DEPARTMENT OF CITY PLANNING

RECOMMENDATION REPORT

City Planning Commission

Date: October 9, 2025
Time: after 8:30 a.m.
Place: This meeting may be available virtually, in a hybrid format. Please check the meeting agenda approximately 72 hours before the meeting for additional information at: https://planning.lacity.org/about/commissions-boards-hearings and/or by contacting cpc@lacity.org

Public Hearing: September 16, 2025

Appeal Status: Off-Menu Density Bonus Housing Incentives and Waivers are not appealable by any party. On-Menu Density Bonus, Conditional Use, and Site Plan Review are appealable to City Council.
Expiration Date: November 30, 2025, Subject to the Mayor's Tolling Order
Multiple Approval: Yes

Case No.: CPC-2021-9522-DB-VCU-CU-SPR-HCA[1]
CEQA No.: ENV-2021-9523-HES-PEIR
Incidental Cases: N/A
Related Cases: AA-2019-5528-MPC
Council No.: 15 - McOsker
Plan Area: Wilmington - Harbor City
Plan Overlay: N/A
Certified NC: Harbor City
GPLU: Community Commercial, Limited Industrial[2]
Zone: [Q]C2-1VL, [Q]CM-1VL

Applicant: ROI 1280 LLC
Representative: Luciralia Ibarra, SITIO

PROJECT LOCATION: **1268 West Pacific Coast Highway, 1270 West Pacific Coast Highway, 1290 West Pacific Coast Highway; 25900 South Frampton Avenue, Los Angeles, CA 90710** (legally described as Lot PT, Arb 33 and 67, Block 10, Tract Peck's Subdivision of Lot J and Portion of Lot H of the Partition of the Rancho)

PROPOSED PROJECT: The proposed project includes the construction of a new six-story, 80-foot tall mixed-use residential building comprised of 354 dwelling units (including 42 Very Low Income units). The project will be approximately 406,855 square feet in floor area, including 1,500 square feet of commercial floor area, with a Floor Area Ratio ("FAR") of 2.6:1. The project will provide 560 residential and 15 commercial parking spaces, for a total of 575 parking spaces, in a six-story above-grade parking garage. The project will include the grading 53,000 cubic yards and export of 7,000 cubic yards of soil, and removal of 24 non-protected trees.

REQUESTED ACTION:

1. The proposed project is within the scope of the program approved with the 2021-2029 Housing Element for which the 2021-2029 Housing Element Environmental Impact Report No. ENV-2020-6762-EIR; SCH No. 2021010130 (EIR), was certified on November 24, 2021, the Addendum No. ENV-2020-6762-EIR-ADD1 adopted on June 12, 2022 and the Addendum No. ENV-2020-6762-EIR-ADD2 adopted on December 10, 2024, which all adequately describe the activity for the purposes of CEQA and the proposed housing

[1] The case was filed on November 18, 2021, prior to the effective date of the New Zoning Code (Chapter 1A-Process and Procedures). Therefore, the case is vested to and subject to the Original Zoning Code.
[2] The site is designated as Light Industrial and Heavy Industrial in the Wilmington – Harbor City Community Plan Map which was last updated 1999. Although ZIMAS identifies the site as being within Light Manufacturing, the City of Los Angeles Department of City Planning does not guarantee the accuracy or reliability of the information transmitted from this website. Therefore, the Community Plan Map land use designations shall prevail.

project was adequately described in the EIR and the Addenda, and the impacts of the proposed housing project are within the scope of the EIR and the Addenda, and adopt the Mitigation Monitoring (MMP) for the proposed housing project.

2. Pursuant to Los Angeles Municipal Code ("LAMC") Section 12.22 A.25(g)(2) and (3), a Density Bonus/Affordable Housing Incentive Program Compliance Review to permit the construction of a Housing Development Project totaling 354 units, reserving 42 units for Very Low Income Household occupancy for a period of 55 years, with the following requested On- and Off-Menu Incentives:

    a. Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access from a less restrictive zone to a more restrictive zone (On-Menu).

    b. A Floor Area Ratio ("FAR") of 2.6:1 in lieu of 1.5:1 as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones and Footnote Nos. 8 and 10 of the Community Plan (Off-Menu).

    c. A 35-foot and three-story increase in the maximum building height to allow 80 feet and seven (6) stories in lieu of 45 feet and three (3) stories as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones, Footnote Nos. 8 and 10 of the Community Plan, and LAMC Section 12.22 A.23 (Off-Menu).

3. Pursuant to LAMC Section 12.22 A.25(g)(3), the following five (5) Waivers of Development Standards:

    a. An 8-foot easterly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.

    b. An 8-foot westerly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.

    c. 25 percent of the required open space to be landscaped in lieu of the 50 percent otherwise required by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

    d. Recreation room to be counted towards 25 percent of the required open space, in lieu of the 10 percent otherwise allowed by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

    e. Waiver from architectural treatment requirements of Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

4. Pursuant to LAMC Section 12.24 V, a Vesting Conditional Use to allow a Mixed Commercial/ Residential Use Development on the subject site.

5. Pursuant to LAMC Section 12.24, a Conditional Use to allow a development combining residential and commercial uses on the subject site as required by Footnote No. 9 of the Wilmington - Harbor City Community Plan.

6. Pursuant to LAMC Section 16.05, a Site Plan Review for a development project resulting in an increase in 50 or more dwelling units.

RECOMMENDED ACTIONS:

1. **Determine**, in the independent judgment of the decision maker, pursuant to CEQA Guidelines Section 15168(c), based on the whole of administrative record, including the Housing Element Checklist, and all its appendices, prepared for this proposed housing project, the proposed housing project is within the scope of the program approved with the 2021-2029 Housing Element for which the 2021-2029 Housing Element Environmental Impact Report No. ENV-2020-6762-EIR; SCH No. 2021010130 (EIR), certified on November 24, 2021, the Addendum No. ENV-2020-6762-EIR-ADD1 adopted on June 12, 2022 and the Addendum No. ENV-2020-6762-EIR-ADD2 adopted on December 10, 2024, the Proposed Housing Development was adequately described in the EIR and Addenda, and the impacts of the proposed project are within the scope of the EIR and the Addenda, and adopt the Mitigation Monitoring (MMP) for the proposed project.

2. **Approve,** pursuant to LAMC Section 12.22 A.25(g)(2) and (3), a **Density Bonus/Affordable Housing Incentive Program Compliance Review** to permit the construction of a Housing Development Project totaling 354 units, reserving 42 units for Very Low Income Household occupancy for a period of 55 years, with the following requested **On- and Off-Menu Incentives**:

   a. Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access from a less restrictive zone to a more restrictive zone (On-Menu).

   b. A Floor Area Ratio ("FAR") of 2.6:1 in lieu of 1.5:1 as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones and Footnote Nos. 8 and 10 of the Community Plan (Off-Menu).

   c. A 35-foot and four-story increase in the maximum building height to allow 80 feet and six (6) stories in lieu of 45 feet and three (3) stories as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones, Footnote Nos. 8 and 10 of the Community Plan, and LAMC Section 12.22 A.23 (Off-Menu).

3. **Approve,** pursuant to LAMC Section 12.22 A.25(g)(3), the following **five (5) Waivers of Development Standards:**

   a) An 8-foot easterly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.

   b) An 8-foot westerly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.

   c) 25 percent of the required open space to be landscaped in lieu of the 50 percent otherwise required by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

   d) Recreation room to be counted towards 25 percent of the required open space, in lieu of the 10 percent otherwise allowed by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

   e) Waiver from architectural treatment requirements of Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

4. **Approve,** pursuant to LAMC 12.24 V, a Vesting Conditional Use to allow a Mixed Commercial/ Residential Use Development on the subject site.

5. **Approve,** pursuant to LAMC Section 12.24, a Conditional Use to allow a development combining residential and commercial uses on the subject site as required by Footnote No. 9 of the Wilmington - Harbor City Community Plan.

6. **Approve,** pursuant to LAMC Section 16.05, a Site Plan Review for a development project resulting in an increase in 50 or more dwelling units.

7. **Adopt** the attached Findings.

ADVICE TO PUBLIC: *The exact time this report will be considered during the meeting is uncertain since there may be several other items on the agenda. Written communications may be mailed to the *Commission Secretariat, Room 273, City Hall, 200 North Spring Street, Los Angeles, CA 90012* (Phone No. 213-978-1300). While all written communications are given to the Commission for consideration, the initial packets are sent to the week prior to the Commission's meeting date. If you challenge these agenda items in court, you may be limited to raising only those issues you or someone else raised at the public hearing agendized herein, or in written correspondence on these matters delivered to this agency at or prior to the public hearing. As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability, and upon request, will provide reasonable accommodation to ensure equal access to these programs, services and activities. Sign language interpreters, assistive listening devices, or other auxiliary aids and/or other services may be provided upon request. To ensure availability of services, please make your request not later than three working days (72 hours) prior to the meeting by calling the Commission Secretariat at (213) 978-1300.

PROJECT ANALYSIS

PROJECT SUMMARY

The proposed project involves the construction of a new six-story, 80-foot tall mixed-use residential building comprised of 354 dwelling units (including 42 Very Low Income units) across five residential levels. The project will be approximately 406,855 square feet in floor area, including 1,500 square feet of commercial, with a Floor Area Ratio ("FAR") of 2.6:1. The project includes 90 studio units, 23 studio units with lofts, 93 one-bedroom units, 22 one-bedroom units with lofts, 90 two-bedroom units, 21 two-bedroom units with lofts, 12 three-bedroom units, and 3 three-bedroom units with lofts.

The project provides the primary pedestrian entrance at the corner of Pacific Coast Highway and Frampton Avenue with a public plaza that provides direct access to the lobby, leasing area, and commercial offices that are flanked with recreation rooms. Secondary pedestrian entrances are provided along Frampton Avenue and 259th Street. Residential amenities are provided in a series of open-air courtyards as well as private balconies.

The project includes a six-story above-grade parking garage at the center of the building that will be mostly wrapped with residential uses and walkways. The project will provide 560 residential and 15 commercial parking spaces, for a total of 575 parking spaces. Vehicular access is provided from a single driveway and curb cut from Frampton Avenue.

The project involves the closure of an existing mobilehome park containing 88 spaces, with 41 spaces currently occupied. The mobilehome park closure is being processed separately under Related Case No. AA-2019-5528-MPC. All existing structures will be demolished and mobilehomes will be removed for the proposed project, including the removal of 24 non-protected trees. The project will include the grading of 53,000 cubic yards and export of 7,000 cubic yards of soil.

BACKGROUND

Subject Property

The project site is located at the corner of Pacific Coast Highway and Frampton Avenue in the Wilmington – Harbor City Community Plan. The project site is a relatively flat, irregular-shaped, dual-zoned site comprised of two (2) lots that total approximately 161,450 square feet (3.7 acres). The site has a street frontage of approximately 270 feet on the south side of Pacific Coast Highway, 557 feet on the east side of Frampton Avenue, and 300 feet on the north side of 259th Street.

The site is currently improved with a mobilehome park containing 88 spaces that is proposed to be closed (under Related Case No. AA-2019-5528-MPC) and vehicle storage area. At the time the case was processed, there were a total of 42 tenants: 15 mobilehomes, 3 RVs or motor homes, 16 travel trailers, and 8 fifth wheels on the subject site[3]. All existing structures will be demolished and mobilehomes will be demolished or removed for the proposed project, including the removal of 24 non-protected trees.

[3] State Mobilehome Residency Law CA Civil Code Section 798.3(b)(2) defines mobilehomes as including "trailer or other recreational vehicle [that] occupies a mobilehome site in the park for nine or more continuous months".

The project site is located within 1.01 Kilometers (.62 miles) from the Palos Verdes Fault Zone. It is within a Methane Zone. However, it is not located within the Alquist-Priolo Fault zone, Liquefaction zone, Landslide Area, Very High Fire Severity Zone, Coastal Zone or BOE Special Grading Area.

Zoning and Land Use Designation

The project site is in the Wilmington - Harbor City Community Plan, and is designated for Community Commercial and Limited Industrial land uses. The Community Commercial land use designation corresponds to the CR, C2, C4, RAS3, P, and PB zones; the Limited Industrial land use designation corresponds to the CM, MR1, M1, and P Zones. The site is zoned [Q]C2-1VL and [Q]CM-1VL and is therefore consistent with the land use designations. Height District No. 1VL limits the Floor Area Ratio ("FAR") to 1.5:1 and building height to 45 feet and three (3) stories. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3 stories, 45 feet, and 3:1 FAR, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 3 stories, 45 feet, and 1.5:1 FAR. Footnote No. 9 of the Community Plan Map requires that properties designated for Community Commercial uses be reserved for commercial and parking uses, except that developments combining residential and commercial uses shall be approved through a procedure similar to a conditional use. The site is subject to Qualified "Q" Conditions established under Ordinance No. 172853 (Subareas 22A and 22B), which has certain usable open space, landscaping, recreation room, architectural treatment, and parking requirements. The project site is in a Transit Priority Area (Zoning Information "ZI" File No. 2452), the State Enterprise Zone (ZI File No. 2130), and is subject to the Wilmington – Harbor City Trucking Related Use Regulations Ordinance (ZI File No. 2514, Ordinance No. 188,287).

Surrounding Uses

The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with an LA Water and Power substation and automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone.

Streets and Circulation

Pacific Coast Highway, abutting the property to the north, is designated by the Mobility Plan as a Boulevard II, with a designated right-of-way width of 110 feet and roadway width of 80 feet, and is currently dedicated to a variable right-of-way width ranging from approximately 100 to 110 feet, and approximately 75-foot roadway width, with a curb, gutter, and sidewalk.

Frampton Avenue, abutting the property to the south, is designated by the Mobility Plan as a Local Street - Standard, with a designated right-of-way width of 60 feet and roadway width of 36 feet, and is currently dedicated to a 50-foot right-of-way width and approximately 40-foot roadway width, with a curb, gutter, and partial sidewalk.

259th Street, abutting the property to the south, is improved as a partial cul-de-sac, and designated by the Mobility Plan as a Local Street - Standard, with a designated right-of-way width of 60 feet and roadway width of 36 feet, and is currently dedicated to variable right-of-way width ranging from approximately 40 feet to 61 feet and variable roadway ranging from 21 feet to 53 feet in width, with no curb, gutter, or sidewalk abutting the subject site.

Public Transit

The subject site is within a half-mile of the intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. The subject site is within proximity to bus stops served by the Los Angeles County Metropolitan Transportation Authority ("Metro") 205, 232, and 246 bus lines, City of Gardena GTrans 2 bus line, and the Los Angeles Department of Transportation ("LADOT") 448 bus line.

Relevant Cases and Building Permits

Subject Site:

Case No. AA-2019-5528-MPC – On September 17, 2019, the applicant filed for a Mobilehome Park Closure Impact Report for the closure of the existing mobilehome park. The application is pending and a determination letter was not issued at the time of preparing this report.

Building Permit No. 21010-10000-06026 - On November 18, 2021, a Building Permit application was submitted for a new 6-story, 354 unit (11% or 42 Very Low Income units) mixed-use affordable housing apartment with 5 levels of Type IIIA apartments over 1 story of Type IA apartments, restaurant, and amenities at the ground floor and attached 6-story Type IA parking garage using L.A.M.C. Section 12.22 A.25 incentives. The permit application is pending and the permit was not issued at the time of preparing this report.

Surrounding Sites:

The following relevant cases were identified to be within 500 feet of the subject site:

Case No. ZA-2012-3540-CU – On April 2, 2013, the Zoning Administrator approved a Conditional Use Permit to allow a dog kennel for the overnight boarding of dogs within 500 feet of a residential zone, for a project located at 15930-25950 Belle Porte Avenue and 25933-25927 South Frampton Avenue.

Case No. DIR-2009-2815-SPR – On October 29, 2009, the City Planning Commission approved a Site Plan Review for the construction of a four-story, 92,000 square foot hospital annex facility, with a new one-story, enclosed pedestrian walkway at the first level, for a project located at 25825 South Vermont Avenue.

Case No. CPC-2006-4722-CU-ZV-ZAD-SPR – On August 30, 2007, the City Planning Commission approved a Conditional Use to replace and upgrade the existing South Bay Hospital Medical Center, allow deviations from Commercial Corner Development Regulations, and allow increased height and reduced yards; a Variance to permit parking to be located more than 750 feet from the intended use during project construction; a Determination to allow a reduction of off-street parking during construction; and a Site Plan Review, for a project located at 25825 Vermont Avenue.

Case No. ZA-2004-4529-ZV – On July 28, 2004, the Zoning Administrator approved a Variance from condition No. 6 of Ordinance 165,801 to permit ¼ guest parking and variable height walls up to 13 feet, for a project located at 2600 Frampton Avenue.

Case No. ZA-2002-2668-ZV-ZAA-ZAD – On January 16, 2003, the Zoning Administrator approved a Zoning Variance to allow multi residential use limited to RD1.5 and to permit 20-foot space between buildings, a Zoning Administrator Adjustment to construct 24 feet

height building, and a Zoning Administrator Determination to permit a 6-foot high fence and gets in front yard, for a project located in 26000 Frampton Avenue.

Case No. CPC-2002-1747-GPA-HD – On October 24, 2002, the City Planning Commission approved a Zone Change/General Plan Amendment to (T)(Q)RD1.5/Low Medium II Density Residential and Height District 1-XL, for a project located at 26000 S. Frampton Avenue.

REQUESTED ACTIONS

Density Bonus / Affordable Housing Incentives Program

In accordance with California State Law (including Senate Bill 1818, and Assembly Bills 2280, 2222, and 2556), the applicant is proposing to utilize LAMC Section 12.22 A.25 (Affordable Housing Incentives – Density Bonus) to set aside a minimum of 42 dwelling units for Very Low Income household occupancy for a period of 55 years. Because the applicant is providing over 15 percent (42 units) of base dwelling units (272 units) to be affordable for Very Low Income household occupancy, the project is eligible for three (3) Density Bonus Incentives.

On- and Off-Menu Incentives

As a result of setting aside over 15 percent (42 dwelling units) of the base 272 dwelling units as Restricted Affordable Units for Very Low Income Households, the applicant requests three (3) On- and Off-Menu Density Bonus Incentives, as follows:

a. Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access from a less restrictive zone to a more restrictive zone (On-Menu).

b. A Floor Area Ratio ("FAR") of 2.6:1 in lieu of 1.5:1 as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones and Footnote Nos. 8 and 10 of the Community Plan (Off-Menu).

c. A 35-foot and four-story increase in the maximum building height to allow 80 feet and six (6) stories in lieu of 45 feet and three (3) stories as otherwise permitted in the [Q]C2-1VL & [Q]CM-1VL zones, Footnote Nos. 8 and 10 of the Community Plan, and LAMC Section 12.22 A.23 (Off-Menu).

Waivers of Development Standards

As mentioned above, a project that provides over 15 percent of its base units for Very Low Income Households qualifies for three (3) Incentives, but may request other "waiver[s] or reduction[s] of development standards that will have the effect of physically precluding the construction of a development meeting the [affordable set-aside percentage] criteria of subdivision (b) at the densities or with the concessions or incentives permitted under [State Density Bonus Law]" (Government Code Section 65915(e)(1)), in conjunction with a Density Bonus Project. Given that the project is utilizing all three (3) Density Bonus Incentives, the applicant requests five (5) Waivers of Development Standards, as follows:

a. An 8-foot easterly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.
b. An 8-foot westerly side yard setback in lieu of the 10 feet otherwise required by the [Q]C2-1VL & [Q]CM-1VL zones.
c.

d. 25 percent of the required open space to be landscaped in lieu of the 50 percent otherwise required by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

e. Recreation room to be counted towards 25 percent of the required open space, in lieu of the 10 percent otherwise allowed by Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

f. Waiver from architectural treatment requirements of Q Condition contained in Ordinance No. 172,853 (Subareas 22A and 22B).

Housing Replacement

On October 9, 2019, the Governor signed into law the Housing Crisis Act of 2019 (SB 330). SB 330 creates new state laws regarding the production, preservation and planning for housing, and establishes a statewide housing emergency until January 1, 2025. During the duration of the statewide housing emergency, SB 330, among other things, creates new housing replacement requirements for Housing Development Projects by prohibiting the approval of any proposed housing development project on a site that will require the demolition of existing residential dwelling units or occupied or vacant "Protected Units" unless the proposed housing development project replaces those units. The Los Angeles Housing Department (LAHD) has determined, per the Housing Crisis Act of 2019 (SB 8) Determination, dated December 19, 2023, that 33 residential units need to be replaced with equivalent type, with 24 units restricted to Very Low Income Households and 9 units restricted to Low Income Households; the remaining 18 units presumed to have been occupied by an above-lower income person or household be replaced in compliance with the City's Rent Stabilization Ordinance ("RSO"); and four (4) units need to be replaced with equivalent type and restricted to Very Low Income Households per income verification (Exhibit C). The LAHD housing replacement requirements are satisfied by the 42 Very Low Income units provided through this Density Bonus Affordable Housing Incentives Program. This is reflected in the Conditions of Approval.

Conditional Use

Pursuant to LAMC Section 12.24 V, the applicant has requested a Vesting Conditional Use to allow a Mixed Commercial/Residential Use Development on the subject site. As provided in LAMC Section 12.24 V, only residential dwelling units are considered a residential use, the project does not exceed a 3:1 FAR in Height District No. 1, and any floor area above the maximum allowed shall be utilized solely for residential development.

Pursuant to LAMC Section 12.24, the applicant has requested a Conditional Use to allow a development combining residential and commercial uses on the subject site as required by Footnote No. 9 of the Wilmington - Harbor City Community Plan. Footnote No. 9 requires that:

> *"Properties designated for Community Commercial uses shall be reserved for commercial and parking uses, except developments combining residential and commercial uses shall be approved through a procedure similar to a conditional use. Such combined residential and commercial development shall require findings that land uses surrounding the proposed development site will not be inimical to the health, safety, and welfare of prospective residents of such quarters. In approving such combined residential and commercial development, the appropriate decisions makers may impose conditions*

necessary to assure that the proposed development is compatible with surrounding development and zoning and consistent with the intent and objectives of this Plan".

Pursuant to LAMC Section 12.24 T, whenever a provision requires the filing of an application for a Conditional Use Permit, a Vesting Conditional Use Permit may be filed instead, which would confer a vested right to proceed with a development in substantial compliance with the rules, regulations, ordinances, zones, and officially adopted policies in force on the date the application is deemed complete.

Site Plan Review

In accordance with LAMC Section 16.05, the applicant has requested Site Plan Review for a development project that creates or results in an increase of 50 or more dwelling units. Given the site is currently improved with a mobilehome park with 42 occupied spaces, and the project proposes 270 new by-right dwelling units, the project results in a net increase of 228 base dwelling units on the subject site, and is subject to Site Plan Review.

ISSUES

Mobilehome Park Closure

The closure of the mobilehome park was reviewed and processed under Case No. AA-2019-5528-MPC. The closure of a mobilehome park is regulated under state law (Mobilehome Residency Law and California Government Code Section 65863.7 et seq. as modified under Assembly Bill ("AB") 2782) and local city requirements (LAMC Sections 47.09 and 47.08 and Zoning Information ("ZI") File No. 1361).

LAMC Section 47.09 requires mobilehome park owners to address the impact of the closure on residents to be displaced, and to take steps to mitigate the adverse impacts on the residents. It establishes the City's procedures for the required filing of a closure impact report with the Advisory Agency. Zoning Information ("ZI") File No. 1361(dated April 11, 2001) established the City's requirements for the contents of closure impact report, and requires the closure impact report address the availability of replacement housing and the relocation costs and assistance for each resident of the mobilehome park. ZI File No. 1361 requires information pertaining to the existing mobilehomes and residents, moving cost estimates, availability of replacement spaces, and two (2) appraisal reports performed by separate independent appraisers, among other requirements. ZI File No. 1361 authorizes the Deputy Advisory Agency to consider assigning a fair and reasonable value to the mobilehome to be paid to the mobilehome owner, relocation assistance including moving costs, rent supplements, and the hiring of a relocation counselor to directly help the residents in finding acceptable replacement housing. LAMC Section 47.08 requires relocation assistance to tenants facing eviction due to the closure of mobilehome parks, including the involvement of relocation assistance providers and payment of relocation fees to tenants.

Since then, the laws that govern the closure of mobilehome parks were modified pursuant to Assembly Bill ("AB") 2782 effective January 1, 2022. Among other things, AB 2782 amended Government Code Section 65863.7 to provide additional protections to mobilehome park residents in the face of the statewide housing crisis.

As a result, to the extent any conflicts exist between the LAMC and the City's ZI (last updated in 2001), the closure impact report has been administered and implemented consistent with the changes in state law and as necessary to allow the City to make the necessary revised findings now required by state law. An effort to update our LAMC and ZI is part of a future work plan.

LAMC Section 47.09 D.4 authorizes the Advisory Agency to impose such conditions as it finds necessary to mitigate the adverse impacts on the residents. Similarly, Section 65863.7(k) establishes the minimum standards for local regulation of conversion of a mobilehome park to another use, the closure of a mobilehome park, and the cessation of use of the land as a mobilehome park and shall not prevent a local agency from enacting more stringent measures.

Closure Impact Report

The applicant has filed a Closure Impact Report, prepared by Overland, Pacific & Cutler, LLC dated March 2025, for the review and consideration by the Deputy Advisory Agency as required by LAMC Section 47.09 and ZI File No. 1361. All current tenants were given an opportunity to review the Closure Impact Report as required by LAMC Section 47.09 and CA Government Code Section 65863.7. The applicant submitted proof of service of the Closure Impact Report to all current tenants on May 6, 2025, with the 60-day review period ending on July 5, 2025 as required by Government Code Section 65863.7(b).

Right of Return

Pursuant to Senate Bill 8 (“SB 8”), all Lower Income Household (as defined in California Health and Safety Code Section 50079.5) occupants of Protected Units are entitled to the right of first refusal (“Right of Return”) to a comparable unit (same bedroom type) at the completed project.

Tenants not qualifying as Lower Income will be offered additional Low Income affordable units that are volunteered by the applicant and separate from those 42 Very Low Income units required by Density Bonus. The voluntary Low Income affordable units will be subject to a 20-year covenant and other terms as determined by the applicant and LAHD.

Relocation Fee

The mobilehome park closure is subject to tenant relocation requirements of LAMC Section 47.08 and Los Angeles Housing Department (“LAHD”) regulations. LAMC Section 47.08 requires relocation assistance to tenants facing eviction due to the closure of mobilehome parks, including the payment of relocation fees to tenants. All tenants will receive monetary relocation assistance provided by the applicant.

The Los Angeles Housing Department prepared Interdepartmental Correspondence dated July 16, 2025, with recommended conditions for relocation fees, escrow instructions, relocation assistance procedures, and right of return instructions.

In-Place Market Valuation

In the event that a displaced resident cannot obtain adequate housing in another mobilehome park, CA Government Code Section 65863.7 requires the owner to pay the in-place market valuation to the displaced resident. The in-place market valuation shall be determined by an appraisal that is completed by a state-certified appraiser with experience establishing the value of mobilehomes, and must be based on the current in-place location of the mobilehome and assume continuation of the mobilehome park. Furthermore, ZI File No. 1361 requires two (2) appraisal reports performed by separate independent appraisers.

The applicant has submitted appraisals completed by two (2) independent state-certified appraisers (Anderson & Brabant, Inc. dated March 2023, and Netzer & Associates dated September 2022) have made determinations on the in-place market valuation of each mobilehome on the subject site as required by CA Government Code Section 65863.7. The appraisals were conducted based on a Sales Comparison Approach that compares the subject

mobilehomes to similar mobilehomes that have recently sold based off resources including but not limited to the Multiple Listing Service (MLS), public records, and HCD database. The appraisals assumed continuation of the mobilehome park. The in-place market valuation includes the contributory value of any physical improvements to the space including but not limited to the blocks and any garage, skirting, siding, porches, decks, storage sheds, cabanas, and awnings, etc. The appraisals accounted for both interior and exterior conditions of the mobilehomes for physical improvements and/or upgrades based on physical inspections and interviews with tenants.

Relocation and Payment Process

The applicant will provide monetary payments to all tenants, in the value of the greater amount between the Relocation Fee and the In-Place Market Valuation. At minimum, all tenants will receive the In-Place Market Valuation. In the instance that the Relocation Fee exceeds the In-Place Market Valuation, tenants whose mobilehome cannot be relocated to another mobilehome park will receive the higher Relocation Fee.

The applicant has elected to set up an escrow account for the payment of the Relocation Assistance Fee and In-Place Market Valuation to tenants. The escrow account shall provide for the payment of Relocation Assistance Fee consistent with LAMC Section 151.09.G, except that it may also provide payments on a rolling basis for payment of monthly rental rates

Public Hearing

A public hearing was conducted on July 24, 2025 by the Deputy Advisory Agency, for the consideration of Case No. AA-2019-5528-MPC and ENV-2021-9523-HES-PEIR, which is the application for the mobilehome park closure. The Deputy Advisory Agency obtained testimony from mobilehome park residents and affected and/or interested parties regarding this application. The public hearing was attended by the applicant team and approximately 38 other attendees including, approximately 16 speakers. Comments in opposition cited concerns regarding accessibility and comprehension of the material considering the majority of tenants spoke Spanish and relocation timing. There were concerns over individual tenant rights for units with multiple tenants. The loss of tenant's homes and the community ties when forced to move to higher costing apartments. There were comments wanting local hire and livable wages for new development. There were also comments against using the Housing Element Streamlining as the environmental clearance. Comments in support cited much needed improvements to the community and opportunity for better jobs. The Deputy Advisory Agency took the case under advisement for a period of 45 days, ending on September 8, 2025. A determination is pending at the time of preparing this report.

A separate public hearing was conducted on September 16, 2025 by the Hearing Officer on behalf of the City Planning Commission, for the consideration of Case No. CPC-2021-9522-DB-VCU-CU-SPR-HCA and ENV-2021-9523-HES-PEIR. The Hearing Officer obtained testimony from the mobilehome park residents and affected and/or interested parties regarding this application. The public hearing was attended by the applicant team (Alex Wong, Luci Ibarra, Ed Casey, Nav Banvar) and approximately 35 other attendees, including 12 speakers. Comments in opposition cited concerns regarding closure of the mobilehome park (relocation assistance, payment distribution, closure timelines, and street parking) as well as local hire and prevailing wages for construction. Comments in support cited being able to have a new development to revitalize and beautify the area, attract new business, and provide affordable housing.

<u>Removal of Waiver Request</u>

Following the Public Hearing on September 28, 2025, the applicant clarified the project was complying with Ordinance 172,853 Condition C of Subarea 22A and 22B. Condition C, requires 50 percent of the required setbacks to be landscaped. The initial case submittal requested a waiver of development standard to allow 39 percent to be landscaped in lieu of the 50 percent. However, the last set of plans and findings submitted by the applicant team show compliance with Condition C and removal of the request of the requested waiver. The easterly side yard consists of 4,328 square feet and 3,029 square feet (70%) is landscaped. The westerly side yard consists of 4,783 square feet and 2,399square feet (50%) is landscaped.

Height / Massing

The subject site is zoned [Q]C2-1VL and [Q]CM-1VL. Height District No. 1VL limits the Floor Area Ratio ("FAR") to 1.5:1 and building height to 45 feet and three (3) stories. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3 stories, 45 feet, and 3:1 FAR, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 3 stories, 45 feet, and 1.5:1 FAR. The applicant has requested an FAR of 2.6:1 in lieu of the maximum 1.5:1 to be averaged across the site through Off-Menu Density Bonus Incentives, for a maximum floor area of 406,855 square feet. The applicant also requested an increase of 35-feet and three stories through an Off-Menu Density Bonus Incentive, for a maximum building height of 80 feet and six (6) stories in lieu of the 45 feet and three (3) stories permitted. While the height of the project is taller than the existing multi-family buildings immediately adjacent to the site, the increase in height is granted through the Density Bonus Ordinance. The increase in height allows for additional 145 units to be developed on the upper floors. The site is not subject to transitional height because it is not within proximity to RW1 or more restrictive zones.

Land Use and Zoning

The site has been subject to and is being considered for various land use and zoning designations, as follows:

- The site is currently zoned [Q]C2-1VL & [Q]CM-1VL zones. The site has land use designations of Light Industrial and Community Commercial, as a result of the Wilmington-Harbor City Community Plan which was last updated in 1999.
- The site is part of the Community Plan Update initiated on November 1, 2018 under Case No. CPC-2018-6402-CPU. At the time of preparing this report, the site is planned for a land use designation of Community Commercial and [LM8-SH4-8][CX6-8] zone. The site is located within the proposed Local Affordable Incentive Program, Article 9 (Public Benefits Systems), Section 9.3.2. (LAHIP) of the new code provides greater development potential (bonus FAR, height, and density) for housing development projects that provide a minimum percentage of affordable units.

Qualified "Q" Condition

The site is subject to Qualified "Q" Conditions established under Ordinance No.172,853 (Subareas 22A and 22B), which has certain usable open space, landscaping, recreation room, architectural treatment, and parking requirements. The applicant has requested three (3) Density Bonus Waivers of Development Standards to address the multiple Q Condition requirements. The waivers include:

- 25 percent of the required open space to be landscaped in lieu of the 50 percent otherwise required,

- recreation rooms to count towards 25 percent of the required open space, in lieu of the 10 percent otherwise required,
- Waiver from architectural treatment requirements

The project is required to provide 40,900 square feet of open space and will be providing 40,990 square feet of open space. Open space will be provided through common open space (e.g., courtyards, recreation rooms, roof deck) and private open space (e.g., terrace/balconies). The project is required to landscape 25% of common open space which is 7,323 square feet and will include 7,377 square feet of planted landscaped area and 102 trees. A waiver from architectural treatment allows for a flat roof to incorporate needed solar and mechanical/HVAC equipment.

Street Dedications, Improvements, and Trees

The Bureau of Engineering has required dedication and improvement requirements along Frampton Avenue and 259th Street which have the potential to affect existing street trees. Prior to any work on the adjacent public right-of-way, the applicant will be required to obtain approved plans from the Department of Public Works. As there currently is no approved right-of-way improvement plan and for purposes of conservative analysis under CEQA, Planning has analyzed the worst-case potential for removal of all street trees. Note that street trees and protected trees shall not be removed without prior approval of the Board of Public Works/Urban Forestry (BPW) under LAMC Sections 62.161 - 62.171. At the time of preparation of this environmental document, no approvals have been given for any tree removals on-site or in the right-of-way by BPW. The City has required a Tree Report to identify all protected trees/shrubs on the project site and all street trees in the adjacent public right-of-way. There are no protected or non-protected trees on the site, as verified in the Tree Evaluation Report prepared by Arborgate Consulting, Inc. dated February 3, 2022 and reviewed by the Urban Forestry Division on December 21, 2022. There are thirteen (13) non-protected street trees along the public right-of-way along Frampton Avenue and 259th Street, all of which may be removed as part of the project due street dedication and improvement requirements from the Bureau of Engineering, which will be subject to Urban Forestry Division review and approval. The project assumes a worst-case scenario of removing all street trees, in the event of changes to the right-of-way improvement plans after approval of the environmental clearance. However, this environmental analysis does not authorize the removal of any street trees without prior approval of Urban Forestry, in compliance with LAMC Sections 62.169 and 62.170 and their applicable findings.

Urban Design Studio

The proposed project was reviewed by the Department of City Planning's Urban Design Studio (UDS). The resulting comments and suggestions focus primarily on the pedestrian experience, 360-degree design, and climate adaptive design. The following includes a discussion of UDS comments and suggestions and the applicant's response:

Pedestrian First Design

- Consider putting transformers in underground vaults instead of being exposed. It is a large area next to a courtyard, so screening should be provided at minimum. The general location is appropriate since it is across from a substation.

360 Degree Design

- The project has good articulation and attention to detail, with varied rooflines and thoughtful treatment of the parking garage.

Climate Adapted Design

- The landscape plans for amenities and open space are too conceptual and need to be more detailed.
- Carob trees along the sidewalk may need to be replaced.

In response to the UDS comments, the applicant submitted updated plans with more details on the amenities and open space areas.

CONCLUSION

Based on the information submitted to the record, and the surrounding uses and zones, staff recommends that the City Planning Commission approve the project, as recommended, subject to the Conditions of Approval. The project will redevelop an underutilized site with a new multi-family residential project resulting in a net increase of 312 dwelling units, including 42 Very Low Income units.

CONDITIONS OF APPROVAL

Density Bonus Conditions

1. **Site Development.** The project shall be in substantial conformance with the plans and materials submitted by the Applicant, including the proposed building design elements and materials, stamped "Exhibit A," with a date of February 28, 2023, attached to the subject case file. No change to the plans will be made without prior review by the Department of City Planning, West/South/Coastal Project Planning Division, and written approval by the Director of Planning. Each change shall be identified and justified in writing. Minor deviations may be allowed in order to comply with the provisions of the Los Angeles Municipal Code or the project conditions.

2. **Residential Density**. The project shall be limited to a maximum density of 354 multi-family residential units including On-Site Restricted Affordable Units.

3. **On-Site Restricted Affordable Units.** 42 units shall be reserved for Very Low Income households, as defined by California Government Code Section 65915 and by the Los Angeles Housing Department (LAHD). In the event the SB 8 Replacement Unit condition requires additional affordable units or more restrictive affordability levels, the most restrictive requirements shall prevail.

4. **Changes in On-Site Restricted Units.** Deviations that increase the number of restricted affordable units or that change the composition of units or change parking numbers shall be consistent with LAMC Section 12.22 A.25.

5. **Housing Requirements.** Prior to issuance of a building permit, the owner shall execute a covenant to the satisfaction of the Los Angeles Housing Department (LAHD) to make 42 units available to Very Low Income Households or equal to 15 percent of the project's total base residential density allowed, for sale or rental, as determined to be affordable to such households by LAHD for a period of 55 years. In the event the applicant reduces the proposed density of the project, the number of required reserved on-site Restricted Units may be adjusted, consistent with LAMC Section 12.22 A.25, to the satisfaction of LAHD, and in consideration of the project's Replacement Unit Determination. Enforcement of the terms of said covenant shall be the responsibility of LAHD. The Applicant shall present a copy of the recorded covenant to the Department of City Planning for inclusion in this file. The project shall comply with the Guidelines for the Affordable Housing Incentives Program adopted by the City Planning Commission and any monitoring requirements established by the LAHD.

6. **Rent Stabilization Ordinance.**

    a. The project shall comply with any tenant relocation requirements established by HCIDLA. Enforcement shall be the responsibility of HCIDLA.
    b. The applicant shall execute and record a Covenant and Agreement (Planning Department General Form CP-6770) in a form satisfactory to the Advisory Agency binding the applicant and any successor in interest to provide tenant relocation assistance and establish a relocation program in a manner consistent with the Rent Stabilization Ordinance. The covenant and agreement shall be executed and recorded within 10 days after the expiration of the appeal period (and final action thereon) and a copy provided to each eligible tenant within five days of recordation of the covenant and agreement.
    c. Within 10 days after the time to appeal has expired, the applicant shall execute and record a Covenant and Agreement (Planning Department General Form CP-

6770) in a form satisfactory to the Advisory Agency binding the applicant and any successor in interest to the affirmative duty to abide by all provisions of the Rental Stabilization Ordinance.

d. Prior to the issuance of a demolition permit, the Applicant or successor shall provide certified mailing receipts of proof of service, to the Department of City Planning demonstrating that existing qualified tenants were provided an offer to enter into a private agreement with the applicant (or successor) that includes the following terms: 1) the ability for the tenant to return to a comparable unit within the project; and, 2) during construction of the project, funding of the difference in rent of a comparably-sized unit between the tenant's rental rate immediately prior to the demolition of the building and the tenant's new rental rate, until the ability to return, if accepted, is exercised. The Applicant (or successor) shall provide a copy of the signed agreement(s) with, or written rejection from, the tenant(s). Where the Applicant (or successor) is not able to enter into an agreement with the tenant(s), the Applicant (or successor) shall submit a written declaration, under penalty of perjury, that best faith efforts have been made to enter into a private agreement with the tenant(s). The applicant (or their successor) shall also submit to the Department of City Planning, concurrent with certified mailing receipts of proof of service signed under penalty of perjury, the rent roll of occupied units at the time the offer is commenced.

7. **Averaging of Floor Area Ratio, Density, Parking and Open Space, and Permitting Vehicular Access (Incentive)**. The project shall be permitted to averaging of Floor Area Ratio, density, parking, and open space over the project site, and permitting vehicular access across all contiguous parcels of the [Q]C2-1VL and [Q]CM-1VL zones of the property.

8. **Floor Area Ratio (FAR) (Incentive)**. The project shall be limited to a maximum floor area ratio of 2.6:1 per Exhibit "A".

9. **Height (Waiver)**. The project shall be limited to 80 feet in building height, including six (6) stories for the residential uses, and six (6) stories for the parking garage, per Exhibit "A".

10. **Parking per AB 2097**. The project shall be permitted to provide a minimum of zero parking space pursuant to California Government Code Section 65863.2 (AB 2097), 575 spaces are provided, as shown in Exhibit "A".

11. **Side Setbacks (Waiver).** The westerly and easterly side yard setbacks shall be no less than 8 feet, as shown in Exhibit "A".

12. **Open Space Landscaping (Waiver)**. The project shall landscape a minimum of 25 percent of the required open space, or 7,375 square feet, as shown in Exhibit "A".

13. **Recreation Rooms (Waiver)**. Recreation rooms shall be permitted to count towards a maximum of 25 percent of the required open space, or 10,140 square feet, as shown in Exhibit "A".

14. **Architectural Treatments (Waiver)**. The project is permitted to provide flat roofs in lieu of pitched roofs, except that varied rooflines shall be required, as shown in Exhibit "A". The project shall comply with other architectural treatment requirements of Ordinance No. 172,853 for Subareas 22A and 22B including using two or more exterior wall finishes, and changes in building plane.

15. **Bicycle Parking.** Bicycle parking shall be provided consistent with LAMC 12.21 A.16.

Conditional Use Conditions

16. **Street Improvements.**

a. **Dedication Required on Pacific Coast Highway** (Boulevard II) – A 2-foot wide, variable width and 5-foot wide strip of land along the property frontage to complete a 55-foot wide half right-of-way in accordance with Boulevard II of LA Mobility Plan 2035 and a 15-foot by 15-foot cut corner or 20-foot radius property line return at the intersection with Frampton Avenue.

b. **Dedication Required on Frampton Avenue** (Local Street) – A 5-foot wide strip of land along the property frontage to complete a 30-foot half right-of-way in accordance with Local Street standards of LA Mobility Plan 2035 and a 10-foot by 10-foot cut corner or 15-foot radius property line return at the intersection with West 259th Street.

c. **Dedication Required on 259th Street** (Local Street) – A 10-foot wide strip of land along the property frontage to complete a 30-foot wide half right-of-way in accordance with Local Street standards of LA Mobility Plan 2035.

d. **Improvements Required on Pacific Coast Highway** – Caltrans to determine the improvements on Pacific Coast Highway.

e. **Improvements Required on Frampton Avenue** – Construct a new 12-foot concrete sidewalk with tree wells or a 5-foot concrete sidewalk with landscaping of the parkway. Repair all broken, off-grade or bad order concrete curb, gutter and roadway pavement along the property frontage. Install ADA curb ramps at the intersection of Pacific Coast Highway and 259 Street per BOE standards and Special Order 01-1020 for connecting and receiving curb ramps. Close all unused driveways with standard curb height and 12-foot concrete sidewalk.

Note: There are street trees along Frampton Avenue. In the event the Urban Forestry Division of Bureau of Services deny the trees removal, then construct a 10-foot parkway and provide additional sidewalk easement to construct an elevated 4-foot sidewalk and 16-foot parkway along the existing 5 large trees located approximately at 195 feet to 316 feet from north west corner property line (Pacific Coast Highway & Frampton Avenue) satisfactory to the Harbor District Office of the Bureau Engineering.

f. **Improvements Required on 259th Street** – Construct suitable surfacing to join the existing improvements to provide an 18-foot wide half roadway with asphalt pavement, integral concrete curb and gutter and a 12-foot wide concrete sidewalk with tree wells or a 5-foot wide concrete sidewalk within a 12-foot landscaped border. Install ADA curb ramps at the intersection of Frampton Avenue per BOE standards and Special Order 01-1020 for connecting and receiving curb ramps. Complete cul-de-sac to match existing cul-de-sac at south side of 259th Street and improve street east of the cul-de-sac per Standard Plan S-470-1 with roadway, curb and gutter and sidewalk north and south of 259th St centerline. Street improvements such as full roadway, curb & gutter and sidewalk (north and south) east of the cul-de-sac will not be required if that area is vacated. If the existing right-of-way east of the cul-de-sac is vacated, provide a sewer easement east of the cul-de-sac. These improvements should suitably transition to join the existing improvements satisfactory to the Bureau of Engineering Harbor District B-Permit Group.

17. **Fire**. Submit plot plans for Fire Department approval and review prior to issuance of building permits.

18. **Mechanical Equipment.** All exterior mechanical equipment, including heating, ventilation and air conditioning (HVAC) equipment, satellite dishes, and cellular antennas, shall be screened from public view through the use of architectural elements such as parapets.

19. **Lighting.** All outdoor and parking lighting shall be shielded and down-cast within the site in a manner that prevents the illumination of adjacent public rights-of-way, adjacent properties, and the night sky (unless otherwise required by the Federal Aviation Administration (FAA) or for other public safety purposes).

20. **Lighting Design.** Areas where nighttime uses are located shall be maintained to provide sufficient illumination of the immediate environment so as to render objects or persons clearly visible for the safety of the public and emergency response personnel. All pedestrian walkways, storefront entrances, and vehicular access ways shall be illuminated with lighting fixtures. Lighting fixtures shall be harmonious with the building design. Wall mounted lighting fixtures to accent and complement architectural details at night shall be installed on the building to provide illumination to pedestrians and motorists.

21. **Heat Island Effect.** To reduce the heat island effect, a minimum of 50 percent of the area of pathways, patios, driveways or other paved areas shall use materials with a minimum initial Solar Reflectance value of 0.35 in accordance with ASTM (American Society of Testing Materials) standards.

22. **Landscape Plan.** Revised landscape plans shall be submitted to show the size and location of all plants. The landscape plan shall indicate landscape points for the Project equivalent to 10% more than otherwise required by LAMC 12.40 and Landscape Ordinance Guidelines “O”. All open areas not used for buildings, driveways, parking areas, recreational facilities or walks shall be landscaped, including an automatic irrigation system, and maintained in accordance with a final landscape plan prepared by a licensed landscape architect or licensed architect, and submitted for approval to the Department of City Planning. The final landscape plan shall be in substantial conformance with the submitted Landscape Plan, Exhibit “A,” and shall incorporate any modifications required as a result of this grant.

23. **Soil Depths.** Shrubs, perennials, and groundcover shall require a minimum soil depth as follows:
    a. A minimum depth with a height ranging from 15 to 40 feet shall be 42 inches.
    b. A minimum depth with a height ranging from 1 to 15 feet shall be 24 to 36 inches.
    c. A minimum depth with a height of less than 1 foot shall be 18 inches.
    d. A minimum depth of an extensive green roof shall be 3 inches.

    Trees shall require a 42-inch minimum soil depth.

    Further, the minimum amount of soil volume for tree wells on the rooftop or any above grade open spaces shall be based on the size of the tree at maturity:
    e. 220 cubic feet for trees with a canopy diameter ranging from 15 to 19 feet.
    f. 400 cubic feet for trees with a canopy diameter ranging from 20 to 24 feet.
    g. 620 cubic feet for trees with a canopy diameter ranging from 25 to 29 feet.
    h. 900 cubic feet for trees with a canopy diameter ranging from 30 to 34 feet.

24. **Street Trees.**

    a. **Street Trees**. Street trees shall be provided to the satisfaction of the Urban Forestry Division. Street trees may be used to satisfy on-site tree requirements pursuant to

LAMC Article Section 12.21.G.3 (Chapter 1, Open Space Requirement for Six or More Residential Units). Per Exhibit A and 12.21.G.3, 24 Street trees shall be provided.

b. **Required Trees per 12.21 G.2**. As conditioned herein, a final submitted landscape plan shall be reviewed to be in substantial conformance with Exhibit "A." There shall be a minimum of 89 trees 24-inch box, or larger, trees on site pursuant to LAMC Section 12.21 G.2. Any required trees pursuant to LAMC Section 12.21 G.2 shown in the public right of way in Exhibit "A" shall be preliminarily reviewed and approved by the Urban Forestry Division prior to building permit issuance. In-lieu fees pursuant to LAMC Section 62.177 shall be paid if placement of required trees in the public right of way is proven to be infeasible due to City determined physical constraints.

c. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2:1 as approved by the Board of Public Works and Urban Forestry Division.

d. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously been paid for tree plantings. The subdivider or contractor shall notify the Urban Forestry Division at: (213) 847-3077 upon completion of construction for tree planting direction and instructions.

25. **Stormwater/irrigation.** The project shall implement on-site stormwater infiltration as feasible based on the site soils conditions, the geotechnical recommendations, and the City of Los Angeles Department of Building and Safety Guidelines for Storm Water Infiltration. If on-site infiltration is deemed infeasible, the project shall analyze the potential for stormwater capture and reuse for irrigation purposes based on the City Low Impact Development (LID) guidelines.

26. **Solar and Electric Generator.** Generators used during the construction process shall be electric or solar powered. Solar generator and electric generator equipment shall be located as far away from sensitive uses as feasible.

27. **Solar-ready Buildings.** The Project shall comply with the Los Angeles Municipal Green Building Code, Section 99.05.211, to the satisfaction of the Department of Building and Safety.

28. **Signage.** There shall be no off-site commercial signage on construction fencing during construction.

29. **Commercial Corner Development.** The Project shall comply with the Mini-shopping center/Commercial Corner Development Standards, Los Angeles Municipal Code (LAMC) Section 12.22.A.23, unless specific deviation has been granted.

30. **Qualified "Q" Condition.** The Project shall comply with the Qualified "Q" Conditions established under Ordinance No. 172,853 (Subareas 22A and 22B), unless specific deviation has been granted.

31. This approval is tied to Case No. AA-2019-5528-MPC. The applicant shall comply with the conditions of approval listed in Case No. AA-2019-5528-MPC.

Environmental Conditions

32. The Mitigation Monitoring and Reporting Program (MMRP) included in the Housing Element Streamlining Checklist (Case No. ENV-2024-4112-HES) have been incorporated into this project and shall be enforced through all phases of the project. The applicant shall be responsible for implementing each Mitigation Measure (MM), Substitute Mitigation Measure, and Implementing Mitigation Measure identified in the MMRP and shall be obligated to provide certification to the appropriate monitoring and enforcement agencies that each MM has been implemented.

Administrative Conditions

33. **Final Plans.** Prior to the issuance of any building permits for the project by the Department of Building and Safety, the applicant shall submit all final construction plans that are awaiting issuance of a building permit by the Department of Building and Safety for final review and approval by the Department of City Planning. All plans that are awaiting issuance of a building permit by the Department of Building and Safety shall be stamped by Department of City Planning staff "Plans Approved". A copy of the Plans Approved, supplied by the applicant, shall be retained in the subject case file.

34. **Notations on Plans.** Plans submitted to the Department of Building and Safety, for the purpose of processing a building permit application shall include all of the Conditions of Approval herein attached as a cover sheet and shall include any modifications or notations required herein.

35. **Approval, Verification and Submittals.** Copies of any approvals, guarantees or verification of consultations, review of approval, plans, etc., as may be required by the subject conditions, shall be provided to the Department of City Planning prior to clearance of any building permits, for placement in the subject file.

36. **Code Compliance.** Use, area, height, and yard regulations of the zone classification of the subject property shall be complied with, except where granted conditions differ herein.

37. **Department of Building and Safety**. The granting of this determination by the Director of Planning does not in any way indicate full compliance with applicable provisions of the Los Angeles Municipal Code Chapter IX (Building Code). Any corrections and/or modifications to plans made subsequent to this determination by a Department of Building and Safety Plan Check Engineer that affect any part of the exterior design or appearance of the project as approved by the Director, and which are deemed necessary by the Department of Building and Safety for Building Code compliance, shall require a referral of the revised plans back to the Department of City Planning for additional review and sign-off prior to the issuance of any permit in connection with those plans.

38. **Enforcement.** Compliance with these conditions and the intent of these conditions shall be to the satisfaction of the Department of City Planning.

39. **Covenant.** Prior to the issuance of any permits relative to this matter, an agreement concerning all the information contained in these conditions shall be recorded in the County Recorder's Office. The agreement shall run with the land and shall be binding on any subsequent property owners, heirs or assign. The agreement must be submitted to the Department of City Planning for approval before being recorded. After recordation, a copy bearing the Recorder's number and date shall be provided to the Department of City Planning for attachment to the file.

40. **Indemnification and Reimbursement of Litigation Costs.**

Applicant shall do all of the following:

(i) Defend, indemnify and hold harmless the City from any and all actions against the City relating to or arising out of, in whole or in part, the City's processing and approval of this entitlement, including but not limited to, an action to attack, challenge, set aside, void, or otherwise modify or annul the approval of the entitlement, the environmental review of the entitlement, or the approval of subsequent permit decisions, or to claim personal property damage, including from inverse condemnation or any other constitutional claim.

(ii) Reimburse the City for any and all costs incurred in defense of an action related to or arising out of, in whole or in part, the City's processing and approval of the entitlement, including but not limited to payment of all court costs and attorney's fees, costs of any judgments or awards against the City (including an award of attorney's fees), damages, and/or settlement costs.

(iii) Submit an initial deposit for the City's litigation costs to the City within 10 days' notice of the City tendering defense to the Applicant and requesting a deposit. The initial deposit shall be in an amount set by the City Attorney's Office, in its sole discretion, based on the nature and scope of action, but in no event shall the initial deposit be less than $50,000. The City's failure to notice or collect the deposit does not relieve the Applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).

(iv) Submit supplemental deposits upon notice by the City. Supplemental deposits may be required in an increased amount from the initial deposit if found necessary by the City to protect the City's interests. The City's failure to notice or collect the deposit does not relieve the Applicant from responsibility to reimburse the City pursuant to the requirement in paragraph (ii).

(v) If the City determines it necessary to protect the City's interest, execute an indemnity and reimbursement agreement with the City under terms consistent with the requirements of this condition.

The City shall notify the applicant within a reasonable period of time of its receipt of any action and the City shall cooperate in the defense. If the City fails to notify the applicant of any claim, action, or proceeding in a reasonable time, or if the City fails to reasonably cooperate in the defense, the applicant shall not thereafter be responsible to defend, indemnify or hold harmless the City.

The City shall have the sole right to choose its counsel, including the City Attorney's office or outside counsel. At its sole discretion, the City may participate at its own expense in the defense of any action, but such participation shall not relieve the applicant of any obligation imposed by this condition. In the event the Applicant fails to comply with this condition, in whole or in part, the City may withdraw its defense of the action, void its approval of the entitlement, or take any other action. The City retains the right to make all decisions with respect to its representations in any legal proceeding, including its inherent right to abandon or settle litigation.

For purposes of this condition, the following definitions apply:

"City" shall be defined to include the City, its agents, officers, boards, commissions, committees, employees, and volunteers.

"Action" shall be defined to include suits, proceedings (including those held under alternative dispute resolution procedures), claims, or lawsuits. Actions includes actions, as defined herein, alleging failure to comply with any federal, state or local law.

Nothing in the definitions included in this paragraph are intended to limit the rights of the City or the obligations of the Applicant otherwise created by this condition.

FINDINGS

DENSITY BONUS/AFFORDABLE HOUSING INCENTIVES COMPLIANCE FINDINGS

1. **Government Code Section 65915 and LAMC Section 12.22 A.25 state that the Commission shall approve a density bonus and requested incentive(s) unless the Commission finds that:**

   a. The incentives do not result in identifiable and actual cost reductions to provide for affordable housing costs as defined in California Health and Safety Code Section 50052.5 or Section 50053 for rents for the affordable units.

   The record does not contain substantial evidence that would allow the City Planning Commission to make a finding that the requested on- and off-menu incentives do not result in actual and identifiable cost reductions to provide for affordable housing costs per State Law. The California Health & Safety Code Sections 50052.5 and 50053 define formulas for calculating affordable housing costs for Very Low, Low, and Moderate Income Households. Section 50052.5 addresses owner-occupied housing and Section 50053 addresses rental households. Affordable housing costs are a calculation of residential rent or ownership pricing not to exceed 25 percent gross income based on area median income thresholds dependent on affordability levels.

   Based on the set-aside of over 15 percent of base units for Very Low Income households, the applicant is entitled to three (3) Incentives under both the Government Code and LAMC. Therefore, the three (3) On- and Off-Menu requests qualify as the proposed development's Incentives. The remaining requests must be processed as Waivers of Development Standards.

   Averaging of Floor Area Ratio, Density, Parking or Open Space, and Permitting Vehicular Access. The requested use of averaging of floor area ratio, density, parking or open space, and permitting vehicular access is expressed in the Menu of Incentives in the Density Bonus Ordinance in LAMC Section 12.22 A.25. The site is comprised of two (2) lots that are dual-zoned [Q]C2-1VL and [Q]CM-1VL. Based on the lot area within each respective zone, the project would only be permitted 139 dwelling units and 1.5:1 FAR in the [Q]C2-1VL zone, and 133 dwelling units and 1.5:1 FAR in the [Q]CM-1VL zone. Strict compliance with the zoning regulations would require the floor area ratio, density, parking, open space, and vehicular access to be provided only within those respective zones of the site. Given that the site includes two zoning designations, it is appropriate to consider averaging of the floor area ratio, density, parking, open space, and vehicular access across the entire site. The project is designed as singular building with residential uses, open space, and parking spread across the site. Furthermore, vehicular access across contiguous parcels is required in order to provide a comprehensive parking plan for the project. Therefore, the averaging incentive will allow the project to achieve a more efficient design and thereby resulting in identifiable and actual cost reductions to provide for affordable housing costs.

   ***FAR*:** The site is zoned [Q]C2-1VL and [Q]CM-1VL, with Height District No. 1VL limiting the Floor Area Ratio ("FAR") to 1.5:1. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3:1 FAR, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 1.5:1 FAR. Strict compliance with the FAR restrictions would limit the site to FAR to 1.5:1 or 236,473 square feet. The applicant has requested an Off-Menu Incentive for increased FAR to 2.6:1 for a maximum floor area of 406,855 square feet. The additional floor area is requested to

accommodate larger sized units, including two-bedroom and three-bedroom units with lofts. The project includes 90 studio units, 23 studio units with lofts, 93 one-bedroom units, 22 one-bedroom units with lofts, 90 two-bedroom units, 21 two-bedroom units with lofts, 12 three-bedroom units, and 3 three-bedroom units with lofts. The requested increase in FAR will allow approximately 170,381.5 square feet of additional floor area and will enable the construction of affordable units. As set forth on Sheets A-0 and A-02 of the project plans, the project's upper residential levels at Level 3 has a floor plate of 79,600 square feet for 76 units, Level 4 has a floor plate of 79,600 square feet for 76 units, and Level 5 has a floor plate of 74,150 square feet for 69 units. These floor plates would not be achievable under the 1.5:1 base FAR and enable the project to construct the unit mix above. Without the incentive to permit additional floor area, the project would need to remove the uppermost floors containing 221 units, or the average unit size and bedroom count would have to be significantly smaller to construct the number of units that the requested density bonus allows. The ability to develop larger units will increase the revenues from the market-rate units, which will lower the marginal cost of developing the affordable units. The additional floor area will allow certain fixed costs involved in the construction of new residential units to be spread over more floor area thereby reducing the per square foot build cost of the development. The requested incentive will allow the developer to expand the building envelope so the additional units can be constructed, and the overall space dedicated to residential uses is increased. Therefore, the FAR incentive will result in identifiable and actual cost reductions to provide for affordable housing costs.

FAR by-right	Buildable Lot Area (sf)	Base Floor Area (sf)
1.5:1	157,649	157,649 x 1.5 = **236,473.5**

FAR Requested	Requested Floor Area (sf)	Additional Floor Area (sf)
2.6:1	157,649 x 2.6=406,855	406,855 - 236,473.5= **170,381.5**

Height: The site is zoned [Q]C2-1VL and [Q]CM-1VL, with Height District No. 1VL limiting building height to 45 feet and three (3) stories. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3 stories and 45 feet, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 3 stories and 45 feet. The applicant has requested an Off-Menu Incentive for increased building height of 35 feet and three (3) stories to allow 80 feet and six (6) stories. Strict compliance with the height restrictions would remove the upper residential levels from the proposed building which will limit the ability to construct the residential dwelling units permitted by-right and the Restricted Affordable Units which are of a sufficient size. As set forth on Sheets A-0 and A-02 of the project plans, the project's upper residential levels at Level 4 contains 76 units, and Level 5 contains 69 units. Without the incentive to permit increased building height, the project would need to remove the uppermost floors containing 145 units, or the average unit size and bedroom count would have to be significantly smaller to construct the number of units that the requested density bonus allows. The ability to develop larger units will increase the revenues from the market-rate units, which will lower the marginal cost of developing the affordable units. The increased building height will allow certain fixed costs involved in the construction of new residential units to be spread over more floor area thereby reducing the per square foot build cost of the development. The requested incentive will allow the developer to expand the building envelope so the additional units can be constructed, and the overall space dedicated to residential uses is increased. Therefore, the height incentive will result in identifiable and actual cost reductions to provide for affordable housing costs.

b. The Incentive will have specific adverse impact upon public health and safety or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse Impact without rendering the development unaffordable to Very Low, Low and Moderate Income households. Inconsistency with the zoning ordinance or the general plan land use designation shall not constitute a specific, adverse impact upon the public health or safety (Government Code Section 65915(d)(1)(B) and 65589.5(d)).

There is no evidence in the record that the proposed density bonus incentive(s) will have a specific adverse impact. A "specific adverse impact" is defined as, "a significant, quantifiable, direct and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete" (LAMC Section 12.22.A.25(b)).

The facades of the proposed building which faces Pacific Coast Highway, Frampton Avenue, and 259th Street are articulated in multiple ways, creating visually interesting elevations that invite interaction with the street. The structure will also be oriented toward the street intersection with the public plaza, primary pedestrian entrance, balconies, windows, and architectural features on street-facing elevations as required. The project does not involve a contributing structure in a designated Historic Preservation Overlay Zone or on the City of Los Angeles list of Historical-Cultural Monuments. The project is not located on a substandard street in a Hillside area or a Very High Fire Hazard Severity Zone. There is no evidence in the record which identifies a written objective health and safety standard that has been exceeded or violated. Based on the above, there is no basis to deny the requested incentives. Therefore, there is no substantial evidence that the project's proposed incentives will have a specific adverse impact on public health and safety, or on property listed in the California Register of Historic Resources.

c. The incentives are contrary to state or federal laws.

There is no evidence in the record that the proposed incentives are contrary to state or federal law.

Following is a delineation of the findings related to the request for five (5) Waivers of Development Standards, pursuant to Government Code Section 65915.

2. **Government Code Section 65915 and LAMC Section 12.22 A.25 state that the Commission <u>shall approve</u> a density bonus and requested Waiver of Development Standard(s) unless the Commission finds that:**

a. ***The waivers or reductions are contrary to state or federal laws.***

There is no evidence in the record that the proposed incentives are contrary to state or federal law.

A project that provides over 15 percent of base units for Very Low Income Households qualifies for three (3) Incentives, and may request other "waiver[s] or reduction[s] of development standards that will have the effect of physically precluding the construction of a development meeting the [affordable set-aside percentage] criteria of subdivision (b) at the densities or with the concessions or incentives permitted under [State Density Bonus Law]" (Government Code Section 65915(e)(1)).

Therefore, the requests for the following are recommended as Waivers of Development Standards. Without the below Waivers, the existing development standards would preclude development of the proposed density bonus units and project amenities:

Side Yard Setbacks: LAMC Sections 12.14 C.2 and 12.17.1 C.1 require side yards to conform to the requirements of the R4 Zone for portions of buildings erected and used for residential purposes. The R4 Zone requires side yards of a minimum of 5 feet, and requires one additional foot in the width of the rear yard for each additional story above the second story. The Project is a six-story mixed-use residential building. Given all levels of the project would be utilized in whole or in part by residential uses, the Project would therefore be required to provide 10-foot side yard setbacks. The applicant has requested two (2) Waivers of Development Standards for reduced side yard setbacks, and proposes 8-foot easterly and westerly side yard setbacks in lieu of the 10 feet otherwise required. Provision of the reduced 8-foot side yard setbacks along the approximately 557-foot lot width accounts for an additional building area of approximately 2,228 square feet per floor, totaling approximately 11,140 square feet across all five residential floors. Strict compliance with the side yard requirements would reduce the buildable lot area by 4 linear feet total, thereby reducing the floor area by approximately 11,140 square feet, thereby limiting the buildable area for new development and reducing the number and range of units that could be developed. As proposed, the reduced side yard setbacks will allow for the construction of the affordable residential units which are of a sufficient size. Given the average unit size is 848 square feet (as shown on Sheet A-0), the waiver would physically preclude the construction of approximately 13 dwelling units across all five residential floors. The requested waiver will allow the developer to provide more buildable area so the additional units can be constructed and the overall space dedicated to residential uses is increased.

Open Space Landscaping: Qualified “Q” Condition No. 1B under Ordinance No. 172,853 for Subareas 22A and 22B requires a minimum of 50 percent of the usable open space to be appropriately landscaped. Q Condition No. 1A also requires 100 square feet of usable open space per dwelling unit. This requirement is superseded by LAMC Section 12.21 G which requires 100 square feet of usable open space per dwelling unit with less than 3 habitable rooms, and 125 square feet of usable open space per dwelling unit with 3 habitable rooms. The project includes 90 studio units, 23 studio units with lofts, 93 one-bedroom units, 22 one-bedroom units with lofts, 90 two-bedroom units, 21 two-bedroom units with lofts, 12 three-bedroom units, and 3 three-bedroom units with lofts a total of 40,900 square feet of open space is required. Strict compliance with the Q Condition would require 50 percent (or 20,450 square feet) of the required open space to be landscaped. The applicant has requested a Waiver of Development Standard to landscape 25 percent of the open space area (or 7,323 square feet), which is consistent with the 25 percent landscaping requirement of LAMC Section 12.21 G, in lieu of the 50 percent landscaping requirement of the Q Condition. The Q Condition would require an additional 25 percent (or 10,225 square feet) of the required open space to be landscaped, which would reduce the area of usable open space and physically preclude the number of affordable residential units to be provided. As proposed, the reduced landscaping of open space will allow for the construction of the affordable residential units which are of a sufficient size. Given the average unit size is 848 square feet (as shown on Sheet A-0), the waiver would physically preclude the construction of approximately 12 dwelling units. The requested waiver will allow the developer to provide more usable open space so the additional units can be constructed and the overall space dedicated to residential uses is increased.

Recreation Rooms: Qualified “Q” Condition No. 1D under Ordinance No. 172,853 for Subareas 22A and 22B allows that recreation rooms may be included as open space,

but may not count for more than ten percent of the total required open space area. As provided above, a total of 40,900 square feet of open space is required for the project. Strict compliance with the Q Condition would allow up to ten percent (or 4,090 square feet) of the required open space to be provided in recreation rooms. The applicant has requested a Waiver of Development Standard to provide up to 25 percent of the required open space to be provided in recreation rooms, which is consistent with the 25 percent allowance of LAMC Section 12.21 G, in lieu of the 10 percent maximum of the Q Condition. The project provides a total of 10,140 square feet of open space within recreation rooms. The Q Condition would require an additional 15 percent (or 6,135 square feet) of the required open space to be provided outside of recreation rooms, which would increase the area of outdoor open space that would otherwise need to be unenclosed and open to the sky, which would physically preclude the number of affordable residential units to be provided. As proposed, the increased recreation room space will allow for the construction of the affordable residential units which are of a sufficient size. Given the average unit size is 848 square feet (as shown on Sheet A-0), the waiver would physically preclude the construction of approximately 36 dwelling units. The requested waiver will allow the developer to provide more indoor usable open space so the additional units can be constructed and the overall space dedicated to residential uses is increased.

Architectural Treatment: Qualified "Q" Condition No. 1E under Ordinance No. 172,853 for Subareas 22A and 22B requires projects to incorporate multi-level pitched roof with a minimum pitch of 3 to 12; use 2 or more exterior wall finishes such as stucco, wood siding or paneling, or brick; and require a change in plane of at least 4 inches in exterior wall surfaces which extends more than 15 feet horizontally and vertically so as to provide facade articulation using porches, balconies, window treatments, recessed windows, different exterior materials, material (not planted), curves, and openings. The applicant has requested a Waiver of Development Standard to eliminate these architectural treatment requirements in order to provide a flat roof. The applicant contends that a level, open, flat roof is necessary to accommodate code requirements for solar alternatives, HVAC units, and hot water boilers, in addition to the ancillary circulation and work areas on the roof to access and service these building systems. The project reserves approximately 25 percent (or 19,900 square feet) of the roof area for the solar, mechanical, and plumbing systems. Strict compliance with the Q Condition would require these facilities be located to the ground floor, which would reduce the buildable area of the lot by 19,900 square feet, which would physically preclude the number of affordable units to be provided. As proposed, the flat roof will allow for the construction of the affordable residential units which are of a sufficient size. Given the average unit size is 848 square feet (as shown on Sheet A-0), the waiver would physically preclude the construction of approximately 117 dwelling units across all five residential floors. The requested waiver will allow the developer to provide more buildable area so the additional units can be constructed and the overall space dedicated to residential uses is increased.

These waivers support the applicant's decision to set aside the specified number of dwelling units for Very Low Households for 55 years.

b. ***The Waiver will have specific adverse impact upon public health and safety or on any real property that is listed in the California Register of Historical Resources and for which there is no feasible method to satisfactorily mitigate or avoid the specific adverse Impact without rendering the development unaffordable to Very Low, Low and Moderate Income households. Inconsistency with the zoning ordinance or the general plan land use designation shall not constitute a specific, adverse impact upon the public health or safety.***

There is no evidence in the record that the proposed density bonus Waivers will have a specific adverse impact. A "specific adverse impact" is defined as, "a significant, quantifiable, direct and unavoidable impact, based on objective, identified written public health or safety standards, policies, or conditions as they existed on the date the application was deemed complete" (LAMC Section 12.22.A.25(b)). The project does not involve a contributing structure in a designated Historic Preservation Overlay Zone or on the City of Los Angeles list of Historical-Cultural Monuments. The project is not located on a substandard street in a Hillside area or a Very High Fire Hazard Severity Zone. There is no evidence in the record which identifies a written objective health and safety standard that has been exceeded or violated. Based on the above, there is no basis to deny the requested incentives. Therefore, there is no substantial evidence that the project's proposed incentives will have a specific adverse impact on public health and safety, or on property listed in the California Register of Historic Resources.

CONDITIONAL USE FINDINGS

A particular type of development is subject to the conditional use process because it has been determined that such use of property should not be permitted by right. All uses requiring a conditional use permit are located within Section 12.24 of the Los Angeles Municipal Code. The project has requested a conditional use approval for the proposed mixed-use development as required by the Footnote No. 9 of the Wilmington – Harbor City Community Plan.

3. **The project will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city, or region.**

The project site is located at the corner of Pacific Coast Highway and Frampton Avenue in the Wilmington – Harbor City Community Plan. The project site is a relatively flat, irregular-shaped, dual-zoned site comprised of two (2) lots that total approximately 161,450 square feet (3.7 acres). The site has a street frontage of approximately 270 feet on the south side of Pacific Coast Highway, 557 feet on the east side of Frampton Avenue, and 300 feet on the north side of 259th Street.

The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with an LA Water and Power substation and automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone. The subject site is within a half-mile of the intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. The subject site is within proximity to bus stops served by the Los Angeles County Metropolitan Transportation Authority ("Metro") 205, 232, and 246 bus lines, City of Gardena GTrans 2 bus line, and Angeles Department of Transportation ("LADOT") 448 bus line.

The proposed project involves the construction of a new six-story, 80-foot tall mixed-use residential building comprised of 354 dwelling units (including 42 Very Low Income units) across five residential levels. The project will be approximately 406,855 square feet in floor area, including 1,500 square feet of commercial, with a Floor Area Ratio ("FAR") of 2.6:1. The project will provide 560 residential and 15 commercial parking spaces, for a total of 575 parking spaces. The project will enhance the built environment by redeveloping an

underutilized site for the construction of a new mixed-use residential apartment building, and will provide affordable units and commercial uses that will better meet the needs and projected growth of the Wilmington-Harbor City area, and be beneficial to the community, city and greater region.

4. **The project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety.**

The proposed project involves the construction of a new six-story, 80-foot tall mixed-use residential building comprised of 354 dwelling units (including 42 Very Low Income units) across five residential levels. The project will be approximately 406,855 square feet in floor area, including 1,500 square feet of commercial, with a Floor Area Ratio ("FAR") of 2.6:1. The project includes 90 studio units, 23 studio units with lofts, 93 one-bedroom units, 22 one-bedroom units with lofts, 90 two-bedroom units, 21 two-bedroom units with lofts, 12 three-bedroom units, and 3 three-bedroom units with lofts.

The project provides the primary pedestrian entrance at the corner of Pacific Coast Highway and Frampton Avenue with a public plaza that provides direct access to the lobby, leasing area, and commercial offices that are flanked with recreation rooms. Secondary pedestrian entrances are provided along Frampton Avenue and 259th Street. Residential amenities are provided in a series of open-air courtyards as well as private balconies.

The proposed project provides recreational and service amenities that will improve habitability for the residents and minimize any impacts on neighboring properties. The project will provide a total of 40,990 square feet of open space in compliance with LAMC Section 12.21 G. Common open space is provided in a series of open-air courtyards at the ground floor totaling 18,740 square feet, recreation rooms totaling 10,140 square feet, and a 400 square foot roof deck. The courtyards provide a variety of recreational amenities for residents including a pool, spa, lounge seating, and fire table at the Main Pool / Spa Courtyard; dining tables with chairs and umbrellas, outdoor kitchen with breakfast bar, water feature, and fire pit at the South Courtyard; water feature and bench seating at the Southwest Courtyard; and a dog parklet with decomposed granite, synthetic turf, and decomposed granite at an additional courtyard. The roof terrace also includes a sky deck, dining tables and chairs, and lounge seating.

The project includes a six-story above-grade parking garage at the center of the building that will be mostly wrapped with residential uses and walkways. The project will provide 560 residential and 15 commercial parking spaces, for a total of 575 parking spaces. Vehicular access is provided from a single driveway and curb cut from Frampton Avenue. All existing structures will be demolished and mobilehomes will be removed for the proposed project, including the removal of 24 non-protected trees. The project will include the grading of 53,000 cubic yards and export of 7,000 cubic yards of soil. Trash enclosure is located within the parking garage to ensure it will not be visible from the street or affect circulation for surrounding properties.

The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with an LA Water and Power substation and automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone. The subject site is within a half-mile of the

intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. The subject site is within proximity to bus stops served by the Los Angeles County Metropolitan Transportation Authority ("Metro") 205, 232, and 246 bus lines, City of Gardena GTrans 2 bus line, and Angeles Department of Transportation ("LADOT") 448 bus line. Therefore, the project mixed-use residential development is compatible with the surrounding neighborhood.

The mixed-use residential development is permitted at this location on the subject site as an allowable use by [Q]C2-1VL and [Q]CM-1VL zones. As provided under Findings Nos. 1 and 2, the project's density, FAR, Height, and setbacks are allowed by the underlying zone in combination with Density Bonus law.

Given the projects site's proximity to public transit, the commercial corridor along Pacific Coast Highway, and the surrounding uses, the project's location, size, height, operations, and other significant features will be compatible with and will not adversely affect adjacent properties, the surrounding neighborhood, or the public, health, welfare, and safety.

5. **The project substantially conforms with the purpose, intent and provisions of the General Plan, the applicable community plan, and any applicable specific plan.**

The Los Angeles General Plan sets forth goals, objectives and programs that guide both Citywide and community specific land use policies. The General Plan is comprised of a range of State-mandated elements, including, Land Use, Transportation, Noise, Safety, Housing and Conservation. The City's Land Use Element is divided into 35 community plans that establish parameters for land use decisions within those sub-areas of the City.

The General Plan is a long-range document determining how a community will grow, reflecting community priorities and values while shaping the future. The project substantially conforms with the following purposes and objectives of the General Plan Elements: Framework Element, Land Use Element (Wilmington - Harbor City Community Plan), Housing Element, and Mobility Element.

Framework Element

The Framework Element is a strategy for long-term growth which sets a citywide context to guide the update of the Community Plan and Citywide Elements. The primary objectives of the policies in the Framework Element's Land Use Chapter are to support the viability of the City's residential neighborhoods and commercial districts, and when growth occurs, to encourage sustainable growth in a number of higher-intensity commercial and mixed-use districts, centers and boulevards and industrial districts particularly in proximity to transportation corridors and transit stations.

The Community Plan Map designates the site for Community Commercial and Limited Industrial land uses. The Community Commercial land use designation corresponds to the CR, C2, C4, RAS3, P, and PB zones; the Limited Industrial land use designation corresponds to the CM, MR1, M1, and P Zones. The site is zoned [Q]C2-1VL and [Q]CM-1VL and is therefore consistent with the land use designations. The [Q]C2-1VL and [Q]CM-1VL zones allow for R4 (High Medium Residential) land uses and estimates 56 to 109 dwelling units per acre.

Land Use Element – Wilmington - Harbor City Community Plan

The proposed project aligns with the intent of the Wilmington - Harbor City Community Plan, including the following:

Goal 1 – A safe, secure and high quality residential environment for all economic, age, and ethnic segments of the community.

Objective 1-1 – To provide for the preservation of existing housing and for the development of new housing to meet the diverse economic and physical needs of the existing residents and projected population of the Plan area to the year 2010.

Policy 1-1.4 – Protect the quality of the residential environment through attention to the appearance of communities, including attention to building and site design.

Objective 1-2 – To locate new housing in a manner which reduces vehicular trips and makes it accessible to services and facilities.

Policy 1-2.1 – Locate higher residential densities near commercial centers and major transit routes, where public service facilities, utilities, and topography will accommodate this development.

Objective 1-5 – To promote and insure the provision of adequate housing for all persons regardless of income, age, or ethnic background.

Policy 1-5.2 – Promote housing in mixed use projects in transit corridors and pedestrian oriented areas.

Policy 1-5.5 – Provide for livable family housing at higher densities.

Objective 1-7 – To minimize housing displacement whenever possible, and, in those cases where displacement is unavoidable, to provide housing relocation assistance and services for persons displaces as a result of public or private actions.

Policy 1-7.1 – Ensure that new housing opportunities minimize displacement of the residents.

Goal 2 – A strong and competitive commercial sector which best serves the needs of the community through maximum efficiency and accessibility while preserving the unique commercial and cultural character of the community.

Objective 2-2 – To enhance the aesthetic quality and pedestrian orientation of commercial developments.

Policy 2-2.3 – Require that mixed use projects and development in pedestrian oriented districts be designed and developed to achieve a high level of quality, distinctive character, and compatibility with existing uses.

Policy 2-2.4 – Promote mixed use projects in proximity to designated transit corridors and in community commercial centers.

Objective 2-3 – To improve the design and land use compatibility of commercial uses.

Policy 2-3.1 – Require urban design techniques, such as appropriate building orientation and scale, transition building heights, landscaping, buffering and increased setbacks in the development of commercial properties to improve land use compatibility with adjacent

uses and to enhance the physical environment.

The project is for the construction of a new mixed-income, mixed-use residential apartment development on an underutilized site. The existing mobilehome park will be closed in accordance with Government Code Section 65863.7 and 65863.8, as well as, and Los Angeles Municipal Code ("LAMC") Sections 47.08, 47.09, and 17.04. The project will result in the net increase of 312 dwelling units, including 42 Very Low Income units. It will also provide approximately 1,500 square feet of commercial that will enhance the pedestrian experience on Pacific Coast Highway. The site is located within walking distance of public transit and local amenities. As shown in Exhibit "A" and Finding No. 4, the Project will provide design features to enhance the visual quality of the area. Planting new street trees will help achieve the City's goals for environmentally sustainable urban design standards and pedestrian-oriented improvements.

Housing Element 2021 - 2029

The proposed project also conforms with the applicable policies of the Housing Element, including:

Goal 1 – A City where housing production results in an ample supply of housing to create more equitable and affordable options that meet existing and projected needs.

Objective 1.2 – Facilitate the production of housing, especially projects that include Affordable Housing and/or meet Citywide Housing Priorities.

Policy 1.2.1 – Expand rental and for-sale housing for people of all income levels. Prioritize housing developments that result in a net gain of Affordable Housing and serve those with the greatest needs.

Policy 1.3.1 – Prioritize housing capacity, resources, policies and incentives to include Affordable Housing in residential development, particularly near transit, jobs, and in Higher Opportunity Areas.

Goal 3 – A City in which housing creates healthy, livable, sustainable, and resilient communities that improve the lives of all Angelenos.

Objective 3.2 – Promote environmentally sustainable buildings and land use patterns that support a mix of uses, housing for various income levels and provide access to jobs, amenities, services and transportation options.

Policy 3.1.5 – Develop and implement environmentally sustainable urban design standards and pedestrian centered improvements in development of a project and within the public and private realm such as shade trees, parkways and comfortable sidewalks.

Policy 3.2.2 – Promote new multi-family housing, particularly Affordable and mixed-income housing, in areas near transit, jobs and Higher Opportunity Areas, in order to facilitate a better jobs-housing balance, help shorten commutes, and reduce greenhouse gas emissions.

The proposed project will result in a net increase of 312 new residential units to the City's housing stock and conforms with the applicable provisions of the Housing Element. The applicant has requested deviations from code requirements under the Density Bonus program for increased FAR, increased height, reduced landscaping of open space, increased recreation room space, waiver from architectural treatments, and reduced side yard setbacks,

thereby allowing the creation of affordable units. Pursuant to Density Bonus requirements, over 15 percent (42 units) of the base dwelling units (272 units), will be set aside for Very Low Income units. Additionally, this mixed-income development is in close proximity to public transit options, and a variety of commercial, institutional, and employment opportunities. Locating new housing in this portion of the City will allow residents to have better access to employment centers and places of interest in area.

Mobility Plan 2035

The proposed project also conforms with the following additional policies of the Mobility Plan, including:

Policy 3.1 – Access for All: Recognize all modes of travel, including pedestrian, bicycle, transit, and vehicular modes - including goods movement – as integral components of the City's transportation system.

Policy 3.3 – Land Use Access and Mix: Promote equitable land use decisions that result in fewer vehicle trips by providing greater proximity and access to jobs, destinations, and other neighborhood services.

The project utilizes Density Bonus incentives and waivers for the construction of a residential mixed-income development that provides housing opportunities in proximity to public transit along Pacific Coast Highway, encouraging multi-modal transportation and decreasing vehicle miles traveled in the neighborhood. The site is located along a portion of Pacific Coast Highway that is designated by the Mobility Plan as a Boulevard II. The project will also provide 165 long-term and 18 short-term bicycle parking spaces, which is consistent with LAMC Section 12.21 A.16 bicycle parking requirements. Furthermore, the subject site is within a Transit Priority Area as it is within a half-mile of the intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. The subject site is within proximity to bus stops served by the Los Angeles County Metropolitan Transportation Authority ("Metro") 205, 232, and 246 bus lines, City of Gardena GTrans 2 bus line, and Angeles Department of Transportation ("LADOT") 448 bus line.

ADDITIONAL FINDINGS REQUIRED BY LAMC SECTION 12.24 V

6. The project is consistent with and implements the affordable housing provisions of the General Plan's Housing Element.

The City's Housing Element for 2021-2029 was adopted by the City Council on November 24, 2021. The Housing Element is the City's blueprint for meeting housing and growth challenges. It identifies the City's housing conditions and needs, reiterates goals, objectives, and policies that are the foundation of the City's housing and growth strategy, and provides the array of programs the City has committed to implement to create sustainable, mixed-income neighborhoods across the City.

As provided under Finding No. 5, the proposed Project would be in conformance with the following goals of the Housing Element as described below:

Goal 1 – A City where housing production results in an ample supply of housing to create more equitable and affordable options that meet existing and projected needs.

Objective 1.2 – Facilitate the production of housing, especially projects that include Affordable Housing and/or meet Citywide Housing Priorities.

Policy 1.2.1 – Expand rental and for-sale housing for people of all income levels. Prioritize housing developments that result in a net gain of Affordable Housing and serve those with the greatest needs.

Policy 1.3.1 – Prioritize housing capacity, resources, policies and incentives to include Affordable Housing in residential development, particularly near transit, jobs, and in Higher Opportunity Areas.

Pursuant to Density Bonus requirements, the project is required to set aside over 15 percent, that is 42 units, of the 272 base density units for Very Low Income Households in exchange for the 30 percent density increase requested. The project proposes to set aside 42 units for Very Low Income Households, thereby complying with the requisite percentage of affordable housing units for the 30 percent density increase.

Although the project involves the closure of an existing mobilehome park and demolition and removal of 42 dwelling units, the project will not result in a loss of housing as it will provide a net increase of 312 dwelling units, including 42 Very Low Income units, on the subject site. The project will offer a range of apartment types and sizes as it provides 90 studio units, 23 studio units with lofts, 93 one-bedroom units, 22 one-bedroom units with lofts, 90 two-bedroom units, 21 two-bedroom units with lofts, 12 three-bedroom units, and 3 three-bedroom units with lofts. Additionally, the project proposes a total of 40,990 square feet of open space in compliance with LAMC Section 12.21 G, including a series of open-air courtyards, recreation rooms, and a roof deck, with amenities including a pool, spa, lounge seating, dining tables, outdoor kitchen, breakfast bar, water feature, dog parklet, and sky deck. The project will provide affordable housing in close proximity to transit. The subject site is within a half-mile of the intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. The subject site is within proximity to bus stops served by the Los Angeles County Metropolitan Transportation Authority (“Metro”) 205, 232, and 246 bus lines, City of Gardena GTrans 2 bus line, and Angeles Department of Transportation (“LADOT”) 448 bus line. Therefore, the project is in conformance with the affordable housing provisions of the Housing Element.

7. The project will further the City's goal of achieving an improved jobs-housing relationship, which is needed to improve air quality in the City.

The proposed project will be redeveloping an underutilized site for the construction of a new mixed-use residential apartment building, and will provide affordable units and commercial uses that will help achieve an improved jobs-housing relationship for the community.

The project utilizes Density Bonus incentives and waivers for the construction of a residential mixed-income development that provides housing opportunities in proximity to public transit along Pacific Coast Highway. The subject site is within a half-mile of the intersection of Pacific Coast Highway and Normandie Avenue, which constitutes as a Major Transit Stop. Although the project is meeting parking requirements of LAMC Section 12.21 A.4, per California Government Code Section 65863.2 (AB 2097) the project site is permitted to provide a minimum of zero parking spaces, encouraging multi-modal transportation and decreasing vehicle miles traveled in the neighborhood.

The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with a LA Water and Power substation and

automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone.

The Project's potential air quality effects were evaluated by estimating the potential construction and operations emissions of criteria pollutants, and comparing those levels to significance thresholds provided by the Southern California Air Quality Management District (SCAQMD). The Project's emissions were estimated using the CalEEMod 2022.1 model (output February 23, 2023 and December 3, 2024) for the purposes of evaluating air quality impacts of proposed projects and summarized in the Air Quality and Greenhouse Gas Technical Memorandum prepared by Dudek dated May 24, 2024 and updated January 2025. The analysis took into account construction activity emissions during demolition, grading, building construction, architectural coating, and paving, as well as operational emissions and effects to sensitive receptors. The analysis confirms that the project would not have a significant impact related to air quality or greenhouse gases. There are several Regulatory Compliance Measures which regulate air quality-related impacts for projects citywide as noted above. Furthermore, as part of the Housing Element Program EIR, the project is subject to Mitigation Measure 4.2-3 which requires construction equipment that meets CARB Tier 4 Final or USEPA Tier 4 off-road emissions.

The new development should provide for adequate multi-family residential development that is in close proximity to commercial centers and public transit. The proposed project is a mixed-use building with 354 new residential units (42 units which are set aside for Very Low Income Households) and 1,500 square feet of ground floor commercial use. The project will not only provide much-needed housing of varying levels of affordability, but it will also provide opportunities for new commercial uses. As a result, the development will strengthen the existing commercial development in the community by adding to the consumer base through the introduction of new residents. The project's proximity to transit connections will reduce vehicular trips to and from the project, vehicle miles traveled, and reduce air pollution; and its location within an existing, under-utilized commercial district and will enable the city to conserve nearby existing stable residential neighborhoods, lower-intensity commercial districts, and enhance the jobs-housing relationship.

8. Pursuant to an agreement entered into under Government Code Sections 65915 - 65918, the project will include the number of Restricted Affordable Units as set forth in Section 12.24 U.26.(a)(1) through (5) of the Los Angeles Municipal Code, with any percentage increase in floor area treated the same as a percentage increase in density for purposes of calculating the number of Restricted Affordable Units.

The applicant has requested a 30 percent increase in density through the Density Bonus Ordinance pursuant to LAMC Section 12.22 A.25. The project provides the requisite number of affordable units (42 Very Low Income units) to qualify for the Density Bonus and requested incentives and waivers. Therefore, the project does not trigger a Conditional Use under LAMC Section 12.24 U.26 for increased density, therefore the affordability calculations under LAMC Section 12.24 U.26 do not apply.

9. The affordability of all reserved lower income dwelling units will continue for a minimum of 55 years.

The applicant proposes to set aside a total of 42 units for Restricted Affordable Units. Per the Conditions of Approval, the applicant is required to execute a covenant to the satisfaction of LAHD to make 42 Restricted Affordable Units available to Very Low Income Households for rental as determined to be affordable to such households by LAHD for a period of 55 years. The applicant is required to present a copy of the recorded covenant to the Department of

City Planning and the proposed project shall comply with any monitoring requirements established by LAHD. Therefore, as conditioned, the project satisfies this finding in regards to subjected restricted affordable units to recorded affordability per LAHD.

10. The construction and amenities provided for the reserved lower income dwelling units will be comparable to those provided for the market rate dwelling units in the development, including the average number of bedrooms and bathrooms per dwelling unit.

The City Planning Commission approved the Affordable Housing Incentives Guidelines (CPC-2005-1101-CA) on June 9, 2005. The Guidelines were subsequently approved by City Council (CF 05-1345) on February 20, 2008, as a component of the City of Los Angeles Density Bonus Ordinance. The Guidelines describe the density bonus provisions and qualifying criteria, incentives available, design standards, and the procedures through which projects may apply for a density bonus and incentives. LAHD utilizes these Guidelines in the preparation of Housing Covenants for Affordable Housing Projects. On April 9, 2010, the City Council adopted updates to the City's Density Bonus Ordinance (CF 05-1345-S1, Ordinance No. 181,142). However, at that time, the Affordable Housing Incentives Guidelines were not updated to reflect changes to the City's Density Bonus Ordinance or more recent changes in State Density Bonus Law located in the Government Code. Therefore, where there is a conflict between the Guidelines and current laws, the current law prevails. Additionally, many of the policies and standards contained in the Guidelines, including design and location of affordable units to be comparable to the market-rate units, equal distribution of amenities, monitoring requirements, and affordability levels, are covered by the State Density Bonus Laws. For example, restricted dwelling units shall be comparable in every manner to market rate dwelling units, including total square footage, bedrooms size, closet space amenities, number of bathrooms, etc., except in the quality of interior "finish" materials (e.g., floor and wall coverings). The design of restricted dwelling units should generally reflect the average number of bedrooms per dwelling units in the development. Restricted dwelling units shall not be confined to one type of dwelling unit within a development. Restricted dwelling units must be interspersed among market-rate dwelling units within the same building. They may not be grouped together on one level or in one or more "less desirable" corners or areas of the building. Residents of restricted dwelling units may not be charged for amenities that are provided at no cost to other residents including, but not limited to, access to recreational facilities, parking, cable TV, and interior amenities such as dishwashers and microwave ovens. Optional services provided must be optional for all residents, and available to all under the same terms and conditions.

11. The approval of a mixed use development on the site will provide for affordable housing costs in the housing development.

As provided under Finding No. 1, the approval of the project including requested Density Bonus Incentives for averaging, increased FAR, and increased height will result in identifiable and actual cost reductions to provide for affordable housing costs.

ADDITIONAL FINDINGS REQUIRED BY COMMUNITY PLAN FOOTNOTE 9

12. Land uses surrounding the proposed development site will not be inimical to the health, safety, and welfare of prospective residents of such quarters.

The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL

and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with an LA Water and Power substation and automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone. Therefore, the land uses surrounding the proposed development are compatible with the mixed-use residential development containing commercial and residential uses, and will not be inimical to the health, safety, and welfare of prospective residents.

SITE PLAN REVIEW FINDINGS

13. The project is in substantial conformance with the purposes, intent and provisions of the General Plan, applicable community plan, and any applicable specific plan.

The project site is in the Wilmington - Harbor City Community Plan, and is designated for Community Commercial and Limited Industrial land uses. The Community Commercial land use designation corresponds to the CR, C2, C4, RAS3, P, and PB zones; the Limited Industrial land use designation corresponds to the CM, MR1, M1, and P Zones. The site is zoned [Q]C2-1VL and [Q]CM-1VL and is therefore consistent with the land use designations. The [Q]C2-1VL and [Q]CM-1VL zones allow for R4 (High Medium Residential) land uses and estimates 56 to 109 dwelling units per acre. Height District No. 1VL limits the Floor Area Ratio ("FAR") to 1.5:1 and building height to 45 feet and three (3) stories. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3 stories, 45 feet, and 3:1 FAR, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 3 stories, 45 feet, and 1.5:1 FAR. Footnote No. 9 of the Community Plan Map requires that properties designated for Community Commercial uses be reserved for commercial and parking uses, except that developments combining residential and commercial uses shall be approved through a procedure similar to a conditional use. The site is subject to Qualified "Q" Conditions established under Ordinance No. 172853 (Subareas 22A and 22B), which has certain usable open space, landscaping, recreation room, architectural treatment, and parking requirements.

As provided under Finding No. 1, the project's averaging, increased FAR, increased height, reduced yards, reduced landscaping, increased recreation room, and waiver of architectural treatment requirements are allowed by the underlying zone in combination with Density Bonus law. The project is designed as singular building with residential uses, open space, and parking spread across the site. The proposed project is a mixed-use residential development with 354 residential units (42 units which are set aside for Very Low Income Households), and 1,500 square feet of ground floor commercial use.

The project has been designed with ground floor commercial space with street entrances and storefront glazing along Pacific Coast Highway. The project provides the primary pedestrian entrance at the corner of Pacific Coast Highway and Frampton Avenue with a public plaza that provides direct access to the lobby, leasing area, and commercial offices that are flanked with recreation rooms. Secondary pedestrian entrances are provided along Frampton Avenue and 259th Street. Residential amenities are provided in a series of open-air courtyards as well as private balconies. The Common open space is provided in a series of open-air courtyards at the ground floor totaling 18,740 square feet, recreation rooms totaling 10,140 square feet, and a 400 square foot roof deck. The courtyards provide a variety of recreational amenities for residents including a pool, spa, lounge seating, and fire table at the Main Pool / Spa Courtyard; dining tables with chairs and umbrellas, outdoor kitchen with breakfast bar, water feature, and fire pit at the South Courtyard; water feature and bench seating at the Southwest Courtyard; and a dog parklet with decomposed granite, synthetic turf, and decomposed

granite at an additional courtyard. The roof terrace also includes a sky deck, dining tables and chairs, and lounge seating.

As provided under Finding No. 5, the proposed project is in substantial conformance with the purpose, intent, and provisions of the General Plan's Framework Element, Wilmington-Harbor City Community Plan, Housing Element, and Mobility Plan, particularly those concerning adding affordable housing near public transit and neighborhood-serving uses.

14. The project consists of an arrangement of buildings and structures (including height, bulk and setbacks), off-street parking facilities, loading areas, lighting, landscaping, trash collection, and other such pertinent improvements that is or will be compatible with existing and future development on adjacent properties and neighboring properties.

As provided under Finding No. 4, the project has been designed to be compatible with adjacent properties and surrounding neighborhood. The subject site is in an urbanized area surrounded by multi-family residential, institutional, commercial, and industrial uses. The site is immediately adjacent to automotive uses, fast food and restaurants, and the Kaiser Permanente South Bay Medical Center on [Q]C2-1VL and [Q]C1-1L properties to the east. Properties across 259th Street to the south are improved with three-story multi-family residential buildings in the [Q]RD1.5-1XL zone. Properties across Frampton Avenue to the west are improved with an LA Water and Power substation and automotive uses in the [Q]MR1-1VL zones, and single-story commercial buildings and automotive uses in the [Q]C2-1VL zone.

The proposed project involves the construction of a new six-story, 80-foot tall mixed-use residential building comprised of 354 dwelling units (including 42 Very Low Income units) across five residential levels. The project will be approximately 406,855 square feet in floor area, including 1,500 square feet of commercial, with a Floor Area Ratio ("FAR") of 2.6:1. The project provides the primary pedestrian entrance at the corner of Pacific Coast Highway and Frampton Avenue with a public plaza that provides direct access to the lobby, leasing area, and commercial offices that are flanked with recreation rooms. Secondary pedestrian entrances are provided along Frampton Avenue and 259th Street. Residential amenities are provided in a series of open-air courtyards as well as private balconies.

The project includes a six-story above-grade parking garage at the center of the building that will be mostly wrapped with residential uses and walkways. The project will provide 560 residential and 15 commercial parking spaces, for a total of 575 parking spaces. Vehicular access is provided from a single driveway and curb cut from Frampton Avenue.

<u>Height</u>
The subject site is zoned [Q]C2-1VL and [Q]CM-1VL. Height District No. 1VL limits the Floor Area Ratio ("FAR") to 1.5:1 and building height to 45 feet and three (3) stories per LAMC Section 12.22.A.23. The site is subject to Footnote No. 8 which restricts the Community Commercial portion of the site to 3 stories, 45 feet, and 3:1 FAR, as well as Footnote No. 10 which restricts the Limited Industrial portion of the site to 3 stories, 45 feet, and 1.5:1 FAR. The applicant has requested an Off-Menu Incentive for increased building height of 35 feet and three (3) stories to allow 80 feet and six (6) stories. Strict compliance with the height restrictions would remove the upper residential levels from the proposed building which will limit the ability to construct the residential dwelling units permitted by-right and the Restricted Affordable Units which are of a sufficient size. Although the massing of the project is larger than the existing commercial and residential buildings, the increase in height is granted through the Density Bonus Ordinance. Furthermore, the site is not subject to transitional height because it is not within proximity to RW1 or more restrictive zones.

Bulk/Massing
The proposed mixed-use development has a street frontage of approximately 270 feet on the south side of Pacific Coast Highway, 557 feet on the east side of Frampton Avenue, and 300 feet on the north side of 259th Street. The applicant has requested an FAR of 2.6:1 in lieu of the maximum 1.5:1 to be averaged across the site through Off-Menu Density Bonus Incentives, for a maximum floor area of 406,855 square feet. The proposed project massing exceeds the existing predevelopment pattern, the project proposing a building height of 80 feet and 6 stories. The applicant has also requested a waiver from the architectural treatment requirements of Qualified "Q" Condition No. 1E contained in Ordinance No. 172,853 (Subareas 22A and 22B) which requires projects to incorporate multi-level pitched roof with a minimum pitch of 3 to 12, however the project will still provide varied and modulated rooflines as shown in Exhibit "A". The project provides architectural detailing that enhances the multiple street-facing façades by applying recesses and balconies with varying building materials and colors to incorporate variation in design. In addition, the project is separated from the adjacent residential properties to the south by 259th Street, and the project provides an upper level stepback on Level 5 to minimize the building mass from those southerly neighboring residential properties. Therefore, the project massing will be compatible with existing and future development on adjacent properties and neighboring properties.

Building Materials
The building design incorporates a variety of recesses, balconies, and different materials to add architectural interest to the building and creates distinct breaks in the building plane. These breaks are further differentiated through the use of a variety of building materials that include standing seam metal wall panels, fiber cement lap siding, painted cement plaster, , and metal and glass guardrails. The project will also have an accent wall with ceramic tile or color mural. Together, these elements are applied to create sufficient breaks in plane and articulation.

Entrances
The project provides the primary pedestrian entrance at the corner of Pacific Coast Highway and Frampton Avenue with a public plaza that provides direct access to the lobby, leasing area, and commercial offices that are flanked with recreation rooms. Secondary pedestrian entrances are provided along Frampton Avenue and 259th Street.

Setbacks
The project has been designed to create a strong street wall along Pacific Coast Highway and 259th Street, with front yard setbacks of 3 feet and 2 feet along those street frontages, respectively, in compliance with the yard requirements of the underlying zone. Given all levels of the project would be utilized in whole or in part by residential uses, the Project would therefore be required to provide 10-foot side yard setbacks. The applicant has requested two (2) Waivers of Development Standards for reduced side yard setbacks, and proposes 8-foot easterly and westerly side yard setbacks in lieu of the 10 feet otherwise required.

Parking/Loading
The project site is within a half-mile of intersection of Pacific Coast and Normandie which constitutes as a Major Transit Stop. Although the project is meeting parking requirements of LAMC Section 12.21 A.4, per California Government Code Section 65863.2 (AB 2097) the project site is permitted to provide a minimum of zero parking spaces, encouraging multi-modal transportation and decreasing vehicle miles traveled in the neighborhood. The project will provide a 560 residential and 15 commercial parking spaces for a total of 575 parking spaces. The parking is provided within an enclosed six-story above grade parking garage at the center of the building that will be mostly wrapped with residential uses and walkways. Consistent with the Above-Grade Parking Advisory, the project minimizes impacts to the

public realm and surrounding community through intentional site planning and design by fully integrating the parking garage into the design and form of the project, buffering the parking garage from view by wrapping with active uses, and ensuring driveways are placed far away from primary pedestrian access points. The project will also provide a loading space that is accessed from 259th Street. All vehicular access is provided from a single driveway and curb cut from Frampton Avenue. Thirty percent, that is 168 provided parking spaces, will be EV charging spaces and 10 percent, that is 56 parking spaces, will be equipped with electric vehicle charging stations. The project will also provide 165 long-term and 18 short-term bicycle parking spaces, which is consistent with LAMC Section 12.21 A.16 bicycle parking requirements. Therefore, the project's parking and loading will be fully contained in the enclosed garage, and will not affect street circulation, and will be compatible with surrounding properties.

Lighting

The project is conditioned to ensure that all outdoor lighting provided on-site will be down-cast shielded to prevent excessive illumination and spillage onto adjacent public rights-of-way, adjacent properties, and the night sky. Furthermore, as conditioned, all pedestrian walkways, storefront entrances, and vehicular access ways shall be illuminated.

Landscaping/Open Space

As provided under Finding No. 13, the project will provide a total of 40,990 square feet of open space in compliance with LAMC Section 12.21 G, including a series of open-air courtyards, recreation rooms, and a roof deck, with amenities including a pool, spa, lounge seating, dining tables, outdoor kitchen, breakfast bar, water feature, dog parklet, and sky deck. The applicant has not requested a reduction in the amount of required open space under LAMC Section 12.21 G, however a Waiver of Development Standard was requested to reduce the amount of landscaping required, as well as increase the amount of recreation rooms to be provided, in order to provide more usable open space. The project proposes to remove 24 non-protected trees subject to the approval of Urban Forestry, and will plant 102 new trees (including Fern Pine, Holly Oak, Raywood Ash, Queen Palm, New Zealand Christmas, Carrotwoot, Medjool Date Palm, King Palm, Dragon Tree, Blue Yucca, Swan Hill Olive, Southern Live Oak, Bronze Loquat, Brisbane Box and Sweet Bay) as provided in Exhibit "A". The project is conditioned to submit landscape plans by a licensed landscape architect or licensed architect to show the size and location of all plants, and ensure sufficient depth and soil volume for trees and green roofs. In addition, the project provides a public plaza at the corner of Pacific Coast Highway and Frampton Avenue that is separate from the residential open space, and features a monument feature, enhanced paving, and bicycle parking.

Street Dedications, Improvements, and Trees

The Bureau of Engineering has required dedication and improvement requirements along Frampton Avenue and 259th Street which have the potential to affect existing street trees. Prior to any work on the adjacent public right-of-way, the applicant will be required to obtain approved plans from the Department of Public Works. As there currently is no approved right-of-way improvement plan and for purposes of conservative analysis under CEQA, Planning has analyzed the worst-case potential for removal of all street trees. Note that street trees and protected trees shall not be removed without prior approval of the Board of Public Works/Urban Forestry (BPW) under LAMC Sections 62.161 - 62.171. At the time of preparation of this environmental document, no approvals have been given for any tree removals on-site or in the right-of-way by BPW. The City has required a Tree Report to identify all protected trees/shrubs on the project site and all street trees in the adjacent public right-of-way. There are no protected or non-protected trees on the site, as verified in the Tree Evaluation Report prepared by Arborgate Consulting, Inc. dated February 3, 2022 and reviewed by the Urban Forestry Division on December 21, 2022. There are thirteen (13) non-

protected street trees along the public right-of-way along Frampton Avenue and 259th Street, all of which may be removed as part of the project due street dedication and improvement requirements from the Bureau of Engineering, which will be subject to Urban Forestry Division review and approval. The project assumes a worst-case scenario of removing all street trees, in the event of changes to the right-of-way improvement plans after approval of the environmental clearance. However, this environmental analysis does not authorize the removal of any street trees without prior approval of Urban Forestry, in compliance with LAMC Sections 62.169 and 62.170 and their applicable findings.

Trash Collection

Trash and recycling areas are conditioned to be located within the first level of the parking garage to ensure that they are fully enclosed to be not visible from public view from the street. Therefore, trash collection will not affect circulation for surrounding properties.

15. The residential project provides recreational and service amenities to improve habitability for its residents and minimize impacts on neighboring properties.

The proposed project provides recreational and service amenities that will improve habitability for the residents and minimize any impacts on neighboring properties. The project will provide a total of 40,990 square feet of open space in compliance with LAMC Section 12.21 G. Common open space is provided in a series of open-air courtyards at the ground floor totaling 18,740 square feet, recreation rooms totaling 10,140 square feet, and a 400 square foot roof deck. The courtyards provide a variety of recreational amenities for residents including a pool, spa, lounge seating, and fire table at the Main Pool / Spa Courtyard; dining tables with chairs and umbrellas, outdoor kitchen with breakfast bar, water feature, and fire pit at the South Courtyard; water feature and bench seating at the Southwest Courtyard; and a dog parklet with decomposed granite, synthetic turf, and decomposed granite at an additional courtyard. The roof terrace also includes a sky deck, dining tables and chairs, and lounge seating. The project also provides 234 private balconies totaling 11,700 square feet of for use as private open space for individual units. The applicant has not requested a reduction in the amount of required open space, however a Waiver of Development Standard was requested to reduce the amount of landscaping required, as well as increase the amount of recreation rooms to be provided, in order to provide more usable open space. Therefore, the proposed project provides sufficient recreational and service amenities for its residents, minimizing any impacts on neighboring properties.

ENVIRONMENTAL FINDINGS

16. Housing Element Streamlining Checklist. The proposed project was found to be within the scope of the 2021-2029 Housing Element Environmental Impact Report (EIR), SCH No. 2021010130, ENV-2020-672-EIR, certified on November 24, 2021 (Housing Element EIR), and the Addendum No. ENV-2020-6762-EIR-ADD1 adopted on June 12, 2022 and the Addendum No. ENV-2020-6762-EIR-ADD2 adopted on December 10, 2024. The proposed project, which includes the development of 420,327 housing units (cumulatively, 456,643), is within the scope of the 2021-2029 Housing Element as it will build out the City's regional housing needs assessment (RHNA). A CEQA Streamlining Checklist for a Project Within the Scope of the Housing Element Program EIR, ENV Case No. ENV-2024-4112-HES (HE Streamlining Checklist), was prepared for the proposed project, pursuant to CEQA Guidelines Section 15168(c). Section 15168(c) provides for limited environmental review of subsequent projects under a Program EIR, where the project is found to be an activity within the scope of the program for which the EIR was prepared, and the impacts of the project are within the scope of the impacts analyzed in the EIR. Council found that the Housing Element EIR analyzed the impacts of the build-out of the RHNA, which involves the development of housing

citywide. The HE Streamlining Checklist was prepared by staff to determine whether the impacts of the proposed project are within the scope of the Housing Element EIR. The prepared HE Streamlining Checklist supports that the impacts of the proposed project are within the scope of the Housing Element EIR and that no significant environmental effects not examined in the Program EIR will occur from the proposed project. All required mitigation measures from the Housing Element EIR Mitigation Monitoring Program (MMP) will be imposed on the proposed project. An MMP for the proposed project has been prepared for adoption by the decisionmaker.

17. Flood Insurance.

The National Flood Insurance Program rate maps, which are a part of the Flood Hazard Management Specific Plan adopted by the City Council by Ordinance No. 172,081, have been reviewed and it has been determined that this project is located in Flood Zone X, areas of minimal flood hazard.

PUBLIC HEARING AND COMMUNICATIONS

PUBLIC HEARING – DEPUTY ADVISORY AGENCY

A public hearing was conducted on July 24, 2025 by the Deputy Advisory Agency, for the consideration of Case No. AA-2019-5528-MPC and ENV-2021-9523-HES-PEIR. The Deputy Advisory Agency obtained testimony from mobilehome park residents and affected and/or interested parties regarding this application. The public hearing was attended by the applicant team 38, approximately 16 speakers, and 22 other attendees. Comments in opposition cited concerns regarding accessibility and comprehension of the material considering the majority of tenants spoke Spanish and relocation timing. There were concerns over individual tenant rights for units with multiple tenants. The loss of tenant's homes and the community ties when forced to move to higher costing apartments. There were comments wanting local hire and livable wages for new development. There were also comments against using the Housing Element Streamlining as the environmental clearance. Comments in support cited much needed improvements to the community and opportunity for better jobs. The Deputy Advisory Agency took the case under advisement for a period of 45 days, ending on September 8, 2025. A determination is pending at the time of preparing this report.

PUBLIC HEARING – HEARING OFFICER

The public hearing was held on Tuesday September 16, 2025 at approximately 11:00 a.m. The Public Hearing was conducted in a virtual format. The hearing was conducted by the Hearing Officer, Norali Martinez, on behalf of the City Planning Commission in taking testimony for Case No. CPC-2021-9522-DB-VCU-CU-SPR-HCA and ENV-2021-9523-HES-PEIR. All interested parties were invited to attend the public hearing in which they could listen, ask questions, or present testimony regarding the project. The purpose of the hearing was to obtain testimony from affected and/or interested parties regarding this application. Interested parties are also invited to submit written comments regarding the request prior to the hearing. The environmental analysis was among the matters to be considered at the hearing. The hearing notice was mailed on August 22, 2025, and was posted on-site on September 5, 2025, and published in the newspaper on August 22, 2025. A Corrected notice was mailed on August 29, 2025, and published in the newspaper August 29, 2025 in accordance with LAMC noticing requirements.

The public hearing was attended by the applicant's representatives (Alex Wong, Luci Ibarra, Ed Casey, Navy Banvard) and approximately 35 other members from the community. There were 12 speakers who provided comments at the hearing, including 5 who spoke in support, 7 provided general questions/comments.

Applicant Presentation. The applicant noted the following:

- The project will provide 354 dwelling units, 42 of them are set aside at special rents to allow for 42 families who currently live on project site to return in the future if they wish.
- The building occupies an entire block on Frampton from Pacific Coast Highway back to 259th.
- The project is 5 stories of residence plus 1 loft on top of 5th story. The 5th story will have 2-level units.
- The project steps down to 4 stories without a loft at 259th across the street from 3-story Stone Haven neighbors.
- The design is meant to be one of the nicest residential communities in all of South Bay.
- The project will have 40,000 sf of resort amenities like fitness center, yoga studio, pool, spa.
- Along PCH is coworking space, conference center, rooftop deck.

- The units are designed for everybody to have their own washer/dryer with quartz counters, wood flooring, and other luxury amenities.
- There will be parking for cars, bikes, and special places for pets.
- Units go around the whole property. There are 2 courtyards inside. 1 of them has a pool, the other has a fire pit and breakfast bar.
- The garage is in the center with 575 cars is more than enough for residents' cars and their guests.
- 42 trees will need to be removed, but they are replanting 100 new trees.
- Shows views from PCH, from east facing Kaiser, and Frampton. Building is broken up into sections with courtyards in-between along Frampton
- Site is in the heart of Harbor City neighborhood. They are excited to be part of the community and will add to surroundings with residential and commercial and hospital.

Public Comments in Support:

- The specific area in question is dilapidated and has been that way since the 1950s. Remembers when trains used to go there. It will help to organically get rid of bad elements that has come to Harbor City. This area needs revitalization.
- Feel this project is going to make this community better. It's very much needed. The project will bring more small businesses and good people to the area and community. The project will take it to the next level. It's time to bring it up to a new era as a hybrid development.
- All the buildings around them are in same design as being proposed. It matches well.
- Current resident plans on coming back to these units because they are beautiful.
- Applicant has done outreach for several years.

Public Comments with General Questions/Concerns:

- Carpenter's union will be impacted by environmental impacts. Project should be built by contractors that hire locally, with prevailing wages, apprenticeships from state-certified training program. Workforce requirements help to reduce environmental impacts while benefiting local economy and workforce development for the area.
- What happens if current residents don't qualify for low income to return to the 42 affordable units?
- Who will guarantee the rental rates won't go up? Who can they contact if rent goes up?
- What happens to residents in terms of eviction? Some residents may need to use up all of the money after paying expensive rents and then ending up homeless
- The applicant has said verbally that residents can return, that they would receive a lump sum payment, etc., but there's no contract and nothing in writing. They should receive something in writing from the city.
- Will there be expansion for low-income housing, since some other people in the area cannot afford thousands of dollars at this time?
- When will they start the project – is there a time estimate?
- Concerns over relocation payments to multiple tenants within individual units. How are individual rights protected, assuming payment is made in one lump sum? What happens if dispute arises among the single group of tenants?
- There are concerns over public parking along Frampton. Some cars stay parked there a long time, and they can't do street sweeping. Are they going to have permit parking for other residents?

Applicant's Response:

- For street parking, they would need to look into the city if resident permit public parking can be done. They are addressing their own parking needs.

- They do not have an answer and would need the city's help to determine the appropriate steps on how money gets distributed if there are multiple people living in a house today that are not the exact people who are officially on the lease signed years ago.
- The rental rate will continue to be the City's official Very Low Income rent which is 50% of the Average Medium Income.
- The estimate for construction to start is 2027. It could be later, but not earlier, and depends on the City having to approve the closure and the design of the new project, financing, and one-year notice that needs to be given.
- Residents won't receive contracts until after City approvals have been issued, but the relocation requirements are in the Closure Impact Report. The city will require and regulate consistent with the way it has been shown.
- The requested action items in the hearing notice are correct. The project has 5 stories of units but the top level is a loft, so it is called 6 stories in height.
- The closure and project must be approved by the city first before they can move forward with a 1-year notice will be given to establish the time for when people must move out. They estimate that to occur in 2027. When people move out they can decide whether they want to return to live in the new project or not. They can make that decision as late as 3-6 months before the project is completed, so maybe 2 years into construction. Families that decide they will not want to return will get their payment right away. Families that have not decided or want to return will get payment in several installments every 6 months during construction.
- The families will decide for themselves where they want to move, what they want to do. The relocation assistant provider is a free service to help make choices but they will make the decision on their own.
- The Density Bonus units are 42 units at Very Low-Income rent with a 55-year covenant term. The rest are market rate units. If returning residents do not meet the income requirements for low-income units, then the applicant has volunteered that they will get market rate units but only be charged the low income rent with a 20-year covenant term. Confirmed that current residents will get replacement units of equivalent size regardless of income qualification (for example 3 bedroom for a 3 bedroom).
- The relocation fee has been calculated by a city formula to be the difference between the current rent of each space and average rent for housing in the Planning Area. The difference is multiplied by 42 months, plus incidental moving costs. The concept is that the relocation assistance payment will cover the difference in rent for a minimum of 24 months and up to 42 months.
- If residents cannot move their home, they will qualify to get the appraised value of their home. If that is appraised value is greater that the relocation fee, they get the larger number (a lump sump on-time payment at the start once they sign paperwork and vacate). If the appraised value is less than the relocation fee, they get the relocation fee (in different intervals at the 24 months and 6 months thereafter).
- The estimate start of construction around 2027 or later, depending on city's approval of the park closure and new project.
- The construction is expected to take between 2-3 years.
- They are tentatively considering a coworking office space in the commercial space.
- The project is in compliance with the commercial corner requirements. They are not requesting to be exempt from the ordinance.
- They have a loading zone to the south along 259th Street, which is primarily for residential move-ins/outs. Commercial space is small and they don't' anticipate a loading space being needed for commercial. Some parking spaces are available in the parking garage to handle reasonably-sized delivery vehicles.
- On the corner of 259th and Frampton is the location for electrical transformer to provide power to the community.
- The sky lounge/deck is for residents of the community.

- The project will provide a yoga studio, fitness center, ancillary amenity spaces. Also at the ground floor will be leasing office and management office. They are requesting deviations from what can be counted as open space and landscaping requirements, but they are meeting the actual open space are requirement since they are providing 40,000 square feet of open space.
- While it has been several years, they do recall incorporating Urban Design Studio recommendations to the best of their ability.
- The existing street trees will not be maintained, for multiple reasons. 1) They are growing in the DWP lines, 2) there are right-of-way dedications that the project will make for transportation plan and slight widenings along Frampton and PCH, and 3) the trees are not healthy so they are unable to be saved.
- The Neighborhood Council provided a letter of support a while ago and they are planning on going back to a meeting for a refresh on the project in the near future.
- They have been in regular contact with the Council District who had submitted their support letter. They were expecting the CD to dial in to the hearing.
- They agree to review how many units might have issues with the relocation assistance funds due to having multiple tenants.

WRITTEN CORRESPONDENCE

The Wilmington Neighborhood Council submitted a letter of support for the project dated March 15, 2023.

Planning Staff has received 40 written correspondences from tenants, neighbors, interested parties expressing support and concerns about the project. Their comments are included in Exhibit E and summarized as follows:

- Support for new development which can beautify and bring revitalization to the community
- Will strengthen the local economy and support nearby businesses
- Support of having a new beautiful development, designed for the community in mind
- Provides housing opportunities for the neighborhood including affordable housing
- Some tenants are in support of having the opportunity to come back to a beautiful building.
- Tenants are concerned over the relocation process and relocation assistance
- Concerns over the tenants rights and payment disbursement
- Public request acts were submitted to obtain project records
- Concerns over utilizing the HES

DENSITY BONUS

BASE DENSITY:	272 UNITS
DENSITY BONUS UNITS (30%)	82 UNTIS
AFFORDABLE UNITS (VLI):	42 UNITS (11.8% OF TOTAL UNITS)

INCENTIVES:

a. An On-Menu Incentive to permit the Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access per LAMC Section 12.22.A25 (g)(2).
b. An Off-Menu Incentive to permit a Floor Area Ratio of 2.6:1 in lieu of the permitted 1.5:1 FAR per LAMC Section 12.22.A5(g)(3).
c. An Off-Menu Incentive to permit a total height of 80-ft and a mixed-use building with 5-story residential buildings and a 7-story parking garage in lieu of the permitted height of 45-ft and 3 stories.

WAIVERS

d. A waiver of (Q) Condition B of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B to permit 25 percent of the required open space to be landscaped per LAMC 12.21.G instead of the 50% required by the Q Condition.
e. A waiver of (Q) Condition D of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B to permit recreation rooms to count for up to 25% of the required open space per LAMC 12.21.G instead of the 10% allowed by the Q Condition.
f. A waiver of (Q) Condition E of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B "Architectural Treatment" requiring multi-level pitched roof with a minimum pitch of 3 to 12.
g. Pursuant to LAMC Section 12.22.A25(g)(3), a waiver of Development Standards to reduce the side yard setback along Frampton Ave. from the required 10-ft to 8-ft.
h. Pursuant to LAMC Section 12.22.A25(g)(3), a waiver of Development Standards to reduce the interior yard setback from the required 10-ft to 8-ft.

PROJECT DESCRIPTION

1280 PCH (PROJECT) IS A MIXED-USE DEVELOPMENT ON A 161,450 SF (3.706 AC) SITE AND IS LOCATED AT THE CORNER OF PACIFIC COAST HWY AND FRAMPTON AVE. THE PROJECT PROPOSES 354 RENTAL UNITS THAT INCLUDES 42 VERY LOW INCOME AFFORDABLE HOUSING UNITS. THE PROJECT CONSISTS OF 4 AND 5-STORY RESIDENTIAL BUILDINGS (TYPE III-A WOOD FRAME CONSTRUCTION). THE DESIGN ALSO INCLUDES 13,100 SF OF RECREATIONAL AND LEASING AREA AND 1,500 SF OF COMMERCIAL AT STREET LEVEL. RECREATIONAL AREAS INCLUDE: CLUB ROOMS, FITNESS CENTER & MEETING ROOMS IN ADDITION TO LANDSCAPED COURTYARDS PROVIDED WITH A POOL AND OUTDOOR AMENITIES. OVERALL THE PROJECT WOULD INCLUDE 406,855 SF OF FLOOR AREA AND A FLOOR AREA RATIO (FAR) OF 2.6:1. PARKING IS PROVIDED IN A PARKING GARAGE (7-STORY, INCLUDING ROOF-LEVEL FUTURE SOLAR PANELS, OF TYPE I-A CONCRETE CONSTRUCTION) THAT IS CENTRALLY LOCATED TO SERVE THE RESIDENTIAL & COMMERCIAL USES. IN TOTAL, THERE ARE 575 PARKING STALLS PROVIDED ON SITE.

(5) AN EASEMENT FOR STREET PURPOSES, RECORDED IN BOOK 15782, PAGE 363 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - PLOTTED HEREON)

6. AN EASEMENT FOR ELECTRICAL DISTRIBUTION EQUIPMENT AND FACILITIES, RECORDED OCTOBER 24, 1980 AS INSTRUMENT NO. 80-1065106 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - BLANKET EASEMENT)

7. THE PROVISIONS OF AN INSTRUMENT ENTITLED "NOTICE OF TEMPORARY VACANT AND SECURED RENTAL UNITS", RECORDED FEBRUARY 1, 2016 AS INSTRUMENT NO. 16-114968 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - NOTHING TO PLOT)

8. - 10. TITLE COMPANY NOTES

BASIS OF BEARINGS:

NORTH AMERICAN DATUM OF 1983 (NAD-83), SHOWN IN TERMS OF THE CALIFORNIA COORDINATE SYSTEM OF 1983 (CCS-83), ZONE V (2017.50 EPOCH DATE) AS DERIVED BY POSITIONS PUBLISHED BY CSRC. ALL COORDINATE VALUES WERE SCALED TO GROUND BY APPLYING THE COMPUTED COMBINATION FACTOR FOR FEI POINT 10013 AND HOLDING THE COMPUTED POSITION ON THIS POINT. INVERSES BETWEEN PROJECT COORDINATES WILL PRODUCE GROUND DISTANCES. TO OBTAIN GRID DISTANCES MULTIPLY GROUND DISTANCES BY 1.000065467Z.

FOUND MONUMENT NOTES

● INDICATES FOUND MONUMENT AS NOTED BELOW:

10001 FOUND HEX BAR IN SSM PER PWFB 0319/1540

10002 FOUND HEX BAR IN SSM PER FB 033-197-136

10003 FOUND LEAD AND TACK PER R1

10004 FOUND 3.5" BRASS DISK IN WELL MONUMENT PER R1

10005 FOUND HEX BAR IN SSM PER FB 033-197-129

10006 FOUND 2" IRON PIPE WITH TAG LS 6654 PER R2

10013 FOUND MAG NAIL NO REF, FITS TIES PER PWFB 319/1540

RECORD DATA NOTE

R1 INDICATES RECORD DATA PER PARCEL MAP LA NO. 2000-3036 P.M.B. 309/53-55.

R2 INDICATES RECORD DATA PER TRACT NO. 53789 M.B. 1297/48-50.

R3 INDICATES RECORD DATA PER TRACT NO. 16447 M.B. 405/5-6.

ALTA/NSPS TABLE A ITEMS:

ITEM 2 1280 PACIFIC COAST HIGHWAY, HARBOR CITY (LOS ANGELES), CALIFORNIA

ITEM 3 THE LAND SHOWN ON THIS SURVEY LIES WITHIN ZONE "X" (UNSHADED) BEING DESCRIBED AS AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN PER FLOOD INSURANCE RATE MAP (FIRM) COMMUNITY PANEL NUMBER 06037C1945F, EFFECTIVE DATE: SEPTEMBER 26, 2008.

ITEM 4 THE GROSS LAND AREA IS: 139,155 S.F. ± / 3.194 ACRES ±
THE NET LAND AREA (EXCLUDING THE LAND CONTAINED WITHIN ITEM (3)): 125,733 S.F.± / 2.886 ACRES ±

ITEM 5 THE CONTOURS SHOWN HEREON ARE BASED ON THE FOLLOWING BENCHMARK:

GPS PROCESSING AND NETWORK ADJUSTMENT WAS CONTROLLED BY USING THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) 2014 ADJUSTMENT, DASCD ON THE CITY OF LOS ANGELES BENCH MARKS BENCH MARK 21-05770 ELEVATION=43.729 FEET.

ITEM 6(a) PER THE CITY OF LOS ANGELES ZIMAS WEB SITE, THE ZONING IS DEFINED AS: COMMUNITY COMMERCIAL AND LIMITED MANUFACTURING.

ITEM 8 SEE THE SURVEY PLAT FOR ANY SUBSTANTIAL FEATURES OBSERVED IN THE PROCESS OF CONDUCTING THE SURVEY.

ITEM 13 SEE THE SURVEY PLAT FOR THE NAMES OF ADJOINING OWNERS.

ITEM 14 SEE THE SURVEY PLAT FOR THE DISTANCE TO THE NEAREST INTERSECTION.

ITEM 15 TOPOGRAPHY SHOWN HEREON WAS PROVIDED BY: ROBERT J LUNG & ASSOCIATES
DATE OF PHOTOGRAPHY: 8-6-18
CONTOUR INTERVAL: 1'

AND SUPPLEMENTED BY A FIELD SURVEY PERFORMED AUGUST 6, 2018

ITEM 16 THERE ISN'T ANY OBSERVABLE EVIDENCE OF EARTH MOVING WORK OR DEMOLITION OVER ANY PORTION OF THE PROPERTY WITHIN RECENT MONTHS.

ITEM 17 THERE ISN'T ANY OBSERVABLE EVIDENCE OF RIGHT OF WAY CHANGES. THERE IS NO EVIDENCE OF STREET OR SIDEWALK CONSTRUCTION OR REPAIRS.

ITEM 20 PROFESSIONAL LIABILITY INSURANCE IS IN EFFECT THROUGHOUT THE CONTRACT TERM.

SURVEYORS NOTES:

1. NO CEMETERIES WERE OBSERVED WHILE CONDUCTING THE FIELD WORK FOR THIS SURVEY.

SURVEYOR'S CERTIFICATE:

TO: 1280 PACIFIC COAST HIGHWAY LLC, A CALIFORNIA LIMITED LIABILITY COMPANY; RED OAK INVESTMENTS, LLC AND PROVIDENT TITLE COMPANY

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH 2016 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS AND INCLUDES ITEMS 2, 3, 4, 5, 6(a), 8, 13, 14, 15, 16, 17 AND 20 OF TABLE A THEREOF.

THE FIELD WORK WAS COMPLETED ON THE GROUND ON 07/20/2018.

LAMC Section 12.22.A.23(a) - DEVELOPEMENT STANDARDS

(1) Height: 80' max. proposed per Density Bonus Incentive Request.

(2) Front Yard: See Plan Exhibit A0.

(3) Windows: See Exterior Wall Diagrams.
The exterior walls and doors of a ground floor containing non-residential uses that front adjacent streets shall consist of at least fifty percent transparent windows, unless otherwise prohibited by law.

(4) Parking: Parking will be provided per Code. See Exhibit A0-4.
(i) Notwithstanding Section 12.21 A.5.(h) of this Code to the contrary, no tandem parking shall be permitted, except those spaces reserved exclusively for residential use.
(ii) Bicycle parking shall be provided as required by Section 12.21 A.16. of this Code.

(5) Lighting: Site lighting will be provided per Code.
All public areas of the lot or lots not covered by a building shall have night lighting for safety and security. All other open exterior areas, such as walkways and trash areas, shall have low-level, security-type lighting. All exterior lighting shall be directed onto the lot or lots, and all flood lighting shall be designed to eliminate glare to adjoining properties. All parking areas shall have a minimum of 3/4 foot-candle of flood lighting measured at the pavement.

(6) Signs: Signage design will be provided per Code
(i) In addition to the requzirements set forth in Division 62 of this Code, no person shall erect on the lot or lots the following signs, as defined in Section 91.6203 of this Code without first obtaining a conditional use permit: pole signs; projecting signs; or roof signs.
(ii) Monument signs and information signs shall be located only within the landscape-planted areas of the lot or lots.

(7) Utilities: Utility design will be provided in coordinated with DWP.
All new utility lines which directly service the lot or lots shall be installed underground. If underground service is not currently available, then provisions shall be made for future underground service.

(8) Walls and Trash Storage: See Plan Exhibits A2 - A4.
A solid masonry wall at least six feet in height shall be erected along the lot lines of the lot or lots where the lot or lots abut or are across an alley from any residential zone or use, except for that portion of the lot line where an access driveway is required by the City. Trash storage bins shall be located within a gated, covered enclosure constructed of materials identical to the exterior wall materials of the building.

(9) Recycling Area or Room: See Plan Exhibits A2 - A4.
Every Mini-Shopping Center or Commercial Corner Development shall conform to the requirements of Section 12.21 A.19.(c) of this Code.

(10) Landscaping: See Landscape Exhibits 01 - 05
All landscaping shall comply with Sections 12.41, 12.42 and 12.43 of this Code and the following requirements:
(i) Landscaping - Setback. A landscaped, planted area having a minimum inside width of five feet shall be required along all street frontages of the lot and on the perimeters of all parking areas of the lot or lots which abut a residential zone or use.
(ii) Irrigation System. An automatic irrigation system shall be provided for all landscaped areas. This system shall be installed prior to the issuance of any certificate of occupancy.

Exterior Wall Area = 2,695 sf. Approx.
Storefront Area Provided = 1,620 sf. (60%) Approx.

Exterior Wall Area = 2,640 sf. Approx.
Storefront Area Provided = 1,450 sf. (55%) Approx.

NOTE

This exhibit identifying existing trees location and proposed removal only. Please refer to the consulting Arborist's Report for detail information and summary.

TREES TO BE REMOVED (Note: No protected tree species are found existing on-site per LAMC 17.02)

(2) Schinus terebinthifolia Brazilian Pepper Tree	(2) Ficus benjamina Chinese Weeping Banyan	(1) Syagrus romanzoffiana Queen Palm
(8) Ulmus parviflora Chinese Elm	(1) Jacaranda mimosifolia Jacaranda Tree	(1) Washingtonia robusta Mexican Fan Palm
(2) Fraxinus uhdei Shamel Ash	(1) Ligustrum japonicum Japanese Privet	(1) Schefflera actinophylla Umbrella Tree
(3) Ceratonia siliqua Carob	(1) Ailanthus altissima Tree of Heaven	(1) Persea americana Avocado

DESCRIPTION

The City of Los Angeles (City) requires a report that identifies the location of the follow:

1. Trees and/or shrubs that are designated as "protected tree or shrub" as defined by Section 17.02 of the Los Angeles Municipal Code (LAMC). This category includes Oak trees (*Quercus* spp.) excluding the Scrub Oak (*Quercus dumosa*), Southern California Black Walnuts (*Juglans californica*), Western Sycamores (*Platanus racemosa*), California Bay Laurels (*Umbellularia californica*), Mexican Elderberry (*Sambucus mexicana*), and Toyon (*Heteromeles arbutifolia*), which have a cumulative trunk diameter of at least four inches, four and one-half feet above ground at the base of the tree or shrub.

The property is located along Pacific Coast Highway at Frampton Avenue and is currently occupied by a mobile home development, a vacant commercial building, and a vehicular storage yard. The primary sizable trees on-site are located behind the curb along Frampton and consiste of (7) Brazilian Pepper trees and (6) Chinese Elms. (2) Chinese Pistache are existing at the corner of Frampton and W 259th Street. The remainder of trees on-site are of significantly smaller size and located within the mobile residence's yards.

No "protected trees," as defined in the City's Municipal Code, occur within the survey area documented in this report. All trees are proposed to be removed for new development.

GENERAL NOTE

The images, illustrations, drawings, and statements ("information") contained herein are based upon a preliminary review of the entitlement requirements; thus are subject to change during the design review process. The information is provided merely to assist in how the site may eventually be developed. Consequently, there is no guarantee that the improvements depicted will be built, or if built, will be of the same type, material, size, appearance, or use as presented.

STREETSCAPE NOTES

1. Street trees shall be pruned and maintained as specified by Los Angeles Urban Forestry Division including: obtain a permit prior to pruning, adhere to ISA tree pruning guidelines and ANSI A300 standards. These guidelines prohibit "topping" and "heading".

2. Tree wells shall be covered with a 2-inch thick layer of unstabilized decomposed granite, installed per manufacturer specifications and per the City of Los Angeles specific plan S-450-3.

SHRUBS AND GROUNDCOVERS

Refer to Landscape Notes and Plant List Sheet for Conceptual Shrub and Groundcover Plant List.

EXISTING TREES NOTE

There are 24 existing trees on the project site to be removed and replaced with 48 new trees per the 2:1 tree replacement ratio requirement on the Urban Forestry Division's document 'Requesting a Tree Removal Permit'. The 48 replacement trees are part of the 102 proposed new trees.

LANDSCAPE TABULATIONS

REQUIREMENT	REQUIRED	PROVIDED
Planted Landscape Area is required to be greater than 25% of common open space (29,290 SF)	7,323 SF	7,375SF (25%)
Trees are required to be provided at a rate of 1 tree for every 4 residential units (354 Units)	89	102

LANDSCAPE SIDE YARDS CALCULATIONS

West Side Yard: 4,328 SF, Landscaped Area: 3,029SF (70%)
East Side Yard: 4,783 SF, Landscaped Area: 2,399SF (50%)

TREE OPTIONS NOTE

Landscape trees symbol are conceptual and each symbol is provided with two potential species. The final selection is to be reviewed and approved in the permitting phase.

The images, illustrations, drawings, and statements (“information”) contained herein are based upon a preliminary review of the entitlement requirements; thus are subject to change during the design review process. The information is provided merely to assist in how the site may eventually be developed. Consequently, there is no guarantee that the improvements depicted will be built, or if built, will be of the same type, material, size, appearance, or use as presented.

PLANTING NOTES

1. All landscape planting improvements shall follow the City of Los Angeles guidelines, and County of Los Angeles Guidelines.
2. The selection of plant material is based on cultural, aesthetic, water efficiency, and maintenance considerations.
3. All planting areas shall be prepared with appropriate soil amendments, fertilizers, and appropriate supplements based upon a soils report from a sample taken from the project site.
4. Groundcovers or bark mulch shall fill in between the shrubs to shield the soil from the sun, evapotranspiration, and runoff. all shrub beds shall be mulched to a 3” depth to help conserve water, lower the soil temperature, and reduce weed growth.
5. Trees and shrubs shall be allowed to grow to their natural forms.
6. Final landscape plans shall accurately show placement of trees, shrubs, and groundcovers.
7. All required landscape planting areas shall be maintained by owner per the city’s requirements.
8. The landscape architect shall be aware of utility, sewer, and storm drain easements and place plantings accordingly.

SHRUB AND GROUNDCOVER OPTIONS NOTE

The shrubs and groundcovers symbol is to identify the planting area. The options provided are suggestive species. The final selection and location are to be reviewed and approved by the Client and the City of Los Angeles in the permitting phase.

IRRIGATION NOTES

1. All Irrigation improvments shall follow water efficiency ordinance AB 1881, the City of Los Angeles Guidelines, and County of Los Angeles Guidelines.
2. An automatic irrigation system shall be installed to provide coverage for all planting areas shown on the plan. low volume equipment shall provide sufficient water for plant growth with a minimum water loss due to water run-off. irrigation systems shall use high quality automatic control valves, controllers, and other necessary irrigation equipment. all components shall be of non-corrosive material. all drip systems shall be adequately filtered and regulated per the manufacturer’s recommended design parameters.
3. The irrigation system shall utilize drip irrigation, high efficiency spray heads, and/or bubblers. the system controls shall be self adjusting via on site weather data and historical weather data.the system shall be designed for dedicated hydrozones based on plant water requirements and irrigation efficiency.
4. The design of the irrigation system shall include a water budget, a dedicated water meter, a weather based controller, and be designed by an epa watersense partner.
5. The irrigation products selected shall come from commercial grade irrigation manufacturing companies with outstanding technical support, including rainbird and hunter.
6. The irrigation components together shall provide an irrigation efficiency rating equal to or greater than 80%.
7. Estimated water usage calculations, schedules, and point of connection water pressure calculations shall be made available at the permit submittal phase. all calculations and factors shall be derived from California Assembly Bill 1881.

CASE SUMMARIES

Note: Information for case summaries is retrieved from the Planning Department's Plan Case Tracking System (PCTS) database.

Case Number:	CPC-2021-9522-DB-VCU-CU-SPR-HCA
Required Action(s):	DB-DENSITY BONUS
	VCU-VESTING CONDITIONAL USE
	CU-CONDITIONAL USE
	SPR-SITE PLAN REVIEW
	HCA-HOUSING CRISIS ACT
Project Descriptions(s):	PURSUANT TO LAMC SECTION 12.22 A.25(G)(2) AN ON-MENU DENSITY BONUS INCENTIVE FOR THE AVERAGING OF FAR ACROSS THE [Q]C2-1VL [Q]CM-1VL ZONES. PURSUANT TO LAMC SECTION 12.22 A.25(G)(3) TO PERMIT THE FOLLOWING: 1) AN FAR OF 2.8:1 IN LIEU OF THE OTHERWISE PERMITTED 1.5:1; 2) A MAX HEIGHT OF 80 FEET AND 5 STORIES IN LIEU OF 45 FEET AND 3 STORIES; 3) 25% OF THE REQUIRED OPEN SPACE TO BE LANDSCAPED PER 12.21 G AND TO WAIVE REQUIREMENTS OF ORD 172853, CONDITION B; 4) A WAIVER OF THE LANDSCAPE SETBACK REQUIREMENTS OF ORD 172853, CONDITION C; 5) RECREATION ROOMS TO COUNT FOR UP TO 25% OF THE REQUIRED OPEN SPACE IN LIEU OF THE 10% REQUIRED BY ORD 172853 CONDITION D; 6) WAIVER OF THE ARCHITECTURAL TREATMENT REQUIREMENT OF ORD 172853 CONDITION E. PURSUANT TO LAMC SECTION 16.05, A SITE PLAN REVIEW FOR A DEVELOPMENT THAT CREATES 50 OR MORE DWELLING UNITS. PURSUANT TO LAMC SECTION 12.24 T, A VESTING CONDITIONAL USE PERMIT FOR A MIXED-USE DEVELOPMENT WITH 354 DWELLING UNITS AND 1500 SQ FT OF COMMERCIAL SPACE. PURSUANT TO LAMC SECTION 12.24 A, A CONDITIONAL USE TO DEMONSTRATE COMPLIANCE WITH FOOTNOTE 9 OF THE WILMINGTON-HARBOR CITY COMMUNITY PLAN.
Case Number:	CPC-2018-6402-CPU
Required Action(s):	CPU-COMMUNITY PLAN UPDATE
Project Descriptions(s):	ADOPTION OF COMMUNITY PLAN POLICY DOCUMENT; GENERAL PLAN AMENDMENTS, AND ZONE CHANGES TO APPLY NEW ZONING CODE.
Case Number:	CPC-2007-5738-ICO
Required Action(s):	ICO-INTERIM CONTROL ORDINANCE
Project Descriptions(s):	INTERIM CONTROL ORDINANCE TO REGUALTE RESIDENTIAL-ONLY PROJECTS ON COMMERICAL PROPERTIES ADJACENT TO THE FOLLOWING STREETS: PACIFIC COAST HIGHWAY BETWEEN ALAMEDA STREET AND THE CITY BOUNDARY WITH LOMITA, ANAHEIM STREET BETWEEN ALAMEDA STREET AND THE 110 FREEWAY, AVALON BOULEVARD BETWEEN SANDISON STREET AND THE PORT OF LOS ANGELES IN THE WILMINGTON-HARBOR CITY COMMUNITY PLAN AREA .
Case Number:	CPC-2005-8252-CA
Required Action(s):	CA-CODE AMENDMENT
Project Descriptions(s):	AN ORDINANCE ESTABLISHING PERMANENT REGULATIONS IMPLEMENTING THE MELLO ACT IN THE COASTAL ZONE.
Case Number:	CPC-1997-50-CPU
Required Action(s):	CPU-COMMUNITY PLAN UPDATE
Project Descriptions(s):	COMMUNITY PLAN UPDATE FOR WILMINGTON-HARBOR CITY WHICH IDENTIFIES AND REDEFINES OUTDATED LAND USE ISSUES AND INCONSISTENT ZONING, REVIEWS POLICIES AND PROGRAMS, AS WELL AS REVISING AND UPDATING THE PLAN MAP AND TEXT
Case Number:	CPC-1986-833-GPC
Required Action(s):	GPC-GENERAL PLAN/ZONING CONSISTENCY (AB283)
Project Descriptions(s):	AB-283 PROGRAM - GENERAL PLAN/ZONE CONSISTENCY - WILMINGTON-HARBOR CITY-COMMUNITY WIDE ZONE AND GENERAL PLAN CHANGES TO BRINGTHE PLAN AND ZONING INTO CONSISTENCY. INCLUDES CHANGES OF HEIGHT AS NEEDED. REQUIRED BY COURT AS PART OF SETTLEMENT IN HILLSIDE FEDERATION LAWSUIT (TAYLOR-PARKER)
Case Number:	ENV-2021-9523-HES-PEIR
Required Action(s):	HES-HOUSING ELEMENT STREAMLINING
	PEIR-PROJECT ENVIRONMENTAL IMPACT REPORT

REFERRAL FORM

AFFORDABLE HOUSING REFERRAL FORM

This form is to serve as a referral to the Los Angeles City Planning's (LACP) Development Services Center (DSC) for Affordable Housing case filing purposes (in addition to the required Department of City Planning Application and any other necessary documentation); and to the City of Los Angeles Housing Department (LAHD), Department of Building and Safety (LADBS), or other City agency for project status and entitlement need purposes. All Applicants are required to provide a complete set of architectural plans at the time that this form is submitted for review. Any application submitted that is missing any required materials will be considered incomplete and will not be reviewed until all materials are submitted.

This form shall be completed by the Applicant and reviewed and signed by LACP DSC Housing Services Unit (HSU) Staff prior to filing an application for an entitlement, administrative review, or building permit. Any modifications to the content(s) of this form after its authorization by HSU Staff is prohibited. LACP reserves the right to require an updated Referral Form for the project if more than 180 days have transpired since the referral date, or as necessary, to reflect project modifications, policy changes, bus route changes, bus schedule changes, and/or amendments to the Los Angeles Municipal Code (LAMC), local laws, and State laws.

THIS SECTION TO BE COMPLETED BY HSU STAFF ONLY

Planning Staff Name & Title: Hamza Khan, Planning Assistant

Planning Staff Signature: Hamza Khan

I. PROPOSED PROJECT

1. PROJECT LOCATION/ZONING

Project Address(es): 1268, 1270, 1290, W PACIFIC COAST HWY / 25900 S FRAMPTON AVE

Assessor Parcel Number(s): 7411-019-016, 7411-019-020

Community Plan: Wilmington - Harbor City

Existing Zone: [Q]C2-1VL, [Q]CM-1VL

Land Use Designation: Community Commercial/Limited Manufacturing

Number of Parcels: 2

Site Size (sf): 161.450 (survey)

☐ **Specific Plan** ☐ **DRB/CDO** ☐ **HPOZ** ☐ **Redevelopment Project Area**

☒ **Enterprise Zone** ☒ **Q Condition/D Limitation (Ordinance No.):** ORD-172853-SA22B, ORD-172853-SA22A

☒ **Other Pertinent Zoning Information (specify):** ZI-1361 Mobile Home Park (Citywide Listing)

[1] *AB 1763 incentives were amended by AB 2345.*

CPC-2021-9522-DB-VCU-CU-SPR-HCA
AA-2019-5528-MPC

2. DETAILED DESCRIPTION OF PROPOSED PROJECT

Removal of all existing structures; New construction of a mixed use development including 1,500 SF commercial space, 354 rental dwelling units (including 42 Very Low Income units) and 575 parking spaces within an enclosed garage. The building is 7 stories/80 ft, with measuring 406,855 SF(requested FAR of 2.6:1). Entitlements include a Density Bonus with On and Off Menu Incentives, Site Plan Review, a CUP required to satisfy Footnote 9 of the Wilmington-Harbor CityCommunity Plan Map, and a Vesting CUP for a Mixed Use project.

3. DETAILED DESCRIPTION OF EXISTING SITE AND DEVELOPMENT

The property is currently improved with a mobile home park.

Existing Uses Dwelling Unit (DU) Square Footage (SF)	Existing No. of DUs or Non-Residential SF	Existing No. of DUs or Non-Residential SF to be Demolished	Proposed[2] No. of DUs or Non-Residential SF
Guest Rooms			
Studios			113
One Bedrooms			115
Two Bedrooms			111
Three Bedrooms			15
_____ Bedrooms			
Non-Residential SF			1,500 SF
Other	42 mobile homes/trailers	42 mobile homes/trailers	

[2] *Per AB 2556, replacement units shall be equivalent to the number of units and number of bedrooms of the existing development.*

4. APPLICATION TYPE

☐ Density Bonus (per LAMC Section 12.22 A.25 or Government Code Section 65915) with only **Base Incentives** filed in conjunction with another discretionary approval.

☒ Density Bonus with **On-Menu Incentives** (specify):

1) Averaging of Floor Area Ratio, Density, Parking, Open Space and permitting Vehicular Access
2) _____
3) _____
4) _____

☒ Density Bonus with **Off-Menu Incentives** (specify):

1) Increase FAR from 1.5:1 to 2.6:1
2) Height increase from 45' to 80'
3) _____
4) _____

☐ Density Bonus with **Waivers of Development Standards** (specify):

1) Allow 25% of the open space to be landscaped instead of the required 50%
2) Allow rec room to be counted 25% towards total open space instead of 10%
3) Waive the architectural treatment requirements of Condition 'E' of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B
4) Allow side yards of 8' instead of the required 10'

☐ Greater Downtown Housing Incentive Area per LAMC Section 12.22 A.29
☐ Affordable Housing per LAMC Section 11.5.11 (Measure JJJ)
☐ Public Benefit Project per LAMC Section 14.00 A.2
☐ General Plan Amendment per LAMC Section 11.5.6

Request: _____

☐ Zone/Height District Change per LAMC Section 12.32

Request: _____

☐ Conditional Use per LAMC Section 12.24 U.26
☒ Site Plan Review per LAMC Section 16.05
☐ Specific Plan Project Permit Compliance per LAMC Section 11.5.7 C
☐ Community Design Overlay per LAMC Section 13.08

☐ Coastal Development Permit per LAMC Section 12.20.2 or 12.20.2.1

☐ Tract or Parcel Map per LAMC Section 17.00 or 17.50

☒ Other (specify): Conditional Use Permit to satisfy Footnote 9 of the Wilmington-Harbor City Community Plan Map: "Properties designated for Community Commercial uses shall be used for commercial and parking uses, except developments combining residential and commercial uses shall be approved through a procedure similar to a conditional use." (see attached)

5. ENVIRONMENTAL REVIEW

☐ Project is Exempt[3]

☐ Not Yet Filed

☒ Filed (Case No.): ENV-2021-9523-EAF

6. HOUSING DEVELOPMENT PROJECT TYPE

CHECK ALL THAT APPLY:

☒ For Rent	☐ For Sale	☐ Mixed-Use Project	☐ Residential Hotel
☐ Extremely Low Income	☒ Very Low Income	☐ Low Income	☐ Moderate Income
☒ Market Rate	☐ Supportive Housing	☐ Senior	

☐ Special Needs (describe): _____

☐ Other Category (describe): _____

7. DENSITY CALCULATION

A. Base Density: Maximum density allowable per zoning

Lot size (including any ½ of alleys)[4] 55,540/105,910 SF (a)

Density allowed by Zone 400/800 SF of lot area per DU (b)

No. of DUs allowed by right (per LAMC) 138+132=270 DUs (c) [c = a/b, round down to whole number]
(Per LAMC 12.10-C.4 and LAMC 12.11-C.4)

Base Density 139+133=272 DUs (d) [d = a/b, round up to whole number]
(With LAMC 12.22-A.25(c)(7))

B. Maximum Allowable Density Bonus[5] 368 DUs (e) [e = dx1.35, round up to whole number]

[3] *Project may be exempt from CEQA review if it qualifies for a CEQA Exemption or is a Ministerial Project (aka, "By Right").*

[4] *If there is a related subdivision case, the lot area shall be calculated based on the site area after a dedication of land has been provided.*

[5] *Per AB 2345, 100% affordable housing developments may request an 80% density increase or unlimited density if the project site is within 0.5 miles of a Major Transit Stop.*

C. Proposed Project: Please indicate total number of DUs requested and break down by levels of affordability set by each category (California Department of Housing and Community Development [HCD] or United States Department of Housing and Urban Development [HUD]). For information on HCD and HUD levels of affordability please contact LAHD at hcidla.landuse@lacity.org.

	Total	HCD (State)	HUD (TCAC)
Market Rate 311	~~312~~	N/A	N/A
Managers Unit(s) - Market Rate	1	N/A	N/A
Extremely Low Income (ELI)			
Very Low Income (VLI)	42	41	1
Low Income (LI)			
Moderate Income			
Permanent Supportive Housing — ELI			
Permanent Supportive Housing — VLI			
Permanent Supportive Housing — LI			
Seniors — Market Rate		N/A	N/A
Other			
Other			
Other			
Other			

TOTAL No. of DUs Proposed 354 (f)

TOTAL No. of Affordable Housing DUs 42 (g)

No. of Density Bonus DUs 354 - 270 = 84 (h) [If f>c, then h=f-c; if f<c, then h= 0]

Percent of Density Bonus Requested 30 (i) {i = 100 x [(f/d) – 1]} (round down)

Percent of Affordable Set Aside 15% (j) [g/d, round down to a whole number]

8. SITE PLAN REVIEW CALCULATION

An application for Site Plan Review (SPR) may be required for projects that meet any of the SPR thresholds as outlined in LAMC Section 16.05 C, unless otherwise exempted per LAMC Section 16.05 D. For Density Bonus projects involving bonus units, please use the formula provided below to determine if the project meets the SPR threshold for unit count. If the project meets the threshold(s) but qualifies under the exemption criteria per Section 16.05 D, please confirm the exemption with LACP's DSC HSU.

270 units allowed by right (permitted by LAMC) – 42 existing units = 228 units

☒ **YES, SPR is required.**
Proposed by-right units minus existing units is equal to or greater than 50[6]

☐ **NO, SPR is not required.**
Base Density units minus existing units is less than 50

☐ **Exempt.**
Specify reason: _____

II. DENSITY BONUS (LAMC SECTION 12.22 A.25, ORDINANCE NO. 179,681)

9. PARKING OPTIONS

CHECK ALL THAT APPLY:

☐ **Automobile Parking Reductions via Bicycle Parking for Residential Uses[7]. Choose only one of the options, if applicable:**

- ☐ 10%
- ☐ 15% (*Only for residential projects or buildings located within 1,500 feet of a Major Transit Stop*)
- ☐ 30% (*If selecting the 30% parking reduction, the project will be ineligible for any of the Parking Options listed below*)

If selecting the 30% parking reduction, provide the following information:

Required Parking per LAMC: _____

Required Parking after the 30% reduction: _____

[6] *Site Plan Review may also be required if other characteristics of the project exceeds the thresholds listed in LAMC Section 16.05.*

[7] *Any project utilizing Parking Option 3 may not further reduce automobile parking via bicycle parking.*

☒ **Automobile Parking for Residential Uses (choose only one of the following options):**

Note: Any fractional numbers are rounded up.

☐ **Parking Option 1.** Based on # of bedrooms, inclusive of Handicapped and Guest parking.

	# of DUs	Spaces/DU	Parking Required	Parking Provided
0-1 Bedroom		1		
2-3 Bedrooms		1.5		
4 or more Bedrooms		2.5		
Stalls Reduced via Bike Parking				Subtract:
TOTALS				

☒ **Parking Option 2.** Reduced only for Restricted Affordable Units and up to 40% of required parking for Restricted Affordable Units may be compact stalls.

	# of DUs	Spaces/DU	Parking Required	Parking Provided
Market Rate (Including Senior Market Rate)	312	Per Code	494	494
Restricted Affordable	42	1	42	42
VLI/LI Senior or Disabled		0.5		
Restricted Affordable in Residential Hotel		2.5		
Stalls Reduced via Bike Parking				Subtract:
TOTALS	354			536

575 spaces provided per Plans

☐ **Parking Option 3 [AB 2345 (2020)].** Applies to two types of projects:

- 100% affordable housing developments consisting solely of affordable units, exclusive of a manager's unit(s), with an affordable housing cost to lower income families; or
- Mixed-income developments consisting of 11% VLI or 20% LI units.

☐ **100% Affordable Housing Developments.** There is no minimum parking requirement for any of the following 100% affordable housing developments described below. Check all that apply:

☐ A housing development located within 0.5 miles of a Major Transit Stop.

☐ A housing development for individuals who are 62 years of age or older with either paratransit service or unobstructed access, within 0.5 miles to a fixed bus route that operates at least eight times per day.

☐ **Special Needs Housing Development**, as defined in Section 51312 of the Health and Safety Code (H&SC), with either paratransit service or unobstructed access, within 0.5 miles to a fixed bus route that operates at least eight times per day.

☐ **Supportive Housing Development,** as defined in Section 50675.14 of the H&SC.

☐ **Mixed-Income Developments** consisting of 11% VLI or 20% LI units.

	Spaces/Unit	Parking Required	Parking Provided
Located within 0.5 miles of Major Transit Stop with unobstructed access to project	0.5		

Major Transit Stop *is defined as a site containing an existing rail or bus rapid transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods. It also includes major transit stops that are included in the applicable regional transportation plan.*

Bus Rapid Transit *is defined as public mass transit service provided by a public agency or by a public-private partnership that includes all of the following features:*

1) Full-time dedicated bus lanes or operation in a separate right-of-way dedicated for public transportation with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.

2) Transit signal priority.

3) All-door boarding.

4) Fare collection system that promotes efficiency.

5) Defined stations.

10. INCENTIVES

A. Qualification for Incentives

Below is the minimum Required Restricted Affordable Housing Units, calculated as a percentage of the base density allowed on the date of the application. Check only one:

Incentives	% Very Low Income	% Low Income	% Moderate Income
One	☐ 5% to <10%	☐ 10% to <20%	☐ 10% to <20%
Two	☐ 10% to <15%	☐ 20% to <30%	☐ 20% to <30%
Three	☒ 15% or greater	☐ 30% or greater	☐ 30% or greater

☐ **100% Affordable Housing Developments may request up to four (4) incentives and one (1) Waiver of Development Standard.** Check this box if this applies to the project.

B. Project Zoning Compliance & Incentives (Only for projects requesting a Density Bonus with Incentives/Waivers)

	Permitted w/o Incentives	Proposed per Incentives	On-Menu	Off-Menu	
☒ Yard/Setback (each yard counts as one incentive)					
☐ Front (1)			☐	☐	
☐ Front (2)			☐	☐	
☒ Side (1)	10'	8'	☐	☒	Waiver
☒ Side (2)	10'	8'	☐	☒	Waiver
☐ Rear			☐	☐	
☐ Lot Coverage			☐	☐	
☐ Lot Width			☐	☐	
☒ Floor Area Ratio[8]	1.5 (C2) / 1.5 (CM)	2.6:1	☐	☒	
☒ Height/Stories[9]	45 ft / 3 stories	80 ft / 7 stories	☐	☒	
☐ Overall Height			☐	☐	
☐ Transitional Height(s)			☐	☐	
☒ Open Space	40,900 s.f	40,990 s.f	☐	☒	Waiver
☐ Density Calculation			☐	☐	

☒ Averaging (all count as one incentive — check all that are needed)

- ☒ FAR (On-Menu Incentive)
- ☒ Density
- ☒ Parking
- ☒ Open Space
- ☒ Vehicular Access

☐ Other Off-Menu Incentives (specify): _____

☒ Waiver of Development Standards (specify): SEE ATTACHED LIST

SEE ATTACHED LIST

☐ 100% Affordable Housing Development shall receive a height increase of three additional stories up to 33 additional feet. Check the box if this applies to your project.

TOTAL No. of Incentives Requested: **On-Menu** 1 **Off-Menu** 2

TOTAL No. of Waivers Requested: 5 (see attached list)

[8] *See LAMC Section 12.22 A.25(f)(4) for additional requirements.*

[9] *See LAMC Section 12.22 A.25(f)(5) for additional requirements.*

11. COVENANT

All Density Bonus projects are required to prepare and record an Affordability Covenant to the satisfaction of the LAHD's Occupancy Monitoring Unit **before** a building permit can be issued. For more information, please contact the LAHD at hcidla.landuse@lacity.org.

III. GREATER DOWNTOWN HOUSING INCENTIVE AREA (LAMC SEC. 12.22 A.29, ORDINANCE NO. 179,076)

12. GREATER DOWNTOWN HOUSING INCENTIVE AREA (GDHIA)

A. Eligibility for Floor Area Bonus

NOTE: The affordability levels required are set by the HUD/TCAC. For information on HCD and HUD levels of affordability please contact the LAHD at hcidla.landuse@lacity.org.

- ☐ 5% of the total number of DUs provided for VLI households; and
- ☐ One of the following shall be provided:
  - ☐ 10% of the total number of DUs for LI households; or
  - ☐ 15% of the total number of DUs for Moderate Income households; or
  - ☐ 20% of the total number of DUs for Workforce Income households, and
- ☐ Any DU or Guest Room occupied by a household earning less than 50% of the Area Median Income (AMI) that is demolished or otherwise eliminated shall be replaced on a one-for-one basis within the Community Plan area in which it is located

B. Incentives

NOTE: Must meet all three (3) eligibility requirements from 12.A above and provide a Covenant & Agreement (See #11).

CHECK ALL THAT APPLY:

- ☐ A 35% increase in total floor area
- ☐ Open Space requirement pursuant to LAMC Section 12.21 G reduced by one-half, provided that a fee equivalent to amount of the relevant park fee, pursuant to LAMC Section 19.17, shall be paid for all dwelling units. See LAMC Section 12.29 A.29(c) for exceptions
- ☐ No parking required for units for households earning less than 50% AMI
- ☐ No more than one parking space required for each dwelling unit

C. Additional Incentives to Produce Housing in the GDHIA

- ☐ No yard requirements except as required by the Urban Design Standards and Guidelines
- ☐ Buildable area shall be the same as the lot area (for the purpose of calculating buildable area for residential and mixed-use)

☐ Maximum number of dwelling units or guest rooms permitted shall not be limited by the lot area provisions, as long as the total floor area utilized by guest rooms does not exceed the total floor area utilized by dwelling units

☐ No prescribed percentage of the required open space that must be provided as either common open space or private open space

IV. MEASURE JJJ[10] (LAMC Sec. 11.5.11, Ordinance No. 184, 745)

13. AFFORDABLE REQUIREMENTS

A certain percentage of affordable units is required based on the total number of units in the project. **Fill out either A or B below:**

A. Rental Projects

☐ No less than the affordability percentage corresponding to the level of density increase requested or allowed:

☐ _____ % VLI **OR** ☐ _____ % LI

☐ For projects requesting a General Plan Amendment, Zone Change, and/or Height District Change that results in an increased allowable density greater than 35%:

☐ 5% ELI **AND** ☐ 6% VLI **OR** ☐ 15% LI

☐ For projects requesting a General Plan Amendment, Zone Change, and/or Height District Change that results in an increased allowable density greater than 35%:

☐ 5% ELI **AND** ☐ 11% VLI **OR** ☐ 20% LI

Required Number of Affordable Units

ELI _____ VLI _____ LI _____

B. For Sale Projects

☐ No less than the affordability percentage corresponding to the level of density increase requested or allowed:

☐ _____% VLI **OR** ☐ _____% LI **OR** ☐ _____% Moderate Income

☐ For projects requesting a General Plan Amendment, Zone Change, and/or Height District Change that results in an increased allowable density greater than 35% or allows a residential use where not previously allowed:

☐ 11% VLI **OR** ☐ 20% LI **OR** ☐ 40% Moderate Income

Required Number of Affordable Units

VLI _____ LI _____ Moderate Income _____

[10] *All fractional amounts in Sections 13 and 14 shall be rounded up to the next whole number.*

14. ALTERNATIVE COMPLIANCE OPTIONS

In lieu of providing the affordable units on site, there are three (3) other options available to comply with Measure JJJ Affordable Requirements. Select one, if applicable; otherwise leave this section blank.

A. Off-Site Construction – Construction of affordable units at the following rate:

- ☐ Within 0.5 miles of the outer edge of the Project, Affordable Units in Section 13 x 1.0
- ☐ Within 2 miles of the outer edge of the Project, Affordable Units in Section 13 x 1.25
- ☐ Within 3 miles of the outer edge of the Project, Affordable Units in Section 13 x 1.5

Updated Required Number of Affordable Units

ELI _____ VLI _____ LI _____ Moderate Income _____

B. Off-Site Acquisition – Acquisition of property that will provide affordable units at the following rate:

- ☐ Within 0.5 miles of the outer edge of the Project, Affordable Units in Section 13 x 1.0
- ☐ Within 1 mile of the outer edge of the Project, Affordable Units in Section 13 x 1.25
- ☐ Within 2 miles of the outer edge of the Project, Affordable Units in Section 13 x 1.5

Updated Required Number of Affordable Units

ELI _____ VLI _____ LI _____ Moderate Income _____

C. In-Lieu Fee – From the Affordability Gaps Study published by the Los Angeles City Planning

Total In-Lieu Fee _____ (Note: Final fee TBD if/when the project is approved)

15. DEVELOPER INCENTIVES

Please describe up to a maximum of three (3) incentives:

1) _____

_____

2) _____

_____

3) _____

_____

Disclaimer: This review is based on the information and plans provided by the applicant at the time of submittal of this form. Applicants are advised to verify any zoning issues such as height, parking, setback, and any other applicable zoning requirements with LADBS.

- Pursuant to LAMC Section 12.22 A.25, a Density Bonus Review for a new residential project with 354 dwelling units providing 15% of the base density for Very Low-Income Households, requesting the following incentives and waivers:
    - Pursuant to **LAMC Section 12.22 A.25(g)(2),** an **On-Menu Incentive** to permit the Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access across the [Q]C2-1VL and [Q]CM-1VL zones;
    - Pursuant to **LAMC Section 12.22 A.25(g)(3),** an **Off-Menu Incentive** to permit a Floor Area Ratio of 2.6:1 in lieu of the otherwise permitted FAR of 1.5:1 in the [Q]C2-1VL and [Q]CM-1VL zones (and per GP Footnotes 8, 10)[1];
    - Pursuant to **LAMC Section 12.22 A.25(g)(3),** an **Off-Menu Incentive** to permit a total height of 80 feet and 5 stories for a mixed-use building (and seven stories for the parking garage) in lieu of the otherwise permitted height of 45 feet and 3 stories permitted for a mixed-use building in the [Q]C2-1VL and [Q]CM-1VL zones (and per GP Footnotes 8, 10);
    - Pursuant to **LAMC Section 12.22 A.25(g)(3),** a **Waiver of Development Standards** to permit 25 percent of the required open space to be landscaped per LAMC 12.21-G and to waive the requirements of Condition B[2] of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B. The applicant's request is a "Waiver or Modification of any Development Standard(s) Not on the Menu."
    - Pursuant to **LAMC Section 12.22 A.25(g)(3),** a **Waiver of Development Standards** to permit recreation rooms to count for up to 25 percent of the required open space per LAMC 12.21-G and to adjust the requirements of Condition D[3] of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B. In lieu of permitting the recreation rooms to be counted for 10 percent of the required open space, the applicant is asking that the recreation rooms be counted for 25 percent of the required open space.
    - Pursuant to **LAMC Section 12.22 A.25(g)(3),** a **Waiver of Development Standards** to waive the "architectural treatment" requirements of Condition E[4] of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B. The architect's design calls for a flat roof.

---

[1] 8. Maximum height of 3 stories and 45 feet from the adjacent grade and maximum 3:1 floor area ratio.
10. Maximum height of 3 stories and 45 feet from adjacent grade and maximum 1.5:1 floor area ratio, except unlimited height and maximum 1.5:1 floor area ratio shall be permitted for oil refineries.

[2] C. Required Yard Setbakcs. Fifty (50) percent of the required setbacks shall be appropriately landscaped to the satisfaction of the City Planning Department in accordance with a landscape plan prepared by a State licensed landscape architect, licensed architect, or landscape contractor.

[3] D. Recreation Rooms Recreation rooms may be included as open space, but may not count for more than ten (10) percent of the total required open space area.

[4] E. Architectural Treatments Projects must also incorporate multi-level pitched roof with a minimum pitch of 3 to 12, use 2 or more exterior wall finishes such as stucco, wood siding or paneling, or brick, and require a change in plane of at least 4 inches in exterior wall surfaces which extends more than 15 feet horizontally and vertically so as

- Pursuant to LAMC Section 12.22 A.25(g)(3), a Waiver of Development Standards to allow a eight (8)-foot side yard in lieu of the required ten (10)-foot side yard along Frampton Avenue.
- Pursuant to LAMC Section 12.22 A.25(g)(3), a Waiver of Development Standards to allow an interior side yard setback of eight (8) feet in lieu of the required ten (10)-foot setback.

to provide facade articulation using porches, balconies, window treatments, recessed windows, different exterior materials, material (not planted), curves, and openings.

REFERRAL FORMS:

Preliminary Zoning Assessment Referral

Department of City Planning (DCP) and Department of Building & Safety (DBS)

This form is to serve as an inter-agency referral for City Planning applications associated with a Housing Development Project. As a part of a City Planning application, this completed form shall be accompanied by architectural plans stamped and signed by DBS Plan Check staff following the completion of a zoning Plan Check. Review of the referral form by City staff is intended to identify and determine compliance with City zoning and land use requirements necessary to achieve the proposed project and to ascertain if any zoning issues or necessary approvals are associated with the project and site that need to be resolved through a discretionary City Planning action.

INSTRUCTIONS: Preliminary Zoning Assessment Referral

1. **Complete the Preliminary Zoning Assessment:**
   a. **Section I: Project Information: This section is to be completed by a member of the project team and verified by City staff.**

   b. **Section II: Housing Development Project Determination**: Projects proposing the development of two or more units are screened to determine whether a project is a Housing Development Project and therefore qualifies for completion of Section III of this form and verified plans through a zoning Plan Check with DBS. The determination on Section II will be made by City Planning staff in the PARP unit prior to completion of a zoning Plan Check with DBS. A set of architectural plans, including a site plan and floor plans, are required to complete the determination.

   c. **Section III: Zoning Plan Check:** Applicants will submit for a zoning Plan Check with DBS to ascertain if any zoning issues or necessary approvals associated with the project and site need to be resolved through a discretionary City Planning action. This completed form shall be accompanied by architectural plans stamped and signed by a DBS Plan Check staff following the completion of a zoning Plan Check. DBS Plan Check staff will sign Section III of the Preliminary Zoning Assessment Form once the zoning plan check verifications are complete.

2. File application with City Planning: Following the completion of the Preliminary Zoning Assessment Referral Form and receipt of architectural plans stamped and signed by DBS Plan Check staff, a City Planning application may be filed. Filing appointments may be made online: **https://planning.lacity.org/development-services/appointment/form**.

3. **Contact Information:**

PLAN CHECK APPROVED FOR ZONING
By: Rodolfo Arias
Date: 04/26/2022
Application No. 22010 - 10000 - 06026

[1] All fields in this form must be completed. If an item is not applicable, write N/A.
2 Must be verified by City Planning, Housing Services Unit
[3] An applicant is a person with a lasting interest in the completed project such as the property owner or a lessee/user of a project. An applicant is not someone filing a case on behalf of a client (i.e. usually not the agent/representative)

Section II. Housing Development Project determination - To be completed by DCP staff

If a project meets any one (1) of the following categories, then the project is a Housing Development Project. Therefore, completion of Section III of this form and receipt of architectural plans stamped and signed by DBS Plan Check staff would be required for filing a City Planning application. If none of the criteria below applies, then the project is not a Housing Development Project and is not required to continue beyond this section in the Preliminary Zoning Assessment process prior to filing a City Planning application.

Housing Development Project categories (to be determined by DCP staff)	Determination: Yes or No
(a) A residential-only housing development project that creates two units or more	No
(b) A mixed-use development consisting of residential and nonresidential uses with at least two-thirds of the Building Area designated for residential use[1]	Yes
(c) Transitional Housing[2]	No
(d) Supportive Housing[3]	No

NOTES: 1268 Pacific Coast
Plans sent via Email on 8/13/21.

DENSITY BONUS

BASE DENSITY:	272 UNITS
DENSITY BONUS UNITS (30%)	82 UNTIS
AFFORDABLE UNITS (VLI):	42 UNITS (11.8% OF TOTAL UNITS)

INCENTIVES:

a. An On-Menu Incentive to permit the Averaging of Floor Area Ratio, Density, Parking, Open Space, and permitting Vehicular Access per LAMC Section 12.22.A25 (g)(2).
b. An Off-Menu Incentive to permit a Floor Area Ratio of 2.6:1 in lieu of the permitted 1.5:1 FAR per LAMC Section 12.22.A5(g)(3).
c. An Off-Menu Incentive to permit a total height of 80-ft and a mixed-use building with 5-story residential buildings and a 7-story parking garage in lieu of the permitted height of 45-ft and 3 stories.

WAIVERS

d. A waiver of (Q) Condition B of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B to permit 25 percent of the required open space to be landscaped per LAMC 12.21.G instead of the 50% required by the Q Condition.
e. A waiver of (Q) Condition D of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B to permit recreation rooms to count for up to 25% of the required open space per LAMC 12.21.G instead of the 10% allowed by the Q Condition.
f. A waiver of (Q) Condition E of Ordinance 172,853-SA22A and Ordinance 172,853-SA22B "Architectural Treatment" requiring multi-level pitched roof with a minimum pitch of 3 to 12.
g. Pursuant to LAMC Section 12.22.A25(g)(3), a waiver of Development Standards to reduce the side yard setback along Frampton Ave. from the required 10-ft to 8-ft.
h. Pursuant to LAMC Section 12.22.A25(g)(3), a waiver of Development Standards to reduce the interior yard setback from the required 10-ft to 8-ft.

ALTA/NSPS LAND TITLE SURVEY

TITLE INFORMATION:

THE TITLE INFORMATION SHOWN HEREON IS PER UPDATED AND AMENDED PRELIMINARY REPORT NO. 10391068 DATED AUGUST 5, 2018, AS PREPARED BY PROVIDENT TITLE COMPANY, EL SEGUNDO, CALIFORNIA. [TITLE OFFICER: STEVE POSS / JULIE SCHALL (800)794-8094] NO RESPONSIBILITY OF CONTENT, COMPLETENESS OR ACCURACY OF SAID COMMITMENT IS ASSUMED BY THE SURVEYOR.

ADDRESS:

1280 PACIFIC COAST HIGHWAY, HARBOR CITY (LOS ANGELES), CALIFORNIA

OWNERSHIP:

TITLE TO SAID ESTATE OR INTEREST IN THE LAND HEREINAFTER DESCRIBED OR REFERRED TO COVERED BY THIS REPORT IS: FEE

TITLE TO SAID ESTATE OR INTEREST AT THE DATE HEREOF IS VESTED IN:
1280 PACIFIC COAST HIGHWAY LLC, A CALIFORNIA LIMITED LIABILITY COMPANY

LEGAL DESCRIPTION:

THE SOUTH 655 FEET OF THE WEST 244.35 FEET (DISTANCES MEASURED TO STREET CENTERS) OF LOT 10 OF PECKS SUBDIVISION OF LOT "J" AND A PORTION OF LOT "H" OF THE PARTITION OF THE RANCHO LOS PALOS VERDES, IN THE CITY OF LOS ANGELES, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED NO. 141, FILED OCTOBER 30, 1897, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

EXCEPTING THEREFROM THAT PORTION THEREOF INCLUDED IN A 50 FOOT ROAD ADJOINING SAID LOT ON THE WEST AND A 40 FOOT ROAD, ADJOINING SAID LOT ON THE SOUTH AS SHOWN ON SAID MAP.

ALSO EXCEPTING THEREFROM THAT PORTION THEREOF, IF ANY, INCLUDED WITHIN THE BOUNDARIES OF A PARCEL OF LAND DESCRIBED IN A DEED TO CALIFORNIA PACIFIC RAILWAY COMPANY, RECORDED IN BOOK 1835 PAGE 294 OF DEEDS.

ASSESSOR'S PARCEL NUMBER: 7411-019-016

TITLE EXCEPTIONS

A - C TAXES

1. WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT SHOWN BY THE PUBLIC RECORDS.

2. ANY AND ALL OFFERS OF DEDICATION, CONDITIONS, RESTRICTIONS, EASEMENTS, FENCE LINE/BOUNDARY DISCREPANCIES, NOTES AND/OR PROVISIONS SHOWN OR DISCLOSED BY THE FILED OR RECORDED MAP REFERRED TO IN THE LEGAL DESCRIPTION.

(3) AN EASEMENT FOR RIGHT OF WAY AND STREET PURPOSES RECORDED IN BOOK 12550, PAGE 9 OF OFFICIAL RECORDS

(DOCUMENT AFFECTS - PLOTTED HEREON)

(4) AN EASEMENT FOR PIPELINE PURPOSES, RECORDED IN BOOK 2705, PAGE 379 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - PLOTTED HEREON)

(5) AN EASEMENT FOR STREET PURPOSES, RECORDED IN BOOK 15782, PAGE 363 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - PLOTTED HEREON)

6. AN EASEMENT FOR ELECTRICAL DISTRIBUTION EQUIPMENT AND FACILITIES, RECORDED OCTOBER 24, 1980 AS INSTRUMENT NO. 80-1065106 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - BLANKET EASEMENT)

7. THE PROVISIONS OF AN INSTRUMENT ENTITLED "NOTICE OF TEMPORARY VACANT AND SECURED RENTAL UNITS", RECORDED FEBRUARY 1, 2016 AS INSTRUMENT NO. 16-114968 OF OFFICIAL RECORDS.

(DOCUMENT AFFECTS - NOTHING TO PLOT)

8. - 10. TITLE COMPANY NOTES

BASIS OF BEARINGS:

NORTH AMERICAN DATUM OF 1983 (NAD-83), SHOWN IN TERMS OF THE CALIFORNIA COORDINATE SYSTEM OF 1983 (CCS-83), ZONE V (2017.50 EPOCH DATE) AS DERIVED BY POSITIONS PUBLISHED BY CSRC. ALL COORDINATE VALUES WERE SCALED TO GROUND BY APPLYING THE COMPUTED COMBINATION FACTOR FOR ITI POINT 10013 AND HOLDING THE COMPUTED POSITION ON THIS POINT. INVERSES BETWEEN PROJECT COORDINATES WILL PRODUCE GROUND DISTANCES. TO OBTAIN GRID DISTANCES MULTIPLY GROUND DISTANCES BY 1.0000654672.

FOUND MONUMENT NOTES

● INDICATES FOUND MONUMENT AS NOTED BELOW:

10001 FOUND HEX BAR IN SSM PER PWFB 0319/1540

10002 FOUND HEX BAR IN SSM PER FB 033-197-136

10003 FOUND LEAD AND TACK PER R1

10004 FOUND 3.5" BRASS DISK IN WELL MONUMENT PER R1

10005 FOUND HEX BAR IN SSM PER FB 033-197-129

10006 FOUND 2" IRON PIPE WITH TAG LS 6654 PER R2

10013 FOUND MAG NAIL NO REF, FITS TIES PER PWFB 319/1540

RECORD DATA NOTE

R1 INDICATES RECORD DATA PER PARCEL MAP LA NO. 2000-3036 P.M.B. 309/53-55.

R2 INDICATES RECORD DATA PER TRACT NO. 53789 M.B. 1297/48-50.

R3 INDICATES RECORD DATA PER TRACT NO. 16447 M.B. 405/5-6.

ALTA/NSPS TABLE A ITEMS:

ITEM 2 1280 PACIFIC COAST HIGHWAY, HARBOR CITY (LOS ANGELES), CALIFORNIA

ITEM 3 THE LAND SHOWN ON THIS SURVEY LIES WITHIN ZONE "X" (UNSHADED) BEING DESCRIBED AS AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN PER FLOOD INSURANCE RATE MAP (FIRM) COMMUNITY PANEL NUMBER 06037C1945F, EFFECTIVE DATE: SEPTEMBER 26, 2008.

ITEM 4 THE GROSS LAND AREA IS: 139,155 S.F. ± / 3.194 ACRES ±
THE NET LAND AREA (EXCLUDING THE LAND CONTAINED WITHIN ITEM (3)): 125,733 S.F.± / 2.886 ACRES ±

ITEM 5 THE CONTOURS SHOWN HEREON ARE BASED ON THE FOLLOWING BENCHMARK:

GPS PROCESSING AND NETWORK ADJUSTMENT WAS CONTROLLED BY USING THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) 2014 ADJUSTMENT, OASCD ON THE CITY OF LOS ANGELES BENCH MARKS BENCH MARK: 21-05770 ELEVATION=43.729 FEET.

ITEM 6(a) PER THE CITY OF LOS ANGELES ZIMAS WEB SITE, THE ZONING IS DEFINED AS: COMMUNITY COMMERCIAL AND LIMITED MANUFACTURING.

ITEM 8 SEE THE SURVEY PLAT FOR ANY SUBSTANTIA.. FEATURES OBSERVED IN THE PROCESS OF CONDUCTING THE SURVEY.

ITEM 13 SEE THE SURVEY PLAT FOR THE NAMES OF ADJOINING OWNERS.

ITEM 14 SEE THE SURVEY PLAT FOR THE DISTANCE TO THE NEAREST INTERSECTION.

ITEM 15 TOPOGRAPHY SHOWN HEREON WAS PROVIDED BY: ROBERT J LUNG & ASSOCIATES
DATE OF PHOTOGRAPHY: 8-6-18
CONTOUR INTERVAL: 1'

AND SUPPLEMENTED BY A FIELD SURVEY PERFORMED AUGUST 6, 2018

ITEM 16 THERE ISN'T ANY OBSERVABLE EVIDENCE OF EARTH MOVING WORK OR DEMOLITION OVER ANY PORTION OF THE PROPERTY WITHIN RECENT MONTHS.

ITEM 17 THERE ISN'T ANY OBSERVABLE EVIDENCE OF RIGHT OF WAY CHANGES. THERE IS NO EVIDENCE OF STREET OR SIDEWALK CONSTRUCTION OR REPAIRS.

ITEM 20 PROFESSIONAL LIABILITY INSURANCE IS IN EFFECT THROUGHOUT THE CONTRACT TERM.

SURVEYORS NOTES:

1. NO CEMETERIES WERE OBSERVED WHILE CONDUCTING THE FIELD WORK FOR THIS SURVEY.

SURVEYOR'S CERTIFICATE:

TO: 1280 PACIFIC COAST HIGHWAY LLC, A CALIFORNIA LIMITED LIABILITY COMPANY; RED OAK INVESTMENTS, LLC AND PROVIDENT TITLE COMPANY

THIS IS TO CERTIFY THAT THIS MAP OR PLAT AND THE SURVEY ON WHICH IT IS BASED WERE MADE IN ACCORDANCE WITH 2016 MINIMUM STANDARD DETAIL REQUIREMENTS FOR ALTA/NSPS LAND TITLE SURVEYS, JOINTLY ESTABLISHED AND ADOPTED BY ALTA AND NSPS AND INCLUDES ITEMS 2, 3, 4, 5, 6(a), 8, 13, 14, 15, 16, 17 AND 20 OF TABLE A THEREOF.

THE FIELD WORK WAS COMPLETED ON THE GROUND ON 07/20/2018.

DATE: December 19, 2023

TO: ROI 1280 LLC, a California Limited Liability Company, Owner
Joel Miller, Representative

FROM: Doris Kwok, Senior Management Analyst I
Los Angeles Housing Department

SUBJECT: **Housing Crisis Act of 2019 (SB 8, DB)**
Replacement Unit Determination (Amendment)
RE: 1268 – 1290 West Pacific Coast Highway, Harbor City, CA 90710
25900 South Frampton Avenue, Harbor City, CA 90710

Based on the SB 8 Application for a Replacement Unit Determination (RUD) submitted by Joel Miller (Representative) on behalf of ROI 1280 LLC, a California Limited Liability Company (Owner) for the property located at 1268 – 1290 W. Pacific Coast Hwy. (APN 7411-019-016 and APN 7411-019-020) (Property) the Los Angeles Housing Department (LAHD) has made the following determination in regards to the above-referenced application. Ninety-One (91) units (spaces) exists/existed on the property within the last five (5) years. Fifty-five (55) Rent Stabilization Ordinance (RSO) units are subject to replacement pursuant to the requirements of California Government Code Section 66300, as "protected units" with thirty-seven (37) of the fifty-five (55) units, subject to replacement as affordable "protected units".

PROJECT SITE REQUIREMENTS:

The Housing Crisis Act of 2019, as amended by SB 8 (California Government Code Section 66300 et seq.), prohibits the approval of any proposed housing development project ("Project") on a site ("Property") that will require demolition of existing dwelling units or occupied or vacant "Protected Units" unless the Project replaces those units as specified below. The replacement requirements below apply to the following projects:

- Discretionary Housing Development Projects that receive a final approval from Los Angeles City Planning (LACP) on or after January 1, 2022,
- Ministerial On-Menu Density Bonus, SB 35 and AB 2162 Housing Development Projects that submit an application to LACP on or after January 1, 2022, and
- Ministerial Housing Development Projects that submit a complete set of plans to the Los Angeles Department of Building & Safety (LADBS) for Plan Check and permit on or after January 1, 2022.

Replacement of Existing Dwelling Units
The Project shall provide at least as many residential dwelling units as the greatest number of residential dwelling units that existed on the Property within the past 5 years.

Replacement of Existing or Demolished Protected Units
The Project must also replace all existing or demolished "Protected Units". Protected Units are those residential dwelling units on the Property that are, or were, within the 5 years prior to the owner's application for a SB 8 Replacement Unit Determination (SB 8 RUD): **(1)** subject to a recorded covenant, ordinance, or law that restricts rents to levels affordable to persons and families of lower or very low income, **(2)** subject to any form of rent or price control through a public entity's valid exercise of its police power within the 5 past years **(3)** occupied by lower or very low income households (an affordable Protected Unit), or **(4)** that were withdrawn from rent or lease per the Ellis Act, within the past 10 years.

Whether a unit qualifies as an affordable Protected Unit, is primarily measured by the INCOME level of the occupants (i.e. W-2 forms, tax return, pay stubs, etc.). The Los Angeles Housing Department (LAHD) will send requests for information to each occupant of the existing project. Requests for information can take two (2) or more weeks to be returned. It is the owner's responsibility to work with the occupants to ensure that the requested information is timely produced.

- ***In the absence of occupant income documentation***: Affordability will default to the percentage of extremely low, very low or low income renters in the jurisdiction as shown in the latest HUD Comprehensive Housing Affordability Strategy (CHAS) database, which as of October 1, 2021, is at 28% extremely low income, 18% very low income and 18% low income for Transit Oriented Communities (TOC) projects and 46% very low income and 18% low income for Density Bonus projects. In the absence of specific entitlements, the affordability will default to 46% very low income and 18% low income. The remaining 36% of the units are presumed above-low income. All replacement calculations resulting in fractional units shall be rounded up to the next whole number.

Replacement of Protected Units Subject to the Rent Stabilization Ordinance (RSO), Last Occupied by Persons or Families at Moderate Income or Above

The City has the option to require that the Project provide: **(1)** replacement units affordable to low income households for a period of 55 years (rental units subject to a recorded covenant), OR **(2)** require the units to be replaced in compliance with the RSO.

Relocation, Right to Return, Right to Remain:

All occupants of Protected Units (as defined in California Government Code Section 66300(d)(2)(F)(vi)) being displaced by the Project have the right to remain in their units until six (6) months before the start of construction activities with proper notice subject to Chapter 16 (Relocation Assistance) of Division 7, Title I of the California Government Code ("Chapter 16"). However, all **Lower Income Household** (as defined in California Health and Safety Code Section 50079.5) occupants of Protected Units are **also** entitled to: **(a)** Relocation benefits also subject to Chapter 16, and **(b)** the right of first refusal ("Right to Return") to a comparable unit (same bedroom type) at the completed Project. If at the time of lease up or sale (if applicable) of a comparable unit, a returning occupant remains income eligible for an "affordable rent" (as defined in California Health and Safety Code Section 50053) or if for sale, an "affordable housing cost" (as defined in California Health and Safety Code Section 50052.5), owner must also provide the comparable unit at the "affordable rent" or "affordable housing cost", as applicable. This provision does not apply to: **(1)** a Project that consists of a Single Family Dwelling Unit on a site where a Single Family Dwelling unit is demolished, and **(2)** a Project that consists of 100% lower income units except Manager's Unit.

THE PROPOSED HOUSING DEVELOPMENT PROJECT:

Per the statement received by LAHD on May 17, 2022, the Owner plans to remove all existing structures in order to construct a new three hundred and fifty-four (354)-unit mixed use project on the Property pursuant to additional incentives from the Department of City Planning (DCP) under Density Bonus (DB) Guidelines.

PROPERTY STATUS (AKA THE "PROJECT SITE"):

Owner submitted an Application for a RUD for the Property on May 17, 2022, and later submitted an Application to amend the RUD on November 9, 2023. Owner submitted an Application for a RUD for the Property on May 17, 2022. In order to comply with the required **five (5)-year** lookback period, LAHD collected and reviewed data from May 2017 to May 2022.

Review of Documents:

Pursuant to the Grant Deed, the Owner acquired the Property on January 31, 2019 (APN 7411-019 -016) and May 1, 2019 (APN 7411-019-020).

Google Earth, Google Street View, and an Internet Search confirm that the Property contains a mobile park home and an adjacent parking lot. The Los Angeles Department of Building and Safety (LADBS) database indicates that the Owner has not applied for a Demolition Permit or a Building Permit Application.

Department of City Planning (ZIMAS), County Assessor Parcel Information (LUPAMS), DataTree database, Billing Information Management System (BIMS) database, and the Code, Compliance, and Rent Information System (CRIS) database, indicates the following use codes:

APN, Lot	Address(es)	Use Code
7411-019-016, Lot PT	1270 – 1290 W. Pacific Coast Hwy. 25900 S. Frampton Ave.	0900 - Residential - Manufactured Home Park
7411-019-020, Lot PT	1268 W. Pacific Coast Hwy.	3800 - Industrial - Parking Lot (Industrial Use)

REPLACEMENT UNIT DETERMINATION:

The Existing Residential Dwelling Units at the Property within the last five (5) years:

#	ADDRESS	BEDROOM TYPE	"PROTECTED?"	BASIS OF "PROTECTED" STATUS
1	1280 W. Pacific Coast Hwy. #A2	Vacant	Yes	RSO Unit

86	1280 W. Pacific Coast Hwy. #E17	1 Bedroom	Yes	RSO Unit
87	1280 W. Pacific Coast Hwy. #E18	Vacant	Yes	RSO Unit
88	1280 W. Pacific Coast Hwy. #E19	Vacant	Yes	RSO Unit
Total: 88 Units				

Per the Owner's Statement, there are currently a total of eighty-eight (88) available spaces on the property. On July 26, 2022, tenant letter packages were sent to all eighty-eight (88) spaces on the Property most commonly known as 1280 W. Pacific Coast Hwy. As of September 28, 2022, income verification documents were received for the following units: 1280 W. Pacific Coast Hwy #A4, 1280 W. Pacific Coast Hwy #A5, 1280 W. Pacific Coast Hwy #B8, and 1280 W. Pacific Coast Hwy #C17.

On September 20, 2022, the tenant's statement for 1280 W. Pacific Coast Hwy #A4 was received along with the requested Social Security Income (SSI) documents verifying income and residency at the address starting at least in 2017. Research and submitted documents show that there is a tenant residing in 1280 W. Pacific Coast Hwy #A4. After reviewing the documents, LAHD has determined that 1280 W. Pacific Coast Hwy #A4 is considered a Very Low Income affordable unit.

On August 30, 2022, the tenant's statement for 1280 W. Pacific Coast Hwy #A5 was received along with the requested Social Security Income (SSI) documents verifying income and residency at the address starting at least in 2017. Research and submitted documents show that there is a tenant residing in 1280 W. Pacific Coast Hwy #A5. After reviewing the documents, LAHD has determined that 1280 W. Pacific Coast Hwy #A5 is considered a Very Low Income affordable unit.

On September 22, 2022, the tenant's statement for 1280 W. Pacific Coast Hwy #B8 was received along with the requested Social Security Income (SSI) documents verifying income and residency at the address starting at least in 2017. Research and submitted documents show that there is a tenant residing in 1280 W. Pacific Coast Hwy #B8. After reviewing the documents, LAHD has determined that 1280 W. Pacific Coast Hwy #B8 is considered a Very Low Income affordable unit.

On September 12, 2022, the tenant's statement for 1280 W. Pacific Coast Hwy #C17 was received along with the requested Social Security Income (SSI) documents verifying income and residency at the address starting at least in 2017. Research and submitted documents show that there is a tenant residing in 1280 W. Pacific Coast Hwy #C17. After reviewing the documents, LAHD has determined that 1280 W. Pacific Coast Hwy #C17 is considered a Very Low Income affordable unit.

Pursuant to (SB 8), where incomes of existing or former tenants are unknown, the required percentage of affordability is determined by the percentage of extremely low, very low, and low income rents in the jurisdiction as shown in the HUD Comprehensive Housing Affordability Strategy (CHAS) database. At present, the Comprehensive Housing Affordability Strategy (CHAS) database shows 28% extremely low income, 18% very low income and 18% low income for Transit Oriented Communities (TOC) projects and 46% very low income and 18% low income for Density Bonus projects. The remaining 36% of the units are presumed above-low income. All replacement calculations resulting in fractional units shall be rounded up to the next whole number.

Per the Owner's Statement, the highest occupancy within the five (5)-year lookback period was fifty-five (55) spaces. This was verified by the rent rolls provided for 2017 through the present date. Therefore, the default CHAS rule of 64% affordable units will be applied to the fifty-five (55) space figure.

<table>
<tr><td colspan="3">Number of Existing Protected Units within five (5) years of Owner's application:</td><td>91</td></tr>
<tr><td colspan="3"><u>Highest number of occupied spaces within the five (5) years of the Owner's application:</u></td><td>55</td></tr>
<tr><td colspan="3">Number of Protected Units Ellised within the last (10) years:</td><td>0</td></tr>
<tr><td colspan="3">Number of Affordable Replacement Units required per CHAS:
<table>
<tr><td></td><td>Project using <u>TOC</u></td><td>Project using <u>DB</u> or <u>No Entitlements</u></td></tr>
<tr><td>51 Units x 64%</td><td>33 Units</td><td>33 Units</td></tr>
<tr><td>Extremely Low</td><td>15 Units</td><td>0 Units</td></tr>
</table></td><td>33</td></tr>
</table>

	Very Low	9 Units	24 Units		
	Low	9 Units	9 Units		
	Market Rate RSO Units	18 Units	18 Units		
Number of Affordable Replacement Units per tenant income verification (Very Low Income): Units #A4, #A5, #B8, #C17					4
Number of Unit(s) presumed to be above-lower income subject to replacement:					18

For Rental:

Income verification documents were provided for four (4) units at the Property. The units at 1280 W. Pacific Coast Hwy #A4, #A5, #B8, and #C17 were verified to be Very Low Income affordable units within the last five (5) years. Per income verification, four (4) units need to be replaced with equivalent type and restricted to Very Low Income Households.

Pursuant to CHAS, thirty-three (33) units need to be replaced with equivalent type. For TOC projects, the replacement requirements will consist of fifteen (15) units restricted to Extremely Low Income Households, nine (9) units to Very Low Income Households, and nine (9) units to Low Income Households. For DB projects and projects not requesting any entitlements, the replacement requirement will consist of twenty-four (24) units restricted to Very Low Income Households and nine (9) units restricted to Low Income Households. For the eighteen (18) remaining units presumed to have been occupied by an above-lower income person or household, as permitted by California Government Code §65915(c)(3)(C)(ii), the City has opted to require that those unit(s) be replaced in compliance with the City's Rent Stabilization Ordinance (RSO).

Vacancy/Occupancy of Units:

Per the Owner's Statement, forty-two (42) units were occupied at the time of the application, however, income documents were only provided for four (4) of the units.

Unless tenant income verification documents prove the remaining unit(s) was/were occupied by a lower income or below lower income household(s) at the time of application, the bedroom size of the existing units and the proportionality of the bedroom sizes of the new units, whichever is more restrictive will be considered to determine the bedroom types of the replacement units.

Please note that all the new units may be subject to RSO requirements unless the RSO is not applicable, or an RSO Exemption is filed and approved by the RSO Section. This determination is provisional and subject to verification by the RSO Section.

This RUD only applies if the proposed project is a rental project and NOT condominiums or units for sale. In the event the project changes to condominiums, the owner needs to request a RUD amendment to reflect 100% replacement of the units. This RUD will apply to TOC projects, DB projects and projects not requesting entitlements.

NOTE: This determination is provisional and is subject to verification by LAHD's Rent Division.

Submitting forged or false documents is a crime that may be punishable as a felony under state law (Cal. Penal Code 115). Documents submitted in connection with your application are subject to investigation. The use of any false or forged document may be grounds for revision to the replacement unit determination. If, following an investigation, the City determines that false or forged documents were used to exempt housing units from the replacement obligations required by law, the housing units may be deemed as affordable replacement units. Other applicable penalties may also be applied.

If you have any questions about this RUD, please contact Blake Bouligny at blake.bouligny@lacity.org.

FORM GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

Date: October 13, 2022

To: Mr. Vincent Bertoni, Director
Department of City Planning
Attn: Connie Chauv (City Planner)

for

From: Bertram Moklebust, Principal Civil Engineer
Permit Case Management Division
Bureau of Engineering

Subject: **Case No. CPC 2021-9522 (DB/VCU/CU/SPR/HCA): 1268-1290 West Pacific Coast Highway and 25900 South Frampton Avenue**

The following recommendations identifying the infrastructure deficiencies adjacent to the application site are submitted for your use for the approval of a Density Bonus, Vesting Conditional Use, Conditional Use, Site Plan Review and Housing Crisis Act adjoining the area involved:

1. Dedication Required:

   Pacific Coast Highway (Boulevard II) – A 2-foot wide, variable width and 5-foot wide strip of land along the property frontage to complete a 55-foot wide half right-of-way in accordance with Boulevard II of LA Mobility Plan 2035 and a 15-foot by 15-foot cut corner or 20-foot radius property line return at the intersection with Frampton Avenue.

   Frampton Avenue (Local Street) – A 5-foot wide strip of land along the property frontage to complete a 30-foot half right-of-way in accordance with Local Street standards of LA Mobility Plan 2035 and a 10-foot by 10-foot cut corner or 15-foot radius property line return at the intersection with West 259th Street.

   259th Street (Local Street) – A 10-foot wide strip of land along the property frontage to complete a 30-foot wide half right-of-way in accordance with Local Street standards of LA Mobility Plan 2035.

   Improvements Required:

   Pacific Coast Highway – Caltrans to determine the improvements on Pacific Coast Highway.

   Frampton Avenue – Construct a new 12-foot concrete sidewalk with tree wells or a 5-foot concrete sidewalk with landscaping of the parkway. Repair all broken, off-grade or bad order concrete curb, gutter and roadway

pavement along the property frontage. Install ADA curb ramps at the intersection of Pacific Coast Highway and 259 Street per BOE standards and Special Order 01-1020 for connecting and receiving curb ramps. Close all unused driveways with standard curb height and 12-foot concrete sidewalk.

Note: There are street trees along Frampton Avenue. In the event the Urban Forestry Division of Bureau of Services deny the trees removal, then construct a 10-foot parkway and provide additional sidewalk easement to construct an elevated 4-foot sidewalk and 16-foot parkway along the existing 5 large trees located approximately at 195 feet to 316 feet from north west corner property line (Pacific Coast Highway & Frampton Avenue) satisfactory to the Harbor District Office of the Bureau Engineering.

259th Street – Construct suitable surfacing to join the existing improvements to provide an 18-foot wide half roadway with asphalt pavement, integral concrete curb and gutter and a 12-foot wide concrete sidewalk with tree wells or a 5-foot wide concrete sidewalk within a 12-foot landscaped border. Install ADA curb ramps at the intersection of Frampton Avenue per BOE standards and Special Order 01-1020 for connecting and receiving curb ramps. Complete cul-de-sac to match existing cul-de-sac at south side of 259th Street and improve street east of the cul-de-sac per Standard Plan S-470-1 with roadway, curb and gutter and sidewalk north and south of 259th St centerline. Street improvements such as full roadway, curb & gutter and sidewalk (north and south) east of the cul-de-sac will not be required if that area is vacated. If the existing right-of-way east of the cul-de-sac is vacated, provide a sewer easement east of the cul-de-sac. These improvements should suitably transition to join the existing improvements satisfactory to the Bureau of Engineering Harbor District B-Permit Group.

Note: Broken curb and/or gutter includes segments within existing score lines that are depressed or upraised by more than ¼ inch from the surrounding concrete work or are separated from the main body of the concrete piece by a crack through the entire vertical segment and greater than 1/8 inch at the surface of the section.

Non- ADA compliant sidewalk shall include any sidewalk that has a cross slope that exceeds 2% and/or is depressed or upraised by more than ¼ inch from the surrounding concrete work or has full concrete depth cracks that have separations greater than 1/8 inch at the surface. The sidewalk also includes that portion of the pedestrian path of travel across a driveway.

All new sidewalk curb and gutter shall conform to the Bureau of Engineering Standard Plans S410-2, S440-4, S442-5 and S444-0.

Install tree wells with root barriers and plant street trees satisfactory to the City Engineer and the Urban Forestry Division of the Bureau of Street Services. Some tree removal in conjunction with the street improvement project may require Board of Public Works approval. The applicant should contact the Urban Forestry Division for further information (213) 847-3077.

Trees: That Board of Public Works approval shall be obtained prior to the issuance of the Certificate of Occupancy of the development project for the removal of any tree in the existing or proposed public right-of-way. The Bureau of Street Services, Urban Forestry Division is the lead agency for obtaining Board of Public Works approval for the removal of such trees.

Removal of street trees is required in conjunction with the street improvements for this project. Please include the tree removal issue in your public hearing notice for this application.

Notes: Street lighting may be required satisfactory to the Bureau of Street Lighting (213) 847-1551.

Department of Transportation may have additional requirements for dedication and improvements.

Regarding any issue with power poles relocation, contact the Department of Water and Power (213) 367-2715.

2. Drain the roof and site to the public right-of-way.

3. Sewer lines exist in Pacific Coast Highway, Frampton Avenue and 259th Street. Extension of the 6-inch house connection laterals to the new property line may be required. All Sewerage Facilities Charges and Bonded Sewer Fees are to be paid prior to obtaining a building permit.

4. An investigation by the Bureau of Engineering Harbor District Office Sewer Counter may be necessary to determine the capacity of the existing pubic sewers to accommodate the proposed development. Submit a request to the Harbor District Office of the Bureau of Engineering at (310) 732-4677.

5. Provide hydraulic and hydrology report and calculations and determine if additional catch basins compliant to Standard Plans S-361-0 / S-362-0 are needed on Frampton Avenue and / or 259th St.

6. Any existing driveways shall comply with the City Standard Plan S-440-4.

7. Caltrans Encroachment permit may be required for work in Pacific Coast Highway.

8. Submit parking area and driveway plans to the Harbor District Office of the Bureau of Engineering and the Department of Transportation for review and approval.

Any questions regarding this report may be directed to Quyen M. Phan of my staff at (213) 808-8604.

PLANNING CASE REFERRAL FORM (PCRF)

City of Los Angeles, Bureau of Engineering (BOE) / Department of City Planning (DCP)

Reference Number: 202100349

Part I. To be Completed by Applicant		DCP Case Number	N/A - Not Filed
Applicant	Joel B. Miller, Gensler	Address	500 S. Figueroa St. Los Angeles, CA 90071
Phone	213.327.3970	Email	joel_miller@gensler.com
Owner	ROI 1280 LLC	Address	4199 Campus Drive Ste 200 Irvine, CA 92612
Project Address	1268, 1270, 1290 W PACIFIC COAST HWY, 25900 S FRAMPTON AVE	APN	7411019016, 7411019020
Engineering District	Harbor		

Project description (attach ZIMAS map with highlighted parcel(s))
New construction of a mixed use building (residential/commercial) with approximately 1,500 SF of commercial space, 355 dwelling units, and associated parking.

Is there a tract or parcel map being filed in conjunction with this: [ ] Yes [**X**] No

If yes,Tract Map No. _____ Parcel Map No. _____

Has the Tract/Parcel report been prepared and submitted to DCP by BOE [ ] Yes [**X**] No

If yes, please refer to the Tract or Parcel map conditions, if not, then

Is any part of this project on a corner lot? [**X**] Yes [ ] No

Part II. To be Completed by BOE Staff

What is/are the street classification(s) for the adjacent streets (list all)?
PACIFIC COAST HWY: BOULEVARD II (R/W = 110-FT; RW = 80-FT) FRAMPTON AVE: LOCAL STREET-STANDARD (R/W = 60-FT; RW = 36-FT)

Does the project front an intersection of two major or secondary highways?	[ ] Yes [**X**] No

If yes, additional dedication may be required for dual left-turn pockets. If no, how far is the project from the nearest major/secondary intersection? Additional dedication may be required if within the standard flare section. Dedication and improvements are to be consistent with Standard Street Dimensions. See Standard Plan S-470-1.

Apparent width of existing half right of way (street centerline to property line):	PACIFIC COAST HWY = 53-FT FRAMPTON AVE = 25-FT ft
Standard dimension for half right of way (from S-470-1), (street centerline to property line):	PACIFIC COAST HWY = 55-FT FRAMPTON AVE = 30-FT ft
Apparent width of existing half roadway (street centerline to curb face):	PACIFIC COAST HWY = 34-FT FRAMPTON AVE = 18-FT ft
Standard street dimension for half roadway (street centerline to curb face):	PACIFIC COAST HWY = 40-FT FRAMPTON AVE = 18-FT ft
Is the lot connected to the sewer?	[**X**] Yes [ ] No
Distance from subject lot to nearest main line sewer	25 ft
Is the subject lot(s) within the hillside ordinance boundary?	[ ] Yes [**X**] No

Preliminary Required Improvements:

Planning Case Referral Form Recommendation:	
Dedication Required:	[**X**] Yes [ ] No
Street Widening Required:	[**X**] Yes [ ] No
Other Improvements Required:	[**X**] Yes [ ] No
If yes, please list preliminary required improvements:	2-FT DEDICATION REQUIRED ALONG PACIFIC COAST HWY TO MEET STANDARD HALF RIGHT OF WAY WIDTH OF 55-FT 6-FT STREET WIDENING REQUIRED ALONG PACIFIC COAST HWY TO MEET STANDARD HALF ROADWAY WIDTH OF 40-FT OTHER IMPROVEMENTS REQUIRED ALONG PACIFIC COAST HWY AND FRAMPTON AVE TO MEET SIDEWALK AND CURB

RAMP STANDARD PLANS
S-444-0, S-442-6.

NOTE: The information on this PCRF is only a "preliminary recommendation" by BOE, which provides the applicant with a general understanding of what **may** be required by BOE. If the PCRF Recommendations for Dedication or Street Widening is marked "Yes", a formal investigation and engineering report will be required. The engineering report will be provided after submittal of all documentation and payment of fees. Measurements and statements contained herein may be adjusted in the engineering report.

Street Trees: If the PCRF Recommendation for Street Widening is marked "Yes", Street tree removals may be required. All street tree removals must be approved by the Board of Public Works. Applicant shall contact the Urban Forestry Division at (213) 847-3077 before proceeding with the Master Land Use Application.

In all cases, the Applicant will be required to close any unused driveways; remove and reconstruct broken, off-grade, or bad order concrete curb, gutter, driveways or sidewalk,; and install/replace public improvements, such as driveway aprons and access ramps, to meet ADA requirements.

Applicants with PCRF Recommendation of "Yes" for Dedication or Street Widening are advised to submit the following documents and pay the BOE investigation fee.

1. BOE investigation fee.
2. Two (2) copies of the Planning Master Land Use Application.
3. Two (2) copies of the project site plan.
4. Two (2) copies of the radius map.
5. Picture of the existing building, sidewalk, curb, and gutter.

Due to the possible implications that dedications and improvements may have on the development of a project, applicants that do not pay the BOE investigation fee for the preparation of a detailed engineering report may have their application placed on hold until such information is provided. Questions and concerns regarding the engineering report may be presented at the hearing.

+FORM. GEN. 160 (Rev. 6-80)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

February 4, 2022

TO: Vincent Bertoni, AICP, Director of Planning
Department of City Planning
Attention: connie.chauv@lacity.org

FROM: Los Angeles Fire Department

SUBJECT: **CPC-2021-9522-DB-VCU-CU-SPR-HCA.:1290 w PCH**

Submit plot plans for Fire Department approval and review prior to recordation of City Planning Case.

RECOMMENDATIONS:

Access for Fire Department apparatus and personnel to and into all structures shall be required.

Address identification. New and existing buildings shall have approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property.

One or more Knox Boxes will be required to be installed for LAFD access to project. Location and number to be determined by LAFD Field Inspector. (Refer to FPB Req # 75).

The entrance or exit of all ground dwelling units shall not be more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.

Fire Lane Requirements:

1) Fire lane width shall not be less than 20 feet. When a fire lane must accommodate the operation of Fire Department aerial ladder apparatus or where fire hydrants are installed, those portions shall not be less than 28 feet in width.
2) The width of private roadways for general access use and fire lanes shall not be less than 20 feet, and the fire lane must be clear to the sky.
3) Fire lanes, where required and dead ending streets shall terminate in a cul-de-sac or other approved turning area. No dead ending street or fire lane shall be greater than 700 feet in length or secondary access shall be required.
4) Submit plot plans indicating access road and turning area for Fire Department approval.
5) All parking restrictions for fire lanes shall be posted and/or painted prior to any Temporary Certificate of Occupancy being issued.
6) Plans showing areas to be posted and/or painted, “FIRE LANE NO PARKING” shall be submitted and approved by the Fire Department prior to building permit application sign-off.
7) Electric Gates approved by the Fire Department shall be tested by the Fire Department prior to Building and Safety granting a Certificate of Occupancy.
8) All public street and fire lane cul-de-sacs shall have the curbs painted red and/or be posted “No Parking at Any Time” prior to the issuance of a Certificate of Occupancy or Temporary Certificate of Occupancy for any structures adjacent to the cul-de-sac.
9) No framing shall be allowed until the roadway is installed to the satisfaction of the Fire Department.

Construction of public or private roadway in the proposed development shall not exceed 10 percent in grade.

The Fire Department may require additional vehicular access where buildings exceed 28 feet in height.

Smoke Vents may be required where roof access is not possible; location and number of vents to be determined at Plan Review.

Where above ground floors are used for residential purposes, the access requirement shall be interpreted as being the horizontal travel distance from the street, driveway, alley, or designated fire lane to the main entrance of individual units.

No building or portion of a building shall be constructed more than 150 feet from the edge of a roadway of an improved street, access road, or designated fire lane.

The following recommendations of the Fire Department relative to fire safety shall be incorporated into the building plans, which includes the submittal of a plot plan for approval by the Fire Department either prior to the recordation of a final map or the approval of a building permit. The plot plan shall include the following minimum design features: fire lanes, where required, shall be a minimum of 20 feet in width; all structures must be within 300 feet of an approved fire hydrant, and entrances to any dwelling unit or guest room shall not be more than 150 feet in distance in horizontal travel from the edge of the roadway of an improved street or approved fire lane.

2014 CITY OF LOS ANGELES FIRE CODE, SECTION 503.1.4 (EXCEPTION)

a. When this exception is applied to a fully fire sprinklered residential building equipped with a wet standpipe outlet inside an exit stairway with at least a 2 hour rating the distance from the wet standpipe outlet in the stairway to the entry door of any dwelling unit or guest room shall not exceed 150 feet of horizontal travel AND the distance from the edge of the roadway of an improved street or approved fire lane to the door into the same exit stairway directly from outside the building shall not exceed 150 feet of horizontal travel.

b. It is the intent of this policy that in no case will the maximum travel distance exceed 150 feet inside the structure and 150 feet outside the structure. The term “horizontal travel” refers to the actual path of travel to be taken by a person responding to an emergency in the building.

c. This policy does not apply to single-family dwellings or to non-residential buildings.

Site plans shall include all overhead utility lines adjacent to the site.

Where access for a given development requires accommodation of Fire Department apparatus, overhead clearance shall not be less than 14 feet.

No proposed development utilizing cluster, group, or condominium design of one or two family dwellings shall be more than 150 feet from the edge of the roadway of an improved street, access road, or designated fire lane.

On small lot subdivisions, any lots used for access purposes shall be recorded on the final map as a “Fire Lane”.

Private development shall conform to the standard street dimensions shown on Department of Public Works Standard Plan S-470-0.

Standard cut-corners will be used on all turns.

FPB #105
5101.1 Emergency responder radio coverage in new buildings. All new buildings shall have approved radio coverage for emergency responders within the building based upon the existing coverage levels of the public safety communication systems of the jurisdiction at the exterior of the building. This section shall not require improvement of the existing public safety communication systems.

That in order to provide assurance that the proposed common fire lane and fire protection facilities, for the project, not maintained by the City, are properly and adequately maintained, the sub-divider shall record with the County Recorder, prior to the recordation of the final map, a covenant and agreement (Planning Department General Form CP-6770) to assure the following:

A. The establishment of a property owners association, which shall cause a yearly inspection to be, made by a registered civil engineer of all common fire lanes and fire protection facilities. The association will undertake any necessary maintenance and corrective measures. Each future property owner shall automatically become a member of the association or organization required above and is automatically subject to a proportionate share of the cost.

B. The future owners of affected lots with common fire lanes and fire protection facilities shall be informed or their responsibility for the maintenance of the devices on their lots. The future owner and all successors will be presented with a copy of the maintenance program for their lot. Any amendment or modification that would defeat the obligation of said association as the Advisory Agency must approve required hereinabove in writing after consultation with the Fire Department.

C. In the event that the property owners association fails to maintain the common property and easements as required by the CC and R's, the individual property owners shall be responsible for their proportional share of the maintenance.

D. Prior to any building permits being issued, the applicant shall improve, to the satisfaction of the Fire Department, all common fire lanes and install all private fire hydrants to be required.

E. That the Common Fire Lanes and Fire Protection facilities be shown on the Final Map.

The plot plans shall be approved by the Fire Department showing fire hydrants and access for each phase of the project prior to the recording of the final map for that phase. Each phase shall comply independently with code requirements.

Any roof elevation changes in excess of 3 feet may require the installation of ships ladders.

Provide Fire Department pathway front to rear with access to each roof deck via gate or pony wall

less than 36 inches.

Building designs for multi-storied residential buildings shall incorporate at least one access stairwell off the main lobby of the building; But, in no case greater than 150ft horizontal travel distance from the edge of the public street, Private Street or Fire Lane. This stairwell shall extend onto the roof.

Entrance to the main lobby shall be located off the address side of the building.

Any required Fire Annunciator panel or Fire Control Room shall be located within 20ft visual line of site of the main entrance stairwell or to the satisfaction of the Fire Department.

Where rescue window access is required, provide conditions and improvements necessary to meet accessibility standards as determined by the Los Angeles Fire Department.

Adequate off-site public and on-site private fire hydrants may be required. Their number and location to be determined after the Fire Department's review of the plot plan.

Any required fire hydrants to be installed shall be fully operational and accepted by the Fire Department prior to any building construction.

The applicant is further advised that all subsequent contact regarding these conditions must be with the Hydrant and Access Unit. This would include clarification, verification of condition compliance and plans or building permit applications, etc., and shall be accomplished **BY APPOINTMENT ONLY**, in order to assure that you receive service with a minimum amount of waiting please call **(213) 482-6543**. You should advise any consultant representing you of this requirement as well.

FORM GEN. 160 (Rev. 8-12)

CITY OF LOS ANGELES
INTER-DEPARTMENTAL CORRESPONDENCE

DATE: February 3, 2022

TO: Connie Chauv, City Planner
Department of City Planning

FROM: Bryan Ramirez, Street Tree Superintendent I
Bureau of Street Services, Urban Forestry Division

SUBJECT: **CPC 2021-9522 – 1290 W. PACIFIC COAST HIGHWAY**

In regard to your request for review of this case regarding Urban Forestry requirements, it is our recommendation that:

1. **STREET TREES**

a. Project shall preserve all healthy mature street trees whenever possible. All feasible alternatives in project design should be considered and implemented to retain healthy mature street trees. A permit is required for the removal of any street tree and shall be replaced 2:1 as approved by the Board of Public Works and Urban Forestry Division.

b. Plant street trees at all feasible planting locations within dedicated streets as directed and required by the Bureau of Street Services, Urban Forestry Division. All tree plantings shall be installed to current tree planting standards when the City has previously been paid for tree plantings. The sub divider or contractor shall notify the Urban Forestry Division at: (213) 847-3077 upon completion of construction for tree planting direction and instructions.

Note: Removal of street trees requires approval from the Board of Public Works. All projects must have environmental (CEQA) documents that appropriately address any removal and replacement of street trees. Contact Urban Forestry Division at: (213) 847-3077 for tree removal permit information.

Subject:	Air Quality Technical Memorandum for the 1280 Pacific Coast Highway Mixed-Use Development Project
Date:	May 24, 2024, updated January 2025
Attachment:	A, Air Quality Modeling Data

1 Introduction

The purpose of this air quality technical memorandum is to evaluate the potential air quality impacts of the proposed 1280 Pacific Coast Highway Mixed-Use Development Project (the Project), located on a 3.7-acre site located at 1268, 1270 & 1290 Pacific Coast Highway & 25900 South Frampton Avenue (the Project Site) within the Wilmington – Harbor City Community Plan (Community Plan) Area in the City of Los Angeles (City). The Project would replace an existing mobile home and a surface parking lot with a mixed-use building consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure. The mixed-use building would occupy a majority of the Project Site and would be approximately 406,855 square feet in size and 5 stories in height (80 feet in height, as measured to the lowest grade). The Project would not include any subterranean levels. This section estimates the air pollutant emissions generated by construction and operation of the Project and evaluates whether Project emissions would conflict with or obstruct implementation of the applicable air quality plan; result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard; expose sensitive receptors to substantial pollutant concentrations; or result in other emissions, such as those leading to odors, affecting a substantial number of people.

On November 24, 2021, the City Council certified the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR, to adopt the 2021-2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element), hereafter referred to as the "Housing Element Program EIR." Pursuant to CEQA Guidelines Section 15168(c)(4), the following air quality analysis is provided in support of the Project's determination of consistency with the scope of the program analyzed in the Program EIR and its environmental impacts. The following Housing Element EIR mitigation measures (MMs) are addressed herein:

- Housing Element MM 4.2-2(a) Construction Emission Reductions
- Housing Element MM 4.2-1(b) Operational Emissions Reduction
- Housing Element MM 4.2-3 Construction TAC Reduction Measures

2 Environmental Setting

2.1 Air Quality Background

Air Quality and Public Health

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants, due to their presence in elevated concentrations in the atmosphere. Such pollutants have been identified and regulated as part of an overall endeavor to prevent further deterioration and to facilitate improvement in air quality. The National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) have been set at levels considered safe to protect public health, including the health of sensitive populations such as asthmatics, children, and the elderly with a margin of safety, and to protect public welfare, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings.[1] As the scientific methods for the study of air pollution health effects have progressed over the past decades, adverse effects have been shown to occur at lower levels of exposure. For some pollutants, no clear thresholds for effects have been demonstrated. New findings over time have, in turn, led to the revision and lowering of NAAQS which, in the judgment of the U.S. Environmental Protection Agency (USEPA), are necessary to protect public health. Ongoing assessments of the scientific evidence from health studies continue to be an important part of setting and informing revisions to federal and state air quality standards[2]. The NAAQS and CAAQS are listed in Table 1 on page 9.

At the regional level, the South Coast Air Quality Management District (SCAQMD) is the regulatory agency responsible for improving air quality for large areas of Los Angeles, Orange County, Riverside and San Bernardino Counties, including the Coachella Valley.[3] The City of Los Angeles is located within the South Coast Air Basin (Air Basin) which is a distinct geographic subarea within the SCAQMD's jurisdiction. The SCAQMD, together with the Southern California Association of Governments (SCAG), has the responsibility for ensuring that national and state ambient air quality standards are achieved and maintained for the Air Basin. Failure to comply with these standards puts state and local agencies at risk for penalties in the form of lawsuits, fines, a federal takeover of state implementation plans, and a loss of funds from federal agencies such as the Federal Highway Administration and Federal Transit Administration.

To meet the air quality standards, regional plans are developed, including the SCAQMD's Air Quality Management Plan (AQMP), which incorporates regional demographic projections and integrated regional land use and transportation strategies from SCAG's Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS). These plans work together to examine multiple pollutants, cumulative effects, and transport issues related to attaining healthful air quality in the region. In addition, a host of regulatory standards at the federal, state, regional, and local level function to identify and limit exposure of air pollutants and toxic air contaminants (TACs).

Local Air Quality and Air Pollution Sources

As mentioned above, the City of Los Angeles is located within the South Coast Air Basin, which is an approximately 6,745-square-mile area bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east; and San Diego County to the south. The Air Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to the Coachella Valley area in Riverside County. The regional climate within the Air Basin is considered semi-arid and is characterized by warm summers, mild winters, infrequent seasonal rainfall, moderate daytime onshore breezes, and moderate humidity. The air quality within the Air Basin is primarily influenced by meteorology and a wide range of emissions sources, such as dense population centers, heavy vehicular traffic, and industry.

The Air Basin experiences a persistent temperature inversion (increasing temperature with increasing altitude) as a result of the Pacific high. This inversion limits the vertical dispersion of air contaminants, holding them relatively near the ground. As the sun warms the ground and the lower air layer, the temperature of the lower air layer approaches the temperature of the base of the inversion (upper) layer until the inversion layer finally breaks, allowing vertical mixing with the lower layer. This phenomenon is observed in mid to late afternoons on hot summer days. Winter inversions frequently break by midmorning.

The combination of stagnant wind conditions and low inversions produces the greatest pollutant concentrations. On days of no inversion or high wind speeds, ambient air pollutant concentrations are lowest. During periods of low inversions and low wind speeds, air pollutants generated in urbanized areas are transported predominantly onshore into Riverside and San Bernardino counties. In the winter, the greatest pollution problem is the accumulation of carbon monoxide (CO) and nitrogen oxides (NO_X) due to low inversions and air stagnation during the night and early morning hours. In the summer, the longer daylight hours and the brighter sunshine combine to cause a reaction between hydrocarbons and NO_X to form photochemical smog.

Air pollutant emissions within the Air Basin are generated primarily by stationary and mobile sources. Stationary sources can be divided into two major subcategories: point and area sources. Point sources occur at a specific location and are often identified by an exhaust vent or stack. Examples include boilers or combustion equipment that produce electricity or generate heat. Area sources are widely distributed and include such sources as residential and commercial water heaters, painting operations, lawn mowers, agricultural fields, landfills, and some consumer products. Mobile sources refer to emissions from motor vehicles, including tailpipe and evaporative emissions, and are classified as either on-road or off-road. On-road sources may be legally operated on roadways and highways. Off-road sources include aircraft, ships, trains, and self-propelled construction equipment. Air pollutants can also be generated by the natural environment, such as when high winds suspend fine dust particles.

Air Pollutant Types

Criteria Pollutants

The six principal pollutants for which national and state criteria and standards have been promulgated, known as “criteria pollutants”, and which are most relevant to current air quality planning and regulation in the Air Basin include: ozone (O_3), respirable and fine particulate matter (PM_{10} and $PM_{2.5}$, respectively), carbon monoxide (CO), nitrogen dioxide (NO_2), sulfur dioxide (SO_2), and lead (Pb). These pollutants are referred to as “criteria air pollutants” as a result of the specific standards, or criteria, which have been adopted for them.

Ozone (O_3)

O_3 is a gas that is formed when volatile organic compounds (VOCs) and nitrogen oxides (NO_X) - both byproducts of internal combustion engine exhaust - undergo slow photochemical reactions in the presence of sunlight. O_3 concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. An elevated level of O_3 irritates the lungs and breathing passages, causing coughing and pain in the chest and throat, thereby increasing susceptibility to respiratory infections and reducing the ability to exercise. Effects are more severe in people with asthma and other respiratory ailments. Long-term exposure may lead to scarring of lung tissue and may lower lung efficiency.

Particulate Matter (PM_{10} and $PM_{2.5}$)

Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter can form when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere. Respirable and fine particulate matter, PM_{10} and $PM_{2.5}$, consist of extremely small, suspended particles or droplets 10 microns and 2.5 microns or smaller in diameter, respectively. Some sources of particulate matter, like pollen and windstorms, are naturally occurring. However, in areas like the City of Los Angeles, most particulate matter is caused by road dust, diesel soot, combustion products, abrasion of tires and brakes, and construction activities. The human body naturally prevents the entry of larger particles into the body. However, small particles can enter the body and become trapped in the nose, throat, and upper respiratory tract. These small particulates can potentially aggravate existing heart and lung diseases, change the body's defenses against inhaled materials, and damage lung tissue. The elderly, children, and those with chronic lung or heart disease are most sensitive to PM_{10} and $PM_{2.5}$. Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates can become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids.

Carbon Monoxide (CO)

CO is a colorless, odorless gas primarily emitted from combustion processes and motor vehicles due to incomplete combustion of carbon-containing fuels such as gasoline or wood. In urban areas, such as the City of Los Angeles, automobile exhaust accounts for the majority of CO emissions. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike O_3, motor vehicles operating at slow speeds are the primary source of CO in the Air Basin. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections. Elevated concentrations of CO weaken the heart's contractions and lower the amount of oxygen carried by the blood. It is especially dangerous for people with chronic heart disease. Inhalation of CO can cause nausea, dizziness, and headaches at moderate concentrations and can be fatal at high concentrations.

Nitrogen Dioxide (NO_2)

Nitrogen dioxide is a nitrogen oxide compound that is produced by the combustion of fossil fuels, such as in internal combustion engines (both gasoline and diesel powered), as well as point sources, especially power plants. Of the seven types of NO_X compounds, NO_2 is the most abundant in the atmosphere. As ambient concentrations of NO_2 are related to traffic density, commuters in heavy traffic areas, such as urban areas like the City of Los Angeles, may be exposed to higher concentrations of NO_2 than those indicated by regional monitors. NO_2 absorbs blue light

and results in a brownish-red cast to the atmosphere and reduced visibility. NO_2 also contributes to the formation of PM_{10}. Nitrogen oxides irritate the nose and throat, and increase one's susceptibility to respiratory infections, especially in people with asthma. The principal concern of NO_X is as a precursor to the formation of O_3.

Sulfur Dioxide (SO_2)

Sulfur oxides (SO_X) are compounds of sulfur and oxygen molecules. SO_2 is the predominant form found in the lower atmosphere and is a product of burning sulfur or burning materials that contain sulfur. Major sources of SO_2 include power plants, large industrial facilities, diesel vehicles, and oil-burning residential heaters. Generally, the highest levels of SO_2 are found near large industrial complexes. In recent years, SO_2 concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of SO_2 and limits on the sulfur content of fuels. Emissions of SO_2 aggravate lung diseases, especially bronchitis. It also constricts the breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. SO_2 potentially causes wheezing, shortness of breath, and coughing. High levels of particulates appear to worsen the effect of SO_2, and long-term exposures to both pollutants leads to higher rates of respiratory illness.

Lead (Pb)

Lead is a metal found naturally in the environment as well as in manufactured products. The highest levels of lead in air are usually found near lead smelters. The major sources of lead emissions to the air are ore and metals processing and piston-engine aircraft operating on leaded aviation gasoline. Lead is also emitted from the sanding or removal of old lead-based paint. Lead emissions are primarily a regional pollutant. Lead affects the brain and other parts of the body's nervous system. Exposure to lead in very young children impairs the development of the nervous system, kidneys, and blood forming processes in the body.

Additional Criteria Pollutants (California Only)

In addition to the national standards, the State of California regulates State-identified criteria pollutants, including sulfates, hydrogen sulfide, visibility-reducing particles, and vinyl chloride. With respect to the State-identified criteria pollutants, most land use development projects either do not emit them (i.e., hydrogen sulfide (nuisance odor) and vinyl chloride), or otherwise account for these pollutants (i.e., sulfates and visibility reducing particles) through other criteria pollutants. For example, sulfates are associated with SO_X emissions, and visibility-reducing particles are associated with particulate matter emissions. A description of the health effects of the State-identified criteria air pollutants is provided below.

Sulfates (SO_4^2)

Sulfates are the fully oxidized ionic form of sulfur. Sulfates occur in combination with metal and/or hydrogen ions. In California, emissions of sulfur compounds occur primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. This sulfur is oxidized during the combustion process and subsequently converted to sulfate compounds in the atmosphere. Effects of sulfate exposure at levels above the standard include a decrease in ventilatory function, aggravation of asthmatic symptoms, and an increased risk of cardio-pulmonary disease. Sulfates are particularly effective in degrading visibility, and, due to the fact that they are usually acidic, can harm ecosystems and damage materials and property.

Hydrogen Sulfide (H_2S)

H_2S is a colorless gas with the odor of rotten eggs. The most common sources of H_2S emissions are oil and natural gas extraction and processing, and natural emissions from geothermal fields. Industrial sources of H_2S include petrochemical plants and kraft paper mills. H_2S is also formed during bacterial decomposition of human and animal wastes, and is present in emissions from sewage treatment facilities and landfills.[4] Exposure to H_2S can induce tearing of the eyes and symptoms related to overstimulation of the sense of smell, including headache, nausea, or vomiting; additional health effects of eye irritation have only been reported with exposures greater than 50 parts per million (ppm), which is considerably higher than the odor threshold.[5] H_2S is regulated as a nuisance based on its odor detection level; if the standard were based on adverse health effects, it would be set at a much higher level.[6]

Visibility-Reducing Particles

Visibility-reducing particles come from a variety of natural and manmade sources and can vary greatly in shape, size and chemical composition. Visibility reduction is caused by the absorption and scattering of light by the particles in the atmosphere before it reaches the observer. Certain visibility-reducing particles are directly emitted to the air, such as windblown dust and soot, while others are formed in the atmosphere through chemical transformations of gaseous pollutants (e.g., sulfates, nitrates, organic carbon particles) which are the major constituents of particulate matter. As the number of visibility-reducing particles increases, more light is absorbed and scattered, resulting in less clarity, color, and visual range.[7] Exposure to some haze-causing pollutants have been linked to adverse health impacts similar to PM_{10} and $PM_{2.5,}$ as discussed above.[8]

Vinyl Chloride

Vinyl chloride is a colorless gas with a mild, sweet odor. Most vinyl chloride is used to make polyvinyl chloride (PVC) plastic and vinyl products and is generally emitted from industrial processes. Other major sources of vinyl chloride have been detected near landfills, sewage plants, and hazardous waste sites, due to microbial breakdown of chlorinated solvents.[9] Short-term health of effects of exposure to high levels of vinyl chloride in the air include central nervous system effects, such as dizziness, drowsiness, and headaches while long-term exposure to vinyl chloride through inhalation and oral exposure causes liver damage and has been shown to increase the risk of angiosarcoma, a rare form of liver cancer in humans.[10] Most health data on vinyl chloride relate to carcinogenicity; thus, the people most at risk are those who have long-term exposure to elevated levels, which is more likely to occur in occupational or industrial settings; however, control methodologies applied to industrial facilities generally prevent emissions to the ambient air.[11]

Volatile Organic Compounds (VOCs) and Toxic Air Contaminants (TACs)

Although the SCAQMD's primary mandate is attaining the NAAQS and the CAAQS for criteria pollutants within the district, SCAQMD also has a general responsibility to control emissions of air contaminants and prevent endangerment to public health. As a result, the SCAQMD has regulated pollutants other than criteria pollutants such as VOCs, TACs, greenhouse gases, and stratospheric ozone-depleting compounds.

VOCs

VOCs are organic chemical compounds of carbon and are not "criteria" pollutants themselves; however, VOCs are a prime component (along with NO_X) of the photochemical processes by which such criteria pollutants as O_3, nitrogen dioxide, and certain fine particles are formed. They are therefore regulated as "precursors" to formation of these criteria pollutants. Some are also identified as TACs and have adverse health effects. VOCs are typically formed from combustion of fuels and/or released through evaporation of organic liquids, internal combustion associated with motor vehicle usage, and consumer products (e.g., architectural coatings, etc.).

Toxic Air Contaminants (TACs)

TACs is a term used to describe airborne pollutants that may be expected to result in an increase in mortality or serious illness or which may pose a present or potential hazard to human health, and include both carcinogens and non-carcinogens. The California Air Resources Board (CARB) and the California Office of Environmental Health Hazard Assessment (OEHHA) determine if a substance should be formally identified, or "listed," as a TAC in California. CARB has listed approximately 200 toxic substances, including those identified by the USEPA, which are identified on the California Air Toxics Program's TAC List. TACs are also not classified as "criteria" air pollutants. The greatest potential for TAC emissions during construction is related to diesel particulate matter (DPM) emissions associated with heavy-duty equipment. During long-term operations, sources of DPM may include heavy duty diesel-fueled delivery trucks and stationary emergency generators. The effects of TACs can be diverse and their health impacts tend to be local rather than regional; consequently ambient air quality standards for these pollutants have not been established, and analysis of health effects is instead based on cancer risk and exposure levels.

2.2 Air Quality Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Air Quality at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Federal Clean Air Act (CAA)
  - National Ambient Air Quality Standards (NAAQS)
- California Clean Air Act (CCAA)
  - California Ambient Air Quality Standards (CAAQS)
- California Code of Regulations (CCR)
- State Programs for Toxic Air Contaminants
- Diesel Risk Reduction Program

- South Coast Air Quality Management District (SCAQMD)'s
  - Air Quality Management Plan (AQMP) and Southern California Association of Governments' (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)
  - SCAQMD's Air Quality Guidance Documents
  - SCAQMD's Rules and Regulations
- City of Los Angeles Air Quality Element
- City of Los Angeles Plan for a Healthy LA
- City of Los Angeles Municipal Code, Ordinance No. 187,714

Federal

Federal Clean Air Act

The Federal Clean Air Act (CAA) was enacted in 1970 and has been amended numerous times in subsequent years, with the most recent amendments occurring in 1990.[12] The CAA is the comprehensive federal law that regulates air emissions in order to protect public health and welfare.[13] The USEPA is responsible for the implementation and enforcement of the CAA, which establishes federal NAAQS, specifies future dates for achieving compliance, and requires the USEPA to designate areas as attainment, nonattainment, or maintenance. The CAA also mandates that each state submit and implement a State Implementation Plan (SIP) for each criteria pollutant for which the state has not achieved the applicable NAAQS. The SIP includes pollution control measures that demonstrate how the standards for those pollutants will be met. The sections of the CAA most applicable to land use development projects include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions).[14]

Title I requirements are implemented for the purpose of attaining NAAQS for criteria air pollutants. Table 1, *Ambient Air Quality Standards*, shows the NAAQS currently in effect for each criteria pollutant. The Air Basin fails to meet national standards for O_3 and $PM_{2.5}$ and, therefore, is considered a federal "non-attainment" area for these pollutants.

Title II pertains to mobile sources, which includes on-road vehicles (e.g. cars, buses, motorcycles) and non-road vehicles (e.g. aircraft, trains, construction equipment). Reformulated gasoline and automobile pollution control devices are examples of the mechanisms the USEPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have been strengthened in recent years to improve air quality. For example, the standards for NO_X emissions have been lowered substantially and the specification requirements for cleaner burning gasoline are more stringent.

The NAAQS, and the CAAQS for the California criteria air pollutants (discussed below), have been set at levels considered safe to protect public health, including the health of sensitive populations and to protect public welfare.

Accessed September 24, 2021. As shown therein, Title I addresses nonattainment areas and Title II addresses mobile sources.

Table 1. Ambient Air Quality Standards

Pollutant	Averaging Period	Federal Standard[a,b]	California Standard[a,b]	South Coast Air Basin Attainment Status[c]	
				Federal Standard[d]	California Standard[d]
Ozone (O_3)	1-hour	—	0.09 ppm (180 µg/m³)	—	Non-Attainment
	8-hour	0.070 ppm (137 µg/m³)	0.07 ppm (137 µg/m³)	Non-Attainment (Extreme)	Non-Attainment
Respirable Particulate Matter (PM_{10})	24-hour	150 µg/m³	50 µg/m³	Attainment	Non-Attainment
	Annual	—	20 µg/m³		
Fine Particulate Matter ($PM_{2.5}$)[f]	24-hour	35 µg/m³	—	Non-Attainment (Serious)	Non-Attainment
	Annual	9 µg/m³	9 µg/m³		
Carbon Monoxide (CO)	1-hour	35 ppm (40 mg/m³)	20 ppm (23 mg/m³)	Attainment	Attainment
	8-hour	9 ppm (10 mg/m³)	9.0 ppm (10 mg/m³)		
Nitrogen Dioxide (NO_2)	1-hour	0.10 ppm (188 µg/m³)	0.18 ppm (339 µg/m³)	Unclassified/ Attainment	Attainment
	Annual	0.053 ppm (100 µg/m³)	0.030 ppm (57 µg/m³)		
Sulfur Dioxide (SO_2)	1-hour	0.075 ppm (196 µg/m³)	0.25 ppm (655 µg/m³)	Unclassified/ Attainment	Attainment
	3-hour	0.5 ppm (1,300 µg/m³)	—		
	24-hour	0.14 ppm (365 µg/m³)	0.04 ppm (105 µg/m³)		
	Annual	0.03 ppm (80 µg/m³)	—		
Lead (Pb)	30-day average	—	1.5 µg/m³	Partial Non-Attainment[e]	Attainment
	Rolling 3-month average	0.15 µg/m³	—		

Table 1. Ambient Air Quality Standards

Pollutant	Averaging Period	Federal Standard[a,b]	California Standard[a,b]	South Coast Air Basin Attainment Status[c]	
				Federal Standard[d]	California Standard[d]
Sulfates	24-hour	—	25 µg/m³	—	Attainment
Hydrogen Sulfide (H2S)	1-hour	—	0.03 ppm (42 µg/m³)	—	Unclassified

CARB, Ambient Air Quality Standards May 4, 2016, https://ww3.arb.ca.gov/research/aaqs/aaqs2.pdf. Accessed September 24, 2021.
Notes:
ppm = parts per million by volume
µg/m³ = micrograms per cubic meter
[a] An ambient air quality standard is a concentration level expressed in either parts per million or micrograms per cubic meter and averaged over a specific time period (e.g., 1 hour). The different averaging times and concentrations are meant to protect against different exposure effects. Some ambient air quality standards are expressed as a concentration that is not to be exceeded. Others are expressed as a concentration that is not to be equaled or exceeded.
[b] Ambient Air Quality Standards based on the 2016 AQMP.
[c] "Attainment" means that the regulatory agency has determined based on established criteria, that the Air Basin meets the identified standard. "Non-attainment" means that the regulatory agency has determined that the Air Basin does not meet the standard. "Unclassified" means there is insufficient data to designate an area, or designations have yet to be made.
[d] California and Federal standard attainment status based on SCAQMD's 2016 AQMP and 2018 updates from CARB. https://ww2.arb.ca.gov/resources/documents/maps-state-and-federal-area-designations.
[e] An attainment re-designation request is pending.
[f] On February 7, 2024, the national annual $PM_{2.5}$ primary standard was lowered from 12.0 mg/m³ to 9.0 mg/m³.

State

California Clean Air Act

The California Clean Air Act (CCAA), signed into law in 1988, requires all areas of the state to achieve and maintain the California Ambient Air Quality Standards (CAAQS) by the earliest practicable date. CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both state and federal air pollution control programs within California. In this capacity, CARB conducts research, sets the CAAQS, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products, and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. Table 1 includes the CAAQS currently in effect for each of the criteria pollutants, as well as other pollutants recognized by the state. As shown in Table 1, the CAAQS include more stringent standards than the NAAQS. The Air Basin fails to meet state standards for O_3, PM_{10}, and $PM_{2.5}$ and, therefore, is considered "non-attainment" for these pollutants.

California Code of Regulations

The California Code of Regulations (CCR) is the official compilation and publication of regulations adopted, amended or repealed by state agencies pursuant to the Administrative Procedure Act. The CCR includes regulations that pertain to air quality emissions. Specifically, Section 2485 in Title 13 of the CCR states that the idling of all diesel-fueled

commercial vehicles (weighing over 10,000 pounds) during construction shall be limited to five minutes at any location. In addition, Section 93115 in Title 17 of the CCR states that operations of any stationary, diesel-fueled, compression-ignition engines shall meet specified fuel and fuel additive requirements and emissions standards.

State Programs for Toxic Air Contaminants

The California Air Toxics Program is an established two-step process of risk identification and risk management to address potential health effects from exposure to toxic substances in the air. In the risk identification step, CARB and OEHHA determine if a substance should be formally identified, or "listed," as a TAC in California. In the risk management step, CARB reviews emission sources of an identified TAC to determine whether regulatory action is needed to reduce risk. Based on results of that review, CARB has promulgated a number of **Airborne Toxic Control Measures** (ATCMs), both for stationary and mobile sources, including On-Road and Off-Road Vehicle Rules. These ATCMs include measures such as limits on heavy-duty diesel motor vehicle idling and emission standards for off-road diesel construction equipment in order to reduce public exposure to DPM and other TACs. These actions are also supplemented by the AB 2588 Air Toxics "Hot Spots" program and SB 1731, which require facilities to report their air toxics emissions, assess health risks, notify nearby residents and workers of significant risks if present, and reduce their risk through implementation of a risk management plan. SCAQMD has further adopted two rules to limit cancer and non-cancer health risks from facilities located within its jurisdiction. Rule 1401 (New Source Review of Toxic Air Contaminants) regulates new or modified facilities, and Rule 1402 (Control of Toxic Air Contaminants from Existing Sources) regulates facilities that are already operating. Rule 1402 incorporates requirements of the AB 2588 program, including implementation of risk reduction plans for significant risk facilities.

Diesel Risk Reduction Program

CARB identified particulate emissions from diesel-fueled engines as TACs in August 1998. Following the identification process, the ARB was required by law to determine if there is a need for further control, which moved us into the risk management phase of the program. CARB developed the *Risk Reduction Plan to Reduce Particulate Matter Emissions from Diesel-Fueled Engines* and the *Vehicles and the Risk Management Guidance for the Permitting of New Stationary Diesel-Fueled Engines*. The Diesel Advisory Committee approved these documents on September 28, 2000, paving the way for the next step in the regulatory process: the control measure phase. During the control measure phase, specific statewide regulations designed to further reduce DPM emissions from diesel-fueled engines and vehicles have and continue to be evaluated and developed. The goal of each regulation is to make diesel engines as clean as possible by establishing state-of-the-art technology requirements or emission standards to reduce DPM emissions.

Regional

South Coast Air Quality Management District (SCAQMD)

The SCAQMD is primarily responsible for planning, implementing, and enforcing air quality standards for the South Coast Air Basin. The Air Basin is a subregion within the western portion of the SCAQMD jurisdiction, as the SCAQMD also regulates portions of the Salton Sea Air Basin and Mojave Desert Air Basin within Riverside County.

Air Quality Management Plan and RTP/SCS

To meet the NAAQS and CAAQS, the SCAQMD has adopted a series of AQMPs, which serve as a regional blueprint to develop and implement an emission reduction strategy that will bring the area into attainment with the standards in a timely manner. The AQMP includes strategies to ensure that rapidly approaching attainment deadlines for O_3 and $PM_{2.5}$ are met and that public health is protected to the maximum extent feasible. The most significant air quality challenge in the Air Basin is to reduce NO_X emissions[15] sufficiently to meet the upcoming O_3 standard deadlines, as NO_X plays a critical role in the creation of O_3. The AQMP's strategy to meet the 8-hour O_3 standard in 2023 should lead to sufficient NO_X emission reductions to attain the 1-hour O_3 standard by 2022. Since NO_X emissions also lead to the formation of $PM_{2.5}$, the NO_X reductions needed to meet the O_3 standards will likewise lead to improvement of $PM_{2.5}$ levels and attainment of $PM_{2.5}$ standards.[16] [17]

The SCAQMD's strategy to meet the NAAQS and CAAQS distributes the responsibility for emission reductions across federal, state and local levels and industries. The 2016 AQMP is composed of stationary and mobile source emission reductions from traditional regulatory control measures, incentive-based programs, co-benefits from climate programs, mobile source strategies, and reductions from federal sources, which include aircraft, locomotives and ocean-going vessels. These strategies are to be implemented in partnership with the CARB and USEPA.

The AQMP also incorporates the transportation strategy and transportation control measures from SCAG's adopted 2016-2040 RTP/SCS.[18] SCAG is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino, and Imperial Counties, and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG coordinates with various air quality and transportation stakeholders in Southern California to ensure compliance with the federal and state air quality requirements. Pursuant to California Health and Safety Code Section 40460, SCAG has the responsibility of preparing and approving the portions of the AQMP relating to the regional demographic projections and integrated regional land use, housing, employment, and transportation programs, measures, and strategies. SCAG is required by law to ensure that transportation activities "conform" to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS. The RTP/SCS includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP. The SCAQMD combines its portion of the AQMP with those prepared by SCAG.[19] The RTP/SCS and Transportation Control Measures, included as Appendix IV-C of the 2016 AQMP for the Air Basin, are based on SCAG's 2016-2040 RTP/SCS.

The 2016 AQMP forecasts the 2031 emissions inventories ''with growth'' based on SCAG's 2016-2040 RTP/SCS. The region is projected to see a 12 percent growth in population, 16 percent growth in housing units, 23 percent growth in employment, and 8 percent growth in vehicle miles traveled between 2012 and 2031. Despite regional

15 NOx emissions are a precursor to the formation of both O_3 and secondary $PM_{2.5}$.
16 Estimates are based on the inventory and modeling results and are relative to the baseline emission levels for each attainment year (see Final 2016 AQMP for detailed discussion).
17 SCAQMD, *Final 2016 AQMP*, 2017. Page ES-2. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed September 24, 2021.
18 SCAG, *Final 2016 RTP/SCP*, 2016. http://scagrtpscs.net/Pages/FINAL2016RTPSCS.aspx. Accessed September 24, 2021.
19 SCAQMD, *Final 2016 AQMP*, 2017. Page ES-2. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/final-2016-aqmp. Accessed September 24, 2021.

growth in the past, air quality has improved substantially over the years, primarily due to the effects of air quality control programs at the local, state and federal levels.[20]

On September 3, 2020, SCAG's Regional Council adopted the 2020-2045 RTP/SCS. The 2020-2045 RTP/SCS was determined to conform to the federally-mandated state implementation plan (SIP), for the attainment and maintenance of NAAQS standards. On October 30, 2020, CARB also accepted SCAG's determination that the SCS met the applicable state greenhouse gas emissions targets.

The 2022 AQMP[21] was adopted December 2, 2022, and is the most recently adopted AQMP for the SCAB. The 2022 AQMP builds upon measures already in place from previous AQMPs discussed above. It also includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technologies (e.g., zero emissions technologies, when cost-effective and feasible, and low NOx technologies in other applications), best management practices, co-benefits from existing programs (e.g., climate and energy efficiency), incentives, and other CAA measures to achieve the 2015 8-hour ozone standard.

The 2022 AQMP uses demographic growth forecasts for various socioeconomic categories (e.g., population, housing, and employment by industry) developed by SCAG for its 2020–2045 RTP/SCS. SCAQMD uses this document, which is based in large part on general plans for cities and counties in the SCAB, to develop the AQMP emissions inventory (SCAQMD 2022).[22] SCAQMD derived future-year emissions using: (1) emissions from the 2018 base year, (2) expected controls after implementation of the South Coast AQMP rules adopted by October 2020 and rule 1109.1 and CARB regulations adopted by December 2021, and (3) activity growth in various source categories between the base and future years. The SCAG RTP/SCS, and associated Regional Growth Forecast, are generally consistent with the local plans.

The next iteration of the SCAG's RTP/SCS, the 2024–2050 RTP/SCS, was adopted on April 4, 2024. The 2024–2050 RTP/SCS builds from the policy directions established in the 2020–2045 RTP/SCS and more recent policy directions from SCAG's Regional Council to reflect additional issues including racial equity, resilience and conservation, climate change, next generation infrastructure, and the economy. The 2024–2050 RTP/SCS goals fall into four core categories: mobility, communities, environment, and economy.[23] While the 2024–2050 RTP/SCS is the latest RTP/SCS, the 2022 AQMP applies the SCAG growth forecast from the 2020–2045 RTP/SCS; as such, the forecasts from the 2020–2045 RTP/SCS are discussed and analyzed herein.

20 SCAQMD, Figure 1-4 of the Final 2016 AQMP.
21 SCAQMD, *Final 2022 AQMP*, December 2022. http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan
22 Information necessary to produce the emissions inventory for the SCAB is obtained from the SCAQMD and other governmental agencies, including the California Air Resources Board, Caltrans, and SCAG. Each of these agencies is responsible for collecting data (e.g., industry growth factors, socioeconomic projections, travel activity levels, emission factors, emission speciation profile, and emissions) and developing methodologies (e.g., model and demographic forecast improvements) required to generate a comprehensive emissions inventory. SCAG incorporates these data into its Travel Demand Model for estimating/projecting vehicle miles traveled and driving speeds. SCAG's socioeconomic and transportation activities projections in their *2020 Regional Transportation Plan/Sustainable Communities Strategy* are integrated in the 2022 AQMP (SCAQMD 2022).

SCAQMD Air Quality Guidance Documents

The SCAQMD published the *CEQA Air Quality Handbook* (approved by the AQMD Governing Board in 1993) to provide local governments with guidance for analyzing and mitigating Project-specific air quality impacts.[24] The *CEQA Air Quality Handbook* provides standards, methodologies, and procedures for conducting air quality analyses. However, the SCAQMD is currently in the process of replacing the *CEQA Air Quality Handbook* with the *Air Quality Analysis Guidance Handbook*. While this process is underway, the SCAQMD has provided supplemental guidance on the SCAQMD website[25].

The SCAQMD has also adopted land use planning guidelines in its *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*, which considers impacts to sensitive receptors from facilities that emit TAC emissions.[26] SCAQMD's siting distance recommendations are the same as those provided by CARB (e.g., a 500-foot siting distance for sensitive land uses proposed in proximity to freeways and high-traffic roads, and the same siting criteria for distribution centers and dry cleaning facilities). The SCAQMD's document introduces land use-related policies that rely on design and distance parameters to minimize emissions and lower potential health risk. SCAQMDs guidelines are voluntary initiatives recommended for consideration by local planning agencies.

The SCAQMD has published a guidance document called the *Final Localized Significance Threshold Methodology* for CEQA evaluations that is intended to provide guidance when evaluating the localized effects from mass emissions during construction or operation of a Project.[27] The SCAQMD adopted additional guidance regarding $PM_{2.5}$ emissions in a document called *Final Methodology to Calculate Particulate Matter (PM)2.5 and $PM_{2.5}$ Significance Thresholds*.[28] The latter document has been incorporated by the SCAQMD into its CEQA significance thresholds and *Final Localized Significance Threshold Methodology*.

SCAQMD Rules and Regulations

The SCAQMD has adopted several rules and regulations to regulate sources of air pollution in the Air Basin and to help achieve air quality standards for land use development projects, which include, but are not limited to the following:

Regulation IV – Prohibitions: This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shutdown exemptions and breakdown events. The following is a list of rules which apply to the Project:

- **Rule 401 – Visible Emissions:** This rule states that a person shall not discharge into the atmosphere from any single source of emission whatsoever any air contaminant for a period or periods aggregating more

Accessed September 24, 2021.

than three minutes in any one hour which is as dark or darker in shade as that designated No. 1 on the Ringelmann Chart or of such opacity as to obscure an observer's view.

- **Rule 402 – Nuisance:** This rule states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.
- **Rule 403 – Fugitive Dust:** This rule requires projects to prevent, reduce or mitigate fugitive dust emissions from a site. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM_{10} emissions to less than 50 micrograms per cubic meter (µg/m3) and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Mitigation measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the USEPA.

Regulation XI – Source Specific Standards: Regulation XI sets emissions standards for specific sources. The following is a list of rules which may apply to the Project:

- **Rule 1113 – Architectural Coatings:** This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.
- **Rule 1138 – Control of Emissions from Restaurant Operations:** This rule specifies PM and VOC emissions and odor control requirements for commercial cooking operations that use chain-driven charbroilers to cook meat.

Regulation XIV – Toxics and Other Non-Criteria Pollutants: Regulation XIV sets requirements for new permit units, relocations, or modifications to existing permit units which emit toxic air contaminants or other non-criteria pollutants. The following is a list of rules which may apply to the Project:

- **Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities:** This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials.

Local

City of Los Angeles General Plan

Air Quality Element

Local jurisdictions, such as the City, have the authority and responsibility to reduce air pollution through their land use decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions. In general, the City of Los Angeles' General Plan (including the Framework, Air Quality, Mobility 2035, and Health and Wellness Elements) and the City of Los Angeles' Green New

Deal (Sustainable pLAn 2019) contain policies and programs for the protection of the environment and health through improved air quality. These serve to provide additional critical guidance for the betterment of public health for the region and City.

The most directly-related of those plans, the City's General Plan Air Quality Element, was adopted on November 24, 1992, and sets forth the goals, objectives, and policies which guide the City in its implementation of its air quality improvement programs and strategies. A number of these goals, objectives, and policies are relevant to land use development, and relate to traffic mobility, minimizing particulate emissions from construction activities, discouraging single-occupancy vehicle trips, managing traffic congestion during peak hours, and increasing energy efficiency in City facilities and private developments.

The Air Quality Element establishes six goals:

- Good air quality in an environment of continued population growth and healthy economic structure;
- Less reliance on single-occupant vehicles with fewer commute and non-work trips;
- Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand-management techniques;
- Minimal impacts of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation and air quality;
- Energy efficiency through land use and transportation planning, the use of renewable resources and less-polluting fuels and the implementation of conservation measures including passive measures such as site orientation and tree planting; and
- Citizen awareness of the linkages between personal behavior and air pollution and participation in efforts to reduce air pollution

The City is also responsible for the implementation of transportation control measures as outlined in the AQMP. Through capital improvement programs, the City can fund infrastructure that contributes to improved air quality by requiring such improvements as bus turnouts as appropriate, installation of energy-efficient streetlights, and synchronization of traffic signals. In accordance with CEQA requirements and the CEQA review process, the City assesses the air quality impacts of new development projects, requires mitigation of potentially significant air quality impacts by conditioning discretionary permits, and monitors and enforces implementation of such mitigation measures.

Plan for a Healthy Los Angeles

The Plan for a Healthy Los Angeles, adopted by the City Council on March 31, 2015, lays the foundation to create healthier communities for all residents in the City. As an element of the General Plan, it provides high-level policy vision, along with measurable objectives and implementation programs, to elevate health as a priority for the City's future growth and development. With a focus on public health and safety, the Plan for a Healthy Los Angeles provides a roadmap for addressing the most basic and essential quality-of-life issues: safe neighborhoods, a clean environment (i.e., improved ambient and indoor air quality), the opportunity to thrive, and access to health services, affordable housing, and healthy and sustainably produced food.

City of Los Angeles Municipal Code

Chapter IX of the LAMC, Sections 99.02.202, 99.04.106.8, and 99.05.106.14, requires that all new buildings be all-electric buildings, with some exceptions. Equipment typically powered by natural gas, such as space heating, water heating, cooking appliances and clothes drying, would need to be powered by electricity for new construction. Exceptions are made for commercial restaurants, hospitals, laboratories, and research and development uses.

2.3 Existing Conditions

Project Site

The Project Site is approximately 3.7 acres in size. It is made up of two parcels, one of which is currently occupied by the A-1 Trailer Park. The other parcel was formerly used as a vehicle storage lot but is now a vacant surface parking lot. The Project Site is bordered to the north by Pacific Coast Highway, to the east by an auto repair shop and a surface parking lot that is used by Kaiser Permanente, to the south by West 259th Street, which is a cul-de-sac that dead ends at the Kaiser Permanente surface parking lot, and to the west by Frampton Avenue. To the south of West 259th Street are multi-family residential buildings.

Sensitive Receptors

The nearest sensitive receptors are multi-family residential buildings to the south of West 259th Street, located approximately 40 feet from the Project Site. Other sensitive receptors in the area consist of single- and multi-family residences approximately 300 feet (and beyond) to the north, northwest, and northeast of the Project Site, as well as a hospital approximately 500 feet to the southeast.

3 Project Impacts

3.1 Thresholds of Significance

The following thresholds are adopted to aid in the determination of the Project's air quality impacts:

State CEQA Guidelines: Appendix G

In accordance with Appendix G of the CEQA Guidelines, the Project would have a significant impact related to air quality if the Project would:

A. Conflict with or obstruct implementation of the applicable air quality plan?
B. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?
C. Expose sensitive receptors to substantial pollutant concentrations?
D. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

This analysis relies on the Appendix G Thresholds. To answer the Appendix G Threshold questions, the analysis uses factors and considerations identified below from the City's CEQA guidance, as appropriate, and other guidance from the SCAQMD.

SCAQMD CEQA Air Quality Handbook

To assist in answering the Appendix G Threshold questions and thresholds provided by SCAQMD, the City uses SCAQMD's CEQA Air Quality Handbook and the thresholds of significance below as the guidance documents for the environmental review of development proposals within the SCAB. Table IV.B-4 shows the currently recommended supplemental thresholds by SCAQMD in the CEQA Air Quality Handbook, which is intended to translate the CEQA Guidelines thresholds into numerical values or performance standards.

Construction

Based on the criteria set forth in SCAQMD's CEQA Air Quality Handbook, the Project may have a significant impact with regard to construction emissions if any of the following would occur:

- Regional emissions from both direct and indirect sources exceed any of the SCAQMD prescribed threshold levels identified in Table 2.

Table 2. SCAQMD Air Quality Significance Thresholds

Mass Daily Thresholds		
Pollutant	**Construction**	**Operation**
NO_x	100 pounds/day	55 pounds/day
VOC[a]	75 pounds/day	55 pounds/day
PM_{10}	150 pounds/day	150 pounds/day
$PM_{2.5}$	55 pounds/day	55 pounds/day
SO_x	150 pounds/day	150 pounds/day
CO	550 pounds/day	550 pounds/day
Lead	3 pounds/day	3 pounds/day
Toxic Air Contaminants and Odor Thresholds		
Toxic Air Contaminants (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Hazard Index ≥ 1.0 (Project increment)	
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402	
Greenhouse Gases	10,000 MT/yr CO_2e for industrial facilities	
Ambient Air Quality for Criteria Pollutants[b]		
NO_2 1-hour average Annual arithmetic mean	SCAQMD is in attainment; Project is significant if it causes or contributes to an exceedance of the following attainment standards: 0.10 ppm (federal)c 0.03 ppm (State)	
PM_{10} 24-hour average	10.4 µg/m^3 (construction)[d] & 2.5 µg/m^3 (operation)	

Table 2. SCAQMD Air Quality Significance Thresholds

Mass Daily Thresholds	
Annual average	1.0 µg/m³
$PM_{2.5}$ 24-hour average	 10.4 µg/m³ (construction)[e] & 2.5 µg/m³ (operation)
SO_2 1-hour average 24-hour average	 0.25 ppm (State) & 0.075 ppm (federal – 99th percentile) 0.04 ppm (State)
Sulfate 24-hour average	 25 µg/m³ (State)
CO 1-hour average 8-hour average	SCAQMD is in attainment; Project is significant if it causes or contributes to an exceedance of the following attainment standards: 20 ppm (State) and 25 ppm (federal) 9.0 ppm (State/federal)
Lead 30-day average Rolling 3-month average	 1.5 µg/m³ (State)[e] 0.15 µg/m³ (federal)

Sources: SCAQMD, SCAQMD CEQA Handbook, 1993; SCAQMD, Air Quality Significance Thresholds, revised April 2019.
Notes: ppm = parts per million by volume; µg/m³ = micrograms per cubic meter; CO = carbon monoxide; CO_2e = carbon dioxide equivalent; MT = metric tons; NO_2 = nitrogen dioxide; NO_x = oxides of nitrogen; PM_{10} = particulate matter with an aerodynamic diameter less than or equal to 10 microns in diameter; $PM_{2.5}$ = particulate matter with an aerodynamic diameter less than or equal to 2.5 microns in diameter; ROG = reactive organic gases; SCAQMD = South Coast Air Quality Management District; SO_x = sulfur oxides; EPA = U.S. Environmental Protection Agency; VOC = volatile organic compound; ppm = parts per million; SO_2 = sulfur dioxide

[a] The definition of VOC includes ROG compounds and additional organic compounds not included in the definition of ROG. However, for the purposes of this evaluation, VOC and ROG will be considered synonymous.

[b] Ambient air quality thresholds for criteria pollutants based on SCAQMD Rule 1303, Table A-2 unless otherwise stated.

[c] In January 2010, the EPA proposed a new 1-hour national air quality standard of 0.10 ppm for NO_2, which is more stringent than the State's current 1-hour threshold of 0.18 ppm. For the purposes of conducting a conservative analysis, the more stringent national one-hour standard for NO_2 is used as a threshold in the evaluation of the Project's air quality impacts.

[d] Ambient air quality threshold based on SCAQMD Rule 403.

[e] The phase-out of leaded gasoline started in 1976. Since gasoline no longer contains lead, the proposed Project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

- Maximum on-site daily localized emissions exceed the localized significance thresholds (LSTs), resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for CO (20 [23,000 micrograms per cubic meter (µg/m3)] over a 1-hour period or 9.0 ppm [10,530 µg/m3] averaged over an 8-hour period) and NO2 (0.18 ppm [338.4 µg/m3] over a 1-hour period, 0.1 ppm [188 µg/m3] averaged 3-year average of the 98th percentile of the daily maximum 1-hour average, or 0.03 ppm [56.4 µg/m3] averaged over an annual period).
- Maximum on-site localized PM_{10} or $PM_{2.5}$ emissions during construction exceed the applicable LSTs, resulting in predicted ambient concentrations in the vicinity of the Project Site to exceed the incremental 24-hour threshold of 10.4 µg/m3 or 1.0 µg/m3 PM_{10} averaged over an annual period.

The LST significance thresholds for NO_2 and CO represent the allowable increase in concentrations above background levels in the vicinity of a Project that would not cause or contribute to an exceedance of the relevant ambient air quality standards, while the threshold for PM_{10} represents compliance with Rule 403 (Fugitive Dust). The LST significance threshold for $PM_{2.5}$ is intended to ensure that construction emissions do not contribute

substantially to existing exceedances of the $PM_{2.5}$ ambient air quality standards. The allowable emission rates depend on the following parameters:

A. Source-receptor area (SRA) in which the Project is located
B. Size of the Project Site
C. Distance between the Project Site and the nearest sensitive receptor (e.g., residences, schools, hospitals)

The Project Site is located in SRA 2 (Northwest Coastal LA County). The SCAQMD provides guidance for applying CalEEMod to the LSTs. LST pollutant screening level concentration data is currently published for 1-, 2-, and 5-acre sites for varying distances. The maximum number of acres disturbed on the peak day was estimated using the Fact Sheet for Applying CalEEMod to Localized Significance Thresholds (SCAQMD 2014). During grading activities, fugitive dust can be generated from the movement of dirt on the Project Site. CalEEMod estimates dust from dozers moving dirt around, dust from graders or scrapers leveling the land, and loading or unloading dirt into haul trucks. Each of those activities is calculated differently in CalEEMod, based on the number of acres traversed by the grading equipment. Only some pieces of equipment generate fugitive dust in CalEEMod. The CalEEMod manual identifies various equipment and the acreage disturbed in an 8-hour day:

- Crawler tractors, graders, and rubber-tired dozers: 0.5 acres per 8-hour day
- Scrapers: 1 acre per 8-hour day

Although the look-up tables include projects up to 5 acres, projects that could disturb greater than 5 acres require dispersion modeling to determine LSTs. The analysis conservatively applies the LSTs for an interpolated 3-acre disturbance area, which is presented in Table 3.

The closest sensitive receptors would be located approximately 40 feet to the south. Therefore, the LST lookup table value for a distance of 25 meters, the lowest available, was used for the analysis. The LST values from the SCAQMD lookup tables for SRA 2 (Northwest Coastal LA County) for a disturbed acreage of 3 acres and a receptor distance of 25 meters are shown in Table 3.

Table 3. Localized Significance Thresholds for Source Receptor Area 2 (East San Gabriel Valley)

Pollutant	Threshold by Acres Disturbed Per Day (Pounds per Day)
	3-acre
NO_2	172
CO	1,062
PM_{10}	8
$PM_{2.5}$	5

Source: SCAQMD 2008.
Notes: NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
LST thresholds were determined based on the values for a distance of 25 meters from the nearest sensitive receptor.

Operations[29]

Based on the criteria set forth in SCAQMD's CEQA Air Quality Handbook, the Project may have a significant impact with regard to operational emissions if any of the following would occur:

- Regional emissions from both direct and indirect sources would exceed any of the SCAQMD-prescribed threshold levels identified in Table 2.
- Maximum on-site daily localized emissions exceed the LST, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for CO (20 ppm over a 1-hour period, 0.1 over a 3-year average of the 98th percentile of the daily maximum 1-hour average, or 0.03 ppm averaged over an annual period).
- Maximum on-site localized operational PM_{10} and $PM_{2.5}$ emissions exceed the incremental 24-hour threshold of 2.5 µg/m^3 or 1.0 µg/m^3 PM_{10} averaged over an annual period.
- The Project causes or contributes to an exceedance of the California 1-hour or 8-hour CO standards of 20 ppm or 9.0 ppm, respectively.
- The Project creates an odor nuisance pursuant to SCAQMD Rule 402 (i.e., objectionable odor at the nearest sensitive receptor).

Toxic Air Contaminants

Based on the criteria set forth in SCAQMD's CEQA Air Quality Handbook, the Project may have a significant TAC impact, if:

- The Project emits carcinogenic or TACs that exceed the maximum incremental chronic and acute cancer risk as provided in Table 2.

In assessing impacts related to TACs in this section, the City will use Appendix G as the threshold of significance. The criteria factors identified above from the 2006 L.A. CEQA Thresholds Guide will be used where applicable and relevant to assist in analyzing the Appendix G thresholds. In addition, the following criteria factors set forth in SCAQMD's CEQA Air Quality Handbook serve as quantitative air quality standards to be used to evaluate Project impacts under Appendix G thresholds.

- The Project results in the exposure of sensitive receptors to carcinogenic or TACs that exceed the maximum incremental cancer risk of 10 in one million or an acute or chronic hazard index of 1.0. For projects with a maximum incremental cancer risk between 1 in one million and 10 in one million, a project would result in a significant impact if the cancer burden exceeds 0.5 excess cancer cases.

[29] Per the Housing Element Mitigation Monitoring Program, operational assessment is not required based on the project size as described in MM 4.2-2(b). Nevertheless, the included operation assessment is provided, applying SCAQMD thresholds, for informational purposes only.

Consistency with Applicable Air Quality Plans

Section 15125 of the State CEQA Guidelines requires an analysis of Project consistency with applicable governmental plans and policies. In accordance with SCAQMD's CEQA Air Quality Handbook,[30] the following criteria were used to evaluate the Project's consistency with SCAQMD's 2022 AQMP and SCAG's 2020–2045 RTP/SCS:

- **Criterion 1:** Will the Project result in any of the following:
  - An increase in the frequency or severity of existing air quality violations;
  - Cause or contribute to new air quality violations; or
  - Delay timely attainment of air quality standards or the interim emission reductions specified in the AQMP?
- **Criterion 2:** Will the Project exceed the assumptions utilized in preparing the AQMP?
  - Is the Project consistent with the population and employment growth projections upon which AQMP forecasted emission levels are based;
  - Does the Project include air quality mitigation measures; or
  - To what extent is Project development consistent with the control measures set forth in the AQMP?

The Project's impacts with respect to these criteria are discussed to assess the consistency with SCAQMD's AQMP and SCAG regional plans and policies. In addition, the Project's consistency with the Air Quality Element of the General Plan is discussed.

Cumulative Impacts

Based on SCAQMD guidance, individual construction projects that exceed the SCAQMD's recommended daily thresholds for Project-specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the SCAB is in nonattainment. As discussed in the SCAQMD's White Paper on Potential Control Strategies to Address Cumulative Impacts from Air pollution:[31]

> As Lead Agency, the AQMD uses the same significance thresholds for Project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR… Projects that exceed the Project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason Project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the Project-specific thresholds are generally not considered to be cumulatively significant.

The cumulative analysis of air quality impacts within this Draft EIR follows SCAQMD's guidance such that construction or operational Project emissions would be considered cumulatively considerable if Project-specific emissions exceed an applicable SCAQMD recommended daily threshold.

3.2 Methodology

Although the SCAQMD is responsible for regional air quality planning efforts, it does not have the authority to directly regulate the air quality issues associated with new development projects within the SCAB, such as the Project. Instead, the SCAQMD published the CEQA Air Quality Handbook in November 1993 to assist lead agencies

30 SCAQMD, CEQA Air Quality Handbook, Chapter 12, Assessing Consistency with Applicable Regional Plans, 1993.
31 SCAQMD, Cumulative Impacts White Paper, Appendix D, August 2003.

consultants, Project proponents, and other interested parties in evaluating potential air quality impacts of projects proposed in the SCAB. The CEQA Air Quality Handbook provides standards, methodologies, and procedures for conducting air quality analyses and was used extensively in the preparation of this analysis. SCAQMD is currently in the process of replacing the CEQA Air Quality Handbook with the Air Quality Analysis Guidance Handbook.[32]

In order to assist the CEQA practitioner in conducting an air quality analysis in the interim while the replacement Air Quality Analysis Guidance Handbook is being prepared, supplemental guidance/information is provided on the SCAQMD website[33] and includes: (1) the EMission FACtors (EMFAC) model on-road vehicle emission factors, (2) background CO concentrations, (3) localized significance thresholds, (4) mitigation measures and control efficiencies, (5) mobile source toxics analysis, (6) off-road mobile source emission factors, (7) $PM_{2.5}$ significance thresholds and calculation methodology, and (8) updated SCAQMD Air Quality Significance Thresholds. The SCAQMD also recommends using approved models to calculate emissions from land use projects, such as CalEEMod. These recommendations were followed in the preparation of this analysis. Pursuant to the CEQA Guidelines (Section 15064.7), a lead agency may consider using, when available, significance thresholds established by the applicable air quality management district or air pollution control district when making determinations of significance.

The SCAQMD has also adopted land use planning guidelines in the Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning (May 2005),[34] which considers impacts to sensitive receptors from facilities that emit TAC emissions. SCAQMD's siting distance recommendations are the same as those provided by CARB, described above. The SCAQMD's document introduces land use-related policies that rely on design and distance parameters to minimize emissions and lower potential health risk. SCAQMD's guidelines are voluntary initiatives recommended for consideration by local planning agencies.

The following paragraphs describe the methodology used to analyze the Project's impacts with respect to air quality:

Construction

Emissions from the construction phase of the proposed Project were estimated using CalEEMod Version 2022.1. Construction scenario assumptions, including phasing, equipment mix, and vehicle trips, were based on information provided by the Project applicant and CalEEMod default values when Project specifics were not known.

Construction is anticipated to start in January 2026 and would last approximately 23 months, ending in November 2027. However, this air quality impact analysis uses an earlier commencement date of January 2024 (based on a construction schedule associated with the filing date of the land use application for the Project) because an earlier start date for Project construction represents a worst-case scenario for criteria air pollutant emissions because equipment and vehicle emission factors for later years would be slightly less due to more stringent standards for in-use off-road equipment and heavy-duty trucks, as well as fleet turnover replacing older equipment and vehicles in later years. The analysis contained herein is based on the following assumptions (duration of phases is approximate, some phases overlap):

- Demolition: 1 month
- Grading: 2 months

[32] SCAQMD, Air Quality Analysis Handbook, 1993, revised March 2015.
[33] SCAQMD, Air Quality Analysis Handbook, 1993, revised March 2015.
[34] SCAQMD, Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning, May 6, 2005.

- Building Construction: 19 months
  - Framing
  - Mechanical/Electrical/Plumbing (MEP)
  - Finish and Close-out
- Architectural Coating: 7 months
- Paving: 1 month

The Project Site is currently occupied by a mobile home and a surface parking lot. The proposed Project involves the demolition/removal of these existing structures and surface parking. The demolition phase would include activities required to remove the existing mobile home park from the Project Site. As part of the first phase in the Project's construction process, the existing manufactured dwellings would be removed, as follows:

- Mobile homes: Approximately 80% of the existing mobile homes (or, 14 homes) are anticipated to be removed by residents, using heavy duty tow trucks. Approximately 20% (or, 3 homes) are anticipated to be demolished in place by the applicant's construction contractor and debris would be hauled off site using dump trucks.
- Trailers: Approximately 80% of the existing trailers (or, 18 trailers) are anticipated to be towed away by residents, using conventional pick-up trucks. Approximately 20% (or, 4 trailers) are anticipated to be towed by the applicant's construction contractor, using conventional pick-up trucks.
- Recreational Vehicles (RVs): All RVs (total of 3) are anticipated to be driven off site by the vehicle owners.

Once the manufactured homes have been relocated or demolished as identified above, all permanent structures would be demolished (utility rooms, the laundry/storage building, and the three buildings along Pacific Coast Highway), and the demolition debris would be hauled off from the Project site. Next, the asphalt, utility poles, fences, landscaping, and other improvements would be demolished and the debris would be removed from the site. In total, demolition of the mobile home park as a whole is expected to require 576 haul truck trips. On a daily basis, approximately 20 construction workers would be required. Removal of the manufactured dwellings, demolition of the permanent structures, and demolition of the other improvements (e.g., asphalt, utility poles) is expected to take approximately one month and would constitute the first phase of Project construction. Once the site has been cleared, the other construction phases would follow (grading, building construction, etc.). The analysis in this memorandum includes the closure of the mobile home park and removal of structures from the Project site.

Once the site has been cleared as described above, construction would commence on the proposed mixed-use building, consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure. For the analysis, it was generally assumed that heavy construction equipment would be operating at the site for approximately 8 hours per day, 5 days per week (22 days per month), during proposed Project construction.

Construction worker estimates and vendor truck trips by construction phase were based on information provided by the Project applicant and/or CalEEMod defaults. Haul truck trips during the grading and building phases were based on demolition and earthwork quantities provided by the applicant. During grading, it was assumed that 7,000 cubic yards of material would be exported. CalEEMod default trip length values were used for the distances for all construction-related trips.

The construction equipment mix and vehicle trips used for estimating the Project-generated construction emissions are shown in Table 4.

Table 4. Construction Scenario Assumptions

Construction Phase	One-Way Vehicle Trips			Equipment		
	Average Daily Worker Trips	Average Daily Vendor Truck Trips	Total Daily Haul Truck Trips	Equipment Type	Quantity	Usage Hours
Demolition	40	50	576	Concrete/Industrial Saws	1	8

Notes: See Appendix A for details.

Operation

Emissions from the operational phase of the proposed Project were estimated using CalEEMod Version 2022.1. The first full year after construction, 2026, was assumed as the first year of operation. (In actuality, the Project is anticipated to open in 2028. However, similar to construction, use of an earlier buildout year in air emissions modeling leads to more conservative results.) In addition to the proposed Project, exiting conditions were modeled to conduct an operational emissions netting analysis.

Area Sources

CalEEMod was used to estimate operational emissions from area sources, including emissions from consumer product use, architectural coatings, and landscape maintenance equipment. Emissions associated with natural gas usage in space heating, water heating, and stoves are calculated in the building energy use module of CalEEMod, as described in the following text.

Consumer products are chemically formulated products used by household and institutional consumers, including detergents; cleaning compounds; polishes; floor finishes; cosmetics; personal care products; home, lawn, and garden products; disinfectants; sanitizers; aerosol paints; and automotive specialty products. Other paint products, furniture coatings, or architectural coatings are not considered consumer products.[35] Consumer product VOC emissions are estimated in CalEEMod based on the floor area of residential and nonresidential buildings and on the default factor of pounds of VOC per building square foot per day. For parking lot land uses, CalEEMod estimates VOC emissions associated with use of parking surface degreasers based on a square footage of parking surface area and pounds of VOC per square foot per day.

VOC off-gassing emissions result from evaporation of solvents contained in surface coatings such as in paints and primers used during building maintenance. CalEEMod calculates the VOC evaporative emissions from application of residential and nonresidential surface coatings based on the VOC emission factor, the building square footage, the assumed fraction of surface area, and the reapplication rate. The model default reapplication rate of 10% of area per year is assumed. Consistent with CalEEMod defaults, it is assumed that the residential surface area for painting equals 2.7 times the floor square footage, with 75% assumed for interior coating and 25% assumed for exterior surface coating. For nonresidential land uses (e.g., retail, community, and commercial areas), it is assumed that the surface area for painting equals 2.0 times the floor square footage, with 75% assumed for interior coating and 25% assumed for exterior surface coating. For the parking garage, the architectural coating area is assumed to be 6% of the total square footage, consistent with the supporting CalEEMod studies provided as an appendix to the CalEEMod User's Guide.[36]

Landscape maintenance includes fuel combustion emissions from equipment such as lawn mowers, rototillers, shredders/grinders, blowers, trimmers, chain saws, and hedge trimmers. The emissions associated from landscape equipment use are estimated based on CalEEMod default values for emission factors (grams per residential dwelling unit per day and grams per square foot of nonresidential building space per day) and number of summer days (when landscape maintenance would generally be performed) and winter days.

[36] CAPCOA CalEEMod Version 2022.1 California Emissions Estimator Model, Appendix C Emissions Calculations Details for CalEEMod, April 2022, https://caleemod.com/documents/user-guide/04_Appendix%20C.pdf

Energy Sources

As represented in CalEEMod, energy sources include emissions associated with building electricity and natural gas usage. Electricity use would contribute indirectly to criteria air pollutant emissions; however, the emissions from electricity use are only quantified for GHGs in CalEEMod, since criteria pollutant emissions occur at the site of the power plant, which is typically off site.

The energy use from nonresidential land uses (natural gas usage per square foot per year) is calculated in CalEEMod based on the California Commercial End-Use Survey database. CalEEMod default values were used for both residential and nonresidential land uses energy consumption. CalEEMod assumes compliance with the 2019 Title 24 Building Energy Efficiency Standards. Compliance with Sections 99.02.202, 99.04.106.8, and 99.05.106.14 of the LAMC, if required, would reduce emissions in this category relative to the results shown herein.

Mobile Sources

Mobile sources for the proposed Project would be motor vehicles (i.e., automobiles and light-duty trucks) traveling to and from the Project Site. Motor vehicles may be fueled with gasoline, diesel, or alternative fuels. Default vehicle trip generation rates included in CalEEMod for each of the analyzed land uses were adjusted to match the proposed Project's trip generation rates presented in the Transportation Impact Analysis prepared for the Project (LLG 2021). CalEEMod default data, including emissions factors were conservatively used for the model inputs to estimate daily emissions from proposed vehicular sources. Emission factors representing the vehicle mix and emissions for 2026 were used to estimate emissions associated with full build-out of the proposed Project. (In actuality, the Project is anticipated to open in 2028. However, similar to construction, use of an earlier buildout year in air emissions modeling leads to more conservative results.) Trip rate assumptions for the proposed Project are shown in Table 5.

Table 5. Project Trip Rate Assumptions

Land Use	CalEEMod Land Use Surrogate	Trip Rate		
		Weekday	Saturday	Sunday
Residential Units*	Apartments Mid-Rise	5.44	4.91	4.09
Commercial Space	High-Turnover Sit-down Restaurant	112.18	122.40	142.64

Source: Appendix A for details.

* All 354 units were modeled for air quality and GHGs based on ITE Land Use Code 221, resulting in a conservative analysis, because the 42 proposed affordable housing units have a slightly lower trip rate per the City's Affordable House data (4.16 compared to 5.44 for weekdays).

3.3 Analysis of Project Impacts

Threshold a) Would the Project conflict with or obstruct implementation of the applicable air quality plan?

SCAQMD CEQA Air Quality Handbook Policy Analysis

In accordance with the procedures established in the SCAQMD's CEQA Air Quality Handbook, the following criteria are required to be addressed in order to determine the Project's consistency with applicable SCAQMD and SCAG policies:

- Whether the Project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the AAQS or interim emission reductions in the AQMP; and
- Whether the Project would exceed the assumptions in the AQMP or increments based on the year of Project buildout and phase. Is the Project consistent with the population and employment growth projections upon which AQMP forecasted emission levels are based; does the Project include air quality mitigation measures; or to what extent is Project development consistent with control measures?

1. Criterion 1: Whether the Project would result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.

To address this criterion, an air quality modeling analysis that identified the Project's impact on air quality was performed. Detailed results of the modeling conducted for the Project are included in Appendix A. CalEEMod Version 2022.1 was used to model emissions for the Project and to analyze the Project's potential to increase relevant criteria pollutants, as discussed in detail under Threshold (b) below.

As discussed under Threshold (b) below, the proposed Project would result in emissions that would not exceed the SCAQMD thresholds for VOC, NO_x, SO_x, PM_{10}, or $PM_{2.5}$ during construction or operations and would not result in a significant and unavoidable impact associated with the violation of an air quality standard. Thus, the Project would not result in an increase in the frequency or severity of existing air quality violations, cause or contribute to new violations, or delay timely attainment of the ambient air quality standards or interim emission reductions in the AQMP.

2. Criterion 2: Whether the Project would exceed the assumptions in the AQMP or increments based on the year of project buildout and phase.

The Project would not conflict with SCAG's growth projections anticipated in the 2022 AQMP because the Project would not introduce a land use or zoning conflict with the City's designations for the Project area. The Project would replace an existing mobile home and a surface parking lot with a mixed-use building consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure.

Since the 2022 AQMP incorporated growth projections from the 2020–2045 RTP/SCS, the Project's increase in residences is compared to the growth forecast in the 2020–2045 RTP/SCS (Connect SoCal 2020). Based on Connect SoCal 2020, the City of Los Angeles is projected to have year 2045 population of 4,771,300 people. Based

on SCAG's more recent Pre-Certified Local Housing Data[37], the City of Los Angeles' population in 2020 was estimated to be 4,010,684 people and the number of housing units was estimated to be 1,517,755 with an average household size of 2.78 people per household, and the number of jobs was estimated to be 1,988,936. Population growth is usually associated with the construction of new residential units, or other infrastructure, that provides housing or employment opportunities and, resultantly, attracts new residents to an area. The Project would include the construction of 354 new housing units within the Wilmington – Harbor City Community in the City of Los Angeles. Assuming SCAG's estimate of 2.78 people per household and assuming that no existing residents moved into the proposed housing units, the Project has the potential to add 984 new residents to the local community.[38] Conservatively assuming that the 984 new residents came from outside of the City of Los Angeles metropolitan area, the proposed Project would account for approximately 0.13% of the City of Los Angeles' projected growth through 2045.[39] This estimate is well within the SCAG anticipated population projections for the City of Los Angeles. As such, the Project would not induce substantial unplanned population growth in the City. Thus, the Project's residential growth would fall within the forecasted growth for the City, and the Project would not represent a substantial or significant growth as compared to the projected population growth for the City.

The Project area is the Wilmington-Harbor City Community Plan Area which is located between the planning communities of Harbor Gateway, San Pedro, and the Port of Los Angeles, and adjacent to the cities of Torrance, Lomita, Rancho Palos Verdes, Carson, Long Beach, and an unincorporated area of Los Angeles County. The overarching goals of the Community Plan are as follows: preserving and enhancing the positive characteristics of existing residential neighborhoods while providing a variety of compatible new housing opportunities; improving the function, design, and economic vitality of the commercial corridors and industrial areas; maximizing the development opportunities around the future transit system while minimizing any adverse impacts; and planning the remaining commercial and industrial development opportunity sites for needed job producing uses that improve the economic and physical condition of the Community Plan Area.

The proposed Project would both further the overarching goals of the Community Plan and would not conflict with the City's implementation of these goals. The Project would provide new housing opportunities that would be compatible with multi-family residential neighborhoods to the south while incorporating a commercial use that would be compatible with uses to the north, east, and west and that would provide a community-serving commercial use in walking distance of proposed residences and existing nearby residences. The Project would also improve the economic vitality of the Project area by redeveloping an underutilized site with higher density residential uses and community-serving commercial business. The Project would also be required to comply with the City's Transportation Demand Management Ordinance.

In summary, the Project would not conflict with SCAG's growth projections anticipated in the 2022 AQMP because the Project would not introduce a land use or zoning conflict with the City's designations for the Project Site. Therefore, the Project would not exceed the assumptions in the AQMP.

[37] SCAG Pre-Certified Local Housing Data, City of Los Angeles. April 2021 https://scag.ca.gov/sites/main/files/file-attachments/los-angeles-he-0421.pdf?1620776467

[38] 354 proposed residential units X 2.78 people per household = 984 new residents

[39] 984 people/(4,771,300 - 4,010,684)(additional people projected through 2045) X 100 = 0.13%

City of Los Angeles Policies

The Air Quality Element of the General Plan was adopted on November 24, 1992, and sets forth the goals, objectives, and policies that guide the City in the implementation of its air quality improvement programs and strategies. The Air Quality Element acknowledges the interrelationships among transportation and land use planning in meeting the City's mobility and air quality goals.

To achieve these goals, performance-based standards have been adopted to provide flexibility in implementation of the policies and objectives of the Air Quality Element. The Air Quality Element goals, objectives, and policies relevant to the Project are summarized in the Local Regulatory Framework section above.

The Project would promote the General Plan Air Quality Element goals, objectives, and policies. The Project Site is well-located to facilitate pedestrian activity, bicycle use, and public transit use. The Metro Silver Line station is located approximately 1-mile to the east at S Figueroa St. In addition, there are also numerous bus stops located near the Project Site along Pacific Coast Hwy. The Project is situated within walking distance of retail, medical facilities, restaurant, and other commercial businesses located along Pacific Coast Hwy. Bus transit service in the Project area is provided by Metro and the Los Angeles Department of Transportation (DASH and Commuter Express transit services). The Project's proximity to the Metro Silver Line and a variety of bus stops would facilitate use of transit to access the Project Site.

In summary, the Project would not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, would not exceed the demographic growth forecasts in the SCAQMD 2016 AQMP, and would be consistent with the General Plan's Air Quality Element. Based on these considerations, impacts related to the Project's potential to conflict with or obstruct implementation of the applicable air quality plan would be less than significant.

Threshold b) Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

The SCAB has been designated as federal nonattainment area for lead,[40] O_3, and $PM_{2.5}$, and a State nonattainment area for O_3, PM_{10}, and $PM_{2.5}$. This nonattainment status is the result of cumulative emissions from all sources of these air pollutants and their precursors within the SCAB.

Construction and operation of the Project may result in emissions of criteria air pollutants from mobile, area, and stationary sources, which may cause exceedances of federal and State ambient air quality standards or contribute substantially to existing nonattainment of ambient air quality standards. The following discussion identifies potential construction and operational impacts that would result from implementation of the Project.

Construction Emissions

Construction of the Project would result in the addition of pollutants to the local airshed caused by soil disturbance, fugitive dust emissions, and combustion pollutants from on-site construction equipment, as well as from off-site

[40] The phase-out of leaded gasoline started in 1976. Since gasoline no longer contains lead, the proposed project is not anticipated to result in impacts related to lead; therefore, it is not discussed in this analysis.

trucks hauling construction materials. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation, and for dust, the prevailing weather conditions. Therefore, such emissions levels can only be estimated, with a corresponding uncertainty in precise ambient air quality impacts.

Implementation of the Project would generate construction-related air pollutant emissions from three general activity categories: entrained dust, equipment and vehicle exhaust emissions, and architectural coatings. Entrained dust results from the exposure of earth surfaces to wind from the direct disturbance and movement of soil, resulting in PM_{10} and $PM_{2.5}$ emissions. Exhaust from internal combustion engines used by construction equipment and vendor trucks (delivery trucks) and worker vehicles would result in emissions of VOCs, NO_x, CO, PM_{10}, and $PM_{2.5}$. The application of architectural coatings, such as exterior/interior paint and other finishes, would also produce VOC emissions; however, per SCAQMD's Rule 1113, the VOC content of most non-specialty architectural coatings would be limited to 50 grams of VOC per liter (g/L VOC) of coating for interior application and 100 g/L VOC for exterior applications.

Table 6 presents the estimated maximum daily construction emissions generated during construction of the Project. (These emissions account for demolition and removal of the existing manufactured dwellings.) The values shown are the maximum summer or winter daily emissions results from CalEEMod. Details of the emissions calculations are provided in Appendix A.

Table 6. Estimated Maximum Daily Construction Emissions

Year	VOCs	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
2024	5.56	29.30	79.20	0.05	10.20	3.09
2025	16.40	19.10	38.50	0.04	5.04	1.48
Maximum daily emissions	**16.40**	**29.30**	**79.20**	**0.05**	**10.20**	**3.09**
SCAQMD threshold	*75*	*100*	*550*	*150*	*150*	*55*
Threshold exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Notes:
VOC = volatile organic compound; NOx = oxides of nitrogen; CO = carbon monoxide; SOx = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
See Appendix A for complete results.
The values shown are the maximum summer or winter daily emissions results from CalEEMod.
These estimates reflect compliance with requirements of SCAQMD's Rule 1113.

As shown in Table 6, daily construction emissions would not exceed the SCAQMD significance thresholds for VOC, NO_x, CO, SOx, PM_{10}, or $PM_{2.5}$ during construction in all construction years. As such, criteria air pollutant impacts associated with construction would be less than significant.

Operations Emissions

Following the completion of construction activities, the Project would generate VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$ emissions from mobile sources, including vehicular traffic generated by residents, workers, and visitors, energy sources (including combustion of fuels used for space and water heating), and area sources (i.e., use of consumer products, architectural coatings for repainting, landscaping equipment). Existing land uses to be demolished include the majority of these sources, which were modeled in order to determine the baseline emissions and net increase in emissions associated with the Project development, based on incremental demolition of existing uses and construction of new

uses. The Project would replace an existing mobile home and a surface parking lot with a mixed-use building consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure. Table 7 presents the maximum daily emissions associated with the operation of the Project.

Table 7. Estimated Daily Maximum Operational Emissions

Emissions Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Existing Baseline						
Area	1.51	0.62	2.63	<0.01	0.05	0.05
Energy	0.02	0.31	0.13	<0.01	0.03	0.03
Mobile	0.69	0.57	5.87	0.01	0.52	0.10
Total	**2.22**	**1.50**	**8.63**	**0.01**	**0.60**	**0.18**
Project						
Area	11.10	5.28	32.90	0.43	0.43	0.43
Energy	0.06	1.05	0.52	0.08	0.08	0.08
Mobile	5.11	4.17	43.90	0.07	3.82	0.73
Total	**16.27**	**10.50**	**77.32**	**0.58**	**4.33**	**1.24**
Net (Project minus Existing Baseline)	**14.05**	**9.00**	**68.69**	**0.57**	**3.73**	**1.06**
Emissions Threshold	*55*	*55*	*550*	*150*	*150*	*55*
Threshold Exceeded?	**No**	**No**	**No**	**No**	**No**	**No**

Source: See Appendix A for complete results.
Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
The values shown are the maximum summer or winter daily emissions results from CalEEMod, though totals may not sum due to rounding.

As shown in Table 7, the net increase in Project emissions would not exceed the SCAQMD operational thresholds for VOC, NO_x, CO, SO_x, PM_{10}, and $PM_{2.5}$. Impacts associated with Project-generated operational criteria air pollutant emissions would be less than significant.

Threshold c) Would the Project expose sensitive receptors to substantial pollutant concentrations?

Construction

Construction activities associated with the Project would result in temporary sources of on-site fugitive dust and construction equipment emissions. Hauling of materials associated with Project construction is not expected to cause substantial air quality impacts to sensitive receptors along off-site roadways. Emissions from the truck pass-bys would be relatively brief in nature and would cease once the trucks passes through the main streets. In addition, diesel equipment would also be subject to the CARB ATCM for in-use off-road diesel fleets, which would minimize DPM emissions. Nevertheless, Project construction emissions include those from on-site activities and include emissions from off-site mobile emissions, while operating on-site, and are estimated based on an estimated 1,000 feet of onsite operation. The maximum allowable daily emissions that would satisfy the SCAQMD localized significance criteria for SRA 2 are presented in Table 8 and compared to the maximum daily on-site construction

emissions generated over the span of all construction phases of the Project. The closest sensitive receptors would be located approximately 40 feet to the south. Therefore, the LST lookup table value for a distance of 25 meters, the lowest available, was used for the analysis. The LST values from the SCAQMD lookup tables for SRA 2 (Northwest Coastal LA County) for a disturbed acreage of 3 acres and a receptor distance of 25 meters are shown in Table 8.

Table 8. Localized Significance Thresholds Analysis for Project Construction

Pollutant	Project Construction Emissions (pound/day)	LST Criteria (pounds/day)	Exceeds LST?
NO_2	25.80	172	No
CO	33.70	1,062	No
PM_{10}	4.54	8	No
$PM_{2.5}$	2.11	5	No

Source SCAQMD, Final Localized Significance Threshold Methodology, July 2009.
Notes:
LST = localized significance threshold; NO_2 = nitrogen dioxide; CO = carbon monoxide; PM_{10} = particulate matter; $PM_{2.5}$ = fine particulate matter.
See Appendix A for complete results.
Localized significance thresholds are shown for an interpolated 3-acre Project Site corresponding to a distance to a sensitive receptor of 25 meters.
NO_x emissions from CalEEMod are compared to the NO_2 LST threshold.
These estimates reflect control of fugitive dust required by Rule 403.

LSTs represent the maximum emissions from a Project that will not cause or contribute to an exceedance of the most stringent applicable NAAQS or CAAQS at the nearest sensitive receptor, taking into consideration ambient concentrations in each source receptor area, Project size, and distance to the nearest sensitive receptor. As shown in Table 8, construction activities would not generate emissions in excess of site-specific LSTs; therefore, site-specific construction impacts during construction of the Project would be less than significant because they would not expose sensitive receptors to substantial pollutant concentrations.

Operations - Mobile Source Carbon Monoxide Hotspots

Mobile source impacts occur on two scales of motion. Regionally, Project-related travel would add to regional trip generation and increase the vehicle miles traveled within the local airshed and the SCAB. Locally, proposed Project traffic will be added to roadways within the proposed Project area. If such traffic occurs during periods of poor atmospheric ventilation, is composed of a large number of vehicles "cold-started" and operating at pollution-inefficient speeds, and is operating on roadways already crowded with non-Project traffic, there is a potential for the formation of microscale CO hotspots in the area immediately around points of congested traffic. Because of continued improvement in vehicular emissions at a rate faster than the rate of vehicle growth and/or congestion, the potential for CO hotspots in the SCAB is steadily decreasing.

CO transport is extremely limited and disperses rapidly with distance from the source. Under certain extreme meteorological conditions, however, CO concentrations near a congested roadway or intersection may reach unhealthy levels, affecting sensitive receptors such as residents, school children, hospital patients, and older adults. Typically, high CO concentrations are associated with roadways or intersections operating at an unacceptable LOS. Projects contributing to adverse traffic impacts may result in the formation of such CO hotspots.

The Los Angeles Department of Transportation (LADOT), in partnership with the Department of City Planning and Fehr & Peers, has developed the City of Los Angeles Vehicle Miles Traveled (VMT) Calculator to estimate Project-specific daily household VMT per capita and daily work VMT per employee for land use development projects. The Project traffic analysis demonstrates no significant traffic impacts as a result of the development of the Project.

At the time that the SCAQMD 1993 Handbook was published, the SCAB was designated nonattainment under the CAAQS and NAAQS for CO. In 2007, the SCAQMD was designated in attainment for CO under both the CAAQS and NAAQS as a result of the steady decline in CO concentrations in the SCAB due to turnover of older vehicles, introduction of cleaner fuels, and implementation of control technology on industrial facilities. The SCAQMD conducted CO modeling for the 2003 AQMP (Appendix V, Modeling and Attainment Demonstrations, of SCAQMD 2003) for the four worst-case intersections in the SCAB: (1) Wilshire Boulevard and Veteran Avenue, (2) Sunset Boulevard and Highland Avenue, (3) La Cienega Boulevard and Century Boulevard, and (4) Long Beach Boulevard and Imperial Highway. At the time the 2003 AQMP was prepared, the intersection of Wilshire Boulevard and Veteran Avenue was the most congested intersection in Los Angeles County, with an average daily traffic volume of about 100,000 vehicles per day. Using CO emission factors for 2002, the peak modeled CO 1-hour concentration was estimated to be 4.6 ppm at the intersection of Wilshire Boulevard and Veteran Avenue. The maximum 1-hour CO concentration from 2018 through 2020 at the nearest CO monitoring station located at 700 North Bullis Road, Compton, was 4.7 ppm in 2018.[41] Adding the maximum value from the Compton monitor station to the concentration at the intersection of Wilshire Boulevard and Veteran Avenue would equate to 9.3 ppm, while the CAAQS is 20 ppm.

The 2003 AQMP also projected 8-hour CO concentrations at these four intersections for 1997 and from 2002 through 2005. From years 2002 through 2005, the maximum 8-hour CO hotspot was 3.8 ppm at the Sunset Boulevard and Highland Avenue intersection (3.4 ppm at the Wilshire Boulevard and Veteran Avenue in 2002). Adding the 3.8 ppm to the maximum 8-hour CO concentration from 2018 through 2020 at the Compton monitoring station, which was 3.5 ppm in 2018, the 8-hour CO would be 7.3 ppm, while the CAAQS is 9.0 ppm.

Therefore, at the most congested intersections in the Los Angeles area, the CO concentrations that are produced fall well below thresholds, even when added to ambient CO levels in the Project area. Additionally, vehicle efficiency has further increased since the time this data was produced. This indicates that the Project would not cause or contribute to a significant CO hotspot. Therefore, the Project does not trigger the need for a detailed CO hotspots model and would not cause any new or exacerbate any existing CO hotspots. As a result, impacts related to localized mobile-source CO emissions are considered less than significant. Accordingly, the Project's CO hotspot impacts would be less than significant because they would not expose sensitive receptors to substantial pollutant concentrations.

Construction and Operational Toxic Air Contaminants

In addition to impacts from criteria pollutants, Project impacts may include emissions of pollutants identified by the State and federal government as TACs or HAPs. State law has established the framework for California's TAC identification and control program, which is generally more stringent than the federal program and aimed at TACs that are a problem in California. The State has formally identified more than 200 substances as TACs, including the federal HAPs, and is adopting appropriate control measures for sources of these TACs.

41 EPA. 2021 "AirData: Access to Air Pollution Data." https://www.epa.gov/outdoor-air-quality-data/monitor-values-report

The following ATCMs are required by state law to reduce DPM emissions (DPMs are considered TACs):

- Fleet owners of mobile construction equipment are subject to the CARB Regulation for In-Use Off-road Diesel Vehicles,[42] the purpose of which is to reduce DPM and criteria pollutant emissions from in-use (existing) off-road diesel-fueled vehicles.
- All commercial diesel vehicles are subject to Title 13, Section 2485 of the California Code of Regulations, limiting engine idling time. Idling of heavy-duty diesel construction equipment and trucks during loading and unloading is required to be limited to 5 minutes; electric auxiliary power units should be used whenever possible.

"Incremental cancer risk" is the net increased likelihood that a person continuously exposed to concentrations of TACs resulting from a Project over a 30-year exposure period would contract cancer based on the use of standard OEHHA risk-assessment methodology.[43] In addition, some TACs have non-carcinogenic effects. The greatest potential for TAC emissions during construction would be DPM emissions from heavy equipment operations and heavy-duty trucks during construction of the proposed Project and the associated health impacts to sensitive receptors. The Project would not result in the creation of a land use that is commonly associated with operational DPM or other TACs. As such, Project operational TAC impacts would be less than significant.

As shown in Table 6, maximum daily particulate matter (PM_{10} or $PM_{2.5}$) emissions generated by construction equipment operation and from haul trucks (exhaust particulate matter, or DPM), combined with fugitive dust generated by equipment operation and vehicle travel, would be well below the SCAQMD significance thresholds. Moreover, total construction of the Project would last approximately 2 years, much less than the OEHHA recommended 30-year exposure period, after which Project construction-related TAC emissions would cease. Nevertheless, the Housing Element Program EIR determined that construction-related TAC emissions from housing projects in proximity to sensitive receptors and with construction durations more than 18 months could result in potentially significant impacts. Housing Element Program EIR MM 4.2-3 (Construction TAC Reduction Measures) was set forth to reduce this impact. MM 4.2-3 requires either preparation of a construction health risk assessment demonstrating less than significant impacts (with a mitigation plan if needed) or commitment to using construction equipment that meets the CARB Tier 4 Final or USEPA Tier 4 off-road emissions for all equipment rated 50 horsepower or greater. In this case, the Project applicant has agreed to commit to using the construction equipment specified in MM 4.2-3, and therefore a Project-specific construction health risk assessment has not been prepared. As stated in the Housing Element Program EIR, "projects that voluntarily incorporate use of certified low-emission equipment are exempted from further analysis because such projects would not generate substantial pollutant concentrations."[44] As such, upon compliance with the equipment specifications in MM 4.2-3, impacts of the Project would be less than significant.

Based on the above considerations, the Project could potentially expose sensitive receptors to substantial pollutant concentrations or health risk during construction; however, implementation of MM 4.2-3 would reduce construction impacts to below a level of significance. As discussed above, TAC emissions would cease after construction and operational impacts would therefore be less than significant.

Threshold d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Odors would be generated from vehicles and/or equipment exhaust emissions during construction of the Project. Odors produced during construction would be attributable to concentrations of unburned hydrocarbons from tailpipes of construction equipment and to architectural coatings. Such odors would cease upon completion of construction. Construction of the Project would involve the use of conventional building materials typical of construction projects of similar type and size. Any odors that may be generated during construction would be localized and temporary in nature and would not be sufficient to affect a substantial number of people. Therefore, impacts associated with odors during construction are considered less than significant because these odors would not affect a substantial number of people.

Land uses and industrial operations that are associated with odor complaints include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The Project would not result in the creation of a land use that is commonly associated with odors. Therefore, Project operations would result in an odor impact that is less than significant.

In addition, the construction and operation of the Project would also comply with SCAQMD Rules 401, 402, and 403 regarding visible emissions violations.[45] In particular, SCAQMD Rule 402 provides that a person may not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.[46] Therefore, with compliance with existing regulatory requirements, the Project would not create other emissions including odors that would adversely affect a substantial number of people.

Based on the above, the potential impact of other emissions, including odors, during construction and operation of the Project would be less than significant.

3.4 Mitigation Measures

The Project has been found to be within the scope of the program analyzed in the Housing Element Program EIR. Accordingly, the Project is required to comply with all applicable mitigation measures identified in the Housing Element Program EIR Mitigation Monitoring Program (MMP). The following Housing Element Program EIR MMs are potentially applicable to the air quality analysis and are addressed as follows:

4.2-2(a) Construction Emission Reductions. For discretionary projects that meet the following criteria, prior to project approval, the Applicant shall be required to provide to the City an Air Quality Impact Analysis prepared by a qualified air quality analyst to analyze construction emissions and identify necessary mitigation:

- Demolition of more than 13,500 square feet of building area;
- Greater than 5,000 cubic yards of soil cut/fill;

[45] SCAQMD, Visible Emissions, Public Nuisance, and Fugitive Dust, 2021.
[46] SCAQMD, Rule 402, Nuisance, adopted May 7, 1976.

- Greater than 5-acres of graded area; or use of more than ten pieces of heavy-duty construction equipment and 150 truck trips (or a total of 6,000 vehicle miles traveled by truck) on any given day during demolition, site clearing, or grading.

The Air Quality Impact Analysis shall demonstrate that project emissions are less than applicable SCAQMD regional and LST thresholds, and as applicable may include, but are not limited to, mitigation identified within the Housing Element MM 4.2-2(a).

4.2-1(b) Operational Emissions Reduction. For discretionary projects, prior to project approval, the Applicant shall be required to provide the City an Air Quality Impact Analysis prepared by a qualified air quality analyst to analyze operational emissions and identify necessary mitigation for any discretionary project that would include more than 462 single-family residential units, 612 multi-family residential units, or any equivalent combination thereof. The Air Quality Impact Analysis shall demonstrate that project emissions are less than applicable SCAQMD regional and LST thresholds, and as applicable may include, but are not limited to, the mitigation identified within the Housing Element MM 4.2-2(b).

4.2-3 Construction TAC Reduction Measures. For discretionary projects with an anticipated construction duration of greater than 18- months and located within 500 feet of a residence or other sensitive receptor, prior to issuance of a permit to construct, the applicant shall provide to the City an Air Quality Impact Analysis, prepared by a qualified air quality analyst, that includes a construction health risk assessment. If the analysis shows incremental cancer risk would exceed 10 persons in one million at a sensitive receptor or the calculated Hazard Index for chronic or acute risks would exceed a value of 1.0 at a sensitive receptor, the air quality analyst shall prepare a mitigation plan subject to City review and approval that reduce TACs to less than SCAQMD thresholds. The applicant shall comply with all mitigation measures in the mitigation plan.

Alternatively, no Air Quality Impact Analysis, health risk assessment, and mitigation plan shall be required for discretionary projects conditioned to use construction equipment that meets the CARB Tier 4 Final or USEPA Tier 4 off-road emissions for all equipment rated 50 horsepower or greater. A copy of each unit's certified tier specification or model year specification and CARB or SCAQMD operating permit (if applicable) shall be available upon request at the time of mobilization of each applicable unit of equipment.

MM 4.2-2(a) is applicable to the Project because construction activities are estimated to require 7,000 cubic yards of soil cut/fill, which is greater than the 5,000 cubic yard threshold identified in the MM. As such, the air quality analysis herein is provided to demonstrate that Project construction emissions are less than applicable SCAQMD regional and LST thresholds. As demonstrated in Table 6, the Project's estimated maximum daily construction emissions would not exceed the SCAQMD significance thresholds for VOC, NOx, CO, SOx, PM_{10}, or $PM_{2.5}$ in all construction years. Table 8 shows that construction activities would not generate emissions in excess of site-specific LSTs; therefore, site-specific construction impacts during construction of the Project would be less than significant without the implementation of the construction emission reduction measures identified in MM 4.2-2(a).

MM 4.2-2(b) is not required because the Project does not include more than 464 single-family residential units, 612 multi-family residential units, or any equivalent combination thereof. The Project includes 354 multi-family

residential units and 1,500 square feet of commercial space. The Project would be less than an "equivalent combination thereof," because the Project operational air quality emissions are less than what a 612 multi-family residential unit project would emit at the same location as demonstrated in Table 9. For this analysis additional CalEEMod analysis was performed for a 612 multi-family residential unit project utilizing CalEEMod defaults and all-electric buildings per Chapter IX of the LAMC, Sections 99.02.202, 99.04.106.8, and 99.05.106.14, which requires that all new buildings be all-electric buildings, with some exceptions, consistent with the methodology used to analyze the Project.

Table 9. Estimated Daily Maximum Operational Emissions

Emissions Source	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
	Pounds per Day					
Comparison Project: 612 multi-family residential unit project						
Area	17.2	8.63	38.3	0.06	0.72	0.71
Energy	0.09	1.53	0.65	0.01	0.12	0.12
Mobile	11.4	9.61	99.6	0.23	20.8	5.38
Total	**28.7**	**19.8**	**139**	**0.29**	**21.6**	**6.22**
Proposed Project: 354 multi-family residential units and 1,500 square feet of commercial space						
Area	11.10	5.28	32.90	0.03	0.43	0.43
Energy	0.06	1.05	0.52	0.01	0.08	0.08
Mobile	5.11	4.17	43.90	0.10	3.82	0.73
Total	**16.27**	**10.50**	**77.32**	**0.14**	**4.33**	**1.24**
Difference (Project minus Comparison Project)	**-12.43**	**-9.3**	**-61.68**	**-0.15**	**-17.27**	**-4.98**

Source: See Appendix A for complete results.
Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM_{10} = coarse particulate matter; $PM_{2.5}$ = fine particulate matter.
The values shown are the maximum summer or winter daily emissions results from CalEEMod, though totals may not sum due to rounding.

As shown in Table 9, the Project emissions would be less than what would result from a 612 multi-family residential unit project at the same location, as such, MM 4.2-2(b) is not required. Nevertheless, Section 3.3 includes an operational emissions analysis of the Project and compares emissions to the regional SCAQMD thresholds. The analysis demonstrates that the Project's operational emissions fall below the thresholds.

MM 4.2-3 is applicable to the Project and the applicant has committed to use construction equipment that meets the CARB Tier 4 Final or USEPA Tier 4 off-road emissions for all equipment rated 50 horsepower or greater. A copy of each unit's certified tier specification or model year specification and CARB or SCAQMD operating permit (if applicable) will be made available upon request at the time of mobilization of each applicable unit of equipment. As such, a Project health risk assessment is not provided herein.

4 Conclusion

As demonstrated herein, the air quality analysis provides support of the Project's determination of consistency with the scope of the program analyzed in the Housing Element Program EIR and its environmental impacts. As a result of mitigation measures identified within the Housing Element Program EIR, the applicant will commit to use construction equipment that meets the CARB Tier 4 Final or USEPA Tier 4 off-road emissions for all equipment rated 50 horsepower or greater, as required by MM 4.2-3.

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	607,692	202,564	24,343	7,740	4,602

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	5,824	—
Grading	0.00	7,000	41.0	0.00	—
Paving	0.00	0.00	0.00	0.00	1.76

5.6.2. Construction Earthmoving Control Strategies

Non-applicable. No control strategies activated by user.

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Apartments Mid Rise	—	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Enclosed Parking with Elevator	0.86	100%
Other Non-Asphalt Surfaces	0.43	0%
Other Non-Asphalt Surfaces	0.47	0%
Health Club	0.00	0%

Recreational Swimming Pool	0.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	690	0.05	0.01
2025	0.00	690	0.05	0.01

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9
Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—
Asthma	69.5
Cardio-vascular	50.1
Low Birth Weights	58.6
Socioeconomic Factor Indicators	—
Education	81.6
Housing	74.0
Linguistic	85.1
Poverty	90.7
Unemployment	87.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	14.731169
Employed	75.70896959
Median HI	25.38175286
Education	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	93.0
Healthy Places Index Score for Project Location (b)	20.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on client provided information.
Construction: Construction Phases	Based on applicant provided schedule
Construction: Architectural Coatings	Default values
Operations: Vehicle Data	Based on TIA
Operations: Hearths	No Wood Stoves and no wood fireplaces
Construction: Trips and VMT	Based on applicant provided information.

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	PCH Mixed Use v2 LST
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	16.0
Location	1268 W Pacific Coast Hwy, Harbor City, CA 90710, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4630
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	354	Dwelling Unit	1.92	300,095	7,323	—	1,048	—
High Turnover (Sit Down Restaurant)	1.50	1000sqft	0.03	1,500	0.00	—	—	—

Enclosed Parking with Elevator	575	Space	0.86	230,000	0.00	—	—	—
Other Non-Asphalt Surfaces	90.7	1000sqft	0.43	0.00	0.00	—	—	—
Other Non-Asphalt Surfaces	20.5	1000sqft	0.47	0.00	0.00	—	—	—
Health Club	13.6	1000sqft	0.31	13,605	0.00	—	—	—
Recreational Swimming Pool	0.94	1000sqft	0.02	945	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Transportation	T-1	Increase Residential Density

2. Emissions Summary

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9
Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—
Asthma	69.5
Cardio-vascular	50.1
Low Birth Weights	58.6
Socioeconomic Factor Indicators	—
Education	81.6
Housing	74.0
Linguistic	85.1
Poverty	90.7
Unemployment	87.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	14.731169
Employed	75.70896959
Median HI	25.38175286
Education	—
Bachelor's or higher	24.38085461
High school enrollment	11.18952906
Preschool enrollment	28.17913512
Transportation	—
Auto Access	31.75927114
Active commuting	81.77851918
Social	—
2-parent households	45.28422944
Voting	11.24085718
Neighborhood	—
Alcohol availability	4.516874118

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	93.0
Healthy Places Index Score for Project Location (b)	20.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on client provided information.
Construction: Construction Phases	Based on applicant provided schedule
Construction: Architectural Coatings	Default values
Operations: Vehicle Data	Based on TIA
Operations: Hearths	No Wood Stoves and no wood fireplaces
Construction: Trips and VMT	Based on applicant provided information.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9

Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	93.0
Healthy Places Index Score for Project Location (b)	20.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on client provided information.
Construction: Construction Phases	Based on applicant provided schedule
Construction: Architectural Coatings	Default values
Operations: Vehicle Data	Default values
Operations: Hearths	No Wood Stoves and no wood fireplaces

Construction: Trips and VMT	Based on applicant provided information.
Operations: Energy Use	Existing use only
Operations: Water and Waste Water	Existing use only

612 Multi-Family Residential Unit
Comparison Project

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	PCH Comparison
Operational Year	2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	16.0
Location	1268 W Pacific Coast Hwy, Harbor City, CA 90710, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4630
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas
App Version	2022.1.1.29

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	612	Dwelling Unit	16.1	587,520	7,323	0.00	1,812	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Energy	E-15	Require All-Electric Development

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	—	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (Radke et al., 2017, CEC-500-2017-008), and consider inundation location and depth for the San Francisco Bay, the Sacramento-San Joaquin River Delta and California coast resulting different increments of sea level rise coupled with extreme storm events. Users may select from four scenarios to view the range in potential inundation depth for the grid cell. The four scenarios are: No rise, 0.5 meter, 1.0 meter, 1.41 meters
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9
Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—
Asthma	69.5
Cardio-vascular	50.1
Low Birth Weights	58.6
Socioeconomic Factor Indicators	—
Education	81.6
Housing	74.0
Linguistic	85.1
Poverty	90.7
Unemployment	87.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	14.731169
Employed	75.70896959
Median HI	25.38175286

Greenhouse Gas Technical Memorandum

DUDEK
225 SOUTH LAKE AVENUE
SUITE M210
PASADENA, CALIFORNIA 91101
T 626.204.9800

MEMORANDUM

To:	Alex Wong, Red Oak Investments
From:	David Larocca, Air Quality/Greenhouse Gas Emissions Specialist, Dudek
Subject:	Greenhouse Gas Technical Memorandum for the 1280 Pacific Coast Highway Mixed-Use Development Project
Date:	November 13, 2024, Revised January 2025
Attachment:	A, Greenhouse Gas Modeling Data

1 Introduction

The purpose of this greenhouse gas (GHG) technical memorandum is to evaluate the potential GHG impacts of the proposed 1280 Pacific Coast Highway Mixed-Use Development Project (the Project), located on a 3.7-acre sitelocated at 1268, 1270 & 1290 Pacific Coast Highway & 25900 South Frampton Avenue (the Project Site) within the Wilmington – Harbor City Community Plan (Community Plan) Area in the City of Los Angeles (City). The Project would replace an existing mobile home and a surface parking lot with a mixed-use building consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure. The mixed-use building would occupy a majority of the Project Site and would be approximately 406,855 square feet in size and 5 stories in height (80 feet in height, as measured to the lowest grade). The Project would not include any subterranean levels.

On November 24, 2021, the City Council certified the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR, to adopt the 2021-2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element), hereafter referred to as the "Housing Element Program EIR." The Project has been found to be within the scope of the program analyzed in the Housing Element Program EIR. The Housing Element Program EIR found that impacts related to GHG emissions would be less than significant. Nevertheless, for informational purposes, Project-specific analysis related to GHG emissions is provided herein.

2 Environmental Setting

2.1 Greenhouse Gas Emissions Background

Global climate change refers to changes in average climatic conditions on Earth as a whole, including changes in temperature, wind patterns, precipitation, and severe weather events. Global warming, a related concept, is the observed increase in average temperature of Earth's surface and atmosphere. One identified cause of global

warming is an increase of GHGs in the atmosphere. GHGs are those compounds in Earth's atmosphere that play a critical role in determining Earth's surface temperature.

Earth's natural warming process is known as the "greenhouse effect." It is called the greenhouse effect because Earth and the atmosphere surrounding it are similar to a greenhouse with glass panes in that the glass allows solar radiation (sunlight) into Earth's atmosphere but prevents radiative heat from escaping, thus warming Earth's atmosphere. Some levels of GHGs keep the average surface temperature of Earth close to a hospitable 60 degrees Fahrenheit. However, as GHG from human activities increase, they build up in the atmosphere and warm the climate, leading to many other changes around the world - in the atmosphere, on land, and in the oceans, with associated adverse climatic and ecological consequences.[1]

Scientists studying the particularly rapid rise in global temperatures have determined that human activity has resulted in increased emissions of GHGs, primarily from the burning of fossil fuels (from motor vehicle travel, electricity generation, consumption of natural gas, industrial activity, manufacturing, etc.), deforestation, agricultural activity, and the decomposition of solid waste. Scientists refer to the global warming context of the past century as the "enhanced greenhouse effect" to distinguish it from the natural greenhouse effect.[2]

Global GHG emissions due to human activities have grown since pre-industrial times. As reported by the United States Environmental Protection Agency (USEPA), global carbon emissions from fossil fuels increased by over 16 times between 1900 and 2008 and by about 43 percent between 1990 and 2015. In addition, in the Global Carbon Budget 2019 report, published in December 2019, atmospheric carbon dioxide (CO_2) concentrations in 2018 were found to be 47 percent above the concentration at the start of the Industrial Revolution, and the present concentration is the highest during at least the last 800,000 years.[3] Global increases in CO_2 concentrations are due primarily to fossil fuel use, with land use change providing another significant but smaller contribution. Regarding emissions of non-CO_2 GHGs, these have also increased significantly since 1990.[4] In particular, studies have concluded that it is very likely that the observed increase in methane (CH_4) concentration is predominantly due to agriculture and fossil fuel use.[5]

In August 2007, international climate talks held under the auspices of the United Nations Framework Convention on Climate Change (UNFCCC) led to the official recognition by the participating nations that global emissions of GHG must be reduced. According to the "Ad Hoc Working Group on Further Commitments of Annex I Parties under the Kyoto Protocol," avoiding the most catastrophic events forecast by the United Nations Intergovernmental Panel on Climate Change (IPCC) would entail emissions reductions by industrialized countries in the range of 25 to 40 percent below 1990 levels. Because of the Kyoto Protocol's Clean Development Mechanism, which gives industrialized countries credit for financing emission-reducing projects in developing countries, such an emissions goal in industrialized countries could ultimately spur efforts to cut emissions in developing countries as well.[6]

6 United Nations Framework Convention on Climate Change, Press Release—Vienna UN Conference Shows Consensus on Key Building Blocks for Effective International Response to Climate Change, August 31, 2007.

In December 2015, the US entered into the Paris Agreement which has a goal of keeping a global temperature rise this century below 2 degrees Celsius above pre-industrial levels and limit the temperature increase further to 1.5 degrees Celsius. This agreement requires that all parties report regularly on emissions and implementation efforts to achieve these goals.

Regarding the adverse effects of global warming, as reported by SCAG:

> Global warming poses a serious threat to the economic well-being, public health and natural environment in southern California and beyond. The potential adverse impacts of global warming include, among others, a reduction in the quantity and quality of water supply, a rise in sea level, damage to marine and other ecosystems, and an increase in the incidences of infectious diseases. Over the past few decades, energy intensity of the national and state economy has been declining due to the shift to a more service-oriented economy. California ranked fifth lowest among the states in CO2 emissions from fossil fuel consumption per unit of Gross State Product. However, in terms of total CO2 emissions, California is second only to Texas in the nation and is the 12th largest source of climate change emissions in the world, exceeding most nations. The SCAG region, with close to half of the state's population and economic activities, is also a major contributor to the global warming problem.[7]

GHG Fundamentals

GHGs are those compounds in the Earth's atmosphere that play a critical role in determining temperature near the Earth's surface. GHGs include carbon dioxide (CO_2), methane (CH_4), nitrous oxide (N_2O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulfur hexafluoride (SF_6), and nitrogen trifluoride (NF_3).[8] More specifically, these gases allow high-frequency shortwave solar radiation to enter the Earth's atmosphere, but retain some of the low frequency infrared energy which is radiated back from the Earth towards space, resulting in a warming of the atmosphere. Compounds that are regulated as GHGs are discussed in Table 1 below.[9, 10]

Table 1. Description of Identified GHGs[a]

Greenhouse Gas	General Description
Carbon Dioxide (CO_2)	An odorless, colorless GHG, which has both natural and anthropocentric sources. Natural sources include the following: decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic (human-caused) sources of CO_2 are burning coal, oil, natural gas, and wood.
Methane (CH_4)	A flammable gas and the main component of natural gas. When one molecule of CH_4 is burned in the presence of oxygen, one molecule of CO_2 and two molecules of water are released. A natural source of CH_4 is the anaerobic decay of organic matter. Geological deposits, known as natural gas fields, also contain CH_4, which is extracted for fuel. Other sources are from landfills, fermentation of manure, and cattle.

10 Intergovernmental Panel on Climate Change, Fourth Assessment Report, Working Group I Report: The Physical Science Basis, Table 2.14, 2007.

Table 1. Description of Identified GHGs[a]

Greenhouse Gas	General Description
Nitrous Oxide (N_2O)	A colorless GHG. High concentrations can cause dizziness, euphoria, and sometimes slight hallucinations. N_2O is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used in rocket engines, race cars, and as an aerosol spray propellant.
Hydrofluorocarbons (HFCs)	Chlorofluorocarbons (CFCs) are gases formed synthetically by replacing all hydrogen atoms in CH_4 or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are non-toxic, non-flammable, insoluble, and chemically unreactive in the troposphere (the level of air at Earth's surface). CFCs were first synthesized in 1928 for use as refrigerants, aerosol propellants, and cleaning solvents. Because they destroy stratospheric ozone, the production of CFCs was stopped as required by the Montreal Protocol in 1987. HFCs are synthetic man-made chemicals that are used as a substitute for CFCs as refrigerants. HFCs deplete stratospheric ozone, but to a much lesser extent than CFCs.
Perfluorocarbons (PFCs)	PFCs have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. High-energy ultraviolet rays about 60 kilometers above Earth's surface are able to destroy the compounds. PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane and hexafluoroethane. The two main sources of PFCs are primary aluminum production and semi-conductor manufacturing.
Sulfur Hexafluoride (SF_6)	An inorganic, odorless, colorless, non-toxic, and non-flammable gas. SF_6 is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semi-conductor manufacturing, and as a tracer gas for leak detection.
Nitrogen Trifluoride (NF_3)	An inorganic, non-toxic, odorless, non-flammable gas. NF_3 is used in the manufacture of semi-conductors, as an oxidizer of high energy fuels, for the preparation of tetrafluorohydrazine, as an etchant gas in the electronic industry, and as a fluorine source in high power chemical lasers.

[a] GHGs identified in this table are ones identified in the Kyoto Protocol and other synthetic gases recently added to the IPCC's Fifth Assessment Report.

Not all GHGs possess the same ability to induce climate change. Carbon dioxide is the most abundant GHG in Earth's atmosphere. Other GHGs are less abundant but have higher global warming potential (GWP) than CO_2. Thus, emissions of other GHGs are commonly quantified in the units of equivalent mass of carbon dioxide (CO_2e). GWP is based on several factors, including the radiative efficiency (heat-absorbing ability) of each gas relative to that of CO_2, as well as the decay rate of each gas (the amount removed from the atmosphere over a given number of years otherwise referred to as atmospheric lifetime) relative to that of CO_2.

The larger the GWP, the more that a given gas warms the Earth compared to CO_2 over that time.[11] These GWP ratios are available from the Intergovernmental Panel on Climate Change (IPCC). Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's Second Assessment Report (SAR). The IPCC updated the GWP values in its Fourth Assessment Report (AR4). The GWPs in the IPCC AR4 are used by CARB for reporting Statewide GHG emissions inventories, consistent with international reporting standards. By applying the GWP ratios, Project-related CO_2e emissions can be tabulated in metric tons per year. Typically, the GWP ratio corresponding to the warming potential of CO_2 over a 100-year period is used as a baseline.

The IPCC has issued an updated Fifth Assessment Report (AR5), which has revised down the majority of the GWP for key regulated pollutants. As CARB still uses AR4 values and the modeling software CalEEmod is built on these assumptions, AR4 GWP values are used for the Project. Generally, the changes from AR4 to AR5 are reductions in warming potential for the GHG most associated with construction and operation of typical development projects. The GWP from AR4 and AR5 and atmospheric lifetimes for key regulated GHGs are provided in Table 2.

Table 2. Atmospheric Lifetimes and Global Warming Potentials

Gas	Atmospheric Lifetime (Years)	Global Warming Potential (100-Year Time Horizon) (AR4 Assessment)	Global Warming Potential (100-Year Time Horizon) (AR5 Assessment)
Carbon Dioxide (CO_2)	50-200	1	1
Methane (CH_4)	12 (+/-3)	25	28
Nitrous Oxide (N_2O)	114	298	265
HFC-23: Fluoroform (CHF_3)	270	14,800	12,400
HFC-134a: 1,1,1,2-Tetrafluoroethane (CH_2FCF_3)	14	1,430	1,300
HFC-152a: 1,1-Difluoroethane ($C_2H_4F_2$)	1.4	124	138
PFC-14: Tetrafluoromethane (CF_4)	50,000	7,390	6,630
PFC-116: Hexafluoroethane (C_2F_6)	10,000	12,200	11,100
Sulfur Hexafluoride (SF_6)	3,200	22,800	23,500
Nitrogen Trifluoride (NF_3)	740	17,200	16,100

Projected Impacts of Global Warming in California

In 2009, California adopted a statewide Climate Adaptation Strategy (CAS) that summarizes climate change impacts and recommends adaptation strategies across seven sectors: Public Health, Biodiversity and Habitat, Oceans and Coastal Resources, Water, Agriculture, Forestry, and Transportation and Energy. The California Natural Resources

[11] GWPs and associated CO2e values were developed by the Intergovernmental Panel on Climate Change (IPCC), and published in its Second Assessment Report (SAR) in 1996. Historically, GHG emission inventories have been calculated using the GWPs from the IPCC's SAR. The IPCC updated the GWP values based on the latest science in its Fourth Assessment Report (AR4). CARB has begun reporting GHG emission inventories for California using the GWP values from the IPCC AR4.

Agency will be updating the CAS and is responsible for preparing reports to the Governor on the status of the CAS. The Natural Resources Agency has produced climate change assessments which detail impacts of global warming in California.[12] These include:

- Sea level rise, coastal flooding and erosion of California's coastlines would increase, as well as sea water intrusion.
- The Sierra snowpack would decline between 70 and 90 percent, threatening California's water supply.
- Higher risk of forest fires resulting from increasing temperatures and making forests and brush drier. Climate change will affect tree survival and growth.
- Attainment of air quality standards would be impeded by increasing emissions, accelerating chemical processes, and raising inversion temperatures during stagnation episodes resulting in public health impacts.
- Habitat destruction and loss of ecosystems due to climate change affecting plant and wildlife habitats.
- Global warming can cause drought, warmer temperatures and saltwater contamination resulting in impacts to California's agricultural industry.

With regard to public health, as reported by the Center for Health and the Global Environment at the Harvard Medical School, the following are examples of how climate change can affect cardio-respiratory disease: (1) pollen is increased by higher levels of atmospheric CO_2; (2) heat waves can result in temperature inversions, leading to trapped masses or unhealthy air contaminants by smog, particulates, and other pollutants; and (3) the incidence of forest fires is increased by drought secondary to climate change and to the lack of spring runoff from reduced winter snows. These fires can create smoke and haze, which can settle over urban populations causing acute and exacerbating chronic respiratory illness.[13]

2.2 Greenhouse Gas Emissions Regulatory Framework

There are a number of plans, regulations, programs, and agencies that provide policies, requirements, and guidelines regarding GHG emissions at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Federal Clean Air Act
- Federal Vehicle Standards: Corporate Average Fuel Economy (CAFE) Standards
- Inflation Reduction Act of 2022
- Energy Independence and Security Act
- California Air Resources Board
- California Greenhouse Gas Reduction Targets
- California Global Warming Solutions Act (AB 32)
- Climate Change Scoping Plan
- Cap-and-Trade Program
- Emission Performance Standards

- City of Los Angeles Municipal Code - All Electric Buildings
- City of Los Angeles Mobility Plan 2035
- Traffic Study Policies and Procedures

Federal

Federal Clean Air Act

The United States Environmental Protection Agency (USEPA) is responsible for implementing federal policy to address GHGs. The United States Supreme Court (Supreme Court) ruled in *Massachusetts v. Environmental Protection Agency*, 127 S.Ct. 1438 (2007), that CO_2 and other GHGs are pollutants under the federal Clean Air Act (CAA), which the USEPA must regulate if it determines they pose an endangerment to public health or welfare. In December 2009, U.S. EPA issued an endangerment finding for GHGs under the Clean Air Act, setting the stage for future regulation.

The Federal Government administers a wide array of public-private partnerships to reduce the GHG intensity generated in the United States. These programs focus on energy efficiency, renewable energy, methane and other non-CO_2 gases, agricultural practices, and implementation of technologies to achieve GHG reductions. USEPA implements numerous voluntary programs that contribute to the reduction of GHG emissions. These programs (e.g., the ENERGY STAR labeling system for energy-efficient products) play a significant role in encouraging voluntary reductions from large corporations, consumers, industrial and commercial buildings, and many major industrial sectors.

Corporate Average Fuel Economy (CAFE) Standards

In response to the *Massachusetts v. Environmental Protection Agency* ruling, President George W. Bush issued Executive Order 13432 in 2007, directing the USEPA, the United States Department of Transportation (USDOT), and the United States Department of Energy (USDOE) to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. The National Highway Traffic Safety Administration (NHTSA) subsequently issued multiple final rules regulating fuel efficiency for and GHG emissions from cars and light-duty trucks for model year 2011 and later for model years 2012-2016, and 2017-2021. In March 2020, the USDOT and the USEPA issued the final Safer Affordable Fuel-Efficient (SAFE) Vehicles Rule, which amends existing CAFE standards and tailpipe carbon dioxide emissions standards for passenger cars and light trucks and establishes new standards covering model years 2021 through 2026[14]. These standards set a combined fleet wide average of 36.9 to 37 for the model years affected. [15]

In addition to the regulations applicable to cars and light-duty trucks described above, in 2011 the USEPA and NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks for model years 2014–2018. The standards for CO_2 emissions and fuel consumption are tailored to three main vehicle categories: combination tractors, heavy-duty pickup trucks and vans, and vocational vehicles. According to the USEPA, this regulatory program would reduce GHG emissions and fuel consumption for the affected vehicles by 6 to 23 percent over the 2010 baselines. Building on the first phase of standards, in August 2016, the EPA and NHTSA finalized Phase 2 standards for medium and heavy-duty vehicles through model year 2027 that will improve fuel efficiency and cut carbon pollution. The Phase 2 standards are expected to lower CO_2 emissions by approximately 1.1 billion metric tons.[16]

The Inflation Reduction Act of 2022

The Inflation Reduction Act was signed into law by President Biden in August 2022. The Act includes specific investment in energy and climate reform and is projected to reduce GHG emissions within the United States by 40% as compared to 2005 levels by 2030. The Act allocates funds to boost renewable energy infrastructure (e.g., solar panels and wind turbines), includes tax credits for the purchase of electric vehicles, and includes measures that will make homes more energy efficient.

The Inflation Reduction Act authorized the EPA to implement the Greenhouse Gas Reduction Fund (GGRF) program, which is a historic, $27 billion investment to mobilize financing and private capital to combat the climate crisis and ensure American economic competitiveness. The GGRF will be designed to achieve the following program objectives: reduce GHG emissions and other air pollutants; deliver the benefits of GHG- and air-pollution-reducing projects to American communities, particularly low-income and disadvantaged communities; and mobilize financing and private capital to stimulate additional deployment of GHG and air pollution reducing projects (EPA 2023g).

The Inflation Reduction Act confirms that reduction of GHGs is a core goal of the Clean Air Act and that the funding provided should allow the EPA to increase the scope of its Clean Air Act rulemakings. The Act also confirms applicability of the Inflation Reduction Act to GHGs in three specific areas: (1) California's ability to regulate GHG

14 United States Environmental Protection Agency, Final Rule for Model Year 2021 - 2026 Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards, published April 30, 2020.
15 National Highway Traffic Safety Administration (NHTSA), Corporate Average Fuel Economy standards.
16 U.S. EPA, EPA and NHTSA Adopt Standards to Reduce GHG and Improve Fuel Efficiency of Medium- and Heavy-Duty Vehicles for Model Year 2018 and Beyond, August 2016.

emissions from vehicles; (2) the EPA's authority to regulate methane emissions from oil and gas facilities; and (3) the EPA's authority to regulate GHG emissions from power plants.

Energy Independence and Security Act

The Energy Independence and Security Act of 2007 (EISA) facilitates the reduction of national GHG emissions by requiring the following:

- Increasing the supply of alternative fuel sources by setting a mandatory Renewable Fuel Standard (RFS) that requires fuel producers to use at least 36 billion gallons of biofuel in 2022;
- Prescribing or revising standards affecting regional efficiency for heating and cooling products, procedures for new or amended standards, energy conservation, energy efficiency labeling for consumer electronic products, residential boiler efficiency, electric motor efficiency, and home appliances;
- Requiring approximately 25 percent greater efficiency for light bulbs by phasing out incandescent light bulbs between 2012 and 2014; requiring approximately 200 percent greater efficiency for light bulbs, or similar energy savings, by 2020; and
- While superseded by the USEPA and NHTSA actions described above, (i) establishing miles per gallon targets for cars and light trucks and (ii) directing the NHTSA to establish a fuel economy program for medium- and heavy-duty trucks and create a separate fuel economy standard for trucks.

Additional provisions of EISA address energy savings in government and public institutions, promote research for alternative energy, additional research in carbon capture, international energy programs, and the creation of "green jobs."[17]

State

California Air Resources Board

The California Air Resources Board (CARB), a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California. In this capacity, CARB conducts research, sets the California Ambient Air Quality Standards (CAAQS), compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (such as hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the Federal Government and the local air districts. The SIP is required for the State to take over implementation of the Federal Clean Air Act. CARB also has primary responsibility for adopting regulations to meet the State's goal of reducing GHG emissions. The State has met its goals to reduce GHG emissions to 1990 levels by 2020. Subsequent State goals include reducing GHG emissions to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050.

[17] A green job, as defined by the United States Department of Labor, is a job in business that produces goods or provides services that benefit the environment or conserve natural resources.

California Greenhouse Gas Reduction Targets

Executive Order S-3-05

Governor Arnold Schwarzenegger announced on June 1, 2005, through Executive Order S-3-05, the following GHG emission reduction targets:

- By 2010, California shall reduce GHG emissions to 2000 levels;
- By 2020, California shall reduce GHG emissions to 1990 levels; and
- By 2050, California shall reduce GHG emissions to 80 percent below 1990 levels.

In accordance with Executive Order S-3-05, the Secretary of CalEPA is required to coordinate efforts of various agencies, which comprise the California Climate Action Team (CAT), in order to collectively and efficiently reduce GHGs. The CAT provides periodic reports to the Governor and Legislature on the State of GHG reductions in the State as well as strategies for mitigating and adapting to climate change.

The CAT stated that smart land use is an umbrella term for strategies that integrate transportation and land-use decisions. Such strategies generally encourage jobs/housing proximity, promote transit-oriented development (TOD), and encourage high-density residential/commercial development along transit corridors. These strategies develop more efficient land-use patterns within each jurisdiction or region to match population increases, workforce, and socioeconomic needs for the full spectrum of the population.

Executive Order B-30-15

On April 29, 2015, Governor Brown issued Executive Order B-30-15. Therein, the Governor directed the following:

- Established a new interim statewide reduction target to reduce GHG emissions to 40 percent below 1990 levels by 2030.
- Ordered all state agencies with jurisdiction over sources of GHG emissions to implement measures to achieve reductions of GHG emissions to meet the 2030 and 2050 reduction targets.
- Directed CARB to update the Climate Change Scoping Plan to express the 2030 target in terms of million metric tons of carbon dioxide equivalent.

Executive Order B-55-18

Executive Order B-55-18, issued by Governor Brown in September 2018, establishes a new statewide goal to achieve carbon neutrality as soon as possible, but no later than 2045, and achieve and maintain net negative emissions thereafter. Based on this executive order, CARB would work with relevant state agencies to develop a framework for implementation and accounting that tracks progress towards this goal as well as ensuring future scoping plans identify and recommend measures to achieve the carbon neutrality goal.

California Global Warming Solutions Act of 2006

In 2006, the California State Legislature adopted Assembly Bill (AB) 32 (codified in the California Health and Safety Code (HSC), Division 25.5 – California Global Warming Solutions Act of 2006), which focuses on reducing GHG

emissions in California to 1990 levels by 2020. HSC Division 25.5 defines regulated GHGs as CO_2, CH_4, N_2O, HFCs, PFCs, and SF_6 and represents the first enforceable Statewide program to limit emissions of these GHGs from all major industries, with penalties for noncompliance. The law further requires that reduction measures be technologically feasible and cost effective. Under HSC Division 25.5, CARB has the primary responsibility for reducing GHG emissions. CARB is required to adopt rules and regulations directing State actions that would achieve GHG emissions reductions.

To achieve these goals, AB 32 mandates that CARB establish a quantified emissions cap, institute a schedule to meet the cap, implement regulations to reduce statewide GHG emissions from stationary sources consistent with the CAT strategies, and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved. In order to achieve the reduction targets, AB 32 requires CARB to adopt rules and regulations in an open public process that achieve the maximum technologically feasible and cost-effective GHG reductions.[18]

In 2016, the California State Legislature adopted Senate Bill (SB) 32 and its companion bill AB 197, and both were signed by Governor Brown. SB 32 and AB 197 amend HSC Division 25.5, establish a new climate pollution reduction target of 40 percent below 1990 levels by 2030 and include provisions to ensure that the benefits of state climate policies reach disadvantaged communities. The new goals outlined in SB 32 update the scoping plan requirement of AB 32 and involve increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries.

AB 197, signed September 8, 2016, is a bill linked to SB 32 and signed on September 8, 2016, prioritizes efforts to cut GHG emissions in low-income or minority communities. AB 197 requires CARB to make available, and update at least annually, on its website the emissions of GHGs, criteria pollutants, and toxic air contaminants for each facility that reports to CARB and air districts. In addition, AB 197 adds two Members of the Legislature to the CARB board as ex officio, non-voting members and creates the Joint Legislative Committee on Climate Change Policies to ascertain facts and make recommendations to the Legislature and the houses of the Legislature concerning the State's programs, policies, and investments related to climate change.

Climate Change Scoping Plan

AB 32 required CARB to prepare a Climate Change Scoping Plan for achieving the maximum technologically feasible and cost-effective GHG emission reduction by 2020 (HSC section 38561 (h)). The 2008 Climate Change Scoping Plan proposed a "comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health."[19] The 2008 Climate Change Scoping Plan had a range of GHG reduction actions which included direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms, such as a cap-and-trade system, and an AB 32 implementation fee to fund the program.

The 2008 Climate Change Scoping Plan called for a "coordinated set of solutions" to address all major categories of GHG emissions. Transportation emissions were addressed through a combination of higher standards for vehicle

[18] CARB's list of discrete early action measures that could be adopted and implemented before January 1, 2010, was approved on June 21, 2007. The three adopted discrete early action measures are: (1) a low-carbon fuel standard, which reduces carbon intensity in fuels statewide; (2) reduction of refrigerant losses from motor vehicle air conditioning system maintenance; and (3) increased methane capture from landfills, which includes requiring the use of state-of-the-art capture technologies.

[19] CARB, *Climate Change Scoping Plan*, December 2008.

fuel economy, implementation of the Low Carbon Fuel Standard (LCFS), and greater consideration to reducing trip length and generation through land use planning and transit-oriented development. Buildings, land use, and industrial operations were encouraged and, sometimes, required to use energy more efficiently. Utility energy providers were required to include more renewable energy sources through implementation of the Renewables Portfolio Standard.[20] Additionally, the 2008 Climate Change Scoping Plan emphasized opportunities for households and businesses to save energy and money through increasing energy efficiency. It indicates that substantial savings of electricity and natural gas will be accomplished through "improving energy efficiency by 25 percent."

The 2008 Climate Change Scoping Plan identified several specific issues relevant to the development projects, including:

- The potential of using the green building framework as a mechanism, which could enable GHG emissions reductions in other sectors (i.e., electricity, natural gas), noting that:

  A Green Building strategy will produce greenhouse gas savings through buildings that exceed minimum energy efficiency standards, decrease consumption of potable water, reduce solid waste during construction and operation, and incorporate sustainable materials. Combined, these measures can also contribute to healthy indoor air quality, protect human health, and minimize impacts to the environment.
- The importance of supporting the Department of Water Resources' work to implement the Governor's objective to reduce per capita water use by 20 percent by 2020. Specific measures to achieve this goal include water use efficiency, water recycling, and reuse of urban runoff. The *Climate Change Scoping Plan* notes that water use requires significant amounts of energy, including approximately one-fifth of statewide electricity.
- Encouraging local governments to set quantifiable emission reduction targets for their jurisdictions and use their influence and authority to encourage reductions in emissions caused by energy use, waste and recycling, water and wastewater systems, transportation, and community design.

As required by HSC Division 25.5, CARB approved the 1990 GHG emissions inventory, thereby establishing the emissions reduction target for 2020. The 2020 emissions reduction target was originally set at 427 million metric tons (MMT) of CO_2e using the GWP values from the IPCC SAR. Forecasting the amount of emissions that would occur in 2020 if no actions are taken was necessary to assess the scope of the reductions California must make to return to the 1990 emissions level by 2020 as required by AB 32. CARB originally defined the "business-as-usual" or BAU scenario as emissions in the absence of any GHG emission reduction measures discussed in the 2008 Climate Change Scoping Plan, as approximately 596 $MMTCO_2e$ (using GWP values from the IPCC SAR). For example, in further explaining CARB's BAU methodology, CARB assumed that all new electricity generation would be supplied by natural gas plants, no further regulatory action would impact vehicle fuel efficiency, and building energy efficiency codes would be held at 2005 standards. Therefore, under these original projections, the State would have had to reduce its 2020 BAU emissions by 28.4 percent to meet the 1990 target of 427 $MMTCO_2e$.

2014 Update to the Climate Change Scoping Plan

The First Update to the Scoping Plan was approved by CARB in May 2014 and built upon the initial Scoping Plan with new strategies and recommendations.[21] In 2014, CARB revised the target using the GWP values from the IPCC AR4 and determined the 1990 GHG emissions inventory and 2020 GHG emissions limit to be increased to 431 $MMTCO_2e$. CARB also updated the State's 2020 BAU emissions estimate to account for the effect of the 2007–

[20] For a discussion of Renewables Portfolio Standard, refer to subsection California Renewables Portfolio Standard.
[21] CARB, First Update to the AB 32 Scoping Plan, May 2014.

2009 economic recession, new estimates for future fuel and energy demand, and the reductions required by regulation that had recently been adopted for motor vehicles and renewable energy. CARB's projected statewide 2020 emissions estimate using the GWP values from the IPCC AR4 was 509.4 $MMTCO_2e$. Therefore, under the first update to the Scoping Plan, the emission reductions necessary to achieve the 2020 emissions target of 431 $MMTCO_2e$ would have been 78.4 $MMTCO_2e$, or a reduction of GHG emissions by approximately 15.4 percent, (down from 28.4 percent).

The stated purpose of the First Update was to "highlight… California's success to date in reducing its GHG emissions and lay… the foundation for establishing a broad framework for continued emission reductions beyond 2020, on the path to 80 percent below 1990 levels by 2050."[22] The First Update found that California was on track to meet the 2020 emissions reduction mandate established by AB 32 and noted that California could reduce emissions further by 2030 to levels squarely in line with those needed to stay on track to reduce emissions to 80 percent below 1990 levels by 2050 if the State realizes the expected benefits of existing policy goals.[23]

In conjunction with the First Update, CARB identified "six key focus areas comprising major components of the State's economy to evaluate and describe the larger transformative actions that will be needed to meet the State's more expansive emission reduction needs by 2050."[24] Those six areas are: (1) energy; (2) transportation (vehicles/ equipment, sustainable communities, housing, fuels, and infrastructure); (3) agriculture; (4) water; (5) waste management; and (6) natural and working lands. The First Update identifies key recommended actions for each sector that will facilitate achievement of the 2050 reduction target.

Based on CARB's research efforts, it has a "strong sense of the mix of technologies needed to reduce emissions through 2050."[25] Those technologies include energy demand reduction through efficiency and activity changes; large-scale electrification of on-road vehicles, buildings, and industrial machinery; decarbonizing electricity and fuel supplies; and the rapid market penetration of efficient and clean energy technologies.

The First Update discussed new residential and commercial building energy efficiency improvements, specifically identifying progress towards zero net energy buildings as an element of meeting mid-term and long-term GHG reduction goals. The First Update expressed CARB's commitment to working with the California Public Utilities Commission (CPUC) and California Energy Commission (CEC) to facilitate further achievements in building energy efficiency.

2017 Update to Climate Change Scoping Plan

In response to the passage of SB 32 and the identification of the 2030 GHG reduction target, CARB adopted the 2017 Climate Change Scoping Plan in December 2017.[26] The 2017 Update builds upon the framework established by the 2008 Climate Change Scoping Plan and the First Update while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health. The 2017 Update includes policies to require direct GHG reductions at some of the State's largest stationary

22 CARB, *2014 Update*, May 2014, p. 4.
23 CARB, *2014 Update*, May 2014, p. 34.
24 CARB, *2014 Update*, May 2014, p. 6
25 CARB, *2014 Update*, May 2014, p. 32
26 CARB, *California's 2017 Climate Change Scoping Plan*, November 2017.

sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the Cap-and-Trade program, which constraints and reduces emissions at covered sources.[27]

CARB's projected Statewide 2030 emissions takes into account 2020 GHG reduction policies and programs.[28] The 2017 Scoping Plan also addresses GHG emissions from natural and working lands of California, including the agriculture and forestry sectors. Under the Scoping Plan Scenario, the majority of the reductions would result from the continuation of the Cap-and-Trade regulation. Additional reductions would be achieved from electricity sector standards (i.e., utility providers to supply 50 percent renewable electricity by 2030), doubling the energy efficiency savings at end uses, additional reductions from the LCFS, implementing the short-lived GHG strategy (e.g., hydrofluorocarbons), and implementing the mobile source strategy and sustainable freight action plan. Implementation of mobile source strategies (cleaner technology and fuels) include the following:

- At least 1.5 million zero emission and plug-in hybrid light-duty electric vehicles by 2025
- At least 4.2 million zero emission and plug-in hybrid light-duty electric vehicles by 2030
- Further increase GHG stringency on all light-duty vehicles beyond existing Advanced Clean Cars regulations
- Medium- and heavy-duty GHG Phase 2
- Innovative Clean Transit: Transition to a suite of to-be-determined innovative clean transit options. Assumed 20 percent of new urban buses purchased beginning in 2018 will be zero emission buses with the penetration of zero-emission technology ramped up to 100 percent of new sales in 2030. Also, new natural gas buses, starting in 2018, and diesel buses, starting in 2020, meet the optional heavy-duty low-NO_X standard.
- Last Mile Delivery: New regulation that would result in the use of low NO_X or cleaner engines and the deployment of increasing numbers of zero-emission trucks primarily for Class 3–7 last mile delivery trucks in California. This measure assumes ZEVs comprise 2.5 percent of new Class 3–7 truck sales in local fleets starting in 2020, increasing to 10 percent in 2025 and remaining flat through 2030.
- Further reduce VMT through continued implementation of SB 375 and regional Sustainable Communities Strategies; forthcoming statewide implementation of SB 743; and potential additional VMT reduction strategies not specified in the Mobile Source Strategy but included in the document "Potential VMT Reduction Strategies for Discussion."

The alternatives in the Scoping Plan are designed to consider various combinations of these programs, as well as consideration of a carbon tax in the event the Cap-and-Trade regulation is not continued. However, in July 2017, the California Legislature voted to extend the Cap-and-Trade regulation to 2030.

The 2017 Scoping Plan discusses the role of local governments in meeting the State's GHG reductions goals because local governments have jurisdiction and land use authority related to: community-scale planning and permitting processes, local codes and actions, outreach and education programs, and municipal operations.[29] Furthermore, local governments may have the ability to incentivize renewable energy, energy efficiency, and water efficiency measures.[30]

27 CARB, *2017 Update*, November 2017, p. 6
28 CARB, *2017 Update*, November 2017
29 CARB, *2017 Update*, November 2017, p.97.
30 CARB, *2017 Update*, November 2017, p.97.

For individual projects under CEQA, the 2017 Scoping Plan states that local governments can support climate action when considering discretionary approvals and entitlements. According to the 2017 Scoping Plan, lead agencies have the discretion to develop evidence-based numeric thresholds consistent with the Scoping Plan, the State's long-term goals, and climate change science.[31]

The City of Los Angeles has not developed per capita targets for 2030 or 2050; however, the City recognizes that GHG emissions reductions are necessary in the public and private sectors. The City has taken the initiative in combating climate change by developing programs such as the Green New Deal and Green Building Code. Each of these programs is discussed further below.

A summary of the GHG emissions reductions required under HSC Division 25.5 is provided in Table 3 *Estimated Statewide Greenhouse Gas Emissions Reductions Required by HSC Division 25.5*.

Table 3. Estimated Statewide Greenhouse Gas Emissions Reductions Required by HSC Division 25.5

Emissions Scenario	GHG Emissions ($MMTCO_2E$)
2008 Scoping Plan (IPCC SAR)	
2020 BAU Forecast (CARB 2008 Scoping Plan Estimate)	596
2020 Emissions Target Set by AB 32 (i.e., 1990 level)	427
Reduction below Business-As-Usual necessary to achieve 1990 levels by 2020	169 (28.4%) [a]
2014 Scoping Plan Update (IPCC AR4)	
2020 BAU Forecast (CARB 2014 Scoping Plan Estimate)	509.4
2020 Emissions Target Set by AB 32 (i.e., 1990 level)	431
Reduction below Business-As-Usual necessary to achieve 1990 levels by 2020	78.4 (15.4%) [b]

Source: CARB, *Final Supplement to the AB 32 Scoping Plan Functional Equivalent Document (FED)*, Attachment D, August 19, 2011; CARB, *2020 Business-as-Usual (BAU) Emissions Projection*, 2014 Edition, 2017, http://www.arb.ca.gov/cc/inventory/data/bau.htm. Accessed October 2017; CARB, *California's 2017 Climate Change Scoping Plan*, November 2017.
Notes:
$MMTCO_2e$ = million metric tons of carbon dioxide equivalents
[a] 596 – 427 = 169 / 596 = 28.4%
[b] 509.4 – 431 = 78.4 / 509.4 = 15.4%
[c] 389 – 260 = 129 / 389 = 33.2%

Under the Scoping Plan Scenario, continuation of the Cap-and-Trade regulation (or carbon tax) is expected to cover approximately 34 to 79 $MMTCO_2$ of the 2030 reduction obligation.[32] The State's short-lived climate pollutants strategy, which is for GHGs that remain in the atmosphere for shorter periods of time compared to longer-lived GHGs like CO_2, is expected to cover approximately 17 to 35 $MMTCO_2e$. The Renewables Portfolio Standard with 50

[31] CARB, *2017 Update*, November 2017, p.100.
[32] CARB, California's 2017 Climate Change Scoping Plan, Appendix G, November 2017.

percent renewable electricity by 2030 is expected to cover approximately 3 $MMTCO_2$. The mobile source strategy and sustainable freight action plan includes maintaining the existing vehicle GHG emissions standards, increasing the number of zero emission vehicles and improving the freight system efficiency, and is expected to cover approximately 11 to 13 $MMTCO_2$. Under the Scoping Plan Scenario, CARB expects that the reduction in GHGs from doubling of the energy efficiency savings in natural gas and electricity end uses in the CEC 2015 Integrated Energy Policy Report by 2030 would cover approximately 7 to 9 $MMTCO_2$ of the 2030 reduction obligation. The other strategies would be expected to cover the remaining 2030 reduction obligations.

2022 Update to Climate Change Scoping Plan

The Final 2022 Scoping Plan for Achieving Carbon Neutrality (2022 Scoping Plan) was issued on November 16, 2022, and approved on December 15, 2022.[33] The 2022 Scoping Plan lays out a path not just to carbon neutrality by 2045 but also to the 2030 GHG emissions reduction target. The 2022 Scoping Plan analyzes four scenarios, with the objective of informing the most viable path to remain on track to achieve the 2030 GHG reduction target. The scenario modeling indicates that if the plan is fully implemented on schedule, the State would achieve the following: 85% reduction in GHG emissions below 1990 levels, 71% reduction in smog-forming air pollution, 94% reduction in fossil fuel consumption, and, creation of 4 million new jobs, among other benefits.

The 2022 Scoping Plan details "Local Actions" in Appendix D.[34] The Local Actions section includes recommendations intended to build momentum for local government actions that align with the State's climate goals, with a focus on local GHG reduction strategies (commonly referred to as climate action planning) and approval of new land use development projects, including through environmental review under CEQA. The recommendations provided in Appendix D are non-binding and provide evidence-based analytical tools to assist local governments with their role as essential partners in achieving California's climate goals.[35] Appendix D recognizes consistency with a CEQA-qualified GHG reduction plan such as a Climate Action Plan as a preferred option for evaluating potential GHG emission impacts under CEQA. Absent a qualified GHG reduction plan, Appendix D provides recommendations for key attributes that residential and mixed-use projects should achieve that would align with the State's climate goals including electric vehicle (EV) charging infrastructure, infill location, no loss or conversion of natural and working lands, transit-supportive densities or proximity to transit stops, reducing parking requirements, provision of affordable housing, and all-electric appliances with no natural gas connection. Appendix D states that projects that achieve all key attributes are considered clearly consistent with the State's climate and housing goals and would have a less-than-significant GHG impact under CEQA. However, projects that do not achieve all attributes are not necessarily considered to result in a potentially significant GHG emission impact. Additional potential threshold options identified when a CEQA-qualified GHG reduction plan is not available included a net-zero threshold and use of air district recommended thresholds of significance.

33 CARB. Press Release, "California releases final proposal for world-leading climate action plan that drastically reduces fossil fuel dependence, slashes pollution." November 16, 2022. https://ww2.arb.ca.gov/news/california-releases-final-2022-climate-scoping-plan-proposal/printable/print

34 CARB. California Air Resources Board 2022 Scoping Plan—Appendix D, Local Actions. November 2022. Accessed January 2023. https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf

35 The threshold approaches outlined in the 2022 Scoping Plan, Appendix D, are recommendations only and are not requirements; they do not supplant lead agencies' discretion to develop their own evidence-based approaches for determining whether a project would have a potentially significant impact on GHG emissions.

Cap-and-Trade Program

The Climate Change Scoping Plan identifies a Cap-and-Trade Program as one of the strategies California would employ to reduce GHG emissions. CARB asserts that this program will help put California on the path to meet its goal of ultimately achieving an 80 percent reduction from 1990 levels by 2050. Under Cap-and-Trade, an overall limit on GHG emissions from capped sectors is established and facilities subject to the cap will be able to trade permits to emit GHGs.

CARB designed and adopted a California Cap-and-Trade Program[36] pursuant to its authority under AB 32. The Cap-and-Trade Program is designed to reduce GHG emissions from public and private major sources (deemed "covered entities") by setting a firm cap on Statewide GHG emissions and employing market mechanisms to achieve the State's emission-reduction mandates. The Statewide cap for GHG emissions from the capped sectors[37] (e.g., electricity generation, petroleum refining, and cement production) commenced in 2013 and will decline over time, achieving GHG emission reductions throughout the Program's duration.

Under the Cap-and-Trade Program, CARB issues allowances equal to the total amount of allowable emissions over a given compliance period and distributes these to regulated entities. Covered entities that emit more than 25,000 $MTCO_2e$ per year must comply with the Cap-and-Trade Program.[38] Triggering of the 25,000 $MTCO_2e$ per year "inclusion threshold" is measured against a subset of emissions reported and verified under the California Regulation for the Mandatory Reporting of Greenhouse Gas Emissions (Mandatory Reporting Rule or "MRR").[39]

Each covered entity with a compliance obligation is required to surrender "compliance instruments"[40] for each $MTCO_2e$ of GHG they emit. Covered entities are allocated free allowances in whole or part (if eligible), and can buy allowances at auction, purchase allowances from others, or purchase offset credits.

The Cap-and-Trade Regulation provides a firm cap, ensuring that the Statewide emission limits will not be exceeded. In sum, the Cap-and-Trade Program will achieve aggregate, rather than site-specific or project-level, GHG emissions reductions. Also, due to the regulatory framework adopted by CARB in AB 32, the reductions attributed to the Cap-and-Trade Program can change over time depending on the state's emissions forecasts and the effectiveness of direct regulatory measures.

The Cap-and-Trade Program covers the GHG emissions associated with electricity consumed in California, whether generated in-state or imported.[41] Accordingly, for projects that are subject to the CEQA, GHG emissions from electricity consumption are covered by the Cap-and-Trade Program. The Cap-and-Trade Program also covers fuel suppliers (natural gas and propane fuel providers and transportation fuel providers) to address emissions from such fuels and from combustion of other fossil fuels not directly covered at large sources in the Program's first compliance period.[42]

The Program applies to emissions that cover approximately 80 percent of the State's GHG emissions. Demonstrating the efficacy of AB 32 policies, California achieved its 2020 GHG Reduction Target four years earlier

36 California Code of Regulations 17, Section 95800 to 96023.
37 California Code of Regulations 17, Section 95811, 95812.
38 California Code of Regulations 17, Section 95812.
39 California Code of Regulations 17, Section 95100-95158.
40 Compliance instruments are permits to emit, the majority of which will be "allowances," but entities also are allowed to use CARB-approved offset credits to meet up to 8% of their compliance obligations.
41 California Code of Regulations 17, Section 95811(b).
42 California Code of Regulations 17, Section 95811, 95812(d).

than mandated. The largest reductions were the result of increased renewable electricity in the electricity sector, which is a covered sector in the Cap-and-Trade Program.

AB 398 was enacted in 2017 to extend and clarify the role of the State's Cap-and-Trade Program through December 31, 2030. As part of AB 398, refinements were made to the Cap-and-Trade program to establish updated protocols and allocation of proceeds to reduce GHG emissions.

Energy-Related (Stationary) Sources

Emission Performance Standards

SB 1368, signed September 29, 2006, is a companion bill to AB 32, which requires the CPUC and the CEC to establish GHG emission performance standards for the generation of electricity. These standards also generally apply to power that is generated outside of California and imported into the State. SB 1368 provides a mechanism for reducing the emissions of electricity providers, thereby assisting CARB to meet its mandate under AB 32.

Renewables Portfolio Standard

SB 1078 (Chapter 516, Statutes of 2002) required retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20 percent of their supply from renewable sources by 2017 as a Renewables Portfolio Standard (RPS). Subsequent amendments provided additional targets throughout the years. Most recently, on October 7, 2015, SB 350 (Chapter 547, Statues of 2015), also known as the Clean Energy and Pollution Reduction Act, further increased the RPS to 50 percent by 2030. The legislation also included interim targets of 40 percent by 2024 and 45 percent by 2027. SB 350 also requires the state to double statewide energy efficiency savings in electricity and natural gas end uses by 2030. The 2017 Climate Change Scoping Plan incorporated the SB 350 standards and estimated the GHG reductions would account for approximately 21 percent of the Scoping Plan reductions.[43] On September 10, 2018, SB 100, provided additional RPS targets of 44 percent by 2024, 52 percent by 2027, and 60 percent by 2030, and that CARB should plan for 100 percent eligible renewable energy resources and zero-carbon resources by 2045.[44]

Mobile Sources

Pavley Standards

AB 1493 (Chapter 200, Statutes of 2002), enacted on July 22, 2002, required CARB to set GHG emission standards for passenger vehicles, light duty trucks, and other vehicles whose primary use is non-commercial personal transportation manufactured in and after 2009. In 2004, CARB approved the Pavley regulation to require automakers to control greenhouse gas emissions from new passenger vehicles for the 2009 through 2016 model years. Upon adoption of subsequent federal greenhouse gas standards by the United States Environmental Protection Agency (U.S. EPA) that preserved the benefits of the Pavley regulations, the Pavley regulations were revised to accept compliance with the federal standards as compliance with California's standards in the 2012 through 2016 model years. This is referred to as the "deemed to comply" option.

In January 2012, CARB approved greenhouse gas emission regulations which require further reductions in passenger greenhouse gas emissions for 2017 and subsequent vehicle model years. As noted above, in August

43 CARB, *California's 2017 Climate Change Scoping Plan*, Table 3, p. 31, November 2017. Calculated as: (108 – 53) / 260 = 21 percent.
44 California Legislative Information, SB-100 California Renewables Portfolio Standard Program: Emissions of Greenhouse Gases.

2012, the USEPA and USDOT adopted GHG emission standards for model year 2017 through 2025 vehicles.[45] On November 15, 2012, CARB approved an amendment that allows manufacturers to comply with the 2017-2025 national standards to meet State law. Automobile manufacturers generally comply with these standards through a combination of improved energy efficiency in vehicle equipment (e.g., air conditioning systems) and engines as well as sleeker aerodynamics, use of strong but lightweight materials, and lower-rolling resistance tires.[46]

In 2018, the USEPA proposed the Safer Affordable Fuel-Efficient Vehicles Rule (SAFE) which would roll back fuel economy standards and revoke California's waiver. The rule amended certain average fuel economy and GHG standards for passenger cars covering model years 2021 through 2026. On March 30, 2020, the SAFE Rule was finalized and published in the Federal Register, commencing a review period. Subsequent legal challenges from a coalition of states, including California, and private industry groups were issued. In August 2021, USEPA proposed to revise and strengthen the emissions standards for passenger cars and light trucks for model years 2023-2026.

On September 27, 2019, the USEPA withdrew the waiver it had previously provided to California for the State's GHG and ZEV programs under Section 209 of the Clean Air Act.[47] The withdrawal of the waiver was effective November 26, 2019. In response, several states including California filed a lawsuit challenging the withdrawal of the EPA waiver.[48] In April 2021, the USEPA announced it will move to reconsider its previous withdrawal and grant California permission to set more stringent climate requirements for cars and SUVs.[49]

California Low Carbon Fuel Standard

Executive Order S-01-07 was enacted on January 18, 2007. The order mandates the following: (1) that a Statewide goal be established to reduce the carbon intensity of California's transportation fuels by at least 10 percent by 2020; and (2) that a LCFS for transportation fuels be established in California. The final regulation was approved by the Office of Administrative Law and filed with the Secretary of State on January 12, 2010; the LCFS became effective on the same day. In September 2015, CARB approved the re-adoption of the LCFS, which became effective on January 1, 2016, to address procedural deficiencies in the way the original regulation was adopted.[50]

The development of the 2017 Scoping Plan Update has identified LCFS as a regulatory measure to reduce GHG emission to meet the 2030 emissions target. In September 2018, the standards were amended by CARB to require a 20 percent reduction in carbon intensity by 2030, aligning with California's 2030 targets set by SB 32.[51]

Advanced Clean Cars Regulations

In 2012, CARB approved the Advanced Clean Cars program, an emissions-control program for model years 2015–2025.[52] The components of the Advanced Clean Cars program include the Low-Emission Vehicle (LEV) regulations that reduce criteria pollutants and GHG emissions from light- and medium-duty vehicles, and the Zero-Emission Vehicle (ZEV) regulation, which requires manufacturers to produce an increasing number of pure ZEVs (meaning battery electric and fuel cell electric vehicles), with provisions to also produce plug-in hybrid electric vehicles (PHEV) in the 2018 through 2025 model years.[53] During the March 2017 Midterm Review, CARB voted unanimously to continue with the vehicle GHG emission standards and the ZEV program for cars and light trucks sold in California through 2025.[54] Effective November 26, 2019, the federal SAFE Vehicles Rule Part One: One National Program withdrew the California waiver for the GHG and ZEV programs under section 209 of the Clean Air Act, which revokes California's authority to implement the Advanced Clean Cars and ZEV mandates. In response, several states including California filed a lawsuit challenging the withdrawal of the EPA waiver.[55] In April 2021, the USEPA announced it will move to reconsider its previous withdrawal of the waiver.[56]

In addition, Governor Gavin Newsom signed an executive order (Executive Order No. N-79-20) on September 23, 2020 that would phase out sales of new gas-powered passenger cars by 2035 in California with an additional 10-year transition period for heavy vehicles. The state would not restrict used car sales, nor forbid residents from owning gas-powered vehicles. In accordance with the Executive Order, CARB is developing a 2020 Mobile Source Strategy, a comprehensive analysis that presents scenarios for possible strategies to reduce the carbon, toxic and unhealthy pollution from cars, trucks, equipment, and ships. The strategies will provide important information for numerous regulations and incentive programs going forward by conveying what is necessary to address the aggressive emission reduction requirements.

The primary mechanism for achieving the ZEV target for passenger cars and light trucks is CARB's Advanced Clean Cars II (ACC II) Program, with an effective date of November 30, 2022. The ACC II regulations focus on post-2025 model year light-duty vehicles, as requirements are already in place for new vehicles through the 2025 model year.

Sustainable Communities and Climate Protection Act (SB 375)

The Sustainable Communities and Climate Protection Act of 2008, or SB 375 (Chapter 728, Statutes of 2008), establishes mechanisms for the development of regional targets for reducing passenger vehicle GHG emissions, was adopted by the State on September 30, 2008. SB 375 finds that the "transportation sector is the single largest contributor of greenhouse gases of any sector."[57] Under SB 375, CARB is required, in consultation with the Metropolitan Planning Organizations, to set regional GHG reduction targets for the passenger vehicle and light-duty truck sector for 2020 and 2035. SCAG is the Metropolitan Planning Organization in which the City of Los Angeles

is located in. CARB set targets for 2020 and 2035 for each of the 18 metropolitan planning organization regions in 2010, and updated them in 2018.[58] In March 2018, the CARB updated the SB 375 targets for the SCAG region to require an 8 percent reduction by 2020 and a 19 percent reduction by 2035 in per capita passenger vehicle GHG emissions.[59] As discussed further below, SCAG has adopted an updated Regional Transportation Plan / Sustainable Community Strategies (RTP/SCS) subsequent to the update of the emission targets. The 2020–2045 RTP/SCS is expected to reduce per capita transportation emissions by 19 percent by 2035, which is consistent with SB 375 compliance with respect to meeting the State's GHG emission reduction goals.[60]

Under SB 375, the target must be incorporated within that region's Regional Transportation Plan (RTP), which is used for long-term transportation planning, in a Sustainable Communities Strategy (SCS). Certain transportation planning and programming activities would then need to be consistent with the SCS; however, SB 375 expressly provides that the SCS does not regulate the use of land, and further provides that local land use plans and policies (e.g., general plans) are not required to be consistent with either the RTP or SCS.

Senate Bill 743

Governor Brown signed Senate Bill (SB) 743 in 2013, which creates a process to change the way that transportation impacts are analyzed under CEQA. Specifically, SB 743 requires the Office of Planning and Research (OPR) to amend the CEQA Guidelines to provide an alternative to level of service (LOS) methodology for evaluating transportation impacts. Particularly within areas served by transit, the required alternative criteria must "promote the reduction of greenhouse gas emissions, the development of multimodal transportation networks, and a diversity of land uses." Measurements of transportation impacts may include "vehicle miles traveled, vehicle miles traveled per capita, automobile trip generation rates, or automobile trips generated."

Building Standards and Other Regulations

California Appliance Efficiency Regulations

The Appliance Efficiency Regulations (Title 20, Sections 1601 through 1608), adopted by the CEC, include standards for new appliances (e.g., refrigerators) and lighting, if they are sold or offered for sale in California. These standards include minimum levels of operating efficiency, and other cost-effective measures, to promote the use of energy- and water-efficient appliances.

Title 24, Building Standards Code and CALGreen Code

The CEC first adopted the Energy Efficiency Standards for Residential and Nonresidential Buildings (CCR, Title 24, Part 6) in 1978 in response to a legislative mandate to reduce energy consumption in the State. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods.

58 CARB, *Sustainable Communities & Climate Protection Program – About*. https://ww2.arb.ca.gov/our-work/programs/sustainable-communities-climate-protection-program/about. Accessed September 24, 2021.
59 CARB, *SB 375 Regional Greenhouse Gas Emissions Reduction Targets*, https://www.arb.ca.gov/cc/sb375/finaltargets2018.pdf. Accessed September 24, 2021.
60 SCAG, *Final 2020–2045 RTP/SCS, Chapter 0: Making Connections*, p. 5, May 7, 2020.

Part 11 of the Title 24 Building Standards is referred to as the California Green Building Standards (CALGreen) Code and was developed to help the State achieve its GHG reduction goals under HSC Division 25.5 (e.g., AB 32) by codifying standards for reducing building-related energy, water, and resource demand, which in turn reduces GHG emissions from energy, water, and resource demand. The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality."[61] The CALGreen Code is not intended to substitute for or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission. The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design and overall environmental quality.[62]

On May 9, 2018, the CEC adopted the 2019 Title 24 Standards, which went into effect on January 1, 2020. The 2019 standards continue to improve upon the previous (2016) Title 24 standards for new construction of, and additions and alterations to, residential and non-residential buildings.[63] The 2019 Title 24 Standards ensure that builders use the most energy efficient and energy conserving technologies and construction practices. As described in the 2019 Title 24 Standards represent "challenging but achievable design and construction practices" that represent "a major step towards meeting the Zero Net Energy (ZNE) goal." Single-family homes built with the 2019 Title 24 Standards are projected to use approximately seven percent less energy due to energy efficiency measures versus those built under the 2016 standards. Once the mandated rooftop solar electricity generation is factored in, homes built under the 2019 standards will use about 53 percent less energy than those under the 2016 standards. Nonresidential buildings are projected to use approximately 30 percent less energy due mainly to lighting upgrades.[64] Compliance with Title 24 is enforced through the building permit process.

CEQA Guidelines

In August 2007, the California State Legislature adopted Senate Bill 97 (SB 97) (Chapter 185, Statutes of 2007), requiring the Governor's Office of Planning and Research (OPR) to prepare and transmit new CEQA guidelines for the mitigation of GHG emissions or the effects of GHG emissions to the Resources Agency by July 1, 2009. In response to SB 97, the OPR adopted CEQA guidelines that became effective on March 18, 2010.

However, neither a threshold of significance nor any specific mitigation measures are included or provided in the guidelines.[65] The guidelines require a lead agency to make a good-faith effort, based on the extent possible on scientific and factual data, to describe, calculate, or estimate the amount of GHG emissions resulting from a Project. Discretion is given to the lead agency whether to: (1) use a model or methodology to quantify GHG emissions resulting from a Project, and which model or methodology to use; or (2) rely on a qualitative analysis or performance-

65 See 14 Cal. Code Regs. §§ 15064.7 (generally giving discretion to lead agencies to develop and publish thresholds of significance for use in the determination of the significance of environmental effects), 15064.4 (giving discretion to lead agencies to determine the significance of impacts from GHGs).

based standards. Furthermore, three factors are identified that should be considered in the evaluation of the significance of GHG emissions:

1. The extent to which a Project may increase or reduce GHG emissions as compared to the existing environmental setting;
2. Whether the Project emissions exceed a threshold of significance that the lead agency determines applies to the Project; and
3. The extent to which the Project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions.[66]

The administrative record for the Guidelines Amendments also clarifies "that the effects of greenhouse gas emissions are cumulative, and should be analyzed in the context of California Environmental Quality Act's requirements for cumulative impact analysis."[67]

Regional

South Coast Air Quality Management District CEQA Guidance

The City of Los Angeles is located in the South Coast Air Basin (Air Basin), which consists of Orange County, Los Angeles County (excluding the Antelope Valley portion), and the western, non-desert portions of San Bernardino and Riverside Counties, in addition to the San Gorgonio Pass area in Riverside County. The South Coast Air Quality Management District (SCAQMD) is responsible for air quality planning in the Air Basin and developing rules and regulations to bring the area into attainment of the ambient air quality standards. This is accomplished through air quality monitoring, evaluation, education, implementation of control measures to reduce emissions from stationary sources, permitting and inspection of pollution sources, enforcement of air quality regulations, and by supporting and implementing measures to reduce emissions from motor vehicles.

In 2008, SCAQMD released draft guidance regarding interim CEQA GHG significance thresholds.[68] A GHG Significance Threshold Working Group was formed to further evaluate potential GHG significance thresholds.[69] The SCAQMD proposed the use of a percent emission reduction target to determine significance for commercial/residential projects that emit greater than 3,000 $MTCO_2e$ per year. Under this proposal, commercial/residential projects that emit fewer than 3,000 $MTCO_2e$ per year would be assumed to have a less than significant impact on climate change. On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold of 10,000 $MTCO_2e$ per year for stationary source/industrial projects where the SCAQMD is the lead agency. However, the SCAQMD has yet to adopt a GHG significance threshold for land use development projects (e.g., residential/commercial projects). The Working Group has been inactive since 2011, and SCAQMD has not formally adopted any GHG significance threshold for other jurisdictions.

SCAG Regional Transportation Plan/Sustainable Communities Strategy

To implement SB 375 and reduce GHG emissions by correlating land use and transportation planning, SCAG adopted the 2020–2046 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS) in October 2020. The vision for the region incorporates a range of best practices for increasing transportation choices, reducing dependence on personal automobiles, further improving air quality, and encouraging growth in walkable, mixed-use communities with ready access to transit infrastructure and employment. More and varied housing types and employment opportunities would be located in and near job centers, transit stations and walkable neighborhoods where goods and services are easily accessible via shorter trips. To support shorter trips, people would have the choice of using neighborhood bike networks, car share or micro-mobility services like shared bicycles or scooters. For longer commutes, people would have expanded regional transit services and more employer incentives to carpool or vanpool. Other longer trips would be supported by on-demand services such as microtransit, carshare, and citywide partnerships with ride hailing services. For those that choose to drive, hotspots of congestion would be less difficult to navigate due to cordon pricing and using an electric vehicle will be easier thanks to an expanded regional charging network.

The 2020–2045 RTP/SCS states that the SCAG region was home to about 18.8 million people in 2016 and currently includes approximately 6.0 million homes and 8.4 million jobs.[70] By 2045, the integrated growth forecast projects that these figures will increase by 3.7 million people, with nearly 1.6 million more homes and 1.6 million more jobs. Transit Priority Areas[71] (TPAs) will account for less than 1 percent of regional total land but are projected to accommodate 30 percent of future household growth between 2016 and 2045. The 2020–2045 RTP/SCS overall land use pattern reinforces the trend of focusing new housing and employment in the region's TPAs. TPAs are a cornerstone of land use planning best practice in the SCAG region because they concentrate roadway repair investments, leverage transit and active transportation investments, reduce regional life cycle infrastructure costs, improve accessibility, create local jobs, and have the potential to improve public health and housing affordability.

The 2020–2045 RTP/SCS is expected to reduce per capita transportation emissions by 19 percent by 2035, which is consistent with SB 375 compliance with respect to meeting the State's GHG emission reduction goals.[72] Due to fuel economy and efficiency improvements, GHG emission rates of model year 2017 vehicles have decreased by 15 to 20 percent when compared to model year 2008 and earlier vehicles. However, for purposes of SB 375 emissions reduction targets, the fuel economy improvements have been largely excluded from the reduction calculation. The SB 375 target focuses on the amount of vehicle travel per capita. As discussed above, OPR recommended that achieving 15 percent lower per capita (residential) or per employee (office) VMT than existing development is both generally achievable and is supported by evidence that connects this level of reduction to the State's emissions goals (i.e., SB 375 goal). The reductions generated by fuel economy improvements are already included as part of the State's GHG emissions reduction program and are not double counted in the SB 375 target calculation.

The RTP/SCS is updated every four years. On April 4, 2024, SCAG adopted the 2024–2050 RTP/SCS, also referred to as "Connect SoCal 2024." Connect SoCal 2024 builds on the prior RTP/SCS and identifies the following strategy

[70] 2020–2045 RTP/SCS population growth forecast methodology includes data for years 2010, 2010, 2016, and 2045.
[71] Defined by the 2020–2045 RTP/SCS as generally walkable transit villages or corridors that are within 0.5 mile of a major transit stop (rail or bus rapid transit station) with 15-minute or less service frequency during peak commute hours

areas to support its environmental goals: Sustainable Development, Air Quality, Clean Transportation, Natural and Agricultural Lands Preservation, and Climate Resilience.

Local

Green New Deal

The City of Los Angeles addressed the issue of global climate change in *Green LA, An Action Plan to Lead the Nation in Fighting Global Warming* ("LA Green Plan/ClimateLA") in 2007. This document outlines the goals and actions the City has established to reduce the generation and emission of GHGs from both public and private activities.

In April 2019, the *Green New Deal (Sustainable City Plan 2019)*, was released, consisting of a program of actions designed to create sustainability-based performance targets through 2050 designed to advance economic, environmental, and equity objectives.[73] L.A.'s Green New Deal is the first four-year update to the City's first Sustainable City pLAn that was released in 2015.[74] It augments, expands, and elaborates L.A.'s vision for a sustainable future and tackles the climate emergency with accelerated targets and new aggressive goals.

While not a plan adopted solely to reduce GHG emissions, within the Green New Deal, "Climate Mitigation," or reduction of GHG is one of eight explicit benefits that help define its strategies and goals. These include reducing GHG emissions through near-term outcomes:

- Reduce potable water use per capita by 22.5 percent by 2025; 25 percent by 2035; and maintain or reduce 2035 per capita water use through 2050.
- Reduce building energy use per square feet for all building types 22 percent by 2025; 34 percent by 2035; and 44 percent by 2050 (from a baseline of 68 mBTU/sq.ft in 2015).
- All new buildings will be net zero carbon by 2030 and 100 percent of buildings will be net zero carbon by 2050.
- Increase cumulative new housing unit construction to 150,000 by 2025; and 275,000 units by 2035.
- Ensure 57 percent of new housing units are built within 1,500 feet of transit by 2025; and 75 percent by 2035.
- Increase the percentage of all trips made by walking, biking, micro-mobility/matched rides, or transit to at least 35 percent by 2025, 50 percent by 2035, and maintain at least 50 percent by 2050.
- Reduce VMT per capita by at least 13 percent by 2025; 39 percent by 2035; and 45 percent by 2050.
- Increase the percentage of electric and zero emission vehicles in the city to 25 percent by 2025; 80 percent by 2035; and 100 percent by 2050.
- Increase landfill diversion rate to 90 percent by 2025; 95 percent by 2035 and 100 percent by 2050.
- Reduce municipal solid waste generation per capita by at least 15 percent by 2030, including phasing out single-use plastics by 2028 (from a baseline of 17.85 lbs. of waste generated per capita per day in 2011).
- Eliminate organic waste going to landfill by 2028.
- Reduce urban/rural temperature differential by at least 1.7 degrees by 2025; and 3 degrees by 2035.
- Ensure the proportion of Angelenos living within 1/2 mile of a park or open space is at least 65 percent by 2025; 75 percent by 2035; and 100 percent by 2050.

73 City of Los Angeles. LA's Green New Deal, 2019.
74 City of Los Angeles, Sustainable City pLAn, April 2015.

City of Los Angeles Green Building Code

On December 11, 2019, the Los Angeles City Council approved Ordinance No. 186,488, which amended Chapter IX of the Los Angeles Municipal Code (LAMC), referred to as the Los Angeles Green Building Code, by adding a new Article 9 to incorporate various provisions of the 2019 CALGreen Code. Projects filed on or after January 1, 2020, must comply with the provisions of the Los Angeles Green Building Code. Specific mandatory requirements and elective measures are provided for three categories: (1) low-rise residential buildings; (2) nonresidential and high-rise residential buildings; and (3) additions and alterations to nonresidential and high-rise residential buildings. Article 9, Division 5 includes mandatory measures for newly constructed nonresidential and high-rise residential buildings.

City of Los Angeles Solid Waste Programs and Ordinances

The recycling of solid waste materials also contributes to reduced energy consumption. Specifically, when products are manufactured using recycled materials, the amount of energy that would have otherwise been consumed to extract and process virgin source materials is reduced as well as disposal energy averted. In 1989, California enacted AB 939, the California Integrated Waste Management Act, which establishes a hierarchy for waste management practices such as source reduction, recycling, and environmentally safe land disposal.

The City has developed and is in the process of implementing the Solid Waste Integrated Resources Plan, also referred to as the Zero Waste Plan, whose goal is to lead the City towards being a "zero waste" City by 2030. These waste reduction plans, policies, and regulations, along with Mayoral and City Council directives, have increased the level of waste diversion for the City to 76 percent as of 2013.[75] The RENEW LA Plan, aims to achieve a zero waste goal through reducing, reusing, recycling, or converting the resources not going to disposal and achieving a diversion rate of 90 percent or more by 2025.[76] The City has also approved the Waste Hauler Permit Program (Ordinance No. 181,519, LAMC Chapter VI, Article 6, Section 66.32-66.32.5), which requires private waste haulers to obtain AB 939 Compliance Permits to transport construction and demolition waste to City-certified construction and demolition waste processors. The City's Exclusive Franchise System Ordinance (Ordinance No. 182,986), among other requirements, sets a maximum annual disposal level and diversion requirements for franchised waste haulers to promote waste diversion from landfills and support the City's zero waste goals. These programs reduce the number of trips to haul solid waste and therefore reduce the amount of petroleum-based fuels and energy used to process solid waste.

City of Los Angeles General Plan

The City does not have a General Plan Element specific to climate change and GHG emissions, and its General Plan does not have any stated goals, objectives, or policies specifically addressing climate change and GHG emissions. However, the following five goals from the City's General Plan Air Quality Element would also lead to GHG emission reductions[77]:

- Less reliance on single-occupancy vehicles with fewer commute and non-work trips;
- Efficient management of transportation facilities and system infrastructure using cost-effective system management and innovative demand-management techniques;

[75] City of Los Angeles, Department of Public Works, LA Sanitation, Recycling. https://www.lacitysan.org/san/faces/home/portal/s-lsh-wwd/s-lsh-wwd-s/s-lsh-wwd-s-r?_adf.ctrl-state=kq9mn3h5a_188. Accessed September 24, 2021.
[76] City of Los Angeles, RENEW LA, Five-Year Milestone Report, 2011.
[77] City of Los Angeles, Air Quality Element, June 1991, pages IV-1 to IV-4.

- Minimal impacts of existing land use patterns and future land use development on air quality by addressing the relationship between land use, transportation, and air quality;
- Energy efficiency through land use and transportation planning, the use of renewable resources and less-polluting fuels, and the implement of conservation measures, including passive measures, such as site orientation and tree planting; and
- Citizen awareness of the linkages between personal behavior and air pollution and participation in efforts to reduce air pollution.

City of Los Angeles Municipal Code

Chapter IX of the LAMC, Sections 99.02.202, 99.04.106.8, and 99.05.106.14, requires that all new buildings be all-electric buildings, with some exceptions. Equipment typically powered by natural gas, such as space heating, water heating, cooking appliances and clothes drying, would need to be powered by electricity for new construction. Exceptions are made for commercial restaurants, hospitals, laboratories, and research and development uses.

Traffic Study Policies and Procedures

The City of Los Angeles Department of Transportation (LADOT) has developed the City Transportation Assessment Guidelines (TAG) (July 2019, updated July 2020) to provide the public, private consultants, and City staff with standards, guidelines, objectives, and criteria to be used in the preparation of a transportation assessment. The TAG establishes the reduction of vehicle trips and VMT as the threshold for determining transportation impacts and thus is an implementing mechanism of the City's strategy to reduce land use transportation-related GHG emissions consistent with AB 32, SB 32, and SB 375.

2.3 Existing Conditions

Project Site

The Project Site is approximately 3.7 acres in size. It is made up of two parcels, one of which is currently occupied by the A-1 Trailer Park. The other parcel was formerly used as a vehicle storage lot but is now a vacant surface parking lot. The Project Site is bordered to the north by Pacific Coast Highway, to the east by an auto repair shop and a surface parking lot that is used by Kaiser Permanente, to the south by West 259th Street, which is a cul-de-sac that dead ends at the Kaiser Permanente surface parking lot, and to the west by Frampton Avenue. To the south of West 259th Street are multi-family residential buildings.

3 Project Impacts (Greenhouse Gas Emissions)

3.1 Thresholds of Significance

State CEQA Guidelines: Appendix G

In accordance with Appendix G of the CEQA Guidelines, projects would have a significant impact related to GHG emissions if a project would:

A. **Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment.**
B. **Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases.**

This analysis relies on the Appendix G Thresholds. State CEQA Guidelines Section 15064.4 recommends that lead agencies quantify GHG emissions of projects and consider other qualitative factors that may be used in the determination of significance:

A lead agency should consider the following factors, among others, when assessing the significance of GHG emissions on the environment:

A. The extent to which the Project may increase or reduce GHG emissions as compared to the existing environmental setting;
B. Whether the Project emissions exceed a threshold of significance that the lead agency determines applies to the Project; and
C. The extent to which the Project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions (see, e.g., Section 15183.5(b)). Such requirements must be adopted by the relevant public agency through a public review process and must reduce or mitigate the project's incremental contribution of GHG emissions. If there is substantial evidence that the possible effects of a particular Project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the Project.

CEQA Guidelines Section 15064.4 does not establish a threshold of significance for GHG impacts. Per CEQA Guidelines Section 15064.7(c), lead agencies have the discretion to establish significance thresholds for their respective jurisdictions, and in establishing those thresholds, a lead agency may appropriately look to thresholds developed by other public agencies, or suggested by other experts, such as the California Air Pollution Control Officers Association or SCAQMD, as long as any threshold chosen is supported by substantial evidence. The CEQA Guidelines amendments also clarify that the effects of GHG emissions are cumulative.

Per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the Project will comply with an approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area of

the Project.[78] To qualify, such a plan or program must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.[79] Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plans [and] plans or regulations for the reduction of greenhouse gas emissions."[80] Put another way, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a Project complies with adopted programs, plans, policies and/or other regulatory strategies to reduce GHG emissions.

In the absence of any applicable adopted numeric threshold, the significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b)(2) by considering whether the Project complies with applicable plans, policies, regulations and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. For this Project, as a land use development Project, the most directly applicable plans to reduce GHG emissions are the following:

- CARB Climate Change Scoping Plan, AB 32, Executive Order S-3-05, SB 32, the Los Angeles Green Building Code, and other laws and regulations
- SCAG's 2024–2050 RTP/SCS
- L.A.'s Green New Deal

In October 2008, SCAQMD proposed recommended numeric CEQA significance thresholds for GHG emissions for lead agencies to use in assessing GHG impacts of residential and commercial development projects as presented in its Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold.[81] This guidance document, which builds on the previous guidance prepared by the California Air Pollution Control Officers Association, explored various approaches for establishing a significance threshold for GHG emissions. The draft interim CEQA thresholds guidance document was not adopted or approved by the Governing Board. However, in December 2008, the SCAQMD adopted an interim 10,000 MT CO2e per-year screening level threshold for stationary source/industrial projects for which the SCAQMD is the lead agency.[82] This SCAQMD interim GHG significance threshold is not applicable to the Project since the Project is a residential Project, and the City is the lead agency.

3.2 Methodology

Amendments to the CEQA Guidelines were adopted to assist lead agencies in determining the significance of the impacts of GHG emissions. Consistent with existing CEQA practice, CEQA Guidelines Section 15064.4 gives lead agencies the discretion to determine whether to assess the significance of GHG emissions quantitatively or qualitatively. This section recommends certain factors be considered that may be used in the determination of significance (i.e., extent to which the Project may increase or reduce GHG emissions compared to the existing environment; whether the Project exceeds an applicable significance threshold; and extent to which the Project complies with regulations or requirements adopted to implement a statewide, regional or local plan for the reduction

78 14 CCR Section 15064(h)(3).
79 14 CCR Section 15064(h)(3).
80 14 CCR Section 15064(h)(3).
81 SCAQMD, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, October 2008.
82 See SCAQMD Resolution No. 08-35, December 5, 2008.

or mitigation of GHGs). The CNRA has also clarified that the GHG related amendments to the CEQA Guidelines focus on the effects of GHG emissions as cumulative impacts, and that the significance of GHG emissions should, therefore, be analyzed in the context of CEQA's requirements for analyzing cumulative impacts.[83]

The City has not adopted a numerical significance threshold for assessing impacts related to GHG emissions and has not formally adopted a local plan for reducing GHG emissions. Similarly, SCAQMD, OPR, CARB, California Air Pollution Control Officers Association, or any other State or regional agency has not adopted a numerical significance threshold for assessing GHG emissions that is applicable to the Project. Since there is no applicable adopted or accepted numerical threshold of significance for GHG emissions, the methodology for evaluating the Project's impacts related to GHG emissions focuses on whether the Project would conflict with statewide, regional, and local plans adopted for the purpose of reducing and/or mitigating GHG emissions. This evaluation of plans is the basis for determining the significance of the Project's GHG-related impacts on the environment.

The analysis also calculates the amount of GHG emissions that would be attributable to the Project using recommended air quality models, as described below. The purpose of quantifying the Project's GHG emissions is to satisfy CEQA Guidelines Section 15064.4(a), which calls for a good-faith effort to describe and calculate emissions. The estimated emissions inventory is also used to determine if there would be a reduction in the Project's incremental contribution of GHG emissions as a result of compliance with regulations and requirements adopted to implement plans for the reduction or mitigation of GHG emissions.

Consistency with GHG Reduction Plans and Regulations

OPR encourages lead agencies to make use of programmatic mitigation plans and programs from which to tier when they perform individual Project analyses. Although the City does not have a programmatic mitigation plan to tier from, such as a GHG emissions reduction plan, the City has released and adopted a number of plans and regulations to help reduce GHG emissions, including L.A.'s Green New Deal and Los Angeles Green Building Code, which encourage and require applicable projects to implement energy efficiency measures. On a statewide level, the Scoping Plan[84] builds on laws and regulations to achieve AB 32, SB 32, and Executive Order S-3-05 targets. On a regional level, SCAG's 2024–2050 RTP/SCS contains measures to achieve VMT reductions required under SB 375. Thus, if the Project is found to not conflict with these plans, policies, regulations, and requirements, the Project would result in a less-than-significant impact because it would be consistent with the overarching state, regional, and local plans for GHG reduction.

A consistency analysis is provided below and describes the Project's compliance with the Climate Change Scoping Plan, AB 32, Executive Order S-3-05, SB 32, other laws and regulations that reduce GHGs, the regional 2024–2050 RTP/SCS and L.A.'s Green New Deal.

[83] See, generally, CNRA, Final Statement of Reasons for Regulatory Action, pp. 11–13, 14, and 16, December 2009; see also Letter from C. Bryant, Director of the Office of Planning and Research, to M. Chrisman, Secretary for Natural Resources, April 13, 2009.

[84] Unless otherwise specified, any discussion of the "Scoping Plan" in the impact analysis refers to the Scoping Plan approved by CARB in 2008 and the subsequent updates in 2014 and 2017.

Quantification of Emissions

In view of the above considerations, this report also quantifies the Project's total annual GHG emissions for informational purposes, taking into account the GHG emission reduction features that would be incorporated into the Project's design (described below).

The California Climate Action Registry General Reporting Protocol (General Reporting Protocol) provides basic procedures and guidelines for calculating and reporting GHG emissions from a number of general and industry-specific activities.[85] The General Reporting Protocol is based on the "Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard" developed by the World Business Council for Sustainable Development and the World Resources Institute through "a multi-stakeholder effort to develop a standardized approach to the voluntary reporting of GHG emissions."[86] Although no numerical thresholds of significance have been developed, and no specific protocols are available for land use projects, the General Reporting Protocol provides a basic framework for calculating and reporting GHG emissions from the Project. The information provided in this section is consistent with the General Reporting Protocol's reporting requirements.

The General Reporting Protocol recommends the separation of GHG emissions into three categories that reflect different aspects of ownership or control over emissions. They include the following:

- **Scope 1:** Direct, on-site combustion of fossil fuels (e.g., natural gas, propane, gasoline, and diesel)
- **Scope 2:** Indirect, off-site emissions associated with purchased electricity or purchased steam
- **Scope 3:** Indirect emissions associated with other emissions sources, such as third-party vehicles and embodied energy (e.g., energy used to convey, treat, and distribute water and wastewater)[87]

The General Reporting Protocol provides a range of basic calculations methods. However, the General Reporting Protocol calculations are typically designed for existing buildings or facilities. These retrospective calculation methods are not directly applicable to planning and development situations where buildings do not yet exist.

CARB recommends consideration of indirect emissions to provide a more complete picture of the GHG footprint of a facility. For example, CARB has proposed requiring the calculation of direct and indirect GHG emissions as part of the AB 32 reporting requirements. Additionally, OPR has noted that lead agencies "should make a good-faith effort, based on available information, to calculate, model, or estimate… GHG emissions from a Project, including the emissions associated with vehicular traffic, energy consumption, water usage and construction activities."[88] Therefore, direct and indirect emissions have been calculated for the Project.

A fundamental difficulty in the analysis of GHG emissions is the global nature of the existing and cumulative future conditions. Changes in GHG emissions can be difficult to attribute to a particular planning program or Project because the planning effort or Project may cause a shift in the locale for some type of GHG emissions, rather than causing "new"

85 California Climate Action Registry, General Reporting Protocol Version 3.1, January 2009.
86 California Climate Action Registry, General Reporting Protocol Version 3.1, January 2009.
87 Embodied energy is a scientific term that refers to the quantity of energy required to manufacture and supply to the point of use a product, material, or service.
88 OPR, Technical Advisory—CEQA and Climate Change: Addressing Climate Change through California Environmental Quality Act (CEQA) Review, June 19, 2008.

GHG emissions. As a result, there is a lack of clarity as to whether a Project's GHG emissions represent a net global increase, reduction, or no change to GHGs that would exist if the Project were not implemented.

GHG emissions are estimated using CalEEMod, which is a statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and GHG emissions associated with both construction and operations from a variety of land use projects. CalEEMod was developed in collaboration with the air districts of California. Data (e.g., emission factors, trip lengths, meteorology, source inventory) have been provided by the various California air districts to account for local requirements and conditions. The model is considered to be an accurate and comprehensive tool for quantifying air quality and GHG impacts from land use projects throughout California.

Construction

Emissions from Project construction activities were estimated using CalEEMod Version 2022.1. Construction of the Project would result in GHG emissions primarily associated with use of off-road construction equipment, on-road haul and vendor (material delivery) trucks, and worker vehicles. The calculations of the emissions generated during Project construction activities reflect the types and quantities of construction equipment that would be used to remove the existing structures and surface parking lots, excavate and grade the building sites, and construct the proposed buildings and related improvements. In accordance with the SCAQMD's guidance, GHG emissions from construction were amortized (i.e., averaged) over the lifetime of the Project. SCAQMD defines the lifetime of a Project as 30 years.[89] Therefore, in accordance with SCAQMD's guidance, total construction GHG emissions were divided by 30 to determine an annual construction emissions estimate and to ensure the construction emissions are evaluated in a quantitative sense with operations. All details for construction criteria air pollutants discussed in Section 3, Air Quality, of this report are also applicable for the estimation of construction-related GHG emissions. As such, see Section 3 for a discussion of construction emissions calculation methodology and assumptions.

Operation

Operation of the Project would result in GHG emissions from area sources (landscape maintenance equipment), energy sources (electrical generation and natural gas combustion), mobile sources (vehicular traffic), water supply, and solid waste. CalEEMod was used to calculate the potential GHG emissions generated by operation of the Project. These sources of GHG emissions are detailed below.

Vehicular Traffic

The Project would generate GHG emissions through the vehicular traffic generated by the Project. On-road vehicle GHG emissions were quantified based on the estimated annual VMT for the Project and existing traffic, which is derived using CalEEMod default trip lengths and based on the Project and existing land use trip rates from the Transportation Impact Study (TIS) prepared for the Project.

Regulatory measures related to mobile sources include AB 1493 and related federal standards. AB 1493 required that CARB establish GHG emission standards for automobiles, light-duty trucks, and other vehicles determined by CARB to be vehicles that are primarily used for noncommercial personal transportation in the State. In addition, NHTSA and USEPA have established corporate fuel economy standards and GHG emission standards, respectively,

[89] SCAQMD, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, October 2008.

for automobiles and light-, medium-, and heavy-duty vehicles. Implementation of these standards and fleet turnover (replacement of older vehicles with newer ones) would gradually reduce emissions from the Project's motor vehicles. The effectiveness of fuel economy improvements was evaluated by using the CalEEMod emission factors for motor vehicles.

Area Sources

In addition to estimating mobile source emissions, CalEEMod was also used to estimate GHG emissions from the Project's area sources, which include landscaping equipment. CalEEMod default assumptions for area sources were included in the modeling for all uses.

Energy Sources

The estimation of operational energy emissions was based on CalEEMod land use defaults and units or total area (i.e., square footage) of the proposed Project's land uses and existing land uses to be demolished. The energy use (electricity or natural gas usage per square foot per year) from residential land uses is calculated in CalEEMod based on the Residential Appliance Saturation Study and the energy use from nonresidential land uses is calculated in CalEEMod based on the California Commercial End-Use Survey database. Emissions are calculated by multiplying the energy use by the utility carbon intensity (pounds of GHGs per kilowatt-hour for electricity or 1,000 British thermal units for natural gas) for CO_2 and other GHGs. Annual electricity emissions were estimated in CalEEMod using the emissions factors for Southern California Edison, which would be the energy provider for the proposed Project.

Water and Wastewater

Supply, conveyance, treatment, and distribution of water for the proposed Project require the use of electricity, which would result in associated indirect GHG emissions. Similarly, wastewater generated by the proposed Project requires the use of electricity for conveyance and treatment, along with GHG emissions generated during wastewater treatment. Water consumption estimates for both indoor and outdoor water use and associated electricity consumption from water use and wastewater generation were estimated using default values in CalEEMod.

Solid Waste

The proposed Project would generate solid waste, and therefore, result in CO2e emissions associated with landfill off-gassing. CalEEMod default values for solid waste generation were used to estimate GHG emissions associated with solid waste for the proposed Project.

3.3 Project Design Features

The Project would be constructed to incorporate environmentally sustainable building features and construction protocols required by the Los Angeles Green Building Code and CALGreen, which would reduce energy use, water use, waste generation, and associated GHG emissions.

3.4 Project Emissions

Quantification of GHG Emissions

The Project's potential impacts with regard to climate change are evaluated in this report solely on consistency with the GHG emission reduction plans. The Project's GHG emissions were also calculated and are presented below for informational purposes only. These emissions were not compared to a numeric threshold, as there are no applicable adopted or accepted numeric thresholds.

Construction Emissions

GHG emissions associated with Project-generated construction activities were quantified using the CalEEMod Version 2020.4.2. On-site sources of GHG emissions include off-road equipment, and off-site sources include hauling and vendor (delivery) trucks and worker vehicles. CalEEMod default values were used where detailed Project information was not available. Additional details regarding these calculations are provided in Appendix A. SCAQMD has not proposed or adopted quantitative GHG thresholds for construction-generated emissions. As explained previously, SCAQMD recommends that, "construction emissions be amortized over a 30-year Project lifetime, so that GHG reduction measures will address construction GHG emissions as part of the operational GHG reduction strategies."[90] Thus, the total construction GHG emissions were calculated, amortized over 30 years, and added to the total operational emissions. Table 4 presents construction emissions for the Project beginning in 2024 with completion by 2025 from on-site and off-site emission sources.

Table 4. Estimated Annual Construction GHG Emissions

Construction Year	MT CO_2	MT CH_4	MT N_2O	Refrigerants	MT CO_2e
2024	977	0.04	0.04	1.04	990
2025	598	0.03	0.02	0.55	604
Total	**1,575**	**0.07**	**0.06**	**1.59**	**1,594**
				Amortized Emissions	**53.13**

Notes: See Appendix A for detailed results.
MT = metric tons; CO_2 = carbon dioxide; CH_4 = methane; N_2O = nitrous oxide; CO_2e = carbon dioxide equivalent.

As shown in Table 4, the estimated total GHG emissions during Project construction would be approximately 1,594 MT CO2e, which equates to about 53 MT CO2e when amortized over 30 years.

Operations Emissions

Following the completion of construction activities, the Project would generate GHG emissions from mobile sources (i.e., on-road vehicular traffic), energy sources, area sources (i.e., landscaping equipment), water and wastewater conveyance and treatment, and solid waste (i.e., decomposition). Existing land uses to be demolished also include these sources (i.e., mobile, energy, area, water and wastewater conveyance and treatment, and solid waste sources), which were modeled in order to determine the baseline GHG emissions and net increase in emissions associated with the Project development, based on incremental demolition of existing uses and construction of new

[90] SCAQMD, Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold, October 2008.

uses. Table 5 presents the operational GHG emission results, complete details of the emissions calculations are provided in Appendix A.

Table 5. Estimated Operational GHG Emissions

Emissions Source	MT CO_2/year	MT CH_4/year	MT N_2O/year	Refrigerants	MT CO_2e/year
Existing Baseline[1]					
Area	9.25	<0.01	<0.01	--	9.26
Energy	121.00	0.01	<0.01	--	122
Mobile	224.00	0.01	0.01	0.34	228
Solid waste	2.76	0.28	0.00	--	9.67
Water supply and wastewater	3.83	0.05	<0.01	--	5.48
Refrigerants	--	--	--	0.06	0.06
Total	**360.84**	**0.35**	**0.01**	**0.40**	**374.41**
Project[2]					
Area	82.9	<0.01	<0.01	--	83.00
Energy	906	0.07	0.01	--	910.00
Mobile	1,523	0.08	0.07	2.28	1,547.00
Solid waste	32.40	3.23	0.00	--	113.00
Water supply and wastewater	35.70	0.47	0.01	--	51.00
Refrigerants	--	--	--	0.76	0.76
Total	**2,529**	**3.85**	**0.08**	**3.04**	**2,704.76**
Amortized Construction Emissions					**53.11**
Net (Project+ Construction minus Existing Baseline)	**2,168.16**	**3.50**	**0.07**		**2,382.66**

Notes: See Appendix A for detailed results.
Totals may not sum due to rounding. Values in parentheses represent negative numbers.
MT = metric tons; CO2 = carbon dioxide; CH4 = methane; N2O = nitrous oxide; CO2e = carbon dioxide equivalent; GHG = greenhouse gas

In summary, as shown in Table 5, the net change in GHG emissions attributable to the Project, including amortized construction emissions, would be an approximate increase of 2,382.66 MT CO2e per year.

3.5 Analysis of Project Impacts

As described above in the Consistency with GHG Reduction Plans and Policies section, in the absence of any adopted numeric threshold, the significance of the Project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b) by considering whether the Project conflicts with applicable plans, policies, regulations, and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. Since the Project is a land use development Project, the most directly applicable adopted regulatory plan to reduce GHG emissions is SCAG's 2024–2050 RTP/SCS, which is designed to achieve

regional GHG reductions from the land use and transportation sectors as required by SB 375 and California's long-term climate goals.

CEQA Guidelines Section 15183.5(b) specifies that a plan for reduction of GHG emissions should:

1. Quantify GHG emissions, both existing and projected over a specified time period, resulting from activities within a defined geographic area.
2. Establish a level, based on substantial evidence, below which the contribution to GHG emissions from activities covered by the plan would not be cumulatively considerable.
3. Identify and analyze the GHG emissions resulting from specific actions or categories of actions anticipated within the geographic area.
4. Specify measures or a group of measures, including performance standards that substantial evidence demonstrates, if implemented on a Project-by-Project basis, would collectively achieve the specified emissions level.
5. Monitor the plan's progress.
6. Adopt the GHG Reduction Strategy in a public process following environmental review.

The 2024–2050 RTP/SCS (SoCal 2024) is a qualified plan for reduction of GHGs because it meets CEQA Guidelines, Section 15183.5(b) listed above by: (1) quantifying all primary sectors of GHG emissions with the SCAG region; (2) including a per-capita reduction target from automobiles and light trucks of at least 8 percent below 2005 per-capita emissions levels by 2020 and 19 percent below 2005 per-capita emissions levels by 2035, which is designed to achieve regional GHG reductions from the land use and transportation sectors as required by SB 375. The Project is within the SCAG region; therefore, determining if the Project does not conflict with the 2024–2050 RTP/SCS (together with implemental local plans) is the applicable plan for addressing impact significance.

Additionally, this analysis also considers potential conflict with the CARB 2022 Climate Change Scoping Plan, AB 32, Executive Order S-3-05, SB 32, the Los Angeles Green Building Code, L.A.'s Green New Deal, and other laws and regulations that reduce GHGs.

CARB Climate Change Scoping Plan, AB 32, Executive Order S-3-05, SB 32, the Los Angeles Green Building Code, and Other Laws and Regulations

The Scoping Plan provides a framework for actions to reduce California's GHG emissions and requires CARB and other state agencies to adopt regulations and other initiatives to reduce GHGs. Under the Scoping Plan, there are several state regulatory measures aimed at the identification and reduction of GHG emissions. CARB and other state agencies have adopted many of the measures identified in the Scoping Plan. Most of these measures focus on area source emissions (e.g., energy usage, high-GWP GHGs in consumer products) and changes to the vehicle fleet (i.e., hybrid, electric, and more fuel-efficient vehicles) and associated fuels (e.g., LCFS), among others. The Scoping Plan builds on a wide array of regulatory requirements that have been promulgated to reduce statewide GHG emissions. While these regulatory requirements are not targeted at specific land use development projects, they would indirectly reduce a development project's GHG emissions. A discussion of these regulatory requirements that would reduce the Project's GHG emissions are provided below. Notably, because GHG regulations continue to expand under California's climate leadership efforts, the discussion below presents a snapshot of these GHG laws and regulations. Since additional GHG reduction laws and regulations are likely to apply, and listed plans and

regulations are likely to continue to evolve, the scope of GHG regulations applicable to GHG-emissions related to the Project is anticipated to expand over time and result in lower-than-predicted GHG emissions. The following regulations and programs are not targeted at specific land use development projects; however, each is discussed based on potential indirect consequences on Project GHG emissions.

- SB 100 (California RPS Program). SB 100 established that 44 percent of the total electricity sold to retail customers in California per year by December 31, 2024, 52 percent by December 31, 2027, and 60 percent by December 31, 2030, be secured from qualifying renewable energy sources. SB 100 states that it is the policy of the State that eligible renewable energy resources and zero-carbon resources supply 100 percent of the retail sales of electricity to California by December 31, 2045. While this regulation does not directly apply to individual projects, the Project complies with the RPS program since its electricity would be provided by LADWP, which is required to comply with the RPS requirements. Thus, the Project would be supplied with electricity via renewable sources at increasing rates over time, thereby reducing the Project's electricity-related GHG emissions.
- Cap-and-Trade Program. The Climate Change Scoping Plan identifies a Cap-and-Trade Program as a key strategy CARB will employ to help California meet its GHG reduction targets for 2020 and 2030, and ultimately achieve an 80-percent reduction from 1990 levels by 2050. Pursuant to its authority under AB 32, CARB has designed and adopted a California Cap-and-Trade Program to reduce GHG emissions from major sources (deemed "covered entities") by setting a firm cap on Statewide GHG emissions and employing market mechanisms to achieve AB 32's emission reduction mandate of returning to 1990 levels of emissions by 2020. The first phase of the Cap-and-Trade regulation included electricity generated in and imported into California, large combustion sources (i.e., generally those emitting more than 25,000 MT CO_2e per year), and certain industrial sectors. The second phase added providers of transportation fuels (and thus transportation-related GHG emissions) and other combustion fuels (e.g., natural gas, propane) to the Cap-and-Trade Program. The regulation requires that emissions generated by these facilities and combustion of fuels be reduced over time under a declining "cap." The Cap-and-Trade regulation provides a firm cap, ensuring that the 2020 statewide emission limit will not be exceeded. An inherent feature of the Cap-and-Trade Program is that it does not guarantee GHG emissions reductions in any discrete location or by any particular source. Rather, GHG emissions reductions are only guaranteed on an accumulative basis. While the Cap-and-Trade Program does not directly apply to individual projects, the Project would comply with the Program inasmuch as the Project's electricity usage, transportation fuel use, and natural gas use would be covered by the Cap-and-Trade Program, resulting in a reduction of GHG emissions from the Project's energy consumption.
- AB 1493 (Pavley Regulations). The State's Pavley Regulations apply to new passenger vehicles from model year 2012 through 2016 (Phase I) and model years 2017–2025 (Phase II). Before these regulations could go into effect, USEPA had to grant California a waiver under the federal Clean Air Act, which ordinarily preempts state regulation of motor vehicle emission standards. While this action does not apply to individual projects, future residents, employees and visitors to the Project Site would purchase new vehicles in compliance with this regulation, which would generate reduced emissions of GHGs. However, as previously noted, the vehicle emissions standards beyond model year 2020 may not occur if the Federal SAFE Vehicles Rules and the One National Program on Federal Preemption of State Fuel Economy Standards are upheld by the courts.
- Advanced Clean Cars Program. This program combines the control of smog- and soot-causing pollutants and GHG emissions into a single coordinated package. The package includes elements to reduce smog-forming

pollution, reduce GHG emissions, promote clean cars (including ZEV and plug-in hybrid EVs), and provide the fuels for clean cars. Although this program does not directly apply to individual projects, the standards would apply to the vehicles purchased by employees and visitors of the Project. Notably, pursuant to the Los Angeles Green Building Code and CALGreen standards, the Project will be required to include at least 30 percent of the total code required parking spaces be EV spaces, with 10 percent of the total code required parking spaces to have EV chargers installed. As such, the Project would support this regulation. However, as detailed previously, USEPA and NHTSA published the SAFE Vehicles Rule, which revokes California's authority to set its own GHG emissions standards and set ZEV mandates in California. Since California and 22 other states, as well as the District of Columbia and four cities, filed suit against the USEPA and a petition for reconsideration of the rule, the effect of the SAFE Rule on the Advanced Clean Cars program is still to be determined pending the ruling of ongoing litigation. Nevertheless, the Project would be required to comply with state and local standards for the number of EV parking spaces provided on site.

- **Low-Carbon Fuel Standard.** The LCFS calls for a 10-percent reduction in the "carbon intensity" of motor vehicle fuels by 2020, as well as at least an 18-percent reduction by 2030. Although this regulation does not directly apply to individual projects, future employees and visitors to the Project Site would utilize transportation fuels in compliance with this regulation, which would reduce emissions of GHGs.
- **SB 375.** This regulation addresses GHG emissions associated with the transportation sector through regional transportation and sustainability plans. Under SB 375, CARB is required, in consultation with the MPOs, to set regional GHG reduction targets for the passenger vehicle and light-duty truck sector for 2020 and 2035. Although this regulation does not apply to individual projects, projects that are consistent with the smart growth principles and VMT reduction goals in the development plan for the Region (i.e., SCAG's 2020–2045 RTP/SCS) would not conflict with the GHG reduction targets of SB 375. As described below , the Project would be consistent with SCAG's 2024–2050 RTP/SCS and would, therefore, support the regional GHG reduction targets of SB 375.
- **CCR, Title 20.** Title 20 requires manufacturers of appliances to meet state and federal standards for energy and water efficiency and applies to new appliances and lighting that are sold in California. This regulation does not apply to individual projects, the Project would comply with this regulation since the Project would install only appliances and lighting that meet the State standards for such equipment.

The Project's consistency with key GHG-reducing laws and regulations that are directly applicable to the Project, including Title 24, Part 6 (Building Energy Efficiency Standards), Title 24, Part 4 (CALGreen Code), and the Los Angeles Green Building Code is described as follows.

- **CCR, Title 24, Part 6 – Building Energy Efficiency.** Part 6 of Title 24 specifically established Building Energy Efficiency Standards that are designed to ensure new and existing buildings in California conserve energy. The Project would be compliant with the requirements of CCR, Title 24, Part 6 as Project buildings would be designed and constructed to incorporate environmentally sustainable design features equivalent to achieve LEED certification.
- **California Code of Regulations (CCR), Title 24, Part 11 – CALGreen.** CALGreen establishes minimum mandatory standards as well as voluntary standards pertaining to the planning and design of sustainable site development, energy efficiency, reducing VMT from fossil fueled vehicles, water conservation, and material conservation. The Project would comply with CALGreen standards.

- **Los Angeles Green Building Code.** Chapter IX, Article 9 of the LAMC incorporates provisions of the 2019 CALGreen Code and establishes minimum mandatory standards as well as voluntary standards pertaining to the planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. The Project would comply with CALGreen standards and would be designed and constructed to incorporate environmentally sustainable design features equivalent to achieve LEED certification, which would also apply to the Project's consistency with the Los Angeles Green Building Code.
- **City of Los Angeles Municipal Code.** Chapter IX of the LAMC, Sections 99.02.202, 99.04.106.8, and 99.05.106.14, requires that all new buildings be all-electric buildings, with some exceptions. The Project would include all-electric appliances with no natural gas connection.

As detailed in the preceding discussion, the Project would implement project design features and comply with green building measures consistent with applicable laws and regulations to reduce energy use, water usage, waste generation, and VMT, thereby reducing the resulting GHG emissions caused by these activities. As a result, the Project would not conflict with these applicable regulations to reduce GHG emissions.

In addition, the Project area is in the Wilmington-Harbor City Community Plan Area which is located between the planning communities of Harbor Gateway, San Pedro, and the Port of Los Angeles, and adjacent to the cities of Torrance, Lomita, Rancho Palos Verdes, Carson, Long Beach, and an unincorporated area of Los Angeles County. The overarching goals of the Community Plan are as follows: preserving and enhancing the positive characteristics of existing residential neighborhoods while providing a variety of compatible new housing opportunities; improving the function, design, and economic vitality of the commercial corridors and industrial areas; maximizing the development opportunities around the future transit system while minimizing any adverse impacts; and planning the remaining commercial and industrial development opportunity sites for needed job producing uses that improve the economic and physical condition of the Community Plan Area.

The proposed Project would both further the overarching goals of the Community Plan and would not conflict with the City's implementation of these goals. The Project would provide new housing opportunities that would be compatible with multi-family residential neighborhoods to the south while incorporating commercial uses that would be compatible with uses to the north, east, and west and that would provide a community-serving commercial use in walking distance of proposed residences and existing nearby residences. The Project would also improve the economic vitality of the Project area by redeveloping an underutilized site with higher density residential uses and community-serving commercial business.

The Project would also be required to comply with the City's Transportation Demand Management Ordinance. The Los Angeles City Planning and Los Angeles Department of Transportation are working to update the City's Transportation Demand Management (TDM) Program to meet transportation demand in a sustainable way. The proposed update would require certain new development projects to implement strategies such as supporting transit, telecommuting, walking, carshare, neighborhood shuttles, and other strategies that reduce vehicle trips.

The TDM program update has three overarching goals. First, the program seeks to reduce greenhouse gas emissions by reducing the amount of vehicle miles traveled (VMT) generated by automobiles. Second, the program presents an updated and expanded set of TDM strategies, including telecommuting and bike share, to allow developers to take advantage of the latest mobility technologies and use strategies that suit their specific Project. Lastly, the program will focus on expanding access to the transportation network through investments in bike and pedestrian infrastructure.

The updated TDM program can lead to improved quality of life by making efficient use of the City's mobility network and can improve public health by enabling active transportation choices like biking and walking.

Consistency with CARB's 2022 Scoping Plan, AB 1279

The 2022 Scoping Plan reflects the 2030 target of a 40% reduction below 1990 levels codified by SB 32, and the 2045 target of carbon neutrality initially established by EO B-55-18 and codified under AB 1279, as detailed in Section 2.1, above. Many of the measures and programs included in the Scoping Plan would result in the reduction of project-related GHG emissions with no action required at the project-level, including GHG emission reductions through increased energy efficiency and renewable energy production (SB 350), reduction in carbon intensity of transportation fuels (LCFS), and the accelerated efficiency and electrification of the statewide vehicle fleet (Mobile Source Strategy). As detailed above, absent a qualified GHG reduction plan, Appendix D of the CARB Scoping Plan provides recommendations for key attributes that residential and mixed-use projects should achieve that would align with the State's climate goals while accommodating housing growth.[91] The Project's consistency with the applicable attributes under three priority areas – transportation electrification, VMT reduction, and building decarbonization – are discussed as follows.

Regarding transportation electrification, the Project would provide EV charging infrastructure that meets the California Green Building Standards Code. To support the goals of VMT reduction, the Project is a transit-oriented residential and mixed-use development located on an infill site that is surrounded by urban uses and is presently served by existing utilities and essential public services, including transit, streets, water, and sewer. The Project site is currently developed, and thus, development of the Project would not result in the loss or conversion of the State's natural and working lands. The Project would not result in a loss of affordable units and would provide new affordable units and residential uses to a site. Additionally, the Project would provide 96 dwelling units per acre, which exceeds the suggested minimum of 20 residential dwelling units per acre as detailed in the 2022 Scoping Plan.

The Project Site is well-located to facilitate pedestrian activity, bicycle use, and public transit use. The Metro Silver Line station is located approximately 1 mile to the east at South Figueroa Street. In addition, there are also numerous bus stops located near the Project Site, less than 0.5 miles away, along Pacific Coast Highway. Peak period head times range from 15 to 60 minutes (15 minutes LA Metro #15, 30 minutes LA Metro #205 and #246, 60 minutes Torrance #2). The Project is situated within walking distance of retail, medical facilities, restaurant, and other commercial businesses located along Pacific Coast Highway. Bus transit service in the Project area is provided by Metro and the Los Angeles Department of Transportation (DASH and Commuter Express transit services). The Project's proximity to the Metro Silver Line and a variety of bus stops would facilitate use of transit to access the Project Site. In addition, the Project would also be required to comply with the City's Transportation Demand Management Ordinance.

To meet the building decarbonization attributes, the Project would include all-electric appliances with no natural gas connection.

Overall, the Project would comply will all regulations adopted in furtherance of the Scoping Plan to the extent applicable and required by law. As demonstrated above, the proposed Project would not conflict with CARB's 2022

[91] CARB. California Air Resources Board 2022 Scoping Plan—Appendix D, Local Actions. November 2022. Accessed January 2023. https://ww2.arb.ca.gov/sites/default/files/2022-11/2022-sp-appendix-d-local-actions.pdf

Scoping Plan updates and with the state's ability to achieve the GHG reduction and carbon neutrality goals. Further, the Project's consistency with the applicable measures and programs from the 2022 Scoping Plan Update would assist in meeting the City's contribution to GHG emission reduction targets in California. Based on the considerations previously outlined, the Project would not conflict with CARB's 2022 Scoping Plan, AB 1279, and EO B-55-18.

Consistency with the SCAG 2024-2050 RTP/SCS

SCAG's Connect SoCal is a regional growth-management strategy that targets per capita GHG reduction from passenger vehicles and light-duty trucks in the Southern California region. The Connect SoCal incorporates local land use projections and circulation networks in city and county general plans. Typically, a Project would be consistent with the RTP/SCS if the Project does not exceed the underlying growth assumptions within the RTP/SCS.

The following policies and strategies are intended to be supportive of implementing the 2024–2050 RTP/SCS and reducing GHGs: Sustainable Development, Air Quality, Clean Transportation, Natural and Agricultural Lands Preservation, and Climate Resilience.

- Sustainable Development. The 2024–2050 RTP/SCS identifies sustainable development, including water and energy-efficient building practices and green infrastructure, as a strategy to reduce GHG emissions. As described herein, targeted sustainable design strategies of the Project include electrifying all buildings and including electric vehicle charging infrastructure. The Project would be designed and constructed to incorporate solar energy features as required by Title 24 CALGreen standards. The Project would be designed and constructed to incorporate water conservation features based on implementation of CALGreen standards. The Project's sustainable features would support 2024–2050 RTP/SCS objective of sustainable development.
- Air Quality. The 2024–2050 RTP/SCS identifies air quality as an environmental strategy because the transportation sector is the predominant source of criteria air pollutant emissions in the region. The 2024–2050 RTP/SCS states that a comprehensive and coordinated regional solution with integrated land use and transportation planning from all levels of governments will be required to achieve the needed emission reductions (SCAG 2024). The Project would be required to comply with the City's Transportation Demand Management Ordinance. The Los Angeles City Planning and Los Angeles Department of Transportation are working to update the City's Transportation Demand Management (TDM) Program to meet transportation demand in a sustainable way. The proposed update would require certain new development projects to implement strategies such as supporting transit, telecommuting, walking, carshare, neighborhood shuttles, and other strategies that reduce vehicle trips. The TDM program update has three overarching goals. First, the program seeks to reduce greenhouse gas emissions by reducing the amount of vehicle miles traveled (VMT) generated by automobiles. Second, the program presents an updated and expanded set of TDM strategies, including telecommuting and bike share, to allow developers to take advantage of the latest mobility technologies and use strategies that suit their specific Project. Lastly, the program will focus on expanding access to the transportation network through investments in bike and pedestrian infrastructure. The updated TDM program can lead to improved quality of life by making efficient use of the City's mobility network and can improve public health by enabling active transportation choices like biking and walking. The Project's mixed-use supports the 2024–2050 RTP/SCS objective of integrated land use. Overall, the Project supports the 2024–2050 RTP/SCS aim to improve air quality throughout the region though

sustainable local and regional land use planning and implementation efforts, which can reduce transportation-related criteria air pollutant emissions on a per capita basis.

- Clean Transportation. The 2024–2050 RTP/SCS identifies EV charging infrastructure, adoption of zero-emission vehicles, and clean transit as ways to reduce GHG emissions from mobile sources. As described herein, the Project would provide EV charging infrastructure that meets the California Green Building Standards Code and supports the 2024–2050 RTP/SCS objective of clean transportation.
- Natural and Agricultural Lands Preservation. The 2024–2050 RTP/SCS promotes the conservation and restoration of natural and agricultural lands through several policies, such as quantifying the carbon sequestration potential of natural and agricultural lands and prioritizing sensitive habitat and wildlife corridors for permanent protection. The Project Site is approximately 3.5 net acres in size. It is made up of two parcels, one of which is currently occupied by the A-1 Trailer Park. The other parcel was formerly used as a vehicle storage lot but is now a vacant surface parking lot. The Project Site is bordered to the north by Pacific Coast Highway, to the east by an auto repair shop and a surface parking lot that is used by Kaiser Permanente, to the south by West 259th Street, which is a cul-de-sac that dead ends at the Kaiser Permanente surface parking lot, and to the west by Frampton Avenue. To the south of West 259th Street are multi-family residential buildings. Therefore, the Project would not convert natural and working lands or interfere with this strategy.
- Climate Resilience. The 2024–2050 RTP/SCS promotes regional coordination and solutions for effective emergency response for climate-related hazards. Additionally, in the category of climate resilience, SCAG has established the following policies: prioritize the most vulnerable populations and communities subject to climate hazards, support local and regional climate and hazard planning, support nature-based solutions to increase regional resilience, promote sustainable water use planning, and support an integrated planning approach to help jurisdictions meet housing needs in a drier environment. While the Project does not directly pertain to these regional coordination efforts for climate resilience, the Project would not interfere with this strategy.

Based on the analysis above, the Project would not conflict with the SCAG 2024–2050 RTP/SCS.

Consistency with the City of Los Angeles Green New Deal - Sustainable City pLAn

In addition, the Project would comply with L.A.'s Green New Deal, which is designed to move the City to a carbon neutral future. Several targets would have indirect GHG reduction benefits for the Project, including the following:

- LADWP will supply 55 percent renewable energy by 2025, 80 percent by 2036, and 100 percent by 2045: This is a Citywide goal of increasing proportion of renewable resources in the LADWP energy mix. Since LADWP is the electrical utility for the Project, the increase in renewable energy mix for LADWP would result in reduced GHG emissions associated with the Project's electricity use.
- Source 70 percent of L.A.'s water locally and capture 150,000 acre-feet per year of stormwater by 2035: Although this is a Citywide goal of increasing the proportion of locally sourced water and stormwater capture, the Project would include stormwater infiltration and reuse and would help the City move towards this stormwater capture goal.

The following discussion provides an overview of the GHG-reduction strategies applicable to the Project, as well as the Project's consistency with the strategies.

- Renewable Energy. Increase cumulative megawatts (MW) by 2025; 2035; and 2050 of:
  - Local solar to 900-1,500 MW; 1,500-1,800 MW; and 1,950 MW Energy
  - Energy storage capacity to 1,654-1,750 MW; 3,000 MW; and 4,000 MW
  - Demand response (DR) programs to 234 MW (2025) and 600 MW (2035)

The Project would be compliant as the Project would be designed and constructed to incorporate solar energy features as required by Title 24 CALGreen standards.

- Local Water. Reduce potable water use per capita by 22.5 percent by 2025; and 25 percent by 2035; and maintain or reduce 2035 per capita water use through 2050. The Project would be compliant as the Project buildings would be designed and constructed to incorporate water conservation features based on implementation of CALGreen standards and design features equivalent to achieve LEED certification.
- Clean and Healthy Building. All new buildings will be net zero carbon by 2030; and 100 percent of buildings will be net zero carbon by 2050. The Project would be compliant as the Project would be required to be constructed in compliance with State and local green building standards in effect at the time of building construction, including the City's Green Building Code, Title 24, and other increasingly stringent programs
- Clean and Healthy Building. Reduce building energy use per square foot for all building types 22 percent by 2025; 34 percent by 2035; and 44 percent by 2050. The Project would comply with the State's and City's requirements that are designed to reduce GHG emissions over time, including the LA Green Building Code, Title 24, and other increasingly stringent energy conservation programs. The Project buildings would be designed and constructed to incorporate environmentally sustainable design features equivalent to achieve LEED certification.
- Mobility and Public Transit. Increase the percentage of all trips made by walking, biking, micro-mobility/matched rides or transit to at least 35 percent by 2025; 50 percent by 2035; and maintain at least 50 percent by 2050. The Project would be compliant as the Project Site is located near major transportation corridors and is well-located to facilitate pedestrian activity, bicycle use, and public transit use. Regarding transit specifically, the Project's close proximity a variety of bus stops would facilitate use of transit to access the Project Site.
- Mobility and Public Transit. Reduce VMT per capita by at least 13 percent by 2025; 39 percent by 2035; and 45 percent by 2050. The project would be compliant, see discussion directly above, as well as the VMT evaluation for the Project.
- Zero Emission Vehicles. Increase the percentage of electric and zero emission vehicles in the City to 25 percent by 2025; 80 percent by 2035; and 100 percent by 2050. The Project would support the use of electric vehicles through the provision of EV parking spaces and charging stations consistent with the CALGreen requirements for Electric Vehicle infrastructure.
- Waste & Resource Recovery.
  - Increase landfill diversion rate to 90 percent by 2025; 95 percent by 2035; and 100 percent by 2050
  - Eliminate organic waste going to landfill by 2028
  - Increase proportion of waste products and recyclables productively reused and/or repurposed within L.A. County to at least 25 percent by 2025; and 50 percent by 2035

During both construction and operation, the Project would comply with all State regulations related to solid waste generation, storage, and disposal, including the California Integrated Waste Management Act as amended, as such the Project would be compliant.

As demonstrated above, the Project would not conflict with any of the GHG targets set forth in L.A.'s Green New Deal. Thus, the Project is consistent with this plan.

4 Conclusion

As described herein, the Project's GHG emissions (both on- and off-site) are regulated by many GHG reduction mandates. Compliance with these GHG reduction legal requirements is appropriately assumed to occur under CEQA (Oakland Heritage Alliance v. City of Oakland (2011) 195 Cal. App. 4th 884, 906; Center for Biological Diversity v. Department of Fish & Wildlife (2015) 234 Cal. App. 4th 214, 244–45). Based on the above considerations, the Project would not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions, and the Project's GHG contribution would be less than significant.

Attachment A

Greenhouse Gas Modeling Data

PCH Mixed Use v2 Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Demolition (2024) - Unmitigated

3.2. Demolition (2024) - Mitigated

3.3. Grading (2024) - Unmitigated

3.4. Grading (2024) - Mitigated

3.5. Building Construction (2024) - Unmitigated

3.6. Building Construction (2024) - Mitigated

3.7. Building Construction (2024) - Unmitigated

3.8. Building Construction (2024) - Mitigated

3.9. Building Construction (2025) - Unmitigated

3.10. Building Construction (2025) - Mitigated

3.11. Building Construction (2025) - Unmitigated

3.12. Building Construction (2025) - Mitigated

3.13. Paving (2025) - Unmitigated

3.14. Paving (2025) - Mitigated

3.15. Architectural Coating (2025) - Unmitigated

3.16. Architectural Coating (2025) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

4.2.3. Natural Gas Emissions By Land Use - Unmitigated

4.2.4. Natural Gas Emissions By Land Use - Mitigated

4.3. Area Emissions by Source

4.3.2. Unmitigated

4.3.1. Mitigated

4.4. Water Emissions by Land Use

4.4.2. Unmitigated

4.4.1. Mitigated

4.5. Waste Emissions by Land Use

4.5.2. Unmitigated

4.5.1. Mitigated

4.6. Refrigerant Emissions by Land Use

4.6.1. Unmitigated

4.6.2. Mitigated

4.7. Offroad Emissions By Equipment Type

4.7.1. Unmitigated

4.7.2. Mitigated

4.8. Stationary Emissions By Equipment Type

4.8.1. Unmitigated

4.8.2. Mitigated

4.9. User Defined Emissions By Equipment Type

4.9.1. Unmitigated

4.9.2. Mitigated

4.10. Soil Carbon Accumulation By Vegetation Type

4.10.1. Soil Carbon Accumulation By Vegetation Type - Unmitigated

4.10.2. Above and Belowground Carbon Accumulation by Land Use Type - Unmitigated

4.10.3. Avoided and Sequestered Emissions by Species - Unmitigated

4.10.4. Soil Carbon Accumulation By Vegetation Type - Mitigated

4.10.5. Above and Belowground Carbon Accumulation by Land Use Type - Mitigated

4.10.6. Avoided and Sequestered Emissions by Species - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.9. Operational Mobile Sources

5.9.1. Unmitigated

5.9.2. Mitigated

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

5.10.2. Architectural Coatings

5.10.3. Landscape Equipment

5.10.4. Landscape Equipment - Mitigated

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

5.12. Operational Water and Wastewater Consumption

5.12.1. Unmitigated

5.12.2. Mitigated

5.13. Operational Waste Generation

5.13.1. Unmitigated

5.13.2. Mitigated

5.14. Operational Refrigeration and Air Conditioning Equipment

5.14.1. Unmitigated

5.14.2. Mitigated

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

5.15.2. Mitigated

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

5.18.1.2. Mitigated

5.18.2. Sequestration

5.18.2.1. Unmitigated

5.18.2.2. Mitigated

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

6.2. Initial Climate Risk Scores

6.3. Adjusted Climate Risk Scores

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

7.2. Healthy Places Index Scores

7.3. Overall Health & Equity Scores

7.4. Health & Equity Measures

7.5. Evaluation Scorecard

7.6. Health & Equity Custom Measures

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	PCH Mixed Use v2
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	3.50
Precipitation (days)	16.0
Location	1268 W Pacific Coast Hwy, Harbor City, CA 90710, USA
County	Los Angeles-South Coast
City	Los Angeles
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4630
EDFZ	16
Electric Utility	Los Angeles Department of Water & Power
Gas Utility	Southern California Gas

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Apartments Mid Rise	354	Dwelling Unit	1.92	300,095	7,323	—	1,048	—
High Turnover (Sit Down Restaurant)	1.50	1000sqft	0.03	1,500	0.00	—	—	—

Enclosed Parking with Elevator	575	Space	0.86	230,000	0.00	—	—	—
Other Non-Asphalt Surfaces	90.7	1000sqft	0.43	0.00	0.00	—	—	—
Other Non-Asphalt Surfaces	20.5	1000sqft	0.47	0.00	0.00	—	—	—
Health Club	13.6	1000sqft	0.31	13,605	0.00	—	—	—
Recreational Swimming Pool	0.94	1000sqft	0.02	945	0.00	—	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-10-A	Water Exposed Surfaces
Construction	C-10-B	Water Active Demolition Sites
Construction	C-10-C	Water Unpaved Construction Roads
Transportation	T-1	Increase Residential Density

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A

Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract

Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9
Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—
Asthma	69.5
Cardio-vascular	50.1
Low Birth Weights	58.6
Socioeconomic Factor Indicators	—
Education	81.6
Housing	74.0
Linguistic	85.1
Poverty	90.7
Unemployment	87.7

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	14.731169
Employed	75.70896959
Median HI	25.38175286
Education	—
Bachelor's or higher	24.38085461
High school enrollment	11.18952906
Preschool enrollment	28.17913512
Transportation	—
Auto Access	31.75927114
Active commuting	81.77851918
Social	—
2-parent households	45.28422944
Voting	11.24085718
Neighborhood	—
Alcohol availability	4.516874118

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	93.0
Healthy Places Index Score for Project Location (b)	20.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Based on client provided information.
Construction: Construction Phases	Based on applicant provided schedule
Construction: Architectural Coatings	Default values
Operations: Vehicle Data	Based on TIA
Operations: Hearths	No Wood Stoves and no wood fireplaces
Construction: Trips and VMT	Based on applicant provided information.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	5.07	annual days of extreme heat
Extreme Precipitation	4.20	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	0.00	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	0	0	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	1	1	1	2
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2

Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	20.8
AQ-PM	72.8
AQ-DPM	80.2
Drinking Water	42.4
Lead Risk Housing	72.2
Pesticides	0.00
Toxic Releases	97.1
Traffic	70.0
Effect Indicators	—
CleanUp Sites	51.6
Groundwater	61.9

Haz Waste Facilities/Generators	87.5
Impaired Water Bodies	83.0
Solid Waste	70.4
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	93.0
Healthy Places Index Score for Project Location (b)	20.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	Yes
Project Located in a Low-Income Community (Assembly Bill 1550)	Yes
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification

Tree Report

ARBORGATE CONSULTING, INC.
ARBORICULTURE & HORTICULTURE

December 8, 2024

Mr. Alex Wong
Red Oak Investments
4199 Campus Drive, Suite 200
Irvine, California 92612

Subject: City of Los Angeles Tree Evaluation Report
1280 Pacific Coast Highway
Los Angeles, California 90710

Dear Mr. Wong:

Arborgate Consulting, Inc. is pleased to provide the following information regarding the results of the City of Los Angeles Tree Evaluation Report of the abovementioned address. As you know, the assessments were completed in 2022 in conformance with the scope and guidance as detailed in the ANSI A300, part 5 Best Management Practices for Managing Trees During Development and Construction: and standard tree evaluation practice.

These tree assessments included a site inspection as well as examining each tree within the size range defined by the City of Los Angeles. The tree assessment was made, conclusions stated, and recommendations outlined. Based on my review, the conclusions, findings, and recommendations of the report remains valid, and I am not aware of any new information that would alter those findings , other than normal growth or decline of the trees.

I appreciate the opportunity to provide arboricultural consulting services to you. If you have any questions concerning my report, or if I can assist you in any other related matter, please contact me at (714) 292-7184.

Respectfully submitted,

Gregory W. Applegate_____ Date 1-7-25
Registered Consulting Arborist #365
Tree Risk Assessment Qualified
Certified Arborist WE-0180a

Introduction

Project Background

Harbor City is a highly diverse neighborhood in the Harbor region of Los Angeles, California, with a population upward of 36,000 people. Originally part of the Rancho San Pedro Spanish land grant, the 2.58-square-mile Harbor City was brought into Los Angeles as a preliminary step in the larger city's consolidation with the port cities of Wilmington and San Pedro. Harbor City is flanked by Harbor Gateway to the north, West Carson and Wilmington to the east, Wilmington and San Pedro to the south and Torrance and Lomita to the west. The neighborhood's boundaries are West Sepulveda Boulevard on the north, Western Avenue and the Harbor Freeway on the east, West Anaheim Street and Palos Verdes Drive on the south and the boundary with the Cities of Lomita and Torrance on the west.

This project is necessitated by planned construction of a five-story apartment building on the property at 1280 Pacific Coast Highway, in the Harbor City district of Los Angeles. Twenty-four trees were included, both street trees and site trees. The first 13 trees appear to be street trees along Frampton Avenue, and the others are scattered around the site. The street trees are Brazil pepper, Chinese elms, and carobs. The has City’s control of street trees and where possible and practical requires their preservation and protection. However, there are no protected species on this property (i.e. native oaks, sycamore, bay, native walnut, toyon and Mexican elderberry). The 11 site trees include tree of heaven, jacaranda, Chinese weeping figs, Shamel ash, queen palm, Mexican fan palm, avocado, and Japanese privet.

Assignment

Arborgate Consulting was retained to review and provide an arboricultural evaluation of 13 street trees' and 11 site trees' health and condition, provide professional opinions, and report as appropriate. All trees in and around the site are numbered, mapped, measured and evaluated for inclusion in this report for the City of Los Angeles Urban Forestry Division's review.

Summary

The 13 street trees are in very poor to good health, but mostly very poor condition. Other than the Chinese elms, most are in fair to good health, and most could probably survive at least another five to ten years if the whole site was not to be demolished and landscaped.

Most of the street trees are carobs and elms. There are also two Brazil peppers. There is no sidewalk, but the space between the curb and the adjoining trailers is narrow and sloped. The carobs are the largest and as a result have caused the most damage to the adjoining curb. Their shallow and exposed roots are probably being damaged by car doors opening. As this progressed over time, some root decay and lower trunk decay has started, and likelihood of ultimate failure will probably increase. Their stability cannot be guaranteed, especially due to the topping, heading and lion-tailing of the upper structure for line clearance. As a result of line clearance above and vehicle clearance below, the canopies are being pancaked in between. The City street trees should have been replaced years ago, but would need to be replaced in the next few years, even if the project is not built. However, the Urban Forestry Department will make the ultimate determination.

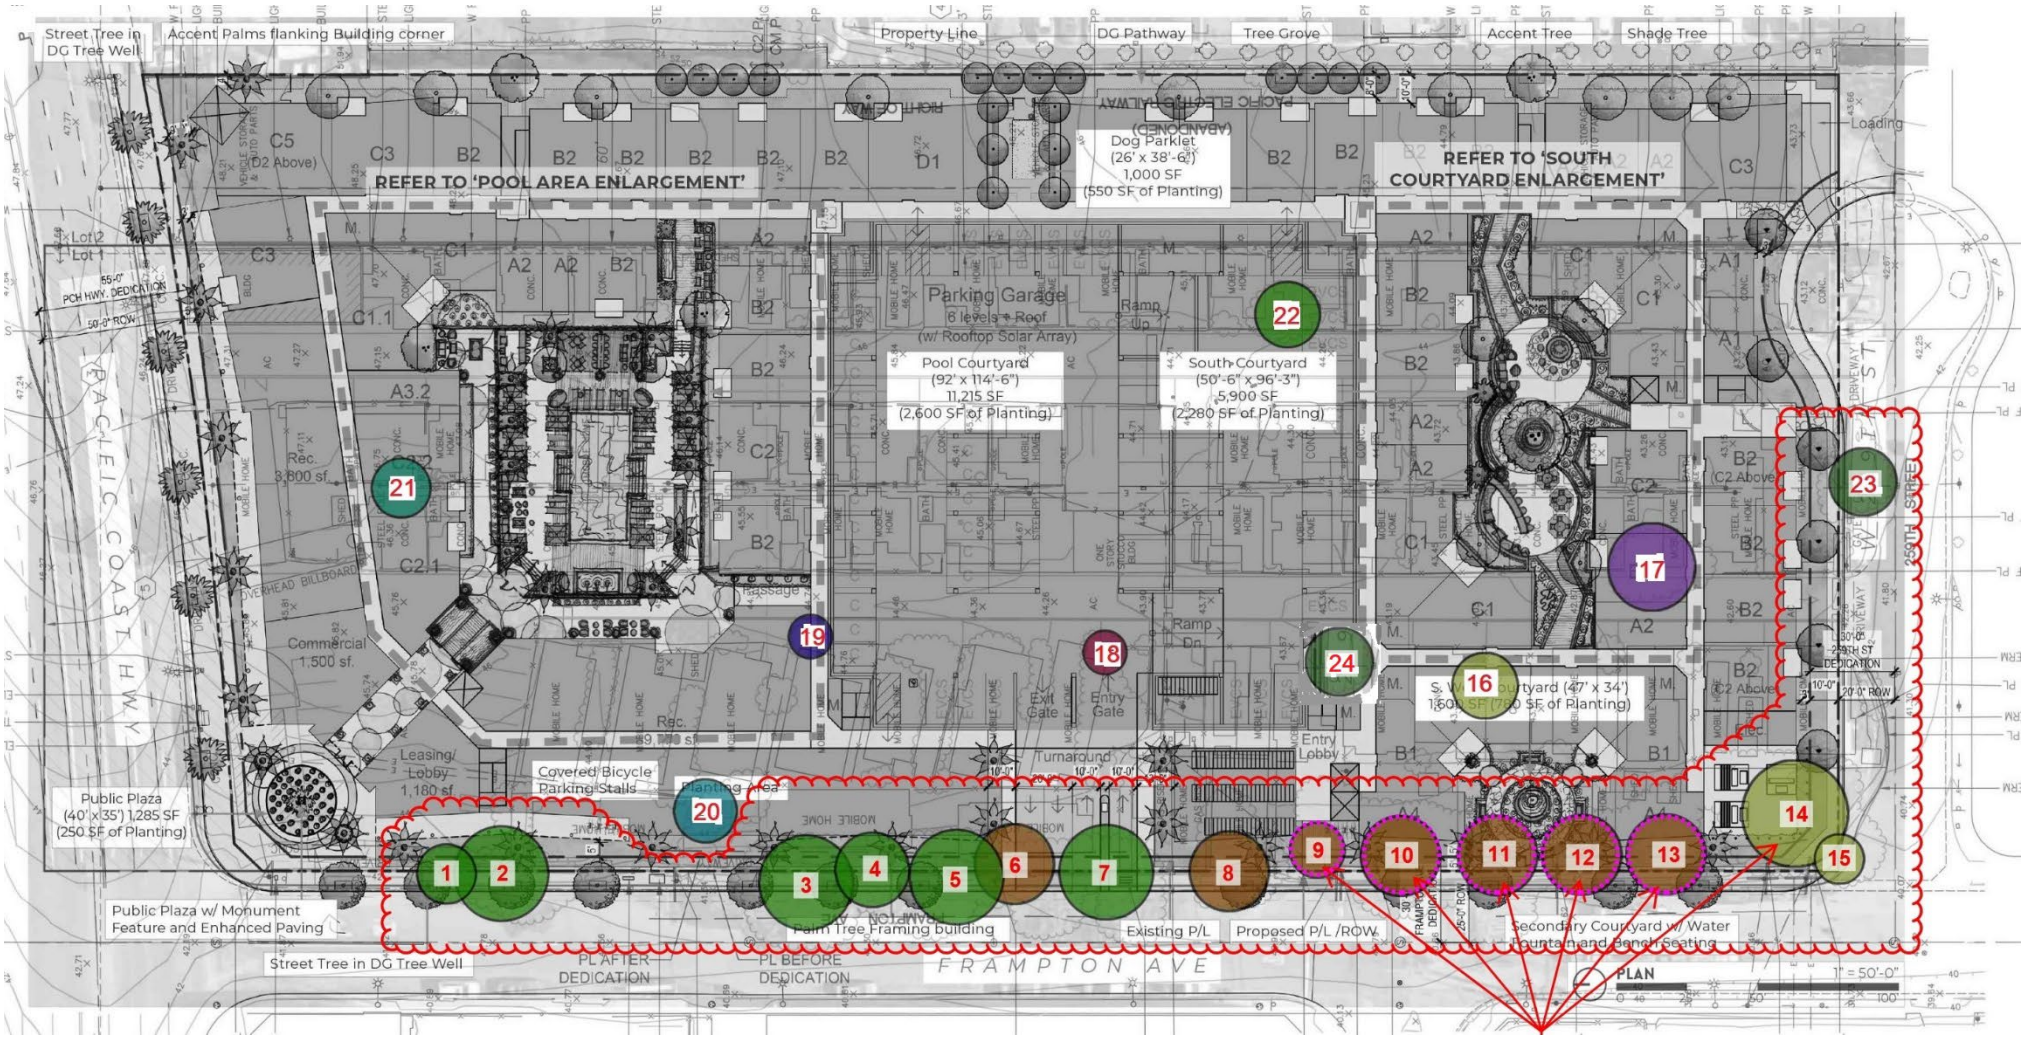
On the main site, between the trailers, there are no protected trees or shrubs, and no known historically significant or endangered tree species are involved in this project. The site trees are fairly randomly chosen by present or past residents. Maintenance of the trees has been mostly to control their size to the small spaces between trailers and lots.

Unless there were conditions of approval unknown to this consultant, removal of site trees is not expected to require replacement. Still, the project is required to plant 89 trees, one for every four dwelling units. Replacement for the removal of street trees may be required. Normally, removal of street trees requires two to one replacement. The removal recommendations of this consultant are written subject to Urban Forestry's agreement.

Purpose

The report is to satisfy the requirements of the Urban Forestry Division, specifically for the street trees, but also as evidence that there are no protected species on site. There is no way to preserve any trees on site, or even the street trees, and still construct the building according to plans. There are no trees of sufficient value or use to the project that warrant transplanting. As a result, this report provides no benefit regarding tree preservation.

Tree Map



⇦ **NORTH**

Tree numbers are in red. Locations are estimated.

Findings

General Conditions Affecting Tree Health and Condition

The street trees are two Brazil peppers, *Schinus terebinthifolius*; four carobs, *Ceratonia siliqua*; and seven Chinese elms, *Ulmus parvifolia.* Their main problems are lack of space, or too big for the space allotted. Their pruning has been somewhat crude, but the situations of inadequate space for roots, canopies, and for power lines, passing vehicles and mobile home trailers below demanded severe pruning. The raised canopies and flat tops have made them less than attractive, and resulted in structure that is more likely to fail. Two of the carobs also had decay in the lower trunk or root flare.

The most common trees on the site are Shamel ash, *Fraxinus uhdei;* and Chinese weeping banyan, *Ficus benjamina* (2 of each). There are also individual jacaranda, tree-of-heaven, Japanese privet, avocado, octopus tree, queen palm and Mexican fan palm. The other species on site are all smaller than need reporting, mostly guava and other small fruit trees. There is also a small group of star pines*, Araucaria heterophylla*, at the north end, but all are still less than 8-inch caliper.

Though both of the palms are in good health and condition and could be transplanted, they lack sufficient value to be worth the expense, and also they could be replaced easily for less cost.

The street trees have outlived their usefulness and are gradually becoming hazardous. Considering the mobile homes below, which provide less protection than a permanent structure, their risk will be assessed and addressed later in this report. Their shallow roots caused by compaction and competition have been injured by opening car doors and people walking over the exposed roots. If there were sidewalks, these trees would have been removed long ago. The Bureau of Engineering will be requiring street widening and sidewalks, which will make removal of the existing street trees inevitable. Considering that a few of the carobs have trunks over 3-feet in diameter, the community has received all the benefits from most of these street trees that can safely been provided. They have given their service easily twice the 17-year average life expectancy quoted for Los Angeles street trees by American Forest magazine.

Abbreviations in Matrix

1s = one-sided
Cod = codominant
CrS = crowded scaffold limbs
cv = cultivar
DBH = diameter at breast height
Db = dieback
DkB = decayed base
DkR = decayed roots
DkT = decayed trunk
DLS = dogleg scaffold limb
DLT = dogleg trunk
epi = epicormic shoots
FC = flush cuts
Hd = headed
Inc = included bark
Lt = lion-tailed
OP = over-pruned
S = scaffold limbs
Sh = shallow roots
Sp = sparse
T = trunk
TD = tear down
TO = tear out
Topd = topped
Xing = crossing branches

Arboricultural terms are defined in the glossary.
*Trunk diameter was measured using calipers up to 8.1 inches, or a Biltmore stick for larger sizes. Height and width were estimated.

Discussion

Street Tree Replacement Decisions

This is a good time to decide how to provide for better growth and longer life of new street trees in the future. With Frampton being on the west side of a four-story apartment building, and having many overhead power and communication lines, there are few good street trees that will not grow so tall that they will conflict with the wires. The plans show a very narrow space. The Bureau of Engineering will require that Frampton dedicate an additional 5-feet, which will result in widening the sidewalk 7 to 12 feet. Also, the Bureau of Engineering will require 259th Street to be widened and have a 7-foot wide sidewalk, which will eliminate tree #23. It is assumed that any new street trees will be planted in sidewalk cutouts, which can limit root space considerably. Considering the proximity of the building, a small, vertical, narrow-growing tree would be best. Many or most of the vertical trees, like Canary Island pine, Afrocarpus, and Liquidambar, get too big. *Chionanthus retusus, Laurus nobilis, Metrosideros excelsa, Podocarpus macrophylla, Tristaniopsis laurina, Pyrus calleryana 'Chanticleer', and Wodyetia bifurcata* should be considered, even though they may not be easy to acquire in larger sizes.

If they are not well chosen, the new trees will have a short life span and end up in a dump. Root barriers, *properly installed* can reduce sidewalk damage, and the need for root cutting, but they also reduce the amount of root space and shorten their useful life span.

Structural soils are too expensive for most applications. The most reasonably priced options are a combination of using well-chosen species, root channels and/or root barriers, and appropriate training and maintenance. One of the benefits of using smaller species of palms, like *Wodyetia bifurcata* or *Ptychosperma elegans*, is that they are less likely to be seriously damaged by pruning because they are self-cleaning and don't need pruning.

Ultimately the City of Los Angeles Urban Forestry Division will decide what the replacement ratio will be. The City will also specify the species of replacement trees for each street. Removal and replacement decisions are dictated by the City Urban Forestry Division. Permits must be obtained for removal of *any* City street trees.

Site Tree Replacement Decisions

The condition of the trees and the planned construction requires all the trees to be removed on site. There are no protected, rare or endangered trees on site.

Recommendations

General Recommendations

1. Remove and replace the street trees on Frampton, after obtaining permits from the City of Los Angeles Urban Forestry Division.
2. Replace the street trees removed in accord with Urban Forestry Division's requirements and replace in accord with the species designated for this specific street.
3. For the new street trees consider root barriers. Non-ribbed moisture barrier is less likely to direct roots down and under the barrier. And because it comes in rolls, there is less chance of connections failing. Also consider alternates for increasing root space as published in *Up By Roots*, by James Urban, and *Reducing Infrastructure Damage by Tree Roots*, By Costello & Jones, pg 43& 44.
4. Test and amend the soil for street trees based on an agronomic soil analysis and percolation test.
5. Remove all site trees. None are worth transplanting.
6. Observe proper safety precautions, as published in ANSI Z133, especially when working near overhead wires.

Regulatory Replacement

The Urban Forestry Division will determine replacement requirements for the street trees to be removed. However, the trees on site are mostly in poor condition and have nearly filled all the allotted root space, and most should be removed.

Risk Assessment

Risk Assessment Process

The following risk assessment is based on American National Standards Institute A300, part nine, and the Best Management Practices booklet for Risk Assessment. The attached matrices are based on the above format and standards. There are three levels of risk assessment. Level one is little more than a drive-by look for clear hazard indications. Level two involves a 360 degree examination from the ground, and covers the topics of what part is most likely to fail, what could be hit if it failed, how likely to fail is it, then how likely is the target to be hit if it failed, and then the consequences of it being struck. The following matrix leads to a conclusion of the level of risk. If there are areas of the trees structure that need further examination below ground, internally or from up in the tree, a level 3 examination would follow. Several of these trees would need sonic tomography or Resistograph testing to determine how decayed they are, and if they could be preserved in place. In this case, all the trees need to be removed for construction, so no other investigation is needed.

The main trees for concern are the street trees along Frampton, due to their large size, poor structural integrity, and an almost constant high target concern. The carobs are especially large and especially weak structurally, some known to be decayed. The pruning up for street clearance and cutting down, or topping, for line clearance have induced many structural weaknesses and caused them to grow out wider over the street and the mobile homes. Cars are parked under most of the street trees most of the day, and the mobile homes are constantly under the trees. Also consider that to some degree passing cars are also targets. The only way to keep the street trees and reduce risk to any degree would to cut them back and paint the curb red.

Even so, there will also be a continuing risk, if the street trees remain, for those who are called to prune the trees near energized conductors. As the trees get wider, pruning the tops becomes more dangerous.

Risk Assessment Analysis

The following shows and example of the analysis of tree #1. The tree is relatively small. The wind-sail is small. With cars passing and parking in the possible fall zone, there is a medium risk of impacting a target parked or passing car. Using the next matrix and using the outcome of the first matrix in the next matrix's first column cross referenced with the consequences column "minor", the risk level is found to be "low".

Likelihood of failure	**Likelihood of Impacting Target**			
	Very low	Low	Medium	High
Imminent	Unlikely	Somewhat	Likely	Very likely
Probable	Unlikely	Unlikely	Somewhat	Likely
Possible	Unlikely	Unlikely	Unlikely	Somewhat
Improbable	Unlikely	Unlikely	Unlikely	Unlikely

Likelihood of failure and impact	**Consequences**			
	Negligible	Minor	Significant	Severe
Very likely	Low	Moderate	High	Extreme
Likely	Low	Moderate	High	High
Somewhat	Low	Low	Moderate	Moderate
Unlikely	Low	Low	Low	Low

Adapted from Best Management Practices, Risk Assessment, published by ISA.

Risk Assessment Matrix

The following matrix uses the above process to determine the risk of each tree.

Tree #	DBH	Structure	Target	Part most likely to fail	Likelihood of failure & impact	Consequences	Risk	Mitigation
1	8	D	Parked cars & trailers	Limbs	Unlikely	Negligble	Low	Remove tree
2	29+18	D	Parked cars & trailers	Trunks	very likely	Severe	High	Remove tree
3	48	D	Parked cars & trailers	Limbs	very likely	Severe	High	Remove tree
4	20	D	Parked cars & trailers	Limbs	very likely	Significant	High	Remove tree
5	38	D	Parked cars & trailers	Limbs	very likely	Severe	Extreme	Remove tree
6	20	D	Parked cars & trailers	Limbs	Likely	Significant	High	Remove tree
7	23+24+25	D	Parked cars & trailers	Trunks	very likely	Severe	Extreme	Remove tree
8	28	D	Parked cars & trailers	Limbs	very likely	Significant	High	Remove tree
9	9" @ 2'	C	Parked cars & trailers	Limbs	Likely	Negligble	Low	Remove tree
10	19" @ 2'	D	passing cars & trailer	Limbs	Somewhat	Significant	Moderate	Remove tree
11	24	D	passing cars & trailer	Limbs	Somewhat	Moderate	Low	Remove tree
12	23	D	Passing cars	Limbs	Unlikely	Significant	Low	Remove tree
13	20	D	Parked cars & trailers	Limbs	Likely	Significant	High	Remove tree
14	37	D	None currently	Limbs	very likely	Minor	Moderate	Remove tree
15	22	D	Passing cars	Limbs	very likely	Significant	High	Remove tree
16	14	D	Mobile home	Limbs	Somewhat	Minor	Low	Remove tree
17	9+10+4	C-	Motor home	trunk	Likely	Minor	Moderate	Remove tree
18	13 @ 2'	C-	Mobile home	Limbs	Somewhat	Negligble	Low	Remove tree
19	11	C-	Parked cars & trailers	Limbs	Somewhat	Negligble	Low	Remove tree
20	20'th	A	Mobile home	trunk	Unlikely	Significant	Low	Remove tree
21	60'th	A	None currently	trunk	Unlikely	Significant	Low	Remove tree
22	13	C-	Parked cars & trailers	Limbs	Somewhat	Significant	Moderate	Remove tree
23	8+8+10	C-	Mobile home	Limbs	Unlikely	Negligble	Low	Remove tree
24	9	C-	Mobile home	Limbs	Unlikely	Negligble	Low	Remove tree

Disclaimer

Good, current information on tree preservation has been applied. However, even when every tree is inspected, inspection involves sampling, therefore some additional areas of decay or weakness may be missed. The paving and mobile homes were in place during my inspection and I could not interpret the root conditions of many trees. Exact root conditions are incapable of being determined.

Although a level 2 tree risk assessment was requested and performed, weather, winds and the magnitude and direction of storms are not predictable and some failures may still occur despite the best application of high professional standards. Construction and future tree maintenance will also affect the trees health and stability and are not under the supervision or scrutiny of this consultant. Continuing construction activity such as grading and trenching will also affect the health and safety, but are unknown and unsupervised by this consultant. This consultant does not assume liability for any tree failures involved with this property.

Registered Consulting Arborist #365

PROFESSIONAL REGISTRATIONS:

American Society of Consulting Arborists RCA #365
International Society of Arboriculture, Certified Arborist Number WE-0180a
International Society of Arboriculture, Tree Risk Assessment Qualified
American Society of Consulting Arborists, Tree and Plant Appraisal Qualified

EXPERIENCE:

Mr. Applegate is an independent consulting arborist. He has been in the horticulture field since 1963, providing professional arboricultural consulting since 1984 within both private and public sectors. His expertise includes appraisal, tree preservation, diagnosis of tree growth problems, construction impact mitigation, environmental assessment, expert witness testimony, hazard evaluation, pruning programs, species selection and tree health monitoring.

Mr. Applegate has consulted for insurance companies, schools, colleges, universities, developers, theme parks, homeowners' associations, landscape architects, contractors, property managers, attorneys and governmental bodies.

Notable projects on which he has consulted are: Disneyland, Disneyland Hotel, DisneySeas-Tokyo, Disney's Wild Animal Kingdom, the New Tomorrowland, Disney's California Adventure, Disney Hong Kong project, Knott's Berry Farm, J. Paul Getty Museums, Tustin Ranch, Newport Coast, Crystal Court, Newport Fashion Island Palms, Bixby Ranch Country Club, Playa Vista, Laguna Canyon Road and Myford Road for The Irvine Company, Beverly Hilton Hotel, Huntington Langham Hotel, MWD-California Lakes, Loyola-Marymount campus, Cal Tech, Cal State Long Beach, Pierce College, The Irvine Concourse, UCI, USC, UCLA, LA City College, LA Trade Tech, Riverside City College, Crafton Hills College, MTA projects, and the State of California review of the Landscape Architecture License exam (re: plant materials))

EDUCATION:

Bachelor of Science in Landscape Architecture, California State Polytechnic University, Pomona 1973
Arboricultural Consulting Academy (by ASCA) Arbor-Day Farm, Kansas City 1995
Continuing Education Courses in Arboriculture, required to maintain Certified Arborist status and for ASCA membership

PROFESSIONAL AFFILIATIONS:

American Society of Consulting Arborists (ASCA), Registered Member
American Society of Landscape Architects (ASLA), Full Member
International Society of Arboriculture (ISA), Regular Member
California Tree Failure Report Program, UC Davis, Participant
Street Tree Seminar (STS), Associate Member

COMMUNITY AFFILIATIONS:

ASCA web site, west coast tree question responder	(2007 and continuing)
California Landscape Architect Student Scholarship Fund-Chairman	(1985)
International Society of Arboriculture-Examiner-tree worker certification	(1990)
ASCA, Industry definitions committee and A3G committee	(2009-2010)
American Institute of Landscape Architects (L.A.) Board of Directors	(1980-1982)

Guest lecturer at UCLA, UCI, Cal Poly, Saddleback College, & Palomar Junior College

B. Glossary

ANSI-A300 American National Standards Institute performance standards for the care and maintenance of trees, shrubs and other woody plants. Copies are available from International Society of Arboriculture bookstore 888-ISA-TREE

ANSI Z133 American National Standards Institute performance standards for working safely on trees.

Arboricultural Pertaining to the awareness, care, evaluation, identification, growing, maintenance, management, planting, selection, treatment, understanding, valuation and so forth of trees and other woody plants and their growing environments, particularly in shade and ornamental (non-crop/commodity) settings.

Arboriculture The selection, cultivation, and care of trees, vines, and shrubs.

Arborist A person possessing the technical competence through experience and related training to provide for or supervise the management of trees or other woody plants in a landscape setting.

ASCA The American Society of Consulting Arborists, Inc. a professional society, as described in its by-laws.

Bark Tissue on the outside of the vascular cambium. Bark is usually divided into inner bark - active phloem and aging and dead crushed phloem - and outer bark.

Caliper Diameter of a nursery-grown or small size tree trunk. Larger trees are usually measured at 4.5 feet (see DBH) Trees with calipers 4 inches and below are measured at 6 inches above grade(ANSI Z60-1-1990) Trees above 4 inches, but still transplantable are measured at 12 inches above grade.

Canopy The live, foliage-bearing part of a tree.

Chlorotic Lacking in chlorophyll, typically yellow or yellowish in color.

Compaction (Soil Compaction) The compression of soil, causing a reduction of pore space and an increase in the bulk density of the soil. Tree roots cannot grow in compacted soil.

Crown The upper portions of a tree or shrub, including the main limbs, branches, and twigs.

Cultivar A cultivated variety, e.g. Platanus x Acerfolia cv. Maybe a field selection or a horticultural variety that has originated and persisted under cultivation. Usually enclosed in single quotes after the genus and species names.

DBH Diameter of the trunk, measured at breast height or 54 inches above the average grade. See caliper.

Decay Progressive deterioration of organic tissues, usually caused by fungal or bacterial organisms, resulting in loss of cell structure, strength, and function - in wood, the loss of structural strength.

Dieback	Progressive death of buds, twigs and branch tissues, on individual limbs, or throughout the canopy.
Dripline	A projected line on the ground that corresponds to the spread of branches in the canopy; the farthest spread of branches.
Epicormic	Epi - upon; cormic - stem. Branches that are upon the stem, i.e. sprouting from either dormant buds in the cambial zone, or from buds sprung anew from ray traces. Epicormic shoots are a sign that energy reserves have been lowered.
Fertilization	The process of adding nutrients to a tree or plant; usually done by incorporating the nutrients into the soil, but sometimes by foliar application or injection directly into living tissues.
Heading	Pruning techniques where the cut is made to a bud, weak lateral branch or stub.
Limb	A large lateral branch growing from the main trunk.
Lion-tailing	Pruning technique where internal foliage and branches are removed, leaving the latter concentrated at branch ends.
Root collar	The basal area of the tree; transition zone from trunk to root. Also sometimes called trunk flare.
Root crown	Area at the base of a tree where the roots and stem merge (synonym – root collar)
Root flare	Area at the base of a trunk where the roots attach and flare out.
Root system	The portion of the tree containing the root organs, including buttress roots, transport roots, and fine absorbing roots; all underground parts of the tree.
Root zone	The area and volume of soil around the tree in which roots are normally found. May extend to three or more times the branch spread of the tree, or several times the height of the tree.
Scaffold limb	Primary structural branch of the crown.
Street tree	A tree growing adjacent to dedicated roadways and within the city's right of way.
Stress	"Stress is a potentially injurious, reversible condition, caused by energy drain, disruption, or blockage, or by life processes operating near the limits for which they were genetically programmed." Alex Shigo
Topping	Pruning technique to reduce height - heading of large branches. Prohibited by State Government Code 53067
Trees	An arborescent woody plant, with a single or few trunks near the base
Vigor	Active, healthy growth of plants: ability to respond to stress factors.

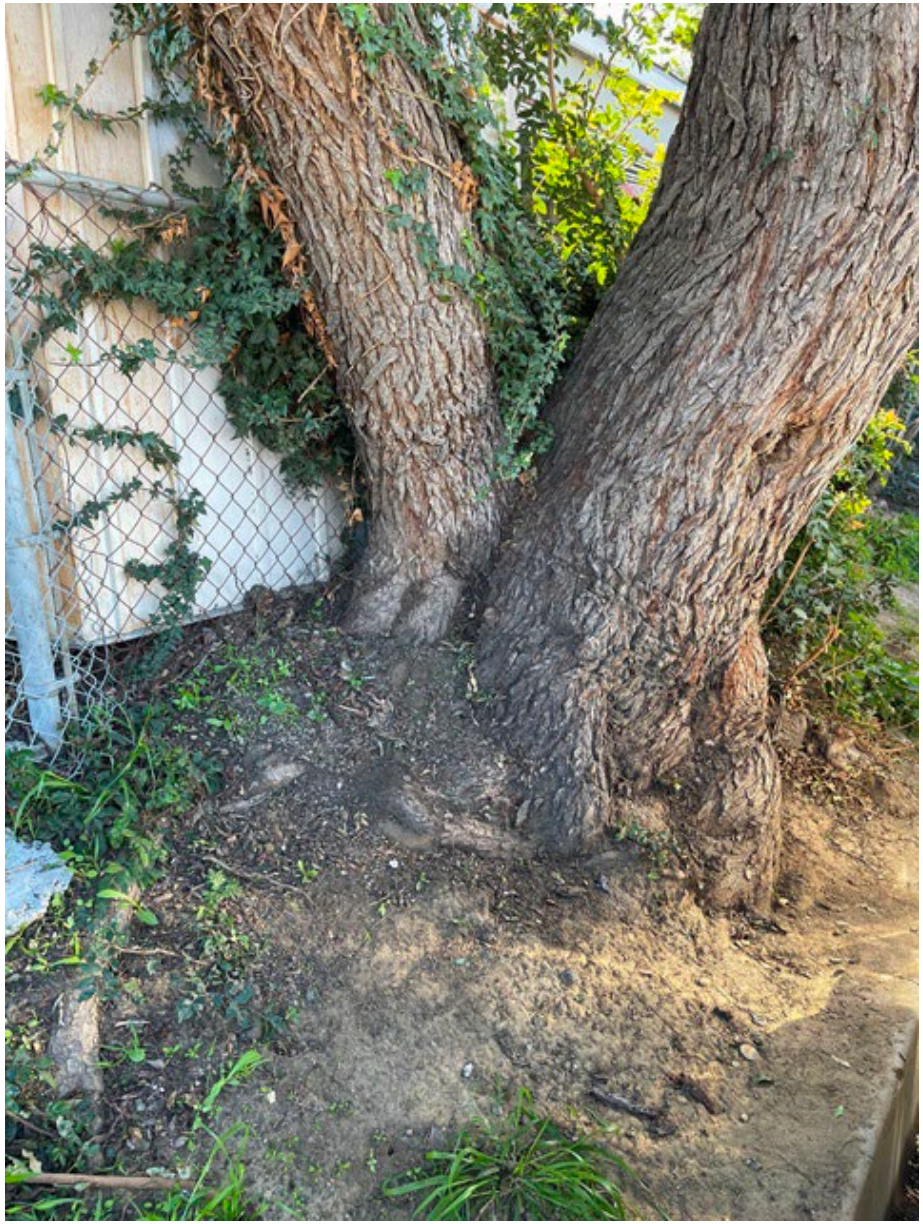
#1 Brazil pepper – note doglegs

#2 Brazil pepper – more doglegs

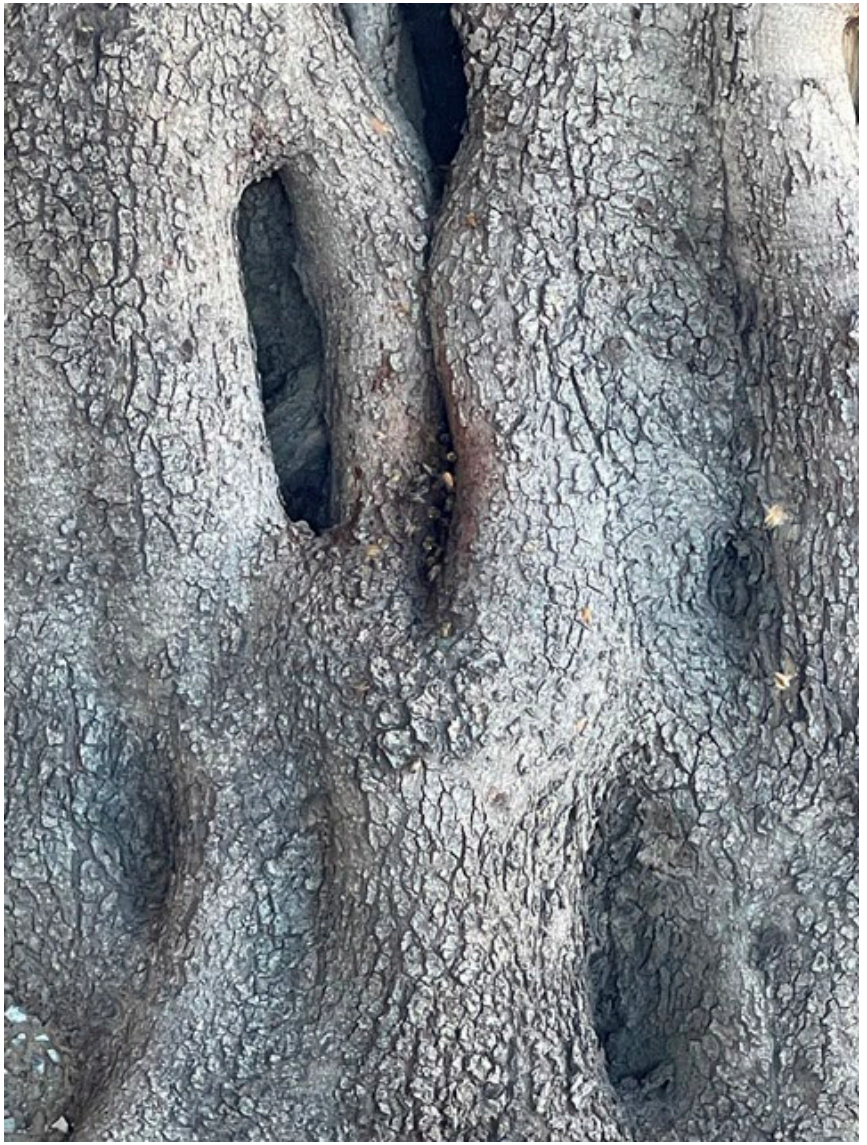


Brazil pepper #2 has 2 codominant trunks with included bark.

#3 Carob is topped and lifted. Note pancaked canopy.

#4 Carob – note root zone.

#5 Carob has a decayed trunk with bees living inside.

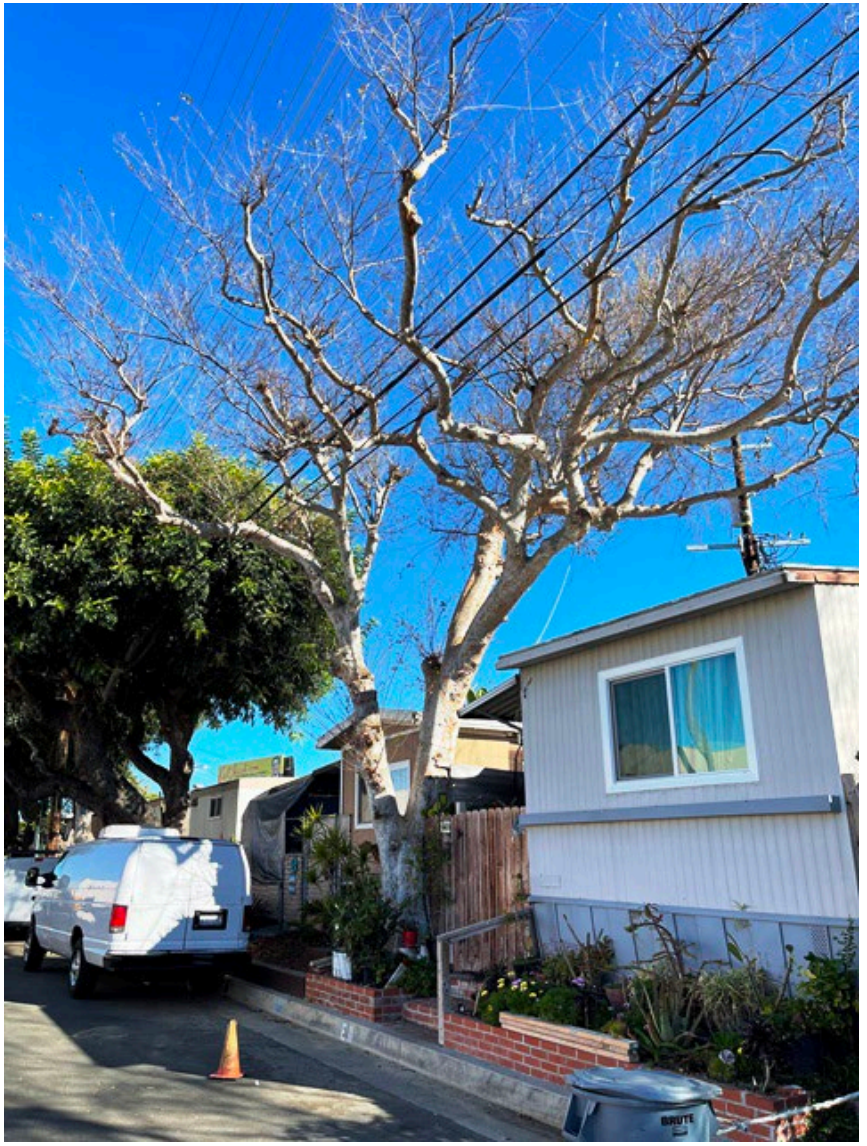


Bees entering and leaving in small center opening.

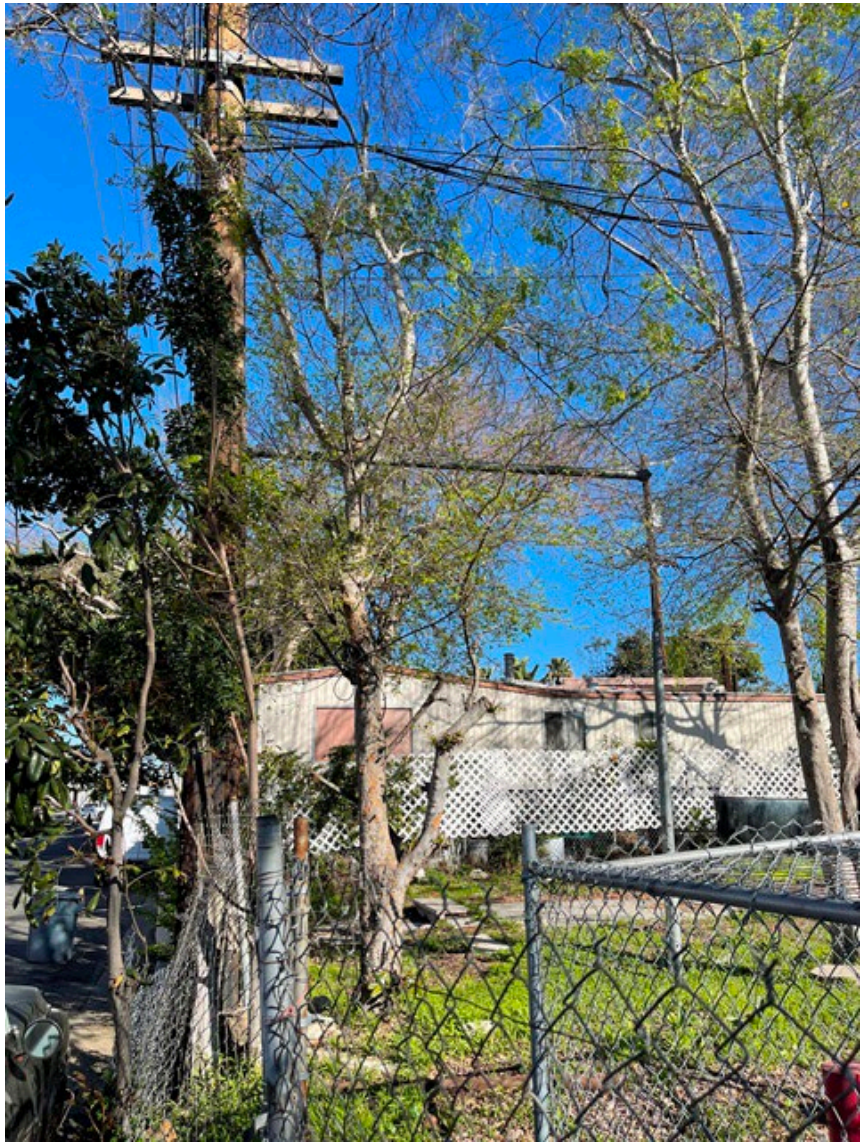
#6 Chinese elm has a basal canker.

#7 Carob has 3 codominant trunks

#8 Chinese elm has flush cuts and an old tear out (upper left fork).

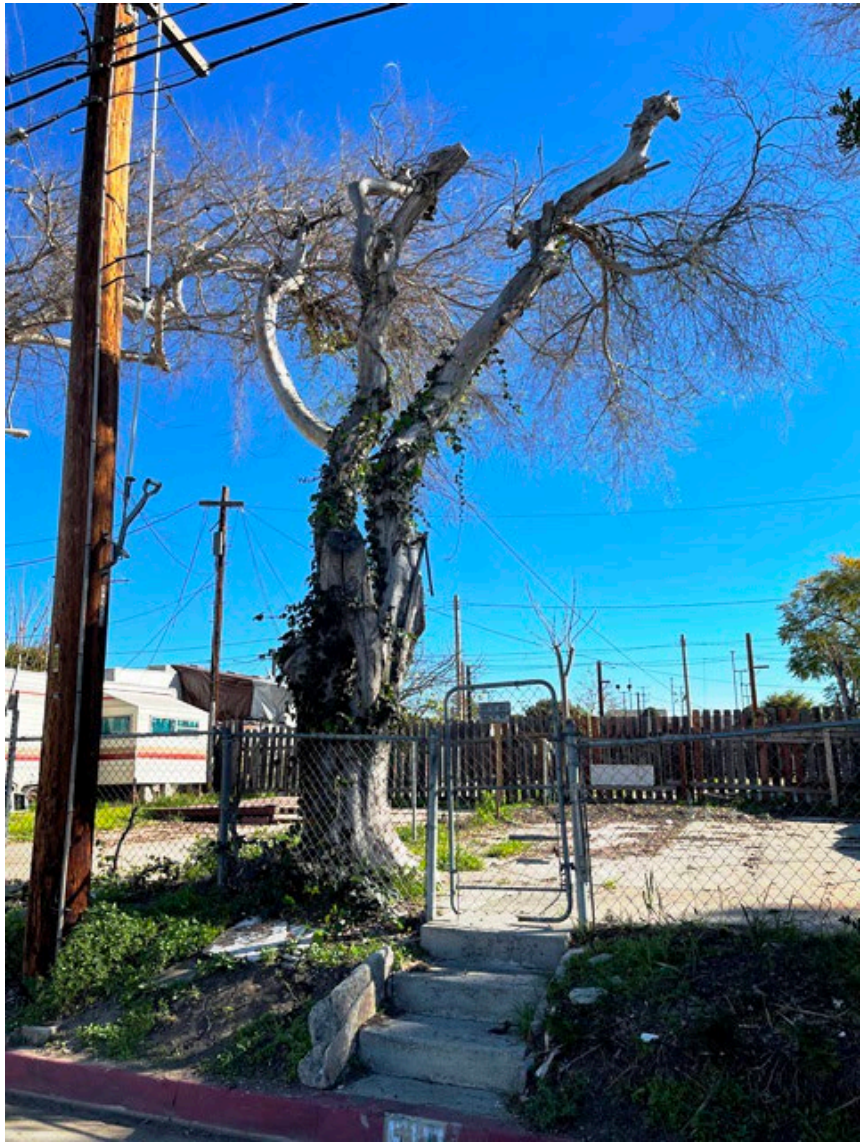


#8 #6 Chinese elm viewed from the other side.



#9 Chinese elm is more on site. Note low branching.

#10 & 11 Chinese elms galls are codominant, #10 is on the wires.

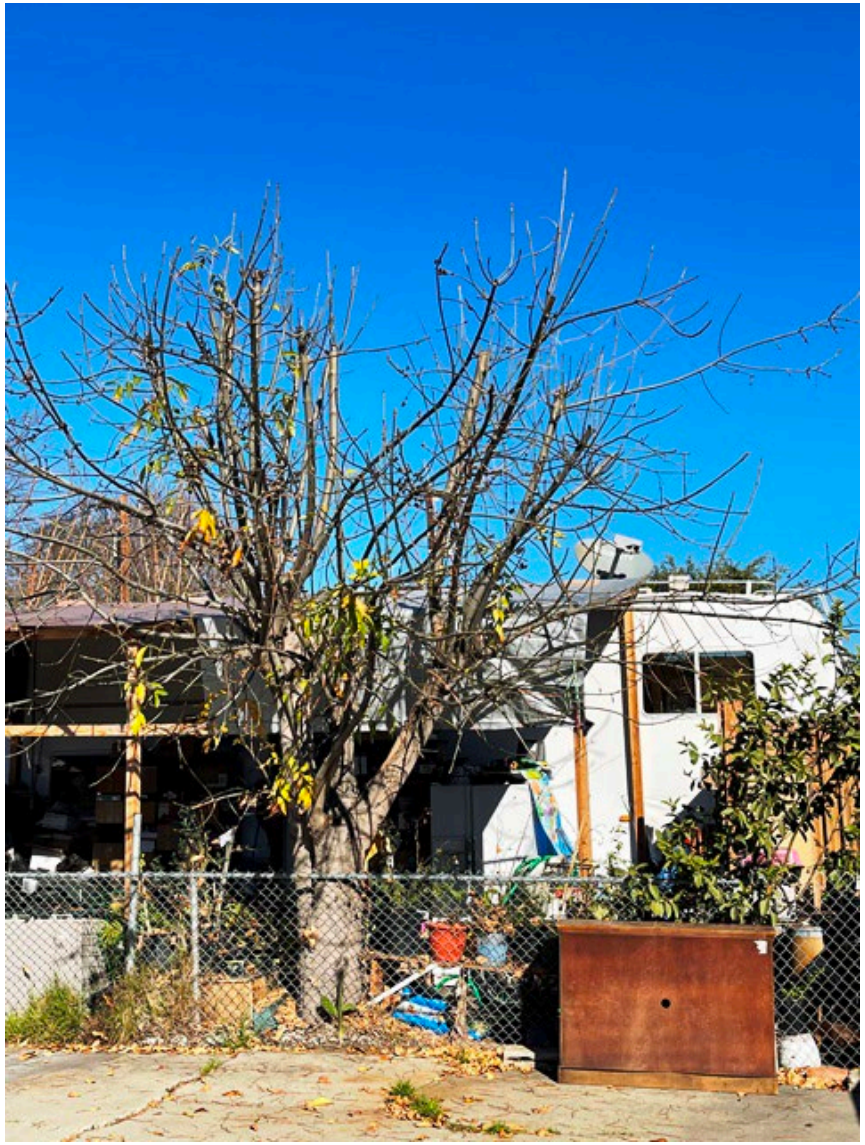


#12 Chinese elm is dying and severely topped and headed back.

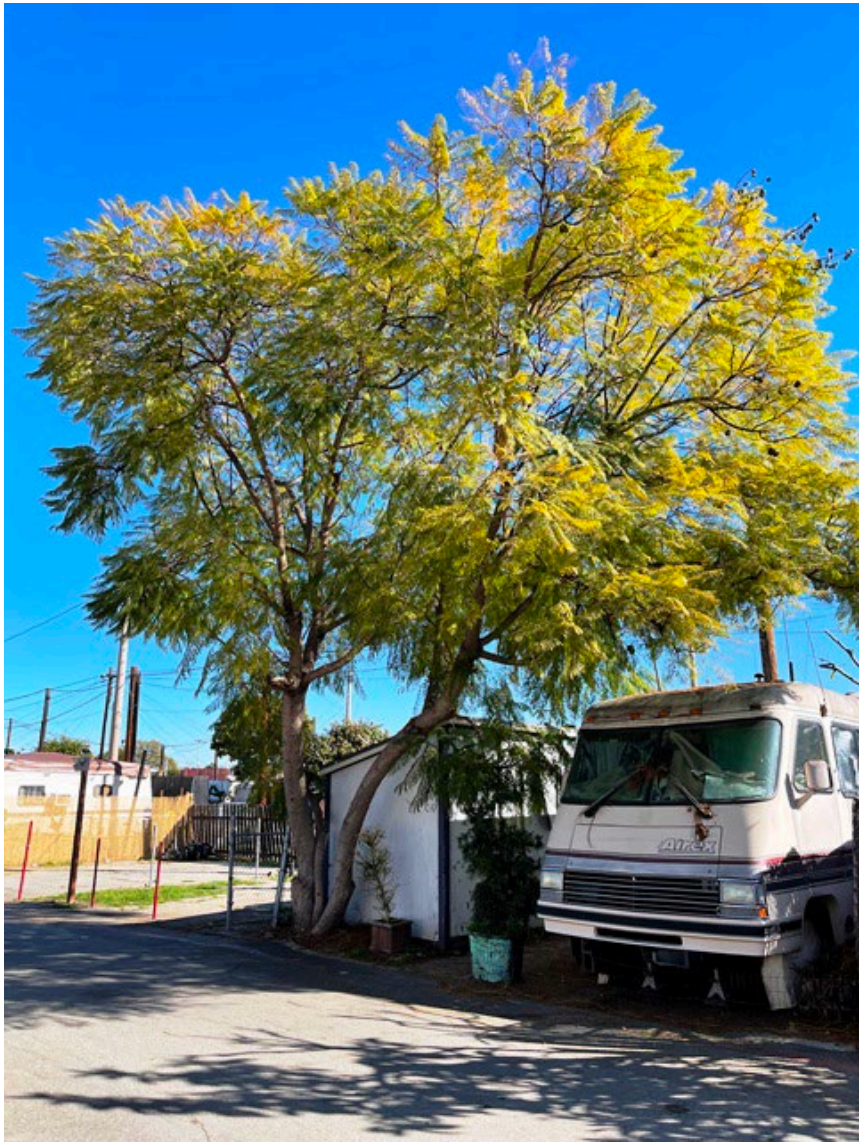
#13 Chinese elm is back of the fence.

#14 Shamel ash has many crowded limbs and appears to be topped.

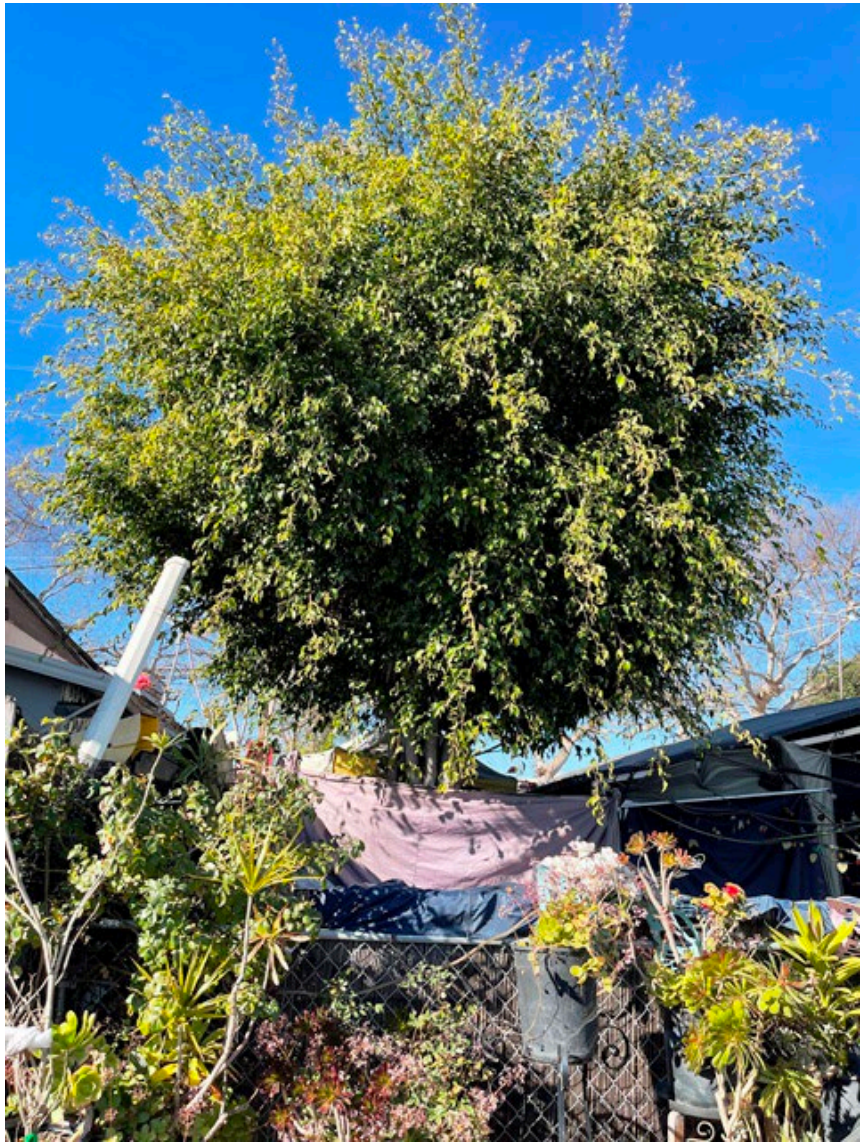
#15 Tree of “heaven” at the corner, obviously not planted as a street tree.



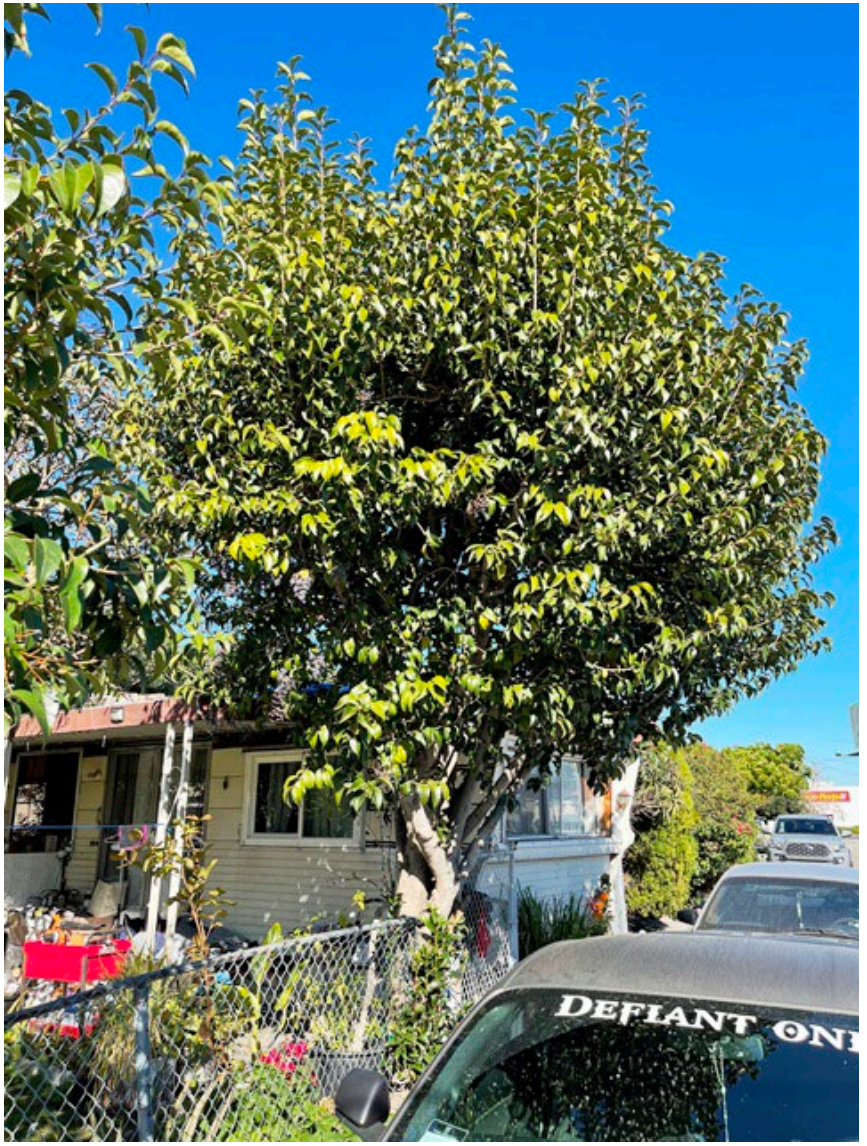
#16 Shamel ash is being headed back to control its size.



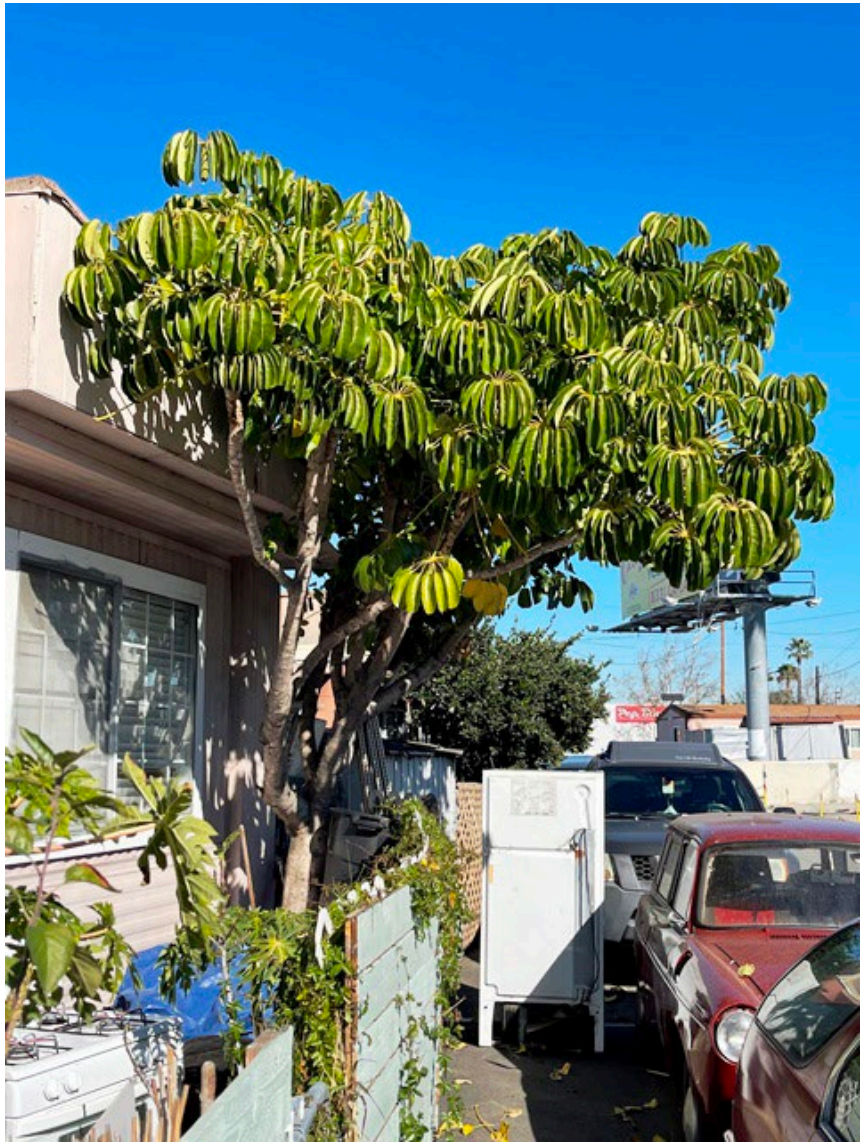
#17 Jacaranda – note 3 crowded trunks with included bark.



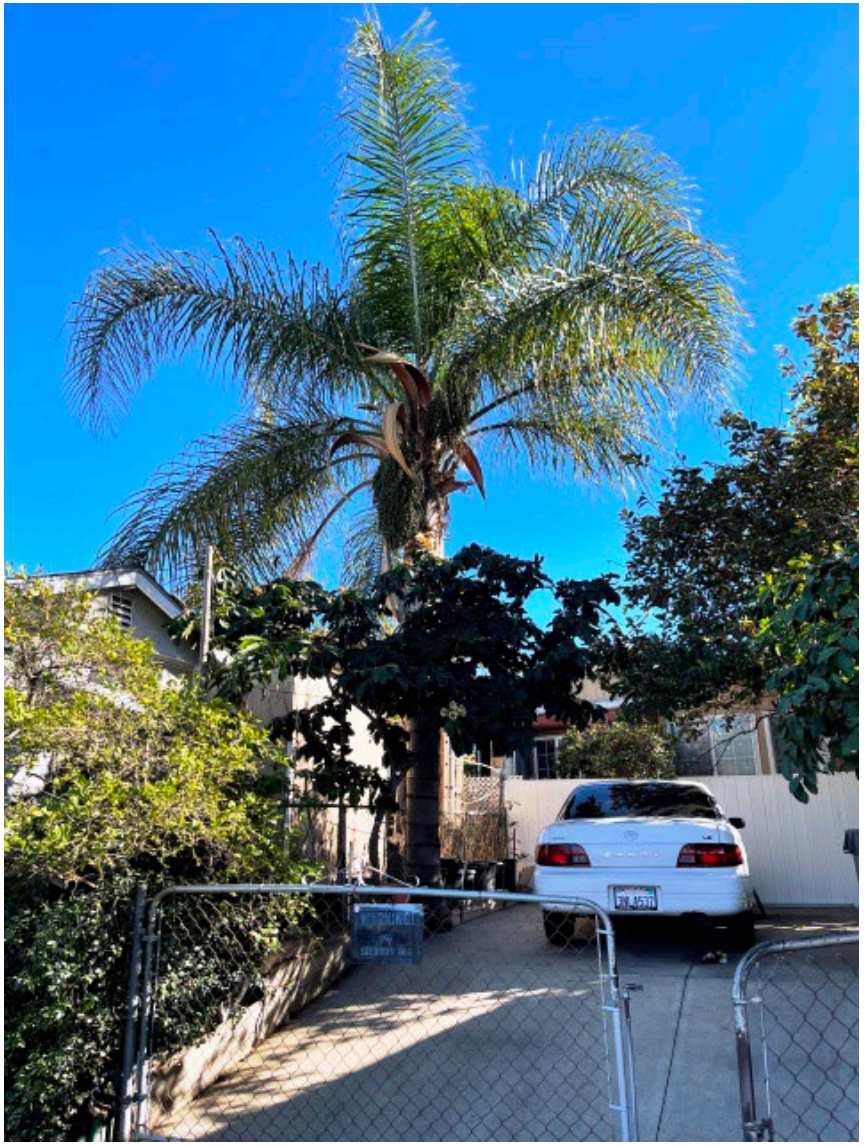
Not included trunk appears less than 8” diameter.



#18 Japanese privet is headed back resulting in many epicormic shoots.



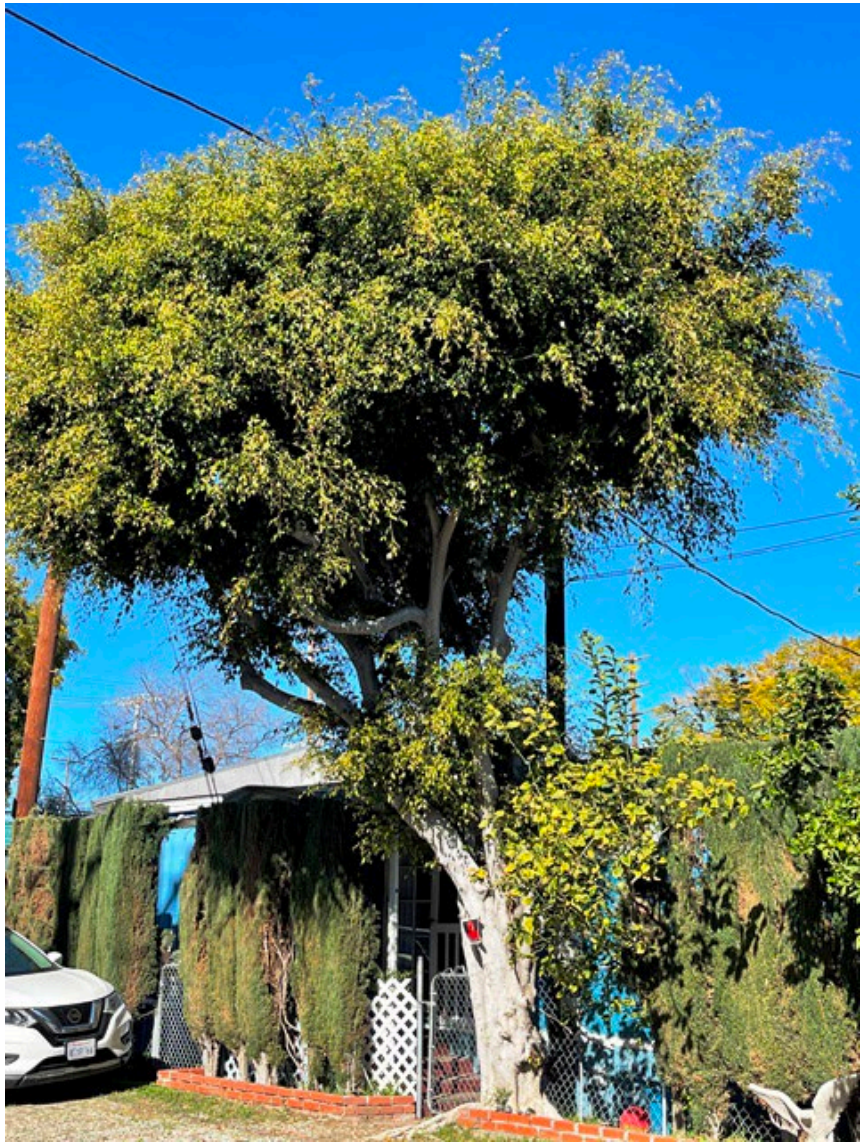
#19 Octopus tree is crowded.



#20 Queen palm is healthy and sound.

#21 Mexican fan palm is healthy and sound.

#22 Avocado is pruned up high over the shed.



#23 Chinese weeping banyan

#24 Chinese weeping banyan

These star pines are not included. None are over 8” caliper.

The east edge of the site has no trees.

The trees shown here are off-site and are at the top of a sloped back wall, and should not be harmed by the planned site work.

Certification

I, Gregory W. Applegate, certify to the best of my knowledge and belief:

That the statements of fact contained in this report, are true and correct. That the report analysis, opinions, and conclusions are limited only the reported assumptions and limiting conditions, and are my personal unbiased professional analysis, opinions and conclusions.

That I have no present or prospective interest in the vegetation that is the subject of this report, and I have no personal interest or bias with respect to the parties involved.

That my compensation is not contingent upon the reporting or a predetermined outcome that favors the cause of the client, or the attainment of stipulated result.

That my analysis, opinions, and conclusions were developed, and this report has been prepared, in conformity with the standards of ASCA and customary arboricultural practice.

That I have made a personal inspection of the plants that are the subject of this report. No one provided significant professional assistance to the person signing this report.

Attachment D

Historical Resources Assessment Report

Michele Finneyfrock

From: Debi Howell-Ardila
Sent: Tuesday, June 18, 2024 4:35 PM
To: Michele Finneyfrock
Subject: HRAR 1280 PCH, Harbor City

Hi, Michele,

I've completed a brief review of the 2021 Historical Resources Assessment Report for the 1280 Pacific Coast Highway Mixed-Use Development project in Harbor City.

As you know, this report was prepared by Sarah Corder and Andrew Bursan of Dudek in September 2021 for Alston & Bird, LLP, Los Angeles.

Based on my review, the basis and findings of this report remain valid, and I am not aware of any new information that has since come to light that would alter those findings. The report's conclusions are based on due-diligence research, site visit, and substantial evidence. Moreover, the report's methodology is reflective of standard best professional practices for HRARs.

I hope this answers your question—please let me know if you need anything else.

Executive Summary

Dudek was retained by Alston & Bird LLP to complete a Historical Resource Assessment Report for the proposed 1280 Pacific Coast Highway Mixed-Use Development Project (Project) in Harbor City, a community in the City of Los Angeles, California. As currently planned, the proposed Project consists of the redevelopment of a mobile home park known as the A-1 Trailer Park at 1280 Pacific Coast Highway and adjacent vacant surface parking lot (Project site). The A-1 Trailer Park (subject property) is a multifamily residential property over 45 years old.

This report includes an intensive level survey of the Project site by qualified architectural historians; building development and archival research; development of an appropriate historic context for the subject property; and recordation and evaluation of one multifamily residential property over 45 years old for historical significance and integrity in consideration of National Register of Historic Places, California Register of Historical Resources, and City of Los Angeles designation criteria and integrity requirements. This report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources and all applicable local guidelines and regulations. The report also conforms to City of Los Angeles requirements for a Historical Resource Assessment Report.

Dudek reviewed the Zone Information and Map Access System, the California Built Environment Resource Directory, the Los Angeles Historic-Cultural Monument List, and the findings of SurveyLA to determine whether or not the subject property was previously identified as a historical resource. This research confirmed that the subject property has not been identified as a historical resource.

The A-1 Trailer Park property does not appear eligible under any National Register of Historic Places, California Register of Historical Resources, or City of Los Angeles designation criteria due to a lack of significant historical associations and architectural merit. Therefore, the subject property is not a historical resource for the purposes of CEQA. No potential resources were identified that could be indirectly impacted by proposed Project activities. Dudek's study is limited to the boundaries of the Project site, which is visually and geographically separated from all other elements of the built environment that are of historic age.

As a result of Dudek's extensive archival research, field survey, and property significance evaluation, no historical resources were identified within the Project site. Therefore, the Project would result in a less-than-significant impact to historical built environment resources under CEQA.

INTENTIONALLY LEFT BLANK

1 Introduction

Dudek was retained by Alston & Bird LLP to complete a Historical Resources Assessment Report for the 1280 Pacific Coast Highway Mixed-Use Development Project (Project) in the Harbor City community of the City of Los Angeles (City), California. This section provides a description of the Project, including information about the location, setting, and proposed Project activities. This section also presents the regulatory setting for the Project.

1.1 Subject Project Location and Description

Project Location and Current Setting

The proposed Project consists of the redevelopment of a mobile home park known as the A-1 Trailer Park associated with the address 1280 Pacific Coast Highway and adjacent vacant surface parking lot (Project site). The Project site is located within the Wilmington-Harbor City Community Plan Area of the City. The unincorporated community of West Carson is located north of the Project site; the community of San Pedro, within the City, is located to the south; the community of Wilmington, also within the City, is located to the east; and the City of Lomita is located to the west (see Figure 1, Project Vicinity, and Figure 2, Project Location).

The Project site is located at the southeastern corner of Pacific Coast Highway and Frampton Avenue. Specifically, the Project site is bounded by W. 259th Street on the south, Pacific Coast Highway on the north, Frampton Avenue on the west, and an auto repair shop and a surface parking lot that is used by Kaiser Permanente to the east. The site consists of two parcels (Assessor's Parcel Numbers [APNs] 7411-019-016 and 7411-019-020) totaling approximately 161,450 square feet (or approximately 3.7 acres) (see Table 1). The site is generally addressed as 1268, 1270, and 1290 Pacific Coast Highway and 25900 Frampton Avenue, Los Angeles, California 90710. The Project site is currently occupied by four permanent, historic age buildings; mobile homes of an undetermined age; and a vehicle storage lot (currently vacant).

Table 1. Parcels Located in the Project Site

Address	APN	Description
1290 Pacific Coast Highway	7411-019-016	A-1 Trailer Park (subject property)
No Address	7411-019-020	Vacant Lot

Note: APN = Assessor's Parcel Number.

Project Description

The Project would involve the construction and operation of a mixed-use building consisting of 354 multifamily residential units (39 of which would be affordable units), 1,500 square feet of commercial space, and a 575-stall parking garage. The mixed-use building would have a maximum height of 80 feet. The Project site is currently occupied with mobile homes, trailers, and a former vehicle storage lot. These existing uses would be closed and demolished as part of the Project.

1.2 Project Personnel

This report and associated property significance evaluations was prepared by Dudek Architectural Historian Andrew Bursan, MCRP. Fieldwork and research were conducted by Mr. Bursan and Historic Built Environment Lead Sarah Corder, MFA. Ms. Corder also served as the project manager and principal architectural historian for this Project. This report was reviewed for quality assurance/quality control by Dudek Senior Architectural Historian Allison Lyons, MSHP. Resumes for all key personnel are provided in Appendix A, Preparer's Qualifications.

2 Field and Research Methodology

2.1 Field Methodology

Dudek Historic Built Environment Lead Sarah Corder, MFA, and Senior Architectural Historian Andrew Bursan conducted a field survey of the Project site at 1280 Pacific Coast Highway (APNs 7411-019-016 and 7411-019-020) on September 2, 2021. The survey entailed walking around the Project site; documenting each component of the built environment with notes and photographs; specifically noting potential character-defining features, spatial relationships, and observed alterations; and identifying any historic landscape features. Dudek documented the fieldwork using field notes, digital photography, property maps, and aerial photographs. Photographs of the Project site were taken with a digital camera. All field notes, photographs, and records related to the current study are on file at Dudek's Pasadena, California, office.

During the course of the survey, Dudek identified four permanent buildings at the A-1 Trailer Park property (the subject property) over 45 years old requiring recordation and evaluation for historical significance: a 20-foot by 40-foot 1946 building at the northwestern corner of the subject property (1290 Pacific Coast Highway still extant), a sales office at the northwest corner of the subject property (1270 Pacific Coast Highway), an office building dating to circa 2000, and a circa 1950s laundry room at the center of the lot. Mobile homes of an undetermined age were also observed and on the subject property. (Please see Section 6, Description and History of Project Site.)

2.2 Research Methodology

Building development and archival research was conducted for the Project site in an effort to establish a thorough and accurate historic context for the property significance evaluation and to confirm the building development history of the Project site and associated parcels. The following repositories were consulted to complete this research.

SurveyLA and HistoricPlacesLA

On September 1, 2021, Dudek reviewed the Historic Resources Survey Report for the Wilmington-San Pedro Community Plan Area completed in July 2012. The subject property was not identified either as an individual historic resource or part of a potential historic district. On September 10, 2021, Dudek reviewed the HistoricPlacesLA website and determined the property is not listed in either their resources map or search functions.

City of Los Angeles Department of Planning and Building Safety

On September 1, 2021, Dudek obtained building permits and records for new construction, demolition, alteration, and additions through the City's Online Building Records website (https://ladbsdoc.lacity.org/) filed after 1946 (the original date of the construction) for parcels comprising the Project site.

Los Angeles County Office of the Assessor

On September 3, 2021, Dudek researched the subject property records available through the online portal of the Los Angeles County Office of the Assessor (https://maps.assessor.lacounty.gov/m/) in order to establish dates of construction.

Historical Newspaper Search

Dudek reviewed historical newspapers covering the Harbor City neighborhood and overall County of Los Angeles in an effort to understand the development of the Project site. All information obtained from the historical newspaper search was incorporated into the historic context (see Section 5, Historic Context).

Historical Aerial Photographs

Historic aerial photographs of the Project site were available from Nationwide Environmental Title Research LLC maps for the years 1952, 1953, 1963, 1972, 1980, 1994, 2000, 2002, 2003, 2004, 2005, 2009, 2010, 2012, 2014, 2016 and 2018 (NETR 2020) and from the University of California, Santa Barbara, FrameFinder Maps for the years 1932, 1941, 1960, 1962, 1965, 1971, and 1976 (UCSB 2020). All information obtained from the Historic aerial photographs was incorporated into the property history.

Sanborn Fire Insurance Maps

The Project site at 1280 Pacific Coast Highway was not included in an area depicted in historic Sanborn Fire Insurance Maps.

Additional Sources Consulted

Dudek review additional sources, including but not limited to:

- National Register of Historic Places (NRHP)
- California Register of Historical Resources (CRHR)
- California Historical Landmarks et seq.
- California Points of Historical Interest et seq.
- California Built Environment Resource Directory
- Los Angeles Historic-Cultural Monument List
- City of Los Angeles's online portal Zone Information and Map Access System
- Databases and indexes available through the Los Angeles Public Library (www.lapl.org): the California index, Los Angeles and San Pedro city directories, genealogy and local history index; photo database; Los Angeles Times historical archives; obituary index; and digitized Sanborn maps
- Newspapers.com historic article database
- Ancestry.com

3 Previous Evaluations

3.1 SurveyLA

The A-1 Trailer Park and parcels comprising the Project site have not been previously identified in a historic resources survey, including the survey of the Wilmington-Harbor City Community Plan Area completed by SurveyLA in 2012. None of the parcels associated with the Project site are listed in the California Built Environment Resource Directory for Los Angeles County. The Project site is not located in a City of Los Angeles Historic Preservation Overlay Zone.

INTENTIONALLY LEFT BLANK

4 Regulatory Setting

Federal

National Register of Historic Places

While there is no federal nexus for this Project, the subject property was evaluated in consideration of NRHP designation criteria. The NRHP is the United States' official list of districts, sites, buildings, structures, and objects worthy of preservation. Overseen by the National Park Service, under the U.S. Department of the Interior, the NRHP was authorized under the National Historic Preservation Act, as amended. Its listings encompass all National Historic Landmarks, as well as historic areas administered by the National Park Service.

NRHP guidelines for the evaluation of historic significance were developed to be flexible and to recognize the accomplishments of all who have made significant contributions to the nation's history and heritage. Its criteria are designed to guide state and local governments, federal agencies, and others in evaluating potential entries in the NRHP. For a property to be listed in or determined eligible for listing, it must be demonstrated to possess integrity and to meet at least one of the following criteria:

> The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:
>
> A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
> B. That are associated with the lives of persons significant in our past; or
> C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
> D. That have yielded, or may be likely to yield, information important in prehistory or history.

Integrity is defined in NRHP guidance, How to Apply the National Register Criteria, as "the ability of a property to convey its significance. To be listed in the NRHP, a property must not only be shown to be significant under the NRHP criteria, but it also must have integrity" (NPS 1997). NRHP guidance further asserts that properties be completed at least 50 years ago to be considered for eligibility. Properties completed fewer than 50 years before evaluation must be proven to be "exceptionally important" (criteria consideration to be considered for listing).

State

California Register of Historical Resources

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code Section 5020.1[j]). In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code Section 5024.1[a]). The criteria for listing resources on the CRHR were expressly

developed to be in accordance with previously established criteria developed for listing in the NRHP, enumerated below. According to California Public Resources Code Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Is associated with the lives of persons important in our past.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 CCR 4852[d][2]).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

California Environmental Quality Act

As described further below, the following California Environmental Quality Act (CEQA) statutes and CEQA Guidelines are of relevance to the analysis of historic resources:

- California Public Resources Code Section 21084.1 and CEQA Guidelines Section 15064.5(a) define "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource." It also defines the circumstances when a project would materially impair the significance of an historical resource.
- California Public Resources Code Sections 21083.2(b)-(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for historic resources, including examples of preservation-in-place mitigation measures.

Under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code Section 21084.1; 14 CCR 15064.5[b]). A "historical resource" is any site listed or eligible for listing in the CRHR. The CRHR listing criteria are intended to examine whether the resource in question (a) is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage; (b) is associated with the lives of persons important in our past; (c) embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or (d) has yielded, or may be likely to yield, information important in pre-history or history.

The term "historical resource" also includes any site described in a local register of historic resources or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code Section 5024.1[q]).

All historical resources—as defined by statute—are presumed to be historically or culturally significant for purposes of CEQA (California Public Resources Code Section 21084.1; 14 CCR 15064.5[a]). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (California Public Resources Code Section 21084.1; 14 CCR 15064.5[a]). A site or resource that does not meet the definition of "historical resource" is not considered significant under CEQA and need not be analyzed further (California Public Resources Code Section 21083.2[a]; 14 CCR 15064.5[c][4]).

Under CEQA a significant cultural impact results from a "substantial adverse change in the significance of an historical resource [including a unique archaeological resource]" due to the "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (14 CCR 15064.5[b][1]; California Public Resources Code Section 5020.1[q]). In turn, the significance of a historical resource is materially impaired when a project:

1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or
2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
3. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA.

Local

Los Angeles Historic-Cultural Monuments

Local landmarks in the City of Los Angeles are known as Historic-Cultural Monuments (HCMs) and are under the aegis of the Planning Department, Office of Historic Resources. They are defined in the Cultural Heritage Ordinance as follows (Los Angeles Municipal Code Section 22.171.7, added by Ordinance No. 178,402, effective April 2, 2007):

> An HCM is any site (including significant trees or other plant life located on the site), building or structure of particular historic or cultural significance to the City of Los Angeles, including historic structures or sites in which the broad cultural, economic or social history of the nation, state or community is reflected or exemplified; or which is identified with historic personages or with important events in the main currents of national, state or local history; or which embodies the distinguishing characteristics of an architectural type specimen, inherently valuable for a study of a period, style or method of construction; or a notable work of a master builder, designer, or architect whose individual genius influenced his or her age.

This definition has been broken down into the following four HCM designation criteria that closely parallel the existing NRHP and CRHR criteria and are numbered for clarity:

1. Is identified with important events in the main currents of national, State or local history, or exemplifies significant contributions to the broad cultural, political, economic or social history of the nation, state, city, or community; or
2. Is associated with the lives of Historic Personages important to national, state, city, or local history; or
3. Embodies the distinctive characteristics of a style, type, period, or method of construction; or represents a notable work of a master designer, builder or architect whose genius influenced his or her age; or possesses high artistic values; or
4. Has yielded, or has the potential to yield, information important to the pre-history or history of the nation, state, city or community.

Historic Preservation Overlay Zones

As described by the City of Los Angeles Office of Historic Resources, the Historic Preservation Overlay Zone Ordinance was adopted in 1979 and amended in 2004 to identify and protect neighborhoods with distinct architectural and cultural resources. Historic Preservation Overlay Zones, commonly known as historic districts, provide for review of proposed exterior alterations and additions to historic properties within designated districts.

Regarding Historic Preservation Overlay Zone eligibility, City of Los Angeles Ordinance Number 175891 states (Los Angeles Municipal Code Section 12.20.3):

> Features designated as contributing shall meet one or more of the following criteria:
>
> - adds to the Historic architectural qualities or Historic associations for which a property is significant because it was present during the period of significance, and possesses Historic integrity reflecting its character at that time; or
> - owing to its unique location or singular physical characteristics, represents an established feature of the neighborhood, community or city; or
> - retaining the building, structure, Landscaping, or Natural Feature, would contribute to the preservation and protection of a Historic place or area of Historic interest in the City.

Regarding effects on federal and locally significant properties, Los Angeles Municipal Code states the following (Section 91.106.4.5, Permits for Historical and Cultural Buildings):

> The department shall not issue a permit to demolish, alter or remove a building or structure of historical, archaeological or architectural consequence if such building or structure has been officially designated, or has been determined by state or federal action to be eligible for designation, on the National Register of Historic Places, or has been included on the City of Los Angeles list of historic cultural monuments, without the department having first determined whether the demolition, alteration or removal may result in the loss of or serious damage to a significant historical or cultural asset. If the department determines that such loss or damage may occur, the applicant shall file an application and pay all fees for the California Environmental Quality Act Initial Study and Check List, as specified in Section 19.05 of the Los Angeles Municipal Code.

If the Initial Study and Check List identifies the historical or cultural asset as significant, the permit shall not be issued without the department first finding that specific economic, social or other considerations make infeasible the preservation of the building or structure.

5 Historic Context

5.1 Historical Overview

Post-contact history for the State of California is generally divided into three periods: the Spanish Period (1769–1821), Mexican Period (1821–1848), and American Period (1846–present). Although Spanish, Russian, and British explorers visited the area for brief periods between 1529 and 1769, the Spanish Period in California begins with the establishment in 1769 of a settlement at San Diego and the founding of Mission San Diego de Alcalá, the first of 21 missions constructed between 1769 and 1823. Independence from Spain in 1821 marks the beginning of the Mexican Period, and the signing of the Treaty of Guadalupe Hidalgo in 1848, ending the Mexican–American War, signals the beginning of the American Period when California became a territory of the United States. The modern development of the area surrounding the Project site began with the development of the port at San Pedro in the 1850s.

Historical Overview of Harbor City and Wilmington

Prior to European settlement, the Wilmington-Harbor City area of Los Angeles County was the traditional home of the indigenous peoples of the Tongva nation. In 1784, Spain conferred the first private land concession in Southern California, the Rancho San Pedro land grant, to Portola Expedition member Juan Jose Dominguez. Dominguez developed the 43,119.13-acre rancho agriculturally by planting wheat. Grain remained a regional staple until the Dominguez heirs sold a portion of Rancho San Pedro to William Sanford, John Downey, and Benjamin Wilson in 1854 (GPA 2012: 6; State Lands Commission 1982: 50; Native Land Digital 2021).

Sanford, Downey, and Wilson partnered with entrepreneur Phineas Banning to construct wharves and warehouses to serve the City of Los Angeles. By the time the port was fully constructed, a small hamlet that supported the development of the port emerged directly inland. In 1858, the wharf was opened for business and the associated hamlet was officially designated New San Pedro. In 1863, New San Pedro was renamed to Wilmington in honor of Banning's hometown of Wilmington, Delaware (GPA 2012: 7).

Wilmington's first development boom coincided with the beginning of the American Civil War. In 1861, Banning and Wilson donated land north of the wharf to the U.S. Armed Forces. The military developed Fort San Pedro, known colloquially as Fort Drum, to be used as the Union Army headquarters for the State of California and the Arizona Territory. In 1862, Wilmington became the Los Angeles terminus for the transcontinental telegraph line. These developments led to continuous industrial development near the waterfront, while residential development inland remained sparse (GPA 2012: 7; Hart 1965: 36).

Figure 3. View of Wilmington Harbor in 1870, showing the Los Angeles and San Pedro Railroad, the first railroad in the harbor, which had been completed by Phineas Banning in 1869 (Water and Power Associates).

In the mid-1860s Banning proposed the development of Southern California's first regional railroad, the Los Angeles and San Pedro Railroad. Construction began on the route in 1868 and concluded in 1869. The railroad resulted in lowered freight and transportation costs, which ensured the continued development of Wilmington. Wilmington was incorporated as a city in 1871 because of its economic success as a port. In 1874, Wilson College, a precursor to the University of Southern California, opened as the first coeducational college west of the Mississippi in Wilmington (GPA 2012: 7; Water and Power Associates 2021).

Wilmington grew steadily until the mid-1880s. Between the late 1880s and the early 1900s, Wilmington's development stagnated when the Southern Pacific Railroad gained control of the Los Angeles and San Pedro Railroad and extended the line beyond Wilmington and into San Pedro to the southwest. In addition, San Pedro was chosen as the site for the harbor of the City of Los Angeles, leading many of the City of Wilmington's businesses to move to San Pedro. Due to its economic decline, Wilmington's incorporation was revoked in 1887 (GPA 2012: 7).

Wilmington's development remained stagnant until the Pacific Electric Interurban Railroad extended its streetcar line through Wilmington to San Pedro and included a stop in Wilmington on the new line. In 1907, Wilmington was reincorporated as a city because of the increased economic activity reintroduced to the area by the Pacific Electric Interurban Railroad. Another commercial industrial development that shaped the Wilmington-Harbor City area in 1907 was the official opening of the Port of Los Angeles to the southwest. In 1909, Wilmington was consolidated into the City of Los Angeles (GPA 2012: 7).

In 1914, a new neighbor was founded directly east of Wilmington, Harbor City. Although Harbor City shared Wilmington's proximity to the industrial Port of Los Angeles, it developed as a residential area instead of as an industrial one. Together, Wilmington and Harbor City provided housing and industry linking the Port of Los Angeles to the wider region.

In 1920, oil was discovered near Wilmington-Harbor City and industrial growth increased exponentially. The new economic opportunity in Wilmington spurred developmental growth in the largely residential community of Harbor City. In 1920, Wilmington-Harbor City's population was 2,250; 10 years later the area's population had increased to 15,486. To accommodate the rapidly increasing population, commercial corridors were constructed on larger streets with single-family and multifamily residential developments interspersed between smaller, gridded streets. In 1932, the discovery of the Wilmington Oil Field, which is the largest oil field in California and the third largest oil field in the contiguous United States, further increased development in Wilmington-Harbor City (GPA 2012: 8; Poe 2021).

While Wilmington-Harbor City saw the first signs of residential growth during the 1930s, the Great Depression generally slowed economic and developmental growth in the region. The fishing industry became the largest employer in the area during the 1930s. Because of the 1934 "Big Strike," which began in San Francisco before spreading across the West Coast, labor unions saw increased influence over the state's ports. The International Longshoreman's and Warehousemen's Union, founded in 1937, established a chapter in Wilmington. By the 1950s, the area was known for its influential labor unions (GPA 2012: 8; Water and Power Associates 2021).

During World War II, the Wilmington-Harbor City area was chosen as the Los Angeles Port of Embarkation. The Los Angeles Port of Embarkation consisted of 118 acres, 101 of which were leased land acquired from private, municipal, and commercial entities from Wilmington-Harbor City. From this port, military personnel were dispatched to fight in the Pacific Theater. Although most non-war related development slowed during World War II, construction began on the Harbor Steam Plant, a power plant, in 1943. Construction of the plant stalled in the same year of its commencement and did not resume until 1947. Construction of the plant concluded in 1949. Upon completion, the plant was renamed the Harbor Generating Station. The station was taken offline in 1991 due to inefficiency and outdated technology (U.S. Army Corps of Engineers 2016; Daily Breeze 2021; Best of the South Bay 2018).

In the 1950s, Wilmington-Harbor City experienced a building boom, which coincided with a building boom across all of Los Angeles County. During the 1950s the Harbor Freeway (Interstate 110), Harbor Regional Park, and Los Angeles Harbor College (originally named Los Angeles Harbor Junior College) were developed. In 1958, the Matson Navigation Company delivered the first shipment of 20 containers to the Port of Los Angeles, resulting in the containerized cargo revolution. Containers proved much easier than shipping bulky packages, drastically increasing the amount of goods moved throughout ports and local corridors like the Harbor Freeway. By 1959, the Port of Los Angeles had already handled 7,000 shipping containers. By 2000, the Port of Los Angeles operated as the busiest port in North America, which supported the commercial and industrial environment of surrounding communities, including Wilmington-Harbor City (Estrada 2014).

Major residential growth in Wilmington-Harbor City occurred in the 1920s and the 1950s. A third wave of residential, industrial, and commercial development began in the 1960s and continued into the current century. As the Port of Los Angeles continued to expand and bring increased commercial and industrial opportunities to Wilmington-Harbor City, residential buildings were constructed throughout the area. Single-family residences continued to dominate the smaller streets between thoroughfares. In the 1960s, there was a dramatic growth in multifamily residential developments. During the 1960s, a variety of multifamily residential developments, including apartment housing, multifamily residential districts, and neighborhoods comprised of manufactured homes were constructed in the area (LADCP 2000: 6).

The Wilmington-Harbor City area has continued to experience steady growth in the twenty-first century. The population increased from 51,517 in 2000 to 82,858 residents by 2017 estimates. Industrially, Wilmington-Harbor City continues to function as Los Angeles County's main industrial economic engine due to its oil refineries and production, goods movement, and the Port of Los Angeles. Labor unions continue to play a prominent role in the

area's industrial development and politics. Commercially, Wilmington-Harbor City is not solely reliant on industrial commerce. During the twentieth and twenty-first centuries, Wilmington-Harbor City developed major commercial shopping centers and tourist amenities along Avalon Boulevard in Wilmington and along Pacific Coast Highway in Harbor City (ACS 2010; LADCP 2014; LADCP 2017; LADCP 2000: 4).

5.2 Property Type: Trailer Parks and Mobile Homes

The following trailer parks and mobile homes context draws content primarily from the Los Angeles Citywide Historic Context Statement theme for Trailer Parks and Mobile Homes (City of Los Angeles Office of Historic Resources 2016) and A Field Guide to American Houses (McAlester 2015).

Trailer Parks and Mobile Homes, 1920–Present

In Los Angeles, trailer parks and mobile home parks represent a significant multifamily residential development type, illustrating the transition of prefabricated mobile housing from solely tourism-related applications to inexpensive permanent dwellings. The modern trailer and mobile home park evolved from development types called auto camps, auto courts, or motor courts in the 1910s. Equipped with amenities like bathhouses, kitchens, and laundry areas, auto camps provided an alternative to the early practice of automobile camping along the roadside or having to stay at downtown hotels that were ill-suited for automobile travelers due to lack of parking for their vehicles (City of Los Angeles Office of Historic Resources 2016: 4).

During the 1930s, the first true mobile homes were developed for use as travel trailers. These mobile houses were small and light enough to tow behind a car. For the first time, as the Great Depression hit in the early 1930s, car camps began to accommodate more permanent trailer housing or trailer parks. California lawmakers, encouraged by trailer manufacturers, passed the State Trailer Camp Act in 1937 in response to the rapid growth of concentrated trailer dwellings in the state. The law established criteria for trailer camp development and was revised numerous times throughout the 1940s to increase the standards (City of Los Angeles Office of Historic Resources 2016: 5; McAlester 2013: 149).

Demand increased for long-term residential trailer camps or parks in Southern California in the years following World War II when returning soldiers and their families joined new California immigrants in their search for inexpensive accommodations. By 1945, the federal government had made a significant investment in the trailer sector, ordering over 150,000 units. By 1949, Los Angeles County boasted 40 trailer parks, with nearly half of them located inside the city boundaries of Los Angeles. Since house trailers were still seen as temporary rather than permanent dwellings in the 1940s, their design remained substantially unaltered from the "single-wide," with the emphasis on mobility and cost. While the classic single-wide home is 8 feet wide, they often include porch, deck, carport, and garage extensions that can take the width upwards of 16 feet. The earlier 1940s and 1950s designs had a linear plan and a single file of rooms (McAlester 2013: 149–150). Also, in the spirit of low cost and mobility, parks of the 1940s offered few amenities compared to parks built after the mid-1950s.

The Project site at 1280 Pacific Coast Highway represents a highly altered version of a typical utilitarian trailer park from the mid-1940s. By 1949, Los Angeles County had several trailer parks. Within the southwest area of Los Angeles County, near the subject property, these included Olympic Trailer Court (2121 Bundy Drive, Santa Monica) (see Figure 4), Chaney Trailer Camp (1415 N. Fries Avenue, Wilmington), Knoll Hill Trailer Park (290 Viewland Place), La Rambla Trailer Park (126 N. Bandini Boulevard), Pepper Tree Auto Court (1036 McFarland Avenue, Wilmington; extant), and Williams Auto Court (222 Pacific Coast Highway, Wilmington). Of these trailer parks, 1036 McFarland

Avenue, Wilmington is the only extant example (City of Los Angeles Office of Historic Resources 2016: 7-8; McAlester 2013: 149-150; San Pedro-Wilmington City Directory 1949: 742).

Figure 4. A view of Olympic Trailer Park in Santa Monica, 1940
(Los Angeles Public Library)

Trailer design began to change in the late 1950s and early 1960s, with manufacturers offering larger, more permanent alternatives that more closely resembled conventional homes. Mobile home parks had become a well-known and even attractive dwelling style by 1960, notably in Southern California. Community buildings, swimming pools, and organized events were all common features of the region's mobile home parks. Other mobile home parks in Los Angeles had nothing in the way of landscaping or community facilities. Often these types of parks were relegated to the fringe areas of a given city. The Harbor City Mobile Home Park (760 Lomita Boulevard, Harbor City, built 1971) represents a later, local example of a park with more spacious homes and amenities such as a pool and community center (City of Los Angeles Office of Historic Resources 2016: 8-10; McAlester 2013: 150).

The U.S. Department of Housing and Urban Development finalized a set of standardized criteria for the building of mobile houses in 1976, and the Housing Act of 1980 mandated the use of the term "manufactured home" instead of "mobile home." As people took up more full-time residency in trailers in the postwar period, the single-wide trailer became the preferred manufactured dwelling type for trailer parks and gradually replaced more transient camper dwelling types during the 1950s. Single-wide manufactured homes range in size to up to 16 feet wide and up to 70 feet long. They are delivered to the job site, installed on a foundation built on site, and seldom relocated. Decks, porches, carports, garages, and room expansions are commonly added to these homes. A double-wide is made up of two linear sections, each without a side wall, that are meant to be linked together to make a single, larger building. In the modern era, manufactured housing continues to provide shelter to a large sector of Americans (McAlester 2013: 150).

Mobile Home and Manufactured Home Sub-Types (1930-Present)

Manufactured homes represent a prevalent type of house in modern America and are loosely grouped into the following subtypes: motorhomes and campers, single-wide homes, and double-wide homes. Manufactured housing is assembled completely in a factory. Unlike the closely related "modular home," a manufactured home is typically exempt from local building codes, but legally must maintain a steel chassis for mobility. The trailer park at 1280 Pacific Coast Highway features two types of mobile homes: campers and non-permanent RV motorhomes. The subject property also features later manufacturer homes known as single-wides. There are no double-wide types on the A-1 Trailer Park property.

Mobile Home Subtype: Camper

The earliest examples of mobile homes date to the 1930s as campers and travel trailers. Typically 8 feet wide, they could easily be attached to automobiles as trailers. Early campers featured a rudimentary layout but soon took on a more permanent design after World War II. The mobile home industry produced the first 10-foot-wide models in 1954 and by 1968, widths reached 12 feet. In the 1960s, the length of mobile homes increased as well to accommodate bathrooms, which were absent in most early trailers (McAlester 2013: 149–150) (see Figure 5).

Figure 5. Example of a circa-1960 mobile home

Figure 6. Example of a circa 1990s motorhome

Mobile Home Subtype: RV Motorhome

Motorhomes provide temporary living quarters, but differ from both a mobile home and single-wide because motorhomes are permanently attached to self-propelled motor vehicle chassis or a van and built by a licensed motorhome manufacturer (see Figure 6). There are two types of motor homes. The larger style is constructed on a truck chassis with a gasoline or diesel engine and has a high fuel capacity, allowing it to travel great distances. The smaller or mini-motor home is built on a van chassis with a portion that extends beyond the cab (McAlester 2013: 149-150).

Mobile Home Subtype: Single-Wides

Single-wides represent the most prevalent style of manufactured home in America and a more permanent style of dwelling. While the classic single-wide home is 8 feet wide, they often include porch, deck, carport, and garage extensions that can take the width upwards of 16 feet (see Figure 7). The earlier 1940s and 1950s era designs had a linear plan and a single file of rooms. Manufacturers increasingly offered designs to accommodate different size lots with embellishments like shallow gables or changes in cladding, often in an effort to mimic Ranch houses (McAlester 2013: 149–150).

Figure 7. Example of a 1960s era single-wide dwelling with porch extension

INTENTIONALLY LEFT BLANK

6 Description and History of Project Site

During the course of the survey, Dudek identified four permanent buildings at the A-1 Trailer Park property (the subject property) over 45 years old requiring recordation and evaluation for historical significance: a 20-foot by 40-foot 1946 building at the northwestern corner of the subject property (1290 Pacific Coast Highway still extant), a sales office at the northwest corner of the subject property (1270 Pacific Coast Highway), an office building dating to circa 2000, and a circa 1950s laundry room at the center of the lot. In addition, mobile homes and single-wides (commonly known as campers) are addressed as part of the subject property.

6.1 Property Description

Manufactured Dwellings (Mobile Homes, Motorhomes, Single-Wide Dwellings)

The subject property at 1280 Pacific Coast Highway consists of a trailer park with five rows of mixed manufactured dwellings (mobile homes, motorhomes, single-wide dwellings) on a 3-acre rectangular parcel. While the entirety of the trailer park is on one parcel (APN 7411-019-016), an adjacent lot to the east (APN 7411-019-020) is utilized by residents for parking and was included in this evaluation as it is part of the overall Project site and is functionally linked to the subject property. The three westernmost rows of manufactured dwelling lots measure 200 yards long and the two easternmost rows measure 150 yards. Each lot originally contained a 4-foot by 8-foot utility room with washer and dryer hookups, but at least 39 of these rooms have been demolished. The lots are now primarily vacant lots, with only the bases remaining where the rooms once stood. The utility rooms represent one of the only ancillary building types that remain on the site that date to the original construction in the 1940s.

Of the remaining dwellings on the subject property, roughly 63% are campers, 27% are more permanent single-wides, and 10% are motorhomes. All dwelling types are one story in height and sit directly on their concrete pads or atop a low base. Flat roofs or low-pitched roofs surmount most dwellings and fenestration includes both aluminum and vinyl slider windows on mobile homes and single-wides. Many units feature porch and auto shelter extensions projecting from the side elevations, and some are attached to motorhomes. Although it is difficult to discern the age of various mobile homes and single-wides, most dwellings appear to range in age from the early 1960s to the late 1990s. Currently 40 of the 91 trailer lots are vacant (see Figure 8 map of the trailer park).

Amenities are limited to a side gabled, stucco clad, circa 1950s laundry room with a storage addition at the center of the subject property (see Figure 16). Along Pacific Coast Highway at the front of the subject property, permanent structures on the property include a front gabled former sales office (Figure 17), an office building (Figure 18), and a vacant, flat roof former retail building (Figure 19). While the former sales office has a "1270" affixed to the front of the building and the former retail building has a "1290," both buildings are on the parcel of 1280 Pacific Coast Highway (Figure 20). Landscaping is limited to small 3-foot by 3-foot garden patches on each lot that sometimes contain small trees. See Figures 9–16 for photos of existing conditions on the subject property.

Other Ancillary Buildings

Former Sales Office (Circa 1953)

The former sales office (1270 Pacific Coast Highway) is a one-story, front gabled building with a rectangular plan (see Figure 17). Non-original rough textured stucco finishes exterior surfaces and fenestration includes non-original vinyl sash windows on multiple elevations. A small awning shelters a wood front door entrance with a security door on the primary north elevation. A rear garage addition in 2015 doubled the footprint of the building.

Figure 17. Primary (north) elevation of Former Sales Office, view southeast

Figure 18. Primary (north) elevation, view south of the office building

Office Building (Circa 2000)

An office building dating to circa 2000 is sited along Pacific Coast Highway side of the property (see Figure 18). This is a one-story building with a side gabled roof and rectangular plan. Vertical wood board siding clads exterior surfaces. Windows are sliding vinyl sash. A four-step wood entrance leads to a wood frame entrance on the eastern side elevation. A wood fence on brick lines the street-facing elevation.

Former Retail Store and Restaurant (1946)

The former retail building (1290 Pacific Coast Highway) is one-story, on a rectangular plan, and topped by a flat roof with a raised parapet (see Figure 19). Two fixed pane metal picture windows with security bars are affixed to the fenestration on the primary elevation. An infilled and centered front door are also found on the primary elevation of the stucco clad building. Side elevations feature non-original wood door entrances, and a brick veneer extends along the east and rear elevations.

Figure 19. Primary (north) elevation, looking southeast view of the 1290 Pacific Coast Highway building (former retail building)

6.2 Project Site History

The earliest aerial photograph of the A-1 Trailer Park dates from 1932 and indicates that the Project site was a vacant lot along an unpaved Pacific Coast Highway. In 1932, the surrounding area was sparsely developed with single-family dwellings with about half the lots vacant and Machado Lake visible to the east. By 1941, the subject Project site contained shed buildings along the northern and western parcel boundary, but they appear to have been demolished when the trailer park was developed in 1946 and do not appear in the 1953 aerial map. The surrounding neighborhood had remained only partially developed by 1941, but Pacific Coast Highway had been reconfigured since 1932 to reflect its current configuration (NETR 1952; UCSB 1932, 1941).

Figure 20. Primary (north) elevation of the trailer park looking southeast at the 1946 former retail building (right), a 2000 era modular office (center), and a circa 1950s former sales office (far left)

Developer Lester N. Moore began construction of the A-1 Trailer Park at 1280 Pacific Coast Highway in 1945 on a formerly vacant lot and opened the park in 1946. Building permits associated with the property do not list an architect for the trailer park and Moore acted as the builder-contractor. A separate slim parcel paved in asphalt sits just to the east of the trailer park and serves as a parking lot for the site. The surrounding neighborhood remained sparsely developed in this period with single-family homes and roughly half the lots vacant. A commercial corridor along Pacific Coast Highway also appears to have emerged at this time. Building permits from 1945 to 1948 show that Moore constructed a series of 4-foot by 8-foot utility buildings on each trailer lot (see Figure 21). A 1952 aerial shows the three easternmost rows of the park lined with trailers, similar to their modern arrangement. Also, during 1946, Norman Hansen built a modest 20-foot by 40-foot, flat roof, stucco clad commercial building (Permit No. 86379, still extant) at the northwestern corner of the subject property. Based on building permits, the building first appears to have opened as a retail building and was converted to a retail restaurant in 1964. The businesses names are not listed in city directories and little information regarding the building's occupants could be found. In 1950, a front gabled, stucco clad sales office was constructed near the northeastern corner of the lot (Permit No. LA23985); this building is still extant but with major alterations. In this building, the subject property had a short-lived trailer sales component in addition to the existing trailer park, which existed from the early 1950s to the early 1960s (City of Los Angeles Department of Building and Safety 1945, 1946, 1948; NETR 1952, 1953, 1963; UCSB 1960; San Pedro News-Pilot 1945, 1946).

The first aerial photography featuring the trailer park was taken in 1952. This aerial photography shows a neighborhood that was largely developed. In an aerial photograph from the following year, 1953, the subject property consists of a 20-foot by 40-foot foot 1946-era building (Permit No. 86379, still extant) at the northwestern corner of the property, a sales office at the northwest corner of the property, and three rows of trailers on the east end of the property. In the 1952 aerial, Frampton Avenue had yet to be paved, but paving appears by a later 1953 map (NETR 1952, 1953; City of Los Angeles Department of Building and Safety 1946).

The next available aerial image from 1960 shows the construction of an additional two rows of trailers on the western end of the subject property; these rows appear completed by the 1962 aerial and brought the total number of rows in the trailer park to five. By the early 1960s, the surrounding neighborhood was completely built out with the emergence of large commercial buildings along Pacific Coast Highway (UCSB 1960, 1962).

Figure 21. A 1940s era utility room stands on a now vacated trailer lot

Beyond the intermittent replacement of mobile homes on the subject property over the decades, the trailer park retained its basic configuration from the early 1960s well into the 1980s based on aerial images. A 2000 aerial image shows a former trailer site replaced with a new street facing office building at the center of the subject property, which appears to remain to the present day. Since roughly 2010, aerial images suggest the removal of many trailers on the site as evidenced by the number of vacant trailer sites. To date, 40 of the 91 trailer spaces have been vacated since the park was at full capacity in the 1990s (see Figure 22). In addition, the 1950 former sales office had a circa 2015 rear addition that doubled the building in size. Beyond the 47 vacant lots on the site, the style of trailer currently occupying the subject property is a mix of 8-foot-wide post-World War II trailers, more permanent single-wide trailers with extensions, and newer motorhomes (NETR 1980, 1994, 2000, 2005, 2010).

Figure 22. Contextual photo of trailer park's easternmost trailer row facing south. Vacant trailer lots can be seen in the foreground.

Building Permits and Identified Alterations

On September 1, 2021, Dudek obtained building permits and records through the Online Building Records website (https://ladbsdoc.lacity.org/) filed after 1946 (the original date of the construction) for parcels within the Project site (APNs 7411-019-016 and 7411-020-039) for new construction, demolition, alteration, and additions. Observed alterations are also included in this section, and dates stated if known:

- 1945. Construction of eight 4-foot by 8-foot utility rooms for $200. (Permit No. 84936)
- 1946. Construction of a 20-foot by 40-foot retail building (now 1290 Pacific Coast Highway) for $5,000. (Permit No. 86379)
- 1947. Construction of 4-foot by 8-foot utility rooms for $200. (Permit No. 85990)
- 1948. Construction of 4-foot by 8-foot utility rooms for $200. (Permit No. 7080)
- 1949. Construction of 32 4-foot by 8-foot utility rooms for $4939. (Permit No. 906)
- 1959. Sign addition for $1,350 (Permit No. LA26236)
- 1964. Restaurant conversion for 1290 Pacific Coast Highway building (Permit No. 30546)
- 1970. Auto-sale conversion for 1290 Pacific Coast Highway building (Permit No. 44123)
- 1979. Door alteration to 1290 Pacific Coast Highway building for $300 (Permit No. 61405)
- 2015. Office conversion to 1290 Pacific Coast Highway building (Permit No. B15VN03776)

INTENTIONALLY LEFT BLANK

7 Significance Evaluation

In order to determine if the proposed Project will affect historical resources under CEQA, the A-1 Trailer Park property (1280 Pacific Coast Highway) within the Project site was evaluated for listing in the NRHP and CRHR, as well as for designation as an HCM, using the established criteria and aspects of integrity. Components of the A-1 Trailer Park addressed in the evaluation below include all buildings and structures on the subject property: four permanent, historic age buildings and the mobile homes of an undetermined age. The contexts, themes, and sub-themes discussed below were drawn from the Los Angeles Citywide Historic Context Statement. Historic contexts are those patterns or trends in history by which a specific property is understood. The significance of a property must be evaluated within its historic context(s).

National Register of Historic Places/California Register of Historical Resources/City of Los Angeles Statement of Significance

The A-1 Trailer Park property (1280 Pacific Coast Highway; APNs 7411-019-016 and 7411-020-039) does not meet any of the criteria for listing in the NRHP, CRHR, or the City of Los Angeles HCM List, either individually or as part of an existing historic district, based on the following significance evaluation.

Criterion A/1/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

The context in the Los Angeles Citywide Historic Context Statement considered under this criterion is Multi-Family Residential Development, specifically the theme of Trailer Parks and Mobile Homes. As a trailer park property developed in the mid-1940s, A-1 Trailer Park is associated with the trend of postwar mobile home parks and the larger trend of postwar multifamily development. The subject property represents one of many similar trailer parks that emerged in the 1940s and early 1950s that exhibit a simple, utilitarian design devoid of amenities found in trailer parks and mobile home parks built after the mid-1950s. As a common example of its type, the A-1 Trailer Park did not play an important role in the overall trend of postwar trailer home or multifamily developments and the subject property is not linked to a development innovation. Research also did not suggest the subject property is associated with more specific events or patterns of events that have historical significance in Harbor City or greater Los Angeles. For these reasons, the subject property at 1280 Pacific Coast Highway does not appear significant under NRHP Criterion A, CRHR Criterion 1, and LA HCM Criterion 1.

Criterion B/2/2: That are associated with the lives of persons significant in our past.

To be eligible under NRHP Criterion B, CRHR Criterion 2, and LA HCM Criterion 2, the subject property would need to be directly associated with a person considered historically significant at the local, state, or national level. Lester N. Moore first developed the subject property in 1946 as A-1 Trailer Park, but research did not show him developing other trailer parks or residential developments and he appears to have been a small-scale developer. No further information could be found about the life and work of Lester N. Moore. This indicates he was not a historic personage. Newspaper.com and directory research did not reveal other individuals connected to this property who may have been important individuals to local history. Based on the research conducted on the area's history, a reasonable likelihood does not exist that additional information will identify a historically significant person associated with the subject property. For these reasons, the subject property at 1280 Pacific Coast Highway does not appear significant under NRHP Criterion B, CRHR Criterion 2, and LA HCM Criterion 2.

Criterion C/3/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The subject property at 1280 Pacific Coast Highway was constructed in 1946 and is typical of low-cost trailer parks built after World War II to accommodate the increasing housing demand. By their nature, the trailer parks of the 1940s and early 1950s were very utilitarian and did not have many features. Though minimal, these trailer parks could be characterized by lots for trailers, utility rooms, signage, and ancillary support buildings. The subject property does not exhibit a substantial number of these character-defining features. Of the 91 lots, 40 are used for campers and motorhomes, not the trailer types they were designed for. At least 39 lot utility rooms have been demolished. There is no original signage. With the absence of character-defining features, the property does not convey significance as an example of the 1940s/1950s trailer park property type. For these reasons, the subject property does not appear to meet NRHP Criterion C, CRHR Criteria 3, and LA HCM Criterion 3.

Criterion D/4/4: That have yielded, or may be likely to yield, information important in prehistory or history.

The property is not significant under Criterion D of the NRHP, Criterion 4 of the CRHR, or LA HCM Criterion 4 as a source, or likely source, of important historical information, nor does it appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

As the property is not significant under any of the NRHP criteria, the integrity of the property does not require examination. It is worth noting, however, that the property lacks integrity as a whole. The A-1 Trailer Park no longer retains integrity of design, materials, and workmanship due to numerous alterations on the site that include the following:

- Alterations to street-facing permanent buildings, including the recladding, replacement windows, and rear addition to the "1270" building in the northwestern corner of the property
- Vacancy of 40 of the 91 lots with a preponderance of non-permanent dwelling types like campers and motorhomes
- Demolition of at least 39 lot utility rooms dating to the initial development of the property (1940s and 1950s)
- Removal of original signage

With the material alteration and demolition of buildings and ancillary structures such as utility rooms, the original workmanship is lost. The property retains its original location. While individual building and units have experienced alterations, the overall layout of the trailer park has remained the same since a western expansion of the site in 1960; however, the integrity of design is diminished overall with the loss of original components of the trailer park plan. The surrounding area, especially around Pacific Coast Highway, has remained a business commercial corridor going back to the 1940s; therefore, integrity of setting is largely intact. The trailer park continues to convey its use and is easily recognizable for the purpose it has served; thus, integrity of feeling is intact. The property is not significant under Criteria A or B and is not associated with an important historic event or person. Therefore, this aspect of integrity does not apply, as there is no historic association. While the property does retain some elements of integrity, the loss of workmanship and materials results in a property that does not retain the requisite integrity for designation and does not rise to the level of significance required for designation at the national, state, or local levels.

8 Findings and Conclusions

8.1 Summary of Findings

No historical resources were identified within the Project site as a result of the extensive archival research, field survey, and property significance evaluation. The A-1 Trailer Park property located at 1280 Pacific Coast Highway (APNs 7411-019-016 and 7411-019-020) does not appear eligible for NRHP, CRHR, or City of Los Angeles designation due to a lack of significant historical associations, architectural merit, and physical integrity. Therefore, the subject property is not considered a historical resource for the purposes of CEQA. Further, no potential indirect impacts to historical resources were identified. The Project would not have a significant effect on the environment and therefore no mitigation is needed.

Appendix A

Preparer's Qualifications

Sarah Corder, MFA

SENIOR ARCHITECTURAL HISTORIAN

Sarah Corder (*SARE-uh COR-der; she/her*) is an architectural historian with 17 years' experience throughout the United States in all elements of cultural resources management, including project management, intensive-level field investigations, architectural history studies, and historical significance evaluations in consideration of the California Register of Historical Resources (CRHR), the National Register of Historic Places (NRHP), and local-level evaluation criteria. Ms. Corder has conducted hundreds of historical resource evaluations and developed detailed historic context statements for a multitude of property types and architectural styles, including private residential, commercial, industrial, educational, and agricultural properties. She has also provided expertise on numerous projects requiring conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

Ms. Corder meets the Secretary of the Interior's Professional Qualification Standards for both Architectural History and History. She has experience preparing environmental compliance documentation in support of projects that fall under the California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act.

Project Experience

Development

Pacific Coast Commons Specific Plan Project, City of El Segundo, Los Angeles County, California. Dudek was retained by the City of El Segundo to complete a cultural resources technical report for the Fairfield Inn & Suites property (525 Sepulveda Boulevard) within the Pacific Coast Commons Specific Plan Project area. Dudek evaluated the Fairfield Inn & Suites property and found it not eligible for listing in the NRHP, CRHR, or at the local level due to a lack of significant historical associations, architectural merit, and physical integrity. Responsibilities included archival research, architectural field survey, and co-authorship of the technical report. (2020)

The Enclave at Ivanhoe Ranch Project, Rancho San Diego, San Diego County, California. Dudek was retained by the applicant to complete a Historical Resources Technical Report (HRTR) in support of a residential development project totaling approximately 121.9 acres in unincorporated San Diego County. The project site includes the Ivanhoe Ranch, an historic-era complex of horse ranch buildings and accompanying residences located at 3256, 3261, 3263, 3267, and 3269 Ivanhoe Ranch Road. The Ivanhoe Ranch was evaluated for historical significance in consideration of potential impacts to historical resources under CEQA, the County of San Diego Historic Preservation Ordinance, and County of San Diego Resource Protection Ordinance. The Ivanhoe Ranch was recommended eligible under NRHP, CRHR and County of San Diego Criteria B/2/2 and C/3/3 for its association with important historical figure John P. Scripps, architectural merit, and association with master designer Cliff

May. A detailed impacts assessment with associated protective mitigation was included in the HRTR. Responsibilities included archival research and co-authorship of the report. (2020)

8850 Sunset Boulevard Project, City of West Hollywood, Los Angeles County, California. Dudek was retained by the City of West Hollywood to complete a Cultural Resources Technical Report and Environmental Impact Report (EIR) for the 8850 Sunset Boulevard Project. The proposed project consisted of the demolition of existing buildings and the construction and operation of a new mixed-use hotel and residential building on a property along the south side of Sunset Boulevard, extending the full city block between Larrabee Street and San Vicente Boulevard, in the City of West Hollywood. Built environment work included a pedestrian survey of the project site by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the project site; and evaluation of four commercial properties for historical significance and integrity in consideration of NRHP, CRHR, and City of West Hollywood Cultural Heritage Preservation Ordinance designation criteria. Responsibilities included archival research, field survey, significance evaluations, and co-authorship of the report. (2020)

740-790 East Green Street Mixed-Use Project, City of Pasadena, Los Angeles County, California. The proposed project involves the demolition of five commercial buildings in order to accommodate the development of a new three- to six-story mixed-use building. Dudek prepared a cultural resources technical report that included the results of a pedestrian survey of the project site by a qualified architectural historian, building development and archival research, development of an appropriate historic context for the project site, and recordation and evaluation of five commercial properties over 45 years old for historical significance and integrity in consideration of NRHP, CRHR, and City of Pasadena designation criteria and integrity requirements. Responsibilities included archival research, field survey, and co-authorship of the report. (2020)

Enlightenment Plaza/Juanita Avenue Project, Los Angeles, Los Angeles County, California. The applicant retained Dudek to complete a historical resources evaluation report for the project that proposes to demolish buildings on four parcels to develop 400–500 units of housing dedicated to permanent supportive housing for formerly homeless individuals. Served as a senior architectural historian on the project and performed archival research. As a result of extensive archival research, field surveying, and property significance evaluations, all six built environment resources on the project site appear not eligible; however, the adjacent building located at 307 North Madison Avenue appears eligible as a Los Angeles Historic Cultural Monument under Criterion 3, for being an excellent example of a Quonset hut building type. Responsibilities included archival research and project oversight. (2020)

Historic Resource Assessment for 9000 Dicks Street, City of West Hollywood, California (2020). Dudek was retained by 9000 Dicks Street Capital LLC to complete an Historic Resource Assessment (HRA) for a residential property located at 9000 Dicks Street in West Hollywood, California. The Spanish colonial revival residence was built in 1926. As a result of Dudek's study, the property at did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, and co-authorship of the HRA.

Historic Resource Assessment for 9004 Dicks Street, City of West Hollywood, California (2020). Dudek was retained by 9004 Dicks Street Capital LLC to complete an HRA for a residential property located at 9004 Dicks Street in West Hollywood, California. The Spanish Colonial Revival residence was built in 1924. As a result of Dudek's study, the property at did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, and co-authorship of the HRA. (2020)

Historic Resource Assessment for 1223-1225 North Ogden Drive, City of West Hollywood, California (2020). Dudek was retained by 1223 Ogden, LLC to complete an HRA for a multi-family property with four buildings located at 1223-1225 North Ogden Drive in the City of West Hollywood, California. The Spanish Colonial Revival-style bungalow court was built in 1923. As a result of Dudek's study, the property at 1223-1225 North Ogden Drive did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, significance evaluation, response to City comments, field survey, and co-authorship of the HRA. (2020)

Historic Structures/Sites Report, Confidential Residential Conformance Review Project, Confidential Client, Santa Barbara, California. Dudek was retained by a private construction company to prepare a Historic Structures/Site Report (HSSR) for a Spanish colonial revival estate built in the 1920s located in Santa Barbara, California. Dudek conducted archival research and an intensive-level pedestrian survey of the property for historic built environment resources. As part of this study, Dudek prepared a Phase 1 HSSR for the property that included a historic context statement and significance evaluation and a Phase 2 HSSR that provided a detailed impacts analysis and Secretary of the Interior's standards conformance review for the construction of a new garage on the historic property. Responsibilities included project management, primary authorship of the report, archival research, evaluation of the property, field work, attendance at Historic Landmarks Commission meetings, design guidance to the construction company and architecture firm, and preparation of an Secretary of the Interior's standards conformance review of the design of the proposed garage. (2018–2020)

Modelo Project EIR, City of Commerce, Los Angeles County, California. Dudek was retained by the City of Commerce to complete a cultural resources technical report and accompanying EIR for the proposed Modelo Project. The project involved the demolition of the existing Veterans Memorial Park (which is currently in an advanced state of disrepair) and an adjacent vacant parcel and the redevelopment of the project site to accommodate a mixed-use development. Built environment work included field survey, building and structure descriptions, archival research, integrity assessments, and significance evaluations. The park was found ineligible for listing in the NRHP, CRHR, or as a locally significant resource due to a lack of significant historical associations or architectural merit. Responsibilities included co-authorship of the report. (2019)

Baseline and Tamarind Warehouse Project, City of Rialto, California. The project includes the proposed construction of an approximately 156,500-square-foot, one-story warehouse building on an approximately 8.01-gross-acre property located in the northwest part of the City of Rialto. Dudek prepared a cultural resources technical report and no resources were identified within the project site as a result of the California Historical Resources Information System (CHRIS) records search, Native American coordination, or intensive pedestrian survey. The study included evaluation of several single-family residences. All properties were found not eligible. Responsibilities included archival research, building evaluations, field survey, and co-authorship of the report. (2018)

Blue Diamond Growers A Street Annex Project, City of Sacramento, California. Dudek was retained by Dreyfuss and Blackford Architecture to prepare a cultural resources evaluation for the proposed demolition of the A Street Annex building constructed in 1926 and currently located on the Blue Diamond Growers Complex in Sacramento. Responsibilities included architectural history field survey, building permit research, background research, preparation of State of California Department of Parks and Recreation Series 523 Forms (DPR forms) for the evaluation of built resources, and co-authoring the cultural resources report. (2018)

Carol Kimmelman Sports and Academic Center Project, City of Carson, California. Dudek was retained to conduct a cultural resources study on the Victoria County Golf Course and associated recreation buildings for the proposed Kimmelman Sports and Academic Center. Conducted a record search, a pedestrian survey, archival and building development research, NRHP and CRHR evaluations, and impacts analysis. All golf course components associated with the Victoria County Golf Course were found not eligible under designation requirements. (2018)

Eldredge Property (Farmstead) Project, City of Vacaville, California. The proposed project consists of development of 130 residential lots on 15.82 acres along with 4.75 acres dedicated for a park and trail uses and project access roads and sidewalks. The City of Vacaville retained Dudek to complete a cultural resources study that involved completion of a CHRIS records search, archival research, a pedestrian survey of the project area, and documentation/evaluation of a large block of farmland, including numerous buildings and structures located at 369 North Orchard Avenue in consideration of the NRHP, CRHR, and city designation criteria. Responsibilities included archival research, significance evaluations, and co-authorship of the report. (2018)

HRA for 852-854 Westmount Drive, Metros Capital LLC, City of West Hollywood, California. Dudek was retained to complete an HRA for a multifamily residential property located at 852-854 Westmount Drive in the City of West Hollywood, California. The Spanish Colonial Revival-style duplex was built in 1924. The property appeared not eligible for the NRHP, CRHR, or City of West Hollywood register due to a lack of significant historical associations and architectural merit and compromised integrity. Responsibilities included archival research and co-authorship of the report. (2018)

Victoria Greens Project, City of Carson, Los Angeles County, California. Dudek was retained by the City of Carson Planning Division for a cultural resource inventory of three parcels at the intersection of Central Avenue and Victoria Street. Responsibilities included field survey, building permit research, background research, preparation of DPR forms, and authoring the cultural resources report. (2018)

Birch Specific Plan 32-Unit Condo Project, City of Carson, California. Dudek was retained by the City of Carson to prepare a cultural resources report for a project that proposes to demolish approximately 6,200 square feet of existing residential buildings and roughly 5,850 square feet of pavement on the project site and construct a 32-unit residential condominium community with on-grade parking, landscaping, and other associated improvements. The historical significance evaluation included three residential properties proposed for demolition. All properties were found not eligible under all designation criteria and integrity requirements. Responsibilities included field survey, archival research, and co-authoring the report. (2018)

The 1431 El Camino Real Project, City of Burlingame, San Mateo County, California. The City of Burlingame proposes to demolish an existing four-unit (two-story) apartment building at 1431-1433 El Camino Real along with the detached five-car garage structure at the rear and construct a new six-unit (three-story) townhouse complex. The property was constructed in 1947 and required evaluation for historical significance. Because the property required a California Department of Transportation (Caltrans) encroachment permit, a Caltrans-compliant Historical Resources Compliance Report was prepared. Dudek also had to address impacts to an NRHP-listed tree row within the project area. Responsibilities included background research, building permit research, co-authorship of the report, and preparation of DPR forms. (2017)

Duke Fontana Warehouse Project, City of Fontana, California. Dudek was retained by the City of Fontana to conduct a cultural resources study for the proposed Duke Fontana Warehouse Project. The proposed project would include construction of a 288,215-square-foot (gross), one-story industrial/warehouse building on an approximately 13.45-acre site at the intersection of Santa Ana Avenue and Oleander Avenue. As part of the cultural resources study, Dudek evaluated 8 residential properties over 45 years old for historical

significance. The resources were found not eligible under all designation criteria and integrity requirements. Responsibilties included archival research, significance evaluations, co-authorship of the report, and preparation of DPR forms. (2017)

Pacific Freeway Center Project, City of Fontana, California. Dudek was retained by the City of Fontana to conduct a cultural resources study for the proposed Pacific Freeway Center Project. The project would include construction and operation of two "high cube" warehouse/distribution/logistics buildings with associated office spaces, surface parking, and loading areas. As part of the cultural resources study, Dudek evaluated the former Union Carbide Site for historical significance. The resource was found not eligible under all designation criteria and integrity requirements. Responsibilties included archival research, significance evaluations, co-authorship of the report, and preparation of DPR forms. (2017)

Yosemite Avenue-Gardner Avenue to Hatch Road Annexation Project, City of Merced, Merced County, California. Dudek was retained to prepare a historic resource significance evaluation of a single-family residence/agricultural property within the proposed project site. The project proposes to annex 70 acres from Merced County to the City of Merced and to construct and operate the University Village Merced Student Housing and Commercial component on an approximately 30-acre portion of the project site. No development is proposed on the remaining 40 acres. The evaluation found the property not eligible under all NRHP and CRHR designation criteria. Responsibilities for the project included archival research. (2017)

Village 3 HomeFed Otay Park Swap, Otay Ranch, Chula Vista, California. Dudek was retained to prepare a Constraints Analysis for the development of approximately 100 acres of land south of the Otay River as an active recreation site. Responsibilities included background research and assistance in the preparation of the historic context for the report. (2017)

Education

Integrity Assessment and Comparative Analysis for Confidential Education Project, Confidential Client, Santa Barbara, California. Dudek prepared a memorandum that provides a comparative analysis and detailed account of alterations made to a confidential educational property located in the City of Santa Barbara, California. This analysis was designed to facilitate future significance evaluations with regard to the property's physical integrity and architectural merit. Responsibilities included project management, field survey, archival research, and preparation of the technical memorandum. (2019-2020)

Campus-wide Historic Context Statement for California State University Long Beach, California State University Long Beach Office of Physical Planning and Sustainability, California. Dudek was retained by the California State University (CSU) Long Beach Office of Physical Planning and Sustainability to prepare a campus-wide historic context statement in order to better understand the important historical themes and potentially significant historic built environment resources that exist on campus. This study included completion of extensive archival research at relevant local data repositories on the history of campus development, as well as correspondence and interviews with architects from the campus's potential period of significance. It also included completion of a detailed historic context statement for CSU Long Beach that examined campus development and building design, landscape design, and the architects and landscape architects that have contributed to the campus over time. Responsibilities included field survey, archival research, and the development of a historical context for the campus. (2019)

San Francisco State University Master Plan EIR, San Francisco State University, City of San Francisco, California. Dudek was retained to evaluate all buildings and structures on campus over 45 years old that were proposed for demolition or substantial alteration as part of the proposed Master Plan Program. The study entailed conducting archival and building development research, a records search, detailed impacts assessment, and development of

mitigation measures for project conformance with the Secretary of the Interior's Standards for Rehabilitation. Responsibilties included field survey leadership, archival research, evaluation of built evaluation of built environment resources, co-authorship of the technical report, and preparation of DPR forms. (2019)

CSU Chico College Park Demolition Project, CSU Chico, Butte County, California. Dudek was retained by CSU Chico to complete a cultural resources study for a project that proposes demolition of 10 single-family residences near the CSU Chico campus. The study involved completion of a CHRIS records search; a pedestrian survey of the project area for built-environment resources; archival and building development research for each property; outreach with local libraries, historical societies, and advocacy groups; and a historic context and evaluation of 10 properties for historical significance. Responsibilities included co-authorship of the technical report, evaluation of built environment resources, field survey, archival research, and preparation of DPR forms. (2018)

John Adams Middle School Auditorium Replacement Project, Santa Monica-Malibu Unified School District, City of Santa Monica, California. The district retained Dudek to write the Final Mitigated Negative Declaration for the John Adams Middle School Auditorium Replacement Project. The project proposed to demolish the existing auditorium and music building and replace them with a new performing arts center. Responsiblities included field survey, archival research, and co-suthorship of the technical report. (2018)

Castilleja School Project, City of Palo Alto, California. Dudek was retained by the City of Palo Alto to conduct a cultural resources study for the Castilleja Master Plan and Conditional Use Permit project. The study included a historical significance evaluation of the campus and related buildings and structures. Responsibilities included field survey, background research, preparation of DPR forms for the evaluation of built resources, and co-authorship of the cultural resources report. (2017)

CSU Chico Siskiyou Hall Project, CSU Chico, Butte County, California. Dudek was retained by CSU Chico to complete a historic resources technical report for Siskiyou Hall. The study involved a pedestrian survey of the project area for built-environment resources, conducting archival and building development research, and completing a historic context and evaluation of the property for historical significance. Responsibilities included field survey, contributions to the technical report, and archival research. (2017)

Elkus Ranch Master Plan Project, University of California, Davis, San Mateo County, California. Dudek was retained by University of California, Davis, to complete a historic resources study for the Master Plan of the University's Elkus Ranch property. This study involved a pedestrian survey of the project area for built-environment resources and recordation and evaluation of all historic age buildings in consideration of NRHP designation criteria and integrity requirements. Responsibilities included field survey, building permit research, background research, evaluation of built environment resources, and co-authorship of the technical report. (2017)

Fullerton College Facilities Master Plan Program EIR, North Orange County Community College District, City of Fullerton, California. The district contracted Dudek to evaluate all buildings and structures on campus over 45 years old that were proposed for demolition or substantial alteration as part of the proposed Master Plan Program. The study entailed conducting archival and building development research, a records search, detailed impacts assessment, and development of mitigation measures for project conformance with the Secretary of the Interior's's Standards for Rehabilitation. As a result of the significance evaluation, three historic districts and one individually eligible building were identified within the project area. Responsibilties included archival research, field survey, and co-authorship the technical report. (2017)

Energy

Confidential Solar Project, Confidential Client, California. Dudek was retained to prepare a historic resources evaluation for historic age irrigation canals. This study involved recordation and evaluation of all historic age canals in consideration of NRHP and CRHR designation criteria and integrity requirements. Responsibilities included background research, preparation of DPR forms for the evaluation of built resources, and co-authoring the historic resources evaluation report. (2018)

Fall River Gun Club Project, Pit 1 Hydroelectric Project (FERC NO. 2687), Pacific Gas & Electric Company, Fall River Mills, California. Dudek was retained to complete a historic resource evaluation for a project that is guided by a Historic Properties Management Plan. This study involved a pedestrian survey of the project area for built-environment resources and recordation and evaluation of all historic age buildings in consideration of NRHP designation criteria and integrity requirements. Responsibilities included architectural history field survey, building permit research, background research, and co-authoring the historic resources report. (2017)

Healthcare

St. Joseph's Hospital Master Plan Project, Stockton, California. Dudek was retained by the Devenney Group Ltd. to prepare a historical resources inventory and evaluation report in support of the St. Joseph's Master Plan Project for the applicant, Dignity Health. The project site contained four properties: 1800 North California Street and 542 McCloud Avenue (St. Joseph's Medical Center), 534 East Maple Street, 425 East Harding Way, and 445 East Harding Way in the City of Stockton, California. The report included conducting archival research, site descriptions, and historical significance evaluations and integrity assessments for resources identified within the project area. Dudek determined that none of the properties were eligible for the NRHP, CRHR, or as local landmark/structure of merit due to lack of architectural merit and compromised integrity. Responsibilities included archival research, field survey, preparation of DPR forms, and co-authorship of the report. (2020)

Municipal

Los Angeles Department of Water and Power Century Trunk Line, Los Angeles Department of Water and Power, City of Los Angeles, California. Dudek was retained by Los Angeles Department of Water and Power (LADWP) to prepare an Avoidance and Protection Plan for Air Raid Siren No. 150. The resource is eligible for the NRHP and CRHR and as a City of Los Angeles Historic-Cultural Monument under Criteria A/1/1 and C/3/3 for its association with World War II and Cold War military infrastructure, and is an historical resource under CEQA. Responsibilities included co-authorship of the Avoidance and Protection Plan, on-site implementation of protection measures, on-site monitoring, and pre-construction field survey, (2020–Present)

Mira Mesa Community Plan Area Historic Context Statement and Focused Reconnaissance Survey, City of San Diego Planning Department, California. Dudek was retained by the City of San Diego to prepare a historic context statement identifying the historical themes and associated property types important to the development of Mira Mesa, accompanied by a reconnaissance-level survey report focused on the master-planned residential communities within the Mira Mesa Community Plan Area (CPA). While the historic context statement addressed all development themes and property types within the community, the scope of the survey was limited to residential housing within the CPA constructed between 1969 and 1990. This study was completed as part of the comprehensive update to the Mira Mesa CPA and Programmatic EIR. Served as project manager leading the survey efforts, senior architectural historian, and co-author of the historic context statement and survey reports. Also provided quality assurance/quality control (QA/QC) of survey information. (2020–Present)

University CPA Historic Context Statement and Focused Reconnaissance Survey, City of San Diego Planning Department, California. Dudek was retained by the City of San Diego to prepare a historic context statement identifying the historical themes and associated property types important to the development of University City, accompanied by a reconnaissance-level survey report focused on the master-planned residential communities within the University CPA. While the historic context statement addressed all development themes and property types within the community, the scope of the survey was limited to residential housing within the CPA constructed between the 1960s and 1990s. Served as project manager leading the survey efforts, senior architectural historian, and co-author of the historic context statement and survey reports. Also provided QA/QC of survey information. (2020–Present)

Coronado Citywide Historic Resources Inventory and Historic Context Statement, City of Coronado, California. Dudek is currently preparing a historic context statement and historic resources inventory survey for all properties at least 50 years or older within city limits. Following current professional methodology standards and procedures developed by the California Office of Historic Preservation and the National Park Service (NPS), Dudek will (1) develop a detailed historic context statement for the city that identifies and discusses the important themes, patterns of development, property types, and architectural styles prevalent throughout the city and (2) conduct a reconnaissance-level survey of all properties within city limits that are at least 50 years old to identify individual properties and groupings of properties (i.e., historic districts) with potential for historical significance under City Criterion C (properties that possess distinctive characteristics of an architectural style; are valuable for the study of a type, period, or method of construction; and have not been substantially altered). To date, Dudek has conducted a public kick-off meeting, conducted local stakeholder outreach meetings, submitted a draft historic context statement to the city for review, and began the citywide survey component of the project. Responsible for coordinating and leading the citywide field survey component of the project and will provide QA/QC for all field data and co-authorship of the final survey report. (2019–Present)

City of Coronado As-Needed Historic Research Consultant, City of Coronado, California. Dudek is currently working with the City of Coronado Community Development Department to provide historic preservation services on an as-needed basis. Services scoped under the current contract include historic resources surveys; archival research; preparation of evaluation reports in consideration of NRHP, CRHR, and City of Coronado designation criteria; attendance at Historic Resource Commission and City Council hearings; and review of projects for conformance with the Secretary of the Interior's Standards for Rehabilitation. Since January 2019, Dudek has completed 17 work orders for the city. Serves as a senior architectural historian for the tasks orders and is responsible for QA/QC of specific deliverables. (2019–Present)

Gilroy Citywide Historic Resources Inventory and Historic Context Statement, City of Gilroy, California. Dudek worked with the City of Gilroy to prepare a citywide historic context statement and update its 1986 historic resource inventory. For the purposes of this project, Dudek developed highly detailed and efficient iPad field forms that allow surveyors to record a property in less than 5 minutes and provide the city with real-time survey data. As survey lead, completed reconnaissance-level survey of over 3,400 properties on time and within budget. Also served as a senior architectural historian for the project and co-authored the historic context statement, attended the public kick-off meeting, prepared DPR forms, developed registration requirements, performed QA/QC on DPR forms, and worked closely with the geographic information system (GIS) team to facilitate the final digital mapping components for the project. (2018–2020)

HSSR for the Arroyo Burro Open Space Park Project, City of Santa Barbara, California. Dudek was retained by the City of Santa Barbara to prepare an updated HSSR for the Arroyo Burrow Open Space Park located within the City of Santa Barbara. The city provided Dudek with previously prepared studies of the project area, which were synthesized as part of the updated study. In addition, Dudek conducted supplemental archival research on the

property and conducted an updated intensive-level pedestrian survey of the property for both archaeological and historic built environment resources. One historic built environment resource, the Veronica Springs Medicinal Water Company, was found not eligible under all NRHP, CRHR, and city designation criteria due to a lack of integrity. Responsibilities included archival research and co-authorship of the report. (2018)

San Diego Dam and Reservoir Citywide Inventory, City of San Diego Public Utilities Department, California. Dudek was retained to prepare a historic context statement and evaluate 10 dam complexes and a flume for the San Diego Public Utilities Department. A detailed historic context was developed after extensive archival research efforts and resources were evaluated for historical significance in consideration of NRHP, CRHR, and City of San Diego designation criteria and integrity requirements. The project also required pedestrian survey of all facilities. Dudek then prepared detailed impacts assessments for proposed modifications to the Dulzura Conduit, Lower Otay Dam, and Morena Dam. Responsibilties included archival research, co-authorship of the historic context statement, preparation of DPR forms, assisting in the creation of a public brochure, and primary authorship of multiple dam significance evaluations. (2017–2020)

The Santa Monica City Yards Master Plan Project, City of Santa Monica, California. The City of Santa Monica retained Dudek to complete a cultural resources study for the proposed City Yards Master Plan project site located at 2500 Michigan Avenue. The study involved evaluation of the entire City Yards site, including two murals and a set of concrete carvings, for historical significance and integrity. As a result, the City Yards and its associated public art work was found ineligible under all designation criteria. Responsibilities included building permit research and co-authorship of the technical report. (2017)

LADWP West Los Angeles District Yard Project, City of Los Angeles, Los Angeles County, California. Dudek was retained by LADWP to complete a cultural resources study for a project that proposes demolition of five LADWP-owned administrative buildings and warehouses at the West Los Angeles District Headquarters located at 12300 West Nebraska Avenue. Dudek evaluated the yard for historical significance in consideration of NRHP, CRHR, and City of Los Angeles Historic-Cultural Monument criteria and integrity requirements. Responsibilities included field survey and archival research. (2017)

State of California

Historical Resource Evaluation for the Normal Street Department of Motor Vehicles, State of California Department of General Services, San Diego, California. Dudek was retained to complete an HRTR for a project that proposes demolition and replacement of the Department of Motor Vehicles building located at 3960 Normal Street in the City of San Diego. To comply with California Public Resources Code, Section 5024(b), the Department of General Services must submit to the State Historic Preservation Officer (SHPO) an inventory of all structures over 50 years of age under their jurisdiction that are listed in or that may be eligible for inclusion in the NRHP, CRHR, and California Historical Landmark. The Department of Motor Vehicles was found not eligible. Responsibilities included archival research and co-authorship of the HRTR. (2017)

Historical Resource Evaluation Report for the Figueroa Division Courthouse, Judicial Council of California, City of Santa Barbara, California. Dudek was retained by the Judicial Council of California (JCC) to prepare an evaluation of the Figueroa Division Courthouse building, located at 118 East Figueroa Street in the City of Santa Barbara, California. The Figueroa Division Courthouse was found not eligible for designation under all applicable criteria. Responsibilities included co-authorship of the technical report and archival research. (2017)

Historical Resource Evaluation Report for the Santa Monica Courthouse, JCC, City of Santa Monica, California. Dudek was retained by the JCC to prepare an evaluation of the Santa Monica Courthouse building, located at 1725 Main Street in the City of Santa Monica, California. The Santa Monica Courthouse was found not eligible for designation under all applicable criteria. Responsibilities included co-authorship of the technical report and archival research. (2017)

Transportation

Princeton Avenue Road Widening Project, City of Moorpark, Ventura County, California. Dudek was retained by Stantec and the City of Moorpark to prepare Caltrans-compliant cultural resource documentation for the Princeton Avenue Road Widening Project. The project includes approximately 0.75 miles of roadway widening and improvements, including sidewalks and bicycle lanes. Dudek prepared an ASR, HRER, and HPSR in support of this effort. Both properties were found ineligible under all designation criteria and integrity requirements. Responsibilities included background research for the required reports. (2017)

Historical Resources Assessment for the San Francisco International Airport Residential Sound Insulation Program, Cities of San Bruno and Millbrae, California. Dudek was retained by San Francisco International Airport to evaluate 28 residential properties constructed 50 years ago or more within the Cities of San Bruno and Millbrae in San Mateo County, California. These properties are proposed to receive installation of sound insulation materials as part of San Francisco International Airport's Residential Sound Insulation Program. All 28 properties were recorded and evaluated on State of California Department of Parks and Recreation Series 523 Forms for historical significance in consideration of NRHP designation criteria and integrity requirements. Responsibilities included architectural history field survey, background research, preparation of DPR forms for the evaluation of built resources, and co-authoring the cultural resources report. (2017)

Relevant Previous Experience

Other California Project Experience

Crenshaw/Los Angeles International Airport Transit Corridor Project, Terry A. Hayes Associates LLC, Los Angeles County, California. Conducted the architectural history survey and participated in the evaluation of over 100 built environment resources that may be affected by the Los Angeles County Metropolitan Transportation Authority's proposed Crenshaw/Los Angeles International Airport Transit Corridor Project. The project is approximately 8.5 miles in length and is located within the Cities of Los Angeles and Inglewood, Los Angeles County, California. Was involved in both architectural history field surveys and completion of over 100 DPR forms for the evaluation of built environment resources. The project was subsequently approved by SHPO with no comments. (2011)

East Los Angeles College Satellite Campus Project, Terry A. Hayes Associates LLC, City of South Gate, California. Conducted the architectural history survey and participated in the evaluation of built environment resources for a land development project in the City of South Gate, California. (2009)

San Gabriel Trench Grade Separation Project (Phases I, II, and III); Terry A. Hayes Associates LLC; Cities of San Gabriel, Alhambra, and Rosemead, California. Conducted the architectural history survey and participated in the evaluation of over 100 built environment resources that may be affected by the a proposed grade separation located within the Cities of San Gabriel, Alhambra, and Rosemead. The proposed project would lower a 2.2-mile section of Union Pacific Railroad tracks in the immediate vicinity of the historic Mission San Gabriel Arcángel. Was involved in both architectural history field surveys and completion of over 100 DPR forms for the evaluation of built environment resources. (2008–2010, 2011–2014)

Wetlands Pocket Park Project, City of Los Angeles Department of Public Works, Los Angeles, California. Conducted the architectural history survey and participated in the evaluation of built environment resources for the project, which was located on the site of a former rail yard for the City of Los Angeles Yellow Line. (2009)

Additional Work Experience

Sabe Preservation Consulting. Owned and operated a historic preservation consulting business in the Commonwealth of Virginia from 2004 to 2009. The bulk of the consulting work was for private property owners seeking to complete tax credit projects on their historic properties. Tax credit services offered included compliance with the Secretary of the Interior's Standards, on-site construction management, and preparation of all required documentation for the tax credit programs on the state and national level. Also performed a feasibility study for the relocation of three historic buildings within the City of Harrisonburg in 2005. The remainder of the work performed was NRHP nomination preparation. Listed the following properties on the Virginia Landmarks Register and the NRHP. (2004–2009)

David and Catherine Driver Farm, Rockingham County, Virginia. Prepared an NRHP nomination for the David and Catherine Driver Farm located in Rockingham County, Virginia. The property is an 823-acre Civil War era that included 7 historic buildings and 5 historic structures. Was responsible for all aspects of the nomination, including the architectural history field survey, background research, preparation of all survey forms for the evaluation of built resources, coordination with SHPO, preparation of historic context, preparation of archival material packets as required by the NPS and SHPO, and preparation of the NRHP nomination form. The David and Catherine Driver Farm was listed on the NRHP and the Virginia Landmarks Register in 2007.

George Chrisman House, Rockingham County, Virginia. Prepared the NRHP nomination for the George Chrisman House located in Rockingham County, Virginia. The property is a late nineteenth century farm with a limestone main house with attached kitchen, ruins of the old mill, and a pump house. Was responsible for all aspects of the nomination, including the architectural history field survey, background research, preparation of all survey forms for the evaluation of built resources, coordination with SHPO, preparation of historic context, preparation of archival material packets as required by the NPS and SHPO, and preparation of the NRHP nomination form. The George Chrisman House was listed on the NRHP and the Virginia Landmarks Register in 2006.

Old Town Historic District, City of Harrisonburg, Virginia. Prepared an NRHP nomination for the Old Town Historic District located in Harrisonburg, Virginia. The late-nineteenth and early twentieth century residential district included 387 contributing buildings, 1 contributing structure, and 62 non-contributing buildings. Was responsible for all aspects of the nomination, including the architectural history field survey, background research for all properties, coordination with state and local stakeholders, public presentations, preparation of all survey forms, entry of all survey data into the Commonwealth of Virginia historic resources database, definition of historic district boundaries, coordination with SHPO, preparation of historic context, preparation of archival material packets as required by the NPS and SHPO, and preparation of the nomination form. The Old Town Historic District was listed on the NRHP and the Virginia Landmarks Register in 2008.

Ramsay Estate, Albemarle County, Virginia. Prepared an NRHP nomination for the Ramsey Estate located in Albemarle County, Virginia. The property was an early twentieth-century farm with an elaborate architect designed main house and 15 contributing outbuildings. Was responsible for all aspects of the nomination, including the architectural history field survey, background research, preparation of all survey forms for the evaluation of built resources, coordination with SHPO, preparation of historic context, preparation of archival material packets as required by the NPS and SHPO, and preparation of the NRHP nomination form. The Ramsey Estate was listed on the NRHP and the Virginia Landmarks Register in 2004.

Whitesel Brothers Building, City of Harrisonburg, Virginia. Prepared the NRHP nomination for the Whitesel Brothers Building located in the City of Harrisonburg, Virginia. The building was an early twentieth century commercial building. Was responsible for all aspects of the nomination, including the architectural history field survey, background research, preparation of all survey forms for the evaluation of built resources, coordination with SHPO, preparation of historic context, preparation of archival material packets as required by the NPS and SHPO, and preparation of the NRHP nomination form. The Whitesel Brothers Building was listed on the NRHP and the Virginia Landmarks Register in 2004.

Owens-Thomas House Museum, Savannah, Georgia. Completed a plaster conservation project at the Owens-Thomas House in Savannah, Georgia. Responsibilities included conservation of deteriorated nineteenth century plaster and paint, management and training for the student intern program, preparation of project reports, education of staff and public, and management of all chemical and safety protocols. (2005–2006)

Andrew Bursan, MCRP

SENIOR ARCHITECTURAL HISTORIAN

Andrew Bursan is an architectural historian and urban planner with 14 years' experience in historic preservation, historic research, report writing, land planning, and project management. Mr. Bursan has worked with the California Department of Transportation (Caltrans), Los Angeles County Metropolitan Transportation Authority, City of Pasadena, City of Santa Monica, City of Los Angeles, City of Santa Barbara, and the City of Arroyo Grande, among others. His experience includes architectural surveys, reconnaissance-level surveys, historical assessments, and extensive historical research. He has prepared historic context statements, technical reports, and impact analysis for cultural resources in environmental impact reports (EIRs). Breadth of work includes major transportation projects, intensive archival research, citywide surveys, and analysis of individual properties under the California Environmental Quality Act (CEQA), Section 106, Section 4(f), and the National Environmental Policy Act.

Education

Cal Poly – San Luis Obispo
Master of City and Regional Planning (MCRP), 2005

University of California, Los Angeles, BA, History, 2002

Relevant Previous Experience

Education

South Region High School No. 13, Los Angeles Unified School District, California. Assisted with fieldwork and wrote property descriptions. ICF prepared an initial technical report in support of environmental documentation for the proposed new South Region High School No. 13, which is subject to review under CEQA. (2010)

Historical Assessment, Brentwood School, Los Angeles County, California. Performed extensive research on the site (e.g., building permits, City directories, libraries, microfiche, Internet) and wrote a portion of the historic context. ICF prepared a historical assessment for Brentwood School because of the proposed addition of three new buildings, three interior renovations of existing buildings, and modifications to the campus grounds. ICF performed a record search of previous evaluations of Brentwood School and a site visit. (2008)

Master Plan EIR, California State University, Dominguez Hills, Carson, California. Wrote the historic background. ICF prepared an EIR for the Campus Master Plan, which was prepared in 2006 as an update to the original 1964 Master Plan to provide the university with a framework for future campus development. The Master Plan proposes new academic and student service facilities, as well as remodeled existing facilities to accommodate near-term future student enrollment of 11,000 full-time-equivalent students by 2017 and long-term student enrollment of 20,000 full-time-equivalent students by 2040. Current student enrollment is approximately 9,000 full-time-equivalent students. The EIR analyses will focus on the environmental effects of the near-term (2017) development and student enrollment levels. (2007)

Municipal

Housing and Urban Development-Neighborhood Stabilization Program 2, Section 106 Consulting Services for Housing and Urban Development, City of Lansing, Michigan. Helped conduct field survey work in the City of Lansing. Provided

the City of Lansing's development office and the Ingram County Housing Commission with research services related to Neighborhood Stabilization Program 2-funded actions in potential historic districts. (2012–2013)

Downtown Long Beach Cultural Resources Survey, City of Long Beach, California. Conducted building permit research, building description, and directory research. ICF was retained in 2009 to conduct a reconnaissance-level survey of historic properties located within the Downtown Long Beach Planned Development District constructed through 1964. The purpose of the survey was to assist the City of Long Beach in the preparation of an EIR for the downtown community plan. (2009)

Santa Monica Citywide Survey, City of Santa Monica, California. Collected permit information and conducted property research. ICF completed an intensive-level Citywide historic survey of structures built through 1968. The project involved the completion of a reconnaissance-level survey of the entire City of Santa Monica and historical context statements for the City as a whole, as well as for specific areas. There are approximately 13,600 properties with structures constructed prior to 1968 within the City of Santa Monica. The project included a more intensive survey of relevant properties following the initial reconnaissance, resulting in a DPR primary record and/or continuation sheet for each such property. The City of Santa Monica's existing historic resources inventory contains approximately 1,300 properties, derived from initial surveys (Phases I and II between 1983 and 1986, Phase III in 1993) and area updates in 1994, 1997, 2002, and 2004. The project goal is to achieve a uniform level of evaluation for the entire City of Santa Monica. (2008–2009)

Ports and Harbors

Jankovich Fueling Station Historic Resources Assessment, Port of Los Angeles, San Pedro, California. Prepared a historic resources assessment of the Jankovich Fueling Station. Research included building permits, Sanborn Map, and archival material. (2019)

Canner's Steam Plant Historic American Build Survey Documentation, Port of Los Angeles, San Pedro, California. Prepared Historic American Build Survey compliance documentation for the historic Canner's Steam Plant. (2019)

San Pedro Waterfront Project Environmental Impact Statement/EIR, Port of Los Angeles, San Pedro, California. Conducted building permit, Sanborn Map, and library research. The Los Angeles Harbor Department (LAHD), in cooperation with the U.S. Army Corps of Engineers, is proposing the San Pedro Waterfront redevelopment project, which would entail redeveloping approximately 422 acres to expand and improve the public recreational and commercial use of the waterfront area. (2008–2009)

Port Historic Initiative Inventory and Conservation Plan, Port of Los Angeles, Wilmington, California. Assisted in the archiving, organization, and rehousing of historic photographs and materials. The LAHD possesses a significant collection of historic records and materials that remain hidden at various Port facilities. The purpose of the report is to assist LAHD in the initial steps of establishing an archival repository to house its historic materials and provide access to staff and the public. It illustrates that the LAHD holds a wide array of historic records, including paper documents, news clippings, photographic material, film, artifacts, and other valuable ephemeral resources. (2009)

Transportation

Ventura County Transpiration Corridor, Ventura County, California. In conjunction with Caltrans, the County of Ventura proposed to widen Interstate 101 for 26 miles through the county. Andrew managed field survey work, oversaw and delegated tasks for the creation of a Historic Resource Evaluation Report (HRER) and Historic Structures Report as well as writing historic context. He engaged in several meeting with Caltrans for the purposes of creating an area of potential effects (APE) for the project. (2019–2021)

I-605 Corridor Improvement Project, Los Angeles County, California. Managed field survey work, performed evaluations of historic properties under CEQA and Section 106, documented tract development resources under a programmatic agreement, wrote historic context, and attended meetings regarding the historic documentation of built resources. Andrew also oversaw the creation of compliance documents for the project. (2017–2020)

California High-Speed Train, Palmdale-to-Burbank, Orange and Los Angeles Counties, California. Served as Architectural Historian. Documented hundreds of properties for National Register of Historic Places and California Register of Historic Resources eligibility, wrote California Department of Parks and Recreation (DPR) forms, historic context, and helped develop the project APE. Andrew managed junior staff to help create the EIR, Historic Property Survey Report, and HRER for the project. (2008–2021)

California High-Speed Train, Anaheim-to-Los Angeles, Orange and Los Angeles Counties, California. Served as Architectural Historian. Mr. Bursan has done extensive work on the project including surveying and documenting hundreds of properties for National Register of Historic Places and California Register of Historic Resources eligibility. Other work on the project includes property database management, writing of historic context, writing DPR forms, and developing strategies for property documentation. (2014–2020)

Anaheim Rapid Connection Fixed Guideway Project and Streetcar LNTP (Anaheim Streetcar), City of Anaheim/Hill International, Anaheim, California. Served as Architectural Historian. Participated in the completion of the energy and utilities-services sections of the ARTIC tech report and EIR under CEQA and Section 106 guidelines. Wrote sections of the historic context and DPR forms for the historic resources section of the reports. Andrew conducted field survey work, building permit research, building description, and directory research. (2014–2015)

I-15 Widening from San Bernardino to I-215 Environmental Impact Statement/EIR, Riverside County Transportation Authority/HDR Engineering, California. Served as architectural historian. Performed site visits, building permit research, and City directory research, as well as wrote a portion of the historic context statement for the HRER. Architectural field surveys of the I-215 HOV lane gap closure project proposed APE were conducted according to standard Caltrans guidelines and procedures. 32 properties were surveyed for the HRER. (2013)

Metro Gold Line Eastside Extension Phase II, Section 106 and CEQA Cultural Resources, Los Angeles County Metropolitan Transportation Authority/Camp Dresser and McKee, Inc., California. Wrote the impacts analysis and mitigation for CEQA and Section 106 for the Los Angeles County Metropolitan Transportation Authority Eastside cultural resources technical memorandum. He conducted extensive building permit, Sanborn Map, and ProQuest research. (2009–2010)

Wilshire Bus Rapid Transit Project CEQA/National Environmental Policy Act Technical Studies, Los Angeles County Metropolitan Transportation Authority, California. Assisted in the field survey and conducted research for the project. Inner City Fund conducted an archaeological survey in 2008 to determine whether prehistoric or historical resources are present along the proposed route for the Wilshire Bus Rapid Transit project. The Wilshire Bus Rapid Transit project would extend 12.5 miles along Wilshire Boulevard between downtown Los Angeles and the City of Santa Monica but would exclude the City of Beverly Hills. (2009)

***P3a. Description:** (Describe resource and its major elements. Include design, materials, condition, alterations, size, setting, and boundaries)

The A-1 Trailer Park (subject property) at 1280 Pacific Coast Highway consists of a trailer park with five rows of mixed manufactured dwellings (mobile homes, motorhomes, single-wide dwellings) on a 3-acre rectangular parcel. While the entirety of the trailer park is on one parcel (APN 7411-019-016), an adjacent lot to the east (APN 7411-019-020) is utilized by residents for parking and was included in this evaluation as it is part of the overall Project site and is functionally linked to the subject property.

See Continuation Sheet.

***P3a. Description (continued):**

Each lot originally contained a 4-foot by 8-foot utility room with washer and dryer hookups, but at least 39 of these rooms have been demolished. The lots are now primarily vacant lots, with only the bases remaining where the rooms once stood. The utility rooms represent one of the only ancillary building types that remain on the site that date to the original construction in the 1940s.

Of the remaining dwellings on the subject property, roughly 63% are campers, 27% are more permanent single-wides, and 10% are motorhomes. All dwelling types are one story in height and sit directly on their concrete pads or atop a low base. Flat roofs or low-pitched roofs surmount most dwellings and fenestration includes both aluminum and vinyl slider windows on mobile homes and single-wides. Many units feature porch and auto shelter extensions projecting from the side elevations, and some are attached to motorhomes. Although it is difficult to discern the age of various mobile homes and single-wides, most dwellings appear to range in age from the early 1960s to the late 1990s. Currently 40 of the 91 trailer lots are vacant.

Amenities are limited to a side gabled, stucco clad, circa 1950s laundry room with a storage addition at the center of the subject property (see Figure 5). Along Pacific Coast Highway at the front of the subject property, permanent structures on the property include a front gabled former sales office (Figure 6), an office building (Figure 7), and a vacant, flat roof former retail building (Figure 8). While the former sales office has a "1270" affixed to the front of the building and the former retail building has a "1290," both buildings are on the parcel of 1280 Pacific Coast Highway (Figure 20). Landscaping is limited to small 3-foot by 3-foot garden patches on each lot that sometimes contain small trees.

Former Sales Office (Circa 1953)

The former sales office (1270 Pacific Coast Highway) is a one-story, front gabled building with a rectangular plan (see Figure 6). Non-original rough textured stucco finishes exterior surfaces and fenestration includes non-original vinyl sash windows on multiple elevations. A small awning shelters a wood front door entrance with a security door on the primary north elevation. A rear garage addition in 2015 doubled the footprint of the building.

Office Building (Circa 2000)

An office building dating to circa 2000 is sited along Pacific Coast Highway side of the property (see Figure 7). This is a one-story building with a side gabled roof and rectangular plan. Vertical wood board siding clads exterior surfaces. Windows are sliding vinyl sash. A four-step wood entrance leads to a wood frame entrance on the eastern side elevation. A wood fence on brick lines the street-facing elevation.

Former Retail Store and Restaurant (1946)

The former retail building (1290 Pacific Coast Highway) is one-story, on a rectangular plan, and topped by a flat roof with a raised parapet (see Figure 8). Two fixed pane metal picture windows with security bars are affixed to the fenestration on the primary elevation. An infilled and centered front door are also found on the primary elevation of the stucco clad building. Side elevations feature non-original wood door entrances, and a brick veneer extends along the east and rear elevations.

Identified Alterations

The On September 1, 2021, Dudek obtained building permits and records through the Online Building Records website (https://ladbsdoc.lacity.org/) filed after 1946 (the original date of the construction) for parcels within the Project site (APNs 7411-019-016 and 7411-020-039) for new construction, demolition, alteration, and additions. Observed alterations are also included in this section, and dates stated if known:

- 1945. Construction of eight 4-foot by 8-foot utility rooms for $200. (Permit No. 84936)
- 1946. Construction of a 20-foot by 40-foot retail building (now 1290 Pacific Coast Highway) for $5,000. (Permit No. 86379)
- 1947. Construction of 4-foot by 8-foot utility rooms for $200. (Permit No. 85990)
- 1948. Construction of 4-foot by 8-foot utility rooms for $200. (Permit No. 7080)
- 1949. Construction of 32 4-foot by 8-foot utility rooms for $4939. (Permit No. 906)
- 1959. Sign addition for $1,350 (Permit No. LA26236)
- 1964. Restaurant conversion for 1290 Pacific Coast Highway building (Permit No. 30546)
- 1970. Auto-sale conversion for 1290 Pacific Coast Highway building (Permit No. 44123)
- 1979. Door alteration to 1290 Pacific Coast Highway building for $300 (Permit No. 61405)
- 2015. Office conversion to 1290 Pacific Coast Highway building (Permit No. B15VN03776)

***B10. Significance (continued):**

Historical Overview of Harbor City and Wilmington

Prior to European settlement, the Wilmington-Harbor City area of Los Angeles County was the traditional home of the indigenous peoples of the Tongva nation. In 1784, Spain conferred the first private land concession in Southern California, the Rancho San Pedro land grant, to Portola Expedition member Juan Jose Dominguez. Dominguez developed the 43,119.13-acre rancho agriculturally by planting wheat. Grain remained a regional staple until the Dominguez heirs sold a portion of Rancho San Pedro to William Sanford, John Downey, and Benjamin Wilson in 1854 (GPA 2012: 6; State Lands Commission 1982: 50; Native Land Digital 2021).

Sanford, Downey, and Wilson partnered with entrepreneur Phineas Banning to construct wharves and warehouses to serve the City of Los Angeles. By the time the port was fully constructed, a small hamlet that supported the development of the port emerged directly inland. In 1858, the wharf was opened for business and the associated hamlet was officially designated New San Pedro. In 1863, New San Pedro was renamed to Wilmington in honor of Banning's hometown of Wilmington, Delaware (GPA 2012: 7).

Wilmington's first development boom coincided with the beginning of the American Civil War. In 1861, Banning and Wilson donated land north of the wharf to the U.S. Armed

Forces. The military developed Fort San Pedro, known colloquially as Fort Drum, to be used as the Union Army headquarters for the State of California and the Arizona Territory. In 1862, Wilmington became the Los Angeles terminus for the transcontinental telegraph line. These developments led to continuous industrial development near the waterfront, while residential development inland remained sparse (GPA 2012: 7; Hart 1965: 36).

In the mid-1860s Banning proposed the development of Southern California's first regional railroad, the Los Angeles and San Pedro Railroad. Construction began on the route in 1868 and concluded in 1869. The railroad resulted in lowered freight and transportation costs, which ensured the continued development of Wilmington. Wilmington was incorporated as a city in 1871 because of its economic success as a port. In 1874, Wilson College, a precursor to the University of Southern California, opened as the first coeducational college west of the Mississippi in Wilmington (GPA 2012: 7; Water and Power Associates 2021).

Wilmington grew steadily until the mid-1880s. Between the late 1880s and the early 1900s, Wilmington's development stagnated when the Southern Pacific Railroad gained control of the Los Angeles and San Pedro Railroad and extended the line beyond Wilmington and into San Pedro to the southwest. In addition, San Pedro was chosen as the site for the harbor of the City of Los Angeles, leading many of the City of Wilmington's businesses to move to San Pedro. Due to its economic decline, Wilmington's incorporation was revoked in 1887 (GPA 2012: 7).

Wilmington's development remained stagnant until the Pacific Electric Interurban Railroad extended its streetcar line through Wilmington to San Pedro and included a stop in Wilmington on the new line. In 1907, Wilmington was reincorporated as a city because of the increased economic activity reintroduced to the area by the Pacific Electric Interurban Railroad. Another commercial industrial development that shaped the Wilmington-Harbor City area in 1907 was the official opening of the Port of Los Angeles to the southwest. In 1909, Wilmington was consolidated into the City of Los Angeles (GPA 2012: 7).

In 1914, a new neighbor was founded directly east of Wilmington, Harbor City. Although Harbor City shared Wilmington's proximity to the industrial Port of Los Angeles, it developed as a residential area instead of as an industrial one. Together, Wilmington and Harbor City provided housing and industry linking the Port of Los Angeles to the wider region.

In 1920, oil was discovered near Wilmington-Harbor City and industrial growth increased exponentially. The new economic opportunity in Wilmington spurred developmental growth in the largely residential community of Harbor City. In 1920, Wilmington-Harbor City's population was 2,250; 10 years later the area's population had increased to 15,486. To accommodate the rapidly increasing population, commercial corridors were constructed on larger streets with single-family and multifamily residential developments interspersed between smaller, gridded streets. In 1932, the discovery of the Wilmington Oil Field, which is the largest oil field in California and the third largest oil field in the contiguous United States, further increased development in Wilmington-Harbor City (GPA 2012: 8; Poe 2021).

While Wilmington-Harbor City saw the first signs of residential growth during the 1930s, the Great Depression generally slowed economic and developmental growth in the region. The fishing industry became the largest employer in the area during the 1930s. Because of the 1934 "Big Strike," which began in San Francisco before spreading across the West Coast, labor unions saw increased influence over the state's ports. The International

Longshoreman's and Warehousemen's Union, founded in 1937, established a chapter in Wilmington. By the 1950s, the area was known for its influential labor unions (GPA 2012: 8; Water and Power Associates 2021).

During World War II, the Wilmington-Harbor City area was chosen as the Los Angeles Port of Embarkation. The Los Angeles Port of Embarkation consisted of 118 acres, 101 of which were leased land acquired from private, municipal, and commercial entities from Wilmington-Harbor City. From this port, military personnel were dispatched to fight in the Pacific Theater. Although most non-war related development slowed during World War II, construction began on the Harbor Steam Plant, a power plant, in 1943. Construction of the plant stalled in the same year of its commencement and did not resume until 1947. Construction of the plant concluded in 1949. Upon completion, the plant was renamed the Harbor Generating Station. The station was taken offline in 1991 due to inefficiency and outdated technology (U.S. Army Corps of Engineers 2016; Daily Breeze 2021; Best of the South Bay 2018).

In the 1950s, Wilmington-Harbor City experienced a building boom, which coincided with a building boom across all of Los Angeles County. During the 1950s the Harbor Freeway (Interstate 110), Harbor Regional Park, and Los Angeles Harbor College (originally named Los Angeles Harbor Junior College) were developed. In 1958, the Matson Navigation Company delivered the first shipment of 20 containers to the Port of Los Angeles, resulting in the containerized cargo revolution. Containers proved much easier than shipping bulky packages, drastically increasing the amount of goods moved throughout ports and local corridors like the Harbor Freeway. By 1959, the Port of Los Angeles had already handled 7,000 shipping containers. By 2000, the Port of Los Angeles operated as the busiest port in North America, which supported the commercial and industrial environment of surrounding communities, including Wilmington-Harbor City (Estrada 2014).

Major residential growth in Wilmington-Harbor City occurred in the 1920s and the 1950s. A third wave of residential, industrial, and commercial development began in the 1960s and continued into the current century. As the Port of Los Angeles continued to expand and bring increased commercial and industrial opportunities to Wilmington-Harbor City, residential buildings were constructed throughout the area. Single-family residences continued to dominate the smaller streets between thoroughfares. In the 1960s, there was a dramatic growth in multifamily residential developments. During the 1960s, a variety of multifamily residential developments, including apartment housing, multifamily residential districts, and neighborhoods comprised of manufactured homes were constructed in the area (LADCP 2000: 6).

The Wilmington-Harbor City area has continued to experience steady growth in the twenty-first century. The population increased from 51,517 in 2000 to 82,858 residents by 2017 estimates. Industrially, Wilmington-Harbor City continues to function as Los Angeles County's main industrial economic engine due to its oil refineries and production, goods movement, and the Port of Los Angeles. Labor unions continue to play a prominent role in the area's industrial development and politics. Commercially, Wilmington-Harbor City is not solely reliant on industrial commerce. During the twentieth and twenty-first centuries, Wilmington-Harbor City developed major commercial shopping centers and tourist amenities along Avalon Boulevard in Wilmington and along Pacific Coast Highway in Harbor City (ACS 2010; LADCP 2014; LADCP 2017; LADCP 2000: 4).

Property Type: Trailer Parks and Mobile Homes

The following trailer parks and mobile homes context draws content primarily from the Los Angeles Citywide Historic Context Statement theme for Trailer Parks and Mobile Homes

(City of Los Angeles Office of Historic Resources 2016) and A Field Guide to American Houses (McAlester 2015).

Trailer Parks and Mobile Homes, 1920–Present

In Los Angeles, trailer parks and mobile home parks represent a significant multifamily residential development type, illustrating the transition of prefabricated mobile housing from solely tourism-related applications to inexpensive permanent dwellings. The modern trailer and mobile home park evolved from development types called auto camps, auto courts, or motor courts in the 1910s. Equipped with amenities like bathhouses, kitchens, and laundry areas, auto camps provided an alternative to the early practice of automobile camping along the roadside or having to stay at downtown hotels that were ill-suited for automobile travelers due to lack of parking for their vehicles (City of Los Angeles Office of Historic Resources 2016: 4).

During the 1930s, the first true mobile homes were developed for use as travel trailers. These mobile houses were small and light enough to tow behind a car. For the first time, as the Great Depression hit in the early 1930s, car camps began to accommodate more permanent trailer housing or trailer parks. California lawmakers, encouraged by trailer manufacturers, passed the State Trailer Camp Act in 1937 in response to the rapid growth of concentrated trailer dwellings in the state. The law established criteria for trailer camp development and was revised numerous times throughout the 1940s to increase the standards (City of Los Angeles Office of Historic Resources 2016: 5; McAlester 2013: 149).

Demand increased for long-term residential trailer camps or parks in Southern California in the years following World War II when returning soldiers and their families joined new California immigrants in their search for inexpensive accommodations. By 1945, the federal government had made a significant investment in the trailer sector, ordering over 150,000 units. By 1949, Los Angeles County boasted 40 trailer parks, with nearly half of them located inside the city boundaries of Los Angeles. Since house trailers were still seen as temporary rather than permanent dwellings in the 1940s, their design remained substantially unaltered from the "single-wide," with the emphasis on mobility and cost. While the classic single-wide home is 8 feet wide, they often include porch, deck, carport, and garage extensions that can take the width upwards of 16 feet. The earlier 1940s and 1950s designs had a linear plan and a single file of rooms (McAlester 2013: 149–150). Also, in the spirit of low cost and mobility, parks of the 1940s offered few amenities compared to parks built after the mid-1950s.

The Project site at 1280 Pacific Coast Highway represents a highly altered version of a typical utilitarian trailer park from the mid-1940s. By 1949, Los Angeles County had several trailer parks. Within the southwest area of Los Angeles County, near the subject property, these included Olympic Trailer Court (2121 Bundy Drive, Santa Monica) Chaney Trailer Camp (1415 N. Fries Avenue, Wilmington), Knoll Hill Trailer Park (290 Viewland Place), La Rambla Trailer Park (126 N. Bandini Boulevard), Pepper Tree Auto Court (1036 McFarland Avenue, Wilmington; extant), and Williams Auto Court (222 Pacific Coast Highway, Wilmington). Of these trailer parks, 1036 McFarland Avenue, Wilmington is the only extant example (City of Los Angeles Office of Historic Resources 2016: 7-8; McAlester 2013: 149-150; San Pedro-Wilmington City Directory 1949: 742).

Trailer design began to change in the late 1950s and early 1960s, with manufacturers offering larger, more permanent alternatives that more closely resembled conventional homes. Mobile home parks had become a well-known and even attractive dwelling style by 1960, notably in Southern California. Community buildings, swimming pools, and organized

events were all common features of the region's mobile home parks. Other mobile home parks in Los Angeles had nothing in the way of landscaping or community facilities. Often these types of parks were relegated to the fringe areas of a given city. The Harbor City Mobile Home Park (760 Lomita Boulevard, Harbor City, built 1971) represents a later, local example of a park with more spacious homes and amenities such as a pool and community center (City of Los Angeles Office of Historic Resources 2016: 8-10; McAlester 2013: 150).

The U.S. Department of Housing and Urban Development finalized a set of standardized criteria for the building of mobile houses in 1976, and the Housing Act of 1980 mandated the use of the term "manufactured home" instead of "mobile home." As people took up more full-time residency in trailers in the postwar period, the single-wide trailer became the preferred manufactured dwelling type for trailer parks and gradually replaced more transient camper dwelling types during the 1950s. Single-wide manufactured homes range in size to up to 16 feet wide and up to 70 feet long. They are delivered to the job site, installed on a foundation built on site, and seldom relocated. Decks, porches, carports, garages, and room expansions are commonly added to these homes. A double-wide is made up of two linear sections, each without a side wall, that are meant to be linked together to make a single, larger building. In the modern era, manufactured housing continues to provide shelter to a large sector of Americans (McAlester 2013: 150).

Mobile Home and Manufactured Home Sub-Types (1930-Present)

Manufactured homes represent a prevalent type of house in modern America and are loosely grouped into the following subtypes: motorhomes and campers, single-wide homes, and double-wide homes. Manufactured housing is assembled completely in a factory. Unlike the closely related "modular home," a manufactured home is typically exempt from local building codes, but legally must maintain a steel chassis for mobility. The trailer park at 1280 Pacific Coast Highway features two types of mobile homes: campers and non-permanent RV motorhomes. The subject property also features later manufacturer homes known as single-wides. There are no double-wide types on the A-1 Trailer Park property.

Mobile Home Subtype: Camper

The earliest examples of mobile homes date to the 1930s as campers and travel trailers. Typically 8 feet wide, they could easily be attached to automobiles as trailers. Early campers featured a rudimentary layout but soon took on a more permanent design after World War II. The mobile home industry produced the first 10-foot-wide models in 1954 and by 1968, widths reached 12 feet. In the 1960s, the length of mobile homes increased as well to accommodate bathrooms, which were absent in most early trailers (McAlester 2013: 149–150) (see Figure 4).

Mobile Home Subtype: RV Motorhome

Motorhomes provide temporary living quarters, but differ from both a mobile home and single-wide because motorhomes are permanently attached to self-propelled motor vehicle chassis or a van and built by a licensed motorhome manufacturer . There are two types of motor homes. The larger style is constructed on a truck chassis with a gasoline or diesel engine and has a high fuel capacity, allowing it to travel great distances. The smaller or mini-motor home is built on a van chassis with a portion that extends beyond the cab (McAlester 2013: 149-150).

Mobile Home Subtype: Single-Wides

Single-wides represent the most prevalent style of manufactured home in America and a more permanent style of dwelling. While the classic single-wide home is 8 feet wide, they often include porch, deck, carport, and garage extensions that can take the width upwards of 16 feet (see Figure 3). The earlier 1940s and 1950s era designs had a linear plan and a single file of rooms. Manufacturers increasingly offered designs to accommodate different size lots with embellishments like shallow gables or changes in cladding, often in an effort to mimic Ranch houses (McAlester 2013: 149–150).

History of the Subject Property

The earliest aerial photograph of the A-1 Trailer Park dates from 1932 and indicates that the Project site was a vacant lot along an unpaved Pacific Coast Highway. In 1932, the surrounding area was sparsely developed with single-family dwellings with about half the lots vacant and Machado Lake visible to the east. By 1941, the subject Project site contained shed buildings along the northern and western parcel boundary, but they appear to have been demolished when the trailer park was developed in 1946 and do not appear in the 1953 aerial map. The surrounding neighborhood had remained only partially developed by 1941, but Pacific Coast Highway had been reconfigured since 1932 to reflect its current configuration (NETR 1952; UCSB 1932, 1941).

Developer Lester N. Moore began construction of the A-1 Trailer Park at 1280 Pacific Coast Highway in 1945 on a formerly vacant lot and opened the park in 1946. Building permits associated with the property do not list an architect for the trailer park and Moore acted as the builder-contractor. A separate slim parcel paved in asphalt sits just to the east of the trailer park and serves as a parking lot for the site. The surrounding neighborhood remained sparsely developed in this period with single-family homes and roughly half the lots vacant. A commercial corridor along Pacific Coast Highway also appears to have emerged at this time. Building permits from 1945 to 1948 show that Moore constructed a series of 4-foot by 8-foot utility buildings on each trailer lot (see Figure 21). A 1952 aerial shows the three easternmost rows of the park lined with trailers, similar to their modern arrangement. Also, during 1946, Norman Hansen built a modest 20-foot by 40-foot, flat roof, stucco clad commercial building (Permit No. 86379, still extant) at the northwestern corner of the subject property. Based on building permits, the building first appears to have opened as a retail building and was converted to a retail restaurant in 1964. The businesses names are not listed in city directories and little information regarding the building's occupants could be found. In 1950, a front gabled, stucco clad sales office was constructed near the northeastern corner of the lot (Permit No. LA23985); this building is still extant but with major alterations. In this building, the subject property had a short-lived trailer sales component in addition to the existing trailer park, which existed from the early 1950s to the early 1960s (City of Los Angeles Department of Building and Safety 1945, 1946, 1948; NETR 1952, 1953, 1963; UCSB 1960; San Pedro News-Pilot 1945, 1946).

The first aerial photography featuring the trailer park was taken in 1952. This aerial photography shows a neighborhood that was largely developed. In an aerial photograph from the following year, 1953, the subject property consists of a 20-foot by 40-foot foot 1946-era building (Permit No. 86379, still extant) at the northwestern corner of the property, a sales office at the northwest corner of the property, and three rows of trailers on the east end of the property. In the 1952 aerial, Frampton Avenue had yet to be paved, but paving appears by a later 1953 map (NETR 1952, 1953; City of Los Angeles Department of Building and Safety 1946).

The next available aerial image from 1960 shows the construction of an additional two rows of trailers on the western end of the subject property; these rows appear completed

by the 1962 aerial and brought the total number of rows in the trailer park to five. By the early 1960s, the surrounding neighborhood was completely built out with the emergence of large commercial buildings along Pacific Coast Highway (UCSB 1960, 1962).

Beyond the intermittent replacement of mobile homes on the subject property over the decades, the trailer park retained its basic configuration from the early 1960s well into the 1980s based on aerial images. A 2000 aerial image shows a former trailer site replaced with a new street facing office building at the center of the subject property, which appears to remain to the present day. Since roughly 2010, aerial images suggest the removal of many trailers on the site as evidenced by the number of vacant trailer sites. To date, 40 of the 91 trailer spaces have been vacated since the park was at full capacity in the 1990s (see Figure 22). In addition, the 1950 former sales office had a circa 2015 rear addition that doubled the building in size. Beyond the 47 vacant lots on the site, the style of trailer currently occupying the subject property is a mix of 8-foot-wide post-World War II trailers, more permanent single-wide trailers with extensions, and newer motorhomes (NETR 1980, 1994, 2000, 2005, 2010).

Significance Evaluation

The A-1 Trailer Park property (1280 Pacific Coast Highway; APNs 7411-019-016 and 7411-020-039) does not meet any of the criteria for listing in the NRHP, CRHR, or the City of Los Angeles HCM List, either individually or as part of an existing historic district, based on the following significance evaluation.

Criterion A/1/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

The context in the Los Angeles Citywide Historic Context Statement considered under this criterion is Multi-Family Residential Development, specifically the theme of Trailer Parks and Mobile Homes. As a trailer park property developed in the mid-1940s, A-1 Trailer Park is associated with the trend of postwar mobile home parks and the larger trend of postwar multifamily development. The subject property represents one of many similar trailer parks that emerged in the 1940s and early 1950s that exhibit a simple, utilitarian design devoid of amenities found in trailer parks and mobile home parks built after the mid-1950s. As a common example of its type, the A-1 Trailer Park did not play an important role in the overall trend of postwar trailer home or multifamily developments and the subject property is not linked to a development innovation. Research also did not suggest the subject property is associated with more specific events or patterns of events that have historical significance in Harbor City or greater Los Angeles. For these reasons, the subject property at 1280 Pacific Coast Highway does not appear significant under NRHP Criterion A, CRHR Criterion 1, and LA HCM Criterion 1.

Criterion B/2/2: That are associated with the lives of persons significant in our past.

To be eligible under NRHP Criterion B, CRHR Criterion 2, and LA HCM Criterion 2, the subject property would need to be directly associated with a person considered historically significant at the local, state, or national level. Lester N. Moore first developed the subject property in 1946 as A-1 Trailer Park, but research did not show him developing other trailer parks or residential developments and he appears to have been a small-scale developer. No further information could be found about the life and work of Lester N. Moore. This indicates he was not a historic personage. Newspaper.com and directory research did not reveal other individuals connected to this property who may have been important individuals to local history. Based on the research conducted on the area's history, a reasonable likelihood does not exist that additional information

will identify a historically significant person associated with the subject property. For these reasons, the subject property at 1280 Pacific Coast Highway does not appear significant under NRHP Criterion B, CRHR Criterion 2, and LA HCM Criterion 2.

Criterion C/3/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The subject property at 1280 Pacific Coast Highway was constructed in 1946 and is typical of low-cost trailer parks built after World War II to accommodate the increasing housing demand. By their nature, the trailer parks of the 1940s and early 1950s were very utilitarian and did not have many features. Though minimal, these trailer parks could be characterized by lots for trailers, utility rooms, signage, and ancillary support buildings. The subject property does not exhibit a substantial number of these character-defining features. Of the 91 lots, 40 are used for campers and motorhomes, not the trailer types they were designed for. At least 39 lot utility rooms have been demolished. There is no original signage. With the absence of character-defining features, the property does not convey significance as an example of the 1940s/1950s trailer park property type. For these reasons, the subject property does not appear to meet NRHP Criterion C, CRHR Criteria 3, and LA HCM Criterion 3.

Criterion D/4/4: That have yielded, or may be likely to yield, information important in prehistory or history.

The property is not significant under Criterion D of the NRHP, Criterion 4 of the CRHR, or LA HCM Criterion 4 as a source, or likely source, of important historical information, nor does it appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

As the property is not significant under any of the NRHP criteria, the integrity of the property does not require examination. It is worth noting, however, that the property lacks integrity as a whole. The A-1 Trailer Park no longer retains integrity of design, materials, and workmanship due to numerous alterations on the site that include the following:

- Alterations to street-facing permanent buildings, including the recladding, replacement windows, and rear addition to the "1270" building in the northwestern corner of the property
- Vacancy of 40 of the 91 lots with a preponderance of non-permanent dwelling types like campers and motorhomes
- Demolition of at least 39 lot utility rooms dating to the initial development of the property (1940s and 1950s)
- Removal of original signage

With the material alteration and demolition of buildings and ancillary structures such as utility rooms, the original workmanship is lost. The property retains its original location. While individual building and units have experienced alterations, the overall layout of the trailer park has remained the same since a western expansion of the site in 1960; however, the integrity of design is diminished overall with the loss of original components of the trailer park plan. The surrounding area, especially around Pacific

Coast Highway, has remained a business commercial corridor going back to the 1940s; therefore, integrity of setting is largely intact. The trailer park continues to convey its use and is easily recognizable for the purpose it has served; thus, integrity of feeling is intact. The property is not significant under Criteria A or B and is not associated with an important historic event or person. Therefore, this aspect of integrity does not apply, as there is no historic association. While the property does retain some elements of integrity, the loss of workmanship and materials results in a property that does not retain the requisite integrity for designation and does not rise to the level of significance required for designation at the national, state, or local levels.

Summary of Evaluation Findings

No historical resources were identified within the Project site as a result of the extensive archival research, field survey, and property significance evaluation. The A-1 Trailer Park property located at 1280 Pacific Coast Highway (APNs 7411-019-016 and 7411-019-020) does not appear eligible for NRHP, CRHR, or City of Los Angeles designation due to a lack of significant historical associations, architectural merit, and physical integrity. Therefore, the subject property is not considered a historical resource.

Paleontological Resources Review

DUDEK
2280 HISTORIC DECATUR ROAD, SUITE 200
SAN DIEGO, CALIFORNIA 92106
T 619.591.1370 F 619.591.1399

MEMORANDUM

To:	Alex Wong, Red Oak Investments, LLC
From:	Michael Williams, Ph.D.
Subject:	Paleontological Resources Review – 1280 Pacific Coast Highway Mixed-Use Development
Date:	May 29, 2024, Updated November 2024
cc:	Michele Finneyfrock, Sarah Siren, Dudek
Attachment:	Confidential Attachment A. Paleontological Records Search Results Letter

Dudek has received and reviewed the results of a paleontological resources records search for the 1280 Pacific Coast Highway Mixed-Use Development Project (Project) and is providing this memo to Red Oak Investments, LLC (Red Oak) to summarize the results of the records search and consider the potential for Project implementation to result in impacts on paleontological resources. The City of Los Angeles (City) is the lead agency responsible for compliance with the California Environmental Quality Act (CEQA) for this Project. A paleontological resources records search was conducted by the Natural History Museum of Los Angeles County (LACM). Dudek also conducted a review of published geological maps and paleontological literature. This paleontological resources study was completed in accordance with CEQA and guidelines from the Society of Vertebrate Paleontology ([SVP] 2010).

On November 24, 2021, the City Council certified the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR, to adopt the 2021-2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element), hereafter referred to as the "Housing Element Program EIR." Pursuant to CEQA Guidelines Section 15168(c)(4), the following paleontological resources analysis is provided in support of the Project's determination of consistency with the scope of the program analyzed in the Housing Element Program EIR and its environmental impacts. The following Housing Element Program EIR mitigation measures (MMs) are addressed herein:

- Housing Element MM 4.5-1(a): Paleontological Procedures for Discretionary Projects
- Housing Element MM 4.5-1(b): Worker Environmental Awareness Program, Fossil Salvage, and Construction Monitoring
- Housing Element MM 4.5-1(c): Construction Monitoring
- Housing Element MM 4.5-1(d): Fossil Discovery, Salvage, and Treatment

Project Location and Description

The Project would involve the construction and operation of a mixed-use building consisting of 354 multi-family residential units (42 of which would be affordable units); 1,500 square feet of commercial space; and a 575-stall parking garage. The mixed-use building would have a maximum height of 80 feet. The Project site is located within the Wilmington – Harbor City Community Plan Area of the City of Los Angeles (City), at the southeastern corner of Pacific Coast Highway and Frampton Avenue. The site consists of two parcels (APNs 7411-019-016 and 7411-019-020) and is 3.7 acres in size. The site is generally addressed as 1268, 1270 & 1290 Pacific Coast Highway & 25900 Frampton Avenue, Los Angeles, California 90710. The Project site is currently occupied with mobile homes, trailers, and a former vehicle storage lot. These existing uses would be closed and demolished as part of the Project.

Regulatory Framework

California Environmental Quality Act

Paleontological resources, which are limited, nonrenewable resources of scientific, cultural, and educational value, are recognized as part of the environment under the State CEQA Guidelines. This study satisfies project requirements in accordance with CEQA (13 PRC, 21000 et seq.) and Public Resources Code Section 5097.5 (Stats 1965, c 1136, p. 2792). This analysis also complies with guidelines and significance criteria specified by the Society of Vertebrate Paleontology (SVP 2010).

Paleontological resources are explicitly afforded protection by CEQA, specifically in Section VII(f) of CEQA Guidelines Appendix G, the "Environmental Checklist Form," which addresses the potential for adverse impacts to "unique paleontological resource[s] or site[s] or … unique geological feature[s]." This provision covers fossils of signal importance – remains of species or genera new to science, for example, or fossils exhibiting features not previously recognized for a given animal group – as well as localities that yield fossils significant in their abundance, diversity, preservation, and so forth. Further, CEQA provides that a resource shall be considered "historically significant" if it has yielded or may be likely to yield information important in prehistory (PRC 15064.5 [a][3][D]). Paleontological resources would fall within this category. The PRC, Chapter 1.7, sections 5097.5 and 30244 also regulates removal of paleontological resources from state lands, defines unauthorized removal of fossil resources as a misdemeanor, and requires mitigation of disturbed sites.

California Public Resources Code Section 5097.5

California Public Resources Code (PRC) Section 5097.5 provides protection for paleontological resources on public lands, where Section 5097.5(a) states, in part, that:

> No person shall knowingly and willfully excavate upon, or remove, destroy, injure, or deface, any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, rock art, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over the lands.

City of Los Angeles General Plan

The City's General Plan Conservation Element recognizes paleontological resources in Section 3: "Archeological and Paleontological" (II-3), specifically the La Brea Tar Pits, and identifies protection of paleontological resources as an objective (II-5). The General Plan identifies site protection as important, stating, "Pursuant to CEQA, if a land development project is within a potentially significant paleontological area, the developer is required to contact a bonafide paleontologist to arrange for assessment of the potential impact and mitigation of potential disruption of or damage to the site. Section 3 of the Conservation Element, adopted in September 2001, includes policies for the protection of paleontological resources. As stated therein, it is the City's policy that paleontological resources be protected for historical, cultural research, and/or educational purposes. Section 3 sets as an objective the identification and protection of significant paleontological sites and/or resources known to exist or that are identified during "land development, demolition, or property modification activities." Section 5 of the Conservation Element recognizes the City's responsibility for identifying and protecting its cultural and historical heritage. The Conservation Element establishes the policy to continue to protect historic and cultural sites and/or resources potentially affected by proposed land development, demolition, or property modification activities, with the related objective to protect important cultural and historical sites and resources for historical, cultural, research, and community educational purposes.[1]

Geological and Paleontological Setting

The Project site is located within the northernmost Peninsular Ranges Geomorphic Province (Norris and Webb 1990; California Geological Survey [CGS] 2002). This geomorphic province is characterized by northwest trending mountain ranges and valleys that extend over 900 miles from the tip of the Baja California Peninsula to the Transverse Ranges (i.e., the San Bernardino and San Gabriel Mountains in southern California). Regionally, the Peninsular Ranges are bounded to the east by the Colorado Desert and the west by the continental shelf and offshore islands (Santa Catalina, Santa Barbara, San Nicholas, and San Clemente) (Norris and Webb 1990; CGS 2002). Regional mountain ranges in the Peninsular Ranges Geomorphic Province include the Santa Ana, San Jacinto, and Santa Rosa Mountains. Geologically, these mountains are dominated by Mesozoic, plutonic igneous and metamorphic rocks that are part of the Peninsular Ranges batholith (southern California batholith) (Jahns 1954).

More specifically, the Project site lies within the southwestern block of the Los Angeles Basin (Yerkes et al. 1965). The Los Angeles Basin (also called the coastal plain) extends from the Santa Monica Mountains in the north to the San Joaquin Hills of Orange County in the south and is a structural basin that in some areas has been subsiding and filling with sediments since the late Cretaceous (Yerkes et al. 1965). The Los Angeles Basin is characterized by alluvial coastal plains, underlain by older alluvial and marine sediments, and punctuated by uplifted highlands owing to the numerous faults underlying the Basin. These faults, which include the Newport-Inglewood fault zone in the south and the Sierra Madre fault zone in the north (a reverse fault), are part of the greater San Andreas fault system, characterized by numerous strike-slip faults.

Surficial geological mapping by Dibblee et al. (1999) at a scale of 1:24,000 indicated the Project site is underlain by late Pleistocene (~ 129,000 to 11,700 years ago) elevated alluvium (map unit Qae). Similarly, according to the geotechnical report, the Project site is underlain by Pleistocene alluvium to a depth of at least 40 feet below the ground surface (bgs) (Geocon West, Inc. [Geocon] 2018). One of the four geotechnical borings for the Project

[1] City of Los Angeles General Plan, Conservation Element, pages II-6 to II-9.

indicated artificial fill was present to a depth of two feet bgs. Pleistocene alluvial deposits have high paleontological resource sensitivity or potential in this part of the Los Angeles Basin.

Past excavation activities within the southwestern Los Angeles Basin have encountered paleontological resources in Pleistocene alluvial deposits. Jefferson (1991) reported numerous localities from this part of Los Angeles County that yielded Ice Age fossil amphibians, reptiles, birds, and mammals, including turtle (*Clemmys* sp.), gopher (*Thomomys* sp. cf. *T. bottae*), rodents (*Spermophilus sp. cf. S. beecheyi*), vole (*Microtus californicus*), rabbit (*Lepus* sp.), tapir (*Tapirus* sp. cf. *T. californicus*), sloth (*Paramylodon*), mammoth (*Mammuthus*), mastodon (*Mammut americanum*), horse (*Equus*), camel (Camelidae), deer (*Odocoileus* sp. cf. *O. hemionus*), pronghorn (*Capromeryx* sp.), bison (*Bison*), carnivore (*Canis latrans, Canis* sp. cf. *C. dirus*).

Paleontological Records Search

Dudek requested a paleontological records search from the LACM on September 1, 2021, and the results were received on September 17, 2021. The LACM did not report any fossil localities from within the Project site, but they do have nearby localities from deposits similar to those underlying the site on the surface and at depth (Confidential Attachment A). In addition to fossils from Pleistocene alluvial deposits, similar to those mapped on the surface of the Project site, the LACM reported fossils from Pleistocene marine deposits (Palos Verdes Sand and San Pedro Sand). These deposits occur at depth and were not recorded in the geotechnical borings, which attained a depth of 40.5 feet bgs (Geocon 2018). Therefore, they are not discussed further herein. The closest Pleistocene vertebrate fossil locality is LACM VP (Vertebrate Paleontology) 3249, which is an unknown geological unit from Lomita that may be in part, marine and produced mastodon (*Mammut*), bison (*Bison*), camel (*Camelops*, *Tanupolama*), sea lion (*Eumetopias*), ground sloth (*Megalonyx*), horse (*Equus*), tapir (*Tapirus*); loon (*Gavia*), grebe (*Achmophorous*), sea duck (*Chendytes*), teleost fish, and other unspecified vertebrates (Confidential Attachment A). The next closest locality (LACM VP 3200), located southwest of the Project site near Green Hills Memorial Park, yielded specimens of Bison (*Bison*) and ground sloth (*Paramylodon*) from approximately 250 feet above mean sea level. Finally, LACM VP 3823 produced a fossil camel specimen (Camelidae) from an unnamed gray, buff arenaceous (sandy) silt approximately 12 to 14 feet bgs approximately 1.5 miles northwest of the Project site in Carson (Confidential Attachment A).

Findings and Recommendations

No paleontological resources were identified within the Project site as a result of the institutional records search and desktop geological and paleontological review. The LACM recommended a full paleontological assessment of the Project site which this study satisfies through its review of a site-specific geotechnical report, a desktop geological map review, and paleontological literature review. Given the presence of Pleistocene alluvium mapped within the Project site and the vertebrate fossils recovered from Pleistocene alluvium in this portion of the Los Angeles Basin, intact paleontological resources may be encountered below a surficial layer of artificial fill or topsoil during Project excavations. In the event that intact paleontological resources are located on the Project site, ground-disturbing activities associated with construction of the Project, such as grading during site preparation, large diameter augering, and trenching for utilities, could destroy a unique paleontological resource or site that has not been previously recorded, resulting in a potentially significant impact.

The Project has been found to be within the scope of the program analyzed in the Housing Element Program EIR. Accordingly, the Project is required to comply with all applicable mitigation measures identified in the Housing

Element Program EIR Mitigation Monitoring Program (MMP). The applicable paleontological resources mitigation measures are listed below.

4.5-1(a) Paleontological Procedures for Discretionary Projects. For all discretionary projects that involve excavation or grading activities at depths greater than previous disturbance on the respective site(s), prior to the start of construction, the following shall be conducted as discussed in detail below: prepare a resource assessment and records search for the presence of paleontological resources to determine if the project site is underlain by paleontological resources; monitor all excavation and grading activities in areas underlain by soils or geologic units potentially containing paleontological resources; and identify, record, and evaluate all paleontological resources uncovered during project construction and submit a paleontological assessment report to the City for review and approval. In addition, during project construction, the following shall be conducted as discussed in detail below: cease all construction activities in the event of the discovery of paleontological resources; conduct fossil recovery as necessary by a qualified paleontologist; avoid handling of paleontological resources by parties other than the qualified paleontologist responsible for conducting fossil recovery; and resume construction activities only upon clearance by the qualified paleontologist. These procedures, as detailed below, shall be implemented to avoid impacts to paleontological resources or reduce potential impacts to a less-than-significant level:

- Prior to excavation and grading activities, a qualified paleontologist shall prepare a resource assessment and records search for the potential presence of paleontological resources. This assessment shall be informed by records from the Natural History Museum of Los Angeles County.
- If the assessment determines the project site is underlain by soils or geologic units with a medium to high potential for containing paleontological resources, a qualified paleontologist shall prepare a monitoring plan, and worker education plan. The paleontologist's assessment and any required monitoring or required worker education plan shall be submitted to the City for review and approval prior to the commencement of construction activities. Any monitoring plan shall include requiring compliance with Mitigation Measure 4.5-1(d) for discovery, salvage and treatment.

4.5-1(b) Worker Environmental Awareness Program, Fossil Salvage, and Construction Monitoring. If required by cultural resources assessment under MM 4.5-1(a), prior to the start of construction, a paleontological monitor shall conduct training for construction personnel regarding the appearance of fossils and the procedures for notifying paleontological staff should fossils be discovered by construction staff, and notice that the identified qualified paleontologist is the only one authorized to handle paleontological find(s), including but not limited to collection and removal. Approved plans shall include statement of WEAP requirement.

4.5-1(c) Construction Monitoring. If required pursuant to a monitoring plan prepared under MM 4.5-1(a), a paleontologist or designated paleontological monitor shall monitor ground disturbance activities, including the initial five feet below the ground surface, as areas with high paleontological sensitivity may contain resources at shallow depths and within the first five feet. If the paleontological monitor determines that full-time monitoring is no longer warranted, he or she may recommend that monitoring be reduced to

periodic spot-checking or cease entirely. Monitoring shall be reinstated if any new or unforeseen deeper ground disturbances are required. After ground disturbing activities are completed, the paleontologist or designated monitor shall complete and submit a report to the City verifying compliance with the monitoring plan. Monitoring plan shall show on the plans.

4.5-1(d) Fossil Discovery, Salvage, and Treatment. All discretionary projects shall be subject to the following mitigation measure:

Discovery. If paleontological resources are uncovered during construction activities (in either a previously disturbed or undisturbed area), all ground-disturbing activities in the area of the find shall cease until a qualified paleontologist has evaluated the find, and identified and prepared an appropriate mitigation plan, in accordance with federal, state, and local guidelines, Construction activities in the area of the discovery shall commence again only after the identified resource(s) are properly processed by a qualified paleontologist, and if construction activities are cleared by the qualified paleontologist to continue. If cleared by the qualified paleontologist, construction activity may continue unimpeded on other portions of the project site that would not affect evaluation or recovery of the identified resource(s).

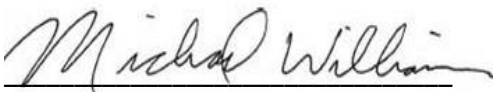
Fossil Salvage and Treatment. The qualified paleontologist or designated paleontological monitor shall recover intact fossils consistent with the mitigation plan and notify the City of any fossil salvage and recovery efforts. Typically, fossils can be safely salvaged quickly by a single paleontologist and not disrupt construction activity. In some cases, larger fossils (such as complete skeletons or large mammal fossils) require more extensive excavation and longer salvage periods. In this case the paleontologist shall have the authority to temporarily direct, divert or halt construction activity to ensure that the fossil(s) can be removed in a safe and timely manner. Any fossils shall be handled and deposited consistent with a mitigation plan prepared by the paleontological monitor. The qualified paleontologist shall prepare a report according to current professional standards including those of the SVP that describes the resource, how it was assessed, and disposition. The report shall be submitted to the City.

The requirements in this mitigation measure shall be shown on plans.

This study satisfies the pre-construction assessment required by MM 4.5-1(a). This study has determined that the Project site is underlain by soils with a medium to high potential for containing paleontological resources. As such, per MM 4.5-1(a), a paleontological monitoring plan and worker education plan will be prepared prior to the commencement of construction activities. The monitoring plan will include required compliance with MMs 4.5-1(b)-(d), which set forth specifications for worker education, construction monitoring, and steps to be taken for the protection and salvage of paleontological resources in the event of an inadvertent discovery. Implementation of MMs 4.5-1(a)-(d) from the Housing Element Program EIR MMP would protect any significant paleontological resources in the event of discovery during Project construction. Upon implementation of the above-listed MMs from the Housing Element Program EIR, impacts to paleontological resources from the Project would be considered less than significant.

If you have any questions regarding this memo, please feel free to contact me 225.892.7622 or mwilliams@dudek.com).

Sincerely,



Michael Williams, Ph.D.
Senior Paleontologist

Attn: Michael Williams

re: Paleontological resources for the 1280 Pacific Coast Highway Project (PN: 13686)

Dear Michael:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the 1280 Pacific Coast Highway project area as outlined on the portion of the Torrance USGS topographic quadrangle map that you sent to me via e-mail on September 1, 2021. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 3249	Lomita, general locality number for specimens without locality data from the area	Unknown formation (Pleistocene)	Mastodon (*Mammut*), Bison (*Bison*), Camel (*Camelops, Tanupolama*), sea lion (*Eumetopias*), ground sloth (*Megalonyx*), horse (*Equus*), tapir (Tapirus); Loon (*Gavia*), grebe (*Achmophorous*), sea duck (*Chendytes*), teleost fish, and other unspecified vertebrates	Unknown (many collected from sand pit operations)
LACM IP 229	South side of Anaheim St; east of Normandie Ave intersection, Harbor Lake, Habror City	Palos Verdes Sand	Invertebrates: gastropods (*Bulla, Caesia, Metaxia, Melampus, Eulithidium, Micranellum, Glyptaesopus, Shaskyus, Roperia, Seila, Megasurcula, Kurtzia, Agathistoma, Iselica, Vermicularia, Crepipatella, Ophiodermella, Eupleura*), bivalve (*Macoma*)	Unknown
LACM IP 166	Northwest corner of	Palos Verdes Sand	Invertebrates: gastropods	Unknown

	Anaheim Avenue and Vermont Avenue; west of Bixby Slough (Harbor Lake); Harbor City		(Naticidae), bivalves (*Argopecten, Anomia, Dosinia, Lucinisca, Macoma, Ostrea*, Verneridae)	(Los Angeles County Sanitation Project pit)
LACM VP 3200	Long View Dr. in Green Hills Memorial Park	Unknown formation (conglomerate overlying Lomita Marl)	Bison (*Bison*), ground sloth (*Paramylodon*)	250 feet above mean sea level
LACM VP 3268	East side of Gaffey Street at the northern end of the Union Oil refinery	San Pedro Sand	Elephant clade (Proboscidea)	Unknown
LACM VP 3823	SE corner of Figueroa St & Sepulveda Blvd	Unidentified (Pleistocene; grey buff arenaceous silt)	Camel family (Camelidae)	12-14 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County ("NHMLA"). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell

Geotechnical Investigation

Project No. A9779-06-01
December 5, 2024

Mr. Alex Wong
Red Oak Investments LLC
4199 Campus Drive, #200
Irvine, CA 92612

Subject: UPDATE OF GEOTECHNICAL INVESTIGATION
PROPOSED MULTI-FAMILY RESIDENTIAL DEVELOPMENT
1280 WEST PACIFIC COAST HIGHWAY, HARBOR CITY, CALIFORNIA
TRACT: PECK'S SUBDIVISION OF LOT J AND PORTION OF LOT H OF THE PARTITION OF THE RANCHO, BLOCK: 10, ARB: 33

Reference: *Geotechnical Investigation, Proposed Multi-Family Residential Development, 1280 West Pacific Coast Highway, Harbor City, California,* by Geocon West, Inc., July 2, 2018.

Dear Mr. Wong:

This letter has been prepared to update the referenced geotechnical investigation report prepared by Geocon West, Inc. It is our understanding that the scope of the project remains essentially unchanged and the geotechnical recommendations presented in the report remain applicable to the project as presently proposed. The recommendations presented herein are intended to update the referenced report for compliance with current building code requirements. Where differing, the recommendations herein supersede the previous recommendations.

Seismic Design Criteria

The following table summarizes the site-specific design criteria obtained from the 2022 California Building Code (CBC; Based on the 2021 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application U.S. Seismic Design Maps, provided by the Structural Engineers Association of California (SEAOC). The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2022 CBC and Table 20.3-1 of ASCE 7-16. The values presented below are for the risk-targeted maximum considered earthquake (MCE_R).

2022 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2022 CBC Reference
Site Class	D	Section 1613.2.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.744g	Figure 1613.2.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.638g	Figure 1613.2.1(2)
Site Coefficient, F_A	1.0	Table 1613.2.3(1)
Site Coefficient, F_V	1.7	Table 1613.2.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	1.744g	Section 1613.2.3 (Eqn 16-20)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.085g*	Section 1613.2.3 (Eqn 16-21)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.163g	Section 1613.2.4 (Eqn 16-22)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.723g*	Section 1613.2.4 (Eqn 16-23)

*Per Supplement 3 of ASCE 7-16, a ground motion hazard analysis (GMHA) shall be performed for projects on Site Class "D" sites with 1-second spectral acceleration (S1) greater than or equal to 0.2g, which is true for this site. However, Supplement 3 of ASCE 7-16 provides an exception stating that that the GMHA may be waived provided that the parameter SM1 is increased by 50% for all applications of SM1. The values for parameters SM1 and SD1 presented above have not been increased in accordance with Supplement 3 of ASCE 7-16.

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.775g	Figure 22-9
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.853g	Section 11.8.3 (Eqn 11.8-1)

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

Plan Review

Grading and foundation plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

If you have any questions regarding this letter, or if we may be of further service, please contact the undersigned.

Very truly yours,

Dear Mr. Wong:

In accordance with your authorization of our proposal dated March 9, 2018, we have performed a geotechnical investigation for the proposed residential development located at 1268, 1270, & 1280 West Pacific Coast Highway and 22900 South Frampton Avenue in the Harbor City district of the City of Los Angeles, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed multi-family residential development located at 1268, 1270, & 1280 West Pacific Coast Highway and 22900 South Frampton Avenue in the Harbor City section of the City of Los Angeles, California (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on June 6, 2018, by excavating four 8-inch diameter borings to depths between 30½ and 40½ feet below the existing ground surface utilizing a truck-mounted hollow-stem auger drilling machine. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2). A detailed discussion of the field investigation, including boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the *List of References* section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 1268, 1270, & 1280 West Pacific Coast Highway and 22900 South Frampton Avenue in the Harbor City section of the City of Los Angeles, California. The site is currently occupied by 3-acre mobile home community and 0.7 acre auto storage yard. The site is bounded by the Pacific Coast Highway (CA-1) to the north, an alley and two-story multifamily residential structures to the south, by an auto repair facility and medical center to the east, and by Frampton Avenue to the west. The site is relatively level, with no pronounced highs and lows. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation onsite consists of trees, grasses and bushes generally confined to planter areas.

It is our understanding that the proposed development will consist of a wrap style development with a central parking structure surrounded by residential units. The development will consist of five stories of multi-family residential housing surrounding a five-story parking structure constructed at or near existing grade. The proposed development is depicted on the Site Plan (see Figure 2).

Based on the preliminary nature of the design at this time, wall and column loads were not available. It is anticipated that column loads for the proposed residential structure will be up to 500 kips, and wall loads will be up to 5 kips per linear foot. It is anticipated that column loads for the proposed parking structure will be up to 900 kips, and wall loads will be up to 9 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located in the southern Torrance Plain, a broad nearly flat alluviated area situated in the southwestern portion of the Los Angeles Coastal Plain, northeast of the Palos Verdes Hills (California Department of Water Resources, 1961). The Torrance Plain is a Pleistocene age marine surface only slightly dissected by local streams. Both fresh water and marine fossils are commonly found at shallow depths below the surface of the plain, suggesting that there were periods of complete or nearly complete emergence of the land between periods of subsidence. Regionally, the site is located within the Peninsular Ranges geomorphic province, which is characterized by elongate northwest-trending mountain ridges separated by straight-sided sediment-filled valleys. The northwest trend is further reflected in the direction of the dominant geologic structural features of the province that are northwest to west-northwest trending folds and faults, such as the nearby Palos Verdes Fault Zone located approximately 0.5 mile southwest of the site.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain by artificial fill and Pleistocene age older alluvial deposits consisting of varying amounts of clay and fine sand (CGS, 2010). Detailed stratigraphic profiles are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered in our field explorations to a maximum depth of 2 feet below existing ground surface. The artificial fill generally consists of dark gray lean clay. The artificial fill is characterized as moist and hard. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Alluvium

Pleistocene age alluvial deposits were encountered beneath the fill. The alluvium consists of light brown to brown, light gray to gray, and grayish brown interbedded clay, sandy silt, silty sand, and poorly graded sand. The alluvium is characterized as moist and soft to hard or dense to very dense. Cohesive deposits were characterized as low to medium plasticity with some localized calcium carbonate accumulation.

5. GROUNDWATER

Review of the Seismic Hazard Zone Report for the Torrance Quadrangle (California Division of Mines and Geology [CDMG], 1998) indicates the historically highest groundwater level in the area is approximately 10 feet beneath the ground surface. Groundwater information presented in this document is generated from data collected in the early 1900's to the late 1990s. Based on current groundwater basin management practices, it is unlikely that groundwater levels will ever exceed the historic high levels.

Groundwater was not encountered in our field explorations drilled to a maximum depth of 40½ feet below the existing ground surface. Considering the lack of groundwater in our borings and the depth of the proposed construction, it is anticipated that groundwater will not be encountered during construction. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for storm water infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (see Section 7.20).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include active, potentially active, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018a). By definition, an active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A potentially active fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years), but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2018b; CDMG, 1986) or a city-designated Preliminary Fault Rupture Study Area (City of Los Angeles, 2018) for surface fault rupture hazards. No active or potentially active faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting

occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest surface trace of an active fault to the site is the Palos Verdes Fault Zone located approximately 0.5 mile to the southwest (CDMG, 1986; CGS, 2018b). Other nearby active faults are the Newport-Inglewood Fault Zone, the Cabrillo Fault (Offshore Segment), the Santa Monica Fault Zone, the Hollywood Fault Zone, and the Whittier Fault Zone located approximately 5.3 miles east-northeast, 6.0 miles south-southeast, 20 miles north, 21 miles north, and 21 miles northeast of the site, respectively (Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 52 miles northeast of the site.

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987, M_w 5.9 Whittier Narrows earthquake and the January 17, 1994, M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. These thrust faults and others in the Los Angeles area are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
San Jacinto-Hemet area	April 21, 1918	6.8	75	E
Near Redlands	July 23, 1923	6.3	62	ENE
Long Beach	March 10, 1933	6.4	22	ESE
Tehachapi	July 21, 1952	7.5	93	NW
San Fernando	February 9, 1971	6.6	43	N
Whittier Narrows	October 1, 1987	5.9	23	NE
Sierra Madre	June 28, 1991	5.8	37	NE
Landers	June 28, 1992	7.3	110	ENE
Big Bear	June 28, 1992	6.4	89	ENE
Northridge	January 17, 1994	6.7	32	NNW
Hector Mine	October 16, 1999	7.1	129	ENE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes summarizes site-specific design criteria obtained from the 2016 California Building Code (CBC; Based on the 2015 International Building Code [IBC] and ASCE 7-10), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the computer program *U.S. Seismic Design Maps*, provided by the USGS. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.3.2 of the 2016 CBC and Table 20.3-1 of ASCE 7-10. The values presented below are for the risk-targeted maximum considered earthquake (MCE_R).

2016 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2016 CBC Reference
Site Class	D	Section 1613.3.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.664 g	Figure 1613.3.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.641g	Figure 1613.3.1(2)
Site Coefficient, F_A	1.0	Table 1613.3.3(1)
Site Coefficient, F_V	1.5	Table 1613.3.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	1.664 g	Section 1613.3.3 (Eqn 16-37)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	0.961 g	Section 1613.3.3 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.110 g	Section 1613.3.4 (Eqn 16-39)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.641 g	Section 1613.3.4 (Eqn 16-40)

The table below presents the mapped maximum considered geometric mean (MCE_G) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-10.

ASCE 7-10 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-10 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.669 g	Figure 22-7
Site Coefficient, F_{PGA}	1.0	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.669 g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2016 California Building Code and ASCE 7-10, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2008 Conterminous U.S. Dynamic edition. The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 6.94 magnitude event occurring at a hypocentral distance of 4.73 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.74 magnitude occurring at a hypocentral distance of 14.01 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The State of California Seismic Hazard Zone Map for the Torrance Quadrangle (CDMG, 1999) indicates that the site is not located within an area designated as having a potential for liquefaction. In addition, a review of the County of Los Angeles Seismic Safety Element (Leighton, 1990) indicates that the site is not located within an area identified as having a potential for liquefaction. The site is underlain by dense Pleistocene age alluvial deposits that are not prone to liquefaction. Based on these considerations, it is our opinion that the potential for liquefaction and associated ground deformations beneath the site is very low.

6.5 Slope Stability

The topography at the site is relatively level and the topography in the immediate site vicinity slopes very gently to the east. The site is not located within a City of Los Angeles Hillside Grading Area or a Hillside Ordinance Area (City of Los Angeles, 2018). Additionally, the site is not located within an area identified as having a potential for seismic slope instability (CDMG, 1999). There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely affect the proposed development is considered low.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. Based on a review of the Los Angeles County Safety Element (Leighton, 1990), the site is not located within a potential inundation area for an earthquake-induced dam failure. Therefore, the probability of earthquake-induced flooding is considered very low.

6.7 Tsunamis, Seiches, and Flooding

The site is located approximately 1.7 miles north of Los Angeles Harbor. Tsunami inundation hazard maps prepared by the State of California indicate the site is not located within a tsunami inundation area (CGS, 2009). Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding resulting from a seismically-induced seiche is considered unlikely.

The site is within an area of minimal flooding (Zone X) as defined by the Federal Emergency Management Agency (FEMA, 2018; LACDPW, 2018b).

6.8 Oil Fields & Methane Potential

Based on a review of the California Division of Oil, Gas and Geothermal Resources (DOGGR) Well Finder website, the site is not located within the limits of an oilfield (DOGGR, 2018). The Torrance Oil Field is located approximately 1,600 feet north of the site. The closest documented well is the O'Donnell Oil, LLC "Dawn" Well No. 2 located approximately 4,000 feet northeast of the site. This well is a plugged oil and gas exploration well (DOGGR, 2018). Due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not shown on the location map and undocumented wells could be encountered during construction. Any wells encountered during construction will need to be properly abandoned in accordance with the current requirements of the DOGGR.

The site is located within a city-designated Methane Zone (City of Los Angeles, 2018). A methane study is required by the City of Los Angeles for the proposed development. It is recommended that a qualified methane consultant be retained to perform the study and provide mitigation measures as necessary.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The site is not located within an area of known ground subsidence. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. There appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the site.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 2 feet of existing artificial fill was encountered during the site investigation. The existing fill encountered is believed to be the result of past grading and construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. Future demolition of the existing commercial structures which occupy the site will likely disturb the upper few feet of soil below those existing improvements. It is our opinion that the existing fill and upper alluvial soils in their present condition are not suitable for direct support of proposed foundations or slabs. The existing fill and site soils are suitable for re-use as engineered fill provided the recommendations in the *Grading* section of this report are followed (see Section 7.4).

7.1.3 Based on these considerations, it is recommended that the upper 4 feet of existing earth materials within the building footprint area be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as needed to remove any encountered fill or soft soils as necessary at the direction of the Geotechnical Engineer (a representative of Geocon). The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint areas, including building appurtenances, or a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft soil removal will be verified by the Geocon representative during site grading activities. Recommendations for earthwork are provided in the *Grading* section of this report (see Section 7.4).

7.1.4 Subsequent to the recommended grading, the proposed structure may be supported on a conventional shallow spread foundation system deriving support in newly placed engineered fill and or competent undisturbed alluvium at or below a depth of 4 feet below the ground surface.

7.1.5 Where subterranean structures are planned (Elevator Pits and Swimming Pool), the structure may be supported on a conventional foundation system bearing in the undisturbed alluvial soils found at or below a minimum depth of 4 feet below the ground surface. Foundations should be deepened as necessary to penetrate through any encountered soft or unsuitable soils at the direction of the Geotechnical Engineer (a representative of Geocon).

7.1.6 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill, the upper 12 inches of the excavation bottom must be scarified, moistened, and proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.1.7 It is anticipated that stable excavations for the recommended grading associated with the proposed structure can be achieved with sloping measures. However, if excavations in close proximity to an adjacent property line and/or structure are required, special excavation measures may be necessary in order to maintain lateral support of offsite improvements. Excavation recommendations are provided in the *Temporary Excavations* section of this report (Section 7.18).

7.1.8 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, foundations may derive support directly in the competent undisturbed alluvial soils found at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12-inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.9 Where new paving is to be placed, it is recommended that all existing fill and soft alluvial soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft alluvial soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable alluvial soil may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of subgrade soil should be scarified and properly compacted for paving support. Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.1.10 Based on the results of percolation testing performed at the site, a stormwater infiltration system is not considered feasible for this project. Results of percolation testing are provided in the *Stormwater Infiltration* section of this report (see Section 7.19).

7.1.11 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Based on the final foundation loading configurations, the potential for settlement should be re-evaluated by this office.

7.1.12 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Some caving should be anticipated in unshored excavations, especially where granular and/or saturated soils are encountered.

7.2.2 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of existing adjacent improvements.

7.2.3 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping or shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.18).

7.2.4 The upper 5 feet of existing site soils encountered during this investigation are considered to have a "moderate" expansive potential (EI = 57); and are classified as "expansive" based on the 2016 California Building Code (CBC) Section 1803.5.3. The recommendations presented herein assume that foundations and slabs at the ground surface will derive support in these materials.

7.3 Minimum Resistivity, pH, and Water-Soluble Sulfate

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "corrosive" with respect to corrosion of buried ferrous metals on site. The results are presented in Appendix B (Figure B6) and should be considered for design of underground structures.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B6) and indicate that the on-site materials possess a sulfate exposure class of "S0" to concrete structures as defined by 2016 CBC Section 1904 and ACI 318-14 Table 19.3.1.1.

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Grading

7.4.1 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing fill and alluvial soil encountered during exploration is suitable for re-use as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed.

7.4.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and building official in attendance. Special soil handling requirements can be discussed at that time.

7.4.3 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.4 As a minimum, it is recommended that the upper 4 feet of existing earth materials within the proposed building footprint area be excavated and properly compacted for foundation and slab support. Deeper excavations should be conducted as necessary to remove deeper artificial fill or soft alluvial soil at the direction of the Geotechnical Engineer (a representative of Geocon). The excavation should extend laterally a minimum distance of 3 feet beyond the building footprint area, including building appurtenances, or a distance equal to the depth of fill below the foundation, whichever is greater. The limits of existing fill and/or soft alluvial soils removal will be verified by the Geocon representative during site grading activities.

7.4.5 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon). Prior to placing any fill, the upper 12 inches of the excavation bottom must be scarified, moistened, and proof-rolled with heavy equipment in the presence of the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.6 The City of Los Angeles Department of Building and Safety requires a minimum compactive effort of 95 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition) where the soils to be utilized in the fill have less than 15 percent finer than 0.005 millimeters. Soils with more than 15 percent finer than 0.005 millimeters may be compacted to 90 percent of the laboratory maximum dry density in accordance with ASTM D 1557 (latest edition). It is anticipated that the soils encountered during the site exploration would require the minimum 90 percent relative compaction requirement; however additional laboratory testing can be performed during construction to verify the compaction requirement. All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to 2 percent above optimum moisture content, and properly compacted to a minimum 90 percent of the maximum dry density in accordance with ASTM D 1557 (latest edition).

7.4.7. Where new paving is to be placed, it is recommended that all existing fill and soft alluvium be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to approximately 2 percent above optimum moisture content, and compacted to at least 95 percent relative compaction, as determined by ASTM D 1557 (latest edition). Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.12).

7.4.8 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed building, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill, which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed or is undesirable, foundations may derive support directly in the competent undisturbed alluvial soils found at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12-inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.4.9 Although not anticipated for this project, all imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. If necessary, import soils used as structural fill should have an expansion index less than 20 and soil corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B6). Import soils placed in the building area should be placed uniformly across the building pad or in a manner that is approved by the Geotechnical Engineer (a representative of Geocon).

7.4.10 Utility trenches should be properly backfilled in accordance with the requirements of the Green Book (latest edition). The pipe should be bedded with clean sands (Sand Equivalent greater than 30) to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry is also acceptable as backfill (see Section 7.5). Prior to placing any bedding materials or pipes, the excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.4.11 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding materials, fill, steel, gravel or concrete.

7.5 Controlled Low Strength Material (CLSM)

7.5.1 Controlled Low Strength Material (CLSM) may be utilized in lieu of compacted soil as engineered fill where approved in writing by the Geotechnical Engineer. Where utilized within the City of Los Angeles, use of CLSM is subject to the following requirements:

Standard Requirements

1. CLSM shall be ready-mixed by a City of Los Angeles approved batch plant;
2. CLSM shall not be placed on uncertified fill, on incompetent natural soil, nor below water;
3. CLSM shall not be placed on a sloping surface with a gradient steeper than 5:1 (horizontal to vertical);
4. Placement of the CLSM shall be under the continuous inspection of a concrete deputy inspector;
5. The excavation bottom shall be accepted by the soil engineer and the City Inspector prior to placing CLSM.

Requirements for CLSM that will be used for support of footings

1. The cement content of the CLSM shall not be less than 188 pounds per cubic yard (min. two sacks);
2. The excavation bottom must be level, cleaned of loose soils and approved in writing by Geocon prior to placement of the CLSM;
3. The ultimate compressive strength of the CLSM shall be no less than 100 pounds per square inch (psi) when tested on the 28th-day per ASTM D4832 (latest edition), Standard Test Method for Preparation and Testing of Controlled Low Strength Material Test Cylinders. Compression testing will be performed in accordance with ASTM C39 and City of Los Angeles requirements;
4. Samples of the CLSM will be collected during placement, a minimum of one test (two cylinders) for each 50 cubic yards or fraction thereof;
5. Overexcavation for CLSM placement shall extend laterally beyond the footprint of any proposed footings as required for placement of compacted fill, unless justified otherwise by the soil engineer that footings will have adequate vertical and horizontal bearing capacity.

7.6 Shrinkage

7.6.1 Shrinkage results when a volume of material removed at one density is compacted to a higher density. A shrinkage factor of between 5 and 10 percent should be anticipated when excavating and compacting the upper 5 feet of existing earth materials on the site to an average relative compaction of 95 percent.

7.6.2 If import soils will be utilized in the building pad, the soils must be placed uniformly and at equal thickness at the direction of the Geotechnical Engineer (a representative of Geocon West, Inc.). Soils can be borrowed from non-building pad areas and later replaced with imported soils.

7.7 Conventional Foundation Design

7.7.1 Subsequent to the recommended grading, a conventional shallow spread foundation system may be utilized for support of the proposed structure provided foundations derive support in newly placed engineered fill and or competent undisturbed alluvium at or below a depth of 4 feet below the ground surface.

7.7.2 Continuous footings may be designed for an allowable bearing capacity of 3,500 pounds per square foot (psf), and should be a minimum of 18 inches in width, 24 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.3 Isolated spread foundations may be designed for an allowable bearing capacity of 4,000 psf, and should be a minimum of 24 inches in width, 24 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.7.4 The allowable soil bearing pressure above may be increased by 250 psf and 700 psf for each additional foot of foundation width and depth, respectively, up to a maximum allowable soil bearing pressure of 5,000 psf.

7.7.5 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.7.6 If depth increases are utilized for the perimeter foundations, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.7.7 Continuous footings should be reinforced with four No. 4 steel reinforcing bars, two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.

7.7.8 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only, and are not intended to be used in lieu of those required for structural purposes.

7.7.9 Due to the expansive potential of the subgrade soils, the moisture content in the slab and foundation subgrade should be maintained at optimum moisture content prior to and at the time of concrete placement.

7.7.10 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.7.11 This office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.8 Foundation Settlement

7.8.1 The maximum expected static settlement for a structure supported on a conventional foundation system deriving support in the recommended bearing materials and designed with a maximum bearing pressure of 3,500 psf is estimated to be less than 1-inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed ½-inch over a distance of 20 feet.

7.8.2 The maximum expected static settlement for a structure supported on a conventional foundation system deriving support in the recommended bearing materials and designed with a maximum bearing pressure of 5,000 psf is estimated to be less than 1¼-inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed ¾-inch over a distance of 20 feet.

7.8.3 If side by side construction is planned for the residential structure and parking structure it is recommended that the parking structure be constructed prior to the adjacent residential structure in order to allow the majority of the static settlement to occur. This will help to minimize differential settlements between the two structures. The utilization of a lesser bearing value would further reduce the anticipated settlements and could be evaluated further once the design becomes more finalized.

7.8.4 Once the design and foundation loading configurations for the proposed structures proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.9 Miscellaneous Foundations

7.9.1 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure may be supported on conventional foundations bearing on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed or is undesirable, such as adjacent to property lines, foundations may derive support in the undisturbed alluvial soils found at or below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12-inch embedment into the recommended bearing materials.

7.9.2 If the soils exposed in the excavation bottom are soft, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Miscellaneous foundations may be designed for a bearing value of 1,500 psf, and should be a minimum of 12 inches in width, 24 inches in depth below the lowest adjacent grade and 12 inches into the recommended bearing material. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.9.3 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated.

7.10 Lateral Design

7.10.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.30 may be used with the dead load forces in properly compacted engineered fill or in competent alluvial soils.

7.10.2 Passive earth pressure for the sides of foundations and slabs poured against properly compacted engineered fill or competent alluvial soils may be computed as an equivalent fluid having a density of 240 pounds per cubic foot (pcf) with a maximum earth pressure of 2,400 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.11 Concrete Slabs-on-Grade

7.11.1 Unless specifically designed and evaluated by the project structural engineer, the concrete slab-on-grade for the parking structure, subject to vehicle loading, should be a minimum of 6 inches thick and reinforced with No. 4 steel reinforcing bars placed 16 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compaction as determined by ASTM Test Method D 1557 (latest edition).

7.11.2 Subsequent to the recommended grading, concrete slabs-on-grade for structures, not subject to vehicle loading, should be a minimum of 4 inches thick and minimum slab reinforcement should consist of No. 4 steel reinforcing bars placed 16 inches on center in both horizontal directions. Steel reinforcing should be positioned vertically near the slab midpoint.

7.11.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning is recommended. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4 inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.11.4 For seismic design purposes, a coefficient of friction of 0.30 may be utilized between concrete slabs and subgrade soils without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.11.5 Exterior slabs for walkways or flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 8 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.11.6 Due to the expansive potential of the site soils, exterior slabs for walkways or flatwork should be doweled into surrounding curbs and foundations where possible in order to minimize movements in the paving due to underlying expansive soil movements. As an alternative, replacing the upper 12 inches of subgrade soil with non-expansive sand will help to minimize movements. Offsets in paving can lead to potential tripping hazards; therefore periodic observation of walkways is recommended.

7.11.7 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.12 Preliminary Pavement Recommendations

7.12.1 Where new paving is to be placed, it is recommended that all existing fill and soft or unsuitable alluvial materials be excavated and properly recompacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft alluvium in the area of new paving is not required; however, paving constructed over existing unsuitable material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to optimum moisture content, and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.12.2 The following pavement sections are based on an assumed R-Value of 20. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.12.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking And Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	12.0

7.12.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.12.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 6 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compaction as determined by ASTM Test Method D 1557 (latest edition).

7.12.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.13 Swimming Pool/Spa

7.13.1 The proposed swimming pool shell bottom may be founded on competent alluvial soils. The proposed pool should be constructed utilizing an expansive soils design and a hydrostatic relief valve should be considered. The earth pressures provided in the following Retaining Wall Design section of this report may be used pool/spa design.

7.13.2 The proposed spa should be constructed independent of the swimming pool and must not be cantilevered from the swimming pool shell.

7.14 Retaining Walls Design

7.14.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 5 feet. In the event that walls significantly higher than 5 feet are planned, Geocon should be contacted for additional recommendations.

7.14.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Conventional Foundation Design* section of this report (see Section 7.7).

7.14.3 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure) of 30 pcf.

7.14.4 Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure) of 45 pcf.

7.14.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed alluvial soils. If sloping techniques are to be utilized for construction of proposed walls, which would result in a wedge of engineered fill behind the retaining walls, revised earth pressures may be required. This should be evaluated once the use of sloping measures is established and once the geotechnical characteristics of the engineered backfill soils can be further evaluated.

7.14.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 90 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.14.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses. Once the design becomes more finalized, an addendum letter can be prepared revising recommendations and addressing specific surcharge conditions throughout the project, if necessary.

7.15 Retaining Wall Drainage

7.15.1 Retaining walls should be provided with a drainage system extended at least two-thirds the height of the wall. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 5). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.15.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 6). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.15.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures. Drainage should not be allowed to flow uncontrolled over descending slopes.

7.15.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.16 Elevator Pit Design

7.16.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Retaining Wall Design* section of this report (see Section 7.14).

7.16.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.16.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.15).

7.16.4 It is suggested that the exterior walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.17 Elevator Piston

7.17.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation, or the drilled excavation could compromise the existing foundation support, especially if the drilling is performed subsequent to the foundation construction.

7.17.2 Due to the preliminary nature of the project at this time, it is unknown if a plunger-type elevator piston will be included for this project. If in the future it is determined that a plunger-type elevator piston will be constructed, the location of the proposed elevator should be reviewed by the Geotechnical Engineer to evaluate the setback from foundations and shoring piles. Additional recommendations will be provided as necessary.

7.17.3 Caving is anticipated especially where granular soils are encountered. The contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.17.4 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.18 Temporary Excavations

7.18.1 Excavations on the order of 4 feet in height may be required during grading operations. The excavations are expected to expose artificial fill and alluvial soils, which are suitable for vertical excavations up to 5 feet in height where loose soils or caving sands are not present, and where not surcharged by adjacent traffic or structures.

7.18.2 Vertical excavations greater than 5 feet or where surcharged by existing structures will require sloping or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1:1 slope gradient or flatter up to a maximum of 10 feet in height. A uniform slope does not have a vertical portion.

7.18.3 Where temporary construction slopes are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary slopes are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. Geocon personnel should inspect the soils exposed in the cut slopes during excavation so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.19 Stormwater Infiltration

7.19.1 During the June 6, 2018, site exploration, boring B2 was utilized to perform percolation testing. The boring was advanced to the depth listed in the table below. Slotted casing was placed in the boring, and the annular space between the casing and excavation was filled with gravel. The boring was then filled with water to pre-saturate the soils. On June 6, 2018, the casing was refilled with water and percolation test readings were performed after repeated flooding of the cased excavation. Based on the test results, the measured percolation rate and design infiltration rate, for the earth materials encountered, are provided in the following table. These values have been calculated in accordance with the Boring Percolation Test Procedure in the County of Los Angeles Department of Public Works GMED *Guidelines for Geotechnical Investigation and Reporting, Low Impact Development Stormwater Infiltration* (June 2017). Percolation test field data and calculation of the measured percolation rate and design infiltration rate are provided on Figure 7.

Boring	Soil Type	Infiltration Depth (ft)	Measured Percolation Rate (in / hour)	Design Infiltration Rate (in / hour)
B2	Silty Sand/Lean Clay	5-15	0.43	0.22

7.19.2 Based on the test method utilized (Boring Percolation Test), the reduction factor RF_t may be taken as 2.0 in the infiltration system design. Based on the number of tests performed and consistency of the soils throughout the site, it is suggested that the reduction factor RF_v be taken as 1.0. The reduction factor RF_s is based on proper maintenance and may be taken as 1.0.

7.19.3 The results of the percolation testing indicate that the soils at depths in the above table are not conductive to infiltration of stormwater. It is recommended that stormwater be retained, filtered, and discharged in accordance with the requirements of the local governing agency.

7.20 Surface Drainage

7.20.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage should be maintained at all times.

7.20.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2016 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. Discharge from downspouts, roof drains and scuppers are not recommended onto unprotected soils within 5 feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the soils providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.20.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.20.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.21 Plan Review

7.21.1 Grading, foundation and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of the scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

APPENDIX A

FIELD INVESTIGATION

The site was explored on June 6, 2018, by excavating four 8-inch diameter borings to depths between 30½ and 40½ feet below the existing ground surface utilizing a truck-mounted hollow-stem auger drilling machine. Representative and relatively undisturbed samples were obtained by driving a 3-inch, O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch high by $2^{3}/_{8}$-inch diameter brass sampler rings to facilitate soil removal and testing. Bulk samples were also obtained.

The soil conditions encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A4. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the boring logs were revised based on subsequent laboratory testing. The location of the borings are shown on Figure 2.

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation and expansion characteristics, corrosivity, in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B6. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

SAMPLE	SOIL TYPE	DRY DENSITY	INITIAL MOISTURE (%)	FINAL MOISTURE (%)
B1 @ 5'	ML	92.4	25.9	30.6
B2 @ 5'	SM	98.7	24.1	28.6
B3 @ 2'	CL	99.5	26.0	27.8
B4 @ 1-5' *	CL	113.0	12.0	17.9

* Sample re-molded to 90% of the maximum dry density per ASTM D 1557.

December 2, 2024

Mr. Alex Wong
Red Oak Investments
4199 Campus Drive, Suite 200
Irvine, California 92612

Subject: Phase I Environmental Site Assessment, Phase II Investigation, and Soil Management Plan
1260 and 1268 Pacific Coast Highway
Los Angeles, California 90710
Partner Project No. 18-210321 and 18-226425

Dear Mr. Wong:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the following information regarding the results of the Phase I Environmental Site Assessment (Phase I ESA) reports of the abovementioned addresses and a Phase II investigation and Soil Management Plan of 1268 Pacific Coast Highway. As you know the Phase I ESA assessments were completed in 2018 in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

These assessments included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

Based on my review, the conclusions, findings, and recommendations of these reports remain valid, and I am not aware of any new information that would alter those findings.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 622-8855 or dstott@partneresi.com.

Sincerely,

DB Stott

Subject: Phase I Environmental Site Assessment
1280 Pacific Coast Highway
Los Angeles, California 90710
Partner Project No. 18-210321.1

Dear Mr. Wong

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 622-8855.

Sincerely,

Debbie Stott, P.G.
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Red Oak Investments for the property located at 1280 Pacific Coast Highway in the Harbor City community, City of Los Angeles, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Red Oak Investments with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the south side of Pacific Coast Highway and the east side of Frampton Avenue within a mixed commercial and residential area of the Harbor City community within Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	1280 Pacific Coast Highway, Los Angeles, California
Additional Addresses:	1270 and 1290 Pacific Coast Highway and 25900 South Frampton Avenue
Property Use:	Residential (mobile home park) and Commercial (vacant)
Land Acreage (Ac):	2.7 Ac
Number of Buildings:	Permanent structures: three (one residential, one laundry/maintenance, and one vacant commercial) plus multiple (unused) toilet structures mobile homes/home pads: approximately 90
Number of Floors:	One
Gross Building Area (SF):	Not Provided
Net Rentable Area (SF):	Not Provided
Date(s) of Construction:	1945-1950
Assessor's Parcel Number (APN):	7411-019-016
Type of Construction:	Permanent structures: wood-framed
Current Tenants:	A-1 Trailer Park consisting of approximately 90 mobile home pads and three permanent buildings
Site Assessment Performed By:	Emilie Moore of Partner
Site Assessment Conducted On:	June 5, 2018

The subject property is currently occupied by A-1 Trailer Park and a vacant building for residential and commercial use. Onsite operations consist of residential living and general building and property maintenance. In addition to the current permanent structures, the subject property is also improved with approximately 90 mobile home pad sites, unused toilet structures, paved parking and driveway areas, and limited landscaping. No septic systems were observed or reported on the subject property.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; developed with partially cleared and vacant land in the 1920s; and developed with the current mobile home park between 1945 and 1950.

The immediately surrounding properties consist of Pacific Coast Highway followed by ACE Cash Express, Pep Boys, and Del Taco to the north; a driveway followed by residences to the south; a parking lot to the east; and Frampton Avenue followed multi-tenant commercial businesses and a Los Angeles Department of Water and Power (LADWP) electrical substation to the west.

According to on-line information and topographic map interpretation, the depth and direction of groundwater in the vicinity of the subject property is approximately 80 feet below ground surface (bgs) and flow is toward the southeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1280 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Partner recommends that a methane assessment be conducted onsite prior to any future redevelopment activities.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1280 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies.

As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Red Oak Investments engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Red Oak Investments. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http: / www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner was unable to document the property use at 5-year intervals or less for all time periods, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews. Since no significant changes in use were identified during undocumented periods, this data failure is not considered critical and is not expected to alter the findings of this assessment.

- Partner submitted a Freedom of Information Act (FOIA) request to the Los Angeles County Health and Hazardous Materials Department (LAHHMD) and the Regional Water Quality Control Board (RWQCB) for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjacent properties. As of this writing, these agencies have not responded to Partner's request for information pertaining to all subject property addresses. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.
- Partner observed all common areas and the exteriors of the privately-owned manufactured homes. Additionally, Partner was unable to inspect the interior of the three permanent structures located onsite. Based on the size and nature of use of the unobserved unit interiors (residential, utility, and vacant commercial), this limited method of survey is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1280 Pacific Coast Highway in Los Angeles, California is located on the south side of Pacific Coast Highway and the east side of Frampton Avenue. According to the Los Angeles County Assessor and building records, the subject property is legally described as "*TRACT PECK'S SUB OF LOT J AND POR OF LOT H PARTITION OF RO LOS PALOS VERDES*LOT COM AT SW COR OF LOT 10 TH E 220 FT TH N PARALLEL WITH E LINE OF FRANPTON AVE,*" and ownership is currently vested in 1280 Pacific Coast Highway LLC.

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by A-1 Trailer Park and a vacant building for residential and commercial use. Onsite operations consist of residential living and general building and property maintenance. In addition to the current permanent structures, the subject property is also improved with approximately 90 mobile home pad sites, unused toilet structures, paved parking and driveway areas, and limited landscaping.

The subject property is designated for commercial and mobile home park development by the City of Los Angeles.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of the Harbor City community within Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Pacific Coast Highway followed by ACE Cash Express (1333 Pacific Coast Highway), Pep Boys (1315 Pacific Coast Highway), and Del Taco (1229 Pacific Coast Highway)
South:	A driveway followed by residences (1270-1289 Riverrock Road)
East:	Parking lot (1268 Pacific Coast Highway)
West:	Frampton Avenue followed multi-tenant commercial businesses (1300 Pacific Coast Highway and 25841-25855 [odds] Frampton Avenue) and a LADWP electrical substation (25901 and 25923 Frampton Avenue)

Adjacent properties to the north and west were identified as Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG), Facility Index System/Facility Registry System (FINDS), Enforcement and Compliance History Information (ECHO), Historical Underground Storage Tank (HIST UST), Facility and Manifest Data (HAZNET), and Aboveground Storage Tank (AST) sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Torrance, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 45 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the southeast. No structures are depicted on the subject property on the 1981 topographic map.

A copy of the 1981 topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

The subject property is located at the southern end of the Central Basin Pressure Area of the Los Angeles Basin and is underlain by the Lakewood Formation. The Lakewood Formation includes all Upper Pleistocene deposits including the Palos Verde Sand and the "200-foot Gravel". The Lakewood Formation is divided into the Artesian-Exposition Aquifers and the Gage-Gardena Aquifers. There are no known water-bearing sediments or beneficial uses for groundwater sources within the Palos Verdes Hills physiographic province. The nearest surface water in the vicinity of the subject property is Harbor Lake, located approximately 0.3-miles to the southeast of the subject property. No settling ponds, lagoons, surface impoundments, wetlands, or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, the sources of public water for the City of Los Angeles are surface water (Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater.

According to a previous subsurface investigation conducted on a nearby property (former One-O-One and Harbor Inc. Dump located 100-feet east), the depth of groundwater in the vicinity of the subject property is inferred to be approximately 80 feet below ground surface (bgs).

2.4.3 Geology/Soils

The subject property is located within the Torrance Plain. The rectangular shaped Torrance Plain extends approximately 28 miles from Santa Monica in the northwest to Long Beach in the southeast and is 5 to 12 miles wide. The relatively flat Torrance Plain consists of marine and non-marine sediments. The Palos Verdes Hills, a prominent topographic feature, borders the southwest margin of the plain and the Newport-Inglewood zone of deformation borders the inland eastern margin of Torrance Plain. The Palos Verdes Hills consist of an uplifted fault block composed of a Jurassic age Catalina schist basement and marine sediment of Tertiary and Quaternary age that have folded into an anticlinal shape. The Palos Verdes Hills are divided from the West Coast Basin by the Palos Verdes Fault Zone. The displacement of near-surface sediments across the fault is relatively minor when compared to the significant displacement which offset the Catalina schist basement at depth.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1945F, dated September 26, 2008, the subject property appears to be located in Unshaded Zone X, an area located outside of the 100-year and 500-year flood plains.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1896	Topographic Maps	Undeveloped/Native land
1923-1928	Aerial Photographs, Topographic Maps	Partially cleared, vacant land
1945-Present	Aerial Photographs, Building Records, City Directories, Onsite Observations	Developed with the present-day mobile home park

According to available historical sources, the subject property was formerly undeveloped as early as 1896; developed with partially cleared and vacant land in the 1920s; and developed with the current mobile home park between 1945 and 1950.

No potential environmental concerns were identified in association with the current or former use of the subject property.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources, Inc. (EDR). The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1923	***Scale: 1"=500'***
Subject Property:	Appears to be partially cleared and vacant land
North:	Appears to be undeveloped
South:	Appears to be partially cleared and vacant land
East:	Appears to be developed agriculturally across a road
West:	Appears to be developed with cleared land and residential structures

Date: 1928	***Scale: 1"=500'***
Subject Property:	Appears to be mostly cleared land
North:	No significant changes visible
South:	No significant changes visible
East:	Appears to be developed with industrial or commercial structures to the southeast
West:	Residential structures are no longer visible

Date: 1947	***Scale: 1"=500'***
Subject Property:	Appears to be cleared and developed with one row of manufactured homes along the eastern perimeter
North:	Appears to be developed with cleared land across the present-day Pacific Coast Highway
South:	No significant changes visible
East:	Appears to be developed with a narrow-cleared parcel followed by a landfill or industrial operation

Date: 1947		***Scale: 1"=500'***
West:	Appears to be developed with cleared land and small structures	

Date: 1953		***Scale: 1"=500'***
Subject Property:	Appears to be developed with additional manufactured homes and driveways	
North:	Appears to be developed with commercial/industrial buildings across Pacific Coast Highway	
South:	No significant changes visible	
East:	No significant changes visible	
West:	No significant changes visible	

Date: 1963, 1970		***Scale: 1"=500'***
Subject Property:	Appears to be developed with the present-day manufactured homes and driveways	
North:	Appears to be developed with additional commercial/industrial buildings across Pacific Coast Highway	
South:	Appears to be developed with parked vehicles or storage across a driveway	
East:	Appears to be developed with parked vehicles or storage and cleared land across a narrow vacant parcel	
West:	Appears to be developed with commercial and residential structures across the present-day Frampton Avenue	

Date: 1983		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	Appears to be developed with additional commercial/industrial buildings across Pacific Coast Highway	
South:	No significant changes visible	
East:	No significant changes visible except the southern portion of the previous storage area is developed as a paved parking lot	
West:	No significant changes visible	

Date: 1994		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible	
South:	Appears to be developed with a commercial or industrial building	
East:	Appears to be a narrow vacant parcel followed by a paved parking lot	
West:	No significant changes visible	

Date: 2002		***Scale: 1"=500'***
Subject Property:	No significant changes visible	
North:	No significant changes visible	
South:	No significant changes visible	
East:	Appears to be developed with the present-day parking lot parcel followed by commercial structures and parking lots	
West:	No significant changes visible	

Date: 2005, 2009, 2016	*Scale: 1"=500'*
Subject Property:	No significant changes visible
North:	No significant changes visible
South:	Appears to be developed with the present-day residential structures across a driveway
East:	No significant changes visible
West:	No significant changes visible

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested Sanborn fire insurance maps from EDR. Sanborn map coverage was not available for the subject property.

A copy of the Sanborn Maps No Coverage Letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR for past names and businesses that were listed for the subject property and adjacent properties. The findings are presented in the following table:

City Directory Search for 1270, 1280, and 1290 Pacific Coast Highway and 25900 Frampton Avenue (Subject Property)	
Year(s)	**Occupant Listed**
1950	Ernest Oaks Plumbing Contractor; Yankee Doodle Coltee Shop (1290 Pacific Coast Highway)
1954	A-1 Trailer Sales; Greyhound Bus Lines (1290 Pacific Coast Highway)
1957	Residential listings
1960	A-1 Trailer Park and residential listings
1964	Kentucky Fried Chicken (1290 Pacific Coast Highway)
1970	A-1 Trailer Park and residential listings; Local Union Carpenters Hall (1290 Pacific Coast Highway); Discount Auto Parts (1290 Pacific Coast Highway)
1975	Cycle Parts and Accessories (1290 Pacific Coast Highway)
1980	A-1 Trailer Park and residential listings; Govinda Fine Produce (1290 Pacific Coast Highway)
1990	Residential listings; Sunny Sheepskins (1290 Pacific Coast Highway)
2001	Residential listings; CHUNSoon (1290 Pacific Coast Highway); Sunny Sheepskins (1290 Pacific Coast Highway)
2010	A-1 Trailer Park
2014	A-1 Trailer Park

Based on the city directory review, no environmentally sensitive listings were identified for the subject property addresses.

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1950	No listings
1954	No listings
1957	No listings

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1960	No listings
1964	No listings
1970	M&D X Ray Service Co. (1315 PCH); Local Union Carpenters Hall (1315 PCH); Kentucky Fried Chicken (1333 PCH)
1975	Kentucky Fried Chicken (1333 PCH)
1980	Kentucky Fried Chicken (1333 PCH)
1990	Kentucky Fried Chicken (1333 PCH)
2001	Del Taco (1229 PCH); Pep Boys (1315 PCH); Popular Cash (1333 PCH)
2010	Del Taco (1229 PCH)
2014	Del Taco (1229 PCH); Pep Boys (1315 PCH)

Based on the city directory review, no environmentally sensitive listings were identified for the adjacent property addresses.

Copies of reviewed city directories are not included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1896	
Subject Property:	Depicted as undeveloped
North:	Depicted as undeveloped
South:	Depicted as undeveloped
East:	Depicted as undeveloped
West:	Depicted as undeveloped
Date: 1925	
Subject Property:	No significant changes depicted
North:	No significant changes depicted
South:	No significant changes depicted
East:	Depicted as undeveloped across railroad tracks
West:	Depicted as developed with structures across a road

Date: 1951, 1964, 1972	
Subject Property:	Depicted as developed with a structure
North:	Depicted as undeveloped across a highway
South:	Depicted as undeveloped
East:	Depicted as developed with a structure across railroad tracks
West:	Depicted as undeveloped across a road

Date: 1981	
Subject Property:	Depicted as undeveloped with a structure
North:	Depicted as shaded indicating general urban development across a highway
South:	Depicted as undeveloped
East:	Depicted as developed with small structures
West:	Depicted as undeveloped with commercial structures across a road

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Fire Department Health Hazardous Materials Division (LACFD HHMD)
Point of Contact:	Wendy Kampen
Agency Address:	5825 Rickenbacker Road, Commerce, California 90040
Agency Phone Number:	(626) 430-3260
Date of Contact:	May 24, 2018
Method of Communication:	Online Request/Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LACFD HHMD for the current subject property address of 1280 Pacific Coast Highway. As of the date of this report, Partner has not received a response from the LACFD HHMD for the additional subject property addressees.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Fire Department (LAFD)- Underground Storage Tank Division (USTD) and the Hazardous Materials Division (HMD)
Agency Address:	200 North Main Street, 17th Floor, Los Angeles, California 90012
Agency Phone Number:	(213) 978-3691
Date of Contact:	May 24, 2018
Method of Communication:	Online Inventories
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and ASTs on the subject property were identified in the CUPA regulated facilities online file lists for the LAFD UST and HazMat divisions.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Website:	Facility Information Detail (FIND) Database *http://www3.aqmd.gov/webappl/fim/prog/search.aspx*
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or

USTs were on file for the subject property in the SCAQMD online database.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	California Regional Water Quality Control Board (RWQCB)
Website:	GeoTracker Online Database *https://geotracker.waterboards.ca.gov/*
Agency Address:	320 West 4th Street, Suite 200, Los Angeles, California 90013
Agency Phone Number:	(213) 576-6600
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the RWQCB's GeoTracker online database.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Websites:	EnviroStor *http://www.envirostor.dtsc.ca.gov/public/* Hazardous Waste Tracking System (HWTS) *http://hwts.dtsc.ca.gov/report_search.cfm?id=5*
Agency Address:	9211 Oakdale Avenue, Chatsworth, California 91331
Agency Phone Number:	(818) 717-6500
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the EnviroStor or HWTS databases.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Building and Safety (LADBS)
Website:	*http://ladbsdoc.lacity.org/idispublic/*
Agency Address:	201 North Figueroa Street, Los Angeles, California 90012
Agency Phone Number:	(213) 482-6862
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	Records were available for review, as further discussed in the following table:

1270, 1280, and 1290 Pacific Coast Highway and 25900 Frampton Avenue (Subject Property)		
Year(s)	**Owner/Applicant**	**Description**
1945	Not Provided	New building permit for a 1-story building located at 25900 South Frampton Avenue
1947	Not Provided	Certificate of Occupancy for a 1-story utility building related to a trailer camp and located at 25900 South Frampton Avenue
1950	L.N. Moore	Certificate of Occupancy for a private garage addition to a community laundry room as related to an onsite trailer camp
1951	L.N. Moore	Certificate of Occupancy for a 1-story utility building
1964	Mr. Thomas Gurski	Certificate of Occupancy for a restaurant converted from a one-story commercial building at 1290 Pacific Coast Highway
1970	Mr. and Mrs. H. Ferrera	Certificate of Occupancy from restaurant to auto parts sales at 1290 Pacific Coast Highway

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Planning Department (LAPD) and Zoning Information and Map Access System (ZIMAS)
Website:	ZIMAS Online *http://zimas.lacity.org/*
Agency Address:	201 North Figueroa Street, Los Angeles, California 90012
Agency Phone Number:	(213) 482-7077
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned C2-1V for "community commercial" development and ZI-1361 for "mobile home park" residential development by the City of Los Angeles. According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	*http://maps.conservation.ca.gov/doms/index.html*
Agency Address:	5816 Corporate Avenue, Suite 200, Cypress, California 90630
Agency Phone Number:	(714) 816-6847
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Office of the Assessor (LACOA) and ZIMAS
Point of Contact:	*http://maps.assessor.lacounty.gov/mapping/viewer.asp*
Agency Address:	500 West Temple Street, Room 225, Los Angeles, California 90012
Agency Phone Number:	(213) 974-3211
Date of Contact:	May 24, 2018
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 7411-019-016 and the onsite structures were erected between 1946 and 1955.

Copies of pertinent documents obtained from the above-referenced regulatory agencies (if available) are included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal NPL or Delisted NPL Site	1.00	N	N	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

The adjacent property to the north is identified as a RCRA-SQG, FINDS, and ECHO site in the regulatory database report, as discussed below:

- The property, identified as Tillack & Co. Ltd at 1325 Pacific Coast Highway, is located adjacent to the north, hydrologically up-gradient of the subject property. According to the RCRA listing, the site was a small quantity generator of unnamed hazardous waste in 1986. No violations were reported in connection with the RCRA listing. The FINDS and ECHO databases are indexing systems that are used to cross-reference various federal and state database listings. These databases do not, in and of themselves, contain any data concerning environmental significant information, however the site was listed with FINDS Facility ID 110002707161 and ECHO Environmental ID 1000275897. No violations were reported in connection with these listings and

this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.

- The property, identified as Harbor City High Performance and Independent Toyota Rep at 1313 Pacific Coast Highway, is located adjacent to the north, hydrologically up-gradient of the subject property. According to the RCRA listings, the site was a large and small quantity generator of unnamed hazardous waste in 1987 and 1997. No violations were reported in connection with the RCRA listing. The FINDS and ECHO databases are indexing systems that are used to cross-reference various federal and state database listings. These databases do not, in and of themselves, contain any data concerning environmental significant information, however the site was listed with FINDS Facility ID 110002786138and ECHO Environmental ID 1000209525. According to the HAZNET listings, the site recycled waste in the form of aqueous solution from 1993-2000. According to the HIST UST listing, the site was equipped with one 500-gallon waste oil UST. No violations were reported in connection with these listings and this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.
- The property, identified as Mikes & Max's at 25853 Frampton Avenue, is located adjacent to the west, hydrologically cross-to-up-gradient of the subject property. According to the RCRA listing, the site was a small quantity generator of unnamed hazardous waste in 1987. No violations were reported in connection with the RCRA listing. The FINDS and ECHO databases are indexing systems that are used to cross-reference various federal and state database listings. These databases do not, in and of themselves, contain any data concerning environmental significant information, however the site was listed with FINDS Facility ID 110002787636 and ECHO Environmental ID 1000220138. No violations were reported in connection with these listings and this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.
- The property, identified as Distributing Station 123 at 25923 Frampton Avenue, is located adjacent to the west, hydrologically cross-to-up-gradient of the subject property. According to the AST listing, the Los Angeles Department of Water and Power (LADWP) owns the site, which was equipped with one AST that was identified by CERSID 10030240. No violations were reported in connection with this listing and this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.

4.2.4 Sites of Concern Listings

The property located two parcels east of the subject property is identified as a Waste Management Unit (WMUDS/SWAT) and Land Disposal Site (LDS) site in the regulatory database report, as discussed below:

- The property, identified as One-O-One and Harbor Inc. dump was located approximately 100 feet east of the subject property, and situated hydrologically down-gradient. Prior to use as a landfill/dump, the site was used for clay pit/brick manufacturing. The dump ceased operation in 1965 and occupied approximately 3.8 acres adjacent to the southwestern corner of the intersection of Pacific Coast Highway and Normandie Avenue. A solid waste water quality assessment test (SWAT) investigation was performed in 1989 and consisted of the installation of four groundwater monitoring wells and two lysimeters near the perimeter of the inactive dump.

  According to the analytical sampling results, soil samples indicated either undetectable metal concentrations or concentrations of metals below actionable values, and no detectable concentrations of organic halocarbons or volatile aromatic constituents. All samples were representative of native material found below the landfill refuse material. High OVA values for soil samples are believed to be due to methane gas. Several halocarbon and volatile aromatic constituents above Drinking Water Standards were detected in the groundwater. The well closest to the subject property (MW4) contained l,2 dichloroethane, trans l,2—dichloroethene, chlorobenzene, TCE, PCE, and benzene. Of these, l,2-dichloroethane, trans l,2-dichloroethene, and TCE were detected in all wells. Based on the SWAT report, ongoing groundwater monitoring was recommended. However, it is unclear if such monitoring ever occurred. Partner notes that an outstanding FOIA for further information is still pending with the RWQCB. However, based on the duration of time elapsed since the last landfill activities, as well as the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern to the subject property.

4.2.5 Orphan Listings

No orphan listings of concern are identified in the regulatory database report.

Based on the database report findings, vapor migration is not expected to represent a significant environmental concern at this time. However, as indicated in Section 4.1.7, due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Red Oak Investments (User of this report).

User Responsibilities

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire		**X**		
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property, identified as 1280 Pacific Coast Highway LLC, was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User. The information requested was not received prior to the issuance of this report. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

A key site manager was not available to be interviewed at the time of this assessment.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with environmental lien and AUL information for review as part of this assessment. However, Partner was provided a copy of a title report, dated April 5, 2018, which did not indicate environmental liens and/or AULs associated with the subject property. A copy of the title report is included in Appendix B of this report.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

No previous reports or other pertinent documentation was provided to Partner for review during the course of this assessment.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Emilie Moore
Site Assessment Conducted On:	June 5, 2018

Partner was unaccompanied during the field reconnaissance,

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located south of the southern subject property line. The City of Los Angeles removes solid waste from the subject property. According to property personnel, only household trash is collected in the on-site solid waste dumpsters. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of Los Angeles services the subject property vicinity. No wastewater treatment facilities or septic systems are observed or reported on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located throughout the subject property and in the public right of way. Site storm water from roofs, landscaped areas, and paved areas is directed to on-site concrete swales, which drain to the public right of way, and to on-site storm water drains. The subject property is connected to a municipal owned and maintained sewer system.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Department of Agriculture; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

Domestic hot water equipment appears to be fueled by electricity provided by The Los Angeles Department of Water and Power (LADWP).

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the sanitary sewer system. No industrial process is currently performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. Multiple pole-mounted transformers were observed on the subject property. The transformers are not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

Additionally, no other potential PCB-containing equipment (interior transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, balers, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property buildings were constructed in 1945-1950. Partner has conducted a limited, visual evaluation of accessible areas for the presence of suspect ACMs at the subject property. The objective of this visual survey was to note the presence and condition of suspect ACM observed. Please refer to the table below for identified suspect ACMs:

Suspect ACMs

Suspect ACM	Location	Friable Yes/No	Physical Condition
Stucco	Throughout Building Exteriors	Yes	Good

Partner was not provided access to the interior of the permanent onsite structures.

The limited visual survey consisted of noting observable materials (materials which were readily accessible and visible during the course of the site reconnaissance) that are commonly known to potentially contain asbestos. This activity was not designed to discover all sources of suspect ACM, PACM, or asbestos at the site; or to comply with any regulations and/or laws relative to planned disturbance of building materials such as renovation or demolition, or any other regulatory purpose. Rather, it is intended to give the User an indication if significant (significant due to quantity, accessibility, or condition) potential sources of ACM or PACM are present at the subject property. Additional sampling, assessment, and evaluation will be warranted for any other use.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property buildings (pre-1978), there is a potential that LBP is present. Exterior painted surfaces were observed in good condition and therefore not expected to represent a hazard. Partner was not provided access to the interior of the permanent onsite structures.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones

EPA Zones	Average Predicted Radon Levels	Potential
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, the sources of public water for the City of Los Angeles are surface water (Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater. According to the 2013 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner was not provided access to the interior of the subject property buildings to inspect for significant evidence of mold growth. This limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

No obvious indications of water damage or mold growth were observed during Partner's visual exterior assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1280 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has revealed no evidence of recognized environmental conditions in connection with the subject property; however, environmental issues were identified. Based on the conclusions of this assessment, Partner recommends the following:

- Partner recommends that a methane assessment be conducted onsite prior to any future redevelopment activities.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 1280 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Whether you are in a high risk zone or not, you may need flood insurance (https://www.fema.gov/national-flood-insurance-program) because most homeowners insurance doesn't cover flood damage. If you live in an area with low or moderate flood risk, you are 5 times more likely to experience flood than a fire in your home over the next 30 years. For many, a National Flood Insurance Program's flood insurance policy could cost less than $400 per year. Call your insurance agent today and protect what you've built.

Learn more about steps you can take (https://www.fema.gov/what-mitigation) to reduce the risk flood damage.

TAX PARCEL NO.:	7411-019-016

C. SUPPLEMENTAL ASSESSMENTS OF PROPERTY TAXES, IF ANY, MADE PURSUANT TO THE PROVISIONS OF PART 0.5, CHAPTER 3.5 (COMMENCING WITH SECTION 75) OF THE CALIFORNIA REVENUE AND TAXATION CODE AS A RESULT OF THE TRANSFER OF TITLE TO THE VESTEE NAMED IN SCHEDULE A.

SUPPLEMENTAL OR ESCAPED ASSESSMENTS OF PROPERTY TAXES, IF ANY, MADE PURSUANT TO PART 0.5, CHAPTER 3.5 OR PART 2, CHAPTER 3, ARTICLES 3 AND 4, RESPECTIVELY, OF THE CALIFORNIA REVENUE AND TAXATION CODE AS A RESULT OF CHANGES IN OWNERSHIP OR NEW CONSTRUCTION OCCURRING PRIOR TO DATE OF POLICY.

ASSESSMENTS, IF ANY, FOR COMMUNITY FACILITY DISTRICTS AFFECTING SAID LAND WHICH MAY EXIST BY VIRTUE OF ASSESSMENT MAPS OR NOTICES FILED BY SAID DISTRICTS.

NOTE: THE MAP ATTACHED HERETO IS NEITHER A PLAT NOR A SURVEY, IT IS FURNISHED AS A CONVENIENCE TO LOCATE THE LAND INDICATED HEREON WITH REFERENCE TO STREETS AND OTHER LAND. NO LIABILITY IS ASSUMED BY REASON OF RELIANCE HEREIN.

1. WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT SHOWN BY THE PUBLIC RECORDS.

2. ANY AND ALL OFFERS OF DEDICATION, CONDITIONS, RESTRICTIONS, EASEMENTS, FENCE LINE/BOUNDARY DISCREPANCIES, NOTES AND/OR PROVISIONS SHOWN OR DISCLOSED BY THE FILED OR RECORDED MAP REFERRED TO IN THE LEGAL DESCRIPTION.

3. AN EASEMENT FOR THE PURPOSE SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT

PURPOSE:	PIPE LINE
AFFECTS:	A STRIP OF LAND 3 FEET WIDE ALONG THE EAST SIDE
RECORDED:	IN **BOOK 2705, PAGE 379,** OFFICIAL RECORDS

4. AN EASEMENT FOR THE PURPOSE SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT

PURPOSE:	STREET PURPOSES
AFFECTS:	AS DESCRIBED THEREIN
RECORDED:	IN **BOOK 15782, PAGE 363,** OFFICIAL RECORDS

5. AN EASEMENT FOR THE PURPOSE SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT

PURPOSE:	ELECTRIC DISTRIBUTION EQUIPMENT AND FACILITIES
AFFECTS:	AS DESCRIBED THEREIN
RECORDED:	**OCTOBER 24, 1980, AS INSTRUMENT NO. 80-1065106,** OFFICIAL RECORDS

6. THE PROVISIONS OF AN INSTRUMENT EXECUTED BY AND BETWEEN THE PARTIES NAMED THEREIN, UPON THE TERMS, PROVISIONS AND CONDITIONS THEREIN PROVIDED.

ENTITLED:	"NOTICE OF TEMPORARY VACANT AND SECURED RENTAL UNITS"
RECORDED:	**FEBRUARY 1, 2016, AS INSTRUMENT NO. 16-114968,** OFFICIAL RECORDS

REFERENCE IS MADE TO SAID DOCUMENT FOR FULL PARTICULARS.

7. MATTERS WHICH MAY BE DISCLOSED BY AN INSPECTION OR BY A SURVEY OF SAID LAND THAT IS SATISFACTORY TO THIS COMPANY, OR BY INQUIRY OF THE PARTIES IN POSSESSION THEREOF.

8. **OUR EXAMINATION OF RECORD TITLE TO THE HEREIN DESCRIBED LAND DOES NOT DISCLOSE ANY EXISTING LOANS. WE THEREFORE REQUEST A COPY OF THE OWNERS DISCLOSURE STATEMENT WITH REFERENCE TO EXISTING ENCUMBRANCES TO RECONFIRM OUR FINDINGS.**

9. THE REQUIREMENT THAT THIS COMPANY BE PROVIDED THE FOLLOWING FOR THE BELOW NAMED LIMITED LIABILITY COMPANY BEFORE ISSUING ANY POLICY OF TITLE INSURANCE,

(1) A COPY OF ITS OPERATING AGREEMENT AND ANY AMENDMENTS THERETO MUST BE SUBMITTED TO THE COMPANY FOR REVIEW.

(2) A CERTIFIED COPY OF ITS ARTICLES OF ORGANIZATION (LLC-1), ANY CERTIFICATE OF CORRECTION (LLC-11), CERTIFICATE OF AMENDMENT (LLC-2), OR RESTATEMENT OF ARTICLES OF ORGANIZATION (LLC-10) MUST BE SUBMITTED TO COMPANY FOR REVIEW.

(3) WITH RESPECT TO ANY DEED, DEED OF TRUST, LEASE SUBORDINATION AGREEMENT OR OTHER DOCUMENT OR INSTRUMENT EXECUTED BY SUCH LIMITED LIABILITY COMPANY AND PRESENTED TO THE COMPANY FOR RECORDING OR UPON WHICH THE COMPANY IS ASKED TO RELY, SUCH DOCUMENT OR INSTRUMENT MUST BE EXECUTED IN ACCORDANCE WITH THE FOLLOWING:

A. IF THE LIMITED LIABILITY COMPANY PROPERLY OPERATES THROUGH OFFICERS APPOINTED OR ELECTED PURSUANT TO THE TERMS OF THE WRITTEN OPERATING AGREEMENT, SUCH DOCUMENT OR INSTRUMENT MUST BE EXECUTED BY AT LEAST TWO DULY ELECTED OR APPOINTED OFFICERS AS FOLLOWS: THE CHAIRMAN OF THE BOARD, THE PRESIDENT, VICE PRESIDENT, AND ANY SECRETARY, ASSISTANT SECRETARY, THE CHIEF FINANCIAL OFFICER OR ANY ASSISTANT TREASURER.

B. IF THE LIMITED LIABILITY COMPANY PROPERLY OPERATES THROUGH A MANAGER OR MANAGERS IDENTIFIED IN THE ARTICLES OF ORGANIZATION AND/OR DULY ELECTED PURSUANT TO THE TERMS OF A WRITTEN OPERATING AGREEMENT, SUCH DOCUMENT OR INSTRUMENT MUST BE EXECUTED BY AT LEAST TWO SUCH MANAGERS OR BY ONE MANAGER IF THE LIMITED LIABILITY COMPANY PROPERLY OPERATES WITH THE EXISTENCE OF ONLY ONE MANAGER.

(4) OTHER REQUIREMENTS WHICH THE COMPANY MAY IMPOSE FOLLOWING ITS REVIEW OF THE MATERIAL REQUIRED HEREIN AND OTHER INFORMATION WHICH THE COMPANY MAY REQUIRE.
NAME OF LLC: 1280 PACIFIC COAST HIGHWAY LLC, A CALIFORNIA LIMITED LIABILITY COMPANY

10. ANY RIGHTS OF THE PARTIES IN POSSESSION OF SAID LAND, BASED ON AN UNRECORDED AGREEMENT, CONTRACT OR LEASE, AS DISCLOSED BY INSPECTION AND INVESTIGATION.

    THIS COMPANY WILL REQUIRE THAT A FULL COPY OF ANY UNRECORDED AGREEMENT, CONTRACT OR LEASE BE SUBMITTED TO US, TOGETHER WITH ALL SUPPLEMENTS, ASSIGNMENTS AND AMENDMENTS, BEFORE ISSUING ANY POLICY OF TITLE INSURANCE.

END OF SCHEDULE B

NOTES AND REQUIREMENTS

SPECIAL NOTE: CALIFORNIA REVENUE AND TAXATION CODE SECTION 18662, EFFECTIVE JANUARY 1, 1994 AND BY AMENDMENT EFFECTIVE JANUARY 1, 2003, PROVIDES THAT THE SELLER IN ALL SALES OF CALIFORNIA REAL ESTATE MAY BE REQUIRED TO WITHHOLD 3 AND 1/3RD% OF THE TOTAL SALES PRICE A CALIFORNIA STATE INCOME TAX, SUBJECT TO THE VARIOUS PROVISIONS OF THE LAW AS THEREIN CONTAINED.

SPECIAL NOTE: UNLESS OTHERWISE DIRECTED IN WRITING, PROVIDENT TITLE COMPANY AUTOMATICALLY ISSUES **THE ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (2-03-10)** ON ALL QUALIFIED RESIDENTIAL PROPERTY SALE TRANSACTIONS.

SPECIAL NOTE: THE ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (1-1-08) CONTAINS EXCEPTIONS AS TO OFF RECORD MATTERS IN ADDITION TO SPECIFIC DEDUCTIBLE AMOUNTS AND SPECIFIC LIABILITY MAXIMUMS FOR COVERED RISKS OF SAID POLICY THAT HAVE BEEN FILED AND APPROVED BY THE VARIOUS DEPARTMENTS OF INSURANCE WHERE THE FORMS HAVE BEEN FILED. PLEASE CONSULT WITH YOUR ESCROW OR TITLE OFFICER IF YOU HAVE QUESTIONS REGARDING THE POLICY.

GOOD FUNDS NOTE:
CALIFORNIA INSURANCE CODE SECTION 12413.1 REGULATES THE DISBURSEMENT OF ESCROW AND SUB-ESCROW FUNDS BY TITLE COMPANIES. THE LAW REQUIRES THAT FUNDS BE DEPOSITED IN THE TITLE COMPANY ESCROW ACCOUNT AND AVAILABLE FOR WITHDRAWAL PRIOR TO DISBURSEMENT. FUNDS DEPOSITED WITH THE COMPANY BY WIRE TRANSFER MAY BE DISBURSED UPON RECEIPT. FUNDS DEPOSITED WITH THE COMPANY VIA CASHIER'S OR TELLER'S CHECK DRAWN ON A CALIFORNIA BASED BANK MAY BE DISBURSED THE NEXT BUSINESS DAY AFTER THE DAY OF DEPOSIT. IF FUNDS ARE DEPOSITED WITH THE COMPANY BY OTHER METHODS, RECORDING AND/OR DISBURSEMENT AY BE DELAYED. ALL ESCROW AND SUB-ESCROW FUNDS RECEIVED BY THE COMPANY WILL BE DEPOSITED WITH OTHER ESCROW FUNDS IN ONE OR MORE NON-INTEREST BEARING ESCROW ACCOUNTS OF THE COMPANY IN A FINANCIAL INSTITUTION SELECTED BY THE COMPANY. THE COMPANY MAY RECEIVE CERTAIN DIRECT OR INDIRECT BENEFITS FROM THE FINANCIAL INSTITUTION BY REASON OF THE DEPOSIT OF SUCH FUNDS OR THE MAINTENANCE OF SUCH ACCOUNTS WITH SUCH FINANCIAL INSTITUTION, AND THE COMPANY SHALL HAVE NO OBLIGATION TO ACCOUNT TO THE DEPOSITION PARTY IN ANY MANNER FOR THE VALUE OF, OR TO PAY SUCH PARTY, ANY BENEFIT RECEIVED BY THE COMPANY. THOSE BENEFITS MAY INCLUDE, WITHOUT LIMITATION, CREDITS ALLOWED BY SUCH FINANCIAL INSTITUTION ON LOANS AND EARNINGS ON INVESTMENTS MADE WITH THE PROCEEDS OF SUCH LOANS, ACCOUNTING, REPORTING AND OTHER SERVICES AND PRODUCTS OF SUCH FINANCIAL INSTITUTION. SUCH BENEFITS SHALL BE DEEMED ADDITIONAL COMPENSATION OF THE COMPANY FOR ITS SERVICES IN CONNECTION WITH THE ESCROW OR SUB-ESCROW.

Note No. 1: YOUR ORDER FOR TITLE WORK CALLS FOR A SEARCH OF PROPERTY THAT IS IDENTIFIED BY A STREET ADDRESS ONLY OR BY SUCH OTHER UNCONFIRMED DATA. BASED ON OUR RECORDS, WE BELIEVE THAT THE LAND DESCRIPTION AND ITS OWNERSHIP IN THIS REPORT REPRESENTS THE PARCEL THAT YOU REQUESTED.

Note No. 2: IN ORDER TO PREVENT COSTLY ERRORS AND TO BE CERTAIN THAT THE CORRECT PARCEL OF LAND IS BEING CONSIDERED, WE REQUIRE THAT WRITTEN APPROVAL OF THE LEGAL DESCRIPTION AND THE VESTING IN THIS REPORT BE SENT TO US. IF WE DO NOT RECEIVE SUCH CONFIRMATION BEFORE CLOSE OF ESCROW, WE WILL CONSIDER THIS DEEMED APPROVAL OF THE DESCRIPTION AND OWNERSHIP OF SAID LAND AS SHOWN IN OUR REPORT.

Note No. 3: WE WILL REQUIRE A STATEMENT OF INFORMATION FROM THE PARTIES NAMED BELOW IN ORDER TO COMPLETE THIS REPORT, BASED ON THE EFFECT OF DOCUMENTS, PROCEEDINGS, LIENS, DECREES, OR OTHER MATTERS WHICH DO NOT SPECIFICALLY DESCRIBE SAID LAND, BUT WHICH, IF ANY DO EXIST, MAY AFFECT THE TITLE OR IMPOSE LIENS OR ENCUMBRANCES THEREON.

PROVIDENT TITLE COMPANY

Privacy Policy Notice

PURPOSE OF THIS NOTICE

Title V of the Gramm-Leach-Bliley Act (GLBA) generally prohibits any financial institution, directly or through its affiliates, from sharing nonpublic personal information about you with a nonaffiliated third party unless the institution provides you with a notice of its privacy policies and practices, such as the type of information that it collects about you and the categories of persons or entities to whom it may be disclosed. In compliance with the GLBA, we are providing you with this document, which notifies you of the privacy policies and practices of **Provident Title Company.**

We may collect nonpublic personal information about you from the following sources:

- Information we receive from you, such as on applications or other forms.
- Information about your transactions we secure from our files, or from our affiliates or others.
- Information we receive from a consumer reporting agency.
- Information that we receive from others involved in your transaction, such as the real estate agent or lender.

Unless it is specifically stated otherwise in an amended Privacy Policy Notice, no additional nonpublic personal information will be collected about you.

We may disclose any of the above information that we collect about our customers or former customers to our affiliates or to nonaffiliated third parties as permitted by law.

We also may disclose this information about our customers or former customers to the following types of nonaffiliated companies that perform marketing services on our behalf or with whom we have joint marketing agreements:

- Financial service providers such as companies engaged in banking, consumer finance, securities and insurance.
- Non-financial companies such as envelope stuffers and other fulfillment service providers.

WE DO NOT DISCLOSE ANY NONPUBLIC PERSONAL INFORMATION ABOUT YOU WITH ANYONE FOR ANY PURPOSE THAT IS NOT SPECIFICALLY PERMITTED BY LAW.

We restrict access to nonpublic personal information about you to those employees who need to know that information in order to provide products or services to you. We maintain physical, electronic, and procedural safeguards that comply with federal regulations to guard your nonpublic personal information.

CONDITIONS AND STIPULATIONS

CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, which are not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 25 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 4 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical

Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

FINDS:

Registry ID: 110002709640

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
