Comments for Public Posting: Please EXCLUDE all hillside properties in the high and very high fire hazard severity zones from this program. We should not be promoting housing in our high fire hazard areas given the extreme fire danger and safety concerns involved. Additionally, these hillside properties are often covered with mature trees and shrubs that get wiped out when structures are added to the site. Please exhaust all efforts to stick with the flatlands.

Comments for Public Posting: Please exclude fire-prone hillsides from this program! Increased construction and building density means more traffic congestion, risk of blocking fire trucks, and increased risk of fire. In addition, green wooded vacant lots are contributing to shade, cooling, cleaning our air, our ecology and overall health. Removing trees will augment health issues, noise and pollution. Our tree canopy is dwindling daily. Please consider the importance of open public green spaces, shade and natural cooling. Thank you
