Comments for Public Posting: Isn't it cheaper to make the roads safer for pedestrians than it is to install a surveillance system to catch speeding? We want lasting solutions, like making roads safer, with protected bike lanes and good sidewalks, additional cross walks with lit up paths where needed. If this will save lives, I'm not opposed, but is it really actually the best option?

Comments for Public Posting: This is an invasion of privacy. This is unconstitutional. This is part of a police state system. This skews the balance from freedom to tyranny. This is a slippery slope to even more intrusive government surveillance and will end in disaster for individual human beings and the human race in general. The existing laws and system of enforcement are sufficiently balanced to assure safety while also respecting basic human rights to some privacy. This is a disgusting money grab from corrupt shortsighted politicians supported by willing fools.

Comments for Public Posting: Although I believe cameras violate privacy, drivers in this state, and other states do not obey laws, and therefore it is imperative that we stop the speeding drivers who have no regard for the safety of others. The cameras that will be installed should provide enough time for drivers to get through lights so that we do not have rear end collisions. The idea the tickets go up in price after continuous violations makes sense. Anyone who violates the law at least twice should be told that upon another violation, their license will be suspended for at least a few months. We have to get serious about enforcing our traffic laws. The lack of police in the San Fernando Valley is causing us tremendous problems. Drivers have been emboldened by the fact that there is no police presence.
