**Comments for Public Posting:** I think this is long overdue. However, keep in mind that AC units need electricity. At 8pm 9/5/25 Per the Hourly Electric Grid Monitor, our very own DWP, electricity generation by source. In first place, natural gas, a fossil fuel. In second place, coal. Third place wind. Zero solar. All the feel good go green renewables are just that. Feel good. In reality, the CA grid and our DWP have no hope in the near future from moving away from fossil fuel. This is a dirty progressive secret. Reality always wins.
