar to the state code on this issue).[9] According to the California Building Standards Code, high-rise buildings exceeding 75 feet in height must install standby and emergency power systems. Specifically, Section 403.1 of the Building Standards Code states that "[n]ew high-rise buildings (see Section 202 for definition of a high-rise) […] shall comply with Section 403.2 through 403.7. Section 202 provides that "high-rise buildings" are defined as "[e]very building of any type of construction or occupancy having floors used for human occupancy located more than 75 feet above the lowest floor level having building access, except buildings used as hospitals."[10] This definition is shared by the Los Angeles Fire Code.[11] The Project constitutes a high-rise building because the highest occupied floor proposed by the Project would be located more than 75 feet above the floor level.[12] Levels 8-15 proposed by the Project are all located higher than 75 feet, as shown in the excerpt from the SCEA's Figure II-14 (South and North Building Elevations).[13]

---

[9] 2022 California Building Standards Code (Cal. Code Regs., Title 24) was published July 1, 2022, with an effective date of January 1, 2023; 2020 Los Angeles Fire Code; 2020 Los Angeles Building Code (this Code replicates the section numbers and language of the state building code).
[10] *See* Los Angeles Fire Code, Section 914.3.
[11] Los Angeles Fire Code, Chapter 2 – Definitions; Los Angeles Building Code, Chapter 2 – Definitions.
[12] SCEA, Project Description, Figure II-4.
[13] *Id.*

printed on recycled paper

Section 2702.2.11 of the California Building Standards Code states that "[e]mergency and standby power shall be provided in high-rise buildings." Section 403.4.8, which is applicable to high-rise buildings pursuant to Section 403.1, states that "[a] standby power system complying with Section 2702 and Section 3003 shall be provided for the standby power loads specified in Section 403.4.8.3," and "[a]n emergency power system complying with Section 2702 shall be provided for the emergency power loads specified in Section 403.4.8.4."[14] Standby power loads specified in Section 403.4.8.3 include ventilation and automatic fire detection equipment and elevators. Emergency power loads specified in Section 403.4.8.4 include exit signs, lighting, emergency communications systems, fire detection systems, fire alarm systems, electrically powered fire pumps, and power and light for the fire command center.

In sum, the California Building Standards Code requires the Project to provide standby and emergency power for the features listed above. The Los Angeles Fire Code also states that these requirements are applicable to the Project: "[s]tandby power and emergency power shall be provided for high-rise buildings and

[14] See also California Building Standards Code, Section 2702.2.11 ("Emergency and standby power shall be provided in high-rise buildings […]").

printed on recycled paper

Group I-2 occupancies having occupied floors located more than 75 feet above the lowest level of fire department access as required in Section 403 of the California Building Code."[15]

Additionally, Section 2702.2 of the Building Standards Code provides that emergency and standby power systems shall be provided for Elevators and Platform Lifts;[16] Emergency Responder Communication Coverage Systems;[17] Emergency Voice/Alarm Communication Systems;[18] Exhaust Systems;[19] Exit Signs;[20] Gas Detection System;[21] High-Rise Buildings and Group I-2 Occupancies Having Occupied Floors Located More Than 75 Feet Above the Lowest Level of Fire Department Vehicle Access.[22] The Los Angeles Fire Code similarly states that emergency and standby power systems are required for these systems.[23] The Building Standards Code provides that these systems are generally required for high-rise buildings such as the Project, and the Project description includes two elevator pits.[24] Thus, the Project will need to provide backup power for these systems.

In sum, the California Building Standards Code and Los Angeles Fire Code require high-rise buildings such as the Project to include emergency and standby power systems.[25] Diesel generators are typically used to power the standby and emergency power systems for large projects such as the instant Project.[26] Therefore,

printed on recycled paper

installation of a diesel back-up generator is a reasonably foreseeable consequence of the Project.

II. An SCEIR Must be Prepared

The back-up generator's contribution to the Project's potentially significant air quality, GHG, and health risk impacts is not addressed by mitigation measures in the 2020-2045 RTP/SCS. The 2020-2045 RTP/SCS's Program EIR does not analyze impacts specifically caused by stationary back-up generators, and does not include mitigation measures requiring stationary back-up generators used in high-rise buildings to use clean fuel sources. The City therefore lacks substantial evidence to conclude that the Project's impacts would be less than significant based on compliance with the mitigation measures and criteria of the 2020-2045 RTP/SCS. The Project instead meets the requirements of Public Resources Code Section 21155.2(c)(2) to prepare an SCEIR[27] to address these impacts.

III. Conclusion

CREED LA urges the City not to approve the Project before the City prepares and circulates an SCEIR which discloses all of the Project's potentially significant impacts and requires all feasible mitigation measures to reduce the Project's significant environmental and public health impacts.

Sincerely,

Aidan P. Marshall

MEMORANDUM

To:	More Song, City Planner Los Angeles City Planning	**Job No.** 1340.002
From:	Lynn Kaufman, CLA, Associate Principal Impact Sciences, Inc.	
Subject:	Responses to Comments made by Adams Broadwell Joseph & Cardozo/CREED LA dated April 10, 2023, regarding the CEQA analysis for the Found Residences Project	
Date:	May 2, 2023	

This memorandum was prepared by Impact Sciences, Inc., in response to comments received on the Sustainable Communities Environmental Assessment (SCEA) for the Found Residences Project (Project) in a letter submitted to the City by Adams Broadwell Joseph & Cardozo (Adams et al) on behalf of the Coalition for Responsible Equitable Economic Development Los Angeles (CREED LA) dated April 10, 2023.

As detailed below, it is the opinion of Impact Sciences that none of the comments/issues raised by Adams et al/CREED LA offer any new significant information or evidence, or any information or evidence that any fact, analysis, or determination in the SCEA is incorrect or not supported with substantial evidence pursuant to the California Environmental Quality Act ([CEQA]; Public Resources Code [PRC] § 21000 et. seq.) and the *State CEQA Guidelines* (California Code of Regulations [CCR] § 15000 et. seq.).

1. INTRODUCTION

The City of Los Angeles (City), as lead agency, prepared and circulated the SCEA on March 9, 2023, for a public review period of 30 days ending on April 10, 2023. According to CEQA, PRC § 21155.2 (b) (4), the lead agency must consider the comments received during consultation and review periods on the SCEA Environmental Checklist. However, comments received on a SCEA Environmental Checklist are not required to be attached to the SCEA Environmental Checklist, nor is the lead agency required to make specific written responses to public agencies or individual commenters. Further, neither CEQA nor the *State CEQA Guidelines* require the lead agency to send responses individually or directly to commenters.

According to PRC § 21155.2 (b) (4):

> Prior to acting on the Sustainable Communities Environmental Assessment, the lead agency shall consider all comments received.

Notwithstanding the above, this Memorandum dated May 2, 2023, prepared by Impact Sciences and reviewed by the Applicant's Counsel, was submitted to the City providing Responses to the Comments received on the SCEA by Adams et al/CREED LA. This Memorandum is available on the City's website as part of City Planning file No. CPC-2022-1048-DB-HCA,[1] and will be provided to the members of the City Planning Commission for their consideration prior to their hearing on July 13, 2023 to consider Project approval.

The following information is provided for the record in response to the Adams et al/CREED LA letter dated April 10, 2023.

2. PROVISION OF INFORMATION RELATED TO THE PROJECT DESCRIPTION (BACKUP GENERATOR AND FIRE PUMP)

The Adams et al/CREED LA letter dated April 10, 2023, asserts that the SCEA failed to include an accurate and complete project description. The comment states that the project design drawings indicate a backup generator and a fire pump will be included for the Project while noting the SCEA's air quality analysis did not include emissions associated with these sources. The Project Applicant has confirmed the Project will include a backup generator and fire pump as required by California Building Code (CBC) Sections 403 (High Rise Buildings), 403.3.2 (Water Supply for Fire Pumps) and 403.4.8 (Standby and Emergency Power). The comment asserts that these sources were not accounted for in the SCEA's air quality analysis, and therefore the SCEA's significance finding is not supported by substantial evidence. It is important to note that the comment only contends that the SCEA's impact determination was not based on substantial evidence; it does not provide any calculations or evidence that the Project's air quality emissions would exceed any thresholds of significance nor does it substantiate a reasonably foreseeable scenario in which impacts would be potentially significant.

With regard to the backup generator, it is anticipated that the Project will include a 250kW diesel generator with particulate matter filter capable of reducing emissions by 85 percent.[2] The backup

---

2 Miratech, CARB Verified DOC/DPF System Specifications (Model Number LTRV6-6-05-XR1); provided by Project Applicant.

generator will only operate to provide power to life-safety equipment during emergencies. It will not be used to power residences during the types of power-outages cited in the comment. Thus, the generator would not be considered a regular or substantive source of air quality emissions. Furthermore, as emergencies are unpredictable and atypical for operations, any analysis attempting to quantify air quality emissions and associated health effects would be entirely speculative and beyond the scope of environmental review required by CEQA. With regard to the fire pump, the Project Applicant has confirmed the Project will utilize an all-electric fire pump. Thus, because the fire pump will not use diesel or other combustible fuels, it will not generate any on-site air quality emissions. For these reasons, the backup generator and fire pump do not have the potential to generate a significant operational air quality impact and the SCEA's impact determination is supported by substantial evidence.

3. PROVISION OF INFORMATION RELATED TO THE AIR QUALITY ANALYSIS

The Adams et al/CREED LA letter dated April 10, 2023, asserts that the SCEA failed to analyze and identify potential health risks associated with construction and operations of the Project. It is important to note that the comment only contends that the SCEA's impact determination was not based on substantial evidence; it does not provide any calculations or evidence that the construction or operation of the Project would exceed any thresholds of significance, nor does it substantiate a reasonably foreseeable scenario in which health risks would be potentially significant.

The SCEA appropriately assessed construction-related health risks and correctly determined these impacts would be less than significant (see SCEA pages IV-40 through IV-46). The comment claims that a health risk assessment (HRA) should have been conducted for the Project based on guidance from the California Office of Environmental Health Hazard Assessment (OEHHA 2015). The intent of the OEHHA 2015 guidance is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary sources. As the Project is not part of the Air Toxics Hot Spots Program and is considered an urban infill development consisting primarily of mobile and area sources (i.e., non-stationary sources), the OEHHA 2015 guidance is not applicable to the Project. While OEHHA 2015 offers limited information on conducting a short-term HRA, the guidance acknowledges the many inherent uncertainties that may occur, and it does not identify the types of short-term projects or non-stationary projects subject thereto. Moreover, OEHHA 2015 does not impose requirements for the Project to conduct an HRA nor does OEHHA 2015 indicate an HRA should be conducted for the Project. The OEHHA 2015 guidance defers to the local air district for guidance on if an HRA may be appropriate and how such analyses should be conducted. However, the South Coast Air

Quality Management District (SCAQMD) has not opined on the application of OEHHA 2015 guidance to development projects such as the Project and has not published any guidance on how (or if) development projects should conduct short-term construction HRAs. As such, it would be speculative to conduct an analysis without SCAQMD's necessary oversight, and any such analysis would not be based on substantial evidence. Furthermore, it should be noted that the City's certified environmental impact report (EIR) for the Citywide Housing Element 2021-2029 and Safety Element Updates included a review of several recent construction projects within the City. As stated therein, even the largest construction projects do not have the potential to cause significant health risks during short-term and temporary construction activities.[3] As such, the SCEA's determination that health risks would be less than significant is substantiated and no further response is required.

The SCEA appropriately assessed operational health risks and correctly determined these impacts would be less than significant (see SCEA pages IV-40 through IV-46). As stated therein, the Project is a 45-unit residential development with 6,456 square feet of common open space. According to the SCAQMD, localized operational air quality emissions are of primary concern for projects with substantial stationary sources or facilities that attract mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities).[4] Once operational, the majority of the Project's air quality emissions would be from mobile source emissions associated with light duty automobiles and non-truck vehicles. These types of mobile sources are not subject to the SCAQMD's health risk assessment guidance for analyzing health risks from diesel particulate matter from mobile sources at facilities such as truck stops and warehouse distribution centers.[5] Furthermore, as discussed above, the Project would not generate substantive on-site air quality emissions associated with the code-required backup generator and fire pump. Further, as discussed below, the Project Applicant has confirmed that the Project will be all electric, and no natural gas infrastructure or appliances will be included for residential use. Thus, the Project would not generate any on-site air quality or greenhouse gas (GHG) emissions from natural gas use. As such, it is clear the Project does not include either the type or volume of air quality source emissions that have the potential to cause significant long-

term health risks. The SCEA's determination that health risks would be less than significant is substantiated and no further response is required.

4. PROVISION OF INFORMATION RELATED TO ENERGY IMPACTS

The Adams et al/CREED LA letter dated April 10, 2023, asserts that the SCEA failed to analyze significant operational impacts associated with natural gas. The comment states that residential natural gas use contributes significantly to climate change and has health risks on residents. The Project Applicant has confirmed that the Project will be all electric, and no natural gas infrastructure or appliances will be included for residential use. Thus, the Project would not generate any air quality or GHG emissions from natural gas use and the SCEA's impact determination is supported by substantial evidence.

The comment asserts that the SCEA failed to adequately analyze operational consumption of electricity because it did not assess if on-site solar generation is feasible for the Project. As stated in the SCEA Project Description (see page II-8), the Project will include a rooftop terrace in order to fulfill open space requirements pursuant to Section 12.21G of the Los Angeles Municipal Code (LAMC). As such, it is infeasible for the Project to include rooftop solar panels. However, as stated on SCEA page II-10, the Project would meet and exceed green building and sustainability standards established by the CALGreen Code and the City of Los Angeles Green Building Code. Specifically, the Project would include the following sustainability features, which would serve to reduce the demand for energy, including electricity:

- ENERGY STAR appliances,
- Water sense labeled low water use fixtures,[6]
- Drought-tolerant landscaping,
- weather-based irrigation control,
- no invasive plants,
- drip irrigation only,
- insulated pipes, and
- LED lighting.

For these reasons, the SCEA's impact determination related to energy use is supported by substantial evidence and no further response is required.

6 Reducing water supply demand reduces the amount of water to be filtered, pumped, and supplied to the water infrastructure, and less energy is required by these systems.

5. PROVISION OF INFORMATION RELATED TO CONSTRUCTION NOISE AND VIBRATION ANALYSIS

The Adams et al/CREED LA letter dated April 10, 2023, asserts that the SCEA failed to adequately analyze and mitigate temporary noise and vibration levels during construction of the Project. Contrary to this assertion, the SCEA appropriately assessed construction noise and vibration and correctly determined these impacts would be less than significant (see SCEA pages IV-136 through IV-142, and pages IV-144 through IV-147).

As stated in the SCEA, construction noise impacts would be significant if the Project violates Section 41.40 of the LAMC, which prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday. This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. The Project would be consistent with Section 41.40 of the LAMC, and the Project would have no impact to any persons during sensitive nighttime hours.

In addition, construction noise impacts would be significant if, as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 A-weighted decibels (dBA) at a distance of 50 feet from the noise source. As stated in the SCEA, the Project Site is not located within 500 feet of a residential zone, and these noise limitations are not applicable to the Project. Furthermore, the City does not have adopted thresholds of significance for construction noise levels. The SCEA included construction noise estimates consistent with methodology established by the Federal Transit Administration (FTA).[7] Construction noise levels were estimated at nearby sensitive receptors with the use of the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM). Consistent with FTA guidance, the SCEA calculated construction noise with the use of FTA reference noise levels (dBA Lmax) for construction equipment and presented the anticipated construction noise levels in dBA Leq. As stated by the FTA, this unit is appropriate because Leq can be used to describe noise levels from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period. Thus, the SCEA's methodology for calculating construction noise is supported by substantial evidence. Though not required, the construction noise levels identified in the SCEA were compared to the 75 dBA standard established in the LAMC for projects within 500 feet of residential zones. As shown in the SCEA, anticipated construction noise levels would not exceed the LAMC standard. It should also be noted that the SCEA's estimated construction noise levels would also not exceed the

7 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual.* September 2018.

FTA's daytime construction noise criteria of 90 dBA Leq (1-hour) for residential uses. The LAMC and FTA standards represent appropriate absolute noise levels that are intended to protect human health. As it is clear that the Project would not have the potential to generate construction noise levels that exceed standards established to protect human health and no construction noise would occur during sensitive nighttime hours, the SCEA's impact determination is supported by substantial evidence and no further response is required.

With respect to construction vibration impacts (annoyance), the Project would be consistent with Section 41.40 of the LAMC, which prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday. This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. As such, the Project would have no construction vibration impact to any persons during sensitive nighttime hours. Neither the LAMC nor the Department of City Planning have adopted construction vibration thresholds of significance for human annoyance. Similar to construction noise, construction vibration is reasonably anticipated in an urban environment, like that found in the Project area, and such vibration levels would not result in health impacts or substantially affect the activities of the general public during daytime hours. Further, due to the sensitive nature of the on-site historic resources to be preserved, in order to protect these resources mitigation measures MM CUL-4 and MM NOI-2 would require that a structural monitoring program be implemented and recorded during construction to ensure that ground borne vibration levels do not exceed 0.12 inches per second, peak particle velocity (PPV). For these reasons, the SCEA's impact determination is supported by substantial evidence and no further response is required.

MEMORANDUM

To:	More Song, City Planner Los Angeles City Planning	**Job No.** 1340.002
From:	Lynn Kaufman, CLA, Associate Principal Impact Sciences, Inc.	
Subject:	Responses to Comments made by Adams Broadwell Joseph & Cardozo/CREED LA dated May 23, 2023, regarding the CEQA analysis for the Found Residences Project	
Date:	June 5, 2023	

This memorandum was prepared by Impact Sciences, Inc., in response to comments received on the Sustainable Communities Environmental Assessment (SCEA) for the Found Residences Project (Project) in a letter submitted to the City Of Los Angeles (City) by Adams Broadwell Joseph & Cardozo (Adams et al) on behalf of the Coalition for Responsible Equitable Economic Development Los Angeles (CREED LA) dated May 23, 2023.

As detailed below, it is the opinion of Impact Sciences that none of the comments/issues raised by Adams et al/CREED LA offer any new significant information or evidence, or any information or evidence that any fact, analysis, or determination in the SCEA is incorrect or not supported with substantial evidence pursuant to the California Environmental Quality Act ([CEQA]; Public Resources Code [PRC] § 21000 et. seq.) and the *State CEQA Guidelines* (California Code of Regulations [CCR] § 15000 et. seq.).

Introduction

The City, as lead agency, prepared and circulated the SCEA on March 9, 2023, for a public review period of 30 days ending on April 10, 2023. According to CEQA, PRC § 21155.2 (b) (4), the lead agency must consider the comments received during consultation and review periods on the SCEA Environmental Checklist. However, comments received on a SCEA Environmental Checklist are not required to be attached to the SCEA Environmental Checklist, nor is the lead agency required to make specific written responses to public agencies or individual commenters. Further, neither CEQA nor the *State CEQA Guidelines* require the lead agency to send responses individually or directly to commenters.

According to PRC § 21155.2 (b) (4):

> *Prior to acting on the Sustainable Communities Environmental Assessment, the lead agency shall consider all comments received.*

Notwithstanding the above, this Memorandum dated June 5, 2023, prepared by Impact Sciences and reviewed by the Applicant's Counsel, was submitted to the City providing Responses to the Comments received on the SCEA by Adams et al/CREED LA. This Memorandum is available on the City's website as part of City Planning file No. CPC-2022-1048-DB-HCA,[1] and will be provided to the members of the City Planning Commission for their consideration prior to their hearing on July 13, 2023, to consider Project approval.

The following information is provided for the record in response to the Adams et al/CREED LA letter dated May 23, 2023.

Response 1: Provision of a Health Risk Analysis (HRA) Related to Emergency Use of the Backup Generator

The Adams et al/CREED LA letter dated My 23, 2023, asserts that the SCEA failed to include back-up generator emissions in its air quality, greenhouse gas, and health risk analyses. Courts have explained that a complete description of a project must "address not only the immediate environmental consequences of going forward with the project, but also all "reasonably foreseeable consequence[s] of the initial project." The commenter further asserts that the use of the back-up generator is a "reasonably foreseeable consequence" of the Project due to the Project's design and because of increasingly common Public Safety Power Shutoff events and extreme heat events.

As previously discussed in Impact Sciences' Memo dated May 2, 2023, the Project Applicant has confirmed the Project will include a backup generator and fire pump as required by California Building Code (CBC) Sections 403 (High Rise Buildings), 403.3.2 (Water Supply for Fire Pumps) and 403.4.8 (Standby and Emergency Power). The comment asserts that these sources were not accounted for in the SCEA's air quality analysis, and therefore the SCEA's significance finding is not supported by substantial evidence. It is important to note that the comment only contends that the SCEA's impact determination was not based on substantial evidence; it does not provide any calculations or evidence that the Project's air quality emissions would exceed any thresholds of

[1] Available on Los Angeles City Planning's website at: https://planning.lacity.org/pdiscaseinfo/search/encoded/MjU1MTE20.

significance nor does it substantiate a reasonably foreseeable scenario in which impacts would be potentially significant.

As previously discussed in Impact Sciences' Memo dated May 2, 2023, regarding the backup generator, it is anticipated that the Project will include a 250kW diesel generator with particulate matter filter capable of reducing emissions by 85 percent.[2] The backup generator will only operate to provide power to life-safety equipment during emergencies. It will not be used to fully power residences for typical daily living usage during the types of power-outages cited in the comment. Thus, the generator would not be considered a regular or substantive source of air quality emissions. Furthermore, as the types of emergencies cited are unpredictable as to both timing and duration, and atypical for operations, any analysis attempting to quantify air quality emissions and associated health effects would be entirely speculative and beyond the scope of environmental review required by CEQA.

For these reasons, the backup generator does not have the potential to generate a significant operational air quality impact and the SCEA's impact determination is supported by substantial evidence.

In addition, the comment claims that a health risk assessment (HRA) should have been conducted for the Project based on guidance from the California Office of Environmental Health Hazard Assessment (OEHHA 2015). The intent of the OEHHA 2015 guidance is to provide HRA procedures for use in the Air Toxics Hot Spots Program or for the permitting of existing, new, or modified stationary sources. As the Project is not part of the Air Toxics Hot Spots Program and is considered an urban infill development consisting primarily of mobile and area sources (i.e., non-stationary sources), the OEHHA 2015 guidance is not applicable to the Project. While OEHHA 2015 offers limited information on conducting a short-term HRA, the guidance acknowledges the many inherent uncertainties that may occur, and it does not identify the types of short-term projects or non-stationary projects subject thereto. Moreover, OEHHA 2015 does not impose requirements for the Project to conduct an HRA nor does OEHHA 2015 indicate an HRA should be conducted for the Project. The OEHHA 2015 guidance defers to the local air district for guidance on if an HRA may be appropriate and how such analyses should be conducted. However, the South Coast Air Quality Management District (SCAQMD) has not opined on the application of OEHHA 2015 guidance to development projects, such as the Project. and has not published any guidance on how (or if) development projects should conduct short-term

2 Miratech, CARB Verified DOC/DPF System Specifications (Model Number LTRV6-6-05-XR1); provided by Project Applicant.

operational HRAs. As such, it would be speculative to conduct an analysis without SCAQMD's necessary oversight, and any such analysis would not be based on substantial evidence. As such, the SCEA's determination that health risks would be less than significant is substantiated and no further response is required.

Further, according to *State CEQA Guidelines* Section 15204(a):

> *CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commentors. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made…*

The SCEA appropriately assessed operational health risks and correctly determined these impacts would be less than significant (see SCEA pages IV-40 through IV-46). As stated therein, the Project is a 45-unit residential development with 6,456 square feet of common open space. According to the SCAQMD, localized operational air quality emissions are of primary concern for projects with substantial stationary sources or facilities that attract mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities).[3] Once operational, the majority of the Project's air quality emissions would be from mobile source emissions associated with light duty automobiles and non-truck vehicles. These types of mobile sources are not subject to the SCAQMD's health risk assessment guidance for analyzing health risks from diesel particulate matter from mobile sources at facilities such as truck stops and warehouse distribution centers.[4] Furthermore, as discussed above, the Project would not generate substantive on-site air quality emissions associated with the operation of the code-required backup generator. As such, it is clear the Project does not include either the type or volume of air quality source emissions that have the potential to cause significant long-term health risks. The SCEA's determination that health risks would be less than significant is substantiated and no further response is required.

MEMORANDUM

To:	More Song, City Planner Los Angeles City Planning	**Job No.** 1340.002
From:	Lynn Kaufman, CLA, Associate Principal Impact Sciences, Inc.	
Subject:	Responses to Comments made by Mitchell M. Tsai, Attorney At Law/SWMSRCC dated May 17, 2023, regarding the CEQA analysis for the Found Residences Project	
Date:	June 5, 2023	

This memorandum was prepared by Impact Sciences, Inc., in response to comments received on the Sustainable Communities Environmental Assessment (SCEA) for the Found Residences Project (Project) in a letter submitted to the City of Los Angeles (City) by Mitchell M. Tsai, Attorney at Law (Tsai) on behalf of the Southwest Mountain States Regional Council of Carpenters (Southwest Mountain States Carpenters or SWMSRCC), dated May 17, 2023.

As detailed below, it is the opinion of Impact Sciences that none of the comments/issues raised by Tsai/SWMSRCC offer any new significant information or evidence, or any information or evidence that any fact, analysis, or determination in the SCEA is incorrect or not supported with substantial evidence pursuant to the California Environmental Quality Act ([CEQA]; Public Resources Code [PRC] § 21000 et. seq.) and the *State CEQA Guidelines* (California Code of Regulations [CCR] § 15000 et. seq.).

Introduction

The City, as lead agency, prepared and circulated the SCEA on March 9, 2023, for a public review period of 30 days ending on April 10, 2023. According to CEQA, PRC § 21155.2 (b) (4), the lead agency must consider the comments received during consultation and review periods on the SCEA Environmental Checklist. However, comments received on a SCEA Environmental Checklist are not required to be attached to the SCEA Environmental Checklist, nor is the lead agency required to make specific written responses to public agencies or individual commenters. Further, neither CEQA nor the *State CEQA Guidelines* require the lead agency to send responses individually or directly to commenters.

According to PRC § 21155.2 (b) (4):

> *Prior to acting on the Sustainable Communities Environmental Assessment, the lead agency shall consider all comments received.*

Notwithstanding the above, this Memorandum dated June 5, 2023, prepared by Impact Sciences and reviewed by the Applicant's Counsel, was submitted to the City providing Responses to the Comments received on the SCEA by Tsai/SWMSRCC. This Memorandum is available on the City's website as part of City Planning file No. CPC-2022-1048-DB-HCA,[1] and will be provided to the members of the City Planning Commission for their consideration prior to their hearing on July 13, 2023, to consider Project approval.

The following information is provided for the record in response to the Tsai/SWMSRCC letter dated May 17, 2023.

Response 1: Use of Local Workforce and Associated Environmental Benefit

The comment suggests the City should require the Project to utilize a local workforce for construction, claiming it would serve to reduce environmental impacts such as vehicle trip lengths and associated air quality and greenhouse gas (GHG) emission reductions. It is important to note that the comment does not offer any calculations or evidence that the Project's air quality or GHG emissions would exceed any thresholds of significance, nor does it substantiate a reasonably foreseeable scenario in which air quality or GHG impacts would be potentially significant. In fact, if the purported environmental benefit would occur as the comment suggests, the air quality and GHG impacts presented in the SCEA would be further reduced from the already less-than-significant impacts identified therein.

Response 2: Imposition of Training Requirements for the Project's Construction Activities to Prevent Community Spread of COVID-19 and Other Infectious Diseases

The comment recommends that the City adopt measures to mitigate public health risks from the Project's construction due to the COVID-19 pandemic. Health risks related to the transmission of viruses are not a CEQA issue, and no specific response is required. Notwithstanding that this topic is outside the scope of CEQA, the City and the State of California, through California Division of Occupational Safety and Health (OSHA), have clear requirements regarding worker safety at

[1] Available on Los Angeles City Planning's website at: https://planning.lacity.org/pdiscaseinfo/search/encoded/MjU1MTE20.

construction sites. The Proposed Project shall comply with all requirements regarding worker safety that are in place during the time of proposed Project construction. Further, the National Center for Disease Control and Prevention (CDC) declared the federal COVID-19 Public Health Emergency (PHE) ended on May 11, 2023.

Response 3: Applicability and Use of a SCEA for the Project

The comment incorrectly asserts the Project does not meet the criteria for the use of a SCEA, claiming the Project Site is not located within a Transit Priority Area (TPA), High Quality Transit Corridor (HQTC), nor located within one-half mile of a major transit stop.

As provided in Chapter III, Sustainable Communities Environmental Assessment Eligibility, of the SCEA, the proposed Project is a transit priority project that clearly meets the intent of both Senate Bill (SB) 375 and the Southern California Association of Government's (SCAG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS). The purpose of SB 375 was to revise CEQA to encourage projects "that will help the state achieve its climate goals under Assembly Bill (AB) 32, assist in the achievement of state and federal air quality standards, and increase petroleum conservation" (see SB 375, Section 1(f)). To meet the state's AB 32 climate goals, SB 375 requires all metropolitan transportation organizations, including SCAG, to prepare an SCS that integrates transportation and land use planning in a manner that results in reduced vehicle miles traveled (VMT) and, as a result, reduced GHG emissions.

Chapter III of the SCEA provides the following discussion related to the applicability and use of a SCEA for the Project:

SB 375 provides CEQA streamlining opportunities for certain transit priority projects (TPPs). A TPP is a project that meets the following three criteria (see PRC, § 21155 (b)):

1. Contains at least 50 percent residential use, based on total building square footage and, if the project contains between 26 percent and 50 percent nonresidential uses, a floor area ratio of not less than 0.75;

2. Provides a minimum net density of at least 20 units per acre; and

3. Is within one-half mile of a major transit stop or high-quality transit corridor included in a regional transportation plan.

As discussed below, the proposed Project qualifies as a TPP pursuant to the criteria set by PRC § 21155.

Consistency with Criterion (a)

The proposed Project consists of 45 four-bedroom multi-family units encompassing a maximum of approximately 67,599 square feet. The new construction is 100 percent residential and as such, the proposed Project would consist of over the minimum of 50 percent residential uses and be consistent with this Criterion. If considered as part of the larger Project Site, the usable, residential component encompasses up to approximately 67,599 square feet of the approximately 93,369 square feet of gross floor area, or approximately 72 percent of the gross floor area, which is also over the minimum of 50 percent residential uses.

Consistency with Criterion (b)

The Project Site is approximately 0.35 acres (15,022 sf). With 45 residential dwellings, the proposed Project would have a density of 129 units per acre. As such, the proposed Project would have over the required minimum density of 20 units per acre and be consistent with this Criterion.

Consistency with Criterion (c)

Public Resources Code (PRC) § 21155 (b) defines a "high-quality transit corridor" as a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

PRC § 21099 defines a "transit priority area" as an area within one-half mile of a major transit stop that is "existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a Transportation Improvement Program adopted pursuant to § 450.216 or 450.322 of Title 23 of the Code of Federal Regulations." PRC § 21064.3 defines "major transit stop" as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15-minutes or less during the morning and afternoon peak commute periods." PRC § 21155 (b) states that a "major transit stop" is defined in PRC § 21064.3, except that, for purposes of § 21155 (b), it also includes major transit stops that are included in the applicable regional transportation plan.

The proposed Project is located within a HQTA as defined by SCAG and a transit priority area as defined by SB 743. The Project Site is located within approximately 0.33 miles of the Metro Hollywood/Vine Station. The Metro B (Red) Line provides service intervals less than 15 minutes during peak commute hours. As such, the Project would be located within one-half mile of a major transit stop and be consistent with this Criterion.

Response 4: Evaluation and Preservation of Identified Historical Resources

ASM's evaluation does find that the Baker Garage at 6422 Selma Avenue is recommended eligible for the California Register of Historical Resources (CRHR) and local register and therefore is a historical resource for the purposes of CEQA. CEQA Section 21084.1 states that significant impacts may occur if "a project may cause a substantial adverse change in the significance to a historic resource." *State CEQA Guidelines* Section 15064.5(b)(1) defines a substantial adverse change as "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired."

According to Section 15064.5(b)(2)(A), "the significance of a historic resource is materially impaired when a project demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the CRHR as determined by a lead agency for purposes of CEQA." Projects that are found to be in conformance with the Secretary of the Interior's (SOI) Standards for the Treatment of Historic Properties (Standards) will not result in a substantial adverse change in the significance of a historical resource.

The SOI Standards do not render a historic structure 'untouchable,' but rather require that 'the historic character of a property will be retained and preserved.'

Substantial discussions took place with the expert historians at the City's Office of Historic Preservation (OHR) regarding the following issues:

- The percentage of the structure of the Baker Garage to remain;
- How its current condition is to be fully photographically documented to Historic American Buildings Survey (HABS) Level 2 standards;
- How the new building will restore the façade of the original building to return it, as close as possible, to its earliest iteration;
- How it is to be protected and preserved during construction via structural monitoring; and
- What additional interpretive material will be incorporated to the Project on-site to provide context for the building and its place in Hollywood history.

Following these meetings, OHR stated that they accept the findings and recommended mitigation measures provided in the CRHR dated August 20, 2021, and that the Project impacts on the eligible historic resource will be less than significant following the implementation of the mitigation measures. OHR further stated that they are comfortable with the Project moving forward as analyzed.

There are four mitigation measures to ensure that the integrity of the historic resource is preserved and protected to the fullest extent possible before, during, and after construction of the Project:

MM CUL-1 Prior to any demolition or construction activity, the garage at 6422 Selma Avenue will be documented to Historic American Buildings Survey (HABS) Level 2 standards, according to the outline format described in the Historic American Building Survey Guidelines for Preparing Written Historical Descriptive Data. Photographic documentation should follow the Photographic Specification–Historic American Building Survey, including 10-15 archival quality, large-format photographs of the exterior and interior of the building and its architectural elements. Construction techniques and architectural details should be documented, especially noting the measurements, hardware, and other features that tie architectural elements to a specific date. If original architectural plans are located, they should be archivally reproduced, following HABS standards. Three copies of the HABS documentation package, with one copy including original photo negatives, will be produced, with at least one copy placed in an archive or history collection accessible to the general public.

MM CUL-2 Additional review of the Project by OHR will only be required if, during construction, more than 10 percent of the materials currently proposed for retention cannot be retained as planned. For example, if after removal and storage of the wooden trusses it is discovered that 5 percent more of the wood must be replaced prior to reinstallation, no additional review will be required and the wood elements of the truss that require replacement will be made in-kind. However, if 15 percent more of the brick walls must be removed than is currently planned (33 percent), subsequent review of the construction plans would be required by OHR.

MM CUL-3 Develop at least two interpretative signs or murals that would communicate the significance of the garage at 6422 Selma Avenue to the Hollywood community. This could consist of a permanent interpretive exhibit that would incorporate

information from historic photographs, HABS documentation, or other materials to highlight the building's association with the automobile and the significance of the automobile to Hollywood. The interpretive signs should be developed by a team that includes a SOI-qualified historian. At least one of the signs should be located near the Selma entrance to the garage to be accessible to the general public. The second mural could be located on the interior of the garage.

MM CUL-4 Prior to the start of construction, surveys shall be performed to document the conditions of the masonry of the remaining walls at 6422 Selma Avenue as well as the Gilbert Hotel building. A structural monitoring program shall be implemented and recorded during construction to ensure that ground borne vibration levels do not exceed 0.12 inches per second, peak particle velocity (PPV). The structural monitoring plan shall include documentation, consisting of video and/or photographic documentation of accessible and visible areas on the exterior of the buildings. A historic architect (meeting SOI's Professional Qualification Standards) or structural engineer with experience with historic masonry buildings shall establish baseline structural conditions of the building and prepare the shoring design. Additionally, a qualified acoustical engineer shall be retained to review the proposed construction equipment and develop and implement a vibration monitoring program capable of documenting the construction-related ground vibration levels at the Project Site during demolition and excavation phases where heavy construction equipment (e.g., large bulldozer and drill rig) would be operating within 15 feet of the affected buildings.

The vibration monitoring system shall measure and continuously store the PPV in inch/second. Vibration data shall be stored on a one-second interval. The system shall also be programmed for two preset velocity levels: a warning level of 0.07 inch/second (PPV) and a regulatory level of 0.12 inch/second (PPV). The system shall also provide real-time alert when the vibration levels exceed either of the two preset levels.

- In the event the warning level of 0.07 inch/second (PPV) is triggered, the contractor shall identify the source of vibration generation and provide steps to reduce the vibration level, including but not limited to

halting/staggering concurrent activities and utilizing lower vibratory techniques.

- In the event the regulatory level of 0.12 inch/second (PPV) is triggered, the contractor shall halt the construction activities and visually inspect the Baker Garage for any damage. Results of the inspection must be logged. The contractor shall identify the source of vibration generation and provide steps to reduce the vibration level. Vibration measurement shall be made with the new construction method to verify that the vibration level is below the warning level of 0.07 inch/second (PPV). Construction activities may then restart.

- In the event damage occurs to historic finish materials due to construction vibration, such materials shall be repaired in consultation with a qualified preservation consultant.

- The structure-monitoring program shall be submitted to the City of Los Angeles Department of Building and Safety (LADBS) and received into the case file for the associated discretionary action permitting the Project prior to initiating any construction activities.

The SCEA's impact determination related to historical resources is supported by substantial evidence and no further response is required.

Response 5: Need for Mitigation Measures Under CEQA

The comment asserts that the SCEA must incorporate "all" feasible mitigation measures from prior applicable EIRs. Contrary to these comments, CEQA only requires, and a SCEA need only incorporate, relevant, applicable mitigation measures from prior EIRs where those measures are needed to mitigate significant or potentially significant impacts identified by the SCEA. (See Public Resources Code §§ 21002, 21155.2(b)(2), 21155.2(b)(5)(i), 21159.28(a); *State CEQA Guidelines* §§ 15002, 15021, 15126(f), 15126.4(a)(3), (4).). Consistent with CEQA, the RTP/SCS Program EIR (RTP/SCS EIR) mitigation monitoring and reporting program (MMRP) itself states that the lead agency should consider imposing the listed mitigation measures when needed "to reduce substantial adverse effects" (emphasis added).

The comment asserts the SCEA does not incorporate certain mitigation measures from the RTP/SCS EIR and MMRP. Specifically, the comments assert that the SCEA fails to incorporate PMM-GEO-1, PMM HYD-1, PMM AES-1, PMM AQ-1, and PMM-GHG-1 from the RTP/SCS EIR.

The SCEA concluded that the Project would not cause significant impacts associated with hydrology/water quality, aesthetics, air quality or GHGs. No mitigation measures are required for these issue areas. All checklist questions for Geology and Soils stated impacts would be less than significant without mitigation except for checklist question (f), which included MM-GEO-1 as a standard and performance-based measure in the event paleontological resources are unearthed during ground-disturbing activities. The measure identifies regulatory compliance with federal, state, and local guidelines, including those set forth in California PRC § 21083.2.

The RTP/SCS EIR MMRP does not include project-level mitigation measures that are required to be incorporated into the Project. However, the RTP/SCS EIR MMRP does provide a list of mitigation measures that SCAG determined a lead agency can and should consider, as applicable and feasible, where the lead agency has concluded that a project has the potential to result in significant effects. The City has complied with PRC §§ 21155.2 and 21159.28. The City has reviewed all mitigation measures contained in the RTP/SCS EIR and determined their applicability to the Project and whether the Project would be in substantial compliance with the mitigation measure as proposed. For each such mitigation measure, the City considered whether to use the RTP/SCS EIR mitigation measure or an equally effective City mitigation measure or federal, state, regional, or City regulation (see page 1 of the RTP/SCS EIR MMRP: “Lead agencies may use, amend, or not use measures identified in this Program EIR as appropriate to address project-specific conditions. The determination of significance and identification of appropriate mitigation is solely the responsibility of the lead agency.”)

Contrary to the comments, the RTP/SCS EIR MMRP itself states that the lead agency should consider imposing the listed mitigation measures when needed “to reduce substantial adverse effects” (emphasis added) (see e.g., PMM AQ-1, PMM HAZ-1, PMM HAZ-5). In addition, mitigation can only be incorporated when it is relevant and applicable to a project. As explained in Appendix A, Incorporation of Feasible Mitigation Measures, Performance Standards, and Criteria From Prior Applicable EIRs, of the SCEA, mitigation measures in the RTP/SCS EIR that are within the purview of SCAG (see, e.g., PMM HAZ-2, PMM HAZ-3, PMM HAZ-4, SMM AES-1, SMM AG-3) are neither relevant nor applicable to the Project. Other measures simply do not apply to this urban, infill location because the subject conditions do not exist on the Project Site (see, e.g., PMM AG-1, PMM BIO-1(c)).

The RTP/SCS EIR MMRP also states that a lead agency has the sole discretion to use, amend, or not use measures identified therein, and may instead consider whether to use an equally effective City mitigation measure or federal, state, regional, or local regulation. The SCEA fully and adequately analyzed the Project's potentially significant impacts, and it included and addressed all feasible mitigation measures from prior certified EIRs. The comments, therefore, do not raise any issues that alter the analysis or conclusions of the SCEA and do not involve any new significant impacts or add "significant new information" that would require recirculation of the SCEA.

Response 6: Construction Noise Impacts

The comment asserts the SCEA fails to adequately assess and mitigate construction noise impacts. Contrary to this assertion, the SCEA appropriately assessed construction noise and correctly determined these impacts would be less than significant (see SCEA pages IV-136 through IV-142).

As stated in the SCEA, construction noise impacts would be significant if the Project violates Section 41.40 of the Los Angeles Municipal Code (LAMC), which prohibits construction activity from occurring between 9:00 PM and 7:00 AM Monday through Friday, and between 6:00 PM and 8:00 AM on Saturday. This is intended to protect persons occupying sleeping quarters in any hotel, apartment, or other place of residence. The Project would be consistent with Section 41.40 of the LAMC, and the Project would have no impact to any persons during sensitive nighttime hours.

In addition, construction noise impacts would be significant if, as indicated in LAMC Section 112.05, noise from construction equipment within 500 feet of a residential zone exceeds 75 A-weighted decibels (dBA) at a distance of 50 feet from the noise source. As stated in the SCEA, the Project Site is not located within 500 feet of a residential zone, and these noise limitations are not applicable to the Project. Furthermore, the City does not have adopted thresholds of significance for construction noise levels. The SCEA included construction noise estimates consistent with methodology established by the Federal Transit Administration (FTA).[2] Construction noise levels were estimated at nearby sensitive receptors with the use of the Federal Highway Administration (FHWA) Roadway Construction Noise Model (RCNM). Consistent with FTA guidance, the SCEA calculated construction noise with the use of FTA reference noise levels

2 Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual.* September 2018.

(dBA Lmax) for construction equipment and presented the anticipated construction noise levels in dBA Leq. As stated by the FTA, this unit is appropriate because Leq can be used to describe noise levels from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period. Thus, the SCEA's methodology for calculating construction noise is supported by substantial evidence. Though not required, the construction noise levels identified in the SCEA were compared to the 75 dBA standard established in the LAMC for projects within 500 feet of residential zones. As shown in the SCEA, anticipated construction noise levels would not exceed the LAMC standard. It should also be noted that the SCEA's estimated construction noise levels would also not exceed the FTA's daytime construction noise criteria of 90 dBA Leq (1-hour) for residential uses. The LAMC and FTA standards represent appropriate absolute noise levels that are intended to protect human health. As it is clear that the Project would not have the potential to generate construction noise levels that exceed standards established to protect human health and no construction noise would occur during sensitive nighttime hours, the SCEA's impact determination is supported by substantial evidence and no further response is required.

INITIAL SUBMISSIONS

The following submissions by the public are in compliance with the Commission Rules and Operating Procedures (ROPs), Rule 4.3a. Please note that "compliance" means that the submission complies with deadline, delivery method (hard copy and/or electronic) AND the number of copies. The Commission's ROPs can be accessed at **http://planning.lacity.org**, by selecting "Commissions & Hearings" and selecting the specific Commission.

The following submissions are not integrated or addressed in the Staff Report but have been distributed to the Commission.

Material which does not comply with the submission rules is not distributed to the Commission.

RE: City of Los Angeles's FOUND Residences – 6422 Selma Avenue Project [CPC-2022-1048-DB-HCA; ENV-2022-1049-SCEA].

Dear More Song,

On behalf of the Southwest Mountain States Regional Council of Carpenters ("**Southwest Mountain States Carpenters**" or "**SWMSRCC**"), my Office is submitting these comments for the City of Los Angeles's ("**City**") Sustainable Communities Environmental Assessment ("**SCEA**") for the **July 13, 2023** City Planning Commission meeting for the FOUND Residences – 6422 Selma Avenue Project ("**Project**").

The Southwest Mountain States Carpenters is a labor union representing 63,000 union carpenters in 10 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of SWMSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Mountain States Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Mountain States Carpenters incorporates by reference all comments related to the Project or its CEQA review, including the Sustainable Communities Environmental Assessment submitted prior to certification of the SCEA for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Mountain States Carpenters requests that the City provide advance notice for any and all notices or hearings referring or related to the Project, including notices issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010), and any applicable state or local municipal code, rules, or regulations. California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body. As such, we request such advance notice to be both e-mailed and mailed to us.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved

apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7,

[1] California Workforce Development Board (2020) Putting California on the High Road: A Jobs and Climate Action Plan for 2030 at p. ii, *available at* https://laborcenter.berkeley.edu/wp-content/uploads/2020/09/Putting-California-on-the-High-Road.pdf.

2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Mountain States Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. SWMSRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Mountain States Carpenters' experience with safe construction site work practices, SWMSRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.

- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

[6] *See also* The Center for Construction Research and Training, North America's Building Trades Unions (April 27 2020) NABTU and CPWR COVIC-19 Standards for U.S Constructions Sites, *available at* https://www.cpwr.com/sites/default/files/NABTU_CPWR_Standards_COVID-19.pdf; Los Angeles County Department of Public Works

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Mountain States Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT

A. Background Concerning the California Environmental Quality Act

The California Environmental Quality Act is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations ("**CEQA Guidelines**"), § 15002, subd. (a)(1).[8] At its core, its purpose is to "inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made." *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

(2020) Guidelines for Construction Sites During COVID-19 Pandemic, *available at* https://dpw.lacounty.gov/building-and-safety/docs/pw_guidelines-construction-sites.pdf.

[7] For details concerning Southwest Carpenters' ICRA training program, *see* https://icrahealthcare.com/.

[8] The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given "great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous." *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

1. Background Concerning Environmental Impact Reports

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to "identify ways that environmental damage can be avoided or significantly reduced." CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns" specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B).

While the courts review an EIR using an 'abuse of discretion' standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id.* Drawing this line and determining whether the EIR complies with CEQA's information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR's function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that

the public is assured those consequences have been considered. *Id.* For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id.*

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the "fair argument" standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of "B" St.* v. *City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that "may have a significant effect on the environment." Public Resources Code ("**PRC**") § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

"Significant effect upon the environment" is defined as "a substantial or potentially substantial adverse change in the environment." PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a "low threshold" for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010)

190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen,* 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of "B" St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

Finally, CEQA procedures reflect a preference for resolving doubts in favor of environmental review. See Pub. Res. Code, § 21080(c) (an EIR may be disposed of only if there is no substantial evidence, in light of the entire record before the lead agency, that the project may have a significant effect on the environment or revisions in the project); CEQA Guidelines §§ 15061(b)(3) (common sense exemption only where it can be seen *with certainty*); 15063(b)(1) (prepare an EIR if the agency determines that there is substantial evidence that any aspect of the project, either individually or cumulatively, may cause a significant effect on the environment, regardless of whether the overall effect of the project is adverse or beneficial]; 15064, subd. (h) (the agency must consider cumulative impacts of past, current, and probable future projects); 15070 (a negative declaration may be prepared only if there is no substantial evidence, in light of the whole record, that the project may have a significant effect on the environment, or project revisions would avoid the effects or mitigate the effects to a point where clearly no significant effects would occur, and there is no substantial evidence, in light of the whole record, that the project as revised may have a significant effect on the environment); *No Oil, Inc., supra,* 13 Cal.3d at p. 83-84 (significant impacts are to be interpreted so as to afford the fullest possible protection).

IV. THE PROJECT DOES NOT MEET THE CRITERIA FOR THE USE OF A SUSTAINABLE COMMUNITIES ENVIRONMENTAL ASSESSMENT

A. Background Concerning Transit Priority Projects and Sustainable Communities Environmental Assessments

Senate Bill ("**SB**") 375 provides CEQA-based incentives and streamlining for certain residential, mixed-use, and transportation-oriented developments. SB 375 includes two optional CEQA streamlining options for local lead agencies.

First, under SB 375, residential and mixed-use projects that (1) are consistent with the use designation, density, building intensity, and applicable policies specified in a California Air Resources Board ("**CARB**")-approved sustainable communities strategy ("**SCS**") or alternative planning strategy ("**APS**") and (2) incorporate mitigation measures required by an "applicable prior environmental document," which may include the environmental impact report for the regional transportation plan, need not "reference, describe or discuss (1) **growth-inducing impacts; or** (2) any **project-specific or cumulative impacts** from **cars** and **light-duty truck trips** generated by the project on **global warming** or the **regional transportation network**". PRC §21159.28(a).

Notably, under PRC §21159.28(a), SCEA does not exempt agencies from their duty to review all other impacts of the project, including but not limited to impacts to historical resources. As to all those impacts, CEQA continues to require studies and mitigation, as well as an EIR to thoroughly assess all feasible mitigation measures and alternatives.

"The EIR is often referred to as the ""heart"" of CEQA." *County of Butte v. Department of Water Resources* (2022) 13 Cal.5th 612, 627. "Ideally, an EIR serves "to identify the significant effects on the environment of a project, to identify alternatives to the project, and to indicate the manner in which those significant effects can be mitigated or avoided." (Pub. Resources Code, § 21002.1, subd. (a).) The document must include a description of the proposed project and its environmental setting and discussions of (1) the possible environmental effects of the project, (2) feasible measures to mitigate any significant, adverse environmental effects of the project, (3) the comparative environmental effects of a range of reasonable alternatives to the proposed project, including a "no project" alternative, and (4) the cumulative impact of the project's various environmental effects (CEQA Guidelines, §§ 15124, 15126, 15126.4, 15126.6, 15130.) An EIR may also include a discussion of the economic and social effects of the project. (*Id.*, § 15131.) Given the role it plays and its required analysis, the EIR is commonly referred to as an "informational document." (Pub. Resources Code, § 21061; CEQA Guidelines, § 15121.) It serves to inform decision makers and the general public about the nature and environmental impact of a proposed project, feasible ways to reduce that impact (often through the mechanism of mitigation

measures), and possible alternatives to the project. (Pub. Resources Code, § 21061.)." *Id.*

Second, Transit Priority Projects ("**TPP**") may qualify for a total CEQA exemption or a Sustainable Communities Environmental Assessment. PRC § 21155.1-21155.2. First and foremost, a TPP is a specific project that must: (1) be consistent with a CARB-approved SCS or APS; (2) contain at least 50 percent residential use, and if the project contains between 26 percent and 50 percent nonresidential uses, then a floor area ratio of not less than 0.75; (3) have a minimum net density of 20 units per acre; and (4) be located **within one-half mile** of a **major transit stop** or **high-quality transit corridor** included in a regional transportation plan. PRC § 21155(a)-(b), emph. added.

1. TPP Exemption or SCPE

If a legislative body of a city or county finds, after conducting a public hearing, that a transit priority project meets all of the requirements in subdivisions (a) and (b) and one of the requirements of subdivision (c) of PRC § 21155.1, the TPP is declared to be a sustainable communities project and will be fully exempt from CEQA. PRC § 21155.1. At a minimum, the legislative body of a city or county must find that the project can be adequately served by existing utilities and that:

(1) the project site does not contain wetlands or riparian areas or have significant value as wildlife habitat,

(2) the project does not have a significant effect on historical resources,

(3) the project buildings are energy efficient,

(4) landscaping is designed to achieve 25 percent less water usage, and

(5) the project does not present a risk of public health exposure in violation of state or federal law.

PRC § 21155.1.

2. Sustainable Communities Environmental Assessment

Alternatively, if a TPP project does not qualify for an exemption, a TPP may be reviewed through a SCEA provided, *inter alia*, that: (1) an initial study identifies "all significant or potentially significant impacts of the transit priority project… based on substantial evidence in light of the whole record" PRC § 21155.2(b)(1); (2) the SCEA shall contain "measures that either avoid or mitigate to a level of insignificance all

potentially significant or significant effects of the project required to be identified in the initial study" PRC § 21155.2(b)(2).

Simply put, a SCEA is similar to a negative declaration in that the lead agency must identify and analyze all potentially significant or significant effects of the project and mitigate them to a level of less than significant. See PRC § 21155.2(b).

A SCEA may be approved by the lead agency after conducting a public hearing, reviewing the comments received, and finding that: (A) all potentially significant or significant effects required to be identified in the initial study have been identified and analyzed, (B) with respect to each significant effect on the environment required to be identified in the initial study, either of the following apply: (i) changes or alterations have been required in or incorporated into the project that avoid or mitigate the significant effects to a level of insignificance, and (ii) those changes or alterations are within the responsibility and jurisdiction of another public agency and have been, or can and should be, adopted by that other agency. PRC §21155.2(b)(5).

The lead agency's decision to review and approve a transit priority project with a sustainable communities environmental assessment" is "reviewed under the substantial evidence standard." PRC § 21155.2(b)(7). As such, any SCEA determination or finding made by the agency has to be supported by substantial evidence, where "[s]ubstantial evidence is not argument, speculation, unsubstantiated opinion or narrative, [or] evidence that is clearly erroneous or inaccurate ...." See, PRC § 21080(e)(2); see also, Guidelines, § 15384(a).

B. <u>The Project Is Not Within a Transit Priority Area.</u>

Under PRC Section 21099(b)(3), a transit priority area is "an area within one-half mile of a major transit stop that is existing or planned, if the planned stop is scheduled to be completed within the planning horizon included in a transportation improvement program or applicable regional transportation plan."

i. The Project Is Not Located Within a Transit Priority Area Because the SCAG's HQTA Designation Is Neither Reliable Nor Binding

According to the SCEA, the Project Site is located within both a High Quality Transit Area ("**HQTA**") and Transit Priority Area. SCEA, III SCEA Eligibility, p. III-19. Yet, CEQA provides for streamlining with SCEA only if the Project is truly a TPP; i.e., first and foremost "within one-half mile of a **major transit stop** or high-quality

transit **corridor** [HQCT] included in a regional transportation plan." PRC § 21155(b), emph. added.

As explained below, SCAG itself distinguishes an HQT**A** (referenced and relied upon by the City) from an HQT**C**, and the Project Site's being located within SCAG's HQT**A** has no bearing under CEQA or its Guidelines regarding TPPs; neither does that qualify as substantial evidence required for SCEA to show that the Project qualifies as a TPP as the precondition for SCEA.

A HQTA is a planning tool that is part of SCAG RTP/RTS, a regional plan. HQTAs are broadly defined as places with convenient public transit service prioritized by local jurisdictions that are suitable for housing, jobs and services growth.

Per SCAG's own *summary* and *disclaimer*:

> "**Summary**
>
> The High Quality Transit Areas (HQTAs) is within one half-mile of a well-serviced transit stop or a transit corridor with 15-minute or less service frequency during peak commute hours.
>
> This is the High Quality Transit Areas (HQTAs) in the SCAG Region for plan year 2045, developed for the Final Connect SoCal (the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)). SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code. The definitions of a "major transit stop" and a "high-quality transit corridor" are as follows:
>
> A. Major transit stop: A site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (CA Public Resource Code Section 21064.3). It also includes major transit stops that are included in the applicable regional transportation.

B. High-quality transit corridor (HQTC): A corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.

Further explanation of the methodology for identifying HQTCs and major transit stops is included in the Connect SoCal Transit Technical Report Appendix.

PLEASE NOTE that SCAG has made one modification to its methodology of HQTAs development to exclude the one-half mile areas around freeway-running HQTCs where there are no bus stops; the one-half mile areas around bus stops serving those freeway HQTCs remain.

Major transit stops and HQTCs are based on the 2045 plan year transit network of Connect SoCal. **PLEASE NOTE** that SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years. However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG. Users should consult with the appropriate transit provider(s) to obtain the latest information on planned transit routes, stop locations, and service intervals. This data is intended for planning purposes only, and SCAG shall incur no responsibility or liability as to the completeness, currentness, or accuracy of this information. SCAG assumes no responsibility arising from use of this information by individuals, businesses, or other public entities. The information is provided with no warranty of any kind, expressed or implied, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. Users should consult with the appropriate transit provider(s) to obtain the latest information on transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption or streamlining."[9] (Bold emphasis orig.; underlining added.)

[9] See, https://gisdata-scag.opendata.arcgis.com/datasets/SCAG::high-quality-transit-areas-hqta-2045-scag-region/about, accessed April 3, 2023

SCAG claims that its GIS Map "SCAG's HQTA is within one-half mile from a "major transit stop" and a "high-quality transit corridor" and developed based on the language in SB375 and codified in the CA Public Resources Code.

However, for its criteria, "SCAG uses the total population of bus trips during the combined seven–hour morning and afternoon peak periods to determine the peak frequency at a bus stop. This is done for each bus route, by direction. The peak frequency is calculated by dividing 420 minutes (the seven–hour peak converted to minutes) by the total peak bus trips. This average frequency should be 15 minutes or less in order to qualify. [emphasis added]"[10]

In addition, SCAG itself does not allow for combining routes to qualify for bus interval frequencies, but does so in certain situations:

> "Corridors with Multiple Overlapping Bus Routes
>
> Separate but overlapping bus routes that do not individually meet the 15-minute threshold **may not** be combined in order to qualify as an HQTC. However, based on RTTAC feedback, there are certain corridors where overlapping "line families" or local/bus rapid transit (BRT) lines are **intended** to function **as one bus route**. On these corridors, transit riders **typically** board the first bus available, whether it be a local, express, or BRT line. For these **line families** or **local/BRT corridors**, SCAG uses the combined routes to calculate the frequency." (*Ibid,* emph. added.)

A recent ruling from the court as against the City of Los Angeles found that combining bus routes to meet the peak-hour 15-minute intervals and to thereby qualify for a major transit stop is improper and does not qualify as substantial evidence that a particular intersection is a major transit stop as defined and contemplated by CEQA and other relevant rules and regulations, including the City's own definitions of a major transit stop. (See, **Exhibit D**, esp. pp. 16-19. [*HI Point Neighbors' Association v City of Los Angeles*; Filed March 9, 2023; LASC # 21STCP02223.])

As quoted above, SCAG provides a disclaimer and notes that its "maps and data are intended for planning purposes only. . . . [and] recommends that [l]ocal jurisdictions . . . consult with the appropriate transit provider(s) to obtain the latest information on

[10] See, https://scag.ca.gov/sites/main/files/file-attachments/twg101619fullagn.pdf?1602535716

transit routes, stop locations, and service intervals before making determinations regarding CEQA exemption[s] or streamlining." As such, these SCAG maps do not outright designate a parcel as having certain location within transit priority areas, and this data depiction is not made for purposes of evaluating a Project's environmental impacts under CEQA.

Moreover, as noted by SCAG, its maps and bus service intervals need to be verified by public agencies for currentness and accuracy. There is no evidence in the record City had performed such a verification. Our own research similarly suggests that there is no qualifying major transit stop or transit priority corridor within the ½ mile of the Project site either as required by CEQA and PRC section 21155(b).

Accordingly, the ZIMAS TPA classification, as well as SCAG's Transit Priority Area or High Quality Transit Area or Corridor, for the purposes cited in the SCEA, are irrelevant and non-binding; they are also unsupported by substantial evidence.

Therefore, the SCEA has failed to demonstrate that the Project is located within an HQTC or a major transit stop, and failed to meet the **first and foremost** critical precondition to qualify as a TPP and SCEA under CEQA. PRC section 21155(b).

C. The Project May Have a Significant Effect on Historical Resources.

The proposed Project calls for the demolition of several structures. SCEA II Project Description, p. II-7. According to the Project Application filed with the City, the Applicant indicated that a ninety-five-year-old (95) commercial structure will be removed or demolished.

According to the Cultural Resources report prepared for the SCEA, the Baker Garage structure located at the Project Site was not recommended as eligible under the California Register of Historical Resources ("**CRHR**"). SCEA Appendix C, p. 52. The Cultural Resources report, however, did recommend that the Baker Garage is eligible under the City of Los Angeles Historical-Cultural Monuments ("**HCM**") criteria 1 and 3, but did not recommend it to be eligible as a contributing resource to any historic district or eligible as a contributor to any potential historic district. *Id.* at p. 53.

Furthermore, the Cultural Resources report directly concludes that "[a]lthough the new construction and parts of the proposed renovation for the garage conform with many of the *Standards*, the loss of some of the materials, features, character, and spatial relationships of the historic building means the project does not fully comply with *Standards*. Therefore, the proposed Found

Residences Project will result in an adverse change in the significance of a historical resource and significant impacts pursuant to CEQA Section 21084.1." SCEA Appendix C, p. 59.

However, Public Resources Code section 21084.1 states:

> [a] project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment. For purposes of this section, an historical resource is a resource listed in, or determined to be eligible for listing in, the California Register of Historical Resources …. The fact that a resource is not listed in, or determined to be eligible for listing in, the California Register of Historical Resources, not included in a local register of historical resources, or not deemed significant pursuant to criteria set forth in subdivision (g) of Section 5024.1 shall not preclude a lead agency from determining whether the resources may be an historical resources for purposes of this section.

CEQA Guidelines Section 15064.5(a)(4) further echoes that, stating:

> [t]he fact that a resource is not listed in, or determined to be eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code sections 5020.1(j) or 5024.1.

As such, pursuant to both PRC section 21084.1 and CEQA Guidelines section 15064.5, the fact that a project is not listed, determined to be, or registered as a historical resource does not preclude an agency's determination that the project is a historical resource.

In turn, CEQA Guidelines § 15064.5(a)(3) provides that a resource may be treated as historical and further mandates:

> Generally, a resource **shall be** considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the

> California Register of Historical Resources (Pub. Res. Code §5024.1, Title 14 CCR, Section 4852) including the following:
>
> (A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
>
> (B) Is associated with the lives of persons important in our past;
>
> (C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
>
> (D) Has yielded, or may be likely to yield, information important in prehistory or history.

(Emph. added.)

As such, based on the fact that the Project site's 95-year-old building was expressly found as meeting criteria 1 and 3 to qualify as a historical monument HCM and also would admittedly have adverse impacts on historical resources, the City's ultimate use of a SCEA is improper since the SCEA, unlike an EIR, does not allow for identification of all feasible mitigation measures and alternatives, including alternative sites. Indeed, there is substantial evidence that the 95-year-old structure may, among other things, "embod[y] the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values." CEQA Guidelines section 15064.5(a)(3)(C).

Accordingly, the Project may result in significant impacts to historical resources and the City must prepare an EIR to study and mitigate those impacts.

D. <u>The Project May Have Significant Hazards and Hazardous Materials Impacts and Related Adverse Impacts on Human Beings, Requiring Mandatory Findings of Significance and an EIR.</u>

1. The SCEA Fails to Establish Accurate Existing Conditions to Determine the Project-Specific Hazards and Hazardous Materials Impacts and Suggests that the Project May Have Hazards Impacts Mandating an EIR.

According to CEQA Guidelines, in order for a Project to be declared a sustainable community, at a minimum, the legislative body of a city or county must find that the project does not present a risk of public health exposure in violation of state or

federal law." PRC § 21155.1. While this requirement expressly applies to sustainable community exemptions, CEQA does not expressly relieve SCEAs from evaluating the Project's specific hazards impacts. Specifically, PRC § 21155.2(b) provides:

> "(b) A transit priority project that satisfies the requirements of subdivision (a) may be reviewed through a **sustainable communities environmental assessment** as follows:
>
> (1) An initial study **shall** be prepared to identify all significant or **potentially significant impacts** of the transit priority project, **other than those** which do not need to be reviewed pursuant to **Section 21159.28** based on **substantial evidence** in **light** of the **whole record**. The initial study shall identify any **cumulative effects** that have been **adequately addressed** and **mitigated** pursuant to the requirements of this division in prior applicable certified environmental impact reports. Where the lead agency determines that a **cumulative effect** has been **adequately addressed** and mitigated, that cumulative effect shall not be treated as cumulatively considerable for the purposes of this subdivision." (Emph. added.)

In turn, PRC § 21159.28(a) provides the limited list of items that need not be analyzed in the initial study and SCEA, in reliance on prior EIRs:

> "(a) If a residential or mixed-use residential project is **consistent** with the **use designation**, **density**, **building intensity**, and **applicable policies** specified for the project area in either a **sustainable communities strategy** or an **alternative planning strategy**, for which the State Air Resources Board pursuant to subparagraph (I) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code has accepted the metropolitan planning organization's determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets and if the project incorporates the mitigation measures required by an applicable prior environmental document, then any findings or other determinations for an exemption, a negative declaration, a mitigated negative declaration, a sustainable communities environmental assessment, an environmental impact report, or addenda prepared or adopted for the project pursuant to this division **shall not** be required to

> reference, describe, or discuss **(1) growth inducing impacts**; or **(2) any project specific** or **cumulative impacts** from **cars** and **light-duty truck trips** generated by the **project** on **global warming** or the **regional transportation network**." (Emph. added.)

As such, in light of the express CEQA provisions quoted above, as well as the statutory interpretation of CEQA required to afford the fullest protection of the environment (CEQA Guidelines § 15003(f)), the project-specific impacts, including related to hazards and hazardous materials, as well as traffic noise, historical resources, and more critically the Project's direct and indirect adverse impacts on human beings is still an impact that CEQA requires agencies to study and mitigate.

In addition, CEQA still requires agencies to review the project-specific impacts defined by PRC § 21065.3. as "all the direct or indirect environmental effects of a project other than cumulative effects and growth-inducing effects." CEQA also requires mandatory findings of significance and an EIR, where, as here, the Project may have adverse impacts on human beings, including due to hazards and hazardous materials impacts. CEQA Guidelines § 15065(a)(4).

As such, the Project's SCEA here cannot neglect the project-specific effects as related to the Project's hazards and hazardous impacts, and derivatively their adverse effect on human beings.

In addition, according to CEQA Guidelines § 15125(a),

> "[a]n EIR must include a description of the physical environmental conditions in the vicinity of the project. This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant. The description of the environmental setting shall be no longer than necessary to provide an understanding of the significant effects of the proposed project and its alternatives. The purpose of this requirement is to give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts."

Furthermore, CEQA Guidelines Section 15125(a) states that "[g]enerally, the lead agency should describe physical environmental conditions as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced . . ." While the above-noted requirement

expressly applies to EIRs, it is inherently applicable to all types of environmental analysis, since an accurate baseline is required to measure the Project's impacts. Without an adequate baseline description, "analysis of impacts, mitigation measures and project alternatives becomes impossible." *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 953; Guidelines § 15125(a). " 'An EIR must include a description of the physical environmental conditions in the vicinity of the project, as they exist at the time the notice of preparation is published, or if no notice of preparation is published, at the time environmental analysis is commenced, from both a local and regional perspective. *This environmental setting will normally constitute the baseline physical conditions by which a lead agency determines whether an impact is significant.*'" *Communities for a Better Environment v. South Coast Air Quality Management Dist.* (2010) 48 Cal.4th 310, 320–321 (emphasis orig.)

As discussed in detail below, the circulated Phase I Environmental Site Assessment ("**ESA**") by CBRE, Inc., that the Project's SCEA relies upon, is manifestly incomplete; its conclusions are unsupported and inaccurate. Hence, SCEA's conclusions that the Project may not have adverse impacts on human beings or hazards impacts is unsupported. A new Phase I ESA is required, to adequately disclose the Project's project-specific hazards effects on the environment, including its adverse impacts on human beings and to support SCEA's findings.

2. *Background on Phase I, II, and III Environmental Site Assessments*

The preparation of a Phase I Environmental Site Assessment is "to research the current and historical uses of a property as part of a commercial real estate transaction" and "to assess if current or historical property uses have impacted the soil or groundwater beneath the property and could pose a threat to the environment and/or human health."[11]

As explained by experts in the field of ESA:

> The primary difference between Phase I and Phase II site assessment lies in the scopes of work of the assessment. A Phase I primarily assesses the

[11] Jenny Redlin, REPA, Partner Engineering and Science, Inc., *What is a Phase I Environmental Site Assessment* (Apr. 9, 2018), *available at* https://www.partneresi.com/resources/articles/what-is-a-phase-i-environmental-site-assessment/#:~:text=A%20Phase%20I%20Environmental%20Site%20Assessment%2C%20commonly%20referred%20to%20as,a%20commercial%20real%20estate%20transaction. (accessed on June 22, 2023).

likelihood that a site is contaminated through visual observations, historical use reviews and regulatory records, while a Phase II assesses whether contamination is in fact present. Here are the components of each.

Phase I Environmental Site Assessment

Review of records, to discover whether the site has been used for potentially hazardous purposes in the past.

Visual inspection of the property's current condition, with comparison to site plans.

Visual inspection of adjoining properties.

Interviews with current property owners, operators, occupants, and local government officials.
Goal: Assess likelihood that property has been contaminated.

Phase II Environmental Site Assessment

Soil and water sampling for signs of contamination.

Comparison of lab results with local, state, and federal regulatory guidelines.

May include inspection of interior spaces for mold, radon, or lead paint.

May include identification of wetlands, ecological resources, or endangered species that may prevent certain land uses.

Goal: Assess actual presence of environmental contaminants.

Phase III Site Assessment

A Phase III Site Assessment is called for only when contamination has been identified. A Phase III Assessment determines the extent of the contamination, both horizontally and vertically, and forms the basis for preparing a remediation plan, and estimation of the cost for remediation. Buyers and lenders use the Phase III Assessment as a negotiating tool with the sellers to ensure the property they purchase yields the benefit they expect.[12]

[12] https://www.gleassociates.com/phase-i-versus-phase-ii-environmental-site-assessments/

Because here Phase I ESA was incomplete, the Project avoided an adequate Phase II and potentially Phase III to conclusively determine if the Project site may not have hazards impacts and related adverse impacts on human beings.

Standards for performing a Phase I ESA have been established by the US Environmental Protection Agency ("**EPA**") and the American Society for Testing and Materials Standards ("**ASTM**").[13]

3. The Phase I ESA Is Inadequate Because It Omits the Vast Majority of the Parcels Encompassing the Project Site and It Is Outdated

The Project involves two (2) parcels: Assessor Parcel Numbers ("**APN**") 5546-013-002 and 5546-013-003 located at 6422 Selma Avenue, portions of 1540-1552 North Wilcox Avenue, Lots 2, 3 4, and 5 of Tract Number 1754. [14] Yet, according to the SCEA Exhibit E Phase I ESA, the report only documented findings on the 6422 Selma Avenue property, but makes no reference to the other pertinent properties located at 1540-1552 North Wilcox Avenue.[15] As such, the Phase I ESA fails to consider the hazards or lack thereof on *all* of the Project's site, and cannot be relied upon to conclude that the Project may have no hazards impacts.

In addition, the Phase I ESA was prepared on September 14, 2018, which is now *nearly five (5) years ago*. *See*, SCEA, Appendix E. The Project Site's conditions very well may have changed over the past five (5) years.

Even further – and detailed below – the Phase I ESA relies upon ASTM Standard Practice E1527-13 ("**E1527-13**"), which has since been replaced with a more stringent standard, ASTM E1527-21 ("**E1527-21**").

Therefore, the SCEA should be revised and recirculated to include a new Phase I ESA that properly evaluates *all* of the Project-related parcels and pursuant to the more recently adopted and more stringent E1527-21.

4. The Phase I ESA Improperly Relies on ASTM 1527-13 While the EPA Recently Adopted and Validated ASTM 1527-21

---

[13] *See*, https://www.astm.org/e1527-21.html (last updated on Dec. 21, 2021.)
[14] SCEA, Appendix E Hazards, Phase I Environmental Site Assessment ("**Appendix E**" or "**Phase I ESA**") (Sept. 14, 2018), p. II-1.
[15] *Id.* at p. 1.

As noted above, the Phase I ESA is incomplete and inaccurate for purposes of CEQA because it only uses the obsolete ASTM E1527-13, while the nonprofit organization ASTM International, founded as the American Society for Testing and Materials, has long adopted its more stringent ASTM Standard Practice E1527-21, which is in fact more rigorous than its predecessor E1527-13. Because Phase I ESA relies upon the E1527-13 methodology recommended by ASTM International to identify Recognized Environmental Conditions ("**RECs**") in connection with the Project Site, it fails to adequately disclose the potential RECs on the Project site and, as related, the Project-specific potential hazards and hazardous impacts and adverse impacts on human beings.[16]

Specifically,

- "Under **ASTM E1527-13**, a REC is defined as the **presence** or **likely presence** of **any hazardous substances** or petroleum products in, on, or at a property: (1) due to **release** to the environment; (2) under **conditions indicative** of a release to the environment; or (3) under conditions that **pose** a **material threat** of a future release to the environment.
- Under **ASTM E1527-21**, a REC means (1) the **presence** of hazardous substances or petroleum due to a release to the environment; (2) the ***likely* presence** of hazardous substances or petroleum products due to a ***likely* release** to the environment; or (3) the presence of hazardous substances or petroleum products under conditions that pose a material threat of a future release to the environment. Further, the new standard provides clarifying discussion notes and examples to assist the environmental professional in applying the definition. Together, the new definition and interpretations direct a consultant to rely on the environmental professional's experience regarding the ***likelihood*** of certain conditions resulting in releases, such as the long term operation of a dry cleaner, instead of discounting that professional experience

[16] *Id.* at p. 2.

> based on the lack of current "indications of a release."[17] (ital. original, bold emphasis added.)

Notably, EPA adopted the new rule in March of 2022 to follow ASTM's E1527-21 standards, and then again reaffirmed its resolve and mandated other agencies and persons to follow E1527-21 by imposing a clear sunset for the ASTM E1527-13 rule, as of on December 15, 2022, which is after the Project's Phase I ESA date of publication on September 19, 2022. *See*, **Exhibit E**.

Thus, a new Phase I ESA should be prepared that, among other things, follows the newly adopted ASTM E1527-21 standards and discloses the Project site's RECs under the new and more comprehensive definition of RECs.

5. The Phase I ESA's Conclusion that the Project Site Contains No Recognized Environmental Conditions Is Unsupported.

By improperly applying ASTM E1527-13 to define a recognized environmental condition, the Phase I ESA critically missed and failed to disclose various hazardous conditions on the site which are essential for purposes of CEQA. It concludes that no evidence of RECs were identified during the assessment.[18]

However, as noted above, the ASTM has long revised its standards and the EPA adopted ASTM's new and more expansive definition of REC. This was not done to relax the standard, but rather, to make it more stringent. The Phase I ESA fails this standard as it relaxes the requirements and, as a result, curtails the needed disclosure.

Accordingly, as shown under the ASTM E1527-21 definition of a REC, the use of the phrases, "likely presence," or "likely release," are more stringent than the REC definition in E1527-13, which leaves out the potential impact for purposes of CEQA. The newer E1527-21, on the other hand, encompasses those concerns.

The Project would clearly have not passed the test under E1527-21, since its ESA would have to disclose numerous RECs on site and would, as a result require further testing and studies in the form of an ESA II and III.

As an example, such RECs would include the Site's prior use for auto repair purposes in the 1920s (*See*, Phase I ESA Appendix E, *supra*, p. 14), and the adjacent properties

[17] https://www.quarles.com/publications/epa-approves-astm-e1527-21-phase-i-esa-standard-for-all-appropriate-inquiry/
[18] *Id.* at p. 44.

located on Selma Avenue and Wilcox Avenue that were historically used as gas stations, automobile repair shops, automobile parts shops, and a potential dry cleaner shop (*see,* Appendix E, pp. 17-21.)

As stated by experts Geo Forward[19]:

> Among other chemicals, Benzene, Toluene, Ethylbenzene and Xylenes (BTEX) are the primary chemicals of concern in gasoline and diesel contamination sites. Additionally, tertiary butyl alcohol (TBA) and methyl tertiary-butyl ether (MTBE) were octane-enhancer additives which were also part of the gasoline formulas in the 1980s. Moreover, each of these constituents have breakdown products.
>
> In order to analyze soil and groundwater for these chemicals, geologists run laboratory analytics for total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs).

(See, **Exhibit F**.)[20]

The impacts of such chemicals on human health are undisputed and well-known to the City and must be disclosed.[21]

Of further note, All Appropriate Inquiries ("**AAI**") compliance, which is a focus of the ESA or EPA, is different from CEQA compliance. According to the EPA, the AAI standard's objective "is to conduct inquiries into past uses and ownerships of a property and visually inspect the property to identify conditions indicative of releases and threatened releases of hazardous substances on, at, in, or to the subject property."[22] Accordingly, AAI can be performed in compliance with either ASTM E1527-21 or E2247-16 in order to protect innocent landowners, contiguous property

County of Fresno (Friant Ranch); especially at pp. I-29—I-44, https://planning.lacity.org/odocument/e1a00fbf-6134-4fa9-b6fd-54eee631effb/City_of_LA_-_Air_Quality_and_Health_Effects_and_Attachments.pdf

[22] EPA, *Brownfields All Appropriate Inquiries* (last updated Jan. 17, 2023), *available at* https://www.epa.gov/brownfields/brownfields-all-appropriate-inquiries#:~:text=The%20final%20AAI%20rule%20is,or%20to%20the%20subject%20property (accessed on May 5, 2023).

owners, or bona fide prospective purchasers from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act ("**CERCLA**").[23]

CEQA, on the other hand, is intended "to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." *Friends of Mammoth v. Board of Supervisors* (1972) 8 Cal.3d 247, 259. Accordingly, if substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen,* 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of "B" St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

For this reason, too, the fact that the EPA provides for sunset of February 2024 for the use of the older ASTM standard and allows its use at the time for purposes of CERCLA liability does not yet mean that the Project, with the manifestly potential RECs under the more updated standard, may not have impacts for purposes of CEQA that require good faith disclosures, remedial activity, and mitigation.

6. The ESA Site Contains Potential Recognized Environmental Conditions and Potential Hazard Risks that Are Unaccounted For

The Phase I ESA expressly states that various adjacent properties to the Project Site have been used for gasoline stations and a potential dry cleaner.[24] Taken with the fact that the Project Site was never studied for soil contamination for the Project proposed, altogether this suggests that the Project Site may have soil contamination on-site. Similarly, the fact that the Project Site is adjacent to *other* previous automobile-related uses, including auto parts shops, auto repair shops (Appendix E, pp. 16-18), further suggests that it may be subject to the REC.

While such contamination is now contained and intact without the Project, the Project – with its massive construction, grading, and demolition activity – may exacerbate those conditions by disturbing the contaminated soils and hazardous materials on site.

[23] *Id.*
[24] Appendix E, *supra*, at p. 21.

Even further, the Phase I ESA directly acknowledges that various business environmental risks ("**BERs**") were identified which warrant mention: asbestos-containing material ("**ACM**").[25] In addition, the demolition of the 95-year-old structure may present hazards related to lead and other hazardous materials, which can have further adverse impacts on human beings.

It is undisputed that both *lead* and *asbestos* are dangerous to people's health. While intact asbestos by itself may not be hazardous, damaged or disturbed asbestos may release asbestos fibers and become a health hazard.[26] Per Occupational Health and Safety Administration's ("**OSHA**") description:

> **What are the hazards of asbestos?**
>
> Asbestos is well recognized as a health hazard and its use is now highly regulated by both OSHA and EPA. Asbestos fibers associated with these health risks are too small to be seen with the naked eye. Breathing asbestos fibers can cause a buildup of scar-like tissue in the lungs called asbestosis and result in loss of lung function that often progresses to disability and death. Asbestos also causes cancer of the lung and other diseases such as mesothelioma of the pleura which is a fatal malignant tumor of the membrane lining the cavity of the lung or stomach. Epidemiologic evidence has increasingly shown that all asbestos fiber types, including the most commonly used form of asbestos, chrysotile, causes mesothelioma in humans.

(OSHA's Definition of "Asbestos" on its Official Website.)[27]

Similarly, *lead* is dangerous to people and their families. Per OSHA's report:

> Lead has been poisoning workers for thousands of years. Lead can damage the central nervous system, cardiovascular system, reproductive system, hematological system, and kidneys. When absorbed into the body in high enough doses, lead can be toxic.

---

[25] *Id.* at p. 1.

[26] *See*, https://www.cpsc.gov/safety-education/safety-guides/home/asbestos-home; *see also*, medical conditions associated with asbestos: https://www.atsdr.cdc.gov/asbestos/health_effects_asbestos.html

[27] *See,* https://www.osha.gov/asbestos

> In addition, workers' lead exposure can harm their children's development. Short-term (acute) overexposure–as short as days--can cause acute encephalopathy, a condition affecting the brain that develops quickly into seizures, coma, and death from cardiorespiratory arrest.
>
> Short-term occupational exposures of this type are highly unusual but not impossible. Extended, long-term (chronic) overexposure can result in severe damage to the central nervous system, particularly the brain. It can also damage the blood-forming, urinary, and reproductive systems. There is no sharp dividing line between rapidly developing acute effects of lead and chronic effects that take longer to develop.

(OSHA report, 2004 *Lead in Construction,* p. 3)[28]

OSHA also documents the adverse effects of lead on people's reproductive health:

> REPRODUCTIVE RISKS
>
> Lead is toxic to both male and female reproductive systems. Lead can alter the structure of sperm cells and there is evidence of miscarriage and stillbirth in women exposed to lead or whose partners have been exposed. Children born to parents who were exposed to excess lead levels are more likely to have birth defects, mental retardation, or behavioral disorders or to die during the first year of childhood.
>
> Workers who desire medical advice about reproductive issues related to lead should contact qualified medical personnel to arrange for a job evaluation and medical followup--particularly if they are pregnant or actively seeking to have a child. Employers whose employees may be exposed to lead and who have been contacted by employees with concerns about reproductive issues must make medical examinations and consultations available.

(OSHA report, 2004 *Lead in Construction,* p. 4.)

The Project's unmitigated impacts of lead and asbestos (and the disturbance of the soil of a potentially contaminated site, as discussed *supra*) may have significant impacts and broader consequences, including through polluting the groundwater and the

[28] See, https://www.osha.gov/sites/default/files/publications/osha3142.pdf

surface waters next to the Project. As described by the report on the Federal Aviation Administration's website:

> Water resources are surface waters and groundwater that are important in providing drinking water and in supporting recreation, transportation and commerce, industry, agriculture, and aquatic ecosystems. **Surface** water, **groundwater**, **floodplains**, and **wetlands do not** function as **separate** and isolated components of the watershed, but rather as a **single**, **integrated** natural system. **Disruption** of any one part of this system can have **consequences** to the functioning of the **entire** system.
>
> ….
>
> 14.1. Wetlands
>
> For regulatory purposes under the Clean Water Act (CWA), the term wetlands means areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. Areas covered with water for such a short time that there is no effect on moist-soil vegetation are not considered wetlands, nor are the waters of streams, reservoirs, and deep lakes. **Wetlands** provide many benefits to the **human**, **biological**, and **hydrological** environment, including **habitat** for **fish** and **wildlife**, **water quality** improvement, **flood storage**, and opportunities for **recreation**.

(FAA Report/Publication, 2/2020, p. 14-2, emph. added.)[29]

CEQA Guidelines mandate: "*Special emphasis should be placed on environmental resources that are rare or unique to that region and would be affected by the project.* The EIR must ... permit the significant effects of the project to be considered in the full environmental context." (CEQA Guidelines § 15125(c), italics added.) The CEQA document here fails this mandate.

For all of the foregoing reasons, the Project does not qualify for a SCEA because it may have hazard and hazardous materials impacts and related adverse impacts on

[29] See also, various regulations to protect wetlands from potential adverse impacts at pp. 14-2—5: https://www.faa.gov/about/office_org/headquarters_offices/apl/environ_policy_guidance/policy/faa_nepa_order/desk_ref/media/14-water-resources.pdf

human beings, and even present a risk of public health exposure in violation of state or federal law, requiring an EIR.

E. SCEA Fails to Incorporate All Feasible Mitigation Measures from Prior Environmental Impact Reports

Section 21155.2 of the Cal. Public Resources Code requires that a transit priority project incorporate all feasible mitigation measures, performance standards, or criteria from prior applicable environmental impact reports. However, the Project's SCEA expressly rejects many, if not most, of the applicable mitigation measures identified in SCAG's 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("**2020-2045 RTP/SCS**" or "**Connect SoCal**"; and its respective Plan Environmental Impact Report[30] without making a feasibility determination.

First, the SCEA fails to incorporate SCAG's provided feasible mitigation measures; instead, it claims it complies with those based on its compliance with various standard regulations and would thereby reduce the Project's impacts to less than significant levels, obviating the need for SCAG's Mitigation Measures.

For example, for SCAG's Mitigation Measure PMM-GEO-1, the SCEA states that:

> the Proposed Project already complies to this Mitigation Measure as it is subject to the building construction protocols for reducing seismic hazards as provided in the Los Angeles Municipal Code and applicable regulations. Compliance would help avoid or reduce the potentially significant effects on the potential for projects to result in the exposure of people and infrastructure to the effects of earthquakes, seismic related ground-failure, liquefaction, and seismically induced landslides, that are in the jurisdiction and responsibility of public agencies, regulatory agencies, and/or Lead agencies. The Proposed Project would also comply with all seismic standards provided in the California Building Code . . .

SCEA, Appendix A, p. A-21.

[30] SCAG (Sept. 3, 2020) A Resolution of the Southern California Association of Governments (SCAG) Adopting the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Addendum and Approving Connect SoCal in its Entirety, Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_ revisedmmrp.pdf?1606004474 at pp. 2 – 52.

In other words, the SCEA conflates SCAG's Mitigation Measures with simply compliance with the law and suggests that the City or the Applicant had a legal option not to comply with the law or that SCAG's Mitigation Measures contain no further requirement. As a result of such erroneous assumptions, the SCEA fails to assess the need for or the feasibility of implementing SCAG's Mitigation Measure PMM-GEO-1.

Similarly, for Mitigation Measure PMM HYD-1, the SCEA states that "[f]ull compliance with the LID Plan, SUSMP, and implementation of design-related best management practices would ensure operation of the Proposed Project would not violate any water quality standards and discharge requirements or otherwise substantially degrade water quality" and thus concludes that the Project "would result in a less than significant impact" and that "[n]o mitigation is required and this mitigation measure is not applicable." SCEA, Appendix A, p. A-30.

Stated otherwise, the SCEA relies on standard and non-site-specific regulatory compliance measures to conclude that the project would have no impacts and therefore no further mitigation measures or SCAG's Mitigation Measures are required. Not so. According to CEQA Guidelines section 15064(b)(2), "[c]ompliance with the threshold does not relieve a lead agency of the obligation to consider substantial evidence indicating that the project's environmental effects may still be significant." See also, *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 885 ("Thresholds of significance are not used to determine automatically whether a given effect will or will not be significant. Instead, thresholds of significance are indicative only that an environmental effect that crosses the threshold "'will *normally* be determined to be significant,'" while effects not crossing the threshold "'*normally* will be determined to be less than significant'" by the agency".)

Moreover, it is well-settled that "[c]ompliance with the law is not enough to support a finding of no significant impact under . . . CEQA." *Californians for Alternatives to Toxics v. Department of Food & Agriculture* (2005) 136 Cal. App. 4th 1, 15 – 17 (finding that a lead agency "abused its discretion by relying on DPR's regulatory scheme as a substitute for performing its own evaluation of the environmental impacts of using pesticides."). *See also*, *Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project); *California Clean Energy Committee v. City of Woodland* (2014) 225 Cal.App.4th 173, 210-211 ("Although the

Building Code applies to all nonresidential buildings, it does not extend beyond the buildings themselves. It addresses the building's envelope, exterior lighting, and signage").

Further, bare conclusions or opinions of the agency are not sufficient to satisfy an agency's obligation under CEQA to support its environmental findings. (*Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 403 – 404 ["To facilitate CEQA's informational role, the EIR must contain facts and analysis, not just the agency's bare conclusions or opinions. . . . [to] enable[] the decision-makers and the public to make an 'independent, reasoned judgment' about a proposed project." (*Concerned Citizens of Costa Mesa, Inc. v. 32nd Dist. Agricultural Assn.* (1986) 42 Cal.3d 929, 935 [(quoting *Santiago County Water Dist. v. County of Orange* (1981) 118 Cal.App.3d 818, 831.]")

Second and similarly, the SCEA unlawfully fails to incorporate feasible mitigation measures simply on the basis that the SCEA did not identify a potentially significant impact. For example, for PMM AES-1, the SCEA concludes that the Mitigation Measure is not applicable and finds that the "proposed project's aesthetic impacts shall not be considered significant impacts on the environment pursuant to PRC § 21099." SCEA Appendix A, p. A-1. Similarly, for Mitigation Measure PMM AQ-1, the SCEA states that upon compliance with the South Coast Air Quality Management District ("**SCAQMD**"), the Mitigation Measure's requirements would be satisfied and concludes that because the impacts on Air Quality were found to be less than significant, the Mitigation Measure is not required. SCEA Appendix A, p. A-5.

The Project is required to incorporate all of SCAG's feasible mitigation measures, regardless of whether the SCEA itself identifies a potentially significant impact. PRC § 21155.2 subd. (a) is unambiguous in stating that transit priority projects must incorporate "**all feasible mitigation measures**, performance standards or criteria set forth in prior environmental impact reports," irrespective of whether the SCEA finds a less than significant impact. The SCEA fails to address the feasibility of measures not incorporated into the Project, and thus fails to meet the requirements of PRC § 21155.2.

F. Background Concerning SCAG's RTP/SCS

Senate Bill No. 375 requires regional planning agencies to include a sustainable communities strategy in their regional transportation plans. Gov. Code § 65080, sub.(b)(2)(B).) PRC § 21155(a) provides that the chapter 4.2 on the "Implementation

of the Sustainable Communities Strategy," which includes both PRC § 21155.1 (TTP exemption) and PRC § 21155.2 (SCEA) provisions, "applies only to a transit priority project that is consistent with …. applicable policies specified for the project area in either a sustainable communities strategy or an **alternative planning strategy**, for which the State Air Resources Board, pursuant to subparagraph (H) of paragraph (2) of subdivision (b) of Section 65080 of the Government Code, has accepted a **metropolitan planning organization's determination** that the sustainable community strategy or the **alternative planning strategy** would, if implemented, achieve the greenhouse gas emission reduction targets." [Emphasis added.]

The metropolitan planning organization for the Project area is SCAG and its respective planning strategy is incorporated in the RTP/SCS:

> Southern California Association of Governments (SCAG) is the largest MPO in California, covering six counties and 191 cities in the Southern California region. It is the transportation planning agency responsible for developing and implementing the long-range regional transportation plan, known as the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).
>
> The 2016 RTP/SCS continues to emphasize the key land use and transportation strategies in the first SCS that support a more sustainable future for the SCAG region. SCAG anticipates new growth will occur within existing urban boundaries with higher density development instead of sprawling outward. The 2016 SCS continues on the course set by the 2012 SCS to direct transportation investments within existing urbanized areas to support a more compact urban form. It includes an extensive regional bus and bus rapid transit (BRT) system, improved commuter and light rail service, an expanded regional bicycle network, improved pedestrian infrastructure, dedicated highway lanes for carpool and express buses, and several transportation demand management programs that reduce the number of vehicle trips.[31]

[31] See, https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-program/regional-plans-evaluations/southern-california ; see also: (1) CARB Executive Order accepting the Southern California Association of Governments' (SCAG) determination that the Final SCS would meet the region's GHG emissions reduction targets (October 2020); (2) CARB staff's technical evaluation of SCAG's Final Sustainable

Moreover, CEQA Guidelines § 15125(d) provides that the agency "shall discuss any inconsistencies between the proposed project and … regional plans. Such regional plans include … regional transportation plans." Thus, CEQA requires analysis of any inconsistencies between the Project and the relevant RTP/SCS plan.

In April 2016, SCAG adopted the 2016 – 2040 Regional Transportation Plan/Sustainable Communities Strategy ("**2016-2040 RTP/SCS**"),[32] which includes policies and strategies to help the region achieve GHG emission reductions that would reduce the region's per capita transportation emissions by eight percent by 2020 and 18 percent by 2035.[33] SCAG's RTP/SCS plan is based upon the same requirements outlined in CARB's 2017 Scoping Plan and SB 375.

On September 3, 2020, SCAG adopted the 2020 – 2045 Regional Transportation Plan/Sustainable Communities Strategy, titled Connect SoCal.[34] The 2020 RTP / SCS adopts policies and strategies aimed at reducing the region's per capita greenhouse gas emissions by 8% below 2005 per capita emissions levels by 2020 and 19% below 2005 per capita emissions levels by 2035.[35]

For both the 2016-2040 and the 2020-2045 RTP/SCS and Connect SoCal, SCAG prepared Program Environmental Impact Reports ("**PEIRs**") that include Mitigation

Monitoring and Reporting Programs ("**MMRP**") that list project-level environmental mitigation measures that directly and/or indirectly relate to a project's GHG impacts and contribution to the region's GHG emissions.[36] These environmental mitigation measures serve to help local municipalities when identifying mitigation to reduce impacts on a project-specific basis that can and should be implemented when they identify and mitigate project-specific environmental impacts.

G. The SCEA Fails to Demonstrate Consistency with SCAG's RTP/SCS

A review of the RPT/SCS demonstrates that the proposed Project is inconsistent with several of its measures, including but not limited to, the analysis below:

SCAG RTP/SCS 2020-2045[37]
Air Quality Project Level Mitigation Measures – PMM-AQ-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:

[36] SCAG (April 7, 2016) Resolution No. 16-578-1: A Resolution of the Southern California Association of Government Certifying the Final Program Environmental Impact Report Prepared for the 2016 – 2040 Regional Transportation Plan / Sustainable Communities Strategy (SCH#2015031035) and Adopting Findings of Fact, a Statement of Overriding Considerations and a Mitigation, Monitoring and Reporting Program Pursuant to the California Environmental Quality Act, Exhibit B, "Mitigation Monitoring and Reporting Program," available at http://www.scag.ca.gov/sites/main/files/file-attachments/2016fpeir_exhibitb_mmrp.pdf?1623887711; see also SCAG (Sept. 3, 2020) A Resolution of the Southern California Association of Governments (SCAG) Adopting the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Addendum and Approving Connect SoCal in its Entirety, Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/resolution-no-20-624-1_connectsocal_peir.pdf?1606004464.

[37] 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) Program Environmental Impact Report (PEIR) Exhibit A, "Revised Mitigation Monitoring and Reporting Program, available at https://scag.ca.gov/sites/main/files/file-attachments/exhibit-a_connectsocal_peir_revisedmmrp.pdf?1606004474

SCAG RTP/SCS 2020-2045[37]	
a) Minimize land disturbance.	Here, the SCEA fails to discuss the feasibility of minimizing land disturbance. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.	Here, the SCEA fails to require suspending grading and earth moving when wind gusts exceed 25 mph. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
c) Cover trucks when hauling dirt.	Here, the SCEA fails to require trucks to be covered during dirt hauling. This is particularly critical where, as here, the Project involves a massive demolition of a 95-year-old structure. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
d) Stabilize the surface of dirt piles if not removed immediately.	The SCEA fails to discuss the feasibility of stabilizing the surface of dirt piles if not removed immediately. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

SCAG RTP/SCS 2020-2045[37]	
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.	Here, the SCEA fails to evaluate the feasibility of limiting vehicular paths on unpaved surfaces and stabilizing any temporary roads. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
f) Minimize unnecessary vehicular and machinery activities.	Here, the SCEA fails to evaluate the feasibility of minimizing unnecessary vehicular and machinery activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	The SCEA fails to specifically require the Project to sweep paved streets at least once per day where there is evidence that dirt has been carried onto the roadway. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

SCAG RTP/SCS 2020-2045[37]	
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.	Here, the SCEA fails to mention or evaluate the feasibility of revegetating disturbed land, including vehicular paths created during construction. The SCEA also fails to mention avoiding future off-road vehicular activities. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.	Here, the SCEA fails to evaluate the feasibility of requiring contractors to assemble comprehensive inventory lists of all heavy-duty off- road equipment that could be use dan aggregate of 40 or more hours for the Project. The SCEA also fails to mention or evaluate the feasibility of preparing a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
k) Ensure that all construction equipment is properly tuned and maintained.	Here, the SCEA fails to discuss the feasibility of ensuring that all construction equipment is properly tuned and maintained. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

SCAG RTP/SCS 2020-2045[37]	
l) Minimize idling time to 5 minutes or beyond regulatory requirements—saves fuel and reduces emissions.	Here, the SCEA fails to discuss the feasibility of minimizing idling time to 5 minutes or beyond regulatory requirements. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	Here, the SCEA fails to discuss the feasibility of providing an operational water truck on-site at all times or using watering trucks to minimize As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.	Here, the SCEA fails to discuss the feasibility of utilizing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours.	Here, the SCEA fails to evaluate the feasibility of developing a traffic plan to minimize traffic flow interference from construction activities. As such, we are unable to verify that the listed measures will be implemented, monitored, and enforced on the

SCAG RTP/SCS 2020-2045[37]	
Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.	Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.	Here, the SCEA fails to evaluate the feasibility of requiring that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. The SCEA also fails to mention or discuss arranging appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the Project site. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
Greenhouse Gas Project Level Mitigation Measures – PMM-GHG-1: In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the *State CEQA Guidelines*, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Integrate green building measures consistent with CALGreen (California Building Code Title 24), local building	Here, while the SCEA states that the Project would comply with the CARB 2017 Scoping Plan and SCAG's 2020 Connect SoCal Plan, the SCEA fails to integrate Green Building measures.

SCAG RTP/SCS 2020-2045[37]	
codes and other applicable laws, into project design including: i. Use energy efficient materials in building design, construction, rehabilitation, and retrofit. ii. Install energy-efficient lighting, heating, and cooling systems (cogeneration); water heaters; appliances; equipment; and control systems. iii. Reduce lighting, heating, and cooling needs by taking advantage of light-colored roofs, and sunlight. iv. Incorporate passive environmental control systems that account for the characteristics of the natural environment. v. Use high-efficiency lighting and cooking devices. vi. Incorporate passive solar design. vii. Use high-reflectivity building materials and multiple glazing. viii. Prohibit gas-powered landscape maintenance equipment. ix. Reduce wood burning stoves or fireplaces. x. Provide bike lanes accessibility and parking at residential developments.	Specifically, the SCEA fails to discuss using energy efficient materials; installing energy- efficient lighting, heating, and cooling systems, water heaters, equipment, and control systems; reducing lighting, heating, and cooling needs by taking advantage of light-colored roofs and sunlight; incorporating passive environmental control systems; using high-efficiency lighting and cooking devices; incorporating passive solar design; using high-reflectivity building materials; prohibiting gas-powered landscape maintenance equipment; reducing wood burning stoves or fireplaces; and/or providing bike lanes accessibility and parking. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination. (SCEA Appendix A, pp. A-22-23.)

SCAG RTP/SCS 2020-2045[37]	
b) Reduce emissions resulting from projects through implementation of project features, project design, or other measures, such as those described in Appendix F of the State CEQA Guidelines.	Here, the SCEA fails to mention or utilize measures described in Appendix F of the State CEQA Guidelines. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
c)Include off-site measures to mitigate a project's emissions.	Here, the SCEA fails to mention or discuss the feasibility of including off-site measures to mitigate the Project's emissions. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
d) Measures that consider incorporation of Best Available Control Technology (BACT) during design, construction and operation of projects to minimize GHG emissions, including but not limited to: i. Use energy and fuel-efficient vehicles and equipment; ii. Deployment of zero- and/or near zero emission technologies; iii. Use lighting systems that are energy efficient, such as LED technology; iv. Use the minimum feasible amount of GHG- emitting construction materials;	Here, the SCEA fails to evaluate the feasibility of incorporating BACT during design, construction, and operation of the Project. Specifically, the SCEA fails to mention or evaluate the feasibility of using energy and fuel-efficient vehicles and equipment; deploying zero- and/or near zero emission technologies; using the minimum feasible amount of GHG-emitting construction materials; using cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; incorporating design measures to reduce energy consumption and increase use of renewable energy; using lighter- colored pavement where feasible; and/or

SCAG RTP/SCS 2020-2045[37]	
v. Use cement blended with the maximum feasible amount of flash or other materials that reduce GHG emissions from cement production; vi. Incorporate design measures to reduce energy consumption and increase use of renewable energy; vii. Incorporate design measures to reduce water consumption; viii. Use lighter-colored pavement where feasible; and ix. Solicit bids that include concepts listed above.	soliciting bids that include the concepts listed above. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
Measures that encourage transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies, including, but not limited to the following: i. Increase bicycle carrying capacity on transit and rail vehicles; ii. Increase access to common goods and services, such as groceries, schools, and day care; iii. Incorporate affordable housing into the project; iv. Incorporate the neighborhood electric vehicle network;	Here, the SCEA fails to evaluate the feasibility of incorporating measures that include transit use, carpooling, bike-share and car-share programs, active transportation, and parking strategies. Specifically, the SCEA fails to mention or evaluate the feasibility of increasing bicycle carrying capacity on transit and rail vehicles; increasing access to common goods and services, such as groceries, schools, and day care; incorporating affordable housing into the project; orienting the project toward transit, bicycle and pedestrian facilities; improving pedestrian or bicycle networks, or transit service; providing traffic calming measures; providing bicycle parking; limiting or eliminating park supply; unbundling parking costs; providing parking cash-

SCAG RTP/SCS 2020-2045[37]	
v. Orient the project toward transit, bicycle and pedestrian facilities; vi. Improve pedestrian or bicycle networks, or transit service; vii. Provide traffic calming measures; viii. Provide bicycle parking; ix. Limit or eliminate park supply; x. Unbundle parking costs; xi. Provide parking cash-out programs; and xii. Implement or provide access to commute reduction program	out programs; and/or implementing or providing access to commute reduction programs. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
f. Incorporate bicycle and pedestrian facilities into project designs and maintaining these facilities; and planning for and building local bicycle projects that connect with the regional network;	Here, the SCEA fails to evaluate the feasibility of incorporating bicycle and pedestrian facilities into Project design and maintaining these facilities. The SCEA also fails to mention or discuss the feasibility of planning for and building local bicycle projects that connect with the regional network. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

SCAG RTP/SCS 2020-2045[37]	
g. Improving transit access to rail and bus routes by incentives for construction and transit facilities within developments, and/or providing dedicated shuttle service to transit stations;	Here, the SCEA fails to provide incentives for construction and transit facilities within the development to improve transit access to rail and bus routes. The SCEA also fails to mention or provide dedicated shuttle service to transit stations. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
h. Designate a percentage of parking spaces for ride-sharing vehicles or high-occupancy vehicles, and provide adequate passenger loading and unloading for those vehicles;	Here, the SCEA fails to discuss the feasibility of or designate a percentage of parking spaces for ride- sharing or high-occupancy vehicles. The SCEA also fails to mention or discuss the feasibility of providing adequate passenger loading and unloading for those vehicles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.
j. Land use siting and design measures that reduce GHG emissions, including: iii. Measures that increase vehicle efficiency, encourage use of zero and low emissions vehicles, or reduce the carbon content of fuels, including constructing or encouraging construction of electric vehicle charging stations or neighborhood electric vehicle networks, or charging for electric bicycles	Here, the SCEA fails to discuss measures that increase vehicle efficiency, including encouraging the use of zero and low emissions vehicles, and/or reducing the carbon content of fuels, and/or charging for electric bicycles. As such, the proposed Project is not consistent with this measure and the SCEA lacks substantial evidence to support its consistency determination.

As the table above indicates, the SCEA fails to provide sufficient information and analysis to determine the Project's consistency with numerous measures under SCAG's 2020-2045 *RTP/SCS*.

H. The SCEA Fails to Adequately Assess and Mitigate Impacts on Noise

If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are "acceptable due to overriding concerns." CEQA Guidelines § 15092(b)(2)(A–B).

The SCEA here finds that the construction of the Project would have the potential to result in significant noise impacts at off-site sensitive receptor locations from on-site construction activities via construction equipment. SCEA Appendix F, p. 17. These impacts are particularly detrimental given that the SCEA identifies at least four (4) sensitive receptor locations, Locations #1-4, within 500 feet of the Project Site. *Id.* Accordingly, the SCEA imposes mitigation measures such as MM NOI-1 which calls for the implementation of noise control devices, such as mufflers, lagging, and/or motor enclosures capable of reducing construction equipment noise by 10 dBA. SCEA Appendix F, p. 18.

However, the SCEA's mitigation measure is problematic for at least two (2) reasons. First, the assumed elevation (at ground level) of the noise source is not defined. *Id.* This information is crucial because it is key to the performance of the noise control devices. The Project proposes a fifteen-story (15) multi-family residential building. SCEA II Project Description, p. II-1. Thus, for example, assuming the noise control device sits on the ground floor at the perimeter of the job site, it would not adequately mitigate noise sources elevated above the ground level as construction of the building progresses. The mitigation measures must be revised to fully explain how the noise control devices would be used to mitigate noise impacts at a minimum of 15 dBA for elevated sources during construction of the fifteen-story (15) building.

Further, the SCEA is not clear on where, if at all, noise-control barriers would be placed and whether those would be movable and adjustable to ensure all construction noise is mitigated.

Second and likewise, MM NOI-1 addresses only receivers at ground level but does not address elevated receivers, such as the seventh floor of the Hollywood Hotel at sensitive

receptor Location #1 or the third floor of the Wilcox Hotel at sensitive receptor Location #2. SCEA Appendix F, p. 17. Furthermore, the SCEA does not recognize other nearby buildings, such as, for example, the Goya Studios Sound Stage or the hotel Mama Shelter Los Angeles, which could very well count as sensitive receptors and be impacted by the noise from the Project's construction.

Therefore, the SCEA should be revised and recirculated to account for the foregoing issues and potential construction and operational noise impacts individually and cumulatively with other related projects as defined by CEQA.

V. CONCLUSION

The Southwest Mountain States Carpenters requests that the City prepare an EIR to fully assess the Project's impacts, including, but not limited to impacts on historical resources, hazards and hazardous materials impacts and – as related, adverse impacts on human beings and on water/hydrology, impacts on noise, in the alternative, the City should revise and recirculate the Project's SCEA to address the aforementioned concerns and to support with substantial and complete evidence its findings that the Project may not have project-specific effects as defined.

If the City has any questions or concerns, feel free to contact this Office.

Sincerely,

Stephanie Papayanis

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Presentations:

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society.* Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution.* Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluoroctanoic Acid (PFOA) and Perfluoroactane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P**. (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water.* Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. The *23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting.* Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.,** Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition.* Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examination, 2009-2011.

EXHIBIT D

SUPERIOR COURT OF CALIFORNIA, COUNTY OF LOS ANGELES

Civil Division

Central District, Stanley Mosk Courthouse, Department 54

21STCP02223 March 9, 2023
HI POINT NEIGHBORS' ASSOCIATION, AN UNINCORPORATED ASSOCIATION vs CITY OF LOS ANGELES, A MUNICIPAL CORPORATION 4:05 PM

Judge: Honorable Maurice A. Leiter
Judicial Assistant: N. Marshalian
Courtroom Assistant: None

CSR: None
ERM: None
Deputy Sheriff: None

APPEARANCES:

For Plaintiff(s): No Appearances

For Defendant(s): No Appearances

NATURE OF PROCEEDINGS: Ruling on Submitted Matter

The Court, having taken the matter under submission on 03/06/2023 for Non-Jury Trial, now rules as follows:

Ruling on Submitted Matter

Trial Date: March 6, 2023
Department 54, Judge Maurice Leiter
First Amended Petition for Writ of Mandate
Moving Party: Petitioner, Hi Point Neighbors' Association
Responding Parties: Respondent, City of Los Angeles; Real Party in Interest, Hi Point M, LLC

Ruling: THE FIRST AMENDED PETITION FOR WRIT OF MANDATE IS GRANTED IN PART AND DENIED IN PART.

The Court posted its tentative decision on this matter on February 28, 2023. Trial (in the form of oral argument) was held on March 6, 2023, after which the Court took the matter under submission. This is the Court's ruling on the merits.

I. STATEMENT OF FACTS

A. Measure JJJ, Transit Oriented Communities Affordable Housing Incentive Program

On November 8, 2016, Los Angeles County voters adopted Measure JJJ. (AR 6655-6676.) Measure JJJ sought to address the acute shortage of affordable housing for unhoused and low-income persons, following the dissolution of the Community Redevelopment Agency (which had

provided funding for low- and moderate-income housing), and considering the County's outdated General Plan and zoning designations, which failed to address affordable housing challenges. (AR 6656.)

Measure JJJ contained an incentive program to encourage the development of affordable housing. It sought to spur development of affordable housing in strategic locations, such as near major transit stops, where residents are susceptible to displacement as property values and rents rise. (Ibid.) And it created the Transit Oriented Communities ("TOC") Affordable Housing Incentive Program to provide developers with incentives to develop affordable housing in transit-oriented neighborhoods. (AR 6657.)

On December 13, 2016, the Los Angeles Municipal Code was amended to codify Measure JJJ and the TOC Affordable Housing Incentive Program, in Municipal Code section 12.22 A.31. (Resp. Request for Judicial Notice ("Resp. RJN"), Ex. B at pp. 75-77.) This Code section provides incentives to housing developments "located within a one-half mile radius [2,640 feet] of a Major Transit Stop," defined by California Public Resources Code section 21064.3 as "[t]he intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute hours." (Id., Ex. B at p. 75; AR 6947; Pub. Resources Code, § 21064.3, subd. (c).) The incentives include residential density increases and parking reductions. (Id., Ex. B at p. 76.) It directs, "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning [to] prepare TOC Affordable Housing Incentive Program Guidelines ("TOC Guidelines") that provide the eligibility standards, incentives, and other necessary components of this TOC Incentive Program described herein." (Ibid.)

On May 25, 2017, the Los Angeles City Planning Commission adopted TOC Guidelines. (AR 6939.) The TOC Guidelines specify that only affordable housing developments located within a one-half mile radius of a "major transit stop" qualify for the incentives. (AR 6947.) They establish a "Tier" system, which provides a ranking (Tier 1-4) to each eligible affordable housing based on its proximity to a "major transit stop." (Ibid.) Pertinent to the matter before the Court, the TOC Guidelines provide that affordable housing developments will be ranked as "Tier 3" where (a) the development is located within 750 feet of an intersection of a Regular Bus and Rapid Bus Line; or (b) the development is located within 1,500 feet of an intersection of two Rapid Bus lines. (AR 6948.) The TOC Guidelines define a "Rapid Bus" as "a higher-quality bus service that may include dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes Metro Bus Rapid Transit line, Metro Rapid

700 lines, Metro Orange and Silver Lines, Big Blue Rapid lines, and the Rapid 6 Culver City. (Ibid.)

The TOC Guidelines state that all eligible affordable housing developments will receive "Base Incentives," which are residential density increases (an increase in the number of dwelling units permitted under the applicable zoning ordinance, and an increase in the floor area ratio permitted under the applicable zoning ordinance), and parking reductions (a decrease in the number of parking spaces required under the applicable zoning ordinance). (AR 6950, 6952-6954.) The degree of the reduction and/or increase permitted is determined by Tier ranking. (Ibid.) And the TOC Guidelines provide that eligible affordable housing developments may be granted "[u]p to three Additional Incentives" (AR 6950.), including reductions in yards/setbacks, decreases in open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.)

B. Project and Project Site

The proposed project at issue here concerns a rectangular-shaped lot at 1447 South Hi Point Street in Los Angeles ("Project Site"), near the intersection of Pico Boulevard and Fairfax Avenue. (AR 18.) The Project Site is approximately 8,839 square feet and currently has a single-family residence. (Ibid.) The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O, with a land use designation of "Medium Residential." (Ibid.) Under its current zoning, building height is limited to 35 feet, articulation is required every 30 feet for building facades exceeding 40 feet, and balconies above the first floor which have a line of sight to adjacent homes are prohibited. (Ibid.)

The proposed Project would demolish the single-family home and construct a five-story, 57-foot-high multi-family residential development above one level of subterranean parking. (AR 18.) It will contain 20 multi-family dwelling units: two one-bedroom units, ten two-bedroom units, and eight three-bedroom units. (Ibid.) It would provide 24 parking spaces, 20 long-term bicycle parking spaces, and two short-term bicycle parking spaces. (Ibid.) The building will encompass approximately 20,093 square feet in total building area, with a floor area ratio of approximately 3.78:1. (Ibid.)

The properties surrounding the Project Site generally are commercial, single-family residences, and multi-family residential uses. (AR 18.) Properties abutting the Project Site to the west are zoned [Q]R3-1-O and contain three- and four-story apartment buildings. (Ibid.) Properties to the

east of the Project Site, across Hi Point Street, are also zoned [Q]R3-1-O and are developed with one- to four- story single-family homes, condominiums, and small lot buildings. (Ibid.) Properties to the north of the Project Site are zoned [Q]R3-1-O and C4-1-O and include both single-family and multi-family residential structures, as well as a McDonald's Drive-Thru restaurant and a commercial strip mall. (Ibid.) Properties to the south of the Project Site, across Saturn Street, are zoned [Q]R3-1-O and R1R3-RG-O and include a mix of single-family residences and multi-story apartment buildings. (Ibid.)

Public buses operate nearby on Pico Boulevard and Fairfax Avenue. (AR 2959.)

C. Administrative History and Approval

On February 27, 2020, Hi Point M, LLC ("Real Party in Interest") submitted a "Transit-Oriented Communities Referral Form" to the Department of City Planning, which asked the Department to determine whether the Project qualified for incentives under the TOC Affordable Housing Incentive Program and, if so, under which "Tier" the Project may be categorized. (AR 619.) On the same day, the Department concluded that the Project qualified for incentives, because the Project was within a half-mile radius of a "Major Transit Stop." The Department noted, "Santa Monica [Big Blue Bus] 7" and "[Rapid] 7" travel through the intersection [at Pico and Fairfax] and have service intervals of less than 15 minutes. (Ibid.) The Department also noted that "Local Line 217" and "Rapid 780" travel through the intersection and have service intervals of 14.4 minutes and 12.7 minutes, respectively. (Ibid.) The Department concluded the Project qualified for "Tier 3" categorization because it was (a) within 750 feet of an intersection of a Regular Bus and Rapid Bus Line, or (b) within 1,500 feet of an intersection of two Rapid Bus lines. (AR 619, 6948.)

On May 24, 2020, Real Party in Interest submitted a "Department of City Planning Application" requesting approval of the Project and the issuance of incentives under the TOC Affordable Housing Incentive Program. (AR 646-652.) Real Party in Interest sought: (a) 70% Density Bonus; (b) 50% Floor Area Ratio increase, (c) Parking reduction to .5 spots per unit; (d) 22 feet height increase; (e) 25% open space reduction; and (f) 30% side yard setback reduction. (AR 647.)

On December 30, 2020, the Director of the Department of City Planning approved the application. (AR 2954-2955.) The Director determined the Project is in a "Tier 3" Incentive Area and approved these "Base Incentives:" (a) a density increase of 70 percent, which equates to a

maximum density of 21 residential dwelling units; (b) a maximum floor area ration of 4.5 to 1, representing a 50 percent increase in the floor area ratio of the underlying residential zone; and (c) .5 automobile parking spaces per unit. (AR 2955-2956.) The Director also approved these "Additional Incentives:" (a) a 30 percent reduction in the required width of two side yards to provide a minimum setback of five feet eight inches in lieu of the minimum eight feet; (b) an increase of 22 feet in building height, equal to a maximum building height of 57 feet, with limited additional height permitted for roof structures, stairwells, elevator shafts, etc. as permitted by the Los Aneles Municipal Code; and (c) a maximum reduction of 25 percent in the required amount of open space. (AR 2956.) And the Director concluded that the Project was exempt from CEQA pursuant to the "Class 32" Categorical Exemption. (AR 2954.)

On January 13, 2021, nearby residents filed a total of five appeals from the Director's approval of the Project. (AR 22.) The residents' appeals challenged: (a) The Director's conclusion the Project is located in a "Tier 3" TOC Affordable Housing Incentive Area; (b) The Director's conclusion the Project is exempt from CEQA pursuant to the "Class 32" Categorical Exemption, because the Project will have significant impacts on noise and traffic conditions; (c) whether The Project complies with the Qualified "Q" Conditions of the Project Site's [Q]R3-1-O zoning; and (d) whether the height of the Project is incompatible with the surrounding neighborhood and will result in loss of sunlight, properly values, and community character. (AR 22-25.)

In response to these appeals the Department of City Planning drafted an "Appeals Recommendation Report", which recommended that the appeals be denied. (AR 22-25.) The Report concluded that: (a) While the Project Site may not be located within 750 feet from a Major Transit Stop, "the project [remains] qualified for Tier 3 TOC status by proximity to a Major Transit Stop involving the intersection of two or more rapid bus routes located within 1,500 feet of the subject property" (rapid bus routes, Santa Monica Big Blue Bus Rapid 7 Line and Metro Rapid Line 780); (b) The Project is exempt from CEQA as it satisfied the five requirements applicable to the "Class 32" Categorical Exemption; (c) The Project is in compliance with the Qualified "Q" Condition; and (d) The Project's height is not incompatible with the surrounding neighborhood. (AR 22-25.)

On April 8, 2021, the City Planning Commission adopted the Department of City Planning's recommendation and denied the appeals. (AR 288.)

On April 13, 2021, two residents filed a CEQA appeal of the "Class 32" Categorical Exemption finding. (Ibid.) On August 31, 2021, the Planning and Land Use Management ("PLUM")

Committee, following a hearing, recommended the City Council deny the residents' appeal. (AR 295-296.) On September 15, 2021, the City Council adopted the PLUM Committee's recommendation and denied the CEQA appeal. (AR 317.)

II. THE PETITION AT ISSUE HERE

On July 12, 2021, Hi Point Neighbors' Association ("Petitioner") filed a Verified Petition for Writ of Mandate against City of Los Angeles ("Respondent"). On November 10, 2021, Petitioner filed the operative Verified First Amended Petition for Writ of Mandate. This Petition has three causes of action: (1) Violation of Local Zoning—As Applied Challenge to TOC Guidelines; (2) Violation of Local Zoning Law—Project Inconsistent with TOC Guidelines; and (3) Violation of California Environmental Quality Act—Improper Adoption of Exemption.

III. REQUEST FOR JUDICIAL NOTICE

Petitioner's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a), (b), and (h).

Respondent's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivisions (a) and (b).

Real Party in Interest's Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

Respondent's Supplemental Request for Judicial Notice is GRANTED, pursuant to Evidence Code section 452, subdivision (c).

IV. STANDARD OF REVIEW

Each of the three causes of action require a different standard of review.

A. First Cause of Action: As-Applied Challenge to TOC Guidelines

The First Cause of Action is a challenge to the TOC Guidelines. Petitioner argues the TOC Guidelines are invalid as exceeding the scope of Measure JJJ. (FAP, ¶¶ 32-33.) First, Petitioner contends the "Tiers" in the TOC Guidelines were not permitted by Measure JJJ. (FAP, ¶ 35.)

Second, Petitioner contends the "Additional Incentives" in the TOC Guidelines exceed the incentives permitted by Measure JJJ. (FAP, ¶¶ 32-33.) Third, Petitioner argues the TOC Guidelines improperly allow open space reductions and height increases which override [Q] Conditions (such as design guidelines) applicable to the Project Site by Ordinance Number 168193. (FAP, ¶ 38.) Petitioner contends the TOC Guidelines are invalid as exceeding those authorized by Measure JJJ.

These are both facial and as-applied challenges. Petitioner challenges the TOC Guidelines as not authorized by Measure JJJ, and challenges them on the ground that their application resulted in the issuance of invalid "conditions of approval" to the Project. (FAP, ¶ 37.) A facial challenge to a statute or local ordinance contends "'the alleged defect is in the [O]rdinance itself, not in the manner or circumstances in which it is being applied.'" (County of Sonoma v. Superior Court (2010) 190 Cal.App.4th 1312, 1324.) "'In evaluating a facial challenge, a court considers "only the text of the [challenged enactment] itself,"' and conducts statutory interpretation to determine the enactment's validity. (Beach & Bluff Conservany v. City of Solana Beach (2018) 28 Cal.App.5th 244, 264.) An as-applied challenge asserts the enforcement of a particular statute or ordinance is invalid. (Howard Jarvis Taxpayers Assn. v. Weber (2021) 67 Cal.App.5th 488, 496.)

The California Supreme Court similarly found a combined facial and as-applied challenge in Travis v. County of Santa Cruz (2004) 33 Cal.4th 757, 767.) The Ordinance at issue there permitted County residents to develop a second dwelling unit on their property so long as the rent charged for the second dwelling unit did not exceed that established by the Section 8 Program or Chapter 17.1 of the County Code, whichever higher, and the resident of the second dwelling unit was a low-income resident, an elderly resident, or a family member of the owner of the unit. (Id. at p. 763.) Travis owned a residential property in the County of Santa Cruz. (Id. at p. 764.) He was granted a permit to construct a second dwelling unit on his proper, subject to the rent and resident conditions imposed by the Ordinance. (Ibid.) Travis filed a Petition for Writ of Mandate against the County of Santa Cruz, challenging the Ordinance on the ground that it violated state law and is unconstitutional.

The Supreme Court found that the petition presented a facial challenge to the Ordinance as invalid and unconstitutional. It also presented an as-applied challenge to the Ordinance, as it placed allegedly improper conditions on his second dwelling unit. (Travis, supra, 33 Cal.4th at p. 767.)
The interpretation of a legislative enactment and the determination of the enactment's validity is reviewed de novo. (Beach & Bluff Conservancy, supra, 28 Cal.App.5th at p. 264.) To prevail on

an as applied challenge, a plaintiff must demonstrate that the application of the statute deprived the individual of a protected right. (Allen v. City of Sacramento (2015) 234 Cal.App.4th 41, 56.) In either case, the Court begins from "'the strong presumption that the ordinance is . . . valid.' [Citations.]" (Building Industry Assn. of Bay Area v. City of San Ramon (2016) 4 Cal.App.5th 62, 90.) The court "'resolve[s] all doubts in favor of the validity of the ordinance.' [Citation.]" (Ibid.) Unless conflict between the two provisions is "clear and unmistakable", the court must uphold the ordinance. (Ibid.) Petitioner bears the burden of demonstrating the ordinance is invalid. (Ibid.)

B. Second Cause of Action: Challenge to Respondent's Tier 3 Finding under TOC Guidelines

The Second Cause of Action alleges that Respondent's conclusion that the Project qualifies for "Tier 3" is not supported by the evidence. (FAP, ¶¶ 39-60.) It is undisputed that this cause of action is governed by Code of Civil Procedure section 1094.5. (Code Civ. Proc., § 1094.5.)

Code of Civil Procedure "section 1094.5, subdivision (c), does not establish a single standard for judicial review of the evidentiary basis for agency determinations." (Bixby v. Pierno (1971) 4 Cal.3d 130, 137; Code Civ. Proc., § 1094.5, subd. (c).) It articulates two possible standards of review: independent judgment and substantial evidence. (Code Civ. Proc., § 1094.5, subd. (c).) The independent judgment standard applies where an administrative agency's decision "substantially affects a fundamentally vested right." (Bixby, supra, 3 Cal.3d at p. 144.) In all other scenarios, where an agency's decision does not "substantially affect a fundamentally vested right," the substantial evidence standard applies. (Ibid.) "The courts must decide on a case-by-case basis whether an administrative decision or class of decisions substantially affects fundamental vested rights . . . ." (Ibid.)

Petitioner does not advance any substantive arguments that approval of the Project "substantially affects a fundamentally vested right." Petitioner's Opening Brief contains a single, conclusory sentence asserting that the Second Cause of Action is subject to independent judgment review. (OB, at p. 12:19-26.) The Court disagrees. The substantial evidence standard of review is applicable to Petitioner's Second Cause of Action.

Under the substantial evidence standard of review the Court must "examine all relevant evidence in the entire record, considering both the evidence that supports the administrative decision and the evidence against it, in order to determine whether or not the agency decision is supported by 'substantial evidence.'" [Citation.]" (Desmond v. County of Contra Costa (1993) 21 Cal.App.4th

330, 335.) "[T]he petitioner in an administrative mandamus proceeding has the burden of proving that the agency's decision was invalid and should be set aside, because it is presumed that the agency regularly performed its official duty. When the standard of review is the substantial evidence test . . . it is presumed that the findings and actions of the administrative agency were supported by substantial evidence. [Citations.]" (Desmond, supra, 21 Cal.App.4th at pp. 335-336.) The court's review "is not designed to rectify an imprudent decision by an administrative agency. Administrative mandamus is not to be used to control the discretion of an administrative body, but only to ensure that it was not abused. [Citations.] It is for the agency to weigh the preponderance of conflicting evidence, 'as we may reverse its decision only if, based on the evidence before [the agency], a reasonable person could not have reached the conclusion reached by [the agency].' [Citations.]" (Young v. City of Coronado (2017) 10 Cal.App.5th 408, 419.)

C. Third Cause of Action: Challenge to Respondent's CEQA Exemption Finding

The Third Cause of Action is brought under the California Environmental Quality Act ("CEQA"). "CEQA is a comprehensive scheme designed to provide long-term protection to the environment." (Mt. Lion Found. v. Fish & Game Com. (1997) 16 Cal.4th 105, 112.) "In enacting CEQA, the Legislature declared its intention that all public agencies responsible for regulating activities affecting the environment give prime consideration to preventing environmental damage when carrying out their duties." (Ibid.) "CEQA is to be interpreted to afford the fullest possible protection to the environment within the reasonable scope of the statutory language." (Ibid.)

"In order to ensure that the long-term protection of the environment, consistent with the provision of a decent home and suitable living environment for every Californian, shall be the guiding criterion in public decisions, CEQA and its implementing administrative regulations (CEQA Guidelines) establish a three-tier process to ensure that public agencies inform their decisions with environmental considerations." (Muzzy Ranch Co. v. Solano County Airport Land Use Com'n (2007) 41 Cal.4th 372, 379-80.)

The Court's inquiry here involves the "second tier." "The second tier concerns exemptions from CEQA review." (Muzzy Ranch Co., supra, 41 Cal.4th at p. 380.) In enacting CEQA, the California Legislature recognized that not all "projects" will have a significant effect on the environment, and, therefore, should not be subject to the regulations imposed by CEQA. (Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086, 1100-1101.) The

Legislature instructed the Office of Planning and Research to "prepare and develop proposed guidelines for the implementation of [CEQA]", which "shall include a list of classes of projects that have been determined not to have a significant effect on the environment and that shall be exempt from [CEQA review]. In adopting the guidelines, the Secretary of the Natural Resources Agency shall make a finding that the listed classes of projects referred to in this section do not have a significant effect on the environment." (Pub. Resources Code, §§ 21083, 21084.) "In response to [the California Legislature's] mandate," the Secretary of the Natural Resources Agency has concluded that thirty-three (33) categories of "projects" "do not have a significant effect on the environment" and "are declared to be categorically exempt from the provisions of CEQA." (CEQA Guidelines, §15300.) Where a public agency properly finds that a proposed "project" falls into one of the thirty-three (33) categorical exemptions articulated within the CEQA Guidelines, "no further environmental review is necessary." (Muzzy Ranch, supra, 41 Cal.4th at 380.) "The agency need only prepare and file a notice of exemption (see CEQA Guidelines, §§ 15061, subd. (d), 15062, subd. (a)), citing the relevant statute or section of the CEQA Guidelines and including a brief statement of reasons to support the finding of an exemption (id., § 15062, subd. (a)(4))." (Ibid.)

An agency's finding that a proposed project is categorically exempt from CEQA review is reviewed for a prejudicial abuse of discretion. (Pub. Resources Code, § 21168.5. "Abuse of discretion is established if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence." (Ibid.; see also Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova (2007) 40 Cal.4th 412, 435.) "'[O]nce an agency . . . determines, based on substantial evidence in the record, that the project falls within a categorical exemption . . ., the burden shifts to the challenging party . . . to "'produce substantial evidence . . .'" [citations] . . . that one of the exceptions to [the] categorical exemption applies.' [Citation.]" (CREED-21 v. City of San Diego (2015) 234 Cal.App.4th 488, 514; see Berkeley Hillside, supra, 60 Cal.4th at p. 1105 ["As to projects that meet the requirements of a categorical exemption, a party challenging the exemption has the burden of producing evidence supporting an exception."].)
V. ANALYSIS

Petitioner challenges Respondent's approval of the Project on three grounds. First, Petitioner contends Respondent's award of "Additional Incentives" pursuant to the TOC Guidelines was improper because the Guidelines are invalid on their face and as applied. Second, Petitioner argues that Respondent's finding that the Project qualifies for "Tier 3" incentives is not supported by substantial evidence. Third, Petitioner says Respondent's determination that the

Project qualifies for a "Class 32" Categorical Exemption under CEQA is not supported by substantial evidence. The Court addresses each claim in turn.

A. First Cause of Action—Petitioner's Challenge to TOC Guidelines

Petitioner raises three facial and as-applied challenges to the TOC Guidelines. Petitioner contends the TOC Guidelines' "Tier" system was not contemplated by Measure JJJ. Second, Petitioner says Measure JJJ did not contemplate the award of "Additional Incentives." Third, Petitioner contends the incentives are inconsistent with the [Q] Conditions applicable to the Project Site.

Before reaching these arguments, the Court addresses Respondent's argument that the first cause of action is barred by the statute of limitations.

1. Petitioner's First Cause of Action is Not Barred by Statute of Limitations

Respondent argues that First Cause of Action is untimely under Government Code section 65009, subdivision (c)(1)(B), which creates a 90-day statute of limitations period for actions or proceedings challenging several types of local planning and zoning decisions. (Gov. Code, § 65009, subd. (c)(1).) Pertinent here are actions described in Government Code section 65009, subdivision (c)(1)(B) and (c)(1)(E):

(c)(1) Except as provided in subdivision (d), no action or proceeding shall be maintained in any of the following cases by any person unless the action or proceeding is commenced and service is made on the legislative body within 90 days after the legislative body's decision:
. . .

(B) To attack, review, set aside, void, or annul the decision of a legislative body to adopt or amend a zoning ordinance.
. . .

(E) To attack, review, set aside, void, or annul any decision on the matters listed in Sections 65901 and 65903, or to determine the reasonableness, legality, or validity of any condition attached to a variance, conditional use permit, or any other permit.

(Gov. Code, § 65009, subd. (c)(1)(B), (c)(1)(E).) The Court of Appeal in County of Sonoma v.

Superior Court (2010) 190 Cal.App.4th 1312, 1324 stated: "[t]he limitations periods set out in the statute are triggered by specific acts of local land use planning authorities. [Citation.] For the actions described in section 65009, subdivision (c)(1) the 90-day limitations period begins to run from the date on which the challenged decision is made. [Citation.] Thus, where a party brings a facial challenge to a zoning ordinance, [the limitations period described in Government Code section 65009, subdivision (c)(1)(B) is applicable, and] the limitation period begins to run on the date the ordinance becomes effective. [Citation.] If a party challenges conditions attached to a conditional use permit or other permit, [the limitations period described in Government Code section 65009, subdivision (c)(1)(E) is applicable, and] the limitations period runs from the date of final administrative action on the permit." (County of Sonoma, supra, 190 Cal.App.4th at p. 1324.) Therefore, to determine when the statute of limitations begins to run, "one must determine what specific governmental act or acts the [party] . . . sought to challenge." (Ibid.)

Respondent argues that Petitioner's First Cause of Action presents only a facial challenge to the TOC Guidelines, that subdivision (c)(1)(B) is applicable, and the statute of limitations period began to run when TOC Guidelines were adopted on May 25, 2017. (AR 6939.)

As discussed, the First Cause of Action is both a facial challenge and an as-applied challenge to the TOC Guidelines. It claims the TOC Guidelines exceed the scope of Measure JJJ, and also claims the application of the TOC Guidelines to the Project resulted in "conditions of approval" unauthorized by Measure JJJ. While the facial challenge is barred by subdivision (c)(1)(B), the as-applied challenge is timely under subdivision (c)(1)(E).

The "Additional Incentives" awarded to the Project are contained in the "Director's Determination" as "Conditions for Approval." These became final on April 13, 2021, when the Department of City Planning issued a Letter of Determination denying the appeals filed against the Director's approval of the award of "Additional Incentives." (AR 289.) Petitioner was required to file the Petition within 90 days, or July 12, 2021. (Ibid.; Gov. Code, § 65009, subd. (c)(1)(E).) Petitioner filed the original Petition on July 12, 2021.

The Court recognizes that Petitioner's as-applied challenge includes arguments that also would apply to a facial challenge: the Court must determine whether the "Additional Incentives" and "Tier" system are permitted by Measure JJJ. The Court may do so in considering the as-applied challenge. (Travis, supra, 33 Cal.4th at pp. 768-769 ["That the Ordinance could have been facially attacked in an appropriate action at an earlier time, before it was applied to Travis' property, does not make section 65009 subdivision (c)(1)(E) inapplicable to Travis's claim for

removal of invalid conditions. This is not a case in which the plaintiff complains of injury solely from a law's enactment. [Citation.] Travis complains of injury arising from, and seeks relief from, not simply the Ordinance's enactment or continued presence in the County Code, but the County's imposition on his second unit permit of conditions required by the Ordinance. Having brought his action in a timely way after application of the Ordinance to him, Travis may raise in that action a facial attack on the Ordinance's validity."].)

2. TOC Guideline's Creation of "Tiers" is Not Beyond Measure JJJ

Petitioner focuses on Section 6 of Measure JJJ, which discusses one of the incentives available to affordable housing developments under the TOC Affordable Housing Incentive Program. (AR 6673.) It states, in part,

Residential Density Increase. An Eligible Housing Development shall be granted increased residential density at rates that shall meet or exceed a 35% increase. In establishing density allowances, the Department of City Planning may allow adjustments to minimum square feet per dwelling unit, floor area ratio, or both, and may allow different levels of density increase depending on the Project's base zone and density.

(AR 6673-6674 [emphasis added].) Petitioner contends Measure JJJ prohibits varying levels of incentives on any basis other than "the Project's base zone and density." (Ibid.) According to Petitioner, "Base Incentives" and "Additional Incentives" based on the Project's proximity to transit—the "Tier" system—is beyond the authority granted by Measure JJJ.

There are several weaknesses in this argument. First, the italicized language relied on by Petitioner is applicable only to one form of incentive (Residential Density Increase); it is not an overarching limitation to all incentives, as Petitioner suggests. Second, Measure JJJ does not expressly prohibit differing incentives based on a criterion other than a Project's base zone and density. Third, Measure JJJ intended to provide flexibility to the Director of the Department of City Planning in drafting the TOC Guidelines. It expressly give the Director discretion to draft the TOC Guidelines and establish "eligibility standards, incentives, and other necessary components of this TOC Incentive Program . . . ." (AR 6673 [emphasis added].) Measure JJJ also states that the Director "shall" draft the TOC Guidelines "consistent with [those] purpose[s]". (AR 6673.) A stated purpose of the TOC Affordable Housing Incentive Program is to encourage the development of affordable housing in transit-rich neighborhoods. (AR 6656-6657.) The Tiers in the TOC Guidelines and the award of more favorable incentives to

developments in closest proximity to major transit stops furthers the purpose of Measure JJJ.

The TOC Guidelines' "Tier" system is not inconsistent with or beyond the scope of Measure JJJ.

3. TOC Guideline's "Additional Incentives" Are Not Beyond Measure JJJ

Petitioner focuses next on the "Additional Incentives" authorized by the TOC Guidelines. Those include reductions in otherwise required yards/setbacks, decreases in required open space, increases in maximum lot coverage, decreases in lot width, and increases in development height. (AR 6954-6957.) Petitioner argues that Measure JJJ did not contemplate the "Additional Incentives."

Measure JJJ expressly contemplates the "Base Incentives" included in the TOC Guidelines. (AR 6673-6674.) But Measure JJJ does not prohibit the Director from including additional incentives. Indeed, Measure JJJ allows the Director to draft incentives; those are not limited to the Base Incentives. (AR 6673.) Measure JJJ expressly provides: "[w]ithin 90 days of enactment of this Ordinance, the Director of Planning shall prepare TOC Affordable Housing Incentive Program Guidelines ('TOC Guidelines') that provide the . . . incentives . . . of this TOC Incentive Program . . . ." (Ibid.)

The "Additional Incentives" in the TOC Guidelines are not inconsistent with Measure JJJ.

4. TOC Guidelines and "Q" Qualified Conditions

The Project Site is in the Wilshire Community Plan Area and is zoned [Q]R3-1-O. (AR 18.) The "Q" Qualified Condition, established by Ordinance Number 168.193, limits building height to 35 feet, requires articulation at every 30 feet for building facades exceeding 40 feet, and prohibits balconies above the first floor which have a line of sight to adjacent existing single-family uses. (Ibid.) Petitioner contends the TOC Guidelines improperly violate the "Q" Qualified Condition by awarding incentives in excess of permissible height and articulation. (OB, at p. 17:1-7.)

The Court is unpersuaded this argument provides grounds to invalidate the TOC Guidelines. The premise of Petitioner's First Cause of Action is that the TOC Guidelines are invalid because they are inconsistent with Measure JJJ. But this argument does not concern inconsistency with Measure JJJ; instead it claims a purported inconsistency with the "Q" Qualified Condition. (OB, at p. 17:1-7.) Petitioner's argument concerning the "Q" Qualified Condition does not show that

"the TOC Guidelines [are] inconsistent with Measure JJJ," as alleged in the First Cause of Action. (FAP, ¶ 38.)

The Petition as to the First Cause of Action is DENIED.

B. Second Cause of Action— Petitioner's Challenge to Respondent's Tier 3 Finding under TOC Guidelines

Petitioner's Second Cause of Action contends that approval of "Tier 3" TOC Incentives is not supported by substantial evidence. (OB, at p. 14:6-15:11.)

As discussed, a proposed development will be placed in "Tier 3" if it is within 1,500 feet of a "Major Transit Stop" which includes the intersection of two "Rapid Buses." (AR 2089.) The TOC Guidelines define a "Rapid Bus" as "a higher quality bus service that may include several key attributes, including dedicated bus lanes, branded vehicles and stations, high frequency, limited stops at major intersections, intelligent transportation systems, and possible off-board fare collection and/or all door boarding. It includes, but is not limited to, Metro Bus Rapid Transit lines, Metro Rapid 700 lines, Metro Orange and Silver Lines, Big Blue Bus Rapid lines and the Rapid 6 Culver City bus." (Ibid.)

On April 8, 2021, the City Planning Commission denied the various appeals filed by residents challenging the Director of City Planning's determination that the Project qualifies as "Tier 3." (AR 14-15.) The Commission concluded the Project is located less than 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where two Rapid Bus lines intersect. (AR 22.) The two Rapid Bus lines are Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780. (AR 22, 286.)

Petitioner does not appear to dispute that Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet the definition of "Rapid Bus[es]." And Petitioner does not appear to dispute that the Project is located within 1,500 feet from the intersection of Pico Boulevard and Fairfax Avenue, where Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 intersect. Rather, Petitioner questions whether Respondent's finding that where the Santa Monica Big Blue Bus Rapid 7 and Metro Rapid 780 meet, at the intersection of Pico Boulevard and Fairfax Avenue, qualifies as a "Major Transit Stop." (OB, at pp. 15:11-16:2.) Petitioner points out that the intersection of two or more bus lines will be considered a "Major Transit Stop" only where those bus lines have "a service interval of 15 minutes or less during the morning and afternoon peak commute hours."

(AR 6947.) Petitioner contends the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak hours, the intersection of the two Rapid bus lines therefore do not meet the definition of "Major Transit Stop," and the Project did not qualify for "Tier 3." (OB, at pp. 15:11-16:2.)

The Court agrees. Respondent's finding is not supported by substantial evidence in the administrative record. Indeed, substantial evidence in the administrative record shows the service interval of Metro Rapid 780 exceeds 15 minutes during the morning and afternoon peak commute hours.

The administrative record includes the bus schedule for Metro Rapid 780 effective as of March 17, 2020. (AR 22 ["[T]he definition of a Major Transit Stop was subsequently clarified through City Planning on August 19, 2020 to apply only to transit schedules in place as of March 17, 2020 . . . ."]; OB, at p. 15:15-21.) Appendix A of the TOC Guidelines outlines the methodology for determining whether a particular bus line has a service interval frequency of 15 minutes or less. (Ibid.) To determine whether a bus line has an average service interval frequency of 15 minutes or less, one must first determine the number of trips the bus line completes during "peak" morning hours and "peak" afternoon hours, and then divide the number of trips made during "peak" morning and afternoon hours by 420. (AR 6958-6959.) 420 represents the total number of minutes during the peak hours of 6:00 AM to 9:00 AM (morning "peak" hours) and 3:00 PM to 7:00 PM (afternoon "peak" hours). (AR 619 [footnote 2], 6958-6959.) Appendix A specifies that the calculation must be completed separately for each direction the bus line travels. "If one or both directions fail to meet the 15 minutes frequency limit, the entire bus line is ineligible for a Major Transit Stop." (Ibid.)

Metro Rapid 780 travels eastbound and westbound. (AR 1982.) The Court finds it makes approximately 12 eastbound trips during the morning "peak" hours, and approximately 12 eastbound trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) Dividing the total number of eligible "peak" hour trips (24 total trips) by 420 yields an average service interval for Metro Rapid 780 Eastbound of approximately 17.5 minutes, which is above the 15-minute requirement for a "Major Transit Stop". (AR 6947.)

Metro Rapid 780 westbound yields similar results. It makes approximately 11 trips during the morning "peak" hours, and approximately 12 trips during the afternoon "peak" hours. (AR 1982, 6958-6959.) The Court divides the total of 23 "peak" hour trips by 420, yielding in an average service interval for Metro Rapid 780 Westbound of approximately 17.5 minutes.

These calculations are greater than the 15-minute requirement for a "Major Transit Stop." (AR 6947.) The Metro Rapid 780 Bus Line is ineligible for inclusion in a Major Transit Stop and does not support Respondent's "Tier 3" finding. (AR 6959.)

Respondent's Opposition does not address this argument, nor does it refer to any portion of the administrative record which provides a calculation different than the Court's, or those provided during the residents' appeals.

Real Party in Interest's remaining arguments are unpersuasive.

Real Party in Interest argues the "Tier 3" category does not contain a 15-minute service requirement. But an overarching eligibility requirement for the TOC Affordable Housing Incentive Program is proximity to a "Major Transit Stop," which is defined as the intersection of two or more bus lines "with a service interval of 15 minutes or less during the morning and afternoon peak commute periods." (AR 6947.) While the definition of "Tier 3" does not itself mention the 15-minute service interval requirement, this requirement is located under the heading "Type of Major Transit Stop." It follows that the "Two Rapid Buses" which intersect must qualify for inclusion within a "Major Transit Stop," and must satisfy the 15-minute service interval requirement. (Ibid.)

Real Party in Interest also argues that the 15-minute service requirement is met if the Court "combines" the intervals of service provided by Metro Rapid 780 and Metro Local Line 217. (Real Party in Interest's Opposition Brief ("RPI Opp."), at pp. 8:12-9:3.) Real Party contends that Metro Rapid 780 and Metro Local Line 217 "follow the same [bus] route from the intersection of Venice and Fairfax to the intersection of Hollywood and New Hampshire." (Id., at p. 8:19-21.) According to Real Party, if the Court were to combine the number of trips made by both bus line during "peak" morning and afternoon commute hours, and divide by 420, the average service interval would be less than 15 minutes. (Id., at p. 8:19-23.)

There are two problems with this argument. First, Real Party in Interest provides no clear authority for the proposition that bus lines may be so combined. Los Angeles Municipal Code section 12.22 A.31 and the TOC Guidelines are silent on whether bus lines may be combined to meet the 15-minute service interval requirement. (AR 6945-6957.) The sample calculation in Appendix A of the TOC Guidelines considers only whether a single bus line meets the 15-minute service interval requirement. While neither expressly prohibits Respondent from combining

multiple bus lines, neither allows it. Real Party in Interest has not shown that Los Angeles Municipal Code section 12.22 A.31 or the TOC Guidelines allow combining bus lines to satisfy the 15-minute service interval requirement.

Second, even if the Municipal Code or the TOC Guidelines could be read to permit combining bus lines, the administrative record does not show that Respondent combined these bus lines in making its determination. Respondent's finding that the intersection of Pico Boulevard and Fairfax Avenue qualifies as a "Major Transit Stop" is vague, without analysis. (AR 22.) Neither the Director's Determination (AR 2959, 2962) nor the Appeal Recommendation Report (AR 20, 22) discusses how the intersection of Pico Boulevard and Fairfax Avenue satisfies the 15-minute service interval requirement. They merely state the conclusion that the intersection qualifies. Neither appears to contemplate combining bus lines to make this determination. (Ibid.) The Transit-Oriented Affordable Housing Referral Form (AR 619) is similarly vague, merely naming bus lines and concluding the 15-minute service interval requirement has been satisfied. (AR 619.)

The Court's inquiry "will be limited to a determination of whether or not the findings are supported by substantial evidence in light of the whole record." (Strumsky v. San Diego County Employees Retirement Assn. (1974) 11 Cal.3d 28, 32.) Respondent must "set forth findings to bridge the analytical gap between the raw evidence and ultimate decision or order." (Sky Posters, Inc. v. Department of Transportation (2022) 78 Cal.App.5th 644, 667-668 ["Reference, in section 1094.5, to the reviewing court's duty to compare the evidence and ultimate decision to 'the findings' . . . leaves no room for the conclusion that the Legislature would have been content to have a reviewing court speculate as to the administrative agency's basis for decision."].)

The administrative record contains no finding that the intersection of Pico Boulevard and Fairfax Avenue constitutes a Major Transit Stop because Respondent combined bus lines to satisfy the 15-minute service interval requirement. The Court will not infer that Respondent made such a finding or speculate on whether it might have done so. [1]

[1] On the eve of trial, Respondent filed a Request for Judicial Notice of a Department of City Planning Director's Determination approving TOC Incentives for an unrelated project. Respondent contends this shows that bus lines are routinely combined to satisfy the 15-minute service interval requirement for a "Major Transit Stop." This document does not show that the Municipal Code or the TOC Guidelines permit combining bus lines, or that such a calculation was made for the project before the Court.

Respondent's finding the Project qualifies for "Tier 3" categorization and incentives, based on the conclusion that the Project is within 1,500 feet of a "Major Transit Stop" including the intersection of "Two Rapid Buses," is not supported by substantial evidence. A writ of mandate setting aside the "Tier 3" incentives awarded under the TOC Affordable Housing Incentive Program is warranted. The Petition as to the Second Cause of Action is GRANTED.

C. Third Cause of Action—Petitioner's Challenge to Respondent's "Class 32" Categorical Exemption Finding

The Third Cause of Action challenges Respondent's finding that environmental review pursuant to CEQA is not required because the Project qualifies for a "Class 32" Categorical Exemption. (FAP, ¶¶ 61-69.) First, Petitioner argues the Project does not satisfy the first and fourth conditions of CEQA Guidelines section 15332. (CEQA Guidelines, § 15332; OB, at pp. 17-24.) Second, Petitioner contends the "unusual circumstances" and/or "cumulative effects" exceptions apply and prohibit the Categorical Exemption. (Id., at p.24-25.)

1. The Record Contains Substantial Evidence That the Project Satisfies the Conditions for a "Class 32" Categorical Exemption

CEQA Guidelines section 15332 lists five conditions that must be satisfied to qualify for a "Class 32" Categorical Exemption. (Ibid.) It states:

Class 32 consists of projects characterized as in-fill development meeting the conditions described in this section.

(a) The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.

(b) The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban areas.

(c) The project site has no value as habitat for endangered, rare or threatened species.

(d) Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

(e) The site can be adequately served by all required utilities and public services.

Petitioner focuses on subdivisions (a) and (d). Petitioner argues the Project fails to satisfy (a) because substantial evidence demonstrates the Project is inconsistent with the general plan and zoning designations applicable to the Project Site. Petitioner argues the Project fails to satisfy (d) because substantial evidence demonstrates the Project would have a significant effect on noise and air quality.

a. Subdivision (a)—Substantial Evidence Supports the Finding that the Project is Consistent with Applicable General Plan and Zoning Designations

Petitioner argues the Project fails to comply with the applicable "Q" Qualified Conditions. As discussed, the Project Site is within the Wilshire Community Plan Area; it is zoned [Q]R3-1-O, with a corresponding land use designation of "Medium Residential." (AR 18.) The "Q" Qualified Conditions impose various land use requirements, including these:

Section 2. Pursuant to Section 12.32-K of the Los Angeles Municipal Code and the amendments thereto, the following limitations are hereby imposed upon the use of that property shown in Section 1 hereof which are subject to the Permanent "Q" Qualified Classification.

1. Covenant: Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns. Further, the agreement must be submitted to the Planning Department for approval before being recorded. After recordation, a copy bearing the Recorder's number and date must be given to the City Planning Department for attachment to the subject file.

. . .

3. Building Mass: For any building façade greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet.

. . .

5. Energy Conservation: Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project.

. . .

10. Open Space: A minimum of 100 square feet of usable open space shall be provided for each dwelling unit. Parking area, driveways, front yard setback areas and rooftops shall not be included as open space. To be considered as usable open space[,] the project shall meet the following criteria:

a. Private Open Space: Patios and yards (located at ground level or the first habitable room level) which are part of a single dwelling unit and are enclosed by solid screen material at least four feet in height may eb included as usable open space provided said areas have a horizontal dimension of at least 15 feet in width.

b. Common Usable Open Space: Each common usable open space area . . . shall have an average width of 20 feet with no width less than 15 feet at any point.

. . .

Common open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning.

A minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees[.]

(AR 2289-2291.)

Petitioner argues the Project is inconsistent with these conditions because: (a) The Conditions of Approval failed to require Real Party in Interest to record the contemplated covenant before any permits may be issued; (b) The Project failed to provide articulation at every 30 feet of the building height; (c) The Conditions of Approval do not require Real Party in Interest to consult with the Department of Water and Power and the Southern California Gas Company prior to the construction of the Project to determine energy conservation designs; and (d) The Project fails to

provide the requisite open space per dwelling unit.

Respondent argues that the Project is not required to comply with all the "Q" Qualified Conditions. According to Respondent, the requirements of the "Q" Qualified Conditions may be amended by the "Base Incentives" and "Additional Incentives" under the TOC Affordable Housing Incentive Program. (Ibid.) Respondent's reading of the "Q" Qualified Conditions and the TOC Affordable Housing Incentive Program is supported by the Los Angeles Municipal Code.

On August 18, 1992, Ordinance Number 168193 codified the "Q" Qualified Conditions. (AR 2294.) It amended Los Angeles Municipal Code section 12.04 (entitled "Zones-Districts-Symbols") by effectively re-zoning the Project Site and neighboring properties, placing a "Q" designation in the zoning classification (i.e., "[Q] R3-1-O"). (AR 2288.) Those properties zoned with the "Q" designation would be subject to the land-use requirements and limitations in the "Q" Qualified Conditions. (AR 2287-2288.)

Los Angeles Municipal Code section 12.22 enumerates approximately 35 "[e]xceptions" to the land use restrictions and requirements in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22 [entitled, "Exceptions."].) Where an "[e]xception" is applicable, a property may be used in a way different than the zone permits. (L.A. Municipal Code, § 12.22.) It is undisputed that the TOC Affordable Housing Incentive Program is included in Los Angeles Municipal Code section 12.22 A.31, as one of the 34 specified "[e]xceptions" to the zoning land-use restrictions in Los Angeles Municipal Code sections 12.04 through 12.21.6. (L.A. Municipal Code, § 12.22, subd. A.31.) While the "Q" Qualified Conditions are applicable to the Project Site as a zoning designation, the Project may stray from their requirements by virtue of the Project's eligibility for the TOC Affordable Housing Incentive Program. (Ibid; Bay Area Citizens v. Association of Bay Area Governments (2016) 248 Cal.App.4th 966, 999 [" ' "If the statutory language is clear, our task is at an end, for there is no need for judicial construction." ' "].)

The Court now turns to the "Q" Qualified Conditions, and finds the project is not inconsistent with those conditions.

i. Section 2, Subsection 1 of "Q" Qualified Condition -- "Covenant"

Section 2, subsection 1 of the "Q" Qualified Conditions states: "Prior to the issuance of any

permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent owners, heirs or assigns." (AR 2289.) Petitioner contends the Project fails to comply with this section because Respondent failed to include, as a condition of approval for the Project, a requirement that Real Party in Interest record the covenant. (OB, at pp. 21:23-22:3.)

The Court is not persuaded the Project is inconsistent with this section. Petitioner has failed to demonstrate that the covenant was not recorded by Real Party in Interest's various predecessors. The "Q" Qualified Conditions were created more than 30 years ago. (AR 2294.) This section does not require all owners of the Project Site to record the contemplated covenant. (AR 2289.) It merely requires the owner of the Project Site who requests a permit first following the effective date of the Ordinance to record the contemplated covenant, which will then "run with the land." (AR 2289.) Petitioner fails to show a prior owner of the Project Site had not recorded the covenant.

ii. Section 2, Subsection 3 of "Q" Qualified Conditions --"Building Mass"

Section 2, subsection 3 of the "Q" Qualified Conditions provides: "For any building greater than forty (40) feet in length, articulation shall be required for every thirty (30) feet. Minimum depth of modulation of the façade shall be five (5) feet." (AR 2289.) Petitioner contends the Project fails to provide sufficient articulation in relation to the building's length. (OB, at pp. 17:28-18:2.) Specifically, Petitioner argues that, while the southern elevation of the Project is approximately 132 feet in length (which would require approximately four articulations pursuant to the "Q" Qualified Conditions), the Project provides only "one articulation 20 feet, 8 inches from the western façade." (Ibid.)

Substantial evidence in the administrative record supports Respondent's conclusion the Project is consistent with this section. The plans depict approximately five corridors on the southern façade, which are exposed and visible from the exterior with a glass railing. (AR 187, 195.) The Department of City Planning determined the five exposed corridors provide sufficient articulation for the building's length. (AR 24.) Petitioner argues that the exposed corridors do not constitute sufficient "modulation of the façade because "the [term] "façade" is defined as the boundary of an exterior walls of the structure, which are not changed by exposed corridors." (OB, at p. 18:5-7.)

Petitioner's definition of the term "façade" comes not from the definitions provided within the "Q" Qualified Conditions but from "LawInsider.com." (Petitioner's Request for Judicial Notice, Ex. 1.) The Court is not persuaded that this definition governs. And the Court must give "great weight" to the Department of City Planning's determination that the exterior corridors provide a sufficient modulation of the building's "façade." (Berkley Hills Watershed Coalition v. City of Berkley (2019) 31 Cal.App.5th 880, 896 ["a city's interpretation of its own ordinance, '"is entitled to great weight unless it is clearly erroneous or unauthorized."']).

iii. Section 2, Subsection 5 of "Q" Qualified Conditions --"Energy Conservation"

Section 2, subsection 5 of the "Q" Qualified Conditions provides: "Prior to the construction of any project, the Department of Water and Power and the Southern California Gas Company shall be consulted regarding feasible energy conservation features which can be incorporated into the design of the project." (AR 2289.) Petitioner contends there is no evidence demonstrating Real Party in Interest consulted with either the Department of Water and Power or the Southern California Gas Company regarding feasible energy conservation features for the Project. (OB, at p. 22:6-11.)

The Project is not inconsistent with this section. Under Section 2, subsection 5 consultation with the Department of Water and Power and the Southern California Gas Company is required "prior to the construction of any project." (AR 2289.) It does not require consultation before obtaining approval for the Project, only before construction. Real Party was not required to consult with either the Department of Water and Power or the Southern California Gas Company for the purpose of obtaining approval for the Project.

iv. Section 2, Subsection 10 of "Q" Qualified Conditions -- "Open Space"

Petitioner maintains the Project is incompatible with various "Open Space" requirements in Section 2, subsection 10 of the "Q" Qualified Conditions.

Petitioner first focuses on the mandate that all patios and yards which are "private open space" must "have a horizontal dimension of at least 15 feet in width." (AR 2290.) Petitioner argues that, while the Plans say the Project provides 50 square feet of "private open space" of patios and yards, the patios are not 15 feet in width. (OB, at p. 19:7-10.) Petitioner cites to the Project Plans, on pages 184 through 186 of the administrative record. (Ibid.; AR 184-186.) But the Plans referenced do not display the measurements of the relevant patios on the first floor, and the

legend provides no further guidance. (Ibid.) Petitioner has not proved this contention. [2]

Petitioner next focuses on the requirement that "[c]ommon open space areas shall incorporate recreational amenities such as swimming pools, spas, picnic tables, benches, tot lots, ball courts, barbecue areas, sitting areas, etc. to the satisfaction of the Department of City Planning." (AR 2291.) Petitioner contends "no amenities are provided for the 950 square feet of rear yard space shown on the Plans." (OB, at p. 19:11-12.) But the 950 square feet of rear yard space clearly provides picnic tables and benches. (AR 182.) These are "recreational amenities" pursuant to the "Q" Qualified Conditions (i.e., "[c]ommon open space areas shall incorporate recreational amenities such as . . . picnic tables, benches . . . .") (AR 2291.)

Petitioner then points to the mandate that "[e]ach common usable open space area shall have a total area of at least 400 square feet and shall have an average width of 20 feet with no width less than 15 feet at any point." (AR 2291.) Petitioner contends the "rear yard area has an average width less than 20 feet with widths as narrow as 4 feet[.]" But the Project Plans unambiguously state the rear yard of the Project is approximately 20 square feet in width. (AR 182.)

Next, Petitioner directs us to the requirement that "rooftops shall not be included as open space." (AR 2290.) Petitioner says the "fifth floor garden," which is approximately 592 square feet, may not be counted towards the "open space requirement" because it is "located on the roof of the fourth story." (OB, at p. 19:17-18.) The Court is unpersuaded that the fifth-floor garden may not be counted towards the minimum open space requirements. Notably, following review of the Project's Plans, the fifth-floor garden is not on the rooftop of the Project, as Petitioner would suggest, but is on an exposed deck on the fifth floor. (AR 6540.) The rooftop is above the fifth floor. (AR 6541.)

[2] Even if Petitioner demonstrated the patios are less than 15 feet in width, this would be insufficient to demonstrate the Project has failed to provide the requisite amount of open space. Due to an "Additional Incentive" provided to the Project (25 percent reduction in the amount of open space), the Project is required to provide approximately 1,500 in open space. (AR 15.) The Plans show the Project provides approximately 2,492 square feet in open space. (AR 181.)

Petitioner also points to the requirement that "[a] minimum of 50 percent of the common usable open space areas shall be planted in ground cover, shrubs or trees . . . ." (AR 2291.) Petitioner contends "the Project fails to landscape 50 percent of common open space as virtually none of the open space that meets the [Q] Conditions provides landscaping." (OB, at pp. 19:23-20:1 [emphasis added].) The Court already has concluded the open space provided by the Project complies with the "Q" Qualified Conditions.

Petitioner's contention that the Project fails to qualify for a "Class 32" Categorical Exemption because it is inconsistent with the "Q" Qualified Conditions is unpersuasive. Substantial evidence demonstrates the Project is sufficiently "consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations."

b. Subdivision (d)—Substantial Evidence Supports the Finding the Project Would Not Result in Significant Effects to Air Quality or Noise

CEQA Guidelines section 15332(d) requires that "[a]pproval of the project not result in any significant effects relating to traffic, noise, air quality, or water quality." Petitioner argues that Respondent's determination the Project will not have a substantial effect on noise and air quality is not supported by substantial evidence.

i. Air Quality Impacts and Greenhouse Gas Emissions

Petitioner's argument concerning air quality centers on the Greenhouse Gas ("GHG") emissions resulting from the Project. (OB, at p. 22:12-24.) Respondent concluded the Project would not have a significant effect upon air quality. (AR 23.) Respondent based its conclusion on "a March 2020 . . . Air Quality Technical Report prepared by ZMassociates Environmental Corporation International." (Ibid.) The ZM Report assessed the Project's effect on air quality by employing the South Coast Air Quality Management District ("SCAQMD") Final Localized Significance Threshold Methodology, published in July 2008. (AR 6621.) Noting that the "Regional Construction Threshold" for Localized Significance with respect to GHG emissions is 3,000 CO2e/year, the ZM Report concluded the GHG emissions created by the Project would be only 70.69 CO2e/year. (AR 6624.) Petitioner contends this finding is erroneous because the SCAQMD "threshold for significance" employed by the ZM Report is outdated, and a more recent "threshold for significance" should have been used. (OB, at p. 22:14-24.) Relying on a report prepared by the consulting entity SWAPE, Petitioner argues the suggested "SCAQMD

2035 efficiency target of 3.0 MT CO2e/SP/year" should have been employed to assess the Project's impact upon GHG emissions. (Ibid.)

Respondent makes two arguments in response. First, Respondent contends the air quality assessment does not require analysis of potential GHG emissions. (Resp. Opp., at pp. 10:24-11:4.) Respondent contends subdivision (d) merely requires it to analyze potential substantial impacts to "air quality." Respondent cites to Appendix G of the CEQA Guidelines, which is a sample "Environmental Checklist Form" that may be used to conduct an initial study of a Project's potential environmental impacts. (CEQA Guidelines, Appendix G.) The sample includes a list of "[e]nvironmental [f]actors" which may be "[p]otentially [a]ffected" by a project's development; it shows "Air Quality" and "Greenhouse Gas Emissions" in separate categories. (Ibid.) Second, if the Court concludes GHG emissions fall within the scope of an analysis of air quality impacts, Respondent contends the standard used in the ZM Report is appropriate.

The Court is not persuaded by Respondent's interpretation of the language of subdivision (d). Although "Air Quality" and "Greenhouse Gas Emissions" are listed separately in Appendix G, this also shows that analysis of GHG emissions is relevant in considering whether the Project will have a significant impact on air quality. Indeed, the ZM Report, on which Respondent relies, analyzes GHG emissions. (AR 6624.) Moreover, Respondent has provided no case law or statue supporting its contention that an analysis of air quality would not include an analysis of GHG emissions.

Respondent's second argument is meritorious. As stated, Petitioner contends Respondent employed an outdated "threshold of significance." (OB, at p.22:14-24.) But CEQA Guidelines section 15064.4 expressly states that an agency has "discretion to select the model or methodology it considers most appropriate to enable decision makers to intelligibly take into account the project's incremental contribution to climate change." (CEQA Guidelines, § 15064.4, subd. (c).) This discretion reflects "the existing CEQA principle that there is no iron-clad definition of 'significance.'[Citation.]." (Center for Biological Diversity v. Department of Fish & Wildlife (2015) 62 Cal.4th 204, 221.) At oral argument, Petitioner conceded that Respondent has discretion to determine the most appropriate model or methodology to assess the Project's impact on GHG emissions.

The Court is not persuaded that Respondent's use of the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) was an abuse of discretion.

Petitioner has not shown that the threshold of significance employed by Respondent was superseded by the threshold of significance set forth by the SCAQMD. As noted, Petitioner relies on a recommendation by the consulting entity SWAPE, which opines that Respondent should have used the SCAQMD 2035 efficiency target of 3.0 metric tons of carbon dioxide equivalents per service population per year. (AR 3158-3159.) SWAPE cites to a publication by a separate non-profit agency named Association of Environmental Professionals. (AR 3158, fn. 22.) But this publication does not establish that SCAQMD adopted this new threshold of significance for GHG emissions, or that they supersede the threshold used by Respondent. (Ibid.) Rather, this publication is a recommended "action plan" based on the opinions of its authors, the Association of Environmental Professionals. (Ibid.) This does not establish that Respondent abused its discretion in applying the threshold of significance in SCAQMD's Final Localized Significance Threshold Methodology (2008) to assess the Project's impact upon GHG emissions.

Respondent did not commit an abuse of discretion by concluding CEQA Guidelines section 15332(d) was satisfied, and the Class 32 Categorical Exemption properly may be applied.

ii. Construction and Operational Noise Impacts

Petitioner's challenge to Respondent's determination concerning noise impacts centers on construction-related noise and operational noise.

Petitioner challenges Respondent's conclusion that construction-related noise will not exceed the maximum decibel limit in Los Angeles Municipal Code section 112.05 of approximately 75 dB(A). The Court is not persuaded by Petitioner's contentions. Substantial evidence in the administrative record, including the expert conclusions in the ZM Report, supports Respondent's conclusion. (AR 6619.) The ZM Report states: "[d]ue to the small project size, the limited number of construction vehicles, limited number of construction equipment, and small size of construction equipment compared to much larger projects, the proposed project will not result in exceedance of City of Los Angeles noise ordinances." (Ibid.)

Petitioner challenges this with an opposing expert report produced by Project opponents during an administrative hearing. (OB, at pp. 23:1-24:1.) This report was prepared by RK Engineering; it concludes the construction-related noise caused by the Project "would result in expected noise levels ranging from 78.5 dB(A) to 117 dB(A)." (AR 3333.) But differing expert opinion is not determinative in a substantial evidence review. (We Advocate Through Environmental Review v. County of Siskiyou (2022) 78 Cal.App.5th 683, 699 [holding, "' "a disagreement among

experts does not make an EIR inadequate"' " and is not determinative in a substantial evidence review].)

Petitioner's arguments concerning operational noise fare no better. Respondent's conclusion is supported by factual findings reached by Department of City Planning staff in a Recommendation Report. (AR 91.) The Department of City Planning concluded: "[n]oise generated through human conversation and activities (particularly in outdoor recreational spaces, such as balconies and patios), landscape maintenance, or trash collection would not exceed the recommended noise compatibility guidelines. Any new stationary sources of noise, such mechanical HVAC equipment, installed on the proposed development will be required to comply with LAMC Sections 112.02 and 112.05 which prohibit noise from air conditioning, refrigeration, heating, pumping, and filtering equipment from exceeding the ambient noise level at neighboring occupied properties by more than five dBA. In addition, the project is not expected to generate a substantial number of vehicle trips which could in turn generate additional noise. The proposed project is expected to generate a negligible increase in ambient noise from operation." (Ibid.)

Petitioner questions the Department of City Planning's findings, citing to a differing expert report which concludes" "it is highly probable that a noise level exceedance would occur from mechanical equipment operating on the project site." (AR 3333.) Again, differing expert opinions are insufficient and this one also appears speculative. (We Advocate Through Environmental Review, supra, 78 Cal.App.5th at p. 699; CEQA Guidelines, § 15384, subd. (a) [substantial evidence does not include "speculation"].)

2. Petitioner Has Failed to Demonstrate the "Unusual Circumstances" Exception or the "Cumulative Impacts" Exception are Applicable

Petitioner argues that the "unusual circumstances" and/or "cumulative impacts" exception apply. (OB, at pp. 24:16-25:18.) Under the CEQA statutory scheme, the thirty-three categorical exemptions are not absolute. (North Coast Rivers Alliance v. Westlands Water Dist. (2014) 227 Cal.App.4th 832, 850 (North Coast Rivers).) They "are subject to exceptions that defeat the use of the exemption." (Ibid.) Where an exception to an exemption applies, the public agency "must 'conduct an initial study to determine if the project may have a significant effect on the environment.' [Citation.]" (Muzzy Ranch, supra, 41 Cal.4th at p. 381.) It is Petitioner's burden to show such an exception applies. (CREED 21, supra, 234 Cal.App.4th at p. 514.)

a. "Unusual Circumstances" Exception

The "unusual circumstances" exception of CEQA Guidelines section 15300.2, provides: "[a] categorical exemption shall not be used for an activity where there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (State CEQA Guidelines, § 15300.2, subd. (c).)

The California Supreme Court in Berkeley Hillside Preservation v. City of Berkeley (2015) 60 Cal.4th 1086 sets forth a two-part, "bifurcated approach" to determine whether a public agency abused its discretion in concluding an "unusual circumstances" exception was inapplicable. (Id. at pp. 1114-1115.) First, the reviewing court must review the administrative record to determine whether there is substantial evidence supporting Respondent's determination that the Project does not present unusual circumstances. A project presents "unusual circumstances" when it will have a significant effect on the environment. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.) Second, the court determines whether the evidence presents a "fair argument" of "a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Berkeley Hillside, supra, 60 Cal.4th at p. 1114.) A "fair argument" may be made where the administrative record includes substantial evidence reflecting "'it [could] be "fairly argued"' " that "there is a reasonable possibility that the activity will have a significant effect on the environment due to unusual circumstances." (Id. at p. 1112.)

Petitioner focuses on construction-related noise and GHG emissions, arguing that substantial evidence demonstrates these are "unusual circumstances."

The Court concludes substantial evidence in the record fails to demonstrate the Project presents "unusual circumstances." Petitioner has failed to establish the Project encompasses "unusual" features which would cause a significant effect on the environment. The Court already has determined Petitioner's arguments concerning noise and GHG emissions are unavailing. Petitioner has failed to satisfy the first prong of the "bifurcated approach" of Berkeley Hillside. (Berkeley Hillside, supra, 60 Cal.4th at p. 1105.)

In this case, the second prong of the Berkeley Hillside analysis dovetails with the first. Substantial evidence does not present a "fair argument" the Project will have a significant impact on the environment.

The Court concludes Petitioner has failed to satisfy that the "unusual circumstances" exception

applies.

b. "Cumulative Impacts" Exception

The "cumulative impacts" exception, in CEQA Guidelines section 15300.2, subdivision (b), provides: "[a]ll exemptions for these classes are inapplicable when the cumulative impact of successive projects of the same type in the same place, over time is significant." "'Cumulative impacts' refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts." (CEQA Guidelines, § 15355.) "The individual effects may be changes resulting from a single project or a number of separate projects." (CEQA Guidelines, § 15355, subd. (a).) "The cumulative impact from several projects is the change in the environment which results from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impact can result from individually minor but collectively significant projects taking place over a period of time." (CEQA Guidelines, § 15355, subd. (b).) The challenging party has the "burden to produce evidence that there was a fair argument that the cumulative impact exception applied." (Aptos Residents Assn. v. County of Santa Cruz (2018) 20 Cal.App.5th 1039, 1052.)

Petitioner argues that three other developments near the Project have been approved by Respondent and "likely [will] be developed concurrently" with the Project, resulting in a significant cumulative impact to air quality. (OB, at p. 25:4-18.) The development projects are: (a) 1444 Hi Point Street (VTT-74364-SL); (b) 1437 Hi Point Street (DIR-2009-2189-SPR-DB); and (c) 1500 Hi Point Street ((DIR-2020-1870-TOC-HCA). (Ibid.) Petitioner cites to the SWAPE Report, which concludes the additional projects and the development at the Project Site "will occur in close proximity at the same time, thus resulting in a potentially significant cumulative impact." (AR 3152-3153.)

Petitioner has failed to demonstrate a fair argument that the cumulative impacts of successive projects, including the Project at issue here, would have a significant effect on the environment. The contentions in the SWAPE Report appear to be speculative. Petitioner fails to confirm whether the additional development projects will occur at the same time as the development of the Project Site, suggesting only that they "would likely be developed" at the same time. (OB, at p. 25:9-10.) And while the SWAPE Report concludes: "[the] projects at 1447 and 1500-1512 ½ South Hi Point Street will occur in close proximity at the same time[,]" the Report fails to articulate any facts—such as a development schedule for the referenced projects—supporting

this conclusion. (AR 3152.)

The Court finds no prejudicial abuse of discretion in Respondent's determination of a categorical exemption. The Petition as to the Third Cause of Action is DENIED.

VI. CONCLUSION

Petitioner's First Amended Writ of Mandate is GRANTED in part and DENIED in part. It is DENIED with respect to the First and Third Causes of Action. It is GRANTED with respect to the Second Cause of Action.

A writ of mandate is issued ordering Respondent to vacate and set aside approval of the Project, including Respondent's award of "Tier 3" TOC Incentives under the TOC Affordable Housing Incentive Program.

Petitioner shall submit a proposed writ of mandate within 10 days.

Order to Show Cause Re: Submission of Proposed Judgment is scheduled for 03/23/2023 at 08:30 AM in Department 54 at Stanley Mosk Courthouse.

The Ruling is filed this date.

The clerk gives notice as reflected in the certificate of mailing. Plaintiff is to give notice to any additional interested parties not reflected in the certificate of mailing.

Certificate of Mailing is attached.

EXHIBIT D

[*Revise the heading ''8.0 Mailing List Services'' to read as follows:*]

8.0 Address Management System

* * * * *

[*Replace current section 8.0 with new text to read as follows:*]

8.0 Address Management System

8.1 Address Management System Products and Fees

For Address Management System (AMS) products and fees, see Notice 123—Price List.

8.1.2 Carrier Route Information System

The official city delivery scheme, called the Carrier Route Information System, is available to mailers.

8.1.3 Address Changes to Election Boards and Voter Registration Commissions

For the designated fee, the USPS provides address changes to election boards and voter registration commissions.

8.2 Election Boards and Voter Registration Commissions

8.2.1 General

Election boards or voter registration commissions may use the ''Return Service Requested'' endorsement and/or the National Change of Address Linkage System (NCOA^{Link}) to maintain current address lists.

8.2.2 Fee Assessment

The fee for address changes provided to election boards and voter registration commissions is assessed for each Form 3575 submitted. The fee is collected on a per card basis regardless of the number of changes made on the card and whether the change concerns a person on the board's or commission's list of registrants. Instead of the actual forms, the USPS may supply facsimiles of the forms or copies of the information they contain at no additional fee.

8.2.3 Procedure

Election boards or voter registration commissions using permanent registration may obtain residential change-of-address information from Forms 3575:

a. An authorized official of the board or commission must sign and submit to the manager, address management systems (district), a written request that lists the Post Offices for which change-of-address information is desired.

b. If the request is approved, an agreement must be obtained from and signed by an authorized official of the board or commission detailing the terms under which the change-of-address information is to be released.

c. The board or commission receives the requested information from the postmasters of the listed Post Offices and pays those postmasters the applicable fees.

* * * * *

705 Advanced Preparation and Special Postage Payment Systems

* * * * *

8.0 Preparing Pallets

* * * * *

8.10 Pallet Presort and Labeling

* * * * *

8.10.3 USPS Marketing Mail or Parcel Select Lightweight—Bundles, Sacks, or Trays

* * * * *

[*Revise the text of 8.10.3e to read as follows*]

e. SCF, required, permitted for bundles, sacks, and trays. Pallet may contain carrier route, automation price, and/or Presorted price mail for the 3-digit ZIP Code groups in L005, or L051 for Parcel Select Lightweight sacks. Mailers may, at their option, place AADC trays on SCF pallets when the tray's ''label to'' 3-digit ZIP Code (from L801) is within that SCF's service area. Mailers may also, at their option, place mixed ADC or mixed AADC trays, labeled per L010, on an SCF pallet entered at the SCF facility responsible for the processing of mixed ADC or mixed AADC trays for that NDC/ASF facility. The SCF Pallet discount applies to 3-Digit, 5-Digit, Carrier Route, High Density, High Density Plus, Saturation (including EDDM—Not Retail) USPS Marketing Mail flat shaped pieces on a SCF pallet entered at an Origin (None), DNDC, or DSCF entry. SCF pallet discount does not apply to Marketing Mail letters or parcels. Labeling: * * *

Notice 123 (Price List)

[*Revise prices as applicable.*]

* * * * *

We will publish an appropriate amendment to 39 CFR part 111 to reflect these changes.

40 CFR Part 312

[EPA–HQ–OLEM–2021–0946; FRL–9334.1–01–OLEM]

Standards and Practices for All Appropriate Inquiries

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is taking final action to amend the Standards and Practices for All Appropriate Inquiries to reference a standard practice recently made available by ASTM International, a widely recognized standards developing organization. Specifically, this final rule amends the All Appropriate Inquiries Rule (AAI rule) to reference ASTM International's E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process'' and allow for its use to satisfy the requirements for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act, and to remove after one year recognition of the previous version of that standard, ASTM E1527–13, as compliant with the AAI rule.

DATES: This rule is effective on February 13, 2023.

FOR FURTHER INFORMATION CONTACT: For more detailed information on specific aspects of this rule, contact Patricia Overmeyer, Office of Brownfields and Land Revitalization (5105T), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460–0002, 202–566–2774, or *Overmeyer.patricia@epa.gov.*

SUPPLEMENTARY INFORMATION: Throughout this document, ''we,'' ''us,'' and ''our'' refer to the EPA.

I. Does this action apply to me?

This action offers certain parties the option of using an available industry standard to conduct all appropriate inquiries. Parties purchasing potentially contaminated properties may use the ASTM E1527–21 standard practice to comply with the all appropriate inquiries requirements of the Comprehensive Environmental Response, Compensation, and Liability

Act (CERCLA). This rule does not require any entity to use this standard. Any party who wants to claim protection from liability under one of CERCLA's landowner liability protections may follow the regulatory requirements of the All Appropriate Inquiries Rule at 40 CFR part 312, use the ASTM E1527–13 ''Standard Practice for Phase I Environmental Site Assessments'' for up to one year after this rule becomes effective, use the ASTM E2247–16 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property,'' or use the standard recognized in this final rule, the ASTM E1527–21 standard, to comply with the all appropriate inquiries provision of CERCLA.

Entities potentially affected by this action, or who may choose to use the newly referenced ASTM standard to perform all appropriate inquiries, include public and private parties who, as bona fide prospective purchasers, contiguous property owners, or innocent landowners, are purchasing potentially contaminated properties and wish to establish a limitation on CERCLA liability in conjunction with the property purchase. In addition, any entity conducting a site characterization or assessment on a property with funding from a brownfields grant awarded under CERCLA Section 104(k)(2)(B)(ii) may be affected by this action. This includes State, local, and Tribal governments that receive brownfields site assessment grants. A summary of the potentially affected industry sectors (by North American Industry Classification System (NAICS) codes) is displayed in the table below.

Industry category	NAICS code
Real Estate	531.
Insurance	52412.
Banking/Real Estate Credit	522292.
Environmental Consulting Services.	54162.
State, Local and Tribal Government.	926110, 925120.
Federal Government	925120, 921190, 924120.

The list of potentially affected entities in the above table may not be exhaustive. Our aim is to provide a guide for readers regarding those entities that EPA is aware potentially could be affected by this action. However, this action may affect other entities not listed in the table. If you have questions regarding the applicability of this action to a particular entity, consult the person listed in the preceding section entitled **FOR FURTHER INFORMATION CONTACT**.

II. Statutory Authority

This rule amends the All Appropriate Inquiries Rule setting Federal standards for the conduct of ''all appropriate inquiries'' at 40 CFR part 312. The All Appropriate Inquiries Rule sets forth standards and practices necessary for fulfilling the requirements of CERCLA section 101(35)(B) to obtain CERCLA liability protection and for conducting site characterizations and assessments with the use of brownfields grants per CERCLA section 104(k)(2)(B)(ii).

III. Background

On January 11, 2002, President Bush signed the Small Business Liability Relief and Brownfields Revitalization Act (''the Brownfields Amendments''). In general, the Brownfields Amendments to CERCLA provide funds to assess and clean up brownfield sites; clarify existing and establish new CERCLA liability provisions related to certain types of owners of contaminated properties; and provide funding to establish or enhance State and Tribal cleanup programs. The Brownfields Amendments revised some of the provisions of CERCLA Section 101(35) and limited liability under Section 107 for bona fide prospective purchasers and contiguous property owners, in addition to clarifying the requirements necessary to establish the innocent landowner liability protection under CERCLA Sections 107 and 101(35). The Brownfields Amendments clarified the requirement that parties purchasing potentially contaminated property undertake ''all appropriate inquiries'' into prior ownership and use of property before purchasing the property to qualify for protection from CERCLA liability.

The Brownfields Amendments of 2002 required EPA to develop regulations establishing standards and practices for how to conduct all appropriate inquiries. EPA promulgated regulations that set standards and practices for all appropriate inquiries on November 1, 2005 (70 FR 66070). In the final regulation, EPA referenced, and recognized as compliant with the rule, the ASTM E1527–05 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.'' In December 2008, EPA amended the All Appropriate Inquiries Rule to recognize another ASTM standard as compliant with the rule, ASTM E2247–08 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland or Rural Property.'' Both standards, the ASTM E1527–05 and the ASTM E2247–08, were subsequently revised by ASTM International. EPA referenced the revised ASTM E1527–13 standard on August 15, 2013 (78 FR 49690), and referenced the revised ASTM E2247–16 Standard on September 15, 2017 (82 FR 43310), as compliant with the All Appropriate Inquiries Rule. Currently, the All Appropriate Inquiries Rule (40 CFR part 312) allows for the use of the ASTM E1527–13 standard or the ASTM E2247–16 standard to conduct all appropriate inquiries, in lieu of following the requirements included in the rule. Once this action is final, the All Appropriate Inquiries Rule will allow for the use of the ASTM E1527–21 standard and will phase out use of the ASTM E1527–13 standard.

Recently, ASTM International published a revised standard for conducting Phase I environmental site assessments. This standard, ASTM E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,'' was reviewed by EPA, and determined by EPA to be compliant with the requirements of the All Appropriate Inquiries Rule.

On March 14, 2022, EPA published a direct final rule (87 FR 14174) to amend the All Appropriate Inquiries Rule to reference ASTM E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,'' and allow for its use to satisfy the requirements of the All Appropriate Inquiries Rule. A companion proposed rule, also published on March 14, 2022, invited comment on the direct final rule and stated that if EPA received adverse comment on the proposal to reference the ASTM E1527–21 standard, the Agency would withdraw the direct final rule. EPA received adverse comments on that action and published a notification of withdrawal of the direct final rule on May 2, 2022 (87 FR 25572). In this document, EPA is finalizing the amendment to the All Appropriate Inquiries Rule referencing the ASTM E1527–21 standard practice and addressing the comments received in response to the March 14, 2022 proposed rule.

IV. Summary of Comments

EPA received thirteen comments on the proposed rule published March 14, 2022. EPA developed a Response to Comments document and placed it in the docket for this action. The comments and EPA's responses are summarized here. Most commenters supported the Agency's proposed action to amend the All Appropriate Inquiries Rule to add a reference to ASTM

International's E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process'' and allow for its use to satisfy the requirements for conducting all appropriate inquiries under the Comprehensive Environmental Response, Compensation and Liability Act. Several commenters raised concerns related to the Agency's decision to continue to recognize a previous ASTM standard, ASTM E1527–13, as compliant with the All Appropriate Inquiries Rule. Commenters pointed out that the previous version of the ASTM standard, ASTM E1527–13, will sunset and will no longer be available from ASTM International. Commenters pointed out that the revised standard, ASTM E1527–21, was developed with input from industry professionals, users, and regulators and its updated provisions offer positive benefits to stakeholders. In addition, commenters asserted that the updated standard now represents ''good commercial and customary business practice,'' and therefore should replace the current ASTM E1527–13 Phase I Environmental Site Assessment standard referenced by EPA, rather than merely being added as an additionally referenced standard. Other commenters stated that EPA's continued acceptance of the 2013 version of the ASTM E1527 standard will create confusion within the marketplace because users will need to unnecessarily compare the costs and benefits of the use of the two standards when receiving multiple bids from potential contractors before environmental site assessment. EPA recognizes the commenters' concerns.

In response to concerns raised by commenters regarding the potential confusion associated with the Agency's recognition of a historical standard no longer recognized by ASTM International as current, or no longer reflecting its current consensus-based, or customary business standard, the Agency will remove its reference to the ASTM E1527–13 Standard Practice for Environmental Site Assessments. To provide parties with an adequate opportunity to complete AAI investigations that may be on-going and to allow all parties sufficient notice to become familiar with the updated industry standard (ASTM E1527–21), the Agency is providing for a sunset period for the removal of its recognition of the historic standard (ASTM E1527–13) as compliant with all appropriate inquiries. The sunset period for removal of the reference to the ASTM E1527–13 Standard Practice for Environmental Site Assessments is one year from publication of this final rule. A Phase 1 Environmental Site Assessment completed before that date using ASTM E1527–13 will be recognized as compliant with the All Appropriate Inquiries Rule.

One commenter requested that EPA provide a formal notice and comment opportunity on the ASTM E1527–21 Phase I Environmental Site Assessment Process. The commenter also stated that the reference to ''emerging contaminants'' in the ASTM E1527–21 standard is an ''out of scope'' consideration that may lead to additional potential CERCLA liability prematurely for landowners and potential buyers. In the March 14 direct final rule and the accompanying proposed rule, EPA clearly stated that it was not requesting comment on the ASTM standard. The ASTM standard is not an EPA regulation, and its use is not required to comply with the All Appropriate Inquiries Rule or any other EPA regulations.

Industry standards may include elements that are not within the scope of the All Appropriate Inquiries Rule. Use of the ASTM E1527–21 standard is not required for compliance with the All Appropriate Inquiries Rule. Therefore, EPA does not consider these additional elements as a reason to avoid recognition of the revised E1527–21 standard as compliant with the All Appropriate Inquiries Rule.

Two commenters submitted requests for modifications to the ASTM E1527–21 standard. One commenter requested changes to the standard's requirements for environmental lien searches and to the definitions of ''recognized environmental conditions.'' Another commenter requested a modification to the definition of ''property use limitation'' as it is used in the ASTM E1527–21 standard. The ASTM E1527–21 is not an EPA standard and the Agency stated in the proposed rule that it was not requesting comments on the ASTM standard. Requests to modify the ASTM standard should be directed to ASTM. Use of the ASTM standard is not required to comply with the All Appropriate Inquiries Rule.

V. What action is the EPA taking?

This rule amends the All Appropriate Inquiries Rule to allow for the use of the recently revised ASTM International standard ASTM E1527–21 to satisfy the all appropriate inquiries requirements under CERCLA for establishing the bona fide prospective purchaser, contiguous property owner, and innocent landowner liability protections.

With this action, parties seeking liability relief under CERCLA's landowner liability protections, as well as recipients of brownfields grants for conducting site assessments, will be considered in compliance with the requirements for all appropriate inquiries, if such parties comply with the procedures provided in the ASTM E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.''

The Agency notes that this action does not require any party to use the ASTM E1527–21 standard. Any party conducting all appropriate inquiries to comply with CERCLA's bona fide prospective purchaser, contiguous property owner, and innocent landowner liability protections, or a brownfields site assessment under CERCLA Section 104(k), may follow the provisions of the All Appropriate Inquiries Rule at 40 CFR part 312. This action merely allows for the option of using ASTM International's E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process'' by those parties purchasing potentially contaminated properties in lieu of following the specific requirements of the All Appropriate Inquiries Rule.

The Agency notes that there are no legally significant differences between the regulatory requirements and the ASTM E1527–21 standard. To facilitate an understanding of the slight differences between the All Appropriate Inquiries Rule and the revised ASTM E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process,'' as well as the applicability of the E1527–21 standard to certain types of properties, EPA developed, and placed in the docket for this action, the document ''Comparison of All Appropriate Inquiries Regulation, the ASTM E1527–13 Phase I Environmental Site Assessment Process, and ASTM E1527–21 Phase I Environmental Site Assessment Process.'' The document also provides a comparison of the two ASTM E1527 standards.

This action also includes the removal of the current reference in the All Appropriate Inquiries Rule to the ASTM E1527–13 Standard Practice for Environmental Site Assessments as compliant with all appropriate inquiries. The removal of the reference to the historic standard as compliant with the all appropriate inquiries requirements will take effect one year following publication of this final rule.

This action includes no changes to the All Appropriate Inquiries Rule other than to add a reference to the new

ASTM E1527–21 standard and remove the current reference to the historic ASTM E1527–13 standard as compliant with all appropriate inquiries. With this final rule, EPA is recognizing the ASTM E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process'' as compliant with the all appropriate inquiries requirements. The reference to the ASTM E1527–13 standard as compliant with the all appropriate inquiries requirements will be removed from the reference section of the AAI (40 CFR 312.11) one year following publication of this final rule.

VI. Statutory and Executive Order Reviews

Under Executive Order 12866 (58 FR 51735, October 4, 1993) and Executive Order 13563 (76 FR 3821, January 21, 2011), this action is not a ''significant regulatory action'' and is therefore not subject to OMB review. This action merely amends the All Appropriate Inquiries Rule to reference ASTM International's E1527–21 ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process'' and allow for its use to satisfy the requirements for conducting all appropriate inquiries under CERCLA. This action does not impose any requirements on any entity, including small entities. Therefore, pursuant to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), after considering the economic impacts of this action on small entities, I certify that this action will not have a significant economic impact on a substantial number of small entities. This action does not contain any unfunded mandates or significantly or uniquely affect small governments as described in sections 202 and 205 of the Unfunded Mandates Reform Act of 1999 (UMRA) (Pub. L. 104–4). This action does not create new binding legal requirements that substantially and directly affect Tribes under Executive Order 13175 (63 FR 67249, November 9, 2000). This action does not have significant federalism implications under Executive Order 13132 (64 FR 43255, August 10, 1999). Because this action is exempt from review under Executive Order 12866, this rule is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 *et seq.,* nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

This action does involve technical standards. Therefore, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (Pub. L. 104–113; 15 U.S.C. 272) (NTTAA) apply. The NTTAA was signed into law on March 7, 1996, and, among other things, directs the National Institute of Standards and Technology (NIST) to bring together Federal agencies as well as state and local governments to achieve greater reliance on voluntary consensus standards and decrease dependence on in-house standards. It states that use of such standards, whenever practicable and appropriate, is intended to achieve the following goals: (a) Eliminate the cost to the government of developing its own standards and decrease the cost of goods procured and the burden of complying with agency regulations; (b) provide incentives and opportunities to establish standards that serve national needs; (c) encourage long-term growth for U.S. enterprises and promote efficiency and economic competition through harmonization of standards; and (d) further the policy of reliance upon the private sector to supply government needs for goods and services. The Act requires that Federal agencies adopt private sector standards, particularly those developed by standards developing organizations (SDOs), whenever possible in lieu of creating proprietary, non-consensus standards.

This action is compliant with the spirit and requirements of the NTTAA. This action allows for the use of the ASTM International standard known as Standard E1527–21 and entitled ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.'' By taking this action, EPA is fulfilling the intent and requirements of NTTAA.

The Congressional Review Act, 5 U.S.C. 801 *et seq.,* generally provides that before certain actions may take effect, the agency promulgating the action must submit a report, which includes a copy of the action, to each House of the Congress and to the Comptroller General of the United States. EPA submitted a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 312

Administrative practice and procedure, Hazardous substances.

Barry N. Breen,

Acting Assistant Administrator, Office of Land and Emergency Management.

For the reasons set out in the preamble, 40 CFR part 312 is amended as follows:

PART 312—INNOCENT LANDOWNERS, STANDARDS FOR CONDUCTING ALL APPROPRIATE INQUIRIES

■ 1. The authority citation for part 312 continues to read as follows:

Authority: Section 101(35)(B) of CERCLA, as amended, 42 U.S.C. 9601(35)(B).

Subpart B—Definitions and References

■ 2. Section 312.11 is amended by:

■ a. Redesignating paragraphs (a) and (b) as paragraphs (b) and (c), respectively;

■ b. Adding a new paragraph (a); and

■ c. Revising newly redesignated paragraph (c).

The addition and revision read as follows:

§ 312.11 References.

* * * * *

(a) The procedures of ASTM International Standard E1527–21 entitled ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.'' This standard is available from ASTM International at *www.astm.org,* 1–610–832–9585.

* * * * *

(c) Until February 13, 2024, the procedures of ASTM International Standard E1527–13 entitled ''Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.'' This standard is available from ASTM International at *www.astm.org,* 1–610–832–9585.

EXHIBIT F

Gas Station Contamination Soil Testing

Gas station contamination soil testing is the scientific process by which geologists drill and collect samples from underground, in order to address environmental pollution concerns. Gasoline service stations typically comprise underground storage tanks (or USTs), which hold thousands of gallons of fuel. And these USTs can gradually leak gasoline and diesel into the subsurface over time. Similarly, the underground piping from these USTs to dispensers can also leak. Depending on the characteristics of geologic units on-site, depth to groundwater, and volume of fuel lost, the government may require clean-up action. This phase of work is called remediation, which can be a scientifically complex and highly bureaucratic aspect of the environmental engineering sector. Updated September 10, 2022.

How Contamination Happens

Gas station contamination soil testing is the specific task that checks if soil and groundwater contamination exists. When gasoline or diesel enters the subsurface in the liquid phase, it travels vertically and horizontally underground. And different types of soils have different fuel migration characteristics.

Chat With Us!

Gasoline Contamination Migration

For example, course grain sand and gravel layers allow gasoline to quickly flow through in a mostly vertical fashion, with little lateral dispersion. This happens because the pore space and grain distributions are larger, allowing the chemical to pass in the direction of gravity, without much resistance. On the other hand, silt and clay layers can have the opposite effect. Silt and clay pore spaces are smaller, yet the overall porosity values are higher than sand and gravel. As a result, the chemical gets absorbed into silt and clay and doesn't migrate within it easily. In fact, this characteristic of silt and clay can also result in a horizontal migration of gasoline and diesel upon contact.

Other factors of Migration

Although the example above brings some clarity to migration pathways to the layperson, the process is much more complex. In fact, there are hundreds of factors that contribute to how a contamination plume occurs. For instance, the molecular properties of the specific chemicals themselves, affect the flow and migration pathways. Similarly, physical properties such as density and aqueous- to vapor- phase evaporation impact contamination plumes. Furthermore, temperature, pressure, and moisture characteristics of the soil underground can also change the way the chemicals react during migration. Moreover, the depth to groundwater and direction of groundwater flow additionally affect the horizontal and lateral extent of the contamination plume. Numerous other factors also play into this process.

Chemicals of Concern

Among other chemicals, Benzene, Toluene, Ethylbenzene and Xylenes (BTEX) are the primary chemicals of concern in gasoline and diesel contamination sites. Additionally, tertiary butyl alcohol (TBA) and methyl tertiary-butyl ether (MTBE) were octane-enhancer additives which were also part of the gasoline formulas in the 1980s. Moreover, each of these constituents have breakdown products.

In order to analyze soil and groundwater for these chemicals, geologists run laboratory analytics for total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs).

Gas Station Contamination Soil Testing Reports

There are a variety of ways a gas station contamination case can come to light. For instance, a Phase 1 Environmental Site Assessment may recommend a subsurface investigation. In such a case, the environmental professional may suggest a Geophysical Survey. This is to identify the boundaries of USTs and product piping. Moreover, the environmental professional may suggest a Phase II Subsurface Investigation to determine whether there has been a gasoline and diesel release. Subsurface media include soil, soil gas, and potentially groundwater if encountered within a reasonable depth. And the parameters for contamination testing should include volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH).

About Geo Forward

Geo Forward is a nationwide environmental company with a mission to help the human race achieve net zero sustainable living.

Forward-Thinking Scientists & Engineers

Our versatile team has expertise in geology, biology, engineering, construction, and environmental policy.

Serving Humanity to Achieve 100% Environmental Sustainability

Services range from environmental due diligence and compliance to underground contamination removal, remediation, and mitigation. In addition to other services, Geo Forward provides its followers with information about modern technologies and discoveries related to environmental science, nature, space exploration, structures, etc.
