Comments for Public Posting: Reject the Scattergood EIR due to significant emissions during startup and shut down. Hydrogen produces 3 - 5 times as much NOx as methane. A lot of energy is required to produce hydrogen. The cooling system contributes to toxic algal blooms. It might take a long time to design and pay for the green hydrogen infrastructure. Much of today's technology is poor quality and breaks down and has the potential to cause disasters. Also we don't need another large, combustible project that probably would be a target of terrorists retaliating.
