References: *Geotechnical Investigation,* prepared by Geocon West, Inc., dated January 12, 2023;

City of Los Angeles Geology and Soils Report Review Letter, Log No. 124921, dated February 24, 2023.

Dear Mr. Landon:

This letter has been prepared in response to the referenced Geology and Soils Report Review Letter prepared by the City of Los Angeles, consisting of ten comments, dated February 24, 2023. A copy of the review letter is appended herein.

Based on discussions with the client and review of the conceptual project plans, the project scope has been revised and no longer includes the Main Campus gymnasium nor the North Campus parking structure. A revised project description is included below.

It is our understanding that the proposed improvements will include :

- Constructing a pedestrian bridge over Saticoy Street connecting the Main and North Campus
- North Campus:
    - Demolish the existing commercial structures and remove the existing paving.
    - Construct a new outdoor pool and pool house.
    - Construct new sports fields with associated ancillary structures.
    - Construct an on-grade parking lot.

- Main Campus:
    - Demolish 6 of the existing administrative and classroom structures.
    - Construct a new 3-Story Main administrative/classroom structure.
    - Repave and remodel existing surface parking areas and outdoor quad.

The locations of the proposed improvements are shown on the updated site plan (see Figure 1). The recommendations of the January 12, 2023, report remain applicable to the project as presently proposed. Where differing, recommendations in this response letter supersede those presented in the referenced report and should be utilized for design and construction.

Comment 1: *Verify the current legal description and addresses (for all lots part of the project site) with the Address Section of the Bureau of Engineering located on the Third Floor of the 201 N. Figueroa Street, City of Los Angeles offices.*

Response 1: Acknowledged. A part of the North Campus address was not included in the project description. Revised legal addresses of the Main Campus and North Campus are provided below.

Main Campus: 7500 N. Chaminade Ave, 23241 W. Cohasset Street and 23260 W. Saticoy Street
TRACT: 26072; LOT: FR LT 1
TRACT: 2500; LOT: FR 19 & FR 35

North Campus: 23217 & 23229-23255 W. Saticoy Street, 7619-7621 & 7625-7629 N. Woodlake Avenue
TRACT: 25773; LOT: LT 1
ARB: 2, 3, 4

Comment 2: *Provide a geologic map that is based upon conceptual grading or site development plans, to illustrate all proposed and existing contours relative to the planned grading and/or construction, along with all off-site slopes and conditions that could adversely affect the stability or safety of the site (7006.3.2).*

Response 2: A Geologic Map of the Main and North Campus is provided on Figures 2A and 2B, respectively. Artificial fill is the surface material at the site and is underlain by either Holocene age alluvium or Tertiary age bedrock of the Monterey Formation. The geologic units are designated as artificial fill over alluvium (af/Qa) or artificial fill over shallow Monterey Formation (af/Tm).

Comment 3: *Show the location and height of all proposed retaining walls.*

Response 3: The Geologic Maps use the conceptual site grading plans as a background which indicate the proposed retaining wall locations and heights. The only proposed retaining wall will be the basement walls of the proposed Administration/Classroom Building where the northwest (southeast-facing excavation) may expose unsupported bedding in the lower 5 feet of the building excavation (see Figure 2). Temporary shoring and retaining wall recommendations to support adverse bedding conditions are provided in the January 12, 2023 report.

Comment 4: *Verify the location of the borings on the maps and cross sections, and revise accordingly.*

Response 4: Boring Locations have been reviewed and are correctly located on the Geologic maps and cross sections (see Figures 2A, 2B and 3).

Comment 5: *Provide slope stability analyses for all slopes steeper than 2H:1V to remain by the proposed improvements, such as the proposed bridge and administration building.*

Response 5: Based on correspondence with the project civil engineer and review of the conceptual grading plan, no slopes steeper than a 2H:1V are planned or will remain.

Comment 6: *In areas where the depth of bedrock exceeds 10 feet, submit justification in accordance with ASCE/SEI 7-16 (Chapter 20) and code section 1613.2.2 of the 2020 Los Angeles Building Code for the use of a Site Class C. Otherwise, the Site Class shall be D in those areas, and updated seismic design parameters shall be provided.*

<u>Note</u>: The use of the Site Class C in the report does not appear justified due to the presence of up to 40 feet of fill and alluvium (North Campus), lack of shear wave velocities, SPT blow counts, or undrained shear strengths of the upper 100 fee of the site profile.

Response 6: Acknowledged. Site Class C seismic design criteria provided in the report may be used for the proposed Main Campus structure. Design of the North Campus structures should use the Site Class D design criteria provided below.

The following table summarizes the site-specific design criteria obtained from the 2022 California Building Code (CBC; Based on the 2021 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application *U.S. Seismic Design Maps*, provided by the Structural Engineers Association of California (SEAOC). The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2022 CBC and Table 20.3-1 of ASCE 7-16. The values presented below are for the risk-targeted maximum considered earthquake (MCE_R).

2022 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2019 CBC Reference
Site Class	D	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.5g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.6g	Figure 1613.2.1(3)
Site Coefficient, F_A	1.0	Table 1613.2.3(1)
Site Coefficient, F_V	1.7	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	1.5g	Section 1613.2.3 (Eqn 16-20)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.02g*	Section 1613.2.3 (Eqn 16-21)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.0g	Section 1613.2.4 (Eqn 16-22)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.68g*	Section 1613.2.4 (Eqn 16-23)
*Per Supplement 3 of ASCE 7-16, a ground motion hazard analysis (GMHA) shall be performed for projects on Site Class "D" sites with 1-second spectral acceleration (S_1) greater than or equal to 0.2g, which is true for this site. However, Supplement 3 of ASCE 7-16 provides an exception stating that that the GMHA may be waived provided that the parameter S_{M1} is increased by 50% for all applications of S_{M1}. The values for parameters S_{M1} and S_{D1} presented above have **not** been increased in accordance with Supplement 3 of ASCE 7-16.		

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION (NORTH CAMPUS - SITE CLASS D)

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.544g	Figure 22-9
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.598g	Section 11.8.3 (Eqn 11.8-1)

Comment 7: *Historic High Groundwater is mapped as less than 10 feet bgs in the areas of the pool house, pool, and generally in the areas outside of the proposed administration building. As such, revise the liquefaction analyses using a historic high groundwater level of less than 10 feet.*

Response 7: We agree that the historic high groundwater level is mapped as less than 10 feet in areas outside of the proposed administration building (CDMG, 1997; revised 2001).

To determine the appropriate historic high groundwater level depth for the liquefaction analysis, we reviewed available groundwater monitoring well data from the County of Los Angeles Department of Public Works. There are two active and five inactive groundwater monitoring wells within one mile of the site that provide groundwater level data for the time period between 1956 and 2022. Based on the monitoring data, the shallowest depth to groundwater documented in these wells was at a depth of 8.9 feet below the ground surface for the period between 1956 and 2022.

The North Campus is underlain by artificial fill, potentially liquefiable alluvium, further underlain by Monterey Formation bedrock. The depth of the bedrock ranges from 12 feet on the west portion of the property, to 42 feet on the east side of the property. It is anticipated that the proposed bridge and Main Campus structures can be founded on relatively shallow bedrock using deepened foundations extending through the potentially liquefiable materials. Since structures will be supported on bedrock, it is our opinion that the potential for liquefaction and associated ground deformations to impact the bridge and Main Campus structures is considered very low.

A revised liquefaction analysis for the North Campus structures has been performed using Site Class D seismic design criteria and a revised historic high groundwater level. The liquefaction analysis was performed for boring B1 to represent the worst-case liquefaction potential, and boring B3 to represent the lowest liquefaction potential for the North Campus.

The liquefaction analysis was performed for a Design Earthquake level by using a high groundwater table of 8 feet below the ground surface, a magnitude 6.58 earthquake, and a peak horizontal acceleration of 0.399g ($\frac{2}{3}PGA_M$). The groundwater level of 8 feet is considered conservative considering the shallowest groundwater level in nearby wells is 8.9 feet over the last 66 years. The enclosed liquefaction analyses included herein for borings B1 and B3 indicate that the alluvial soils below the proposed foundation level would be prone to approximately 2.9 and 0.4 inches of liquefaction settlement during a Design Earthquake ground motion (see enclosed calculation sheets, Figures 4 through 7). The resulting differential settlement at the foundation level is anticipated to be approximately 1½ inches over a distance of 20 feet.

It is our understanding that the intent of the Building Code is to maintain “Life Safety” during Maximum Considered Earthquake level events. Therefore, additional analysis was performed to evaluate the potential for liquefaction during a MCE event. The structural engineer should evaluate the proposed structure for the anticipated MCE liquefaction induced settlements and verify that anticipated deformations would not cause the foundation system to lose the ability to support the gravity loads and/or cause collapse of the structure.

The liquefaction analysis was also performed for Maximum Considered Earthquake levels by using a historic high groundwater table of 8 feet below the ground surface, a magnitude 6.66 earthquake, and a peak horizontal acceleration of 0.598g (PGA_M). The enclosed liquefaction analysis, included herein for borings B1 and B3 indicates that the alluvial soils below the proposed foundation would be prone to approximately 3.1 and 0.4 inches of liquefaction settlement during a Maximum Considered Earthquake ground motion (see enclosed calculation sheets, Figures 8 and 11). The resulting differential settlement at the foundation level is anticipated to be approximately 1½ inches over a distance of 20 feet.

Comment 8: *For other than the Pool House, provide foundation recommendations for the proposed structures within the "North Campus" as shown on FIG. 2A, and for any proposed structures within the southern portion of the "Main Campus" (see FIG. 2A). Note: The foundation recommendations shall comply with the settlement thresholds for liquefaction based on P/BC 2020-151.*

Response 8: A summary of the proposed structures, recommended foundation system and recommended bearing materials is provided in the table below. Revised recommendations for the North Campus structures based on the results of the revised liquefaction analysis are also provided below.

Campus Location	Structure Name	Recommended Foundation Type	Recommended Slab	Recommended Bearing Material
Main Campus	New Administration/Classroom Building	Conventional Spread Foundations[1]	Conventional Slab-on-Grade	Bedrock
North/Main Campus	Pedestrian Bridge	Deepened Foundations (Piles)[2]	NA	Bedrock
North Campus	Pool House	Mat Foundation[3]	Mat Foundation[3]	Engineered Fill
North Campus	Miscellaneous accessory structures (Locker rooms, concessions stand, etc.)	Mat Foundation[3]	Mat Foundation[3]	Engineered Fill

1. See Section 8.7 and 8.9 of January 12, 2023 report for Conventional Foundation Recommendations
2. See Sections 8.10 through 8.12 of January 12, 2023 report for Deepened Foundations Recommendations
3. See below for Mat Foundation Recommendations

At a minimum, it is recommended that the upper 5 feet of existing earth materials within the proposed structures footprint be excavated and properly compacted for support of a reinforced concrete mat foundation system. Deeper excavations should be conducted as necessary to remove any existing deeper artificial fill or soft alluvial soil at the direction of the Geotechnical Engineer (a representative of Geocon). The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint area, including building appurtenances, or a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft alluvial soils removal will be verified by the Geocon representative during site grading activities.

Prior to placement of new engineered fill, all building pad excavation bottoms shall be proof rolled with heavy equipment in the presence of the Geotechnical Engineer.

Once the recommended grading has been completed, the proposed North Campus structures may be supported by a reinforced mat foundation system deriving support in newly placed engineered fill. The mat foundation system allows for more efficient construction and is better at distributing loads to minimize the effect of potential settlement.

The recommended allowable bearing pressure is 3,000 pounds per square foot (psf). The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

It is recommended that a modulus of subgrade reaction of 100 pounds per cubic inch (pci) be utilized for the design of the mat foundation bearing in the engineered fill. The modulus should be reduced in accordance with the following equation when used with larger foundations:

$$K_R = K\left[\frac{B+1}{2B}\right]^2$$

where: K_R = reduced subgrade modulus
K = unit subgrade modulus
B = foundation width (in feet)

The thickness of and reinforcement for the mat foundation should be designed by the project structural engineer.

For seismic design purposes, a coefficient of friction of 0.40 may be utilized between the concrete mat and bedrock without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

This office should be provided a copy of the final construction plans so that the recommendations presented herein could be properly reviewed and revised if necessary.

The maximum static settlement for a reinforced mat foundation system deriving support in the newly placed engineered fill with a maximum allowable bearing value of 3,000 psf is expected to be less than 1 inch and occur below the heaviest loaded structural element. Static differential settlement over a distance of 20 feet, is expected to be less than ½ inch. Based on seismic considerations, the proposed North Campus structures should be designed for a combined static and seismically induced differential settlement of 2 inches over a distance of 20 feet.

Comment 9: *Provide recommendations for the proposed swimming pool.*

Response 9: Acknowledged. Swimming pool recommendations are provided below.

The proposed North Campus swimming pool should be designed as a free-standing structure deriving support in newly placed engineered fill and/or competent alluvial soils found at or below a depth of 5 feet. If the alluvial soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Swimming pool foundations and walls may be designed in accordance with the Mat Foundation Design and Retaining Wall Design sections of the referenced January 12, 2023 report.

The proposed pool should be constructed utilizing an expansive soils design, and a hydrostatic relief valve should be considered as part of the swimming pool design unless a gravity drain system can be placed beneath the pool shell.

Comment 10: *Revise the recommendations in the report based on the above items.*

Response 10: Acknowledged. Revised recommendations have been provided in response to the comments above.

If you have any questions regarding this letter, or if we may be of further service, please contact the undersigned.

Very truly yours,

EMPIRICAL ESTIMATION OF LIQUEFACTION POTENTIAL
DESIGN EARTHQUAKE

NCEER (1996) METHOD
EARTHQUAKE INFORMATION:

Earthquake Magnitude:	6.58
Peak Horiz. Acceleration PGA_M (g):	0.598
2/3 PGA_M (g):	0.399
Calculated Mag.Wtg.Factor:	0.719
Historic High Groundwater:	8.0
Groundwater Depth During Exploration:	100.0

By Thomas F. Blake (1994-1996)
ENERGY & ROD CORRECTIONS:

Energy Correction (CE) for N60:	1.29
Rod Len.Corr.(CR)(0-no or 1-yes):	1.0
Bore Dia. Corr. (CB):	1.00
Sampler Corr. (CS):	1.20
Use Ksigma (0 or 1):	1.0

LIQUEFACTION CALCULATIONS:

Unit Wt. Water (pcf): 62.4

GEOLOGY AND SOILS REPORT REVIEW LETTER

February 24, 2023

LOG # 124921
SOILS/GEOLOGY FILE – 2
LIQ

Jenson Capital Group, Inc.
822 S. Robertson Boulevard, Suite 303
Los Angeles, CA 90035

TRACTS:	26072 // 2500	// 25773	
LOTS:	1 // 19 & 35	// 1 (Arbs. 2, 3 & 4)	
LOCATION:	7500 N. Chaminade Avenue, 23241 W. Cohasset Street // 23260 W. Saticoy Street // 23217-23255 W. Saticoy Street, 7619-7629 N. Woodlake Avenue		

CURRENT REFERENCE REPORT/LETTER	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Geology/Soils Report	W1547-06-01	01/12/2023	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provides recommendations for the proposed demolition of existing site improvements and construction of a 3-level administrative/classroom structure, accessory structures, pedestrian bridge, pool house, pool and retaining walls.

The earth materials at the subsurface exploration locations consist of up to 7 feet of uncertified fill underlain by up to 3 feet of colluvium, up to 40 feet of alluvium and Monterey Formation siltstone and sandstone bedrock that dips 10 degrees to the northeast and 12 to 30 degrees to the southeast. According to the consultants, groundwater was encountered at a depth of 14.6 feet in boring 12 and 32 feet in boring 1. Historic High Groundwater is mapped as less than 10 feet bgs in the areas of the pool house, pool, and generally in the areas outside of the proposed administration building.

The consultants recommend to support the proposed structures on conventional and/or drilled-pile foundations bearing in competent bedrock or on mat foundations bearing on a blanket of properly placed fill. According to the consultants, the upper 5 feet in the area of the pool house footprint is recommended to be excavated and compacted for support of the mat foundation.

The site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California.

The review of the subject report cannot be completed at this time and will be continued upon submittal of an addendum to the report which shall include, but not be limited to, the following:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2023 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

AN EQUAL EMPLOYMENT OPPORTUNITY - AFFIRMATIVE ACTION EMPLOYER

1. Verify the current legal description and addresses (for all lots part of the project site) with the Address Section of the Bureau of Engineering located on the Third Floor of the 201 N. Figueroa Street, City of Los Angeles offices.

2. Provide a geologic map that is based upon conceptual grading or site development plans, to illustrate all proposed and existing contours relative to the planned grading and/or construction, along with all off-site slopes and conditions that could adversely affect the stability or safety of the site (7006.3.2).

3. Show the location and height of all proposed retaining walls.

4. Verify the location of the borings on the maps and cross sections, and revise accordingly.

5. Provide slope stability analyses for all slopes steeper than 2H:1V to remain by the proposed improvements, such as the proposed bridge and administration building.

6. In areas where the depth to bedrock exceeds 10 feet, submit justification in accordance with ASCE/SEI 7-16 (Chapter 20) and code section 1613.2.2 of the 2020 Los Angeles Building Code for the use of a Site Class C. Otherwise, the Site Class shall be D in those areas, and updated seismic design parameters shall be provided.

   Note: The use of the Site Class C in the report does not appear justified due to the presence of up to 40 feet of fill and alluvium (North Campus), lack of shear wave velocities, SPT blow counts, or undrained shear strengths of the upper 100 feet of the site profile.

7. Historic High Groundwater is mapped as less than 10 feet bgs in the areas of the pool house, pool, and generally in the areas outside of the proposed administration building. As such, revise the liquefaction analyses using a historic high groundwater level of less than 10 feet.

8. For other than the Pool House, provide foundation recommendations for the proposed structures within the "North Campus" as shown on FIG. 2A, and for any proposed structures within the southern portion of the "Main Campus" (see FIG.2A). Note: The foundation recommendations shall comply with the settlement thresholds for liquefaction based on P/BC 2020-151.

9. Provide recommendations for the proposed swimming pool.

10. Revise the recommendations in the report based on the above items.

The geologist and soils engineer shall prepare a report containing an itemized response to the review items indicated in this letter. If clarification concerning the review letter is necessary, the report review engineer and/or geologist may be contacted. Two copies of the response report, including one unbound wet-signed original for archiving purposes, a pdf-copy of the complete report in a flash drive, and the appropriate fees will be required for submittal.

Oversized Doc(s).	``	``	``

PREVIOUS REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Dept. Review Letter	124921	02/24/2023	LADBS
Geology/Soils Report	W1547-06-01	01/12/2023	Geocon West, Inc.

The Grading Division of the Department of Building and Safety has reviewed the referenced reports that provide recommendations for the proposed demolition of existing site improvements and construction of a 3-level administrative/classroom structure, accessory structures, pedestrian bridge, pool house, pool and retaining walls, as shown on the Site Plan (Figure 1) and Geologic Maps (Figures 2A & 2B) in the 05/08/2023 report.

The earth materials at the subsurface exploration locations consist of up to 7 feet of uncertified fill underlain by up to 3 feet of colluvium, up to 40 feet of alluvium and Monterey Formation siltstone and sandstone bedrock that dips 10 degrees to the northeast and 12 to 30 degrees to the southeast. According to the consultants, groundwater was encountered at a depth of 14.6 feet in boring 12 and 32 feet in boring 1. Historic High Groundwater is mapped as less than 10 feet bgs in the areas of the pool house, pool, and generally the areas outside of the proposed administration building.

The consultants recommend to support the proposed structures on conventional and/or drilled-pile foundations bearing in competent bedrock or on mat foundations bearing on a blanket of properly placed fill (see pg. 6 of the 05/08/2023 report). According to the consultants, the upper 5 feet

AN EQUAL EMPLOYMENT OPPORTUNITY - AFFIRMATIVE ACTION EMPLOYER

within the proposed structures is recommended to be excavated and compacted for support of the mat foundation (see pg. 6 of the 05/08/2023 report).

According to the consultants, the proposed swimming pool is recommended to derive support from newly placed fill and/or competent alluvial soils found at or below a depth of 5 feet, as recommended on page 8 of the 05/08/2023.

The site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California. The Liquefaction study included as a part of the 05/08/2023 report demonstrates that the site soils for the North Campus (boring B-1 by the pool house) are subject to liquefaction. The earthquake induced total and differential settlements are calculated to be 2.9 and 1.5 inches, respectively (based on 2/3rd the PGA_M). To mitigate the earthquake induced settlements it is proposed to use a mat foundation. The requirements of the 2023 City of Los Angeles Building Code have been satisfied.

The site is located in a designated liquefaction hazard zone as shown on the Seismic Hazard Zones map issued by the State of California. The Liquefaction study included as a part of the 05/08/2023 report demonstrates that the site soils for the North Campus (boring B-3 by the pedestrian bridge) are subject to liquefaction. The earthquake induced total and differential settlements are calculated to be 0.4 and 0.2 inches, respectively (based on 2/3rd the PGA_M). To mitigate the earthquake induced settlements it is proposed to use a pile foundation system bearing in bedrock. The requirements of the 2023 City of Los Angeles Building Code have been satisfied.

The referenced reports are acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2023 City of LA Building Code. P/BC numbers refer to the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. Conformance with the Zoning Code Section 12.21 C8, which limits the heights and number of retaining walls, will be determined during structural plan check.

2. Approval shall be obtained from the Department of Public Works, Bureau of Engineering, Development Services and Permits Program where removal of support and/or retaining of slopes adjoining to a public way is proposed (3307.3.2).

   6262 Van Nuys Blvd. Ste 351, Van Nuys (818) 374-4605

3. Secure the notarized written consent from all owners upon whose property proposed grading/construction access is to extend, in the event off-site grading and/or access for construction purposes is required (7006.6). The consent shall be included as part of the final plans.

4. In the event temporary tie-back anchors are utilized for shoring purposes, then provide a notarized letter from all adjoining property owners allowing tie-back anchors on their property (7006.6).

5. The geologist and soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans that clearly

indicates the geologist and soils engineer have reviewed the plans prepared by the design engineer; and, that the plans include the recommendations contained in their reports (7006.1).

6. All recommendations of the report(s) that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.

7. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans (7006.1). Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit.

8. A grading permit shall be obtained for all structural fill and retaining wall backfill (106.1.2).

9. All graded, brushed or bare slopes shall be planted with low-water consumption, native-type plant varieties to protect slopes against erosion (7012).

10. All new graded slopes shall be no steeper than 2H:1V (7010.2 & 7011.2).

11. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density. Placement of gravel in lieu of compacted fill is only allowed if complying with LAMC Section 91.7011.3.

12. If import soils are used, no footings shall be poured until the soils engineer has submitted a compaction report containing in-place shear test data and settlement data to the Grading Division of the Department; and, obtained approval (7008.2).

13. Compacted fill shall extend beyond the mat foundations a minimum distance equal to the depth of the fill below the bottom of footings or a minimum of three feet, whichever is greater, as recommended (7011.3).

14. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill (1809.2, 7011.3).

15. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction (7013.12).

16. Grading shall be scheduled for completion prior to the start of the rainy season, or detailed temporary erosion control plans shall be filed in a manner satisfactory to the Grading Division of the Department and the Department of Public Works, Bureau of Engineering, B-Permit Section, for any grading work in excess of 200 cubic yards (7007.1).

17. All loose foundation excavation material shall be removed prior to commencement of framing. Slopes disturbed by construction activities shall be restored (7005.3).

18. Controlled Low Strength Material, CLSM (slurry) if proposed to be used shall satisfy the requirements specified in P/BC 2020-121.

19. The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the General Safety Orders of the California Department of Industrial Relations (3301.1).

20. Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring, as recommended. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)

21. Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).

22. The soils engineer shall review and approve the shoring plans prior to issuance of the permit (3307.3.2).

23. Prior to the issuance of the permits, the soils engineer and/or the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.

24. Unsurcharged temporary excavations exposing unsupported geology and/or unsupported bedding planes shall be trimmed back at a 2H:1V slope inclination up to 15 feet or shored, as recommended.

25. Unsurcharged temporary excavation may be cut vertical up to 5 feet in fill, soil and favorably orientated bedrock as determined by the project geologist. Excavations over 5 feet up to 10 feet shall be trimmed back at a uniform gradient not exceeding 1.5H:1V, from top to bottom of excavation, as recommended on pages 39 and 40 of the 01/12/2023 report.

26. Shoring shall be designed for the lateral earth pressures specified in the section titled "8.22 Shoring-Soldier Pile Design and Installation" starting on page 40 of the 01/12/2023 report; all surcharge loads shall be included into the design. Total lateral load on shoring piles shall be determined by multiplying the recommended EFP by the pile spacing.

27. Shoring shall be designed for a maximum lateral deflection of 1 inch, provided there are no structures within a 1:1 plane projected up from the base of the excavation. Where a structure is within a 1:1 plane projected up from the base of the excavation, shoring shall be designed for a maximum lateral deflection of ½ inch, or to a lower deflection determined by the consultant that does not present any potential hazard to the adjacent structure.

28. A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.

29. All foundations shall derive entire support from a blanket of properly placed fill or competent bedrock, as recommended and approved by the geologist and soils engineer by inspection (see pg. 6 of the 05/08/2023 report for a summary of the proposed foundations and bearing materials).

30. The building design in the eastern portion of the North Campus (boring B-1 by the pool house) shall incorporate provisions for total anticipated differential settlements of 2 inches, which include 0.5 and 1.5 inches for static and seismic-induced loads, respectively. (1808.2)

31. Special provisions such as flexible or swing joints shall be made for buried utilities and drain lines to allow for differential vertical displacement.

32. Footings for miscellaneous small outlying structures, such as property line walls and trash enclosures, not to be tied-in to the proposed building, shall derive entire support from properly placed fill soils or native undisturbed soils, as recommended on page 21 of the 01/12/2023 report.

33. Piles shall be designed for the down drag forces as specified and recommended on page 27 of the 01/12/2023 report.

34. Foundations adjacent to a descending slope steeper than 3:1 (horizontal to vertical) in gradient shall be a minimum distance of one-third the vertical height of the slope but need not exceed 40 feet measured horizontally from the footing bottom to the face of the slope (1808.7.2); for pools the foundation setback shall be one-sixth the slope height to a maximum of 20 feet (1808.7.3).

35. Buildings adjacent to ascending slopes steeper than 3H:1V in gradient shall be setback from the toe of the slope a level distance measured perpendicular to slope contours equal to one-half the vertical height of the slope, but need not exceed 15 feet (1808.7.1).

36. All continuous footings shall be reinforced with a minimum of four (4), ½-inch diameter (#4) deformed reinforcing bars. Two (2) bars shall be placed near the bottom and two (2) bars placed near the top of the footing, as recommended.

37. The foundation/slab design shall satisfy all requirements of the Information Bulletin P/BC 2017-116 "Foundation Design for Expansive Soils" (1803.5.3).

38. Pile caisson and/or isolated foundation ties are required by LAMC Sections 91.1809.13 and/or 91.1810.3.13. Exceptions and modification to this requirement are provided in Information Bulletin P/BC 2020-030.

39. The design passive pressure shall be neglected for a portion of the pile with a horizontal setback distance less than five feet from the face of the slope, or as recommended in the soils report, whichever is greater.

40. When water is present in drilled pile holes, the concrete shall be tremied from the bottom up to ensure minimum segregation of the mix and negligible turbulence of the water (1808.8.3).

41. Existing uncertified fill shall not be used for lateral support of deep foundations (1810.2.1).

42. The Code requires analysis for the group effects on lateral behavior where the center-to-center spacing of deep foundation elements in the direction of lateral force is less than eight times the least horizontal dimension of an element, and the Code also requires analysis for the group effects on axial behavior where the center-to-center spacing of deep foundation elements is less than three times the least horizontal dimension of an element. Where this occurs for the proposed pile layout, a supplemental report shall be submitted that contains said analysis and recommendations for reduction factors as appropriate. (1810.2.5)

43. Slabs on uncertified fill shall be designed as a structural slab (7011.3).

44. Slabs placed on approved compacted fill shall be at least 4 inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way, as recommended.

45. Concrete floor slabs placed on expansive soil shall be placed on a 4-inch fill of coarse aggregate or on a moisture barrier membrane. The slabs shall be at least 4 inches thick and shall be reinforced with ½-inch diameter (#4) reinforcing bars spaced a maximum of 16 inches on center each way.

46. The seismic design shall be based on a Site Class C for the Main Campus structure and Site Class D for the North Campus structures, as recommended on page 3 of the 05/08/2023 report. All other seismic design parameters shall be reviewed by LADBS building plan check. According to ASCE 7-16 Section 11.4.8, for structures on Site Class D sites with S1 greater than or equal to 0.2, the parameter SM1 determined by EQ. (11.4-2) shall be increased by 50%. Alternatively, a supplemental report containing a site-specific ground motion hazard analysis in accordance with ASCE 7-16 Section 21.2 shall be submitted for review and approval.

47. Retaining walls with a level backfill shall be designed for the lateral earth pressures specified in the section titled "8.16 Retaining Wall Design" starting on page 36 of the 01/12/2023 report. All surcharge loads shall be included into the design.

48. Retaining walls higher than 6 feet shall be designed for lateral earth pressure due to earthquake motions as specified on page 38 of the 01/12/2023 report (1803.5.12).

    Note: Lateral earth pressure due to earthquake motions shall be in addition to static lateral earth pressures and other surcharge pressures. The height of a stacked retaining wall shall be considered as the summation of the heights of each wall.

49. All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted in a non-erosive device to the street in an acceptable manner (7013.11).

50. With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soils report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record (1805.4).

51. Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector (108.9).

52. Basement walls and floors shall be waterproofed/damp-proofed with an LA City approved "Below-grade" waterproofing/damp-proofing material with a research report number (104.2.6).

53. The use of acceptable prefabricated drainage composites (also known as geosynthetic subdrain systems), as an alternative to traditionally accepted methods of draining retained earth, shall be determined during structural plan check.

54. Where the ground water table is lowered and maintained at an elevation not less than 6 inches below the bottom of the lowest floor, or where hydrostatic pressures will not occur, the floor and basement walls shall be damp-proofed. Where a hydrostatic pressure condition exists, and the design does not include a ground-water control system, basement walls and floors shall be waterproofed. (1803.5.4, 1805.1.3, 1805.2, 1805.3)

55. The pool shall be designed for expansive soil conditions in accordance with Information Bulletin P/BC 2020-014.

56. The proposed swimming pool shall be designed for a freestanding condition, as recommended on page 8 of the 05/08/2023.

57. The structure shall be connected to the public sewer system per P/BC 2020-027.

58. All concentrated drainage shall be conducted to the street in an acceptable manner in non-erosive devices or other approved location in a manner that is acceptable to the LADBS and the Department of Public Works; water shall not be dispersed on to descending slopes without specific approval from the Grading Division and the consulting geologist and soils engineer (7013.10).

59. An on-site storm water infiltration system at the subject site shall not be implemented, as recommended.

60. Any recommendations prepared by the geologist and/or the soils engineer for correction of geological hazards found during grading shall be submitted to the Grading Division of the Department for approval prior to use in the field (7008.2, 7008.3).

61. The geologist and soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading (7008, 1705.6 & 1705.8).

62. All friction pile or caisson drilling and excavations shall be performed under the inspection and approval of the geologist and soils engineer. The geologist shall indicate the distance that friction piles or caissons penetrate into competent bedrock in a written field memorandum. (1803.5.5, 1705.1.2)

63. Prior to pouring concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the work inspected meets the conditions of the report. No concrete shall be poured until the LADBS Inspector has also

inspected and approved the footing excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)

64. Prior to excavation an initial inspection shall be called with the LADBS Inspector. During the initial inspection, the sequence of construction; shoring; pile installation; protection fences; and, dust and traffic control will be scheduled (108.9.1).

65. Installation of shoring and/or pile excavations shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).

66. The installation and testing of tie-back anchors shall comply with the recommendations included in the report or the standard sheets titled "Requirement for Tie-back Earth Anchors", whichever is more restrictive. [Research Report #23835]

67. A supplemental report shall be provided in the event any deviation to the currently proposed project configuration, as presented and as shown in the plans and cross sections included in the approved reports, is made. This shall include but not limited to: relocation, change in any dimension, change in the number of stories above or below grade of any of the proposed structures; addition of any structure(s), such as retaining walls, decks, swimming pools, driveways, access roads, living quarters, etc.; or, additional permanent grading or temporary grading for construction purposes that are not described and not shown in the plans and cross sections included in the approved reports.

68. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the soil inspected meets the conditions of the report. No fill shall be placed until the LADBS Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included (7011.3).

69. No footing/slab shall be poured until the compaction report is submitted and approved by the Grading Division of the Department.

TECHNICAL MEMORANDUM

To: Stacie Henderson
CAJA Environmental Services, LLC
15350 Sherman Way, Suite 315
Van Nuys, California 91406

From: Mathew Carson, M.S., Lead Paleontologist

Date: December 15, 2022

Re: **Paleontological Resources Technical Memorandum for the Chaminade College Preparatory – High School Project, Los Angeles, Los Angeles County, California**

INTRODUCTION

On behalf of Chaminade College Preparatory, SWCA Environmental Consultants (SWCA) conducted a paleontological resources assessment for the proposed Chaminade College Preparatory – High School Project (project) in the West Hills neighborhood of the city of Los Angeles, Los Angeles County, California (Figure 1). The following study was conducted to analyze any potential impacts the project may have on paleontological resources located in the project area, to comply with the California Environmental Quality Act (CEQA), local regulations, and best practices in paleontological mitigation (Murphey et al. 2019). This technical memorandum documents the methods and results of the paleontological resources assessment, which included a review of geologic maps, scientific literature, and confidential fossil locality records from the Natural History Museum of Los Angeles County (NHMLA). These data were used to evaluate the likelihood of paleontological resources within the project area.

SWCA Lead Paleontologist Mathew Carson, M.S., conducted the paleontological resources assessment presented herein and authored this technical memorandum. SWCA Principal Paleontologist Russell Shapiro, Ph.D., provided quality assurance/quality control. Figures were generated by SWCA Geographic Information System (GIS) Specialist Marty Kooistra, M.A., Registered Professional Archaeologist (RPA). Copies of the report are on file with SWCA's Pasadena office.

PROJECT DESCRIPTION AND LOCATION

The project consists of changing the existing main campus and adding a new north campus (Figure 2). The changes to the main campus include a partial demolition of existing surface parking lots; demolition of approximately 32,204 square feet of existing classroom buildings, including the removal of existing portable buildings; and the addition of approximately 60,760 square feet of new floor area to include a new administrative, multipurpose, and classroom building, as well as the renovation of existing offices and the addition of electric vehicle parking and charging stations within most existing surface parking lots.

Figure 1. Project vicinity within the western San Fernando Valley of Los Angeles County.

Figure 2. Project area plotted on an aerial photograph.

The project also involves the expansion of the high school to the north campus on the north side of Saticoy Street, to include demolition of the existing structures on-site totaling approximately 58,706 square feet and the demolition of the existing surface parking lot (see Figure 2). The expansion to the north campus includes the development of approximately 8,494 square feet of floor area within a proposed athletic field pool house, locker rooms, and proposed building to house restrooms and concessions. The balance of the north campus site will include a proposed new soccer and baseball field, a new pool, and two new proposed surface parking lots.

A new pedestrian bridge will be constructed to span Saticoy Street connecting the north campus to the main campus. The pedestrian bridge will have access at the surface parking lot of the north campus and the new main entrance to the high school on the main campus. In addition, to complete the perimeter security on the main campus, new fencing and vehicular gates will be added along the northeast drive aisle, parent drop-off along Chaminade Avenue, and the most eastern access along Cohasset Street. A new 10-foot-high ornamental fencing will be provided around the perimeter of the north campus.

New construction on the main campus includes a new, multistory building at the main entrance that will include administrative offices, counseling offices, library, multipurpose room, classrooms, and labs. The existing single-story buildings, used for administrative offices located at the southeast corner of the main campus, will undergo renovation, but will not increase in floor area or height. A new surface parking lot will be constructed in place of the existing paved driveway adjacent to the single-story office building at the southeast corner of the main campus. Finally, additional improvements to the main campus will include minor demolition and resurfacing of the existing baseball field along Cohasset Street, to be reutilized as a softball field, and removal of the north surface parking lot and resurfacing to create a new landscaped quad area adjacent to the new administrative building.

Improvements on the north campus include a baseball field, practice soccer fields, swimming pool, associated facilities, and surface parking. The baseball field and soccer field are inclusive of 40-foot-high safety netting along a portion of the outfield perimeter, a 26-foot-high electric scoreboard located in left-center field facing Saticoy Street, single-story locker rooms, batting cages and bull pens located along the first and third base-lines, bleachers providing approximately 350 seats, and a shade structure reaching 19 feet in height located behind home plate with a press box of approximately 100 square feet located between the home and visiting seating sections. Eight stadium light standards ranging in height from 70 feet to 90 feet are proposed with the 70-foot light standards located along the perimeter of left and right field, with 80- and 90-foot light standards along Saticoy Street and adjacent to the new surface parking lot. To the west of the baseball field is a 1,540-square-foot single-story concession and restroom building (16 feet in height) and a 95-stall surface parking lot and entrance to the pedestrian bridge.

To the east of the baseball field is a proposed in-ground pool, with four 40-foot-high light standards, a single-story (19 feet), 6,094-square-foot athletic field and pool house, and 19 surface parking stalls. There are currently four ingress/egress points along Saticoy Street that will be reduced to the two access points for this project. There are currently two ingress/egress points along Woodlake Avenue that will be reduced to one ingress/egress driveway at the approximate location of the existing north access point.

PROJECT LOCATION

The project area is in Section 35, Township 2 North, Range 17 West, and is plotted on the U.S. Geological Survey (USGS) Calabasas, California, quadrangle (Figure 3). The project area comprises six parcels: 7500 Chaminade Avenue (Assessor Parcel Numbers [APNs] 2027-005-002 and -009), which contains the high school campus (the Main Campus); the proposed project will develop another property designated as the North Campus, which is located at the northwest corner of Saticoy Street and Woodlake Avenue, at 23255 Saticoy Street, 7629 Woodlake Avenue, and 7621 Woodlake Avenue (APNs 2027-005-005, 2027-005-006, and 2027-005-007). Combined, the Main Campus and proposed North Campus total

approximately 25.9 acres. The proposed North Campus is currently developed with a multi-tenant mini shopping center and surface parking lot, built between 1962 and 1964.

PROFESSIONAL STANDARDS

The Society of Vertebrate Paleontology (SVP) has established standard guidelines that outline professional protocols and practices for conducting paleontological resource assessments and surveys, monitoring and mitigation, data and fossil recovery, sampling procedures, and specimen preparation, identification, analysis, and curation (SVP 1995, 2010). Most practicing professional vertebrate paleontologists adhere closely to the SVP's assessment, mitigation, and monitoring requirements, as specifically provided in its standard guidelines. Most state regulatory agencies with paleontological laws, ordinances, regulations, and standards accept and use the professional standards set forth by the SVP.

As defined by the SVP (2010:11), significant paleontological resources are

> fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information. Paleontological resources are considered to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years).

Numerous paleontological studies have developed criteria for the assessment of significance for fossil discoveries (e.g., Eisentraut and Cooper 2002; Murphey et al. 2019; Scott and Springer 2003). In general, these studies assess fossils as significant if one or more of the following criteria apply:

1. The fossils provide information on the evolutionary relationships and developmental trends among organisms, living or extinct;
2. The fossils provide data useful in determining the age(s) of the rock unit or sedimentary stratum, including data important in determining the depositional history of the region and the timing of geologic events therein;
3. The fossils provide data regarding the development of biological communities or interaction between paleobotanical and paleozoological biotas;
4. The fossils demonstrate unusual or spectacular circumstances in the history of life; or
5. The fossils are in short supply and/or are in danger of being depleted or destroyed by the elements, vandalism, or commercial exploitation, and are not found in other geographic locations.

Geologic units known to preserve significant fossils or fossil localities are likely to contain additional undiscovered and potentially significant fossils and are generally considered sensitive for paleontological resources throughout their areal and stratigraphic (i.e., vertical) extent. The extent of sensitivity differs from that defined for archaeological resource sites as follows:

> It is extremely important to distinguish between archaeological and paleontological (fossil) resource sites when defining the sensitivity of rock units. The boundaries of archaeological sites define the areal extent of the resource. Paleontological sites, however, indicate that the containing sedimentary rock unit or formation is fossiliferous. The limits of the entire rock formation, both areal and stratigraphic, therefore define the scope of the paleontological potential in each case. (SVP 1995:23)

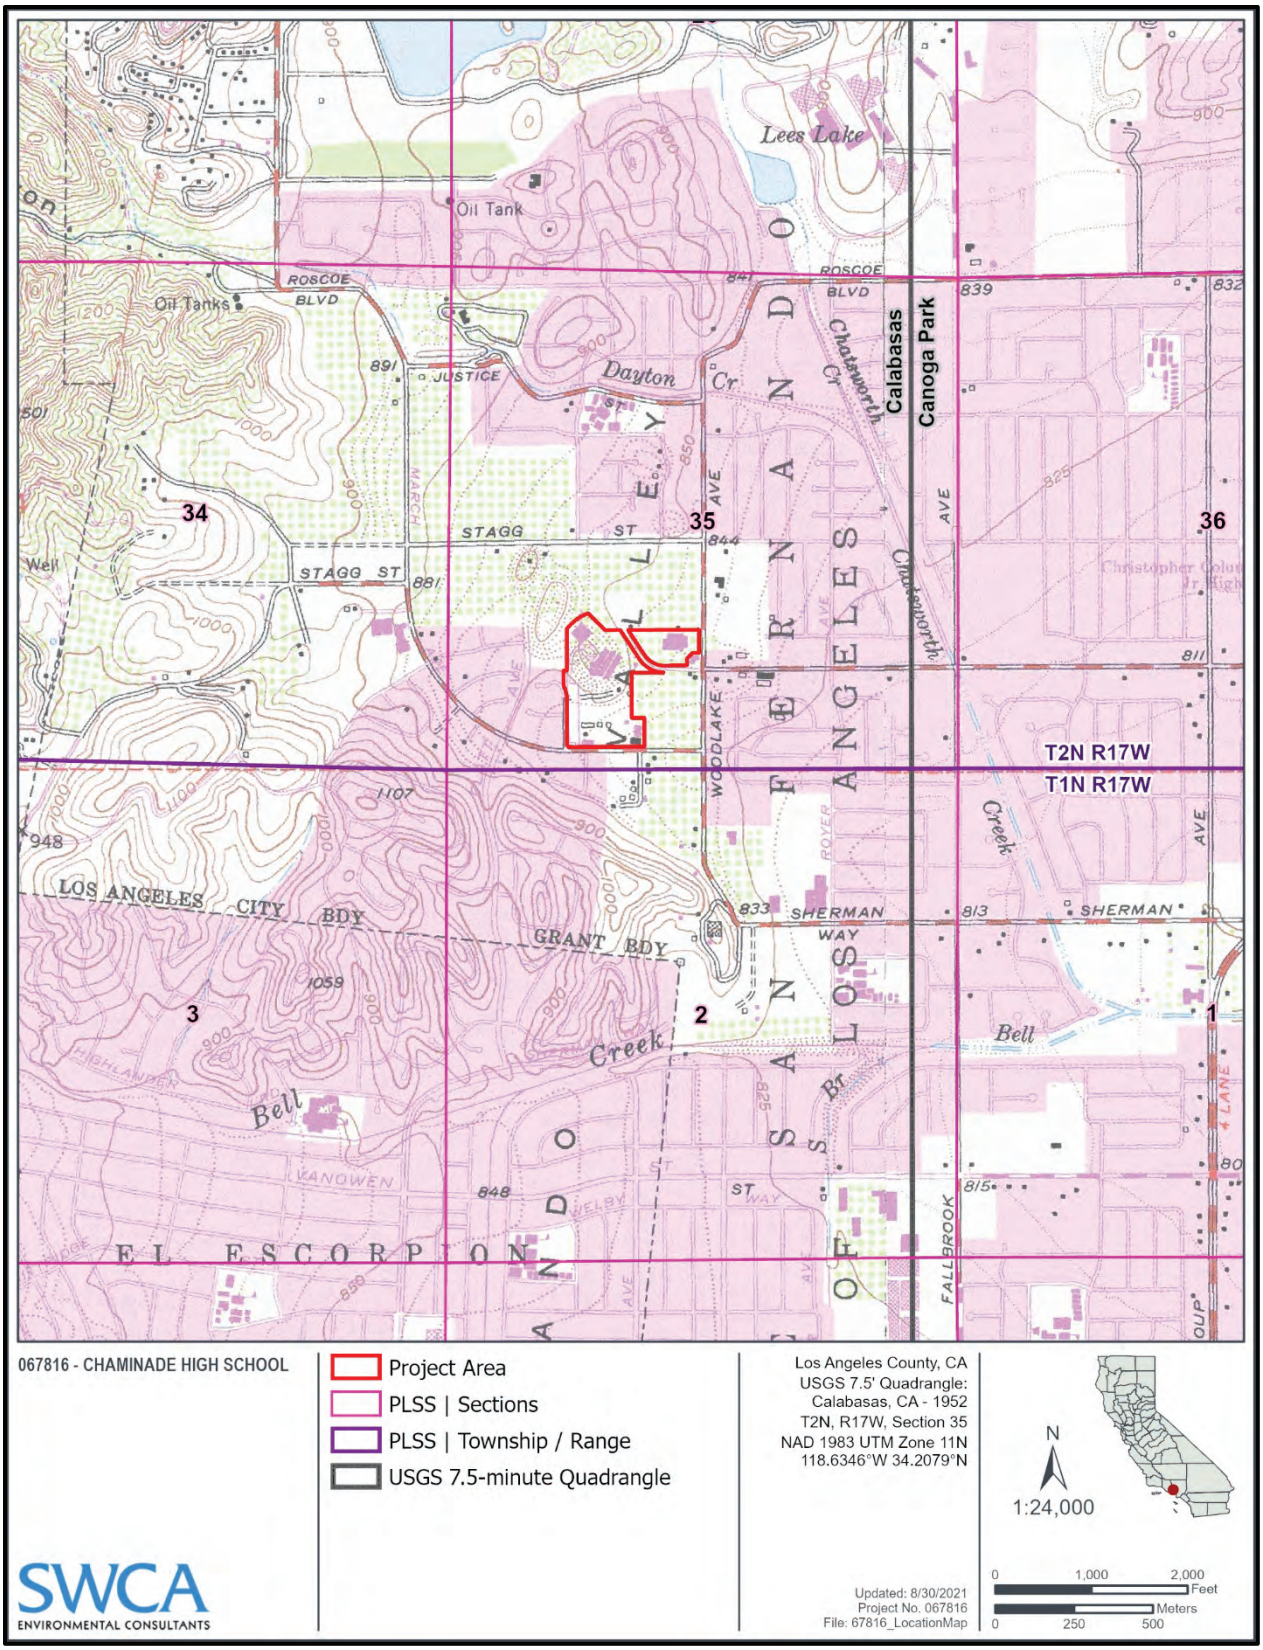

Figure 3. Project area plotted on the USGS Calabasas, California, 7.5-minute topographic quadrangle.

Many archaeological sites contain features visually detectable on the surface. In contrast, fossils may be present at the surface or at depth within sediments or bedrock. Subsurficial fossils would not be observable or detectable unless exposed by erosion or human activity. In the case of human activity, such as project-related ground disturbances within geologic units with a high probability to yield significant fossils, direct or indirect adverse impacts to significant fossils may occur.

In summary, paleontologists cannot know either the quality or quantity of fossils prior to natural erosion or anthropogenic exposure. As a result, even in the absence of fossils on the surface, it is necessary to assess the sensitivity of geologic units based on their known potential to produce significant fossils elsewhere within the same geologic unit (both within and outside the study area), a similar geologic unit, and whether the unit in question was deposited in a type of environment known to be favorable for fossil preservation. Monitoring by experienced paleontologists greatly increases the probability that fossils will be discovered during ground-disturbing activities and that, if such fossils are determined to be potentially significant, successful mitigation and salvage efforts may be undertaken to prevent adverse impacts to these resources.

REGULATORY SETTING

Paleontological resources are limited, nonrenewable resources of scientific, cultural, and educational value and are afforded protection under state and local laws and regulations. This study satisfies project requirements in accordance with state and local regulations and was conducted as a means of characterizing the existing conditions consistent with the application of the screening criteria defined in Appendix G of the State CEQA Guidelines (as amended December 28, 2018). This analysis also complies with guidelines and criteria specified by the SVP (2010) and follows best practices in mitigation paleontology (Murphey et al. 2019).

State Regulations

California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the state and is codified at Public Resources Code (PRC) Section 21000 et seq. CEQA requires lead agencies to determine if a proposed project would have a significant effect on the environment, including significant effects on paleontological resources. Guidelines for the Implementation of CEQA, as amended December 28, 2018 (Title 14, Chapter 3, California Code of Regulations [CCR] 15000 et seq.), define procedures, types of activities, persons, and public agencies required to comply with CEQA. Section VII(f) of the Environmental Checklist (State CEQA Guidelines Appendix G) asks whether a project would directly or indirectly destroy a unique paleontological resource and result in impacts to the environment.

Public Resources Code Section 5097.5

Requirements for paleontological resource management are included in PRC Division 5, Chapter 1.7, Section 5097.5, which states:

> No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

These statutes prohibit the removal, without permission, of any paleontological site or feature from land under the jurisdiction of the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, local agencies are required to comply with PRC 5097.5 for their own activities, including construction and maintenance, as well as for permit actions (e.g., encroachment permits) undertaken by others. PRC Section 5097.5 also establishes the removal of paleontological resources as a misdemeanor and requires reasonable mitigation of adverse impacts to paleontological resources from developments on public (state, county, city, and district) land.

Local Regulations

City of Los Angeles General Plan

Section 3 (Archaeological and Paleontological) of the *City of Los Angeles General Plan Conservation Element* (Conservation Element) recognizes paleontological resources (page II-3) and contains an objective (page II-5) to protect the city's archaeological and paleontological resources for historical, cultural, research, and/or educational purposes (City of Los Angeles 2001). The Conservation Element includes the policy to "continue to identify and protect significant archaeological and paleontological sites and/or resources known to exist or that are identified during land development, demolition or property modification activities." The Conservation Element also states the following:

> Pursuant to CEQA, if a land development project is within a potentially significant paleontological area, the developer is required to contact a bona fide paleontologist to arrange for assessment of the potential impact and mitigation of potential disruption of or damage to the site. If significant paleontological resources are uncovered during project execution, authorities are to be notified and the designated paleontologist may order excavations stopped, within reasonable time limits, to enable assessment, removal or protection of the resources. (City of Los Angeles 2001:II-5)

Section D:1 of the *L.A. CEQA Thresholds Guide* (City of Los Angeles 2006) specifies that the determination of significance for paleontological resources shall be made on a case-by-case basis, taking into consideration the following factors:

- Whether, or the degree to which, the project might result in the permanent loss of, or loss of access to, a paleontological resource; and
- Whether the paleontological resource is of regional or statewide significance.

METHODS

The following sections present an overview of the methodology used to analyze the potential for paleontological resources within the project area. This report conforms to industry standards as developed by the SVP (1995, 2010) and best practices in mitigation paleontology (Murphey et al. 2019). The purpose of this analysis is to: 1) determine whether any previously recorded fossil localities occur in the project area at the surface or at depth; 2) if so, assess the potential for disturbance of these localities during construction; 3) evaluate the paleontological potential of the project area; and 4) evaluate the potential for significant impacts or adverse effects on previously undiscovered scientifically significant paleontological resources that could be present within the project area and adversely impacted by implementation or construction of the project.

Existing Data Analysis

SWCA conducted an analysis of available existing data pertinent to paleontological resources. This analysis included a review of geologic maps, scientific literature, and museum records search results.

The geologic mapping used in this analysis is from Yerkes and Campbell (1995) at a scale of 1:24,000. The museum records search was submitted to the NHMLA on August 25, 2021. The results of the museum records search were received on August 28, 2021, and are incorporated into the Results section of this technical memorandum and included in confidential Attachment A.

Paleontological Potential Classification

Paleontological potential is defined as the potential for a geologic unit to produce scientifically significant fossils. This is determined by rock type, history of the geologic unit in producing significant fossils, and fossil localities recorded from that unit. Paleontological sensitivity is derived from the known fossil data collected from the entire geologic unit, not just from a specific survey. The SVP (2010:1–2) defines four categories of paleontological sensitivity (potential) for rock units: high, low, undetermined, and no potential:

> **High Potential**. Rock units from which vertebrate or significant invertebrate, plant, or trace fossils have been recovered are considered to have a high potential for containing additional significant paleontological resources. Rocks units classified as having high potential for producing paleontological resources include, but are not limited to, sedimentary formations and some volcaniclastic formations (e.g., ash or tephra), and some low-grade metamorphic rocks which contain significant paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils (e.g., middle Holocene and older, fine-grained fluvial sandstone, argillaceous and carbonate-rich paleosols, cross-bedded point bar sandstone, fine-grained marine sandstone, etc.). Paleontological potential consists of both a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, plant, or trace fossils and b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, paleoecologic, taphonomic, biochronologic, or stratigraphic data. Rock units which contain potentially datable organic remains older than late Holocene, including deposits associated with animal nests or middens, and rock units which may contain new vertebrate deposits, traces, or trackways are also classified as having high potential.
>
> **Low Potential**. Reports in the paleontological literature or field surveys by a qualified professional paleontologist may allow determination that some rock units have low potential for yielding significant fossils. Such rock units will be poorly represented by fossil specimens in institutional collections or based on general scientific consensus only preserve fossils in rare circumstances and the presence of fossils is the exception not the rule, e.g., basalt flows or Recent colluvium. Rock units with low potential typically will not require impact mitigation measures to protect fossils.
>
> **Undetermined Potential**. Rock units for which little information is available concerning their paleontological content, geologic age, and depositional environment are considered to have undetermined potential. Further study is necessary to determine if these rock units have high or low potential to contain significant paleontological resources. A field survey by a qualified professional paleontologist to specifically determine the paleontological resource potential of these rock units is required before a paleontological resource impact mitigation program can be developed. In cases where no subsurface data are available, paleontological potential can sometimes be determined by strategically located excavations into subsurface stratigraphy.

> **No Potential**. Some rock units have no potential to contain significant paleontological resources, for instance high-grade metamorphic rocks (such as gneisses and schists) and plutonic igneous rocks (such as granites and diorites). Rock units with no potential require no protection or impact mitigation measures relative to paleontological resources. (SVP 2010:1–2)

RESULTS

Regional Geology

The project area is situated in the San Fernando Valley, a structural trough located within the Transverse Ranges Geomorphic Province, consisting of a complex series of young, east-west-trending mountain ranges and valleys that contradict the general north-south orientation of California's other mountain ranges, such as the adjacent Peninsular Ranges and Coastal Ranges geomorphic provinces (Norris and Webb 1990; Sylvester and O'Black Gans 2016). The Transverse Ranges Geomorphic Province begins at Point Conception in Santa Barbara County and extends in an easterly direction, terminating at the San Bernardino Mountains in San Bernardino County (Sylvester and O'Black Gans 2016). Most of the Traverse Ranges Geomorphic Province is bounded on the north and east by the San Andreas Fault System that separates the province from the Peninsular Ranges and Coastal Ranges geomorphic provinces. Topography of the Transverse Ranges Geomorphic Province is noted for being extremely steep and difficult to cross (Norris and Webb 1990).

The Transverse Ranges Geomorphic Province includes a wide variety of geologic units, ranging in age from the Proterozoic to Recent (Norris and Webb 1990). Mountain ranges within the Transverse Ranges Geomorphic Province are mainly composed of two distinct types of crystalline basement rocks that are separated by thrust faults (Norris and Webb 1990). The sedimentary units within the province are composed of a thick sequence of late Mesozoic- and Cenozoic-aged strata that rest unconformably on a variety of basement rocks (Namson and Davis 1988). The province is undergoing active north-south shortening due to faulting (Wentworth and Yerkes 1971), causing a significant rise in elevation on an annual scale. The San Fernando Valley specifically is bounded by several of these fault-bounded mountain ranges, such as the Santa Susana Mountains on the northwest, the San Gabriel Mountains on the northeast, the Santa Monica Mountains on the south, and the Simi Hills on the west. Near the Granada Hills neighborhood, the Mission Hills Fault presumably trends along the northern border of the San Fernando Valley along its contact with the topographically rugged Santa Susana Mountains (Dibblee and Ehrenspeck 1992). The San Fernando Valley forms a deep trough into which sediments have been deposited from the Miocene to the present (Wentworth and Yerkes 1971). Sediments are primarily sourced from the Santa Susana Mountains and San Gabriel Mountains to the north and consist of clasts of Precambrian gneisses, the Mesozoic Pelona Schist, and Jurassic siliceous sediments (Yerkes 1997). These sediments have accumulated to thicknesses of more than 9,840 feet in the San Fernando Valley (Yerkes 1997). The valley is situated in a tectonically active area, with sedimentary deposits subjected to uplift and deformation from ongoing fault activity (Wentworth and Yerkes 1971).

Local Geology and Paleontology

According to geologic mapping by Yerkes and Campbell (1995), the project area is mapped at the surface as late to middle Pleistocene old alluvial fan deposits, undivided (Qof) and late Miocene Modelo Formation, undivided (Tm). Although unmapped by Yerkes and Campbell (1995), the project area also contains unmapped Recent to late Holocene artificial fill (Qaf) at the surface based on aerial imagery (see Figure 2). These geologic units are described in geochronological order below and shown in Figure 4.

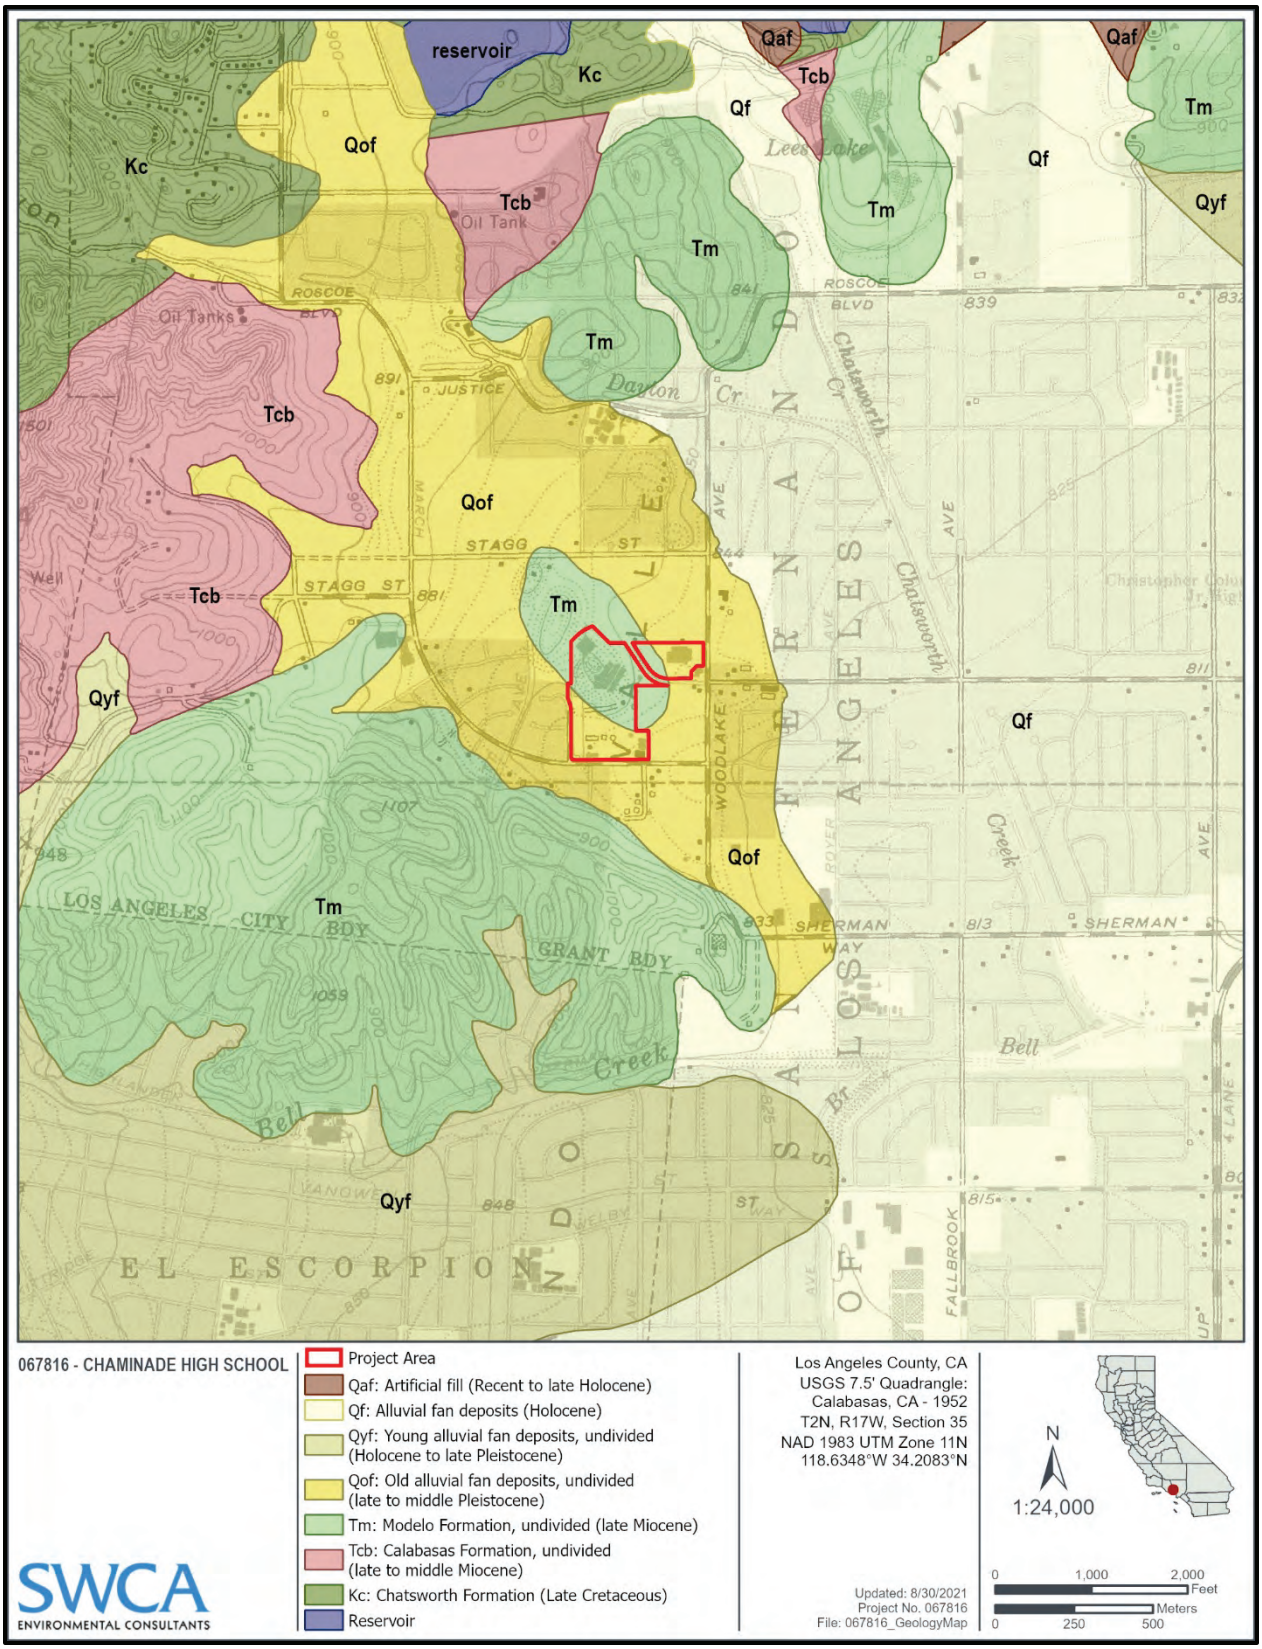

Figure 4. Geology of the project area.

Recent to late Holocene Artificial Fill (Qaf)

Recent to late Holocene artificial fill (Qaf) is not mapped at the surface within the bounds of the project area by Yerkes and Campbell (1995); however, based on aerial imagery, the flat topography of the San Fernando Valley, and previous site development, artificial fill likely caps the project area as a thin veneer. Previously disturbed sediments or artificial fill may contain fossils; however, any such fossil from these deposits has been removed from its original stratigraphic context (provenance). Therefore, artificial fill is unlikely to yield significant paleontological resources. Artificial fill is likely underlain by geologic units capable of preserving scientifically significant paleontological resources (i.e., old alluvial fan deposits [Qof] and/or Modelo Formation [Tm]).

Late to middle Pleistocene Old Alluvial Fan Deposits, undivided (Qof)

According to geologic mapping by Yerkes and Campbell (1995), late to middle Pleistocene old alluvial fan deposits (Qof) are mapped at the surface of the project area but are likely capped by Recent to late Holocene artificial fill (Qaf) (see Figure 4). Old alluvial fan deposits consist of gravel, sand, silt, and clay, moderately to well consolidated, silty to well cemented, and dissected (Yerkes and Campbell 1995). The depth to the old alluvial fan deposits underlying the artificial fill in the subsurface of the project area is unknown but likely shallow based on the flat topography of the San Fernando Valley and on the presence of Pleistocene-age fossils recorded at shallow depths within the project's vicinity (NHMLA 2021).

The SVP (2010) defines fossil resources as being those over 5,000 years in age; therefore, late Pleistocene (i.e., 10,000 to 129,000 years old) old alluvial fan deposits in the subsurface within the project area are of an age to preserve fossil resources. Several paleontological resources have been recovered in the San Fernando Valley and Los Angeles Basin from undifferentiated Pleistocene-aged alluvial deposits. For example, fossil bison and mammoth have been recovered from near the Van Norman Reservoir; fossil bison, camel, peccary, and horse have been recovered from near the Sepulveda Dam Recreation Area; and fossil mammoth and horse were collected in Chatsworth (SWCA 2018; Yerkes 1997). In general, undifferentiated alluvial sediments of Pleistocene age have a rich fossil history in southern California (Jefferson 1991a, 1991b; McDonald and Jefferson 2008; Miller 1971; Reynolds and Reynolds 1991; Springer et al. 2009). The most common Pleistocene terrestrial mammal fossils include the bones of mammoth, bison, deer, and small mammals, but other taxa, including horse, lion, cheetah, wolf, camel, antelope, peccary, mastodon, capybara, and giant ground sloth, have been reported (Graham and Lundelius 1994), as well as reptiles, snakes, frogs, and salamanders (Hudson and Brattstrom 1977). These fossils illuminate the striking differences between southern California in the Pleistocene and southern California today, and this abundant fossil record has been vital in studies of extinction (e.g., Barnosky et al. 2004; Sandom et al. 2014; Scott 2010), ecology (e.g., Connin et al. 1998), and climate change (e.g., Roy et al. 1996).

Late Miocene Modelo Formation, undivided (Tm)

According to geologic mapping by Yerkes and Campbell (1995), late Miocene Modelo Formation (Tm) deposits are mapped at the surface within the project area but are likely capped by Recent to late Holocene artificial fill (Qaf) (see Figure 4). Here, strata of the Modelo Formation are mostly late Miocene in age but may include middle Miocene strata. The Modelo Formation consists of predominantly gray to brown, thin-bedded mudstone, diatomaceous clay shale, or siltstone, with interbeds of very fine-grained to coarse-grained sandstone (Yerkes and Campbell 1995). Throughout its geographic extent, strata of the Modelo Formation rest unconformably over older rocks of middle Miocene age and may be time-equivalent to marine strata of the Puente Formation in the southern Los Angeles Basin and diatomaceous rocks of the Monterey Formation west of the Newport-Inglewood fault zone (Campbell et al. 2014; Yerkes and Campbell 1995). In fact, Dibblee and Ehrenspeck (1992) refer to the rocks in the

immediate vicinity of the project area as the Monterey Formation that is equivalent to the lower Modelo Formation due to its similar lithology to the Monterey Formation. Since Dibblee and Ehrenspeck's (1992) geologic investigation, other geologists have reclassified these strata as part of the Modelo Formation, aligned with earlier investigations. The earliest investigation and description of the Modelo Formation comes from Eldridge and Arnold (1907), who based their description on exposures within the Topatopa Mountains. Later on, Winterer and Durham (1962) described the Modelo Formation within the Santa Susana Mountains and San Fernando Pass. Since these investigations, at least five members have been described by Cemen (1977), with at least four of them present within the Santa Susana Mountains area (Campbell et al. 2014; Yerkes and Campbell 1995). The informal members have been numbered member 1 (oldest) to member 5 (youngest) and consist of alternating shale and sandstone of variable thicknesses (ranging between 200 and 1,000 feet thick) (Campbell et al. 2014). Within the vicinity of the project area, the Modelo Formation has largely been left undivided but may consist of any combination of the five informal members.

The Modelo Formation, and its equivocal geologic units throughout southern California, have yielded numerous significant paleontological resources localities. The Modelo Formation has yielded marine mammals, such as baleen whales and dolphins; birds, such as cormorants, puffins, boobies, and others; bony fishes, such as viperfish, lanternfish, boafish, herrings, smelts, pipefish, mackerels, and others; invertebrates, such as clams, abalones, and gastropods; and green and brown algae (Barnes 1985; Crane 1966; David 1943; Denton 2013; Fink and Fink 1986; Howard 1962; Kellogg 1934; Miller 1929; Woodring 1931). These fossils illuminate the environmental changes that occurred in southern California from the late Miocene to today.

Museum Records Search

The NHMLA (2021) performed a museum records search for paleontological localities within the vicinity of the project area. Based on the results of the museum records search, the NHMLA does not contain records of paleontological resources from within the project area; however, several fossil localities have been recorded within the project vicinity from the Modelo Formation and unknown/unnamed Pleistocene deposits. The closest fossil locality from the Modelo Formation is LACM VP 4506, situated approximately 1.5 miles from the project area; it yielded fossil bony fish (Osteichthyes) from near the surface. From unknown/unnamed Pleistocene deposits, the closest fossil locality is LACM VP 1817, situated approximately 2.7 miles away; it yielded fossil horse (*Equus*) from 3 feet below ground surface. The results of the museum records search from the NHMLA (2021) are summarized in Table 1 and included in confidential Attachment A.

Table 1. NHMLA Fossil Localities near the Project Area from Relevant Geologic Units

Locality Number	Approximate Distance to the Project Area	Formation	Taxa	Depth (below ground surface)
LACM VP 4506	1.5 miles	Modelo Formation	Bony fish (Osteichthyes)	Surface
LACM IP 500	1.8 miles	Modelo Formation	Unspecified invertebrates	Unknown
LACM VP 5658	5.4 miles	Modelo Formation	Baleen whale (Mysticeti)	Unknown
LACM VP 1817	2.7 miles	Unspecified Pleistocene deposits	Horse (*Equus*)	3 feet
LACM VP 5878	3.3 miles	Unspecified Pleistocene deposits	Mastodon (*Mammut*)	Unknown
LACM VP 3822	10.0 miles	Unnamed Pleistocene lacustrine deposits	Bison (*Bison*)	75 to 100 feet

Paleontological Potential of the Project Area

Based on an analysis of available existing data, SWCA determined the paleontological potential of the geologic units underlying the project area. Recent to late Holocene artificial fill (Qaf) likely exists within the project area as a thin veneer, overlying previously undisturbed sedimentary deposits. Artificial fill has the potential to yield paleontological resources; however, any such fossil has been removed from its original stratigraphic context (provenance). Therefore, artificial fill has a low paleontological sensitivity based on SVP (2010) guidelines. Based on SVP (2010) guidelines and definition of significant paleontological resources, late to middle Pleistocene old alluvial fan deposits (Qof) and late Miocene Modelo Formation (Tm), which both underlie the artificial fill at unknown, but likely very shallow depths, have a high paleontological sensitivity. In summary, the overall project area has a low paleontological sensitivity in the uppermost disturbed sediments and a high paleontological sensitivity in the underlying, previously undisturbed sediments. The depth to the previously undisturbed sediments within the project area is likely very shallow based on the local topography of the existing built environment (i.e., a parking lot and sports stadium). The paleontological sensitivity of the project area and the relevant geologic units within it are summarized in Table 2.

Table 2. Paleontological Potential of the Project Area and its Relevant Geologic Units

Geologic Unit	Age	Paleontological Potential	Recommendations
Artificial fill (Qaf)	Recent to late Holocene	Low	No monitoring during ground-disturbing activities that impact only artificial fill or previously disturbed sediments.
Old alluvial fan deposits (Qof)	Late to middle Pleistocene	High	Full-time monitoring during ground-disturbing activities that impact previously undisturbed sediments at 3 feet below ground surface or greater; no monitoring of previously disturbed sediments regardless of depth.
Modelo Formation (Tm)	Late Miocene	High	Full-time monitoring during ground-disturbing activities that impact previously undisturbed sediments at 3 feet below ground surface or greater; no monitoring of previously disturbed sediments regardless of depth.

IMPACT ASSESSMENT

This paleontological assessment was conducted to analyze any potential impacts this project may have on paleontological resources located in the project area to comply with state and local regulations, as well as best practices in paleontological mitigation (Murphey et al. 2019). The changes to the main campus include a partial demolition of existing structures and the addition of approximately 60,760 square feet of new floor area to include a new administrative, multipurpose, and classroom building, as well as the renovation of existing offices and the addition of electric vehicle parking and charging stations. The expansion to the north campus includes the development of approximately 8,494 square feet of floor area within a proposed athletic field pool house, locker rooms, and proposed building to house restrooms and concessions. The balance of the north campus site will include a proposed new soccer and baseball field, a new pool, and two new proposed surface parking lots. Based on the features of the proposed project, substantial ground-disturbing activities are anticipated to impact previously undisturbed sediments underlying the artificial fill present as a veneer across the site. The depth to the underlying, previously undisturbed sediments is unknown, but likely very shallow (e.g., 3 feet below ground surface). Project-related ground-disturbing activities are likely to exceed the depth of the artificial fill and impact the underlying previously undisturbed geologic units of high paleontological sensitivity. Therefore, fossils may be encountered during the ground-disturbing activities. Should significant fossils be encountered, they would be at risk for damage or destruction from construction activities, which would constitute an impact under CEQA.

CONCLUSIONS AND RECOMMENDATIONS

Based on this analysis of available existing data, the surface of the project area contains unmapped Recent to late Holocene artificial fill (Qaf). Artificial fill is subsequently underlain at very shallow depth (e.g., 3 feet below ground surface) by late to middle Pleistocene old alluvial fan deposits (Qof) and late Miocene Modelo Formation (Tm). Based on SVP (2010) guidelines, artificial fill has a low paleontological sensitivity; however, the underlying old alluvial fan deposits and Modelo Formation have a high paleontological sensitivity. Project-related ground-disturbing activities are likely to exceed the depth of the artificial fill and impact the underlying previously undisturbed geologic units of high paleontological sensitivity. If fossils are encountered, they would be at risk for damage or destruction from construction activities, which would constitute an impact under CEQA. The implementation of the following recommendations will ensure that fossils, if encountered, are assessed for significance and, if determined to be significant, salvaged and curated with an accredited repository. Implementation of these recommendations will reduce potential impacts to paleontological resources from the project to less-than-significant levels, pursuant to CEQA.

Accordingly, SWCA provides the following recommendations that are developed in accordance with and incorporate the performance standards of the SVP (1995, 2010), state and local regulations, and best practices in mitigation paleontology (Murphy et al. 2019).

1. **Retain a Qualified Professional Paleontologist:** Chaminade College Preparatory should retain a Qualified Professional Paleontologist (Project Paleontologist), who meets or exceeds the SVP standards, to oversee all regulatory compliance measures and protocols related to paleontological resources.
2. **Conduct Worker Training:** The Project Paleontologist should develop a Worker Environmental Awareness Program (WEAP) to train the construction crew on the legal requirements for preserving fossil resources, as well as the procedures to follow in the event of a fossil discovery. This training program would be given to the crew before ground-disturbing work commences and would include handouts to be given to new workers as needed.
3. **Monitor for Paleontological Resources:** Ground disturbances greater than or equal to 3 feet below ground surface with the potential to impact late to middle Pleistocene old alluvial fan deposits (Qof) and/or late Miocene Modelo Formation (Tm) should be monitored full-time. Monitoring should be reduced or ceased once over-excavations into the underlying previously undisturbed deposits have been completed, or if Recent to late Holocene artificial fill (Qaf) is the only geologic units encountered during earthwork activities. Ground disturbances in previously disturbed sediments should not be monitored, regardless of depth.

   Monitoring should be conducted by a paleontological monitor who meets the standards of the SVP (2010) working under the supervision of the Project Paleontologist. The Project Paleontologist may periodically inspect construction activities to adjust the level of monitoring in response to subsurface conditions. In consultation with the lead agency and Chaminade College Preparatory, monitoring efforts can be increased, reduced, or ceased entirely if determined adequate by the Project Paleontologist. Paleontological monitoring should include inspection of exposed sedimentary units during active excavations within sensitive geologic sediments. The monitor should have authority to temporarily divert activity away from exposed fossils to evaluate the significance of the find and, should the fossils be determined significant, professionally and efficiently recover the fossil specimens and collect associated data. Paleontological monitors should record pertinent geologic data and collect appropriate sediment samples from any fossil localities.

4. **Prepare a Paleontological Resources Monitoring Report:** Upon conclusion of ground-disturbing activities, the Project Paleontologist overseeing paleontological monitoring should prepare a final Paleontological Resources Monitoring Report (PRMR) that documents the paleontological monitoring efforts for the project and describes any paleontological resources discoveries observed and/or recorded during the life of the project. If paleontological resources are curated, the final PRMR and any associated data pertinent to the curated specimen(s) should be submitted to the designated repository. A copy of the final PRMR should be filed with the lead agency.

1. Executive Summary

A Phase I Environmental Site Assessment (ESA) was conducted for the West Hills Shopping Center located at 23221-23233 Saticoy Street and 7629 Woodlake Avenue in West Hills with Assessor's Parcel Numbers (APNs) 2027-005-005, 2027-005-006, and 2027-005-007 in West Hills, California (**Figure 1**). The Site is approximately 4.86 acres and is currently used as a commercial shopping center.

Summary of Findings				
Report Section	**De minimis**	**REC**	**Historical/ Controlled REC**	**Description**
Section 5 Previous Reports		X		PCE impacts to the soil and soil vapor noted in 2013 and 2014.
Section 6 Site Reconnaissance		X		Drycleaner located in one of the tenant units.
Section 7 Historical Source Review		X		A dry cleaner has occupied a tenant unit since at least 1990. The subject property was used for agriculture from before 1928 until after 1959
Section 8 Historical Source Review		X		Potential residual impacts due to a closed release case on the adjacent property located at 27607 Woodlake (former gas station).
Section 8 Vapor Encroachment Screen		X		Cannot rule out a vapor encroachment condition (VEC) for subject property due to known PCE impacts in the soil and soil vapor. Cannot rule out VEC for former adjacent gas station.
Section 9 Additional Potential Hazards			X	An additional potential hazard has been identified as the adjacent former gas station/auto repair facility.

As a result of the identification of these RECs, Dudek performed limited sampling of soil, groundwater, and soil vapor to determine the extent of the potential impacts to the subject property. The results of this Limited Phase II sampling are presented in **Appendix A.**

Based on the results of the limited Phase II sampling, Dudek recommends remediating the shallow perchloroethylene (PCE)-impacted soil vapor to mitigate potential vapor intrusion risk. The results of the limited Phase II also indicate that the former agricultural use of the subject property is unlikely to present a risk to human health and is therefore considered to be *de minimis*.

2. Introduction

This Phase I Environmental Site Assessment was performed according to the guidelines stipulated in the American Society for Testing and Materials Standard E 1527-13, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". The Site is located at 23221-23233 Saticoy Street and 7629 Woodlake Avenue (APNs 2027-005-005, 2027-005-006, and 2027-005-007) in West Hills, California. This Phase I ESA is being conducted as part of the due diligence process for the purchase of the subject property.

2.1 Assessment Procedure and Scope of Investigation

Phase I Environmental Site Assessments assist in identifying past and present land use, including identification of possible on-site releases or disposal of manufacturing or other wastes if such information is contained within regulatory reports, files, and/or is currently visible on-site. The assessment reviews Local, County, State, and U.S. Environmental Protection Agency lists of known or potentially hazardous waste sites, landfills, and sites currently under investigation for environmental violations that may be of concern to this site.

The scope of the environmental investigation consisted of: 1) a reconnaissance of the subject property; 2) a file review of available regulatory agency records; 3) a review of available historical aerial photographs and topographic maps; 4) a review of available Sanborn fire insurance maps, City Directory listings, and City building permit records; 5) an interview with the property owner and occupant; 6) an environmental lien search; 7) vapor encroachment screening; and 8) the preparation of this Phase I Environmental Site Assessment Report detailing the findings of the investigation.

These activities were conducted in order to identify recognized environmental conditions (RECs). The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products in, on, or at the subject property 1) due to any release to the environment, 2) under conditions that indicate a release to the environment, or 3) under conditions that pose a material threat of a release to the environment.

The term controlled recognized environmental condition (controlled REC) is an environmental condition that would have been considered a recognized environmental condition in the past, but which has been remediated and received risk-based closure by a regulatory agency (i.e. no further action letter) where residual contamination remains in place. Furthermore, controlled REC is used if the property is subject to a control or use restriction (i.e. property use restrictions, activity and use

limitations, institutional controls, or engineering controls) due to residual onsite contamination.

The term historical recognized environmental condition (historical REC) is an environmental condition that would have been considered a recognized environmental condition in the past, but which has been remediated and received unrestricted residential use closure by the regulatory agency. Therefore, no controls or use restrictions have been applied to the property.

The term recognized environmental condition is not intended to include *de minimus* conditions. *De minimus* conditions are conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

2.2 Qualifications of Environmental Professionals

The Phase I ESA was conducted under the supervision of Susan Smith, a Professional Geologist with over 15 years of relevant experience (**Appendix B**).

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental professionals as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed all the appropriate inquires in conformance with the standards and practices set forth in 40 CFR Part 312.

3. Site Description

The subject property is approximately 4.86 acres of land with APNs 2027-005-005, 2027-005-006, and 2027-005-007 in West Hills, California (**Figure 1**). The addresses associated with the subject property include 23221-23233 Saticoy Street (St) and 7629 Woodlake Avenue (Ave), West Hills, California. The subject property consists of a relatively flat parcel that is currently used as a commercial shopping center and parking lot. Landscaping is present along the perimeters of the subject property, including ornamental trees, shrubs and groundcover.

One commercial shopping center is located at the subject property, which is a single story structure built on grade with exterior stucco surfacing and a flat roof.

The following fifteen tenants are located in the commercial shopping center:

7625 Woodlake Ave – Delcourt Insurance
7621 Woodlake Ave – Happy Dogs Grooming and Supplies
7629 Woodlake Ave – Melito's Barber Shop 2
23217 Saticoy St – Woodlake Liquors
23221 Saticoy St – Fields Market
23229 Saticoy St – Gourmet Soup Kitchen
23231 Saticoy St – Function First Fitness
23233 Saticoy St, Units 101 through 103 – West Hills Veterinary Clinic
23233 Saticoy St, Unit 104 – Raz's Little Italy
23233 Saticoy St, Unit 105 – State Farm Insurance Agent Steven Hill
23233 Saticoy St, Unit 106 – Disability Rehabilitation Center
23233 Saticoy St, Units 107 and 108 – Golden Performing Arts Center
23233 Saticoy St, Unit 109 – West Hills Massage Therapy
23233 Saticoy St, Unit 110 – West Hills Cleaners
23233 Saticoy St, Unit 114 – Cutting Edge Karate

There are three unoccupied commercial units in the commercial shopping center, units 111 through 113.

The Site is bordered to the north by residential homes, to the south and west by Saticoy St. and to the east by Woodlake Ave. South of Saticoy St. and east of Woodlake Ave. are residential properties, while Chaminade College Preparatory High School is located across Saticoy St. to the west of the Site.

4. Environmental Setting

General topographic information for the Site and the surrounding area was obtained from a review of a USGS topographic map for Calabasas, California (**Appendix G**), from Google Earth, and from the site visit. The subject property and surrounding areas are relatively flat, with an elevation of approximately 846 feet above mean sea level.

Soils observed during Dudek's soil vapor sampling at the subject property consisted of silty sand/sandy silt to 7 feet below ground surface (bgs) and clayey silt/silty clay to 10 feet bgs. According to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS), the shallow soils at the subject property are likely well-drained sandy loams (**Appendix C**).

According to the California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), two plugged oil/gas wells are located within 1 mile of the subject property. According to records reviewed on DOGGR both wells were prospect wells that were drilled and abandoned in 1951. Neither well ever produced oil or gas (DOGGR 2017). Since the wells are plugged, never produced, and are located more than ½ mile from the subject property, these two wells are unlikely to impact conditions at the subject property.

No water wells were mapped by EDR within one mile of the subject property.

5. Interviews

5.1. *Site Owner Interview*

A Property Background Information Questionnaire was not completed for the subject property. Although a questionnaire was not completed, the representative for the owner provided previous reports detailing environmental investigations at the subject property.

5.2. *User-Provided Information*

In accordance with ASTM Standard 1527-13, Janet Koller, Vice President of Chaminade College Preparatory, provided the following information:

1) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

   No

2) Are you aware of any activity and land use limitations (AUL), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

   Nothing other than zoning

3) As the user of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

   We are owners of the property across the street (school). We know that dry cleaners have been present on the property. A gas station is adjacent to the property.

4) Is the property being purchase at fair market value? If the purchase price of the Site was below fair market value, did this occur because contamination was/is known or believed to be present at the property?

   Price will likely be lowered due to soil contamination on the property.

5) Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as a user,

   a) Do you know the past uses of the property?

      Just know of an old dry cleaner on east side.

   b) Do you know of specific chemicals that are present or once were present at the property?

      Dry cleaning chemicals

   c) Do you know of spills or other chemical releases that have taken place at the property?

      No specific knowledge of spills or releasing occurring; however, testing indicates that may have occurred.

   d) Do you know of any environmental cleanups that have taken place at the property?

      No

6) As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property?

   Yes. Seller and Buyer have had testing done which indicated some soil contamination.

5.3. *Agency Interview*

5.3.1. Los Angeles County Fire Department

Dudek contacted the Los Angeles County Fire Department (LACFD) on March 21, 2017 about agency files for the subject property. The Los Angeles County Department of Public Health responded on behalf of LACFD on April 14, 2017 stating that records were available for review at their office. These records contain the last three Certified Unified Program Agencies (CUPA) inspections completed by the LACFD at the West Hills Cleaners located at 23233 Saticoy St. #110 in Canoga Park, CA 91304. Records also included a list of dates of contacts and inspections completed between March 10, 1992 and April 17, 2013. Although the inspection forms are not available for dates prior to January 23, 2007, records indicated the issuance of Notice

of Violation #022502 on March 10, 1992, but not further information is available and no further Notices of Violation were issued. Inspection forms indicate the presence of one 55 gallon drum of waste perchloroethylene (PCE) located on site in January 2007 and November 2009 but not during the April 2013 inspection which stated that all dry cleaning was being transported to another location. Copies of agency records are presented in **Appendix D**.

5.3.2. Los Angeles Regional Water Quality Control Board

Dudek contacted the Los Angeles Regional Water Quality Control Board (LARWQCB) on March 21, 2017 requesting information on the subject property and the adjacent gas station/auto repair facility. As no response was received from the LARWQB by May 25, 2017, a second request was sent. The LARWQCB replied by email on June 5, 2017 stating that they do not have any records for the subject property, however the LARWQCB did provide information on the adjacent gas station/auto repair facility. A release of petroleum hydrocarbons to the soil and groundwater was first discovered in 1988. Groundwater monitoring was conducted from 1989 to 1992 with low detections of petroleum hydrocarbons and related volatile organic compounds. The site was granted closure in 2001 due to the plume stability and low threat to drinking water. A copy of the agency response is in **Appendix D**.

5.3.3. Los Angeles County Department of Public Health

Dudek contacted the Los Angeles County Department of Public Health (DPH) on March 21, 2017 requesting information on the subject property. The DPH replied by fax on March 30, 2017 that their search revealed no records pertaining to the subject property. This response is attached in **Appendix D**.

5.3.4. South Coast Air Quality Management District

Dudek contacted the South Coast Air Quality Management District (SCAQMD) on March 21, 2017 requesting information on the subject property. The SCAQMD replied by email on March 22, 2017 with information for the West Hills Cleaners at 23233 Saticoy St, #110. These records include Permits to Operate from 1989, 2002, 2004, and 2007, and equipment lists and inspection reports from 2002-2013. Notices of violation are also included, indicating that in 2000 and 2002 a Firbimatic Vortex 40 dry cleaning machine was being operated without a permit. The 2002 notice also included a vapor leak of PCE. A notice of violation was issued in 2009 for failing to change the machine gaskets and another notice was issued for failing to submit a

quadrennial update report; both of these situations were later remedied. Copies of agency records are presented in **Appendix D**.

5.3.5. California Department of Toxic Substances Control

Dudek contacted the California Department of Toxic Substances Control, Chatsworth Office (DTSC) on March 21, 2017 requesting information on the subject property. The DTSC replied by email on March 24, 2017, stating that no records exist in their office for the subject property. A copy of the letter sent by the DTSC is presented in **Appendix D**.

5.4. *Previous Investigations*

Three Confidential Site Assessment Reports were conducted for the current owner of the property. These reports included a Phase I ESA and a Limited Phase II ESA prepared by Alpha Environmental in 2013 and a Limited Subsurface Investigation prepared by Lord Environmental Services in 2014. In the Alpha Phase II ESA, 6 soil vapor borings were advanced and a total of 10 samples were collected and analyzed from depths between 5 and 15 feet bgs. The 2014 Lord Environmental Services (Lord) investigation consisted of 4 borings to 15-20 feet bgs, with soil and 8 soil vapor samples collected. In their conclusions, Lord recommended the installation of 5 soil vapor/groundwater monitoring wells, additional soil vapor probes, and a geophysical survey of the sewer line exiting the dry cleaner.

Previous soil vapor sampling conducted by Alpha and Lord found that:

1. Two soil vapor samples collected near the former Chevron Gas Station found no detected levels of Total Petroleum Hydrocarbons (TPH) or BTEX in samples collected from 15 feet bgs (Alpha, 2013). However, one soil vapor sample had low level detections of PCE and trichloroethene (TCE).

2. Three soil vapor samples collected by Alpha at locations near the current dry cleaner, West Hills Cleaners (23233 Saticoy Street, Unit 110) from 5 and 15 feet bgs had low detected levels of the dry cleaning solvent PCE. Lord collected 8 additional soil vapor samples from the area around West Hills Cleaners and found higher concentrations of PCE ranging from 22 to 360 ug/L, with the highest concentrations found just south of the cleaners.

3. Two soil vapor samples collected from 5 feet bgs within the former dry cleaner unit (7621 Woodlake Avenue) had no detected volatile organic compounds (VOCs) (Alpha, 2013).

The Phase I ESA written by Alpha Environmental was prepared on May 31, 2013. The site reconnaissance indicated that the site was improved with two single-story commercial buildings. Environmental concerns observed during the site reconnaissance included a neighboring dry cleaning business and an adjacent gas station/auto repair shop. The historical review identified concerns related to the dry cleaning businesses, they were reported to be operating during the 1980's, along with the potential storage and handling of chlorinated solvents by the dry cleaning business. Some environmental concerns were also identified due to the presence of a gas station/auto repair facility adjacent to the subject property from 2001 to 2012. Regulatory research did not identify any listings on federal, state, or local agency databases for the subject property. However, the neighboring gas station/auto repair facility was found to be listed for a LUST case that was closed in 2001. The report concluded with recommendations for a Limited Phase II ESA in order to verify the sub-surface soil conditions due to the potential on-site and off-site sources.

Following the recommendations from the Phase I ESA, the current property owner hired Alpha Environmental to prepare a Limited Phase II ESA, dated August 19, 2013. Alpha advanced 6 soil vapor probes for the Phase II ESA at depths of 5 and 15 feet bgs. Soil vapor samples were collected for 10 of the soil vapor probes. Soil vapor samples collected near the on-site dry cleaning facility did not yield any PCE or VOC results above the laboratory detection limits. All samples of TPH and BTEX collected near the neighboring gas station/auto repair facility were found to be below the laboratory detection limits. However, soil vapor samples collected near the adjacent off-site dry cleaning facility and the gas station/auto repair facility were found to have limits above the California Human Health Screening Levels (CHHSL) for a depth of 5 feet bgs for residential (0.18 µg/L) and commercial (0.6 µg/L) PCE and TCE. The maximum concentration of PCE identified was found to be 1.24 µg/L and the maximum concentration of TCE was observed to be 0.25 µg/L. Alpha Environmental recommended additional investigations to further delineate the extent of the PCE subsurface contamination.

A Limited Subsurface Investigation was prepared by Lord Environmental Services on February 13, 2014. Lord analyzed 4 soil borings in and around the on-site cleaners (West Hills Cleaners). One soil boring was done within the cleaners adjacent to the dry cleaning machine and three additional soil borings were done to the north, south, and east of the cleaners. Soil samples were analyzed from the boring within the building and the boring to the south of the building at multiple depths, no results of VOCs were detected above the laboratory detection limits. Soil vapor samples were collected at all 4 of the soil boring locations at a depth of 5 and 15 or 20 feet bgs. No detections of TCE or other VOCs were found. However, levels of PCE were detected in the range of 22 to 360 µg/L, with the highest concentrations found to the south of the dry cleaners. Based on the findings Lord recommended installation of 5 vapor extraction/groundwater monitoring wells, 4 soil vapor probes, and a geophysical survey of the dry cleaner sewer line.

6. Site Reconnaissance

A site reconnaissance was conducted by Dudek on October 13, 2017 by Christian Hunter. The Site Reconnaissance consisted of walking the subject property, viewing liquid and solid waste storage facilities behind the building, and viewing adjacent sites from the subject property or public rights of way. Photographs are included in **Appendix E**.

The subject property is comprised of approximately 4.86 acres containing one large building with eighteen commercial tenant spaces currently occupied by fifteen tenants, two trash enclosures, and a surrounding parking complex (**Figure 1**). The Site is bounded to the north by residential homes (**Photograph 1**); to the west by Saticoy Street and the Chaminade College Preparatory High School (**Photograph 2**); to the south by Saticoy Street and residential homes (**Photograph 3**); to the southeast by Complete Auto Service garage (**Photograph 4**); and to the east by Woodlake Ave. and residential homes (**Photograph 5**).

The Site addresses and their tenants are described below.

- 7621 Woodlake Ave. – Melito's Barber Shop 2 (**Photograph 6**).
- 7625 Woodlake Ave. – Delcourt Insurance (**Photograph 6**).
- 7629 Woodlake Ave. – Happy Dogs Grooming & Supplies (**Photograph 6**).
- 23217 Saticoy St. – Woodlake Liquors (**Photographs 6-7**).
- 23221 Saticoy St. – Fields Market (**Photographs 7-8**).
- 23229 Saticoy St. – The Gourmet Soup Kitchen (**Photograph 9**).
- 23231 Saticoy St. – Function First Fitness (**Photograph 9**).
- 23233 units 111 through 113 – Unoccupied (**Photographs 9-10**).
- 23233 unit 110 – West Hills Cleaners (**Photograph 10**).
- 23233 unit 109 – West Hills Massage Therapy (**Photograph 10**).
- 23233 units 107 and 108 – Golden Performing Arts (**Photograph 11**).
- 23233 unit 106 – Disability Rehabilitation Center (**Photograph 12**).
- 23233 unit 105 – State Farm Insurance Agent Steven Hill (**Photograph 12**).
- 23233 unit 104 – Raz's Little Italy Italian Restaurant (**Photographs 12-13**).
- 23233 units 101 through 103 – West Hills Veterinary Clinic (**Photograph 13**).
- 23233 unit 114 (back of building) – Cutting Edge Karate (**Photograph 14**).

The Site is accessed via driveway entrances along Woodlake Ave. and Saticoy St.

Surface Water Discharge

The subject property is generally flat, with minimal slope to the south and east. No on-site storm drains were observed. Stormwater appears to be directed towards storm drains

on Woodlake Ave. and Saticoy St., aided by a shallow concrete swale running along the length of the north side of the building (**Photograph 15**). No standing water was observed during the Site Reconnaissance.

Pits, Ponds, or Lagoons

No pits, ponds, lagoons, or other waterways were observed at the subject property. It could not be determined by the Site Reconnaissance whether drainage from the depressed loading dock would be sufficient to prevent pooling of water during storm events (**Photograph 15**).

Distressed Vegetation

No distressed vegetation was observed on the subject property.

Indications of Solid Debris Storage

Containerized trash was observed in four dumpsters located at two different areas behind the building. Two of these dumpsters were located in an enclosed solid waste area behind the West Hills Veterinary Clinic near the northwest corner of the building (**Photograph 16**). Adjacent to this enclosure, a drum was observed containing soil samples from a previous subsurface investigation and awaiting disposal (**Photograph 17**). Two additional dumpsters were located below two electrical poles adjacent to the rear loading dock (**Photograph 18**). Although an enclosed trash area was observed behind Function First Fitness, no dumpsters were observed. No additional debris was observed on the subject property.

Chemical Storage or Use

Although the interior of the tenant units were not observed, some chemical storage was observed on the exterior of the building. A 5-gallon bucket of "Premium Final Rinse, Low Temp Machine Chlorinating Sanitizer" dry cleaning solution was located beside the waste storage enclosure behind West Hills Cleaners and Function First Fitness (**Photograph 19**). This product is a disinfectant (sodium hypochlorite) regulated by the California Department of Pesticide Regulation (http://apps.cdpr.ca.gov/cgi-bin/label/pir.pl?prodno=57955). An unlabeled blue drum, containing what appeared to be cooking oil, is located in the waste storage enclosure behind the West Hills Veterinary Clinic (**Photograph 20**). This drum was not sealed and the lid was only placed on top without a drum ring. Additionally, a drum, a 5-gallon bucket, and a cardboard box containing a plastic container were observed behind the two dumpsters located adjacent to the rear loading dock (**Photograph 21**). The unlabeled black drum appears to contain oil, possibly vegetable-based (**Photograph 22**). The cardboard box and plastic container are labeled "Canola Salad Oil". The 5-gallon bucket labeled as pickles contains an odorous decomposed orange liquid (**Photograph 23**). Additionally, rat traps are placed at regular intervals along the back perimeter of the building (**Photograph 24**). Several

drums appear to be stored behind fencing at the Complete Auto Service garage immediately adjacent to southeast corner of the subject property, but their contents could not be determined without access to the adjacent site (**Photograph 25**).

Pools of Liquid

No pools or flowing water were observed on the subject property.

Groundwater Wells, Cisterns, Cesspools or Septic Tanks

No groundwater wells or indications of septic tanks were observed on the subject property.

Drains and Sumps

No sumps were observed on the subject property. Street storm drains associated with surface runoff are described above in Surface Water Discharge.

Transformers and Hydraulic Equipment

A total of nine pole-mounted transformers were observed on or immediately adjacent to the subject property. Two transformers were observed along Saticoy St., one near the northwestern entrance to the subject property (**Photograph 26**) and one near the intersection of Woodlake Ave. and Saticoy St. (**Photograph 27**). Five transformers were located on poles in the area behind Function First Fitness: two on a pole near the back entrance to The Gourmet Soup Kitchen (**Photograph 28**) and another three on a pole above the dumpsters (**Photograph 18**). An additional two transformers were observed behind Melito's Barber Shop (**Photograph 29**). No staining was observed below these transformers, although one of the two transformers behind Melito's Barber Shop does appear to be rusted and in poor condition. No pad-mounted transformers were observed on the subject property.

Abnormal Odor

No abnormal odors were noted on the subject property.

Soil Disturbances

No soil disturbances were observed on the subject property.

Underground Storage Tanks

No evidence of underground storage tanks was observed on the subject property during the Site Reconnaissance.

Aboveground Storage Tanks

No aboveground storage tanks were observed on the subject property during the Site Reconnaissance.

Staining

Minor areas of surface staining were observed on the asphalt of the parking lot related to the parking of vehicles (**Photographs 9, 10, and 12**). No additional staining was observed on the subject property during the Site Reconnaissance.

7. Historical Use Information

Dudek reviewed the following historical use information in order to assess the possibility of historical activities that could present environmental concerns. The information obtained from review of these historical use records is summarized in the following table and described in more detail in the following subsections.

- Historical aerial photographs (AP)
- Historical topographic maps (TM)
- Sanborn fire insurance maps (SFIM)
- City Directory listings (CD)
- City building permits (BP)

The photographs indicate that the subject property consisted of agricultural land from at least 1928 to 1959. Sometime between 1959 and 1967, the subject property was developed as a shopping center with parking lots and a gas station on an adjacent corner parcel. This shopping center was expanded in 1981 to its current size. The residential structures to the north of the subject property were completed between 1981 and 1989. The High School to the southwest of the subject property was constructed between 1959 and 1967. Residential structures to the south of the subject property were completed between 1972 and 1978, while those to the east of the subject property were built in 2005.

Period	Property	Adjoining Area	Source	Comment
1903-1925	The subject property appears to be agriculture or is vacant unused land.	Surrounding properties appear to be used for agriculture or are vacant unused land.	TM	None
1925-1944	The subject property still appears to be agricultural or vacant unused land.	The majority of the surrounding properties appear to be used for agriculture or are vacant unused land. Some residential housing and commercial buildings are noted to the north and east of the subject property. Saticoy St and Santa Ana Ave are first visible on the 1925 topographic map. The name of Santa Ana Ave changes to Woodlake Ave on the 1932-1933 topographic map.	AP, TM	None

Period	Property	Adjoining Area	Source	Comment
1944-1967	Orchards are present on the subject property through 1959. A new structure and parking lot are shown on the eastern half of the subject property, which is consistent with the eastern portion of the commercial shopping center construction.	Surrounding properties continue to be developed as residential housing and commercial buildings. Saticoy Street has been extended further west.	AP, TM	None
1967-2012	The building in the northeastern corner of the subject property appears to have doubled in size, which is consistent with the expansion of the commercial shopping center.	Surrounding properties continue to be developed as residential housing and commercial buildings.	AP, CD	None
2012-Present	The subject property is developed as a commercial shopping center and parking lot, as it appears today.	Surrounding properties are developed for commercial buildings and residential housing, as the area appears today	AP, CD	None

7.1 Aerial Photographs

Dudek reviewed historical aerial photographs from EDR for the years 1928, 1938, 1947, 1952, 1959, 1967, 1972, 1978, 1981, 1989, 1994, 2002, 2005, 2009, 2010, and 2012 (**Appendix F**). The aerial photographs show the following:

Date	Description
1928	Woodlake Ave. is visible to the east of the subject property, which appears to be a young orchard. Surrounding areas appear to be of similar agricultural use with possible farm buildings located immediately to the north of the subject property. Additional farm buildings, possibly homes, are located to the northeast and southeast of the subject property. Saticoy St. appears to be a dirt road, heading east from the subject property.
1938	The subject property and surrounding areas appear similar to the 1928 photograph. The orchards on the subject property and surrounding areas appear to be more mature.
1947	The subject property and surrounding areas appear similar to the 1938 photograph. A racing track, possibly for horses or cars, is located 1000' to the east of the subject property.
1952	Three white structures appear at the center of the subject property. The surrounding areas have had a gradual increase in the number of small structures, possibly farm homes.
1959	Large-scale residential development has occurred southeast of the subject property, as well as further east and northeast. The area to the north of the subject property has been cleared for potential development. The subject property remains similar to the 1952 photographs.
1967	The eastern half of the current West Hills Shopping Center has been built on the subject property, with associated parking areas. A structure, possibly the former fueling station, is located on the northwest corner of Saticoy St. and Woodlake Ave. Residential development has continued to expand around the shopping center and the High School has been built across Saticoy St. to the west and south, with associated sports fields. Surrounding areas to the north, northwest and east of the subject property are largely undeveloped.
1972	Development has continued to expand in the surrounding areas, with construction of residential structures occurring to the north and northwest of the subject property. Areas immediately north, east, and south of the subject property remain largely undeveloped with the exception of a few small structures on the northeast corner of the intersection of Saticoy and Woodlake, and a baseball field to the south of the subject property. The subject property is being actively used as a shopping center.
1978	The subject property appears similar to the 1972 photograph. The area immediately to the south of the subject property has been developed with residential structures and the area to the east is currently under construction. The area immediately to the north of the subject property remains undeveloped.
1981	All surrounding areas have been developed as residential, with the exception of the High School to the southwest of the subject property and areas immediately to the east and north of the subject property. The area to the north appears to be under active excavation and construction appears to have begun on the western half of the West Hills Shopping Center.
1989	The area to the north of the subject property has been developed with residential structures, and construction on the western half of the West Hills Shopping Center has completed. With the exception of the undeveloped parcel to the east of the subject property and a parcel under active residential development south of the subject property, all surrounding areas have been developed as residential.
1994	The subject property and surrounding areas appear similar to the 1989 photograph.
2002	The subject property and surrounding areas appear similar to the 1994 photograph.
2005	Construction of residential structures has begun on the parcel east of the subject property. The Site and all other surrounding areas appear similar to the 2002 photograph.

2009	The subject property appears similar to the 2005 photograph. All surrounding areas have been developed as residential with the exception of the High School to the southwest of the subject property.
2010	The subject property and surrounding areas appear to be similar to the 2009 photograph.
2012	The subject property and surrounding areas appear to be similar to the 2010 photograph.

7.2 Topographic Maps

Historical topographic maps were obtained from EDR for the years 1903, 1925, 1927-1928, 1932-1933, 1940, 1944, 1947, 1952, 1967, and 2012 (**Appendix G**). The topographic maps show the following:

Date	Scale	Description
1903	1:62,500	The subject property appears to be vacant and the closest road is approximately ¾ miles away.
1925	1:24,000	The subject property appears to be vacant. Saticoy St and Santa Ana Ave. (Woodlake Ave) appear. Saticoy St does not extend west of Santa Ana Ave. Other major streets also appear along with some structures.
1927, 1928	1:24,000	The subject property appears to be vacant and the surrounding areas appear to be similar to the 1925 topographic map.
1932, 1933	1:24,000	The subject property appears to be vacant and Saticoy St now extends west of Woodlake Ave approximately the length of the subject property. Santa Ana Ave have been changed to Woodlake Ave. The surrounding areas appear to be similar to the 1927-1928 topographic map.
1940	1:24,000	The subject property appears to be vacant and the surrounding areas appear to be similar to the 1932-1933 topographic map.
1944	1:62,500	The subject property appears to have one structure in the northeast corner. However, based on the aerial photography review and the subject property's relation to Saticoy St, it appears that the subject property boundary may have been placed in the wrong location. Additional roadways and structures appear in the vicinity of the subject property.
1947	1:50,000	The subject property appears to be vacant. However, the location of the subject property in relation to Saticoy St. and Woodlake Ave., it appears that the subject property may have been placed in the wrong location. The vicinity of the subject property appears to be similar to the 1944 topographic map.
1952	1:24,000	The subject property appears to be vacant. Additional structures appear to the southwest of the subject property along Cohasset St. and a race track appears to the west of the subject property.
1967	1:24,000	A structure appears on the northeast corner of the subject property. Development appears on the north, east, and south of the subject property and the High School appears to the west of the subject property.
2012	1:24,000	The subject property is surrounded by development. Structures are not specifically identified on the topographic map.

7.3 Sanborn Fire Insurance Maps

Historical Sanborn fire insurance maps were requested from EDR; however, no maps were available for the subject property (**Appendix H**).

7.4 City Directory Listings

Various tenants at the subject property were identified in the city directory listings. The entries are summarized below and are presented in **Appendix H**.

Year	On-Site Entries
2013	23221 Saticoy St. – Daban Enterprises, Fields Market 23233 Saticoy St. – Cutting Edge Karate, Disability Rehab Center, Elite Full Service Salon & Boutique, Golden Performing Arts Center, Pet Medical Center Chatoak, Razs Little Italy, Star Makers Dance Academy, Steven Hill State Farm Insurance, Superior Collection Bureau, West Hills Massage Therapy, West Hills Pool Supply 7629 Woodlake Ave. – Melitos Barber Shop
2008	23221 Saticoy St. – West Hills Market 23233 Saticoy St. – American Tsuuhan, Cutting Edge Karate, Disability Rehab Center, Elite Full Service Beauty Salon, Golden Performing Arts Center, Superior Collection Inc., Touchstone Estates, West Hills Cleaners, West Hills Pool Supply, West Hills Veterinary Clinic 7629 Woodlake Ave. – Holtons Barber Shop
2004	23221 Saticoy St. – West Hills Markets 23233 Saticoy St. – Amertshuuhan, Arts Center, Beautysln, Buffumrobertm, Collection, Elutefullservice, Goldenperforming, Ilparadiso, Sea & Shoretravel, Superior, Veterinary Clinic, West Hills, West Hls Cleaners 7629 Woodlake Ave. – Holtons Barber Shop
1995	23221 Saticoy St. – Not listed 23233 Saticoy St. – Buffum Robert M, Fax Telephone No, Half Hour Photo, Leimert Walter HJr, Paradise & Beyond Travel, Sues Coffee Corner, West Hills Cleaners, West Hills Postal Center, West Hills Veterinary Clinic 7629 Woodlake Ave. – Holtons Barber Shop
1991	23221 Saticoy St. – Not listed 23233 Saticoy St. – Ad Lib Stylist, Ad Magic Specialties, Fax Telephone No, Haleaf Hour Photo, Leimert Walter H Jr, West Hi URpsjstal Center, West Hills Cleaners, West Hill Property Owners Assn, West Hills Psychiatric Medical Group, West Hills Veterinary Clinic, West Isabelle S, West J, West J Tuj, 7629 Woodlake Ave. – Holtons Barber Shop
1985	23221 Saticoy St. – Not listed 23233 Saticoy St. – Ad Lib Stylist, Ad mArt Second Hand Dealers 7629 Woodlake Ave. – Holtons Barber Shop
1980	23221 Saticoy St. – Not listed 23233 Saticoy St. – Not listed 7629 Woodlake Ave. – Holtons Barber Shop
1975	23221 Saticoy St. – Not listed 23233 Saticoy St. – Canoga Park 7629 Woodlake Ave. – Not listed

1970	23221 Saticoy St. – Not listed 23233 Saticoy St. – Not listed 7629 Woodlake Ave. – J H Barber Shop
1965	23221 Saticoy St. – Lalph Heta Ache Markets 23233 Saticoy St. – BT11C5100E Hair Fashions, TEC0NIOUL Hair Fashions 7629 Woodlake Ave. – Not listed
1956	23221 Saticoy St. – Not listed 23233 Saticoy St. – Not listed 7629 Woodlake Ave. – Schreiber Bert

7.5 Review of Environmental Liens and Activity and Land Use Limitations

An environmental lien search was conducted by NETR for the subject property parcels in March 2017. No liens or activity and use limitations were found (**Appendix I**).

8. **Public Agency Records Search Review**

The regulatory database gives a listing of sites, within an approximately one-mile radius of the subject property, which are known to be chemical handlers, hazardous waste generators, or polluters. Information in these listings includes the location of the site relative to the subject property, sources of pollution, and the status of the site. The search performed for this assessment was conducted in October 2017 by EDR. The complete database search report is included as **Appendix C**.

Acronym	Database	Search Distance	Subject Site	Number of Sites Listed
NPL	National Priorities List (including proposed NPL sites)	1 mile	No	0
NPL LIENS	Federal NPL Site List	Target Property	No	0
Delisted NPL	National Priority List Deletions	1 mile	No	0
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)	0.5 mile	No	0
FEDERAL FACILITY	Federal CERCLIS List	0.5 mile	No	0
CERCLIS NFRAP	CERCLIS No Further Remedial Action Planned	0.5 mile	No	0
CORRACTS	Resource Conservation and Recovery Act (RCRA) Corrective Action	1 mile	No	0
RCRA TSDF	RCRA - Transportation, Storage, and Disposal	0.5 mile	No	0
RCRA-LQG	RCRA Large Quantity Generators	0.25 mile	No	0
RCRA-SQG	RCRA Small Quantity Generators	0.25 mile	Yes	2
RCRA-CESQG	RCRA Conditionally Exempt Small Quantity Generators	0.25 mile	No	0
ERNS	Emergency Response Notification System	Target Property	No	0
US ENG CONTROLS	Sites with Engineering Controls	0.5 mile	No	0
US INST CONTROLS	Sites with Institutional Controls	0.5 mile	No	0
LUCIS	Federal Institutional Controls/Engineering Controls Registries	0.5 mile	No	0
RESPONSE	State- and Tribal-Equivalent NPL	1 mile	No	0
ENVIROSTOR	State- and Tribal-Equivalent CERCLIS	1 mile	No	1
SWF/LF	State and Tribal Landfill and/or Solid Waste Disposal Site	0.5 mile	No	0
LUST	State and Tribal Leaking Storage Tank	0.5 mile	No	3

Acronym	Database	Search Distance	Subject Site	Number of Sites Listed
SLIC	State and Tribal Leaking Storage Tank	0.5 mile	No	0
Indian LUST	State and Tribal Leaking Storage Tank	0.5 mile	No	0
UST	State and Tribal Registered Storage Tank	0.25 mile	No	1
AST	State and Tribal Registered Storage Tank	0.25 mile	No	0

Indian VCP	State and Tribal Voluntary Cleanup	0.5 mile	No	0
VCP	State and Tribal Voluntary Cleanup	0.5 mile	No	0
US Brownfields	State and Tribal Brownfields	0.5 mile	No	0
EDR US Hist Cleaners	Historic Dry Cleaners	0.25 mile	Yes	1
Additional Environmental Records		Varies	Yes	18

The subject property was listed in eight of the databases searched by EDR. These listings are described in **Section 8.1**.

Four unique sites were identified in the database search within the specified search distances. These sites are discussed in **Section 8.2**.

8.1. *Subject Property Listings*

Multiple addresses within the shopping center were listed in various databases. The subject property listings are described in the table below.

Tenant Name and Address	Database Listings	Comments
West Hills Cleaners 23233 Saticoy Street, Suite 110	RCRA-SQG, FINDS, ECHO, HAZNET, EDR Hist Cleaner, DRYCLEANERS, EMI	The West Hills Cleaners tenant is listed as a small quantity generator of waste; no violations were reported. The HAZNET listing documents the disposal (recycling) of halogenated solvents for the following years: 1995, 1996, 2004, 2005, 2007, 2008, 2010, and 2015. The FINDS database listing reports a dry cleaning plant at the site. The ECHO database listing does not provide site-specific information. The EMI database presents a South Coast AQMD entry for 1990 for the cleaners; no emissions were reported. The RCRA-SQG database did not report any violations for the West Hills Cleaners.
West Hills Pool Supply 23233 Saticoy Street, Suite 111	FINDS	The FINDS database entry reports a SIC code of 5091 for the tenant – Sporting and Recreational Goods and Supplies. No additional information was presented in the listing.
West Hills Veterinary Clinic 23233 Saticoy Street	HAZNET	The HAZNET listing documents the disposal (recycling) of photochemicals/photoprocessing and metal sludge waste for 1993 through 1997.
Rase Inc 23233 Saticoy Street, Suite 146	EDR Hist Auto	The EDR report lists the site as a general automotive repair shop for years 1992, 1993, 1994, 1996, and 1997. No additional information was presented in the listing.

8.2. *Other Site Database Listings*

Of the 4 sites listed in the regulatory databases, only three were identified in databases that are indicative of releases. These sites, Chevron Station #9-3113, West Hills Regional Medical Center, and Enadia Way School, are discussed in the table below.

Site Name and Address	Database Listings	Relative Location	Flow Direction and Relative Gradient to SP	REC?
Chevron Station #9-3113, Paul Mac Chevron 7607 Woodlake Ave	LUST, RCRA-NonGen/NLR, FINDS, ECHO, UST, EDR Hist Auto, HIST UST, SWEEPS UST, CA FID UST, HIST CORTESE	Adjacent - borders subject property to the southeast	Northeast Cross Gradient	Yes
Comments: A gasoline leak was discovered in May of 1988 and was recorded on the LUST and LUST REG 4 lists in June of 1993. Four USTs were removed from the site in December 1989. A letter from Holguin, Fahan, & Associates, Inc. dated February 3, 2000 requesting site closure indicates that the site is a low risk groundwater contamination site due to the facility upgrades, the limited soil contamination at the site, the concrete/asphalt surface barrier, and the attenuation of the dissolved-phase hydrocarbon plume. Furthermore, due to the direction of the groundwater movement trending towards the northeast, away from the subject property, the Chevron Station poses a limited threat to the subject property.				
West Hills Regional Medical Center 7300 Medical Center Drive	RCRA-LQG, LUST, UST, SWEEPS UST, CA FID UST, FINDS, ECHO, EMI, HIST CORTESE	0.4 mile South/Southeast	E/SE Up-gradient	No
Comments: A release of diesel fuel to groundwater was reported in 1991. The database listing for the site details that the release was discovered in July 1991, was reported and remediated in August 1991, and site closure was issued in December 1991. Based on the timeline (5 months from discovery to site closure), this suggests that the release was limited in size and groundwater was not likely to be the impacted media. Additional items listed in the various databases document waste generated at the site and transported off-site for disposal/recycling. This site is not likely to have impacted the environmental conditions on the subject property.				
Enadia Way Elementary School Re-Opening 5460038 2294 Enadia Way	ENVIROSTOR, SCH	0.67 mile South/Southeast	N/A	No
Comments: The Enadia Way Elementary School site was listed in the ENVIROSTOR and SCH databases related to a school investigation prior to the re-opening. The constituents of concern are listed as asbestos and lead-based paint and lead in soil. Based on the nature of the constituents of concern and impacted media (soil), this site is unlikely to impact the environmental conditions of the subject property.				

8.3. *Unmapped Sites*

Unmapped sites are flagged by EDR but not mapped due to insufficient address information. No sites were reported as unmapped by EDR.

8.4. *Online Databases*

Dudek reviewed the RWQCB's online GeoTracker database and the DTSC's online Envirostor database on October 29, 2017 and no additional sites were plotted in the immediate vicinity of the subject property.

9. Vapor Encroachment Screening

A vapor encroachment screen report was prepared using EDR's vapor encroachment tool. A "Tier I" Vapor Encroachment Screening (VES) was performed for the Site in accordance with ASTM E 2600-10 "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions." The Tier I VES was performed to evaluate whether there is a potential for vapors originating from contaminated soil and/or groundwater to occur in the subsurface below the existing and proposed on-site structures. For sites where a vapor encroachment condition (VEC) could not be ruled out but where reports of site sampling were available, those reports were used to evaluate the subject property (Tier 2 screening).

The EDR vapor encroachment worksheet evaluated types of soils, geology, and hydrology as well as listed contaminated sites as identified in Federal, State, and local databases. The following table presents a summary of the VEC findings:

Potential for Vapor Intrusion on Site	
Areas of Concern	**Conclusion**
Site (existing conditions)	VEC cannot be ruled out (presence of a dry cleaner).
Site (former condition)	VEC cannot be ruled out (presence of a dry cleaner).
Adjoining Property or near-by Property Operations or Existing Conditions	VEC cannot be ruled out (nearby former gas station with known residual impacts).
Historical Uses of Adjoining Property or Near-by Properties	VEC cannot be ruled out (former release at nearby gas station).
Regulatory Review of sites identified on Federal, State, and Local databases	None identified.

Based on this screening, a VEC cannot be ruled out for the subject property due to the long-term presence of a dry cleaner and residual impacts left in place at the adjacent gas station; both items are considered RECs.

10. Evaluation of Additional Potential Hazards

Dudek obtained information regarding the following potential sources of hazards and hazardous material releases from the interview, site reconnaissance, the EDR report, historical documents, and environmental reports.

Agricultural Use
Based on a review of historical aerial photographs, orchards were present on the subject property from before 1928 to sometime after 1959.

Off-Site Sources
Based on a review of environmental reports and the results of the database search by EDR, an adjacent gas station/auto repair facility with a known release of gasoline to groundwater may have impacted the environmental conditions of the subject property. The adjacent gas station/auto repair facility case was closed in 2001. Groundwater and soil sampling results show that low concentrations of residual impacts remain at the site.

Radon
Los Angeles County is classified as a Zone 2 Federal EPA Radon Zone, indicating that the indoor average level is ≥2 picocuries per liter (pCi/L) but ≤4 pCi/L which is below the EPA radon action level of 4 pCi/L.

PCB Items
Pole-mounted transformers were observed on and immediately adjacent to the subject property. The PCB content of the transformers was not known but no staining or leaks were observed on the transformers.

Fill Material
Based on a review of historical aerial photographs and a search of public agency records, the subject property is not known to have received fill material.

Debris
No evidence of debris dumping was observed on the subject property.

Tanks
No evidence of underground storage tanks was observed on the subject property during the site reconnaissance.

11. Conclusions and Recommendations

Information obtained during the Phase I ESA indicates that the subject property consisted of agricultural land from at least 1928 to 1959. Sometime between 1959 and 1967, the subject property was developed as a shopping center with parking lots and a gas station on an adjacent corner parcel. This shopping center was expanded in 1981 to its current size. According to records reviewed, the dry cleaner has operated at the subject property since at least 1989.

Dudek has performed this Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13. Any exceptions to, or deletions from, this practice are described in Section 12 of this report.

The Phase I Environmental Site Assessment identified the following recognized environmental conditions in connection with the subject property.

- The long-term presence of a dry cleaner at the subject property with known solvent releases;
- The known release of hydrocarbons to soil and groundwater from the adjacent former gas station;
- Potential vapor intrusion concerns from the dry cleaner and adjacent former gas station; and
- Former agricultural use from before 1928 until sometime after 1959.

As a result of the identification of these RECs, Dudek performed a limited Phase II environmental assessment related to the dry cleaner, adjacent former gas station, and former agricultural use of the subject property. The results of this assessment are presented in **Appendix A.** Based on the results of the limited Phase II environmental assessment, Dudek recommends remediating the shallow perchloroethylene (PCE)-impacted soil vapor to mitigate potential vapor intrusion risk.

The results of the limited Phase II also indicate that the former agricultural use of the subject property is unlikely to present a risk to human health and is therefore considered to be *de minimis*.

Although not a REC, asbestos and/or lead may be present on the buildings at subject property, given that the existing buildings were constructed prior to 1967. Dudek recommends that a lead-based paint and asbestos survey be conducted prior to remodeling, demolition, or any other activity that may disturb the subject property structures. If asbestos and/or lead paint are identified, Dudek recommends that the materials be abated by a licensed abatement contractor in accordance with applicable local, state, and federal guidelines and/or regulations.

12. Limitations

The following data gaps, which are unlikely to be significant, were identified for this Phase I ESA:

- The property owner did not complete a background questionnaire; and
- Dudek was only able to access the dry cleaner tenant unit.

The findings and conclusions presented in this report are professional opinions based solely upon the indicated data described in this report, visual observations of the property and vicinity and our interpretation of the available historical information and documents reviewed. Dudek makes no warranty as to the accuracy of statements made by others or the accuracy of information included in documentation reviewed in connection with this study. It should be recognized that this study was not intended to be a definitive investigation of potential contamination at the property and that the recommendations do not necessarily include all conditions that may be present. Because the scope of the investigation was limited, it is possible that currently unrecognized conditions or contamination might exist at the property.

No warranties or guarantees or representations, expressed or implied, are made by Dudek, except that this report has been prepared in accordance with current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professionals performing the same or similar services. The conclusions are intended exclusively for the purpose outlined herein and may not be suitable to satisfy the needs of other users. Thus, any use or reuse of this document is at the sole risk of said user. No parties other than the user of this Phase I ESA, as identified in Section 2.0 of this Phase I ESA or Chaminade College Preparatory, should rely on this report without prior written consent of Dudek.

Coleman & Horowitt, for itself, and as agent for any parties who now or hereafter hold any portion of or interest in, the indebtedness, and their successors and assign, its parent, affiliates, bond holders and potential bond holders, the underwriters of any securitization of the loan secured by the subject property, the rating agencies rating such securitization, and each of such parties' counsel, are entitled to rely upon this report and to use its contents and conclusions as may be appropriate.

In accordance with ASTM Standard E 1527-13, this Phase I ESA is valid for 180 days. After 180 days, this report, or the information presented in this report must be updated in accordance with the ASTM Standard.

1. Introduction

This Limited Phase II Environmental Site Assessment was conducted for the West Hills Shopping Center site located between 23221 and 23233 Saticoy Street in West Hills, California (the Site; Figures 1, 2 and 3). The Site is within Assessor's Parcel Numbers (APNs) 2027-005-005, 2027-005-006, and 2027-005-007 and is bounded by Woodlake Avenue, Saticoy Street and residences (Figure 2 and 3). The Site is approximately 4.86 acres and is used as a commercial shopping center. The shopping center was first constructed in 1962-1963. Historically and currently, dry cleaners have occupied a tenant unit at the Site since approximately 1980. The West Hills Cleaners have operated at the Site since 1990. We understand that tetrachloroethene (PCE) was a chemical used in the past onsite by the West Hills Cleaners tenant. Additionally, the Site was used for agriculture from at least 1928 until after 1959.

A former gas station is located on a parcel immediately to the southeast of the Site. A previous report for the gas station indicated that a leaking underground gasoline storage tank was first reported in 1988. Total petroleum hydrocarbons (TPH) and volatile organic compounds (VOCs) were detected in soil and groundwater samples. Groundwater monitoring and sampling began in 1989 and ceased in 1999. Site closure was granted in 2001. Two soil vapor samples collected near the former Chevron Gas Station found no detected levels of TPH or benzene, toluene, ethylene and xylenes (BTEX) in samples collected from 15 feet bgs. (Alpha, 2013). However, one soil vapor sample had low-level detections of PCE and trichloroethylene (TCE).

In July 2013, Alpha Environmental performed a Limited Phase II Environmental Site Investigation (ESA) at the Site to assess the presence of VOCs in the subsurface soil vapor. This investigation consisted of installing six soil vapor probes to a maximum depth of 15 feet below ground surface (bgs). Soil vapor samples were collected from depths of 5 at 15 feet bgs. Groundwater was not encountered during this work. A total of ten soil vapor samples were collected from the six soil vapor probes. Three of the soil vapor samples were at locations near the current dry cleaner, West Hills Cleaners (located at 23233 Saticoy Street, Unit 110). The samples at these three locations, collected between 5 and 15 feet bgs, had low detected levels of the dry cleaning solvent PCE ranging from non-detect to 1.24 µg/L.

In February 2014, Lord Environmental Services performed a Limited Subsurface Investigation to evaluate the presence and distribution of VOCs in subsurface soil and soil gas at the Site. Four soil borings were advanced to a maximum depth of 20 feet bgs in the area around the West Hills Cleaners. Soil samples were collected at 5 foot intervals from these borings and submitted to a laboratory for VOC analysis. VOCs were not detected in any of the soil samples. Each soil boring was completed as a dual-nested soil vapor probe, with one probe set at total depth (between 15 and 20 feet bgs) and one probe set at 5 feet bgs. A soil vapor sample was collected from each probe, resulting in a total of 8 soil vapor samples. PCE was detected at concentrations ranging from 22 to 360 µg/L, with the highest concentrations located immediately south of the cleaners.

This Limited Phase II ESA follow-up sampling was conducted to further define the extent of VOC impacts, specifically PCE, which were identified during the July 2013 and February 2014 investigations.

2. Investigation

Based on review of the previous Site investigations, Dudek conducted follow-up sampling of soil vapor, soil, and groundwater at the Site between March 2, 2017 and July 13, 2017. The investigation consisted of the collection of soil vapor samples from 21 locations at depths of 5 and 15 feet bgs. Groundwater samples were collected via hydropunch method from 7 locations between 25 and 29 feet bgs. Soil samples were collected at depths of 1 and 3 feet bgs from four locations.

2.1. Soil Vapor Sampling

A total of 43 soil vapor samples, including 4 duplicate samples, were collected at the Site from 21 unique locations (Figure 1). Eight of the soil vapor locations (DSV-1 through DSV-8) were advanced on March 2, 2017. Twelve of the soil vapor locations (DSV-9 through DSV-20) were advanced between July 7 and 8, 2017. One soil vapor sample location, SG-4, is a permanent soil vapor probe which we understand was installed in 2014. Soil vapor samples were collected from 5 and 15 feet bgs. at all locations with the exception of DSV-2, DSV-4, DSV-7 and DSV-20, where no-flow conditions were encountered at 15 feet bgs. Thus, soil vapor samples were collected from 5 feet bgs at these locations; one additional probe was installed to 10 feet bgs at DSV-7. Soil vapor samples were analyzed on the Site for VOCs by EPA Method 8260B by a mobile analytical laboratory.

PCE was detected in 41 of the 43 samples analyzed at concentrations ranging from 0.017 µg/L to 384 µg/L. Thirteen of the 21 sample locations contained concentrations of PCE exceeding the DTSC HERO Note 7 Future Residential Soil Gas Screening Level of 0.46 µg/L. Eleven of the 21 sample locations contained concentrations of PCE exceeding the DTSC HERO Note 7 Current Commercial Soil Gas Screening Level of 2.0 µg/L. PCE soil vapor concentrations from the samples collected at 5 feet bgs are presented in Figure 2. PCE soil vapor concentrations from the samples collected at 15 feet bgs are presented in Figure 3.

Trichloroethylene (TCE) was detected in 16 of the 43 samples at concentrations ranging from 0.010 µg/L to 1.73 µg/L. The highest site TCE concentrations were detected at location DSV-5 (5 and 15 feet bgs). The concentration of TCE in the samples collected from location DSV-5 do not exceed the calculated DTSC Hero Note 5 Screening Level for Residential Soil Gas of 2.0 µg/L or Commercial Soil Gas of 8.0 µg/L. DTSC HERO Note 5 Residential and Commercial Accelerated Response Action Levels were used to calculate soil gas screening levels by applying the 0.001 attenuation factor. The 0.001 attenuation factor was determined by DTSC in the 2011 Final Guidance for the

Evaluation and Mitigation of Subsurface Vapor Intrusion to Indoor Air. The location of DSV-5 coincides with the highest detected PCE concentrations at the Site.

Benzene was detected in one sample – DSV-2 at 5 feet bgs – at a concentration of 0.232 µg/L. This concentration exceeds the calculated DTSC Hero Note 3 Screening Level for Residential Soil Gas of 0.097 µg/L, but is below the Screening Level for Commercial Soil Gas of 0.42 µg/L. DTSC HERO Note 3 Screening Levels for Residential and Commercial Air were used to calculate soil gas screening levels by applying the 0.001 attenuation factor. Adjacent sample locations did not contain benzene concentrations at or above the laboratory reporting limits.

The soil vapor sample results are summarized in Table 1 and the laboratory analytical report is presented in Appendix A.

2.2 Groundwater Sampling

As part of this Limited Phase II Investigation, a total of 7 groundwater samples were collected at the Site from 7 unique locations (Figure 1). One hydropunch (DHP-27) was advanced at the Site in the vicinity of the West Hills Cleaners on March 2, 2017. Six hydropunch borings (DHP-1 through DPH-6) were advanced throughout the Site on July 13, 2017. The groundwater samples were collected from depths between 25 and 29 feet bgs, approximately 30 minutes after each borehole was advanced.

The groundwater samples collected at locations DPH-27, DPH-5 and DPH-6 contained detectable concentrations of PCE. PCE concentrations ranged from 0.7 µg/L at DPH-6 to 5.5 µg/L at DPH-27, which exceeds the maximum contaminant level (MCL) of 5 µg/L. Low concentrations of toluene, chloroform, dibromodichloromethane, and dibromochloromethane were also detected at location DPH-27. The concentration of toluene is below the MCL; no MCLs are established for the remaining detected constituents.

The hydropunch groundwater sample results are summarized in Table 2 and the laboratory analytical report is presented in Appendix B.

2.3 Soil Sampling

As part of this Limited Phase II Investigation, a total of 8 soil sample s were collected from four locations on the Site (Figure 2). The soil samples were collectedfrom 1 and 5 feet bgs on July 7, 2017 to be analyzed for metals and organochlorine pesticides (OCPs). The soil sample results are summarized in Tables 3 and 4. The laboratory analytical results are presented in Appendix C.

3. Data Summary and Recommendations

The results of the Dudek's Limited Phase II Investigation sampling are summarized below:

- PCE was detected throughout the Site in subsurface soil vapor at depths between 5 and 15 feet bgs. The highest concentrations of PCE are located immediately south of the current dry cleaners location.
  Concentrations of PCE in soil vapor generally decrease with distance from the dry cleaner location.

- Additionally, concentrations of PCE generally decrease with depth at each sampling location. The soil vapor samples collected at 5 feet bgs generally had higher concentrations of PCE than the samples collected at 15 feet bgs

- PCE concentrations in soil vapor exceed both residential and commercial screening levels. PCE concentrations are generally highest in the south-central portion of the parking lot. Dudek recommends remediating the shallow PCE-impacted soil vapor to mitigate potential vapor intrusion risk.

- Groundwater samples were collected from depths between 25 and 29 feet bgs at 7 individual locations. Low concentrations of PCE were detected in 3 of the samples, one of which (5.5 µg/L at DPH-27) was slightly over the MCL of 5 µg/L. It is probable that the remediation of the soil vapor would sufficiently remediate the low, spatially constrained PCE concentrations in shallow groundwater at the Site.

- OCPs were not detected at or above the laboratory detection limits in any of the soil samples analyzed.

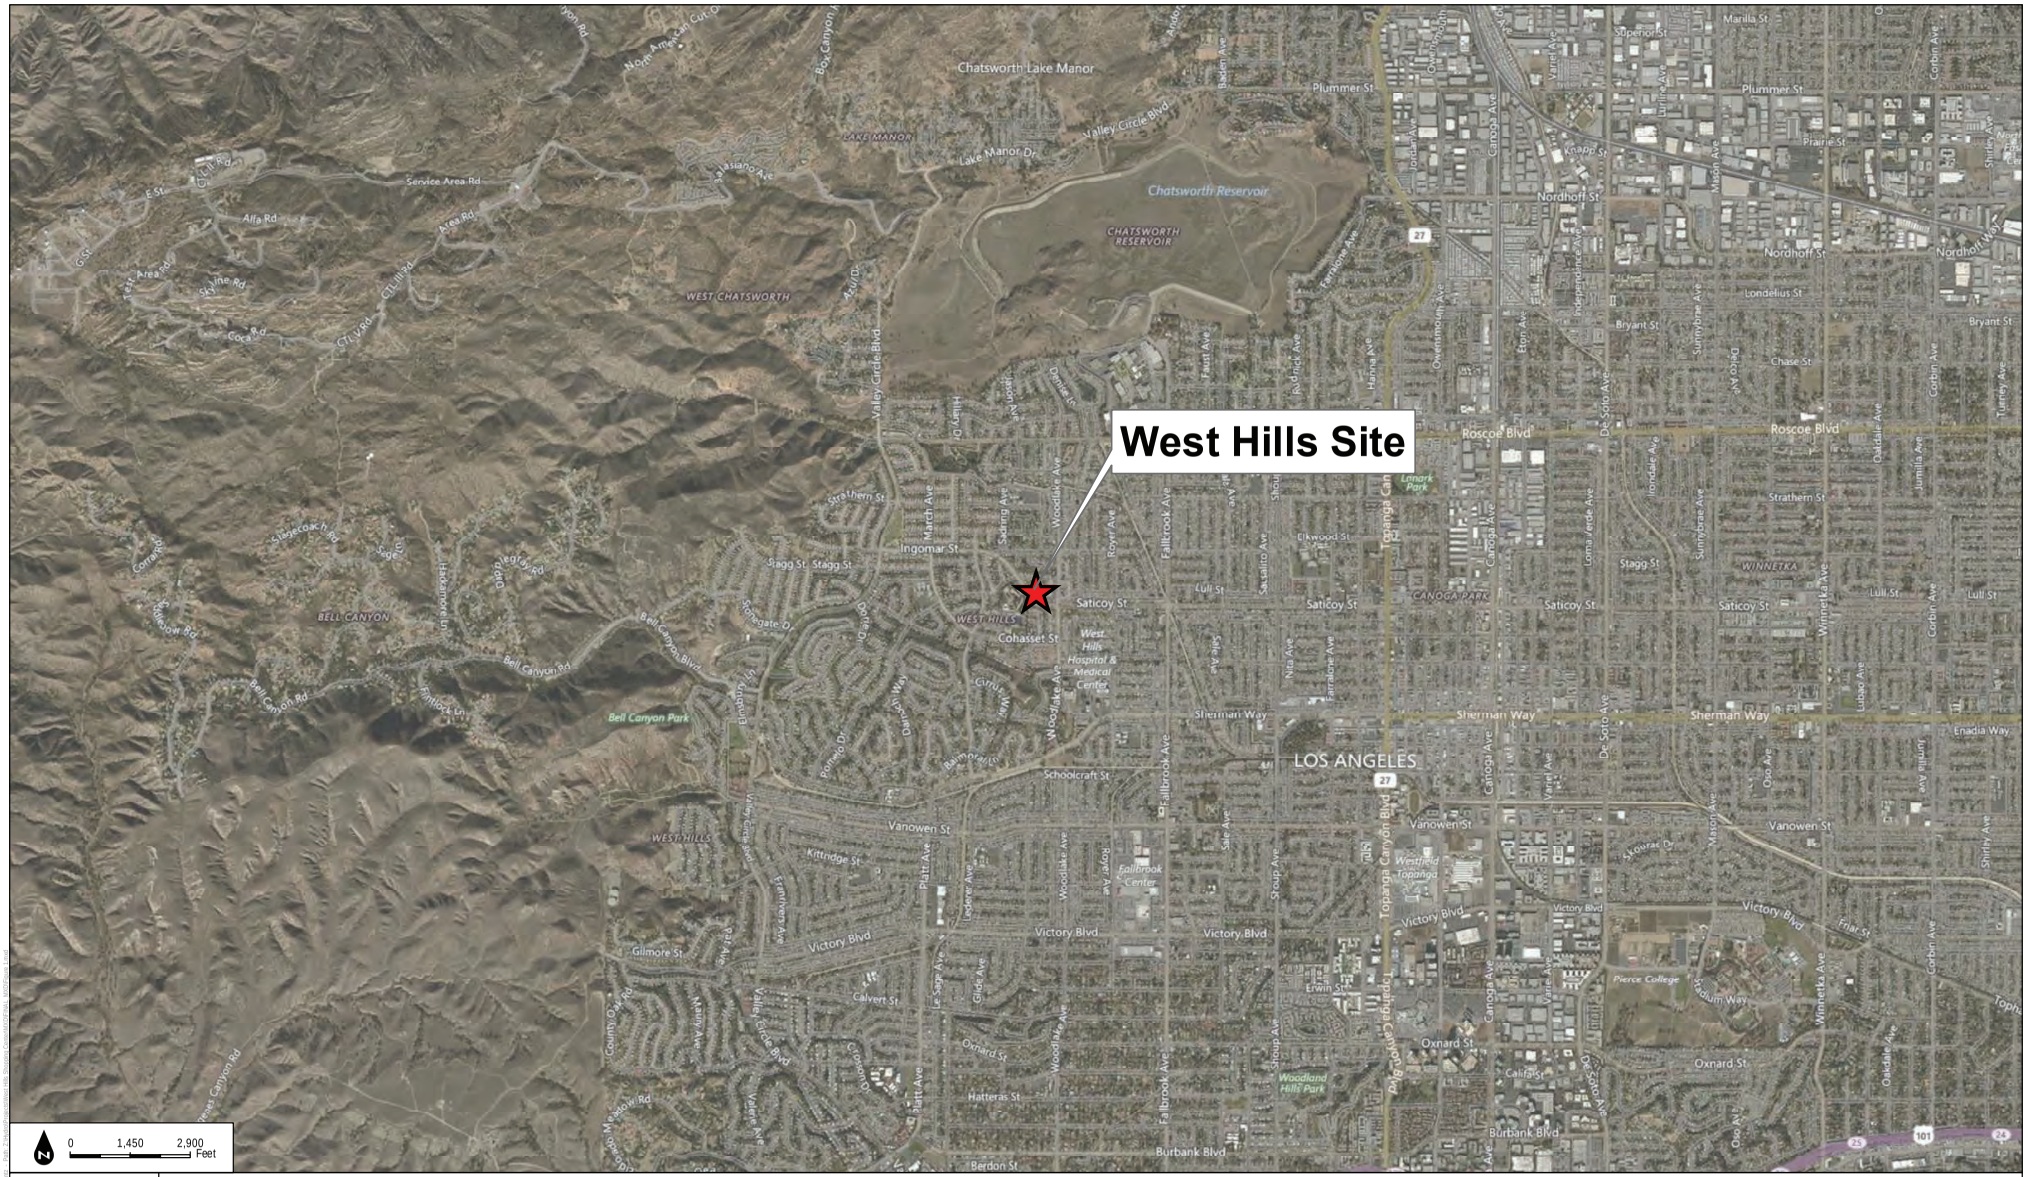
- Low concentrations of metals were detected in all of the soil samples collected and analyzed by the laboratory. The low concentrations represent background conditions at the Site and are not likely to present a risk to human health.

4. Potential Remediation Options

Based on the nature of the contamination, the concentration levels, the shallow depth of impacted soil vapor and the lateral extent of the contamination, Dudek recommends soil vapor extraction (SVE) as the primary means of remediation at the Site. The SVE remediation method involves installing vapor extraction wells screened in the target zone (vertical extent of contaminated soil vapor) and are connected to an SVE unit. Typically,

the SVE unit consists of a blower package which creates vacuum pressure on the wells and a mobile treatment unit which extracts or destroys the contamination within the soil vapor.

Dudek proposes installing an SVE remediation system consisting of 17 vapor extraction wells. Each vapor extraction well will have a 10 foot screened interval, from 5 feet to 15 feet bgs. The wells will be connected to the SVE unit via sub-grade PVC piping which will be placed in shallow trenches in the parking lot which will be backfilled and patched to match existing asphalt surface. In scoping this proposal, it is assumed that sufficient power is available at the Site to operate the SVE system and the SVE system will be operated for a duration of 12 months.



Dudek has been successful in the past achieving site-cleanup with the SVE remediation method and the SVE method is a commonly employed remediation strategy but takes time to achieve meaningful results. While we are hopeful that this remediation method will effectively address vapor concerns, it is possible that post-remediation concentrations of PCE will still not meet the DTSC HERO Note 7 Future Residential Soil Gas Screening Level of 0.46 µg/L at all Site locations. Since we do not know what post-remediation concentrations will be after employing SVE remediation method at this time and are mindful that the remediation process will likely take more than twelve (12) months to achieve meaningful results extracting these soil vapors, we can't aver or opine at this time whether this remediation method will successfully reduce concentrations below these screening levels and remain keenly aware that it could take well over a year from employment to make such determinations. To further address these continuing concerns, if necessary, a site specific human health risk analysis can be used to evaluate potential human health risk at post-remediation levels. Additionally, mitigation of buildings located in areas where soil vapor exceeds screening levels is also an option. Future building construction may implement mitigation measures at time of development utilizing vapor barriers and passive venting systems. Again, these are remediation scenarios that can't be quantified and scoped at this early stage.

5. Limitations

The findings and conclusions presented in this report are professional opinions based solely upon the indicated data described in this report, visual observations of the Site and vicinity and our interpretation of the available historical information and documents reviewed. Dudek makes no warranty as to the accuracy of statements made by others or the accuracy of information included in documentation reviewed in connection with this study. It should be recognized that this study was not intended to be a definitive investigation of potential contamination at the subject property and that the recommendations do not necessarily include all conditions that may be present. Because the scope of the investigation was limited, it is possible that currently unrecognized conditions or contamination might exist at the Site.

No warranties or guarantees or representations, expressed or implied, are made by Dudek, except that this report has been prepared in accordance with current generally accepted practices and standards consistent with the level of care and skill exercised under similar circumstances by other professionals performing the same or similar services. The conclusions are intended exclusively for the purpose outlined herein and may not be suitable to satisfy the needs of other users. Thus, any use or reuse of this document is at the sole risk of said user.

LABORATORY RESULTS

Client:	Millennium Environmental, Inc	**Report date:**	3/2/2017
Client Address:	2936 E. Coronado Street Anaheim, CA 92806	**JEL Ref. No.:** **Client Ref. No.:**	E-0685 M184-16
Attn:	Mindy Jenkins	**Date Sampled:** **Date Received:**	3/2/2017 3/2/2017
Project Name:	Dudek - West Hills	**Date Analyzed:**	3/2/2017
Project Address:	23233 Saticoy St. West Hills, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B - Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval: 

Steve Jones, Ph.D.
Laboratory Manager

LABORATORY RESULTS

Client:	Dudek & Associates, Inc.	**Report date:**	7/7/2017
Client Address:	605 Third Street Encinitas, CA 92024	**JEL Ref. No.:** **Client Ref. No.:**	E-0735 10138
Attn:	Susan Smith	**Date Sampled:** **Date Received:**	7/7/2017 7/7/2017
Project Name:	West Hills Shopping Center	**Date Analyzed:**	7/7/2017
Project Address:	23233 Saticoy Street West Hills, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Carolyn Carroll

LABORATORY RESULTS

Client:	Dudek & Associates, Inc.	**Report date:**	7/8/2017
Client Address:	605 Third Street Encinitas, CA 92024	**JEL Ref. No.:** **Client Ref. No.:**	E-0736 10138
Attn:	Susan Smith	**Date Sampled:** **Date Received:**	7/8/2017 7/8/2017
Project Name:	West Hills Shopping Center	**Date Analyzed:**	7/8/2017
Project Address:	23233 Saticoy Street West Hills, CA	**Physical State:**	Soil Gas

ANALYSES REQUESTED

1. EPA 8260B – Volatile Organics by GC/MS + Oxygenates

Sampling – Soil Gas samples were collected in glass gas-tight syringes equipped with Teflon plungers.

A tracer gas mixture of n-pentane, n-hexane, and n-heptane was placed at the tubing-surface interface before sampling. These compounds were analyzed during the 8260B analytical run to determine if there were surface leaks into the subsurface due to improper installation of the probe. No n-pentane, n-hexane, or n-heptane was found in any of the samples reported herein.

The sampling rate was approximately 200 cc/min, except when noted differently on the chain of custody record, using a glass gas-tight syringe. Purging was completed using a pump set at approximately 200 cc/min, except when noted differently on the chain of custody record. A default of 3 purge volumes was used as recommended by July 2015 DTSC/RWQCB guidance documents.

Prior to purging and sampling of soil gas at each point, a shut-in test was conducted to check for leaks in the above ground fittings. The shut-in test was performed on the above ground apparatus by evacuating the line to a vacuum of 100 inches of water, sealing the entire system and watching the vacuum for at least one minute. A vacuum gauge attached in parallel to the apparatus measured the vacuum. If there was any observable loss of vacuum, the fittings were adjusted as needed until the vacuum did not change noticeably. The soil gas sample was then taken.

No flow conditions occur when a sampling rate greater than 10 mL/min cannot be maintained without applying a vacuum greater than 100 inches of water to the sampling train. The sampling train is left at a vacuum for no less than three minutes. If the vacuum does not subside appreciably after three minutes, the sample location is determined to be a no flow sample.

Analytical – Soil Gas samples were analyzed using EPA Method 8260 that includes extra compounds required by DTSC/RWQCB (such as Freon 113). Instrument Continuing Calibration Verification, QC Reference Standards, Instrument Blanks and Sampling Blanks were analyzed every 12 hours as prescribed by the method. In addition, a Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) were analyzed with each batch of Soil Gas samples. A duplicate/replicate sample was analyzed each day of the sampling activity. All samples were injected into the GC/MS system within 30 minutes of sampling.

Approval:

Carolyn Carroll
Stationary Lab Manager

SAMPLE NON-CONFORMANCE

Jones ID: ST-10911

CLIENT: Dudek
PROJECT: West Hills Ph II

DATE/TIME: 7/14/17 0957
REPORTED BY: Stephanie Jackson
Non-Conformance ID:

1) Coolers
   a) Not received (received COC only)
   b) Leaking/Damaged
   c) Other:
2) Custody Seals
   a) None
   b) Not intact
3) Temperature (Temp criteria = 6°C > Temp > 0°C)
   a) Sample Temp(s)
   b) Cooler Temp(s)
   c) Temperature Blank(s)
4) Chain of Custody (COC)
   a) Not relinquished by client
   b) No date/time relinquished
   c) Incomplete information provided
   d) COC not received – notify PM
5) Containers
   a) Leaking
   b) Broken
   c) Extra
   d) Missing
6) Labels
   a) Not the same sample ID / info as on the COC
   b) Incomplete information
   c) Markings / Info illegible
7) Samples
   a) Incorrect sample ID
   b) Incorrect sampling Date/Time
   c) Samples not received but listed on COC
   d) Samples received but not listed on COC
   e) Logged based on Label Information and not COC
   f) Logged according to Work Plan and not COC
   g) Logged in, on hold until further notice
   h) Insufficient quantities for analysis
   i) Improper container used
   j) Mislabeled as to tests, preservatives, etc.
   k) Holding time expired – list sample ID and test
   l) Not preserved/Improper preservative used
   m) Without labels, no information on containers
   n) Other (see comments)

Checked by: SJ

Comments:

1 VOA in DHP-5-27 was broken when recieved.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to,

identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there is 1 ENVIROSTOR site within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within

approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Facility Id: 23811				

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there is 1 SWEEPS UST site within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CHEVRON STATION NO 9	***7607 WOODLAKE***	***ESE 0 - 1/8 (0.010 mi.)***	***B15***	***21***

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there are 2 HIST CORTESE sites within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

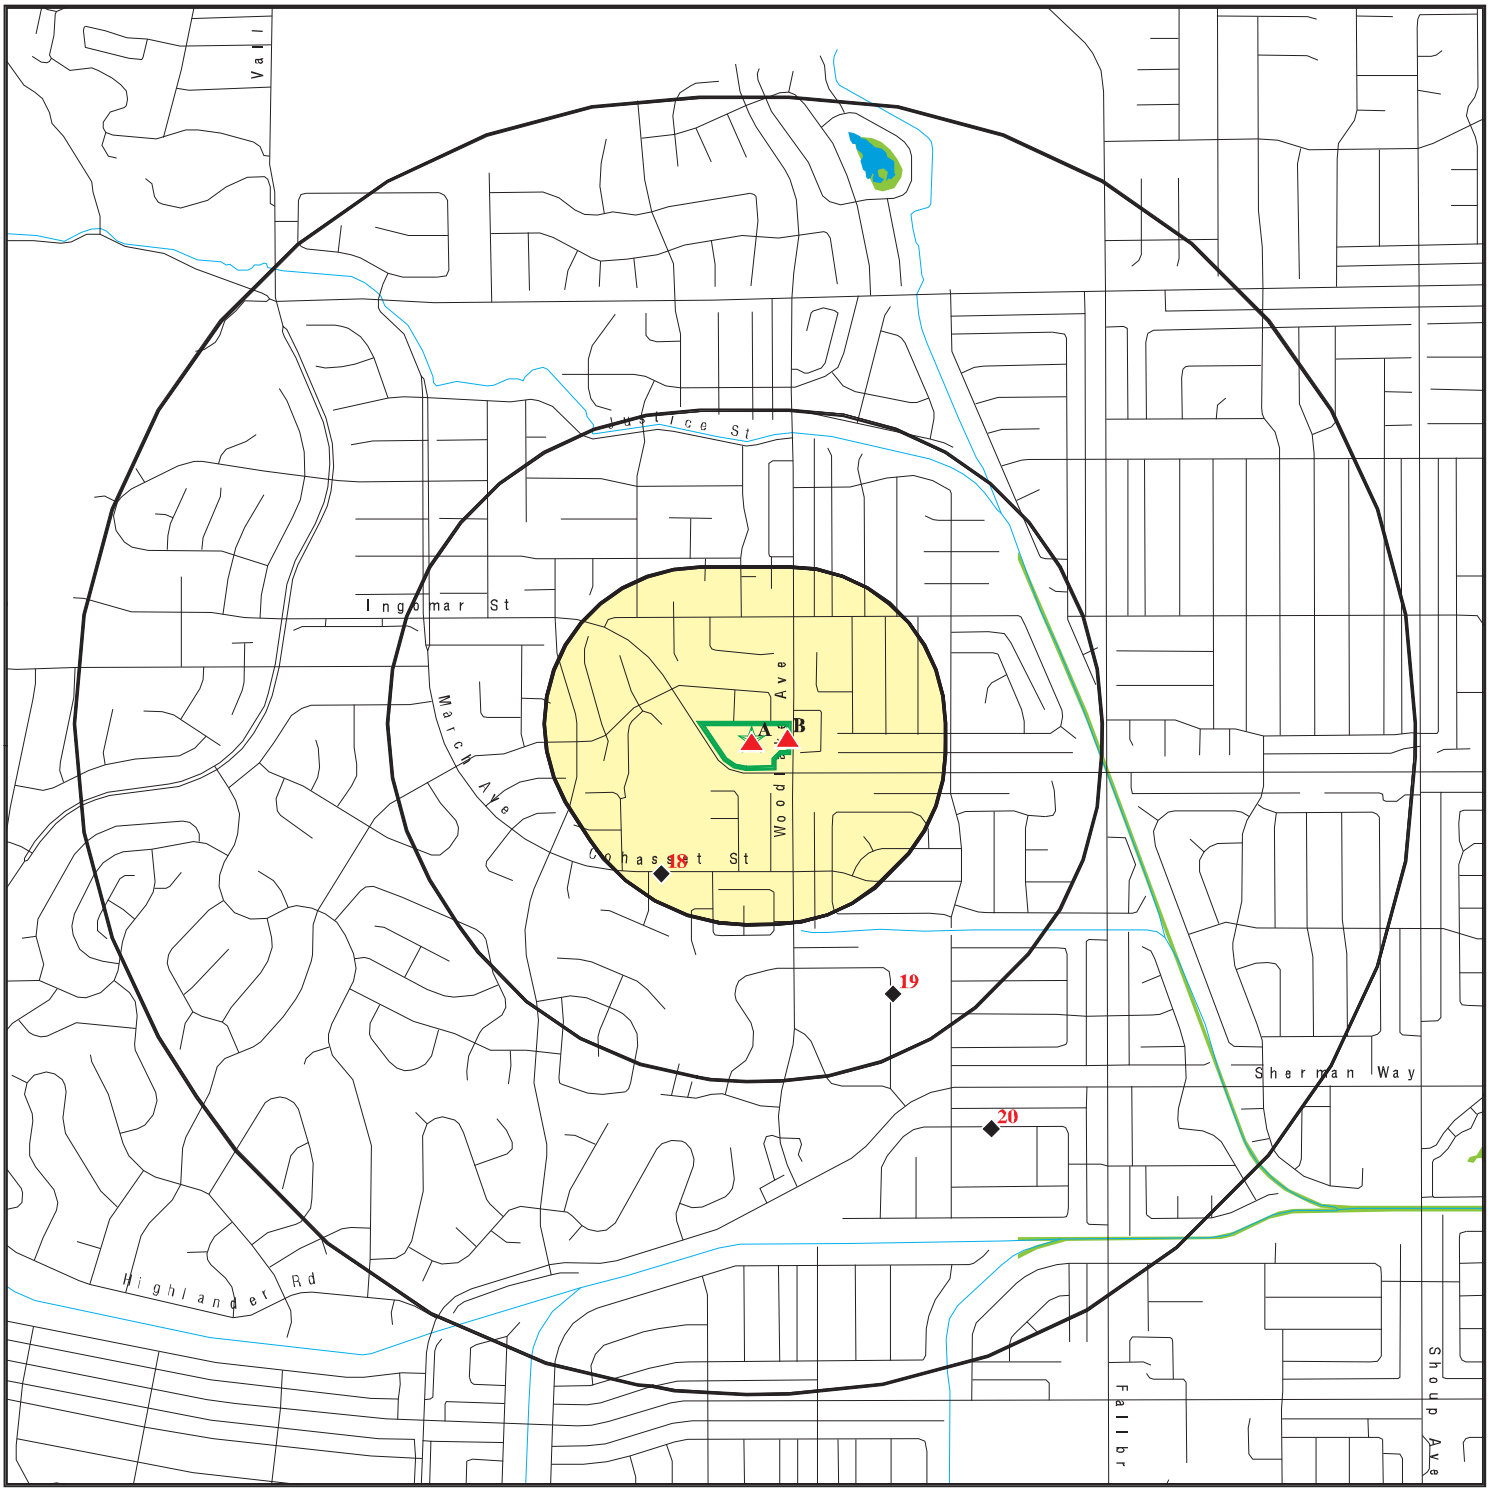
EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
PAUL MAC CHEVRON	7607 WOODLAKE AV	ESE 0 - 1/8 (0.010 mi.)	B13	20

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.



A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

FINDS:

Registry ID: 110009534968

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Data Release Frequency: Varies

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

RE: 7629 WOODLAKE AVE, WEST HILLS, CA 91304

I, the undersigned, being the Custodian or the Keeper of Records, certify that a thorough search for the records you requested was carried out under my direction and control.

This search revealed no records.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or under another classification. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (323) 890-7806.

Sincerely,

Yvonne Curtis, Deputy Health Officer
Public Health Investigation

REPORT: Date: 06/20/2003, Time: 0930.

I met with Ms. Ou Yun Lee, the owner of West Hills Cleaners.

The Firbimatic, model # Vortex 40 dry cleaner machine was operating. A calibrated PID was used to monitor any vapor leaks, but none were found.

The ATCM certificate (# 012207) was issued on July 30, 2000, and Ms. Lee has signed up for the refresher course.

All records of daily operations, maintenance and checklist records, weekly inspection records, and annual mileage reports were available.

REPORT: Date: 05/10/2002, Time: 0720.

Met with Ms. Ou Yun Lee, the owner of West Hills Cleaners.

The Multimatic dry cleaner is operating.

Ms. Lee submitted an application to get a permit to operate. I found out that her application was denied. Communication with Ms. Lee was difficult because of language problems.

She has her ATCM certificate (# 012207) that was issued on July 30, 2000.

The record keeping is deficient.

The inspection was not completed and is pending upon the permit status.

05/22/2002

The dry cleaning machine was in operation without a valid permit to operate.

Other deficiencies in the operation of the dry cleaning machine were also noticed. The lint from button trap and lint trap was not placed in a tightly sealed container.

The distillation unit muck cooker was operating during the inspection. A perc vapor reading of 20 to 70 ppmV was recorded around this unit, using the calibrated ToxiRae PID.

Ms. Lee did not have the weekly operation and maintenance/leak inspection checklists.

I provided Ms. Lee a Korean edition of the dry cleaning brochure and a complete set of record keeping tables.

I issued Notice of Violation # P 35672 as per District's Rules 203 and 1421 (e)(1)(A)(vii); (e)(2)(C); and (i)(1)(C).

Application No.	Permit No.	Permit Issue Date	Permit Status	Equipment Category	BCAT/CCAT Description	Application Date	Application Status

REPORT: Date: 02/05/2013, Time: 12:30 p.m.

Applicable rules: 109, 203, 206, 1146.2, and 1421.

I arrived at West Hills Cleaners, where I met with Mr. and Mrs. Lee, the owners.

Mr. Lee showed me one Fibrimatic SPA Vortex 40 Plus Perc dry cleaning machine that was not operating. I used the facility's perc detector to check for any possible leaks which I did not find any.

Mr. Lee showed me the daily operation logs, and the weekly inspection check lists. According to him they stopped operating their Perc machine since July 2012 and do only wet cleaning.

ATCM certificate was issued to Mr. Hung Sun Lee on April 17, 2010 and it expires on April 17, 2013.

They operate one Parker boiler with maximum heat input capacity of 398,000 Btu/hr., N.B. # 37258 that was manufactured in 1989. There are no emission requirements for this size boiler in Rule 1146.2 at this time.

I issued NC # E19504 to complete and submit the Quadrennial update report.

02/27/2013.

West Hills Cleaners completed the Quad. Update Report and submitted that to Att: Cher Snyder. The facility is operating in compliance now.

REPORT: Date: 02/04/2011, Time: 13:00 p.m.

Applicable rules: 109, 203, 206, 1402, and 1421.

I arrived at West Hills Cleaners, where I met with Mr. and Mrs. Lee, the owners.

Mr. Lee showed me one Fibrimatic SPA Vortex 40 Plus perc dry cleaning machine that was not operating. I used the facility's perc detector to check for any possible leaks which I did not find any.

Mr. Lee showed me the daily operation logs, the weekly inspection check lists, Facility Annual Mileage, and the maintenance & operation logs. The facility cleaned a total of 12,241 pounds of clothes in 2010 and added 10 gallons of perc to the machine. The Annual Facility Mileage was 1,224 lbs./gal.

ATCM certificate was issued to Mr. Hung Sun Lee on April 17, 2010 and it expires on April 17, 2013.

They replaced the gaskets for the front door, lint trap, button trap, and still door on July 20, 2009. I reminded Mr. Lee to replace the gaskets again this year, since the rule requires them to be replaced at least once every two years.

West Hills Cleaners was operating in compliance.

REPORT: Date: 05/19/2005, Time: 0915.

I met with Mr. Hung Sun Lee, the co-owner of West Hills Cleaners.

The dry cleaning machine was operating and I used the facility's perc detector and subsequently used a calibrated Toxi Rae PID to check for any vapor leaks. I did not find any leaks.

ATCM certificate # 018293 was issued to Mr. Hung Sun Lee on April 25, 2004 and it expires on April 24, 2007.

The facility had all the records of operation, the weekly inspection check lists, the maintenance and operation logs, and receipts of perc purchase. The facility washes 40-60 lbs. of clothes daily. It washed a total of 14,968 pounds of clothes in 2004 and used 20 gallons of perc. The Annual Mileage for 2004 was 748 lbs./gal. .

REPORT: Date: 05/14/2004, Time: 0925.

I met with Mrs. Eunice Lee, the owner of, and Mr. Hung Sun Lee, an employee of, West Hills Cleaners.

Mrs. Lee told me that they purchased this facility about a month ago and submitted the application form and the fees to apply for change of permittee on April 27, 2004.

ATCM certificate # 018293 was issued to Mr. Hung Sun Lee on April 25, 2004.

The dry cleaning machine was not operating, but I checked it for any possible vapor leaks and found none.

The facility washes 2-3 loads (40-60 lbs.) of clothes per day, and had all daily operation logs. All records of weekly inspection check lists and maintenance and operation records were also available.

Conditions:

1) OPERATION OF THIS EQUIPMENT SHALL BE CONDUCTED IN ACCORDANCE WITH ALL DATA AND SPECIFICATIONS SUBMITTED WITH THE APPLICATION UNDER WHICH THIS PERMIT IS ISSUED UNLESS OTHERWISE NOTED BELOW.

2) THIS EQUIPMENT SHALL BE PROPERLY MAINTAINED AND KEPT IN GOOD OPERATING CONDITION AT ALL TIMES.

3) THE TOTAL QUANTITY OF SOLVENT THAT IS REPLENISHED IN THIS EQUIPMENT SHALL NOT EXCEED 8.5 GALLONS PER MONTH.

4) A TEMPERATURE GAUGE WITH A MINIMUM RANGE OF 0 TO 150 DEGREES FAHRENHEIT SHALL BE INSTALLED IN THE OUTLET DUCT OF THE CONDENSER.

5) THE REFRIGERATED VAPOR CONDENSER ON THE DRY-TO-DRY UNIT SHALL BE OPERATED DURING THE CLOSED LOOP COOL-DOWN PERIOD UNTIL THE AIR TEMPERATURE AT THE CONDENSER OUTLET IS 45 DEGREES FAHRENHEIT OR LOWER.

6) COMPLETE RECORDS OF MONTHLY REPLENISHED SOLVENT SHALL BE PREPARED, KEPT FOR AT LEAST TWO YEARS AND BE MADE AVAILABLE TO SCAQMD PERSONNEL UPON REQUEST.

7) ALL WASTE MATERIALS WHICH HAVE COME INTO CONTACT WITH ANY SOLVENT SHALL BE DISCARDED AS HAZARDOUS WASTE.

8) THIS EQUIPMENT SHALL COMPLY WITH RULE 1421.

FILE COPY

PERMIT TO CONSTRUCT/OPERATE

CONTINUATION OF PERMIT TO CONSTRUCT/OPERATE

NOTICE

IN ACCORDANCE WITH RULE 206, THIS PERMIT TO OPERATE OR COPY SHALL BE POSTED ON OR WITHIN 8 METERS OF THE EQUIPMENT.

THIS PERMIT DOES NOT AUTHORIZE THE EMISSION OF AIR CONTAMINANTS IN EXCESS OF THOSE ALLOWED BY DIVISION 26 OF THE HEALTH AND SAFETY CODE OF THE STATE OF CALIFORNIA OR THE RULES OF THE AIR QUALITY MANAGEMENT DISTRICT. THIS PERMIT CANNOT BE CONSIDERED AS PERMISSION TO VIOLATE EXISTING LAWS, ORDINANCES, REGULATIONS OR STATUTES OF OTHER GOVERNMENT AGENCIES.

VARIOUS SITES
PR3-032117-05

Dear Ms. Hunter:

We have received your Public Records Act Request for records from the Department of Toxic Substances Control.

After a thorough review of our files we have found that no such records exist at this office pertaining to the sites/facilities referenced below.

- 23221-23233 Saticoy Street, West Hills, CA 91304
- 7629 Woodlake Avenue, West Hills, CA 91304
- APN's: 2027-005-005, 2027-005-006 & 2027-005-007

We would like to inform you about Envirostor, a database that provides information and documents on over 5,000 DTSC cleanup sites. EnviroStor can be accessed at: http://www.envirostor.dtsc.ca.gov/public. Also, a computer is available in the Central Files of each DTSC Regional Office for use by community members to view EnviroStor. If you have any questions or would like further information regarding your request, please contact me at (818) 717-6522.

Sincerely,

Glenn Castillo /bh
Regional Records Coordinator

Subject: **REQUEST FOR SITE CLOSURE FOR CHEVRON PRODUCTS COMPANY SERVICE STATION #9-3113 7607 WOODLAKE AVENUE, WEST HILLS, CALIFORNIA**

Dear Mr. Baiady:

On behalf of Chevron Products Company (Chevron), Holguin, Fahan, & Associates, Inc. (HFA) has prepared this request for regulatory site closure for the above-referenced site. The closure request is based on the results of previous subsurface investigations, the State Water Resources Control Board interpretation of UST regulations, and the published "common sense" criteria outlined in the California Regional Water Quality Control Board, Los Angeles Region's (4) (CRWQCB-LAR's) correspondence dated August 12, 1996 (see Attachment 1 for HFA's responses to "common sense" questions and Attachment 2 for the case review form).

Chevron Service Station #9-3113 is located at 7607 Woodlake Avenue, on the northwestern corner of the intersection of Woodlake Avenue and Saticoy Street in West Hills, California (see Figure 1 - Site Location Map). The former site features included two dispenser islands, three gasoline USTs (one 7,000-gallon, one 6,000-gallon, and one 3,000-gallon), one 550-gallon used-oil UST, and the associated product piping. Current site features include three 10,000-gallon, double-walled, gasoline USTs; four dispensers, and the associated product piping. Eight groundwater monitoring wells (MW-1, MW-3 through MW-6, and T-1 through T-3) are located at the site (see Figure 2 - Plot Plan for current and former site features).

The site contact is Mr. Y.M. Tuan, Chevron Products Company, Post Office Box 2833, La Habra, California, 90632-2833, (562) 694-9183. The consultant contact is Mr. James M. Haslett, Holguin, Fahan & Associates, Inc., 5940 Lakeshore Drive, Cypress, California, 90630, (714) 236-1741. The regulatory contact is Mr. Magdy Baiady, California Regional Water Quality Control Board, Los Angeles Region (4), 320 West 4th Street, Suite 200, Los Angeles, California, 90013, (213) 576-6699.

SITE HISTORY

SITE ASSESSMENT

In May 1988, GeoResearch drilled three soil borings (T-1 through T-3) and completed each soil boring as a 35-foot-deep groundwater monitoring well (GeoResearch, 1988, Revised Site Investigation, August 17, 1988). Groundwater was encountered at a depth of approximately 20 fbg. Laboratory analytical results of the soil samples collected from soil borings T-1 and T-2 did not indicate detectable TPH as gasoline or BTEX concentrations. Laboratory analytical results of the soil samples collected from soil boring T-3 indicated a maximum TPH as gasoline concentration of 9,730 mg/kg and a maximum benzene concentration of 9.18 mg/kg. Laboratory analytical results of groundwater samples indicated a maximum benzene concentration of 1,860 µg/l in the groundwater sample collected from monitoring well T-2 (see Attachment 2, Appendices A through E for the historical site documentation).

In December 1988, Harding Lawson Associates (HLA) conducted groundwater sampling at the site (HLA, 1989, Phase I Data Review and Initial Sampling, February 28, 1989). Laboratory analytical results of groundwater samples indicated a maximum benzene concentration of 206 µg/l in the groundwater sample collected from monitoring well T-3 (see Attachment 2, Appendices A through E).

In March 1989, HLA installed three additional groundwater monitoring wells (MW-1 through MW-3) at the site (HLA, 1989, Phase II Investigation, July 24, 1989). Soils encountered during drilling included sandy silt and silty clay in the interval ranging in depth from surface grade to approximately 16 fbg. The silt and clay is underlain by the siltstone of the Modelo Formation to a depth of 40 fbg, the maximum depth of the investigation. Laboratory analytical results of soil samples collected from the soil borings indicated a maximum TPH as gasoline concentration of 240 mg/kg and a maximum benzene concentration of 0.37 mg/kg. Laboratory analytical results of groundwater samples indicated a maximum benzene concentration of 57 µg/l in the groundwater sample collected from monitoring well T-3 (see Attachment 2, Appendices A through E). The groundwater flow direction for the site was determined to be toward the northeast.

In April 1991, HLA installed three additional groundwater monitoring wells (MW-4 through MW-6) and advanced two off-site cone penetrometer testing locations (HLA, 1991, Phase III Investigation and Recommendations, July 5, 1991). Monitoring well MW-4 replaced monitoring well MW-2, which was abandoned prior to installation of three new USTs at the site (see below). Laboratory analytical results of the soil samples collected from soil borings MW-4 through MW-6 indicated a maximum TPH as gasoline concentration of 600 mg/kg and a maximum

benzene concentration of 0.081 mg/kg. Laboratory analytical results of the groundwater samples collected from monitoring wells MW-1, MW-3 through MW-6, and T-1 through T-3 indicated a maximum TPH as gasoline concentration of 5,000 µg/l and a maximum benzene concentration of 800 µg/l (see Attachment 2, Appendices A through E).

UNDERGROUND STORAGE TANK REMOVAL (DECEMBER 1989)

In December 1989, Chevron's contractor removed one 7,000-gallon gasoline UST, one 6,000-gallon gasoline UST, one 3,000-gallon gasoline UST, one 550-gallon used-oil UST and two dispenser islands (HLA, 1990, Soil Sampling During Tank Removal, April 12, 1990). Soil samples were collected from beneath each UST and dispenser island. Laboratory analytical results of the soil samples did not indicate detectable TPH as gasoline concentrations, however, a maximum benzene concentration of 0.29 mg/kg was detected (see Attachment 2, Appendices A through E). Three new 10,000-gallon, double-walled, USTs were installed southeast of the station building (see Figure 2 for UST locations).

FACILITY UPGRADE (MAY 1998)

In May 1998, JMC Construction performed a station upgrade at the site, including replacement of the dispensers (HFA, 1998, Soil Sampling and Air Monitoring Report, May 28, 1998). Laboratory analytical results of the soil samples collected from beneath the dispenser islands did not indicate detectable TPH as gasoline, BTEX, or MTBE concentrations, with the exception of soil sample D4-2, which indicated an MTBE concentration of 0.11 mg/kg (see Attachment 2, Appendices A through E).

GROUNDWATER MONITORING

Groundwater monitoring and sampling began at the site in April 1989, and has been performed quarterly since January 1992. A total of 32 episodes of groundwater monitoring, sampling, and reporting has been conducted for the 8 existing groundwater monitoring wells. Dissolved-phase MTBE concentrations have been quantified since July 1997. The groundwater flow direction for the site during the most recent quarterly monitoring episode was determined to be toward the northeast, which is consistent with the previously-measured flow direction (see Attachment 2, Appendices A through E).

The most recent quarterly groundwater monitoring episode, conducted on October 14, 1999, indicated a maximum TPH as gasoline concentration of 42 µg/l, a maximum benzene concentration of 1.0 µg/l, and a maximum MTBE concentration of 42 µg/l (Blaine Tech Services, Inc., 1999, Fourth Quarter 1999 Monitoring Report, December 2, 1999).

Dissolved-phase hydrocarbon and MTBE concentrations detected in the groundwater samples collected from monitoring wells MW-1, MW-3 through MW-6, and T-1 through T-3 have significantly decreased since quarterly monitoring began, indicating that intrinsic bioremediation may be aiding in the remediation of subsurface hydrocarbons. The downgradient extent of dissolved-phase hydrocarbon plume has been delineated (monitoring well MW-1) and the extent of the plume has substantially decreased in size since the initiation of groundwater monitoring (see Attachment 2, Appendices A through E).

TOPOGRAPHY, GEOLOGY, AND HYDROGEOLOGY

TOPOGRAPHY

The site is located at an elevation of approximately 840 feet above MSL. The local topography slopes gently to the east at a gradient of approximately 0.01 (1 foot per 100 feet) (United States Geological Survey, 1952, Canoga Park 7.5 Minute Series Quadrangle Map, photorevised 1967).

GEOLOGY

Soil beneath the site consists of a very thin veneer of Quaternary alluvium consisting of silt and clay derived from erosion of the Santa Monica Mountains to the south and the Simi Hills to the west (Department of Water Resources, 1961, Bulletin No. 104, Planned Utilization of the Ground Water Basins of the Coastal Plain of Los Angeles County, June 1961). In the site vicinity, Quaternary alluvium is underlain by the Miocene Modelo Formation.

Soils encountered during drilling included sandy silt and silty clay in the interval ranging in depth from approximately 6 inches below surface grade to 16 fbg. The silt and clay is underlain by the siltstone of the Modelo Formation in the interval ranging in depth from 16 to 45.5 fbg, the maximum depth investigated.

HYDROGEOLOGY

The site is located in the extreme western portion of the San Fernando Valley Basin in the Upper Los Angeles River Basin Area, which is drained primarily by the Los Angeles River. According to the Los Angeles County Department of Public Works, the western portion of the basin contains fine-grained sediments that exhibit low water yields. The regional groundwater gradient is toward the southeast.

According to the Los Angeles Watermaster Service (May 1990), groundwater beneath the site is not utilized due to the presence of chlorinated solvents, which have been detected in groundwater throughout the San Fernando Valley. However, groundwater beneath the site does have potential uses.

The nearest surface body of water is Chatsworth Creek, an ephemeral stream located approximately 2,500 feet east of the site. Chatsworth Creek flows into Bell Creek, another ephemeral stream, approximately 1 mile southeast of the site.

According to the Los Angeles County Flood Control District (LACFCD), there are no groundwater production wells located within 1 mile of the site. The nearest well (well #3580C) is an observation well located approximately 1.25 miles southeast of the site near the intersection of Shoup Avenue and Bell Creek. On May 11, 1999, the depth to groundwater in well #3580C was was measured to be 14.9 fbg.

Based on quarterly groundwater monitoring results at the site, water levels were measured at depths ranging from 15.97 to 25.31 fbg. Groundwater levels in monitoring wells MW-1, MW-3 through MW-6, and T-1 through T-3 have fluctuated as much as 8 feet since the first quarterly monitoring episode. The groundwater flow direction for the site during the most recent quarterly monitoring episode was determined to be toward the northeast.

FUTURE SITE USE

According to Chevron, the site will remain a service station for the foreseeable future.

REQUEST FOR REGULATORY SITE CLOSURE

In letters from the CRWQCB-LAR dated August 12, 1996, and September 30, 1996, a list of "common sense" questions was included to help the regulatory agency reviewer evaluate sites for closure. For the regulatory reviewer's convenience, HFA's responses to the "common sense" questions are included in Attachment 1. A case review form with appendices is included in Attachment 2.

In CRWQCB-LAR's August 12, 1996, letter, "low risk groundwater contamination sites" are ready for closure when the following conditions (in bold) are met:

1. **The leak has been stopped and ongoing sources, including free product, have been removed or remediated.** Free product has never been observed at the site. The former gasoline USTs have been replaced by new 10-gallon, double-walled, USTs (December 1989) and the dispensers were upgraded in May 1998. Only one soil sample collected during site assessment and UST removal contained a benzene concentration greater than 1.0 mg/kg; therefore, the risk to the environment and to human health is considered to be minimal. Concrete or asphalt at the surface should act as an additional barrier to the

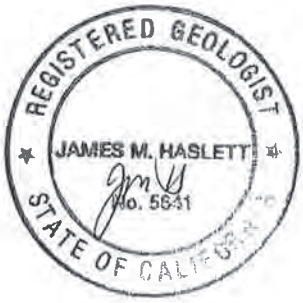
upward movement of hydrocarbon vapors beneath the site and should also minimize the future downward migration of surface water.

2. **The site has been adequately characterized and the groundwater contamination plume is stable.** The downgradient extent of the dissolved-phase hydrocarbon plume (MW-1) was evaluated. The dissolved-phase hydrocarbon concentrations have significantly decreased since the inception of groundwater monitoring. No potential horizontal and vertical conduits are known, which could act as preferential pathways for the dissolved-phase plume.

3. **No drinking water wells, aquifers, or surface waters have been or are likely to be affected.** According to the LACFCD, there are no groundwater production wells located within 1 mile of the site. The nearest well (well #3580C) is an observation well located approximately 1.25 miles southeast of the site near the intersection of Shoup Avenue and Bell Creek.

   The nearest surface body of water is Chatsworth Creek, an ephemeral stream located approximately 2,500 feet east of the site. Chatsworth Creek flows into Bell Creek, another ephemeral stream, approximately 1 mile southeast of the site.

   Drinking water wells or surface waters are not likely to be affected. Based on the shallow occurrence of the Modelo Formation beneath the site, it is unlikely that a drinking water aquifer underlies the site; therefore, drinking water aquifers should not be affected.



4. **Groundwater has been impacted and contaminant levels exceed MCLs; however, the consideration of the use of the aquifer and the potential exposure of receptors such as public drinking water wells should determine the need for remediation and not just the fact that MCLs are being exceeded.** There are no known groundwater production water wells within 1 mile of the site. Based on the shallow occurrence of the Modelo Formation beneath the site, it is unlikely that a drinking water aquifer underlies the site; therefore, drinking water aquifers should not be affected. The dissolved-phase hydrocarbon concentrations beneath the site have significantly decreased since quarterly monitoring began and should continue to decrease with time.

On behalf of Chevron Products Company, Holguin, Fahan & Associates, Inc., requests that the site be classified as a "low risk groundwater case" and granted regulatory site closure. If you have any questions or require additional information, please contact me at (714) 236-1741 or at e-mail address Jim_Haslett@oc.hfa.com.

Respectfully submitted,

James M. Haslett

REVISION DATE: FEBRUARY 3, 2000: PI

HFA's RESPONSES TO "COMMON SENSE" QUESTIONS

1. **Has a leaking tank or piping been documented as repaired or removed?**
   Three former gasoline USTs and one former used-oil UST were removed in December 1989. The dispensers were replaced in May 1998.

2. **If present, was petroleum-saturated soil in tank pit removed?**
   Petroleum-saturated soil was not encountered during UST removal or site assessment at the site.

3. **If free product was discovered, was it removed?**
   Free product has not been encountered at the site.

4. **Was any active remediation performed?**
   No.

5. **Were monitoring wells installed and has the plume been delineated?**
   Eight groundwater monitoring wells are located at the site. The extent of the adsorbed-phase hydrocarbon plume was evaluated and is contained within the station property boundaries. The dissolved-phase benzene plume has been delineated in the downgradient direction (monitoring well MW-1). Dissolved-phase hydrocarbon and MTBE concentrations have been decreasing since the initiation of groundwater monitoring in 1991.

6. **What do monitoring results and trends indicate?**
   Results of groundwater monitoring indicate a decreasing trend in the dissolved-phase hydrocarbon concentrations. The dissolved-phase hydrocarbon plume appears to be stable.

7. **What is the geology beneath the site?**
   Soil beneath the site consists of Quaternary alluvium consisting of silt and in the interval ranging in depth from approximately 6 inches below surface grade to 16 fbg. Siltstone of the Modelo Formation underlies the Quaternary alluvium in the interval ranging in depth from 16 to 45.5 fbg, the maximum depth investigated.

8. **If groundwater is involved, what is the direction of gradient?**
   During the most recent quarterly groundwater monitoring episode conducted on October 14, 1999, Blaine Technical Services, Inc., determined the direction of the groundwater gradient to be toward the northeast. This is consistent with the previously-measured flow direction for the site.

9. **What is the horizontal distance to the nearest groundwater well or surface water?**
According to the Los Angeles County Flood Control District, there are no groundwater production wells located within 1 mile of the site. The nearest well (well #3580C) is an observation well located approximately 1.25 miles southeast of the site near the intersection of Shoup Avenue and Bell Creek.

The nearest surface body of water is Chatsworth Creek, an ephemeral stream located approximately 2,500 feet east of the site. Chatsworth Creek flows into Bell Creek, another ephemeral stream, approximately 1 mile southeast of the site.

10. **What is the vertical distance between tank bottom and groundwater table?**
During a monitoring and sampling episode conducted on October 14, 1999, groundwater levels in monitoring wells MW-1, MW-3 through MW-6, and T-1 through T-3 ranged in depth from 18.07 to 19.40 fbg. The bottoms of tanks are generally at a depth of approximately 15 fbg; therefore, the bottoms of the tanks were 3 to 4 feet above groundwater.

11. **What are groundwater fluctuations (if any) at the site?**
Fluctuations in groundwater levels in monitoring wells MW-1, MW-3 through MW-6, and T-1 through T-3 have been as much as 8 feet since the initial monitoring conducted in 1991.

12. **If groundwater is impacted, does it (1) have any designated beneficial uses; (2) is it being used; and (3) what depth is it being drawn at?**
Groundwater beneath the site has been impacted by dissolved-phase hydrocarbons. (1) According to the Los Angeles Watermaster Service (May 1990), groundwater beneath the site is not utilized due to the presence of chlorinated solvents, which have been detected in groundwater throughout the San Fernando Valley. However, groundwater beneath the site does have potential uses; (2) No known production wells are located within 1 mile of the subject site; (3) Not applicable.

13. **If "soils only" case, is the plume contained by geology and will not impact groundwater due to vertical distance separation?**
Not applicable

14. **Has site closure been requested by the RP or their consultant?**
This letter is HFA's request for site closure.

Soil Closure only:	Case Closure: X	Solvent Case:
Additional Action Required (i.e.: additional site assessment, remediation, monitoring):		

VIII. JUSTIFICATION FOR CLOSURE

Low risk groundwater contamination. No drinking water wells, aquifers, or surface water have been, or are likely to be, affected. The site has been adequately characterized, and the plume is stable. There has been a significant decrease in dissolved-phase hydrocarbon concentrations. USTs, product piping, and dispensers have been removed and replaced.

Waste oil tank excavation and stockpile:

Sample	Depth	Total Petroleum Hydrocarbons (mg/kg) EPA 418.1	PCBs (mg/kg) EPA 8080	Total Lead (mg/kg) EPA 7420
1A	8[1]	<10	NA	NA
SP-3	1[5]	900	<17	8.1

Notes:
1. feet below ground surface.
2. mg/kg = milligrams per kilogram.
3. < = constituent not detected at or above indicated laboratory detection limit.
4. NA = not analyzed.
5. feet below stockpile surface.

Table 3. Soil Sample Analysis Summary
(March 22-24, 1989 Sample Date)

Harding Lawson Associates

Boring	Depth (feet)	Total Petroleum Hydro-carbons (mg/kg)	Benzene (mg/kg)	Toulene (mg/kg)	Ethyl-benzene (mg/kg)	Xylenes (mg/kg)	Total BTEX (mg/kg)	Total Lead (mg/kg)	Flash-point (^{O}F)
MW-1	26	170	0.37	5.2	3.8	26	35	--	--
MW-2	8	<10	--	--	--	--	--	--	--
	19	240	0.36	5.3	6.2	42	54	--	--
MW-3	20	70	--	--	--	--	--	--	--
	22	120	0.16	1.8	1.8	11	15	--	--
	24	<10	--	--	--	--	--	--	--
Composite from bin	--	<10	<0.005	0.014	0.027	0.17	--	<80	>140

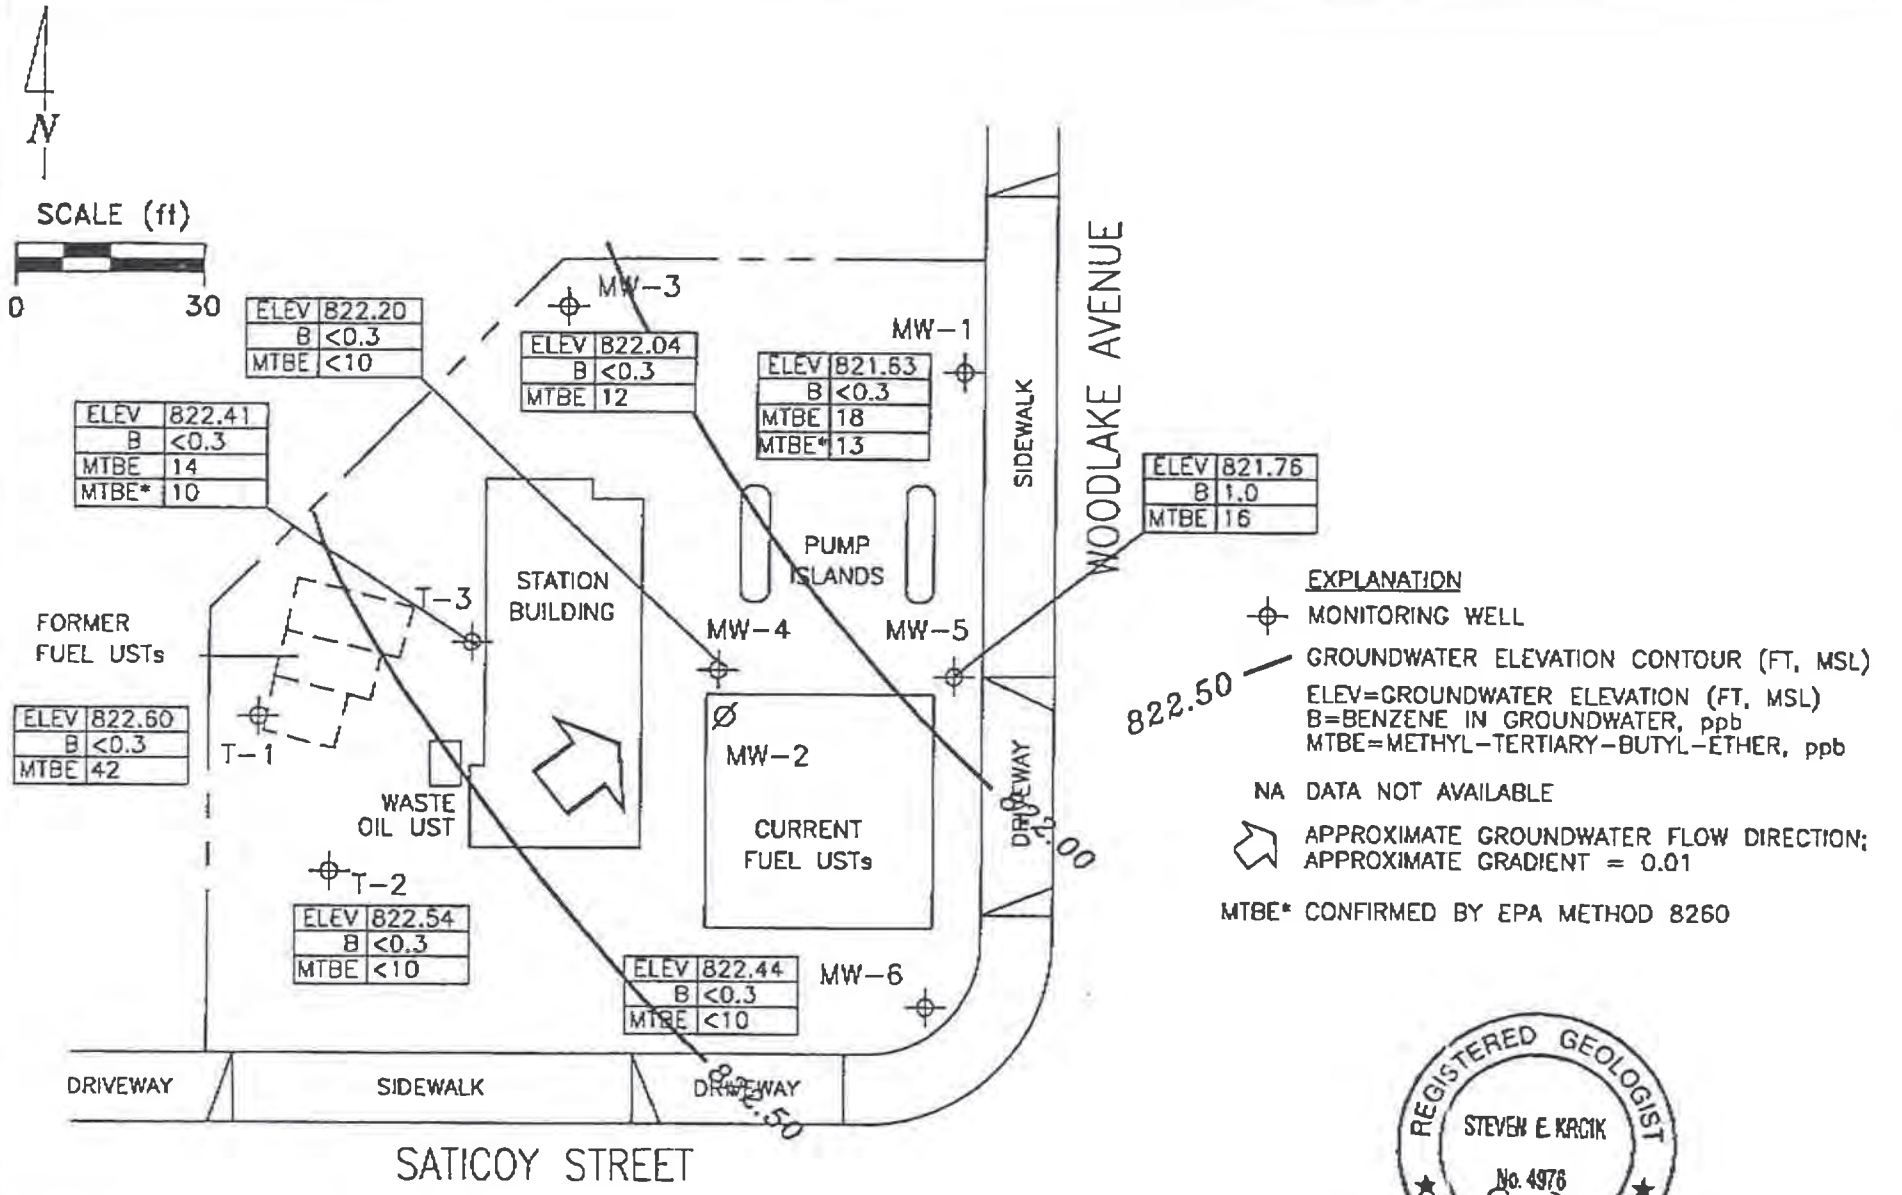
Notes:
1. Total Petroleum Hydrocarbons (TPH) analyzed by modified EPA Test Method 8015.
2. Benzene, Toluene, Ethylbenzene, and Xylene (BTEX) analyzed by EPA Test Method 8020.
3. Total Lead analyzed by EPA Test Method 7040.
4. Flashpoint measured by modified EPA Test Method 1010.
5. mg/kg = milligrams per kilogram.

Table 1. Sample Collection Data

Sample	Sample Date	Depth Below Ground Surface (feet)	PID [1]	Location
1A	01/02/90	8	3	Center, waste oil tank excavation
SP-3	01/02/90	1[2]	NR[3]	Waste oil tank stockpile
2E-1	01/02/90	11	150	East (turbine) end of Tank #2 (Regular)
3E-1	01/02/90	12	70	East (turbine) end of Tank #3 (Super Unleaded)
4E-1	01/02/90	13	20	East (turbine) end of Tank #4 (Unleaded)
2W-1	01/02/90	12	15	West (fill) end of Tank #2 (Regular)
3W-1	01/02/90	13	80	West (fill) end of Tank #3 (Super Unleaded)
4W-1	01/02/90	13	10	West (fill) end of Tank #4 (Unleaded)
PL-1	01/02/90	1	NR	North end of west dispenser island
PL-2	01/02/90	1	NR	South end of east dispenser island

Notes:
1. PID = Photoionization detector reading. PID calibrated to a benzene standard and equipped with a 10.2 electron volt lamp.
2. Depth below surface of stockpile.
3. NR = no PID reading taken.

Table 1. Summary of Laboratory Test Results - Soil



Sample ID		Date	Constituent Concentration (milligrams per kilogram)				
			EPA Test Method 8020				EPA Test Method 8015
Boring No.	Depth (feet)		Benzene	Toluene	Ethylbenzene	Xylenes	TPH (as gasoline)
MW-1	26	03/89	0.37	5.2	3.8	26	170
MW-2	8	03/89	NA	NA	NA	NA	<10
	19	03/89	0.36	5.3	6.2	42	240
MW-3	20	03/89	NA	NA	NA	NA	70
	22	03/89	0.16	1.8	1.8	11	120
	24	03/89	NA	NA	NA	NA	<10
MW-4	20	04/91	<0.5	0.64	1.5	4.3	120*
	25	04/91	<0.5	0.57	6.2	20	89*
MW-5	20	04/91	<2.5	23	18	10	600
	25	04/91	0.081	0.07	0.08	0.13	24
MW-6	25	04/91	<0.005	0.11	<0.005	<0.015	<1

Notes:
1. Samples from MW-1 through MW-3 were analyzed during previous field work.
2. NA = not analyzed.
3. < indicates constituent not detected at the reported detection limit.
4. * indicates higher boiling point hydrocarbon.

Site Photographs

Site Photographs

Photograph 1 - Looking northwest along alleyway behind building. Residential homes on other side of wall.

Photograph 2 - Looking southwest across Saticoy St. from the southwest portion of the Site at back entrance to Chaminade College Preparatory High School

Photograph 3 - Looking southwest along Saticoy St. from the corner of Saticoy St. and Woodlake Ave. Residential homes on the other side of the street.

Photograph 4 - Looking north from Saticoy St. at Complete Auto Service.

Photograph 5 - Looking northeast along Woodlake Ave. from the intersection of Saticoy St. and Woodlake Ave. Residential homes visible on the other side of the street.

Photograph 6 - Businesses on the Woodlake Ave. side of the Site. Tenants include Melito's Barber Shop, Delcourt Insurance, Happy Dogs Grooming & Supplies and Woodlake Liquors

Photograph 7 - Looking west across site from Woodlake Ave. Woodlake Liquors (yellow sign) and Fields Market (black awning) visible

Photograph 8 - Entrance to Fields Market

Photograph 9 - Businesses to the west of Fields Market, include The Gourmet Soup Kitchen, Function First Fitness and 3 unoccupied commercial units.

Photograph 10 - Businesses to the west of the unoccupied commercial units include West Hills Cleaners and West Hills Massage Therapy.

Photograph 11 - Goldern Performing Arts located to the west of West Hills Massage Therapy.

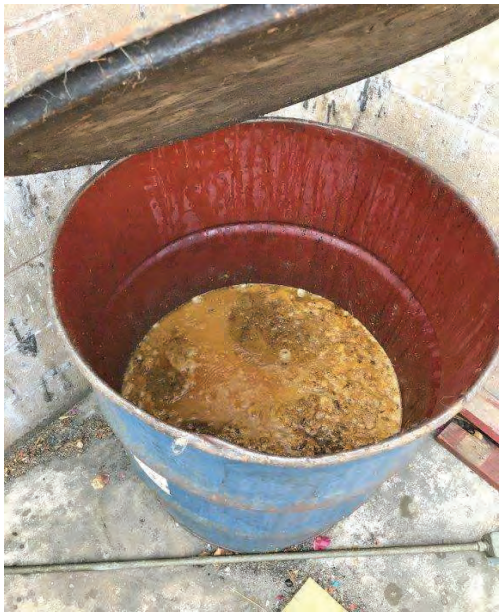
Photograph 12 - Disability Rehabilitation Center, State Farm Insurance Agent Steven Hill and Little Italy Italian Restaurant located to the west of Golden Performing Arts.

Photograph 13 - Little Italy Italian Restaurant and West Hills Veterinary Clinic located on the west side of the shopping center.

Photograph 14 - Cutting Edge Karate located on the north side of the shopping center in western portion of the back alley.

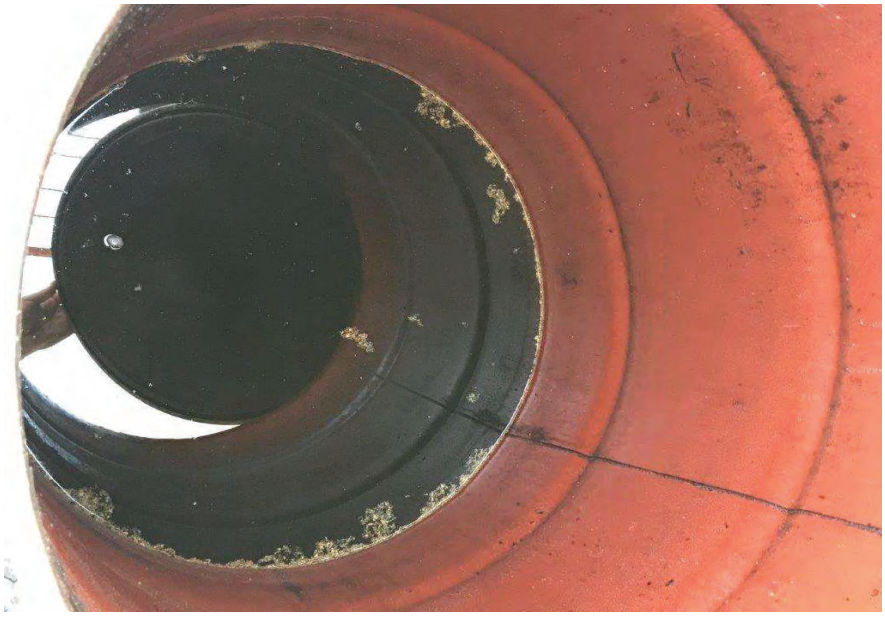
Photograph 15 - Depressed concrete loading dock located in the north back alley of the shopping center.

Photograph 16 - Dumpsters in waste enclosure located in the western part of back alley of the shopping center, near the West Hills Veterinary Clinic.



Photograph 17 - Drum of soil samples from a previous geotechnical investigation. Located outside of a solid waste enclosure from Photograph 16.

Photograph 18 - Two dumpsters and 3 pole-mounted transformers located adjacent to the loading dock from Photograph 15. Drum and bucket behind dumpsters shown in detail in Photograph 21.



Photograph 19 - 5-gallon bucket of Dry Cleaning Solution (sodium hypochlorite) located in back of Function First Fitness.

Photograph 20 - Unlabeled blue drum located in solid waste storage enclosure from Photograph 16. Contents appear to be greases and fats.

Photograph 21 - Black drum, plastic container and 5-gallon bucket located behind dumpsters from Photograph 18. Plastic container labeled as Canola Oil. Contents of drum and bucket described in the following photos.

Photograph 22 - Contents of black drum from Photograph 21, appears to be vegetable-based oil.

Photograph 23 - Contents of bucket from Photograph 21. Contents unknown but very odorous and appear to have decomposed.

Photograph 24 - White rat traps regularly placed along north side of shopping center building.

	Photograph 25 - Drums of unknown contents located in fenced area at adjacent Complete Auto Service. Yellow lines in bottom right of photo appear to indicate property boundaries between the garage and the shopping center.
	Photograph 26 - Pole-mounted transformer located along Saticoy St. sidewalk to the southwest of the Site.

Photograph 27 - Pole-mounted transformer located at the intersection of Saticoy St. and Woodlake Ave.

Photograph 28 - Two pole-mounted transformers located adjacent to the back entrance to The Gourmet Soup Kitchen behind the shopping center.

Photograph 29 - Two pole-mounted transformers located behind Melito's Barber Shop on the northeast corner of the shopping center building.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Dudek & Associates were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Contact: Susie Smith

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Dudek & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 31F9-4560-AD42

PO # 10138

Project West Hills Shopping Center

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 31F9-4560-AD42

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

Fax: 480-966-9422

ENVIRONMENTAL LIEN AND AUL REPORT

The NETR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied property information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' office, registries of deed, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved and description); and
- provide a copy of the deed or cite documents reviewed;

Thank you for your business
Please contact NETR at 480-967-6752
with any questions or comments

CORRECTION GRANT DEED

THE UNDERSIGNED GRANTORS declare: Documentary transfer tax is NONE. See Note #1 below.

FOR NO MONETARY CONSIDERATION, WALTER H. LEIMERT, III, Trustee of The Tim Leimert Non-Exempt Family Trust FBO Walter H. Leimert, III; WALTER H. LEIMERT, III, Administrative Trustee of The Tim Leimert Non-Exempt Family Trust FBO Norman T. Leimert; WALTER H. LEIMERT, III, Trustee of The Walter H. Leimert Trust; and WALTER H. LEIMERT, III, Trustee of The Norman Timothy Leimert 2003 Irrevocable Trust,

HEREBY GRANT TO: WEST HILLS MARKET, LLC, a California limited liability company, their entire interest in the following described real property in the **County of Los Angeles, State of California:**

See Legal Description attached hereto as Exhibit "A" and incorporated herein by this reference.

(Commonly known as 23221 Saticoy Street, Canoga Park, CA 91304)

APN: 2027-005-006

NOTE #1: The grantor and grantee in this conveyance are comprised of the same parties who continue to hold the same proportionate interest in the property, R&T 11925(d).

NOTE #2: This conveyance results in a change in the method of holding title to the real property transferred without changing the proportional interests of the co-owners in the real property, R&T 62(a)(1) and 64.

NOTE #3: This Grant Deed is being recorded to correct a scrivnor's error in the situs address in that certain Grant Deed recorded on January 6, 2010 as Instrument No. 20100015769 in the Los Angeles County Official Records and in all prior deeds of record.

RE: Chaminade High School North Campus Athletic Facilities – Technical Memorandum

Dear Stacie,

As you know, Noah Tanski Environmental Consulting (NTEC) performed the operational noise analysis for the Chaminade College Preparatory High School Initial Study/Mitigated Negative Declaration (IS/MND). The analysis evaluated noise impacts from sources such as mechanical equipment, parking lots, and athletic facilities that are proposed by the Project. Noise sources from these facilities are potentially wide-ranging (e.g., crowd noise, athletics noise, amplified sounds, etc.), and there is limited formal scholarship establishing reference noise levels for use in predictive analysis. That said, the noise sources are well understood, and many studies, including CEQA-related studies, have documented noise levels associated with high school athletics. To characterize and predict noise impacts that would result from the Project's proposed athletic facilities, the analysis performed for the IS/MND drew upon a synthesis of noise levels that were documented as part of studies for similar athletic facilities projects. A simplified discussion of the analysis and its reference noise levels is included in the IS/MND; a more-detailed discussion is included here in this technical memorandum.

North Campus Athletic Fields and Aquatics Complex – Overview

As explained in the IS/MND, the North Campus would include new athletic fields for soccer and baseball, as well as an aquatic facility featuring an outdoor pool. The hours of operation for the North Campus would be more restrictive than the usage hours allowed by the school's current Conditional Use Permit for the Main Campus. The North Campus hours of operations would be:

- Athletic Fields: Monday – Friday, 7:00 A.M. – 9:00 P.M. (with exception for overtime/extra inning play); Saturday, 8:00 A.M. – 9:00 P.M.; Sunday, 9:00 A.M. – 8:00 P.M. (no more than 15 Sundays per year).
- Aquatic Complex/Pool: Monday – Friday, 8:00 A.M. – 8:00 P.M.; Saturday, 10:00 A.M. – 7:00 P.M.; no operations on Sundays.
- Batting Cage: Monday – Saturday, 9:00 A.M. – 7:00 P.M.; no operations on Sundays.

Rental or lease of the North Campus athletic facilities would be subject to more restrictive day and hour limitations:

- Athletic Fields: Use by community-based athletic organizations shall be limited to 36 days annually, Monday through Saturday, 8:00 A.M. – 6:00 P.M. Use is not permitted on Sundays and national holidays. The rental or lease of the batting cages is not permitted at any time.
- Aquatic Complex/Pool: Use by community-based organizations, which shall travel to and from the North Campus by bus, shall be limited to daylight hours and end no later than 7:00 P.M. Monday through Friday, and no later than 5:00 P.M. on Saturdays. For community member swim activities, use hours shall be limited to Monday-Saturday, 8:00 A.M. – 6:00 P.M. Use is not permitted on Sundays and national holidays.

CEQA Noise Thresholds of Significance – Overview

The City's threshold of significance for operational noise impacts is whether a project's operations would: (1) cause ambient noise levels to increase by 3 dBA CNEL or more to or within a sensitive receptor's "normally unacceptable" or "clearly unacceptable" noise and land use compatibility category, as defined by the City's General Plan Noise Element; or (2) result in any 5 dBA $L_{eq\ (1\text{-}hour)}$ or CNEL noise increase to a sensitive receptor. CNEL is a 24-hour weighted average noise level that penalizes noise levels between 7:00 P.M. and 7:00 A.M. to account for people's increased noise sensitivity during these hours. L_{eq} represents the energy average noise level for a given time period, which for purposes of the impact analysis is a minimum of one hour. The Project's sensitive receptors for noise impact assessment are all single-family residential land uses. According to the City's General Plan Noise Element, noise levels between 70 and 75 dBA CNEL are considered "normally unacceptable" for these uses, and noise levels 75 dBA CNEL and above are considered "clearly unacceptable." Another way of understanding this threshold is that if the Project does not cause or contribute to noise levels of 70 dBA CNEL or greater at a sensitive receptor, then a 5 dBA CNEL increase is the appropriate threshold. If the Project may cause or contribute to noise levels of 70 dBA CNEL or greater at a sensitive receptor, then a 3 dBA CNEL increase is the appropriate threshold. Notwithstanding, any 5 dBA L_{eq} increase over an averaging period of one hour or more would also be considered significant. Therefore, the following analysis discusses impacts in terms of a 3 dBA CNEL increase threshold, a 5 dBA CNEL increase threshold, and a 5 dBA L_{eq} increase threshold, as appropriate.

Aquatic Complex/Pool

Discussion

Studies consistently show that the highest noise levels from high school aquatic facilities are associated with amplified sound systems (e.g., music, announcements, etc.) during swim meets. Noise from regular pool activities (e.g., swimming, practice, coaching, etc.) are relatively modest and were measured to be approximately 66.6 dBA L_{eq} at 15 feet. However, noise during swim meets is closely correlated with the noise levels of amplified sound systems and was measured to be approximately 71.8 dBA L_{eq} at 30 feet.

Analysis

The nearest sensitive receptors to the proposed aquatic complex/pool are Melba Street Cul-de-Sac Residences, Bobbyboyar Avenue Cul-de-Sac Residences, and Woodlake Avenue Residences. Worst-case hourly noise levels for these receptors were estimated based on the 71.8 dBA L_{eq} at 30 feet noise level

associated with swim meets and distances to each receptor. For Bobbyboyar Avenue Cul-de-Sac Residences, existing walls and the massing of the proposed aquatics facility design would provide additional noise reduction, which is accounted for by the analysis. As shown in Table 1, worst-case hourly noise level increases at Melba Street Cul-de-Sac Residences, Bobbyboyar Avenue Cul-de-Sac Residences, and Woodlake Avenue Residences would be below 3 dBA and therefore below the 5 dBA L_{eq} threshold of significance.

Table 1
Aquatic Complex/Pool Noise Levels – Swim Meet (L_{eq} 1-hr)

Receptor	Distance (feet)	Operations Noise Level (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Noise Level (dBA L_{eq})	Threshold (dBA L_{eq})	Increase (dBA L_{eq})[A]
Melba Street Cul-de-Sac Residences	250	53.4	53.9	56.7	5.0	2.8
Bobbyboyar Avenue Cul-de-Sac Residences	150	52.8	53.9	56.4	5.0	2.5
Woodlake Avenue Residences	100	61.3	67.2	68.2	5.0	1.0
Note A: Potential significant impacts are shown in **bold**.

Batting Cage

Discussion

Studies report that batting cage noise levels (i.e., noise from batting practice using a pitching machine) are only as high as 56.6 dBA L_{eq} at 40 feet. Noise levels from the contact of bat and ball can be as high as 70.5 dBA L_{max} when adjusted to the same 40-foot distance, but these events are instantaneous and do not create sustained high noise levels.

Analysis

The batting cage would be located approximately 75 feet south of the Project's northern property line. However, hitters would be positioned in the southern portion of the batting cage, approximately 75 feet farther from the property line. Therefore, noise from hitting would occur approximately 150 feet south of the northern property line. The nearest sensitive receptors to the batting cage are 23309 Saticoy Street Residence, Melba Street Cul-de-Sac Residences, and Bobbyboyar Avenue Cul-de-Sac Residences. Worst-case hourly noise levels for these receptors were estimated based on the 56.6 dBA L_{eq} at 40 feet noise level associated with batting cage practice and distances to each receptor. Conservatively, no other non-distance related attenuation was assumed (i.e., shielding from existing walls, baffling/shielding inside the batting cage, etc.). As shown in Table 2, worst-case hourly noise increases at 23309 Saticoy Street Residence, Melba Street Cul-de-Sac Residences, and Bobbyboyar Avenue Cul-de-Sac Residences would be below 1 dBA and therefore below the 5 dBA L_{eq} threshold of significance.

Table 2
Batting Cage Practice Noise Levels (L_{eq} 1-hr)

Receptor	Distance (feet)	Operations Noise Level (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Noise Level (dBA L_{eq})	Threshold (dBA L_{eq})	Increase (dBA L_{eq})[A]
23309 Saticoy Street Residence	200	42.6	66.3	66.3	5.0	<0.1
Melba Street Cul-de-Sac Residences	150	45.1	53.9	54.4	5.0	0.5
Bobbyboyar Avenue Cul-de-Sac Residences	230	41.4	53.9	54.1	5.0	0.2

Athletic Fields (Soccer Field, Baseball Diamond and Bleachers)

Discussion

Similar to aquatic facilities, studies show that the highest noise levels from baseball diamonds and soccer fields are associated with amplified sound systems operated during games and not the individual sports activities/practices themselves. Sports activities typically generate noise levels below 60 dBA L_{eq}, as measured at the sidelines and fringes of activity areas. However, noise from amplified sound systems during baseball games may be as high as 80 dBA L_{eq} surrounding bleachers where speakers are located. Farther out, noise levels can vary considerably depending on the distance and orientation from speakers, which are usually mounted on the press box facing the bleacher sections. Noise levels drop off to 65 dBA L_{eq} within approximately 110 feet, 60 dBA L_{eq} within approximately 220 feet, and 55 dBA L_{eq} within approximately 350 feet, assuming that there are no intervening structures.

Analysis

The nearest sensitive receptors that would be affected by noise from the proposed athletic fields are 23309 Saticoy Street Residence, Saticoy Street Residences – South of North Campus, Melba Street Cul-de-Sac Residences, and Bobbyboyar Avenue Cul-de-Sac Residences. Worst-case hourly noise levels for these receptors were calculated based on an 80 dBA L_{eq} at 20 feet reference noise level, which aligns well with the noise contours described above. Conservatively, no non-distance related attenuation was assumed. As shown in Table 3, worst-case hourly noise increases at 23309 Saticoy Street Residence, Saticoy Street Residences – South of North Campus, Melba Street Cul-de-Sac Residences, and Bobbyboyar Avenue Cul-de-Sac Residences would not exceed 4 dBA, below the 5 dBA L_{eq} threshold of significance.

Table 3
Baseball Game Noise Levels (L_{eq} 1-hr)

Receptor	Distance (feet)	Operations Noise Level (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Noise Level (dBA L_{eq})	Threshold (dBA L_{eq})	Increase (dBA L_{eq})[A]

Composite Noise Analysis (All Sources)

As shown in the previous sections, noise generated by the aquatic complex/pool, batting cage, and athletic fields would, individually, be incapable of exceeding existing daytime noise levels at surrounding noise-sensitive receptors by greater than 5 dBA L_{eq}, which is the hourly threshold of significance for the Project's operational impacts. However, each of these uses may be operational on a given school day, so composite impacts from concurrent operations must also be evaluated against the 5 dBA L_{eq} threshold. To address this scenario, composite noise levels associated with a baseball game and a swim meet were estimated for surrounding receptors. The batting cage would not be used while a baseball game is being played, so its usage does not figure into the analysis. The composite noise levels shown in Table 4 are estimated based on the swim meet noise levels shown in Table 1 and the baseball game noise levels shown in Table 3. Table 5 compares the composite noise levels estimated in Table 4 with existing daytime noise levels at surrounding noise-sensitive receptors to determine the composite noise impact. As shown in Table 5, Melba Street Cul-de-Sac Residences could experience noise increases greater than 5 dBA L_{eq} during instances when a baseball game and swim meet occur simultaneously.

Table 4
Composite Noise Levels – Swim Meet and Baseball Game (L_{eq} 1-hour)

Receptor	Swim Meet Noise Level (dBA L_{eq})	Baseball Game Noise Level (dBA L_{eq})	Composite Noise Level (dBA L_{eq})
23309 Saticoy Street Residence	<50.0	54.8	56.0
Saticoy Street Residences – South of North Campus	<50.0	65.2	65.3
Melba Street Cul-de-Sac Residences	53.4	55.7	57.7
Bobbyboyar Avenue Cul-de-Sac Residences	52.8	54.8	56.9
Woodlake Avenue Residences	61.3	<50.0	61.6

Table 5
Composite Noise Level Impact at Receptors (L_{eq} 1-hour)

Receptor	Composite Noise Level From Table 4 (dBA L_{eq})	Existing Ambient Noise Level (dBA L_{eq})	New Noise Level (dBA L_{eq})	Threshold (dBA L_{eq})	Increase (dBA L_{eq})[A]
23309 Saticoy Street Residence	56.0	66.3	66.7	5.0	0.4
Saticoy Street Residences – South of North Campus	65.3	68.6	70.3	5.0	1.7
Melba Street Cul-de-Sac Residences	57.7	53.9	59.2	5.0	**5.3**
Bobbyboyar Avenue Cul-de-Sac Residences	56.9	53.9	58.7	5.0	4.8
Woodlake Avenue Residences	61.6	67.2	68.3	5.0	1.1
Note A: Potential significant impacts are shown in **bold**.					

The composite noise levels and maximum hourly impacts shown in Table 4 and Table 5 are also insightful regarding the Project's potential effects on 24-hour CNELs at surrounding noise-sensitive receptors. As discussed earlier, the applicable CNEL-related thresholds are whether the Project would: (1) cause ambient noise levels at sensitive receptor locations to increase by 3 dBA CNEL or more to or above 70 dBA CNEL, which the City's General Plan Noise Element considers to be a "normally unacceptable" exterior noise level for residential land uses; or (2), barring the above, any 5 dBA CNEL increase.

Given that existing daytime ambient noise conditions at Melba Street Cul-de-Sac Residences and Bobbyboyar Avenue Cul-de-Sac Residences are below 55 dBA L_{eq}, it is clear that their 24-hour noise levels are below at least 65 dBA CNEL, meaning that the 5 dBA CNEL increase threshold would apply at these

receptors.[1] The following analysis evaluates the potential that 5 dBA CNEL increases could occur at Melba Street Cul-de-Sac Residences and Bobbyboyar Avenue Cul-de-Sac Residences. As explained previously, the composite noise levels shown in Table 4 and Table 5 are representative of a worst-case scenario in which there is a simultaneous swim meet and baseball game. These events last no more than a few hours each. However, if one assumes a conservative scenario in which the worst-case composite noise levels would be generated from 3:00 P.M. – 9:00 P.M.[2], then the corresponding CNEL at Melba Street Cul-de-Sac Residences and Bobbyboyar Avenue Cul-de-Sac Residences would be 53.5 dBA and 52.7 dBA, respectively, as shown in Table 6. Measured ambient noise conditions and factors such as the urbanized nature of the neighborhood show that 24-hour noise levels for Melba Street Cul-de-Sac Residences and Bobbyboyar Avenue Cul-de-Sac Residences are between 50-55 dBA CNEL. Assuming a low-end 50 dBA CNEL value, the composite CNEL figures estimated in Table 6 demonstrate that operational activities on the North Campus could result in a slight exceedance of the 5 dBA CNEL increase threshold at Melba Street Cul-de-Sac Residences, as shown in Table 7.

Table 6
24-Hour Noise Levels – Swim Meet and Baseball Game (dBA CNEL)

Receptor	Swim Meet Noise Level (dBA CNEL)	Baseball Game Noise Level (dBA CNEL)	Composite Noise Level (dBA CNEL)
Melba Street Cul-de-Sac Residences	48.1	52.0	53.5
Bobbyboyar Avenue Cul-de-Sac Residences	47.5	51.1	52.7

Table 7
24-Hour CNEL Noise Level Impact at Receptors

Receptor	Composite Noise Level From Table 6 (dBA CNEL)	Existing 24-Hour Noise Level (dBA CNEL)	New Noise Level (dBA CNEL)	Threshold (dBA CNEL)	Increase (dBA CNEL)[A]
Melba Street Cul-de-Sac Residences	53.5	50.0	55.1	5.0	**5.1**
Bobbyboyar Avenue Cul-de-Sac Residences	52.7	50.0	54.6	5.0	4.6
Note A: Potential significant impacts are shown in **bold**.					

With regard to the remaining receptors, 23309 Saticoy Street Residence, Saticoy Street Residences – South of North Campus, and Woodlake Avenue Residences: Table 5 shows that the worst-case hourly

[1] In other words, it would take more than a 5 dBA CNEL increase for their 24-hour noise levels to exceed the 70 dBA CNEL "normally unacceptable" standard.

[2] Specifically, the assumed time periods are 3:00 P.M. – 9:00 P.M. for baseball games and 3:00 P.M. – 8:00 P.M. for swim meets, consistent with their allowable usage hours.

composite noise impacts at these receptors would be below 2 dBA. As such, there is no potential that corresponding 24-hour CNEL impacts at these receptors would exceed the minimum 3 dBA increase threshold.

LAMC Section 112.01

Before discussing the potential mitigating design features and operational conditions that could reduce hourly (i.e., L_{eq}) and 24-hour (i.e., CNEL) noise impacts at Melba Street Cul-de-Sac Residences, it is important to address LAMC Section 112.01 and the effect it would have on amplified baseball game and swim meet noise levels that are at the root of the noise impacts affecting Melba Street Cul-de-Sac Residences and other receptors. LAMC Section 112.01(b) would prohibit any amplified noises from being audible at a distance greater than 150 feet from the North Campus property line, and compliance with this regulation would necessitate that the Project's amplified noise levels are much lower than the levels predicted in this memorandum's analyses. For example, Table 5 shows that composite swim meet and baseball game noise levels, which are mainly caused by amplified sounds at these events, would be as high as 56.9 dBA L_{eq} at Bobbyboyar Avenue Cul-de-Sac Residences. While this would result in a less than significant 4.8 dBA L_{eq} hourly noise increase at Bobbyboyar Avenue Cul-de-Sac Residences, the 56.9 dBA L_{eq} noise level indicates that amplified sounds generating this noise level would be clearly audible over the receptor's 53.9 dBA L_{eq} ambient noise conditions. Therefore, despite the noise increase being less than significant with respect to the City's 5 dBA L_{eq} CEQA threshold of significance, the amplified sounds emanating from swim meets and baseball games held simultaneously would still need to be reduced to achieve compliance with the LAMC Section 112.01(b) audibility standard.[3]

The Project's amplified sound systems can be designed in a way that achieves Project objectives (i.e., providing amplified sound for baseball games and swim meets) while complying with LAMC Section 112.01(b). For example, large outdoor music venues are often acoustically engineered to comply with similar noise standards, despite featuring much louder sound systems than the Project would utilize. Acoustical design considerations commonly include techniques such as utilizing directional speakers rather than broadcast systems, mounting speakers low and oriented away from residential areas, and instituting maximum sound level limits. The facilities themselves may also be designed to aid noise control efforts. For example, bleachers may be located so that crowd-facing speakers are directed away from sensitive residential areas, and structures may be located to buffer sensitive residential areas from noise sources. In fact, the Project's site plan already features some of these considerations. For example: the baseball field is oriented so that bleachers are located along Saticoy Street, not near the quieter residential neighborhood to the north; the batting cage is oriented so that batters would also be distanced from this neighborhood; and the aquatic complex is oriented so that the parking lot and athletic field/pool house provide a buffer between the pool and this neighborhood.

Mitigation Recommendations

As shown above in Table 5, maximum hourly noise impacts at Melba Street Cul-de-Sac Residences could be as high as a 5.3 dBA L_{eq} increase over existing daytime noise conditions, which would exceed the 5 dBA L_{eq} increase threshold of significance. As shown in Table 7, 24-hour noise impacts at this same receptor could be as high as a 5.1 dBA CNEL increase, which would exceed the 5 dBA CNEL increase threshold of

[3] In turn, this would reduce the noise increase experienced by Bobbyboyar Avenue Cul-de-Sac Residences.

significance for this receptor, as well. Further, all noise impacts would need to comply with the audibility standard established by LAMC Section 112.01(b). Noise reductions necessary to achieve compliance with LAMC Section 112.01(b) would also achieve the noise reductions necessary to reduce noise impacts at Melba Street Cul-de-Sac Residences to less than significant levels. The following mitigation measures are recommended:

MM-1: Amplified sound systems for the Project's baseball field/bleachers and outdoor aquatics facility/bleachers shall be acoustically engineered with the following design and performance standards:

- Amplified sound levels, as measured at the northern property line of the North Campus, shall not exceed 50 dBA.
- Amplified sound systems shall not be operated outside the operational hours established for the North Campus facilities.
- Speakers shall be directional and oriented away from the northern property line of the North Campus.
- Non-Chaminade users of the facilities shall not be permitted to utilize the facilities' amplified sound systems.

Please do not hesitate to contact me if you have any questions or require additional information.

Sincerely,

Noah Tanski, Principal

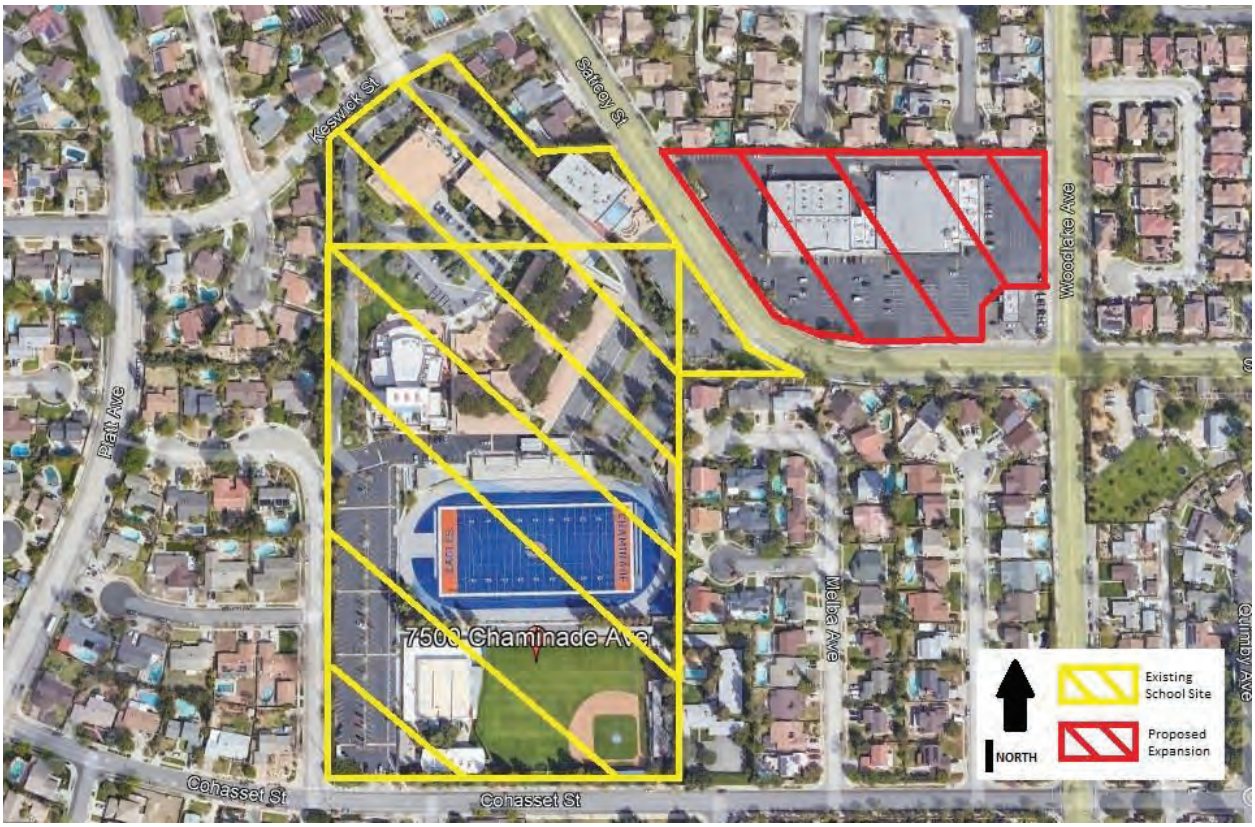
INTRODUCTION

This transportation assessment study is consistent with the City of Los Angeles (City) Department of Transportation (LADOT), Transportation Assessment Guidelines (TAG), dated August 2022. This study evaluates the potential project-specific transportation effects of the proposed project. The analysis focuses on traditional mobility considerations as well as safety, sustainability, smart growth, and the reduction of greenhouse gas emissions.

The TAG conforms to the requirements of Senate Bill 743 (SB 743) and is consistent with the California Environmental Quality Act (CEQA), requiring the use of Vehicle Miles Traveled (VMT) as the primary metric for evaluating a project's transportation impacts. The TAG also requires the traffic analysis to examine whether the proposed project conflicts with the City's plans, programs, ordinances, and policies. In addition, Non-CEQA transportation analysis is also required to assess the project's potential transportation effects on pedestrian, bicycle and transit facilities, project access, safety and circulation, project construction, and the potential for residential street intrusion.

PROJECT DESCRIPTION



Project Characteristics

The Owner and Applicant, Chaminade College Preparatory (the "Applicant" or "Chaminade"), proposes to update and expand the existing Chaminade College Preparatory, High School campus (the "High School"), approved and currently operating under a Conditional Use Permit ("CUP"), under City Planning Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, with a revised campus plan located at 7500 Chaminade Avenue, 23241 Cohasset Street, 23260 Saticoy Street, 23217-23255 Saticoy Street and 7619-7629 Woodlake Avenue in West Hills (the "Subject Property"). The revised campus plan (the "Project") will include a total lot area of approximately 25.86 acres, inclusive of: 1) a new three-story school building ("Multistory Building"), updated parking areas, remodeled athletic fields, new student quads, and renovated classrooms, student service centers and offices on the existing campus located on approximately 21.03 acres in the A1-1 and RS-1 Zones, at 7500 Chaminade Avenue, 23241 Cohasset Street and 23260 Saticoy Street ("Main Campus"), as noted in Figure 1 as "Existing School Site", 2) an expanded school campus area of approximately 4.83 acres located across Saticoy Street, at 23217-23255 Saticoy Street and 7619-7629 Woodlake Avenue, proposed for new athletic fields, an aquatic center/outdoor swimming pool, and accessory facilities/structures and associated surface parking facilities, in the proposed C2-1 Zone (the new "North Campus"), as noted in Figure 1 "Proposed Expansion", and 3) a new pedestrian bridge across Saticoy Street ("pedestrian bridge"). No increase in the maximum permitted student enrollment (1,360 students) is proposed. Upon Project completion, the revised campus plan for the High School will include a total of approximately 193,818 square feet of Floor Area and approximately 501 on-site surface parking spaces.

Project Area Map and Location

As illustrated in the project area map in Figure 1, the proposed North Campus is located across the main campus on Saticoy Street on the Northwest corner of Woodlake Avenue and Saticoy Street.

Figure 1 – Project Area Map

Project Site Plan

Figure 2 illustrates the project site plan showing driveway locations, distance of the project driveways from the adjacent intersection, and the on-street and off-street loading/unloading areas.

Project Site Vehicle Access

Currently, the existing shopping center on the northwest corner of Saticoy Street and Woodlake Avenue has four existing two-way driveways on Saticoy Street and two existing two-way driveways off Woodlake Avenue. The project proposes to reduce the number of driveways. As shown in Figure 2, there will be three proposed two-way driveways. Two driveways are proposed on Saticoy Street and one driveway is proposed on Woodlake Avenue.

Figure 2 – Project Site Plan - On-Site and Off-Site Passenger Loading/Unloading Areas

Project Passenger Loading/Unloading

The driveway on Chaminade Avenue, as shown in Figure 2, provides parent access to the on-site loading and unloading area for student drop off and pick up. The approximate length is about 400 feet from the driveway to the drop off and pick up point which provides queueing capacity for approximately 20 to 22 vehicles. Based on observations, during the drop off period, the queue length is minimal since the vehicles arrive at different times between 7:00 AM and 8:40 AM, with the peak being between 8:00 AM to 8:30 AM.

During the morning drop off time the maximum anticipated number of vehicles arriving at the school is approximately 6 vehicles per minute between 8:00 AM to 8:30 AM for a total of approximately 194 vehicles.

During the afternoon pick up period between 2:50 PM to 3:40 PM the majority of the pick-ups will occur on-site with vehicles entering the Chaminade Avenue gate to pick up students in the designated student loading (pick-up) area and exiting the campus through the Keswick Street exit driveway. In the afternoons queuing of vehicles has been observed on Chaminade Avenue north of Cohasset Street as the cars line up to enter the campus for student pick-up. The Cohasset Street and Saticoy Street gates will primarily serve as egress points for the students, faculty and

staff that were parked on campus for most of the day. It is estimated that about 10% of juniors and seniors are dropped off and picked up at the on-site student loading area. The maximum anticipated number of vehicles arriving at the school is approximately 194 vehicles.

PROJECT CONTEXT

A comprehensive analysis and an inventory of the existing transportation infrastructure and conditions within a ¼ mile radius of the project, as shown in the aerial map in Figure 3, was collected. The collected data was analyzed to determine the street designations, classifications, and modal priorities as identified in the City's Mobility Plan 2035.

Figure 3 – ¼ Mile Radius Area Map

The following describes the details of the transportation infrastructure in the vicinity of the project:

Non-Vehicular Transportation System

The following sections describe the non-vehicular transportation system for Pedestrian Facilities, Bicycle Facilities, and Transit Services:

Pedestrian Facilities

A review of the project area was conducted to evaluate the effects of the project on pedestrian activity within a ¼-mile radius of the project. As part of this review, we developed a map of the study area indicating potential pedestrian destinations within 1,320 feet of the edge of the project

site, as shown in Figure 3. According to the City of Los Angeles' Mobility Plan 2035, the project site is not adjacent to the Pedestrian Enhanced District network. However, Woodlake Avenue south of Saticoy Street is shown as a Pedestrian Segment on the map. Therefore, the project will comply with City's requirements for Pedestrian Enhanced Districts, if any. The Pedestrian Enhanced Districts map is included in Appendix 1.

Additionally, the school is proposing to construct a pedestrian bridge over Saticoy Street to connect the Main Campus to the North Campus. The bridge is intended to eliminate students crossing Saticoy Street thereby enhancing the student pedestrian activity. The following pedestrian facilities are provided:

Sidewalks

A sidewalk inventory within the ¼ mile vicinity of the project was taken. The collected data for existing pedestrian sidewalks is listed in Table 1 below:

Table 1 – Sidewalk Inventory

Street Name	From	To	Street Side	Sidewalk Width	Condition
Saticoy Street	Ingomar Street	Woodlake Avenue	NS /SS	~10 Feet	Good
Saticoy Street*	Woodlake Avenue	e/o Woodlake Avenue	SS	No Sidewalk	N/A
Saticoy Street*	Woodlake Avenue	e/o Woodlake Avenue	NS	~10 Feet	Good
Woodlake Avenue*	Ingomar Street	s/o Cohasset Street	WS/ES	~10 Feet	Good
Cohasset Street	e/o Woodlake Avenue	w/o Platt Avenue	NS/SS	~5 to 10 Feet	Good
Keswick Street	e/o Saticoy Street	w/o Platt Avenue	NS/SS	~ 5 Feet	Good

*Southeast corner of Woodlake Avenue and Saticoy Street is not developed

Crosswalks, Curb Ramps & Pedestrian Push Buttons

Within ¼ mile vicinity of the project site, pedestrian crosswalks, curb ramps and pedestrian push buttons are available at the following locations, shown in Table 2:

Table 2 – Crosswalk, Curb Ramp & Pedestrian Push Button Inventory

Intersection Name		Signal Phasing	Ped Push Button	Crosswalk Type	Curb Ramp	Cond.
Cohasset Street	Woodlake Avenue	2	Yes	North Leg Continental	Yes	Good
				South Leg Continental	Yes	Good
				East Leg Continental	Yes	Good

				West Leg Continental	Yes	Good
Saticoy Street	Woodlake Avenue	Stop Control	N/A	North Leg No Crosswalk	Northeast Yes	N/A
				South Leg No Crosswalk	Southwest Yes	N/A
				East Leg No Crosswalk	N/A	N/A
				West Leg No Crosswalk	Southwest Yes	N/A
Keswick Street	Saticoy Street	Stop Control	N/A	North Leg No Crosswalk	Northeast Yes	N/A
				South Leg No Crosswalk	Southeast Yes	N/A
				East Leg No Crosswalk	N/A	N/A
				West Leg No Crosswalk	N/A	N/A
Cohasset Street	Platt Avenue	Stop Control	N/A	North Leg Continental	N/A	Good
				South Leg Continental	Yes	Good
				East Leg Continental	Southeast Yes	Good
				West Leg Continental	Southwest Yes	Good
Keswick Street/Pomelo Drive	Platt Avenue	Stop Control	N/A	North Leg No Crosswalk	Northeast Yes	N/A
				South Leg No Crosswalk	Southeast Yes	N/A
				East Leg No Crosswalk	Yes	N/A
				West Leg No Crosswalk	N/A	N/A

Bicycle Facilities

According to the City of Los Angeles' Mobility Plan 2035, the project site and its vicinity is not a part of the Bicycle Enhanced Network. The City's Bicycle Enhanced Network and Bicycle Lane Network maps are shown in Appendix 2. Within a ¼-mile radius of the project site bicycle facilities are installed at the following locations, as shown in Table 3:

Table 3 – Bicycle Facilities Inventory

Street Name	Bicycle Facility	Condition
Platt Avenue	Tier 2	Good

Transit Services

According to the City of Los Angeles' Mobility Plan 2035, the project site and its vicinity is not a part of the Transit Enhance Network. Within ¼ mile radius of the project site transit services in

the project area are provided by Los Angeles County Metropolitan Transportation Authority (Metro). As shown on the Bus Service Area Map in Figure 4, Metro operates local bus routes 152, 162, 165, and 169 in the vicinity of the project site. Bus schedules including location of bus stops and frequency of service are provided in Appendix 3.

Figure 4 – Bus Service Area Map

Vehicular Transportation System

An assessment of the roadway system within a ¼ -mile radius of the project site was conducted. The assessment included the number of traffic lanes, direction of flow, and the presence of peak period tow-away lanes affecting roadway travel capacity, the presence of bicycle lanes, and any other significant street information.

Regional Freeway System

The project area is served by Ventura Freeway, US 101 and Ronald Reagan Freeway, State Route (SR) 118. The project site is more than ¼ mile from either freeway. The nearest intersection freeways are the I-5 to the north and the SR-134 to the south. The segment of the SR-118 freeway and the US 101 freeway near the project site generally consists of four mixed-flow travel lanes in each direction. SR-118 also provides one High Occupancy Vehicle (HOV) lane in each direction.

Area Roadway System

The project area is served by the following surrounding major roadways:

- Saticoy Street in the vicinity of the project site is an east-west roadway designated as "Avenue II" by City of Los Angeles General Plan. It has two travel lanes in each direction separated by a continuous two-way left-turn lane. Parking is allowed on both sides of the street.
- Woodlake Avenue in the vicinity of the project site is a north-south roadway designated as "Avenue II" by City of Los Angeles General Plan. It has two travel lanes in each direction separated by a continuous double-double-yellow and two-way left-turn lane. Parking is allowed on both sides of the street.
- Platt Avenue in the vicinity of the project site is a north-south roadway designated as "Avenue II" by City of Los Angeles General Plan. It has two travel lanes and a Tier 2 bicycle lane in each direction separated by a continuous two-way left-turn lane. Parking is restricted on both sides of the street.
- Cohasset Street in the vicinity of the project site is an east-west roadway functioning as "Collector" street. It has one travel lane in each direction. Parking is allowed on both sides of the street.

Please refer to Appendix 4 for City of Los Angeles Street Designation map.

CEQA ANALYSIS OF TRANSPORTATION IMPACTS

In compliance with CEQA and/or in accordance with City regulations, LADOT may require applicants to analyze and assess project-specific transportation impacts based on the following criteria:

- If the Development Project is estimated to generate a net increase of 250 or more daily vehicle trips and requires discretionary action, a transportation assessment for a Development Project is required.
- A transportation assessment is required by City ordinance or regulation.

According to the TAG, the preparation of a transportation impact assessment requires analysis and prediction of impacts or deficiencies to the circulation system generated by Development or Transportation Projects as well as the identification of feasible measures or corrective conditions to offset any impacts or deficiencies identified through a transportation assessment.

Project Daily Vehicle Trip Generation

LADOT's VMT calculator, Version 1.3, was used to determine if the project would exceed any of the Transportation Impact Assessment criteria which would require further transportation impact analysis. Based on the land use and size of the existing and proposed project the VMT calculator determined that the project would decrease Net Daily Vehicle Trips (NDVT) by -1,179. The reduction in the NDVT is the result of eliminating the shopping plaza which is a high trip generator use and replacing it with an athletic facility for the school use such as competitions and practices. As community service, the school will provide limited access to other schools and the local community to benefit from the use of the athletic facilities.

Refer to Appendix 5 for VMT Calculator sheets. Since the project's NDVT does not exceed the 250 NDVT threshold, as shown in the Table 4 below, further transportation impact assessment would not be required.

Table 4 – VMT Calculator Results

	Existing Land Use	Proposed Project	Net Decrease
Daily Vehicle Trips	3,981	2,803	-1,179
Daily VMT	33,085	22,681	-10,404

However, due to the nature of the project as a "school" and proximity to the adjacent residential area, LADOT determined that while CEQA analysis will not be required, the project would be required to conduct non-CEQA transportation analysis for access, safety, and circulation evaluation.

NON-CEQA TRANSPORTATION ANALYSIS

The City of Los Angeles' police powers provides the authority to regulate the use of land. In certain applications, the City is required to make specific findings to exercise its discretionary authority to approve a land use development project. The City's Site Plan Review approval process establishes discretionary authority in Section 16.05 of the Los Angeles Municipal Code (LAMC) to review and correct for transportation deficiencies that may result from a development project. Therefore, the City is requiring non-CEQA transportation analysis and potentially requiring improvements to address identified transportation related deficiencies.

Pedestrian, Bicycle, and Transit Access Assessment

The pedestrian, bicycle, and transit facilities in the vicinity of the project were assessed to determine the potential effects of the project on these facilities. According to the TAG, the deficiencies could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities).

Screening Criteria

The TAG establishes three main screening criteria to determine whether further non-CEQA transportation analysis would be required to assess any potential project related effects and determine any possible adverse effect on existing pedestrian, bicycle, or transit facilities. The screening criteria is listed in Table 5 below:

Table 5 – Screening Criteria for Pedestrian, Bicycle and Transit Access

	Screening Criteria Questions	Answer	Action
1	Does the project require discretionary action?	Yes	If answer is yes to 1, 2 & 3 further analysis is required
2	Does the land use project include the construction, or addition of:	No	
	▪ 50 (or more) dwelling units or guest rooms or combination thereof, or		

	▪ 50,000 square feet (or more) of non-residential space?		
3	Would the project generate a net increase of 1,000 or more daily vehicle trips, or is the project's frontage along an Avenue, Boulevard, or Collector (as designated in the City's General Plan) 250 linear feet or more, or is the project's building frontage encompassing an entire block along an Avenue or Boulevard (as designated in the City's General Plan)?	Yes	

The project does not exceed the screening criteria. Therefore, further analysis of pedestrian, bicycle and transit access is not required.

Project Access, Safety, and Circulation Evaluation

The TAG requires an evaluation of the project's access and circulation constraints. The evaluation may include operational, or capacity constraints. Constraints can be related to vehicular/vehicular, vehicular/bicycle, or vehicular/pedestrian constraints as well as to operational delays. A detailed review of the project access, safety and circulation was conducted to determine any project related adverse effects. The review analyzed the operation of vehicular traffic volumes as well as pedestrian and bicycle traffic.

Screening Criteria

The TAG establishes two main screening criteria to determine whether further non-CEQA transportation analysis would be required to assess any potential project related effects and determine any possible adverse effect on access, safety, and circulation. The screening criteria is listed in Table 6 below:

Table 6 – Screening Criteria for Access, Safety, and Circulation

	Screening Criteria Questions	Answer	Action
1	Does the project require discretionary action?	Yes	If answer is yes to 1 & 2 further analysis is required
2	Would the land use project generate a net increase of 500 or more daily vehicle trips?	No	

The project does not exceed the screening criteria. However, due to the nature of the project as a "school" and proximity to the adjacent residential area the project would be required to conduct access, safety, and circulation evaluation.

Evaluation Criteria

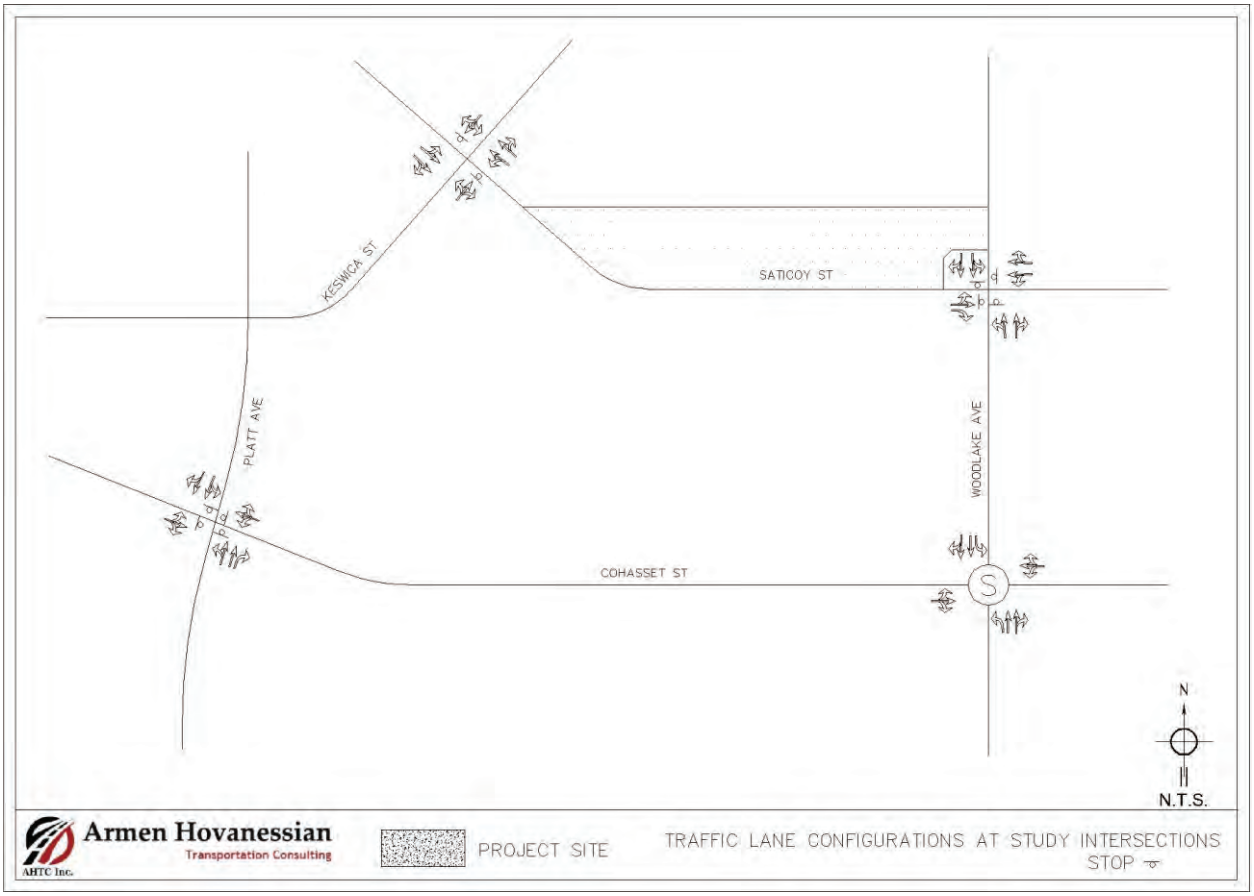
The TAG requires operational, safety and passenger loading evaluations of the project's effects on access, safety, and circulation. Project access is considered constrained if the project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard (as designated in the Mobility Plan 2035) at project driveway(s) or would cause or substantially extend queuing at nearby signalized intersections. Unacceptable or extended queuing may be defined as; spill over

from turn pockets into through lanes, block cross streets, or alleys, and contribute to “gridlock” congestion.

Operational Evaluation

An operational evaluation of the project area was conducted to determine any project impact on access, safety, and circulation on the roadway network in the vicinity of the project.

Study Intersections



After a consultation with LADOT, it was determined that the following intersections would be analyzed and evaluated for operational assessment, as shown in Table 7 below:

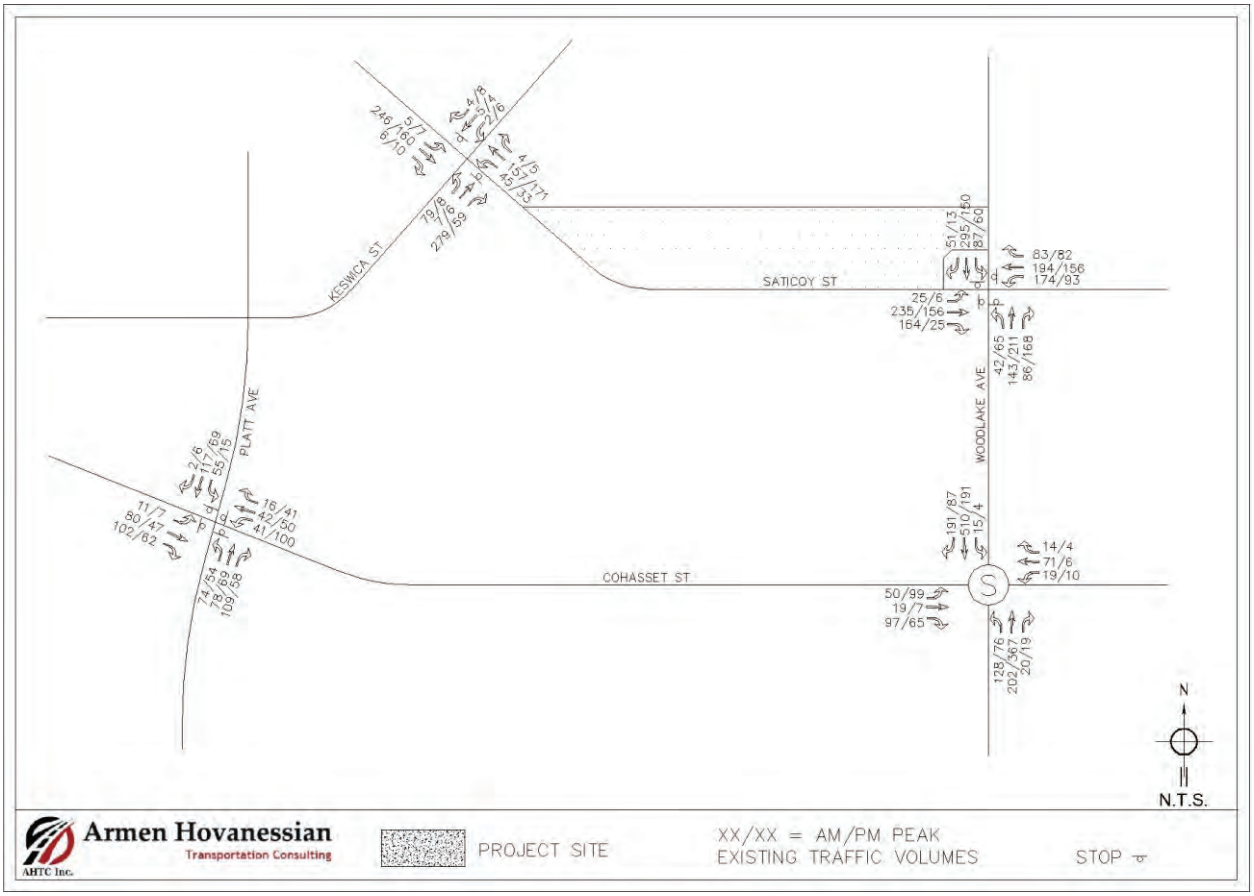
Table 7 – Study Intersections

Intersection(s)	Configuration	Control
Keswick Street & Saticoy Street	4-legged	Stop Sign Control
Cohasset Street & Platt Avenue	4-legged	Stop Sign Control
Cohasset Street & Woodlake Avenue	4-legged	Traffic Signal
Saticoy Street & Woodlake Avenue	4-legged	Stop Sign Control

Refer to Figure 5 below for a depiction of the configurations of traffic lanes at the approaches to the study intersections.

Figure 5 – Study Intersections Lane Configurations

Traffic Volume Counts



Traffic volume counts were obtained for vehicular turning movements at the following four (4) study intersections:

- Keswick Street and Saticoy Street
- Cohasset Street and Platt Avenue
- Cohasset Street and Woodlake Avenue
- Saticoy Street and Woodlake Avenue

Vehicular turning movement counts were conducted on Wednesday, January 18, 2023, during the typical commuter hours of 6:00 AM to 9:00 AM and 3:00 PM to 6:00 PM, to obtain existing traffic volumes for the AM and PM peak hours.

Please refer to Appendix 6 for the manual traffic counts, and Figure 6 below for Existing (AM/PM Peak) Traffic Volumes for an illustration of the AM and PM peak-hour turning movement counts used for the study intersections.

Figure 6 – Existing Traffic Volumes at Study Intersections

Project Trip Generation

Trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation Manual 11th Edition* were used to determine the school traffic trip generation. The number of activities and

the attendees were used to estimate the number of trips generated by the athletic center. Please refer to Appendix 6 for the trip generation tables for the athletic center.

While ITE provides trip generation for the shopping centers with supermarket (40K-150K SF) (Code 821), for the purpose of this analysis traffic count surveys were conducted at the shopping center driveways to determine the trip generation by the shopping center. The reason for conducting the surveys at the shopping center driveways instead of using the ITE trip rates was due to the shopping center not being fully occupied. Please refer to Appendix 6 for the related surveys sheets. The survey results were compared to the ITE trip generation. The comparison indicated that the trip generation from the survey was below the ITE trip generation. Therefore, the analysis took a more conservative approach and used the lower trip generation from the survey to take existing use trip credit for the analysis. The trip generation calculations are consistent with the TAG and have been approved by the City staff.

The project does not propose to add any new students to their existing student capacity. As shown in the project trip generation Table 8 below, the project is forecast to result in 0 net new AM peak trips and 292 net new PM peak hour trips. The total daily net new trips will be reduced by -1,355. The net new PM peak hour trips will be generated by six proposed activities such as:

1- 10 high school swim competitions per year
2- 10 middle school swim competitions per year
3- Other schools swim practice (limited to February through April)
4- Swim lessons and water exercise classes daily
5- Local community swimming (if there are no other activities at the athletic center)
6- Local non-school athletic groups (limited to May through December)

Table 8 – Project Trip Generation

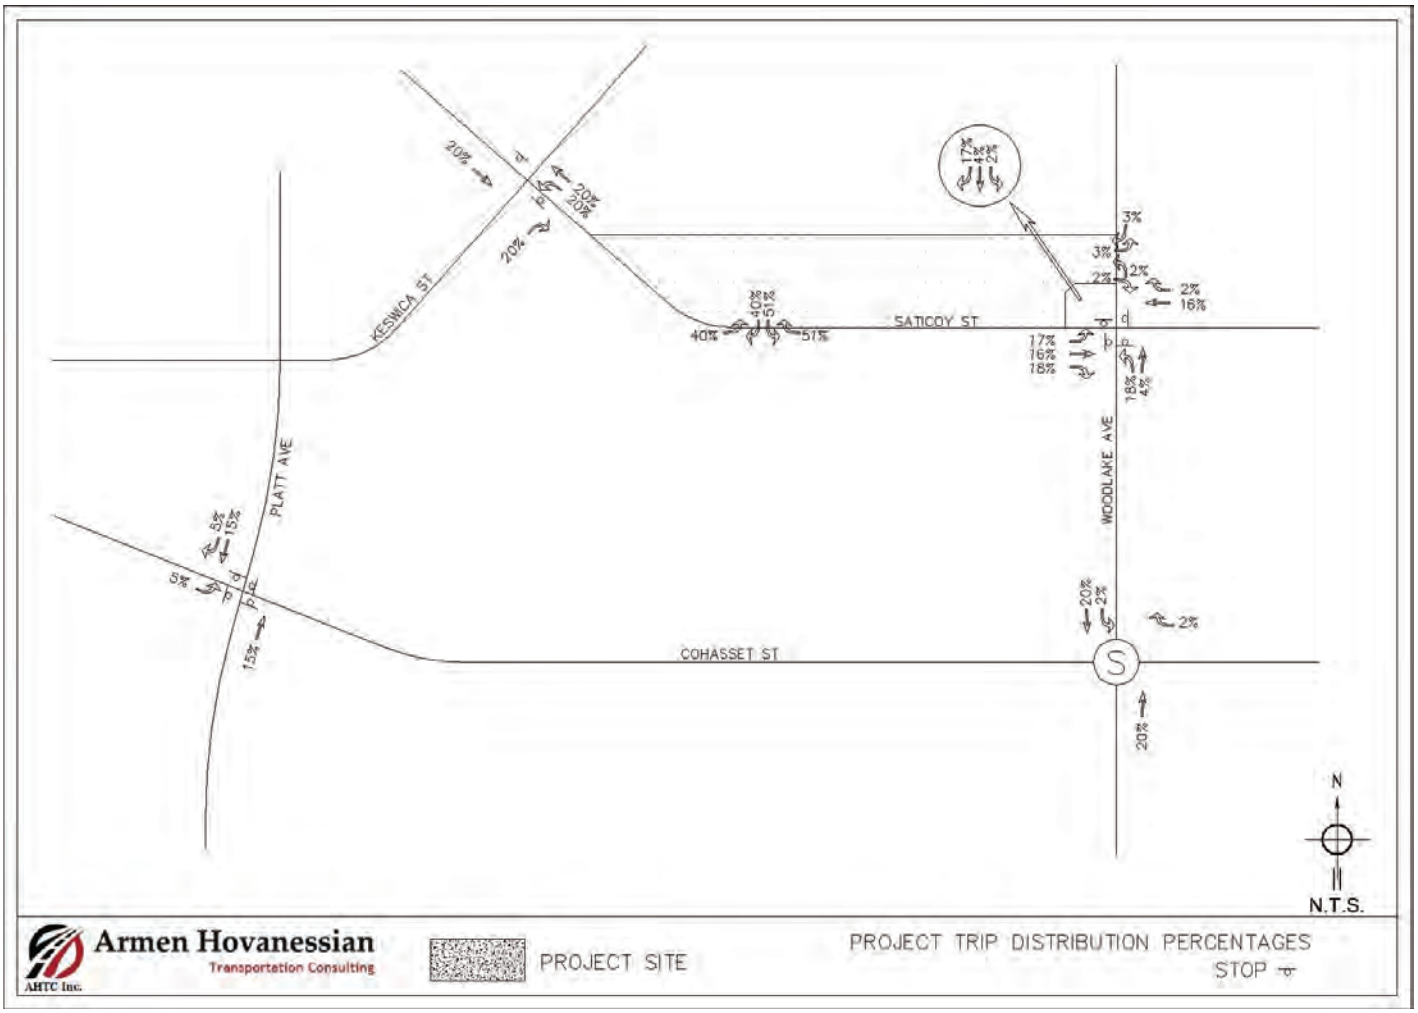
Source: ITE Trip Generation Manual, 11th Edition
*Trip generation rates were produced based on the number of projected participants and activities
** Peak hour trip generation was produced using actual traffic count survey at the site & daily trips were generated using the 6-hour traffic volume counts

Project Trip Distribution and Assignment

Trip distribution assumptions are used to determine the origin and destination of new vehicle trips associated with the Project. The geographic distribution of project trips is based on the functional classification of streets in the vicinity, the magnitude of traffic volumes, as well as local knowledge of the roadway network. Based on the project trip generation, shown in Table 8, and the regional trip distribution assumptions, a proposed study area for the traffic analysis was derived. The location and the number of the intersections to be analyzed was reviewed and approved by the City staff.

Refer to Figures 7 and 8 below for illustrations showing the Project's Trip Distributions and Assignments at the study intersections.

Figure 7 – Project Trip Distribution



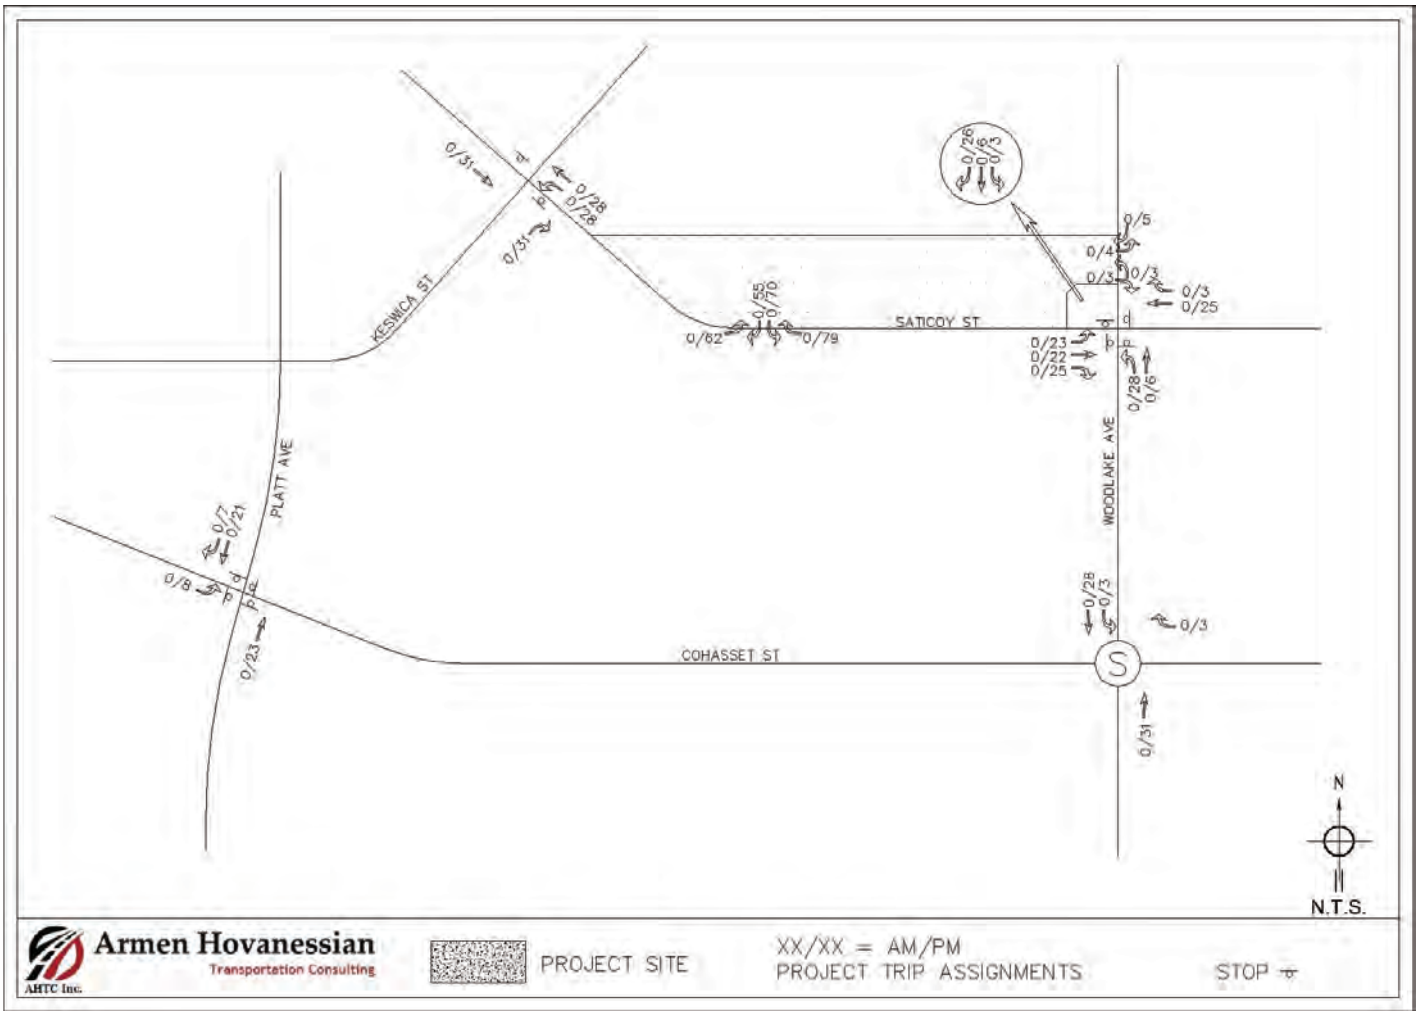


Figure 8 – Project Trip Assignments

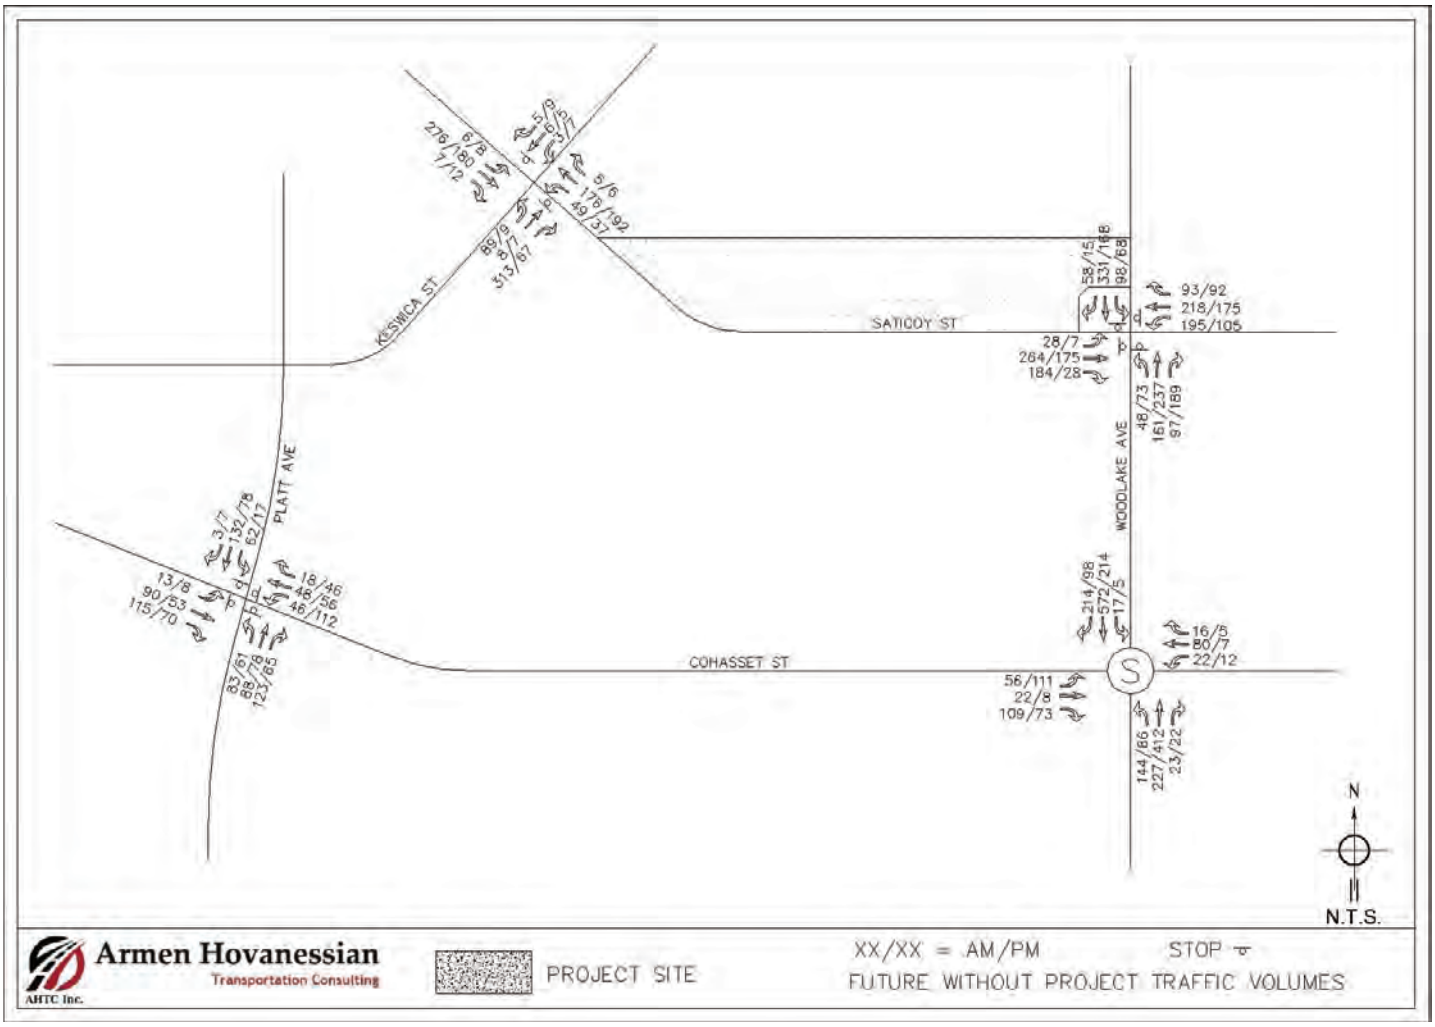
Traffic Forecasts

In general, future peak hour traffic projections for the study intersections are estimated to include future growth due to (1) related projects within ½ mile of the project site and (2) ambient traffic growth.



Related Projects

There were no related projects identified within the ½ mile vicinity of the project site.

Ambient Traffic Growth

To account for the future ambient traffic growth from intensification of existing developments, and other projects that are located further than a half mile from the project site, the existing traffic volumes were increased by an ambient growth rate of 1% per year to the anticipated year of completion 2035. These values were used to forecast the future traffic volumes without project traffic volumes as shown in Figure 9.

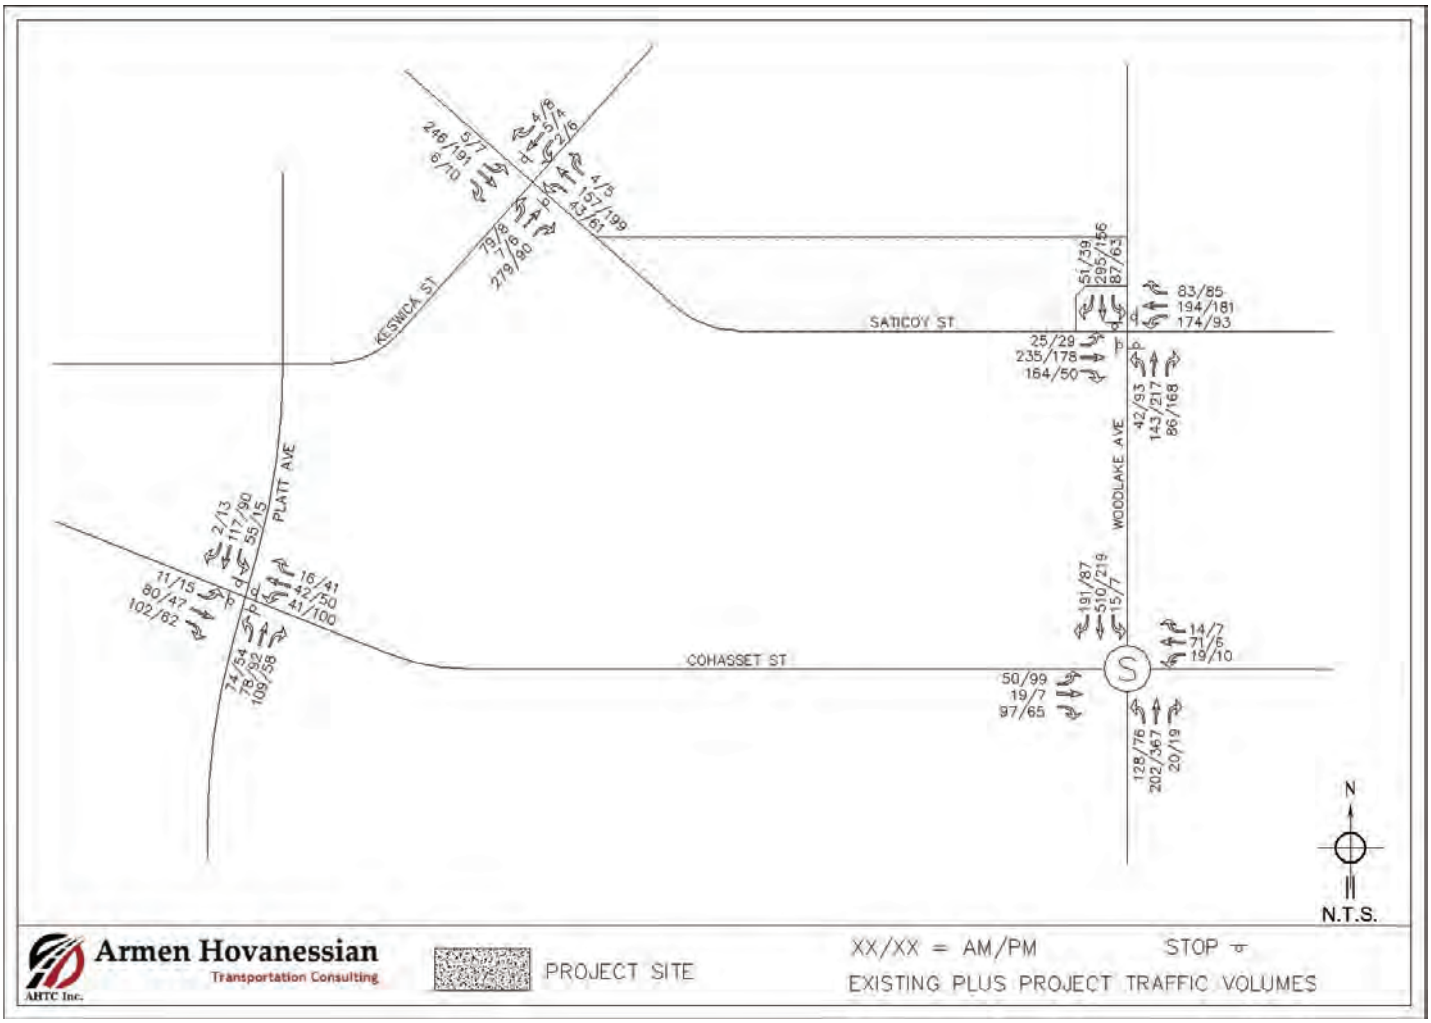
Figure 9 – Future without Project Traffic Volumes

Operational Evaluation

Operational analyses of vehicle average control delays, levels of service, and queueing were conducted at the study intersections for the following conditions and their traffic volumes.

1) Existing Traffic Conditions (See Figure 6)
2) Existing Plus Project Traffic Conditions (See Figure 10)
3) Future (2035) Without Project Traffic Conditions (See Figure 9)
4) Future (2035) Plus Project Traffic Conditions (See Figure 11)

Figure 10 – Existing Plus Project Traffic Volumes



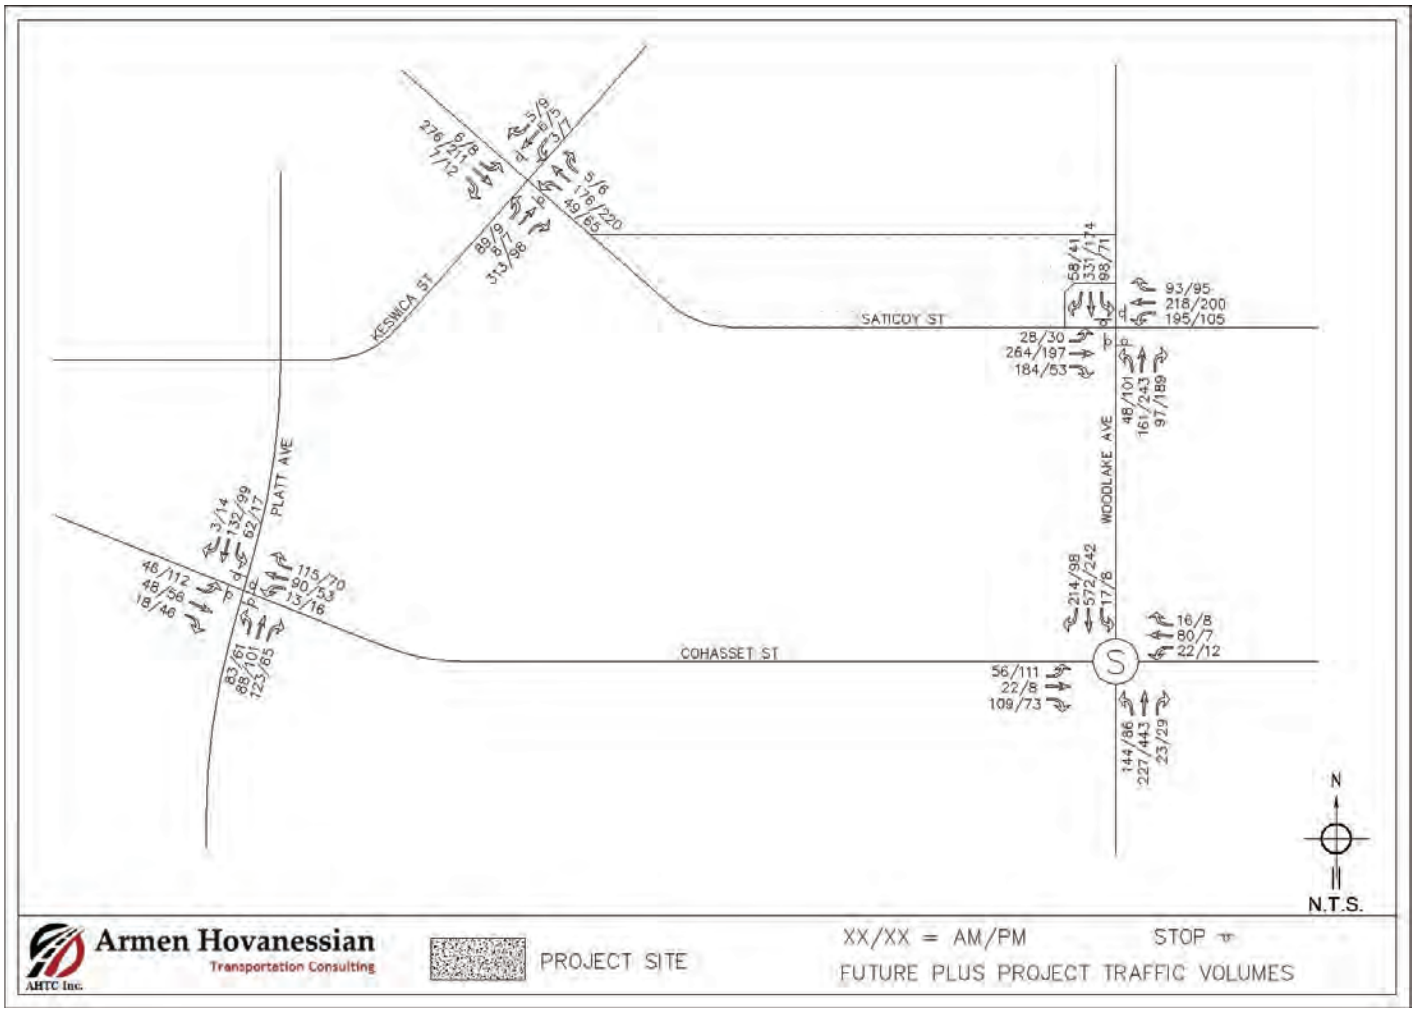


Figure 11 – Future Plus Project Traffic Volumes

Delay and Queueing Methodology

Signalized Intersections

For signalized intersections, the City utilizes the Highway Capacity Manual (HCM) operations methodology for performing signalized intersection capacity analysis. This method relies on the determination of a delay or Level of Service (LOS) at each of the study intersection by first determining their corresponding average control delay per vehicle. Control delay includes initial deceleration delay, queue move-up time, stopped delay and final acceleration delay. It is a measure of driver discomfort, frustration, fuel consumption and lost travel time.

Level of Service (LOS) varies from at best LOS A (free flow/excellent) to at worst LOS of F (stop-and-go/failure). Shown below, in Table 9, are the LOS categories and their corresponding HCM average control delay ranges for signalized intersections.

Table 9 – LOS at Signalized Intersection

Level of Service	Average Control Delay per Vehicle (Sec/Veh)
A	0 to 10.00
B	10.01 to 20.00
C	20.01 to 35.00
D	35.01 to 55.00
E	55.01 to 80.00
F	Over 80.00

Unsignalized Intersections

For unsignalized intersections, the City utilizes the Highway Capacity Manual (HCM) methodologies for performing two-way stop-controlled (TWSC) and all-way Stop-controlled (AWTC) intersection capacity analyses. For TWSC intersection analysis, LOS is calculated for each movement of the intersection and the most critical LOS is the one that represents the effectiveness of that intersection. For AWSC intersection analysis, LOS is defined by the control delay of the entire intersection. The LOS thresholds, as shown in Table 10, for TWSC and AWSC intersections differ from those for signalized intersections to reflect different driver expectations. Shown below are the LOS categories and their corresponding HCM average control delay ranges for TWSC and AWSC intersections.

Table 10 – LOS at Unsignalized Intersections

Level of Service	Average Control Delay per Vehicle (Sec/Veh)
A	0 to 10.00
B	Over 10 to 15
C	Over 15 to 25
D	Over 25 to 35
E	Over 35 to 50
F	Over 50

Level of Service and Queueing Analysis

The results of the operational analyses are summarized in the following tables:

- Table 11: Levels of Service, Delays and Queue Lengths for existing conditions.
- Table 12: Levels of Service, Delays and Queue Lengths for existing plus project conditions.

- Table 13: Levels of Service, Delays and Queue Lengths for future without project conditions.
- Table 14: Levels of Service, Delays and Queue Lengths for future with project conditions.

Please refer to Appendix 7 for the (HCM) analysis worksheets for the analyzed intersections.

As shown in the Level of Service comparison Table 15, with the addition of the project traffic to the future traffic, the level of services for all traffic movements at the study intersections will remain the substantially the same except for four traffic movement. However, the queueing length will for all four traffic movements will at all four only increase by less than one car length with negligible delay. Therefore, the project does not add any substantial amount of traffic to the study intersections.

Table 15 – Comparison of LOS- Future to Future + Project Conditions

Recommended Actions

The project does not have major adverse effects on access, safety, and circulation in the roadway system within the study area or at the analyzed intersections. Therefore, no additional actions would be needed.

Project Construction

This section evaluates the project construction transportation effects. The evaluation is related to the temporary construction related effects that may result from the construction activities of the project, which may include safety, operational, or delay impacts.

Screening Criteria

The TAG establishes seven screening criteria to determine whether further non-CEQA transportation analysis is required to address any potential project construction transportation effects and determine any possible adverse effect on existing pedestrian, bicycle, or transit facilities. The screening criteria is listed below:

Table 16 – Screening Criteria for Temporary Project Construction Effects

	Screening Criteria Questions	Answer	Action
1	Would the project require construction activities to take place within the right-of-way of a Boulevard or Avenue (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than one day (including day and evening hours, and overnight closures if on a residential street)?	Yes	If answer is yes to any of these questions further analysis is required
2	Would the project require construction activities to take place within the right-of-way of a Collector or Local Street (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than seven days (including day and evening hours, and including overnight closures if on a residential street)?	Yes	
3	Would in-street construction activities result in the loss of regular vehicle, bicycle, or pedestrian access, including loss of bicycle parking to an existing land use for more than one day, including day and evening hours and overnight closures if access is lost to residential units?	Yes	

4	Would in-street construction activities result in the loss of regular ADA pedestrian access to an existing transit station, stop, or facility (e.g., layover zone) during revenue hours?	No	
5	Would in-street construction activities result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route that serves the project site?	No	
6	Would construction activities result in the temporary removal and/or loss of on-street metered parking for more than 30 days?	No	
7	Would the project involve a discretionary action to construct new buildings or additions of more than 1,000 square feet that require access for hauling construction materials and equipment from streets of less than 24-feet wide in a hillside area?	No	

Evaluation Criteria

The TAG establishes assessment factors to be considered in evaluating temporary construction related effects that may result from the construction activities of the project. These factors are listed below:

Table 17 – Evaluation Criteria for Temporary Project Construction Effects

Assessment Factors	Answers
Temporary Transportation Constraints:	
The length of time of temporary street closures or closures of two or more travel lanes	Unknown
The classification of the street (major arterial, state highway, substandard hillside local or collector, etc.) affected	Avenue II
The existing congestion levels on the affected street segments and intersections	Minor
The operational constraints of substandard hillside streets needing to access construction sites	N/A
Whether the affected street directly leads to a freeway on- or off-ramp or other state highway	No
Potential safety issues involved with street or lane closures	None

The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street	Yes
Temporary loss of access:	
The length of time of any loss of pedestrian or bicycle circulation past a construction area	Unknown
The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area	Unknown
The length of time of any loss or impedance of access by emergency vehicles or area residents to hillside properties	None
The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility	Unknown
The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access	N/A
The type of land uses affected, and related safety, convenience, and/or economic issues	None
Temporary Loss of Bus Stops or Rerouting of Bus Lines:	
The length of time that an existing bus stop would be unavailable or that existing service would be interrupted	None
The availability of a nearby location (within ¼ mile) to which the bus stop or route can be temporarily relocated	Yes
The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes	N/A
Whether the interruption would occur on a weekday, weekend, or holiday, and whether the existing bus route typically provides service that/those day(s).	Unknown

A comprehensive analysis and inventory of the existing transportation infrastructure and conditions within a ¼ -mile radius of the project was conducted and is included in the Project Context section of this report. Additionally, a review of the proposed construction procedures/plans was conducted to determine whether construction activity within the street right-of-way would cause/require any of the following:

Table 18 -Construction Activity Effect

During Construction	
Street, sidewalk, or lane closures	Yes
Block existing vehicle, bicycle, or pedestrian access along a street or to parcels fronting the street	Yes

Modification of access to transit stations, stops, or facilities during revenue hours	No
Closure or movement of an existing bus stop or rerouting of an existing bus line	Yes
Creation of transportation hazards	No

Corrective Measures

The project construction activities may result in temporary adverse effects on certain transportation facilities. To minimize and address these adverse effects, the following corrective measures were analyzed and recommended:

Table 19 – Project Construction Corrective Measures

Corrective Measures	Recommended
Traffic Management Plan	Yes
Detour Plan	Yes
Modification of construction procedures	N/A
Limit major road obstructions to off-peak hours	Yes
Coordinate with emergency service and public transit providers	Yes
Provide alternative vehicular, bicycle, and/or pedestrian access to affected parcels	N/A
Consult LADOT's Parking Meters Division regarding revenue recovery costs for the removal of parking meter spaces, if applicable	N/A
Coordinate access with adjacent property owners and tenants	Yes
Coordinate with Metro regarding maintenance of ADA access to Metro stations, stops, and transit facilities (e.g., layover zones) during revenue hours	N/A
Coordinate with transit providers regarding the need to temporarily close or relocate bus stops or reroute service	N/A

Residential Street Cut-Through Analysis

The objective of this analysis is to determine potential increases in average daily traffic (ADT) volumes on designated Local Streets near a project that can be classified as cut-through trips generated by the project, and that can adversely affect the character and function of those streets.

Cut-through trips are defined as those which feature travel along a street classified as a Local Street in the City's General Plan, with residential land-use frontage, as an alternative to a higher classification street segment (e.g., Collector, Avenue, or Boulevard as designated in the City's General Plan) to access a destination that is not within the neighborhood within which the Local Street is located.

SCREENING CRITERA

The TAG establishes the criteria to determine whether further analysis would be required to determine potential cut-through traffic increase because of the project. In addition to these two criteria,

- A net increase of 250 or more daily vehicle trips, and
- Project subject to a discretionary action that would be under review by the Department, the project would be subject to the following criteria:

Table 20 – Screening Criteria for Residential Street Cut-Through Traffic

Screening Criteria	Answer	
The project is located along a currently congested Boulevard or Avenue and adds trips that may lead to trip diversion to parallel routes along residential Local Streets. The congestion level of the Boulevard or Avenue can be determined based on the estimated peak hour LOS under project conditions of the study intersection(s) (as determined in Section 3.3). LOS E and F are considered to represent congested conditions	No	If answer is yes to 1, 2 & 3 further analysis is required
The project is projected to add a substantial amount of automobile traffic to the congested Boulevard(s), Avenue(s), or Collector(s) that could potentially cause a shift to alternative route(s);	No	
Nearby local residential street(s) (defined as Local streets as designated in the City's General Plan passing through a residential neighborhood) provide motorists with a viable alternative route. A viable alternative route is defined as one which is parallel and reasonably adjacent to the primary route as to make it attractive as an alternative to the primary route. LADOT has discretion to define which routes are viable alternative routes, based on, but not limited to, features such as geography and presence of existing traffic control devices, etc.	Yes	

Evaluation Criteria

The TAG establishes the evaluation criteria based on an estimate of the amount of daily project traffic that may shift to local residential streets, considering that the street system is less congested during non-peak hours than during peak hours. Once the estimated traffic volumes are identified, then these numbers must exceed the traffic volumes thresholds as shown in the table below:

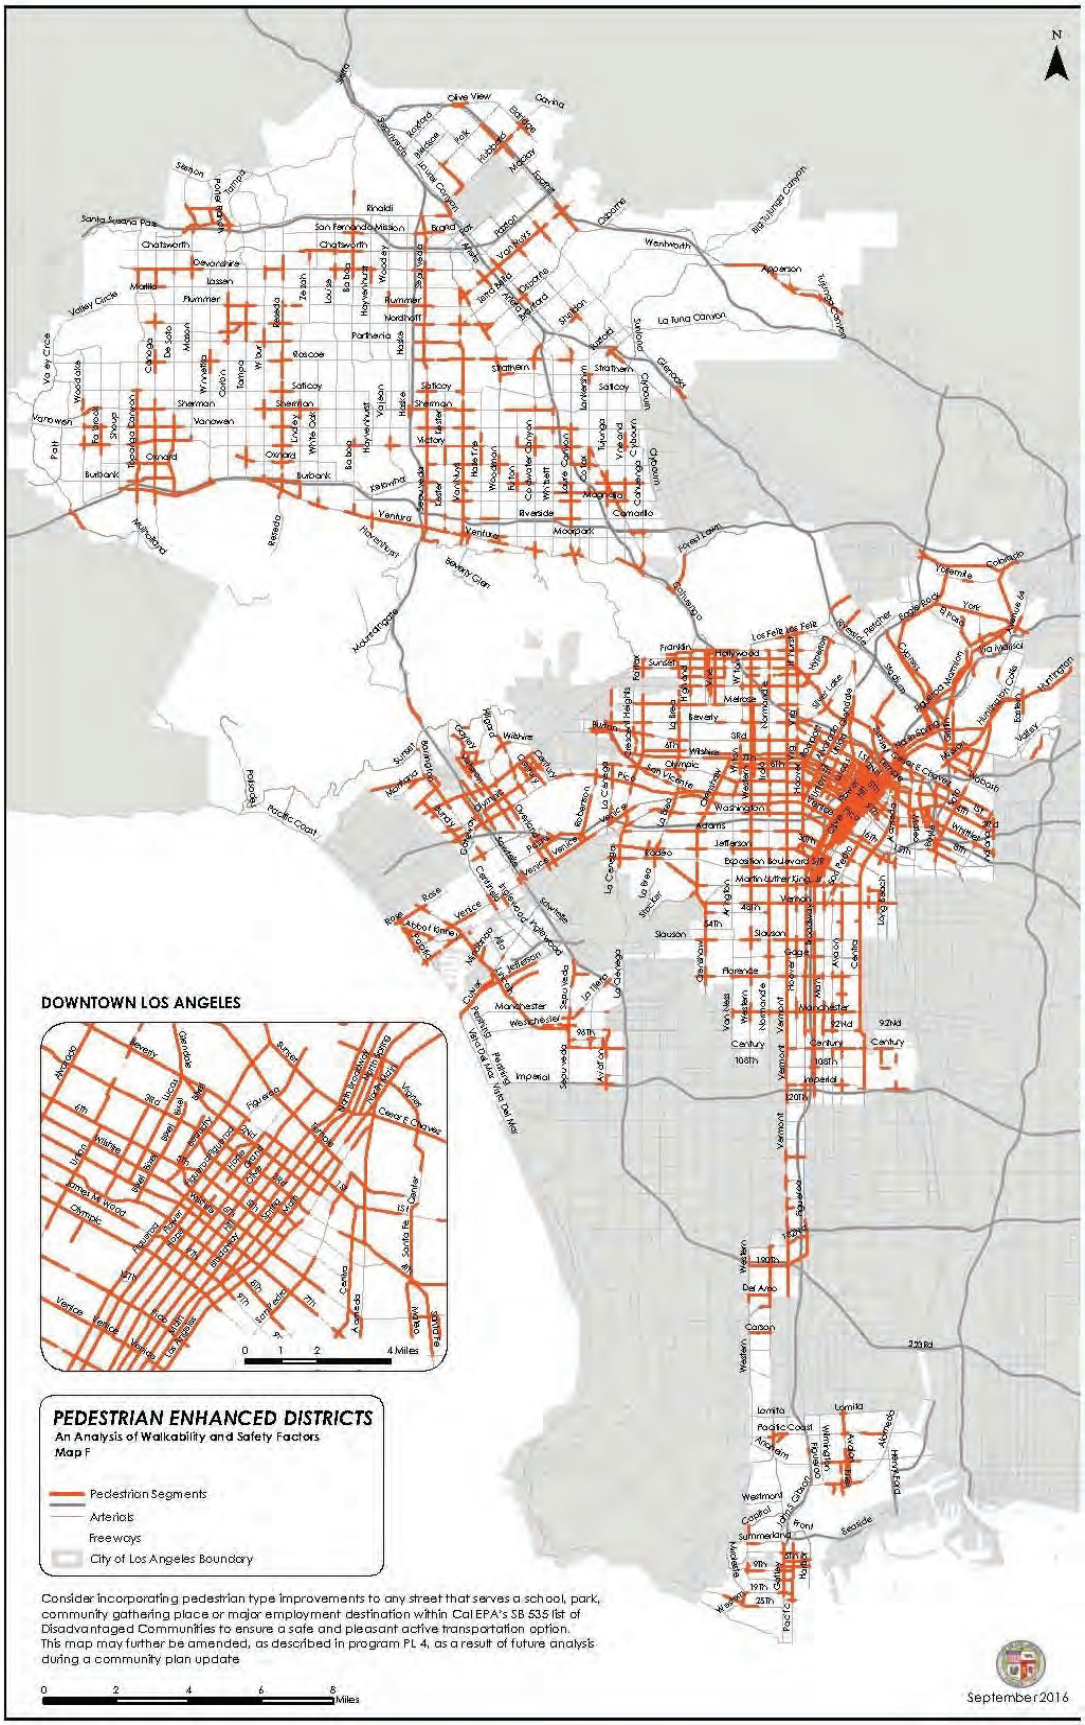

Table 21 – Residential/Local Street Diversion Criteria

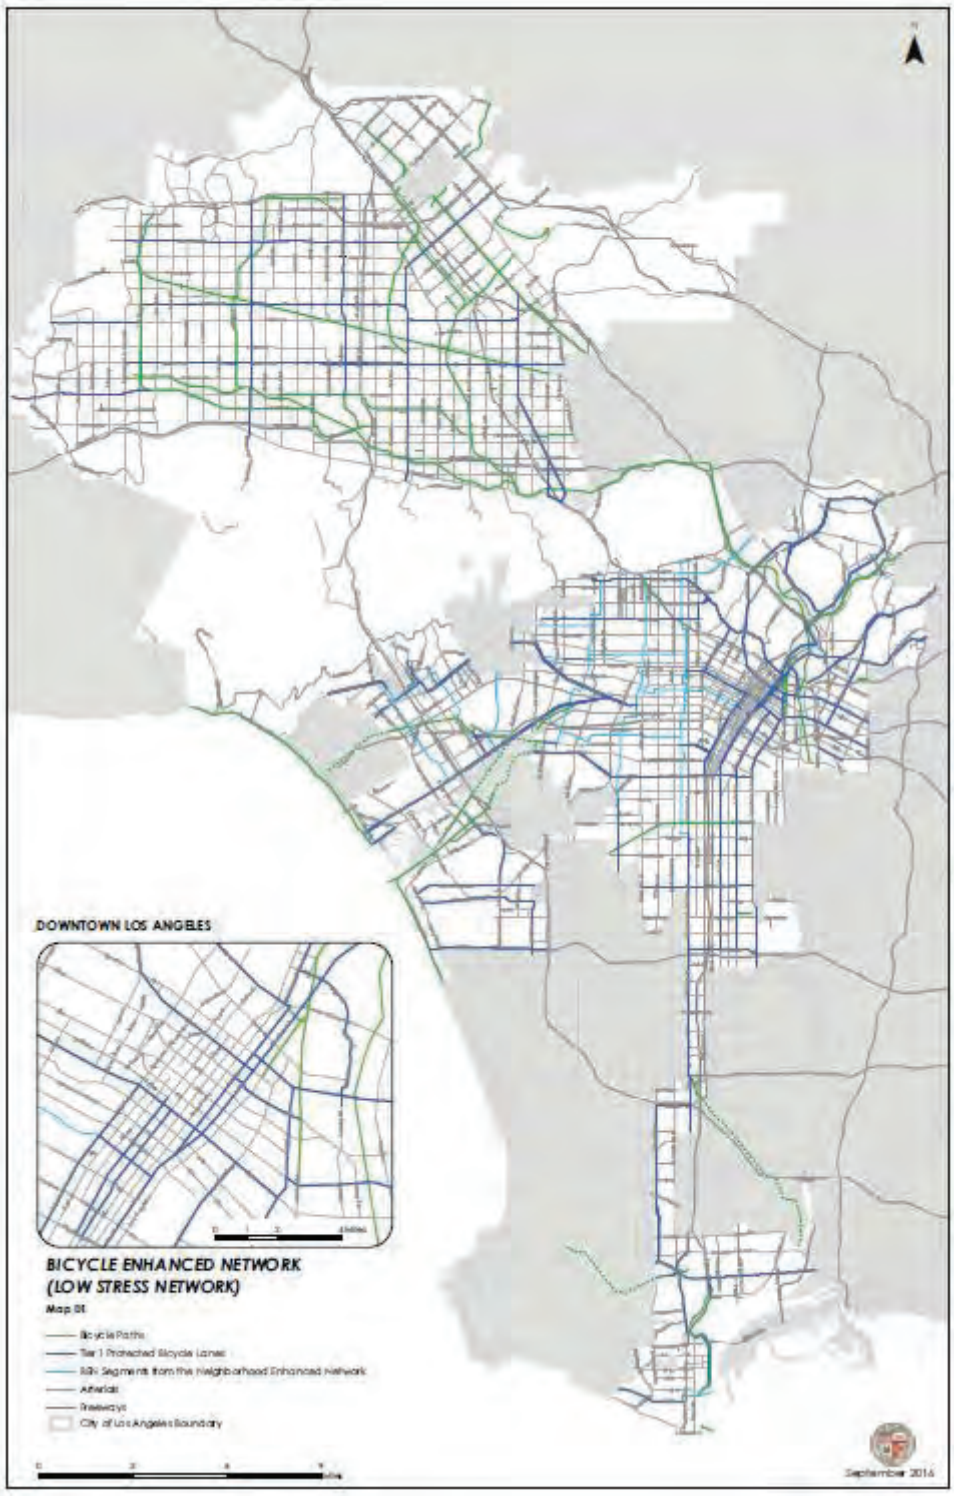
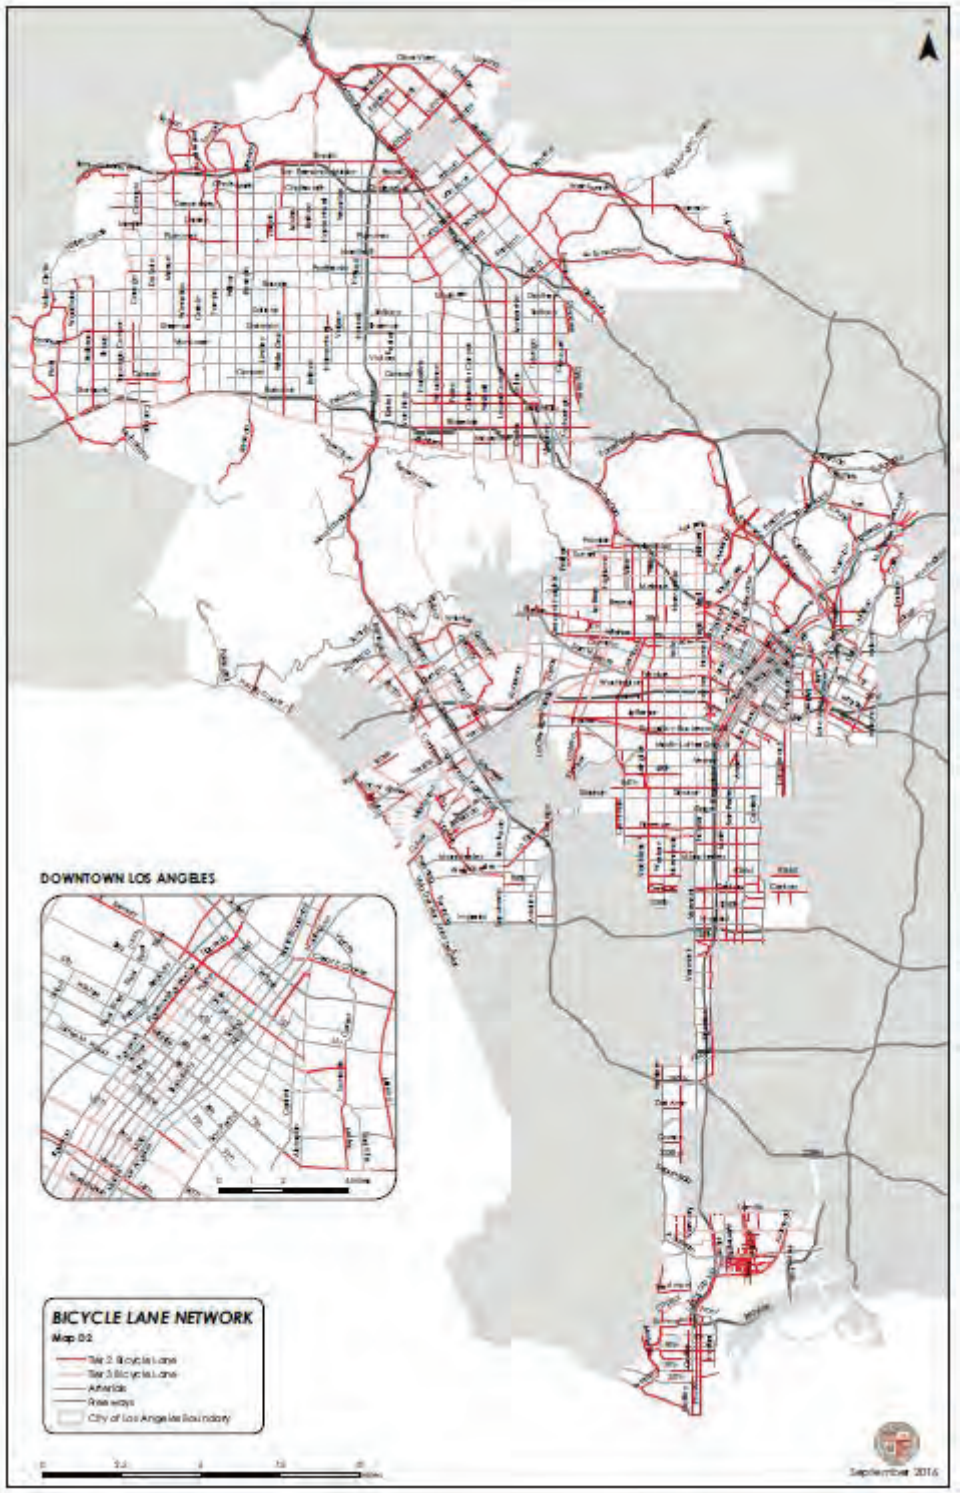
Project ADT with Project (Final ADT)	Project Related Increase in ADT
1 to 999	120 or more
1,000 to 1,999	12 percent or more of final ADT
2,000 to 2,999	10 percent or more of final ADT
3,000 or more	8 percent or more of final ADT



Recommended Actions



The project related traffic does not exceed the thresholds. Therefore, the project related traffic does not result in residential street diversion. The project is not subject to implementing corrective measures.

Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: Chaminade College Prepatory

Scenario:

Address: 7500 N CHAMINADE AVE, 91304

Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Single Family		DU
Retail | General Retail	53.5	ksf
School | High School	1360	Students

☐ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
School | High School		Students
School | High School	1360	Students
(custom) Athletic Center | Retail/Non-Retail	Non-Retai	LU type
(custom) Athletic Center | Residents	0	Person
(custom) Athletic Center | Employees	4	Person
(custom) Athletic Center | Daily	952	Trips
(custom) Athletic Center | HBW-Attraction Split	4	Percent
(custom) Athletic Center | HBO-Attraction Split	51	Percent
(custom) Athletic Center | NHB-Attraction Split	23	Percent
(custom) Athletic Center | HBW-Production Spl	0	Percent
(custom) Athletic Center | HBO-Production Spl	0	Percent
(custom) Athletic Center | NHB-Production Spli	22	Percent

☑ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed
3,981 Daily Vehicle Trips	2,803 Daily Vehicle Trips
33,085 Daily VMT	22,681 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	-1,178 Net Daily Trips
The net increase in daily VMT ≤ 0	-10,404 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	0.000 ksf

The proposed project is not required to perform VMT analysis.

TDM Strategies

Select each section to show individual strategies

Use ☑ to denote if the TDM strategy is part of the proposed project or is a mitigation strategy

	Proposed Project	With Mitigation
Max Home Based TDM Achieved?	**No**	**No**
Max Work Based TDM Achieved?	**No**	**No**

A Parking

Reduce Parking Supply ☐ Proposed Prj ☐ Mitigation
- 100 city code parking provision for the project site
- 74 actual parking provision for the project site

Unbundle Parking ☐ Proposed Prj ☐ Mitigation
- 100 monthly parking cost (dollar) for the project site

Parking Cash-Out ☐ Proposed Prj ☐ Mitigation
- 50 percent of employees eligible

Price Workplace Parking ☐ Proposed Prj ☐ Mitigation
- 6.0 daily parking charge (dollar)
- 50 percent of employees subject to priced parking

Residential Area Parking Permits ☐ Proposed Prj ☐ Mitigation
- 200 cost (dollar) of annual permit

B Transit

C Education & Encouragement

D Commute Trip Reductions

E Shared Mobility

F Bicycle Infrastructure

Analysis Results

Proposed Project	With Mitigation
2,803 Daily Vehicle Trips	**2,803** Daily Vehicle Trips
22,681 Daily VMT	**22,681** Daily VMT
N/A Household VMT per Capita	**N/A** Household VMT per Capita
N/A Work VMT per Employee	**N/A** Work VMT per Employee

Significant VMT Impact?

Proposed Project	With Mitigation
Household: N/A Threshold = 9.4 15% Below APC	**Household: N/A** Threshold = 9.4 15% Below APC
Work: N/A Threshold = 11.6 15% Below APC	**Work: N/A** Threshold = 11.6 15% Below APC

Intersection Summary

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

7500 N. Chaminade Ave
LADOT Case No. SFV23-114459
LADOT Project ID No. 54764

Date: May 16, 2023

To: Claudia Rodriguez, Senior City Planner
Department of City Planning

From: Vicente Cordero, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION IMPACT ASSESSMENT FOR CHAMINADE COLLEGE PREPARATORY HIGH SCHOOL DEVELOPMENT LOCATED AT 7500 NORTH CHAMINADE AVENUE, 23241 WEST COHASSET STREET, 23260 WEST SATICOY STREET, 23217-23255 WEST SATICOY STREET, AND 7619-7629 NORTH WOODLAKE AVENUE (CPC-2009-1477-CU-ZV-ZAA-SPR)**

The Department of Transportation (LADOT) has reviewed the transportation assessment prepared by Armen Hovanessian Transportation Consulting (AHTC, Inc.), dated May 4, 2023, for the proposed Chaminade College Preparatory High School development located at 7500 North Chaminade Avenue, 23241 West Cohasset Street, 23260 West Saticoy Street, 23217-23255 West Saticoy and 7619-7629 North Woodlake Avenue in the Canoga Park-Winnetka-Woodland Hills-West Hills Community Planning Area of the City of Los Angeles. On July 30, 2019, pursuant to Senate Bill (SB) 743 and the recent changes to Section 15064.3 of the State's California Environmental Quality Act (CEQA) Guidelines, the City of Los Angeles adopted vehicle miles traveled (VMT) as the criteria by which to determine transportation impacts under CEQA. Based on the VMT thresholds established in LADOT's Transportation Assessment Guidelines (TAG), the proposed project would not result in a significant transportation impact on VMT as described below.

DISCUSSION AND FINDINGS

A. Project Description

The proposed project consists of the update and expansion of the existing Chaminade College Preparatory High School campus. The revised campus plan will include a total lot area of approximately 25.86 acres, including: 1) a new three-story school building, updated parking areas, remodeled athletic fields, new student quads, and renovated classrooms, student service centers and offices on the existing campus located on approximately 21.03 acres, at 7500 North Chaminade Avenue, 23241 West Cohasset Street and 23260 West Saticoy Street, 2) an expanded school campus area of approximately 4.83 acres located across Saticoy Street, at 23217-23255 West Saticoy Street and 7619-7629 North Woodlake Avenue, proposed for new athletic fields, an aquatic center/outdoor swimming pool, and accessory facilities/structures and associated surface parking facilities, and 3) a new pedestrian bridge

across Saticoy Street. The project area map can be seen in **Attachment A**. No increase in the maximum permitted student enrollment (1,360 students) is proposed. Upon project completion, the revised campus plan for the High School will include a total of approximately 193,818 square feet of Floor Area and approximately 501 on-site surface parking spaces. The school site and parking lots are accessible from four different two-way driveways on Cohasset Street, Chaminade Avenue, Keswick Street, and Saticoy Street. Vehicular access to the North Campus project site will be provided via three proposed two-way driveways including two driveways on Saticoy Street and one driveway on Woodlake Avenue. The project is expected to be completed by the year 2035.

B. CEQA Screening Threshold

A trip generation analysis was conducted to determine if the project would exceed the net 250 daily vehicle trips (DVT) screening threshold set forward by the TAG. The City of Los Angeles VMT Calculator Tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition, as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, determined that the project does **not** exceed the net 250 DVT threshold. The assessment determined that the project would generate a 1,178 net decrease in DVT and a 10,404 net decrease in daily VMT. The reduction in net DVT is the result of eliminating the shopping plaza which is a high trip generator use and replacing it with an athletic facility for the school use such as competitions and practices. As for community service, the school will provide limited access to other schools and the local community to benefit from the use of the athletic facilities.

Since the project's net DVT does not exceed the net 250 DVT threshold, further transportation impact assessment would not be required. Therefore, it was concluded that the implementation of the proposed project would not result in a significant VMT impact. A copy of the VMT calculator-screening pages are provided in **Attachment B.**

C. Access and Circulation

The access and circulation analysis included a delay study of the following intersections using the Highway Capacity Manual (HCM) methodology which calculates the amount of delay per vehicle based upon the intersection traffic volumes, lane configurations, and signal timing:

- Keswick Street & Saticoy Street
- Cohasset Street & Platt Avenue
- Cohasset Street & Woodlake Avenue
- Saticoy Street & Woodlake Avenue

Existing and Cumulative Traffic Conditions

Traffic volume counts were obtained for vehicular turning movements at the above study intersections. Vehicular turning movement counts were conducted on Wednesday, January 18, 2023, during the typical commuter hours of 6:00 AM to 9:00 AM and 3:00 PM to 6:00 PM, to obtain existing traffic volumes for the AM and PM peak hours respectively. To account for the future ambient traffic growth from intensification of existing developments and other projects that are located further than a half mile from the project site, the existing traffic volumes were increased by an ambient growth rate of 1% per year to the anticipated year of completion 2035.

Under the HCM methodology, level of service (LOS) at signalized and unsignalized intersections is defined based on the delay experienced per vehicle. The results for the Existing (2023), Existing (2023) Plus Project, Future (2035) Without Project, and Future (2035) Plus Project traffic conditions are shown in **Attachment C.** With the addition of the project traffic to the future traffic, the level of services for all traffic movements at the study intersections will remain substantially the same except for four traffic movements. However, the queueing length for all four traffic movements will only increase by less than one car length with negligible delay. Therefore, the project does not add any substantial amount of traffic to the study intersections. LADOT finds that the transportation assessment adequately evaluated potential project-related delays and level of service at the studied intersections.

Student Drop-Off/Pick-Up

AHTC, Inc. has prepared a Traffic management Plan (TMP) for the Chaminade College Preparatory High School to establish procedures related to student drop-off and pick-up operations.

The school site and parking lots are accessible from four different two-way driveways on Cohasset Street, Chaminade Avenue, Keswick Street, and Saticoy Street. These driveways are to be used for school faculty, staff, students, parents, and visitors. The Keswick driveway serves as an exit only driveway during the drop-off and pick-up times. Additionally, there is one on-street area on Saticoy Street used by school buses for student drop-off and pick-up with direct access to a pedestrian gate on the south side of Saticoy Street. The addition of the North Campus to the existing school operations will provide for three additional gated access points for the North Campus. There will be two two-way driveways on Saticoy Street serving the new (second) Senior Parking lot and one two-way driveway on Woodlake Avenue serving the parking lot adjacent to the aquatic center.

School Access Points:

1. Cohasset Street School Access

   The main gate located on Cohasset Street is designated to be used by sophomores, juniors, and staff. This access point provides ingress and egress access to the "Junior Parking Lot" with 216 parking spaces intended for self-driving junior students and staff. Approximately 196 self-driving juniors park at this location with 20 staff members. Parent drop-off or pick-up is not allowed anywhere on the Junior Parking Lot.

   Currently, parking is allowed on the north side of Cohasset Street east of Chaminade Avenue. The project proposes to install a passenger loading zone along the 400-foot school frontage on the north side of Cohasset Street to accommodate student drop-off and pick-up for queuing capacity for 20 vehicles along with bus loading and unloading for certain student activities usually occurring outside of normal drop-off and pick-up times.

2. Chaminade Avenue School Access

   Currently there is an onsite designated student drop-off and pick-up zone with vehicles entering the school main campus from the Chaminade Avenue gate and traveling northerly through the designated campus drop-off and pick-up zone and exiting through the Keswick Street "exit only" gate.

   Currently, parking is allowed on the eastside of Chaminade Avenue north of Cohasset Street. The project proposes to install no parking time restricted

signs for the AM and PM drop-off and pick-up times along the 600-foot school frontage on the eastside of Chaminade Avenue north of Cohasset Street. The parking restriction would allow queueing vehicles to form a line closer to the eastside of the street thereby avoid blocking the roadway.

3. Saticoy Street School Access (Main Campus)
   The gate located on the south side of Saticoy Street is designated to be used by seniors and staff. This access point provides ingress and egress access to the "Senior Parking Lot" with 168 parking spaces intended for self-driving students. Parent drop-off or pick-up is not allowed at this access point or anywhere on the Senior Parking Lot.

4. Saticoy Street School Access (North Campus)
   The gates located on the north side of Saticoy Street are designated to be used by seniors and staff to access 86 parking spaces. This access point provides ingress and egress access to the new Senior Parking Lot intended for self-driving students and staff. Parent drop-off or pick-up is not allowed at this access point or anywhere on the new Senior Parking Lot.

5. Woodlake Avenue School Access
   The gate located on the west side of Woodlake Avenue is designated to be used by seniors and staff. This access point provides ingress and egress access to the new Senior Parking Lot intended for self-driving students and staff. Parent drop-off or pick-up is not allowed at this access point or anywhere on the new Senior Parking Lot.

The school proposes to execute many traffic management steps during the school drop-off and pick-up peak periods to minimize the impacts to the surrounding neighborhood, the adjacent roadways, including using staff to assist in loading and unloading students. The school should strive for improving efficiency of the drop-off and pick-up operations by continually training staff on the procedures and distributing the traffic management information to the parents. This will help to minimize the disruptions to non-school traffic flow in the vicinity of the school.

LADOT finds that the TMP adequately evaluated the drop-off and pick-up operations at the school. The applicant shall consult with the LADOT West Valley District Office for the appropriate parking restriction signage.

PROJECT REQUIREMENTS

A. CEQA-Related Mitigation
   There are no CEQA related mitigation requirements required for this project.

B. Non-CEQA-Related Requirements and Considerations
   To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Construction Impacts
   LADOT recommends that a construction worksite traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section for review and approval prior to the start of any construction work. Refer to https://ladot.lacity.org/businesses/temporary-traffic-control-plans to determine which section to coordinate review of the worksite traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. LADOT also recommends that construction related traffic be restricted to off-peak hours to the extent possible.

2. Highway Dedication and Street Widening Requirements
   Per the Mobility Element of the General Plan, **Chaminade Avenue** is designated as a local street and would require an 18-foot half-width roadway within a 30-foot half-width right-of-way. **Cohasset Street** is designator as a collector street and would require a 20-foot half-width roadway within a 33-foot half-width right-of-way. **Saticoy Street** is designated as an Avenue II and would require a 28-foot half-width roadway within a 43-foot half-width right-of-way. **Woodlake Avenue** is designated as an Avenue II and would require a 28-foot half-width roadway within a 43-foot half-width right-of-way.

   The applicant should check with Bureau of Engineering's Land Development Group to determine if there are any applicable highway dedication, street widening, and/or sidewalk requirements for this project.

3. Parking Requirements
   The revised campus plan proposes to provide approximately 501 on-site parking spaces upon project completion. The applicant should check with the Department of Building and Safety on the number of Code-required parking spaces needed for the project.

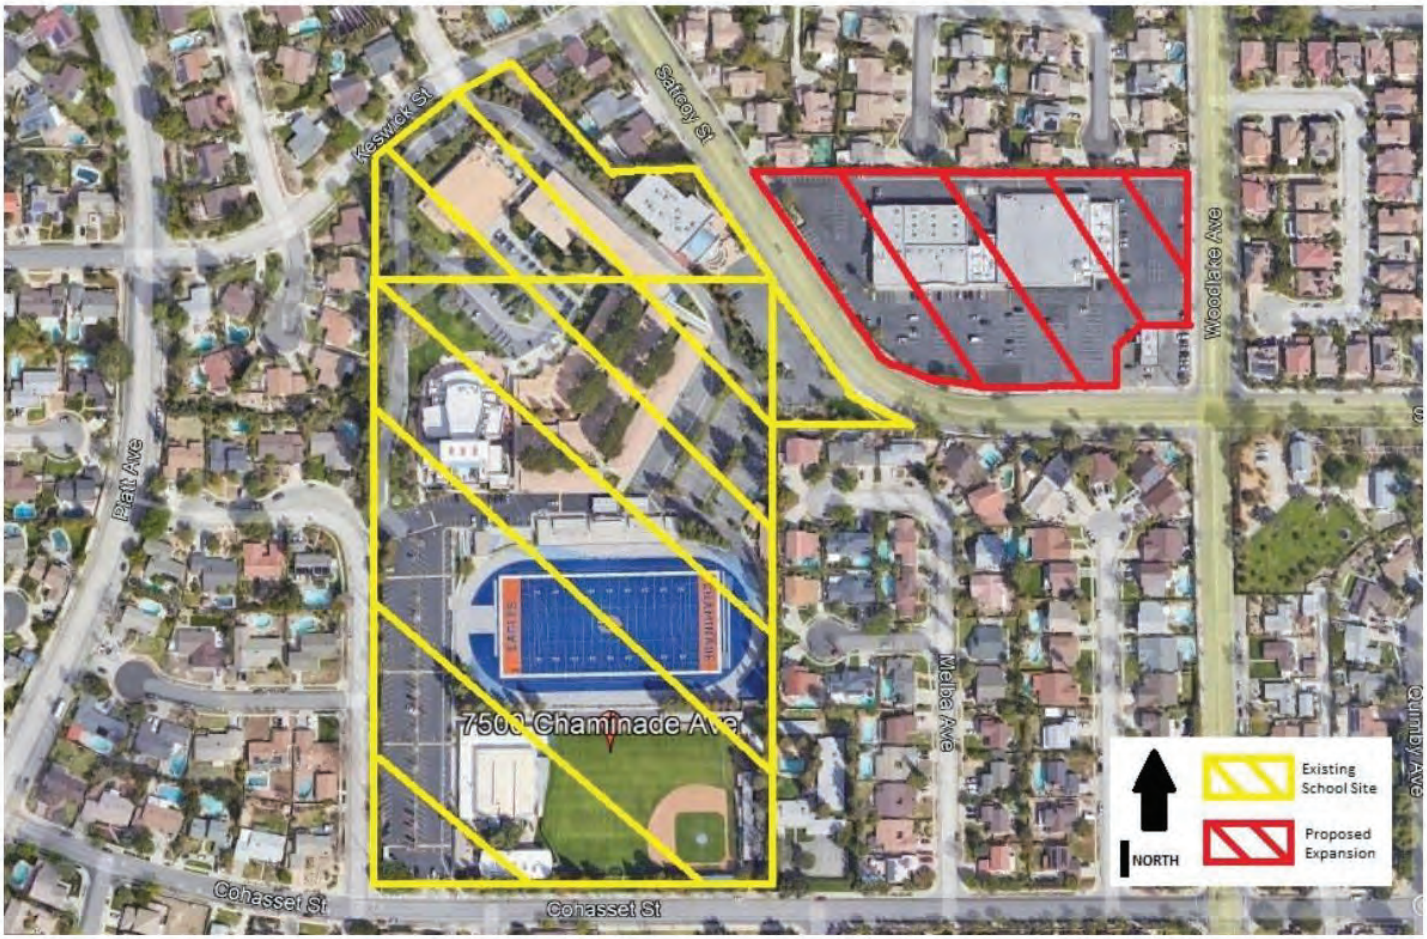
4. Driveway Access and Circulation
   The school site and parking lots are accessible from four different two-way driveways on Cohasset Street, Chaminade Avenue, Keswick Street, and Saticoy Street. These driveways are to be used for school faculty, staff, students, parents, and visitors. The Keswick Street driveway serves as an exit only driveway during the drop-off and pick-up times.

   Currently, the existing shopping center on the northwest corner of Saticoy Street and Woodlake Avenue has four existing two-way driveways on Saticoy Street and two existing two-way driveways off Woodlake Avenue. The project proposes to reduce the number of driveways such that vehicular access to the project site will be provided via three proposed two-way driveways. Two two-way driveways are proposed on Saticoy Street serving the new (second) Senior Parking lot and one two-way driveway is proposed on Woodlake Avenue serving the parking lot adjacent to the aquatic center. A copy of the project site plan is shown in **Attachment D**.

The applicant shall consult with the LADOT West Valley District Office for the appropriate signage for the proposed passenger loading zone for drop-off and pick-up on Cohasset Street along with any other parking restriction signage that may be needed.

The review of this study does not constitute approval of the existing driveway dimensions, access, and circulation scheme with regard to this project. Those elements require separate review and approval and should be coordinated with LADOT's Valley Planning Coordination Section (6262 Van Nuys Boulevard, Rm 320, @ 818-374-4699). To minimize and prevent last-minute design changes, the applicant should contact LADOT before the commencement of building or parking layout design efforts, for driveway width and internal circulation requirements. New driveways should be Case-2, designed with a recommended width of 28 feet for two-way operations, or 16 feet for one-way operations, or to the satisfaction of LADOT. Additionally, the applicant should check with City Planning regarding the project's vehicular access and design.

5. Development Review Fees
   Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.



If you have any questions, please contact Sheila Ahoraian of my staff at (818) 374-4690.

TECHNICAL MEMORANDUM

To: Stacie Henderson
CAJA Environmental Services, LLC
15350 Sherman Way, Suite 315
Van Nuys, California 91406

From: Rafaella Lisboa, Project Manager

Date: March 9, 2023

Re: **Tribal Cultural Resources Review for the Proposed Chaminade College Preparatory High School Project, West Hills, California / SWCA Project No. 067816**

INTRODUCTION AND SUMMARY

CAJA Environmental Services, LLC (CAJA) retained SWCA Environmental Consultants (SWCA) to prepare a tribal cultural resource review for the proposed Chaminade College Preparatory High School Project (project), on behalf of Chaminade College Preparatory (Applicant). The project is located in the West Hills neighborhood of the city of Los Angeles, California. The project proposes to update and expand the campus at Chaminade College Preparatory high school. The improvements to the Main Campus will include two new quads, a new administrative office building, updates to existing classrooms and offices, two new sports fields, and temporary portable buildings. The development of the North Campus includes a new surface parking lot, two sports fields, and a pool. In addition, a new pedestrian bridge across Saticoy Street is proposed to connect the Main Campus and the North Campus. The project site is currently developed, with the Main Campus containing the existing Chaminade College Preparatory high school, which includes multi-story academic and administrative buildings, sports fields, and facilities, and the proposed North Campus containing a one-story multi-tenant mini shopping center and surface parking lot, built between 1962 and 1964. The surrounding area is fully urbanized and is characterized primarily by residential properties.

The project is subject to review under the California Environmental Quality Act (CEQA), and the City of Los Angeles (City) Department of City Planning is the lead CEQA agency. The project site is composed of five parcels: 7500 Chaminade Avenue (Assessor's Parcel Number [APN] 2027-005-002 and -009), which contains the high school campus (the Main Campus), the proposed project will develop another property designated as the North Campus, which is located at the northwest corner of Saticoy Street and Woodlake Avenue, at 23255 Saticoy Street, 7629 Woodlake Avenue, and 7621 Woodlake Avenue (APNs 2027-005-005, 2027-005-006, and 2027-005-007). The project site is in Section 35, Township 2 North, Range 17 West, and is plotted on the U.S. Geological Survey (USGS) Calabasas, California, quadrangle (Appendix A, Figures A-1 through A-3).[1]

[1] All figures in this report are included in Appendix A.

This technical memorandum provides a review of available evidence for known tribal cultural resources within the project site and analyzes the likelihood (i.e., sensitivity) for unknown tribal cultural resources to be present as buried archaeological deposits. The results of this study are intended to provide a basis upon which the potential for impacts to tribal cultural resources can be assessed in accordance with the significance thresholds in Appendix G of the CEQA Guidelines. This study includes a summary of resources identified in the California Historical Resources Information System (CHRIS) requested from the South Central Coastal Information Center (SCCIC), the results of a Sacred Lands File (SLF) search requested from the Native American Heritage Commission (NAHC), and background research. The CHRIS and SLF results letters are included in Appendices B and C, respectively.

Public Resources Code (PRC) Section 21082.3.1, as amended by Assembly Bill 52 (AB 52), requires the lead agency to begin consultation with culturally and geographically affiliated California Native American tribes prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for a project. The evaluation of a tribal cultural resource must consider the cultural values to a California Native American tribe, in addition to scientific and archaeological considerations. Although not all tribal cultural resources are archaeological in nature, those preserved below the surface would likely fit the definition of both an archaeological and tribal cultural resource. Accordingly, SWCA's assessment of the buried resource potential focuses exclusively on the scientific and archaeological sources of evidence, consistent with standard industry practices, and the analysis of the sensitivity for buried tribal cultural resources considered only those that are archaeological in nature. Tribal consultation for the project is being conducted concurrent with the preparation of this report; therefore, any input from consulting tribal parties has not been included.

This report was prepared by SWCA Cultural Resources Project Manager Rafaella Lisboa, M.A., Registered Professional Archaeologist (RPA), and Principal Investigator Michael Bever, Ph.D., RPA. Dr. Bever meets the Secretary of the Interior Professional Qualification Standards in archaeology and the Society for California Archaeology's standards for a principal investigator. Copies of this report are on-file with the Applicant, the City's Department of City Planning, and the SCCIC at California State University, Fullerton. All background materials are on file with SWCA's office in Pasadena, California.

Summary of Results

SWCA reviewed the results of CHRIS and SLF searches. Results from the CHRIS record search did not identify any known resources within the project site. The NAHC SLF search results were positive, indicating that there are known tribal cultural resources within the project site. The NAHC provided a contact list of tribal representatives who may have more information about these known resources. SWCA's supplemental research found that at least three former Chumash, Gabrielino, and Fernandeño-Tataviam villages—*Jucjauyunga, Momonga,* and *Ceegenga*—are in the vicinity, but outside of the project site. Aerial photographs from the early to mid-twentieth century show developments associated with former agricultural land uses directly within the project site.

While there are known significant Native American village sites located in the general vicinity, such as *Jucjauyunga* located approximately 1.6 miles southwest and *Momonga* 3.5 miles to the north, the project site is not located near enough or in a comparable environmental setting to suggest an increased likelihood for associated tribal cultural resources within the project site. The project site is set within what has been a broad floodplain of the Los Angeles River for which there are only generalized indicators of former use by Native Americans such that substantial material deposits are likely to have occurred. These generalized indicators include a reasonable proximity to former stream courses and important natural resources that occur in higher densities near waterways. Two intermittent streams are located in the vicinity of the project site: Dayton Creek formed approximately 0.6 mile to the north, and Bell Creek is approximately 0.7 mile to the south. Dayton Creek connects to Chatsworth Creek, which is located

approximately 0.7 miles east of the project site. Both Chatsworth and Bell Creeks connect to the south-flowing Los Angeles River, currently located approximately 2.1 miles southeast of the project site. The proximity to these streams could suggest the area was more intensively used by Native Americans, such that there would be a corresponding increase in the potential for a tribal cultural resource to be present. Late to middle Pleistocene old alluvial fan deposits below the artificial fill within the project site are naturally less likely to contain buried archaeological resources. The depth to the depth to the underlying, previously undisturbed sediments is unknown, but likely very shallow (e.g., 3 feet below ground surface). Additionally, the impacts to the near-surface from Historic period agricultural use and developments further decreases the likelihood of encountering any buried archaeological resources due to the compromised integrity of the physical setting. **Based on these findings, the sensitivity for tribal cultural resources is considered low.**

Although there are no known archaeological resources within the project site, and the sensitivity for tribal cultural resources is considered low, the location of a tribal cultural resource that is archaeological in nature is unpredictable and the potential for a resource to be present cannot be fully ruled out. SWCA assumes that the City will impose a condition of approval that addresses the inadvertent discovery of a tribal cultural resource. The condition requires that in the event a potential tribal cultural resource is discovered in the project site during ground-disturbing activities such as demolition, excavation, grading, or drilling, all ground-disturbing activities temporarily cease until it is determined whether the discovery is a tribal cultural resource and appropriate treatment is determined through consultation with a California Native American tribe on the City's AB 52 list and with a qualified archaeologist.

REGULATORY SETTING

State Regulations

Assembly Bill 52

AB 52 of 2014 amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3. Section 4 of AB 52 adds Sections 21074(a) and (b) to the PRC, which address tribal cultural resources and cultural landscapes. Section 21074(a) defines tribal cultural resources as one of the following:

(1) Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
    (A) Included or determined to be eligible for inclusion in the California Register of Historical Resources.
    (B) Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.
(2) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Section 1(a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on tribal cultural resources should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to tribal cultural resources, the consultation shall include those

topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

AB 52 TRIBAL CONSULTATION

California Native American tribes are defined in AB 52 as any Native American tribe located in California that is on the contact list maintained by the NAHC, whether or not they are federally recognized. AB 52 specifies that California Native American tribes traditionally and culturally affiliated with a geographic area may have expertise concerning their tribal cultural resources. Once an application for a project is completed or a public agency makes a decision to undertake a project, the lead agency has 14 days to formally notify Native American tribes designated by the NAHC as having traditional and cultural affiliation with a given project site and previously requested in writing to be notified by the lead agency (PRC Section 21082.3.1[b][d]). The notification shall include a brief description of the proposed project, the location, contact information for the agency contact, and notice that the tribe has 30 days to request, in writing, consultation (PRC Section 21082.3.1[d]). Consultation must be initiated by the lead agency within 30 days of receiving any California Native American tribe's request for consultation. Furthermore, consultation must be initiated prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report for a project (PRC Section 21082.3.1[b][e]).

Consistent with the stipulations stated in Senate Bill 18 (Government Code Section 65352.4), consultation may include discussion concerning the type of environmental review necessary, the significance of the project's impacts on the tribal cultural resources, and, if necessary, project alternatives or the appropriate measures for preservation and mitigation that the California Native American tribe may recommend to the lead agency (PRC Section 21080.3.2[a]). The consultation shall be considered concluded when either the parties agree to measures mitigating or avoiding a significant effect, if one exists, on a tribal cultural resource; or a party, acting in good faith and after reasonable effort, concludes that agreement cannot be reached (PRC Section 21082.3.2[b]).

Pursuant to Government Code Sections 6254 and 6254.10, and PRC Section 21082.3(c), information submitted by a California Native American tribe during consultation under AB 52 shall not be included in the environmental document or otherwise disclosed to the public by the lead agency, project applicant, or the project applicant's agent, unless written permission is given. Exemptions to the confidentiality provisions include any information already publicly available, in lawful possession of the project applicant before being provided by the tribe, independently developed by the project applicant or the applicant's public agent, or lawfully obtained by a third party (PRC Section 21082.3[c]).

California Register of Historical Resources

Created in 1992 and implemented in 1998, the California Register of Historical Resources (CRHR) is "an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (PRC Sections 21083.2 and 21084.1). Certain properties, including those listed in or formally determined eligible for listing in the National Register of Historic Places (NRHP) and California Historical Landmarks numbered 770 and higher, are automatically included in the CRHR. Other properties recognized under the California Points of Historical Interest program, identified as significant in historical resources surveys, or designated by local landmarks programs, may be nominated for inclusion in the CRHR. According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if

the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- **Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
- **Criterion 2:** It is associated with the lives of persons important in our past.
- **Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
- **Criterion 4:** It has yielded, or may be likely to yield, information important in history or prehistory.

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity does not meet NRHP criteria may still be eligible for listing in the CRHR (California Association of Environmental Professionals 2019).

Local Regulations

City of Los Angeles, Department of City Planning

CONDITION OF APPROVAL

The City has developed a standard condition of approval to address the inadvertent discovery of tribal cultural resources during activities of a proposed project. The condition of approval is intended to ensure that if any such discoveries occur, they will be handled in compliance with state law so that any potential impacts would be less than significant. The condition of approval requires that in the event of discovery of a potential tribal cultural resource, all ground-disturbing activities—including but not limited to demolition, excavation, grading, or drilling—will temporarily cease. These activities cannot resume in the vicinity of the discovery until it is determined whether the discovery is a tribal cultural resource. If the discovery is confirmed as a tribal cultural resource, appropriate treatment will be determined if necessary. The identification and any treatments will be determined in consultation with a California Native American tribe on the City's AB 52 list and a qualified archaeologist. SWCA assumes the City will impose this standard condition of approval for the inadvertent discovery of tribal cultural resources.

ENVIRONMENTAL SETTING

The project site is located in the West Hills neighborhood situated in the western portion of the San Fernando Valley. The project site is within a highly developed and urbanized area bordered by the Simi Hills to the west, Chatsworth to the north, Canoga Park to the east and the U.S. Route 101 to the south. The immediate vicinity of the project site is characterized primarily by residential properties. Geographically, the project site is located 4 miles north of the Santa Monica Mountains and 2 miles southwest of Chatsworth Reservoir, which is formed on the eastern margin of the Simi Hills. The project site is situated on a relatively flat, alluvial plain with a slight southern aspect at an elevation of approximately 255 meters (m) (837 feet) above mean sea level. Historical topographic maps show two intermittent streams in the vicinity of the project site: Dayton Creek formed approximately 0.6 miles to the north, and Bell Creek is approximately 0.7 mile to the south. Dayton Creek connects to Chatsworth Creek, which is located approximately 0.7 miles east of the project site. Both Chatsworth and Bell Creeks connect to the south-flowing Los Angeles River, currently located approximately 2.1 miles southeast of the project site (Figure A-4).

The San Fernando Valley is drained by the Los Angeles River and its tributaries. The main channel of the Los Angeles River is located approximately 6.5 miles south of the project site. Historically the Los Angeles River did not have a permanent, well-defined channel this far west within the San Fernando Valley. Rather, with significant portions of the water being located underground, the surface in this vicinity was characterized by several smaller-order streams that would drain east and form tributaries of the Los Angeles River (Gumprecht 2001). Cycles of flooding would alter these stream courses and establish channels in some places, but through a series of flood control projects in the early to mid-twentieth century, a permanent channel for the Los Angeles River was established in its current location and by 1964, was lined with concrete. It was not just the Los Angeles River that was prone to flooding. Several of the stream courses extending from the surrounding foothills, which may have been nothing more than dry washes for years at a time, could become saturated and subject large areas to violent flooding during significant storms.

As mentioned above, the San Fernando Valley is primarily defined by deposits of alluvium—sediments deposited by water. These deposits began accumulating during the Pleistocene Epoch, which ended approximately 12,000 years ago, and are overlaid by Holocene age deposits—those that are formed fewer than 12,000 years ago. The maximum thickness of Holocene age deposits in the San Fernando Valley varies geographically, and ranges between 900 feet thick near Burbank and 100 feet thick in the north. The project site is mapped within a surficial geologic unit defined as late to middle Pleistocene old alluvial fan deposits, undivided (Qof) and late Miocene Modelo Formation, undivided (Tm). According to the paleontological resources study conducted for this project, the depth to the underlying, previously undisturbed sediments is unknown, but likely very shallow (e.g., 3 feet below ground surface) (Carson 2022).

CULTURAL SETTING

Prehistoric Period

In the last several decades, researchers have devised numerous prehistoric chronological sequences to aid in understanding cultural changes in southern California. Building on early studies and focusing on data synthesis, Wallace (1955, 1978) developed a prehistoric chronology for the southern California coastal region that is still widely used today and is applicable to near-coastal and many inland areas. Four horizons are presented in Wallace's prehistoric sequence: Early Man, Milling Stone, Intermediate, and Late Prehistoric. Although Wallace's 1955 synthesis initially lacked chronological precision due to a paucity of absolute dates (Moratto 1984:159), this situation has been alleviated by the availability of thousands of radiocarbon dates obtained by southern California researchers in the last three decades (Byrd and Raab 2007:217). Given this, several revisions were subsequently made to Wallace's 1955 synthesis using radiocarbon dates and projectile point assemblages (e.g., Koerper and Drover 1983; Koerper et al. 2002; Mason and Peterson 1994). The summary of prehistoric chronological sequences for southern California coastal and near-coastal areas presented below is a composite of information in Wallace (1955) and Warren (1968), as well as later studies, including Koerper and Drover (1983).

Horizon I: Early Man (ca. 10,000–6000 B.C.)

The earliest accepted dates for archaeological sites on the southern California coast are from two of the northern Channel Islands, located off the coast of Santa Barbara. On San Miguel Island, Daisy Cave clearly establishes the presence of people in this area ca. 10,000 years ago (Erlandson 1991:105). On Santa Rosa Island, human remains have been dated from the Arlington Springs site to ca. 13,000 years ago (Johnson et al. 2002). Present-day Orange and San Diego Counties contain several sites dating from 9,000 to 10,000 years ago (Byrd and Raab 2007:219; Macko 1998:41; Mason and Peterson 1994:55–57; Sawyer and Koerper 2006). Although the dating of these finds remains controversial, several sets of

human remains from the Los Angeles Basin (e.g., "Los Angeles Man," "La Brea Woman," and the Haverty skeletons) apparently date to the middle Holocene, if not earlier (Brooks et al. 1990; Erlandson et al. 2007:54).

Recent data from Horizon I sites indicate that the economy was a diverse mixture of hunting and gathering, with a major emphasis on aquatic resources in many coastal areas (e.g., Jones et al. 2002) and a greater emphasis on large-game hunting inland.

Horizon II: Milling Stone (6000–3000 B.C.)

Set during a drier climatic regime than the previous horizon, the Milling Stone horizon is characterized by subsistence strategies centered on collecting plant foods and small animals. The importance of seed processing is apparent in the dominance of stone grinding implements in contemporary archaeological assemblages, namely milling stones (metates) and hand stones (manos). Recent research indicates that Milling Stone horizon food procurement strategies varied in both time and space, reflecting divergent responses to variable coastal and inland environmental conditions (Byrd and Raab 2007:220).

Horizon III: Intermediate (3000 B.C.–A.D. 500)

The Intermediate horizon is characterized by a shift toward a hunting and maritime subsistence strategy, along with a wider use of plant foods. An increasing variety and abundance of fish, land mammal, and sea mammal remains are found in sites from this horizon along the California coast. Related chipped stone tools suitable for hunting are more abundant and diversified, and shell fishhooks became part of the toolkit during this period. Mortars and pestles became more common during this period, gradually replacing manos and metates as the dominant milling equipment and signaling a shift away from the processing and consuming of hard seed resources to the increasing importance of the acorn (e.g., Glassow et al. 1988; True 1993).

Horizon IV: Late Prehistoric (A.D. 500–Spanish contact)

In the Late Prehistoric horizon, there was an increase in the use of plant food resources in addition to an increase in land and sea mammal hunting. There was a concomitant increase in the diversity and complexity of material culture during the Late Prehistoric horizon, demonstrated by more classes of artifacts. The recovery of a greater number of small, finely chipped projectile points suggests increased use of the bow and arrow rather than the atlatl (spear thrower) and dart for hunting. Steatite cooking vessels and containers are also present in sites from this time, and there is an increased presence of smaller bone and shell circular fishhooks; perforated stones; arrow shaft straighteners made of steatite; a variety of bone tools; and personal ornaments such as beads made from shell, bone, and stone. There was also an increased use of asphalt for waterproofing and as an adhesive. Late Prehistoric burial practices are discussed in the Native American Ethnographic Overview section below.

By A.D. 1000, fired clay smoking pipes and ceramic vessels were being used at some sites (Drover 1971, 1975; Meighan 1954; Warren and True 1961). The scarcity of pottery in coastal and near-coastal sites implies that ceramic technology was not well developed in that area, or that occupants were trading with neighboring groups to the south and east for ceramics. The lack of widespread pottery manufacture is usually attributed to the high quality of tightly woven and watertight basketry that functioned in the same capacity as ceramic vessels.

During this period, there was an increase in population size accompanied by the advent of larger, more permanent villages (Wallace 1955:223). Large populations and, in places, high population densities are characteristic, with some coastal and near-coastal settlements containing as many as 1,500 people. Many

of the larger settlements were permanent villages in which people resided year-round. The populations of these villages may have also increased seasonally.

In Warren's (1968) cultural ecological scheme, the period between A.D. 500 and European contact, which occurred as early as 1542, is divided into three regional patterns: Chumash (Santa Barbara and Ventura Counties), Takic/Numic (Los Angeles, Orange, and western Riverside Counties), and Yuman (San Diego County). The seemingly abrupt introduction of cremation, pottery, and small triangular arrow points in parts of modern-day Los Angeles, Orange, and western Riverside Counties at the beginning of the Late Prehistoric period is thought to be the result of a Takic migration to the coast from inland desert regions. Modern Gabrielino, Juaneño, and Luiseño people in this region are considered the descendants of the Uto-Aztecan, Takic-speaking populations that settled along the California coast in this period.

Ethnographic Overview

Alfred Kroeber was the first scholar to propose boundaries of traditional territories inhabited by California Native American populations following Spanish contact. Kroeber's ethnographic work (1925) established the conventions for names and territorial boundaries, drawn heavily from linguistic groupings, on which subsequent scholarly research would be based (Bean and Smith 1978). These proposed tribal boundaries, however, are far from exact and subsequent scholars have suggested alternate delineations for traditional tribal territories for the region (cf. Johnson 2006). Based on more recent iterations of traditional tribal territory boundaries, the project site is located just within the boundaries of the Ventureño Chumash (King 2011) along a shared border with the Gabrielino to the east, and the Tataviam to the northeast. Therefore, ethnographic contexts for all three tribal groups are presented below.

Chumash

The project area is a cultural transition zone and was traditionally occupied by the Ventureño Chumash (Grant 1978a–c; Kroeber 1925). The Chumash people lived between Malibu in Los Angeles County and San Marcos Creek near the Monterey County line, on all four of the northern Channel Islands, and as far east as the edge of Kern County (Milliken and Johnson 2005). The Chumash territory was divided into seven parts, each representing various linguistic subgroups, some of which were nearly mutually unintelligible (Kroeber 1925; Milliken and Johnson 2005). Most of our information regarding Chumash traditional culture comes from the ethnographic studies conducted by J. P. Harrington, who worked among the surviving Chumash population between 1912 and 1958. The following descriptions of Chumash society are compiled from scant ethnographic and ethnohistoric sources that entail numerous biases and should be taken as general accounts of Native lifeways observed at the time of European contact and later (after indigenous lifeways had been severely disrupted by European presence in the Americas) that likely preclude primary aspects of cultural identity and practices.

The term "Chumash" is derived from a Native American word initially applied to the people living on Santa Cruz Island (King 1994); though Chumash now refers to the entire linguistic and ethnic group of societies that occupied the coast between San Luis Obispo and northwestern Los Angeles County, including the northern Channel Islands, and inland to the western edge of the San Joaquin Valley. Neighboring groups included the Salinan to the north, the Southern Valley Yokuts and Tataviam to the east, and the Gabrielino (Tongva) to the south.

The Chumash spoke at least six closely related Chumashan languages, which have been divided into two broad groups—Northern Chumash (consisting only of Obispeño) and Southern Chumash (Purisimeño, Ineseño, Barbareño, Ventureño, and Island Chumash) (Mithun 2001). While Island Chumash was the most divergent of the five southern languages, Ventureño may have had the most internal variation with at least six distinct dialects. The Chumashan languages are considered by some to be part of the Hokan language family, though others consider Chumashan to be an isolate stock with a long history in the Santa

Barbara region, and not part of the Hokan linguistic family (Mithun 2001). As much of these languages were lost during the past several hundred years post-European contact, it is likely that debate regarding their origins will continue.

Numerous large Chumash villages extended along the Santa Barbara coastline at the time of European contact, particularly at the mouths of large drainages (Grant 1978a:Figure 1) suggesting extensive use of the greater area by Indigenous peoples. At the time of Spanish contact in 1542 and again in 1769, accounts describe settlement along the Santa Barbara Channel coast as relatively dense with multiple large villages. Estimates of total Chumash population for the initial Contact period vary from 8,000–10,000 (Kroeber 1925:551) to 18,000–22,000 (Cook and Heizer 1965:21). Coastal Ventureño and Barbareño Chumash villages were described as containing anywhere from 30 to 120 houses with several hundred to over 1,000 inhabitants and multiple canoes (Brown 2001; Grant 1978b). Early accounts by Spanish explorers note that inland villages were smaller than their coastal counterparts, with 100–500 occupants.

Permanent Chumash villages located along the coast contained hemispherical dwellings arranged in close groups. These were constructed of bent poles and covered by grass or tule mats. Average family dwellings measured approximately 6–7 m (20–23 feet) and had a hole in the roof through which light could enter and smoke would escape, and in rainy weather, these holes were covered with animal skins. Larger dwellings were also described for housing related family groups; these measured approximately 15–17 m (50–56 feet) and could contain around 60 people (Brown 2001; Hudson and Blackburn 1981). Houses in the smaller inland villages were described as rectangular and more like those found among the adjacent Takic speakers, though style and types of artifacts were distinctly like those used by the coastal Chumash (Grant 1978a:518). The chief's house was often the largest dwelling, encompassing his extended household and providing for his hospitality duties. Villages often contained storehouses, one or more subterranean sweat lodges, and a semi-circular dance ground and associated sacred ceremonial enclosure, with a nearby game field surrounded by low walls (McCall and Perry 1986). Satellite gathering or processing areas included earth ovens used to roast yucca and other foods, rockshelters, quarries, and bedrock mortars for processing acorns and similar plant resources (King 1994).

Each Chumash village had a formal cemetery, generally separate from the village proper. Ethnographic records indicate that cemeteries were marked by tall painted poles and frequently had an entrance area where ceremonies were performed. Within the cemetery, stone, wood, or bone markers identified burial sites. Occasionally, individual burials were marked by painted boards with markings indicating the occupation or clan of the deceased (Gamble et al. 2001). Prior to burial, a wake was held in a sacred enclosure. Individuals were then interred face down in a flexed position with personal objects including effigies, steatite pipes, bowls, ollas, beads, and other grave goods. Social differentiation and hierarchy are inferred from archaeological studies that identified distinct areas appearing to denote high- and low-status families within the cemetery grounds (King 1969).

Chumash society was organized into craft guilds including canoe building, bead making, basketry making, woodworking, and weapon making, among others (Miller 1988). Being a guild member had strong economic advantages. Membership was primarily open to the upper class, and ranking members of the guilds were *ʻantap* society members. Chumash society was divided into three classes (McCall and Perry 1986). Upper class members held the important social and religious positions, including chief, canoe builders and owners, and members in the *ʻantap* society. The middle class contained about half the population, mainly hunters, gatherers, and general workers, and social outcasts and unproductive people populated the lower class. Unlike their southern neighbors, the Chumash did not have a lineage organization and most elite marriages were matrilocal.

Every village had a chief, or *wot*, who was usually male, but hereditary rights to this role were passed down matrilineally (Johnson 1987). The *wot* had both political and religious ceremonial duties to perform; his assistant, the *paha*, helped officiate at rituals. Other officials known as *ksen* were "messengers who traveled from place to place, making announcements and gathering news for the *wot*" (McCall and Perry 1986:40). A large village usually had three to four chiefs, one of whom would be the head chief (Brown 2001). Other portions of Chumash territory were organized into provinces, or groups of villages that were ruled by a single chief.

Chumash subsistence practices varied somewhat between coastal and inland groups based on available resources, but like many indigenous Californian groups, the acorn was a dietary staple. Acorns were gathered in the autumn and stored in villages, where they were ground to a meal, leached, and then cooked daily. In addition to acorns—mainly from the coast live oak (*Quercus agrifolia*)—other nuts, such as pine nuts and walnuts, were collected. Chumash diet also included cattail roots, fruits, and pads from *Opuntia* cactus, along with bulbs and tubers (Miller 1988; Timbrook 2007). Yucca stalks were harvested and roasted, and the buds and flowers were also gathered and consumed. Staples included small hard seeds of several annual and perennial plants such as grass, chia and other sages, and buckwheat. Seasonal resources included berries (blackberry, elderberry, grape, madrone, laurel, and wild cherry), mushrooms, and cress.

Seeds were processed using various grinding implements including wooden and stone mortars, pestles, bedrock mortars, and hand stones. Tools used to gather plant foodstuffs consisted of at least several forms of gathering and winnowing baskets, woven seed beaters, and sharpened digging sticks. A variety of basket styles were manufactured for the processing and serving of foods, including straining and leaching acorn meal, and processed meal and other foods were cooked in water-tight baskets (Miller 1988). Other baskets were made for storing grains, acorns, meal, prepared foods, and other dietary resources. Carved steatite bowls, ollas, and comals also were used for cooking, and meals were sometimes served on wooden plates and bowls.

On the coast, shellfish was harvested from intertidal habitats and fishing was conducted from shore as well as from wooden plank canoes (*tomol*), which may also have been employed for marine mammal hunting. The *tomol* not only facilitated marine resource procurement but also facilitated interaction between the mainland and the Channel Islands. Seals, sea lions, otters, porpoises, and whales were hunted with harpoons. Deep-sea fish such as bonito, sea bass, halibut, barracuda, yellowtail, and shark were caught with hooks and lines, harpoons, and deep or shoreline nets. Digging sticks were used to procure clams and scallops from the beach sands, and flat bone or wood wedges were used to pry mussels and abalone from intertidal rocks during low tides.

Local Chumash populations captured mule deer, antelope, cottontail, jackrabbit, mice, and wood rats; mountain and valley quail, dove, and resident and migratory waterfowl, among other birds; and various types of reptiles, amphibians, and insects. Larger animals, such as mule deer, coyote, and fox, were hunted with the bow and arrow; smaller game was captured with traps and snares. Hunting was accomplished by various means, with the bow and arrow, spears, slings, throwing sticks, traps, and deadfalls (Hudson and Blackburn 1979). Hunting parties were comprised of up to eight people; communal hunting groups used large nets and clubs, and individuals used throwing sticks to kill smaller prey like rabbits and hares (Brown 2001). Bone and shell were used to produce a wide range of utilitarian and nonutilitarian items, such as eating utensils, ornaments, whistles, gorges, fishhooks, harpoons, awls, and antler wedges. The steatite industry was especially developed in the southern areas, manifested in a variety of ornaments, vessel forms, and ceremonial objects.

Trade was an integral component of Chumash subsistence, and trade relationships among inland, coastal, and island groups were well established, though the specifics of what was traded between island and

mainland groups is less clear. Coastal Chumash traded with their inland Chumash neighbors, who in turn traded with their Yokut, Tataviam, Kitanemuk, and Gabrielino neighbors to the north, east, and south (Miller 1988). Extensive trade network increased the diversity of goods available throughout Chumash territory, encouraged craft specialization, and established the coastal villages as middlemen. The coastal villages were well positioned with their access to abundant marine resources; they built and kept the boats that moved trade goods across the channel and likely profited from this exchange.

The Chumash are well known for their material culture, which included highly decorated utilitarian tools and ceremonial items, as well as rock art (Grant 1978a–b; Hudson and Blackburn 1984, 1986). Carved steatite items included bowls decorated with beads, medicine tubes, effigies, beads, pipes, and charmstones. Rock paintings are found in sheltered locations near the coast and inland to the farthest reaches of the Chumash sphere. In the interior region inhabited by the Cuyama Chumash who spoke the Ineseño dialect, archaeological and ethnographic evidence strongly suggest a Chumash affiliation with the Carrizo Plain rock art, where the rock paintings—mostly pictographs comprised of polychrome abstract designs and some petroglyphs—reach a high degree of development. Despite being recognized as the location of the most extensive rock art, the Carrizo Plain area is among the least studied of Chumash regions. The remote location of the majority of Chumash rock art suggests the paintings may represent shrines or sacred areas.

Chumash religion was well developed and integrated into everyday life. Rituals and ceremonies were observed throughout the year; the most important was performed at the Winter Solstice, when a large festival was held in honor of the Sun. Astronomers carefully marked the shortest day of the year to know when to begin the rites and dances and used the observation to recalibrate their calendar. The *Hutush* autumn harvest festival, a time of thanksgiving, celebrated the Earth Goddess as provider of all foods (McCall and Perry 1986). Ceremonies were performed in everyday life and to mark special occasions; rituals were performed to name children, cure the sick of various ailments, and initiate young men into the mysteries of religion. The *'antap* society, restricted to the upper class, was also the federation of shamans who controlled ceremonial observances.

Gabrielino/Tongva

The name Gabrielino (sometimes spelled Gabrieleno or Gabrieleño) denotes those people who were administered by the Spanish from Mission San Gabriel Arcángel. By the same token, Native Americans in the sphere of influence of Mission San Fernando Rey de España were historically referred to as Fernandeño (Kroeber 1925). This group is now considered to be a regional dialect of the Gabrielino language, along with the Santa Catalina Island and San Nicolas Island dialects (Bean and Smith 1978). In the post-Contact period, Mission San Gabriel included natives of the greater Los Angeles area, as well as members of surrounding groups such as Kitanemuk, Serrano, and Cahuilla. There is little evidence that the people we call Gabrielino had a broad term for their group; rather, they identified themselves as an inhabitant of a specific community through the use of locational suffixes (e.g., a resident of Yaanga was called a Yabit, much the same way that a resident of New York is called a New Yorker) (Dakin 1978:222).

Native words that have been suggested as labels for the broader group of Native Americans in the Los Angeles region include Tongva (or Tong-v) and Kizh (Kij or Kichereno); although there is evidence that these terms originally referred to local places or smaller groups of people within the larger group that we now call Gabrielino (Heizer 1968). Many present-day descendants of these people have taken on Tongva as a preferred group name because it has a native rather than Spanish origin and one group of descendants prefers the term Kizh (King 1994). The term Gabrielino/Tongva, which combines the most commonly used group names, is used in the remainder of this study to designate native people of the Los Angeles Basin and their descendants.

Gabrielino/Tongva lands encompassed the greater Los Angeles Basin and three Channel Islands—San Clemente, San Nicolas, and Santa Catalina. Their mainland territory was bounded on the north by the Chumash at Topanga Creek, the Serrano at the San Gabriel Mountains in the east, and the Juaneño on the south at Aliso Creek (Bean and Smith 1978:538; Kroeber 1925:636).

The Gabrielino/Tongva language, as well as that of the neighboring Juaneño/Luiseño, Serrano, and Tatataviam/Alliklik, belongs to the Takic branch of the Uto-Aztecan language family, which can be traced to the Great Basin area (Mithun 2004:539, 543–544). This language family's origin differs substantially from that of the Chumash to the north and the Ipai, Tipai, and Kumeyaay farther south. The language of the Ipai, Tipai, and Kumeyaay is derived from the California-Delta branch of the Yuman-Cochimi language family, which originated in the American Southwest (Mithun 2004:577). The Chumash language is unlike both the Yuman-Cochimi and Uto-Aztecan families, and may represent a separate lineage (Mithun 2004:390). Linguistic analysis suggests that Takic-speaking immigrants from the Great Basin area began moving into southern California around 500 B.C. (Kroeber 1925:579). This migration may have displaced both Chumashan- and Yuman-speaking peoples, but the timing and extent of the migrations and their impact on indigenous peoples is not well understood. The Gabrielino/Tongva language consisted of two main dialects, Eastern and Western; the Western included much of the coast and the Channel Island population (King 2004). Lands of the Western group encompassed much of the western Los Angeles Basin and San Fernando Valley, northward along the coast to the Palos Verdes Peninsula (McCawley 1996:47).

Gabrielino/Tongva society was organized along patrilineal non-localized clans, a characteristic Takic pattern. Clans consisted of several lineages, each with their own ceremonial leader. The chief, or *tómyaar*, always came from the primary lineage of the clan/village. One or two clans generally made up the population of a village. Even though the Gabrielino/Tongva did not have a distinctly stratified society, there were two general classes of individuals: elites and commoners. The elites consisted of primary lineage members, other lineage leaders (who maintained a separate ceremonial language), the wealthy, and the elite families of the various villages who commonly married among themselves. The commoner class contained those from "fairly well-to-do and long-established lineages" (Bean and Smith 1978:543). A third, lower class consisted of slaves taken in war and individuals, unrelated to the inhabitants, who drifted into the village.

The Gabrielino/Tongva established large, permanent villages in the fertile lowlands along rivers and streams, and in sheltered areas along the coast, stretching from the foothills of the San Gabriel Mountains to the Pacific Ocean. A total tribal population has been estimated of at least 5,000 (Bean and Smith 1978:540), but recent ethnohistoric work suggests that a number approaching 10,000 seems more likely (O'Neil 2002). Several Gabrielino/Tongva villages appear to have served as trade centers, due in large part to their centralized geographic position in relation to the southern Channel Islands and to other tribes. These villages maintained particularly large populations and hosted annual trade fairs that would bring their population to 1,000 or more for the duration of the event (McCawley 1996:113–114).

Houses constructed by the Gabrielino/Tongva were large, circular, domed structures made of willow poles thatched with tule that could hold up to 50 people (Bean and Smith 1978). Other structures served as sweathouses, menstrual huts, ceremonial enclosures, and probably communal granaries. Cleared fields for races and games, such as lacrosse and pole throwing, were created adjacent to Gabrielino/Tongva villages (McCawley 1996:27).

The Gabrielino/Tongva subsistence economy centered on gathering and hunting. The surrounding environment was rich and varied, and the tribe exploited mountains, foothills, valleys, and deserts as well as riparian, estuarine, and open and rocky coastal eco-niches. Like most Native Californians, acorns were the staple food (an established industry by the time of the early Intermediate period). Acorns were

supplemented by the roots, leaves, seeds, and fruits of a wide variety of flora (e.g., islay, cactus, yucca, sages, and agave). Fresh- and saltwater fish, shellfish, birds, reptiles, and insects, as well as large and small mammals, were also consumed (Bean and Smith 1978:546; Kroeber 1925:631–632; McCawley 1996:119–131). Groups residing near the ocean used ocean-going plank canoes (known as a *ti'at*) and tule balsa canoes for fishing, travel, and trade between the mainland and the Channel Islands. The ocean-going canoes were capable of holding six to 14 people and were also used for travel and trade between the mainland and the Channel Islands. The tule balsa canoes were used for near-shore fishing (Blackburn 1963; McCawley 1996:117–127).

The Gabrielino/Tongva participated in an extensive exchange network, trading coastal goods for inland resources. They exported Santa Catalina Island steatite products, roots, seal and otter skins, fish and shellfish, red ochre, and lead ore to neighboring tribes, as well as people as far away as the Colorado River. In exchange, they received ceramic goods, deer skin shirts, obsidian, acorns, and other items. This burgeoning trade was facilitated through craft specialists, a standard medium of exchange (*Olivella* bead currency), and the regular destruction of valuables in ceremonies, which maintained a high demand for these goods (McCawley 1996:112–115).

Deceased Gabrielino/Tongva were either buried or cremated, with inhumation being more common on the Channel Islands and the neighboring mainland coast and cremation predominating on the remainder of the coast and in the interior (Harrington 1942; McCawley 1996:157). Cremation ashes have been found in archaeological contexts buried within stone bowls and in shell dishes (Ashby and Winterbourne 1966:27), as well as scattered among broken ground stone implements (Cleland et al. 2007). Archaeological data such as this correspond with ethnographic descriptions of an elaborate mourning ceremony that included a wide variety of offerings, including seeds, stone grinding tools, otter skins, baskets, wood tools, shell beads, bone and shell ornaments, and projectile points and knives. Offerings varied with the sex and status of the deceased (Johnston 1962:52–54; McCawley 1996:155–165; Reid 1926:24–25). At the behest of the Spanish missionaries, cremation essentially ceased during the post-Contact period (McCawley 1996:157).

European contact with the Gabrielino/Tongva occurred as early as 1542 with the Spanish expedition led by Juan Rodriguez Cabrillo, followed by Sebastián Vizcaíno in 1602, who both visited Santa Catalina Island. Colonization of Gabrielino/Tongva lands did not begin in earnest until after the inland expedition led by Gaspar de Portolá in 1769. By 1771, four missions had been constructed in the region, including Mission San Gabriel, founded in Los Angeles County in September 1771 (Bean and Smith 1978:540–541; Engelhardt 1927a; McCawley 1996:3–6).

In the early twentieth century, Gabrielino/Tongva who still lived in San Gabriel neighborhoods near the old mission joined the Mission Indian Federation and sought redress from the federal government over lost lands. A generation later, partly as an outgrowth of the Civil Rights Movement, Gabrielino/Tongva started to form political organizations of their own to affect handling of ancestral remains discovered at construction sites and to seek federal acknowledgement of their tribe. There are currently five such organizations with total membership approaching nearly a thousand people. They are still struggling to receive federal recognition.

Tataviam

The Tataviam lived in the upper drainage of the Santa Clara River between the San Fernando Valley to the south and the top of Pastoria Creek in the Tehachapi Mountains to the north. To the east, their ancestral lands extended to part of the southern fringe of Antelope Valley. The core Tataviam population centered on the south sides of the Liebre, Sawmill, and Sierra Pelona Mountains. Neighboring groups include the Ventureño Chumash to the west, Emigdiano Chumash to the north, Kitanemuk to the

northeast, Vanyume Serrano to the east, and Western Gabrielino to the south in the San Fernando Valley (Grant 1978c; Johnson and Earle 1990:193; King and Blackburn 1978:535).

The Tataviam language is a part of the Takic branch of the Uto-Aztecan language family, also spoken by the Western Gabrielino and Kitanemuk (Mithun 2001:540). This language family can be traced to the Great Basin area, which represents an origin different from the Chumash. According to Bright (1975), the Tataviam language may be "the remnant, influenced by Takic, of a language family otherwise unknown in southern California" or the language was probably Takic but not from the Serrano or Cupan branches like Kitanemuk and Vanyume, respectively. The Tataviam language probably began to differentiate itself from the others around 1000 B.C. (King and Blackburn 1978:535). The name "Tataviam" itself is derived from the Kitanemuk's designation for this group (King and Blackburn 1978:535). Kroeber (1925:614) referred to them as the "Alliklik," named by the Ventureño Chumash to separate them from the Beñeme Serrano in the western Mojave Desert and Antelope Valley.

Information about Tataviam social organization and political structure is relatively limited, but there is no evidence that would substantially differentiate them from the Kitanemuk and Western Gabrielino. Tataviam villages ranged from large centers of around 200 individuals to small settlements of 10 to 15 people (King and Blackburn 1978:536). Intermediate-sized villages were dispersed between the larger centers, with smaller villages spaced around the larger villages. Tataviam villages and placenames closest to the project site are *Achoicominga*, *Ceegenga* and *Passenga* (Fernandeño Tataviam Band of Mission Indians 2022; Hackel et al. 2015; Johnson 1997; King 2011). Figure A-5 shows the estimated locations of each former village site, which range from 2.3 to 8 kilometers (km) (1.4 to 5 miles) from the project site.

King and Blackburn (1978:534) estimate the total Tataviam population at the time of historic contact at no more than 1,000 people, with the widest possible territorial extent considered. Mortuary practices probably included cremation, as well as a mourning ceremony practiced in late summer or early fall (King and Blackburn 1978:535).

Archaeological data, the primary source of information available, indicate broad similarities among the Tataviam, Chumash, and Gabrielino (King and Blackburn 1978:536). Considering their environment and available data, it is probable that Tataviam relied more heavily on yucca as a staple than neighboring groups. Additional plant foods most likely included acorns, sage seeds, juniper seeds, and islay berries. Animal resources included small mammals such as rabbits and rodents, as well as deer and possibly antelope. Extensive trade networks developed between inland groups of the desert regions. They traded lithic material and large game animals with coastal groups for marine resources, shell, asphaltum, and steatite.

The first European visit to the general Tataviam area occurred in A.D. 1769, when Lieutenant Colonel Gaspar de Portolá led an overland expedition from the newly established settlement at San Diego in an attempt to find Monterey Bay. They traversed the San Fernando Valley in August 1769, passing to the north of where Mission San Fernando would be founded 28 years later. From there, they entered Tataviam territory in the Newhall-Saugus area through the Freemont Pass (Portolá 1909). The general vicinity was probably crossed again during the second Portolá expedition in 1770 and by the Friar Francisco Garces expedition in 1776 (Beck and Haase 1974:15). The Mission of San Fernando was founded in 1798 on the southern fringe of Tataviam lands, and by 1820, most of the population had been baptized at the mission. During this time, Tataviam often intermarried with surrounding Native American groups, most notably the Kitanemuk, and often attended and participated in Chumash ceremonies.

Following the Spanish period, interest in the Santa Clara Valley grew as fur trappers in the early 1800s, the discovery of gold in Placerita Canyon in 1842, and provisioning of miners heading for the gold strikes in the 1850s led to Euro-American settlement, ranching, and agriculture within the valley. Beef, grain, and other foodstuffs in demand by the miners resulted in an economic windfall for the ranches in the

valley. As a consequence, the ranchers expanded their range into Tataviam hunting grounds and harvesting fields. Tataviam families and communities intermarried with and were absorbed into other Native American settlements in southern California during the late nineteenth century (Johnson and Earle 1990:209). Several Tataviam descendant families lasted into the twentieth century, but by 1916, there were no longer any Tataviam speakers (King and Blackburn 1978:536).

Native American Communities in the San Fernando Valley

In general, it has proven very difficult or impossible to establish definitively the precise location of Native American villages occupied after Spanish contact (McCawley 1996:31–32). Native American place names recorded during this period did not necessarily represent continually occupied settlements within discrete locations. Instead, in at least some cases, the communities were represented by several smaller camps scattered throughout an approximate geography, shaped by natural features subject to change over generations (Johnston 1962:122). In fact, many of the villages had long since been abandoned by the time ethnographers, anthropologists, and historians attempted to document any of their locations, at which point the former village sites were affected by urban and agricultural development, and Native American lifeways had been irrevocably changed. Kroeber remarked on the subject as follows:

> Many of the latter (i.e., place-names) no doubt originally denoted villages; but it is usually impossible to determine. The Indians of this region, Serrano, Gabrielino, and Luiseño, have long had relations to the old ranchos or land grants, by which chiefly the country was known and designated until the Americans began to dot it with towns. The Indians kept in use, and often still retain, native names for these grants. Some were the designations of the principal village on the grant, others of the particular spot on which the ranch headquarters were erected, still others of the camp sites, or hills, or various natural features. The villages, however, are long since gone, or converted into reservations, and the Indians, with all their native terminology, think in terms of Spanish grants or American towns. Over much of southern California—the "Mission Indian" district—the opportunity to prepare an exact aboriginal village map passed away 50 years ago. (Kroeber 1925:616)

Efforts at relocating former settlements have been further complicated by the frequency with which alternative names and spellings for communities were used, and that there are conflicting reports on the meaning or locational references in the names. Although the precise location of any given village is subject to much speculation, it is clear the San Fernando Valley and greater Los Angeles area once contained many Gabrielino settlements, including several concentrated along the banks of major waterways, near the coast, and along the base of foothills.

The closest ethnographically documented villages to the project site are *Atavsanga* (also known as *Ataguama* or *Totongna*) located approximately 2 miles to the southwest, *Momonga* located 3.5 miles to the north (near present-day Chatsworth), and *Siutcanga* located approximately 8.4 miles to the southeast (near present-day Encino). As described above by Kroeber (1925) and later noted by others (e.g., Harrington 1986 [cited in McCawley 1996]), the settlements and placenames are often correlated with the later Spanish and Mexican period ranchos. This appears to be because the ranchos developed around existing Native American settlements, partly because Native Americans intentionally established rancherias near the Spanish and Mexican ranch houses, and also because the ranchos were the most common means by which geographic locations were historically described. For example, *Atavsanga* and *Siutcanga* are both believed to have been located within the boundaries of Ranchos El Escorpion and Encino, respectively. The project site is located approximately 0.7 miles north of Rancho El Escorpion (Figure A-6). The town of El Escorpion in Bell Canyon was one of the larger Native villages in the San Fernando Valley during the period of recruitment from the area by the San Fernando Mission (McLendon and Johnson 1999). According to McLendon and Johnson (1999), 75 people were baptized from

El Escorpion, many of whom had native names with ending characteristic of names in Chumash languages (McLendon and Johnson 1999). Mission registers indicate that kinship links with non-Escorpion people were through close ties and marriages with people born in adjacent Chumash speaking villages, as well as kinship links documented with the Tongva-speaking towns including *Momonga* in present day Chatsworth (McLendon and Johnson 1999).

Trails and travel corridors between settlements shared a similar association so that the roads established by the Spanish between the missions, presidios, and pueblos likely followed existing footpaths used by Native Americans, some of which have been retained by contemporary street alignments. Some of these early trails are depicted in nineteenth century maps (see Figures A-6 and A-7). The closest such trail to the project site—labeled "Road from Ventura to Los Angeles" in Figure A-6—is plotted approximately 2.5 miles south of the project site. This is typically understood to have been the route taken by the first Spanish land expedition, and then maintained as part of the network of roads connecting the major settlements of the Mission system, known as El Camino Real (lit. "The Royal Road"). The "road," however, was never a single trail. Many of these early travel routes were likely established along the trails previously used by Native Americans for foraging, communication, travel, and trade. Though foot trails can be ephemeral and completely change course from year to year, such trails are known to have existed between significant Gabrielino settlements, and temporary camps or other types of Native American features (such as burials) would have been common along these paths, especially where they intersect water sources or are located near other natural resources and culturally significant landmarks, including favorable viewsheds. The earliest survey maps created after California's annexation into the United States offer some indication of the trail system operating prior to this time. Unfortunately, as with the location of settlements, maps of Native American trails were never drawn after Spanish contact and the routes described in ethnographic sources refer only to generalized travel corridors.

George W. Kirkman's 1937 map (known as Kirkman-Harriman's pictorial and historical map of Los Angeles County) captures many of the prominent routes, including El Camino Real, and plots several Native American "village sites" (Figure A-8). Kirkman's map includes several of the ethnographically documented settlements described by scholars (shown in Figure A-5) as well as others of uncertain origin, some of which can be traced to the archaeological sites recorded in the early nineteenth century. For example, the location frequently given for *Siutcanga* is identified in the Kirkman map as having a village site, which is a reasonable distance from the location reported in other sources (e.g., Hackel et al. 2015; Johnston 1962; King 2011; McCawley 1996). Conversely, other of the "village sites" mapped by Kirkman do not correlate with other ethnographically documented sources or archaeological sites mapped in the CHRIS, and it is not clear where Kirkman got his information, and he does not list his primary sources. One such site was identified approximately 1 mile southwest of the project site on the east side of a Los Angeles River tributary and approximately 4 miles northwest of the point plotted for Canoga Park. As with the other sites in Kirkman's map that could not be corroborated by other evidence, the location of a Native American settlement in this location is certainly plausible. It should be noted that the Kirkman map and others like it (e.g., Gumprecht 2001:30; Johnston 1962) are understood by most scholars to convey a general sense of where significant sites and features were located but are intended as a representational rather than explicit geographic points. Even with archaeological evidence, it can be difficult to conclusively establish whether any given assemblage represents the remains of the former village site.

Historic Overview

The post-Contact history of California is divided into three periods that are defined by the ruling national government: the Spanish period (1769–1822), the Mexican period (1822–1848), and the American period (1848–present). Each period is briefly described below. Some chronologies include the Mission period (1769–1834), defined by the active span of those Spanish, and later Mexican, Catholic institutions.

The Protohistoric period is used here to refer to the era of initial interaction between Native Americans and European explorers and settlers, ranging from 1542 through the early 1800s in outlying areas, where a mixture of native and nonnative cultural traits can be observed archaeologically.

Spanish Period (1769–1822)

The first Europeans to observe what became southern California were members of the 1542–1543 expedition of Juan Rodriguez Cabrillo. When sailing past Santa Monica Bay, Cabrillo noted the numerous campfires of the Gabrielino/Tongva and thus named the area the Bay of Smokes. Cabrillo and other early explorers sailed along the coast and made limited expeditions into Alta (upper) California between 1529 and 1769. Although Spanish, Russian, and British explorers briefly visited Alta California during this nearly 250-year span, they did not establish permanent settlements.

Gaspar de Portolá and Franciscan Father Junípero Serra established the first Spanish settlement in Alta California at San Diego in 1769. Mission San Diego de Alcalá was the first of 21 missions built by the Spanish between 1769 and 1823. Portolá continued north, passing near the project site in August of 1769, and reaching San Francisco Bay on October 31. The process of converting the local Native American population to Christianity through baptism and relocation to mission grounds was begun in this region by the Franciscan padres at the San Gabriel Mission, which was established in 1771 (Engelhardt 1927a). The San Fernando Mission was founded 26 years later, its location chosen as a stopping point between the San Gabriel and San Buenaventura missions (Englehardt 1927b). Most Native Americans from the Los Angeles Basin were persuaded to settle in the vicinity of the two missions. These included the Eastern Gabrielino of the plains as far south as the Santa Ana River and west to the Los Angeles River. The padres also proselytized the Serrano of the San Gabriel and San Bernardino Mountains, as well as the Vanyume Serrano of the Mojave Desert; many of the western Cahuilla in the Coachella and San Jacinto Valley; some Luiseño of the San Jacinto Valley; and Western Gabrielino of the plains west of the Los Angeles River, San Fernando Valley, and the southern Channel Islands. The missions were charged with administering to the Native Americans within their areas. Although mission life gave the Native Americans the skills needed to survive in their rapidly changing world, the close quarters and regular contact with Europeans transmitted diseases for which they had no immunity, decimating their populations (McCawley 1996).

Mexican Period (1822–1848)

After the end of the Mexican Revolution against the Spanish crown (1810–1821), all Spanish holdings in North America (including both Alta and Baja California) became part of the newly formed Mexican Empire, and shortly thereafter, a constitutionally based United Mexican States. Under Mexican rule, the authority of the California missions gradually declined, culminating with their secularization. Events leading up to the secularization of the California missions spanned many years and much political upheaval, after which the Mexican Congress passed the Secularization Act in August 1833. Not only did the action divest the Franciscans of property, it also opened both of the Californias to colonization. The first 10 of the missions were secularized in 1834, San Gabriel among them.

Historical documents suggest that what followed was a period of intrigue, revolution, and lawlessness. With a disruption in trade came an increase in the number of American interlopers. Political resistance erupted on every front as Mexican citizens in California (*Californios*) vied for control of their ranchos against American intruders and Mexican authority. Although the Mexican government directed that each mission's lands, livestock, and equipment be divided among its neophytes, the majority of these holdings quickly fell into non-Indian hands. As mission landholdings passed into private hands, neophyte workers, who had become dependent on the missions, were left to fend for themselves.

If mission life was difficult for Native Americans, secularization was worse. After two generations of dependence upon the missions, they were suddenly disenfranchised. After secularization, "nearly all of the Gabrielinos went north while those of San Diego, San Luis and San Juan overran this county, filling the Angeles and surrounding ranchos with more servants than were required" (Dakin 1978[1939]:282).

Former mission lands were quickly divided and granted to private citizens for use as agricultural and pastoral land. Most of the land grants to Californios were located inland, a policy intended to increase the population away from the coastal areas where the Spanish settlements were concentrated (Dakin 1978[1939]:282). With no work at the mission, there was a far greater labor force in the region than could be employed.

After years of surreptitious commerce, the first party of American immigrants arrived in Los Angeles in 1841, including William Workman and John Rowland, who soon became influential landowners. As the possibility of a takeover of California by the United States loomed large in the 1840s, the Mexican government increased the number of land grants in an effort to keep the land in Mexican hands (Wilkman and Wilkman 2006). Governor Pío Pico and his predecessors made more than 600 rancho grants between 1833 and 1846, putting most of the state's lands into private ownership for the first time (Grumprecht 2001). Trade in the region changed as well. British and American trade displaced supply ships from Mexico and, in 1841, the first party of American immigrants arrived at the Pueblo de Los Angeles.

American Period (1848–Present)

The United States took control of California in 1846, seizing Monterey, San Francisco, San Diego, and Los Angeles with little resistance. Los Angeles soon slipped from American control, however, and was retaken in 1847. Approximately 600 U.S. sailors, marines, Army dragoons, and mountain men converged under the leadership of Colonel Stephen W. Kearney and Commodore Robert F. Stockton in early January of that year to challenge the California resistance, which was led by General Jose Maria Flores. The American party scored a decisive victory over the Californios in the Battle of the Rio San Gabriel and at the Battle of La Mesa the following day, effectively ending the war and opening the door for increased American immigration (Harlow 1992).

The 1848 Treaty of Guadalupe Hidalgo formally ended the war and required that legitimate land grants be honored. California was admitted as the 31st state on September 9, 1850. Pursuant to the Land Act of 1851 requiring claims be filed with the United States Public Lands Commission, Eulogio de Celis filed his claim in 1852; it was granted in 1873. After de Celis died in 1869, San Fernando Mission land was sold in 1874 to California State Senator Charles Maclay and his partner George K. Porter. Maclay founded the community of San Fernando in 1874 on his eastern section, and included land for the Southern Pacific Railroad (SPRR) that would eventually construct a tunnel through the pass at San Fernando.

In 1903, George Porter sold his share of the land to Leslie Brand's newly syndicated San Fernando Mission Land Company. One of their major shareholders was Moses Sherman, who sat on the city water commission board that in 1905 approved plans for the Los Angeles Aqueduct and later exercised their option to buy Porter's land (Roderick 2001). The aqueduct was constructed between 1908 and 1913, which was preceded by a real estate boom in the San Fernando Valley, leading to the founding of several modern-day cities and communities, including Owensmouth in March of 1912—renamed Canoga Park in 1931. Around 1911, the Pacific Electric Railway had extended its lines from Hollywood to Van Nuys, sharing portions of track with SPRR, and connecting passenger rails to the northwest portion of the San Fernando Valley. The San Fernando Valley was annexed to Los Angeles County in 1917, and the region's economy slowly began shifting from agricultural to light industrial and commercial.

Historical Development of the Project Site

The project site is located in the West Hills neighborhood of Los Angeles. Geographically, the project is in the western San Fernando Valley, 4 miles north of the Santa Monica Mountains and 2 miles southwest of Chatsworth Reservoir, which is formed on the eastern margin of the Simi Hills. The project site is located within an area designated as former San Fernando Mission Lands, which were established after the Spanish missions were secularized and converted into large-scale ranchos. Amongst the many large-scale ranchos in the San Fernando Valley is Rancho El Escorpion, located less than a mile south of the project. In 1845, the El Escorpion land was granted to Odon Chijuya, Urbano, and Manual of the Fernandeño and Ventureño Chumash, who were claimants of 1,110 acres, patented on September 16, 1876 (McLendon and Johnson 1999). Espiritu Chijuya, the eldest daughter of Odon Chijuya and sole surviving grantee of Rancho El Escorpion, married the Basque immigrant, Miguel Leonis. Through this marriage, Leonis, who was known as "The King of Calabasas," acquired Rancho El Escorpion, increasing his land holdings in the west end of the San Fernando Valley (California State University, Northridge 2023). When Leonis died in 1889, interest in San Fernando Valley real estate was increasing, and Leonis' relatives started selling portions of the land. Espiritu Chijuya continued to live at the Leonis Adobe until she died in 1906, and what remained of the rancho—along with 44,000 additional acres of the Valley—was purchased by the Los Angeles Suburban Home Company in anticipation of the construction of the Owens River Aqueduct. The expectations of investors notwithstanding, the western edge of Canoga Park was slow to develop relative to the rest of the Valley. The project site, for example, appears to have been vacant unused land or land used for agriculture from 1903 to 1944. This continued until at least 1959 when the area was graded for development, with residential buildings increasingly being developed in the vicinity of the project site. The Rancho El Escorpion lands became the town of Owensmouth, which was eventually renamed Canoga Park. In the 1980s, the homeowners in the shadow of El Escorpion peak petitioned the City of Los Angeles to be recognized as the separate community of West Hills (*Los Angeles Times* 2017).

METHODS

Although not all tribal cultural resources are archaeological in nature, those likely to be preserved below the surface are likely to fit the definition of an archaeological and tribal cultural resource. Similarly, the evaluation of a tribal cultural resource must consider the cultural values to a California Native American tribe, in addition to scientific and archaeological considerations. This section assesses the potential (i.e., sensitivity) for tribal cultural resources that are archaeological in nature to be preserved below the surface of the project site. This sensitivity assessment considers archaeological, ethnographic, historical, environmental, and other archival data sources. Evidence from these sources is used to estimate whether the location was favorable for Native American habitation, the environmental setting within the last 13,000 years, land uses within region, and any alterations to the physical setting within the project site that may have occurred from natural causes or Historic period developments and influenced the potential for preserving buried materials.

Where sites are fully paved or otherwise developed and directly testing through archaeological excavation for such buried materials is not feasible, indirect evidence is used. For this reason, the resulting sensitivity assessment is qualitative by nature—ranging along a spectrum of increasing probability—designated here as low, moderate, and high. Indicators of favorable habitability for Native American sites are proximity to certain natural features (e.g., perennial water source, plant or mineral resource, animal habitat), flat topography, and historically dry conditions (i.e., not directly within standing water). The assessment also considers whether the general location is described in ethnographic studies and oral histories, and whether the area of interest is similar to the physical setting in which other Native American archaeological sites have been identified. Next, the sensitivity assessment considers whether the location is capable of containing buried deposits, including whether there are natural or Historic period developments that have

eroded, displaced, or otherwise destroyed any potential materials that may have once been present. Areas with a favorable setting for habitation or temporary use, soil conditions capable of preserving buried material, and little to no disturbances are considered to have a high sensitivity. Areas lacking these traits are considered to have low sensitivity. Areas with a combination of these traits are considered as having moderate sensitivity.

Historical maps drawn to scale were georeferenced using Esri ArcMAP v.10.5 to show precise relationships to the project site. Sources consulted included the following publicly accessible data sources: City of Los Angeles Office of Historic Resources (OHR) (SurveyLA); City of Los Angeles Department of Building and Safety (building permits); David Rumsey Historical Map Collection; Huntington Library Digital Archives; Library of Congress; Los Angeles Public Library Map Collection; Sanborn Fire Insurance Company Maps (Sanborn maps); USGS historical topographic maps; University of California, Santa Barbara, Digital Library (aerial photographs); and University of Southern California Digital Library.

RESULTS

Archival Research

SWCA's archival research included a review of historical maps for the project site and vicinity and focused on documenting modifications to the physical setting and identifying any potential natural or artificial features with relevance to use by Native Americans (e.g., stream courses, vegetation, historical topography, roads, habitation markers) or use of the location by non–Native American people in the Historic period. Historical topographic maps show the project area appears to be used for agriculture or is vacant unused land from 1903 to 1944. A review of historical aerial photographs beginning in 1947, the earliest available year, shows the entire project site was being used as agricultural fields. This continued until 1959, as shown on an aerial photograph from that year. Sometime between 1959 and 1967, the area was graded for the construction of the Chaminade College Preparatory high school and shopping mall where the proposed North Campus will be developed. An aerial photograph from 1967 shows the high school and shopping mall fully built by then (Historic Aerials 2021). The original buildings are still present on the project site, though it appears to have been subject to several alterations. The multi-tenant mini shopping center within the proposed North Campus area that is slated for demolition was built between 1962 to 1964, and expanded in 1981 to its current size. Also between 1959 and 1967, residential development started on parcels immediately adjacent to the south and southwest boundaries of the project site, with residences showing in the parcels between Chaminade Avenue and Cohasset Street, between Cohasset Street and Valerio Street, and west of Platt Avenue. By 1977, the entire neighboring areas were developed with residences.

CHRIS Records Search

On August 23, 2021, SWCA submitted a CHRIS records search request at the SCCIC on the campus of California State University, Fullerton, to identify previously documented archaeological resources within a 0.8-km (0.5-mile) radius of the project site. The SCCIC maintains records of previously documented archaeological resources (including those that meet the definition of a tribal cultural resource) and technical studies; it also maintains copies of the California Office of Historic Preservation's (OHP's) portion of the Historic Resources Inventory. Confidential CHRIS results include specific information on the nature and location of sensitive archaeological sites, which should not be disclosed to the public or unauthorized persons and are exempt from the Freedom of Information Act. The information included in a confidential CHRIS records search is needed to assess the sensitivity for undocumented tribal cultural resources and inform the impact analysis. The search included any previously recorded archaeological

resources (i.e., excluding historic buildings) within the project site and surrounding 0.8-km (0.5-mile) area. Results of the CHRIS records search are included in Appendix B.

Results of the CHRIS records search indicate that six previous cultural resources investigations have been conducted within 0.5-mile of the project site. None of these studies were conducted directly within the project site or included an assessment of tribal cultural resource sensitivity relevant to the current study.

No archaeological sites, including any that could qualify as a tribal cultural resource, were identified within a 0.5-mile (0.8-km) radius of the project site.

Sacred Lands File Search

The NAHC is charged with identifying, cataloging, and protecting Native American cultural resources, which include ancient places of special religious or social significance to Native Americans, and known ancient graves and cemeteries of Native Americans on private and public lands in California. The NAHC's inventory of these resources is known as the SLF. In addition, the NAHC maintains a list of tribal contacts affiliated with various geographic regions of California. The contents of the SLF are strictly confidential and SLF search requests return positive or negative results, in addition to a list of tribal contacts affiliated with the specified location.

SWCA submitted an SLF search request for the project site to the NAHC on August 23, 2021. The NAHC emailed a response to SWCA's SLF search request on September 24, 2021, indicating that the results for the SLF search was positive. In addition, the NAHC provided a list of tribes affiliated with the area and requested that the associated tribal organizations should be contacted for more information. The NAHC provided a contact list of 14 Native American individuals or tribal organizations that may have knowledge of cultural resources in or near the study area (Table 1). SWCA provided the contact list to CAJA on October 11, 2021, since they were in coordination with the City. The SLF results letter and contact list are included in Attachment C.

Table 1. Summary of Native American Individuals and Groups Culturally Affiliated with the Project Area.

Name and Title	Affiliation
Andrew Salas, Chairperson	Gabrieleño Band of Mission Indians–Kizh Nation
Anthony Morales, Chairperson	Gabrieleño/Tongva San Gabriel Band of Mission Indians
Julie Tumamait-Stenslie, Chairperson	Barbareño/Ventureño Band of Mission Indians
Christina Conley, Tribal Consultant and Administrator	Gabrielino Tongva Indians of California Tribal Council
Charlez Alvarez	Gabrielino-Tongva Tribe
Jairo Avila, Tribal Historic Preservation Officer	Fernadeño Tataviam Band of Mission Indians
Sandonne Goad, Chairperson	Gabrielino Tongva Nation
Robert F. Dorame, Chairperson	Gabrielino Tongva Indians of California Tribal Council
Rudy Ortega, President	Fernadeño Tataviam Band of Mission Indians
Julio Quair, Chairperson	Chumash Council of Bakersfield
Mariza Sullivan, Chairperson	Coastal Band of the Chumash Nation
Fred Collins, Spokesperson	Northern Chumash Tribal Council
Mark Vigil, Chief	San Luis Obispo County Chumash Council
Kenneth Kahn, Chairperson	Santa Ynez Band of Chumash Indians

TRIBAL CULTURAL RESOURCES SENSITIVITY ANALYSIS

No resources that could qualify as tribal cultural resources were identified in a CHRIS records search within the project site or 0.5-mile radius. The results of the SLF search conducted by the NAHC indicated that there are known tribal cultural resources in the vicinity of the project site. The NAHC provided a contact list of tribal representatives who may have more information about these known resources. Review of ethnographic literature and historical maps document significant Native American villages and sites nearby. The Chumash village known as *Atavsanga* (also known as *Ataguama* or *Totongna*) is the closest ethnographically documented village to the project site, located approximately 3.2 km (2 miles) to the southwest. The Tatavian village known as *Momonga* is located 5.6 km (3.5 miles) to the north (near present-day Chatsworth), and the Gabrielino village known as *Siutcanga* is located approximately 8.4 miles to the southeast (near present-day Encino) of the project site. These villages are often correlated with the later Spanish and Mexican period ranchos, as ranchos developed around existing Native American settlements. *Atavsanga* and *Siutcanga* are both believed to have been located within the boundaries of Ranchos El Escorpion and Encino, respectively.

The project site is located approximately 1.1 km (0.7 mile) north of Rancho El Escorpion, which was one of the larger Native villages in the San Fernando Valley during the period of recruitment from the area by the San Fernando Mission. The El Escorpion land was granted to Odon Chijuya, Urbano, and Manual of the Fernandeño and Ventureño Chumash in 1845. Odon Chijuya's eldest daughter Espiritu Chijuya inherited the Rancho El Escorpion. Miguel Leonis, who was known as "The King of Calabasas", acquired the Rancho El Escorpion through his marriage to Espiritu Chijuya, thus increasing his land holdings in the west end of the San Fernando Valley. After his death in 1889, Leonis' relatives started selling portions of the land. Espiritu continued to live at the Leonis Adobe until she died in 1906, and the remains of the rancho—along with 44,000 additional acres of the Valley—was purchased by the Los Angeles Suburban Home Co. in anticipation of the coming of the Owens River Aqueduct. The Rancho El Escorpion was eventually renamed Canoga Park. The western edge of Canoga Park was slow to develop relative to the rest of San Fernando Valley. The project site, for example, appears to have been vacant unused land or land used for agriculture from 1903 to 1944. This continued until at least 1959 when the area was graded for development, with residential buildings increasingly being developed in the vicinity of the project site.

The project site (both the Main and proposed North Campuses) was developed in the early 1960s with the Main Campus buildings and sports field, and a multi-tenant mini shopping center and paved parking lot within the proposed North Campus. The shopping center was expanded in 1981 to its current size. The development of the project site and its prior use as agricultural fields is likely to have substantially compromised the integrity of the physical setting and likely destroyed or displaced any tribal cultural resources that may have been deposited on the surface or shallowly buried. Furthermore, the surficial geology of the site has been identified as late to middle Pleistocene old alluvial fan deposits, undivided (Qof) and late Miocene Modelo Formation, undivided (Tm). According to the paleontological resources study conducted for this project, the depth to the underlying, previously undisturbed sediments is unknown, but likely very shallow (e.g., 3 feet below ground surface) (Carson 2022). These types of sediments are naturally less likely to contain buried archaeological resources.

Archaeological remains that are tribal cultural resources can occur below paved surfaces within developed urban settings. While the CHRIS records search results did not identify any such archaeological resources within the project site or vicinity, most of the project site was not inspected for archaeological resources before being developed. SWCA considers the greater region of the project site as having moderate sensitivity for tribal cultural resources. However, the project site consists of a comparatively small area within the greater region and has been subject to multiple episodes of ground disturbances. As a result, archaeological materials once located on the surface or in shallow deposits are very unlikely to have been preserved within the project site, and though more deeply buried deposits

could exist, SWCA considers the sensitivity for archaeological resources to decrease within the project site. Based on the Historic period developments within the project site and SWCA's interpretation of the sediment profiles, across the entire project site, the sensitivity for tribal cultural resources within the near-surface is considered low.

While there are known significant Native American village sites located in the general vicinity of the project site, such as *Atavsanga* and *Momonga*, the project site is not located near or in a comparable environmental setting to suggest an increased likelihood for associated tribal cultural resources to be discovered within the project site. The project site is set within what has been a broad floodplain of the Los Angeles River for which there are only generalized indicators of former use by Native Americans such that substantial material deposits are likely to have occurred. These generalized indicators include a reasonable proximity to former stream courses and important natural resources that occur in higher densities near waterways. Two intermittent streams are located in the vicinity of the project site: Dayton Creek formed approximately 0.6 mile to the north, and Bell Creek is approximately 0.7 miles to the south. Dayton Creek connects to Chatsworth Creek, which is located approximately 0.7 miles east of the project site. Both Chatsworth and Bell Creeks connect to the south-flowing Los Angeles River, currently located approximately 2.1 miles southeast of the project site. The proximity to these streams could suggest the area was more intensively used by Native Americans, such that there would be a corresponding increase in the potential for a tribal cultural resource to be present.

Late to middle Pleistocene old alluvial fan deposits below the artificial fill within the project site are naturally less likely to contain buried archaeological resources. The depth to the depth to the underlying, previously undisturbed sediments is unknown, but likely very shallow (e.g., 3 feet below ground surface). Additionally, the impacts to the near-surface from Historic period agricultural use and developments further decreases the likelihood of encountering any buried archaeological resources due to the compromised integrity of the physical setting. **Based on these findings, the sensitivity for tribal cultural resources is considered low.**

RECOMMENDATIONS

There were no tribal cultural resources identified within the project area, and SWCA finds that the project area is not likely to contain undocumented tribal cultural resources beneath the surface obscured by pavement. Therefore, no mitigation measures are recommended for impacts to known tribal cultural resources. Standard mitigation measures related to the unanticipated discovery of archaeological resources and human remains are recommended for the project, as indicated below. SWCA recommends that the proposed project will have no impact to tribal cultural resources with the implementation of the following mitigation measures:

- If an archaeological resource is encountered, the City and Project Proponent shall be immediately notified and construction activities in the area of the discovery shall cease until a qualified archaeologist—one who meets the Secretary of the Interior's Professional Qualification Standards for archaeology (36 Code of Federal Regulations 61)—can be consulted to assess the discovery in accordance with CEQA. Should any prehistoric or ethnohistoric archaeological resources be identified within the Project Area, Native American consulting parties shall be contacted regarding the disposition and treatment of these resources. If the discovery proves to be significant under CEQA and avoidance is not possible, the qualified archaeologist shall coordinate with the City to develop and implement a data recovery plan data recovery to reduce potential impacts to less than significant.
- In the event of the unanticipated discovery of human remains, work in the immediate vicinity of the find shall stop and no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to State of California Health and Safety Code

> Section 7050.5 and PRC Section 5097.98. The County Coroner shall be notified of the find immediately. If the human remains are determined to be Native American or "ancient," the Coroner shall notify the NAHC, which will designate and notify a Native American most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of notification and make recommendations regarding the treatment and disposition of human remains and items associated with Native American burials.

It should be noted that this study has not assessed impacts or sensitivity relevant to other types of (non-tribal) cultural resources, including built environment, historic archaeological resources, or paleontological resources. Additional mitigations measures may be appropriate related to these other types of resources.

STUDY CONSTRAINTS AND DISCLAIMER

In creating the category of tribal cultural resources, the legislative intent of AB 52 is expressly stated as seeking to consider "the tribal cultural values in addition to the scientific and archaeological values when determining impacts and mitigation" and "recognize that California Native American tribes may have expertise with regard to their tribal history and practices, which concern the tribal cultural resources with which they are traditionally and culturally affiliated" (Gatto 2014). Analysis of tribal cultural resources in the absence of information provided by local tribes, therefore, is considered to be constrained insofar as the evidence considered may be confined to published, academic, and archaeological sources, and the conclusions can only be considered as representing scientific and archaeological values. The analysis and conclusions stated herein are based on the expertise and professional judgement of SWCA's qualified archaeologists and are intended to present information that can be used in assessing the potential for tribal cultural resources under CEQA, and should not be considered a replacement for tribal expertise or assumed to represent tribal cultural values.

RE: 7500 Chaminade Avenue; 23241 Cohasset Street; 23260 Saticoy Street; 23217-23255 Saticoy Street; 7619-7629 Woodlake Avenue

Canoga Park – Winnetka – Woodland Hills – West Hills Community Plan
CASE NOS.: CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101, CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, ENV-2023-1255-EAF

Dear Tribal Representative:

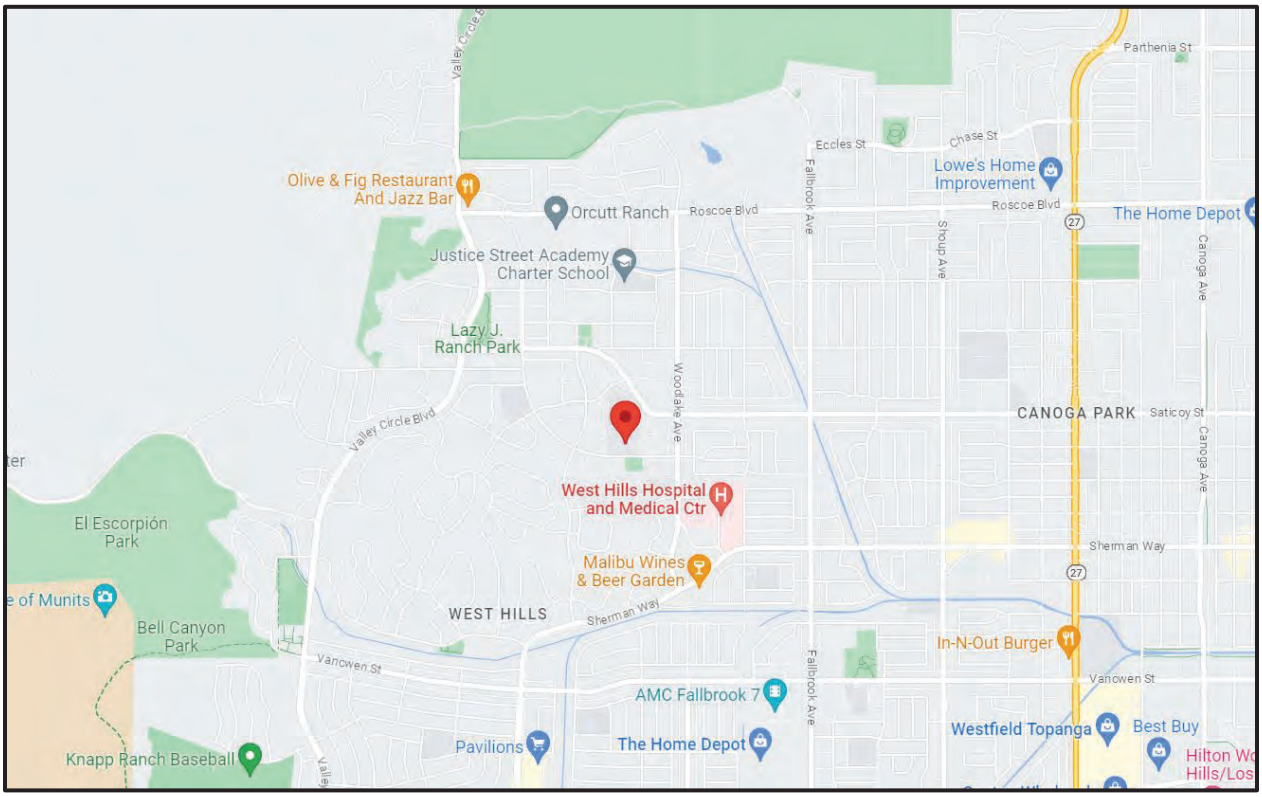
In conformance with the tribal consultation requirements of Assembly Bill (AB) 52, this letter is to inform you that the Los Angeles Department of City Planning is reviewing the proposed project described below. Per AB 52, the tribe has the right to consult on a proposed public or private

project prior to the release of a negative declaration, mitigated negative declaration or environmental impact report. The project description is as follows:

Project Overview

The Owner and Applicant, Chaminade College Preparatory (the "Applicant" or "Chaminade"), proposes to update and expand the existing Chaminade College Preparatory, High School campus (the "High School"), approved and currently operating under a Conditional Use Permit ("CUP"), under City Planning Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, with a revised campus plan located at 7500 Chaminade Avenue, 23241 Cohasset Street, 23260 Saticoy Street, 23217-23255 Saticoy Street and 7619-7629 Woodlake Avenue in West Hills (the "Subject Property"). The revised campus plan (the "Project") will include a total lot area of approximately 25.86 acres, inclusive of: 1) a new three-story school building ("Multistory Building"), updated parking areas, remodeled athletic fields, new student quads, and renovated classrooms, student service centers and offices on the existing campus located on approximately 21.03 acres in the A1-1 and RS-1 zones, at 7500 Chaminade Avenue, 23241 Cohasset Street and 23260 Saticoy Street ("Main Campus"), 2) an expanded school campus area of approximately 4.83 acres located across Saticoy Street, at 23217-23255 Saticoy Street and 7619-7629 Woodlake Avenue, proposed for new athletic fields, an aquatic center/outdoor swimming pool, and accessory facilities/structures and associated surface parking facilities, in the proposed C2-1 Zone (the new "North Campus"), and 3) a new pedestrian bridge across Saticoy Street ("pedestrian bridge"). No increase in the maximum permitted student enrollment (1,360 students) is proposed. Upon Project completion, the revised campus plan for the High School will include a total of approximately 193,818 square feet of Floor Area and approximately 501 on-site surface parking spaces. The Project involves the grading and export of a total of 18,520 cubic yards of soil from the Project Site including 17,800 cubic yards of soil from the Main Campus, and 720 cubic yards from the North Campus.

Background



The Subject Property, which includes the Main Campus and North Campus as described above, is bifurcated by Saticoy Street and comprised of six parcels which total approximately 25.86 acres of lot area, as shown in **Figure 1** below. The Main Campus is approximately 21.03 gross acres in lot area and provides approximately 666 feet along the west/south side of Saticoy Street, approximately 273 feet of frontage along south side of Keswick Street; approximately 636 feet of frontage along east side of Chaminade Avenue, and approximately 808 feet of frontage along the north side of Cohasset Street. The North Campus is approximately 4.83 gross acres in lot area and provides approximately 788 feet along the east/north side of Saticoy Street and approximately 244 feet of frontage along the west side of Woodlake Avenue. The Main Campus is currently improved a range of single-story and multiple story buildings within the existing High School campus, inclusive of academic and administrative buildings, and sports fields and facilities. The proposed North Campus is currently improved with a one-story, multi-tenant commercial mini shopping center and surface parking lot, built between 1962 to 1964. The shopping center is currently occupied with retail, restaurant and grocery store tenants.

The Main Campus is legally described as FR Lot 1 of Tract 26072 and FR Lot 19 and FR Lot 35 of Tract 2500 [with Assessor Parcel Numbers (APNs) 2027-005-002 and -009], and the North Campus is legally described as Lot 1 (Arbs 2, 3 and 4) of Tract 25573 (with APNs 2027- 005-005, -006 and -007). The Main Campus is located within the A1-1 and RS-1 Zones, and the North Campus is currently located in the [Q]C1-1VL and P-1VL Zones.

Agency Reports

FORM GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

Date: 6/7/2023

To: Charlie Rausch, Senior City Planner
Department of City Planning
200 N. Spring St., 6th Floor MS-395

From: Gil De La Cruz, P.E.
Case Management Supervisor
Private Development Division
Bureau of Street Lighting

SUBJECT: STREET LIGHTING REQUIREMENTS FOR DISCRETIONARY ACTIONS

CITY PLANNING CASE No.: CPC 2023-1254 VZC HD ZAD
7500 N CHAMINADE AVE

The Bureau of Street Lighting's recommended condition of approval for the subject city planning case is as follows: (Improvement condition added to S-3 (c) where applicable.)

SPECIFIC CONDITION: Prior to the recordation of the final map or issuance of the Certificate of Occupancy (C of O), street lighting improvement plans shall be submitted for review and the owner shall provide a good faith effort via a ballot process for the formation or annexation of the property within the boundary of the development into a Street Lighting Maintenance Assessment District.
IMPROVEMENT CONDITION: Construct new street lights: one (1) on Cohasset St, and one (1) on Keswick St. If street widening per BOE improvement conditions, relocate and upgrade street lights: four (4) on Cohasset St, three (3) on Chaminade Ave, seven (7) on Saticoy St, two (2) on Woodlake Ave

NOTES:

The quantity of street lights identified may be modified slightly during the plan check process based on illumination calculations and equipment selection.

Conditions set: 1) in compliance with a Specific Plan, 2) by LADOT, or 3) by other legal instrument excluding the Bureau of Engineering conditions, requiring an improvement that will change the geometrics of the public roadway or driveway apron may require additional or the reconstruction of street lighting improvements as part of that condition.

CITY OF LOS ANGELES

INTER-DEPARTMENTAL MEMORANDUM

7500 N Chaminade Ave
LADOT Project ID No. 56231

Date: October 12, 2023

To: Deputy Advisory Agency
Department of City Planning

From: Miguel Crisostomo, Transportation Engineering Associate I
Department of Transportation

Subject: **Parcel Map No. CPC-2023-1254-VZC-HD-ZAD-ZAA**
VTT-84101

Reference is made to your request for review of this case regarding potential traffic access problems. Based upon this review, it is recommended that:

1. A minimum 20-foot reservoir space is required between any security gate or parking space and the property line, or to the satisfaction of LADOT.

2. A two-way driveway width of W=28 feet is required for all driveways, or to the satisfaction of LADOT.

3. A parking area and driveway plan should be submitted to the Citywide Planning Coordination Section of the Los Angeles Department of Transportation for approval prior to submittal of building permit plans for plan check by the Department of Building and Safety. Transportation approvals are conducted at 6262 Van Nuys Blvd., Room 320, Van Nuys, CA 91401.

4. The report fee and condition clearance fee be paid to the Los Angeles Department of Transportation as required per Ordinance No. 183270 and LAMC Section 19.15 prior to recordation of the final map. Note: The applicant may be required to comply with any other applicable fees per this new ordinance.

If you have any questions, you may contact me at Miguel.crisostomo@lacity.org or 818-374-4699.

FORM GEN. 160 (Rev. 8-12)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: June 29, 2023

TO: Heather Bleemers, Senior City Planner
Department of City Planning

FROM: Bryan Ramirez, Street Tree Superintendent I
Bureau of Street Services, Urban Forestry Division

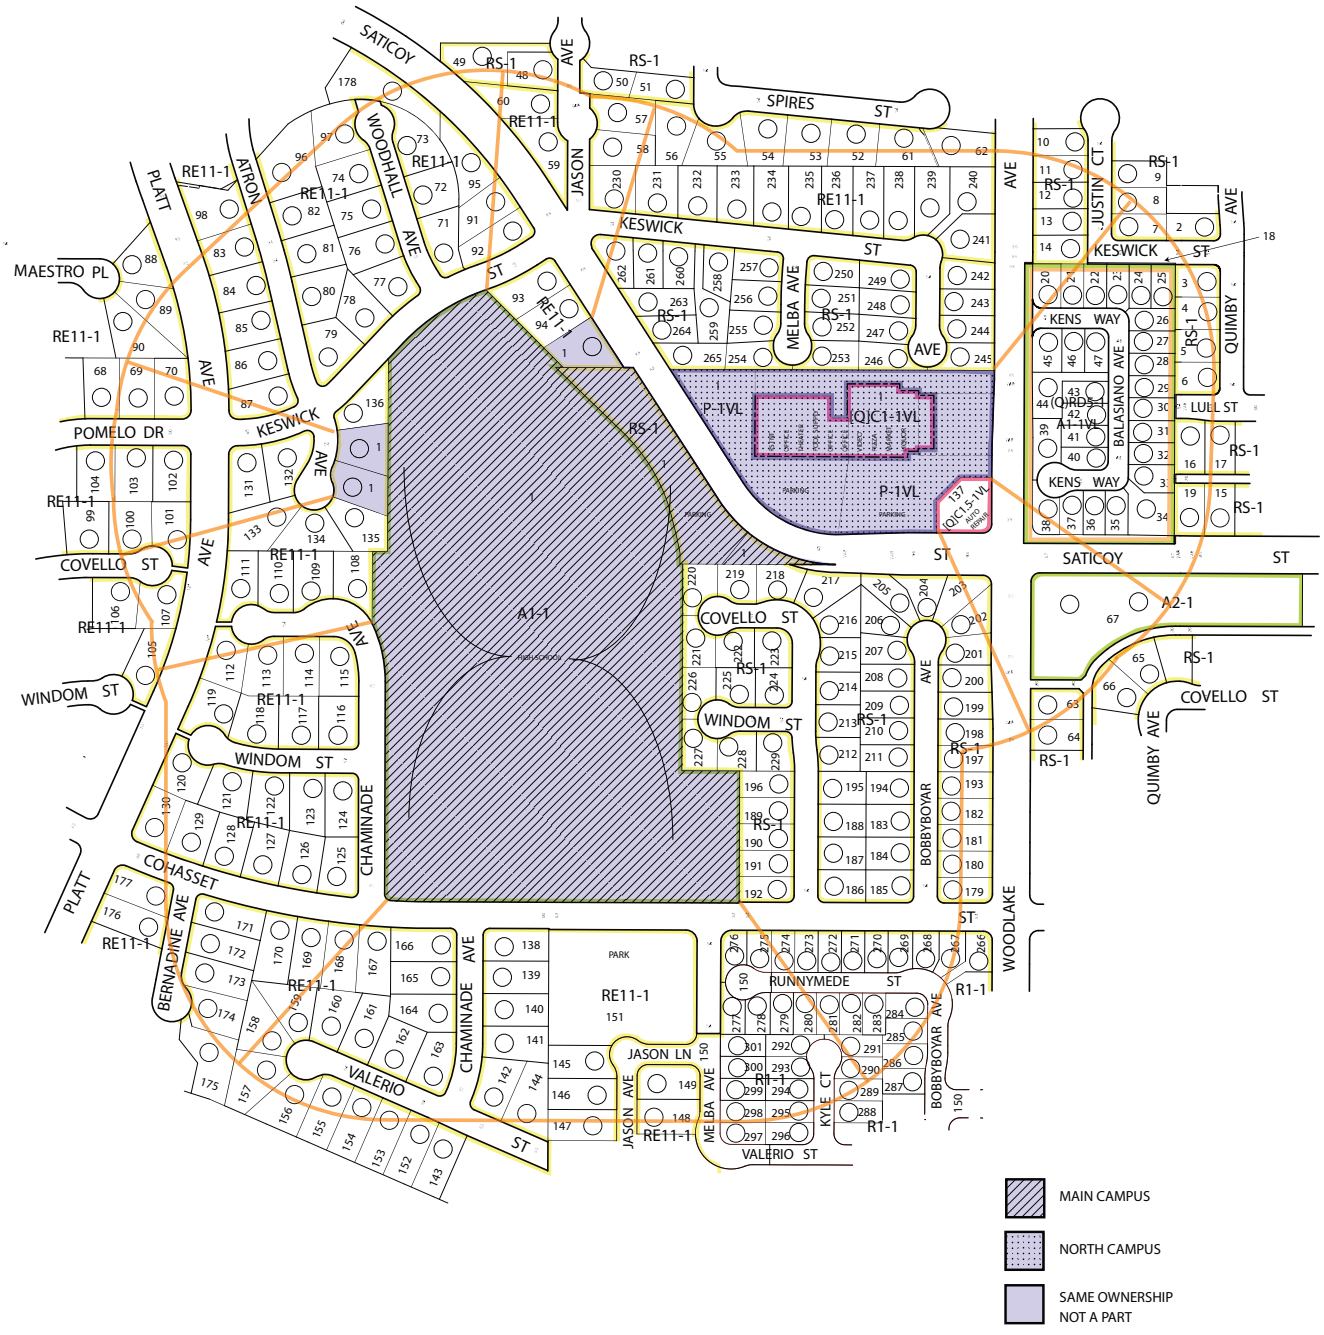
SUBJECT: **CPC-2023-1254-VZC-HD - 7500 N Chaminade Ave**

In regard to your request for review of this case regarding Urban Forestry requirements, it is our recommendation that:

1. **STREET TREES**

a. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2:1 as approved by the Board of Public Works and Urban Forestry Division.

b. When street dedications are required and to the extent possible, the project shall provide larger planting areas for existing street trees to allow for growth and planting of larger stature street trees. This includes and is not limited to parkway installation and/or enlargement of tree wells and parkways.



c. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously been paid for tree plantings. The sub divider or contractor shall notify the Urban Forestry Division at: (213) 847-3077 upon completion of construction for tree planting direction and instructions.

Note: Removal of street trees requires approval from the Board of Public Works. All projects must have environmental (CEQA) documents that appropriately address any removal and replacement of street trees. Contact Urban Forestry Division at: (213) 847-3077 for tree removal permit information.

Re:
Chaminade College Preparatory, High School Campus Plan Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Dear Mr. Martin,

I'm a parent (Jack '22 and Lila '25) at Chaminade College Preparatory School and I'm writing to you in support of the proposed High School Campus Plan referenced above. Chaminade has been an amazing school for my children, and, while they will not be there to enjoy the new campus proposed by this plan, I'm very enthusiastic about what this will do for the school and the community at large.

First and foremost, the proposed plan will make the school, and thus the surrounding community, safer. Safety is the number one priority of Chaminade's Board and Administration and it's clear that this was taken into great consideration when developing this plan.

The plan will also enhance the educational opportunities for all students and create an environment to better focus on overall health and wellness. And, as a parent of a student athlete who plays lacrosse, the new fields and athletic facilities will be a huge addition to the campus and the community at large. Chaminade sports teams are an integral part of the Chaminade school spirit experience, and a positive force throughout the West Hills community. My family and friends will definitely be returning to the school for lots of games in the future.

The Chaminade community – students, parents, alumni, and administrators – are so excited about this project. That is evidenced by the fact that so many people have contributed to the fundraising efforts to make this happen. This will be a big win for the school and the community!

Thank you,

Abigail Krasny

RE: Chaminade College Preparatory, High School Campus Plan
Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street, & 7619-7629 Woodlake Avenue

Mr. Martin,

Chaminade is my Alma Mater – 1981. The academic education I received at Chaminade was of inestimable value to me in the workplace. I owe the vast majority of my success in life to Chaminade. While college often opens doors, for me, Chaminade was the focus of every instance of my leaning back in a chair and recalling the teaching, or the teacher, that enabled me to succeed in any given endeavor.

Classrooms were crowded back then and supplies were minimal. By God's grace, that can now change. I recall the shopping center behind the school. It is a rare opportunity indeed to be able to purchase an adjacent property, be it next to your home or your business. Those opportunities do not come along a second time. Chaminade was fortunate to be able to take advantage of the opportunity and I know that they will expand in a responsible and considerate manner. I expect that the many neighbors will be pleased to see that old shopping center replaced with a well-designed, attractive, modern, and well-maintained property. Additionally, a second access point will be a boon to those who bore the brunt of living next to a school for many years. Chaminade was always a good neighbor to West Hills.

I have seen the plan created for the project and it clearly reflects a great improvement over the campus I remember from so long ago. It has been 43 years since I graduated. Having attended Chaminade from 7th grade, I can personally vouch for the benefits Chaminade provided in the education I received there. I am pleased to see that the commitment to West Hills and the San Fernando Valley remains.

I urge you to give favorable consideration to this project. Thank you for your time.

Sincerely,

Christopher T. Valvo

Dear Sir,

I am a San Fernando Valley neighbor and parent of a student at Chaminade Middle School. My son absolutely loves Chaminade. And we are not practicing Catholics. This seems to make no difference to my son, or any of his many friends at Chaminade. I write to fully support Chaminade and the Chaminade College Preparatory High School Campus Plan. I have seen some of the plans and layouts for this project. This will be a significant, and modern, upgrade for this area of the San Fernando Valley. While I am not a construction engineer, it is plain to see that significant study, knowledge and effort went into the production of the plans for this project. The athletics upgrade alone is well worth this effort. High school athletics is an important part of the high school experience. This project will be a large step towards furthering the quality of that experience. Chaminade has a decades long track record of providing quality schooling at the West Hills location. Please lend your support to this project. Thank you for your consideration.

Sincerely yours,

Greg Hall

Re: Chaminade College Preparatory, High School Campus Plan Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HDZAD-ZAA, VTT-84101 Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Dear Mr. Trevor Martin,

I am a neighborhood resident of West Hills for over 25 years. We have 3 children who were the main reason why we chose this neighborhood to live in. We currently have 1 adult child who graduated from Chaminade High School and currently have 2 children at Chaminade schools - one at the high school campus and one at the middle school campus.

We have reviewed the campus plan and believe that this plan will improve the neighborhood we currently live in. The plan provides for more parking which will help with school events. The additional facilities such as swimming pool & additional fields will also make this school an attractive option for those in the community as well as alleviate the need to go to outside facilities which would increase traffic and reduce student participation in these sports. We feel strongly that having these outlets for sports & extracurricular activities is vital to our young people for mental & physical health reasons.

Sincerely,

Jennifer Yep

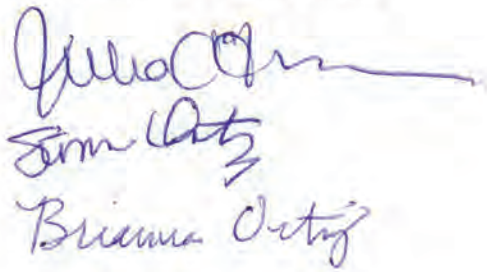
Re: Chaminade College Preparatory, High School Campus Plan
Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD
ZAD-ZAA, VTT-84101
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Mr. Trevor Marin –

We are writing to you as long time West Hills residents, Chaminade Parents, and Chaminade Alumni. We would like to express our support for the proposed campus improvements to the West Hills campus.

We believe the proposed improvements will be beneficial to the overall West Hills community by enhancing the general area surrounding the West Hills campus as well providing more opportunities for our local high school students to receive the tools they need to succeed in this increasingly competitive world. With additional sports facilities, wellness opportunities, enhanced safety, and technology, Chaminade students will be well prepared for college and beyond.



The proposal takes into consideration not only the interests of the Chaminade students, but the interests of the residents. With additional parking spots and moving the campus entry to Saticoy Street, there will be less parking and traffic on the residential streets. Furthermore, since the school operating hours are not changing, there is no impact on the residents from school activities and possibly less impact outside of school hours since the existing shopping center will be removed.

We enthusiastically support the proposal.

Thank you for your consideration,

The Ortiz Family

7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Dear Mr. Martin/Los Angeles Planning,

I am an alumni, former parent, former Board Member and former Board Chairperson of Chaminade College Preparatory. I write this letter in support of Chaminade's School Campus Plan. I support this expansion and plan not only for the reasons that it will improve the quality of education and high school experience at Chaminade, which includes both academic and extracurricular activities but also because the plan is sensitive to the impact on the local community, seeking expansion of facilities but not increase in student body size. Further, Chaminade has been and is thoroughly committed to working with community as a *good neighbor* in this endeavor, for example, by instituting no parking zones during school hours, a community hotline for concerns, limiting athletic event hours and seeking approval to allow a portion of its campus to be open for public use.

While the plan seeks to add classrooms, a library and to expand athletic facilities, the plan also addresses traffic and safety with additional parking, pedestrian bridge, on site facilities (reducing commuting to offsite venues), additional fencing, safer street crossings and reduced local school traffic. The proposed zone change would protect the community from larger residential developments and by creating a more insulated and self contained campus, the local community will be less affected by day to day school activities.

I have been part of the Chaminade community for nearly 50 years and while Chaminade has added needed facilities on this campus over the years, this comprehensive plan is the result of a long period of thoughtful planning and will continue to raise the high school education reputation for the West Valley to the highest levels.

Sincerely,

Pamela G. Meyer

Project Address: 7500 Chaminade Ave, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Dear Mr. Martin,

We have been parents at Chaminade School for 11 years and we hope to continue for 4 years more. Two of our four children have graduated and are currently pursuing their studies in Business Administration having successful college years thanks to the preparation they received at Chaminade College Preparatory School. All four of our kids found a haven at Chaminade, a place where they could excel in their academics, athleticism and most importantly their faith. The support and guidance they received in such a family environment helped and is helping them blossom.

Chaminade has been a successful institution since it's inception and never have they allowed their premises to be nothing short of immaculate. This speaks of their pride in ownership and workplace. It was not surprising to me when I first heard of the schools plans to become even better. They teach pursuing excellence so it follows that they pursue excellence themselves. We as a family have already given our financial support to this cause that will surely help hundreds of students in the years to come. We now ask you to please support the plans of Chaminade's Projects so that more students could benefit from the haven it has already been and will continue to be. Communities are elevated by the presence of great schools like Chaminade, please support their community by supporting Chaminade College Preparatory School's Campus Plan. Thank you for your time.

Sincerely,

Victor and Gabriela Quiroz
Parents of Julia ('20), Gabriela ('23), Victor ('25), and Sophia ('28)

Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Re: Chaminade College Preparatory, High School Campus Plan
Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1,
CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue

Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

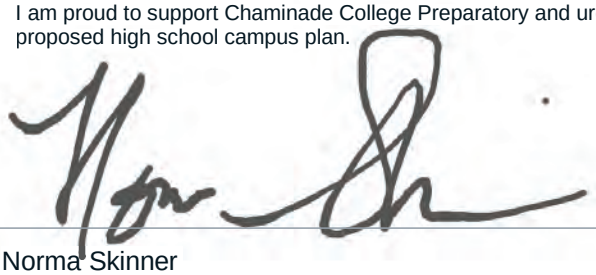
Re: Chaminade College Preparatory, High School Campus Plan
Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1,
CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue



Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Case Nos.: CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD-ZAD-ZAA, VTT-84101
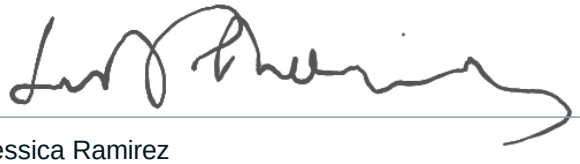
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street & 23260 Saticoy Street, 23217-23255 Saticoy Street & 7619-7629 Woodlake Avenue



Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Sincerely,

Dear Mr. Martin,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Sincerely,

I support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new administrative, counseling, library, multi-purpose, classroom and laboratory areas and a new student quad, and will create quality athletic and parking facilities on the new North Campus. I also strongly support the proposed pedestrian bridge, which will connect the Main Campus with the North Campus as an essential safety element of the campus.

Chaminade has been an important asset in the West Hills community for the past 60+ years. Allowing the school to proceed with the thoughtfully and sensitively designed campus plan that incorporates top quality educational and athletic facilities will bring great value to our community for years to come. The proposed campus plan will allow for the essential enhancement of the quality education currently offered and will expand upon the wide variety of curricular, co-curricular and extra-curricular programs.

I am proud to support Chaminade College Preparatory and urge you to approve their newly proposed high school campus plan.

Sincerely,

Description Area	Petition In Support of Chaminade College Preparatory's New High School Campus PlanI have reviewed and support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new academic, library, counseling and administrative areas and a new student quad, will expand athletic and parking facilities to the new North Campus, and will include the construction of a pedestrian bridge to safely connect the existing and new campuses. I support Chaminade because they have been an important asset in the West Hills community for the past 60+ years, and the campus plan will allow them to provide additional quality educational programs and a wide variety of essential curricular, co-curricular and extra-curricular programs.

Description Area	Petition In Support of Chaminade College Preparatory's New High School Campus PlanI have reviewed and support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new academic, library, counseling and administrative areas and a new student quad, will expand athletic and parking facilities to the new North Campus, and will include the construction of a pedestrian bridge to safely connect the existing and new campuses. I support Chaminade because they have been an important asset in the West Hills community for the past 60+ years, and the campus plan will allow them to provide additional quality educational programs and a wide variety of essential curricular, co-curricular and extra-curricular programs.

Description Area	Petition In Support of Chaminade College Preparatory's New High School Campus PlanI have reviewed and support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new academic, library, counseling and administrative areas and a new student quad, will expand athletic and parking facilities to the new North Campus, and will include the construction of a pedestrian bridge to safely connect the existing and new campuses. I support Chaminade because they have been an important asset in the West Hills community for the past 60+ years, and the campus plan will allow them to provide additional quality educational programs and a wide variety of essential curricular, co-curricular and extra-curricular programs.

Description Area	Petition In Support of Chaminade College Preparatory's New High School Campus PlanI have reviewed and support Chaminade College Preparatory's new high school campus plan which will modernize and upgrade the existing campus facilities with new academic, library, counseling and administrative areas and a new student quad, will expand athletic and parking facilities to the new North Campus, and will include the construction of a pedestrian bridge to safely connect the existing and new campuses. I support Chaminade because they have been an important asset in the West Hills community for the past 60+ years, and the campus plan will allow them to provide additional quality educational programs and a wide variety of essential curricular, co-curricular and extra-curricular programs.

Hi!

I live at 23029 Strathern St in West Hills. right down the street from this project.
I fully support it and do not agree with anything the Neighborhood Council has sent. If it isnt this project they should just do 100% affordable housing.

Thank you!

Danny

Dear Trevor,
My main issue is the pool.
Please reconsider in making it covered.
It will protect everyone from tragedies.
Also consider the traffic if those apartments three hundred plus are built right at the corner.
Neighbors are all worried about the noise.
Thank you.
Have a great day,
Aida Abkarians

To: trevor.martin@lacity.org

I am a resident of West Hills interested in Chaminade's expansion plans. Please send me a copy of the MND-Mitigated Negative Declaration as soon as it is available. Email address: TonyBWHNC@gmail.com
Please reply to confirm receipt of this request and to confirm your intent to send the document to me when it comes available.
Thank you, Anthony Brosamle - Neighbor, former Chaminade employee and parent & former member of West Hills Neighborhood Counsel.

Thank you. Tony

Hi Tony,

I have added your name and contact info to the interested parties list for the Chaminade High School Project (Case No. CPC-2023-1254-VZC-HD-ZAD-ZAA). I will send you a copy of the MND Report once it is finalized.

Best,

Trevor

CHAMINADE
COLLEGE PREPARATORY

OFFICE OF THE PRESIDENT

June 7, 2024

Ms. Charlene Rothstein
Mr. Bill Rose
West Hills Neighborhood Council
Zoning & Planning Committee
charwhnc@gmail.com
billrose@parkregency.com

Re: Response to WHNC Letter dated April 19, 2024, Chaminade College Preparatory, High School, Proposed North Campus Athletic Facilities
Project Address: 7500 Chaminade Avenue, 23241 Cohasset Street, 23260 Saticoy Street, 23217-23255 Saticoy Street and 7619-7629 Woodlake Avenue, West Hills
Case Nos.: CPC-2023-1254-VZC-HD-ZAD-ZAA, CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, VTT-84101

Dear Ms. Rothstein and Mr. Rose:

Thank you for your comment letter dated April 19, 2024, regarding the athletic facilities proposed by Chaminade College Preparatory on the North Campus property, located across the street from the existing high school campus. Please know that consistent with your goal to preserve the character of the neighborhood surrounding the proposed campus, high on our list of goals and objectives for the new facilities is to operate with the utmost sensitivity and regard to our neighbors while fulfilling the mission of our school. We understand the importance of quality of life and in the continued interest of our neighbors' and their interest. This is evidenced by our hosting of two community open houses prior to submitting our entitlement applications as well as engaging with the West Hills Neighborhood Council (WHNC) Zoning & Planning Committee and Streets & Transportation Committee very early in our planning process. We appreciate the time, effort, and care that you and other members of the Chaminade Subcommittee have put into reviewing Chaminade's proposal and engaging the community to provide comments.

Not to go unnoticed, based on discussions we held with the Chaminade Subcommittee in the office of Councilmember John Lee (Council District Office 12), we scaled back many of the operational aspects that we originally proposed for the North Campus. We established operational restrictions to address the concerns expressed, as relayed in the "Proposed Modified and New Conditions in Response to WHNC Comments" document dated March 7, 2024. Nonetheless, we do acknowledge the additional comments detailed in your April 19, 2024th letter and would like to take

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

this opportunity to address them and, where possible, agree to the additional changes, as discussed below by topic.

Environmental Hazards and Potential Health Exposures

Regarding your request to be informed immediately of all environmental hazards and potential health exposures currently known for the Project construction and operation, the draft Mitigated Negative Declaration (MND), which is near completion, details proposed remediation, demolition, and construction activities associated with the Project, including any foreseeable environmental hazards and potential health exposures. For example, the draft MND addresses the removal of asbestos and lead based paint during demolition of the existing shopping center. It notes that the Project would comply with existing regulations from OSHA, the US EPA, and the SCAQMD, and addresses mitigation regarding the remediation of impacted soil. For construction, the Project would comply with all applicable regulations governing the use of hazardous materials. It also discloses the hazardous materials which are those typical for a school operation, such as paints, cleaning materials, etc., similar to existing operations, and again would be subject to compliance with applicable statutory regulations regarding the use of such materials. We understand that Los Angeles City Planning will publish the draft MND soon, after which time it will be available for your review.

Zone Change

In response to your request for Chaminade to record a covenant and agreement to agree that no variances will be incorporated in the Los Angeles City Planning application for the North Campus, please know that no variances are currently requested, and we have no plans to incorporate such request. There are, however, other requests including Zoning Administrator Determinations to allow for the proposed heights of the structures that are ancillary to the athletic field and facilities, including the scoreboard, netting and netting poles, lights, and the pedestrian bridge. We will notify the WHNC of any changes that might trigger a Variance but at this time none are expected. To address your concern, however, Los Angeles City Planning will require that a covenant and agreement be recorded as a condition of the requested grants, binding the property to the requests approved and the associated conditions of approval. The covenant that the City will require would serve the same purpose as the covenant you are requesting as it will effectively bind the North Campus to the plans and requests submitted, effectively not allowing any other deviations as part of the application that is being considered.

Noise, Lighting & Setbacks

As for the requests for project design and operational features that address noise, lighting and setbacks, we are unable to provide the level of detail requested at this conceptual stage. However, we are committed to considering and implementing additional features, as needed and as required to comply with requirements set forth in the MND, when we are in the construction and operation design phase of the North Campus. In the meantime, we have given careful thought to your concerns and propose the following as conditions which would regulate noise and lighting:

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

- *Noise levels including, but not limited to, activities such as the use of outdoor public address system or speakers and announcements during sporting events, use of batting cages, and other activities will be subject to the local noise ordinance. All amplified noise must comply with LAMC Section 112.01, referenced below.*

  SEC. 112.01. RADIOS, TELEVISION SETS, AND SIMILAR DEVICES. (Amended by Ord. No. 156,363, Eff. 3/29/82.)

  (a) It shall be unlawful for any person within any zone of the City to use or operate any radio, musical instrument, phonograph, television receiver, or other machine or device for the producing, reproducing or amplification of the human voice, music, or any other sound, in such a manner, as to disturb the peace, quiet, and comfort of neighbor occupants or any reasonable person residing or working in the area.
  (b) Any noise level caused by such use or operation which is audible to the human ear at a distance in excess of 150 feet from the property line of the noise source, within any residential zone of the City or within 500 feet thereof, shall be a violation of the provisions of this section.
  (c) Any noise level caused by such use or operation which exceeds the ambient noise level on the premises of any other occupied property, or if a condominium, apartment house, duplex, or attached business, within any adjoining unit, by more than five (5) decibels shall be a violation of the provisions of this section.

- *All lighting shall be directed onto the site. Floodlighting shall be designed and installed to preclude glare to adjoining and adjacent properties. Outdoor lighting shall be designed and installed with shielding such that the light source is directed on-site, away from adjacent properties.*

- *On the North Campus: The athletic facility lights shall be turned off no later than 9:00 p.m. on practice and contest nights, with an exception for overtime/extra inning play on contest nights. On nights when the athletic facility is not in use, only low-level security lighting shall be permitted.*

At this time, landscaping unfortunately cannot be added on-site along the north side of the athletic field due to limited area to accommodate the necessary field dimension standards. Relocation of the scoreboard anywhere further to the east is unfortunately also not feasible. Due to the positioning of the sun in the afternoon hours and the location of the bleachers serving the athletic field, relocating the scoreboard further to the east would compromise its visibility. However, there is existing mature landscaping on the adjoining home properties to the north as well as an existing masonry block wall along the northern property line which varies in height, but is a minimum of 6-feet tall, with additional fencing on top. The wall and fences will remain, which will provide both visual screening and achieve the desire for additional sound attenuation. The proposed 10-foot-tall wrought iron security fence will be constructed in front of the existing wall to remain. In addition, the 19-foot-tall pool house proposed between the proposed pool and parking lot fronting on Woodlake Avenue provides sound attenuation. As such, adding a soundproof wall along the north property line would not be effective in further reducing noise levels. However, if abutting neighbors to the north have concerns, they are welcome

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

to contract Chaminade and we would be happy to address possible additional landscaping measures with them. In the meantime, as we understand that the main concern is amplified noise, we will propose the following mitigation measure.

- *Amplified sound systems for the Project's baseball field/bleachers and outdoor aquatics facility/bleachers shall be acoustically engineered with the following design and performance standards:*
  - *Amplified sound levels, as measured at the northern property line of the North Campus, shall not exceed 50 dBA.*
  - *Amplified sound systems shall not be operated outside the operational hours established for the North Campus facilities.*
  - *Speakers shall be directional and oriented away from the northern property line of the North Campus.*
  - *Non-Chaminade users of the facilities shall not be permitted to utilize amplified sound systems.*

To further address noise concerns, we have also in good faith volunteered to restrict the use of the batting cages for Chaminade only. We also volunteered to reduce the batting cage hours by two hours on the North Campus, to be limited to 9:00 a.m. to 7:00 p.m., Monday through Saturday, instead of 8:00 a.m. to 8:00 p.m. as originally proposed consistent with the CUP conditions of approval currently on the Main Campus. We are also exploring noise baffling measures for the batting cages, such as sound-limiting acoustic fencing and/or other appropriate features. Should any noise complaints be raised by neighbors after operations begin on the North Campus, Chaminade will work on resolving them as quickly as possible. We encourage all complaints to be placed on our 24-hour Complaint Line: (818) 588-4CCP (4227).

Regarding minimum setbacks for the pool lights along the Woodlake Avenue frontage, in response to your request, we agree to propose the following as a condition of approval:

- *Along the Woodlake Avenue frontage, pool lights shall be set back a minimum of 12 inches from the property line.*

Rental or Lease of Facilities/Use Restrictions

In response to the request for additional details about the proposed outside use of the North Campus, please know this is an aspect in our proposal which, if approved by Los Angeles City Planning, we feel would benefit the community, not only in response to interest expressed by some community residents to open campus facilities to the community, but due to the lack of outdoor pools available in the West Valley. With that, we previously scaled back the hours and imposed restrictions, in an effort to be sensitive to concerns shared by neighbors. For example, we reduced the originally proposed hours for outside use of the aquatic complex/pool and we volunteered to require outside organizations, such as local schools and youth groups, to arrive and depart by bus only. With your most recent comments in mind, we have further refined our proposal for outside use and offer the following language which we would propose to Los Angeles City Planning for consideration as conditions of approval:

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

- *North Campus Only: The rental or lease of the athletic and parking facilities, and associated structures, for non-Chaminade activities are restricted to the following:*
    - *Athletic Fields. Use by community-based organizations shall be limited to 36 days, Monday through Saturday, from 8 a.m. to 6 p.m. Use is not permitted on Sundays and national holidays. The rental or lease of the batting cages is not permitted at any time.*
    - *Aquatic Complex/Pool. Use by community-based organizations, which shall travel to and from the North Campus by bus, shall be limited to daylight hours only, and to end no later than 7:00 p.m., Monday through Friday, and no later than 5:00 p.m. on Saturdays, with no use of outdoor lighting other than low-level security lighting. For community member swim activities, use hours shall be limited to Monday-Saturday, 8:00 a.m. to 6:00 p.m. Use is not permitted on Sundays and national holidays. A lifeguard must be on duty any time the pool is in use.*
    - *For purposes of the above conditions, "community-based organization" shall mean any educational or athletic institution, group or league. "Daylight hours" shall mean hours illuminated by the natural light of day, or from dawn to dusk, year-round, but further limited by the times noted herein.*

In addition, as reflected in the mitigation measure related to amplified sound, as noted above, Non-Chaminade users of the athletics facilities will not be permitted to utilize amplified sound systems, which we believe further addresses concerns over outside use of the athletic facilities.

Hours of Operation (for Chaminade Use of North Campus)

Thank you for your comments about the hours of operation. For the Aquatic Complex/Pool use, we are proposing to implement the same hours of operation on the North Campus that are established in our current CUP for the existing campus, as follows:

- *For Aquatic Complex/Pool use: Shall have hours of 8:00 a.m. to 8:00 p.m., Monday through Friday. Saturday use is limited to 10 a.m. to 7 p.m. Athletic use is not permitted on Sundays or national holidays.*

We understand your request is to revise the hours to 8:00 a.m. to 7:00 p.m. In previous years leading to the approval of our current CUP, we agreed to reduce the original pool hours we proposed, resulting in the above-noted hours/condition. Further reducing the operational hours will negatively affect access to our programs, services and activities, and will further limit access to the facilities by outside community organizations, so it is important that we retain the needed flexibility. As for the requested schedule of set hours and days by month for the proposed pool, we are unable to provide this level of detail at this early stage. However, the schedule will be limited to the hours established above and will also be based, in part, on annual league schedules published by California Interscholastic Federation – Southern Section. Additionally, we feel that the noise mitigation pertaining to amplification, as noted above, will address concerns expressed by neighbors.

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

At this early stage, we are also unable to provide a detailed schedule for the use of the athletic fields, which will also be based in part on annual league schedules published by California Interscholastic Federation – Southern Section. However, after our initial meeting with the WHNC Chaminade Subcommittee, we proposed more restrictive hours of operation than the hours permitted on the existing campus, as follows:

- *For Athletic Field/Stadium use: Main Campus: Shall have hours of 7:00 a.m. to 10:00 p.m., Monday through Friday; Saturday use is limited to 8:00 a.m. to 9 p.m., and; 9:00 a.m. to 8:00 p.m. on Sunday. No more than 15 Sundays per year will be allowed. North Campus: Shall have the same hours as the Main Campus, except the end time shall be 9:00 p.m. (instead of 10:00 p.m.) on Monday through Friday, with an exception for overtime/extra inning play. Both Campuses: Athletic use is not permitted on national holidays. No congregating on the site for the purpose of these activities shall occur before the permitted hours. An instructor/school staff member shall be present at the subject site at least one-half hour prior to the designated start times to monitor student activities/arrivals to assure that noise impacts on the adjacent neighbors are minimized.*

Complaints

We very much appreciate your additional comments and suggestions pertaining to neighbor complaints. As we have shared previously, based on the comments expressed to date, we have implemented a new and improved 24-hour complaint line. The complaint line is posted at the bottom of our website homepage (Chaminade.org), as the **West Hills Neighbor Complaints Line (818) 588-4CCP (4227)**. We previously provided you with information about the complaint line, which was also mailed to our campus neighbors within a 500-foot radius of the existing campus, and shared our compliant line procedures. Complaints are logged and responded to as they are received. Accordingly, we agree to responding to complaints within 48 hours of receiving them, and propose to maintain and apply the following condition:

- *Complaint Log. The school shall maintain a complaint log associated with any concerns, written or verbal, expressed to the school by area residents, staff, students, or visitors regarding the operation of the school. The complaint log shall be made available to the Director of Planning in conjunction with the review of conditions set forth under Condition No. 28. The school administration shall make the complaint log available for review by any member of the public upon request.*

Any complaints related to construction, parking, noise and operations can be filed using this same complaint line. We remain committed to working with our neighbors to address any complaints we receive. As per our previous commitment, we would be happy to share the compliant log with the WHNC upon request, but do not agree to weekly or regular reporting.

Construction

Regarding the request that nearby residents be informed about construction activities and routes as they are scheduled to take place on the Main Campus and North Campus, including the

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

construction of the pedestrian bridge over Saticoy Street, we will adhere to standard noticing requirements for demolition and construction activities as required by the Los Angeles Department of Building and Safety. In addition, as required under our current CUP, a notice of construction activities will be posted on the construction sites as required by Condition No. 35, included below:

> ***35. Posting of Construction Activities.*** *The adjacent residents shall be given regular notification of major construction activities and their duration. A visible and readable sign (at a distance of 50 feet) shall be posted on the construction site identifying a telephone number for inquiring about the construction process and to register complaints.*

Parking

We understand there is concern over vehicles parking in adjoining residential streets on game days on the North Campus. As we shared previously, the level of attendance and parking needs for baseball games are not nearly as high as they are for football games. As such, the on-campus parking lots (on the Main and North Campuses) will adequately accommodate the parking demands for baseball games. Nevertheless, in an effort to address your concern, we volunteer to post signs at the North Campus driveway entrances along Saticoy Street and Woodlake Avenue, directing attendees to park on the North Campus or across the street on the Main Campus, and indicating that parking is not permitted on Keswick Street, Saticoy Street, Woodlake Avenue or other residential streets, per the following proposed (updated) condition:

- *For all games, competitions and swim meets on the North Campus:*
  - *All Chaminade students, faculty and staff shall be directed to park on the Main Campus.*
  - *In advance of each game day, written notice shall be provided to all visiting teams to indicate that vehicles must park on campus (either on the North Campus or across the street on the Main Campus), and that street parking on Keswick Street and other residential streets is not permitted.*
  - *A permanent sign shall be placed or posted at each driveway entry along Saticoy Street and Woodlake Avenue serving the North Campus, directing attendees to park on the North Campus or across the street on the Main Campus, and indicating that parking is not permitted on Keswick Street, Saticoy Street, Woodlake Avenue or other streets.*

After operations commence on the North Campus and games take place, should any neighbors have complaints related to game attendees parking in the street, we encourage them to reach out to us through our 24-hour Complaint Line so we can make adjustments and consider additional preventative measures accordingly.

Traffic Management Plan

We are happy to hold further discussions with the WHNC Streets & Transportation Committee, in concert with Council District Office 12, about the Woodlake and Saticoy intersection

10210 OAKDALE AVENUE | CHATSWORTH | CALIFORNIA 91311-3533
PHONE: 818.360.4211 | FAX: 818.363.0127 | CHAMINADE.ORG

and concern over traffic speeds. However, as LADOT has expressed, a traffic signal is not warranted at the street intersection, and as our traffic consultant has shared, the 4-way stop signs that currently exist at the intersection slows traffic more than a traffic signal would.

Safety and Security Monitoring

Safety and security plans that detail the arrival and department times of security guards on the school campuses cannot be made public, as this would be absolutely contrary to best security practices. However, a condition of our existing CUP, noted below, requires a security plan in consultation with the Police Department. We expect that this condition or a similar condition will be applied to the new North Campus as part of the currently requested entitlements. As such, Chaminade's agreement to such requirement will be recorded on the North Campus through the covenant and agreement that will be required for the requested entitlements. Evidence of compliance will also need to be provided to Los Angeles City Planning as part of condition clearances. We can provide evidence of compliance with respect to the proposed North Campus at the appropriate time in the future, when requested by the WHNC.

- *A security plan shall be developed in consultation with the Police Department, outlining security features of each new structure to prior to the issuance of a certificate of occupancy for each new structure. In addition, the property owner shall provide to the Topanga Commanding Officer a diagram of the site indicating access routes and any additional information that might facilitate police response. The applicant shall submit evidence of compliance to the City Planning Department.*

We are hopeful that our responses largely address the concerns you have relayed from stakeholders. Again, we appreciate the thought, time and effort you have put into gathering them and communicating them to us. We look forward to meeting with the WHNC Zoning & Planning Committee again soon, after publication of the draft MND, and answering any additional questions that you may still have.

Thank you,

Robert S. Webb

Hello Mr. Martin -

I have lived in West Hills for almost forty years, and I am very interested in what is happening in my community. Therefore, I would very much like to read the Mitigated Negative Declaration for the proposed expansion project of Chaminade College Preparatory High School.

Would it be possible for your office to send the MND to me, via email? I would appreciate that very much!

Thank you for your assistance in making me more familiar with the details of this proposed project.

Hello Mr. Martin -

So far, I have only received emails regarding the Harbor LA Draft EIR, from Los Angeles City Planning, but nothing about the West Hills Chaminade Expansion MND.

Is the Chaminade MND available yet?

To: "trevor.martin@lacity.org" <trevor.martin@lacity.org>, JEFF BORNSTEIN <powcp@aol.com>, Elizabeth Ene <elizabeth.ene@lacity.org>

Hi Trevor and Elizabeth,

Please include this comment below in the record for Aug 28 meeting for case(s) VTT-84101;
CPC-2023-1254-VZC–H D-ZAD-ZAA CPC-2009-1477-CU-ZV-Z AA-SPR-PA1 ENV-2023-1255-MND

(*Please confirm receipt*)

Dear Sirs and Madams,

Please deny approval concerning the case of Chaminade High School expansion.

Case Numbers VTT-84101;
CPC-2023-1254-VZC–H D-ZAD-ZAA CPC-2009-1477-CU-ZV-Z AA-SPR-PA1 ENV-2023-1255-MND.

A current EIR needs to be required

to study the effects of the expansion on the surrounding community. Studies and information on the project need to be updated as

the information used by applicant is outdated. In some cases, extremely outdated. This is a large project and will undoubtedly have a major impact on

not only the surrounding community. But also, the community as a whole.

Beyond the need for current information on impacts with a current Environmental Impact report, the project

needs offsets for the community in the manner of access to the school when not utilized by the school.

Providing value to the community in the manner of access to the athletic facilities for open recreation.

Open recreation to promote the health, safety and welfare for the community from its neighbor

Chaminade High School. In exchange for the expansion there should be hours of use available to the

residents/citizens of the surrounding community. I understand for safety concerns, a form of registration

maybe needed. Beyond, that public-open recreation needs to be free as part of the offset to the impact of the expansion.

Chaminade High School should be open to the public for free recreational use as

compensation for the impacts of the community which are undefined without a current

Environmental Impact Report.

Traffic, congestion, noise, light reflection and shade will all be affected by this expansion project.

Chaminade needs to be open a minimum of 20 hours a week to open recreation using outdoor and indoor athletic facilities

with no cost to the public to offset impacts of the project.

Without a dedicated and coordinated effort to serve the public in some legitimate manner

the City of Los Angeles is authorizing a project with heavy impact on the community, allowing

for their discretion of what is defined as a mitigated negative impact. With no offset for the community.

This project does not add housing stock to our community. This is an exclusive private school.

It is a private educational environment. We must not allow a private entity to expand and impact the public,

be allowed variances that again further effect the public without any offset for the community from said private entity.

Please deny this project and require an EIR going further. Please deny variances until more is done for the community.

And please deny approval for the Mitigated Negative Declaration until such time that community inclusion is taken into account.

Please confirm receipt of this comment and inclusion in the record for the August 28. 2024 DEPARTMENT OF CITY PLANNING SUBDIVISIONS (AND HEARING OFFICER) hearing.

Sincerely,
Jeff Bornstein
West Valley Alliance for Optimal Living.

Hi Trevor,

I just saw this. Nothing ever came back to me as "undeliverable", so if there's a Travis at lacity.org., he's probably wondering what the hell this is. Sorry 'bout that.

So to be sure, please send me a copy of the MND as soon as it's available, and send me a return email confirming receipt of this request and that the MND will be sent to me.

If this is a duplicate, please forgive that as well. Sometimes "auto-correct" can be a pain.

Thanks for your understanding,

Jeff

Karen <k10bs@aol.com> Thu, Jan 11, 2024 at 11:14 AM
To: Trevor Martin <trevor.martin@lacity.org>

Dear Mr. Martin,

As a resident of this West Hills community since 1986, I would like to present my concerns and that of many of my neighbors about the proposed expansion of the Chaminade High School.

The proposed expansion of an athletic field on the property in question will greatly change the nature of our neighborhood community.

The proposed athletic field will interfere with the quality and enjoyment of our bedroom community.

The lights, the noise and the traffic will make it nearly impossible for us to enjoy the respite of our homes.

Chaminade High School was built in the 1960's and the homes surrounding the current campus were built in the 1970's.

Those residents chose to live near the current athletic field whereas, we did not.

Our neighborhood realizes that Chaminade has purchased the property in question.

We are requesting that the school not be allowed to build an athletic complex on this property.

We would hope that the school would build classrooms and perhaps administrative offices on the property instead and keep all athletic activities on the current campus.

Sincerely,
Karen Sachs

RE: Response to Chaminade Preparatory School Expansion ENV-2023-1255-MND

This is my response to the Mitigated Negative Declaration (MND) released June 13, 2024 regarding the proposed Chaminade Preparatory School Expansion.

Essentially, I disagree with the MND signed by Trevor Martin, City Planner, dated 6/07/24. I believe that the proposed Chaminade Preparatory School Expansion WILL have a significant effect on the environment! Initially, Chaminade told the public that the property would be used for an "aquatic center". Personally, I felt that was a reasonable use for the property, given that Chaminade was going to do something with it. However, at the time I incorrectly assumed that the "aquatic center" would be enclosed. Subsequently, the project was changed to be primarily a baseball field with a small outdoor pool at the northeast corner of the property. The noise and lights associated with a baseball field would be untenable for the homeowners living adjacent to the property. It was at that time that I was opposed to Chaminade's proposed use, preferring that additional classrooms be built there and the proposed sports uses go on the current campus where they now intend to build additional classrooms.

In light of the above, I have many concerns about the parking, additional traffic generated by the now proposed use, as well as the negative affect the sports field would have on the adjacent home owners who most likely would never had purchased their home there had they known such a change would take place. Also, the MND did not take into account the major impact the proposed 324-unit apartment building on the south east corner of Woodlake and Saticoy will have, as that development was not known about at the time research was done for the MND. I personally believe that the proposed apartment project is out of conformance with the surrounding West Hills community! It is clear that the trend is to create new housing, but with the addition of many vehicles of those tenants having automobiles, an increase in traffic is sure to happen. Furthermore, with minimal parking for the proposed apartment occupants, there is no easy access to public transportation for tenants without automobiles, so other problems are sure to be created along with additional traffic generated by Uber drivers.

In my opinion, many of the conclusions stated in the MND are just not based on reality. One example is the grossly overstated number of car trips that would be eliminated with the removal of Field's market and the other tenants; the center generating a very low amount of traffic. Another example is the suggestion that

the noise coming from the new proposed use will be less than what exists now. Nothing could be further from reality!

In summary, while I have not mentioned many other important issues dues to a lack of time, such as the probable under-ground contamination from the former gas station on the northwest corner of Woodlake and Saticoy and adjacent south east of the development, I believe that at the very least a new MND must be generated taking into account the new apartment development, accurate current traffic and the affect the Chaminade expansion will have on the surrounding community.

Respectfully,
Steve Randall
11-year member of the West Hills NC Zoning & Planning Committee
11-year member of the West Hills NC Streets & Transportation Committee

West Hills/Chaminade College Preparatory's expansion plans

2 messages

Shirley <shirl.ey1548@att.net> Thu, Jan 18, 2024 at 11:34 AM
To: trevor.martin@lacity.org

I am a resident of West Hills interested in Chaminade College preparatory's expansion plans. Please send me a copy of the mitigated negative declaration (MND) as soon as available.

shirl.ey1548@att.net

I would appreciate receiving a return email that this request has been received and the MND and will be sent. Thank you for your help.

Regards.
Shirley Huber

Hi Shirley,

I have added your name and contact info to the interested parties list for the Chaminade High School Project (Case No. CPC-2023-1254-VZC-HD-ZAD-ZAA). I will send you a copy of the MND Report once it is finalized.

Best,

Trevor

Re: Expansion/Development for New Campus -Corner of Woodland & Saticoy Street
Updating Facilities at Current High School Campus – 7500 Chaminade Avenue
CASE NO. CPC-2023-1254-VZC-HD-ZAD-ZAA

Dear Mr. Webb:

Recently the West Hills Neighborhood Council (WHNC) Zoning & Planning Sub-Committee had two additional sessions with stakeholders to further discuss the proposed Chaminade expansion/development. Please see the following issues that the we feel will help preserve the unique character of our community.

- Request to ADD that residents and WHNC will be informed immediately of all environmental hazards and potential health exposures currently known or exposed throughout the project's development and lifespan.

Zone Change

- Request Covenant Agreement with Chaminade with no variances be incorporated as a requirement in the same filings with the L.A. City Planning Department.

Noise & Setbacks

- Request to ADD objections to all noise levels will be resolved to neighbors' satisfaction.
- Request to ADD increase the number of trees and planting along walls/fences to reduce noise.
- Request to ADD clarification of barrier fencing and wall materials to reduce noise.
- Request to ADD installation of soundproofing walls to reduce noise heard by residents on northern property line separating North Campus from homes; walls to provide STC ratings of 45-55 when surface is sealed.
- Request to ADD to setbacks list, the minimum setback for pool lights.
- Request to ADD all lights when not in use are low level and DarkSky compliant.

- Request to RECEIVE report on noise baffling measures for batting cages from Chaminade's noise consultant with changes as necessary for further noise reduction.
- Request to ADD sound-absorbing materials to pool building to reduce noise emanating from inside of building to outside environment.
- Request to ADD that noise levels will not exceed local ordinances and laws.
- Request to ADD definition of low decibel levels for outdoor public address system during special announcements and sporting events.
- Request to ADD definition of where and when designated amplified music is permitted.
- Request to ADD information if sound system is planned for Aquatic Center
- Request MOVING scoreboard to reduce invasive visual image experienced by residents. Chaminade to inform WHNC after discussions with sign company.

Rental or Lease of Facilities/Use Restrictions

- Request to ADD definition of North Campus users (all inclusive) including community members, other Chaminade schools, organizations, etc.
- Request to ADD maximum use of three (3) days per month for the pool.
- Request to ADD schedule of monthly pool swim use, with set hours, and number of days during the week and weekends.
- Request to ADD definition of daylight hours for the pool taking into account seasonal adjustments.
- Request to ADD a limit use of three (3) days per year for the Athletic Fields by community-based members and associated athletic organizations.

Hours of Operation

- Request TO CHANGE hours for Aquatic Complex/Pool use: to: "8:00am to 7:00pm…"
- Request to RECEIVE proposed pool use schedule with set hours and number of days by month from Chaminade.
- Request to RECEIVE schedule defining when ball games will be played, i.e, number of games played during week, weekends and approximate duration of games per month.

Complaints

- Request to ADD Chaminade will respond to noise /parking complaints within 48 hours from residents generated from the Athletic/Pool facilities, and during construction, i.e., trucks and equipment transporting dust, dirt, building materials, debris, any and all activities that negatively impact homes or prohibit or impede access to neighborhood streets.
- Request to ADD that residents' complaints will be logged along with complaint resolutions daily.
- Request to ADD logged complaints and complaint resolutions emailed to Charlene Rothstein, President, WHNC, weekly on Mondays.
- Request to ADD on Chaminade's website visible information including contact information for assigned Chaminade staff member handling complaints, how to file complaints by phone calls, by email or by using a dedicated online fillable complaint submission form.

Construction

- Request to ADD residents will receive information for the Main Campus, bridge (streets closures, e.g. Saticoy) and North Campus by postal mail as well as be available on Chaminade website the dates of project throughout the development stages from beginning to completion, along with construction routes and notices containing days/ hours of construction (weekdays and weekends).

Parking

- Request to ADD information on how violations for parking infractions will be handled, and preventative measures taken, i.e., Chaminade hires patrolling streets, notes/flyers on cars, sawhorses blocking entrances to residential streets, etc.

Traffic Management Plan

- Request to ADD further discussions and resolutions that the Board of WHNC and the Streets & Transportation Committee partner with Chaminade and CD12 to propose a solution on the dangerous intersection and traffic delays at Woodlake and Saticoy regarding stop signs and installation of traffic lights and sidewalks.

Safety and Security Monitoring

- Request to ADD verification and inform WHNC of compliance with the Topanga Community Police Station and L.A. City Planning during development of security plan.
- Request to ADD arrival and departure times for security guards on North Campus.

We look forward to continuing discussions at the next meeting at the Council District 12 office. If you have any questions, please do not hesitate to contact us.

> As WHNC Streets & Transportation Committee Chair I request, LADOT attend our Streets & Transportation Committee meeting on June 20th. Where we will review the Transportation Assessment regarding the Chaminade expansion. The dates and conditions (see below) provided to me, will not allow stakeholder input on traffic and parking to be transmitted to the City within the time constraints the WHNC is required to submit a response.
>
> 1. I have been informed that Streets can have a meeting at de Toledo on the 20th at 7:00pm. (But no attendance by LADOT or Chaminade)
> 2. I've also been informed that ALL WHNC committee meetings are cleared to be held at Chaminade starting July 1st. (strictly adhering to our regular meeting schedule)
> 3. I've been contacted by Chaminade (Rosenheim & Associates, Inc) informing me that LADOT and Chaminade can not attend a WHNC Streets & Transportation Committee meeting until August 7th or later.
>
> WHNC has 90 days from 5/25/23 to respond to the City. (per document VTT-84101.pdf) If no response is made within that time it could be deemed approved by the WHNC. The WHNC committee meetings at Chaminade will be strictly held to our normal schedule. Zoning is held on the 2nd Tuesday of the month Streets on the 3rd Tuesday. Full Board held on the 1st Thursday. This would create the following, Streets would meet on 3rd Tuesday 8/15, WHNC Zoning Committee would not be able to review WHNC Streets Committee recommendations until the 2nd Tuesday in September (9/12) and the WHNC Board will not be able to take a vote to send a response to the City until the 1st

Thursday in October (10/5). Our 90 days to respond expires on 8/25/23. Any Zoning approval/denial and any recommendations are required to be passed by a full board vote before they can be submitted to the City.

The aforementioned conditions and time line, will not allow WHNC Streets & Transportation Committee (stakeholder) or Zoning input before 8/25/23. This is just not acceptable to me and seems to defeat the purpose of the Neighborhood Council providing a conduit from our stakeholders to City government.

If LADOT can not attend the WHNC Streets & Transportation Committee meeting on June 20th. It is my opinion that an extension of 60 days to the required response time for the WHNC be granted OFFICIALLY.

Mr. Robert Webb, President
Chaminade College Preparatory
7500 Chaminade Avenue West
Hills, California 91304

Re: **Expansion of an Existing High School, Including Construction, Use and Maintenance of a New Campus**

Case No. CPC-2023-1254-VZC-HD-ZAD-ZAA

Dear Mr. Webb:

The request for the proposed expansion of Chaminade College Preparatory High School is in actuality a request for the construction of a Sports Center without respect for the surrounding and adjacent single-family homes. According to the Planning Department, limitations are necessary to protect the best interests and to assure a development in harmony with the General Plan and the surrounding communities. The West Hills General Plan Land Use is very low residential, any reference to the West Hills **DRAFT** Community Plan is unacceptable. Please see Exhibits A & B attached hereto for reference.

The West Hills Neighborhood Council ("WHNC") Zoning & Planning Sub-Committee is in the process of an investigation regarding this case.

Our findings to date are as follows:

1. Many constituents would support an expansion of classrooms and library to the North campus if done appropriately with respect for the surrounding neighborhood;

2. Many constituents would support a Sports Center on the main South campus with compliance to the current conditions; and

3. Attachment D.1, regarding Discretionary Requests from Chaminade to change conditions place on Chaminade in Case No. CPC-2009-1477-CU-ZV-ZAA-SPR.

Recommendations from the Zoning & Planning Committee:

1. Condition 5 – To remain as written for both campuses;
2. Condition 6E Athletic Field Use/Batting Cages – Hours of operation and renting of facilities would be detrimental to the quiet and quality of life if permitted;
3. Condition 11 A& B Marching Band - Request is unclear and excessive; Condition to remain as written. Please see Exhibit C attached hereto for reference;
4. Condition 15 Parking – On-site parking requires further explanation for both the main South campus and North Campus;
5. Condition 16 Traffic Management Program – Requires and updated Traffic Management Program and the current program is flawed;
6. Condition 18 Buses – Requires queuing, possible splitting of buses and implementation of a drop-off and pick-up plan that does not inhibit traffic flow;
7. Condition 24 Lighting – Current lighting on the main South campus can be seen from adjacent streets; this is non-compliant with this condition;
8. Condition 26 Noise Mitigation – Should be kept as written for protection of the neighbors; and
9. Condition 27 Complaint Log – Constituents have been unable to locate a number for the Chaminade hotline. Requests were made directly to the school's office to see the complaint log. No log has been located to date. Pursuant to Condition 27 and as a public record, the WHNC requests a quarterly report of the complaint log.

APPLICANT REQUEST FOR A ZONE CHANE TO THE NORTH CAMPUS C2-1 WITH R4 USES

WEST HILLS NEIGHBORHOOD COUNCIL ("WHNC") ZONE CHANGE REQUEST FOR THE NORTH CAMPUS – C1-1VL-CUP-Variance-Covenant Agreement

Please see Exhibits D & E attached hereto for reference.

TRAFFIC STUDY:

The analysis of the May 4, 2023 Transportation Assessment report and the corresponding May 16, 2023 City of Los Angeles Inter-Departmental Correspondence remains in dispute. According to the reports, the project would not exceed 250 daily vehicle trips ("DVT") and refers to the shopping center ("North Campus") as a "high trip generator". The reality is that the

shopping center is an extremely "low trip generator". The WHNC's sub-committee encountered only 8 vehicles parked in the shopping center lot during one visit with 5-6 vehicles entering intermittently, 10 parked vehicles on another visit with 5-6 vehicles entering intermittently and comparable numbers of vehicles parked and entering on other visits. Intermittent vehicle trips generated throughout the day at the shopping center do not create long vehicle line-ups at Woodlake, Saticoy or Keswick nor interfere with traffic flow.

Many of the stores in the shopping center have been closed for many years and remain closed today. Fields Market has managed to remain open due to its continued use by the film industry for commercial filming.

Although student enrollment is stated to remain the same, there is no calculation for additional traffic from students coming from other schools and public attendance to the proposed Sports Center for games and competitions. Because Chaminade has not submitted a Traffic Management Program to date, that was not calculated in the analysis. Please see Exhibit F attached hereto for reference.

Should you have any questions please do not hesitate to let us know.

Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, Approved 11/17/2009, and As Amended by Letters of Clarification, dated 4/6/2010 & 6/16/2010	
Condition	**Response / If Applicable, REQUEST for Condition Modification**
9. Sign. One (1) 16-foot tall, text-only, LED pole sign for on-site identification and informational purposes only, with an 8-foot tall pole, and a sign face with dimensions of 8 feet in height and 12 feet in width, will be allowed along the Saticoy Street frontage as shown on the site plans (Exhibit B1). The pole sign will be in substantial conformance with Exhibit B3.	The Applicant is in compliance with this condition with respect to the existing pole sign. Please note that new identification and wayfinding signs will be proposed on the North Campus and on the pedestrian bridge.
10. Landscaping. For each new structure, and prior to obtaining any grading or building permits before the recordation of the final map, a landscape plan, prepared by a licensed landscape architect, shall be submitted to and approved by the Planning Department in accordance with CP-6730.	The Applicant has complied with this condition.
11. Marching Band practices shall be limited to the following locations and hours: **a.** Evening Practice Sessions. A maximum 1 weekday night per week in the outdoor stadium, between the hours of 6:30 p.m. and 9:00 p.m., to be completed with the lights turned out and the stadium vacated no later than 9:00 p.m. Students leaving the campus after 9:00 p.m. shall be instructed that no playing of instruments shall occur after the end of the session; this shall be strictly enforced by the school administration. The instructor or school staff shall monitor student activities and departures to ensure that noise impacts on adjacent neighbors are minimized. **b.** Morning Practice Sessions. In addition to the one night as per above, a maximum 3 working days (Monday through Friday) per week between the hours of 7:50 a.m. and ending by 9:30 a.m. An exception is made for no more than two weeks in the summer when a marching band camp is held. In all instances, all students shall refrain from congregating at the practice site prior to 7:30 a.m. and after 9:30 a.m. during the school year and between 7:30 a.m. and after noon during the two-week band camp, to minimize noise impacts on adjacent neighbors. An instructor/school staff member shall be present at the subject location by 7:30 a.m. to monitor student activities and arrivals to ensure that	**REQUEST** – Chaminade has a truly successful marching band program and requires slightly more outdoor practice time, as follows: **a.** The Applicant requests up to two (2) weekday nights per week in the outdoor stadium, between the hours of 6 p.m. to 9 p.m., in lieu of one (1) weekday night per week from 6:30 p.m. to 9 p.m. **b.** The Applicant requests that this condition be modified consistent with any modification to Condition No. 11.a. Chaminade also requests that morning practice sessions be modified to up to 2 hours of outdoor practice per day between the hours of 8:00 a.m. to 3:00 p.m, with an exception to allow no more than two weeks in the summer for marching band camp to be held between the hours of 8:00 a.m. and 8:00 p.m. To minimize disruption for neighbors, the outdoor playing of instruments is proposed to be limited to four (4) hours per day during summer camp.

Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, Approved 11/17/2009, and As Amended by Letters of Clarification, dated 4/6/2010 & 6/16/2010	
Condition	**Response / If Applicable, REQUEST for Condition Modification**
noise impacts on adjacent neighbors are minimized. No instruments shall be played (including tuning, or "warming up") prior to the 7:50 a.m. start time. **c.** Saturday Sessions. A cumulative total of five Saturday marching band "warm up" sessions, immediately prior to participation at athletic competitions, shall be permitted during the school year, with hours expressly limited to starting after 8:45 a.m. and ending before 5:00 p.m.	c. No change is requested to this Condition. The Applicant complies with this condition and will continue to comply after Project completion.
12. Special Events. **a.** No more than 18 "Special Events" are authorized. Special events are activities involving parents and/or other visitors where more than 451 vehicles are anticipated at one time. School administrative board meetings and parent/teacher meetings are excluded from the definition of "Special Events". **b.** Unless subsequently modified by the City Planning Commission, the 18 special events authorized on the property are as follows: 1) Graduation - <u>One per semester</u> 2) Varsity Football Games (not including playoffs) - Eight per year 3) Also, <u>nine additional days annually</u>, for school performances, other athletic events, and school-related fundraising activities. 4) A copy of the Calendar and List of Major Events shall be submitted to the appropriate Council District, West Hills Neighborhood Council, and residents within 500 feet of the school property at least 60 days prior to the beginning of each school year for their reference. 5) Calendar Modifications. No variation to allow any "special' event that is not included on the Calendar shall be scheduled without a minimum 60-day advance notification to the appropriate Council District, Neighborhood Council, and residents within 500 feet of the school property. (This	The Applicant is in compliance with Condition No. 12 and will remain compliant with respect to the proposed Project. No changes are proposed to the permitted Special Events.

EXHIBIT D
REQUEST FOR
Case No. CPC-2009-1477-CU-ZV-ZAA-SPR,

C1-1VL LIMITED COMMERCIAL ZONE. (1VL height restrictions) (see Attachment A)

The following regulations shall apply to the "C1" Limited Commercial Zone:

A. Use – No building, structure or land shall be used and no building or structure shall be erected, structurally altered. enlarged or maintained, except for the following uses, and when a "**Supplemental Use District**" is created by the provisions of Article 3 of this chapter, for such uses as may be permitted therein:

1. Any use permitted in the CR Limited Commercial Zone ~~but not~~ including a church, educational institution, museum or school (elementary or high), provided that all the regulations of said CR zone are complied with except as provided in this section. Any residential use permitted in the ~~R3 Multiple Residential~~ Zone RS-1 provided that all the regulations of said ~~R3~~ RS zone are complied with except as provided in this section. **(Amended by Ord. No. 157,994, Eff. 9/25/82.)**

1.5. Hotels (including motels), apartment hotels or hostels when no portion of a structure proposed to be used as a hotel (including a motel), apartment hotel or hostel is located within 500 feet from any A or R zone. **(Amended by Ord. No. 185,931, Eff. 7/1/19.)**

2. **(Amended by Ord. No. 140,726, Eff. 9/3/70.)** The following retail stores, shops or businesses when conducted in accordance with the limitations hereafter specified:

(a) **Types of Uses:**

(1) Bakery goods shop;

(2) **(None)**

(3) Barber shop or beauty parlor;

(4) Book or stationery store;

(5) Clothes cleaning agency or pressing establishment;

(6) ~~Clubs or lodges, bridge clubs, fraternal or religious associations; (Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.)~~ **Removed under covenant agreement**

(7) Confectionery store;

(8) Custom dressmaking or millinery store;

Exhibit D
Cont.

(9) Drugstore;

(10) Dry goods or notions store;

(11) Florist or gift shop;

(12) Grocery, fruit or vegetable store;

(13) ~~Hospital, sanitarium or clinics (except animal hospitals). (Amended by Ord. No. 177,325, Eff. 3/18/06.)~~ **Removed under covenant agreement**

(14) Hardware or electric appliance store;

(15) Jewelry store;

(16) Laundry agency;

(17) Meat market or delicatessen store;

(18) Office, business or professional;

(19) Photographer;

(20) Restaurant, tea room or cafe (excluding dancing or entertainment). Restaurants with drive-through service that adjoin or are across the street from or separated only by an alley from any portion of a lot in a residential zone or use or in an RA Zone, shall be subject to the conditional use requirements of Section 12.24 W.17. **(Amended by Ord. No. 173,492, Eff. 10/10/00.)**

(21) Shoe store or shoe repair store;

(22) Tailor, clothing or wearing apparel shop;

(23) Laundries or cleaning establishments of a self-service type using only automatic machines with non-flammable cleaning fluid; **(Added by Ord. No. 140,726, Eff. 9/4/70.)**

(24) Other uses similar to the above list when determined as provided for in Section 12.21 A.2.; **(Added by Ord. No. 140,726, Eff. 9/4/70.)**

(25) Uses (not involving storage) customarily incident to any of the above- named uses and accessory buildings (including storage garages) when located on the same lot. Automobile parking space required in connection with permitted uses as provided for in Section 12.21 A.4.

(26) **(Amended by Ord. No. 173,754, Eff. 3/5/01.)** Indoor swap meets when authorized pursuant to the provisions of Section 12.24 W.42.

Exhibit D
cont.

(27) Joint living and work quarters for the following occupations: accountants; architects; artists and artisans; attorneys; computer software and multimedia related professionals; consultants; engineers; fashion, graphic, interior and other designers; insurance, real estate and travel agents; photographers and other similar occupations as determined by the Zoning Administrator, provided that the commercial uses are permitted by the underlying zone. **(First Sentence Amended by Ord. No. 172,572, Eff. 6/3/99.)** For all existing buildings, the yards required shall be the same as the yards observed by the existing structures on the site. For an existing building, for which a building permit was issued before April 1, 1994, and which contains no more than eight living and work quarters, the number of parking spaces required shall be the same as the number of spaces existing on the site. All other buildings used for this purpose must meet the parking and yard requirements for residential buildings. **(Added by Ord. No. 169,670, Eff. 5/13/94.)**

(28) Facilities for the development of software (including the reproduction of software and data) and other computer and media-related products and services, not including hardware. **(Added by Ord. No. 172,106, Eff. 8/14/98.)**

(29) Skilled Nursing Care Housing. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(30) Alzheimer's/Dementia Care Housing. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(31) Eldercare Facility. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(b) **Limitations:**

(1) **(Amended by Ord. No. 173,492, Eff. 10/10/00.)** All merchandise shall be ~~new~~ and shall be sold at retail only, unless the sale of the merchandise is authorized in an indoor swap meet pursuant to the provisions of Section 12.24 W.42.

(2) All activities are conducted wholly within an enclosed building, except that ground floor restaurants may have outdoor eating areas. An outdoor eating area for a ground floor restaurants may be located anywhere between the building and its required front yard, or between the building and any required side or rear yard which side or rear yard abuts a public street. **(Amended by Ord. No. 165,403, Eff. 2/17/90.)**

(3) All products produced, whether primary or incidental, are sold on the premises, and not more than five persons are engaged in such production or in servicing of materials. **(Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.)**

(4) Any exterior sign is attached to a building, does not extend more than two feet beyond the wall of the building, and does not project above the roof ridge or parapet wall (whichever is higher) of the building.

(5) **(Added by Ord. No. 174,097, Eff. 8/26/01.)** All retail stores, shops or businesses shall be limited to less than 100,000 square feet of floor area. This limitation shall apply to the cumulative sum of related or successive permits that are a part of a larger project, such as piecemeal additions

Exhibit D cont.

to a building, or multiple buildings on a lot or adjacent lots, as determined by the Director of Planning.

B. Restriction. (Amended by Ord. No. 173,268, Eff. 7/1/00, Oper. 7/1/00.) For any lot designated as Public, Quasi-Public, Public/Quasi-Public Use, Other Public, or Open Space on the land use map of the applicable community or district plan; any lot shown on the map as having existing lakes, waterways, reservoirs, debris basins, or similar facilities; any lot shown on the map as the location of a freeway right-of-way; and any property annexed to the City of Los Angeles where a plan amendment was not adopted as part of the annexation proceedings:

Any of the uses permitted by Subsection A of this section shall require prior approval in accordance with the provisions of Section 12.24.1 of this Code.

C. Area. (Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.) No building or structure nor the enlargement of any building or structure, shall be erected and maintained unless the following yards, lot areas and loading spaces are provided and maintained in connection with such building, structure or enlargement.

In applying the provisions of this section, the front lot line of a corner lot shall be the line separating the lot from the principal street upon which it abuts. Where said lot abuts upon a major or secondary highway such highway shall be construed as being the principal street. Where a lot abuts upon two or more highways, and in all other cases, a Zoning Administrator shall determine which street is the principal street.

1. **Front Yard**. There shall be a front yard of not less than 10 feet in depth.

2. **Side Yards**. Side yards shall be required only in the following instances:

(a) Along the side street lot line of every corner lot in the C1 Zone.

(b) Where the side lot line of the lot in the C1 Zone abuts upon the side of a lot in an A or R Zone.

(c) For all portions of buildings erected and used for residential purposes.

The width of such required side yard shall not be less than 10 percent of the lot width, but need not exceed five feet and shall not be less than three feet in width. Provided, however, that one foot shall be added to the width of the required side yard for each additional story above the second story, but such side yard need not exceed 16 feet in width.

In all other cases, a side yard for a commercial building shall not be required, but if provided, it shall not be less than three feet in width.

3. **Rear Yard.** A rear yard shall be provided only in the following instances:

(a) Where the rear of the lot in the C1 Zone abuts upon a lot in an A or R Zone.

Exhibit D cont.

(b) For all portions of buildings erected and used for residential purposes. Such yard shall be provided and maintained at and above the floor level of the lowest story designed or used for residential purposes, and the full height of the building shall be used in computing the required depth of rear yard.

The depth of such required rear yard shall be not less than 15 feet. One foot shall be added to the depth of such rear yard for each additional story above the third story, but such rear yard need not exceed 20 feet in depth.

4. **Lot Area**. The lot area requirements of the ~~R3~~ RS-1 Zone (Section 12.07.1 C.4.) shall apply to all portions of buildings erected and used for residential purposes. Provided, however, that where the lot is in the "H" Hillside or Mountainous Area, there shall be not more than one dwelling unit for each 5,000 square feet of lot area.

5. **Loading Space**. As required by Section 12.21 C.1. Exceptions to Area regulations are provided for in Section 12.22 C.

VARIENCES & MONDIFICATIONS

1. School, elementary or high, or educational institution (Pursuant LAMC 6. LAMC 12.32 G2)
2. Approved Conditional Use, RS Suburban Zone Residential Zone (in lieu of R4 Multiple Dwelling) Zone.

EXHIBIT E
ATTACHMENT A
DISCRETIONARY REQUESTS
APPROVE/RECOMMEND
Case No. CPC-2009-1477-CU-ZV-ZAA-SPR

The applicant requests a **VESTING ZONE CHANGE AND HEIGHT DISTRICT CHANGE**, pursuant to Los Angeles Municipal Code ("LAMC") Sections 12.32 F and 12.32 Q, **from the [Q]C1-1VL and P-1VL Zones to the C2-1 Zone** on the new North Campus.

We recommend a **VESTING ZONE CHANGE ONLY** on the North Campus from [Q]C1-1VL and P-1VL to [Q]C1-1VL only, Pursuant to Los Angeles Municipal Code ("LAMC") Sections 12.32 F and 12.32 G-2 a 1-3 Code. Keeping existing condition of a maximum 0.5:1 FAR

We reject applicants "Attachment C" under **JUSTIFICATIONS / FINDINGS "The proposed Zone Change is in conformity with public necessity, convenience, general welfare and good zoning practice."**, references to the draft Canoga Park-Winnetka-Woodland Hill-West Hills Community Plan. This plan has not been adopted and is still under review and any reference to this plan is rejected when used for justification of any development or vesting zone change.

We reject applicants Attachment F Zoning Administrator Determination Findings section 3 Community Plan which references Page III-10 of the Canoga Park-Winnetka-Woodland Hills-West Hills Community Plan. This section applies to Public Schools not private schools.

The applicant claims the development is beneficial in terms of **public necessity**. We reject these justification and findings. The applicant is a private school and business not open to the public while it is located in West Hills this proposed development serves it's clients. Fences and security keep the public out.

The applicant claims the development is beneficial in terms of **Convenience**. We reject these justification and findings. The applicant is a private school and business not open to the public while, it is located in West Hills this proposed development serves Chaminade clients. There will be increased traffic on Saticoy where the drop off of clients will be changed. For the stakeholders in this area this will be inconvenient at best.

Community Plan page III-12 and III-13 Goals, Objectives and Policies states:

SCHOOLS:
In the Canoga Park-Winnetka-Woodland Hills-West Hills, public schools are administered by the Los Angeles Unified School District (LAUSD). The number of LAUSD facilities in the Plan area are twenty-two elementary schools, five middle schools, and three high schools.

GOAL 6:

Exhibit E
Cont.

PUBLIC SCHOOLS THAT PROVIDE A QUALITY EDUCATION FOR ALL OF THE CITY'S CHILDREN, INCLUDING THOSE WITH SPECIAL NEEDS, AND ADEQUATE SCHOOL FACILITIES TO SERVE EVERY NEIGHBORHOOD IN THE CITY.
Objective 6-1 Work constructively with LAUSD to promote the siting and construction of adequate school facilities phased with growth.

Policies

6.1.1 Explore creative alternatives for providing new school sites in the City, where appropriate.

Program: Develop plans to address issues of siting and joint use of facilities including strategies for expansion in transit-rich locations.

Program: Use the City's "Annual Growth Report" to monitor locations for growth and potential new school sites.

Objective 6-2 Maximize the use of local schools for community use and local open space and parks for school use.
Policies 6-2.1 Encourage the siting of community facilities (libraries, parks, schools and auditoriums) together. Program: Formulate/update plans to address issues relating to siting and the joint use of facilities. Identify strategies for the expansion of school facilities including:

1. Siting of schools and other community facilities (libraries, parks, and auditoriums) within a transit station, center, or mixed-use area so they can complement each other and make the most efficient use of the land provided for these services.

2. Locating middle schools and high schools where possible, close to transit stations and key centers and mixed-use districts, so students can use the transit system to get to and from school.

3. Encouraging private redevelopment of existing school sites in the immediate vicinity of transit stations and centers so that the existing site (a low intensity use) would be replaced by a high intensity mixed-use development that would incorporate school facilities.

The above polices are intended for Public Schools not Private Schools. We reject these polies as applied to Private Schools.

The applicant claims the development is beneficial in terms of **general welfare**. We reject these justifications and findings. The applicant is a private school and business is not open to the public while located in West Hills this proposed development serves its clients. We agree the general welfare of the applicants' clients will benefit from this proposed development, but the general public will not.

The applicant claims "the proposed Vesting Zone Change and Height District Change is beneficial in terms of **good zoning practice**" The applicant claims that their proposed C2 Zone corresponds to the existing Neighborhood Commercial land use designation of the North

Exhibit E
Cont.

Campus. These justifications refer to a draft Community Plan that has not been adopted. We reject all references to the Draft Community Plan.

We recommend C1-1VL Zone for this development project in keeping with "**good zoning practice**" with the application of condition 1 referenced on the applicates attachment D.1 of the Conditions of Approval Compliance Matrix.

We recommend the R3 zoning normally allowed under C1 modified to RS.

1. Community Plan I-9 "Preserve and enhance the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance."
2. Community Plan I-2 "West Hills" This primarily single-family neighborhood is bound by Roscoe Boulevard to the north, Topanga Canyon Boulevard on the east, the Ventura Freeway to the South, and the Simi Hills on the South and Southwest.
3. Residential page III-1 of Community Plan states: "the proposed Plan has three fundamental premises. First, is limiting single family residential densities in various neighborhoods to the prevailing density of development in these neighborhoods"
4. The properties located to the north of the Subject Property and abutting, are zoned RS-1 and improved with single-family.
5. The properties located to the west and south of the Subject Property across Saticoy Street, are zoned RS-1 and improved with single-family
6. LAMC 12.32 G2 provision may be made in a zoning ordinance that the property not be utilized for all the uses ordinarily permitted in a particular zone classification and/or that the development of the site shall conform to certain specified standards, if the limitations are deemed necessary to:

   (1) Protect the best interests of and assure a development more compatible with the surrounding property or neighborhood;

   (2) Secure an appropriate development in harmony with the objectives of the General Plan; or

   (3) Prevent or mitigate potential adverse environmental effects of the zone change.

We recommend -1VL for height restrictions. (Summary of Zoning Regulations page 7) All surrounding properties are -1VL or RS-1.
C2-1 would violate the intent of the Community Plan to preserve the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance.

Applicants **CONDITIONS OF APPROVAL COMPLIANCE MATRIX**

Exhibit E cont.

8. Setbacks change. The Applicant requests the modification of Condition No. 8 to clarify that it applies to new structures on the Main Campus only, as there are no minimum required setbacks in the C2 Zone proposed for the new North Campus.

We reject C2 and recommend C1 for the North Campus Condition should be changed to "With the exception of the proposed xx-foot tall fence for the baseball field, all new structures abutting a single-family residence shall be located at a minimum distance of 25 feet from the property line on the North Campus All other setbacks shall comply with C1 zoned setbacks (LAMC) 12.13. section **C Area.** Setbacks on the Main Campus shall remain unchanged from the existing covenant agreement. (#8 Setbacks)

11. Marching Band practices shall be limited to the following locations and hours:
All changes rejected.

The Applicant requests the following discretionary approvals:
• A **ZONING ADMINISTRATOR DETERMINATION**, as follows:
a. A Zoning Administrator Determination, pursuant to Los Angeles Municipal Code ("LAMC") Section 12.24 X.22, for new structures related to the sports facilities on the new North Campus, including, but not limited to, a score board, netting and netting poles, lights and a pedestrian bridge, ranging in height from approximately 25 to 90 feet tall, in lieu of the 25-foot, 33-foot and 61-foot tall structures permitted within 0-199 feet of lots zoned RW1 or more restrictive per the Transitional Height limitations in LAMC Section 12.21.1 A.10.

1. We reject 90-foot tall lights Pursuant to Community Plan page I-9 "Preserve and enhance the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance" and LAMC 12.32 G2 provision may be made in a zoning ordinance that the property not be utilized for all the uses ordinarily permitted in a particular zone classification and/or that the development of the site shall conform to certain specified standards, if the limitations are deemed necessary to:

   (1) Protect the best interests of and assure a development more compatible with the surrounding property or neighborhood;

   (2) Secure an appropriate development in harmony with the objectives of the General Plan; or

   (3) Prevent or mitigate potential adverse environmental effects of the zone change.

Chaminade Expansion
Case CPC-2023-1254-VZC-HD-ZAD-ZAA
Conditions:

Approved by West Hills Neighborhood Council
Zoning & Planning committee September 12th, 2023

1) Zone Change to C1-1VL-CUP, a covenant agreement removing Hotels, Apts, etc from the C1 Zone and a variance/s as needed

2) All Conditions from the South Campus to be applied to the North Campus

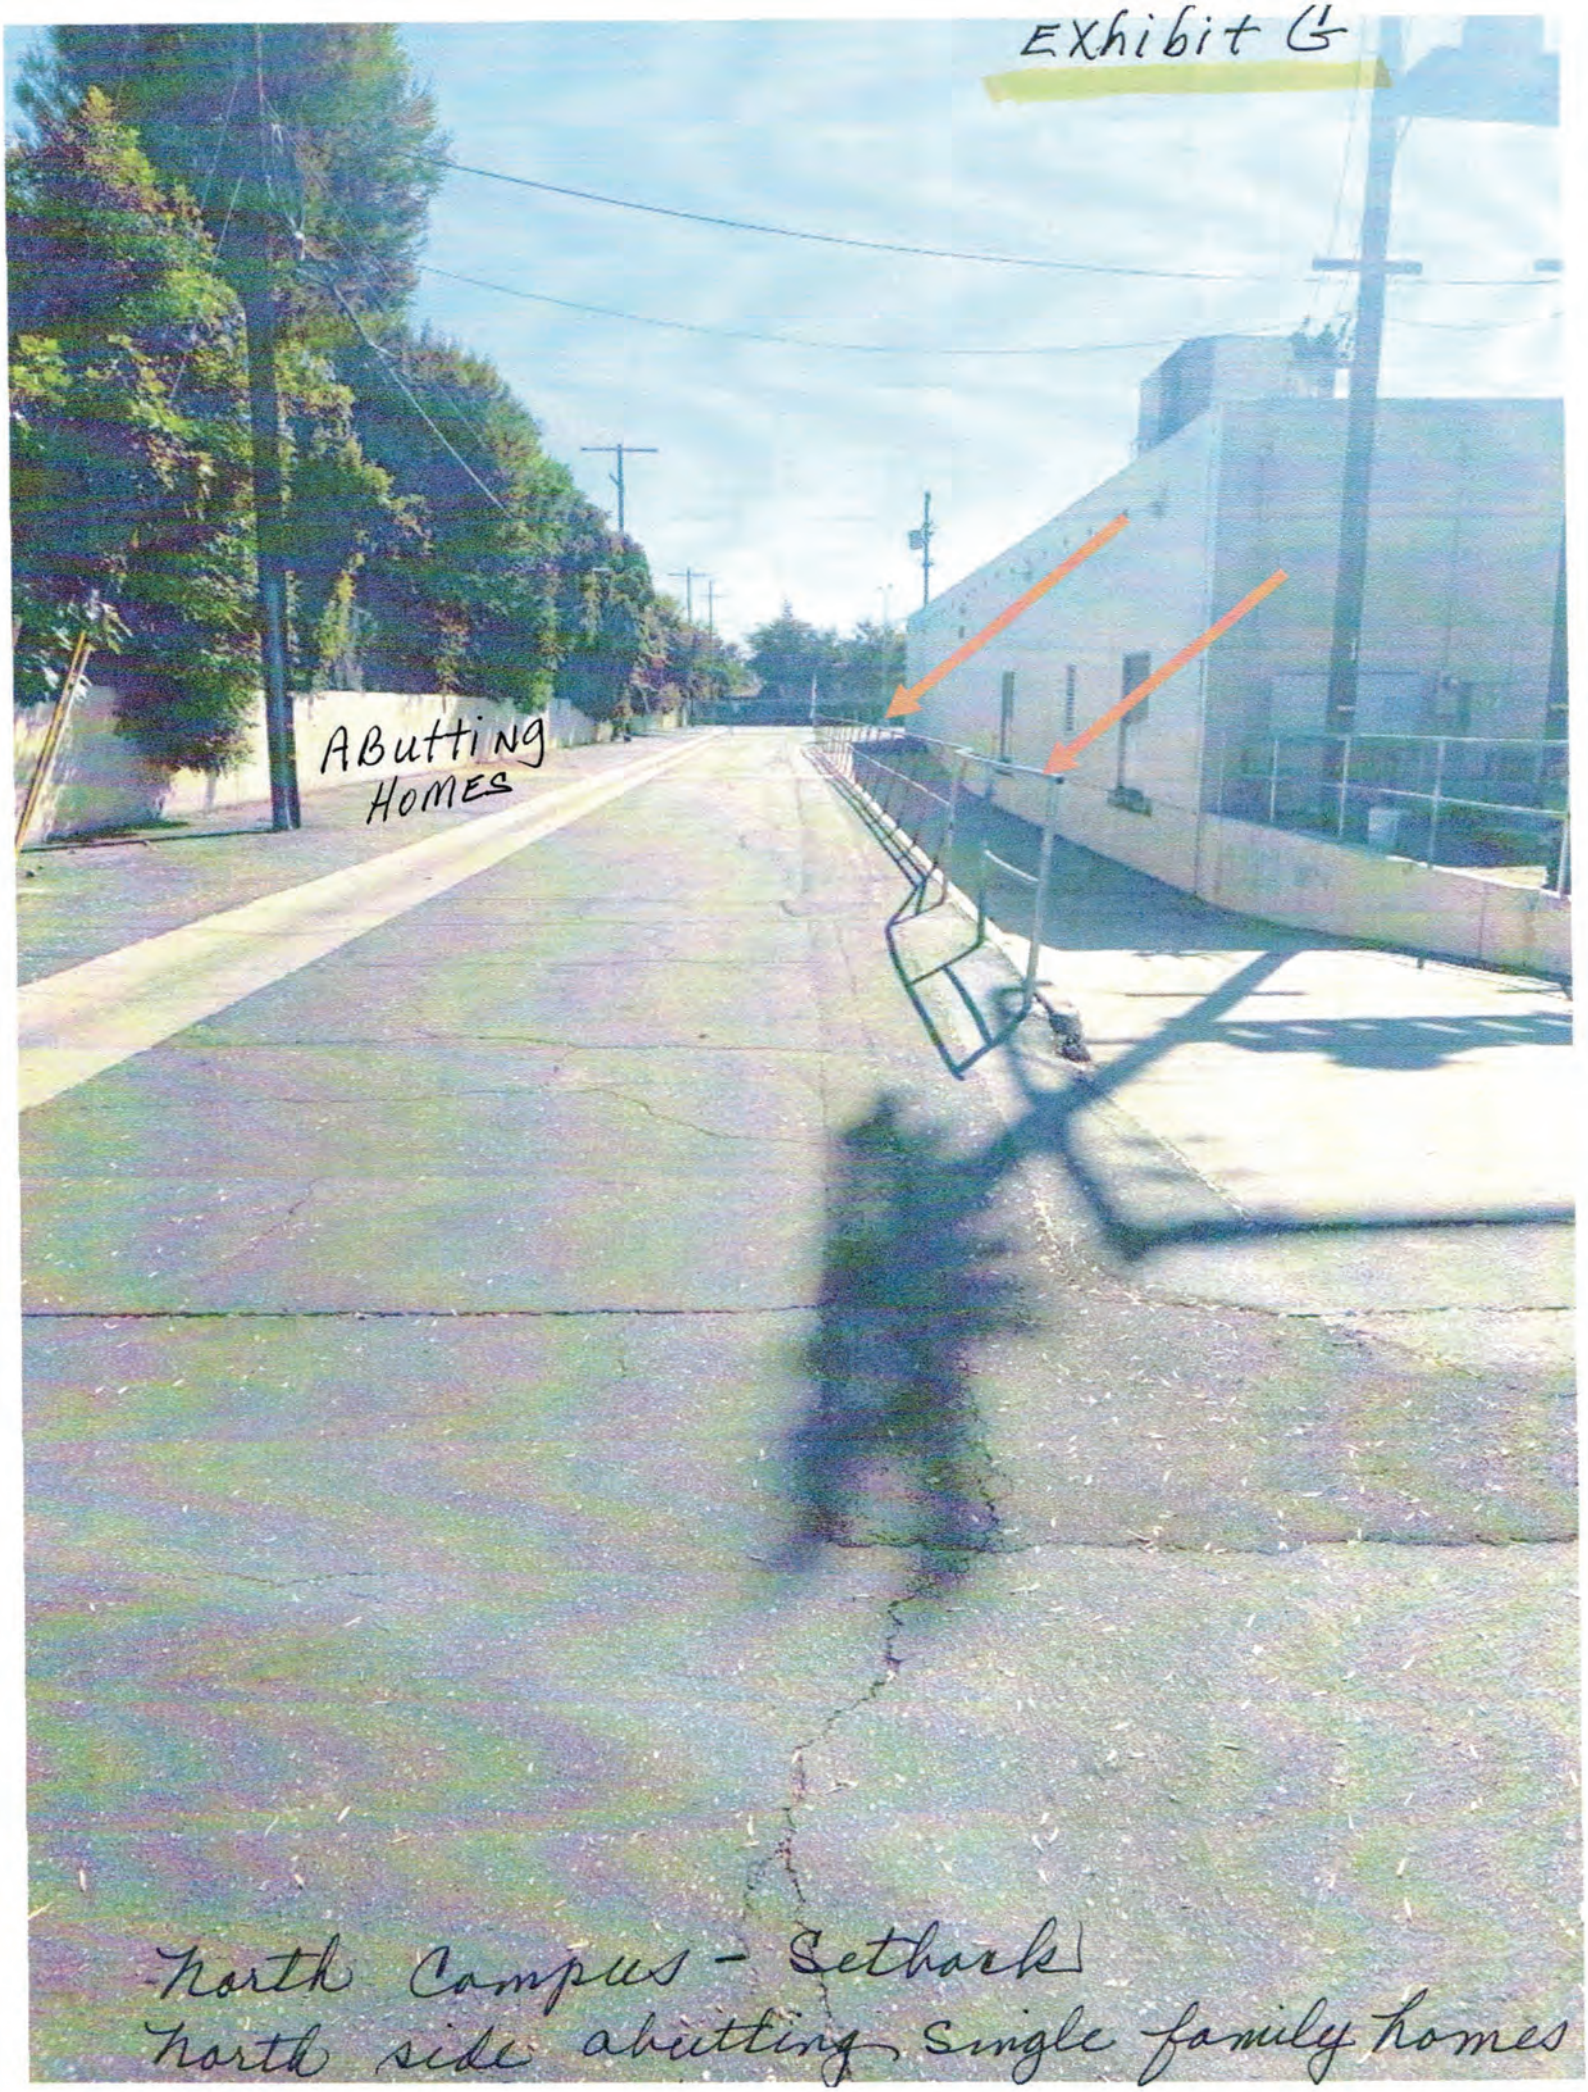
3) No Events relocated to the North Campus

4) No parking on any residential streets for students and/or parents, games or events

5) Indoor/Enclosed Pool facility with same requirements as the noise mitigation included in CPC-2009-1477-CU-ZV-ZAA-SPR

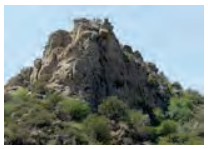
6) Location of the Bridge (moved eastward away from homes for privacy)

7) Split buses/queuing avoiding traffic issues on Saticoy and Cohasset



8) Security guard at bridge/driveways to ensure that pedestrians do not cross in the street

9) Batting Cages/Hours of Operation/No rental or outside use



10) Lights at North Campus/Maximum height 50 feet

11) Setbacks on the North Campus, north side abutting residential, to be no less than 15 feet
(please see Exhibit G)

RE: Response to Chaminade Preparatory School Expansion
ENV-2023-1255-MND

This document is in Response to the Mitigated Negative Declaration (MND) released June 13, 2024 for the proposed Chaminade Preparatory School Expansion.

A Motion was passed unanimously to approve the WHNC Zoning & Planning Committee's Response at the July 9, 2024 meeting.

WHNC disagrees with the DETERMINATION for issuing an MND signed by Trevor Martin, City Planner, dated 6/07/24:
"I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent."

Note: Document titles in red; WHNC comments in blue

Request to be added to Report for North Campus:

* Setbacks for structures including pool
* Request for on-site meetings with Chaminade at proposed North Campus to indicate visually where lights will be placed along wall with neighbors North of project as well as on site at Main Campus to compare pole heights and lighting
* Marching band hours and restrictions

ENV-2023-1255-MND
Project Description
3.2.4 Existing Facilities
Pg 18
"The existing high school encompasses approximately 21.03 acres on the Main Campus……*and a pool."*
Although Chaminade was permitted to install a pool on the Main Campus, it was never built.

3.3.2 New Construction and Campus Changes
Pg 22
"Six modular trailers/classrooms will be temporarily located on the Main Campus during the construction until the new Multistory Building is completed. Parking spaces displaced by these temporary classrooms will be available in the new surface parking lot on the North Campus prior to the installation of the modular trailers."
How many parking spots will be moved to the North Campus during construction?

3.3.5 Vehicle and Bicycle Parking
Pg 32
After construction 501 parking spaces
Main Campus existing 462 stalls; after construction 501 parking stalls
North Campus 101 parking stalls (86 stalls entrance from Saticoy + 15 stalls-pool & Srs- entrance from Woodlake)
Increase of 39 parking spaces
Still Inadequate parking for all of the events and games with vehicles encroaching into neighborhoods

3.5 Related Projects
Pg 38
"As stated in the Transportation Assessment prepared for the Project……no related projects have been identified within one-half mile of the Project Site."
Vesting Preliminary Application filed 3/30/2024 for proposed 324-unit apartment building on former Circle S Ranch property, 7556 Woodlake Avenue, West Hills, 91304. The project was not included in the MND and will have a major impact on the Transportation Assessment. The single-family home was demolished and consideration must be made for development of multiple buildings (homes or apartments) resulting in higher densities on this site.

Project Impacts
Artificial Light
Pg 42
"Ad adverse impact would occur if a project created a substantial new source of artificial light that would adversely affect the surrounding area…….The North Campus portion of the Project will include new lighting standards ranging in height from 70-90 feet ….. "
****Setbacks must be in the MND Report to understand the impact of the pole lights on the homes to the North of the Project. Request for on-site meetings with Chaminade at proposed North Campus to indicate visually where lights will be placed along wall as well as on site at Main Campus to compare pole heights.***
Refer to 3/07/24 DRAFT for Discussion; Setbacks on North Campus, pg 1.

III Air Quality
Pg 53
Southern California Association of Governments
"To this end, the 2020-2045 TP/SCS land use pattern continues the trend of focusing new housing and employment in the region's High Quality Transit Areas (HQTAs) and aims to enhance and build out the region's transit network."
Refer to "ENV-2023-1255-H-1 Transportation Assessment Report, "According to the City of Los Angeles' Mobility Plan 2035, the project site and its vicinity is not a part of the Transit Enhance Network".

City of Los Angeles Policies
Pg 61
"In addition, due to the removal of the existing supermarket and other commercial uses……the Project would result in a net reduction of 1,355 daily trips. Because of this significant reduction in site-related daily trips, the Project would result in a net decrease in operational emissions as compared to existing site uses."
The number of daily trips in this Report is overstated and does not reflect the actual number of trips to the shopping center. Long-time business tenants state that there were closer to 500 trips daily before COVID reduced shopping. The number 1,355 is incorrectly mentioned throughout the Report approximately 30 times.

Off-Side Operational Noise Sources
Pg 186
"The Project would result in a net-reduction in vehicle trips when compared to existing uses….."
The number of daily trips in this Report is overstated and does not reflect the actual number of trips to the shopping center. Long-time business tenants state that there were closer to 500 trips daily before COVID reduced shopping. The number 1,355 is incorrectly mentioned throughout the Report approximately 30 times.

Construction
On-Site Construction Activities
Pg 187
"The Project may not be fully implemented until 2035, and there is currently no exact sequence of construction activities or phasing….."
Without including Start dates and End dates for each phase of construction for the Project, the cumulative impact on noise, air quality/emissions, traffic and transportation cannot be fully realized.

North Campus – Demolition
Pg 189
"Table XIII-3 shows the estimated noise increases that would result from the Project's demolition activities on the North Campus…….noise increases at Melba Street Cul-de-Sac Residences and Bobbyboyar Avenue Residences could exceed the 5 dBA Leq threshold of significance for daytime construction activities lasting more than 10 days in a three-month period……"
****Not acceptable. Request reducing permitted construction hours from 7:00am-9:00pm (Monday-Friday) because of detrimental impact especially to neighborhoods located North of the planned development.***

LAMC Section 112.05 Threshold Analysis
Pg 194-197
****Not acceptable. Request reducing permitted construction hours from 7:00am-9:00pm (Monday-Friday) because of detrimental impact especially to neighborhoods located North of the planned development.***

Pg 194-196

LAMC Section 112.05 Threshold Analysis

"LAMC establishes a noise limit of 75 dBA Leq for powered equipment….operated within 500 feet of numerous residential-zoned properties…….would apply to the Project's construction noise levels. Project would not expose nearby residential uses to noise levels in excess of 75 dBA Leq…."

Table XIII-10/Construction Noise Levels-North Campus Construction of Pedestrian Bridge (Mitigated)

23309 Saticoy Street Residence- New Noise Level (dBA Leq): 67.0

Melba Street Cul-deSac Residences-New Noise Level (dBA Leq: 58.7

Bobbyboyar Avenue Cul de Sac Residences – New Noise Level (dBA Leq: 54.4

*"As shown, implementation of noise barriers pursuant to Mitigation Measure NOI-1 would ensure that the demolition-related noise increases at these receptors are below the 5 dBA Leq threshold of significance….."

Not acceptable. Also refer to "ENV-2023-1255-G-1 Noise Measurement Map", Equipment Noise Levels, Bore/Drill Rig at 95 ft. Workday Noise Level -dBA Leq. Bore drilling will be substantially noisier than a lawn mower at dBA Leq 80-100. Homes on West side of Saticoy, 23320 and 23314 Saticoy, should be included in the MND Reports. They will also be substantially affected by bridge construction.

Parking Related Activities

Pg 199

"Further it is worth noting that the existing shopping center on the North Campus is associated with 2,307 daily trips, according to the Project's transportation study……This is far greater than the number of vehicles that would utilize the two North Campus parking lots…….This suggests that the parking-related noises associated with the North Campus site would likely decrease with implementation of the Project."

Neighbors to the North of the proposed expansion development report that they do not experience noise from vehicles coming and going to the shopping center. The existing building acts as a buffer to noise. Therefore the statement in the Report that noises would be decreased is incorrect. In addition, noises generated by the Project will increase due to crowds attending athletic competitions and students participating in ongoing sport practices, i.e., baseball, soccer and swimming events.

North Campus Athletics and Aquatic Facilities

Summary of new activities at the North Campus (not including existing school events that would shift from the Main Campus to the North Campus)

Local community swimming –WHNC understood that a decision to open the pool to the community would probably not be included because of liability issues.

Pg 200

(North Campus) Batting cage: Monday – Saturday, 7:00am-8:00pm. No use is permitted on Sundays.

The time is incorrect. The agreed upon time indicated in the 3/07/24 DRAFT is 9:00am to 7:00pm.

On-Site Operational Noise Mitigation Measures

Pg 204-205

NOI-3 Amplified sound systems

"LAMC Section 112.01 (b) would prohibit any amplified noises from being audible at a distance greater than 150 feet from the North Campus property line, and compliance with this regulation would necessitate that the project's amplified noise levels are much lower than the levels predicted by this analysis. Without mitigation, this impact related to athletic operations on the North Campus could be significant"

Neighbors will contact Chaminade if noise levels are significant enough to disturb them and Chaminade will reduce noise to satisfy their concerns.

XVII Transportation

Pg 221

Vesting Preliminary Application filed 3/30/2024 for proposed 324-unit apartment building on former Circle S Ranch property, 7556 Woodlake Avenue, West Hills, 91304. This project was not included in the MND and will have a major impact on the Transportation Assessment. . The single-family home was demolished and consideration must be made for development of multiple buildings (homes or apartments) resulting in higher densities on this site. **Would this project conflict or be inconsistent with CEQA Guidelines section 15064.3 subdivision (b)?**

Pg 222

"…….demonstrate that the Project would result in a net decrease of daily vehicle trips when compared to existing conditions. This reduction is the result of demolishing an existing shopping center which is a high trip-generating use and replacing it with athletic and ancillary facilities for a high school."

The shopping center does not generate high-trip use. The number of miles in this Report is overstated and does not reflect the actual VMT. However, accepted that the number of cars entering and exiting the proposed athletic facility will be less than the existing shopping center.

ENV-2023-1255-A

Tech Lighting

Pg 14

Conclusion

In conclusion, the proposed sports lighting design does demonstrate an increase in both spill light and maximum intensity in comparison to the existing lighting conditions.

****Setbacks must be included in the MND Report to understand the impact of the pole lights on neighboring homes.***

As an example, In the June 7, 2024 Letter from Robert Webb/Chaminade to Charlene Rothstein/WHNC, page 4, "regarding minimum setbacks for the pool lights along the Woodlake Avenue frontage, in response to your request, we agree to propose the following as a condition of approval: Along the Woodlake Avenue frontage, pool lights shall be set back a minimum of 12 inches from the property line." WHNC requests on-site meetings with Chaminade at proposed North Campus to visually indicate where lights will be placed along wall with neighbors as well as on site at Main Campus for comparison of pole height.

ENV-2023-1255-B

Health and Equity Details

Pg 2-3

CalEEMod version 2022 seems to underestimate default horsepower ratings for this equipment."

Please explain

"It is worth noting that Sunshine Canyon Landfill, the likeliest destination, is located within 20 miles of the Project site."

Sunshine Landfill is a Class III landfill and is not permitted to accept hazardous waste under California Law. There may be a possibility that hazardous soil will have to be removed; an alternative landfill for hazardous waste should be listed.

Pg 27

"A high score (i.e. greater than 50) reflects a higher pollution burden compared to other census tracts in the State.

Drinking Water – 83.1"

****Request more information on water, potable or ground water, etc. and how this might affect usage and /or construction.***

Pg 22 & Pg 50
Activity Data
Operational Mobile Sources
"Shopping Center: 2,307 trips/weekday; VMT weekday 15,622"
*Actual total weekday trips is less than HALF the number used in the data

"High School: 2,953 trips/weekday; VMT/weekday 24,112"
**** Pollution Measurements--Does the "school weekday VMT" include that vehicles will travel greater distances from homes to and from Chaminade than current trips made by surrounding neighbors' homes to the shopping center?***

ENV-2023-1255-F
Environmental Site Assessment
Summary of Findings
Section 9/Additional Hazards
Pg 4
"An additional potential hazard has been identified as the adjacent former gas station/auto repair facility."
****Request for former gas station/auto repair facility site to be tested every year.***
L.A. zoning ordinance: If the lot is located 500 ft. or less from any school lot with a Certificate of Occupancy for a one-family dwelling, multiple family dwelling or mixed-use project containing a residential use or an A or R zone, automotive repair is prohibited unless approved pursuant to the provision of Section 12.24W. *Provide Conditional Use Permit.

5.2 User-Provided Information
Pg 10
"Price will likely be lowered due to soil contamination on the property."
****See comments ENV-2023-1255-B***
Health and Equity Details
****Sunshine Landfill is a Class III landfill and is not permitted to accept hazardous waste under California Law. If there a possibility of hazardous soil that may have to be removed, list the alternative landfill destination.***

9. Vapor Encroachment Screening
Pg 30
"Based on this screening, a VEC cannot be ruled out for the subject property due to the long-term presence of a dry cleaner and residual impacts left in place at the adjacent gas station; both items are considered REC's."

Pg 44
3.Data Summary and Recommendations
"PCE concentrations in soil vapor exceed both residential and commercial screening levels."
****The biodegradation process degrades PCE to TCE and eventually to VC. PCE can persist in subsurface soil a long period of time. Will soil venting technology be used to remove the PCE?***

ENV-2023-1255-G-1
Noise Measurement
Construction Noise Impact Analysis
23309 Saticoy Street Residence
****The residence at 23309 Saticoy is referenced throughout the report for high noise and vibration impact. It does not appear that the following homes at 23320 and 23314 Saticoy on the West side of***

Saticoy are included. They will be negatively impacted, particularly with the bridge construction. Add them to the Report.

Vibration Impact Analysis
Pg 66
****Vibrations from drilling/boring will affect nearby residences. Include monitoring equipment to detect levels of vibration during the operation to adjust and minimize the impact.***

ENV 2023-1255-G-2
Air Quality, Greenhouse Gases, Noise Analysis
Pg 3
Table 1 Aquatic Complex/Pool Noise Levels-Swim Meet (Leq 1hr)"
"Source: Woodrow Wilson High School Aquatic Center IS/MND March 2021"
****Assume this is the school located in Long Beach. Without having site map and information on their aquatic center project, we are unable to determine if the pool noises associated with the W. Wilson project are comparable to the projected Chaminade pool noise levels.***

Batting Cage
Discussion & Analysis
"The batting cage would be located approximately 75 feet south of the Project's northern property line."
****How many balls per minute are released from the batting machine and how long does one standard batting practice session last per individual session?***

ENV-2023-1255-H-2
Transportation Impact Assessment
C Access and Circulation
Existing & Cumulative Traffic Conditions
Pg 2
The access and circulation analysis included a delay study of the following intersections using the Highway Capacity Manual (HCM) methodology which calculates the amount of delay per vehicle based upon the intersection traffic volumes, lane configurations and signal timing:
****The Transportation Impact Assessment does not take into consideration the Vesting Preliminary Application filed 3/30/2024 for proposed 324-unit apartment building on former Circle S Ranch property, 7556 Woodlake Avenue, West Hills, 91304. The single-family home was demolished and consideration must be made for development of multiple buildings (homes or apartments) resulting in higher densities on this site. This project was not included in the MND and will have a major impact on the Transportation Assessment. Currently there is a 4-way stop at the corner of Saticoy Street and Woodlake Avenue. Saticoy Street crossing Woodlake Avenue heading East is narrow and may have to be widened. To avoid accidents, there should be a traffic light to replace the 4-way stop.***

Pg 3
Student Drop-Off/Pick up
School Access Points
****Will school be in session when construction begins and during dates of peak activity? What plan is in place to accommodate disrupted traffic flow when students and visitors are attending classes and events?***

ENV-2023-1255-H-1
Transportation Assessment Report
Overall comments
****The proposed 324-unit apartment project on the former Circle S property located at the intersection of Saticoy Street and Woodlake Avenue (a 4-way stop) will add multiple vehicle trips (volume) to***

immediate vicinity roadways and intersections that combined with Chaminade traffic will negatively impact the analysis contained in the MND (including traffic forecasts and ambient traffic growth. The single-family home was demolished and consideration must be made for development of multiple buildings (homes or apartments) resulting in higher densities on this site. WHNC believes that the MND has not considered to the fullest extent changes that the S.W. Valley 2024-2025 Community Plan will be bringing to the surrounding community of West Hills.

2. 7/02/24 WHNC Email to L.A. City Planning Department; Case #2024-1742-VHCA

REFERRAL FORM

HOUSING CRISIS ACT
Vesting Preliminary Application

This form serves as the optional Housing Crisis Act Vesting Preliminary Application for projects creating one or more units seeking vesting rights pursuant to the Housing Crisis Act of 2019 (HCA). This form also serves as a referral to the Los Angeles City Planning (City Planning) Development Services Center (DSC) and to the Los Angeles Department of Building and Safety (LADBS) Plan Check for HCA vesting purposes. The HCA Vesting Preliminary Application (Preliminary Application) allows the applicant to vest to City ordinances, policies, and standards adopted and in effect on the day that a complete Preliminary Application is submitted. Please be advised that these vesting rights do not apply to changes in State law or to changes in building code.

The following project types are eligible to submit a Preliminary Application:

- Housing Development Projects requiring an application to City Planning; or
- Housing Development Projects not requiring a City Planning application and submitting for building permit Plan Check to LADBS on or after January 1, 2022.

For Submittal Instructions, refer to Section E of this form. Section G ("Retention of Vesting Rights") of this form may be referenced for additional guidance on HCA vesting rights. The "Housing Development Project Applicability Matrix" may also be used to identify whether the HCA applies to specified development types, and when a Preliminary Application applies.

THIS SECTION TO BE COMPLETED BY PLANNING STAFF ONLY

Case Number PAR- 2024-1742-VHCA

Proposed No. of Dwelling Units[1]: 324

Proposed Building Area[1,2]: 246,573 sf

Submittal Completion Date[3]: 3/20/2024

Last Day to file City Planning Application/Submit to LADBS Plan Check[1]: 09/16/2024

Invoice No.: 94485 **Payment Date:** 03/20/2024

City Planning Staff Name and Title: Greg Guillermo, Planning Assistant

City Planning Staff Signature: _____

1 For information on retention of vesting rights, refer to Section F of this form.
2 Building Area, as defined by the California Building Standards Code (Title 24 of the California Code of Regulations) – California Government Code Section 65941.1(c). Refer to Appendix 2 for Building Area calculation instructions.
3 As part of the process to deem complete the submittal of this optional Preliminary Application, City Planning staff have affirmed neither the feasibility nor the entitlement review path of the proposed project.

This form shall be completed by the applicant and reviewed and signed by City Planning staff prior to filing the City Planning application, or the LADBS Plan Check application for projects that do not require a City Planning application. The signed Preliminary Application shall be submitted during the City Planning application filing, or the submission of an application for building permit and Plan Check. Any modifications to the content(s) of this form after its authorization by City Planning staff is prohibited. Further, any change to the proposed number of dwelling units or the proposed building area must be verified by City staff.

THIS SECTION TO BE COMPLETED BY THE APPLICANT

A. SITE INFORMATION

PROJECT LOCATION

Street Address[4]: 7556-7572 N WOODLAKE AVE LOS ANGELES CA, 91304

Legal Description[5] (Lot, Block, Tract): LOT: FR 208, BLOCK: N/A, TRACT: TR21391

Assessor Parcel Number(s): 2021-002-013 **Site Area (sf):** 95,699.3

EXISTING USE(S)

Describe in detail the existing uses on the project site, including any major physical alterations or soil disturbance that may have previously occurred.

TWO TWO-STORY SINGLE FAMILY DWELLINGS TO BE DEMOLISHED.

B. PROPOSED PROJECT

☐ **ED 1 Eligible[6]**

PROPOSED USE(S)

Describe in detail the characteristics, scope and/or operation of the proposed project.

NEW CONSTRUCTION, 5-STORY, TYPE VA OVER TYPE IA, 324-UNIT, 193,834 SF, 100% AFFORDABLE SENIOR AGE RESTRICTED HOUSING DEVELOPMENT. PROJECT TO SEEK ON-MENU INCENTIVES PER LAMC 12.22.A.25 AND AB2334.

[4] Street Address must include all addresses on the subject/application site (as identified in ZIMAS http://zimas.lacity.org).
[5] Legal Description must include all contiguously owned properties (even if they are not a part of the proposed project site).
[6] Refer to Executive Directive 1 Implementation Guidelines for qualifying criteria. If the project is determined to be ineligible for ED 1, a new Referral Form will need to be obtained.

AFFORDABLE HOUSING INCENTIVES, WAIVERS, CONCESSIONS, AND PARKING REDUCTIONS

Will the project proponent seek incentives, waivers, concessions, or parking reductions pursuant to California Government Code Section 65915 (i.e., Density Bonus), the Transit-Oriented Communities (TOC) program, or any other affordable housing incentive program[7]?

☒ **YES** ☐ **NO**

If "YES", describe:

BASE INCENTIVES (3):
33' ADDITIONAL HEIGHT FEET OR 3 STORIES PER AB2334
UNLIMITED DENSITY PER AB2334
PARKING OPTION 3 PER AB2334 - SENIOR HOUSING

ON-MENU INCENTIVE (5):

RESIDENTIAL DWELLING UNIT COUNT

Indicate the total number of dwelling units proposed as well as a breakdown by levels of affordability.

PER AB2334 GENERAL PLAN ALLOWS RD5 DENSITY.

Affordability Levels	Total
Market Rate	1
No. of Affordable Units Proposed	323
Extremely Low Income	
Very Low Income	
Low Income	259
Moderate Income	64
TOTAL No. of Units Proposed	324

Total Units	Total
No. of Units Allowed by Right (per LAMC)	19
No. of Bonus Units Proposed	305
TOTAL No. of Units Proposed	324

Other Notes on Units:

[7] Projects proposing Density Bonus "On-Menu" incentives through a ministerial process or "Off-Menu" incentives, waivers, concessions and parking reductions through a discretionary process must be reviewed by the Los Angeles City Planning Affordable Housing Services Section and obtain a signed Affordable Housing Referral Form (CP13-4043) prior to filing a City Planning application.

FLOOR AREA

Provide the proposed floor area and square footage of residential and non-residential development:

Floor Area[8] 193,834 **Building Area**[9] 246,573

PARKING

Provide the proposed number of automobile and bicycle parking spaces:

Automobile Parking	**Total**
Residential	184
Non-Residential	

Bicycle Parking	**Total**
Residential Long Term	156
Residential Short Term	16
Non-Residential Long Term	
Non-Residential Short Term	

SUBDIVISION

Will the proposed project include a request for an approval pursuant to the Subdivision Map Act, including a Vesting or Tentative Tract Map, Preliminary Parcel Map, Condominium Map, Lot Line Adjustment, or Certificate of Compliance?

☐ **YES** ☒ **NO**

ADDITIONAL INFORMATION

Does the project propose any point sources of air or water pollutants[10]?

☐ **YES** ☒ **NO**

If "YES", please describe:

[8] As defined by the LAMC.

[9] As defined by the California Building Standards Code (Title 24 of the California Code of Regulations) – California Government Code Section 65941.1(c). Refer to Appendix 1 for Building Area calculation instructions.

[10] A project that proposes point sources of air or water pollutants may trigger review and permitting by, but not limited to, the South Coast Air Quality Management District, the Los Angeles Regional Water Quality Control Board, or the Los Angeles Bureau of Sanitation.

C. EXISTING SITE CONDITIONS

HOUSING[11]

Provide the number of existing residential units on the project site that will be demolished and whether each existing unit is occupied or unoccupied:

	Existing Residential Units	Demolished or To Be Demolished
Occupied Units		
Unoccupied Units	2	2
TOTAL Units	2	2

ADDITIONAL SITE CONDITIONS

1. Is the project site located wholly or partially within:

a. A Very High Fire Hazard Severity Zone (VHFHSZ)[12]? ☐ **YES** ☒ **NO**

b. Wetlands, as defined in United States Fish and Wildlife (USFW) Service Manual, Part 660 FW 2 (June 21, 1993)? ☐ **YES** ☒ **NO**

c. A special flood hazard area subject to inundation by the one percent annual chance flood (100-year flood) as determined by the Federal Emergency Management Agency (FEMA) in any official maps published by FEMA? ☐ **YES** ☒ **NO**

d. Delineated earthquake fault zone as determined by the State Geologist in any official maps published by the State Geologist? ☐ **YES** ☒ **NO**

e. Hazardous waste site that is listed pursuant to Section 65962.5 or a hazardous waste site designated by the Department of Toxic Substances Control (DTSC) pursuant to Section 25356 of the Health and Safety Code[13]? ☐ **YES** ☒ **NO**

[11] A Housing Development Project, as defined in California Government Code Section 65905.5(b)(3), is subject to the provisions of Government Code Section 66300, as amended by SB 8, and will require an SB 8 Replacement Unit Determination letter from the Los Angeles Housing Department or a No-Net-Loss Property Owner Declaration.

[12] Housing Development Projects located in a VHFHSZ are eligible to seek vesting rights pursuant to the HCA.

[13] The development shall not be located on a legal parcel that is a hazardous waste site except for sites the DTSC has cleared for residential use or residential mixed use.

2. Does the project site contain a designated or potentially historic and/or cultural resource[14]? ☐ **YES** ☒ **NO**

   If "YES", please describe:

   a. Does the project site contain any species of special concern such as special status flora or fauna, protected trees, or wildlife[15]? ☐ **YES** ☒ **NO**

      If "YES", please describe and/or depict on the site plan:

   b. Does the project site contain any recorded easement, such as easements for conservation, storm drains, water lines, and other public rights of way? ☐ **YES** ☒ **NO**

      If "YES", please describe and/or depict on the site plan:

   c. Does the project site contain a stream or other resource that may be subject to a streambed alteration agreement pursuant to Chapter 6 (commencing with Section 1600) of Division 2 of the California Fish and Wildlife Code, including creeks and wetlands? ☐ **YES** ☒ **NO**

      If "YES", please describe and/or depict on the site plan:

[14] Information regarding historic resources that have been identified by the City or another public agency can be found in SurveyLA, HistoricPlacesLA, or ZIMAS.

[15] An Arborist Report or a Biological Survey and Impact Assessment may be required following the filing of an application requesting approval of a discretionary action if the project site is on or adjacent to open space or previously undisturbed land in order to demonstrate whether the site provides habitat for any special status flora or fauna, including those identified in a Specific Plan or Zoning Overlay.

D. COASTAL

1. Is the project site located wholly or partially within the Coastal Zone, as defined in Division 20 (commencing with Section 3000) of the Public Resources Code (PRC). If marked "NO", skip to section E. ☐ **YES** ☒ **NO**

2. Does the project site contain a/an:

   a. Wetlands, as defined in subdivision (b) of Section 13577 of Title 14 of the California Code of Regulations[16]? ☐ **YES** ☐ **NO**

   b. Environmentally Sensitive Habitat Area (ESHAs), as defined in Section 30240 or the California PRC[17]? ☐ **YES** ☐ **NO**

   c. Tsunami run-up zone? ☐ **YES** ☐ **NO**

   d. Area used for public access to or along the coast? ☐ **YES** ☐ **NO**

E. ADDITIONAL REQUIRED MATERIALS

In order to initiate a request for HCA vesting rights, an applicant must submit a Preliminary Application and the following materials and information through City Planning's Online Application Portal. An appointment is not required.

1. **HCA Vesting Preliminary Application** (CP13-4062)

2. **Plot/Site Plan.** A legible plot plan drawn to scale is required. The plot plan must include all contiguous parcels under the applicants' ownership and any contiguous parcels proposed to be part of the project site. The plot plan should identify which parcels are/are not a part of the proposed project. The plot plan should include a summary of information table indicating the following:

   - Building area of each building that is to be occupied
   - Proposed land uses
   - Proposed number of dwelling units
   - Height of buildings
   - All measurements that establish the proposed location of the proposed buildings and structures, including property lines, yards, setbacks, space between buildings and structures, and building footprint dimensions.
   - Trees and Shrubs. Plans must clearly show all existing trees and shrubs on the project site and within the right-of-way adjacent to the property. Identify and label (by name and trunk diameter) the following protected trees and shrubs as identified on the Plot Plan Instructions (CP-7752).

[16] Wetlands may include a watercourse or a storm drain. A Wetlands Delineation Report may be required following the filing of an application requesting approval of a discretionary action in the Coastal Zone if the site contains a watercourse or a storm drain.

[17] ESHAs are mapped areas in the certified Venice Land Use Plan and the San Pedro Coastal Land Use Plan.

- Watercourses, storm drains, creeks streams, wetlands (as defined in the USFW Service Manual, Part 660 FW 2 (June 21, 1993) or as defined in subdivision (b) of Section 13577 of Title 14 of the California Code of Regulations), or other resources that may be subject to a streambed alteration agreement pursuant to Chapter 6 (commencing with Section 1600) of Division 2 of the Fish and Wildlife Code.
- Aerial Site Photograph showing existing site conditions of environmental site features that would be subject to regulations by a public agency, including creeks and wetlands. It may be provided on any relevant plan sheet, including a project information sheet.

Refer to the Plot Plan Instructions (CP-7752) for additional guidance.

3. **Elevation Plans.** Elevations must show the design, materials, color, textures, patterns, massing and height of each building under the project scope. Refer to the Housing Crisis Act Vesting Preliminary Application Elevations Instructions (Appendix 1 of this form, page 15) for additional guidance. The elevations plans shall be included as part of the set of plans.
4. **Building Area Analysis.** Refer to the Housing Crisis Act Vesting Preliminary Application Building Area Analysis Instructions (Appendix 2 of this form, page 16) for additional guidance. The building area plans shall be included as part of the set of plans.
5. **Sections** for projects located on multiple levels or subterranean floors (e.g., basements, subterranean parking, etc.) showing depth (linear feet) and amount (cubic yards) of proposed cut, fill, import, and export related to grading, excavation of earthwork. The sections shall be included in the set of plans.
6. **Filing Fee.** Fees must be paid online after the electronic invoice is received.

F. ADDITIONAL RESOURCES

1. **Appendix 1:** Elevations Instructions for Vesting Pursuant to the Housing Crisis Act (page 15).
2. **Appendix 2:** Building Area Analysis for Vesting Pursuant to the Housing Crisis Act (page 16).

G. RETENTION OF VESTING RIGHTS

A Preliminary Application must be deemed complete by City Planning in order to obtain vesting rights. A Preliminary Application is deemed complete at the time that all required forms, documents, and materials are submitted, and the final invoice has been issued and proof of payment is presented to City Planning. A Preliminary Application completed before January 1, 2030 is valid until January 1, 2034, provided that HCA vesting rights are maintained and have not otherwise lapsed or terminated.

To retain HCA vesting rights, the applicant must adhere to certain time limits and limitations on project scope changes. **If the time limits are not met or if the changes in the project scope exceed specified thresholds, the Preliminary Application shall expire and have no further force or effect.** During City Planning application filing or the submission of an application for building permit and Plan Check, as well as through the development process, City staff will verify whether a project has been able to maintain vesting rights. Refer to the “Housing Crisis Act Vesting Log” on page 11 for additional instructions.

TIME LIMITS TO RETAIN VESTING RIGHTS

Once the Preliminary Application is complete, the City Planning application or the application for building permits and Plan Check must be submitted within 180 days of the date on which the Preliminary Application is deemed complete, in order to retain vesting rights.

If a City Planning application is required, the applicant must submit all outstanding information needed in order to deem the City Planning application complete within 90 days of receiving a hold or "deemed incomplete" letter from City Planning staff. The 90-day period does not apply to projects eligible to submit a building permit Plan Check application to LADBS without a City Planning application on or after January 1, 2022.

For all vested projects (ministerial or discretionary), construction of the Housing Development Project must commence within 2.5 years. For vested projects that are 100 percent affordable, the Housing Development Project must commence within 3.5 years.

If the project is discovered to require a City Planning application during the permitting process, the project may still use the Preliminary Application issued as long as the City Planning application is submitted within 180 days of the date a complete Vesting Preliminary Application was submitted. The submittal of the building permit application to LADBS would not be held against the project.

PROJECT SCOPE THRESHOLDS TO RETAIN VESTING RIGHTS

In order to maintain vesting rights, any change in the residential unit count or in the Building Area is limited to *less than* 20 percent of the total proposed on the completed Preliminary Application, exclusive of any increase resulting from the receipt of a density bonus, concession, waiver, or similar provision.

H. PROJECT TEAM INFORMATION (Complete all applicable fields)

Applicant[18] Name: JEFF ZBIKOWSKI

Company/Firm: JZA ARCHITECTURE

Proposed No. of Dwelling Units[20]: _____

City Planning Staff Name and Title: _____

[20] The proposed number of dwelling units should match the number of proposed dwelling units identified on page 1.

TABLE A - HOUSING CRISIS ACT VESTING LOG
THIS SECTION TO BE COMPLETED BY CITY PLANNING CASE PROCESSING UNIT ONLY

Milestone	Date Due	Date Complete	Dwelling Units[21]	Determination[22]	Staff Name
City Planning Application Filing Project submitted within 180 days of the HCA Vesting Preliminary Application being deemed complete.[23] Project meets the time limits: ☐ **YES** ☐ **NO**			☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the time limits (180 days) and limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	
Applicant Response to Deemed Incomplete Letter If a City Planning Application is Deemed Incomplete, the applicant must submit all information needed within 90 days of receiving the Deemed Incomplete Letter (applies ONLY to projects that are required to file a City Planning application) Project meets the time limits: ☐ **YES** ☐ **NO**			☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the time limits (90 days) and limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	

[21] Any change in the residential unit count is limited to less than 20 percent of what is indicated on the completed Preliminary Application, exclusive of any increase resulting from the receipt of a density bonus, concession, waiver, or similar provision.
[22] If the time limits are not met or if the changes in the project scope exceed specified thresholds, then the Preliminary Application shall expire and have no further force or effect.
[23] Once the Preliminary Application is complete, the City Planning application must be submitted within 180 days of the Preliminary Application completion date.

Milestone	Date Due	Date Complete	Dwelling Units	Determination	Staff Name
Date City Planning Application Deemed Complete	N/A		☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	
Date of Hearing	N/A		☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	
Date of Final Approval of City Planning Application[24]	N/A		☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	

[24] Final approval means that a project has obtained all necessary approvals to be eligible to apply for, and obtain, a building permit or permits, and all appeal periods or statutes of limitations have been exhausted or resolved in favor of the Housing Development Project (G.C. Sec. 65589.5(o)(2)(D)(ii)).

Milestone	Date Due	Date Complete	Dwelling Units	Determination	Staff Name
Date Construction Commenced (within 2.5 years or 3.5 years of Final Decision)[25] Project meets the time limits: ☐ **YES** ☐ **NO**			☐ Project meets 20% threshold ☐ Project exceeds 20% threshold Proposed Units: _____ Plan Sheet No.: _____	☐ The project meets the time limits (2.5 or 3.5 years) and limitations on project scope (unit count). ☐ The HCA Vesting Preliminary Application is expired and has no further force or effect.	

Notes:

[25] Vested Housing Development Projects must commerce construction within two and one-half years, or three and one-half years for one hundred percent affordable Housing Development Projects.

Appendix 1
Elevations Instructions for Vesting Pursuant to the Housing Crisis Act

123 Example Blvd, Los Angeles, CA

Materials, Textures and Colors

Exterior Cement Plaster, Smooth, Cream

Balcony Door, Vinyl, White

Board Formed Concrete, Wood Grain, Misty Blue

Exterior Cement Plaster, Smooth, Pewter

Aluminum, Brushed Metal, Dark Grey

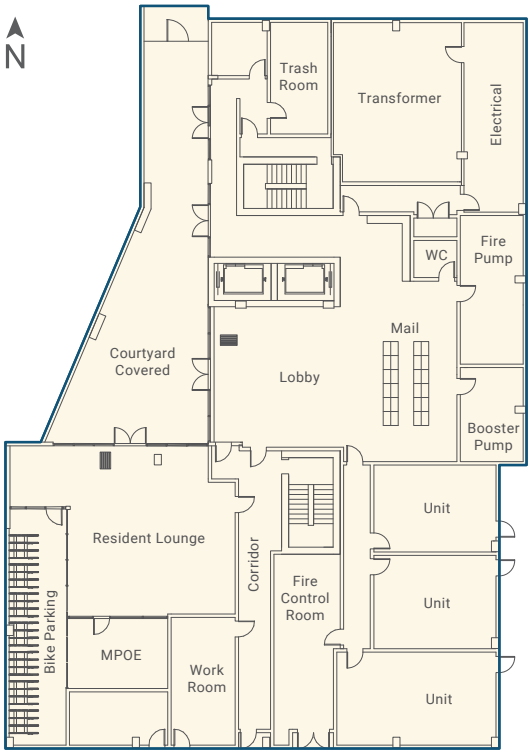
Elevations shall show the design, materials, color, massing, facade and height of each building under the project scope:

- **Scale:** The scale shall be no less than ⅛" = 1'-0" or a scale that produces a readable illustration.
- **Building Materials and Colors:** Elevations must identify all building materials types and colors. Include any sustainable features of the project as well as the material texture or pattern.
- **Location:** The elevations page must include the site address.
- **Labeling:** All views and major features shall be labeled, including which side of the project is being illustrated.
- **Dimensions:** Elevations shall be dimensioned in a manner that all relevant measurements can be read. Accessory structures shall have the same dimension requirements as the main structure. Include the dimensions for all heights. Required dimensions must include the following items:
  - The lowest elevation within 5 feet of the perimeter of the building;
  - The highest elevation for purposes of determining maximum building height as measured per Department of Building and Safety requirements and as defined by LAMC Section 12.03 of Chapter 1;
  - Height to the highest point of the roof and all roof structures;
  - Wireless facilities and transformers;
  - Projections proposed to be attached to a building facade;
  - Poles or signs including those attached to the facade or roof. Roof signs, pole signs and billboards must show both sides;
  - Facade texture, pattern, color and material changes to determine compliance with building articulation and design standards; and
  - Fences, walls, beams, barriers, including lighting fixtures, pillars, and gates on all sides.

Most City Planning processes involve a review of the project design. Applicants are encouraged to consult with the **LACP Urban Design Studio** regarding the design of the project early in the application process, ideally prior to filing. You may schedule a design review meeting online: planning.lacity.org/plans-policies/urban-design-studio/schedule-appointment.
Refer to Elevation Instructions (CP-7817) for additional guidance.

Appendix 2
Building Area Analysis for Vesting Pursuant to the Housing Crisis Act

The purpose of this Building Area analysis sample and instructions is to provide guidance with determining the total Building Area or "square footage of construction" of a Housing Development Project in order to vest pursuant to the Housing Crisis Act. The sample below broadly applies to all types of Housing Development Projects.



Building Area Calculation Table – Example

Level	Proposed
L2–L5	30,704 sf
L1	9,426 sf
Total	40,130 sf

Building Area Definition

The area included within surrounding exterior walls (or exterior walls and fire walls) exclusive of vent shafts and courts. Areas of the building not provided with surrounding walls shall be included in the building area if such areas are included within the horizontal projection of the roof or floor above.
– California Government Code Section 65941.1(C)

Building Area Diagram – Example

Level 1 Building Area 9,426 sf

Levels 2-5 Building Area 7,676 sf (per level)

Instructions

- **Shaded and Dimensioned Diagram:** Set of plans shall include a shaded and dimensioned diagram indicating the total Building Area for each level, including any covered parking areas, elevator shafts and stairwells at each level.
- **Quantities Referenced Diagram:** Each area analysis must include a label or reference to its Building Area, expressed as square-footage.
- **Calculation Table:** The Building Area page should include a corresponding calculation table indicating the Building Area for each level, as well as the grand total.

Re Case #2024-1742-VHCA

Char Rothstein <charwhnc@gmail.com> Tue, Jul 2, 2024 at 12:09 PM
To: "greg.guillermo@lacity.org" <greg.guillermo@lacity.org>

Good morning Greg,

Hope this finds you doing well.

This is a follow up to my voicemail left on your LA city phone on 7/1/2024 and comes to you from the West Hills Neighborhood Council (WHNC) Zoning & Planning committee:

The Vesting Preliminary Application filed on 3/20/2024 has been shown to be problematic and has raised many concerns. The proposal is for an extremely dense project, to be built at (5) stories on a hill facing surrounding single family homes of (1) and (2) stories, also facing a two way street which already has traffic issues. Many constituents have requested a signal in the past at Woodlake & Saticoy for safety reasons.

On June 11, 2024, the WHNC held their regularly scheduled Zoning & Planning committee meeting. This case was on the agenda and over 250 stakeholders attended in person with over 150 attending on zoom.
(please see a 15 second video of the meeting attached)

We will be meeting at Senator Stern's office during the week of July 22nd to discuss this case and other community concerns.There are many questions that have come from the community regarding this application. Can we please discuss?

We appreciate your help.

Best regards,
Char Rothstein
WHNC/President
Zoning & Planning
Co-Chair

Hi there

I am a resident of West Hills interested in Chaminade College Preparatory's expansion plans.

Please send me a copy of the Mitigated Negative Declaration (MND) as soon as available.

byrose627@gmail.com

I would appreciate receiving a return email that this request has been received and the MND will be sent. Thank you for your help.

Regards,

Yvonne Rose

Hi Yvonne,

I have added your name and contact to the interested parties list for the Chaminade High School Project (Case No. CPC-2023-1254-VZC-HD-ZAD-ZAA). I will send you a copy of the MND Report once it is finalized.

Best,

Trevor

Chaminade College Preparatory, High School Campus
Proposed Modified and New Conditions in Response to WHNC Comments
Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD-ZAD-ZAA

Note: ~~Strikethrough text~~ is proposed to be deleted and **bolded underlined text** is proposed to be added.

1. ZONE CHANGE ON NORTH CAMPUS

New "Q" Qualified Condition on North Campus:

- **Use. Uses shall be limited to school uses for Grade K-12 and uses accessory to or associated with the school, such as athletic and parking facilities as shown on and in substantial conformance with the plans ("Exhibit A") and the Conditions of Approval associated with this Case. No residential or hotel uses are permitted.**

New "D" Development Limitation on North Campus:

- **Height of Buildings and Structures. No building, fence or structure shall exceed 45 feet in height, except for the athletic field and pool facility lights which shall not exceed 90 feet in height, in substantial conformance with the plans ("Exhibit A").**

2. SETBACKS ON NORTH CAMPUS

New "Q" Qualified Condition on North Campus:

- **Setbacks on North Campus. No new buildings or structures may be located within 15 feet of the northern property line, except for the following as shown on the plans ("Exhibit A"):**

  a. **10-foot-tall perimeter fence, with a minimum setback of approximately 1-foot, 4 inches;**
  b. **40-foot-tall poles and netting, with a minimum setback of approximately 2 feet, 10 inches;**
  c. **22-foot-tall to 25-foot-tall parking lot lights, with minimum setbacks of approximately 3 feet, 4 inches and 6 feet-6 inches, respectively;**
  d. **A 26-foot-tall score board, with a minimum setback of approximately 6 feet, 8 inches;**
  e. **70-foot-tall stadium lights, with a minimum setback of 8 feet, 4 inches; and**
  f. **8-foot-tall bull pen, with a minimum setback of 10 feet.**

New “Q” Qualified Condition on North Campus:

- **Along the Woodlake Avenue frontage, pool lights shall be set back a minimum of 12 inches from the property line.**

3. RENTAL OR LEASE OF FACILITIES

Revise Existing Condition 5:

5. Use Restrictions.

   a. Rental or lease of the batting cage facilities or athletic fields located on the school campus is not permitted for any purpose**, except as permitted under Condition 5.e**. Rental or lease of other on-site facilities is limited to activities solely to the general educational purpose of the institution. [The term "rental of the facilities" is not dependent upon the payment of a fee].

   b. Parking on-site shall not be utilized for events or uses occurring at off-site locations, unless the off-site event occurs on a weekend, in the summer, and does not coincide with a Special Event at the school.

   c. Filming exclusively for commercial purposes and without active student participation, shall be prohibited on the property. All filming shall be limited between the hours of 8:00 a.m. to 8 p.m., Monday through Friday. The use of artificial light is prohibited.

   d. No incidental gaming activities as defined in Section 12.21-A,13, shall be permitted on the site.

   e. North Campus Only: The rental or lease of the athletic and parking facilities, and associated structures, for non-Chaminade activities are restricted to the following:

   Athletic Fields. Use by community-based organizations shall be limited to 36 days per year, Monday through Saturday, from 8 a.m. to 6 p.m. Use is not permitted on Sundays and national holidays. The rental or lease of the batting cages is not permitted at any time.

   Aquatic Complex/Pool. Use by community-based organizations, which shall travel to and from the North Campus by bus, shall be limited to daylight hours only, and to end no later than 7:00 p.m., Monday through Friday, and no later than 5:00 p.m. on Saturdays, with no use of outdoor lighting other than low-level security lighting. For community member swim activities, use hours shall be limited to

Monday-Saturday, 8:00 a.m. to 6:00 p.m. Use is not permitted on Sundays and national holidays. A lifeguard must be on duty any time the pool is in use.

For purposes of the above conditions, "community-based organization" shall mean any educational or athletic institution, group or league. "Daylight hours" shall mean hours illuminated by the natural light of day, or from dawn to dusk, year-round, but further limited by the times noted herein.

4. HOURS OF OPERATION

Revise Existing Condition 6:

6. Hours of Operation Shall Observe the Following Limitations**, unless otherwise permitted elsewhere in the conditions**.

   a. For daytime classroom instruction: 6:30 a.m. to 6 p.m., Monday through Friday. Evening classes, occurring no more than four times weekly is to conclude by 10:00 p.m. Saturday classroom instruction is limited to the hours of 8:00 a.m. to 6:00 p.m. No classroom instruction is permitted on Sunday.

   b. For gymnasium use: 6:30 a.m. to 10:00 p.m., Monday through Friday; 8:30 a.m. to 10:00 p.m. on Saturday; and 8:30 a.m. to 8:00 p.m. on Sunday. No Saturday game or practice session shall begin prior to 8:30 a.m. No congregating on the school site for the purpose of these activities shall occur prior to 8:30 a.m. on Saturdays and Sundays. An instructor or school staff member shall be present at the subject site at least one half hour prior to the designated start times to monitor student activities/arrivals to assure that noise impacts on the adjacent neighbors are minimized.

   c. For Athletic Field/Stadium use: **Main Campus:** Shall have hours of 7:00 a.m. to 10:00 p.m., Monday through Friday; Saturday use is limited to 8:00 a.m. to 9 p.m., and; 9:00 a.m. to 8:00 p.m. on Sunday. No more than 15 Sundays per year will be allowed. **North Campus: Shall have the same hours as the Main Campus, except the end time shall be 9:00 p.m. (instead of 10:00 p.m.) on Monday through Friday, with an exception for overtime/extra inning play. Both Campuses:** Athletic use is not permitted on national holidays. No congregating on the site for the purpose of these activities shall occur before the permitted hours. An instructor/school staff member shall be present at the subject site at least one-half hour prior to the designated start times to monitor student activities/arrivals to assure that noise impacts on the adjacent neighbors are minimized.

d. For Aquatic Complex/Pool use: Shall have hours of 8:00 a.m. to 8:00 p.m., Monday through Friday. Saturday use is limited to 10 a.m. to 7 p.m. Athletic use is not permitted on Sundays or national holidays.

e. Batting Cage**s**. The batting cage**s** shall be restricted to the sole use of Chaminade students and staff. **Main Campus:** ~~No use of the cages shall occur between 8:00 p.m. and 8:00 a.m., the following day (~~**Shall be limited to 8:00 a.m. to 8:00 p.m.,** Monday through Saturday~~)~~. **North Campus: Shall be limited to 9:00 a.m. to 7:00 p.m., Monday through Saturday. Both Campuses:** No use of the batting cages ~~in~~ **is** permitted on Sundays **and national holidays**.

f. Teacher preparations, normal school maintenance, parent conferences with teachers, school board meetings and similar customary school activities cumulatively limited to 451 vehicles on the property at one time, **consistent with the minimum parking required per the Conditional Use under Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, or limited to 501 vehicles on the property at one time upon full buildout of the Project approved pursuant Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA,** may extend beyond the hours set forth above.

g. Motorized sweeping of the parking lots and driveways and motorized landscape maintenance shall occur only between the hours of 8 a.m. and 6 p.m., Monday through Saturday.

5. SETBACKS ON MAIN CAMPUS

Revise Existing Condition 8:

8. **Setbacks on Main Campus**. With the exception of **existing structures to remain as of date of this approval, including** the **existing** ~~proposed~~ 36-foot tall fence for the baseball**/softball** field, all new structures abutting a single-family residence shall be located at a minimum distance of 35 feet from the property line.

6. MARCHING BAND HOURS

Revise Existing Condition 11:

11. Marching Band practices **held outdoors** shall be limited to **the Main Campus with** the following locations and hours:

a. Evening Practice Sessions. A maximum **of** 1 week~~day~~ night per week in the outdoor stadium, between the hours of ~~6:30 p.m.~~ **6:00 p.m.** and 9:00 p.m., **and 1 weeknight per week, between the hours of 6:00 pm. and 8:00 p.m.,** to be completed with the lights turned out and the stadium vacated no later than **the required end time** ~~9:00 p.m~~. Students leaving the campus ~~after 9:00 p.m.~~ shall be instructed that no playing of instruments shall occur after the end of the session; this shall be strictly enforced by the school administration. The instructor or school staff shall monitor student activities and departures to ensure that noise impacts on adjacent neighbors are minimized.

b. ~~Morning~~ **Daytime** Practice Sessions. In addition to the ~~one~~ **two week**night**s permitted** as per **Condition 11.a.** above, a maximum **of** 3 ~~working~~ **week**days (Monday through Friday) per week**, not to exceed 2 consecutive hours per day,** between the hours of ~~7:50 a.m. and ending by 9:30 a.m~~ **8:00 a.m. and 3:00 p.m. shall be permitted**.

c. Band Camp: An exception is made for no more than two weeks in the summer when ~~a~~ marching band camp is held**, allowed between the hours of 8:00 a.m. and 8:00 p.m., with a maximum of 4 hours per day for the outdoor playing of instruments (the 4 hours of outdoor playing of instruments need not be consecutive)**.

d. In all instances **stated in Conditions 11.b. and 11.c. above**, all students shall refrain from congregating at the practice site prior to 7:30 a.m. and after ~~9:30 a.m. during the school year and between 7:30 a.m. and after noon during the two-week band camp~~ **the required end time**, to minimize noise impacts on adjacent neighbors. An instructor/school staff member shall be present at the subject location by 7:30 a.m. to monitor student activities and arrivals to ensure that noise impacts on adjacent neighbors are minimized. No instruments shall be played (including tuning, or "warming up") prior to the ~~7:50~~ **8:00** a.m. start time.

~~c.~~**e.** Saturday Sessions. A cumulative total of five Saturday marching band "warm up" sessions, immediately prior to participation at athletic competitions, shall be permitted during the school year, with hours expressly limited to starting after 8:45 a.m. and ending before 5:00 p.m.

7. ON-SITE PARKING

Revise Existing Condition 15:

15. Parking.

a. At least 451 permanent, striped parking spaces shall be provided on the site at all times **consistent with the Conditional Use under Case No. CPC-2009-**

1477-CU-ZV-ZAA-SPR. Upon full buildout of the Project approved pursuant Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA, at least 501 permanent, striped parking spaces shall be provided on-site between the Main Campus and North Campus, consistent with Exhibit A. ~~In conjunction with the construction of the aquatic complex, 24 new parking spaces will be constructed as shown on the plans (Exhibit B).~~

b. The school shall inform parents, students, faculty and staff in writing on an annual basis of all rules regulating school traffic and parking. A copy shall be mailed to the City Planning Department at the same time. The school shall maintain a progressive disciplinary system of enforcement of the involved student(s) from school. The school administration shall maintain a list of license plate numbers of all staff and students permitted to park on campus and shall issue a parking tag to all families to be used when parents visit the school site.

c. Except during special events, all faculty, administrators, other employees and visitors shall be instructed by persons acting on behalf of the school to park on-site at designated locations.

d. Special Event Parking

   (1) If a special event at the property is expected to attract more than 451 vehicles, **or more than 501 vehicles after full buildout of the Project approved pursuant to Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA,** then off-site parking for vehicles in excess of the 451st vehicle **(or in excess of the 501st vehicle after full Project buildout)** shall be provided at the West Hills Hospital (located at 7300 Medical Center Drive) and/or other locations which the school may secure, to the satisfaction of the City Planning Department. Those persons attending the event shall be instructed to park in such off-site parking locations (unless playing field parking is allowed on the campus). Note: In the event that the school secures another off-site parking facility in lieu of the existing site, the applicant must notify the City Planning Department, the West Hills Neighborhood Council, the Council Office, and residents within a 500-foot radius, in writing at least 90 days in advance.

   (2) A free shuttle bus system shall be used between the off-site parking area(s) and the subject property. Shuttle vehicles shall be of a number and carrying capacity to facilitate the transport of persons to and from the property expeditiously. The use of temporary signage will be used to inform parents, students and visitors to park within the designated off-site area(s) and to use the shuttle system. Note: Text-only temporary signs are permitted for use during the day of the special event, and will be posted and removed at least one half hour prior to the event and removed one half hour after the conclusion of the event.

e. Construction Parking. In the event that construction staging takes place within the parking areas, and if at least 20 spaces are encumbered for construction

purposes, Chaminade shall provide an equal number of temporary off-site parking spaces at a secondary site. Off-site parking will not be permitted along adjacent streets. If the secondary site is not immediately adjacent to the campus, a shuttle shall be provided to transport students, staff, and visitors to and from the school.

f. For all games, competitions and swim meets on the North Campus:

(1) All Chaminade students, faculty and staff shall be directed to park on the Main Campus.

(2) In advance of each game day, written notice shall be provided to all visiting teams to indicate that vehicles must park on campus (either on the North Campus or across the street on the Main Campus), and that street parking on Keswick Street and other residential streets is not permitted.

(3) A permanent sign shall be placed or posted at each driveway entry along Saticoy Street and Woodlake Avenue serving the North Campus, directing attendees to park on the North Campus or across the street on the Main Campus, and indicating that parking is not permitted on Keswick Street, Saticoy Street, Woodlake Avenue or other streets.

8. UPDATED TRAFFIC MANAGEMENT PLAN

Revise Existing Condition 16:

16. Traffic Management Program. The school shall implement ~~a~~ **the updated** Traffic Management Program**, dated May 4, 2023,** to encourage carpooling amongst parents and students, bicycling, **the use of school buses,** and the use of public transit to reduce vehicular trips to school**, and to improve the efficiency of the drop-off and pick-up operations and help minimize any disruptions to non-school traffic flow in the vicinity of the school**. A copy of ~~which~~ **the updated Traffic Management Program** shall be provided to the Department of City Planning and the Council Office prior to the issuance of a **new** certificate of occupancy. A copy shall also be ~~posted~~ **available** on-site **in the Facilities Office**, **posted** online, sent by email, or regular mail to staff, students, and parents. Components of such efforts shall include:

a. Appointing adult traffic monitors for the program, distribution of literature explaining the program, and maintaining a system to encourage and enable parents to form and participate in carpools.

b. For each day that school is in session and for special events, parking monitors shall be required to be posted at each vehicular access driveway in order to direct traffic and minimize queuing of school visitor, student, and

staff vehicles on adjacent residential streets, from blocking **the** public right-of-ways, private driveways, or otherwise adversely affecting traffic circulation for residents. Likewise, they will discourage excessive noise from car horns, car radios, car alarms and loud voices, and to maintain smooth ingress to and egress from the parking areas.

c. Traffic monitors shall be at the school for: (1) 30 minutes prior to the start of school through such time at which the gates are to be closed or have a security guard stationed at the gates; (2) One-half hour prior to the end of school through such time at which the primary gates are to be closed or guarded, and; (3) One hour prior to the beginning of special events through such time at which the primary gates to the campus are to be closed or guarded.

d. Once parking has reached capacity, traffic monitors shall direct traffic away from residential streets, and utilize cones and temporary signage wherever necessary, to re-direct traffic, discourage spillover traffic and parking on adjacent residential streets, and to direct drivers to the secondary parking area (West Hills Hospital), where the free shuttle will transport visitors back to the school. Note: In the event that the school secures another off-site parking facility in lieu of the existing site, the applicant must notify the City Planning Department, the West Hills Neighborhood Council, the Council Office, and residents within a 500-foot radius, in writing at least 90 days in advance.

e. Provide a safe and secure area for bicycle parking.

f. There shall be no school drop-off or pick-up on the North Campus.

9. SAFETY AND SECURITY MONITORING

Existing Conditions to remain (for reference only):

21. A minimum of four state-licensed security guards shall provide security on football game nights with at least two officers assigned to patrol the adjacent residential neighborhoods with an emphasis on those residential streets nearest to the school. The officers shall be present one hour before game time and shall patrol the defined area until the campus is cleared of game participants and spectators and the campus gates are closed.

22. A security plan shall be developed in consultation with the Police Department, outlining security features of each new structure to prior to the issuance of a certificate of occupancy for each new structure. In addition, the property owner shall provide to the Topanga Commanding Officer a diagram of the site indicating access routes and any additional information that might facilitate

police response. The applicant shall submit evidence of compliance to the City Planning Department.

23. The property shall be internally secured when not in use.

New Condition on North Campus:

- **Security on North Campus.**

  a. All driveway gates shall be closed 15 minutes after the morning bell rings and opened 15 minutes before the dismissal bell rings.

  b. A security guard or school employee shall be posted at or near the Saticoy Street driveways to monitor student arrival and departure during regular school days when the North Campus gate(s) are open, to ensure use of the pedestrian bridge and control street-level crossing.

  c. There shall be a 24/7 security camera monitoring and burglar alarm system.

10. LIGHTS

Revised Existing Conditions 24 and 25 to apply to both campuses:

24. All lighting shall be directed onto the site. Floodlighting shall be designed and installed to preclude glare to adjoining and adjacent properties. Outdoor lighting shall be designed and installed with shielding such that the light source ~~cannot be seen~~ **is directed on-site, away** from adjacent properties.

25. **Main Campus:** The athletic field lights shall be turned off no later than 11:00 p.m. on contest nights, and no later than 9:00 p.m. on practice nights. **North Campus: The athletic facility lights shall be turned off no later than 9:00 p.m. on practice and contest nights, with an exception for overtime/extra inning play. Both Campuses:** On nights when the field is not in use, only low-level security lighting shall be ~~allowed~~ **permitted**.

11. NOISE

Existing Condition 26 – To remain as written and apply to both campuses, with proposed new Conditions 26.g. and 26.h for North Campus:

26. Noise Mitigation.

a. An outdoor public address system shall be utilized for emergency purposes, special announcements, and sporting events only. The use of the outdoor public address system shall not be used after 6:00 p.m., unless to notify students, staff, and visitors of emergency purposes, or during sporting events occurring after 6:00 p.m.

b. The existing solid masonry walls at the adjoining property lines, where the school abuts a residence, shall be maintained at the site.

c. Except where designated elsewhere in this determination (special events, marching band practice, etc.), amplified music or loud non-amplified music is not permitted outside.

d. The gymnasium shall contain no operable windows. No doors shall be oriented to the adjacent residences, unless where required by law.

e. Compressors and other equipment which may introduce noise impacts beyond any property line shall be enclosed or otherwise attenuated so as to be inaudible off-site.

f. No exterior bells are permitted outside the hours of daytime classroom instruction detailed under Condition No. 6(a). No exterior bells are permitted on Saturdays or Sundays.

g. Noise levels including, but not limited to, activities such as the use of outdoor public address system or speakers and announcements during sporting events, use of batting cages, and other activities will be subject to the local noise ordinance. All amplified noise must comply with LAMC Section 112.01, referenced below.

SEC. 112.01. RADIOS, TELEVISION SETS, AND SIMILAR DEVICES. (Amended by Ord. No. 156,363, Eff. 3/29/82.)

(a) It shall be unlawful for any person within any zone of the City to use or operate any radio, musical instrument, phonograph, television receiver, or other machine or device for the producing, reproducing or amplification of the human voice, music, or any other sound, in such a manner, as to disturb the peace, quiet, and comfort of neighbor occupants or any reasonable person residing or working in the area.

(b) Any noise level caused by such use or operation which is audible to the human ear at a distance in excess of 150 feet from the property line of the noise source, within any residential zone of the City or within 500 feet thereof, shall be a violation of the provisions of this section.

(c) Any noise level caused by such use or operation which exceeds the ambient noise level on the premises of any other occupied property, or if a condominium, apartment house, duplex, or attached business, within any adjoining unit, by more than five (5) decibels shall be a violation of the provisions of this section.

h. Batting cages on the North Campus shall incorporate noise baffling measures.

New Mitigation Measure for North Campus:

- **Amplified sound systems for the Project's baseball field/bleachers and outdoor aquatics facility/bleachers shall be acoustically engineered with the following design and performance standards:**
  - **Amplified sound levels, as measured at the northern property line of the North Campus, shall not exceed 50 dBA.**
  - **Amplified sound systems shall not be operated outside the operational hours established for the North Campus facilities.**
  - **Speakers shall be directional and oriented away from the northern property line of the North Campus.**
  - **Non-Chaminade users of the facilities shall not be permitted to utilize amplified sound systems.**

12. COMPLAINT LOG

Existing Condition 27 – To remain as written:

27. Complaint Log. The school shall maintain a complaint log associated with any concerns, written or verbal, expressed to the school by area residents, staff, students, or visitors regarding the operation of the school. The complaint log shall be made available to the Director of Planning in conjunction with the review of conditions set forth under Condition No. 28. The school administration shall make the complaint log available for review by any member of the public.

13. CONSTRUCTION ACTIVITIES

Existing Condition 35 to remain and apply to both campuses:

35. Posting of Construction Activities. The adjacent residents shall be given regular notification of major construction activities and their duration. A visible and readable sign (at a distance of 50 feet) shall be posted on the construction site identifying a telephone number for inquiring about the construction process and to register complaints.

IMPORTANT NOTE: *It should be noted that LA City Planning may adjust the above proposed language, as deemed necessary for consistency with department policies and procedures for condition language. In addition, it is expected that LA City Planning will further modify the language in other existing conditions of approval, and impose additional conditions of approval, for consistency with the current campus plan, the changes for the proposed campus plan, and the pending City Planning application.*

Re: Expansion/Development for New Campus -Corner of Woodland & Saticoy Street
Updating Facilities at Current High School Campus – 7500 Chaminade Avenue
CASE NO. CPC-2023-1254-VZC-HD-ZAD-ZAA

Dear Mr. Webb:

Recently the West Hills Neighborhood Council (WHNC) Zoning & Planning Sub-Committee had two additional sessions with stakeholders to further discuss the proposed Chaminade expansion/development. Please see the following issues that the we feel will help preserve the unique character of our community.

- Request to ADD that residents and WHNC will be informed immediately of all environmental hazards and potential health exposures currently known or exposed throughout the project's development and lifespan.

Zone Change

- Request Covenant Agreement with Chaminade with no variances be incorporated as a requirement in the same filings with the L.A. City Planning Department.

Noise & Setbacks

- Request to ADD objections to all noise levels will be resolved to neighbors' satisfaction.
- Request to ADD increase the number of trees and planting along walls/fences to reduce noise.
- Request to ADD clarification of barrier fencing and wall materials to reduce noise.
- Request to ADD installation of soundproofing walls to reduce noise heard by residents on northern property line separating North Campus from homes; walls to provide STC ratings of 45-55 when surface is sealed.
- Request to ADD to setbacks list, the minimum setback for pool lights.
- Request to ADD all lights when not in use are low level and DarkSky compliant.

- Request to RECEIVE report on noise baffling measures for batting cages from Chaminade's noise consultant with changes as necessary for further noise reduction.
- Request to ADD sound-absorbing materials to pool building to reduce noise emanating from inside of building to outside environment.
- Request to ADD that noise levels will not exceed local ordinances and laws.
- Request to ADD definition of low decibel levels for outdoor public address system during special announcements and sporting events.
- Request to ADD definition of where and when designated amplified music is permitted.
- Request to ADD information if sound system is planned for Aquatic Center
- Request MOVING scoreboard to reduce invasive visual image experienced by residents. Chaminade to inform WHNC after discussions with sign company.

Rental or Lease of Facilities/Use Restrictions

- Request to ADD definition of North Campus users (all inclusive) including community members, other Chaminade schools, organizations, etc.
- Request to ADD maximum use of three (3) days per month for the pool.
- Request to ADD schedule of monthly pool swim use, with set hours, and number of days during the week and weekends.
- Request to ADD definition of daylight hours for the pool taking into account seasonal adjustments.
- Request to ADD a limit use of three (3) days per year for the Athletic Fields by community-based members and associated athletic organizations.

Hours of Operation

- Request TO CHANGE hours for Aquatic Complex/Pool use: to: "8:00am to 7:00pm…"
- Request to RECEIVE proposed pool use schedule with set hours and number of days by month from Chaminade.
- Request to RECEIVE schedule defining when ball games will be played, i.e, number of games played during week, weekends and approximate duration of games per month.

Complaints

- Request to ADD Chaminade will respond to noise /parking complaints within 48 hours from residents generated from the Athletic/Pool facilities, and during construction, i.e., trucks and equipment transporting dust, dirt, building materials, debris, any and all activities that negatively impact homes or prohibit or impede access to neighborhood streets.
- Request to ADD that residents' complaints will be logged along with complaint resolutions daily.
- Request to ADD logged complaints and complaint resolutions emailed to Charlene Rothstein, President, WHNC, weekly on Mondays.
- Request to ADD on Chaminade's website visible information including contact information for assigned Chaminade staff member handling complaints, how to file complaints by phone calls, by email or by using a dedicated online fillable complaint submission form.

Construction

- Request to ADD residents will receive information for the Main Campus, bridge (streets closures, e.g. Saticoy) and North Campus by postal mail as well as be available on Chaminade website the dates of project throughout the development stages from beginning to completion, along with construction routes and notices containing days/ hours of construction (weekdays and weekends).

Parking

- Request to ADD information on how violations for parking infractions will be handled, and preventative measures taken, i.e., Chaminade hires patrolling streets, notes/flyers on cars, sawhorses blocking entrances to residential streets, etc.

Traffic Management Plan

- Request to ADD further discussions and resolutions that the Board of WHNC and the Streets & Transportation Committee partner with Chaminade and CD12 to propose a solution on the dangerous intersection and traffic delays at Woodlake and Saticoy regarding stop signs and installation of traffic lights and sidewalks.

Safety and Security Monitoring

- Request to ADD verification and inform WHNC of compliance with the Topanga Community Police Station and L.A. City Planning during development of security plan.
- Request to ADD arrival and departure times for security guards on North Campus.

We look forward to continuing discussions at the next meeting at the Council District 12 office. If you have any questions, please do not hesitate to contact us.

Additional Proposed Conditions
Chaminade Expansion Proposal
Case #CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, Cpc-2023-1254-VZC-HD-ZAD-ZAA

Landscaping on the North Campus:

1) To include trees as close to the northern property line as possible and to fully screen and infill where needed to provide coverage for the abutting residential homes.
2) To include trees along the most easterly side of the site along Woodlake Avenue, to provide screening to the residential homes on Woodlake as well as use of the pool.
3) To contact the homeowners of the northern abutting properties regarding an offer from Chaminade to provide trees on their properties for the purpose of screening.

Traffic Management Program:

1) Subsequent to review of the Traffic Study, the WHNC requested a Traffic Management Program to be submitted with the expansion proposal.
2) We request the traffic program includes a plan with the following; diagrams with drop-offs and pick-ups for vehicles and buses, locations and times for the pick-ups, drop-offs and which gates will be open and used at what times of the day and which gates will be used for students that drive.

Noise and Facility Use Issues:

1) The WHNC requests that during construction and following the opening of the sports facility, Chaminade hold public meetings with the WHNC Zoning committee every six (6) months or as issues arise from the community.
2) The Zoning Administrator/Decision Maker shall reserve the right to impose additional corrective Conditions if proven necessary for the protection of persons in the neighborhood or occupants of the adjacent properties.

>
> As WHNC Streets & Transportation Committee Chair I request, LADOT attend our Streets & Transportation Committee meeting on June 20th. Where we will review the Transportation Assessment regarding the Chaminade expansion. The dates and conditions (see below) provided to me, will not allow stakeholder input on traffic and parking to be transmitted to the City within the time constraints the WHNC is required to submit a response.
>
> 1. I have been informed that Streets can have a meeting at de Toledo on the 20th at 7:00pm. (But no attendance by LADOT or Chaminade)
> 2. I've also been informed that ALL WHNC committee meetings are cleared to be held at Chaminade starting July 1st. (strictly adhering to our regular meeting schedule)
> 3. I've been contacted by Chaminade (Rosenheim & Associates, Inc) informing me that LADOT and Chaminade can not attend a WHNC Streets & Transportation Committee meeting until August 7th or later.
>
> WHNC has 90 days from 5/25/23 to respond to the City. (per document VTT-84101.pdf) If no response is made within that time it could be deemed approved by the WHNC. The WHNC committee meetings at Chaminade will be strictly held to our normal schedule. Zoning is held on the 2nd Tuesday of the month Streets on the 3rd Tuesday. Full Board held on the 1st Thursday. This would create the following, Streets would meet on 3rd Tuesday 8/15, WHNC Zoning Committee would not be able to review WHNC Streets Committee recommendations until the 2nd Tuesday in September (9/12) and the WHNC Board will not be able to take a vote to send a response to the City until the 1st

Thursday in October (10/5). Our 90 days to respond expires on 8/25/23. Any Zoning approval/denial and any recommendations are required to be passed by a full board vote before they can be submitted to the City.

The aforementioned conditions and time line, will not allow WHNC Streets & Transportation Committee (stakeholder) or Zoning input before 8/25/23. This is just not acceptable to me and seems to defeat the purpose of the Neighborhood Council providing a conduit from our stakeholders to City government.

If LADOT can not attend the WHNC Streets & Transportation Committee meeting on June 20th. It is my opinion that an extension of 60 days to the required response time for the WHNC be granted OFFICIALLY.

Re: Case #: CPC-2009-1477-CU-ZV-ZAA-ZAA-SPR-PA1, CPC-2023-1254-VZCC-HD-ZAD-ZAA
Chaminade Avenue, West Hills, California 91304
Main Campus and North Campus

Hearing Date: August 28, 2024

Dear Mr. Martin:

As you know, the West Hills Neighborhood Council ("WHNC") has been in discussions with Chaminade and their associates over the past year regarding the expansion of Chaminade High School. The negotiations included numerous meetings with the WHNC Zoning & Planning Committee, a Zoning sub-committee, Council District 12, community members and Chaminade.

After extensive examination of the proposal and careful study of best practices to ensure due regard for the character of the surrounding community and quality of life for the adjoining residents, the WHNC voted at a Special Zoning & Planning meeting held on Thursday, August 22, 2024, to support the proposal with conditions. Please find the WHNC approved conditions dated August 14, 2024 and August 22, 2024 with this letter.

Because the subject site is situated in a residential area and also directly abuts some of the homes, there have been concerns from residents concerning future problems that may occur. For this reason, the establishment of the conditions is significant, those from the WHNC and from LA City Planning.

Should you have any questions, please do not hesitate to contact us.

Respectfully submitted,

Bill Rose

Chaminade College Preparatory, High School Campus
Proposed Modified and New Conditions in Response to WHNC Comments
Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1, CPC-2023-1254-VZC-HD-ZAD-ZAA

Note: ~~Strikethrough text~~ is proposed to be deleted and **bolded underlined text** is proposed to be added.

1. ZONE CHANGE ON NORTH CAMPUS

New "Q" Qualified Condition on North Campus:

- **Use. Uses shall be limited to school uses for Grade K-12 and uses accessory to or associated with the school, such as athletic and parking facilities as shown on and in substantial conformance with the plans ("Exhibit A") and the Conditions of Approval associated with this Case. No residential or hotel uses are permitted.**

New "D" Development Limitation on North Campus:

- **Height of Buildings and Structures. No building, fence or structure shall exceed 45 feet in height, except for the athletic field and pool facility lights which shall not exceed 90 feet in height, in substantial conformance with the plans ("Exhibit A").**

2. SETBACKS ON NORTH CAMPUS

New "Q" Qualified Condition on North Campus:

- **Setbacks on North Campus. No new buildings or structures may be located within 15 feet of the northern property line, except for the following as shown on the plans ("Exhibit A"):**

  a. **10-foot-tall perimeter fence, with a minimum setback of approximately 1-foot, 4 inches;**
  b. **40-foot-tall poles and netting, with a minimum setback of approximately 2 feet, 10 inches;**
  c. **22-foot-tall to 25-foot-tall parking lot lights, with minimum setbacks of approximately 3 feet, 4 inches and 6 feet-6 inches, respectively;**
  d. **A 26-foot-tall score board, with a minimum setback of approximately 6 feet, 8 inches;**
  e. **70-foot-tall stadium lights, with a minimum setback of 8 feet, 4 inches; and**
  f. **8-foot-tall bull pen, with a minimum setback of 10 feet.**

New “Q” Qualified Condition on North Campus:

- **Along the Woodlake Avenue frontage, pool lights shall be set back a minimum of 12 inches from the property line.**

3. RENTAL OR LEASE OF FACILITIES

Revise Existing Condition 5:

5. Use Restrictions.

   a. Rental or lease of the batting cage facilities or athletic fields located on the school campus is not permitted for any purpose**, except as permitted under Condition 5.e**. Rental or lease of other on-site facilities is limited to activities solely to the general educational purpose of the institution. [The term "rental of the facilities" is not dependent upon the payment of a fee].

   b. Parking on-site shall not be utilized for events or uses occurring at off-site locations, unless the off-site event occurs on a weekend, in the summer, and does not coincide with a Special Event at the school.

   c. Filming exclusively for commercial purposes and without active student participation, shall be prohibited on the property. All filming shall be limited between the hours of 8:00 a.m. to 8 p.m., Monday through Friday. The use of artificial light is prohibited.

   d. No incidental gaming activities as defined in Section 12.21-A,13, shall be permitted on the site.

   e. North Campus Only: The rental or lease of the athletic and parking facilities, and associated structures, for non-Chaminade activities are restricted to the following:

   Athletic Fields. Use by community-based organizations shall be limited to 36 days per year, Monday through Saturday, from 8 a.m. to 6 p.m. Use is not permitted on Sundays and national holidays. The rental or lease of the batting cages is not permitted at any time.

   Aquatic Complex/Pool. Use by community-based organizations, which shall travel to and from the North Campus by bus, shall be limited to daylight hours only, and to end no later than 7:00 p.m., Monday through Friday, and no later than 5:00 p.m. on Saturdays, with no use of outdoor lighting other than low-level security lighting. For community member swim activities, use hours shall be limited to

Monday-Saturday, 8:00 a.m. to 6:00 p.m. Use is not permitted on Sundays and national holidays. A lifeguard must be on duty any time the pool is in use.

For purposes of the above conditions, "community-based organization" shall mean any educational or athletic institution, group or league. "Daylight hours" shall mean hours illuminated by the natural light of day, or from dawn to dusk, year-round, but further limited by the times noted herein.

4. HOURS OF OPERATION

Revise Existing Condition 6:

6. Hours of Operation Shall Observe the Following Limitations**, unless otherwise permitted elsewhere in the conditions**.

   a. For daytime classroom instruction: 6:30 a.m. to 6 p.m., Monday through Friday. Evening classes, occurring no more than four times weekly is to conclude by 10:00 p.m. Saturday classroom instruction is limited to the hours of 8:00 a.m. to 6:00 p.m. No classroom instruction is permitted on Sunday.

   b. For gymnasium use: 6:30 a.m. to 10:00 p.m., Monday through Friday; 8:30 a.m. to 10:00 p.m. on Saturday; and 8:30 a.m. to 8:00 p.m. on Sunday. No Saturday game or practice session shall begin prior to 8:30 a.m. No congregating on the school site for the purpose of these activities shall occur prior to 8:30 a.m. on Saturdays and Sundays. An instructor or school staff member shall be present at the subject site at least one half hour prior to the designated start times to monitor student activities/arrivals to assure that noise impacts on the adjacent neighbors are minimized.

   c. For Athletic Field/Stadium use: **Main Campus:** Shall have hours of 7:00 a.m. to 10:00 p.m., Monday through Friday; Saturday use is limited to 8:00 a.m. to 9 p.m., and; 9:00 a.m. to 8:00 p.m. on Sunday. No more than 15 Sundays per year will be allowed. **North Campus: Shall have the same hours as the Main Campus, except the end time shall be 9:00 p.m. (instead of 10:00 p.m.) on Monday through Friday, with an exception for overtime/extra inning play. Both Campuses:** Athletic use is not permitted on national holidays. No congregating on the site for the purpose of these activities shall occur before the permitted hours. An instructor/school staff member shall be present at the subject site at least one-half hour prior to the designated start times to monitor student activities/arrivals to assure that noise impacts on the adjacent neighbors are minimized.

d. For Aquatic Complex/Pool use: Shall have hours of 8:00 a.m. to 8:00 p.m., Monday through Friday. Saturday use is limited to 10 a.m. to 7 p.m. Athletic use is not permitted on Sundays or national holidays.

e. Batting Cage**s**. The batting cage**s** shall be restricted to the sole use of Chaminade students and staff. **Main Campus:** ~~No use of the cages shall occur between 8:00 p.m. and 8:00 a.m., the following day (~~**Shall be limited to 8:00 a.m. to 8:00 p.m.,** Monday through Saturday~~)~~. **North Campus: Shall be limited to 9:00 a.m. to 7:00 p.m., Monday through Saturday. Both Campuses:** No use of the batting cages ~~in~~ **is** permitted on Sundays **and national holidays**.

f. Teacher preparations, normal school maintenance, parent conferences with teachers, school board meetings and similar customary school activities cumulatively limited to 451 vehicles on the property at one time, **consistent with the minimum parking required per the Conditional Use under Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, or limited to 501 vehicles on the property at one time upon full buildout of the Project approved pursuant Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA,** may extend beyond the hours set forth above.

g. Motorized sweeping of the parking lots and driveways and motorized landscape maintenance shall occur only between the hours of 8 a.m. and 6 p.m., Monday through Saturday.

5. SETBACKS ON MAIN CAMPUS

Revise Existing Condition 8:

8. **Setbacks on Main Campus**. With the exception of **existing structures to remain as of date of this approval, including** the **existing** ~~proposed~~ 36-foot tall fence for the baseball**/softball** field, all new structures abutting a single-family residence shall be located at a minimum distance of 35 feet from the property line.

6. MARCHING BAND HOURS

Revise Existing Condition 11:

11. Marching Band practices **held outdoors** shall be limited to **the Main Campus with** the following locations and hours:

a. Evening Practice Sessions. A maximum **of** 1 week~~day~~ night per week in the outdoor stadium, between the hours of ~~6:30 p.m.~~ **6:00 p.m.** and 9:00 p.m., **and 1 weeknight per week, between the hours of 6:00 pm. and 8:00 p.m.,** to be completed with the lights turned out and the stadium vacated no later than **the required end time** ~~9:00 p.m~~. Students leaving the campus ~~after 9:00 p.m.~~ shall be instructed that no playing of instruments shall occur after the end of the session; this shall be strictly enforced by the school administration. The instructor or school staff shall monitor student activities and departures to ensure that noise impacts on adjacent neighbors are minimized.

b. ~~Morning~~ **Daytime** Practice Sessions. In addition to the ~~one~~ **two week**night**s permitted** as per **Condition 11.a.** above, a maximum **of** 3 ~~working~~ **week**days (Monday through Friday) per week**, not to exceed 2 consecutive hours per day,** between the hours of ~~7:50 a.m. and ending by 9:30 a.m~~ **8:00 a.m. and 3:00 p.m. shall be permitted**.

c. Band Camp: An exception is made for no more than two weeks in the summer when ~~a~~ marching band camp is held**, allowed between the hours of 8:00 a.m. and 8:00 p.m., with a maximum of 4 hours per day for the outdoor playing of instruments (the 4 hours of outdoor playing of instruments need not be consecutive)**.

d. In all instances **stated in Conditions 11.b. and 11.c. above**, all students shall refrain from congregating at the practice site prior to 7:30 a.m. and after ~~9:30 a.m. during the school year and between 7:30 a.m. and after noon during the two-week band camp~~ **the required end time**, to minimize noise impacts on adjacent neighbors. An instructor/school staff member shall be present at the subject location by 7:30 a.m. to monitor student activities and arrivals to ensure that noise impacts on adjacent neighbors are minimized. No instruments shall be played (including tuning, or "warming up") prior to the ~~7:50~~ **8:00** a.m. start time.

~~c.~~**e.** Saturday Sessions. A cumulative total of five Saturday marching band "warm up" sessions, immediately prior to participation at athletic competitions, shall be permitted during the school year, with hours expressly limited to starting after 8:45 a.m. and ending before 5:00 p.m.

7. ON-SITE PARKING

Revise Existing Condition 15:

15. Parking.

a. At least 451 permanent, striped parking spaces shall be provided on the site at all times **consistent with the Conditional Use under Case No. CPC-2009-**

1477-CU-ZV-ZAA-SPR. Upon full buildout of the Project approved pursuant Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA, at least 501 permanent, striped parking spaces shall be provided on-site between the Main Campus and North Campus, consistent with Exhibit A. ~~In conjunction with the construction of the aquatic complex, 24 new parking spaces will be constructed as shown on the plans (Exhibit B).~~

b. The school shall inform parents, students, faculty and staff in writing on an annual basis of all rules regulating school traffic and parking. A copy shall be mailed to the City Planning Department at the same time. The school shall maintain a progressive disciplinary system of enforcement of the involved student(s) from school. The school administration shall maintain a list of license plate numbers of all staff and students permitted to park on campus and shall issue a parking tag to all families to be used when parents visit the school site.

c. Except during special events, all faculty, administrators, other employees and visitors shall be instructed by persons acting on behalf of the school to park on-site at designated locations.

d. Special Event Parking

   (1) If a special event at the property is expected to attract more than 451 vehicles, **or more than 501 vehicles after full buildout of the Project approved pursuant to Case Nos. CPC-2009-1477-CU-ZV-ZAA-SPR-PA1 and CPC-2023-1254-VZC-HD-ZAD-ZAA,** then off-site parking for vehicles in excess of the 451st vehicle **(or in excess of the 501st vehicle after full Project buildout)** shall be provided at the West Hills Hospital (located at 7300 Medical Center Drive) and/or other locations which the school may secure, to the satisfaction of the City Planning Department. Those persons attending the event shall be instructed to park in such off-site parking locations (unless playing field parking is allowed on the campus). Note: In the event that the school secures another off-site parking facility in lieu of the existing site, the applicant must notify the City Planning Department, the West Hills Neighborhood Council, the Council Office, and residents within a 500-foot radius, in writing at least 90 days in advance.

   (2) A free shuttle bus system shall be used between the off-site parking area(s) and the subject property. Shuttle vehicles shall be of a number and carrying capacity to facilitate the transport of persons to and from the property expeditiously. The use of temporary signage will be used to inform parents, students and visitors to park within the designated off-site area(s) and to use the shuttle system. Note: Text-only temporary signs are permitted for use during the day of the special event, and will be posted and removed at least one half hour prior to the event and removed one half hour after the conclusion of the event.

e. Construction Parking. In the event that construction staging takes place within the parking areas, and if at least 20 spaces are encumbered for construction

purposes, Chaminade shall provide an equal number of temporary off-site parking spaces at a secondary site. Off-site parking will not be permitted along adjacent streets. If the secondary site is not immediately adjacent to the campus, a shuttle shall be provided to transport students, staff, and visitors to and from the school.

f. For all games, competitions and swim meets on the North Campus:

(1) All Chaminade students, faculty and staff shall be directed to park on the Main Campus.

(2) In advance of each game day, written notice shall be provided to all visiting teams to indicate that vehicles must park on campus (either on the North Campus or across the street on the Main Campus), and that street parking on Keswick Street and other residential streets is not permitted.

(3) A permanent sign shall be placed or posted at each driveway entry along Saticoy Street and Woodlake Avenue serving the North Campus, directing attendees to park on the North Campus or across the street on the Main Campus, and indicating that parking is not permitted on Keswick Street, Saticoy Street, Woodlake Avenue or other streets.

8. UPDATED TRAFFIC MANAGEMENT PLAN

Revise Existing Condition 16:

16. Traffic Management Program. The school shall implement ~~a~~ **the updated** Traffic Management Program**, dated May 4, 2023,** to encourage carpooling amongst parents and students, bicycling, **the use of school buses,** and the use of public transit to reduce vehicular trips to school**, and to improve the efficiency of the drop-off and pick-up operations and help minimize any disruptions to non-school traffic flow in the vicinity of the school**. A copy of ~~which~~ **the updated Traffic Management Program** shall be provided to the Department of City Planning and the Council Office prior to the issuance of a **new** certificate of occupancy. A copy shall also be ~~posted~~ **available** on-site **in the Facilities Office**, **posted** online, sent by email, or regular mail to staff, students, and parents. Components of such efforts shall include:

a. Appointing adult traffic monitors for the program, distribution of literature explaining the program, and maintaining a system to encourage and enable parents to form and participate in carpools.

b. For each day that school is in session and for special events, parking monitors shall be required to be posted at each vehicular access driveway in order to direct traffic and minimize queuing of school visitor, student, and

staff vehicles on adjacent residential streets, from blocking **the** public right-of-ways, private driveways, or otherwise adversely affecting traffic circulation for residents. Likewise, they will discourage excessive noise from car horns, car radios, car alarms and loud voices, and to maintain smooth ingress to and egress from the parking areas.

c. Traffic monitors shall be at the school for: (1) 30 minutes prior to the start of school through such time at which the gates are to be closed or have a security guard stationed at the gates; (2) One-half hour prior to the end of school through such time at which the primary gates are to be closed or guarded, and; (3) One hour prior to the beginning of special events through such time at which the primary gates to the campus are to be closed or guarded.

d. Once parking has reached capacity, traffic monitors shall direct traffic away from residential streets, and utilize cones and temporary signage wherever necessary, to re-direct traffic, discourage spillover traffic and parking on adjacent residential streets, and to direct drivers to the secondary parking area (West Hills Hospital), where the free shuttle will transport visitors back to the school. Note: In the event that the school secures another off-site parking facility in lieu of the existing site, the applicant must notify the City Planning Department, the West Hills Neighborhood Council, the Council Office, and residents within a 500-foot radius, in writing at least 90 days in advance.

e. Provide a safe and secure area for bicycle parking.

f. There shall be no school drop-off or pick-up on the North Campus.

9. SAFETY AND SECURITY MONITORING

Existing Conditions to remain (for reference only):

21. A minimum of four state-licensed security guards shall provide security on football game nights with at least two officers assigned to patrol the adjacent residential neighborhoods with an emphasis on those residential streets nearest to the school. The officers shall be present one hour before game time and shall patrol the defined area until the campus is cleared of game participants and spectators and the campus gates are closed.

22. A security plan shall be developed in consultation with the Police Department, outlining security features of each new structure to prior to the issuance of a certificate of occupancy for each new structure. In addition, the property owner shall provide to the Topanga Commanding Officer a diagram of the site indicating access routes and any additional information that might facilitate

police response. The applicant shall submit evidence of compliance to the City Planning Department.

23. The property shall be internally secured when not in use.

New Condition on North Campus:

- **Security on North Campus.**

  a. All driveway gates shall be closed 15 minutes after the morning bell rings and opened 15 minutes before the dismissal bell rings.

  b. A security guard or school employee shall be posted at or near the Saticoy Street driveways to monitor student arrival and departure during regular school days when the North Campus gate(s) are open, to ensure use of the pedestrian bridge and control street-level crossing.

  c. There shall be a 24/7 security camera monitoring and burglar alarm system.

10. LIGHTS

Revised Existing Conditions 24 and 25 to apply to both campuses:

24. All lighting shall be directed onto the site. Floodlighting shall be designed and installed to preclude glare to adjoining and adjacent properties. Outdoor lighting shall be designed and installed with shielding such that the light source ~~cannot be seen~~ **is directed on-site, away** from adjacent properties.

25. **Main Campus:** The athletic field lights shall be turned off no later than 11:00 p.m. on contest nights, and no later than 9:00 p.m. on practice nights. **North Campus: The athletic facility lights shall be turned off no later than 9:00 p.m. on practice and contest nights, with an exception for overtime/extra inning play. Both Campuses:** On nights when the field is not in use, only low-level security lighting shall be ~~allowed~~ **permitted**.

11. NOISE

Existing Condition 26 – To remain as written and apply to both campuses, with proposed new Conditions 26.g. and 26.h for North Campus:

26. Noise Mitigation.

a. An outdoor public address system shall be utilized for emergency purposes, special announcements, and sporting events only. The use of the outdoor public address system shall not be used after 6:00 p.m., unless to notify students, staff, and visitors of emergency purposes, or during sporting events occurring after 6:00 p.m.

b. The existing solid masonry walls at the adjoining property lines, where the school abuts a residence, shall be maintained at the site.

c. Except where designated elsewhere in this determination (special events, marching band practice, etc.), amplified music or loud non-amplified music is not permitted outside.

d. The gymnasium shall contain no operable windows. No doors shall be oriented to the adjacent residences, unless where required by law.

e. Compressors and other equipment which may introduce noise impacts beyond any property line shall be enclosed or otherwise attenuated so as to be inaudible off-site.

f. No exterior bells are permitted outside the hours of daytime classroom instruction detailed under Condition No. 6(a). No exterior bells are permitted on Saturdays or Sundays.

g. Noise levels including, but not limited to, activities such as the use of outdoor public address system or speakers and announcements during sporting events, use of batting cages, and other activities will be subject to the local noise ordinance. All amplified noise must comply with LAMC Section 112.01, referenced below.

SEC. 112.01. RADIOS, TELEVISION SETS, AND SIMILAR DEVICES. (Amended by Ord. No. 156,363, Eff. 3/29/82.)

(a) It shall be unlawful for any person within any zone of the City to use or operate any radio, musical instrument, phonograph, television receiver, or other machine or device for the producing, reproducing or amplification of the human voice, music, or any other sound, in such a manner, as to disturb the peace, quiet, and comfort of neighbor occupants or any reasonable person residing or working in the area.

(b) Any noise level caused by such use or operation which is audible to the human ear at a distance in excess of 150 feet from the property line of the noise source, within any residential zone of the City or within 500 feet thereof, shall be a violation of the provisions of this section.

(c) Any noise level caused by such use or operation which exceeds the ambient noise level on the premises of any other occupied property, or if a condominium, apartment house, duplex, or attached business, within any adjoining unit, by more than five (5) decibels shall be a violation of the provisions of this section.

h. Batting cages on the North Campus shall incorporate noise baffling measures.

New Mitigation Measure for North Campus:

- **Amplified sound systems for the Project's baseball field/bleachers and outdoor aquatics facility/bleachers shall be acoustically engineered with the following design and performance standards:**
  - **Amplified sound levels, as measured at the northern property line of the North Campus, shall not exceed 50 dBA.**
  - **Amplified sound systems shall not be operated outside the operational hours established for the North Campus facilities.**
  - **Speakers shall be directional and oriented away from the northern property line of the North Campus.**
  - **Non-Chaminade users of the facilities shall not be permitted to utilize amplified sound systems.**

12. COMPLAINT LOG

Existing Condition 27 – To remain as written:

27. Complaint Log. The school shall maintain a complaint log associated with any concerns, written or verbal, expressed to the school by area residents, staff, students, or visitors regarding the operation of the school. The complaint log shall be made available to the Director of Planning in conjunction with the review of conditions set forth under Condition No. 28. The school administration shall make the complaint log available for review by any member of the public.

13. CONSTRUCTION ACTIVITIES

Existing Condition 35 to remain and apply to both campuses:

35. Posting of Construction Activities. The adjacent residents shall be given regular notification of major construction activities and their duration. A visible and readable sign (at a distance of 50 feet) shall be posted on the construction site identifying a telephone number for inquiring about the construction process and to register complaints.

IMPORTANT NOTE: *It should be noted that LA City Planning may adjust the above proposed language, as deemed necessary for consistency with department policies and procedures for condition language. In addition, it is expected that LA City Planning will further modify the language in other existing conditions of approval, and impose additional conditions of approval, for consistency with the current campus plan, the changes for the proposed campus plan, and the pending City Planning application.*

Mr. Robert Webb, President
Chaminade College Preparatory
7500 Chaminade Avenue West
Hills, California 91304

Re: **Expansion of an Existing High School, Including Construction, Use and Maintenance of a New Campus**

Case No. CPC-2023-1254-VZC-HD-ZAD-ZAA

Dear Mr. Webb:

The request for the proposed expansion of Chaminade College Preparatory High School is in actuality a request for the construction of a Sports Center without respect for the surrounding and adjacent single-family homes. According to the Planning Department, limitations are necessary to protect the best interests and to assure a development in harmony with the General Plan and the surrounding communities. The West Hills General Plan Land Use is very low residential, any reference to the West Hills **DRAFT** Community Plan is unacceptable. Please see Exhibits A & B attached hereto for reference.

The West Hills Neighborhood Council ("WHNC") Zoning & Planning Sub-Committee is in the process of an investigation regarding this case.

Our findings to date are as follows:

1. Many constituents would support an expansion of classrooms and library to the North campus if done appropriately with respect for the surrounding neighborhood;

2. Many constituents would support a Sports Center on the main South campus with compliance to the current conditions; and

3. Attachment D.1, regarding Discretionary Requests from Chaminade to change conditions place on Chaminade in Case No. CPC-2009-1477-CU-ZV-ZAA-SPR.

Recommendations from the Zoning & Planning Committee:

1. Condition 5 – To remain as written for both campuses;
2. Condition 6E Athletic Field Use/Batting Cages – Hours of operation and renting of facilities would be detrimental to the quiet and quality of life if permitted;
3. Condition 11 A& B Marching Band - Request is unclear and excessive; Condition to remain as written. Please see Exhibit C attached hereto for reference;
4. Condition 15 Parking – On-site parking requires further explanation for both the main South campus and North Campus;
5. Condition 16 Traffic Management Program – Requires and updated Traffic Management Program and the current program is flawed;
6. Condition 18 Buses – Requires queuing, possible splitting of buses and implementation of a drop-off and pick-up plan that does not inhibit traffic flow;
7. Condition 24 Lighting – Current lighting on the main South campus can be seen from adjacent streets; this is non-compliant with this condition;
8. Condition 26 Noise Mitigation – Should be kept as written for protection of the neighbors; and
9. Condition 27 Complaint Log – Constituents have been unable to locate a number for the Chaminade hotline. Requests were made directly to the school's office to see the complaint log. No log has been located to date. Pursuant to Condition 27 and as a public record, the WHNC requests a quarterly report of the complaint log.

APPLICANT REQUEST FOR A ZONE CHANE TO THE NORTH CAMPUS C2-1 WITH R4 USES

WEST HILLS NEIGHBORHOOD COUNCIL ("WHNC") ZONE CHANGE REQUEST FOR THE NORTH CAMPUS – C1-1VL-CUP-Variance-Covenant Agreement

Please see Exhibits D & E attached hereto for reference.

TRAFFIC STUDY:

The analysis of the May 4, 2023 Transportation Assessment report and the corresponding May 16, 2023 City of Los Angeles Inter-Departmental Correspondence remains in dispute. According to the reports, the project would not exceed 250 daily vehicle trips ("DVT") and refers to the shopping center ("North Campus") as a "high trip generator". The reality is that the

shopping center is an extremely "low trip generator". The WHNC's sub-committee encountered only 8 vehicles parked in the shopping center lot during one visit with 5-6 vehicles entering intermittently, 10 parked vehicles on another visit with 5-6 vehicles entering intermittently and comparable numbers of vehicles parked and entering on other visits. Intermittent vehicle trips generated throughout the day at the shopping center do not create long vehicle line-ups at Woodlake, Saticoy or Keswick nor interfere with traffic flow.

Many of the stores in the shopping center have been closed for many years and remain closed today. Fields Market has managed to remain open due to its continued use by the film industry for commercial filming.

Although student enrollment is stated to remain the same, there is no calculation for additional traffic from students coming from other schools and public attendance to the proposed Sports Center for games and competitions. Because Chaminade has not submitted a Traffic Management Program to date, that was not calculated in the analysis. Please see Exhibit F attached hereto for reference.

Should you have any questions please do not hesitate to let us know.

Respectfully Submitted,

Bill Rose

Exhibit C

Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, Approved 11/17/2009, and As Amended by Letters of Clarification, dated 4/6/2010 & 6/16/2010	
Condition	**Response / If Applicable, REQUEST for Condition Modification**
9. Sign. One (1) 16-foot tall, text-only, LED pole sign for on-site identification and informational purposes only, with an 8-foot tall pole, and a sign face with dimensions of 8 feet in height and 12 feet in width, will be allowed along the Saticoy Street frontage as shown on the site plans (Exhibit B1). The pole sign will be in substantial conformance with Exhibit B3.	The Applicant is in compliance with this condition with respect to the existing pole sign. Please note that new identification and wayfinding signs will be proposed on the North Campus and on the pedestrian bridge.
10. Landscaping. For each new structure, and prior to obtaining any grading or building permits before the recordation of the final map, a landscape plan, prepared by a licensed landscape architect, shall be submitted to and approved by the Planning Department in accordance with CP-6730.	The Applicant has complied with this condition.
11. Marching Band practices shall be limited to the following locations and hours: **a.** Evening Practice Sessions. A maximum 1 weekday night per week in the outdoor stadium, between the hours of 6:30 p.m. and 9:00 p.m., to be completed with the lights turned out and the stadium vacated no later than 9:00 p.m. Students leaving the campus after 9:00 p.m. shall be instructed that no playing of instruments shall occur after the end of the session; this shall be strictly enforced by the school administration. The instructor or school staff shall monitor student activities and departures to ensure that noise impacts on adjacent neighbors are minimized. **b.** Morning Practice Sessions. In addition to the one night as per above, a maximum 3 working days (Monday through Friday) per week between the hours of 7:50 a.m. and ending by 9:30 a.m. An exception is made for no more than two weeks in the summer when a marching band camp is held. In all instances, all students shall refrain from congregating at the practice site prior to 7:30 a.m. and after 9:30 a.m. during the school year and between 7:30 a.m. and after noon during the two-week band camp, to minimize noise impacts on adjacent neighbors. An instructor/school staff member shall be present at the subject location by 7:30 a.m. to monitor student activities and arrivals to ensure that	**REQUEST** – Chaminade has a truly successful marching band program and requires slightly more outdoor practice time, as follows: **a.** The Applicant requests up to two (2) weekday nights per week in the outdoor stadium, between the hours of 6 p.m. to 9 p.m., in lieu of one (1) weekday night per week from 6:30 p.m. to 9 p.m. **b.** The Applicant requests that this condition be modified consistent with any modification to Condition No. 11.a. Chaminade also requests that morning practice sessions be modified to up to 2 hours of outdoor practice per day between the hours of 8:00 a.m. to 3:00 p.m, with an exception to allow no more than two weeks in the summer for marching band camp to be held between the hours of 8:00 a.m. and 8:00 p.m. To minimize disruption for neighbors, the outdoor playing of instruments is proposed to be limited to four (4) hours per day during summer camp.

Case No. CPC-2009-1477-CU-ZV-ZAA-SPR, Approved 11/17/2009, and As Amended by Letters of Clarification, dated 4/6/2010 & 6/16/2010	
Condition	**Response / If Applicable, REQUEST for Condition Modification**
noise impacts on adjacent neighbors are minimized. No instruments shall be played (including tuning, or "warming up") prior to the 7:50 a.m. start time. **c.** Saturday Sessions. A cumulative total of five Saturday marching band "warm up" sessions, immediately prior to participation at athletic competitions, shall be permitted during the school year, with hours expressly limited to starting after 8:45 a.m. and ending before 5:00 p.m.	c. No change is requested to this Condition. The Applicant complies with this condition and will continue to comply after Project completion.
12. Special Events. **a.** No more than 18 "Special Events" are authorized. Special events are activities involving parents and/or other visitors where more than 451 vehicles are anticipated at one time. School administrative board meetings and parent/teacher meetings are excluded from the definition of "Special Events". **b.** Unless subsequently modified by the City Planning Commission, the 18 special events authorized on the property are as follows: 1) Graduation - <u>One per semester</u> 2) Varsity Football Games (not including playoffs) - Eight per year 3) Also, <u>nine additional days annually</u>, for school performances, other athletic events, and school-related fundraising activities. 4) A copy of the Calendar and List of Major Events shall be submitted to the appropriate Council District, West Hills Neighborhood Council, and residents within 500 feet of the school property at least 60 days prior to the beginning of each school year for their reference. 5) Calendar Modifications. No variation to allow any "special' event that is not included on the Calendar shall be scheduled without a minimum 60-day advance notification to the appropriate Council District, Neighborhood Council, and residents within 500 feet of the school property. (This	The Applicant is in compliance with Condition No. 12 and will remain compliant with respect to the proposed Project. No changes are proposed to the permitted Special Events.

EXHIBIT D
REQUEST FOR
Case No. CPC-2009-1477-CU-ZV-ZAA-SPR,

C1-1VL LIMITED COMMERCIAL ZONE. (1VL height restrictions) (see Attachment A)

The following regulations shall apply to the "C1" Limited Commercial Zone:

A. Use – No building, structure or land shall be used and no building or structure shall be erected, structurally altered. enlarged or maintained, except for the following uses, and when a "**Supplemental Use District**" is created by the provisions of Article 3 of this chapter, for such uses as may be permitted therein:

1. Any use permitted in the CR Limited Commercial Zone ~~but not~~ including a church, educational institution, museum or school (elementary or high), provided that all the regulations of said CR zone are complied with except as provided in this section. Any residential use permitted in the ~~R3 Multiple Residential~~ Zone RS-1 provided that all the regulations of said ~~R3~~ RS zone are complied with except as provided in this section. **(Amended by Ord. No. 157,994, Eff. 9/25/82.)**

1.5. Hotels (including motels), apartment hotels or hostels when no portion of a structure proposed to be used as a hotel (including a motel), apartment hotel or hostel is located within 500 feet from any A or R zone. **(Amended by Ord. No. 185,931, Eff. 7/1/19.)**

2. **(Amended by Ord. No. 140,726, Eff. 9/3/70.)** The following retail stores, shops or businesses when conducted in accordance with the limitations hereafter specified:

(a) **Types of Uses:**

(1) Bakery goods shop;

(2) **(None)**

(3) Barber shop or beauty parlor;

(4) Book or stationery store;

(5) Clothes cleaning agency or pressing establishment;

(6) ~~Clubs or lodges, bridge clubs, fraternal or religious associations; (Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.)~~ **Removed under covenant agreement**

(7) Confectionery store;

(8) Custom dressmaking or millinery store;

Exhibit D
Cont.

(9) Drugstore;

(10) Dry goods or notions store;

(11) Florist or gift shop;

(12) Grocery, fruit or vegetable store;

(13) ~~Hospital, sanitarium or clinics (except animal hospitals). (Amended by Ord. No. 177,325, Eff. 3/18/06.)~~ **Removed under covenant agreement**

(14) Hardware or electric appliance store;

(15) Jewelry store;

(16) Laundry agency;

(17) Meat market or delicatessen store;

(18) Office, business or professional;

(19) Photographer;

(20) Restaurant, tea room or cafe (excluding dancing or entertainment). Restaurants with drive-through service that adjoin or are across the street from or separated only by an alley from any portion of a lot in a residential zone or use or in an RA Zone, shall be subject to the conditional use requirements of Section 12.24 W.17. **(Amended by Ord. No. 173,492, Eff. 10/10/00.)**

(21) Shoe store or shoe repair store;

(22) Tailor, clothing or wearing apparel shop;

(23) Laundries or cleaning establishments of a self-service type using only automatic machines with non-flammable cleaning fluid; **(Added by Ord. No. 140,726, Eff. 9/4/70.)**

(24) Other uses similar to the above list when determined as provided for in Section 12.21 A.2.; **(Added by Ord. No. 140,726, Eff. 9/4/70.)**

(25) Uses (not involving storage) customarily incident to any of the above- named uses and accessory buildings (including storage garages) when located on the same lot. Automobile parking space required in connection with permitted uses as provided for in Section 12.21 A.4.

(26) **(Amended by Ord. No. 173,754, Eff. 3/5/01.)** Indoor swap meets when authorized pursuant to the provisions of Section 12.24 W.42.

Exhibit D
cont.

(27) Joint living and work quarters for the following occupations: accountants; architects; artists and artisans; attorneys; computer software and multimedia related professionals; consultants; engineers; fashion, graphic, interior and other designers; insurance, real estate and travel agents; photographers and other similar occupations as determined by the Zoning Administrator, provided that the commercial uses are permitted by the underlying zone. **(First Sentence Amended by Ord. No. 172,572, Eff. 6/3/99.)** For all existing buildings, the yards required shall be the same as the yards observed by the existing structures on the site. For an existing building, for which a building permit was issued before April 1, 1994, and which contains no more than eight living and work quarters, the number of parking spaces required shall be the same as the number of spaces existing on the site. All other buildings used for this purpose must meet the parking and yard requirements for residential buildings. **(Added by Ord. No. 169,670, Eff. 5/13/94.)**

(28) Facilities for the development of software (including the reproduction of software and data) and other computer and media-related products and services, not including hardware. **(Added by Ord. No. 172,106, Eff. 8/14/98.)**

(29) Skilled Nursing Care Housing. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(30) Alzheimer's/Dementia Care Housing. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(31) Eldercare Facility. **(Added by Ord. No. 178,063, Eff. 12/30/06.)**

(b) **Limitations:**

(1) **(Amended by Ord. No. 173,492, Eff. 10/10/00.)** All merchandise shall be ~~new~~ and shall be sold at retail only, unless the sale of the merchandise is authorized in an indoor swap meet pursuant to the provisions of Section 12.24 W.42.

(2) All activities are conducted wholly within an enclosed building, except that ground floor restaurants may have outdoor eating areas. An outdoor eating area for a ground floor restaurants may be located anywhere between the building and its required front yard, or between the building and any required side or rear yard which side or rear yard abuts a public street. **(Amended by Ord. No. 165,403, Eff. 2/17/90.)**

(3) All products produced, whether primary or incidental, are sold on the premises, and not more than five persons are engaged in such production or in servicing of materials. **(Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.)**

(4) Any exterior sign is attached to a building, does not extend more than two feet beyond the wall of the building, and does not project above the roof ridge or parapet wall (whichever is higher) of the building.

(5) **(Added by Ord. No. 174,097, Eff. 8/26/01.)** All retail stores, shops or businesses shall be limited to less than 100,000 square feet of floor area. This limitation shall apply to the cumulative sum of related or successive permits that are a part of a larger project, such as piecemeal additions

Exhibit D cont.

to a building, or multiple buildings on a lot or adjacent lots, as determined by the Director of Planning.

B. Restriction. (Amended by Ord. No. 173,268, Eff. 7/1/00, Oper. 7/1/00.) For any lot designated as Public, Quasi-Public, Public/Quasi-Public Use, Other Public, or Open Space on the land use map of the applicable community or district plan; any lot shown on the map as having existing lakes, waterways, reservoirs, debris basins, or similar facilities; any lot shown on the map as the location of a freeway right-of-way; and any property annexed to the City of Los Angeles where a plan amendment was not adopted as part of the annexation proceedings:

Any of the uses permitted by Subsection A of this section shall require prior approval in accordance with the provisions of Section 12.24.1 of this Code.

C. Area. (Amended by Ord. No. 144,365, Eff. 4/5/73, Oper. 9/1/73.) No building or structure nor the enlargement of any building or structure, shall be erected and maintained unless the following yards, lot areas and loading spaces are provided and maintained in connection with such building, structure or enlargement.

In applying the provisions of this section, the front lot line of a corner lot shall be the line separating the lot from the principal street upon which it abuts. Where said lot abuts upon a major or secondary highway such highway shall be construed as being the principal street. Where a lot abuts upon two or more highways, and in all other cases, a Zoning Administrator shall determine which street is the principal street.

1. **Front Yard**. There shall be a front yard of not less than 10 feet in depth.

2. **Side Yards**. Side yards shall be required only in the following instances:

(a) Along the side street lot line of every corner lot in the C1 Zone.

(b) Where the side lot line of the lot in the C1 Zone abuts upon the side of a lot in an A or R Zone.

(c) For all portions of buildings erected and used for residential purposes.

The width of such required side yard shall not be less than 10 percent of the lot width, but need not exceed five feet and shall not be less than three feet in width. Provided, however, that one foot shall be added to the width of the required side yard for each additional story above the second story, but such side yard need not exceed 16 feet in width.

In all other cases, a side yard for a commercial building shall not be required, but if provided, it shall not be less than three feet in width.

3. **Rear Yard.** A rear yard shall be provided only in the following instances:

(a) Where the rear of the lot in the C1 Zone abuts upon a lot in an A or R Zone.

Exhibit D cont.

(b) For all portions of buildings erected and used for residential purposes. Such yard shall be provided and maintained at and above the floor level of the lowest story designed or used for residential purposes, and the full height of the building shall be used in computing the required depth of rear yard.

The depth of such required rear yard shall be not less than 15 feet. One foot shall be added to the depth of such rear yard for each additional story above the third story, but such rear yard need not exceed 20 feet in depth.

4. **Lot Area**. The lot area requirements of the ~~R3~~ RS-1 Zone (Section 12.07.1 C.4.) shall apply to all portions of buildings erected and used for residential purposes. Provided, however, that where the lot is in the "H" Hillside or Mountainous Area, there shall be not more than one dwelling unit for each 5,000 square feet of lot area.

5. **Loading Space**. As required by Section 12.21 C.1. Exceptions to Area regulations are provided for in Section 12.22 C.

VARIENCES & MONDIFICATIONS

1. School, elementary or high, or educational institution (Pursuant LAMC 6. LAMC 12.32 G2)
2. Approved Conditional Use, RS Suburban Zone Residential Zone (in lieu of R4 Multiple Dwelling) Zone.

EXHIBIT E
ATTACHMENT A
DISCRETIONARY REQUESTS
APPROVE/RECOMMEND
Case No. CPC-2009-1477-CU-ZV-ZAA-SPR

The applicant requests a **VESTING ZONE CHANGE AND HEIGHT DISTRICT CHANGE**, pursuant to Los Angeles Municipal Code ("LAMC") Sections 12.32 F and 12.32 Q, **from the [Q]C1-1VL and P-1VL Zones to the C2-1 Zone** on the new North Campus.

We recommend a **VESTING ZONE CHANGE ONLY** on the North Campus from [Q]C1-1VL and P-1VL to [Q]C1-1VL only, Pursuant to Los Angeles Municipal Code ("LAMC") Sections 12.32 F and 12.32 G-2 a 1-3 Code. Keeping existing condition of a maximum 0.5:1 FAR

We reject applicants "Attachment C" under **JUSTIFICATIONS / FINDINGS "The proposed Zone Change is in conformity with public necessity, convenience, general welfare and good zoning practice."**, references to the draft Canoga Park-Winnetka-Woodland Hill-West Hills Community Plan. This plan has not been adopted and is still under review and any reference to this plan is rejected when used for justification of any development or vesting zone change.

We reject applicants Attachment F Zoning Administrator Determination Findings section 3 Community Plan which references Page III-10 of the Canoga Park-Winnetka-Woodland Hills-West Hills Community Plan. This section applies to Public Schools not private schools.

The applicant claims the development is beneficial in terms of **public necessity**. We reject these justification and findings. The applicant is a private school and business not open to the public while it is located in West Hills this proposed development serves it's clients. Fences and security keep the public out.

The applicant claims the development is beneficial in terms of **Convenience**. We reject these justification and findings. The applicant is a private school and business not open to the public while, it is located in West Hills this proposed development serves Chaminade clients. There will be increased traffic on Saticoy where the drop off of clients will be changed. For the stakeholders in this area this will be inconvenient at best.

Community Plan page III-12 and III-13 Goals, Objectives and Policies states:

SCHOOLS:
In the Canoga Park-Winnetka-Woodland Hills-West Hills, public schools are administered by the Los Angeles Unified School District (LAUSD). The number of LAUSD facilities in the Plan area are twenty-two elementary schools, five middle schools, and three high schools.

GOAL 6:

Exhibit E
Cont.

PUBLIC SCHOOLS THAT PROVIDE A QUALITY EDUCATION FOR ALL OF THE CITY'S CHILDREN, INCLUDING THOSE WITH SPECIAL NEEDS, AND ADEQUATE SCHOOL FACILITIES TO SERVE EVERY NEIGHBORHOOD IN THE CITY.
Objective 6-1 Work constructively with LAUSD to promote the siting and construction of adequate school facilities phased with growth.

Policies

6.1.1 Explore creative alternatives for providing new school sites in the City, where appropriate.

Program: Develop plans to address issues of siting and joint use of facilities including strategies for expansion in transit-rich locations.

Program: Use the City's "Annual Growth Report" to monitor locations for growth and potential new school sites.

Objective 6-2 Maximize the use of local schools for community use and local open space and parks for school use.
Policies 6-2.1 Encourage the siting of community facilities (libraries, parks, schools and auditoriums) together. Program: Formulate/update plans to address issues relating to siting and the joint use of facilities. Identify strategies for the expansion of school facilities including:

1. Siting of schools and other community facilities (libraries, parks, and auditoriums) within a transit station, center, or mixed-use area so they can complement each other and make the most efficient use of the land provided for these services.

2. Locating middle schools and high schools where possible, close to transit stations and key centers and mixed-use districts, so students can use the transit system to get to and from school.

3. Encouraging private redevelopment of existing school sites in the immediate vicinity of transit stations and centers so that the existing site (a low intensity use) would be replaced by a high intensity mixed-use development that would incorporate school facilities.

The above polices are intended for Public Schools not Private Schools. We reject these polies as applied to Private Schools.

The applicant claims the development is beneficial in terms of **general welfare**. We reject these justifications and findings. The applicant is a private school and business is not open to the public while located in West Hills this proposed development serves its clients. We agree the general welfare of the applicants' clients will benefit from this proposed development, but the general public will not.

The applicant claims "the proposed Vesting Zone Change and Height District Change is beneficial in terms of **good zoning practice**" The applicant claims that their proposed C2 Zone corresponds to the existing Neighborhood Commercial land use designation of the North

Exhibit E
Cont.

Campus. These justifications refer to a draft Community Plan that has not been adopted. We reject all references to the Draft Community Plan.

We recommend C1-1VL Zone for this development project in keeping with "**good zoning practice**" with the application of condition 1 referenced on the applicates attachment D.1 of the Conditions of Approval Compliance Matrix.

We recommend the R3 zoning normally allowed under C1 modified to RS.

1. Community Plan I-9 "Preserve and enhance the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance."
2. Community Plan I-2 "West Hills" This primarily single-family neighborhood is bound by Roscoe Boulevard to the north, Topanga Canyon Boulevard on the east, the Ventura Freeway to the South, and the Simi Hills on the South and Southwest.
3. Residential page III-1 of Community Plan states: "the proposed Plan has three fundamental premises. First, is limiting single family residential densities in various neighborhoods to the prevailing density of development in these neighborhoods"
4. The properties located to the north of the Subject Property and abutting, are zoned RS-1 and improved with single-family.
5. The properties located to the west and south of the Subject Property across Saticoy Street, are zoned RS-1 and improved with single-family
6. LAMC 12.32 G2 provision may be made in a zoning ordinance that the property not be utilized for all the uses ordinarily permitted in a particular zone classification and/or that the development of the site shall conform to certain specified standards, if the limitations are deemed necessary to:

   (1) Protect the best interests of and assure a development more compatible with the surrounding property or neighborhood;

   (2) Secure an appropriate development in harmony with the objectives of the General Plan; or

   (3) Prevent or mitigate potential adverse environmental effects of the zone change.

We recommend -1VL for height restrictions. (Summary of Zoning Regulations page 7) All surrounding properties are -1VL or RS-1.
C2-1 would violate the intent of the Community Plan to preserve the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance.

Applicants **CONDITIONS OF APPROVAL COMPLIANCE MATRIX**

Exhibit E cont.

8. Setbacks change. The Applicant requests the modification of Condition No. 8 to clarify that it applies to new structures on the Main Campus only, as there are no minimum required setbacks in the C2 Zone proposed for the new North Campus.

We reject C2 and recommend C1 for the North Campus Condition should be changed to "With the exception of the proposed xx-foot tall fence for the baseball field, all new structures abutting a single-family residence shall be located at a minimum distance of 25 feet from the property line on the North Campus All other setbacks shall comply with C1 zoned setbacks (LAMC) 12.13. section **C Area.** Setbacks on the Main Campus shall remain unchanged from the existing covenant agreement. (#8 Setbacks)

11. Marching Band practices shall be limited to the following locations and hours:
All changes rejected.

The Applicant requests the following discretionary approvals:
• A **ZONING ADMINISTRATOR DETERMINATION**, as follows:
a. A Zoning Administrator Determination, pursuant to Los Angeles Municipal Code ("LAMC") Section 12.24 X.22, for new structures related to the sports facilities on the new North Campus, including, but not limited to, a score board, netting and netting poles, lights and a pedestrian bridge, ranging in height from approximately 25 to 90 feet tall, in lieu of the 25-foot, 33-foot and 61-foot tall structures permitted within 0-199 feet of lots zoned RW1 or more restrictive per the Transitional Height limitations in LAMC Section 12.21.1 A.10.

1. We reject 90-foot tall lights Pursuant to Community Plan page I-9 "Preserve and enhance the positive characteristics of existing uses which provide the foundation for community identity, such as scale, height, bulk, setbacks and appearance" and LAMC 12.32 G2 provision may be made in a zoning ordinance that the property not be utilized for all the uses ordinarily permitted in a particular zone classification and/or that the development of the site shall conform to certain specified standards, if the limitations are deemed necessary to:

   (1) Protect the best interests of and assure a development more compatible with the surrounding property or neighborhood;

   (2) Secure an appropriate development in harmony with the objectives of the General Plan; or

   (3) Prevent or mitigate potential adverse environmental effects of the zone change.

Chaminade Expansion
Case CPC-2023-1254-VZC-HD-ZAD-ZAA
Conditions:

Approved by West Hills Neighborhood Council
Zoning & Planning committee September 12th, 2023

1) Zone Change to C1-1VL-CUP, a covenant agreement removing Hotels, Apts, etc from the C1 Zone and a variance/s as needed

2) All Conditions from the South Campus to be applied to the North Campus

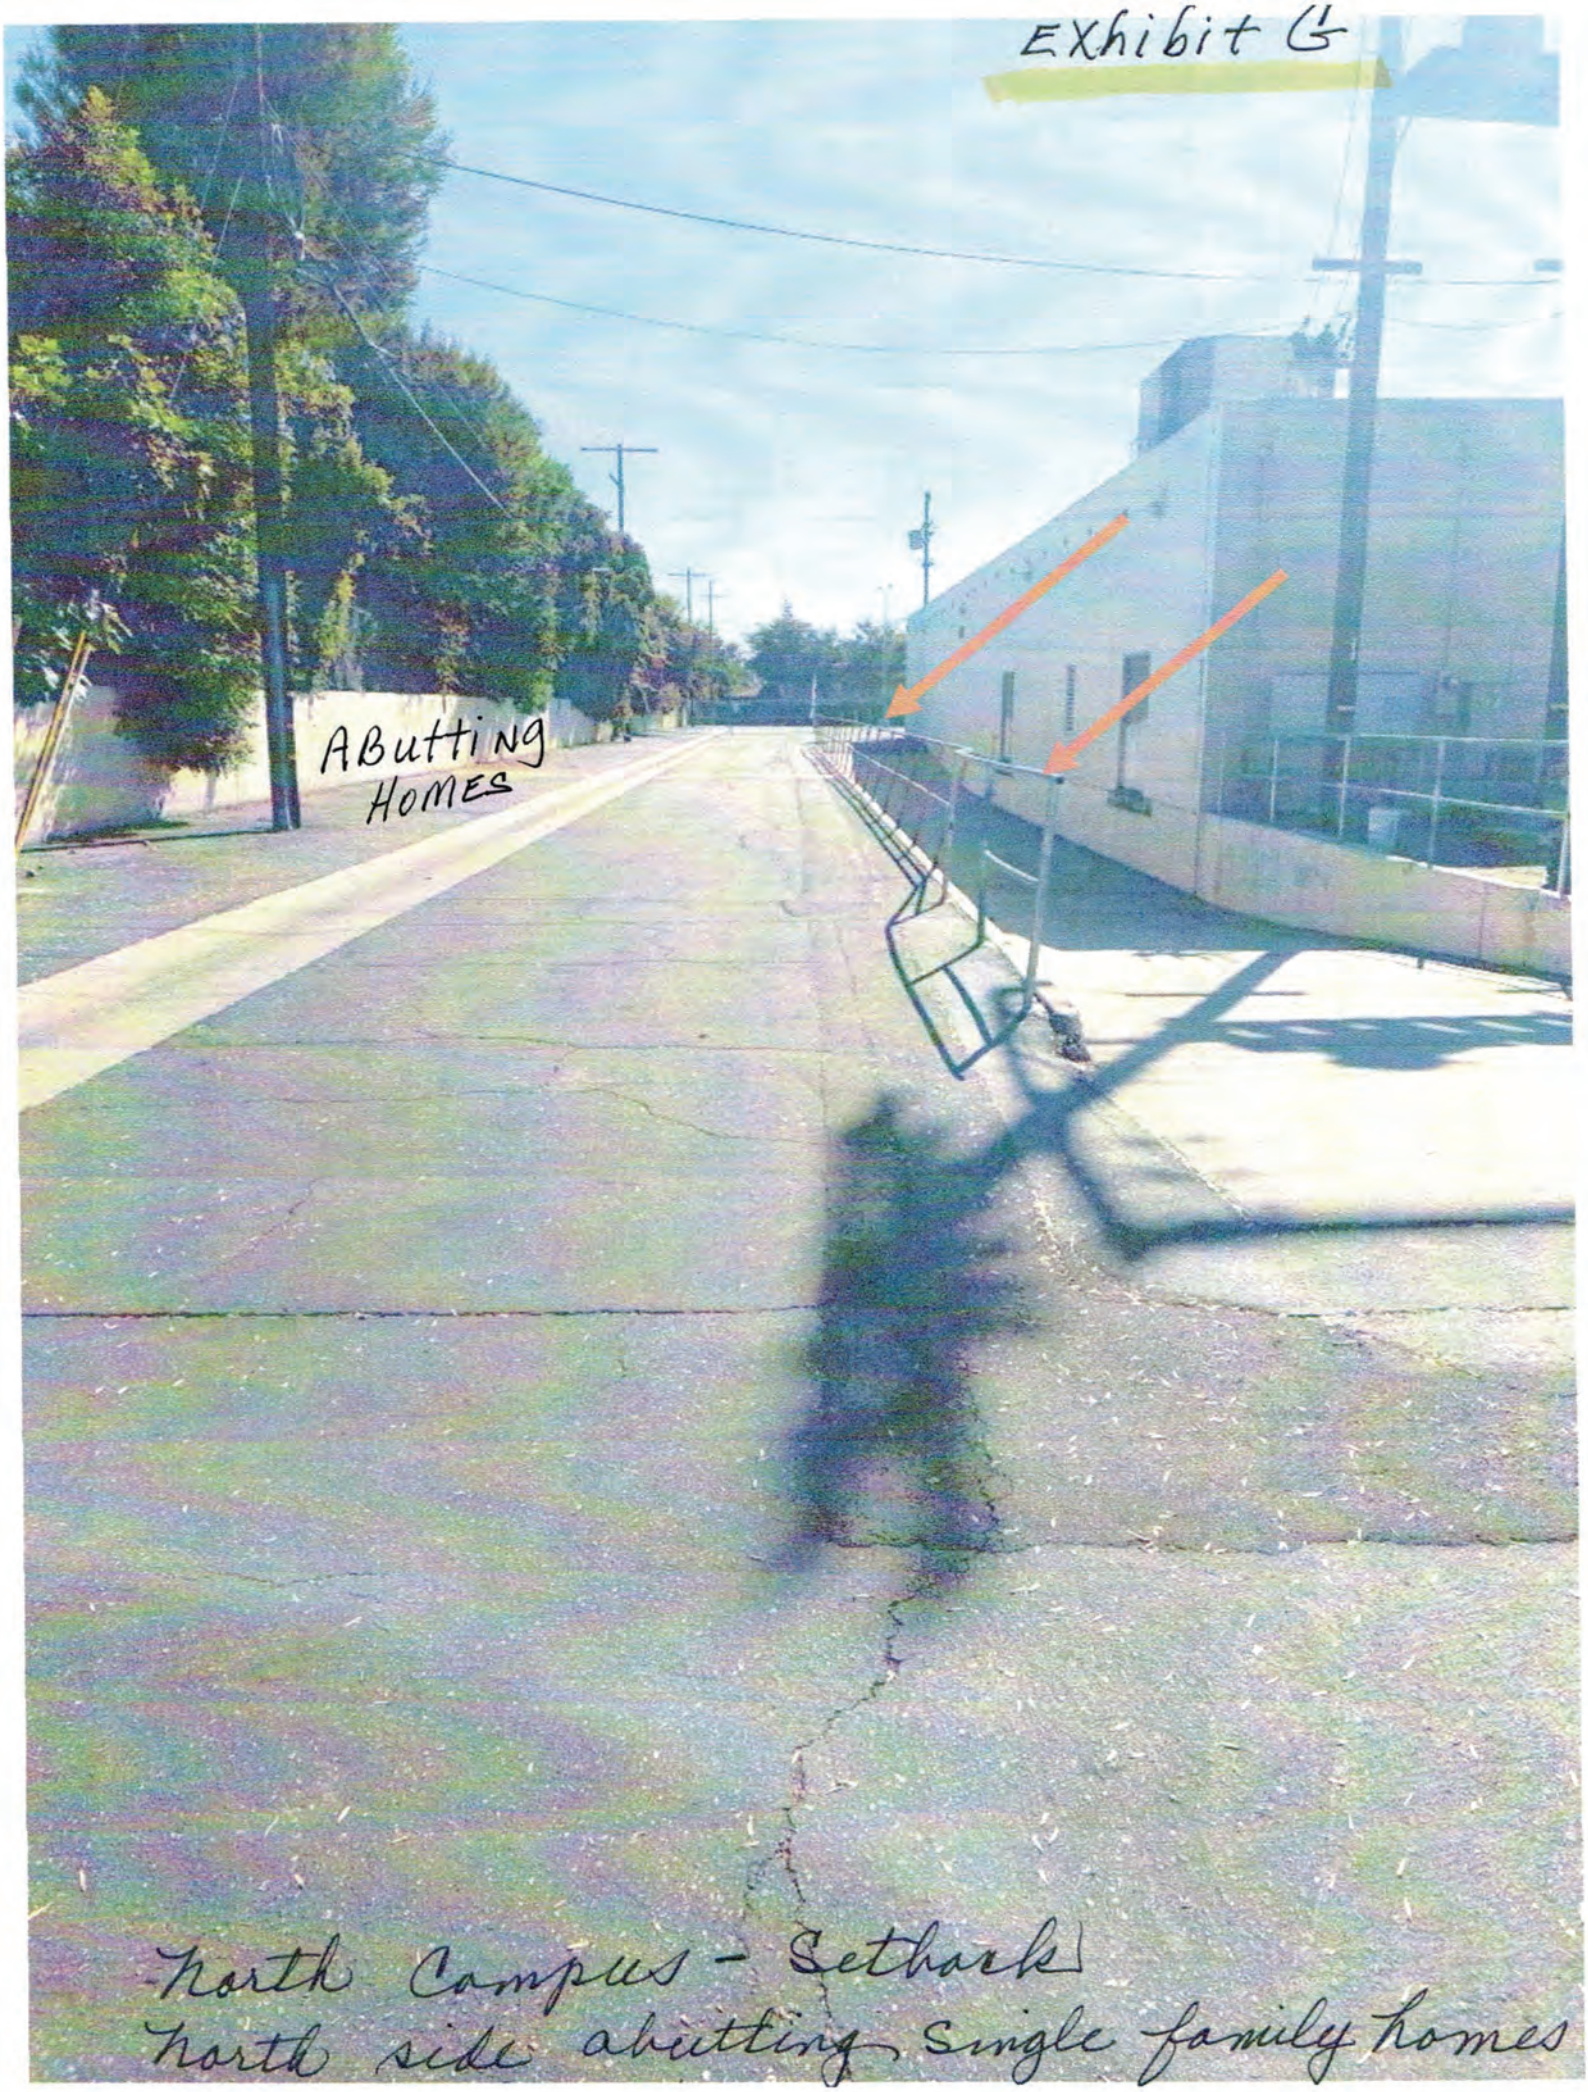
3) No Events relocated to the North Campus

4) No parking on any residential streets for students and/or parents, games or events

5) Indoor/Enclosed Pool facility with same requirements as the noise mitigation included in CPC-2009-1477-CU-ZV-ZAA-SPR

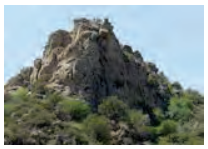
6) Location of the Bridge (moved eastward away from homes for privacy)

7) Split buses/queuing avoiding traffic issues on Saticoy and Cohasset



8) Security guard at bridge/driveways to ensure that pedestrians do not cross in the street

9) Batting Cages/Hours of Operation/No rental or outside use



10) Lights at North Campus/Maximum height 50 feet

11) Setbacks on the North Campus, north side abutting residential, to be no less than 15 feet
(please see Exhibit G)

RE: Response to Chaminade Preparatory School Expansion
ENV-2023-1255-MND

This document is in Response to the Mitigated Negative Declaration (MND) released June 13, 2024 for the proposed Chaminade Preparatory School Expansion.

A Motion was passed unanimously to approve the WHNC Zoning & Planning Committee's Response at the July 9, 2024 meeting.

WHNC disagrees with the DETERMINATION for issuing an MND signed by Trevor Martin, City Planner, dated 6/07/24:
"I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions on the project have been made by or agreed to by the project proponent."

Note: Document titles in red; WHNC comments in blue

Request to be added to Report for North Campus:

* Setbacks for structures including pool
* Request for on-site meetings with Chaminade at proposed North Campus to indicate visually where lights will be placed along wall with neighbors North of project as well as on site at Main Campus to compare pole heights and lighting
* Marching band hours and restrictions

ENV-2023-1255-MND
Project Description
3.2.4 Existing Facilities
Pg 18
"The existing high school encompasses approximately 21.03 acres on the Main Campus……*and a pool."*
Although Chaminade was permitted to install a pool on the Main Campus, it was never built.

3.3.2 New Construction and Campus Changes
Pg 22
"Six modular trailers/classrooms will be temporarily located on the Main Campus during the construction until the new Multistory Building is completed. Parking spaces displaced by these temporary classrooms will be available in the new surface parking lot on the North Campus prior to the installation of the modular trailers."
How many parking spots will be moved to the North Campus during construction?

3.3.5 Vehicle and Bicycle Parking
Pg 32
After construction 501 parking spaces
Main Campus existing 462 stalls; after construction 501 parking stalls
North Campus 101 parking stalls (86 stalls entrance from Saticoy + 15 stalls-pool & Srs- entrance from Woodlake)
Increase of 39 parking spaces
Still Inadequate parking for all of the events and games with vehicles encroaching into neighborhoods

3.5 Related Projects
Pg 38
"As stated in the Transportation Assessment prepared for the Project……no related projects have been identified within one-half mile of the Project Site."
Vesting Preliminary Application filed 3/30/2024 for proposed 324-unit apartment building on former Circle S Ranch property, 7556 Woodlake Avenue, West Hills, 91304. The project was not included in the MND and will have a major impact on the Transportation Assessment. The single-family home was demolished and consideration must be made for development of multiple buildings (homes or apartments) resulting in higher densities on this site.

Project Impacts
Artificial Light
Pg 42
"Ad adverse impact would occur if a project created a substantial new source of artificial light that would adversely affect the surrounding area…….The North Campus portion of the Project will include new lighting standards ranging in height from 70-90 feet ….. "
