Comments for Public Posting: Jones Chemical is a dangerous facility just adjacent to our neighborhood. It needs to be removed from our community. It is not fair that we bear this burden. in a catistrophic release members of our community will die others will be severely affected and the impact will send a ripple effect through our neighborhood for generations. Our first responders are not prepared to handle the devastating consequences of that release. because the facility is in the city and we live in the county separated by Normandie. Normandie however can not stop a topic cloud of chlorine gas.. The county side needs to make this a priority
