Comments for Public Posting: All Californians and the country as a whole need a new infrastructure bank. Local funds are difficult to secure for infrastructure, and federal funds have proven to be nearly impossible to get or maintain. Every infrastructure project becomes horribly inefficient when a stop/start funding cycle is applied. We don't have the time or capital to proceed this way. We need a smarter way to affordably fix what's crumbling and leave the next generations with working systems. They will have enough to worry about as it is. Please adopt the resolution supporting the National Infrastructure Bank and help convince our national representatives to approve this charter. We know this kind of mechanism works, since it has worked 4 times in our past and is used worldwide in countries that get their infrastructure projects built.
