Comments for Public Posting: I am an angeleno who has recently given up my car in favor of walking, cycling and transit. The proposals here would make a huge positive difference. Pedestrian recall is crucial for cyclists who can end up waiting for lights that will never change. Longer lead times for pedestrians to get started are also crucial due to distracted driving, fast average speeds and huge intersections. I'm trying to do my part to reduce emissions and make the city a better place for my kids, but I don't want to lose my life in the process! Please approve this motion and continue down the path to a truly livable city
