Comments for Public Posting: My name is Stephany Calvillo, and I am a tenant in CD 15. I support the maximum indoor temperature ordinance. Extreme heat is the most deadly weather condition we face. As our climate warms, there will be more days every year where we will be exposed to dangerous and life-threatening conditions in our homes. Though I live in close proximity to ocean breezes in San Pedro, my neighbors and I still face extreme heat and all the other negative impacts that come with it. Living in/near a port town and being exposed to other factors that affect my health, only compound the negative impacts. Adding extreme heat to that worsens over all well-being and health and not having central AC/cooling in my home, makes it extremely difficult. Adequate cooling should be a habitability requirement in all homes just like heating is. This is not just a matter of comfort, this is a matter of health and safety. My neighbors and I deserve for our internal home temperatures to not exceed 80 degrees, so that we may live healthy and safe lives at home.

Comments for Public Posting: I am a CD13 resident and parent writing in strong support of progress for the City's maximum indoor heat ordinance. My neighbors, kids' fellow students, and fellow churchgoers all deserve protection from extreme indoor temperatures that harm people's health and wellness, ability to do well at school and work, and can even threaten people's lives. Tenants deserve access to cooling measures ASAP, and important efforts to ensure utility affordability and appliance efficiency should not prevent timely implementation of these protections. Tenants of small landlords also urgently need at least one room in their dwelling to have cooling as a matter of survival. Please ensure progress is made for the fulfillment of this already adopted policy to protect our fellow Angelenos from dangerous heat like we've experienced this week.
