Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 5427

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

KAISER PERMANENTE SOUTH BAY MEDICAL CENTER (Continued) **1007199252**

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Registry ID: 110002747387

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: DTSC approved the revised Remedial Investigation Work Plan on 3/27/2012 DTSC will deactivate this project in our database for the time being, until we hear back from the City of LA that the Ken Malloy Harbor Regional Park Former Disposal Site is back on track to resume the proposed work, then we ll re-activate it. Thank you all for your help in updating me on the status of this project. Sue Hakim, M.S. Remedial Project Manager Brownfields and Environmental Restoration Program Department of Toxic Substances Control 5796 Corporate Avenue Cypress, California 90630 Phone:(714) 484-5381 soad.hakim@dtsc.ca.gov From: Julie Allen [mailto:julie.allen@lacity.org] Sent: Thursday, October 18, 2012 11:18 AM To: Hakim, Soad@DTSC Cc: Bache, Stephanie; Senga, Robert@DTSC; Kourda, Dina@DTSC; Thompson, Jennifer K.; Gratwick, Stephen; Katherine Doherty; David Attaway Subject: Re: Ken Malloy Harbor Regional Park Former Disposal Site (Machado Lake) For

MACHADO LAKE (Continued) **S111022969**

clarification, I am the City of Los Angeles project manager for the Machado Lake Rehabilitation Project, which will be in construction beginning in 2013. This project includes improvements to the lake and other areas at the Ken Malloy Harbor Regional Park, but does not include any work related to the former disposal site. The disposal site area will not be impacted by the construction project. From my understanding, a Work Plan related to testing at the disposal site was prepared and reviewed by DTSC, but the implementation of the Work Plan is not part of the scope of this project. The park is under the ownership of the City of Los Angeles Department of Recreation and Parks (RAP). The contact person for RAP is David Attaway, whom I have copied on this email. It is not anticipated that RAP will be performing any work related to the former disposal site while the Lake Rehabilitation construction project is in progress, which is expected to end in 2016. Please let me know if I can be of any further assistance. Thank you, Julie Allen, PE Senior Construction Engineer/PM II Proposition O Clean Water Bond Program Bureau of Engineering 1149 S. Broadway, 6th Floor Los Angeles, CA 90015 213-485-1454 (phone)

Comments: Annual Cost Estimate letter completed on 10/31//2011

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 10/18/2012
Comments: DTSC approved the revised Remedial Investigation Work Plan on 3/27/2012 DTSC will deactivate this project in our database for the time being, until we hear back from the City of LA that the Ken Malloy Harbor Regional Park Former Disposal Site is back on track to resume the proposed work, then we ll re-activate it. Thank you all for your help in updating me on the status of this project. Sue Hakim, M.S. Remedial Project Manager Brownfields and Environmental Restoration Program Department of Toxic Substances Control 5796 Corporate Avenue Cypress, California 90630 Phone:(714) 484-5381 soad.hakim@dtsc.ca.gov From: Julie Allen [mailto:julie.allen@lacity.org] Sent: Thursday, October 18, 2012 11:18 AM To: Hakim, Soad@DTSC Cc: Bache, Stephanie; Senga, Robert@DTSC; Kourda, Dina@DTSC; Thompson, Jennifer K.; Gratwick, Stephen; Katherine Doherty; David Attaway Subject: Re: Ken Malloy Harbor Regional Park Former Disposal Site (Machado Lake) For clarification, I am the City of Los Angeles project manager for the Machado Lake Rehabilitation Project, which will be in construction beginning in 2013. This project includes improvements to the lake and other areas at the Ken Malloy Harbor Regional Park, but does not include any work related to the former disposal site. The disposal site area will not be impacted by the construction project. From my understanding, a Work Plan related to testing at the disposal site was prepared and reviewed by DTSC, but the implementation of the Work Plan is not part of the scope of this project. The park is under the ownership of the City of Los Angeles Department of Recreation and Parks (RAP). The contact person for RAP is David Attaway, whom I have copied on this email. It is not anticipated that RAP will be performing any work related to the former disposal site while the Lake Rehabilitation construction project is in progress, which is expected to end in 2016. Please let me know if I can be of any further assistance. Thank you, Julie Allen, PE Senior Construction Engineer/PM II Proposition O Clean Water Bond Program Bureau of Engineering 1149 S. Broadway, 6th Floor Los Angeles, CA 90015 213-485-1454 (phone)

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as

C-BRITE METAL FINISHING INC (Continued) **1000363029**

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002619756

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Completed Info:

Completed Area Name: 1A, 1B, 2
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/30/1998
Comments: RA - OU1 (Sites 1A, 1B, & 2): The removal action involves capping by covering exposed impacted soil areas with a total of 8,310 tons of imported clean soil, grading, and landscaping to prevent and minimize surface water and wind erosion. The soil cover comprises of three layers with a total thickness ranging from 2.5 to 7.5 feet: a bottom granular fill layer to establish sub-grade elevation; an infiltration layer consisting of lower permeability silt and clay to reduce infiltration; and a vegetative layer to support plant cover growth. The removal action also includes the installation and quarterly monitoring of three groundwater monitoring wells and drainage channel installation.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/07/1995
Comments: PEA FOR OU-1 AND OU-2 COMPLETED SEPTEMBER 7, 1995 SIZE OF ACTIVITY: MEDIUM The Navy submitted an SI Report in July 1993 documenting the soil investigation conducted at OUs 1 and 2. Due to the presence of a variety of chemical constituents includ- ing volatile organics, semivolatile organics, metals, and petroleum hydrocarbons, the Navy decided to further investi- gate these areas for a threat to both human health and the environment, documented as part of a Removal Site Evalua- tion Report. The results of RSE investigation showed at OUs 1 and 2 that (1) The volatile organic compounds were below the soil risk-based concentrations (RBCs); (2) The semivolatiles exceeded their respective RBCs; and (3) The metals exceeded their background and RBCs, including the dioxin concentrations at OU2. Additionally, the concentra- tions of the total petroleum hydrocarbons as gas and diesel, respectively were greater than 1000 parts per million. The RSE report recommended a removal action for these sites. We concur with the removal action per our letter of September 14, 1995.

Completed Document Type:	Certification
Completed Date:	03/13/1998
Comments:	CERT - Landfill: The removal action at OU2 involves excavation and transportion of soil contaminated with benzo(a) pyrene, dibenzo(a, h) anthracene, and/or a total recoverable petroleum hyrocarbon for off-site disposal. Confirmatory sampling was also conducted to verify that the impacted soil has been removed. An estimated 1,175 tons of soil was excavated and disposed of at a permitted and licensed off-site landfill. Additionally, an underground storage tank was removed in accordance with California Leaking Underground Fuel Tank (CALUFT) requirements.

Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	06/30/1998
Comments:	RA - OU1 (Sites 1A, 1B, & 2): The removal action involves capping by covering exposed impacted soil areas with a total of 8,310 tons of imported clean soil, grading, and landscaping to prevent and minimize surface water and wind erosion. The soil cover comprises of three layers with a total thickness ranging from 2.5 to 7.5 feet: a bottom granular fill layer to establish sub-grade elevation; an infiltration layer consisting of lower permeability silt and clay to reduce infiltration; and a vegetative layer to support plant cover growth. The removal action also includes the installation and quarterly

DEFENSE FUEL SUPPORT POINT SAN PEDRO (Continued) **U001565523**

monitoring of three groundwater monitoring wells and drainage channel installation.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/07/1995
Comments: PEA FOR OU-1 AND OU-2 COMPLETED SEPTEMBER 7, 1995 SIZE OF ACTIVITY: MEDIUM The Navy submitted an SI Report in July 1993 documenting the soil investigation conducted at OUs 1 and 2. Due to the presence of a variety of chemical constituents includ- ing volatile organics, semivolatile organics, metals, and petroleum hydrocarbons, the Navy decided to further investi- gate these areas for a threat to both human health and the environment, documented as part of a Removal Site Evalua- tion Report. The results of RSE investigation showed at OUs 1 and 2 that (1) The volatile organic compounds were below the soil risk-based concentrations (RBCs); (2) The semivolatiles exceeded their respective RBCs; and (3) The metals exceeded their background and RBCs, including the dioxin concentrations at OU2. Additionally, the concentra- tions of the total petroleum hydrocarbons as gas and diesel, respectively were greater than 1000 parts per million. The RSE report recommended a removal action for these sites. We concur with the removal action per our letter of September 14, 1995.

Completed Date:	03/13/1998
Comments:	CERT - Landfill: The removal action at OU2 involves excavation and transportion of soil contaminated with benzo(a) pyrene, dibenzo(a, h) anthracene, and/or a total recoverable petroleum hyrocarbon for off-site disposal. Confirmatory sampling was also conducted to verify that the impacted soil has been removed. An estimated 1,175 tons of soil was excavated and disposed of at a permitted and licensed off-site landfill. Additionally, an underground storage tank was removed in accordance with California Leaking Underground Fuel Tank (CALUFT) requirements.

PHILLIPS 66 LOS ANGELES REFINERY WILMINGTON PLANT (Continued) **1000337291**

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	43650
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs):	97
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.
Amount (Lbs):	2171
Waste code:	D004
Waste name:	ARSENIC
Amount (Lbs):	545669
Waste code:	D006
Waste name:	CADMIUM
Amount (Lbs):	10

Waste code: D039
Waste name: TETRACHLOROETHYLENE
Amount (Lbs): 567

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 406

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 406

Waste code: F037
Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN: OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORMWATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGE GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.
Amount (Lbs): 113068

Waste code: K050
Waste name: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY
Amount (Lbs): 56659

Waste code: K051
Waste name: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY
Amount (Lbs): 1902

Waste code: K171
Waste name: Spent hydrotreating catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic

RB Case Number:	0231
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline, Other Petroleum
Site History:	The Wilmington Plant (Plant) has been in operation since June 1919 with refinery operations initiated in 1940. Currently the Wilmington Plant serves as the upgrade unit of the ConocoPhillips Los Angeles Refinery (COP LAR), which consists of two plants located in Carson and Wilmington, California. LAR Wilmington processes intermediate petroleum streams (i.e., naphtha distillates, diesel distillates, and gas oil) provided by pipeline from the Carson Plant into finished products. The major products of the facility currently include automotive gasoline, jet fuel, and diesel. Since 1985, the refinery has been under numerous directives, issued by the Water Board under authority in sections 13304 and 13267 of the California Water Code (CWC), to investigate and cleanup releases of wastes. Cleanup and Abatement Order (CAO) No. 93-48, issued by the Executive Officer of RWQCB on August 10, 1993, directing the former owner of Wilmington Plant, Unocal, to complete the investigation and assessment for onsite and offsite soil and groundwater contamination. In 1994, this Order was revised, by the Executive Officer, in CAO No. 94-139. On June 28, 2005 RWQCB ordered, pursuant to section 13267 of the CWC, COP to perform investigation and analysis to determine the extent and magnitude of TBA impacts on Lynwood and Silverado aquifers. COP is in compliance with the Orders, currently carrying out tasks including: semi-annual groundwater monitoring and reporting; O&M hydrocarbon recovery system; LNAPL mobility study; deeper aquifers groundwater investigation to further assess TBA migration; implementation of

PHILLIPS 66 CO LOS ANGELES REFINERY - WILMINGTON PLANT (Continued) **S103634906**

Interim Remedial Action Plan for the southwestern plume, focusing Blocks 72 through 74 remediation system design and installation; refine conceptual site model; pilot stest on the air-sparge and vapor extraction system for the north plume . The Master Work Plan was previously updated in 2015, and will be updated by September 2017.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Next Scheduled EDR Contact: 08/27/2018
Data Release Frequency: Varies

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2016

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board?s review found that more than one-third of the region?s active disposal pits are operating without permission.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

UTM Y (Meters):	3739276.0
Elevation:	44 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5633779 TORRANCE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

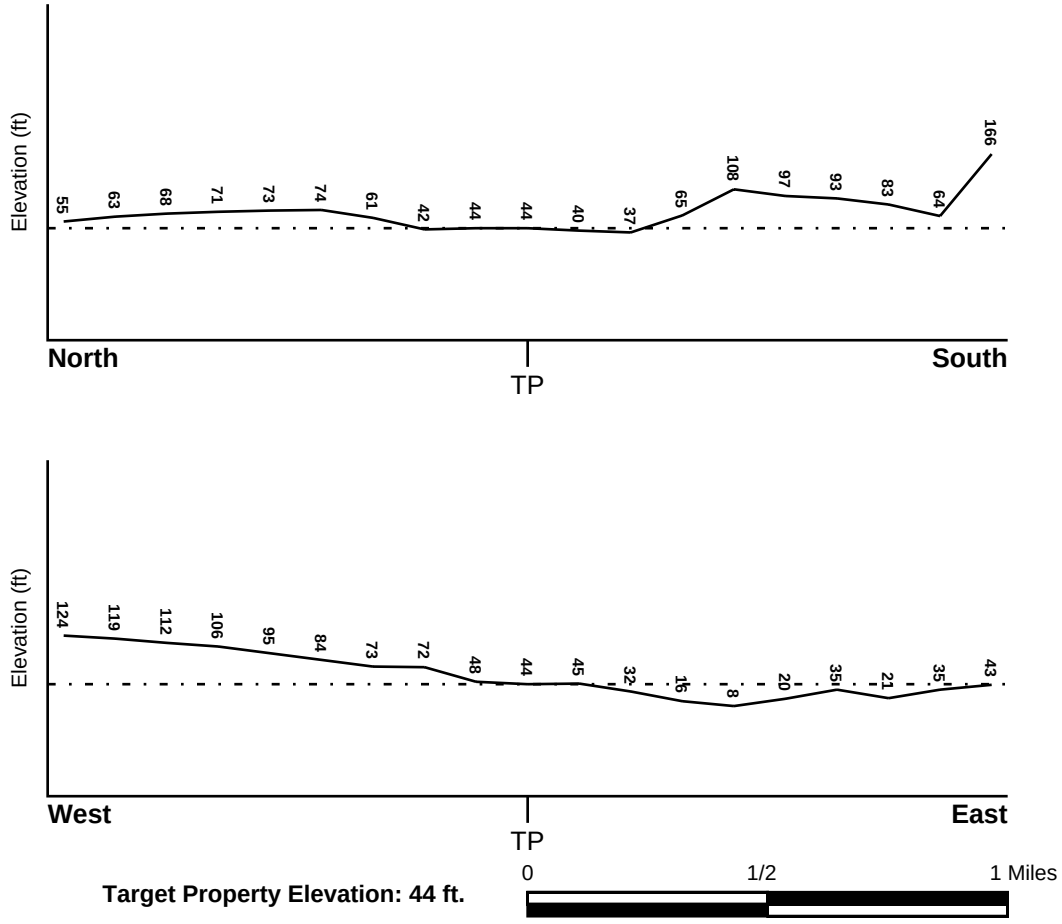
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1945F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06037C1940F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
TORRANCE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Surficial Soil Types:
sandy loam
gravelly - sandy loam
silt loam
clay
fine sand
gravelly - sand
sand
fine sandy loam

Shallow Soil Types:
fine sandy loam
gravelly - loam
sandy clay
sandy clay loam
clay
silty clay
sand

Deeper Soil Types:
gravelly - sandy loam
sandy loam
very gravelly - sandy loam
stratified
very fine sandy loam
weathered bedrock
sand
gravelly - fine sandy loam
silty clay loam
clay loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

APPENDIX D: QUALIFICATIONS/INSURANCE

PARTNER

Education

B.A., Environmental Studies, Concentration in Sustainability, Energy and Society
University of Southern California, *departmental honors, USC S.U.R.F. research fund recipient*

Highlights

9 years in the environmental industry including environmental law and due diligence
4 years of experience performing CEQA/NEPA research and legal assistance
5 years of experience performing due diligence assessments including Phase I and Phase II Environmental Site Assessments, Transaction Screen Assessments, and Environmental Desktop Reports
3 years of specific experience with Freddie Mac and Fannie Mae as well as US Department of Housing and Urban Development (HUD) and US Small Business Association (SBA) assessments
AHERA-Certified Asbestos Building Inspector #ABII0601160006N11623

Experience Summary

Ms. Moore currently holds the role of Environmental Professional and her responsibilities include thorough site assessment and technical report writing in line with the American Society of Testing and Materials (ASTM) standard and US Environmental Protection Agency's All Appropriate Inquiry (AAI) as well as customized client formats. In addition, Ms. Moore performs limited asbestos surveys, lead-based paint surveys and radon testing as required per scope of work.

Ms. Moore has worked on numerous large scope projects including gas stations, dry cleaners, manufacturing sites, upscale residential developments, high-rise hotels, retail shopping centers, machine shops, auto repair facilities, cell phone data towers and associated land, recycling facilities, oil drilling sites, multi-use commercial/residential buildings, and original construction buildings located in Downtown Los Angeles with known historical significance.

Additional field experience for Ms. Moore includes ground and well water testing for lead, volatile organic compounds of concern, pH, alkalinity, total suspended solids, chlorides, and conductivity, extensive soil sampling, characterization, and testing as related to contamination and remediation near Southern California Superfund sites, experience drafting corrective action plans for these sites when contamination is found, and Environmental Impact Report (EIR) production and associated revisions

Ms. Moore works closely with state and local regulatory agencies to obtain environmentally significant documents regarding tank removal and subsurface investigations performed onsite. Ms. Moore is an effective communicator and thrives under pressure and on a deadline. Ms. Moore has worked for the federal government, private investors, as well as large financial institutions including, but not limited to, Bank of America, Citibank, N.A., KeyBank, N.A., JPMorgan Chase Bank, BBVA Compass Bank, East West Bank, US Bank, Union Bank, Comerica Bank, HUD, 1st Enterprise Bank, Morgan Stanley, Bank of the West, California Republic Bank, Freddie Mac/Fannie Mae, SBA, CDC Small Business Finance, and Wells Fargo.

Project Experience

Ms. Moore has five years of experience performing due diligence assessments for a variety of property types, as detailed above. For each assessment, she reviews the condition of the building structure and systems and develops a thorough report. Project highlights include:

Gas Stations, Los Angeles, California. Ms. Moore performed a series of four Phase I Environmental Assessments as part of a larger portfolio concerning name-brand gasoline stations throughout the Greater Los Angeles area. Potentially leaking underground storage tanks were identified at two of these four locations necessitating subsequent soil and groundwater assessments.

Six Grocery Stores, San Fernando Valley, California. Ms. Moore performed a series of six Phase I Environmental Assessments as part of a larger portfolio assisting a well-known grocery store chain as they were acquired by another chain.

Dairy Farm/Agricultural Land, Ontario, California. Ms. Moore performed a Phase I Environmental Assessment on a complex plot of land featuring active dairy and farming operations.

Multi-Use, Santa Monica, California. Ms. Moore performed a Phase I Environmental Assessment on five acres of formerly industrial land which was used commercially, but was being sold for future high-density residential development.

Golf Courses, Nipomo and Huntington Beach, California. Ms. Moore performed Phase I Environmental Assessments on formerly industrial/landfill land which had been redeveloped as golf courses.

Recycling Center/Waste Disposal Site, North Los Angeles, California. Ms. Moore performed a Phase I Environmental Assessment on a former landfill which had been redeveloped as a recycling facility.

Multi-family apartment complex on a 14 acre lot, Bakersfield, California. Ms. Moore performed a Phase I Environmental Assessment for a multi-family apartment complex. This assessment included lead and asbestos sampling.

Hotel, Beverly Hills, California. Ms. Moore performed a Phase I Environmental Assessment for a well-known, five-star, full service hotel with 285 guest rooms, onsite dry cleaning, and previous onsite gas station operations.

Oil-Drilling/Active Oil Wells, Lost Hills, California. Ms. Moore performed a Phase I Environmental Assessment for a 60-acre parcel of land featuring active oil drilling operations and drilling equipment storage.

Highlights
19 years of experience in the Environmental Consulting Industry
Industrial Hygiene

Experience Summary
Mr. Gallagher serves as a Senior Project Manager in Partner Engineering and Science Inc.'s (Partner) Fort Lauderdale, FL office and has 19 years of experience in environmental consulting, including Phase I and Phase II Environmental Site Assessments, Site Investigations, and remediation of petroleum-contaminated and solvent-contaminated soil and groundwater. In addition to having experience in environmental due diligence, Mr. Gallagher is skilled in Asbestos-Containing Materials (ACM), Lead-based Paint (LBP), Indoor Air Quality (IAQ), Vapor Intrusion, Mold inspections and Abatement/mitigation. He has used his experience and client dedication to bring a higher level of focus to identifying business environmental risk and evaluating environmental liabilities, understanding and interpreting environmental regulatory climate, and managing aggressive project deadlines.

Mr. Gallagher's core focus at Partner is to provide real estate lenders, investors and equity owners with the advice they need to quantify hard asset risk and provide them with the information they need to make informed real estate business decisions. He has served as a project manager or executive senior reviewer on over 4,000 real estate transactions throughout his career.

Project Experience
Environmental Due Diligence (EDD) Consulting
Mr. Gallagher has provided technical and management expertise on a variety of due diligence assessment projects throughout North America and Europe. He has conducted hundreds of environmental site assessment (ESA) projects in conformance with ASTM E1527/AAI requirements and client specific protocol. Mr. Gallagher has managed several portfolios related to pre and post-acquisition environmental due diligence for several Fortune 500 companies, both domestically and internationally.

Subsurface Investigation
Mr. Gallagher has extensive Phase II subsurface investigation and mitigation experience in all aspects of subsurface investigations with respect to soil and/or groundwater contamination at a variety of locations, including: gas stations, dry cleaners, airports, and many other industrial settings. Specific responsibilities included: fee proposal preparation; coordination of contractor submittals in regards to qualifications, bids, subcontractor agreements, and schedules; soil and groundwater sampling; data analysis; and report

preparation. Where properties have required regulatory involvement, Mr. Gallagher has successfully fast-tracked case resolution to facilitate real estate transactions.

Remedial Investigation
Mr. Gallagher has extensive experience conducting Remedial Investigations for petroleum and solvent contaminated sites. Mr. Gallagher has participated in several site investigations to delineate contaminated media and develop remedial options. Projects included Superfund sites, Consent Order sites, and Voluntary Cleanup Program sites in Florida and Wisconsin.

Expert Witness
Mr. Gallagher has served as an expert witness for a lawsuit involving a Phase I Environmental Site Assessment and its adherence to the ASTM E1527 Standard. Mr. Gallagher provided expert testimony, advised attorneys, and helped bring the lawsuit to a favorable conclusion.

100+ Phase I Environmental Site Assessments

Experience Summary

As Technical Director for due diligence services as part of the Investment Advisory Group, Ms. Stott focuses on report quality, client service, and sharing her years of expertise with staff and clients.

Ms. Stott has performed hundreds of Phase I Environmental Site Assessments, Third Party Reviews, Due Diligence Audits, Record Search and Risk Assessments, Phase II and III Subsurface Investigations, Underground storage tank investigations, Remedial Investigations, Radon Studies, Mold Assessments, Methane Surveys, Indoor Air Quality Assessments, and Lead-in-water sampling and analysis.

Clients have varied and have included: individual investors, City of Los Angeles Agencies, Los Angeles County, City of Anaheim, institutional investors, private and institutional equity companies, insurance companies, attorneys, brokers, developers, and multiple lenders.

Project Experience

Ms. Stott has conducted, managed and directed thousands of ESAs throughout her career and has been Senior Project Manager for hundreds of site investigations, characterization studies and remediation projects throughout California and the US. The following select projects summarize her experience and due diligence background:

Transaction Due Diligence

Project Manager, Western US and Southern California, LBA Realty. For over 16 years performed due diligence services related to real estate transfers as well as asset refinances for LBA Realty. The relationship requires close coordination and communication with property managers and representatives to provide a smooth process with client and lenders. Services have also included review of third party reports, asbestos surveys, subsurface investigations, and development of soil management plans. Many projects involved multiple locations in several states thus requiring coordination with other offices and client contacts.

Environmental Lead, West Coast, Barings, LLC (Barings). Ms. Stott assists with management and review of environmental due diligence and environmental actions associated with acquisitions, property development, joint venture developments, property divestments and finance group loan transactions. Environmental due diligence includes Phase I ESAs, Phase II ESAs, indoor air quality assessments, mold assessment and mitigation planning, providing third party review, asbestos investigations, asbestos abatement, operation and maintenance plan development, remedial action development and implementation, regulatory correspondence and permitting.

Phase I ESAs – multiple clients throughout US.. Ms. Stott manages and oversees preparation of Phase I Environmental Site Assessments for several confidential clients. All are completed to ASTM guidelines with various special criteria specific to each client.

Subsurface Investigations/Vapor Intrusion

Project Manager, Whittier, CA, Confidential Client. Conducted several investigations to evaluate the potential for vapor intrusion associated with contaminated groundwater into client buildings. At one location a horizontal well system was installed to passively vent vapors. Site investigations involved the installation of multiple, multi-depth vapor probes through the property to map the plume and to assist in decision making for potential further investigation. Data collected from both soil vapor and indoor air monitoring was subjected to risk assessment in order to determine if indoor air quality had been negatively impacted and engineering controls needed to protect workers. Client was able to purchase and redevelop portions of the desired parcels for use as parking.

Project Manager and Environmental Lead, Berkeley, CA, LBA Realty. Evaluation of potential risks associated with the presence of trichloroethylene (TCE) and breakdown products cis 1,2- dichloroethene (cis 1,2-DCE) and vinyl chloride (VC), and methyl tert butyl ether (MTBE) in groundwater and ambient air at an existing building in Berkeley, CA. Worked with outside counsel to evaluate, summarize, and present the risks and potential risks of continued investment in the property. Remedial systems were installed under DTSC oversight, risk assessment performed and the building remodeled and reused for office space.

Municipal/State Contracts

Project Manager, ESAs for City of Anaheim widening of Lincoln Avenue. As a subcontractor to the geotechnical consultant, Partner provided Environmental Site Assessments for multiple properties along the project alignment. The parcel uses ranged from car wash, to older office and motel properties, automotive repair, banks, public school, and a church. Partner finished the multi-site project on time and within budget.

Subject: Phase I Environmental Site Assessment
1268 Pacific Coast Highway
Los Angeles, California 90710
Partner Project No. 18-226425.1

Dear Mr. Wong:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (310) 622-8855.

Sincerely,

Debbie Stott, P.G.
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by Red Oak Investments for the property located at 1268 Pacific Coast Highway in the Harbor City community, City of Los Angeles, Los Angeles County, California (the "subject property"). The Phase I Environmental Site Assessment is designed to provide Red Oak Investments with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the south side of Pacific Coast Highway within a mixed commercial and residential area of the Harbor City community within Los Angeles County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Address:	1268 Pacific Coast Highway, Los Angeles, California
Property Use:	Parking Lot
Land Acreage (Ac):	0.82 Ac
Number of Buildings:	None
Number of Floors:	N/A
Assessor's Parcel Number (APN):	7411-019-020
Site Assessment Performed By:	Emilie Moore of Partner
Site Assessment Conducted On:	January 8, 2019

The subject property is currently occupied by a parking lot for commercial use. Onsite operations consist of vehicle parking and storage, storage trailer parking, as well as typical administrative tasks. The subject property consists of a narrow rectangular shaped parcel on which vehicles are parked along the western and eastern perimeter.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; developed with a railroad track bisecting the center of the parcel between 1923 and circa 1972 and developed for the current parking lot use in circa 1983.

The immediately surrounding properties consist of Pacific Coast Highway followed by Pep Boys and Del Taco to the north; 259th Street (a cul-de-sac) followed by apartment buildings to the south; A-1 Auto Smog and a Kaiser Permanente parking lot to the east; and a mobile home park to the west.

According to online information and topographic map interpretation, the depth to groundwater in the vicinity of the subject property is estimated to be approximately 80 feet below ground surface (bgs) with flow toward the southeast.

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).
- The subject property was historically developed with railroad tracks bisecting the center of the parcel from north to south from 1923 until circa 1963. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing polychlorinated biphenyls (PCBs), herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for

track fill material. While the subject property is currently paved over, potential PCB or arsenic concentrations resulting from the historic railroad use could be present in subsurface sediments. Due to the planned redevelopment of the subject property for residential use, Partner conducted soil sampling to evaluate the suspect potential contaminants.

Results indicated that arsenic was the only chemical of concern and was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations that exceeded the residential and industrial soil Department of Toxic Substances Control (DTSC) Regional Screening Levels (RSLs). Arsenic was detected above the RSLs in three samples collected from approximately 1.5 feet bgs at concentrations ranging from 12.5 milligrams per kilogram (mg/kg) to 53.3 mg/kg. It should be noted that the residential and commercial RSLs are well below typical background concentrations; however, the three detections of arsenic also exceeded background arsenic concentrations for typical California soils of 12 mg/kg as based on the Kearney Foundation of Soil Science March 1996 Background Concentrations of Trace and Major Elements in California Soils Report.

There appear to be concentrations of arsenic on-site that may represent a concern to construction workers during proposed redevelopment of the site. No other contaminants of concern were detected above laboratory RLs and applicable screening levels. The arsenic impacts appear to be vertically limited to a depth of less than two feet bgs. Arsenic was not detected above screening criteria in the deeper samples. Arsenic was less than 0.5 mg/kg in those samples. Partner understands that several feet of surface soil will be over-excavated, mixed, and recompacted. Moving soil offsite is not anticipated. Thus, the arsenic in shallow soil will be mixed and redistributed, effectively reducing the concentration. Future residents will not have access to soil and would not be exposed. Notification to regulatory agencies is not required. Remedial action is not required by regulatory agencies. Partner recommends soil management in accordance with grading plans, codes, and regulations during future redevelopment activities.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1268 Pacific Coast Highway in the Harbor City community within Los Angeles County (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has not revealed evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Typical soil management practices used during earth moving, such as keeping soil watered to prevent dust, should be followed.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 1268 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the ESA Report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical

restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold, and/or radon.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

Environmental concerns, which are beyond the scope of a Phase I ESA as defined by ASTM include the following: ACMs, LBP, radon, and lead in drinking water. These issues may affect environmental risk at the subject property and may warrant discussion and/or assessment; however, are considered non-scope issues. If specifically requested by the Client, these non-scope issues are discussed in Section 6.3.

1.4 User Reliance

Red Oak Investments engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of Red Oak Investments. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http: / www.partneresi.com/terms-and-conditions.php.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with historical owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 3.0), this data gap is not expected to alter the findings of this assessment.
- Partner was unable to determine the property use at 5-year intervals, which constitutes a data gap. Except for property tax files and recorded land title records, which were not considered to be sufficiently useful, Partner reviewed all standard historical sources and conducted appropriate interviews.
- Partner's view of the ground during the site assessment was obstructed due to parked cars. Based on information obtained from other historical sources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 1268 Pacific Coast Highway in Los Angeles, California is located on the south side of Pacific Coast Highway. According to the Los Angeles County Assessor, the subject property is legally described as "*Peck's Subdivision Of Lot J And Portion Of Lot H Of The Partition Of The Rancho Los Palos Verdes Lot Com E 220 Ft From Sw Cor Of Lot 10 Th N Parallel With W Line Of Sd Lot*,".

Please refer to Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map, and Appendix A: Site Photographs for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property is currently occupied by a parking lot for commercial use. Onsite operations consist of vehicle parking and storage, storage trailer parking, as well as typical administrative asks. The subject property consists of a narrow rectangular shaped parcel on which vehicles are parked along the western and eastern perimeter.

The subject property is designated for commercial development by the City of Los Angeles.

The subject property was not identified in the regulatory database report of Section 4.2.

2.3 Current Use of Adjacent Properties

The subject property is located within a mixed commercial and residential area of Los Angeles County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
North:	Pacific Coast Highway followed by Pep Boys (1315 Pacific Coast Highway) and Del Taco (1229 Pacific Coast Highway)
South:	259th Street (a cul-de-sac) followed by apartment buildings (1270-1289 [evens] Riverrock Road)
East:	A-1 Auto Smog (1242 Pacific Coast Highway) and a Kaiser Permanente parking lot (25825, 25875, 25801, 25803, 25805 South Normandie Avenue and 1301 West 259th Street)
West:	Mobile home park (1280 Pacific Coast Highway)

Adjacent properties to the north and east were identified as Resource Conservation and Recovery Act (RCRA) Small Quantity Generator (SQG), Facility Index System/Facility Registry System (FINDS), Enforcement and Compliance History Information (ECHO), Historical Underground Storage Tank (HIST UST), Facility and Manifest Data (HAZNET), Statewide Environmental Evaluation and Planning System Underground Storage Tank (SWEEPS UST), Emissions Inventory (EMI) EDR Historical Auto Station, Waste Management Unit Database System (WMUDS/SWAT, Los Angeles County Site Mitigation, and Land Disposal Sites (LDS) sites in the regulatory database report of Section 4.2.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *Torrance, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 45 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping toward the southeast.

A copy of the 1981 topographic map is included as Figure 3 of this report.

2.4.2 Hydrology

The subject property is located at the southern end of the Central Basin Pressure Area of the Los Angeles Basin and is underlain by the Lakewood Formation. The Lakewood Formation includes all Upper Pleistocene deposits including the Palos Verde Sand and the "200-foot Gravel". The Lakewood Formation is divided into the Artesian-Exposition Aquifers and the Gage-Gardena Aquifers. The nearest surface water in the vicinity of the subject property is Harbor Lake, located approximately 0.3-miles to the southeast of the subject property. No settling ponds, lagoons, surface impoundments, wetlands, or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, the sources of public water for the City of Los Angeles are surface water (Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater.

According to a previous subsurface investigation conducted on a nearby property (former One-O-One and Harbor Inc. Dump located adjacent to the east), the depth to groundwater in the vicinity of the subject property is inferred to be approximately 80 feet below ground surface (bgs). Based on topographic map interpretation, groundwater is assumed to flow southeasterly.

2.4.3 Geology/Soils

The subject property is located within the Torrance Plain. The rectangular shaped Torrance Plain extends approximately 28 miles from Santa Monica in the northwest to Long Beach in the southeast and is 5 to 12 miles wide. The relatively flat Torrance Plain consists of marine and non-marine sediments. The Palos Verdes Hills, a prominent topographic feature, borders the southwest margin of the plain and the Newport-Inglewood zone of deformation borders the inland eastern margin of Torrance Plain. The Palos Verdes Hills consist of an uplifted fault block composed of a Jurassic age Catalina schist basement and marine sediment of Tertiary and Quaternary age that have folded into an anticlinal shape. The Palos Verdes Hills are divided from the West Coast Basin by the Palos Verdes Fault Zone. The displacement of near-surface sediments across the fault is relatively minor when compared to the significant displacement which offset the Catalina schist basement at depth.

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06037C1945F, dated September 26, 2008, the subject property appears to be located in Unshaded Zone X, an area located outside of the 100-year and 500-year flood plains

A copy of the reviewed flood map is included in Appendix B of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. A chronological listing of the historical data found is summarized in the table below:

Historical Use Information		
Period/Date	**Source**	**Description/Use**
1896	Topographic Map	Undeveloped
1923-1972	Aerial Photographs, Topographic Maps	Railroad Track
1983-Present	Aerial Photographs, Topographic Maps, Onsite Observations	Parking Lot

The subject property was historically developed with railroad tracks bisecting the center of the parcel from north to south from 1923 until circa 1972. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing polychlorinated biphenyls (PCBs), herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. While the subject property is currently paved over, potential PCB or arsenic concentrations resulting from the historic railroad use could be present in subsurface sediments.

3.1 Aerial Photograph Review

Partner obtained available aerial photographs of the subject property and surrounding area from Environmental Data Resources (EDR). The following observations were noted to be visible on the subject property and adjacent properties during the aerial photograph review:

Date: 1923	*Scale: 1"=500'*
Subject Property:	Developed with a railroad track bisecting the parcel from north to south
North:	Developed with a railroad track bisecting the parcel from north to south
South:	Developed with a railroad track bisecting the parcel from north to south
East:	Developed agriculturally
West:	Undeveloped

Date: 1928	*Scale: 1"=500'*
Subject Property:	Developed with a railroad track bisecting the parcel from north to south
North:	Developed with a railroad track bisecting the parcel from north to south
South:	Developed with a railroad track bisecting the parcel from north to south
East:	Developed with multiple structures and a pit
West:	Developed with cleared land

Date: 1947	*Scale: 1"=500'*
Subject Property:	Developed with a railroad track bisecting the parcel from north to south
North:	Developed with a railroad track bisecting the parcel from north to south across Pacific Coast Highway
South:	Developed with a railroad track bisecting the parcel from north to south
East:	Developed with additional structures and a pit
West:	The present-day mobile home park appears to be under development

Date: 1953, 1963	*Scale: 1"=500'*
Subject Property:	Developed with a railroad track bisecting the parcel from north to south
North:	Developed with commercial structures across Pacific Coast Highway
South:	Developed with a railroad track bisecting the parcel from north to south
East:	Developed with additional structures and a pit
West:	Developed with the present-day mobile home park

Date: 1970	*Scale: 1"=500'*
Subject Property:	Developed with a railroad track bisecting the parcel from north to south
North:	Developed with additional commercial structures across Pacific Coast Highway
South:	Developed with a railroad track bisecting the parcel from north to south
East:	Developed with a cleared and leveled parcel
West:	Developed with the present-day mobile home park

Date: 1983	*Scale: 1"=500'*
Subject Property:	Developed with the present-day parking lot
North:	Developed with the present-day commercial structures across Pacific Coast Highway
South:	Developed with what appears to be a parking lot
East:	Developed with a cleared parcel, commercial building, and a parking lot
West:	Developed with the present-day mobile home park

Date: 1994, 2002, 2005, 2009, 2016	*Scale: 1"=500'*
Subject Property:	Developed with the present-day parking lot
North:	Developed with the present-day commercial structures across Pacific Coast Highway
South:	Developed with the present-day structure across a cul-de-sac
East:	Developed with a commercial building and the present-day parking lot
West:	Developed with the present-day mobile home park

Copies of select aerial photographs are included in Appendix B of this report.

3.2 Fire Insurance Maps

Partner requested Sanborn Fire insurance maps from EDR. Sanborn map coverage was not available for the subject property.

A copy of the Sanborn Maps No Coverage Letter is included in Appendix B of this report.

3.3 City Directories

Partner reviewed historical city directories obtained from EDR for past names and businesses that were listed for the subject property and adjacent properties. City directories were not identified for the subject property; however adjacent properties are discussed below:

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1950	Ernest Oaks Plumbing Contractor; Yankee Doodle Coltee Shop (1290 Pacific Coast Highway)
1954	A-1 Trailer Sales; Greyhound Bus Lines (1290 Pacific Coast Highway)
1957	Residential listings
1960	A-1 Trailer Park and residential listings

City Directory Search for Adjacent Properties	
Year(s)	**Occupant Listed**
1964	Kentucky Fried Chicken (1290 Pacific Coast Highway)
1970	A-1 Trailer Park and residential listings; Local Union Carpenters Hall (1290 Pacific Coast Highway); Discount Auto Parts (1290 Pacific Coast Highway), M&D X-Ray (1315 PCH)
1975	Cycle Parts and Accessories (1290 Pacific Coast Highway)
1980	A-1 Trailer Park and residential listings; Govinda Fine Produce (1290 Pacific Coast Highway)
1990	Residential listings; Sunny Sheepskins (1290 Pacific Coast Highway)
2001	Del Taco LLC (1229 PCH), PepBoys (1315 PCH)
2010	Del Taco LLC (1229 PCH), PepBoys (1315 PCH)
2014	Del Taco LLC (1229 PCH), PepBoys (1315 PCH)

According to the city directory review, the adjacent properties have been occupied by various auto-related businesses, as further discussed in section 4.2.3.

Copies of reviewed city directories are included in Appendix B of this report.

3.4 Historical Topographic Maps

Partner reviewed historical topographic maps obtained from EDR. The following observations were noted to be depicted on the subject property and adjacent properties during the topographic map review:

Date: 1896	
Subject Property:	Depicted as undeveloped
North:	Depicted as undeveloped
South:	Depicted as undeveloped
East:	Depicted as undeveloped
West:	Depicted as undeveloped

Date: 1925	
Subject Property:	Depicted as bisected with a railroad from north to south
North:	Depicted as bisected with a railroad from north to south
South:	Depicted as bisected with a railroad from north to south
East:	Depicted as undeveloped
West:	Depicted as undeveloped

Date: 1951	
Subject Property:	Depicted as bisected with a railroad from north to south
North:	Depicted as bisected with a railroad from north to south across Pacific Coast Highway
South:	Depicted as bisected with a railroad from north to south
East:	Depicted as undeveloped
West:	Depicted as undeveloped

Date:	***1964, 1972***
Subject Property:	Depicted as bisected with a railroad from north to south
North:	Depicted as shaded red indicating dense urban development and bisected with a railroad from north to south across Pacific Coast Highway
South:	Depicted as bisected with a railroad from north to south
East:	Depicted as undeveloped
West:	Depicted as undeveloped

Date:	***1981***
Subject Property:	Depicted as undeveloped
North:	Depicted as shaded red indicating dense urban development and bisected with a railroad from north to south across Pacific Coast Highway
South:	Depicted as undeveloped
East:	Depicted as developed with small structures
West:	Depicted as developed with two structures across a road

Copies of reviewed topographic maps are included in Appendix B of this report.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	Los Angeles County Fire Department Health Hazardous Materials Division (LACFD HHMD)
Point of Contact:	Wendy Kampen
Agency Address:	5825 Rickenbacker Road, Commerce, California 90040
Agency Phone Number:	(626) 430-3260
Date of Contact:	January 2019
Method of Communication:	Online Request/Email
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file with the LACFD HHMD for the current subject property address of 1268 Pacific Coast Highway.

4.1.2 Fire Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Fire Department (LAFD)- Underground Storage Tank Division (USTD) and the Hazardous Materials Division (HMD)
Agency Address:	200 North Main Street, 17th Floor, Los Angeles, California 90012
Agency Phone Number:	(213) 978-3691
Date of Contact:	January 2019
Method of Communication:	Online Inventories
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and ASTs on the subject property were identified in the CUPA regulated facilities online file lists for the LAFD UST and HazMat divisions.

4.1.3 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	South Coast Air Quality Management District (SCAQMD)
Website:	Facility Information Detail (FIND) Database *http://www3.aqmd.gov/webappl/fim/prog/search.aspx*
Agency Address:	21865 Copley Drive, Diamond Bar, California 91765
Agency Phone Number:	(909) 396-2000
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	No Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) or the presence of AULs, dry cleaning machines, or USTs were on file for the subject property in the SCAQMD online database.

4.1.4 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	California Regional Water Quality Control Board (RWQCB)
Website:	GeoTracker Online Database *https://geotracker.waterboards.ca.gov/*
Agency Address:	320 West 4th Street, Suite 200, Los Angeles, California 90013
Agency Phone Number:	(213) 576-6600
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the RWQCB's GeoTracker online database.

4.1.5 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	California Department of Toxic Substances Control (DTSC)
Websites:	EnviroStor *http://www.envirostor.dtsc.ca.gov/public/* Hazardous Waste Tracking System (HWTS) *http://hwts.dtsc.ca.gov/report_search.cfm?id=5*
Agency Address:	9211 Oakdale Avenue, Chatsworth, California 91331
Agency Phone Number:	(818) 717-6500
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	No records regarding hazardous substance use, storage or releases, or the presence of USTs and AULs on the subject property were on file in the EnviroStor or HWTS databases.

4.1.6 Building Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Department of Building and Safety (LADBS)
Website:	*http://ladbsdoc.lacity.org/idispublic/*
Agency Address:	201 North Figueroa Street, Los Angeles, California 90012
Agency Phone Number:	(213) 482-6862
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	Due to the lack of structures on-site, no LADBS records were on-file for the subject property.

4.1.7 Planning Department

Regulatory Agency Data	
Name of Agency:	Los Angeles Planning Department (LAPD) and Zoning Information and Map Access System (ZIMAS)
Website:	ZIMAS Online *http://zimas.lacity.org/*
Agency Address:	201 North Figueroa Street, Los Angeles, California 90012
Agency Phone Number:	(213) 482-7077
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned C2-1V for "community commercial" development and CM-1VL for "limited manufacturing" development by the City of Los Angeles. According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

4.1.8 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Division of Oil, Gas and Geothermal Resources (DOGGR)
Point of Contact:	*http://maps.conservation.ca.gov/doms/index.html*
Agency Address:	5816 Corporate Avenue, Suite 200, Cypress, California 90630
Agency Phone Number:	(714) 816-6847
Date of Contact:	January 2019
Method of Communication:	Online
Summary of Communication:	According to DOGGR, no oil or gas wells are located on or adjacent to the subject property.

4.1.9 Assessor's Office

Regulatory Agency Data	
Name of Agency:	Los Angeles County Office of the Assessor (LACOA) and ZIMAS
Point of Contact:	*http://maps.assessor.lacounty.gov/mapping/viewer.asp*
Agency Address:	500 West Temple Street, Room 225, Los Angeles, California 90012
Agency Phone Number:	(213) 974-3211
Date of Contact:	January 2019

Regulatory Agency Data	
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor Parcel Number (APN) 7411-019-020 and is a 0.82-acre parcel.

Copies of pertinent documents obtained from the above-referenced regulatory agencies (if available) are included in Appendix B of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by Environmental Data Resources, Inc. (EDR). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG)	0.25	N	Y	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	N/A	N/A
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	N	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	N	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	N	N	N
State/Tribal Spills	0.50	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N

LDS	Varies	N	N	Y
EMI	Varies	N	Y	N

4.2.2 Subject Property Listings

The subject property is not identified in the regulatory database report.

4.2.3 Adjacent Property Listings

Adjacent properties to the north and east were identified as RCRA-SQG, FINDS, ECHO, HIST UST, HAZNET, SWEEPS UST, EMI, EDR Historical Auto Station, WMUDS/SWAT, Los Angeles County Site Mitigation, and LDS sites in the regulatory database report of Section 4.2., as discussed below:

- The property, identified as Frank Coletto Ford Isuzu Inc. at 1241 Pacific Coast Highway, is located adjacent to the north, hydrologically up-gradient of the subject property. According to the RCRA listing, the site was a small quantity generator of unnamed hazardous waste in 1996. No violations were reported in connection with the RCRA listing. The FINDS and ECHO databases are indexing systems that are used to cross-reference various federal and state database listings. These databases do not, in and of themselves, contain any data concerning environmental significant information, however the site was listed with FINDS Facility ID 110002754760 and ECHO Environmental ID 1000316586. No violations were reported in connection with these listings and this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.
- The property, identified as Johns Transmissions at 1242 Pacific Coast Highway, is located adjacent to the east, hydrologically cross-to-down-gradient of the subject property. According to the EDR historical Auto Station Listing, the site was occupied by an automotive transmission repair and general automotive repair shop from 1997-2014. No violations were reported in connection with the listing. Based on the absence of a reported release and inferred direction of groundwater flow, this adjacent site is not expected to represent an environmental concern for the subject property
- The property, identified as Harbor City High Performance and Independent Toyota Rep at 1313 Pacific Coast Highway, is located adjacent to the north, hydrologically up-gradient of the subject property. According to the RCRA listings, the site was a large and small quantity generator of

unnamed hazardous waste in 1987 and 1997. No violations were reported in connection with the RCRA listing. The FINDS and ECHO databases are indexing systems that are used to cross-reference various federal and state database listings. These databases do not, in and of themselves, contain any data concerning environmental significant information, however the site was listed with FINDS Facility ID 110002786138and ECHO Environmental ID 1000209525. According to the HAZNET listings, the site recycled waste in the form of aqueous solution from 1993-2000. According to the HIST UST listing, the site was equipped with one 500-gallon waste oil UST. No violations were reported in connection with these listings and this site is not identified on any database that reports spills or releases, such as the LUST database. Based on the absence of a reported release and permit nature of the listings, this adjacent site is not expected to represent an environmental concern for the subject property.

- The property, identified as One-O-One and Harbor Inc. dump was located adjacent to the east of the subject property, and situated hydrologically down-gradient. Prior to use as a landfill/dump, the site was used for clay pit/brick manufacturing. The dump ceased operation in 1965 and occupied approximately 3.8 acres adjacent to the southwestern corner of the intersection of Pacific Coast Highway and Normandie Avenue. A solid waste water quality assessment test (SWAT) investigation was performed in 1989 and consisted of the installation of four groundwater monitoring wells and two lysimeters near the perimeter of the inactive dump.

  According to the analytical sampling results, soil samples indicated either undetectable metal concentrations or concentrations of metals below actionable values, and no detectable concentrations of organic halocarbons or volatile aromatic constituents. All samples were representative of native material found below the landfill refuse material. High OVA values for soil samples are believed to be due to methane gas. Several halocarbon and volatile aromatic constituents above Drinking Water Standards were detected in the groundwater. The well closest to the subject property (MW4) contained l,2 dichloroethane, trans l,2—dichloroethene, chlorobenzene, TCE, PCE, and benzene. Of these, l,2-dichloroethane, trans l,2-dichloroethene, and TCE were detected in all wells. Based on the SWAT report, ongoing groundwater monitoring was recommended. However, it is unclear if such monitoring ever occurred. Partner notes that an outstanding FOIA for further information is still pending with the RWQCB. However, based on the duration of time elapsed since the last landfill activities, depth to groundwater of approximately 80 feet, as well as the inferred direction of groundwater flow, this site is not expected to represent a significant environmental concern to the subject property.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

Based on the database report findings, vapor migration is not expected to represent a significant environmental concern at this time. However, as indicated in Section 4.1.7, due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).

A copy of the regulatory database report is included in Appendix C of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from Red Oak Investments (User of this report).

User Responsibilities				
Item	**Provided By User**	**Not Provided By User**	**Discussed Below**	**Does Not Apply**
Environmental Pre-Survey Questionnaire			**X**	
Title Records, Environmental Liens, and AULs			**X**	
Specialized Knowledge			**X**	
Actual Knowledge			**X**	
Valuation Reduction for Environmental Issues			**X**	
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports		**X**		
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property, identified as Penn Equities LLC, was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to Section 5.2 below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

A key site manager was not available to be interviewed at the time of this assessment.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was reviewed a Title Insurance Policy issued by Provident Title Company dated October 10, 2018. Evidence of environmental lien and activity and use limitations (AUL) was not listed in the title.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did not provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment.

5.2.6 Previous Reports and Other Provided Documentation

Phase II Subsurface Investigation Report, 1268 PCH Harbor City, 1268 Pacific Coast Highway, Los Angeles, California 90710, Partner, January 25, 2019.

Partner completed a subsurface investigation to evaluate the potential for contaminants associated with the former use as a rail road line. The purpose of the investigation was to evaluate the potential impact of petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), organochlorine pesticides (OCPs), lead, and arsenic to soil as a consequence of a release or releases from the potential on-site railroad line.

On January 9, 2019, Partner subcontracted with Munoz Direct Push (Munoz) to provide and operate drilling equipment. Munoz, under the direction of Partner, advanced borings B1 through B4 with a limited-access Geoprobe Model 420MT direct push rig.

Partner collected 12 soil samples on January 9, 2019, which were transported on the same day in an iced cooler under chain-of-custody protocol to Jones Environmental Inc. (JEI), a state-certified laboratory [Environmental Laboratory Accreditation Program (ELAP) certificate number 6C76103] in the City of Santa Fe Springs, California, for analysis. Each of the soil samples (12 soil samples total) was analyzed for total petroleum hydrocarbons (TPH-cc) in accordance with EPA Method 8015M/8260B, PAHs in accordance with EPA Method 8270C, OCPs in accordance with EPA Method 8081A, and arsenic and lead in accordance with EPA Method 6010B.

Total petroleum hydrocarbons as diesel (TPH-d) and total petroleum hydrocarbons as oil (TPH-o) were detected in one of the analyzed soil samples (B3-1.5) at concentrations exceeding the laboratory reporting limits (RLs). None of the remaining soil samples contained TPH-cc above laboratory RLs.

None of the analyzed soil samples contained detectable concentrations of OCPs or PAHs above the laboratory RLs.

Arsenic was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations exceeding laboratory RLs. Lead was detected in each of the 12 analyzed soil samples at concentrations exceeding laboratory RLs.

Neither of the detected concentrations of TPH-d and TPH-o in sample B3-1.5 exceeded the Maximum SSLs of 1,000 milligrams per kilogram (mg/kg) and 10,000 mg/kg, respectively. TPH-d was detected at 327 mg/kg and TPH-o was detected at 903 mg/kg. None of the remaining soil samples contained TPH-cc above the laboratory RLs and the RLs did not exceed the Maximum SSLs.

None of the analyzed soil samples contained detectable concentrations of OCPs or PAHs above the laboratory RLs and the RLs did not exceed the residential or commercial/industrial RSLs.

Each of the detected concentrations of arsenic (3 of 12 samples) exceeded the DTSC residential and industrial soil RSLs of 0.11 milligrams per kilogram (mg/kg) and 0.36 mg/kg, respectively. Arsenic was detected above the RLs in three samples collected from approximately 1.5 feet bgs at concentrations ranging from 12.5 mg/kg to 53.3 mg/kg. It should be noted that the residential and commercial RSLs are well below typical background concentrations; however, the three detections of arsenic also exceeded

background arsenic concentrations for typical California soils of 12 mg/kg as based on the Kearney Foundation of Soil Science March 1996 Background Concentrations of Trace and Major Elements in California Soils Report.

Lead was not detected in soil above background concentrations or RSLs.

There appear to be concentrations of arsenic on-site that may represent a concern to construction workers during proposed redevelopment of the site. No other contaminants of concern were detected above laboratory RLs and applicable screening levels. The arsenic impacts appear to be vertically limited to a depth of less than two feet bgs. Arsenic was not detected above screening criteria in the deeper samples. Arsenic was less than 0.5 mg/kg in those samples. Partner understands that several feet of surface soil will be over-excavated, mixed, and recompacted. Moving soil offsite is not anticipated. Thus, the arsenic in shallow soil will be mixed and redistributed, effectively reducing the concentration. Future residents will not have access to soil and would not be exposed. Notification to regulatory agencies is not required. Remedial action is not required by regulatory agencies. Partner recommends soil management in accordance with grading plans, codes, and regulations during future redevelopment activities.

A copy is attached in Appendix B.

6.0 SITE RECONNAISSANCE

The weather at the time of the site visit was sunny and clear. Refer to Section 1.5 for limitations encountered during the field reconnaissance and Sections 2.1 and 2.2 for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Emilie Moore
Site Assessment Conducted On:	January 8, 2019

Partner was unaccompanied during the field reconnaissance.

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

No potential environmental concerns were identified during the onsite reconnaissance.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in commercial dumpsters located in the rear of the subject property. The City of Los Angeles removes solid waste from the subject property.

6.1.2 Sewage Discharge and Disposal

There are no sanitary discharges on the subject property; however, The City of Los Angeles services the subject property vicinity.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by sheet flow action across the paved surfaces towards storm water drains located in the public right of way.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service; however, a comprehensive wetlands survey would be required in order to formally determine actual wetlands on the subject property. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

There are no heating or cooling systems located on the subject property. Electricity in the vicinity of the subject property is provided by The Los Angeles Department of Water and Power (LADWP).

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during the site reconnaissance.

6.1.6 Wastewater

No permanent buildings are located onsite, thus no wastewater is produced.

6.1.7 Septic Systems

No septic systems were observed or reported on the subject property.

6.1.8 Additional Site Observations

No additional general site characteristics were observed during the site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid were observed on the subject property during the site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with storm water removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be *presumed* to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

There are no permanent structures located on-site. As such, an asbestos evaluation was not required by the scope of services.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

There are no permanent structures located on-site. As such, a LBP evaluation was not required by the scope of services.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 2. Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Los Angeles Department of Water and Power (LADWP) serves the subject property vicinity. According to a representative of the LADWP, the sources of public water for the City of Los Angeles are surface water (Colorado River Aqueduct & Los Angeles Aqueduct) as well as groundwater. According to the 2016 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

No obvious indications of water damage or mold growth were observed during Partner's visual assessment.

6.4 Adjacent Property Reconnaissance

The adjacent property reconnaissance consisted of observing the adjacent properties from the subject property premises. No items of environmental concern were identified on the adjacent properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- Partner did not identify any recognized environmental conditions during the course of this assessment

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. The following was identified during the course of this assessment:

- Partner did not identify any controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls. The following was identified during the course of this assessment:

- Partner did not identify any historical recognized environmental conditions during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion. The following was identified during the course of this assessment:

- According to the City of Los Angeles Planning Department (LAPD) ZIMAS database, the subject property is located within a significant oil production area known as "Methane Zones." Methane zone sites include sites including gas sources and where testing and mitigation are required by the City of Los Angeles Department of Building and Safety. Partner notes that no current or historical oil or gas wells are located on the subject property. Due to the potential environmental risk associated with construction in methane zones, the subject property owner is required to conduct a methane assessment and plan to install a methane mitigation system prior to the redevelopment of the subject property (Division 71 of the Los Angeles Building Code).
- The subject property was historically developed with railroad tracks bisecting the center of the parcel from north to south from 1923 until circa 1963. Railroad tracks and spurs represent environmental concerns due to the historical application of oils containing polychlorinated

biphenyls (PCBs), herbicides, and arsenic for pest and weed control, as well as the potential presence of creosote on the rail ties, and the historical common practice of using coal cinders for track fill material. While the subject property is currently paved over, potential PCB or arsenic concentrations resulting from the historic railroad use could be present in subsurface sediments. Due to the planned redevelopment of the subject property for residential use, Partner conducted soil sampling to evaluate the suspect potential contaminants.

Results indicated that arsenic was the only chemical of concern and was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations that exceeded the residential and industrial soil Department of Toxic Substances Control (DTSC) Regional Screening Levels (RSLs). Arsenic was detected above the RSLs in three samples collected from approximately 1.5 feet bgs at concentrations ranging from 12.5 milligrams per kilogram (mg/kg) to 53.3 mg/kg. It should be noted that the residential and commercial RSLs are well below typical background concentrations; however, the three detections of arsenic also exceeded background arsenic concentrations for typical California soils of 12 mg/kg as based on the Kearney Foundation of Soil Science March 1996 Background Concentrations of Trace and Major Elements in California Soils Report.

There appear to be concentrations of arsenic on-site that may represent a concern to construction workers during proposed redevelopment of the site. No other contaminants of concern were detected above laboratory RLs and applicable screening levels. The arsenic impacts appear to be vertically limited to a depth of less than two feet bgs. Arsenic was not detected above screening criteria in the deeper samples. Arsenic was less than 0.5 mg/kg in those samples. Partner understands that several feet of surface soil will be over-excavated, mixed, and recompacted. Moving soil offsite is not anticipated. Thus, the arsenic in shallow soil will be mixed and redistributed, effectively reducing the concentration. Future residents will not have access to soil and would not be exposed. Notification to regulatory agencies is not required. Remedial action is not required by regulatory agencies. Partner recommends soil management in accordance with grading plans, codes, and regulations during future redevelopment activities.

Conclusions, Opinions and Recommendations

Partner has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of 1268 Pacific Coast Highway in the Harbor City community within Los Angeles County (the "subject property"). Any exceptions to, or deletions from, this practice are described in Section 1.5 of this report.

This assessment has not revealed evidence of recognized environmental conditions in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Typical soil management practices used during earth moving, such as keeping soil watered to prevent dust, should be followed.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I Environmental Site Assessment of the property located at 1268 Pacific Coast Highway in the City of Los Angeles, Los Angeles County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Legend

SEE FIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance Water Surface Elevation
- Coastal Transect
- 513 Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 1/8/2019 at 7:06:33 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

SCHEDULE B
EXCEPTIONS FROM COVERAGE

THIS POLICY DOES NOT INSURE AGAINST LOSS OR DAMAGE (AND THE COMPANY WILL NOT PAY THE COSTS, ATTORNEYS' FEES OR EXPENSES) THAT ARISE BY REASON OF:

A. SECOND INSTALLMENT GENERAL AND SPECIAL PROPERTY TAXES FOR THE FISCAL YEAR 2018-2019.

2ND INSTALLMENT:	$ 3,478.10 OPEN
CODE NO.:	00019
TAX PARCEL NO.:	7411-019-020

B. SUPPLEMENTAL ASSESSMENTS OF PROPERTY TAXES, IF ANY, MADE PURSUANT TO THE PROVISIONS OF PART 0.5, CHAPTER 3.5 (COMMENCING WITH SECTION 75) OF THE CALIFORNIA REVENUE AND TAXATION CODE AS A RESULT OF THE TRANSFER OF TITLE TO THE VESTEE NAMED IN SCHEDULE A.

SUPPLEMENTAL OR ESCAPED ASSESSMENTS OF PROPERTY TAXES, IF ANY, MADE PURSUANT TO PART 0.5, CHAPTER 3.5 OR PART 2, CHAPTER 3, ARTICLES 3 AND 4, RESPECTIVELY, OF THE CALIFORNIA REVENUE AND TAXATION CODE AS A RESULT OF CHANGES IN OWNERSHIP OR NEW CONSTRUCTION OCCURRING PRIOR TO DATE OF POLICY.

ASSESSMENTS, IF ANY, FOR COMMUNITY FACILITY DISTRICTS AFFECTING SAID LAND WHICH MAY EXIST BY VIRTUE OF ASSESSMENT MAPS OR NOTICES FILED BY SAID DISTRICTS.

NOTE: THE MAP ATTACHED HERETO IS NEITHER A PLAT NOR A SURVEY, IT IS FURNISHED AS A CONVENIENCE TO LOCATE THE LAND INDICATED HEREON WITH REFERENCE TO STREETS AND OTHER LAND. NO LIABILITY IS ASSUMED BY REASON OF RELIANCE HEREIN.

1. WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT SHOWN BY THE PUBLIC RECORDS.

2. AN EASEMENT FOR THE PURPOSE SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT

PURPOSE:	PIPELINE
AFFECTS:	SAID LAND
RECORDED:	IN BOOK 2705 PAGE 379 OFFICIAL RECORDS

SAID ITEM WILL BE DELETED UPON RECORDING OF QUITCLAIM DEED FROM UNION OIL COMPANY OF CALIFORNIA TO ROI 1280 LLC AT CLOSE OF ESCROW.

3. ANY RIGHTS, INTERESTS, OR CLAIMS WHICH, MAY EXIST OR ARISE BY REASON OF THE FOLLOWING FACTS SHOWN ON A SURVEY PLAT:

ENTITLED:	ALTA/NSPS LAND TITLE SURVEY
DATED:	OCTOBER 10, 2018
PREPARED BY:	FUSCOE ENGINEERING

A. THE FACT THAT AN 8” BLOCK WALL LOCATED ALONG THE NORTHEASTERLY BOUNDRY IS PARTIALLY ON SAID LAND AND PARTIALLY ON ADJOINING LAND.

B. THE FACT THAT THERE ARE SIX (6) LIGHT POLES LOCATED WITHIN THE WESTERLY BOUNDARY OF SAID LAND.

C. THE FACT THAT THE WEST FACE OF A BLOCK WALL LOCATED ALONG THE WESTERLY BOUNDARYOF SAID LAND EXTENDS UP TO 0.4’ ONTO SAID LAND.

D. THE FACT THAT THERE IS A POWER POLE LOCATED WITHIN THE WESTERLY BOUNDARY OF SAID LAND.

ENDORSEMENT: 101.3-06

ORDER NO.: 11367113

Subject: Phase II Subsurface Investigation Report
1268 PCH Harbor City
1268 Pacific Coast Highway
Los Angeles, California 90710
Partner Project Number: 18-226425.2

Dear Mr. Wong:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the assessment performed on the above-referenced property. The following report describes the field activities, methods, and findings of the Phase II Subsurface Investigation conducted at the above-referenced property.

This assessment was performed utilizing methods and procedures consistent with good commercial or customary practices designed to conform to acceptable industry standards. The independent conclusions represent Partner's best professional judgment based upon existing conditions and the information and data available to us during the course of this assignment.

We appreciate the opportunity to provide these services. If you have any questions concerning this report, or if we can assist you in any other matter, please contact Debbie Stott at (310) 622-8855.

Sincerely,

Partner Engineering and Science, Inc.

1.0 INTRODUCTION

1.1 Purpose

The purpose of the investigation was to evaluate the potential impact of petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), organochlorine pesticides (OCPs), lead, and arsenic to soil as a consequence of a release or releases from the potential on-site railroad line. Red Oak Investments provided project authorization of Partner Proposal Number P18-226425.2.

1.2 Limitations

This report presents a summary of work conducted by Partner. The work includes observations of site conditions encountered and the analytical results provided by an independent third-party laboratory of samples collected during the course of the project. The number and location of samples were selected to provide the required information. However, it cannot be assumed that the limited available data are representative of subsurface conditions in areas not sampled.

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally-accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.3 User Reliance

Partner was engaged by Red Oak Investments (the Addressee), or their authorized representative, to perform this investigation. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property consists of one parcel of land comprising approximately 0.83 acre located on the south side of Pacific Coast Highway within a mixed residential, commercial, industrial area of Los Angeles County, California. According to Client-provided information, the subject property is currently used as a 60-foot wide parking lot that was formerly an abandoned railroad line.

The subject property is bound by Pacific Coast Highway followed by commercial properties to the north, a parking lot to the east, an alley followed by residential properties to the south, and residential properties to the west. Refer to Figure 1 for a site plan showing site features and surrounding properties.

2.2 Site History

According to Client-provided information, the subject property was formerly an abandoned railroad line. No information regarding whether the line remains on site was available; however, recent aerial photographs indicate that the railroad line has likely been removed.

2.3 Geology and Hydrogeology

Based on a review of the United States Geological Survey (USGS) *Torrance, California* Quadrangle topographic map, the subject property is situated at an elevation approximately 40 feet above mean sea level, and the local topography is sloping gently to the northeast. Refer to Figure 2 for a topographic map of the site vicinity.

According to the California Geological Survey, the subject property is situated in the Transverse Ranges which are an east-west trending series of steep mountain ranges and valleys. The east-west structure of the Transverse Ranges is oblique to the normal northwest trend of coastal California, hence the name "transverse". The province extends offshore to include San Miguel, Santa Rosa, and Santa Cruz islands. Its eastern extension, the San Bernardino Mountains, has been displaced to the south along the San Andreas Fault. Intense north-south compression is squeezing the Transverse Ranges. As result, this is one of the most rapidly rising regions on earth. Great thickness of Cenozoic petroleum-rich sedimentary rocks have been folded and faulted, making this one of the important oil-producing areas in the United States.

Based on borings advanced during this investigation, the underlying subsurface consists predominantly of sandy silt (ML) from the ground surface to approximately five feet below ground surface (bgs). From five to 10 feet bgs, the subsurface consists predominantly of silty sand (SM). Refer to Appendix A for boring logs from this investigation.

Groundwater was not encountered during this investigation and was not a part of the scope of work. According to the State Water Resources Control Board (SWRCB) Geotracker website, a nearby Leaking Underground Storage Tank (LUST) site is located at 1268 Pacific Coast Highway in the city of Los Angeles, which is approximately 550 feet to the northeast of the subject property and is overseen by the Los Angeles Regional Water Quality Control Board (LARWQCB) as Case Number 907100116A. The site maintains four

groundwater monitoring wells in the area. The most recent monitoring data available on the GeoTracker Website was for May 9, 2011, with depth to groundwater at approximately 67 feet bgs with a direction of flow to the southeast.

3.0 FIELD ACTIVITIES

The scope of the Phase II Subsurface Investigation included the advancement of four borings (B1 through B4) for the collection and analysis of representative soil samples. Refer to Table 1 for a summary of the borings, sampling schedule and laboratory analyses for this investigation.

3.1 Preparatory Activities

Prior to the initiation of fieldwork, Partner completed the following activities.

3.1.1 Utility Clearance

Partner delineated the work area with white spray paint and notified Underground Service Alert (USA) to clear public utility lines as required by law at least 48 hours prior to drilling activities. USA issued ticket number A182830545 for the project.

In addition, Partner subcontracted with Ground Penetrating Radar Systems (GPRS) on January 9, 2019 to clear boring locations of utilities. GPRS systematically free-traversed each proposed boring location with a Radiodetection model RD7000 electromagnetic induction (EM) equipment unit with line-tracing capabilities, and a GSSI model SIR-3000 ground penetrating radar (GPR) unit. The data was interpreted in real time for evidence of utility lines and/or other subsurface features of potential concern. Based on the findings of the GPR survey, no subsurface utilities were identified within the proposed boring locations.

3.1.2 Health and Safety Plan

Partner prepared a site-specific Health and Safety Plan, which was reviewed with on-site personnel involved in the project prior to the commencement of drilling activities.

3.2 Drilling Equipment

On January 9, 2019, Partner subcontracted with Munoz Direct Push (Munoz) to provide and operate drilling equipment. Munoz, under the direction of Partner, advanced borings B1 through B4 with a limited-access Geoprobe Model 420MT direct push rig. Sampling equipment was decontaminated between sample intervals and boring locations to prevent cross-contamination.

3.3 Boring Locations

Borings B1 through B4 were advanced in the northernmost, north-central, south-central, and southernmost portions of the subject property, respectively. Refer to Figure 3 for a map indicating boring locations.

3.4 Soil Sampling

Borings B1 through B4 were overlain by asphalt, which was penetrated using a punch bit attachment advanced by the direct-push drill rig. Borings B1 through B4 were advanced to a terminal depth of 10 feet bgs.

Soil samples were collected using a two-foot long by 1.5-inch diameter sampler with a two-foot long acetate liner and sampling point. The sampler was advanced by the direct-push drill rig using three-foot long by 1.25-inch diameter hollow rods with the inner rods in place. At approximately one foot above the desired sampling depth, an inner rod was removed and the sampler was advanced to the desired sampling depth

to allow undisturbed soil to enter the sampling liner. The sampler was retrieved from the subsurface and the soil-filled liner was removed.

Each acetate liner was cut using a hacksaw. Samples were collected from the lower half of the liner using a disposable plastic syringe and retained in two sodium bisulfate-preserved and one methanol-preserved volatile organics analysis (VOA) vials in accordance with United States Environmental Protection Agency (EPA) Method 5035 sampling protocol. The remainder of the lower half of the liner was capped on either end with Teflon tape and plastic caps. The capped liners and VOA vials were labeled for identification and stored in an iced cooler. The soil in the upper half of the liner was visually inspected for discoloration, monitored for odors, classified in accordance with the Unified Soil Classification System, placed in a sealable plastic bag, and field-screened with a photoionization detector (PID). None of the samples exhibited discoloration or an odor and none of the PID readings suggested the presence of elevated volatile organics concentrations.

Soil samples were collected from each boring at 1.5, five, and 10 feet bgs.

3.5 Post-Sampling Activities

The boreholes were backfilled with hydrated bentonite chips following sampling activities. Boreholes were capped with asphalt patch to match existing ground cover after being backfilled.

No significant amounts of derived wastes were generated during this investigation.

4.0 LABORATORY ANALYSIS

4.1 Laboratory Analysis

Partner collected 12 soil samples on January 9, 2019, which were transported on the same day in an iced cooler under chain-of-custody protocol to Jones Environmental Inc. (JEI), a state-certified laboratory [Environmental Laboratory Accreditation Program (ELAP) certificate number 6C76103] in the City of Santa Fe Springs, California, for analysis. Each of the soil samples (12 soil samples total) was analyzed for total petroleum hydrocarbons (TPH-cc) in accordance with EPA Method 8015M/8260B, PAHs in accordance with EPA Method 8270C, OCPs in accordance with EPA Method 8081A, and arsenic and lead in accordance with EPA Method 6010B.

4.2 Laboratory Analytical Results

Laboratory analytical results are included in Appendix B and discussed below.

4.2.1 Soil Sample Analytical Results

Total petroleum hydrocarbons as diesel (TPH-d) and total petroleum hydrocarbons as oil (TPH-o) were detected in one of the analyzed soil samples (B3-1.5) at concentrations exceeding the laboratory reporting limits (RLs). None of the remaining soil samples contained TPH-cc above laboratory RLs.

None of the analyzed soil samples contained detectable concentrations of OCPs or PAHs above the laboratory RLs.

Arsenic was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations exceeding laboratory RLs. Lead was detected in each of the 12 analyzed soil samples at concentrations exceeding laboratory RLs.

Refer to Tables 2 and 3 for a summary of the soil sample TPH-cc and arsenic and lead laboratory analysis results, respectively.

5.0 DISCUSSION AND CONCLUSIONS

5.1 Regulatory Agency Guidance

Maximum Soil Screening Levels

Maximum Soil Screening Levels (SSLs) are concentrations of petroleum hydrocarbons that are allowed to remain in soil without potentially degrading the quality of groundwater underlying a site. Maximum SSLs are established and enforced by the LARWQCB.

Department of Toxic Substances Control (DTSC) Regional Screening Levels

Regional Screening Levels (RSLs) are generic, risk-based chemical concentrations developed by the DTSC for use in initial screening-level evaluations. RSLs combine human health toxicity values with standard exposure factors to estimate contaminant concentrations that are considered to be health protective of human exposures over a lifetime through direct-contact exposure pathways (e.g., via inhalation and/or ingestion of and/or dermal contact with impacted soil and/or indoor air). RSLs are not legally enforceable standards, but rather are considered guidelines to evaluate if potential risks associated with encountered chemical impacts may warrant further evaluation.

The Department of Toxic Substances Control (DTSC) Office of Human and Ecological Risk (HERO) developed California-Modified RSLs based on a review of 1) RSL concentrations, and 2) recent toxicity values.

5.2 Discussion

Neither of the detected concentrations of TPH-d and TPH-o in sample B3-1.5 exceeded the Maximum SSLs of 1,000 milligrams per kilogram (mg/kg) and 10,000 mg/kg, respectively. TPH-d was detected at 327 mg/kg and TPH-o was detected at 903 mg/kg. None of the remaining soil samples contained TPH-cc above the laboratory RLs and the RLs did not exceed the Maximum SSLs.

None of the analyzed soil samples contained detectable concentrations of OCPs or PAHs above the laboratory RLs and the RLs did not exceed the residential or commercial/industrial RSLs.

Each of the detected concentrations of arsenic (3 of 12 samples) exceeded the DTSC residential and industrial soil RSLs of 0.11 milligrams per kilogram (mg/kg) and 0.36 mg/kg, respectively. Arsenic was detected above the RLs in three samples collected from approximately 1.5 feet bgs at concentrations ranging from 12.5 mg/kg to 53.3 mg/kg. It should be noted that the residential and commercial RSLs are well below typical background concentrations; however, the three detections of arsenic also exceeded background arsenic concentrations for typical California soils of 12 mg/kg as based on the Kearney Foundation of Soil Science March 1996 Background Concentrations of Trace and Major Elements in California Soils Report.

Lead was not detected in soil above background concentrations or RSLs.

There appear to be concentrations of arsenic on-site that may represent a concern to construction workers during proposed redevelopment of the site. The concentrations of arsenic appear to be generally close to the surface at 1.5 feet bgs and do not extend to five feet bgs.

No other contaminants of concern were detected above laboratory RLs and applicable screening levels.

5.3 Summary and Conclusions

Partner conducted a Phase II Subsurface Investigation at the subject property to evaluate the potential impact of TPH-cc, PAHs, OCPs, lead, and arsenic to soil as a consequence of a release or releases from the potential on-site railroad line. The scope of the Phase II Subsurface Investigation included four soil borings. Twelve soil samples were analyzed for TPH-cc, PAHs, OCPs, arsenic, and lead.

Subsurface lithology encountered in the upper 10 feet bgs consisted of sandy silt and silty sand. Groundwater was not encountered during this investigation.

None of the analyzed soil samples contained TPH-cc, PAHs, OCPs, or lead above applicable screening levels.

Arsenic was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations exceeding residential and commercial/industrial RSLs and exceeding typical background concentrations.

There appear to be concentrations of arsenic on-site that may represent a concern to construction workers during proposed redevelopment of the site. No other contaminants of concern were detected above laboratory RLs and applicable screening levels. The arsenic impacts appear to be vertically limited to a depth of less than two feet bgs. Arsenic was not detected above screening criteria in the deeper samples. Arsenic was less than 0.5 mg/kg in those samples. Notification to regulatory agencies is not required. Remedial action is not required by regulatory agencies. Partner recommends soil management in accordance with grading plans, codes, and regulations during future redevelopment activities.

TABLES

Notes:

TPH-cc = carbon chain total petroleum hydrocarbons

EPA = United States Environmental Protection Agency

TPH-g = total petroleum hydrocarbons as gasoline

TPH-d = total petroleum hydrocarbons as diesel

TPH-o = total petroleum hydrocarbons as oil

mg/kg = milligrams per kilogram

SSLs = Soil-screening levels (Los Angeles Regional Water Quality Control Board - April 27, 2004) for groundwater at a depth of 20-150 feet

< = not detected above indicated Laboratory Reporting Limit (RL)

Values in bold exceed laboratory RLs

Table 3: Soil Sample Arsenic and Lead Laboratory Results (mg/kg)
1268 Pacific Coast Highway
Harbor City, California 90710
Partner Project Number 18-226425.2
January 2019

Element	Residential Soil RSL	Industrial Soil RSL	Background Concentrations*	B1-1.5	B1-5	B1-10	B2-1.5	B2-5	B2-10	B3-1.5	B3-5	B3-10	B4-1.5	B4-5	B4-10
Arsenic (As)	0.11	0.36	12**	16.9	< 0.5	< 0.5	53.3	< 0.5	< 0.5	12.5	< 0.5	< 0.5	< 0.5	< 0.5	< 0.5
Lead (Pb)	80	320	10.1 - 37.7	33	4.6	3.3	5.3	3.9	2.3	21.3	3.6	3.0	3.9	5.4	4.8

Notes:

*From Kearney Foundation of Soil Science March 1996 report Background Concentrations of Trace and Major Elements in California Soils. Background concentrations of metals are considered to be within one standard deviation from the mean metal concentrations determined by the study. Concentrations indicated in milligrams per kilogram (mg/kg).

**From Department of Toxic Substance Control (DTSC) March 2008 report Determination of a Southern California Regional Background Arsenic Concentration in Soil.

CAM = California Administrative Manual

RSL = September 2018 DTSC Regional Screening Levels (RSLs). If DTSC RSLs do not exist, May 2018 United States Environmental Protection Agency (EPA) Region 9 RSLs were utilized, as denoted by [1].

< = not detected above indicated laboratory Reporting Limit (RL)

NA = not applicable

Values in bold exceed laboratory RLs

Highlighted values exceed one or more regulatory guideline

with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2018 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1268 PACIFIC COAST HIGHWAY
HARBOR CITY, CA 90710

COORDINATES

Latitude (North):	33.7885730 - 33° 47' 18.86''
Longitude (West):	118.2990300 - 118° 17' 56.50''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	379734.3
UTM Y (Meters):	3739278.2
Elevation:	43 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/17/2018 has revealed that there

are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
PUREX CORP B&W CHEM Site ID: 0901808 EPA Id: CAD980636419	25920 BELLE PORTE AV	WSW 0 - 1/8 (0.106 mi.)	F26	48

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/01/2018 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/01/2018 has revealed that there are 24 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/30/2018 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/01/2018 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 5 DRYCLEANERS sites within approximately 0.25 miles of the target property.

Cleanup Status: POST CLOSURE PERMIT

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

MICREE CORP (Continued) **1000355375**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Robert@DTSC; Kourda, Dina@DTSC; Thompson, Jennifer K.; Gratwick, Stephen; Katherine Doherty; David Attaway Subject: Re: Ken Malloy Harbor Regional Park Former Disposal Site (Machado Lake) For clarification, I am the City of Los Angeles project manager for the Machado Lake Rehabilitation Project, which will be in construction beginning in 2013. This project includes improvements to the lake and other areas at the Ken Malloy Harbor Regional Park, but does not include any work related to the former disposal site. The disposal site area will not be impacted by the construction project. From my understanding, a Work Plan related to testing at the disposal site was prepared and reviewed by DTSC, but the implementation of the Work Plan is not part of the scope of this project. The park is under the ownership of the City of Los Angeles Department of Recreation and Parks (RAP). The contact person for RAP is David Attaway, whom I have copied on this email. It is not anticipated that RAP will be performing any work related to the former disposal site while the Lake Rehabilitation construction project is in progress, which is expected to end in 2016. Please let me know if I can be of any further assistance. Thank you, Julie Allen, PE Senior Construction Engineer/PM II Proposition O Clean Water Bond Program Bureau of Engineering 1149 S. Broadway, 6th Floor Los Angeles, CA 90015 213-485-1454 (phone)

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name: 1A, 1B, 2
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/30/1998
Comments: RA - OU1 (Sites 1A, 1B, & 2): The removal action involves capping by covering exposed impacted soil areas with a total of 8,310 tons of imported clean soil, grading, and landscaping to prevent and minimize surface water and wind erosion. The soil cover comprises of three layers with a total thickness ranging from 2.5 to 7.5 feet: a bottom granular fill layer to establish sub-grade elevation; an infiltration layer consisting of lower permeability silt and clay to reduce infiltration; and a vegetative layer to support plant cover growth. The removal action also includes the installation and quarterly monitoring of three groundwater monitoring wells and drainage channel installation.

Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/07/1995
Comments: PEA FOR OU-1 AND OU-2 COMPLETED SEPTEMBER 7, 1995 SIZE OF ACTIVITY: MEDIUM The Navy submitted an SI Report in July 1993 documenting the soil investigation conducted at OUs 1 and 2. Due to the presence of a variety of chemical constituents includ- ing volatile organics, semivolatile organics, metals, and petroleum hydrocarbons, the Navy

DEFENSE FUEL SUPPLY POINT, SAN PEDRO 1 (Continued) **U001565523**

decided to further investi- gate these areas for a threat to both human health and the environment, documented as part of a Removal Site Evalua- tion Report. The results of RSE investigation showed at OUs 1 and 2 that (1) The volatile organic compounds were below the soil risk-based concentrations (RBCs); (2) The semivolatiles exceeded their respective RBCs; and (3) The metals exceeded their background and RBCs, including the dioxin concentrations at OU2. Additionally, the concentra- tions of the total petroleum hydrocarbons as gas and diesel, respectively were greater than 1000 parts per million. The RSE report recommended a removal action for these sites. We concur with the removal action per our letter of September 14, 1995.

Comments: DTSC has concurred the Final addendum.

Completed Area Name: OU2
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 03/13/1998
Comments: CERT - Landfill: The removal action at OU2 involves excavation and transportion of soil contaminated with benzo(a) pyrene, dibenzo(a, h) anthracene, and/or a total recoverable petroleum hyrocarbon for off-site disposal. Confirmatory sampling was also conducted to verify that the impacted soil has been removed. An estimated 1,175 tons of soil was excavated and disposed of at a permitted and licensed off-site landfill. Additionally, an underground storage tank was removed in accordance with California Leaking Underground Fuel Tank (CALUFT) requirements.

Completed Info:
Completed Area Name: 1A, 1B, 2
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/30/1998
Comments: RA - OU1 (Sites 1A, 1B, & 2): The removal action involves capping by covering exposed impacted soil areas with a total of 8,310 tons of imported clean soil, grading, and landscaping to prevent and minimize surface water and wind erosion. The soil cover comprises of three layers with a total thickness ranging from 2.5 to 7.5 feet: a bottom granular fill layer to establish sub-grade elevation; an infiltration layer consisting of lower permeability silt and clay to reduce infiltration; and a vegetative layer to support plant cover growth. The removal action also includes the installation and quarterly monitoring of three groundwater monitoring wells and drainage channel installation.

Completed Area Name: OU1 AND OU2
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 09/07/1995
Comments: PEA FOR OU-1 AND OU-2 COMPLETED SEPTEMBER 7, 1995 SIZE OF ACTIVITY: MEDIUM The Navy submitted an SI Report in July 1993 documenting the soil investigation conducted at OUs 1 and 2. Due to the presence of a variety of chemical constituents includ- ing volatile organics, semivolatile organics, metals, and petroleum hydrocarbons, the Navy decided to further investi- gate these areas for a threat to both human health and the environment, documented as part of a Removal Site Evalua- tion Report. The results of RSE investigation showed at OUs 1 and 2 that (1) The volatile organic compounds were below the soil risk-based concentrations (RBCs); (2) The semivolatiles exceeded their respective RBCs; and (3) The metals exceeded their background and RBCs, including the dioxin concentrations at OU2. Additionally, the concentra- tions of the total petroleum hydrocarbons as gas and diesel, respectively were greater than 1000 parts per million. The RSE report recommended a removal action for these sites. We concur with the removal action per our letter of September 14, 1995.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 05/31/1994
Comments: PPP - DTSC approved the Public Participation Plan on May 31, 1994. Approximate cost not available; funding = DSMOA.

Completed Area Name: Navy - Site 32
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation / Feasibility Study
Completed Date: 09/30/2009
Comments: Not reported

Completed Area Name: Navy - Site 32
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 02/17/2011
Comments: DTSC has concurred the Final addendum.

DEFENSE FUEL SUPPLY POINT, SAN PEDRO 1 (Continued) **U001565523**

Completed Area Name:	OU2
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	03/13/1998
Comments:	CERT - Landfill: The removal action at OU2 involves excavation and transportion of soil contaminated with benzo(a) pyrene, dibenzo(a, h) anthracene, and/or a total recoverable petroleum hyrocarbon for off-site disposal. Confirmatory sampling was also conducted to verify that the impacted soil has been removed. An estimated 1,175 tons of soil was excavated and disposed of at a permitted and licensed off-site landfill. Additionally, an underground storage tank was removed in accordance with California Leaking Underground Fuel Tank (CALUFT) requirements.

Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: 162
. Waste name: Other spent catalyst

. Waste code: 181
. Waste name: Other inorganic solid waste

. Waste code: 212
. Waste name: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

. Waste code: 222
. Waste name: Oil/water separation sludge

. Waste code: 223
. Waste name: Unspecified oil-containing waste

. Waste code: 331
. Waste name: Off-specification, aged, or surplus organics

. Waste code: 341
. Waste name: Organic liquids (nonsolvents) with halogens

. Waste code: 352
. Waste name: Other organic solids

. Waste code: 461
. Waste name: Degreasing sludge

. Waste code: 551
. Waste name: Laboratory waste chemicals

. Waste code: 751
. Waste name: Solids or sludge with halogenated organic comp. > 1000 mg/kg

. Waste code: 791
. Waste name: Liquids with pH < 2

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

PHILLIPS 66 - LOS ANGELES REFINERY WILMINGTON PLANT (Continued) **1000337291**

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

. Waste code: D004
. Waste name: ARSENIC

. Waste code: D006
. Waste name: CADMIUM

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: D009
. Waste name: MERCURY

. Waste code: D018
. Waste name: BENZENE

. Waste code: D035
. Waste name: METHYL ETHYL KETONE

. Waste code: D039
. Waste name: TETRACHLOROETHYLENE

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F037
. Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE-ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS

PHILLIPS 66 - LOS ANGELES REFINERY WILMINGTON PLANT (Continued) **1000337291**

DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN: OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORMWATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGE GENERATED IN STORMWATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED FROM NON-CONTACT ONCE-THROUGH COOLING WATERS SEGREGATED FOR TREATMENT FROM OTHER PROCESS OR OILY COOLING WATERS, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS) AND K051 WASTES ARE NOT INCLUDED IN THIS LISTING.

. Waste code: K050
. Waste name: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY

. Waste code: K051
. Waste name: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY

. Waste code: K171
. Waste name: Spent hydrotreating catalyst from petroleum refining operations, including guard beds used to desulfurize feeds to other catalytic reactors (excludes inert support media)

. Waste code: D001
. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste code: D003
. Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

PHILLIPS 66 CO LOS ANGELES REFINERY - WILMINGTON PLANT (Continued) **S103634906**

CPS-SLIC:

Region:	STATE
Facility Status:	**Open - Assessment & Interim Remedial Action**
Status Date:	09/29/2005
Global Id:	SLT43132130
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	33.777194
Longitude:	-118.288711
Case Type:	Cleanup Program Site
Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	0231
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern:	Benzene, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline, Other Petroleum
Site History:	The Wilmington Plant (Plant) has been in operation since June 1919 with refinery operations initiated in 1940. Currently the Wilmington Plant serves as the upgrade unit of the ConocoPhillips Los Angeles Refinery (COP LAR), which consists of two plants located in Carson and Wilmington, California. LAR Wilmington processes intermediate petroleum streams (i.e., naphtha distillates, diesel distillates, and gas oil) provided by pipeline from the Carson Plant into finished products. The major products of the facility currently include automotive gasoline, jet fuel, and diesel. Since 1985, the refinery has been under numerous directives, issued by the Water Board under authority in sections 13304 and 13267 of the California Water Code (CWC), to investigate and cleanup releases of wastes. Cleanup and Abatement Order (CAO) No. 93-48, issued by the Executive Officer of RWQCB on August 10, 1993, directing the former owner of Wilmington Plant, Unocal, to complete the investigation and assessment for onsite and offsite soil and groundwater contamination. In 1994, this Order was revised, by the Executive Officer, in CAO No. 94-139. On June 28, 2005 RWQCB ordered, pursuant to section 13267 of the CWC, COP to perform investigation and analysis to determine the extent and magnitude of TBA impacts on Lynwood and Silverado aquifers. COP is in compliance with the Orders, currently carrying out tasks including: semi-annual groundwater monitoring and reporting; O&M hydrocarbon recovery system; LNAPL mobility study; deeper aquifers groundwater investigation to further assess TBA migration; implementation of Interim Remedial Action Plan for the southwestern plume, focusing Blocks 72 through 74 remediation system design and installation; refine conceptual site model; pilot stest on the air-sparge and vapor extraction system for the north plume . The Master Work Plan was previously updated in 2015, and will be updated by September 2017.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/17/2018

Next Scheduled EDR Contact: 10/15/2018
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018
Date Made Active in Reports: 06/22/2018
Number of Days to Update: 86

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018

Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/01/2018
Date Data Arrived at EDR: 03/28/2018
Date Made Active in Reports: 06/22/2018

Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/01/2018

Last EDR Contact: 08/28/2018
Next Scheduled EDR Contact: 12/10/2018
Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2018

Next Scheduled EDR Contact: 11/12/2018
Data Release Frequency: Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 07/30/2018

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

APPENDIX D: QUALIFICATIONS

PARTNER

PARTNER

Emilie Moore
Environmental Professional

Education

B.A., Environmental Studies, Concentration in Sustainability, Energy and Society
University of Southern California, departmental honors, USC S.U.R.F. research fund recipient

Highlights

10 years in the environmental industry including environmental law and due diligence
4 years of experience performing CEQA/NEPA research and legal assistance
8 years of experience performing and reviewing due diligence assessments including Phase I and Phase II Environmental Site Assessments, Transaction Screen Assessments, NEPA Assessments, and Environmental Desktop Reports
6 years of specific experience with Freddie Mac and Fannie Mae as well as US Department of Housing and Urban Development (HUD) and US Small Business Association (SBA) assessments
AHERA-Certified Asbestos Building Inspector #ABII0601160006N11623

Experience Summary

Ms. Moore currently holds the role of Environmental Professional and her responsibilities include thorough site assessment inspections and technical report writing and reviewing in line with the American Society of Testing and Materials (ASTM) standard and US Environmental Protection Agency's All Appropriate Inquiry (AAI) as well as customized client formats. In addition, Ms. Moore performs limited asbestos surveys, lead-based paint surveys, radon testing, and lead in water testing as required per scope of work.

Ms. Moore has worked on dozens of large scope projects including gas stations, dry cleaners, manufacturing sites, upscale residential developments, high-rise hotels, retail shopping centers, machine shops, auto repair facilities, cell phone data towers and associated land, recycling facilities, oil drilling sites, multi-use commercial/residential buildings, and original construction buildings throughout the Western United States.

Additional field experience for Ms. Moore includes ground and well water testing for lead, volatile organic compounds of concern, pH, alkalinity, total suspended solids, chlorides, and conductivity, extensive soil sampling, characterization, and testing as related to contamination and remediation near Southern California Superfund sites, experience drafting corrective action plans for these sites when contamination is found, and Environmental Impact Report (EIR) production and associated revisions

Ms. Moore works closely with state and local regulatory agencies to obtain environmentally significant documents regarding tank removal and subsurface investigations performed onsite. Ms. Moore has worked for the federal government, private investors, as well as large financial institutions including, but not limited to, Bank of America, Citibank, N.A., KeyBank, N.A., JPMorgan Chase Bank, BBVA Compass Bank, East West Bank, US Bank, Union Bank, Comerica Bank, HUD, 1st Enterprise Bank, Morgan Stanley, Bank of the West, California Republic Bank, CDC Small Business Finance, and Wells Fargo. Ms. Moore is also certified to author and review reports for government enterprises such as Freddie Mac, Fannie Mae, and the SBA.

Project Experience

Ms. Moore has eight years of experience performing and reviewing due diligence assessments for a variety of property types, as detailed above. Project highlights include:

Gas Stations, Los Angeles, California. Ms. Moore performed a series of multiple Phase I Environmental Assessments as part of a larger portfolio concerning name-brand gasoline stations throughout the Greater Los Angeles area. Potentially leaking underground storage tanks were identified at two of these four locations necessitating subsequent soil and groundwater assessments.

Dairy Farm/Agricultural Land, Ontario, California. Ms. Moore performed a Phase I Environmental Assessment on a complex plot of land featuring active dairy and farming operations.

Multi-Use, Santa Monica, California. Ms. Moore performed a Phase I Environmental Assessment on five acres of formerly industrial land which was used commercially, but was being sold for future high-density residential development.

Golf Courses, Nipomo and Huntington Beach, California. Ms. Moore performed Phase I Environmental Assessments on formerly industrial/landfill land which had been redeveloped as golf courses.

Recycling Center/Waste Disposal Site, North Los Angeles, California. Ms. Moore performed a Phase I Environmental Assessment on a former landfill which had been redeveloped as a recycling facility.

Hotels, Beverly Hills, California and Aspen, Colorado. Ms. Moore performed Phase I Environmental Assessments for two well-known, five-star, full service hotels with over 1,000 combined guest rooms, on-site dry cleaning, and previous on-site gas station operations.

Oil-Drilling/Active Oil Wells, Lost Hills, California. Ms. Moore performed a Phase I Environmental Assessment for a 60-acre parcel of land featuring active oil drilling operations and drilling equipment storage.

Private Jet Airports/Fixed Base Operations (FBOs), Santa Maria and Long Beach, California. Ms. Moore performed Phase I Environmental Assessments for two full-service FBOs with on-site jet fueling, storage, and maintenance. Both locations required subsequent soil and groundwater assessments.

New Construction Multi-Family Apartment Complex, Denver, Colorado. Ms. Moore performed a Phase I Environmental Assessment for a ground-up newly built multi-family apartment complex constructed at the site of a former prolific rubber factory with significant soil contamination and associated vapor concerns.

PARTNER

Debbie Stott, P.G.
Nevada CEM - Technical Director

Education
BA Geology, The Ohio State University

Registrations
California Professional Geologist No. 6221
Nevada Certified Environmental Manager No. 2359

Training
OSHA, Hazardous Waste Operator (HAZWOPER) 40 hour Certification
AHERA Certified Asbestos Inspector
Certified Project Manager

Highlights
Over 28 years of experience in the environmental service industry with a focus on due diligence assessments
Knowledgeable with ASTM, EPA's All Appropriate Inquiry (AAI), and customized client formats.
100+ Phase I Environmental Site Assessments

Experience Summary
As Technical Director for due diligence services as part of the Investment Advisory Group, Ms. Stott focuses on report quality, client service, and sharing her years of expertise with staff and clients.

Ms. Stott has performed hundreds of Phase I Environmental Site Assessments, Third Party Reviews, Due Diligence Audits, Record Search and Risk Assessments, Phase II and III Subsurface Investigations, Underground storage tank investigations, Remedial Investigations, Radon Studies, Mold Assessments, Methane Surveys, Indoor Air Quality Assessments, and Lead-in-water sampling and analysis.

Clients have varied and have included: individual investors, City of Los Angeles Agencies, Los Angeles County, City of Anaheim, institutional investors, private and institutional equity companies, insurance companies, attorneys, brokers, developers, and multiple lenders.

Project Experience
Ms. Stott has conducted, managed and directed thousands of ESAs throughout her career and has been Senior Project Manager for hundreds of site investigations, characterization studies and remediation projects throughout California and the US. The following select projects summarize her experience and due diligence background:

Transaction Due Diligence
Project Manager, Western US and Southern California, LBA Realty - For over 17 years performed due diligence services related to real estate transfers as well as asset refinances for LBA Realty. The relationship requires close coordination and communication with property managers and representatives to provide a smooth process with client and lenders. Services have also included review of third party reports, asbestos surveys, subsurface investigations, and development of soil management plans. Many projects involved multiple locations in several states thus requiring coordination with other offices and client contacts.

Environmental Lead, West Coast, Barings, LLC (Barings) - Ms. Stott assists with management and review of environmental due diligence and environmental actions associated with acquisitions, property development, joint venture developments, property divestments and finance group loan transactions. Environmental due diligence includes Phase I ESAs, Phase II ESAs, indoor air quality assessments, mold assessment and mitigation planning, providing third party review, asbestos investigations, asbestos abatement, operation and maintenance plan development, remedial action development and implementation, regulatory correspondence and permitting.

Phase I ESAs – multiple clients throughout US - Ms. Stott manages and oversees preparation of Phase I Environmental Site Assessments for several confidential clients. All are completed to ASTM guidelines with various special criteria specific to each client.

Subsurface Investigations/Vapor Intrusion

Project Manager, Whittier, CA, Confidential Client - Conducted several investigations to evaluate the potential for vapor intrusion associated with contaminated groundwater into client buildings. At one location a horizontal well system was installed to passively vent vapors. Site investigations involved the installation of multiple, multi-depth vapor probes through the property to map the plume and to assist in decision making for potential further investigation. Data collected from both soil vapor and indoor air monitoring was subjected to risk assessment in order to determine if indoor air quality had been negatively impacted and engineering controls needed to protect workers. Client was able to purchase and redevelop portions of the desired parcels for use as parking.

Project Manager and Environmental Lead, Berkeley, CA, LBA Realty - Evaluation of potential risks associated with the presence of trichloroethylene (TCE) and breakdown products cis 1,2- dichloroethene (cis 1,2-DCE) and vinyl chloride (VC), and methyl tert butyl ether (MTBE) in groundwater and ambient air at an existing building in Berkeley, CA. Worked with outside counsel to evaluate, summarize, and present the risks and potential risks of continued investment in the property. Remedial systems were installed under DTSC oversight, risk assessment performed and the building remodeled and reused for office space.

Municipal/State Contracts

Project Manager, ESAs for City of Anaheim widening of Lincoln Avenue - As a subcontractor to the geotechnical consultant, Partner provided Environmental Site Assessments for multiple properties along the project alignment. The parcel uses ranged from car wash, to older office and motel properties, automotive repair, banks, public school, and a church. Partner finished the multi-site project on time and within budget.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) was retained by Red Oak Investments to prepare the following Soil Management Plan (SMP) for the property located at 1268 Pacific Coast Highway, Los Angeles, Los Angeles County, California. The SMP is being prepared in accordance with standard industry practice and applicable regulations.

1.1 Purpose

The purpose of the SMP is to outline protocol for ensuring the proper handling and/or disposal of impacted soil and/or subsurface features of concern that may be encountered during site redevelopment activities. The SMP was prepared to minimize potential exposure to impacted soil by construction, facility, and maintenance personnel; tenants; contractors and vendors; and the general public. This SMP only applies to the soil and/or subsurface features that may be encountered at the subject property.

1.1 Limitations

Conclusions and/or recommendations are based on the observations, laboratory analyses, and the governing regulations. Conclusions and/or recommendations beyond those stated and reported herein should not be inferred from this document.

Partner warrants that the environmental consulting services contained herein were accomplished in accordance with generally accepted practices in the environmental engineering, geology, and hydrogeology fields that existed at the time and location of work. No other warranties are implied or expressed.

1.2 User Reliance

Partner was engaged by Red Oak Investments (the Addressee), or their authorized representative, to perform this management plan. The engagement agreement specifically states the scope and purpose of the investigation, as well as the contractual obligations and limitations of both parties. This report and the information therein, are for the exclusive use of the Addressee. This report has no other purpose and may not be relied upon, or used, by any other person or entity without the written consent of Partner. Third parties that obtain this report, or the information therein, shall have no rights of recourse or recovery against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, the Addressee and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such use. Unauthorized use of this report shall constitute acceptance of, and commitment to, these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted.

This report has been completed under specific Terms and Conditions relating to scope, relying parties, limitations of liability, indemnification, dispute resolution, and other factors relevant to any reliance on this report. Any parties relying on this report do so having accepted Partner's standard Terms and Conditions, a copy of which can be found at http://www.partneresi.com/terms-and-conditions.php.

2.0 SITE BACKGROUND

2.1 Site Description

The subject property is currently occupied by a parking lot for commercial use. On-site operations consist of vehicle parking and storage, and storage trailer parking

The immediately surrounding properties consist of Pacific Coast Highway followed by Pep Boys and Del Taco to the north; 259th Street (a cul-de-sac) followed by apartment buildings to the south; A-1 Auto Smog and a Kaiser Permanente parking lot to the east; and a mobile home park to the west.

2.2 Site History

Partner completed a *Phase I Environmental Site Assessment Report* (Phase I) for the subject property, dated January 29, 2019 on behalf of Red Oak.

According to available historical sources, the subject property was formerly undeveloped as early as 1896; developed with a railroad track bisecting the center of the parcel between 1923 and *circa* 1972 and developed for the current parking lot use *circa* 1983.

Subsequent to the Phase I, Partner completed a *Phase II Subsurface Investigation Report* (Phase II), dated January 25, 2019, prepared on behalf of Red Oak. Partner conducted the Phase II at the subject property to evaluate the potential impact of total petroleum hydrocarbons – carbon chain (TPH-cc), polyaromatic hydrocarbons (PAHs), organochlorine pesticides (OCPs) lead, and arsenic to soil as a consequence of a release or releases from the potential on-site railroad line. The scope of the Phase II included four soil borings. Twelve soil samples were analyzed for TPH-cc, PAHs, OCPs, arsenic, and lead.

Subsurface lithology encountered in the upper 10 feet bgs consisted of sandy silt and silty sand. Groundwater was not encountered during this investigation.

None of the analyzed soil samples contained TPH-cc, PAHs, OCPs, or lead above applicable screening levels.

Arsenic was detected in three of the analyzed soil samples (B1-1.5, B2-1.5, and B3-1.5) at concentrations exceeding residential and commercial/industrial screening levels and exceeding typical background concentrations.

The detected concentrations of arsenic on-site can be managed through use of this SMP. No other contaminants of concern were detected above laboratory RLs and applicable screening levels. The arsenic impacts appear to be vertically limited to a depth of less than two feet bgs. Arsenic was not detected above screening criteria in the deeper samples. Arsenic was less than 0.5 mg/kg in those samples. Notification to regulatory agencies is not required. Remedial action is not required by regulatory agencies. Partner recommends soil management in accordance with grading plans, codes, and regulations during future redevelopment activities.

3.0 GEOLOGY AND HYDROGEOLOGY

Groundwater was not encountered during the investigation and was not a part of the scope of work. According to the State Water Resources Control Board (SWRCB) Geotracker website, a nearby Leaking Underground Storage Tank (LUST) site is located at 1268 Pacific Coast Highway in the city of Los Angeles, which is approximately 550 feet to the northeast of the subject property and is overseen by the Los Angeles Regional Water Quality Control Board (LARWQCB) as Case Number 907100116A. The site maintains four groundwater monitoring wells in the area. The most recent monitoring data available on the GeoTracker Website was for May 9, 2011, with depth to groundwater at approximately 67 feet below ground surface (bgs) with a direction of flow to the southeast.

4.0 CHEMICALS OF CONCERN

Based on the known on-site impacts, soil chemicals of concern (COCs) at the subject property include Arsenic. Each of the detected concentrations of arsenic (3 of 12 samples) exceeded the Department of Toxic Substances Control (DTSC) residential and commercial/industrial soil regional screening levels (RSLs) of 0.11 milligrams per kilogram (mg/kg) and 0.36 mg/kg, respectively. Arsenic was detected above the laboratory reporting limits (RLs) in three samples collected from approximately 1.5 feet bgs at concentrations ranging from 12.5 mg/kg to 53.3 mg/kg. It should be noted that the residential and commercial/industrial RSLs are well below typical background concentrations; however, the three detections of arsenic also exceeded background arsenic concentrations for typical California soils of 12 mg/kg as based on the Kearney Foundation of Soil Science March 1996 Background Concentrations of Trace and Major Elements in California Soils Report.

5.0 SOIL MANAGEMENT

This section outlines the protocols for identifying, handling, and/or disposing of COC-impacted soil that may be encountered during ground cover demolition, subject property grading, and/or other earthmoving activities that may be performed on the subject property. Partner understands that the Client intends to redevelop the subject property for multi-family use and that when complete, residents will not have contact with soil and that soil export is not anticipated.

5.1 Applicability

The SMP applies to ground cover removal and/or demolition and/or soil-disturbing activities associated with the subject property redevelopment, including excavation, grading, trenching, utility installation, and/or other activities that could potentially generate COC-impacted soil. Field personnel directly involved with earthmoving activities should be familiar with the contents of the SMP.

5.2 Duration

Implementation of the SMP is intended to coincide with the start of ground cover removal and/or demolition and subject property grading activities and shall remain in effect for the duration of the subject property redevelopment involving soil-disturbing activities.

5.3 Key Roles and Responsibilities

The following is a list of key roles involved with the SMP and the respective general responsibilities:

The following is a list of key roles involved with the SMP and the respective general responsibilities:

- Client (Red Oak)– Responsible for selecting and engaging the main contractor(s) and environmental consultants(s) involved with the subject property redevelopment and/or implementation of the SMP;
- General Contractor (GC) – Responsible for overseeing the subject property grading/redevelopment/construction activities, managing the associated subcontractors (including the dewatering subcontractor, if necessary), and the initial soil screening (refer to Section 5.9 for additional details); and,
- Environmental Consultant (EC) – Responsible for implementing the SMP if necessary.

5.4 Work Area Control

Control of the work area (e.g., perimeter fencing) will be the responsibility of the GC. In general, the work area should be secured as to limit access only to the personnel qualified and authorized to be on-site.

5.5 Health and Safety

GC will prepare a separate site-specific health and safety plan (HASP) that will be implemented in conjunction with the SMP when handling soil with suspected or confirmed COC impacts. At a minimum, the HASP will identify the potential hazards of concern and establish guidelines and/or procedures for controlling/minimizing exposures to potential hazards, including the appropriate level(s) of personal protective equipment (PPE). The GC will be responsible for health and safety concerns associated with the excavation (e.g., excavation stability, stockpile placement, heavy equipment operation, etc.).

5.6 Permitting

If permits are required for specific tasks (e.g. stockpiling, disposal, on site re-use), the GC will facilitate permits in accordance with applicable State and/or Federal regulations.

5.7 Pre-Construction Meeting

Prior to grading/redevelopment/construction activities, representatives of the Client, the GC, and EC should meet to review and discuss the contents of the SMP, roles and responsibilities, and the grading/redevelopment schedule.

5.8 Undocumented Subsurface Features

The GC should cordon off and halt construction activities in the immediate area(s) of undocumented subsurface features of potential environmental concern (e.g., USTs, clarifiers, buried drums, residual impacted soil) if encountered during the course of ground cover removal and/or demolition, subject property grading, and/or other earthmoving activities. The GC must promptly notify the Client and EC. The following general approach will be applied by the EC to address such subsurface features:

1) Notify the relevant regulatory oversight agency or agencies involved with the subsurface feature decommissioning / residual impacted soil and file the necessary permit(s), when applicable;
2) Decontamination and decommission the subsurface feature(s) via removal (if practical) in accordance with generally accepted industry practices and the requirements of the filed permit(s) (where applicable);
3) Collect and analyze soil samples to evaluate potential chemical impacts to the subsurface due to a historical release or releases from subsurface feature(s), and assess the lateral and vertical extent of residual impacted soil; and
4) Document the decommissioning activities and soil handling / removal activities and findings in a summary report.

EC will provide specific protocols to address encountered subsurface features on a case-by-case basis based on the subject property conditions and the nature of the subsurface features.

5.9 General Decision Process for Handling Disturbed Soil

Evaluating whether excavated soil is suitable for reuse on the subject property and selecting which off-site facility or facilities are suitable for receiving exported soil will be based on up to three criteria: (1) field observations (e.g., evidence of staining, odor); (2) soil monitoring readings with an organic vapor analyzer (OVA); and/or (3) laboratory analysis results, as applicable. Refer to Appendix A for the general decision process for handling disturbed soil. The process steps are discussed in detail in the proceeding Sections.

5.10 Initial Soil Monitoring and Segregation

At this time, handling of VOC-impacted soil is <u>not</u> anticipated during the soil disturbing activities considering the results of the previous subsurface investigation results. Therefore, the primary initial criterion for segregating soil generated during soil-disturbing activities will be the field observations of the GC excavation personnel. Soil devoid of evident impacts (e.g., staining, odor) will be deemed suitable for unrestricted use and may be reused on-site as backfill material or exported off-site. Handling, exporting,

and management of unrestricted soil will defer to the GC. In the event that soil exhibiting discoloration and/or odor is encountered during soil-disturbing activities, it will be segregated in separate stockpiles for GC assessment and off-site disposal in accordance with applicable regulations.

5.11 Handling of VOC-Impacted Soil

Despite the fact that VOC-impacted soil is not anticipated during soil disturbing activities, if such are encountered, then such a contingency during excavation and grading at the subject property will be managed under an Air Quality Management District (AQMD) Rule 1166 Compliance Plan. Refer to Appendix B for the AQMD Compliance Plan.

To monitor for unanticipated VOC-impacted soil, the EC will provide an OVA that has been calibrated by the manufacturer within three months of the date of fieldwork. The OVA will be calibrated prior to the start of fieldwork using hexane calibration gas (or the OVA readings will be correlated and expressed as hexane using equivalency factors provided by the manufacturer if a calibration gas other than hexane is used). During the course of the project, the GC will perform periodic soil screening and will notify the EC in the event that suspect VOC-impacted soils are encountered during general grading activities. Moreover, the EC will be present on-site for soil-disturbing activities in the immediate area(s) identified as possible VOC-impacted soil. Disturbed soil will be monitored with the OVA at a minimum frequency of one reading for every two cubic yards of soil excavated, not to exceed 15 minutes between readings. Readings will be collected no later than three minutes after excavation and at a distance of no more than three inches between the OVA intake and the soil surface.

If possible, VOC-impacted soils are encountered based on the OVA monitoring results, excavated soil will be segregated into soil registering OVA readings less than 1,000 parts per million (ppm) and soil registering OVA readings equal to or greater than 1,000 ppm. Refer to Sections 5.12.1 and 5.12.2 for stockpile management protocol for the two respective categories of soil.

5.12 Soil Stockpile Management

Each category of VOC-impacted soil and non-VOC-impacted soil must be segregated and stored separately. Stockpile management procedures for the three categories are discussed in the following Sections.

5.12.1 VOC-Impacted Soil (<1,000 ppm)

Potential VOC-impacted soil registering OVA readings less than 1,000 ppm can be immediately loaded onto trucks and transported to an AQMD-approved off-site treatment/disposal facility (refer to Section 5.15.1 for details regarding disposal of VOC-impacted soil) or can be temporarily stockpiled on-site prior to exporting.

Each individual stockpile must not contain more than 400 cubic yards of soil. With the exception of the stockpile work face (i.e. portion of the stockpile where excavated soil is added), stockpiles must be placed on and covered while on-site with 6-millimeter polyethylene sheeting so that no portion of the VOC-impacted soil is exposed to the atmosphere. The polyethylene sheeting seams must overlap a minimum of 24 inches and be secured with duct tape. The stockpile work face(s) should be similarly covered/secured during periods of inactivity longer than one hour and stockpiles, including the work face(s), must be completely covered and securely anchored at the end of each workday.

Once covered and secured, the stockpiles should remain undisturbed and should not be reshaped or relocated as much as feasible until the soil is exported from the subject property. The soil must be transported to an AQMD-approved off-site treatment/disposal facility within 30 calendar days of excavation.

5.12.2 VOC-Impacted Soil (≥1,000 ppm)

VOC-impacted soil registering OVA readings equal to or greater than 1,000 ppm cannot be stockpiled on-site. If encountered, the AQMD must be notified within one hour of detection; the work area must be immediately sprayed with water; and the VOC-impacted soil must be directly loaded onto trucks, sprayed with additional water, covered, and transported to an AQMD-approved off-site treatment/disposal facility (refer to Section 5.15.1 for details regarding disposal of VOC-impacted soil). If VOC-impacted soil registering OVA readings equal to or greater than 1,000 ppm is encountered, but trucks for immediate exporting are not available, soil disturbance in the immediate area must cease and may only resume once the excavation can proceed with direct loading of soil onto trucks.

5.12.3 Non-VOC-Impacted Soil

In general, the management of non-VOC-impacted soil (e.g., stockpile sizes, cover requirements) will defer to the GC. However, management of non-VOC-impacted soil that is visually or olfactory impacted (e.g. staining or odors), should be handled by stockpiling on polyethylene sheeting, covered, and sampled in accordance with the procedures detailed in Section 5.15 for off-site disposal or may be loaded directly into trucks for disposal.

5.13 Vapor Suppression and Dust Control

To suppress vapor emissions during soil disturbances of potential VOC-impacted soil, excavations should be kept moist by periodically spraying the work area with water. In addition, exposed soil surfaces of stockpiles of potential VOC-impacted soil should be kept moist with water.

Dust control during the subject property redevelopment will defer to the protocol established by the GC.

5.14 Surface Water Protection

Responsibility for surface water protection (e.g., prevention of sediment runoff into storm drains) and implementation of best management practices (BMPs) in accordance with applicable regulations

5.15 Soil Stockpile Sampling

Stockpiled soil classified as VOC-impacted through OVA screening or visually or olfactory impacted (staining, odors) that is designated for off-site disposal must be characterized through the collection and analysis of samples to evaluate whether the material meets the acceptance requirements of the receiving facility or facilities. A set of laboratory analysis data for waste profiling must be generated for each exported soil designation category (excluding unrestricted soil).

5.15.1 Sampling Frequency

For exported soil, the sampling frequency will default to the sampling frequency specified by each selected receiving facility to meet the respective acceptance requirements. For visually- or olfactory-impacted soil

and for exported soil for which the receiving facility has not specified a sampling frequency, the sampling frequency will default to the procedures set forth in the most recently promulgated edition of the United States Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (EPA SW-846). In general, EPA SW-846 provides a method for assessing the mean concentration of a given chemical within a soil mass and the number of samples necessary to calculate this mean to within an acceptable confidence level.

The following sampling schedule may be used to estimate the minimum number of samples necessary to meet the statistical requirements set forth in EPA SW-846:

- Stockpiles less than 500 cubic yards: One sample for every 25 cubic yards;
- Stockpiles from 500 to 1,000 cubic yards: Twenty samples plus one sample for every 100 cubic yards in excess of the initial 500 cubic yards;
- Stockpiles from 1,000 to 10,000 cubic yards: Twenty-five samples plus one sample for every 500 cubic yards in excess of the initial 1,000 cubic yards; and
- Stockpiles greater than 10,000 cubic yards: Forty-three samples plus one sample for every 5,000 cubic yards in excess of the initial 10,000 cubic yards.

Note that the above schedule is only a guide and that more or less samples than specified may be required to meet the statistical requirements set forth in EPA SW-846. In addition, it is not necessary to consider each individual stockpile separately. Soils in separate stockpiles that are expected to exhibit similar conditions of COC impacts can be considered part of the same soil mass for the purposes of EPA SW-846 sampling.

5.15.2 Sampling Protocol

The method for selecting the soil stockpile sample locations (e.g., simple random sampling, systematic random sampling) will be based on the professional judgment of the EC and/or field-screening results.

In general, discrete soil samples should be analyzed. However, composite sampling may be acceptable depending on the receiving facility requirements, the professional judgment of the EC, and/or the target analytes. Compositing should be performed by the laboratory and no more than four discrete samples should comprise a composite sample. Composite samples should not be analyzed for target analytes that are volatile or semi-volatile.

Samples should be collected in pre-cleaned, analysis-appropriate containers; preserved (e.g., sodium bisulfate, ice) as required for the specified analysis method; labeled with unique sample identifications; and transported to the laboratory under proper chain-of-custody protocol.

Sampling equipment should be decontaminated between sampling points to reduce the potential for cross-contamination.

5.15.3 Laboratory Analyses

The laboratory analysis suite for soil that will be exported will default to the laboratory analysis suite specified by each selected receiving facility to meet the respective acceptance requirements. However, at a minimum, samples should be analyzed for TPH, VOCs, lead and arsenic (as appropriate).

The laboratory or laboratories conducting the sample analyses should be state-certified and run surrogate samples and method blanks as part of the Quality Assurance/Quality Control (QA/QC) program. Analyses should be performed within the accepted method hold times.

5.16 Exporting Soil Off-Site

Three exported soil designation categories are anticipated: VOC-impacted, unrestricted, non-hazardous, and hazardous. Procedures for exporting each soil designation category are discussed in the following sections.

5.16.1 Exporting of VOC-Impacted Soil

Excavated soil classified as VOC-impacted through OVA monitoring that has been further sampled and determined to be not permitted to be reused on the subject property as backfill must be exported off-site. Soil classified as VOC-impacted should be profiled based on the laboratory analysis results and transported under waste manifest documentation to an AQMD-approved facility or facilities permitted to receive the waste for treatment and/or disposal. The EC will be responsible for selecting the appropriate receiving facility for VOC-impacted soil. Note that although the soil will be designated as VOC-impacted, the soil is anticipated to be classified as non-hazardous [as opposed to Resource Conservation & Recovery Act (RCRA) or non-RCRA hazardous] for waste disposal purposes given the historical usage of the subject property and the results of the previous subsurface investigation.

5.16.2 Exporting of Unrestricted Soil

The GC will be responsible for selecting and complying with the requirements of the facility or facilities that will receive the exported unrestricted soil. Note that other factors beyond the scope of the SMP (e.g., soil parameters such as pH) may affect whether a receiving facility is able to accept the unrestricted soil.

5.16.3 Exporting of Non-Hazardous Soil

Exported soil will be classified as non-hazardous if soil monitoring results designate the soil as non-VOC-impacted, but the soil exhibits an odor and/or discoloration and/or laboratory analysis results indicate the presence of target analytes above the soil screening criteria or arsenic above background levels (i.e., not meeting the acceptance requirements of the unrestricted soil receiving facility).

Soil classified as non-hazardous should be profiled based on the laboratory analysis results and transported under proper bill of lading or waste manifest documentation to an appropriate off-site facility that is permitted to receive the waste for treatment and/or disposal (typically a soil recycler and/or landfill). The EC or the EC in conjunction with the GC will be responsible for selecting the appropriate receiving facility for non-hazardous soil.

5.16.4 Soil Classified as Hazardous Waste

Given the findings of the previous subsurface investigations, the generation of soil classified as RCRA or non-RCRA hazardous (i.e., meeting Federal or State hazardous waste criteria, respectively) is not anticipated during soil disturbance/grading/redevelopment/construction activities. However, if identified through the laboratory analysis results, soil classified as RCRA or non-RCRA hazardous should be profiled based on the laboratory analysis results and transported under waste manifest documentation to an off-site facility permitted to receive the waste for treatment and/or disposal (typically a landfill or incinerator). Hazardous

waste must be transported by a hauler licensed to transport hazardous waste. The EC will be responsible for selecting the appropriate receiving facility for RCRA and/or non-RCRA hazardous soil.

6.0 SUMMARY AND CONCLUSIONS

As needed, the EC will prepare a summary report for submittal to the Client. At a minimum, the report will include a summary of field activities, laboratory analysis reports, and off-site disposal documentation (if soil was exported, excluding unrestricted soil). The Consultant will also be responsible for complying with regulatory agency reporting requirements if VOC-impacted soil was encountered.

7.0 SIGNATURES OF PARTICIPATING PROFESSIONAL

Thank you for the opportunity to be of service. If you have questions regarding this SMP, please contact Debbie Stott at 310-803-4413.

Sincerely,

Debbie Stott, P.G.

MEMORANDUM

To:	Alex Wong, Red Oak Investments
From:	Michael Greene and Dana Lodico, PE, INCE Bd. Cert., Noise Specialists, Dudek
Subject:	Noise Technical Memorandum for the 1280 Pacific Coast Highway Mixed-Use Development Project
Date:	May 24, 2024, Updated December 9, 2024
Attachments:	A, Field Noise Data Sheets B, Construction Noise Modeling Input and Output C, Traffic Noise Calculations

1 Introduction

The purpose of this noise technical memorandum is to evaluate the potential noise impacts of the proposed 1280 Pacific Coast Highway Mixed-Use Development Project (the Project), located on a 3.7-acre site located at 1268, 1270 & 1290 Pacific Coast Highway & 25900 South Frampton Avenue (the Project Site) within the Wilmington – Harbor City Community Plan (Community Plan) Area in the City of Los Angeles (City). The Project would replace an existing mobile home and a surface parking lot with a mixed-use building consisting of 354 multi-family residential units; 1,500 square feet of commercial space; and a 575-space parking structure. The mixed-use building would occupy a majority of the Project site and would be approximately 406,855 square feet in size and 5 stories in height (80 feet in height, as measured to the lowest grade). The Project would not include any subterranean levels.

On November 24, 2021, the City Council certified the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (EIR), SCH No. 2021010130, EIR No. ENV-2020-6762-EIR, to adopt the 2021-2029 Citywide Housing Element and the Updates to the Safety Element and the Plan for a Healthy LA (Health Element), hereafter referred to as the "Housing Element Program EIR." Pursuant to CEQA Guidelines Section 15168(c)(4), the following noise analysis is provided in support of the Project's determination of consistency with the scope of the program analyzed in the Housing Element Program EIR and its environmental impacts. The following Housing Element Program EIR mitigation measures (MMs) are addressed herein:

- **Housing Element MM 4.10-1(a):** Noise Shielding and Silencing
- **Housing Element MM 4.10-1(b):** Use of Driven Pile Systems
- **Housing Element MM 4.10-1(c):** Enclosures and Screening
- **Housing Element MM 4.10-1(d):** Construction Staging Areas
- **Housing Element MM 4.10-1(e):** Temporary Sound Barriers
- **Housing Element MM 4.10-1(f):** Project-Specific Construction Noise Study

- **Housing Element MM 4.10-2:** Project-Specific Operational Noise Study
- **Housing Element MM 4.10-3(b):** Vibration Mitigation

2 Environmental Setting

Due to the technical nature of noise and vibration impacts, a brief overview of basic noise principles and descriptors is provided below.

2.1 Noise and Vibration Basics

Noise Principles and Descriptors

Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a liquid or gaseous medium (e.g., air). Noise is generally defined as undesirable (i.e., loud, unexpected, or annoying) sound. Acoustics is defined as the physics of sound and addresses its propagation and control.[1] In acoustics, the fundamental scientific model consists of a sound (or noise) source, a receiver, and the propagation path between the two. The loudness of the noise source and obstructions or atmospheric factors affecting the propagation path to the receiver determine the sound level and characteristics of the noise perceived by the receiver.

Sound, traveling in the form of waves from a source, exerts a sound pressure level (referred to as sound level) that is measured in decibels (dB), which is the standard unit of sound amplitude measurement and reflects the way people perceive changes in sound amplitude[2]. The dB scale is a logarithmic scale that describes the physical intensity of the pressure vibrations that make up any sound, with 0 dB corresponding roughly to the threshold of human hearing and 120 and 140 dB corresponding to the thresholds of feeling and pain, respectively. Pressure waves traveling through air exert a force registered by the human ear as sound.[3]

Sound pressure fluctuations can be measured in units of hertz (Hz), which correspond to the frequency of a particular sound. Typically, sound does not consist of a single frequency, but rather a broad band of frequencies varying in levels of magnitude. When all of the audible frequencies of a sound are measured, a sound spectrum is plotted consisting of a range of frequencies spanning 20 to 20,000 Hz. The sound pressure level, therefore, constitutes the additive force exerted by a sound corresponding to the sound frequency/sound power level spectrum.[4]

The typical human ear is not equally sensitive to the frequency range from 20 to 20,000 Hz. As a consequence, when assessing potential noise impacts, sound is measured using an electronic filter that deemphasizes the frequencies below 1,000 Hz and above 5,000 Hz in a manner corresponding to the human ear's decreased sensitivity to these extremely low and extremely high frequencies. This method of frequency filtering or weighting is referred to as A-weighting, expressed in units of A-weighted decibels (dBA), which is typically applied to community

noise measurements.[5] Some representative common outdoor and indoor noise sources and their corresponding A-weighted noise levels are shown in Figure 1, *Decibel Scale and Common Noise Sources*.

Noise Exposure and Community Noise

Community noise exposure is typically measured over a period of time; a noise level is a measure of noise at a given instant in time. Community noise varies continuously over a period of time with respect to the sound sources contributing to the community noise environment. Community noise is primarily the product of many distant noise sources, which constitute a relatively stable background noise exposure, with many unidentifiable individual contributors. Single-event noise sources, such as aircraft flyovers, sirens, etc., may cause sudden changes in background noise level.[6] However, generally, background noise levels change gradually throughout the day, corresponding with the addition and subtraction of distant noise sources, such as changes in traffic volume.

These successive additions of sound to the community noise environment change the community noise level from moment to moment, requiring the noise exposure to be measured over periods of time to legitimately characterize a community noise environment and evaluate cumulative noise impacts. The following noise descriptors are used to characterize environmental noise levels over time.[7]

L_{eq}: The equivalent sound level over a specified period of time, typically, 1 hour (L_{eq}). The L_{eq} may also be referred to as the energy-average sound level.

L_{max}: The maximum, instantaneous noise level experienced during a given period of time.

L_{min}: The minimum, instantaneous noise level experienced during a given period of time.

L_x: The noise level exceeded a percentage of a specified time period. For instance, L_{50} and L_{90} represent the noise levels that are exceeded 50 percent and 90 percent of the time, respectively.

L_{dn}: The average A-weighted noise level during a 24-hour day, obtained after an addition of 10 dBA to measured noise levels between the hours of 10:00 P.M. and 7:00 A.M. to account for nighttime noise sensitivity. The L_{dn} is also termed the day-night average noise level (DNL).

CNEL: The Community Noise Equivalent Level (CNEL) is the time average A-weighted noise level during a 24-hour day that includes an addition of 5 dBA to measured noise levels between the hours of 7:00 P.M. and 10:00 P.M. and an addition of 10 dBA to noise levels between the hours of 10:00 P.M. and 7:00 A.M. to account for noise sensitivity in the evening and nighttime, respectively.

Effects of Noise on People

Noise is generally loud, unpleasant, unexpected, or undesired sound that is typically associated with human activity that is a nuisance or disruptive. The effects of noise on people can be placed into four general categories:

- Subjective effects (e.g., dissatisfaction, annoyance);
- Interference effects (e.g., communication, sleep, and learning interference);
- Physiological effects (e.g., startle response); and
- Physical effects (e.g., hearing loss).

Although exposure to high noise levels has been demonstrated to cause physical and physiological effects, the principal human responses to typical environmental noise exposure are related to subjective effects and interference with activities. Interference effects interrupt daily activities and include interference with human communication activities, such as normal conversations, watching television, telephone conversations, and interference with sleep.

The World Health Organization's Guidelines for Community Noise details the adverse health effects of high noise levels, which include hearing impairment, speech intelligibility, sleep disturbance, physiological functions (e.g.

[7] California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, Section 2.2.2, September 2013. Accessed November 1, 2021.

hypertension and cardiovascular effects), mental illness, performance of cognitive tasks, social and behavioral effects (e.g. feelings of helplessness, aggressive behavior), and annoyance.[8]

With regard to the subjective effects, an individuals' responses to similar noise events are diverse and influenced by many factors, including the type of noise, the perceived importance of the noise, the appropriateness of the noise to the setting, the duration of the noise, the time of day and the type of activity during which the noise occurs, and individual noise sensitivity. Overall, there is no completely satisfactory way to measure the subjective effects of noise, or the corresponding reactions of annoyance and dissatisfaction on people. A wide variation in individual thresholds of annoyance exists, and different tolerances to noise tend to develop based on an individual's past experiences with noise. Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted (i.e., comparison to the ambient noise environment). In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will be judged by those hearing it. With regard to increases in A-weighted noise level, the following relationships generally occur:[9]

- Except in carefully controlled laboratory experiments, a change of 1 dBA in ambient noise levels cannot be perceived.
- Outside of the laboratory, a 3 dBA change in ambient noise levels is considered to be a barely perceivable difference.
- A change in ambient noise levels of 5 dBA is considered to be a readily perceivable difference.
- A change in ambient noise levels of 10 dBA is subjectively heard as doubling of the perceived loudness.

These relationships between change in noise level and human hearing response occur in part because of the logarithmic nature of sound and the dB scale. Because the dBA scale is based on logarithms, two noise sources do not combine in a simple additive fashion, but rather logarithmically. Under the dBA scale, a doubling of sound energy corresponds to a 3 dBA increase. In other words, when two sources are each producing sound of the same loudness, the resulting sound level at a given distance would be approximately 3 dBA higher than one of the sources under the same conditions. For example, if two identical noise sources produce noise levels of 50 dBA, the combined sound level would be 53 dBA, not 100 dBA. Under the dB scale, three sources of equal loudness together produce a sound level of approximately 5 dBA louder than one source, and ten sources of equal loudness together produce a sound level of approximately 10 dBA louder than the single source.[10]

Noise Attenuation

When noise propagates over a distance, the noise level reduces, or attenuates, with distance depending on the type of noise source and the propagation path. Noise from a localized source (i.e., point source) propagates uniformly outward in a spherical pattern, referred to as "spherical spreading." The rate of sound attenuation for a point source, such as a piece of mechanical or electrical equipment (e.g., air conditioner) or idling vehicle (e.g., bulldozer), is 6 dBA per doubling of distance from the noise source to the receptor over acoustically "hard" sites

8 World Health Organization Team, edited by Berglund, Birgitta; Lindvall, Thomas; Schwela, Dietrich H, Guidelines for Community Noise, 1999.

and 7.5 dBA per doubling of distance from the noise source to the receptor over acoustically "soft" sites .[11] Hard sites are those with a reflective surface between the source and the receiver, such as asphalt or concrete surfaces or smooth bodies of water. No excess ground attenuation is assumed for hard sites and the reduction in noise levels with distance (drop-off rate) is simply the geometric spreading of the noise from the source. Soft sites have an absorptive ground surface, such as soft dirt, grass, or scattered bushes and trees, which in addition to geometric spreading, provides an excess ground attenuation value of 1.5 dBA (per doubling distance).[12] For example, an outdoor condenser fan that generates a sound level of 60 dBA at a distance of 50 feet from a point source at an acoustically hard site would attenuate to 54 dBA at a distance of 100 feet from the point source and attenuate to 48 dBA at 200 feet from the point source.

Roadways and highways consist of several localized noise sources on a defined path, and hence are treated as "line" sources, which approximate the effect of several point sources.[13] Noise from a line source propagates over a cylindrical surface, often referred to as "cylindrical spreading."[14] Line sources (e.g., traffic noise from vehicles) attenuate at a rate between 3 dBA for hard sites and 4.5 dBA for soft sites for each doubling of distance from the reference measurement.[15] Therefore, noise due to a line source attenuates less with distance than that of a point source with increased distance.

Structures (e.g., buildings and solid walls) and natural topography (e.g., hills and berms) that obstruct the line-of-sight between a noise source and a receptor further reduce the noise level if the receptor is located within the "shadow" of the obstruction, such as behind a sound wall. This type of sound attenuation is known as "barrier insertion loss." If a receptor is located behind the wall but still has a view of the source (i.e., the line-of-sight is not fully blocked), barrier insertion loss would still occur but to a lesser extent. Additionally, a receptor located on the same side of the wall as a noise source may actually experience an increase in the perceived noise level as the wall can reflect noise back to the receptor, thereby compounding the noise. Noise barriers can provide noise level reductions ranging from approximately 5 dBA (where the barrier just breaks the line-of-sight between the source and receiver) to an upper range of 20 dBA with a larger barrier.[16] Additionally, structures with closed windows can further attenuate exterior noise by a minimum of 20 dBA to 30 dBA.[17]

Receptors located downwind from a noise source can be exposed to increased noise levels relative to calm conditions, whereas locations upwind can have lowered noise levels.[18] Atmospheric temperature inversion (i.e., increasing

temperature with elevation) can increase sound levels at long distances. Other factors such as air temperature, humidity, and turbulence can, under the right conditions, also have substantial effects on noise levels.[19]

Vibration Fundamentals

Vibration can be interpreted as energy transmitted in waves through the ground or man-made structures, which generally dissipate with distance from the vibration source. Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Since energy is lost during its transfer from one particle to another, vibration becomes less perceptible with increasing distance from the source.

As described in the Federal Transit Administration's (FTA) *Transit Noise and Vibration Impact Assessment Manual*, groundborne vibration can be a serious concern for nearby neighbors of a transit system route or maintenance facility, causing buildings to shake and rumbling sounds to be heard.[20] In contrast to airborne noise, groundborne vibration is not a common environmental problem, as it is unusual for vibration from sources such as rubber-tired buses and trucks to be perceptible, even in locations close to major roads. Some common sources of groundborne vibration are trains, heavy trucks traveling on rough roads, and certain construction activities, such as blasting, pile-driving, and operation of heavy earth-moving equipment.[21] Groundborne vibration generated by man-made activities (e.g., road traffic, construction operations) typically weakens with greater horizontal distance from the source of the vibration.

Several different methods are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal in inches per second (in/sec), and is most frequently used to describe vibration impacts to buildings.[22] The root mean square (RMS) amplitude is defined as the average of the squared amplitude of the signal and is most frequently used to describe the effect of vibration on the human body.[23] Decibel notation (VdB) is commonly used to express RMS vibration velocity amplitude. The relationship of PPV to RMS velocity is expressed in terms of the "crest factor," defined as the ratio of the PPV amplitude to the RMS amplitude. PPV is typically a factor of 1.7 to 6 times greater than RMS vibration velocity; FTA uses a crest factor of 4.[24] The decibel notation VdB acts to compress the range of numbers required to describe vibration. Typically, groundborne vibration generated by man-made activities attenuates rapidly with distance from the source of the vibration. Sensitive receptors for vibration include buildings where vibration would interfere with operations within the building or cause damage (especially older masonry structures), locations where people sleep, and locations with vibration sensitive equipment.[25]

Groundborne noise specifically refers to the rumbling noise emanating from the motion of building room surfaces due to the vibration of floors and walls; it is perceptible only inside buildings.[26] The relationship between

26 Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, Section 5.4, 2018.

groundborne vibration and groundborne noise depends on the frequency of the vibration and the acoustical absorption characteristics of the receiving room. For typical buildings, groundborne vibration that causes low frequency noise (i.e., the vibration spectrum peak is less than 30 Hz) results in a groundborne noise level that is approximately 50 decibels lower than the velocity level. For groundborne vibration that causes mid-frequency noise (i.e., the vibration spectrum peak is 30 to 60 Hz), the groundborne noise level will be approximately 35 to 37 decibels lower than the velocity level.[27] Therefore, for typical buildings, the groundborne noise decibel level is lower than the groundborne vibration velocity level at low frequencies.

2.2 Regulatory Framework

There are several plans, regulations, and programs that include policies, requirements, and guidelines regarding Noise at the federal, state, regional, and local levels. As described below, these plans, guidelines, and laws include the following:

- Noise Control Act of 1972
- Federal Transportation Administration Vibration Standards
- Occupational Safety and Health Act of 1970
- California Office of Planning and Research Guidelines for Noise Compatible Land Use
- Caltrans Vibration/Groundborne Noise Standards
- Los Angeles County Airport Land Use Commission Comprehensive Land Use Plan
- City of Los Angeles Municipal Code
- City of Los Angeles General Plan Noise Element

Federal

Noise Control Act of 1972

Under the authority of the Noise Control Act of 1972, the United States Environmental Protection Agency (USEPA) established noise emission criteria and testing methods published in Parts 201 through 205 of Title 40 of the Code of Federal Regulations (CFR) that apply to some transportation equipment (e.g., interstate rail carriers, medium trucks, and heavy trucks) and construction equipment. In 1974, USEPA issued guidance levels for the protection of public health and welfare in residential areas of an outdoor L_{dn} of 55 dBA and an indoor L_{dn} of 45 dBA.[28] These guidance levels are not standards or regulations and were developed without consideration of technical or economic feasibility. There are no federal noise standards that directly regulate environmental noise related to the construction or operation of the Project. Moreover, the federal noise standards are not reflective of urban environments that range by land use, density, proximity to commercial or industrial centers, etc. As such, for purposes of determining acceptable sound levels and evaluating intrusive noise sources and increases, this document utilizes the City of Los Angeles Noise Regulations, discussed below.

[27] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, Table 6-3 and Table 6-14, pages 126 and 146, 2018.
[28] United States Environmental Protection Agency, EPA Identifies Noise Levels Affecting Health and Welfare, 1974.

Federal Transit Administration Vibration Standards

There are no federal vibration standards or regulations adopted by any agency that are applicable to evaluating vibration impacts from land use development projects such as the proposed Project. However, the Federal Transit Administration (FTA) has adopted vibration criteria for use in evaluating vibration impacts from construction activities.[29] The vibration damage criteria adopted by the FTA are shown in Table 1, *Construction Vibration Damage Criteria*.

Table 1. Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

Source: FTA, Transit Noise and Vibration Impact Assessment Manual, 2018.

Occupational Safety and Health Act of 1970

Under the Occupational Safety and Health Act of 1970 (29 U.S.C. §1919 et seq.), the Occupational Safety and Health Administration (OSHA) has adopted regulations designed to protect workers against the effects of occupational noise exposure. These regulations list permissible noise level exposure as a function of the amount of time during which the worker is exposed. The regulations further specify a hearing conservation program that involves monitoring noise to which workers are exposed, ensuring that workers are made aware of overexposure to noise, and periodically testing the workers' hearing to detect any degradation.[30]

State

Office of Planning and Research Guidelines for Noise Compatible Land Use

The State of California has not adopted statewide standards for environmental noise, but the Governor's Office of Planning and Research (OPR) has established guidelines for evaluating the compatibility of various land uses as a function of community noise exposure, as presented in Figure 2, *Guidelines for Noise Compatible Land Use*.[31] The purpose of these guidelines is to maintain acceptable noise levels in a community setting for different land use types. Noise levels are divided into four general categories, which vary in range according to land use type: "normally acceptable," "conditionally acceptable," "normally unacceptable," and "clearly unacceptable." The City has developed its own compatibility guidelines in the Noise Element of the General Plan based in part on OPR Guidelines. California Government Code Section 65302 requires each county and city in the State to prepare and adopt a comprehensive long-range general plan for its physical development, with Section 65302(f) requiring a noise element to be included in the general plan. The noise element must: (1) identify and appraise noise problems in the community; (2) recognize Office of Noise Control guidelines; and (3) analyze and quantify current and projected noise levels.

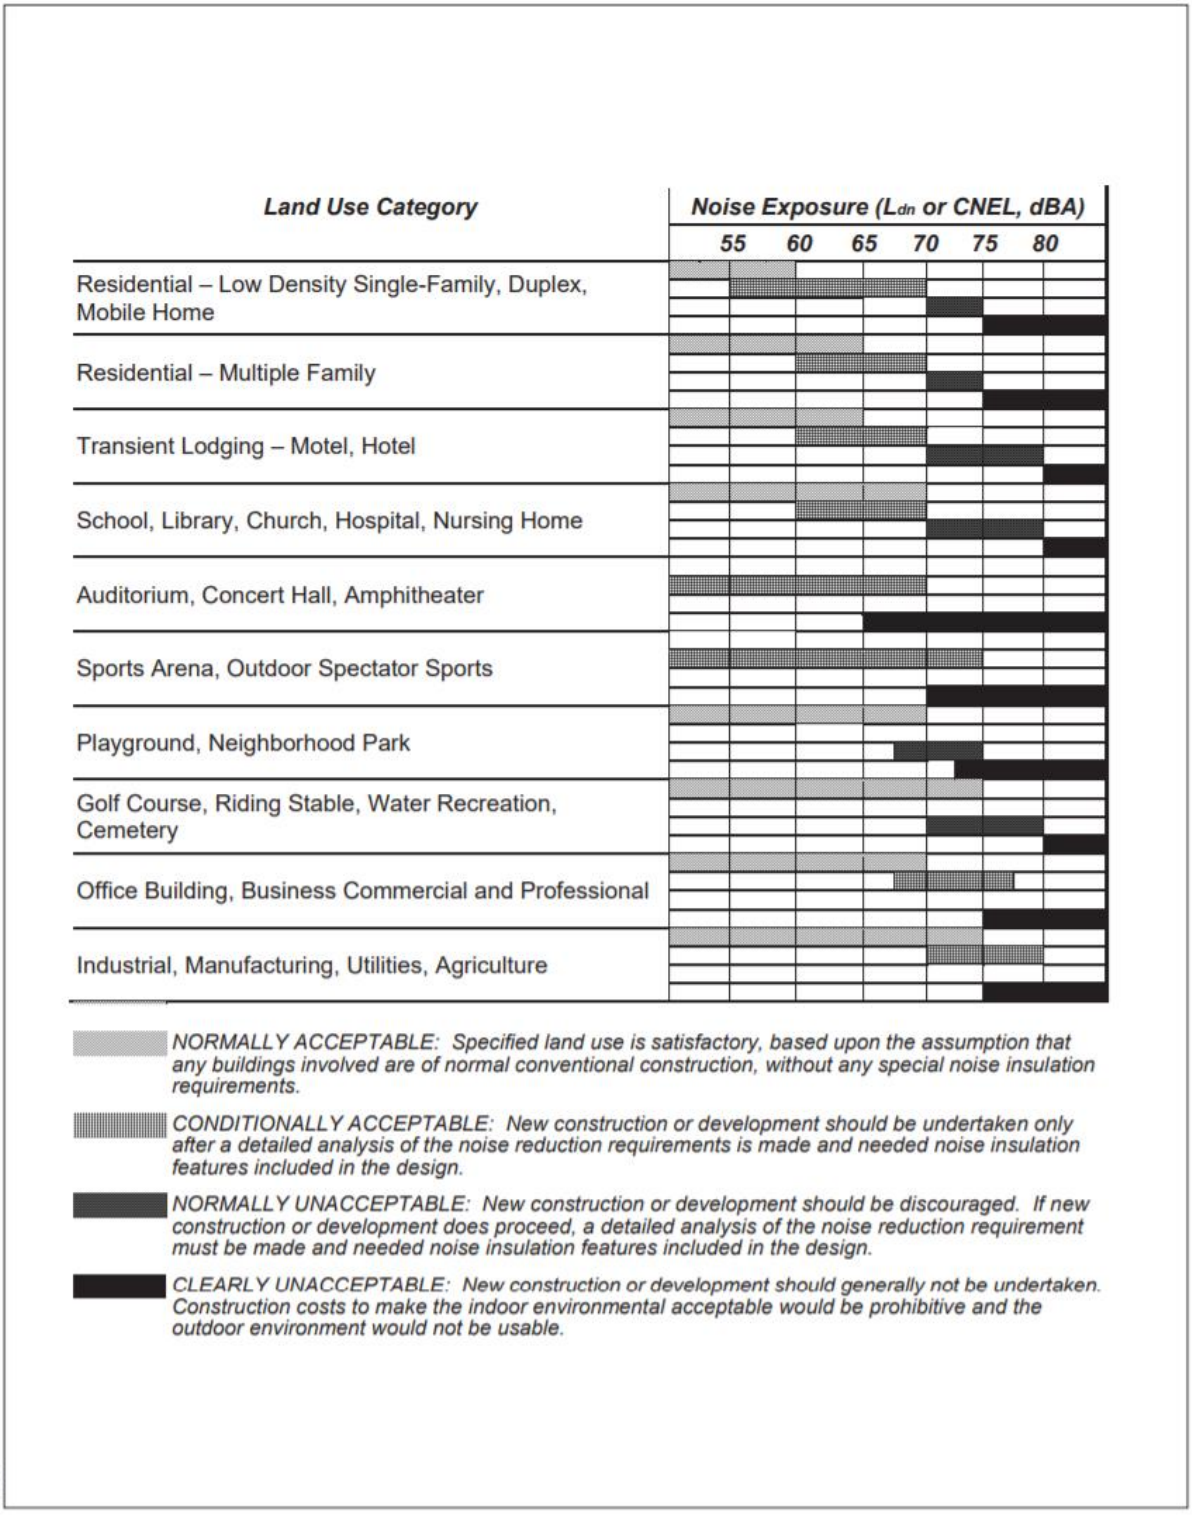
Figure 2. Guidelines for Noise Compatible Land Use



Source: State of California, General Plan Guidelines, Governor's Office of Planning and Research, 2003

The State has also established noise insulation standards for new multi-family residential units, hotels, and motels. These requirements are collectively known as the California Noise Insulation Standards (Title 24, California Code of Regulations). The noise insulation standards set forth an interior standard of 45 dBA CNEL in any habitable room. The standards require an acoustical analysis demonstrating that dwelling units have been designed to meet this interior standard where such units are proposed in areas subject to exterior noise levels greater than 60 dBA CNEL. Title 24 standards are typically enforced by local jurisdictions through the building permit application process.

The State of California's noise insulation standards for nonresidential uses are codified in the California Code of Regulations, Title 24, Building Standards Administrative Code, Part 11, California Green Building Standards (CALGreen) Code. The CALGreen Code noise standards are applied to new or renovation construction projects in California to control interior noise levels resulting from exterior noise sources. Proposed Projects may use either the prescriptive method (CALGreen Code Section 5.507.4.1) or the performance method (CALGreen Code Section 5.507.4.2) to show compliance. Under the prescriptive method, a project must demonstrate transmission loss ratings for the wall and roof-ceiling assemblies and exterior windows when located within a noise environment of 65 dBA CNEL or higher. Under the performance method, a project must demonstrate that interior noise levels do not exceed 50 dBA $L_{eq(1hr)}$.

Caltrans Vibration/Groundborne Noise Standards

The State of California has not adopted Statewide standards or regulations for evaluating vibration or groundborne noise impacts from land use development projects such as the proposed Project. Although the State has not adopted any vibration standard, Caltrans in its 2020 *Transportation and Construction Vibration Guidance Manual* recommends the following vibration thresholds that are more practical than those provided by the FTA, shown in Table 2, *Guideline Vibration Damage Potential Threshold Criteria*. The City's updated construction noise and vibration thresholds are consistent with these criteria.

Table 2. Guideline Vibration Damage Potential Threshold Criteria

Structure and Condition	Maximum PPV (in/sec)	
	Transient Sources[a]	Continuous/Frequent Intermittent Sources[b]
Extremely fragile historic buildings, ruins, ancient monuments	0.12	0.08
Fragile buildings	0.20	0.10
Historic and some old buildings	0.50	0.25
Older residential structures	0.50	0.30
New residential structures	1.00	0.50
Modern industrial/commercial buildings	2.00	0.50

Source: Caltrans, Transportation and Construction Vibration Guidance Manual, Table 19, April 2020.
Notes:
a Transient sources create a single, isolated vibration event, such as blasting or drop balls.
b Continuous/frequent intermittent sources include impact pile drivers, pogo-stick compactors, crack-and-seat equipment, vibratory pile drivers, and vibratory compaction equipment.

Regional

Los Angeles County Airport Land Use Commission Comprehensive Land Use Plan

In Los Angeles County the Regional Planning Commission has the responsibility for acting as the Airport Land Use Commission (ALUC) and for coordinating the airport planning of public agencies within the county. The ALUC coordinates planning for the areas surrounding public use airports. The Comprehensive Land Use Plan provides for the orderly expansion of Los Angeles County's public use airports and the area surrounding them. It is intended to provide for the adoption of land use measures that will minimize the public's exposure to excessive noise and safety hazards. In formulating the Comprehensive Land Use Plan, the Los Angeles County ALUC has established provisions for safety, noise insulation, and the regulation of building height within areas adjacent to each of the public airports in the County.

Local

Los Angeles Municipal Code

The City of Los Angeles Noise Regulations are provided in Chapter XI of the Los Angeles Municipal Code (LAMC). LAMC Section 111.02 provides procedures and criteria for the measurement of the sound level of "offending" noise sources. In accordance with the LAMC, a noise source that causes a noise level increase of 5 dBA over the existing average ambient noise level as measured at an adjacent property line creates a noise violation. This standard applies to radios, television sets, air conditioning, refrigeration, heating, pumping and filtering equipment, powered equipment intended for repetitive use in residential areas, and motor vehicles driven on-site. To account for people's increased tolerance for short-duration noise events, the Noise Regulations provide a 5 dBA allowance for a noise source that causes noise lasting more than 5 but less than 15 minutes in any one-hour period, and an additional 5 dBA allowance (for a total of 10 dBA) for a noise source that causes noise lasting 5 minutes or less in any one-hour period.[32]

The LAMC provides that in cases where the actual ambient conditions are not known, the City's presumed daytime (7:00 A.M. to 10:00 P.M.) and nighttime (10:00 P.M. to 7:00 A.M.) minimum ambient noise levels as defined in LAMC Section 111.03 should be used. The presumed ambient noise levels for these areas where the actual ambient conditions are not known as set forth in the LAMC Sections 111.03 are provided in Table 3, *City of Los Angeles Presumed Ambient Noise Level*s. For example, for residential-zoned areas, the presumed ambient noise level is 50 dBA during the daytime and 40 dBA during the nighttime.

Table 3. City of Los Angeles Presumed Ambient Noise Levels

Zone	Daytime Hours (7 A.M. to 10 P.M.) dBA (L_{eq})	Nighttime Hours (10 P.M. to 7 A.M.) dBA (L_{eq})
Residential (A1, A2, RA, RE, RS, RD, RW1, RW2, R1, R2, R3, R4, and R5)	50	40
Commercial (P, PB, CR, C1, C1.5, C2, C4, C5, and CM)	60	55
Manufacturing (M1, MR1 and MR2)	60	55
Heavy Manufacturing (M2 and M3)	65	65

Source: LAMC Section 111.03.

[32] Los Angeles Municipal Code, Chapter XI, Article I, Section 111.02-(b). Accessed November 1, 2021.

LAMC Section 112.02 limits increases in noise levels from air conditioning, refrigeration, heating, pumping and filtering equipment. Such equipment may not be operated in such manner as to create any noise which would cause the noise level on the premises of any other occupied property, or, if a condominium, apartment house, duplex, or attached business, within any adjoining unit, to exceed the ambient noise level by more than 5 dB.

LAMC Section 113.01 prohibits collecting or disposing of rubbish or garbage, operating any refuse disposal truck, or collecting, loading, picking up, transferring, unloading, dumping, discarding, or disposing of any rubbish or garbage, as such terms are defined in LAMC Section 66.00, within 200 feet of any residential building between the hours of 9:00 P.M. and 6:00 A.M. of the following day, unless a permit therefore has been duly obtained beforehand from the Board of Police Commissioners.

Section 91.1207.14.2 prohibits interior noise levels attributable to exterior sources from exceeding 45 dBA in any habitable room. The noise metric shall be either the day-night average sound level (L_{dn}) or the CNEL, consistent with the noise element of the local general plan.

City of Los Angeles General Plan Noise Element

The Noise Element of the City's General Plan policies include the CNEL guidelines for land use compatibility as shown in Table 4, *City of Los Angeles Land Use Compatibility for Community Noise*, and includes a number of goals, objectives, and policies for land use planning purposes. The overall purpose of the Noise Element is to guide policymakers in making land use determinations and in preparing noise ordinances that would limit exposure of citizens to excessive noise levels.[33] The following policies and objectives from the Noise Element apply to the Project.

> Objective 2 (Non-airport): Reduce or eliminate non-airport related intrusive noise, especially relative to noise sensitive uses.
>
> Policy 2.2: Enforce and/or implement applicable city, state, and federal regulations intended to mitigate proposed noise producing activities, reduce intrusive noise and alleviate noise that is deemed a public nuisance.
>
> Objective 3 (Land Use Development): Reduce or eliminate noise impact associated with proposed development of land and changes in land use.
>
> Policy 3.1: Develop land use policies and programs that will reduce or eliminate potential and existing noise impacts.

Exhibit I of the Noise Element also contains guidelines for noise compatible land uses.[34] The following table summarizes these guidelines, which are based on OPR guidelines from 1990.

33 City of Los Angeles. General Plan, Noise Element, Pages 1.1-2.4, 1999
34 City of Los Angeles. General Plan, Noise Element, Page I-1, 1999.

CITY OF LOS ANGELES LAND USE COMPATIBILITY FOR COMMUNITY NOISE

	Community Noise Exposure CNEL (dBA)			
Land Use	**Normally Acceptable**	**Conditionally Acceptable**	**Normally Unacceptable**	**Clearly Unacceptable**
Single-Family, Duplex, Mobile Homes	50 to 60	55 to 70	70 to 75	Above 70
Multi-Family Homes	50 to 65	60 to 70	70 to 75	Above 70
Schools, Libraries, Churches, Hospitals, Nursing Homes	50 to 70	60 to 70	70 to 80	Above 80
Transient Lodging—Motels, Hotels	50 to 65	60 to 70	70 to 80	Above 80
Auditoriums, Concert Halls, Amphitheaters	—	50 to 70	—	Above 65
Sports Arena, Outdoor Spectator Sports	—	50 to 75	—	Above 70
Playgrounds, Neighborhood Parks	50 to 70	—	67 to 75	Above 72
Golf Courses, Riding Stables, Water Recreation, Cemeteries	50 to 75	—	70 to 80	Above 80
Office Buildings, Business and Professional Commercial	50 to 70	67 to 77	Above 75	—
Industrial, Manufacturing, Utilities, Agriculture	50 to 75	70 to 80	Above 75	—

Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements.

Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice.

Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable: New construction or development should generally not be undertaken.

City of Los Angeles Construction Noise and Vibration - Updates to Thresholds and Methodology

In August of 2024, the City developed updated thresholds for construction noise and vibration.[35] The thresholds are "to be used by the Department of City Planning in assessing the environmental impacts of projects in accordance with CEQA" and are "intended to be suited to the generally urban nature of the City, while still

[35] City of Los Angeles. Construction Noise and Vibration, Updates to Thresholds and Methodology, August 2024.

recognizing the importance of human health, including sleep disruption." The thresholds "are intended to account for reasonable expectations regarding construction noise and vibration during daytime and nighttime hours, and also include absolute maximum noise levels that are intended to protect human health." The updated thresholds are used in this document to assess significance under CEQA. The thresholds are listed in Section 3.1, Thresholds of Significance, below.

2.3 Existing Conditions

Project Site

The Project Site is approximately 3.5 net acres in size. It is made up of two parcels, one of which is currently occupied by the A-1 Trailer Park. The other parcel was formerly used as a vehicle storage lot but is now a vacant surface parking lot. The Project Site is bordered to the north by Pacific Coast Highway, to the east by an auto repair shop and a surface parking lot that is used by Kaiser Permanente, to the south by West 259th Street, which is a cul-de-sac that dead ends at the Kaiser Permanente surface parking lot, and to the west by Frampton Avenue. To the south of West 259th Street are multi-family residential buildings.

Noise-Sensitive Receptors

The nearest sensitive receptors are multi-family residential buildings to the south of West 259th Street, located approximately 40 feet from the Project Site. Other sensitive receptors in the area consist of residences to the north, northwest, and northeast of the Project Site, as well as a hospital to the southeast.

Existing Noise Conditions

Ambient noise measurements were conducted on and near the Project Site to characterize the existing noise environment. The measurements were conducted on December 4, 2023, using a Rion NL-52 Integrating Sound Level Meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier.[36] The sound level meter meets the current American National Standards Institute (ANSI) standard for a Type 1 (Precision) sound level meter. The calibration of the sound level meter was verified before and after the measurements, and the measurements were conducted with the measurement microphone covered with a windscreen and positioned approximately five feet above the ground.

Six noise measurement locations were selected (ST1–ST6), representing existing and/or future noise-sensitive receptors on the project site and in the project vicinity. The measurement locations are shown in Figure 3, *Noise Measurement Locations*, and the measured average noise levels and measurement locations are provided in Table 5. Noise measurement data is also included in Attachment A. As shown in Table 5, measured ambient noise levels ranged from approximately 53 dBA L_{eq} at ST4 (south of the Project Site) to 76 dBA L_{eq} at ST1 (northwest of the Project Site). The primary noise sources at the measurement locations consisted of traffic along the adjacent roadways, as well as aircraft flyovers. Secondary noise sources included distant conversations, and distant mechanical noise.

36 There has been no new development or construction in the vicinity of the Project that would substantially alter the ambient noise environment relative to December 2023 conditions.

Table 5. Measured Noise Levels

Receptors	Location/Address	Date	Time	L_{eq} (dBA)	L_{max} (dBA)
ST1	Northwest corner of PCH and Belle Porte Avenue (1401 PCH and 25737 Belle Porte Avenue), northwest of Project Site	December 4, 2023	10:30 a.m. – 10:45 a.m.	76	102
ST2	Southeast corner of Corona Del Sol Apartments (25711 Frampton Avenue), north of Project Site	December 4, 2023	10:55 a.m. – 11:10 a.m.	61	79
ST3	Along PCH public ROW, south of residence at 1068 Bayview Lane, northeast of Project Site	December 4, 2023	11:27 a.m. – 11:42 a.m.	73	86
ST4	Adjacent to residence at 1277 West 2595th Street, south of Project Site	December 4, 2023	11:54 a.m. – 12:12 p.m.	53	76
ST5	Along PCH public ROW, north of Project Site	December 4, 2023	12:15 p.m. – 12:30 p.m.	75	90
ST6	Along Normandie Avenue public ROW, west of hospital at 25820 Normandie Avenue, east of Project Site	December 4, 2023	12:41 p.m. – 12:57 p.m.	64	82

Attachment A
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); L_{max} = maximum sound level during the measurement interval; ROW = right-of-way; There has been no new development or construction in the vicinity of the Project that would substantially alter the ambient noise environment relative to December 2023 conditions.

3 Project Impacts

3.1 Thresholds of Significance

The following thresholds are adopted to aid in the determination of the Project's noise and vibration impacts:

State CEQA Guidelines: Appendix G

In accordance with Appendix G of the CEQA Guidelines, the Project would have a significant impact related to noise if the Project would result in:

a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*

b) *Generation of excessive groundborne vibration or groundborne noise levels?*

c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

On-Site Construction Noise Threshold

As set forth in the City of Los Angeles Construction Noise and Vibration - Updates to Thresholds and Methodology, construction noise thresholds are as follows:

- For construction activities that occur between 7:00 A.M. and 7:00 P.M. Monday through Friday, and between 8:00 A.M. and 6:00 P.M. on Saturdays, there is no numerical threshold above ambient noise levels.
- On- and off-site construction noise during daytime hours (7:00 A.M. and 7:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturdays) are limited to a maximum 80 dBA $L_{eq(8\text{-}hour)}$ absolute threshold at sensitive uses (at the property line or at the exterior of the building), including outdoor public recreational areas owned or maintained by a public agency. This standard does not apply to private residential balconies which may or may not extend past the exterior of a building, or to private residential recreational areas.
- For construction activities that occur between 7:00 P.M. and 7:00 A.M. Monday through Friday, and between 6:00 P.M. and 8:00 A.M. on Saturdays, and anytime on Sundays or national holidays, noise levels at sensitive uses would not exceed 5 dBA above the ambient noise level at the receptor.
  - Mat pour activities (and other types of concrete pour, which require an extended continuous pour beyond the allowable construction hours) that are required to occur during nighttime hours for less than five days are exempt from this provision.
- For construction activities that occur between 7:00 P.M. and 7:00 A.M. Monday through Friday, and between 6:00 P.M. and 8:00 A.M. on Saturdays, and anytime on Sundays or national holidays, the maximum exterior noise level at sensitive uses where sleep is expected will not exceed the following:
  - 55 dBA L_{eq} for sensitive uses within older buildings that would have operable windows that may be open.
  - 65 dBA L_{eq} for sensitive uses with windows closed that are not operable and are single-glazed.
  - 70 dBA L_{eq} for sensitive uses that have newer construction (i.e., the structures have been designed to ensure that an interior 45 dBA is obtained with double-paned windows)
  - Mat pour activities (and other types of concrete pour, which require an extended continuous pour beyond the allowable construction hours) that are required to occur during nighttime hours for less than five days are exempt from this provision.

Operational Noise Thresholds

In addition to applicable City standards and guidelines that would regulate or otherwise manage the Project's operational noise impacts, the following criteria are adopted to assess the impacts of the Project's operational noise sources:

- Project operations would cause ambient noise levels at off-site locations to increase by 3 dBA CNEL or more to or within "normally unacceptable" or "clearly unacceptable" noise and land use compatibility categories, as defined by the City's General Plan Noise Element (see Table 4).
- In areas where the ambient noise level is normally or conditionally acceptable, Project operations would cause any 5 dBA or greater noise increase.

Construction Groundborne Vibration Thresholds

As set forth in the City of Los Angeles Construction Noise and Vibration - Updates to Thresholds and Methodology, construction noise thresholds are as follows:

- For construction activities that occur between 7:00 A.M. and 7:00 P.M. Monday through Friday, and between 8:00 A.M. and 6:00 P.M. on Saturdays, there is no numerical threshold related to human annoyance.
- During nighttime hours (between 7:00 P.M. and 7:00 A.M. Monday through Friday, and between 6:00 P.M. and 8:00 A.M. on Saturdays), and anytime on Sundays or national holidays, construction activities shall not generate groundborne vibration levels that exceed 80 VdB at the exterior of a sensitive use building.
- Architectural Building Damage — Construction activities shall not exceed the following building damage thresholds for the identified structures:
  - Fragile Buildings: 0.1 PPV
  - Historic Buildings: 0.25 PPV
  - Older[37] Residential Structures: 0.3 PPV
  - New Residential Structures: 0.5 PPV
  - Modern Industrial/Commercial Buildings: 0.5 PPV

There would be no operational vibration associated with the Project and thus no operational vibration thresholds have been identified.

3.2 Methodology

The following section discusses the methods used to analyze the Project's noise impacts:

[37] Caltrans does not specify the age of the building to be considered. For vibration impact analyses, a building over 50 years old can be considered an "older" residential structure.

Construction Activities

The Project is within 40 feet of residences. The Project's construction noise impact associated with its on-site construction activities was determined by identifying the source noise levels of the Project's potential construction equipment at a reference distance of 50 feet, calculating the noise levels of this equipment at the nearest residential property lines, and comparing them to the 80 dBA standard set by the City's updated construction noise thresholds. Reference equipment noise levels were obtained from the Federal Highway Administration's Roadway Construction Noise Model, version 1.1 (FHWA RCNM 1.1).[38]

The Project would not result in nighttime construction work, and construction work would not be scheduled for Sundays or national holidays. As such, the construction noise thresholds specific to nighttime work or work on Sundays and national holidays would not apply.

On-Site Operational Noise Sources

The Project's potential to result in significant noise impacts from on-site operational noise sources was assessed by identifying likely on-site noise sources and considering the impacts they could produce given the nature of the source (i.e., loudness and/or whether noise would be generated during daytime or more-sensitive nighttime hours), distances to nearby noise-sensitive receptors, surrounding ambient noise levels, the presence of similar noise sources in the vicinity, and maximum allowable noise levels permitted by the LAMC and General Plan Noise Element.

Off-Site Operational Noise Sources

The Project's off-site operational noise impact from its related traffic generation was assessed by comparing the Project's estimated trip generation with surrounding traffic levels to determine significance.

Construction Vibration Sources

The Project's potential to generate damaging levels of groundborne vibration was analyzed by identifying construction vibration sources and estimating the maximum vibration levels that they could produce at nearby buildings and sensitive receptors, all based on FTA methodology and guidance. Vibration levels are then compared with the City's thresholds listed above in Section 3.1, Thresholds of Significance.

Operational Vibration Sources

Significant sources of operational vibration are generally limited to heavy equipment or industrial operations. The Project proposes to construct a mixed-use residential project, and no such operations would take place.

[38] Federal Highway Administration. Roadway Construction Noise Model (RCNM), Software Version 1.1. U.S. Department of Transportation, Research and Innovative Technology Administration, John A. Volpe National Transportation Systems Center, Environmental Measurement and Modeling Division. December 2008.

3.3 Analysis of Project Impacts

Threshold a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

On-Site Construction Activities

Construction of the Project would occur over an approximate 23-month period. Construction would occur in phases, including demolition, grading, building construction, architectural coatings, and paving. The demolition phase would include activities required to remove the existing mobile home park from the Project Site. As part of the first phase in the Project's construction process, the existing manufactured dwellings would be removed, as follows:

- Mobile homes: Approximately 80% of the existing mobile homes (or, 14 homes) are anticipated to be removed by residents, using heavy duty tow trucks. Approximately 20% (or, 3 homes) are anticipated to be demolished in place by the applicant's construction contractor and debris would be hauled off site using dump trucks.
- Trailers: Approximately 80% of the existing trailers (or, 18 trailers) are anticipated to be towed away by residents, using conventional pick-up trucks. Approximately 20% (or, 4 trailers) are anticipated to be towed by the applicant's construction contractor, using conventional pick-up trucks.
- Recreational Vehicles (RVs): All RVs are anticipated to be driven off site by the vehicle owners.

Once the manufactured homes have been relocated or demolished as identified above, all permanent structures would be demolished (utility rooms, the laundry/storage building, and the three buildings along Pacific Coast Highway), and the demolition debris would be hauled off from the Project site. Next, the asphalt, utility poles, fences, landscaping, and other improvements would be demolished and the debris would be removed from the site. In total, demolition of the mobile home park as a whole is expected to require 576 haul truck trips. On a daily basis, approximately 20 construction workers would be required. Removal of the manufactured dwellings, demolition of the permanent structures, and demolition of the other improvements (e.g., asphalt, utility poles) is expected to take approximately one month and would constitute the first phase of Project construction. Once the site has been cleared, the other construction phases would follow (grading, building construction, etc.). The analysis in this memorandum includes the closure of the mobile home park and removal of structures from the Project site.

The types of equipment that would be used for demolition and construction include standard equipment that would be employed for any routine construction project of this scale, such as graders, tractors, loaders, cranes, rubber-tired bulldozers, generators, and paving equipment. Construction equipment with substantially higher noise-generation characteristics (such as pile drivers, rock drills, blasting equipment) would not be necessary for demolition or construction of the proposed Project.

Construction noise is difficult to quantify because of the many variables involved, including the specific equipment types, size of equipment used, percentage of time each piece is in operation, condition of each piece of equipment, and number of pieces that would operate on the site. One of the most extensive and widely used databases for sound levels from motorized or powered construction equipment is the Noise Source Database developed under National Cooperative Highway Research Program 25-49 Development of a Highway Construction Noise Prediction

Model.[39] While the focus of data compilation was for equipment that would typically be employed for the construction of transportation facilities, the list is comprehensive enough to be useful in assessing sound levels for nearly every activity for which powered equipment is used. The range of maximum noise levels for various types of construction equipment at a distance of 50 feet is shown in Table 6. The noise values represent maximum noise generation, or full- power operation of the equipment. As an example, a loader and two dozers, all operating at full power and relatively close together, would generate a maximum sound level of approximately 90 dBA at 50 feet from their operations. As one increases the distance between equipment or separation of areas with simultaneous construction activity, dispersion and distance attenuation reduce the effects of separate noise sources added together. In addition, typical operating cycles may involve 2 minutes of full-power operation, followed by 3 or 4 minutes at lower levels. The average noise level during construction activities is generally lower (typical levels of approximately 88 dBA L_{eq} at a distance of 50 feet), since maximum noise generation may only occur up to 50% of the time. Noise levels from construction operations decrease at a rate of approximately 6 dB per doubling of distance from the source.

Table 6. Typical Construction Equipment Noise Emission Levels

Equipment	Typical Sound Level (dBA) 50 Feet from Source
Air compressor	81
Backhoe	80
Compactor	82
Concrete mixer	85
Concrete pump	82
Concrete vibrator	76
Crane, mobile	83
Dozer	85
Generator	81
Grader	85
Impact wrench	85
Jackhammer	88
Loader	85
Paver	89
Pneumatic tool	85
Pump	76
Roller	74
Saw	76
Truck	88

Source: Project 25-49 Data, National Cooperative Highway Research Program, 2022. .

The nearest point of construction activities to the closest noise-sensitive receivers (multi-family residences located south of the Project Site) would be approximately 40 feet and the furthest would be approximately 630 feet. The nearest noise-sensitive receivers are located approximately 330 feet away from the acoustic center of construction activity (the idealized point from which the energy sum of all construction activity noise near and far would be

[39] Project 25-49 Data, National Cooperative Highway Research Program, https://apps.trb.org/cmsfeed/trbnetprojectdisplay.asp?projectid=3889, October 2018.

centered). Thus, the distance to construction activities for the closest residences would be as near as 40 feet away but would typically be approximately 330 feet away.

With the sound sources identified in Table 6 above, an analysis was performed with a Microsoft Excel–based noise prediction model using the NCHRP reference data. Input variables include the equipment type (i.e., backhoe, crane, truck, etc.), the number of equipment pieces, and the distance from the sensitive receptor. The noise analysis does not take into account the estimated noise reduction provided by the temporary construction noise barrier as detailed in MM-NOI-2. The 8-foot high noise barrier would provide a minimum of 10 dB noise reduction. Construction sound levels taking into account the 8-foot-high barrier are given in Table 9 in Section 3.5, Impacts after Mitigation.

The noise levels from the proposed construction activities are summarized in Table 7. The complete set of input and output data for construction noise is provided in Attachment B. As shown, at the nearest residences, located to the south of the proposed project site, noise levels without mitigation would range from approximately 64 to 88 dBA L_{eq} when construction would take place at or near the project boundary. More typical construction noise levels at the residences to the south would range from approximately 41 to 66 dBA L_{eq}. Noise levels at the other, more distant locations would be lower. Also as shown in Table 7, construction noise levels would exceed 80 dBA L_{eq} during heavy construction located near the southern or southeastern boundary. With MM-NOI-1 and 2, construction equipment noise would not exceed 80 dBA L_{eq} at sensitive properties (see Table 9), and therefore would comply with the City's updated construction noise thresholds. Therefore, noise from on-site construction activities would be less than significant with mitigation.

Additionally, the Project applicant would be required employ Housing Element Program EIR noise mitigation measures MM 4.10-1(a)-(e) for noise control, which may serve to further reduce construction noise levels beyond those shown in Table 7 and Table 9. The Project applicant would also provide notification to nearby land uses prior to Project commencement and would provide a complaint process in the event of noise disturbance.

Source: Attachment B
Notes: dBA = A-weighted decibels; L_{eq} = equivalent sound level

Off-Site Construction Activities

The Project would result in local, short-term increases in roadway noise as a result of construction traffic. Based on information developed as part of the Project's air quality analysis, Project-related traffic would include workers commuting to and from the Project Site as well as vendor and haul trucks bringing or removing materials. The highest number of average daily worker trips would be 350 trips, occurring during the building construction (Framing and Mechanical/Electrical/Plumbing) phases. The highest number of average daily vendor truck trips would be 50 trips, occurring during the demolition phase. The highest number of total haul trips for any construction phase is estimated to be 876 trips, during the grading phase. The grading phase is estimated to occur over a 41 working day period, resulting in an average of approximately 21 haul trucks per day.

Based upon a review of average daily traffic volumes,[40] Pacific Coast Highway carries approximately 43,000 trips in this area (based upon traffic counts conducted at Pacific Coast Highway and Western Avenue in 2015). Comparing the maximum number of daily construction-related trips (350 worker trips, 50 vendor truck trips and 21 haul truck trips) to the average daily traffic volume (43,000 trips), the additional vehicle trips would amount to an increase of less than 1%. Based upon the fundamentals of acoustics, a doubling (i.e., a 100% increase) would be needed to result in a 3-dB increase in noise levels, which is the level corresponding to an audible change to the typical human listener. An incremental increase of 1% would not correspond to an audible or a measurable increase on an hourly average basis, and thus would be less than significant. Therefore, traffic related to construction activities would not result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impacts from Project-related construction traffic noise would be less than significant.

On-Site Operational Noise

On-Site Mechanical Noise

Mechanical noise from HVAC units and other electro-mechanical equipment would occur as a result of the Project. Based upon information provided by the Project applicant, individual HVAC condenser units would be on the rooftop. The details regarding the specific units (i.e., manufacturer, model, noise output) or their locations, have not yet been determined. Additionally, an outdoor electrical transformer would be included as part of the Project. Similar to the HVAC units, the details regarding the location, manufacturer, model, or noise output of the transformer have also not yet been determined. Section 112.02 of the LAMC limits increases in noise levels from air conditioning, refrigeration, heating, pumping and filtering equipment. As specified in the LAMC, such equipment may not be operated in such manner as to create any noise which would cause the noise level on the premises of any other occupied property, or, if a condominium, apartment house, duplex, or attached business, within any adjoining unit, to exceed the ambient noise level by more than 5 dB. Section 112.04 limits noise from powered equipment intended for repetitive use in residential areas and other machinery, equipment, and devices. This section states that “no person shall operate or cause to be operated any machinery, equipment, tools, or other mechanical or electrical device, or engage in any other activity in such manner as to create any noise which would cause the noise level on the premises of any other occupied property, or, if a condominium, apartment house, duplex, or attached business, within any adjoining unit, to exceed the ambient noise level by more than 5 dB.” With required compliance with the LAMC regulations, operational noise from on-site mechanical equipment would be less than significant.

Roof Deck, Pool Deck, and Other Exterior Use Areas

The proposed mixed-use building would occupy a majority of the Project site; therefore, the space along the Project’s north, south, east and west sides would be limited to narrow landscaped areas, a small plaza with a monument feature at the southeast corner of Frampton Avenue and Pacific Coast Highway, a secondary courtyard with a water fountain and bench seating on the building’s southwest side, and a small dog “parklet” (26 feet wide by 38.5 feet long) on the building’s east side. A small roof deck is proposed on the northwest corner of the building. No outdoor “outward-facing” dining or other prolonged noise-generating activities are proposed.

[40] Los Angeles Department of Transportation (LADOT). LADOT Traffic Counts Summary. https://data.lacity.org/Transportation/LADOT-Traffic-Counts-Summary/94wu-3ps3. Accessed November 4, 2021.

Pursuant to Public Resources Code 21085, sound generated by residents and their guests in residential uses are not considered significant impacts on the environment. Nevertheless, it is noted that most outdoor activities would take place within either the primary south courtyard or the pool area, both of which are enclosed on all four sides by the multi-level building. Sounds generated in the small roof deck on the northwest corner of the building are anticipated to be limited to conversation only (i.e., no amplified music is proposed). Normal conversation could generate a sound level of about 60 dBA L_{eq} at a distance of 3 feet. At the distance of the nearest residences, located about 330 feet to the northwest of the roof deck, sound levels from conversation in the roof deck would be below 20 dBA, well below background levels in this location, which are measured to be 61 dBA L_{eq} (see ST2 in Table 5). Noise from the proposed dog "parklet" is anticipated to be minimal as the area is small and facing east, where no noise-sensitive receivers exist in the vicinity.

The proposed parking structure would be surrounded on all four sides by the proposed residential/commercial structure, and the parking structure's entrance would be located to the west; for this reason, noise from parking activities would be minimal at noise-sensitive receivers adjacent to the Project site (located to the south, southeast, and points north). Finally, periodic outdoor landscaping maintenance activities would take place along the Project's outward-facing planted areas, but these would generate noise levels similar in level and character to the maintenance carried out for other residential and commercial spaces in the Project vicinity, would be relatively brief in duration and would be subject to City of Los Angeles noise regulations for powered equipment or powered hand tools. For these reasons, noise from exterior noise sources would be less than significant.

Off-Site Operational Noise

The Project would result in the creation of additional vehicle trips on local roadways (i.e., Pacific Coast Highway, Frampton Avenue, Belle Porte Avenue, 259th Street), which could result in increased traffic noise levels at adjacent noise-sensitive land uses.

Off-Site Traffic Noise

The Project would add additional traffic along adjacent roadways. Potential noise effects from vehicular traffic were assessed using the Federal Highway Administration's Traffic Noise Model (TNM) version 2.5.[41] Information used in the model included the site geometry, existing, existing plus Project, future (Year 2026) without Project, and future (Year 2026) with Project traffic volumes[42] and posted traffic speeds. Noise levels were modeled at representative noise-sensitive receivers ST1 through ST6 as well as an additional modeled-only location (M1), at Frampton Avenue and West 259th Street, as shown in Figure 3. The receivers were modeled to be 5 feet above the local ground elevation. The noise model results are summarized in Table 8. Detailed traffic noise modeling input and output is provided in Attachment C.

Table 8 shows that the maximum noise level increase would be 1 dB (when rounded to whole numbers). The proposed Project would not cause ambient noise levels at off-site locations to increase by 3 dBA CNEL or more to or within "normally unacceptable" or "clearly unacceptable" noise and land use compatibility categories, as defined by the City's General Plan Noise Element (see Table 4). Nor would the proposed Project cause a 5 dBA or greater

41 Federal Highway Administration (FHWA). FHWA Traffic Noise Model, Version 2.5. Office of Environment and Planning. Washington, DC. February 2004.

42 Linscott, Law & Greenspan Engineers. 1280 Pacific Coast Highway Mixed-Use Development Project Traffic Volumes.

noise increase in areas where the ambient noise level is normally or conditionally acceptable. Based upon these results, off-site traffic noise impacts would be less than significant.

Table 8. Off-Site Traffic Noise Modeling Results

Modeled Receptor	Existing Noise Level (dBA CNEL)	Existing Plus Project Noise Level (dBA CNEL)	Noise Level Increase (dB)	Future Noise Level (dBA CNEL)	Future Plus Project Noise Level (dBA CNEL)	Noise Level Increase (dB)

Threshold b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction Vibration

Construction activities that might expose persons to excessive ground-borne vibration or ground-borne noise could cause a potentially significant impact. Groundborne vibration from construction activities is typically attenuated over short distances. The heavier pieces of construction equipment used at this site could include bulldozers, excavators, loaded trucks, water trucks, and pavers.

Per the City's construction vibration thresholds listed in Section 3.1, Thresholds of Significance, there is no numerical threshold related to human annoyance for daytime construction activities (i.e., those occurring between 7:00 A.M. and 7:00 P.M. Monday through Friday and between 8:00 A.M. and 6:00 P.M. on Saturdays. Project construction is anticipated to occur during these specified time frames, and these construction hours would be enforced through compliance with MM-NOI-1 (see Section 3.4, Mitigation Measures, for details). As such, construction vibration effects related to human annoyance would be less than significant. Nevertheless, the City's numerical thresholds for architectural building damage due to construction vibration would still apply to the Project. Based on a review of surrounding buildings, their built dates, and their historical status, the Project is not located in proximity to fragile buildings, historic buildings, or older residential structures.[43] As such, the applicable building damage threshold would be 0.5 PPV.

43 Dudek, Research regarding parcels within 50 feet of the Project Site, including Zimas, SurveyLA, Los Angeles County Assessor, the California Built Environment Resources Directory, and a desktop review of the Project area. December 2024.

Based on published vibration data, typical heavy construction equipment would generate a vibration level of approximately 0.089 to 0.210 inches per second PPV at a distance of 25 feet from the source; lighter construction equipment, such as a small bulldozer, would generate a substantially lower vibration level of approximately 0.003 inches per second PPV at a distance of 25 feet from the source.[44] The closest structures to the Project site are commercial buildings approximately 20 feet to the east. At this distance, the worst-case vibration level would be 0.12 to 0.26 inches per second PPV. This is below the applicable building damage threshold of 0.5 inches per second PPV for modern commercial and industrial buildings, as well as below the 0.3 inches per second PPV threshold for older residential buildings Impacts related to architectural building damage would thus be less than significant.

Operational Vibration

The on-going operation of the Project would not include the operation of any known vibration sources. Therefore, no impact would occur from operation of the Project.

Threshold c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No airstrips are located in the Project vicinity. The nearest airport is Torrance Municipal Airport, located approximately 2 miles west of the project site. Based on the Los Angeles County Airport Land Use Plan,[45] the Project Site is not located within the Airport Influence Areas of any of the airports in the region. As such, less than significant impacts from airport/aircraft noise would occur.

3.4 Mitigation Measures

The Project has been found to be within the scope of the program analyzed in the Citywide Housing Element 2021-2029 and Safety Element Updates Final Environmental Impact Report (Housing Element Program EIR). Accordingly, the Project is required to comply with all applicable mitigation measures identified in the Housing Element Program EIR Mitigation Monitoring Program (MMP). The applicable noise mitigation measures (MMs) are listed below.

4.10-1(a) Noise Shielding and Silencing. For all discretionary projects, power construction equipment (including combustion engines), fixed or mobile, shall be equipped with noise shielding and silencing devices consistent with manufacturer's standards or the Best Available Control Technology. Equipment shall be properly maintained, and the Project Applicant or Owner shall require any construction contractor to keep documentation on-site during any earthwork or construction activities demonstrating that the equipment has been maintained in accordance with manufacturer's specifications. Measure shall be shown on plans.

4.10-1(b) Use of Driven Pile Systems. For all discretionary projects, driven (impact), sonic, or vibratory pile drivers shall not be used, except in locations where the underlying geology renders alternative

[44] Federal Transit Administration, Transit Noise and Vibration Impact Assessment Manual, Table 7-4, page 184, 2018.

[45] Los Angeles County Airport Land Use Commission, Los Angeles County Airport Land Use Plan. 2004. http://planning.lacounty.gov /assets/upl/data/pd_alup.pdf. Accessed November 2, 2021.

methods infeasible, as determined by a soils or geotechnical engineer and documented in a soils report. Requirement shall show on plans.

4.10-1(c) Enclosures and Screening. For all discretionary projects, all outdoor mechanical equipment shall be enclosed or screened from off-site noise-sensitive uses. The equipment enclosure or screen shall be impermeable (i.e., solid material with minimum weight of 2 pounds per square feet) and break the line-of-sight from the equipment and off-site noise-sensitive uses.

4.10-1(d) Construction Staging Areas. Construction staging areas shall be located as far from noise-sensitive uses as reasonably possible and feasible in consideration of site boundaries, topography, intervening roads and uses, and operational constraints. Requirement shall show on plans.

4.10-1(e) Temporary Sound Barriers. Sound barriers, such as temporary walls or sound blankets, shall be erected between construction activities and noise-sensitive uses when construction activities are located within a line-of-sight to and within 500 feet of noise-sensitive uses. Requirement shall show on plans.

4.10-1(f) Project-Specific Construction Noise Study. A Construction Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for discretionary projects in the City located within 500 feet of noise-sensitive land uses and that have one or more of the following characteristics:

- Two or more subterranean levels or 20,000 cubic yards or more of excavated material;
- Construction duration (excluding architectural coatings) of 18 months or more;
- Use of large, heavy-duty equipment rated 300 horsepower or greater; or
- The potential for impact pile driving.

The Construction Noise Study shall characterize sources of construction noise, quantify noise levels at noise-sensitive uses (e.g., residences, transient lodgings, schools, libraries, churches [or other places of assembly], hospitals, nursing homes, auditoriums, concert halls, amphitheaters, playgrounds, and parks), and identify measures to reduce noise exposure. The Construction Noise Study shall identify reasonably available noise reduction devices or techniques to reduce noise levels to acceptable levels and/or durations including through reliance on any relevant federal, state or local standards or guidelines or accepted industry practices, and in compliance with LAMC standards. Noise reduction devices or techniques may include but not be limited to mufflers, shields, sound barriers, and time and place restrictions on equipment and activities. Each measure in the Construction Noise Study shall identify anticipated noise reductions at noise-sensitive land uses.

Project Applicants shall be required to comply with all requirements of Mitigation Measures 4.10-1(a) through 4.10-5(e) in addition to any additional requirements identified and recommended by the Construction Noise Study and shall maintain proof that notice of, as well as compliance with, the identified measures have been included in contractor agreements.

4.10-2 Project-Specific Operational Noise Study. A Noise Study, prepared by a qualified noise expert to meet the requirements herein, shall be required for all discretionary housing developments with roof decks and/or pool decks in the City of Los Angeles concurrent with Design Review and prior to the approval of building permits. The Noise Study shall include:

- Description of pertinent noise regulations.
- Analysis of operational noise generated by the project's roof decks and/or pool decks to noise-sensitive land uses.
- Comparison of noise levels to applicable City thresholds, such as if the project's operational noise would exceed 3 dBA in an unacceptable land use category or 5 dBA in an acceptable land use category per the City's land use compatibility guidelines included in the City of Los Angeles General Plan Noise Element.
- If project noise would exceed City thresholds, identification of mitigation measures to reduce noise to below 3dBA in an unacceptable land use category or 5 dBA in an acceptable land use category to the extent feasible. Mitigation measures may include, but would not be limited to, operational restrictions, sound dampening equipment, or sound walls.
- Each mitigation measure in the Noise Study shall identify anticipated noise reductions at noise-sensitive land uses.
- Applicant/owners shall comply with the mitigation plan and include the measures in construction contracts.
- Mitigation plan shall be included on plans.

4.10-3(b) Vibration Mitigation. For all discretionary projects:

- Impact pile drivers shall be avoided to eliminate excessive vibration levels. Drilled piles or similar methods are alternatives that shall be utilized where geological conditions permit their use.
- Construction activities shall involve rubber-tired equipment rather than metal-tracked equipment.

The construction contractor shall manage construction phasing (scheduling demolition, earthmoving, and ground-impacting operations so as not to occur in the same time period), use low-impact construction technologies, and shall avoid the use of vibrating equipment when allowed by best engineering practices. Requirement to be on plans.

During construction, the Project would be required to comply with MM 4.10-1(a), 4.10-1(b), 4.10-1(c), 4.10-1(d), and 4.10-1(e). The analysis contained herein fulfills the requirements for a project-specific construction and operational noise study, per MM 4.10-1(f) and MM 4.10-2. In addition to the construction noise requirements of MM 4.10-1(a)-(e), the Project would also be required to comply with the following additional requirements during construction.

MM-NOI-1 Construction Hours. Construction and demolition shall be restricted to the hours of 7:00 A.M. to 7:00 P.M. Monday through Friday, and 8:00 A.M. to 6:00 P.M. on Saturday.

MM-NOI-2 Specifications for Temporary Sound Barriers. Pursuant to MM 4.10-1(e), a temporary sound barrier is required to be erected between construction activities at noise-sensitive uses when construction activities are located within a line-of-sight to and within 500 feet of noise-sensitive uses. The specifications below have been set forth for the Project's temporary sound barriers based on site-specific conditions:

A temporary noise control barrier (8 feet in height) will be installed along the construction site's northern and southern property lines. The noise control barriers shall be engineered to reduce construction-related noise levels at the nearby noise-sensitive uses with a goal of a reduction of 10 A-weighted decibels (dBA). The noise barrier must be free of openings and cracks (with the exception of expansion joints gaps), must achieve a Sound Transmission Class (STC) of 30 or greater in accordance with ASTM Test Method E90, and must be constructed from a material having a surface density of at least 4 pounds per square foot to ensure adequate transmission loss characteristics.[46] The supporting structure shall be engineered and erected according to all other applicable codes.

3.5 Impacts after Mitigation

Table 9 shows construction impacts after implementation of the mitigation measures identified in Section 3.4, Mitigation Measures. It is noted that implementation of MM-NOI-2 is expected to result in a 10 dB reduction in construction noise. The efficacy of the noise control barriers is demonstrated via calculations shown in Attachment B, which rely on industry standards of practice as defined in *Noise and Vibration Control*.[47]

While the other mitigation measures that would be required for the Project (namely, MM 4.10-1(a)-(e)) may serve to further reduce construction noise, numerical reductions associated with these measures have not been included in Table 9. As demonstrated by the results in Table 9, implementation of the noise barrier identified in MM-NOI-2 would ensure that construction noise impacts from the Project would be reduced to less than significant.

No significant operational impacts have been identified and no operational mitigation is required. Therefore, operational noise impacts from the Project are considered less than significant.

Table 9. Construction Noise Modeling Summary Results – With Mitigation

Off-Site Receptor Location	Distance from Construction Activity to Noise Receptor (feet)	Estimated Construction Noise Levels (dBA L_{eq})

Attachment B

Construction Noise Modeling Input and Output

Source to barrier distance	20
Receiver to barrier distance	20
Receiver height	5

noise level limit for construction phase at residential land use, per County guidance = 80

allowable hours over which Leq is to be averaged = 8

8 = temporary barrier (TB) of input height inserted between source and receptor

Construction Activity	Equipment	Total Equipment Qty	Reference Level @ 50 ft. from FHWA RCNM 2 Table	Client Equipment Description, Data Source and/or Notes	Source to NSR Distance (ft.)	*Temporary Barrier Insertion Loss (dB)*	*Additional Noise Reduction*	Distance-Adjusted Leq	Allowable Operation Time (hours)	Allowable Operation Time (minutes)	Predicted 8-hour Leq	Source Elevation (ft)	Receiver Elevation (ft)	Barrier Height (ft)	Source to Barr. Transportation Assessment

Michele Finneyfrock

From: Jason Shender <jshender@llgengineers.com>
Sent: Thursday, January 9, 2025 2:02 PM
To: Michele Finneyfrock
Subject: Transportation Assessment for the 1280 PCH Project

Michele,

Linscott, Law & Greenspan, Engineers ("LLG") has reviewed the Transportation Assessment prepared for the 1280 PCH project dated February 3, 2022. It is noted that LADOT updated their Vehicle Miles Traveled ("VMT") Calculator and Transportation Assessment Guidelines ("TAG") subsequent to the preparation of the Transportation Assessment. However, the results of the VMT analysis are identical utilizing Versions 1.3, 1.4, and 1.5 of the VMT Calculator. Furthermore, LADOT policy states that the versions of the VMT Calculator and TAG in effect at the time when the Transportation Assessment Memorandum of Understanding was executed are the versions that should be used for preparing the Transportation Assessment.

The analysis in the Transportation Assessment assumed 2026 as the Project buildout year. However, we now understand that has been pushed out to 2028. The Transportation Assessment utilized a 1.0% annual ambient growth rate from 2021 to 2026, or 5.10% total growth of the traffic volumes, to account for general traffic growth in the area, as well as unknown related projects. Subsequent to the preparation of the Transportation Assessment, LLG understands that a proposed 1,287 square-foot Starbucks located at 1333 Pacific Coast Highway was approved by the Harbor Area Planning Commission on May 7, 2024. The growth factors provided in the 2010 LA County Congestion Management Program ("CMP") manual suggest that traffic volumes are expected to grow 0.19% annually from 2021 to 2028, or 1.34% total growth of traffic volumes. Therefore, the Future Cumulative analysis included in the Transporation Assessment is still valid and conservative, even with the change in buildout year and approved Starbucks located at 1333 Pacific Coast Highway.

Therefore, LLG can confirm that the analysis, findings, and conclusions detailed in the February 3, 2022 Transportation Assessment remain valid to date.

Regards,
Jason

TRANSPORTATION ASSESSMENT

1280 PCH

City of Los Angeles, California
February 3, 2022

1.0 INTRODUCTION

1.1 Transportation Assessment Overview

This transportation assessment has been conducted to identify and evaluate the potential transportation impacts of the proposed 1280 PCH project (the "Project") located at 1268-1290 W. Pacific Coast Highway and 25900 S. Frampton Avenue (the "Project Site") on the surrounding street system. The Project Site is located in the Wilmington-Harbor City Community Plan Area of the City of Los Angeles, California (the "City"). The Project Site is generally bounded by Pacific Coast Highway to the north, 259th Street to the south, Frampton Avenue to the west, and an automobile repair center and a surface parking lot to the east. The Project Site location and general vicinity are shown in ***Figure 1–1***.

The transportation analysis follows the *Los Angeles Department of Transportation (LADOT) Transportation Assessment Guidelines*[1] (TAG). The City's TAG are focused on transportation metrics that promote: the reduction of greenhouse gas emissions, the development of multimodal networks and access to diverse land uses, as well as safety, sustainability and smart growth. In compliance with the California Environmental Quality Act (CEQA), the City's TAG identify vehicle miles traveled (VMT) as the primary metric for evaluating a project's transportation impacts along with whether the proposed project conflicts or is inconsistent with local plans and policies. In addition, the City's TAG require evaluation of non-CEQA mobility elements such as pedestrian, bicycle and transit access, project access and circulation, project construction, and the potential for residential street intrusion.

This transportation assessment presents (i) a CEQA assessment of whether the Project conflicts or is inconsistent with local transportation-related plans and policies, (ii) a CEQA assessment of Project-related VMT, (iii) a CEQA assessment of whether the Project increases hazards due to a geometric design feature or incompatible use, (iv), a CEQA freeway safety analysis, (v) a non-CEQA assessment of pedestrian, bicycle and transit access, (vi) a non-CEQA evaluation of Project access, safety and circulation, and (vii) a non-CEQA review of Project construction activities.

1280 PCH

1.2 Study Area

The CEQA and non-CEQA analysis criteria for this transportation assessment were identified in consultation with LADOT staff. The analysis criteria were determined based on the City's TAG, the proposed Project description and location, and the characteristics of the surrounding transportation system. As defined by the City as Lead Agency under CEQA, LADOT confirmed the appropriateness of the analysis criteria when it entered into a transportation assessment Memorandum of Understanding (MOU) for the Project on September 1, 2021. The approved MOU is contained in ***Appendix A***.

2.0 PROJECT DESCRIPTION

2.1 Project Site Location

The Project Site is located at 1268-1290 W. Pacific Coast Highway and 25900 S. Frampton Avenue in the Wilmington-Harbor City Community Plan Area of the City (Assessor's Parcel Nos. 7411-019-016 and 7411-019-020). The Project Site is generally bounded by Pacific Coast Highway to the north, 259th Street to the south, Frampton Avenue to the west, and an automobile repair center and a surface parking lot to the east. The Project Site location and general vicinity are shown in *Figure 1–1*.

The Project Site is located within a high-quality transit area (HQTA) included in *Connect SoCal*[2]*,* the Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) of the Southern California Association of Governments (SCAG) and is currently served by many local lines and regional/commuter lines via stops located within convenient walking distance along Pacific Coast Highway. The transit lines include Los Angeles County Metropolitan Transit Authority (Metro) Local Lines 205 and 232, Metro Express Line 550, LADOT Commuter Express (CE) Line 448, and City of Gardena (GTrans) Line 2.

2.2 Existing Project Site

The Project Site comprises approximately 3.70 acres and is currently improved with a mobile home park (A-1 Trailer Park) with 42 dwelling units and a vacant lot. Vehicular access to the existing Project Site is provided via one full access driveway and one outbound only driveway along the south side of Pacific Coast Highway, one full access driveway along the west side of Frampton Avenue, and two driveways (one inbound only and one outbound only) along the north side of 259th Street. The Project Site is highlighted in an aerial photograph presented in ***Figure 2–1***.

2.3 Project Description

As currently proposed, the Project will remove the existing A-1 Trailer Park and construct a new mixed-use development consisting of 312 market-rate residential apartment dwelling units, 42 affordable housing dwelling units, and 1,500 square feet of ground floor commercial floor area. While the intended use of the ground floor commercial floor area has yet to be determined, for purposes of this Transportation Assessment, the ground floor commercial floor area will be analyzed as a High-Turnover (Sit-Down) Restaurant use. The Project proposes to provide 575 vehicular parking spaces within a six level above-grade parking garage. Construction and occupancy of the Project is proposed to be completed by the year 2026. The site plan for the Project is illustrated in ***Figure 2–2***.

First Floor Plan
1280 PCH

2.4 Vehicular Project Site Access

Vehicular access to the Project Site will be provided via one driveway along the east side of Frampton Avenue. The new Project driveway will accommodate full vehicular access (i.e., left-turn and right-turn ingress and egress movements). Additionally, a driveway providing access to a designated loading space at the terminus of 259th Street, at the southeasterly portion of the Project Site. The existing driveways will be removed in conjunction with the Project.

2.5 Pedestrian and Bicycle Project Site Access

Pedestrian access to the Project Site will be provided via Pacific Coast Highway, Frampton Avenue, and 259th Street. The Project will provide access locations to ensure pedestrian safety in compliance with City standards (e.g., provide sidewalks and crosswalks, and other pedestrian traffic controls). Separate pedestrian entrances will provide access from the nearby public transit stops, as well as other amenities along the major corridors.

Bicycle access to the Project Site will be provided via Pacific Coast Highway and Frampton Avenue. The Project will provide bicycle parking onsite for residents, visitors, and employees of the Project. Bicycle parking spaces will be installed in compliance with the Los Angeles Municipal Code (LAMC).

2.6 Project Parking

The Project will provide a total of 575 vehicular parking spaces within a six-level above-grade parking garage.

2.7 Project Loading

All loading activities will occur off-street and internal to the Project Site. Loading activities associated with service and delivery operations will occur within the designated loading space at the terminus of 259th Street. Loading activities associated with trash collection and waste management for the Project will occur within the at-grade level of the onsite parking garage. Access to the Project's trash/recycling areas will be provided via the Project driveway along the east side of Frampton Avenue.

2.8 Project Traffic Generation and Distribution

2.8.1 *Project Traffic Generation*

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Traffic volumes expected to be generated by the Project during the weekday AM and PM peak hours were estimated using rates provided in the Institute of Transportation Engineers' (ITE) *Trip Generation Manual*[3] and the affordable housing trip rates published in Table 3.3-2 of the TAG. The following trip generation rates were used to forecast the traffic volumes expected to be generated by the Project:

[3] Institute of Transportation Engineers, *Trip Generation Manual,* 10th Edition, Washington, D.C., 2017.

- Apartments: ITE Land Use Code 221 (Multifamily Housing [Mid-Rise]) trip generation average rates were used to forecast the traffic volumes expected to be generated by the residential apartment component of the Project.

- Affordable Family Housing: LADOT Affordable Housing (Family) trip generation average rates were used to forecast the traffic volumes expected to be generated by the affordable family housing component of the Project.

- Commercial: ITE Land Use Code 932 (High-Turnover [Sit-Down] Restaurant) trip generation average rates were used to forecast the traffic volumes expected to be generated by the commercial component of the Project.

In addition to the trip generation forecasts for the Project (which are essentially an estimate of the number of vehicles that could be expected to enter and exit the Project Site access points), an adjustment was made to the trip generation forecast based on the Project Site's existing land use. The existing land use includes the A-1 Trailer Park with 42 dwelling units. The trips associated with the existing use will be subtracted from the projected Project trips to account for the existing environmental condition. ITE Land Use Code 240 (Mobile Home Park) trip generation average rates were used to estimate the trip reduction related to the existing use.

A forecast was also made of the transit trips that will be generated by the Project in lieu of trips by the private automobile. The Project Site is within a HQTA included in *Connect SoCal,* SCAG's RTP/SCS, and is currently served by many local lines and regional/commuter lines via stops located within convenient walking distance along Pacific Coast Highway. The transit lines include Metro Local Lines 205 and 232, Metro Express Line 550, LADOT CE Line 448, and GTrans Line 2. Further discussion of the transit framework is provided in Section 3.2 herein. As the Project Site is within one-quarter mile of numerous bus stops, a transit adjustment of 10% has been utilized, consistent with guidance provided in the TAG.

The trip generation forecast for the Project was submitted for review and approval by LADOT staff. As presented in ***Table 2–1***, the Project is expected to generate 126 net new vehicle trips (38 inbound trips and 88 outbound trips) during the AM peak hour. During the PM peak hour, the Project is expected to generate 134 net new vehicle trips (81 inbound trips and 53 outbound trips).

The daily vehicle trips expected to be generated by the Project were estimated using Version 1.3 of the City's VMT Calculator. Copies of the detailed VMT Calculator worksheets for the Project are contained in ***Appendix B***. As indicated in the summary VMT Calculator worksheet, the Project is forecast to generate 1,760 net new daily vehicle trips. It is noted that Version 1.3 of the City's VMT Calculator does not include a Mobile Home Park land use. In accordance with the TAG, the "Custom Land Use Type" featured was used to input daily trips associated with the existing A-1 Mobile Home Park. The ITE Land Use Code 240 (Mobile Home Park) trip generation average rate was used to estimate the daily trip reduction related to the existing use. By applying the daily vehicle trip rate from the ITE *Trip Generation Manual* (5.0 daily trips per unit), as well as a 10% transit credit, the existing A-1 Mobile Home Park is estimated to generate

Table 2-1
PROJECT TRIP GENERATION [1]

[1] Source: ITE *Trip Generation Manual,* 10th Edition, 2017.
[2] Trips are one-way traffic movements, entering or leaving.
[3] ITE Land Use Code 221 (Multifamily Housing [Mid-Rise]) trip generation average rates.
- AM Peak Hour Trip Rate: 0.36 trips/dwelling unit; 26% inbound/74% outbound
- PM Peak Hour Trip Rate: 0.44 trips/dwelling unit; 61% inbound/39% outbound

[4] City of Los Angeles Affordable Housing (Family) trip generation average rates.
- AM Peak Hour Trip Rate: 0.52 trips/dwelling unit; 38% inbound/62% outbound
- PM Peak Hour Trip Rate: 0.38 trips/dwelling unit; 55% inbound/45% outbound

[5] ITE Land Use Code 932 (High-Turnover [Sit-Down] Restaurant) trip generation average rates.
- AM Peak Hour Trip Rate: 9.94 trips/1,000 SF of floor area; 55% inbound/45% outbound
- PM Peak Hour Trip Rate: 9.77 trips/1,000 SF of floor area; 62% inbound/38% outbound

[6] The transit reduction is based on the site's proximity to local bus stops, as well as the land use characteristics of the Project.
[7] ITE Land Use Code 240 (Mobile Home Park) trip generation average rates.
-AM Peak Hour Trip Rate: 0.26 trips/dwelling unit; 31% inbound/69% outbound
-PM Peak Hour Trip Rate: 0.46 trips/dwelling unit; 62% inbound/38% outbound

189 daily vehicle trips on a typical weekday and was the daily trip value utilized within Version 1.3 of the City's VMT Calculator.

2.8.2 *Project Traffic Distribution and Assignment*

Project traffic volumes both entering and exiting the Project Site have been distributed and assigned to the adjacent street system based on the following considerations:

- The Project Site's proximity to major traffic corridors (i.e., Pacific Coast Highway, Normandie Avenue, I-110 Freeway, etc.);
- Expected localized traffic flow patterns based on adjacent roadway channelization and presence of traffic signals;
- Existing intersection traffic volumes;
- Ingress/egress availability at the Project Site assuming the site access and circulation scheme described in Section 2.4;
- The location of proposed parking areas;
- Nearby population and employment; and
- Input from LADOT staff.

The general, directional traffic distribution patterns for the existing use on the Project Site is presented in ***Figure 2–3***. The general, directional traffic distribution patterns for Project-related trips bound to the Project Site is presented in ***Figure 2–4***. The forecast net new weekday AM and PM peak hour Project traffic volumes at the study intersections associated with the proposed Project are presented in ***Figure 2–5***. The traffic volume assignments presented in *Figure 2–5* reflect the traffic distribution characteristics shown in *Figures 2–3* and *2–4*, and the Project traffic generation forecast presented in *Table 2–1*.

2.9 Project Transportation Demand Management

The Project includes one transportation demand management (TDM) strategy to be implemented as Project Design Features. The TDM strategies are listed in Table 2.2-2 of the TAG. Further discussion of the TDM strategy is provided in the section below.

2.9.1 *Include Bike Parking per Los Angeles Municipal Code*

Table 12.21A.16(a)(1)(i) of the LAMC provides the required short-term and long-term bicycle parking spaces for the residential component of the Project (354 units). The short-term bicycle parking ratios are as follows:

- Dwelling Units 1-25: 1 space per 10 units (3 spaces);

Date: 9/9/2021
Time: 3:59 PM

Figure 2-5
Net New Project Traffic Volumes
(Page 2 of 2)

1280 PCH

- Dwelling Units 26-100: 1 space per 15 units (5 spaces);
- Dwelling Units 101-200: 1 space per 20 units (5 spaces); and
- Dwelling Units 201-354: 1 space per 40 units (4 spaces).

The long-term bicycle parking ratios are as follows:

- Dwelling Units 1-25: 1 space per unit (25 spaces);
- Dwelling Units 26-100: 1 space per 1.5 units (50 spaces);
- Dwelling Units 101-200: 1 space per 2 units (50 spaces); and
- Dwelling Units 201-354: 1 space per 4 units (39 spaces).

Table 12.21.A.16(a)(2) in the LAMC provides the required short-term and long-term bicycle parking spaces for the commercial component of the Project. The short-term bicycle parking ratios are as follows:

- Commercial (1,500 s.f.): 1 space per 2,000 s.f. (2 spaces[4]).

The long-term bicycle parking ratios are as follows:

- Commercial (1,500 s.f.): 1 space per 2,000 s.f. (2 spaces[5]).

Based on the above, the Project is required to provide 17 short-term and 164 long-term bicycle parking spaces for the residential component. For the commercial component, the Project is required to provide two short-term bicycle parking spaces and two long-term bicycle parking spaces. The Project will provide the LAMC-required number of short-term and long-term bicycle parking spaces.

The Project Applicant will comply with the City's existing TDM Ordinance in LAMC Section 12.26.J. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

[4] While the calculation would yield a requirement of one short-term bicycle parking space, Table 12.21 A.16(a)(2) states that a minimum of two short-term bicycle parking spaces are required for a restaurant use (i.e., the assumed use for the Project's commercial component).

[5] While the calculation would yield a requirement of one long-term bicycle parking space, Table 12.21 A.16(a)(2) states that a minimum of two long-term bicycle parking spaces are required for a restaurant use (i.e., the assumed use for the Project's commercial component).

3.0 PROJECT CONTEXT

3.1 Non-Vehicle Transport System

3.1.1 *Pedestrian Framework*

Public sidewalks that are approximately 13 feet in width and pedestrian facilities are provided along the Project Site's Pacific Coast Highway frontage. Sidewalks are not currently provided along the Project Site's Frampton Avenue and 259th Street frontages. However, the Project includes construction of new sidewalks along the Project Site's Frampton Avenue and 259th Street frontages, as well as improvements to the existing sidewalk along the Project Site's Pacific Coast Highway frontage. Potential pedestrian destinations located within an approximately one-quarter mile radius (i.e., 1,320 feet) from the Project Site are noted in ***Figure 3–1***, per Section 3.2.4 of the TAG. ***Figure 3–2*** shows the existing pedestrian and transit facilities within an approximately one-quarter mile radius (i.e., 1,320 feet) from the Project Site. As presented in *Figure 3–2*, the following pedestrian facilities currently are provided in the direct vicinity of the Project Site:

- American With Disabilities Act (ADA) access ramps, including some with the yellow truncated domes, are provided at the following intersections in the immediate vicinity of the Project Site:
  - Belle Porte Avenue / 257th Street
  - Belle Porte Avenue / Pacific Coast Highway
  - Belle Porte Avenue / 259th Street
  - Frampton Avenue / 257th Street
  - Frampton Avenue / Pacific Coast Highway
  - Frampton Avenue / 259th Street (West Leg)
  - Frampton Avenue / 259th Street (East Leg)
  - Frampton Avenue / Anaheim Street
  - Normandie Avenue / Pacific Coast Highway
- Traditional parallel bar or continental style pedestrian crosswalks with varying widths of between approximately 10 feet and 17 feet are provided at the following intersections in the immediate vicinity of the Project Site:
  - Senator Avenue / Pacific Coast Highway
  - Belle Porte Avenue / Pacific Coast Highway

Figure 3-2
Facilities Inventory

1280 PCH

- Normandie Avenue / Pacific Coast Highway

- Pedestrian crossing signals and push buttons are presently included as part of the traffic signal controls at the nearby signalized intersections that are noted in *Figure 3–2*.

The Project has been designed to encourage pedestrian activity and walking as a transportation mode. Pedestrian access to the Project will be provided via entrances along Pacific Coast Highway, Frampton Avenue, and 259th Street. Separate pedestrian entrances will be provided for the residential and commercial components of the Project. The Project will improve the sidewalk along the Pacific Coast Highway property frontage and provide new sidewalks along the Frampton Avenue and 259th Street property frontages to enhance the pedestrian experience and ensure ADA compliance.

The City's Mobility Plan 2035[6] identifies a collection of arterial streets, known as Pedestrian Enhanced Districts (PEDs), where pedestrian improvements could be prioritized to provide enhanced walking connections to and from the major destinations within communities. The arterials within the Project study area that have been identified as PEDs are presented in ***Figure 3–3***. Mobility Plan 2035 also identifies a collection of streets, known as the Neighborhood Enhanced Network (NEN), that provide comfortable and safe routes for non-motorized modes of travel such as walking. Roadways within the NEN within the Project study area are presented in ***Figure 3–4***.

3.1.2 *Bicycle Network*

Bicycle access to the Project Site is facilitated by the City's bicycle roadway network. Existing bicycle facilities (e.g., Class I Bicycle Path, Class II Bicycle Lanes, Class III Bicycle Routes, Bicycle Friendly Streets, etc.) identified in the City's 2010 Bicycle Plan are located within the immediate vicinity of the Project Site.[7] The 2010 Bicycle Plan goals and policies have been folded into Mobility Plan 2035 to reflect a commitment to a balanced, multi-modal viewpoint.

Class II Bicycle Lanes are currently provided in each direction on Belle Porte Avenue and Normandie Avenue, north of Pacific Coast Highway within Project study area. South of Pacific Coast Highway, Normandie Avenue is designated as a Class III Bicycle Route. Within Mobility Plan 2035, Vermont Avenue and Anaheim Street are included within the Tier I Bicycle Enhanced Network, Normandie Avenue is included within the Tier II Bicycle Lane Network, and Pacific Coast Highway is included within the Tier III Bicycle Lane Network. Class II Bicycle Lanes are planned for Pacific Coast Highway, Anaheim Street, Normandie Avenue south of Pacific Coast Highway, and Vermont Avenue in the future. The existing and planned bicycle facilities within the Project study area are shown in ***Figure 3–5***.

[6] *Mobility Plan 2035,* Los Angeles Department of City Planning, December 2015.

[7] *2010 Bicycle Plan,* Los Angeles Department of City Planning, Adopted March 1, 2011. As noted in *Mobility Plan 2035*, the 2010 Bicycle Plan and policies have been folded into the Mobility Plan to reflect a commitment to a balanced, multi-modal viewpoint.

3.2 Transit Framework

The Project Site is currently served by many local lines and regional/commuter lines via stops located within convenient walking distance along Pacific Coast Highway. Public transit service in the Project Site area is currently provided by Metro, LADOT, and GTrans. A summary of the existing transit service with stops within one-quarter mile of the Project Site, including the transit route, destinations and peak hour headways, is presented in ***Table 3–1***. The existing public transit routes in the Project Site vicinity are illustrated in ***Figure 3–6***.

3.3 Vehicle Network

3.3.1 *Regional Highway Access*

Regional vehicular access to the Project Site is primarily provided by the I-110 (Harbor) Freeway. A brief description of the I-110 Freeway is provided in the following paragraph.

I-110 (Harbor) Freeway is a north-south oriented freeway that extends across southern California from Downtown Los Angeles to the San Pedro area of the City. North of Downtown Los Angeles, the I-110 Freeway becomes the SR-110 (Arroyo Seco Parkway) Freeway and extends to Pasadena. In the Project vicinity, four mixed-flow freeway lanes are provided in each direction on the I-110 Freeway with auxiliary merge/weave lanes provided between some interchanges. Northbound and southbound ramps are provided on the I-110 Freeway at Pacific Coast Highway and Anaheim Street in the Project vicinity and are located approximately 1.1 mile east and 1.7 mile southeast of the Project Site, respectively.

3.3.2 *Local Roadway System*

The following intersections were selected in consultation with LADOT staff for analysis of potential traffic operations deficiencies due to the Project:

1. Belle Porte Avenue / Pacific Coast Highway
2. Belle Porte Avenue / 259th Street
3. Frampton Avenue / Pacific Coast Highway
4. Frampton Avenue / Project Driveway
5. Frampton Avenue / 259th Street
6. Frampton Avenue / Anaheim Street
7. Normandie Avenue / Pacific Coast Highway

The Belle Porte Avenue / Pacific Coast Highway and Normandie Avenue / Pacific Coast Highway intersections are presently controlled by traffic signals. The Belle Porte Avenue / 259th Street and Frampton Avenue / 259th Street intersections are all-way stop-controlled intersections (i.e., stop signs facing all approaches). The Frampton Avenue / Pacific Coast Highway

intersection is a two-way stop-controlled intersection (i.e., stop signs facing the northbound and southbound Frampton Avenue approaches). The Frampton Avenue / Anaheim Street intersection is also a two-way stop-controlled intersection (i.e., stop sign facing the southbound Frampton Avenue approach). The Frampton Avenue / Project Driveway intersection will be a two-way stop-controlled intersection (i.e., stop sign facing the outbound driveway approach). The existing and Project lane configurations at the study intersections are displayed in ***Figures 3–7*** and ***3–8***, respectively.

3.3.3 *Roadway Descriptions*

Immediate access to the Project Site is provided via Pacific Coast Highway and Frampton Avenue. A brief description[8] of the roadways in the Project vicinity is provided in the following paragraphs.

Belle Porte Avenue is a north-south oriented roadway located west of the Project Site. Within the Project study area, Belle Porte Avenue is designated as a Collector by the City. One through travel lane is provided in each direction on Belle Porte Avenue within the Project study area. Separate exclusive left-turn lanes are provided in each direction on Belle Porte Avenue at major intersections. A separate exclusive right-turn lane is provided in the southbound direction on Belle Porte Avenue at the Pacific Coast Highway intersection. Belle Porte Avenue has a posted speed limit of 35 miles per hour within the Project study area.

Frampton Avenue is a north-south oriented roadway that borders the Project Site to the west. Within the Project study area, Frampton Avenue is designated as a Local Street – Standard by the City. One through travel lane is provided in each direction on Frampton Avenue within the Project study area. Separate exclusive right-turn lanes are provided in each direction on Frampton Avenue at the Pacific Coast Highway intersection. There is no speed limit posted on Frampton Avenue north of Pacific Coast Highway within the Project study area, thus a prima facie speed limit of 25 miles per hour is assumed, consistent with California Vehicle Code Section 22352(b)(1). Frampton Avenue has a posted speed limit of 25 miles per hour south of Pacific Coast Highway within the Project study area.

Normandie Avenue is a north-south oriented roadway located east of the Project Site. Within the Project study area, Normandie Avenue is designated as an Avenue I by the City. Two through travel lanes are provided in each direction on Normandie Avenue within the Project study area. Separate exclusive left-turn lanes are provided in each direction on Normandie Avenue at major intersections. Normandie Avenue has a posted speed limit of 35 miles per hour north of Pacific Coast Highway within the Project study area and a posted speed limit of 45 miles per hour south of Pacific Coast Highway within the Project study area.

Pacific Coast Highway is an east-west oriented roadway that borders the Project Site to the north. Within the Project study area, Pacific Coast Highway is designated as a Boulevard II by the City. Three through travel lanes are provided in each direction on Pacific Coast Highway within the Project study area. Separate exclusive left-turn lanes are provided in each direction on

Pacific Coast Highway at the Belle Porte Avenue, Frampton Avenue, and Normandie Avenue intersections. Pacific Coast Highway has a posted speed limit of 35 miles per hour west of Normandie Avenue and a posted speed limit of 40 miles per hour east of Normandie Avenue within the Project study area.

259th Street is an east-west oriented roadway that borders the Project Site to the south. Within the Project study area, 259th Street is designated as a Local Street – Standard by the City. One through travel lane is provided in each direction on 259th Street within the Project study area. There is no speed limit posted on 259th Street within the Project study area, thus a prima facie speed limit of 25 miles per hour is assumed, consistent with California Vehicle Code Section 22352(b)(1).

Anaheim Street is an east-west oriented roadway located south of the Project Site. Within the Project study area, Anaheim Street is designated as an Avenue II by the City. Two through travel lanes are provided in the eastbound direction on Anaheim Street within the Project study area. One through travel lane is provided in the westbound direction on Anaheim Street within the Project study area. Anaheim Street has a posted speed limit of 35 miles per hour within the Project study area.

3.3.4 *City of Los Angeles High Injury Network*

Vision Zero[9] is a citywide initiative which prioritizes the safety of pedestrians and bicyclists on public streets, with the understanding that roads which are safe for vulnerable users will be safer for all users, in an effort to eliminate traffic fatalities. Key elements of the policy, such as reducing traffic speeds, are founded on the principles of engineering, education, enforcement, evaluation, and equity. Originating in Sweden, the policy has been adopted in numerous other North American cities, including California cities such as San Francisco and San Diego.

Mayor Eric Garcetti issued Executive Directive No. 10 in August 2015, formally launching the Vision Zero initiative in Los Angeles. Vision Zero is also a stated safety objective in the Mobility Plan 2035, which sets the goal of zero traffic deaths by 2035. Jointly directed by LADOT and the Police Department, Vision Zero takes a multi-disciplinary approach to identifying safety risk factors and implementing solutions on a citywide scale. Using a methodology originally developed by the San Francisco Public Health Department, the Vision Zero Task Force has identified streets where investments in safety will have the most impact in reducing severe injuries and traffic fatalities in the City. These roads are collectively known as the High Injury Network (HIN). The HIN will be reviewed by the LADOT's Vision Zero group for potential engineering re-design as well as educational and enforcement campaigns.

As shown in ***Figure 3–9***, roadways in the immediate vicinity of the Project which have been identified on the HIN are noted below:

- Pacific Coast Highway

[8] For reference, the street descriptions provided include designations under *Mobility Plan 2035*.

If a proposed project results in significant transportation impacts, LADOT's Vision Zero group will review those specific locations and immediate vicinity for potential safety enhancements that are consistent with the City's Vision Zero initiative.

3.4 Traffic Counts

In April 2020, LADOT issued guidance[10] to transportation consultants related to traffic count data to be used in transportation assessments prepared in accordance with the City's TAG. Because traffic count data could not be collected at the study intersections due to the COVID-19 pandemic, LADOT has directed transportation consultants to use historical data, with appropriate modifications to represent current (pre-pandemic) traffic volume conditions. For this transportation assessment, the following techniques were used to estimate current year (2021) peak hour turning movement traffic volumes at the study intersections:

- Belle Porte Avenue / Pacific Coast Highway: Historical traffic count data at this intersection was unavailable. Therefore, new weekday AM and PM peak hour traffic volume data was collected at this intersection on September 22, 2021.

- Belle Porte Avenue / 259th Street: Historical traffic count data at this intersection was unavailable. Therefore, new weekday AM and PM peak hour traffic volume data was collected at this intersection on September 22, 2021.

- Frampton Avenue / Pacific Coast Highway: Historical traffic count data at this intersection was unavailable. Therefore, new weekday AM and PM peak hour traffic volume data was collected at this intersection on September 22, 2021.

- Frampton Avenue / Project Driveway: The traffic count data approaching and departing the Frampton Avenue / 259th Street intersection were used to derive the northbound and southbound through volumes.

- Frampton Avenue / 259th Street: Historical traffic count data at this intersection was unavailable. Therefore, new weekday AM and PM peak hour traffic volume data was collected at this intersection on September 22, 2021.

- Frampton Avenue / Anaheim Street: Historical traffic count data at this intersection was unavailable. Therefore, new weekday AM and PM peak hour traffic volume data was collected at this intersection on September 22, 2021.

- Normandie Avenue / Pacific Coast Highway: Peak hour traffic volume data collected at this intersection in February 2020 (pre-pandemic) were increased by a 1.0% annual traffic growth rate through the year 2021 to estimate current year traffic volumes. Further discussion of the annual traffic growth rate is provided in Section 3.5.2.

[10] *Pandemic-related updates to LADOT's Transportation Assessment Requirements,* LADOT, April 17, 2020.

The existing traffic volumes at the study intersections during the weekday AM and PM peak hours are shown in ***Figure 3–10***. Summary data worksheets of the manual traffic counts at the study intersections are contained in ***Appendix C***.

3.5 Cumulative Development Projects

3.5.1 *Related Projects*

A forecast of on-street traffic conditions prior to occupancy of the Project was prepared by incorporating the potential trips associated with other known development projects (related projects) in the area. With this information, the potential impact of the Project can be evaluated within the context of the cumulative impact of all ongoing development. The related projects research was based on information on file at LADOT. Per the TAG, related projects within a radius of one-quarter mile from the farthest outlying study intersection should be included. Therefore, related projects within a 0.53-mile radius (one-quarter mile past the farthest outlying study intersection, Frampton Avenue / Anaheim Street) of the Project Site should be included. However, based on information on file at LADOT, there are no related projects within a 0.53-mile radius of the Project Site. Therefore, related projects within a one-mile radius have been included. The list of related projects in the Project Site area is presented in ***Table 3–2***. The location of the related projects is shown in ***Figure 3–11***.

Traffic volumes expected to be generated by the related projects were calculated using rates provided in the ITE *Trip Generation Manual*. The related projects' respective traffic generation for the weekday AM and PM peak hours, as well as on a daily basis for a typical weekday, is summarized in *Table 3–2*. The distribution of the related projects traffic volumes to the study intersections during the weekday AM and PM peak hours are displayed in ***Figure 3–12***.

3.5.2 *Ambient Traffic Growth*

In order to account for unknown related projects not included in this analysis, the existing traffic volumes were increased at an annual rate of 1.0% per year to and including the year 2026 (i.e., the anticipated year of Project buildout). The ambient growth factor was based on general traffic growth factors provided in the *2010 Congestion Management Program for Los Angeles County* ("CMP manual") and determined in consultation with LADOT staff. It is noted that based on review of the general traffic growth factors provided in the CMP manual for the Project Site area (i.e., Regional Statistical Area [RSA] 19, Palos Verdes, which includes the Project Site), it is anticipated that the existing traffic volumes are expected to increase at an annual rate of approximately 0.19% per year between the years 2020 and 2026. Thus, application of an annual growth factor of 1.0% annual growth results in a conservative, worst-case forecast of future traffic volumes in the area as it substantially exceeds the annual traffic growth rate published in the CMP manual. Furthermore, the CMP manual's traffic growth rate is intended to anticipate future traffic generated by development projects in the Project vicinity. Thus, the inclusion in this traffic analysis of a forecast of traffic generated by known related projects plus the use of an ambient growth traffic factor based on CMP traffic model data results in an even more conservative estimate of future traffic volumes at the study intersections.

4.0 CEQA ANALYSIS OF TRANSPORTATION IMPACTS

4.1 Conflicting with Plans, Programs, Ordinances, or Policies (Threshold T-1)

The City aims to achieve an accessible and sustainable transportation system that meets the needs of all users. The City's adopted transportation-related plans and policies affirm that streets should be safe and convenient for all users of the transportation system, including pedestrians, bicyclists, motorists, public transit riders, disabled persons, senior citizens, children, and movers of commercial goods. Therefore, the transportation requirements for proposed developments should be generally consistent with the City's transportation-related plans and policies.

As stated in Section 2.1.1 of the TAG, proposed projects shall be analyzed to identify potential conflicts with adopted City plans and policies and, if there is a conflict, improvements that prioritize access for and improve the comfort of people walking, bicycling, and riding transit in order to provide safe and convenient streets for all users should be identified. Projects designed to encourage sustainable travel help to reduce vehicle miles traveled. This section provides a review of the screening criteria and a summary of the consistency of the Project with the City's adopted plans and policies.

4.1.1 *Screening Criteria*

Per Section 2.1.2 of the TAG, if the project requires a discretionary action, and the answer is yes to any of the following questions, further analysis is required to assess whether the Project would conflict with adopted City plans, programs, ordinances, or policies that establish the transportation planning framework for all travel modes:

- Does the project require a discretionary action that requires the decision maker to find that the decision substantially conforms to the purpose, intent, and provisions of the General Plan?
    - Yes, the Project requires a discretionary action.
- Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?
    - No, the Project is not known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety.
- Is the project proposing to, or required to make any voluntary or required modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)?
    - Yes, a two-foot right-of-way dedication requirement and a three-foot roadway widening with a new 15-foot sidewalk improvement is required for Pacific Coast Highway along the Project Site. A five-foot right-of-way dedication requirement and a new five-foot sidewalk improvement is required for Frampton Avenue along the Project Site. A ten-foot right-of-way dedication and a varying street widening

improvement to achieve an 18-foot half street width and new 12-foot sidewalk is required for 259th Street along the Project Site. All dedications and improvements will be confirmed with the City's Bureau of Engineering (BOE).

As the answer is "yes" to two of the screening criteria questions, further analysis is required to assess whether the Project would conflict with adopted City plans, programs, ordinances, or policies.

4.1.2 *Impact Criteria and Methodology*

The impact criteria set forth in Appendix G to the State CEQA Guidelines, as well as Section 2.1.3 of the City's TAG, regarding conflicts with plans, programs, ordinances, or policies (referred to as Threshold T-1 in the TAG) are as follows:

- Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

The threshold test is to assess whether a project would conflict with an adopted program, policy, plan, or ordinance that is adopted to protect the environment. In general, transportation policies or standards adopted to protect the environment are those that support multimodal transportation options and a reduction in VMT. Conversely, a project would not always have a significant impact merely based on whether or not it would implement a particular transportation-related program, plan, policy, or ordinance. Many of these programs must be implemented by the City itself over time, and over a broad area, and it is the intention of this threshold test to ensure that proposed development projects and plans do not preclude the City from implementing adopted programs, plans and policies.

The methodology for determining a project's transportation impact associated with conflicts with plans, programs, ordinances, or policies is describe in the TAG as follows:

- A project that generally conforms with and does not obstruct the City's development policies and standards will generally be considered to be consistent. The Project Applicant should review the documents and ordinances identified in the TAG (refer to Table 2.1-1 thereof) for City plans, policies, programs, ordinances and standards relevant to determining project consistency. TAG Attachment D: Plan Consistency Worksheet provides questions that must be answered in order to help guide whether the project conflicts with City circulation system policies. A "yes" or "no" answer to these questions does not determine a conflict. Rather, as indicated in TAG Attachment D, the Project Applicant must provide substantiating information to help determine whether the proposed project precludes the City's implementation of any adopted policy and/or program that was adopted to protect the environment. A mere conflict with adopted transportation related policies, or standards that require administrative relief or legislative change does not in itself constitute an impact.

- If vacation of a public right-of-way, or relief from a required street dedication is sought as part of a proposed project, an assessment should be made as to whether the right-of-way in question is necessary to serve a long-term mobility need, as defined in Mobility Plan 2035, transportation specific plan, or other planned improvement in the future.

Per Section 2.1.4 of the TAG, the analysis of cumulative impacts may be quantitative or qualitative. Each of the plans, ordinances, and policies reviewed to assess potential conflicts with proposed projects should be reviewed to assess cumulative impacts that may result from the proposed project in combination with other development projects in the study area. In addition, the cumulative analysis should also consider planned transportation system improvements within the study area as identified in consultation with LADOT.

Related projects to be considered in the cumulative analysis are known development projects located within a one-half mile radius of the Project Site. As discussed in Section 3.5.1, based on the information on file at LADOT, there are no related projects within a one-half mile of the Project Site. Please refer to the list of related projects identified in *Table 3–2* and *Figure 3–11* for the location of the related projects in relation to the Project Site.

4.1.3 *Review of Project Consistency*

This section provides a summary of the consistency review that compares the characteristics of the Project and site design features (i.e., including the site access and circulation scheme) with the City's relevant plans and policies. ***Appendix D*** provides the Plans, Policies, and Programs Worksheet from the TAG, and provide additional detail regarding the plans, programs, ordinances, and policies review.

As confirmed in *Appendix D*, the Project would not conflict with the relevant City plans, policies and programs and does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives. The Project will not conflict with any plans or policies that govern the public right-of-way, such as LADOT's Manual of Policy and Procedures (MPP) Section 321, Driveway Design, and the Citywide Design Guidelines – Guideline 2. The Project has been found to be consistent with the greenhouse gas (GHG) reduction targets forecasted in *Connect SoCal,* the SCAG RTP/SCS. Additionally, the Project has been found to be consistent with the transportation-related elements of the Plan for a Healthy Los Angeles (Healthy LA), Vision Zero, the Mobility Hubs Reader's Guide, the City's Walkability Checklist, and the Wilmington-Harbor City Community Plan.

Therefore, the Project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities, and the impact would therefore be "less than significant". Furthermore, the Project Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance in LAMC Section 12.26.J) and other requirements pursuant to the LAMC. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

4.1.4 *Review of Cumulative Consistency*

Per Section 2.1.4 of the TAG, the analysis of cumulative consistency requires consultation and confirmation with LADOT and the City's Department of City Planning (LADCP).

As with the Project, the related projects and any future development projects will include adequate bicycle facilities and include high density urban uses in proximity to the nearby multimodal transportation facilities. The related projects and any future development projects, as with the Project, would not conflict with adjacent street designations and classifications. Accordingly, there would be no significant cumulative impacts to which the Project, as well as other nearby related projects contribute to regarding transportation policies or standards adopted to protect the environment and support multimodal transportation options and a reduction in VMT.

Based on the discussion and conclusion in the preceding Section 4.1.3, the guiding language contained in the City's TAG, and review of related projects in the Project vicinity, this documentation is sufficient to demonstrate that there is also no cumulative inconsistency with the City's plans, policies, ordinances and programs, and therefore, the cumulative impacts of the Project would be less than significant. In addition, since the Project does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives, there is no cumulative inconsistency that can be determined.

4.2 VMT Analysis (Threshold T-2.1)

The State of California Governor's Office of Planning and Research (OPR) issued proposed updates to the CEQA Guidelines in November 2017 and an accompanying technical advisory guidance in April 2018 (*OPR Technical Advisory*) that amends the Appendix G question for transportation impacts to delete reference to vehicle delay and level of service and instead refer to Section 15064.3, subdivision (b)(1) of the CEQA Guidelines asking if the project will result in a substantial increase in vehicle miles traveled (VMT). Section 15064.3, subdivision (b)(1) states the following:

- Land Use Projects. Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be considered to have a less than significant transportation impact.

Comprehensive updates to the State CEQA Guidelines were certified and adopted by the California Natural Resources Agency in December 2018. Accordingly, the City adopted significance criteria for transportation impacts based on VMT for land use projects and plans in accordance with the amended Appendix G question:

- Threshold T-2.1: For a land use project, would the project conflict or be inconsistent with CEQA guidelines section 15064.3, subdivision (b)(1)?

For land use projects, the intent of this threshold is to assess whether a land use project causes substantial vehicle miles traveled. The City has developed the following screening and impact criteria to address this question. The criteria below are based on the OPR technical advisory but reflects local considerations.

If the project requires discretionary action, and the answer is no to either T-2.1-1 or T-2.1-2, further analysis will not be required for CEQA Threshold T-2.1, and a "no impact" determination can be made for that threshold:

- T-2.1-1: Would the land use project generate a net increase of 250 or more daily vehicle trips?

For purposes of screening the daily vehicle trips, a proposed project's daily vehicle trips should be estimated using the City's VMT Calculator tool or the most recent edition of the ITE *Trip Generation Manual*. TDM strategies should not be considered for the purposes of screening. If existing land uses are present on the project site or there were previously terminated land uses that meet the criteria for trip credits described in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the daily vehicle trips generated by the existing or qualified terminated land uses can be estimated using the VMT Calculator tool and subtracted from the proposed project's daily vehicle trips to determine the net increase in daily vehicle trips.

- T-2.1-2: Would the project generate a net increase in daily VMT?

For the purpose of screening the VMT, a project's daily VMT should be estimated using the City's VMT Calculator tool or the City's Travel Demand Forecasting (TDF) model. TDM strategies should not be considered for the purpose of screening. If existing land uses are present on the project site or there were previously terminated land uses that meet the criteria for trip credits description in the trip generation methodology discussion (refer to Subsection 3.3.4.1 of the TAG), the daily VMT generated by the existing or qualified terminated land uses can be estimated using the City VMT Calculator tool and subtracted from the project's daily VMT to determine the net increase in daily VMT.

In addition to the above screening criteria, the portion of, or the entirety of a project that contains small-scale or local serving retail uses[11] are assumed to have less than significant VMT impacts. If the answer to the following question is no, then that portion of the project meets the screening criteria, and a no impact determination can be made for the portion of the project that contains retail uses. However, if the retail project is part of a larger mixed-use project, then the remaining portion of the project may be subject to further analysis in accordance with the above screening criteria. Projects that include retail uses in excess of the screening criteria would need to evaluate the entirety of the project's VMT, as specified in Subsection 2.2.4 of the TAG.

- If the project includes retail uses, does the portion of the project that contain retail uses exceed a net 50,000 square feet?

[11] As noted in the TAG, the definition of retail for this purpose includes restaurant.

4.2.1 *Impact Criteria and Methodology*

For development projects, the proposed project will have a potential VMT impact if the project meets the following:

- For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the Area Planning Commission (APC) area in which the project is located.

- For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located.

- For regional serving retail projects, the project would result in a net increase in VMT.

- For other land use types, measure VMT impacts for the work trip element using the criteria for office projects above.

Different VMT significance thresholds have been established for each APC boundary area as the characteristics of each are distinct in terms of land use, density, transit availability, employment, etc. The City's significance thresholds (i.e., provided on a daily household VMT per capita basis and a daily work VMT per employee basis) for each of the seven APC boundary areas are presented in ***Table 4–1***. As the Project Site is located within the Harbor APC, the VMT impact criteria (i.e., 15% below the APC average) applicable to the Project is 9.2 Daily Household VMT per Capita and 12.3 Daily Work VMT per Employee.

The impact methodology set forth in the TAG for a mixed-use project such as the Project is as follows:

- Mixed-Use Projects. The project VMT impact should be considered significant if any one (or all) of the project land uses exceed the impact criteria for that particular land use, taking credit for internal capture. In such cases, mitigation options that reduce the VMT generated by any or all of the land uses could be considered.

4.2.2 *Summary of Project VMT Analysis*

The daily vehicle trips and VMT expected to be generated by the Project were forecast using Version 1.3 of the City's VMT Calculator tool. Copies of the detailed City of Los Angeles VMT Calculator worksheets for the proposed project are contained in *Appendix B*. As indicated in the summary VMT Calculator worksheet, the Project is forecast to generate the following:

- The Project is estimated to generate a total of 1,906 daily vehicle trips and 1,760 net new daily vehicle trips.

    - As described in Section 2.8.1 herein, it is noted that Version 1.3 of the City's VMT Calculator does not include a Mobile Home Park land use. In accordance with the TAG, the "Custom Land Use Type" featured was used to input daily trips associated

Table 4-1
CITY OF LOS ANGELES VMT IMPACT CRITERIA [1]

AREA PLANNING COMMISSION	15% BELOW APC CRITERIA [2]	
	DAILY HOUSEHOLD VMT PER CAPITA	DAILY WORK VMT PER EMPLOYEE
Central	6.0	7.6
East Los Angeles	7.2	12.7
Harbor	**9.2**	**12.3**
North Valley	9.2	15.0
South Los Angeles	6.0	11.6
South Valley	9.4	11.6
West Los Angeles	7.4	11.1

[1] Source: *LADOT Transportation Assessment Guidelines,* July 2020.

[2] The development project will have a potential impact if the project meets the following:
- For residential projects, the project would generate household VMT per capita exceeding 15% below the existing average household VMT per capita for the APC area in which the project (refer to above [source: Table 2.2-1 of the TAG]).
- For office projects, the project would generate work VMT per employee exceeding 15% below the existing average work VMT per employee for the APC in which the project is located (refer to above [source: Table 2.2-1 of the TAG]).
- For retail projects, the project would result in a net increase in VMT.
- For other land use types, measure VMT impacts for the work trip element using the criteria for office project above (source: Table 2.2-1 of the TAG).

with the existing A-1 Mobile Home Park. The ITE Land Use Code 240 (Mobile Home Park) trip generation average rate was used to estimate the daily trip reduction related to the existing use. The existing A-1 Mobile Home Park is estimated to generate 189 daily vehicle trips on a typical weekday and was the daily trip value utilized within Version 1.3 of the City's VMT Calculator.

- The estimated Daily Household VMT per Capita for the Project is 7.1 Daily Household VMT per Capita, which is less than the Harbor APC significance threshold of 9.2 Daily Household VMT per Capita.

- Per the TAG, the Project's commercial component, which totals 1,500 square feet, is considered a local-serving retail use. As the commercial component provides less than 50,000 square feet, the Project's commercial component would result in a "less than significant" VMT impact.

It is noted that the Project will include bike parking per the requirements of the LAMC as TDM Project Design Feature, as described in Section 2.9 herein. Thus, based on the above analyses, the Project is not expected to result in a significant VMT impact. Therefore, no mitigation is necessary as it relates to VMT.

4.2.3 *Summary of Cumulative VMT Analysis*

As stated in the City's TAG document (refer to Section 2.2.4 thereof), analyses should consider both short-term and long-term project effects on VMT. Short-term effects are evaluated in the detailed Project-level VMT analysis summarized above. Long-term, or cumulative, effects are determined through a consistency check with SCAG's RTP/SCS. The RTP/SCS is the regional plan that demonstrates compliance with air quality conformity requirements and greenhouse gas (GHG) reduction targets. As such, projects that are consistent with this plan in terms of development, location, density, and intensity, are part of the regional solution for meeting air pollution and GHG goals. Projects that are deemed to be consistent would have a less than significant cumulative impact on VMT. Development in a location where the RTP/SCS does not specify any development may indicate a significant impact on transportation. However, as noted in the City's TAG document, for projects that do not demonstrate a project impact by applying an efficiency-based impact threshold (i.e., VMT per capita or VMT per employee) in the analysis, a less than significant project impact conclusion is sufficient in demonstrating there is no cumulative VMT impact. Projects that fall under the City's efficiency-based impact thresholds are already shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS.

Based on the above Project-related VMT analysis and the conclusions reported in Section 4.2.2 (i.e., which conclude that the Project falls under the City's efficiency-based impact thresholds and thus are already shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS), the Project's cumulative VMT impact would be less than significant.

4.3 Geometric Design (Threshold T-3)

As stated in the City's TAG (refer to Section 2.4.1 thereof), impacts regarding the potential increase of hazards due to a geometric design feature generally relate to the design of access points to and from the project site, and may include safety, operational, or capacity impacts. Impacts can be related to vehicle/vehicle, vehicle/bicycle, or vehicle/pedestrian conflicts as well as to operational delays caused by vehicles slowing and/or queuing to access a project site. These conflicts may be created by the driveway configuration or through the placement of project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to busy or congested intersections. Evaluation of access impacts require details relative to project land use, size, design, location of access points, etc. These impacts are typically evaluated for permanent conditions after project completion but can also be evaluated for temporary conditions during project construction. Project access can be analyzed in qualitative and/or quantitative terms, and in conjunction with the review of internal site circulation and access to parking areas. All proposed site access points should be evaluated.

4.3.1 *Screening Criteria*

If the project requires a discretionary action, and the answer is "yes" to either of the following questions, further analysis will be required to assess whether the project would result in impacts due to geometric design hazards or incompatible uses:

- Is the project proposing new driveways, or introducing new vehicle access to the property from the public right-of-way?

  - Yes, the Project proposes to introduce new vehicular access to the property from the public right-of way. The Project will remove the existing Frampton Avenue driveway and add a new driveway further south along the Project Site's Frampton Avenue frontage, away from the Pacific Coast Highway intersection. This driveway will serve as the vehicular access point to the Project. Additionally, the Project will remove the existing driveways along the Project Site's 259th Street frontage and add a driveway at the terminus of the 259th Street cul-de-sac, at the southeasterly portion of the Project Site. This driveway will provide access to the Project's loading zone. Upon completion of the Project, there will continue to be one driveway along the Project Site's Frampton Avenue frontage, the number of driveways along the Project Site's 259th Street frontage will be reduced from two to one, and the number of driveways along the Project Site's Pacific Coast Highway frontage will be reduced from two to zero.

- Is the project proposing to, or required to make any voluntary or required modifications to the public right-of-way (i.e., street dedications, reconfigurations of curb line, etc.)?

  As stated in the City's TAG document (refer to Section 2.4.2 thereof), for the purpose of the screening for projects that are making physical changes to the public right-of-way, determine the street designation and improvement standard for any project frontage along streets classified as an Avenue or Boulevard (as designated in the City's General Plan)

using the Mobility Plan 2035, or NavigateLA. If any street fronting the project site is an Avenue or Boulevard and it is determined that additional dedication, or physical modifications to the public right-of-way are proposed or required, the answer to this question is yes. For projects not subject to dedication and improvement requirements under the LAMC, though the project does propose dedications or physical modifications to the public right-of-way, the answer to this question is yes. Based on a review of the Project, the following answer is provided:

- Yes, a two-foot right-of-way dedication requirement and a three-foot roadway widening with a new 15-foot sidewalk improvement is required for Pacific Coast Highway along the Project Site. A five-foot right-of-way dedication requirement and a new five-foot sidewalk improvement is required for Frampton Avenue along the Project Site. A ten-foot right-of-way dedication and a varying street widening improvement to achieve an 18-foot half street width and new 12-foot sidewalk is required for 259th Street. All dedications and improvements will be confirmed with BOE.

As the answer is "yes" to the two screening criteria questions, further analysis is required to assess whether the Project would result in impacts due to geometric design hazards or incompatible uses.

4.3.2 *Impact Criteria and Methodology*

The impact criteria set forth in Appendix G of the CEQA Guidelines, as well as the City's TAG for substantially increasing hazards due to a geometric design feature or incompatible use (referred to a Threshold T-3) is defined as follows:

- Threshold T-3: Would the project substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

  - No, the Project would not substantially increase hazards due to a geometric design feature. Vehicular access to the Project Site will be provided via one driveway along the east side of Frampton Avenue. Additionally, access to the Project's loading area will be provided via one driveway at the terminus of the 259th Street cul-de-sac. The Project's driveways will be designed per City standards. Furthermore, upon completion of the Project, there will continue to be one driveway along the Project Site's Frampton Avenue frontage, the number of driveways along the Project Site's 259th Street frontage will be reduced from two to one, and the number of driveways along the Project Site's Pacific Coast Highway frontage will be reduced from two to zero.

Preliminary project access plans are to be reviewed in light of commonly accepted traffic engineering design standards to ascertain whether any deficiencies are apparent in the site access

plans which would be considered significant. The determination of significance shall be on a case-by-case basis, considering the following factors:

- The relative amount of pedestrian activity at project access points.
- Design features/physical configurations that affect the visibility of pedestrians and bicyclists to drivers entering and exiting the site, and the visibility of cars to pedestrians and bicyclists.
- The type of bicycle facilities the project driveway(s) crosses and the relative level of utilization.
- The physical conditions of the site and surrounding area, such as curves, slopes, walks, landscaping or other barriers, that could result in vehicle/pedestrian, vehicle/bicycle, or vehicle/vehicle impacts.
- The project location, or project-related changes to the public right-of-way, relative to proximity to the High Injury Network or a Safe Routes to School program area.
- Any other conditions, including the approximate location of incompatible uses that would substantially increase a transportation hazard.

With respect to vehicle, bicycle and pedestrian safety impacts, the City's TAG (refer to Section 2.4.4 thereof) indicate that a review of all project access points, internal circulation, and parking access from an operational and safety perspective (for example, turning radii, driveway queuing, line of sight for turns into and out of project driveway[s]) should be conducted. Where project driveways would cross pedestrian facilities or bicycle facilities (bike lanes or bike paths), operational and safety issues related to the potential for vehicle/pedestrian and vehicle/bicycle conflicts and the severity of consequences that could result should be considered. In areas with moderate to high levels of pedestrian or bicycle activity, the collection of pedestrian or bicycle count data may be required.

4.3.3 *Qualitative Review of Site Access Points*

As discussed in Section 3.3.2 herein, the Project Site has frontage along Pacific Coast Highway, a Boulevard II with a posted speed limit of 35 miles per hour, Frampton Avenue, a Local Street – Standard with a posted speed limit of 25 miles per hour, and 259th Street, a Local Street – Standard with an assumed speed limit of 25 miles per hour. The Project will improve the pedestrian experience along these corridors, including at the Project Site access points, which will enhance connections to and from the numerous pedestrian destinations in the direct vicinity of the Project Site. As previously noted, the Project will improve the sidewalks along the Pacific Coast Highway property frontage and construct new sidewalks along the Frampton Avenue and 259th Street property frontages to enhance the pedestrian experience and ensure ADA compliance. The sidewalk and driveway improvements will be designed to improve conditions for all modes of travel and reduce the potential for vehicle/pedestrian conflicts at the driveways. Excellent line of sight is provided for all modes of travel (motorists, pedestrians, and bicyclists)

at the Project Site driveways. Improved sidewalks will be provided along the Project Site's Pacific Coast Highway frontage, and new sidewalks will be provided along the Project Site's Frampton Avenue and 259th Street frontages. Signalized crossings are provided within convenient walking distance to the Project Site along Pacific Coast Highway. The Project will remove the two existing driveways and will not add driveways along the Project Site's Pacific Coast Highway frontage. The Project will shift the existing Frampton Avenue driveway further south, away from the Pacific Coast Highway intersection. The Project will not increase the number of driveways along the Project Site's Frampton Avenue frontage. While the Project will add a new driveway along the Project Site's 259th Street frontage, the Project will remove the existing driveways along the Project Site's 259th Street frontage, reducing the number of curb cuts along the Project Site's 259th Street frontage from two to one. The Project Site is located on flat terrain and the physical condition of the Project Site and proposed entry/exit points would be improved in conjunction with the Project, therefore, the potential for vehicle/pedestrian, vehicle/bicycle, or vehicle/vehicle impacts would be reduced. Pacific Coast Highway is noted in the City's HIN. However, the Project will not preclude the City from making future improvements along the Project Site's Pacific Coast Highway frontage. Given the existing physical conditions of the Project Site and planned reduction of curb cuts along Pacific Coast Highway and 259th Street, no safety concerns related to geometric design are noted.

The driveways would be designed to comply with LADOT standards. The driveways would not require the removal or relocation of existing passenger transit stops and would be designed and configured to avoid or minimize potential conflicts with transit services and pedestrian traffic. No security gates or other parking control features are proposed along the Project Site driveways in close proximity to the public right-of-way. As discussed in a following section, no excessive vehicle queuing is anticipated at the Project Site driveways. The driveways will be designed to meet City standards to ensure adequate maneuvering by vehicles entering and exiting the Project Site. Therefore, it can be determined that the Project would not substantially increase hazards due to a geometric design feature or incompatible use, and a less than significant impact determination can be reached.

4.4 Freeway Safety Analysis

It is noted that the City issued an interim guidance on the preparation of a freeway safety analysis for land use projects.[12] If the answer is yes to the following question, a freeway safety analysis will be required to assess whether the project would lengthen a forecasted off-ramp queue and create speed differentials between vehicles exiting freeway off-ramps and vehicles operation on the freeway mainline:

- Does the land use project add 25 or more trips to any nearby freeway off-ramp serving the project site in either the morning or afternoon peak-hour?

[12] *LADOT Transportation Assessments – Interim Guidance for Freeway Safety Analysis,* City of Los Angeles Department of Transportation, May 2020.

- No, as shown in ***Figure 4–1***, the Project does not add 25 or more trips to any nearby freeway off-ramp serving the Project Site in either the morning or afternoon peak hour.

As the answer is "no" to the screening criteria question (i.e., the Project will not add 25 or more trips to nearby freeway off-ramps serving the Project Site during either the AM of PM peak hour), a freeway safety analysis is not required and the Project would result in a less than significant freeway safety impact.

4.5 CEQA Transportation Measures

4.5.1 *Transportation Demand Management*

The Project includes one TDM strategy to be implemented as a Project Design Feature and is described in detail in Section 2.9 above. The TDM strategy includes:

- Include Bike Parking per LAMC.

The Project Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance, referred to in the LAMC Section 12.26.J) and the other requirements per the City's Municipal Code. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

4.5.2 *CEQA Transportation Summary*

Based on the findings above, it can be determined that the Project will not conflict with City plans, policies, ordinances and programs, will not result in a significant VMT impact, will not substantially increase hazards due to a geometric design feature, and will not cause a freeway safety impact. Therefore, a "less than significant" determination can be made as related to the CEQA analysis. No transportation mitigation measures are required or recommended.

5.0 NON-CEQA ANALYSIS

The authority for requiring non-CEQA transportation analysis and potentially requiring improvements to address identified deficiencies lies in the City of Los Angeles' Site Plan Review authority as established in LAMC Section 16.05. As provided in Section 16.05:

> "The purposes of site plan review are to promote orderly development, evaluate and mitigate significant environmental impacts, and promote public safety and the general welfare by ensuring that development projects are properly related to their sites, surrounding properties, traffic circulation, sewers, other infrastructure and environmental setting; and to control or mitigate the development of projects which are likely to have a significant adverse effect on the environment as identified in the City's environmental review process, or on surrounding properties by reason of inadequate site planning or improvements."

Additional authority is found in other City ordinances, such as certain transportation specific plans. The impacts, also referred to as deficiencies, discussed in the City's TAG are not intended to be interpreted as thresholds of significance, or significance criteria for purposes of CEQA review unless otherwise specifically identified (refer to Section 4.0).

5.1 Pedestrian, Bicycle, and Transit Access

The assessment of pedestrian, bicycle, and transit facilities is intended to determine a project's potential effect on pedestrian, bicycle, and transit facilities in the vicinity of a project. The deficiencies could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities).

5.1.1 *Screening Criteria*

Per Section 3.2.2 of the TAG, if the answer is yes to all of the following questions, further analysis is required to assess whether the Project would negatively affect existing pedestrian, bicycle, or transit facilities:

- Does the land use project involve a discretionary action that would be under review by LADCP?
  - Yes, the Project involved a discretionary action that would be under review by LADCP.
- Does the land use project include the construction, or addition of 50 dwelling units or guestrooms or combination thereof, or 50,000 square feet of non-residential space?
  - Yes, the Project proposes the construction of 312 market-rate residential apartment dwelling units and 42 affordable family housing units. Additionally, the Project proposes the construction of 1,500 square feet of new ground-floor commercial floor area.

- Would the project generate a net increase of 1,000 or more daily vehicle trips, or is the project's frontage along a street classified as an Avenue or Boulevard (as designated in the City General Plan), 250 linear feet or more, or is the project's building frontage encompassing an entire block along a street classified as an Avenue or Boulevard by the City's General Plan?

    - Yes, the Project will generate a net increase 1,000 or more daily vehicle trips. As indicated on the Screening Tab of the City's VMT Calculator (Page 1 of *Appendix B*), the Project will generate 1,760 net new daily vehicle trips. The Project Site's frontage along Pacific Coast Highway, which is designated as a Boulevard II by the City, is approximately 282 feet. The Project Site's frontage does not encompass an entire block.

As the answer is "yes" to all of the screening criteria, further analysis is required to assess whether the Project would negatively affect existing pedestrian, bicycle, or transit facilities.

5.1.2 *Evaluation Criteria*

Factors to consider when assessing a project's potential effect on pedestrian, bicycle and transit facilities, include, but are not limited to, the following:

- Would a project directly or indirectly result in a permanent removal or modification that would lead to the degradation of pedestrian, bicycle, or transit facilities, such as:

    - Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/bulbouts

    - Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.)

    - Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities

    - Removal of other existing transportation system elements supporting sustainable mobility

    - Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds

    - Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access way

    - Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.)

- Would a project intensify use of existing pedestrian, bicycle, or transit facilities, such as:

- Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting. Refer to the Guidelines for Marked Crosswalks Across Uncontrolled Locations, in LADOT's MPP Section 344, or Guidelines for Traffic Signals in MPP Section 353 to determine approval and warrant criteria for an additional crossing.

- Result in new pedestrian demand between project site entries/exits and major destinations or transit stops expected to serve the development where there are missing pedestrian facilities (e.g., gaps in the sidewalk network) or substandard pedestrian facilities (e.g., narrow or uneven sidewalks, no crosswalks at intersections or mid-block, no marked crossing, or push button crossing rather than actuated, etc.).

- Increase transit demand at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, or unlit areas.

The locations and descriptions of pedestrian, bicycle and transit facilities in the Project Site vicinity that could be affected by Project-related traffic or by users traveling between the Project Site and nearby destinations is presented in Section 3.0 herein. Potential pedestrian destinations located within an approximately one-quarter mile (i.e., 1,320 feet) radius from the Project Site are noted in *Figure 3–1*. The existing pedestrian, bicycle, and transit facilities within a one-quarter mile (i.e., 1,320 feet) radius from the Project Site are noted in *Figure 3–2*. The location of the existing and future bicycle facilities within the immediate Project Site vicinity is shown in *Figure 3–5*. The location of the City's PEDs and NEN within the immediate Project Site vicinity and in the surrounding area is shown in *Figures 3–3* and *3–4*, respectively.

5.1.3 *Results of Qualitative Access Review*

Table 5–1 summarizes the City's criteria associated with the two guiding questions regarding the pedestrian, bicycle, and transit access assessment and the determination of potential Project-related effect on the subject facilities in the vicinity of the Project. The determination is based on whether the Project would create deficiencies that could be physical (through removal, modification, or degradation of facilities) or demand-based (by adding pedestrian or bicycle demand to inadequate facilities). As indicated in *Table 5–1*, the Project does not include any features that would permanently remove, adversely modify, or degrade pedestrian, bicycle, and transit facilities in the Project vicinity. As also noted in *Table 5–1*, it is possible that the Project may nominally intensify use of pedestrian, bicycle, and transit facilities in the Project vicinity. However, such nominally intensified use is not expected to result in a deficient condition. As also shown in *Table 5–1*, the Project has the potential to nominally increase pedestrian activity to an existing unmarked crossing (e.g., across Frampton Avenue at Pacific Coast Highway), but this is not expected to result in a deficient condition.

It is noted that the Project Site's Pacific Coast Highway frontage is included on the HIN. As such, it is understood that LADOT staff may coordinate internal review with the Vision Zero

Table 5-1
PROJECT EVALUATION OF PEDESTRIAN, BICYCLE, AND TRANSIT ACCESS

11-Nov-21

CRITERIA	PROJECT RESPONSE	FURTHER QUANTITATIVE ASSESSMENT?
PERMANENT REMOVAL OR MODIFICATION OF FACILITIES		
Removal or degradation of existing sidewalks, crosswalks, pedestrian refuge islands, and/or curb extensions/bulbouts.	**No**	**No**
Removal or degradation of existing bikeways and/or supporting facilities (e.g., bikeshare stations, on-street bike racks/parking, bike corrals, etc.).	**No**	**No**
Removal or degradation of existing transit and/or local circulator facilities including stop, bench, shelter, concrete pad, bus lane, or other amenities.	**No**	**No**
Removal of other existing transportation system elements supporting sustainable mobility.	**No**	**No**
Increase street crossing distance for pedestrians; increase in number of travel/turning lanes; increase in turning radius or turning speeds.	**No**	**No**
Removal, degradation, or narrowing of an existing sidewalk, path, crossing, or pedestrian access way.	**No**	**No**
Removal or narrowing of existing sidewalk-street buffering elements (e.g., curb extension, parkway, planting strip, street trees, etc.).	**No**	**No**
INTENSIFY USE OF FACILITIES		
Increase in pedestrian or vehicle volume, and thereby increase the need or attraction to cross a street at unmarked pedestrian crossings or unsignalized or uncontrolled intersections where a crossing is not available without significant rerouting. Refer to the Guidelines for Marked Crosswalks Across Uncontrolled Locations, in LADOT's Manual of Policies and Procedures (MPP) Section 344, or Guidelines for Traffic Signals in MPP Section 353 to determine approval and warrant criteria for an additional crossing.	**The Project may nominally increase pedestrians attempting to cross Pacific Coast Highway at the Frampton Avenue intersection. Signalized crossings are available approximately 350 feet west of the Frampton Avenue / Pacific Coast Highway intersection at the Belle Porte Avenue / Pacific Coast Highway intersection and 670 feet east of the Frampton Avenue / Pacific Coast Highway intersection at the Normandie Avenue / Pacific Coast Highway intersection. Therefore, the need for a marked crosswalk is not warranted per LADOT MPP Section 344.**	**No**
Result in new pedestrian demand between project site entries/exits and major destinations or transit stops expected to serve the development where there are missing pedestrian facilities (e.g., gaps in the sidewalk network) or substandard pedestrian facilities (e.g., narrow or uneven sidewalks, no crosswalks at intersections or mid-block, no marked crossing, or push button crossing rather than actuated, etc.).	**The Project may nominally increase pedestrians walking to local destinations and/or transit stops. There are no observed missing pedestrian facilities along Pacific Coast Highway in the Project vicinity. There are no sidewalks along the Project Site's Frampton Avenue and 259th Street frontages. However, sidewalks will be constructed along the Project Site's Frampton Avenue and 259th Street frontages as part of the Project.**	**No**
Increase transit demand at bus stops that lack marked crossings, with insufficient sidewalks, or are in isolated, unshaded, or unlit areas.	**The Project may nominally increase pedestrians walking to local transit stops. Transit stops for Metro Lines 205 and 232, LADOT CE Line 448, and GTrans Line 2 are provided at the Belle Porte Avenue / Pacific Coast Highway intersection. Transit stops for the aforementioned lines, along with Metro Line 550, are provided at the Normandie Avenue / Pacific Coast Highway intersection. The Belle Porte Avenue / Pacific Coast Highway and Normandie Avenue / Pacific Coasy Highway intersections are signalized and provide crosswalks with pedestrian phasing on all legs. Bus benches within shelters are provided for transit riders in the southbound, eastbound, and westbound directions at the Normandie Avenue / Pacific Coast Highway intersection. Bus benches are provided for eastbound transit riders at the Belle Porte Avenue / Pacific Coast Highway intersection and northbound transit riders at the Normadie Avenue / Pacific Coast Highway intersection.**	**No**

Programs Bureau to determine if safety-related measures are needed to support safe access to and/or from the development site for vulnerable road users (i.e., pedestrians and bicyclists).

5.2 Project Access and Circulation Review

Project access and circulation constraints relate to the provision of access to and from the project site, and may include safety, operational, or capacity constraints. Constraints can be related to vehicular/vehicular, vehicular/bicycle, or vehicular/pedestrian constraints as well as to operational delays. These conflicts may be created by the driveway configuration or through the placement of Project driveway(s) in areas of inadequate visibility, adjacent to bicycle or pedestrian facilities, or too close to an intersection or crosswalk. The Project access and circulation has been evaluated for permanent conditions after Project completion. ***Table 5–2*** summarizes the vehicle queuing analysis prepared for each of the study locations for the representative intersection traffic movements for the weekday AM and PM peak hours. ***Appendix F*** contains the analysis data worksheets for the study intersections.

5.2.1 *Screening Criteria*

For land use projects, if the answer is yes to both of the following questions (refer to Section 3.3.2 of the TAG), further analysis will be required to assess whether the project would negatively affect project access and circulation:

- Does the land use project involve a discretionary action that would be under review by the Department of City Planning?
    - Yes, the Project will require a discretionary action that would be under review by the Department of City Planning.
- Would the land use project generate a net increase of 250 or more daily vehicle trips?
    - Yes, the Project will generate a net increase of 250 or more daily vehicle trips. As indicated on the Screening Tab of the VMT Calculator (Page 1 of *Appendix B*), the Project would generate 1,760 net new daily vehicle trips.

As the answer is "yes" to both of the screening criteria questions (i.e., the Project will require a discretionary action and the Project will generate more than 250 daily trips), further analysis is required to evaluate Project access, safety and circulation.

5.2.2 *Evaluation Criteria*

For operational evaluation of land use projects, the City's TAG requires a quantitative evaluation of the Project's expected access and circulation operations. Project access is considered constrained if the Project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard (as designated in the Mobility Plan 2035) at Project driveway(s) or would cause or substantially extend queuing at nearby signalized intersections. Unacceptable or extended queuing may be defined as follows:

Table 5-2

[1] Pursuant to the *LADOT Transportation Assessment Guidelines,* July 2020, the Highway Capacity Manual (HCM) methodology for signalized and unsignalized intersections was utilized to calculate vehicle queuing.

[2] Control delay reported in seconds per vehicle.

[3] Signalized Intersection Levels of Service were based on the following criteria:

Control Delay (s/veh)	LOS
<= 10	A
> 10-20	B
> 20-35	C
> 35-55	D
> 55-80	E
> 80	F

Unsignalized Intersection Levels of Service were based on the following criteria:

Control Delay (s/veh)	LOS
<= 10	A
> 10-15	B
> 15-25	C
> 25-35	D
> 35-50	E
> 50	F

[4] The 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes. The HCM 6th Edition methodology worksheets report queues in number of vehicles, however an average vehicle length of 25 feet was assumed for analysis purposes. The reported queues therefore represent the calculated maximum back of queue in feet.

[5] Represents the change in calculated maximum back of queue (in feet) due to the addition of Project-related traffic.

- Spill over from turn pockets into through lanes.

- Block cross streets or alleys.

- Contribute to gridlock congestion. For the purposes of this section, "gridlock" is defined as the condition where traffic queues between closely spaced intersections and impedes the flow of traffic through upstream intersections.

The City's TAG acknowledges that demand for curbside space has substantially increased due to the continued expansion of driver-for-hire transportation network companies (TNCs) and shared mobility services. As such, the TAG states that a transportation assessment should characterize the onsite loading demand of the project frontage and answer the following questions:

- Would the project result in passenger loading demand that could not be accommodated within any proposed onsite passenger loading facility?

  - Not Anticipated. It is envisioned that passenger loading at the Project Site will occur within the in the proposed onsite parking garage.

- Would accommodating the passenger loading demand create pedestrian or bicycle conflicts? Which curbside management options should be explored to better address passenger loading needs in the public right-of-way?

  - No, as discussed in Section 2.7, passenger loading and unloading for the Project will occur within the onsite parking garage. While passenger loading and unloading will occur internally to the Project Site, some infrequent curbside loading/unloading may occur along the Project Site's Pacific Coast Highway, Frampton Avenue, and 259th Street frontages.

5.2.3 *Operational and Passenger Loading Evaluation Methodology*

Based on coordination with LADOT staff and as presented in the transportation assessment MOU, the following seven study intersections were identified for operational evaluation of whether the Project's traffic would contribute to unacceptable queuing on an Avenue or Boulevard:

1. Belle Porte Avenue / Pacific Coast Highway
2. Belle Porte Avenue / 259th Street
3. Frampton Avenue / Pacific Coast Highway
4. Frampton Avenue / Project Driveway
5. Frampton Avenue / 259th Street
6. Frampton Avenue / Anaheim Street

7. Normandie Avenue / Pacific Coast Highway

The study locations were based on proximity to the Project Site and the importance of the intersections in terms of the Project's site access and circulation scheme.

The analysis was prepared based on the *Highway Capacity Manual*[13] (HCM) operational analysis methodology pursuant to the City's TAG. Intersection analyses were prepared utilizing the *HCS7* software package, which implements the Highway Capacity Manual operational methods. In addition, specifics such as traffic volume data, lane configurations, available vehicle storage lengths, crosswalk locations, posted speed limits, traffic signal timing and phasing for signalized locations, etc., were coded in the *HCS7* software. The operational analysis was prepared utilizing the following data previously presented herein:

- Project Peak Hour Traffic Generation: Refer to Subsection 2.8.1
- Project Trip Distribution and Assignment: Refer to Subsection 2.8.2
- Existing Vehicle Network: Refer to Subsection 3.3
- Existing Weekday AM and PM Hour Traffic Count Data: Refer to Subsection 3.4
- Related Projects (i.e., within a one-mile radius) and Ambient Traffic Growth: Refer to Subsection 3.5

LADOT confirmed the appropriateness of the above data in the transportation assessment MOU it approved for the Project. The transportation assessment MOU is attached to this report in *Appendix A*.

The operational analysis of vehicle queuing at the study intersections was prepared for the following conditions:

(a) Existing (2021) conditions.

(b) Condition (a) with completion and occupancy of the Project.

(c) Condition (a) plus one 1.0% annual ambient traffic growth through year 2026 and with completion and occupancy of the related projects (i.e., Future Cumulative Baseline)

(d) Condition (c) with completion and occupancy of the Project.

Pursuant to the City's TAG, the HCM methodology for signalized and unsignalized intersections was utilized to calculate vehicle queuing. The operation analysis reports the control delay (in seconds), Levels of Service (LOS), and 95th percentile queues (in feet) for all approaches for the signalized intersections and the minor street approaches for the unsignalized intersections. The

[13] *Highway Capacity Manual 6th Edition,* Transportation Research Board of the National Academies of Sciences-Engineering-Medicine, 2016.

95th percentile queue is the maximum back of queue with 95th percentile traffic volumes. The HCM 6th Edition methodology worksheets report queues in number of vehicles. As such, an average vehicle length of 25 feet, which includes the length of the vehicle and spacing between vehicles, was assumed for analysis purposes. The reported queues therefore represent the calculated maximum back of queue in feet. The summary of the operational analysis of the study intersections is provided in *Table 5–2*. The HCM methodology worksheets for the analyzed intersections are contained in *Appendix F.*

The existing traffic volumes at the study intersections during the weekday AM and PM peak hours are displayed in *Figure 3–10*. The "Existing with Project" traffic volumes at the study intersections during the weekday AM and PM peak hours are illustrated in ***Figure 5–1***. The "Future Cumulative Baseline" (existing, ambient growth and related projects) traffic volumes at the study intersections during the weekday AM and PM peak hours are presented in ***Figure 5–2***. The "Future Cumulative with Project" (existing, ambient growth, related projects, and Project) traffic volumes at the study intersections during the weekday AM and PM peak hours are illustrated in ***Figure 5–3***.

As presented in *Table 5–2*, the Project would not cause or substantially extend vehicle queuing at any of the seven study intersections during the weekday AM and PM peak hours. At these intersections, the change in queue length for individual traffic movements associated with the Project ranges from no change to a maximum of 44.9 feet (i.e., less than two vehicles).

While Project-related traffic would not cause or substantially extend vehicle queuing at any of the seven study intersections during the weekday AM and PM peak hours, it is noted that the existing and forecast peak queues in the left-turn lane of the eastbound approach at the Normandie Avenue / Pacific Coast Highway intersection are expected to exceed the available storage under all conditions analyzed (e.g., "Existing" through "Future Cumulative with Project" conditions).

West of the eastbound left-turn lane on Pacific Coast Highway at the Normandie Avenue intersection, there is a striped eastbound left-turn lane that provides access to a driveway serving the commercial center at the northwest corner of the Normandie Avenue / Pacific Coast Highway intersection. This driveway accommodates full vehicular access (i.e., left-turn and right-turn ingress and egress movements). Modifications to the Pacific Coast Highway striping (i.e., connecting the two left-turn lanes) would provide sufficient vehicle storage capacity to accommodate the forecast peak queues under "Future Cumulative with Project" conditions during both the weekday AM and PM peak hours. LADOT would need to review this potential revision to the roadway striping on Pacific Coast Highway to assess appropriateness and feasibility.

It is envisioned that passenger loading/unloading will occur within the onsite parking garage. No pedestrian or bicycle conflicts due to potential loading/unloading activities are anticipated to occur. While not currently proposed, appropriate signage and pavement/curb markings will be required by the City and installed by the Project Applicant for any curbside loading/unloading zones that may be proposed by the Project Applicant in the future. Any installations that fall

within the City's (public) right-of-way will require prior review and approval by LADOT. Thus, it is envisioned that should any curbside loading/unloading zones be proposed by the Project Applicant, on-street parking along the direct Project frontages may not be allowed and some or most of the curbside space would be repurposed for loading/unloading operations.

5.3 Project Construction Effect on Nearby Mobility

The project construction evaluation addresses activity associated with project construction and major in-street construction of infrastructure projects.

5.3.1 *Screening Criteria*

For land use projects, if the answer is yes to any of the following questions, further analysis will be required to assess whether project construction would negatively affect pedestrian, bicycle, transit, or vehicle circulation:

- Would a project that requires construction activities to take place within the right-of-way of a Boulevard or Avenue (as designated in Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than one day (including day and evening hours, and overnight closures if on a residential street)?

    - Yes. The Project Site has frontage along Pacific Coast Highway, which is designated as a Boulevard II within Mobility Plan 2035. Construction of the Project may require temporary travel lane closures on Pacific Coast Highway related to utility work, delivery of construction equipment, etc. Such closures are expected to be temporary in nature; no overnight closures of travel lanes on Pacific Coast Highway are anticipated. A detailed Construction Staging and Traffic Management Plan (CSTMP) including the measures described herein will address temporary construction-related closures to minimize conflicts between construction activities and vehicular traffic.

- Would a project require construction activities to take place within the right-of-way of a Collector or Local Street (as designated in the Mobility Plan 2035) which would necessitate temporary lane, alley, or street closures for more than seven days (including day and evening hours, and including overnight closures if on a residential street)?

    - No. The Project Site is adjacent to Frampton Avenue and 259th Street, which are both designated as a Local Street – Standard within Mobility Plan 2035. Temporary travel lane closures on Frampton Avenue and 259th Street due to Project construction are not anticipated. If closures were to be required, such closures are expected to be temporary in nature; no overnight closures of travel lanes on Frampton Avenue and 259th Street are anticipated. As noted above, the CSTMP will include the measures to address temporary construction-related closures to minimize conflicts between construction activities and vehicular traffic.

- Would in-street construction activities result in the loss of regular vehicle, bicycle, or pedestrian access, including loss of existing bicycle parking to an existing land use for

more than one day, including day and evening hours and overnight closures if access is lost to residential units?

- Yes. Temporary closures of the sidewalks adjacent to the Project Site on Pacific Coast Highway may be required during portions of the construction period. However, signs would be posted advising pedestrians of temporary sidewalk closures and providing alternative routes. Construction activities will not affect access to any other adjacent or nearby land uses. As noted above, the CSTMP will include measures to address temporary construction-related closures to minimize conflicts between construction activities and vehicular traffic, bicyclists, and pedestrians.

- Would in-street construction activities result in the loss of regular ADA pedestrian access to an existing transit station, stop, or facility (e.g., layover zone) during revenue hours?

  - Yes. Temporary closures of the sidewalks adjacent to the Project Site on Pacific Coast Highway may be required during portions of the construction period. Specifically, ADA pedestrian access along the south side of Pacific Coast Highway may be lost to existing bus stops along Pacific Coast Highway at the Belle Porte Avenue and Normandie Avenue intersections. ADA access to these bus stops is available on the north side of Pacific Coast Highway. Signs would be posted advising pedestrians of temporary sidewalk closures and providing alternative ADA routes to nearby transit stops located adjacent to or near the Project Site on Pacific Coast Highway. As noted above, the CSTMP will include measures to address temporary construction-related closures to minimize conflicts between construction activities and vehicular traffic, bicyclists, and pedestrians.

- Would in-street construction activities result in the temporary loss for more than one day of an existing bus stop or rerouting of a bus route that serves the project site?

  - No. Construction activities will not require the temporary closure or relocation of existing bus stops or rerouting of existing bus routes that serve the Project Site.

- Would construction activities result in the temporary removal and/or loss of on-street metered parking for more than 30 days?

  - No. While construction activities may require temporary removal and/or loss of on-street parking on Pacific Coast Highway and/or Frampton Avenue for more than 30 days, these parking spaces are not metered.

- Would the project involve a discretionary action to construct new buildings of more than 1,000 square feet that require access for hauling construction materials and equipment from streets of less than 24-feet wide in a hillside area?

  - No. The Project Site is not located within a hillside area.

As the answer is "yes" to three of the screening criteria questions, further analysis is required to evaluate whether Project construction would negatively affect pedestrian, bicycle, transit, or vehicle circulation.

5.3.2 *Evaluation Criteria and Methodology*

The evaluation criteria for project construction are focused on whether the proposed project would adversely affect mobility in the project vicinity during the construction process. Specifically, the City's TAG asks the following question: "Would construction of a project substantially interfere with pedestrian, bicycle, transit, or vehicle circulation and accessibility to adjoining areas?" Factors to be considered are the location of the project site, the functional classification of the adjacent street(s), the availability of alternate routes or additional capacity, temporary loss of bicycle parking, temporary loss of bus stops or rerouting of transit lines, the duration of temporary loss of access, the affected land uses, and the magnitude of the temporary construction activities.

Factors to consider when assessing a project construction's potential effect on mobility in the project area include the following:

- Temporary transportation constraints:
  - The length of time of temporary street closures or closures of two or more travel lanes;
  - The classification of the street (major arterial, state highway) affected;
  - The existing congestion levels on the affected street segments and intersections;
  - Whether the affected street directly leads to a freeway on- or off-ramp or other state highway;
  - Potential safety issues involved with street or lane closures; and
  - The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street.
- Temporary loss of access:
  - The length of time of any loss of pedestrian or bicycle circulation past a construction area;
  - The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area;
  - The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility;

- The availability of nearby vehicular or pedestrian access within ¼ mile of the lost access; and

- The type of land uses affected, and related safety, convenience, and/or economic issues.

- Temporary Loss of Bus Stops or Rerouting of Bus Lines:

  - The length of time that an existing bus stop would be unavailable or that existing service would be interrupted;

  - The availability of a nearby location (within one-quarter mile) to which the bus stop or route can be temporarily relocated;

  - The existence of other bus stops or routes with similar routes/destinations within a ¼-mile radius of the affected stops or routes; and

  - Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s).

Descriptions of the Project location and physical setting are provided in Subsection 2.1, Project Site Location, and Section 3.0, Project Context, herein that apply to this analysis. The Project location and Project setting data items such as adjacent street classifications, public bicycle parking, inventory of existing transit lines, bus stops, etc. Per Section 3.4.4 of the TAG, the evaluation of the Project construction includes a review of whether construction activity within the street right-of-way would require any of the following:

- Street, sidewalk, or lane closures.

- Block existing vehicle, bicycle, or pedestrian access along a street or to parcels fronting the street.

- Modification of access to transit stations, stops, or facilities during revenue hours.

- Closure or movement of an existing bus stop or rerouting of an existing bus line.

- Creation of transportation hazards.

The City's TAG notes that a comparison of the results to the evaluation criteria are to be provided in order to determine the level of impact. The summary of the Project construction evaluation criteria in order to determine the Project's effect is provided in ***Table 5–3***.

As presented in *Table 5–3*, it is concluded that Project construction would not result in the closure of two or more travel lanes on any one roadway and would not impede emergency access. However, Project construction may result in the temporary loss of single travel lanes on

Table 5-3
QUALITATIVE REVIEW OF PROJECT CONSTRUCTION ACTIVITIES

CRITERIA	PROJECT RESPONSE	DESCRIPTION
TEMPORARY TRANSPORTATION CONSTRAINTS		
The length of time of temporary street closures or closures of two or more travel lanes.	**N/A**	**Project construction will not require street closures or closures of two or more travel lanes.**
The classification of the street (major arterial, state highway) affected.	**Boulevard II and Local Street - Standard**	**Pacific Coast Highway is classified as a Boulevard II by the City. Frampton Avenue and 259th Street are both classified by the City as as Local Street - Standard.**
The existing congestion levels on the affected street segments and intersections.	**N/A**	**Existing congestion levels are consistent with those experienced on major thoroughfares in the Project vicinity.**
Whether the affected street directly leads to a freeway on- or off-ramp or other State highway.	**Yes**	**The Project has frontage along Pacific Coast Highway, a State highway. Pacific Coast Highway leads to the I-110 Freeway. As Project construction will not require street closures, access to the State Highway System will be maintained.**
Potential safety issues involved with street or lane closures.	**N/A**	**While safety issues are not anticipated, the Project Applicant will prepare a Construction Staging and Traffic Management Plan (CSTMP) which would detail any potential safety issues.**
The presence of emergency services (fire, hospital, etc.) located nearby that regularly use the affected street.	**Kaiser Permanente South Bay Medical Center**	**Kaiser Permanente South Bay Medical Center regularly accommodates emergency vehicles (ambulances) and will continue to do so througout the construction period. The Project will not affect emergency access.**
TEMPORARY LOSS OF ACCESS		
The length of time of any loss of pedestrian or bicycle circulation past a construction area.	**Unknown**	**The Project Applicant will prepare a CSTMP which would detail any loss of pedestrian or bicycle circulation past the construction area.**
The length of time of any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area.	**Unknown**	**The Project Applicant will prepare a CSTMP which would detail any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area.**
The length of time of any loss of ADA pedestrian access to a transit station, stop, or facility.	**Unknown**	**The Project Applicant will prepare a CSTMP which would detail any loss of vehicular, bicycle, or pedestrian access to a parcel fronting the construction area.**
The availability of nearby vehicular or pedestrian access within one quarter-mile of the lost access.	**Available**	**Signalized intersections with accommodations for pedestrian crossings are provided near the Project Site at Belle Porte Avenue / Pacific Coast Highway and Normandie Avenue / Pacific Coast Highway.**
The type of land uses affected, and related safety, convenience, and/or economic issues.	**None**	**Access will be maintained for adjacent parcels in the Project vicinity.**

Table 5-3 (Continued)
QUALITATIVE REVIEW OF PROJECT CONSTRUCTION ACTIVITIES

TEMPORARY LOSS OF BUS STOPS OR REROUTING OF BUS LINES		
The length of time that an existing bus stop would be unavailable or that existing service would be interrupted.	**N/A**	**Project construction will not require relocation of existing transit stops or interrupt existing transit service.**
The availability of a nearby location (within one quarter-mile) to which the bus stop or route can be temporarily relocated.	**N/A**	**N/A**
The existence of other bus stops or routes with similar routes/destinations within a quarter-mile radius of the affected stops or routes.	**N/A**	**N/A**
Whether the interruption would occur on a weekday, weekend or holiday, and whether the existing bus route typically provides service that/those day(s).	**N/A**	**N/A**

Pacific Coast Highway. Additionally, Project construction may result in the temporary loss of pedestrian access along the Project Site's Pacific Coast Highway frontage.

5.3.3 *Recommended Project-Specific Action Items*

Due to the short-term nature of construction activities and the variable characteristics and needs of a specific project's construction phase(s), it is recommended that a construction work site traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity. The construction work site traffic control plan is required to identify the location of all temporary roadway lane and/or sidewalk closures needed during project construction. Additionally, if pedestrian detours and/or temporary travel lane closures are proposed, LADOT requires submission and approval of a traffic control/management plan prior to the issuance of building permits.

Consistent with LADOT's recommendation and requirements, the Project Applicant would prepare a detailed CSTMP, which would include any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan. The plan would be based on the nature and timing of the Project's specific construction activities and would consider other projects under construction in the immediate vicinity of the Project Site. The CSTMP also would include features such as notification to adjacent project owners and occupants of upcoming construction activities, advance notification regarding any temporary transit stop relocations, and limitation of any potential roadway lane closure(s) to off-peak travel periods, to the extent feasible.

6.0 SUMMARY AND CONCLUSIONS

- ***Project Description*** – As currently proposed, the Project would remove the existing mobile home park (A-1 Trailer Park) and construct a new mixed-use development with 312 market-rate residential apartment dwelling units, 42 affordable housing dwelling units, and 1,500 square feet of ground floor commercial floor area. The Project proposes to provide 575 vehicular parking spaces within a six level above-grade parking garage. Construction and occupancy of the Project is proposed to be completed by the year 2026.

- ***Study Scope –*** This transportation assessment presents (i) a CEQA assessment of whether the Project conflicts or is inconsistent with local transportation-related plans and policies, (ii) a CEQA assessment of Project-related VMT, (iii) a CEQA assessment of whether the Project increases hazards due to a geometric design feature or incompatible use, (iv), a CEQA freeway safety analysis, (v) a non-CEQA assessment of pedestrian, bicycle and transit access, (vi) a non-CEQA evaluation of Project access, safety and circulation, and (vii) a non-CEQA review of Project construction activities. LADOT confirmed the appropriateness of the analysis criteria when it entered into a transportation assessment MOU for the Project.

- ***Project Trip Generation*** – The Project is expected to generate 126 net new vehicle trips (38 inbound trips and 88 outbound trips) during the weekday AM peak hour. During the weekday PM peak hour, the Project is expected to generate 134 net new vehicle trips (81 inbound trips and 53 outbound trips). The Project is expected to generate 1,760 net new daily vehicle trips.

- ***CEQA Analysis***

  - *Project Consistency with Local Plans and Policies:* The Project has been found to be consistent with the relevant City transportation plans, programs, ordinances, or policies, and does not include any features that would preclude the City from completing and complying with these guiding documents and policy objectives. Therefore, a determination of less than significant can be made for the Project with respect to consistency with transportation plans, programs, ordinances, or policies. Furthermore, the Project Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance) and the other requirements pursuant to the LAMC. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

  - *VMT Analysis:* The Project would not result in a significant VMT impact. Furthermore, based on the Project-related VMT analysis and the conclusions discussed in Section 4.2.3 (which demonstrate that the Project falls under the City's efficiency-based impact thresholds and thus are already shown to align with the long-

term VMT and GHG reduction goals of SCAG's RTP/SCS), cumulatively significant VMT impacts are not anticipated.

- *Geometric Design Review:* Given the existing physical condition of the Project Site, surrounding land uses, and planned pedestrian enhancements, no safety concerns related to geometric design are noted. Additionally, it is noted that the Project will remove the existing curb cuts along the Project Site's Pacific Coast Highway frontage, will shift the existing Frampton Avenue curb cut to the south, away from the Pacific Coast Highway intersection, and will reduce the number of curb cuts along the Project Site's 259th Street frontage from two to one. Additionally, it is noted that the while the Project Site's Pacific Coast Highway frontage is included within City's HIN, the Project will not preclude or conflict with future changes by various City Departments. Therefore, it can be determined that the Project will not substantially increase hazards due to a geometric design feature or incompatible use, resulting in a less than significant impact determination.

- *Freeway Safety Analysis:* Given that the Project would not add 25 or more net new vehicle trips to any nearby freeway off-ramp during either the AM or PM peak hours, the Project would not result in a significant freeway safety impact.

- ***Non-CEQA Analysis***

  - *Pedestrian, Bicycle, and Transit Access:* It is determined the Project does not include any features that would permanently remove, adversely modify, or degrade pedestrian, bicycle, and transit facilities in the Project vicinity. As noted herein, it is determined that it is possible that the Project may intensify use of pedestrian, bicycle, and transit facilities in the Project vicinity, however, such use is not expected to result in a deficient condition caused by the Project.

  - *Project Access and Circulation Review:* The Project's weekday AM and PM peak hour traffic volumes will not cause or substantially extend vehicle queuing at the any of the seven study intersections analyzed (as discussed in Section 5.2.3 herein). At the Normandie Avenue / Pacific Coast Highway intersection, peak queues in the left-turn lane on the eastbound Pacific Coast Highway approach exceed the available left-turn storage during the weekday AM and PM peak hours under all conditions (i.e., "Existing" through "Future Cumulative with Project" conditions). Potential modifications to the existing Pacific Coast Highway striping have been identified and are shown to accommodate the forecast peak vehicle queues in the left-turn lane on the eastbound Pacific Coast Highway approach to the Normandie intersection. Any modifications to the existing striping would be implemented by LADOT at their discretion.

  - *Project Construction Effect on Nearby Mobility:* It is concluded that Project construction would not result in the closure of two or more travel lanes on any one roadway and would not impede emergency access. However, Project construction

may result in the temporary loss of a single travel lane on Pacific Coast Highway. Additionally, Project construction may result in the temporary loss of regular pedestrian access along the Project Site's Pacific Coast Highway frontage. The Project Applicant will prepare a construction work site traffic control plan be submitted to LADOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of construction activity should any lane closure(s) be proposed. Consistent with LADOT's recommendation and requirements, the Project Applicant would also prepare a detailed CSTMP, which includes any applicable street/lane/sidewalk closure information, a detour plan, haul route(s), and a staging plan.

APPENDIX A

APPROVED TRANSPORTATION ASSESSMENT MEMORANDUM OF UNDERSTANDING

Transportation Assessment Memorandum of Understanding (MOU)

This MOU acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: 1280 PCH

Project Address: 1268-1290 W. Pacific Coast Highway and 25900 Frampton Avenue

Project Description: Development of 315 residential apartment dwelling units, 39 affordable housing dwelling units, and 1,500 square feet of commercial floor area (to be analyzed as High Turnover [Sit-Down] Restaurant.

LADOT Project Case Number: HRB21-111596 Project Site Plan attached? *(Required)* ☒ Yes ☐ No

II. TRANSPORTATION DEMAND MANAGEMENT (TDM) MEASURES

Select any of the following TDM measures, which may be eligible as a Project Design Feature[1], that are being considered for this project:

	Reduced Parking Supply[2]	x	Bicycle Parking and Amenities		Parking Cash Out

List any other TDM measures (e.g. bike share kiosks, unbundled parking, microtransit service, etc.) below that are also being considered and would require LADOT staff's determination of its eligibility as a TDM measure. LADOT staff will make the final determination of the TDM measure's eligibility for this project.

1 _____ 4 _____

2 _____ 5 _____

3 _____ 6 _____

III. TRIP GENERATION

Trip Generation Rate(s) Source: ITE 10th Edition / Other ITE 10th Edition/LADOT Affordable Housing Trip Rates

Trip Generation Adjustment *(Exact amount of credit subject to approval by LADOT)*	**Yes**	**No**
Transit Usage	☒	☐
Existing Active or Previous Land Use	☒	☐
Internal Trip	☐	☒
Pass-By Trip	☐	☒
Transportation Demand Management (See above)	☐	☒

Trip generation table including a description of the existing and proposed land uses, rates, estimated morning and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc. attached? *(Required)* ☐ Yes ☐ No

	IN	OUT	TOTAL
AM Trips	38	87	125
PM Trips	80	54	134

NET Daily Vehicle Trips (DVT)

1,667 DVT (ITE 10th ed.)

1,760 DVT (VMT Calculator ver. 1.3)

[1] At this time Project Design Features are only those measures that are also shown to be needed to comply with a local ordinance, affordable housing incentive program, or State law.

[2] Select if reduced parking supply is pursued as a result of a parking incentive as permitted by the City's Bicycle Parking Ordinance, State Density Bonus Law, or the City's Transit Oriented Community Guidelines.

IV. STUDY AREA AND ASSUMPTIONS

Project Buildout Year: 2026 Ambient Growth Rate: 1.0 % Per Yr.

Related Projects List, researched by the consultant and approved by LADOT, attached? *(Required)* ☒ Yes ☐ No

STUDY INTERSECTIONS and/or STREET SEGMENTS:
(May be subject to LADOT revision after access, safety, and circulation evaluation.)

1 _____ 4 _____

2 _____ 5 _____

3 _____ 6 _____

Provide a separate list if more than six study intersections and/or street segments.

Is this Project located on a street within the High Injury Network? ☒ Yes ☐ No

If a study intersection is located within a ¼-mile of an adjacent municipality's jurisdiction, signature approval from said municipality is required prior to MOU approval.

V. ACCESS ASSESSMENT

a. Does the project exceed 1,000 net DVT? ☒ Yes ☐ No
b. Is the project's frontage 250 linear feet or more along an Avenue or Boulevard as classified by the City's General Plan? ☒ Yes ☐ No
c. Is the project's building frontage encompassing an entire block along an Avenue or Boulevard as classified by the City's General Plan? ☐ Yes ☒ No

VI. ACCESS ASSESSMENT CRITERIA

If Yes to any of the above questions a., b., or c., complete **Attachment C.1: Access Assessment Criteria**.

VII. SITE PLAN AND MAP OF STUDY AREA

Please note that the site plan should also be submitted to the Department of City Planning for cursory review.

Does the attached site plan and/or map of study area show	Yes	No	Not Applicable
Each study intersection and/or street segment	☒	☐	☐
*Project Vehicle Peak Hour trips at each study intersection	☒	☐	☐
*Project Vehicle Peak Hour trips at each project access point	☒	☐	☐
*Project trip distribution percentages at each study intersection	☒	☐	☐
Project driveways designed per LADOT MPP 321 (show widths and directions or lane assignment)	☒	☐	☐
Pedestrian access points and any pedestrian paths	☒	☐	☐
Pedestrian loading zones	☒	☐	☐
Delivery loading zone or area	☒	☐	☐
Bicycle parking onsite	☒	☐	☐
Bicycle parking offsite (in public right-of-way)	☐	☐	☒

*For mixed-use projects, also show the project trips and project trip distribution by land use category.

(One trip distribution assumed for all components.)

VIII. FREEWAY SAFETY ANALYSIS SCREENING

Will the project add 25 or more trips to any freeway off-ramp in either the AM or PM peak hour? ☐ YES ☒ NO

Provide a brief explanation or graphic identifying the number of project trips expected to be added to the nearby freeway off-ramps serving the project site. If Yes to the question above, a freeway ramp analysis is required.

Study Intersections

1. Belle Porte Avenue / Pacific Coast Highway
2. Belle Porte Avenue / 259th Street
3. Frampton Avenue / Pacific Coast Highway
4. Frampton Avenue / Project Driveway
5. Frampton Avenue / 259th Street
6. Frampton Avenue / Anaheim Street
7. Normandie Avenue / Pacific Coast Highway

Access Assessment Criteria

This Criteria acknowledges that the Transportation Assessment for the following Project will be prepared in accordance with the latest version of LADOT's Transportation Assessment Guidelines:

I. PROJECT INFORMATION

Project Name: 1280 PCH

Project Address: 1268-1290 W. Pacific Coast Highway and 25900 S. Frampton Avenue

Project Description: Development of 315 residential apartment dwelling units, 39 affordable housing dwelling units, and 1,500 square feet of commercial floor area (to be analyzed as High-Turnover [Sit-Down] Restaurant.

LADOT Project Case Number: HRB21-111596

II. PEDESTRIAN/ PERSON TRIP GENERATION

Source of Pedestrian/Person Trip Generation Rate(s)? ☐ VMT Calculator ☒ ITE 10th Edition ☐ Other:

	Land Use	Size/Unit	Daily Person Trips
Proposed	Apartments	315 DU	171
	Commercial	1,500 GSF	17
	Total new trips:		188

Pedestrian/Person trip generation table including a description of the proposed land uses, trip credits, person trip assumptions, comparison studies used for reference, etc. attached? ☒ Yes ☐ No (See Transit Trips on Table 2-1)

III. PEDESTRIAN ATTRACTORS INVENTORY

Attach Pedestrian Map for the area (1,320-foot radius from edge of the project site) depicting:

- site pedestrian entrance(s)
- Existing or proposed passenger loading zones
- pedestrian generation/distribution values
  - Geographic Distribution: N 30 % S 10 % E 25 % W 35 %
- transit boarding and alighting of transit stops (should include Metro rail stations; Metro, DASH, and other municipal bus stops)
- Key pedestrian destinations with hours of operation:
  - schools (school times)
  - government offices with a public counter or meeting room
  - senior citizen centers
  - recreation centers or playgrounds
  - public libraries
  - medical centers or clinics
  - child care facilities
  - post offices

- places of worship
- grocery stores
- other facilities that attract pedestrian trips

- pedestrian walking routes to key destinations from project site

Note: Pedestrian Count Summary, Bicycle Count Summary, Manual Traffic Count Summary will need to be attached to the Transportation Assessment

IV. FACILITIES INVENTORY

Is a High Injury Network street located within 1,320-foot radius from the edge of the project site? ☒ Yes ☐ No
If yes, list streets and include distance from the project:

Pacific Coast Highway _____ at 0 (feet)

Normandie Avenue, north of Pacific Coast Highway _____ at 440 (feet)

_____ at _____(feet)

_____ at _____(feet)

Attach Radius Map for the area (1,320 foot radius from edge of the project site) depicting the following existing and proposed facilities:

- transit stops
- bike facilities
- traffic control devices for controlled crossings
- uncontrolled crosswalks
- location of any missing, damaged or substandard sidewalks

For a reference of planned facilities, see the Transportation Assessment Support Map

Crossing Distances

Does the project property have frontage along an arterial street (designated as either an Avenue or Boulevard?)

☒ Yes ☐ No

If yes, provide the distance between the crossing control devices (e.g. signalized crosswalk, or controlled mid-block crossing) along any arterial within 1,320 feet of the property.

870 (feet) at President Avenue / Pacific Coast Highway and Belle Porte Avenue / Pacific Coast Highway

1,040 (feet) at Belle Porte Avenue / Pacific Coast Highway and Normandie Avenue / Pacific Coast Highway

990 (feet) at Normandie Avenue / 255th Street and Normandie Avenue / Pacific Coast Highway

740 (feet) at Normandie Avenue / Pacific Coast Highway and Normandie Avenue / Permanente Way

_____(feet) at _____

_____(feet) at _____

V. Project Construction

Will the project require any construction activity within the city right-of-way? ☒ Yes ☐ No

If yes, will the project require temporary closure of any of the following city facilities?

- sidewalk ✓
- bike lane
- parking lane
- travel lane
- bus stop
- bicycle parking (racks or corrals)
- bike share or other micro-mobility station
- car share station
- parklet
- other: _____

[1] Source: ITE *Trip Generation Manual,* 10th Edition, 2017.
[2] Trips are one-way traffic movements, entering or leaving.
[3] ITE Land Use Code 221 (Multifamily Housing [Mid-Rise]) trip generation average rates.
- Daily Trip Rate: 5.44 trips/dwelling unit; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 0.36 trips/dwelling unit; 26% inbound/74% outbound
- PM Peak Hour Trip Rate: 0.44 trips/dwelling unit; 61% inbound/39% outbound

[4] City of Los Angeles Affordable Housing (Family) trip generation average rates.
- Daily Trip Rate: 4.16 trips/dwelling units; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 0.52 trips/dwelling unit; 38% inbound/62% outbound
- PM Peak Hour Trip Rate: 0.38 trips/dwelling unit; 55% inbound/45% outbound

[5] ITE Land Use Code 932 (High-Turnover [Sit-Down] Restaurant) trip generation average rates.
- Daily Trip Rate: 112.18 trips/1,000 SF of floor area; 50% inbound/50% outbound
- AM Peak Hour Trip Rate: 9.94 trips/1,000 SF of floor area; 55% inbound/45% outbound
- PM Peak Hour Trip Rate: 9.77 trips/1,000 SF of floor area; 62% inbound/38% outbound

[6] The transit reduction is based on the site's proximity to Metro bus stops, as well as the land use characteristics of the project.
[7] ITE Land Use Code 240 (Mobile Home Park) trip generation average rates.
- Daily Trip Rate: 5.00 trips/dwelling unit; 50% inbound/50% outbound
-AM Peak Hour Trip Rate: 0.26 trips/dwelling unit; 31% inbound/69% outbound
-PM Peak Hour Trip Rate: 0.46 trips/dwelling unit; 62% inbound/38% outbound

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

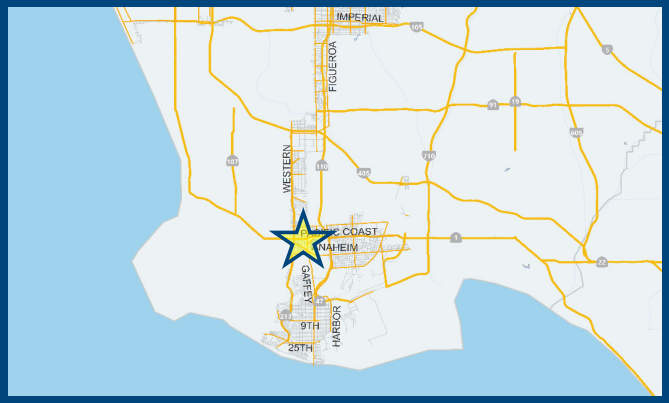
Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: 1280 PCH

Scenario: Proposed Project

Address: 1280 W PACIFIC COAST HWY, 90710



Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Multi-Family		DU
(custom) Mobile Home Park | Daily	189	Trips
(custom) Mobile Home Park | HBW-Attraction S	0	Percent
(custom) Mobile Home Park | HBO-Attraction S	20	Percent
(custom) Mobile Home Park | NHB-Attraction S	5	Percent
(custom) Mobile Home Park | HBW-Production	15	Percent
(custom) Mobile Home Park | HBO-Production	41	Percent
(custom) Mobile Home Park | NHB-Production	19	Percent
(custom) Mobile Home Park | Daily	132	Residents
(custom) Mobile Home Park | Daily	0	Employees
(custom) Mobile Home Park | Daily	Non-Retai	Retail/Non-R

☑ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | High-Turnover Sit-Down Restaurant	1.5	ksf
Housing | Multi-Family	315	DU
Retail | High-Turnover Sit-Down Restaurant	1.5	ksf
Housing | Affordable Housing - Family	39	DU

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
159 Daily Vehicle Trips	1,919 Daily Vehicle Trips
1,024 Daily VMT	12,389 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	1,760 Net Daily Trips
The net increase in daily VMT ≤ 0	11,365 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	1.500 ksf

The proposed project is required to perform VMT analysis.

TDM Strategies

Select each section to show individual strategies

Use ☑ to denote if the TDM strategy is part of the proposed project or is a mitigation strategy

	Proposed Project	With Mitigation
Max Home Based TDM Achieved?	**No**	**No**
Max Work Based TDM Achieved?	**No**	**No**

A Parking

Reduce Parking Supply ☐ Proposed Prj ☐ Mitigation
- 563 city code parking provision for the project site
- 540 actual parking provision for the project site

Unbundle Parking ☐ Proposed Prj ☐ Mitigation
- 175 monthly parking cost (dollar) for the project site

Parking Cash-Out ☐ Proposed Prj ☐ Mitigation
- 50 percent of employees eligible

Price Workplace Parking ☐ Proposed Prj ☐ Mitigation
- 6.00 daily parking charge (dollar)
- 50 percent of employees subject to priced parking

Residential Area Parking Permits ☐ Proposed Prj ☐ Mitigation
- 200 cost (dollar) of annual permit

B Transit

C Education & Encouragement

D Commute Trip Reductions

E Shared Mobility

F Bicycle Infrastructure

G Neighborhood Enhancement

Analysis Results

Proposed Project	With Mitigation
1,906 Daily Vehicle Trips	**1,906** Daily Vehicle Trips
12,312 Daily VMT	**12,312** Daily VMT
7.1 Household VMT per Capita	**7.1** Household VMT per Capita
N/A Work VMT per Employee	**N/A** Work VMT per Employee

Significant VMT Impact?

Proposed Project	With Mitigation
Household: No Threshold = 9.2 15% Below APC	**Household: No** Threshold = 9.2 15% Below APC
Work: N/A Threshold = 12.3 15% Below APC	**Work: N/A** Threshold = 12.3 15% Below APC

VMT Calculator User Agreement

The Los Angeles Department of Transportation (LADOT), in partnership with the Department of City Planning and Fehr & Peers, has developed the City of Los Angeles Vehicle Miles Traveled (VMT) Calculator to estimate project-specific daily household VMT per capita and daily work VMT per employee for land use development projects. This application, the VMT Calculator, has been provided to You, the User, to assess vehicle miles traveled (VMT) outcomes of land use projects within the City of Los Angeles. The term "City" as used below shall refer to the City of Los Angeles. The terms "City" and "Fehr & Peers" as used below shall include their respective affiliates, subconsultants, employees, and representatives.

The City is pleased to be able to provide this information to the public. The City believes that the public is most effectively served when they are provided access to the technical tools that inform the public review process of private and public land use investments. However, in using the VMT Calculator, You agree to be bound by this VMT Calculator User Agreement (this Agreement).

VMT Calculator Application for the City of Los Angeles. The City's consultant calibrated the VMT Calculator's parameters in 2018 to estimate travel patterns of locations in the City, and validated those outcomes against empirical data. However, this calibration process is limited to locations within the City, and practitioners applying the VMT Calculator outside of the City boundaries should not apply these estimates without further calibration and validation of travel patterns to verify the VMT Calculator's accuracy in estimating VMT in such other locations.

Limited License to Use. This Agreement gives You a limited, non-transferrable, non-assignable, and non-exclusive license to use and execute a copy of the VMT Calculator on a computer system owned, leased or otherwise controlled by You in Your own facilities, as set out below, provided You do not use the VMT Calculator in an unauthorized manner, and that You do not republish, copy, distribute, reverse-engineer, modify, decompile, disassemble, transfer, or sell any part of the VMT Calculator, and provided that You know and follow the terms of this Agreement. Your failure to follow the terms of this Agreement shall automatically terminate this license and Your right to use the VMT Calculator.

Ownership. You understand and acknowledge that the City owns the VMT Calculator, and shall continue to own it through Your use of it, and that no transfer of ownership of any kind is intended in allowing You to use the VMT Calculator.

Warranty Disclaimer. In spite of the efforts of the City and Fehr & Peers, some information on the VMT Calculator may not be accurate. The VMT Calculator, OUTPUTS AND ASSOCIATED DATA ARE PROVIDED "as is" WITHOUT WARRANTY OF ANY KIND, whether expressed, implied, statutory, or otherwise including but not limited to, the implied warranties of merchantability and fitness for a particular purpose.

Limitation of Liability. It is understood that the VMT Calculator is provided without charge. Neither the City nor Fehr & Peers can be responsible or liable for any information derived from its use, or for any delays, inaccuracies, incompleteness, errors or omissions arising out of your use of the VMT Calculator or with respect to the material contained in the VMT Calculator. You understand and agree that Your sole remedy against the City or Fehr & Peers for loss or damage caused by any defect or failure of the

VMT Calculator, regardless of the form of action, whether in contract, tort, including negligence, strict liability or otherwise, shall be the repair or replacement of the VMT Calculator to the extent feasible as determined solely by the City. In no event shall the City or Fehr & Peers be responsible to You or anyone else for, or have liability for any special, indirect, incidental or consequential damages (including, without limitation, damages for loss of business profits or changes to businesses costs) or lost data or downtime, however caused, and on any theory of liability from the use of, or the inability to use, the VMT Calculator, whether the data, and/or formulas contained in the VMT Calculator are provided by the City or Fehr & Peers, or another third party, even if the City or Fehr & Peers have been advised of the possibility of such damages.

This Agreement and License shall be governed by the laws of the State of California without regard to their conflicts of law provisions, and shall be effective as of the date set forth below and, unless terminated in accordance with the above or extended by written amendment to this Agreement, shall terminate on the earlier of the date that You are not making use of the VMT Calculator or one year after the beginning of Your use of the VMT Calculator.

By using the VMT Calculator, You hereby waive and release all claims, responsibilities, liabilities, actions, damages, costs, and losses, known and unknown, against the City and Fehr & Peers for Your use of the VMT Calculator.

Before making decisions using the information provided in this application, contact City LADOT staff to confirm the validity of the data provided.

Print and sign below, and submit to LADOT along with the transportation assessment Memorandum of Understanding (MOU).

APPENDIX B

LADOT VMT CALCULATOR OUTPUT

CITY OF LOS ANGELES VMT CALCULATOR Version 1.3

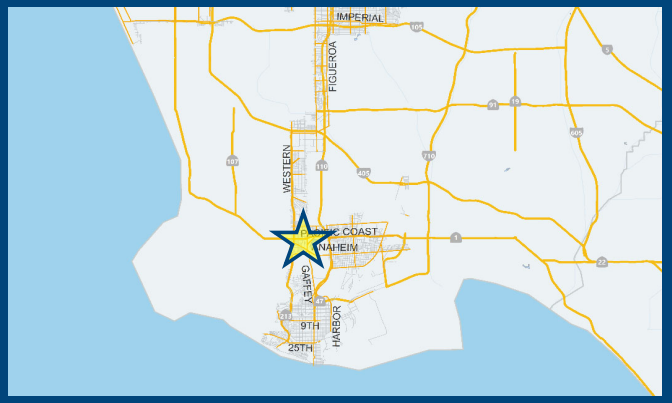
Project Screening Criteria: Is this project required to conduct a vehicle miles traveled analysis?

Project Information

Project: 1280 PCH

Scenario: Proposed Project

Address: 1280 W PACIFIC COAST HWY, 90710



Is the project replacing an existing number of residential units with a smaller number of residential units AND is located within one-half mile of a fixed-rail or fixed-guideway transit station?

○ Yes ○ No

Existing Land Use

Land Use Type	Value	Unit
Housing | Multi-Family		DU
(custom) Mobile Home Park | Daily	189	Trips
(custom) Mobile Home Park | HBW-Attraction S	0	Percent
(custom) Mobile Home Park | HBO-Attraction S	20	Percent
(custom) Mobile Home Park | NHB-Attraction S	5	Percent
(custom) Mobile Home Park | HBW-Production	15	Percent
(custom) Mobile Home Park | HBO-Production	41	Percent
(custom) Mobile Home Park | NHB-Production	19	Percent
(custom) Mobile Home Park | Daily	132	Residents
(custom) Mobile Home Park | Daily	0	Employees
(custom) Mobile Home Park | Daily	Non-Retai	Retail/Non-R

☑ Click here to add a single custom land use type (will be included in the above list)

Proposed Project Land Use

Land Use Type	Value	Unit
Retail | High-Turnover Sit-Down Restaurant	1.5	ksf
Housing | Multi-Family	312	DU
Housing | Affordable Housing - Family	42	DU
Retail | High-Turnover Sit-Down Restaurant	1.5	ksf

☐ Click here to add a single custom land use type (will be included in the above list)

Project Screening Summary

Existing Land Use	Proposed Project
159 Daily Vehicle Trips	1,919 Daily Vehicle Trips
1,024 Daily VMT	12,389 Daily VMT

Tier 1 Screening Criteria

Project will have less residential units compared to existing residential units & is within one-half mile of a fixed-rail station. ☐

Tier 2 Screening Criteria

The net increase in daily trips < 250 trips	1,760 Net Daily Trips
The net increase in daily VMT ≤ 0	11,365 Net Daily VMT
The proposed project consists of only retail land uses ≤ 50,000 square feet total.	1.500 ksf

The proposed project is required to perform VMT analysis.

TDM Strategies

Select each section to show individual strategies

Use ☑ to denote if the TDM strategy is part of the proposed project or is a mitigation strategy

	Proposed Project	With Mitigation
Max Home Based TDM Achieved?	**No**	**No**
Max Work Based TDM Achieved?	**No**	**No**

A Parking

Reduce Parking Supply ☐ Proposed Prj ☐ Mitigation
- 563 city code parking provision for the project site
- 540 actual parking provision for the project site

Unbundle Parking ☐ Proposed Prj ☐ Mitigation
- 175 monthly parking cost (dollar) for the project site

Parking Cash-Out ☐ Proposed Prj ☐ Mitigation
- 50 percent of employees eligible

Price Workplace Parking ☐ Proposed Prj ☐ Mitigation
- 6.00 daily parking charge (dollar)
- 50 percent of employees subject to priced parking

Residential Area Parking Permits ☐ Proposed Prj ☐ Mitigation
- 200 cost (dollar) of annual permit

B Transit

C Education & Encouragement

D Commute Trip Reductions

E Shared Mobility

F Bicycle Infrastructure

G Neighborhood Enhancement

Analysis Results

Proposed Project	With Mitigation
1,906 Daily Vehicle Trips	**1,906** Daily Vehicle Trips
12,312 Daily VMT	**12,312** Daily VMT
7.1 Household VMT per Capita	**7.1** Household VMT per Capita
N/A Work VMT per Employee	**N/A** Work VMT per Employee

Significant VMT Impact?

Proposed Project	With Mitigation
Household: No Threshold = 9.2 15% Below APC	**Household: No** Threshold = 9.2 15% Below APC
Work: N/A Threshold = 12.3 15% Below APC	**Work: N/A** Threshold = 12.3 15% Below APC

VMT Calculator User Agreement

The Los Angeles Department of Transportation (LADOT), in partnership with the Department of City Planning and Fehr & Peers, has developed the City of Los Angeles Vehicle Miles Traveled (VMT) Calculator to estimate project-specific daily household VMT per capita and daily work VMT per employee for land use development projects. This application, the VMT Calculator, has been provided to You, the User, to assess vehicle miles traveled (VMT) outcomes of land use projects within the City of Los Angeles. The term "City" as used below shall refer to the City of Los Angeles. The terms "City" and "Fehr & Peers" as used below shall include their respective affiliates, subconsultants, employees, and representatives.

The City is pleased to be able to provide this information to the public. The City believes that the public is most effectively served when they are provided access to the technical tools that inform the public review process of private and public land use investments. However, in using the VMT Calculator, You agree to be bound by this VMT Calculator User Agreement (this Agreement).

VMT Calculator Application for the City of Los Angeles. The City's consultant calibrated the VMT Calculator's parameters in 2018 to estimate travel patterns of locations in the City, and validated those outcomes against empirical data. However, this calibration process is limited to locations within the City, and practitioners applying the VMT Calculator outside of the City boundaries should not apply these estimates without further calibration and validation of travel patterns to verify the VMT Calculator's accuracy in estimating VMT in such other locations.

Limited License to Use. This Agreement gives You a limited, non-transferrable, non-assignable, and non-exclusive license to use and execute a copy of the VMT Calculator on a computer system owned, leased or otherwise controlled by You in Your own facilities, as set out below, provided You do not use the VMT Calculator in an unauthorized manner, and that You do not republish, copy, distribute, reverse-engineer, modify, decompile, disassemble, transfer, or sell any part of the VMT Calculator, and provided that You know and follow the terms of this Agreement. Your failure to follow the terms of this Agreement shall automatically terminate this license and Your right to use the VMT Calculator.

Ownership. You understand and acknowledge that the City owns the VMT Calculator, and shall continue to own it through Your use of it, and that no transfer of ownership of any kind is intended in allowing You to use the VMT Calculator.

Warranty Disclaimer. In spite of the efforts of the City and Fehr & Peers, some information on the VMT Calculator may not be accurate. The VMT Calculator, OUTPUTS AND ASSOCIATED DATA ARE PROVIDED "as is" WITHOUT WARRANTY OF ANY KIND, whether expressed, implied, statutory, or otherwise including but not limited to, the implied warranties of merchantability and fitness for a particular purpose.

Limitation of Liability. It is understood that the VMT Calculator is provided without charge. Neither the City nor Fehr & Peers can be responsible or liable for any information derived from its use, or for any delays, inaccuracies, incompleteness, errors or omissions arising out of your use of the VMT Calculator or with respect to the material contained in the VMT Calculator. You understand and agree that Your sole remedy against the City or Fehr & Peers for loss or damage caused by any defect or failure of the

VMT Calculator, regardless of the form of action, whether in contract, tort, including negligence, strict liability or otherwise, shall be the repair or replacement of the VMT Calculator to the extent feasible as determined solely by the City. In no event shall the City or Fehr & Peers be responsible to You or anyone else for, or have liability for any special, indirect, incidental or consequential damages (including, without limitation, damages for loss of business profits or changes to businesses costs) or lost data or downtime, however caused, and on any theory of liability from the use of, or the inability to use, the VMT Calculator, whether the data, and/or formulas contained in the VMT Calculator are provided by the City or Fehr & Peers, or another third party, even if the City or Fehr & Peers have been advised of the possibility of such damages.

This Agreement and License shall be governed by the laws of the State of California without regard to their conflicts of law provisions, and shall be effective as of the date set forth below and, unless terminated in accordance with the above or extended by written amendment to this Agreement, shall terminate on the earlier of the date that You are not making use of the VMT Calculator or one year after the beginning of Your use of the VMT Calculator.

By using the VMT Calculator, You hereby waive and release all claims, responsibilities, liabilities, actions, damages, costs, and losses, known and unknown, against the City and Fehr & Peers for Your use of the VMT Calculator.

Before making decisions using the information provided in this application, contact City LADOT staff to confirm the validity of the data provided.

Print and sign below, and submit to LADOT along with the transportation assessment Memorandum of Understanding (MOU).

APPENDIX D

DETAILED PLANS, PROGRAMS, ORDINANCES, AND POLICIES REVIEW

Plans, Policies and Programs Consistency Worksheet

The worksheet provides a structured approach to evaluate the threshold T-1 question below, that asks whether a project conflicts with a program, plan, ordinance or policy addressing the circulation system. The intention of the worksheet is to streamline the project review by highlighting the most relevant plans, policies and programs when assessing potential impacts to the City's circulation system.

> Threshold T-1: Would the project conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadways, bicycle, and pedestrian facilities?

This worksheet does not include an exhaustive list of City policies, and does not include community plans, specific plans, or any area-specific regulatory overlays. The Department of City Planning project planner will need to be consulted to determine if the project would obstruct the City from carrying out a policy or program in a community plan, specific plan, streetscape plan, or regulatory overlay that was adopted to support multimodal transportation options or public safety. LADOT staff should be consulted if a project would lead to a conflict with a mobility investment in the Public Right of Way (PROW) that is currently undergoing planning, design, or delivery. This worksheet must be completed for all projects that meet the Section I. Screening Criteria. For description of the relevant planning documents, **see Attachment D.1.**

For any response to the following questions that checks the box in bold text ((i.e. ☐ Yes or ☐ No), further analysis is needed to demonstrate that the project does not conflict with a plan, policy, or program.

I. SCREENING CRITERIA FOR POLICY ANALYSIS

If the answer is 'yes' to any of the following questions, further analysis will be required:

Does the project require a discretionary action that requires the decision maker to find that the project would substantially conform to the purpose, intent and provisions of the General Plan?

☒ Yes ☐ No

Is the project known to directly conflict with a transportation plan, policy, or program adopted to support multimodal transportation options or public safety?

☐ Yes ☒ No

Is the project required to or proposing to make any voluntary modifications to the public right-of-way (i.e., dedications and/or improvements in the right-of-way, reconfigurations of curb line, etc.)?

☒ Yes ☐ No

II. PLAN CONSISTENCY ANALYSIS

A. Mobility Plan 2035 PROW Classification Standards for Dedications and Improvements

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.1 *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*

Mobility Plan 2035 Policy 2.3 *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*

Mobility Plan 2035 Policy 3.2 – *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*

Mobility Plan 2035 Street Designations and Standard Roadway Dimensions

A.1 Does the project include additions or new construction along a street designated as a Boulevard I, and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone? [x] Yes [ ] No

A.2 If **A.1 is yes**, is the project required to make additional dedications or improvements to the Public Right of Way as demonstrated by the street designation. [x] Yes [ ] No [ ] N/A

A.3 If **A.2 is yes**, is the project making the dedications and improvements as necessary to meet the designated dimensions of the fronting street (Boulevard I, and II, or Avenue I, II, or III)?

[x] Yes [ ] No [ ] N/A

If the answer is to **A.1 or A.2 is NO, or to A.1, A.2 and A.3. is YES**, then the project does not conflict with the dedication and improvement requirements that are needed to comply with the Mobility Plan 2035 Street Designations and Standard Roadway Dimensions.

A.4 If the answer to **A.3. is NO**, is the project applicant asking to waive from the dedication standards?

[ ] **Yes** [ ] **No** [x] N/A

Lists any streets subject to dedications or voluntary dedications and include existing roadway and sidewalk widths, required roadway and sidewalk widths, and proposed roadway and sidewalk width or waivers.

Frontage 1 Existing PROW'/Curb' : Existing Varies/Varies Required 55'/40' Proposed 55'/40'
Pacific Coast Highway (Boulevard II)

Frontage 2 Existing PROW'/Curb' : Existing 25'/18' Required 30'/18' Proposed 30'/18'
Frampton Avenue (Local Street - Standard)

Frontage 3 Existing PROW'/Curb' : Existing 20'/Varies Required 30'/18'* Proposed 30'/18'*
259th Street (Local Street - Standard)

Frontage 4 Existing PROW'/Curb' : Existing _____ Required _____ Proposed _____

*Per discussions with BOE, new ROW dedication for new cul-de-sac construction will be required. All dedications and other improvements will be made in accordance with BOE and LADOT requirements.

If the answer to **A.4 is NO**, the project is inconsistent with Mobility Plan 2035 street designations and must file for a waiver of street dedication and improvement.

If the answer to **A.4 is YES**, additional analysis is necessary to determine if the dedication and/or improvements are necessary to meet the City's mobility needs for the next 20 years. The following factors may contribute to determine if the dedication or improvement is necessary:

Is the project site along any of the following networks identified in the City's Mobility Plan?

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[1]

Is the project within the service area of Metro Bike Share, or is there demonstrated demand for micro-mobility services?

If the project dedications and improvements asking to be waived are necessary to meet the City's mobility needs, the project may be found to conflict with a plan that is adopted to protect the environment.

B. Mobility Plan 2035 PROW Policy Alignment with Project-Initiated Changes

B.1 Project-Initiated Changes to the PROW Dimensions

These questions address potential conflict with:

> ***Mobility Plan 2035 Policy 2.1*** *– Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.*
>
> ***Mobility Plan 2035 Policy 2.3*** *– Pedestrian Infrastructure. Recognize walking as a component of every trip, and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.*
>
> ***Mobility Plan 2035 Policy 3.2 –*** *People with Disabilities. Accommodate the needs of people with disabilities when modifying or installing infrastructure in the public right-of-way.*
>
> ***Mobility Plan 2035 Policy 2.10*** *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*
>
> **Mobility Plan 2035 Street Designations and Standard Roadway Dimensions**

[1] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.1 Does the project physically modify the curb placement or turning radius and/or physically alter the sidewalk and parkways space that changes how people access a property?

Examples of physical changes to the public right-of-way include:

- widening the roadway,
- narrowing the sidewalk,
- adding space for vehicle turn outs or loading areas,
- removing bicycle lanes, bike share stations, or bicycle parking
- modifying existing bus stop, transit shelter, or other street furniture
- paving, narrowing, shifting or removing an existing parkway or tree well

☐ **Yes** ☒ No

B.2 Driveway Access

These questions address potential conflict with:

Mobility Plan 2035 Policy 2.10 *– Loading Areas. Facilitate the provision of adequate on and off-site street loading areas.*

Mobility Plan 2035 Program PL.1. Driveway Access. *Require driveway access to buildings from non-arterial streets or alleys (where feasible) in order to minimize interference with pedestrian access and vehicular movement.*

Citywide Design Guidelines - Guideline 2*: Carefully incorporate vehicular access such that it does not degrade the pedestrian experience.*

Site Planning Best Practices:

- *Prioritize pedestrian access first and automobile access second. Orient parking and driveways toward the rear or side of buildings and away from the public right-of-way. On corner lots, parking should be oriented as far from the corner as possible.*
- *Minimize both the number of driveway entrances and overall driveway widths.*
- *Do not locate drop-off/pick-up areas between principal building entrances and the adjoining sidewalks.*
- *Orient vehicular access as far from street intersections as possible.*
- *Place drive-thru elements away from intersections and avoid placing them so that they create a barrier between the sidewalk and building entrance(s).*
- *Ensure that loading areas do not interfere with on-site pedestrian and vehicular circulation by separating loading areas and larger commercial vehicles from areas that are used for public parking and public entrances.*

B.2 Does the project add new driveways along a street designated as an Avenue or a Boulevard that conflict with LADOT's Driveway Design Guidelines (See Sec. 321 in the Manual of Policies and Procedures) by any of the following:

- locating new driveways for residential properties on an Avenue or Boulevard, and access is otherwise possible using an alley or a collector/local street, or
- locating new driveways for industrial or commercial properties on an Avenue or Boulevard and access is possible along a collector/local street, or

- the total number of new driveways exceeds 1 driveway per every 200 feet[2] along on the Avenue or Boulevard frontage, or
- locating new driveways on an Avenue or Boulevard within 150 feet from the intersecting street, or
- locating new driveways on a collector or local street within 75 feet from the intersecting street, or
- locating new driveways near mid-block crosswalks, requiring relocation of the mid-block crosswalk

☐ **Yes** ☒ No

If the answer to **B.1 and B.2 are both NO**, then the project would not conflict with a plan or policies that govern the PROW as a result of the project-initiated changes to the PROW.

Impact Analysis

If the answer to either **B.1 or B.2 are YES**, City plans and policies should be reviewed in light of the proposed physical changes to determine if the City would be obstructed from carrying out the plans and policies. The analysis should pay special consideration to substantial changes to the Public Right of Way that may either degrade existing facilities for people walking and bicycling (e.g., removing a bicycle lane), or preclude the City from completing complete street infrastructure as identified in the Mobility Plan 2035, especially if the physical changes are along streets that are on the High Injury Network (HIN). The analysis should also consider if the project is in a Transit Oriented Community (TOC) area, and would degrade or inhibit trips made by biking, walking and/ or transit ridership. The streets that need special consideration are those that are included on the following networks identified in the Mobility Plan 2035, or the HIN:

- Transit Enhanced Network
- Bicycle Enhanced Network
- Bicycle Lane Network
- Pedestrian Enhanced District
- Neighborhood Enhanced Network
- High Injury Network

To see the location of the above networks, see **Transportation Assessment Support Map**.[3]

Once the project is reviewed relevant to plans and policies, and existing facilities that may be impacted by the project, the analysis will need to answer the following two questions in concluding if there is an impact due to plan inconsistency.

B.2.1 Would the physical changes in the public right of way or new driveways that conflict with LADOT's Driveway Design Guidelines degrade the experience of vulnerable roadway users such as modify, remove, or otherwise negatively impact existing bicycle, transit, and/or pedestrian infrastructure?

☐ **Yes** ☐ No ☒ N/A

[2] for a project frontage that exceeds 400 feet along an Avenue or Boulevard, the incremental additional driveway above 2 is more than 1 driveway for every 400 additional feet.
[3] LADOT Transportation Assessment Support Map https://arcg.is/fubbD

B.2.2 Would the physical modifications or new driveways that conflict with LADOT's Driveway Design Guidelines preclude the City from advancing the safety of vulnerable roadway users?

☐ **Yes** ☐ No ☒ N/A

If either of the answers to either **B.2.1 or B.2.2 are YES**, the project may conflict with the Mobility Plan 2035, and therefore conflict with a plan that is adopted to protect the environment. If either of the answers to both **B.2.1. or B.2.2. are NO**, then the project would not be shown to conflict with plans or policies that govern the Public Right-of-Way.

C. Network Access

C. 1 Alley, Street and Stairway Access

These questions address potential conflict with:

Mobility Plan Policy 3.9 *Increased Network Access: Discourage the vacation of public rights-of-way.*

C.1.1 Does the project propose to vacate or otherwise restrict public access to a street, alley, or public stairway?

☐ Yes ☒ No

C.1.2 If the answer to C.1.1 is Yes, will the project provide or maintain public access to people walking and biking on the street, alley or stairway?

☐ Yes ☐ **No** ☒ N/A

C.2 New Cul-de-sacs

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.10 *Cul-de-sacs: Discourage the use of cul-de-sacs that do not provide access for active transportation options.*

C.2.1 Does the project create a cul-de-sac or is the project located adjacent to an existing cul-de-sac?

☒ Yes ☐ No

C.2.2 If yes, will the cul-de-sac maintain convenient and direct public access to people walking and biking to the adjoining street network?

☒ Yes ☐ **No** ☐ N/A

If the answers to either C.1.2 or C.2.2 are YES, then the project would not conflict with a plan or policies that ensures access for all modes of travel. If the answer to either **C.1.2 or C.2.2 are NO**, the project may conflict with a plan or policies that governs multimodal access to a property. Further analysis must assess to the degree that pedestrians and bicyclists have sufficient public access to the transportation network.

D. Parking Supply and Transportation Demand Management

These questions address potential conflict with:

Mobility Plan 2035 Policy 3.8 *– Bicycle Parking, Provide bicyclists with convenient, secure and well maintained bicycle parking facilities.*

Mobility Plan 2035 Policy 4.8 – *Transportation Demand Management Strategies. Encourage greater utilization of Transportation Demand Management Strategies to reduce dependence on single-occupancy vehicles.*

Mobility Plan 2035 Policy 4.13 *– Parking and Land Use Management: Balance on-street and off-street parking supply with other transportation and land use objectives.*

D.1 Would the project propose a supply of onsite parking that exceeds the baseline amount[4] as required in the Los Angeles Municipal Code or a Specific plan, whichever requirement prevails?

☐ Yes ☒ No

D.2 If the answer to D.1. is YES, would the project propose to actively manage the demand of parking by independently pricing the supply to all users (e.g. parking cash-out), or for residential properties, unbundle the supply from the lease or sale of residential units?

☐ Yes ☐ **No** ☒ N/A

If the answer to **D.2. is NO** the project may conflict with parking management policies. Further analysis is needed to demonstrate how the supply of parking above city requirements will not result in additional (induced) drive-alone trips as compared to an alternative that provided no more parking than the baseline required by the LAMC or Specific Plan. If there is potential for the supply of parking to result in induced demand for drive-alone trips, the project should further explore transportation demand management (TDM) measures to further off-set the induced demands of driving and vehicle miles travelled (VMT) that may result from higher amounts of on-site parking. The TDM measures should specifically focus on strategies that encourage dynamic and context-sensitive pricing solutions and ensure the parking is efficiently allocated, such as providing real time information. Research has demonstrated that charging a user cost for parking or providing a 'cash-out' option in return for not using it is the most effective strategy to reduce the instances of drive-alone trips and increase non-auto mode share to further reduce VMT. To ensure the parking is efficiently managed and reduce the need to build parking for future uses, further strategies should include sharing parking with other properties and/or the general public.

D.3. Would the project provide the minimum on and off-site bicycle parking spaces as required by Section 12.21 A.16 of the LAMC?

☒ Yes ☐ **No**

[4] The baseline parking is defined here as the default parking requirements in section 12.21 A.4 of the Los Angeles Municipal Code or any applicable Specific Plan, whichever prevails, for each applicable use not taking into consideration other parking incentives to reduce the amount of required parking.

D.4. Does the Project include more than 25,000 square feet of gross floor area construction of new non-residential gross floor?

☐ Yes ☒ No

D.5 If the answer to D.4. is YES, does the project comply with the City's TDM Ordinance in Section 12.26 J of the LAMC?

☐ Yes ☐ **No** ☒ N/A

If the answer to **D.3. or D.5. is NO** the project conflicts with LAMC code requirements of bicycle parking and TDM measures. If the project includes uses that require bicycle parking (Section 12.21 A.16) or TDM (Section 12.26 J), and the project does not comply with those Sections of the LAMC, further analysis is required to ensure that the project supports the intent of the two LAMC sections. To meet the intent of bicycle parking requirements, the analysis should identify how the project commits to providing safe access to those traveling by bicycle and accommodates storing their bicycle in locations that demonstrates priority over vehicle access.

Similarly, to meet the intent of the TDM requirements of Section 12.26 J of the LAMC, the analysis should identify how the project commits to providing effective strategies in either physical facilities or programs that encourage non-drive alone trips to and from the project site and changes in work schedule that move trips out of the peak period or eliminate them altogether (as in the case in telecommuting or compressed work weeks).

E. Consistency with Regional Plans

This section addresses potential inconsistencies with greenhouse gas (GHG) reduction targets forecasted in the Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) / Sustainable Communities Strategy (SCS).

E.1 Does the Project or Plan apply one the City's efficiency-based impact thresholds (i.e. VMT per capita, VMT per employee, or VMT per service population) as discussed in Section 2.2.3 of the TAG?

☒ Yes ☐ No

E.2 If the Answer to E.1 is YES, does the Project or Plan result in a significant VMT impact?

☐ Yes ☒ No ☐ N/A

E.3 If the Answer to E.1 is NO, does the Project result in a net increase in VMT?

☐ Yes ☐ No ☒ N/A

If the Answer to E.2 or E.3 is NO, then the Project or Plan is shown to align with the long-term VMT and GHG reduction goals of SCAG's RTP/SCS.

E.4 If the Answer to E.2 or E.3 is YES, then further evaluation would be necessary to determine whether such a project or land use plan would be shown to be consistent with VMT and GHG reduction goals of the SCAG RTP/SCS. For the purpose of making a finding that a project is consistent with the GHG reduction targets forecasted in the SCAG RTP/SCS, the project analyst should consult Section 2.2.4 of the Transportation Assessment Guidelines (TAG). Section 2.2.4 provides the methodology for evaluating a land use project's cumulative impacts to VMT, and the appropriate reliance on SCAG's most recently adopted RTP/SCS in reaching that conclusion.

The analysis methods therein can further support findings that the project is consistent with the general use designation, density, building intensity, and applicable policies specified for the project area in either a sustainable communities strategy or an alternative planning strategy for which the State Air Resources Board, pursuant to Section 65080(b)(2)(H) of the Government Code, has accepted a metropolitan planning organization's determination that the sustainable communities strategy or the alternative planning strategy would, if implemented, achieve the greenhouse gas emission reduction targets.

ATTACHMENT D.1: CITY PLAN, POLICIES AND GUIDELINES

The Transportation Element of the City's General Plan, Mobility Plan 2035, established the "Complete Streets Design Guide" as the City's document to guide the operations and design of streets and other public rights-of-way. It lays out a vision for designing safer, more vibrant streets that are accessible to people, no matter what their mode choice. As a living document, it is intended to be frequently updated as City departments identify and implement street standards and experiment with different configurations to promote complete streets. The guide is meant to be a toolkit that provides numerous examples of what is possible in the public right-of-way and that provides guidance on context-sensitive design.

The Plan for A Healthy Los Angeles (March 2015) includes policies directing several City departments to develop plans that promote active transportation and safety.

The City of Los Angeles Community Plans, which make up the Land Use Element of the City's General Plan, guide the physical development of neighborhoods by establishing the goals and policies for land use. The 35 Community Plans provide specific, neighborhood-level detail for land uses and the transportation network, relevant policies, and implementation strategies necessary to achieve General Plan and community-specific objectives.

The stated goal of Vision Zero is to eliminate traffic-related deaths in Los Angeles by 2025 through a number of strategies, including modifying the design of streets to increase the safety of vulnerable road users. Extensive crash data analysis is conducted on an ongoing basis to prioritize intersections and corridors for implementation of projects that will have the greatest effect on overall fatality reduction. The City designs and deploys Vision Zero Corridor Plans as part of the implementation of Vision Zero. If a project is proposed whose site lies on the High Injury Network (HIN), the applicant should consult with LADOT to inform the project's site plan and to determine appropriate improvements, whether by funding their implementation in full or by making a contribution toward their implementation.

The Citywide Design Guidelines (October 24, 2019) includes sections relevant to development projects where improvements are proposed within the public realm. Specifically, Guidelines one through three provide building design strategies that support the pedestrian experience. The Guidelines provide best practices in designing that apply in three spatial categories of site planning, building design and public right of way. The Guidelines should be followed to ensure that the project design supports pedestrian safety, access and comfort as they access to and from the building and the immediate public right of way.

The City's Transportation Demand Management (TDM) Ordinance (LA Municipal Code 12.26.J) requires certain projects to incorporate strategies that reduce drive-alone vehicle trips and improve access to destinations and services. The ordinance is revised and updated periodically and should be reviewed for application to specific projects as they are reviewed.

The City's LAMC Section 12.37 (Waivers of Dedication and Improvement) requires certain projects to dedicate and/or implement improvements within the public right-of-way to meet the street designation standards of the Mobility Plan 2035.

The Bureau of Engineering (BOE) Street Standard Dimensions S-470-1 provides the specific street widths and public right of way dimensions associated with the City's street standards.

Detailed Responses in Support of General Consistency with Transportation-Related Plans, Programs, Ordinances, or Policies (Adapted from Attachment D in *LADOT Transportation Assessment Guidelines*, July 2020)

The items below correspond with the TAG Attachment D: Plan, Policy, and Program Consistency Worksheet. Defined terms below have the same meanings as in the Transportation Assessment.

A. Mobility Plan 2035 (MP 2035) PROW Classification Standards for Dedications and Improvements

The Project does include additions or new construction along a street designated as a Boulevard I and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone. The Project proposes new construction along Pacific Coast Highway, which is designated as a Boulevard II under the Mobility Plan 2035 Street Standards Plan. Additionally, the Project proposes new construction along Frampton Avenue and 259th Street, which are both designated as a Local Street – Standard under the Mobility Plan 2035 Street Standards Plan. The Project Site is zoned [Q]C2-1VL and [Q]CM-1VL per the LAMC. A two-foot right-of-way dedication requirement and a three-foot roadway widening with a new 15-foot sidewalk improvement is required for Pacific Coast Highway along the Project Site. A five-foot right-of-way dedication requirement and a new five-foot sidewalk improvement is required for Frampton Avenue along the Project Site. A ten-foot right-of-way dedication and a varying street widening improvement to achieve an 18-foot half street width and new 12-foot sidewalk is required for 259th Street along the Project Site. All dedications and improvements will be confirmed with the City's Bureau of Engineering (BOE). Along the Project Site, Pacific Coast Highway is included within the Bicycle Lane Network (BLN) and as a Pedestrian Enhanced District (PED) within the Mobility Plan 2035. The Project will not alter adjacent streets or the right-of-way in a manner that would preclude or conflict future changes by various City Departments. Therefore, the Project does not conflict with any dedication and improvement requirements that are needed to comply with the Mobility Plan 2035 Street Designation and Standard Roadway Dimensions requirements.

Mobility Plan 2035 Policy 2.1 – Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.

- The Project is required to make dedications or improvements to the public right-of way. Specifically, a two-foot right-of-way dedication requirement and a three-foot roadway widening with a new 15-foot sidewalk improvement is required for Pacific Coast Highway along the Project Site. A five-foot right-of-way dedication requirement and a new five-foot sidewalk improvement is required for Frampton Avenue along the Project Site. A ten-foot right-of-way dedication and a varying street widening improvement to achieve an 18-foot half street width and new 12-foot sidewalk is required for 259th Street along the Project Site. All dedication and improvement requirements will be confirmed with BOE. The Project will not alter adjacent streets or the right-of-way in a manner that would preclude or conflict future changes by various City Departments.

Mobility Plan 2035 Policy 2.3 – Pedestrian Infrastructure. Recognize walking as a component of every trip and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.

- The Project will not alter pedestrian infrastructure or the right-of-way in a manner that would preclude or conflict future changes by various City Departments. The Project prioritizes pedestrian access and connectivity. Pedestrian access to the Project will be provided via entrances along Pacific Coast Highway, Frampton Avenue, and 259th Street. Separate pedestrian entrances will be provided for the residential and commercial components of the Project. The Project will improve the sidewalk along the Pacific Coast Highway property frontage and provide new sidewalks along the Frampton Avenue and 259th Street property frontages to enhance the pedestrian experience and ensure ADA compliance.

Mobility Plan 2035 Policy 3.2 – People with Disabilities. Accommodate the needs of people with disabilities when modifying of installing infrastructure within the public right-of-way.

- The Project will not alter existing ADA infrastructure or the right-of-way in a manner that would preclude or conflict with future changes by various City Departments. Pedestrian access from the public-right-of-way to the Project will be ADA compliant.

Mobility Plan 2035 Street Designations and Standard Roadway Dimensions

- The Project proposes new construction along a street designated as a Boulevard I and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone. Pacific Coast Highway is designated as a Boulevard II under the Mobility Plan 2035 Street Standards Plan. Both Frampton Avenue and 259th Street are designated as a Local Street – Standard under the Mobility Plan 2035 Street Standards Plan. The Project Site is zoned [Q]C2-1VL and [Q]CM-1VL per the LAMC.

Mobility Plan 2035 Networks

- The Project Site has frontage along the following networks in Mobility Plan 2035:
    - Bicycle Lane Network: Pacific Coast Highway
    - Pedestrian Enhanced District: Pacific Coast Highway (east of Frampton Avenue) and Normandie Avenue (See analysis of Mobility Plan 2035 Policy 2.3 above).

Mobility Plan 2035 Policy 2.6 – Bicycle Networks. Provide safe, convenient, and comfortable local and regional bicycling facilities for people of all types and abilities.

- Pacific Coast Highway has been designated within the City's BLN. Bicycle infrastructure is not currently provided on Pacific Coast Highway. The Project will not preclude or conflict with any potential improvements to Pacific Coast Highway as part of the BLN.

B. MOBILITY PLAN 2035 (MP 2035) PROW POLICY ALIGNMENT WITH PROJECT-INITIATED CHANGES

B.1. Project-Initiated Changes to the PROW Dimensions

The Project will not physically modify the curb placement or turning radius, nor does it physically alter the sidewalk and parkways space, in a manner that would change how people access the Project Site. The Project complies with the Mobility Plan 2035 policies outlined below.

Mobility Plan 2035 Policy 2.1 – Adaptive Reuse of Streets. Design, plan, and operate streets to serve multiple purposes and provide flexibility in design to adapt to future demands.

- The Project is required to make dedications or improvements to the public right-of way. Specifically, a two-foot right-of-way dedication requirement and a three-foot roadway widening with a new 15-foot sidewalk improvement is required for Pacific Coast Highway along the Project Site. A five-foot right-of-way dedication requirement and a new five-foot sidewalk improvement is required for Frampton Avenue along the Project Site. A ten-foot right-of-way dedication and a varying street widening improvement to achieve an 18-foot half street width and new 12-foot sidewalk is required for 259th Street along the Project Site. All dedication and improvement requirements will be confirmed with BOE. The Project will not alter adjacent streets or the right-of-way in a manner that would preclude or conflict future changes by various City Departments.

Mobility Plan 2035 Policy 2.3 – Pedestrian Infrastructure. Recognize walking as a component of every trip and ensure high quality pedestrian access in all site planning and public right-of-way modifications to provide a safe and comfortable walking environment.

- The Project will not alter pedestrian infrastructure or the right-of-way in a manner that would preclude or conflict future changes by various City Departments. The Project prioritizes pedestrian access and connectivity. Pedestrian access to the Project will be provided via entrances along Pacific Coast Highway, Frampton Avenue, and 259th Street. Separate pedestrian entrances will be provided for the residential and commercial components of the Project. The Project will improve the sidewalk along the Pacific Coast Highway property frontage and provide new sidewalks along the Frampton Avenue and 259th Street property frontages to enhance the pedestrian experience and ensure ADA compliance.

Mobility Plan 2035 Policy 3.2 – People with Disabilities. Accommodate the needs of people with disabilities when modifying of installing infrastructure within the public right-of-way.

- The Project will not alter existing ADA infrastructure or the right-of-way in a manner that would preclude or conflict future changes by various City Departments. Pedestrian access from the public-right-of-way to the Project will be ADA compliant.

Mobility Plan 2035 Policy 2.10 – Loading Areas. Facilitate the provision of on and off-site street loading areas.

- All loading activities will occur off-street and internal to the Project Site. Loading activities associated with service and delivery operations will occur within the designated loading space at the terminus of 259th Street. Loading activities associated with trash collection and waste management for the Project will occur within the at-grade level of the onsite parking garage. Access to the Project's trash/recycling areas will be provided via the Project driveway along the east side of Frampton Avenue.

Mobility Plan 2035 Street Designations and Standard Roadway Dimensions

- The Project proposes new construction along a street designated as a Boulevard I and II, and/or Avenue I, II, or III on property zoned for R3 or less restrictive zone. Pacific Coast Highway is designated as a Boulevard II under the Mobility Plan 2035 Street Standards Plan. Both Frampton Avenue and 259th Street are designated as a Local Street – Standard under the Mobility Plan 2035 Street Standards Plan. The Project Site is zoned [Q]C2-1VL and [Q]CM-1VL per the LAMC.

B.2. Driveway Access

The Project does not add new driveways along a street designated as an Avenue or a Boulevard, therefore, the Project does not conflict with LADOT Manual of Policy and Procedures (MPP), Section 321, Driveway Design. The Project Site does have frontage along Pacific Coast Highway, which is designated as a Boulevard II under the Mobility Plan 2035 Street Standards Plan. The Project will remove the existing curb cuts along the Project Site's Pacific Coast Highway frontage. Vehicular access to the Project Site be provided via one new driveway along the east side of Frampton Avenue. Additionally, a driveway providing access to a designated loading space at the terminus of 259th Street, at the southeasterly portion of the Project Site. It is noted that Frampton Avenue and 259th Street are both designated as a Local Street – Standard, under the Mobility Plan 2035 Street Standards Plan.

Mobility Plan 2035 Policy 2.10 – Loading Areas. Facilitate the provision of on and off-site street loading areas.

- All loading activities will occur off-street and internal to the Project Site. Loading activities associated with service and delivery operations will occur within the designated loading space at the terminus of 259th Street. Loading activities associated with trash

collection and waste management for the Project will occur within the at-grade level of the onsite parking garage. Access to the Project's trash/recycling areas will be provided via the Project driveway along the east side of Frampton Avenue.

Mobility Plan 2035 Program PL.1. Driveway Access. Require driveway access to buildings from non-arterial streets or alleys (where feasible) in order to minimize interference with pedestrian access and vehicular movement.

- The Project will remove the existing Frampton Avenue driveway and add a new driveway further south along the Project Site's Frampton Avenue frontage, away from the Pacific Coast Highway intersection. This driveway will serve as the vehicular access point to the Project. Additionally, the Project will remove the existing driveways along the Project Site's 259th Street frontage and add a driveway at the terminus of the 259th Street cul-de-sac, at the southeasterly portion of the Project Site. This driveway will provide access to the Project's loading zone. Upon completion of the Project, there will continue to be one driveway along the Project Site's Frampton Avenue frontage, the number of driveways along the Project Site's 259th Street frontage will be reduced from two to one, and the number of driveways along the Project Site's Pacific Coast Highway frontage will be reduced from two to zero. The Project has been designed to minimize interference with pedestrian access and vehicular movement.

Citywide Design Guidelines – Guideline 2. Carefully incorporate vehicular access such that it does not degrade the pedestrian experience, in accordance with the Site Planning Best Practices listed below.

- *Prioritize pedestrian access first and automobile access second. Orient parking and driveways toward the rear or side of buildings and away from the public right-of-way. On corner lots, parking should be oriented as far from the corner as possible.*

    - The Project prioritizes pedestrian access first. The Project will remove the existing Frampton Avenue driveway and add a new driveway further south along the Project Site's Frampton Avenue frontage, away from the Pacific Coast Highway intersection. This driveway will serve as the vehicular access point to the Project. Additionally, the Project will remove the existing driveways along the Project Site's 259th Street frontage and add a driveway at the terminus of the 259th Street cul-de-sac, at the southeasterly portion of the Project Site. This driveway will provide access to the Project's loading zone. Upon completion of the Project, there will continue to be one driveway along the Project Site's Frampton Avenue frontage, the number of driveways along the Project Site's 259th Street frontage will be reduced from two to one, and the number of driveways along the Project Site's Pacific Coast Highway frontage will be reduced from two to zero.

- *Minimize both the number of driveway entrances and overall driveway widths.*

    - There are currently five driveway entrances serving the existing Project Site. The number of driveway entrances will be reduced to two. As previously mentioned, primary vehicular access will be provided via the Frampton Avenue driveway. The driveway at the terminus of 259th Street will provide access to the Project's loading area.

- *Do not locate drop-off/pick-up areas between principal building entrances and the adjoining sidewalks.*

    - The Project does not propose any on-street drop-off/pick-up areas.

- *Orient vehicular access as far from street intersections as possible.*

    - The Project will shift the existing Frampton Avenue driveway further south, away from the Pacific Coast Highway intersection.

- *Place drive-through elements away from intersections and avoid placing them so that they create a barrier between the sidewalk and building entrance(s).*

    - The Project does not propose any drive-through elements.

- *Ensure that loading areas do not interfere with onsite pedestrian and vehicular circulation by separating loading areas and larger commercial vehicles from areas that are used for public parking and public entrances.*

    - All loading activities will occur off-street and internal to the Project Site. Loading activities associated with service and delivery operations will occur within the designated loading space at the terminus of 259th Street. Loading activities associated with trash collection and waste management for the Project will occur within the at-grade level of the onsite parking garage. Access to the Project's trash/recycling areas will be provided via the Project driveway along the east side of Frampton Avenue.

C. NETWORK ACCESS

C.1. Alley, Street and Stairway Access

The Project does not conflict with Mobility Plan 2035 policy below because it will not vacate or otherwise restrict public access to a street, alley or public stairway.

Mobility Plan 2035 Policy 3.9 – Increased Network Access. Discourage the vacation of public rights-of-way.

- The Project will not vacate any public rights-of-way.

C.2. New Cul-de-sacs

The Project is located adjacent to the existing 259th Street cul-de-sac. The Project does not conflict with the Mobility Plan 2035 policy below because it will provide access for active transportation options. The Project will make the required dedications and improvements to add sidewalks along the property's 259th Street cul-de-sac.

Mobility Plan 2035 Policy 3.10 – Cul-de-sacs. Discourage the use of cul-de-sacs that do not provide access for active transportation options.

- The Project will add sidewalks along the 259th Street property frontage and will provide access for all modes of transportation.

D. Parking Supply and Transportation Demand Management

The Project is consistent with the Mobility Plan 2035 polices below because it does not propose a supply of onsite parking that would exceed the baseline amount as required in the LAMC. Per the LAMC, the Project is required to provide 575 vehicular parking spaces. The Project will provide the LAMC-required 575 vehicular parking spaces within an onsite parking garage. The Project will also provide short-term and long-term bicycle parking per LAMC requirements.

The Project Applicant will comply with the City's existing transportation demand management (TDM) Ordinance in LAMC Section 12.26.J. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project. Therefore, the Project does not conflict the LAMC vehicle and bicycle parking requirements or the City's TDM measures.

Mobility Plan 2035 Policy 3.8 – Bicycle Parking. Provide bicyclists with convenient, secure, and well-maintained bicycle parking facilities.

- The Project is required to provide 19 short-term and 166 long-term bicycle parking spaces in accordance with LAMC. The Project will provide the LAMC-required number of short-term and long-term bicycle parking spaces.

Mobility Plan 2035 Policy 4.8 – Transportation Demand Management Strategies. Encourage greater utilization of Transportation Demand Management Strategies to reduce dependence on single-occupancy vehicles.

- As described in Section 2.9 of the Transportation Assessment, the Project will utilize one TDM strategy as Project Design Feature: Include Bike Parking per the LAMC. The Project Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance, referred to in the LAMC Section 12.26.J) and the other requirements per the City's Municipal Code. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of

the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

Mobility Plan 2035 Policy 4.13 – Parking and Land Use Management. Balance on-street and off-street parking supply with other transportation and land use objectives.

- The Project will provide a total of 575 vehicular parking spaces within an onsite parking garage. Additionally, the Project will provide the LAMC-required number of short-term and long-term bicycle parking spaces. Moreover, the Project is located within convenient walking distance to public transit routes along Pacific Coast Highway and other nearby streets.

E. CONSISTENCY WITH REGIONAL PLANS

The Project applies two of the City's efficiency-based impact thresholds (i.e., VMT per Capita and VMT per Employee) as discussed in Section 4.2 of the Transportation Assessment. The Project's VMT analysis concludes that the Project will not result in a significant VMT impact. As the Project will not result in a significant VMT impact, the Project is shown to be consistent with the VMT and greenhouse gas (GHG) goals of the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS).

Additional Review

The following provides a review of the transportation-related goals listed in the Plan for a Healthy Los Angeles (Healthy LA).

- The Project supports the transportation-related goals listed in Healthy LA. The Project is designed in a manner that facilitates travel on foot between the Project Site and the nearby destinations along the Pacific Coast Highway corridor, as well as other nearby streets. Additionally, the Project will feature a street front commercial component, as well as direct connections to the Project Site from the Pacific Coast Highway, Frampton Avenue, 259th Street sidewalks. The Project will provide the LAMC-required number of bicycle parking spaces. The Project would not conflict with, limit or preclude the City's ability to implement programs and policies in furtherance of Healthy LA.

The following provides a review of relevant policies within the LADOT MPP.

- The LADOT MPP, Section 321, Driveway Design, includes driveway design standards to minimize adverse effects of on-street traffic. The Project Site has frontage along Pacific Coast Highway, which is designated as a Boulevard II under the Mobility Plan 2035 Street Standards Plan. Additionally, the Project Site has frontage along Frampton Avenue and 259th Street, which are both designated as a Local Street – Standard under the Mobility Plan 2035 Street Standards Plan. There are currently five driveways that provide vehicular access to the Project Site: two on the south side of Pacific Coast Highway, one on the east

side of Frampton Avenue, and two on the north side of 259th Street. The Project will remove the existing Pacific Coast Highway and 259th Street driveways, and relocate the Frampton Avenue driveway further south, away from Pacific Coast Highway intersection. Vehicular access to the Project Site will be provided via the relocated driveway along the east side of Frampton Avenue. Additionally, the Project will add a driveway at the end of the 259th Street cul-de-sac to provide access to the Project's proposed loading zone. For streets classified as a Collector or Local, MPP 321 states that driveways should not be placed within 75 feet of the adjacent street (for a project with frontage greater than 250 feet). The Project's driveway along Frampton Avenue is approximately 116 feet north of the 259th Street (west leg) intersection). The loading zone driveway at the end of the 259th Street (east leg) cul-de-sac is approximately 260 feet east of the Frampton Avenue intersection. The Project would not conflict with the LADOT MPP.

The following provides a review of Vision Zero.

- Vision Zero is a plan that strives to eliminate traffic-related deaths in Los Angeles by 2025 through strategies, such as modifying streets to better serve vulnerable road users. Projects located in the HIN should make improvements or fund them. The Project Site's Pacific Coast Highway frontage is included within the HIN. The Project would not preclude or conflict with the implementation of future Vision Zero projects in the public right-of-way along Pacific Coast Highway or other roadways within the immediate vicinity of the Project Site.

The following provides a review of the Mobility Hubs Reader's Guide.

- The Mobility Hubs Reader's Guide specifically focuses on enhancing bicycle connections, providing vehicle sharing services, improving bus infrastructure, providing real-time transit and wayfinding information, and enhancing walkability and pedestrian connections. The Project would incorporate several components, including LAMC-required short-term and long-term bicycle parking that both facilitates and encourages residents, visitors, and employees to bicycle to and from the Project Site. The existing sidewalks along the Project Site's Pacific Coast Highway frontage would be improved and new sidewalks would be constructed along the Project Site's Frampton Avenue and 259th Street frontages as part of the Project. The Project would not conflict with the Mobility Hubs Reader's Guide.

The following provides a review of the City's Walkability Checklist.

- The Project would result in the retention and improvement of the sidewalks along the Project Site's Pacific Coast Highway frontage. Additionally, the Project would result in the construction of new sidewalks along the Project Site's Frampton Avenue and Pacific Coast Highway frontages. There are currently five driveways that provide vehicular access to the Project Site: two on the south side of Pacific Coast Highway, one on the east side of Frampton Avenue, and two on the north side of 259th Street. The Project will remove the existing Pacific Coast Highway and 259th Street driveways, and relocate the Frampton Avenue driveway further south, away from Pacific Coast Highway intersection. The

Project will add a driveway at the end of the 259th Street cul-de-sac to provide access to the Project's proposed loading zone. The construction and improvement of existing and new sidewalks along the Project Site as well as the removal of curb cuts, particularly along Pacific Coast Highway will facilitate a safe pedestrian connection between the Project Site and the nearby destinations along the Pacific Coast Highway corridor. These features support the Walkability Checklist recommendations and serve to enhance the pedestrian experience. The Project would not conflict with the Walkability Checklist.

The following provides a review of the transportation-related goals listed in the Wilmington-Harbor City Community Plan ("Community Plan"). The Community Plan was adopted in 1999. While an updated Community Plan is currently under development, the plan from 1999 is currently in effect and forms the basis for this review of potential conflicts relating to the transportation system.

From a transportation perspective, the Community Plan offers the following goals and objectives related to the Project.

Goal 11: Encourage alternative modes of transportation to reduce the use of single occupant vehicles (SOV) in order to reduce vehicular trips.

Objective 11-1: To pursue transportation management strategies that can maximize vehicle occupancy, minimize average trip length, and reduce the number of vehicle trips.

Policy 11-1.1: Encourage non-residential development to provide employee incentives for utilizing alternatives to the automobile (i.e., carpools, vanpools, buses, flex time, bicycles, and walking, etc.).

- As described in Section 2.9 of the Transportation Assessment, the Project will provide bicycle parking per the requirements of the LAMC. The Project is located within a HQTA and is within convenient walking distance to transit stops along the Pacific Coast Highway corridor. The Project Applicant will comply with existing applicable City ordinances (e.g., the City's existing TDM Ordinance, referred to in the LAMC Section 12.26.J) and the other requirements per the City's Municipal Code. It is noted that the City's TDM Ordinance is currently being updated. Although not yet adopted, the Project Applicant will comply with the terms of the proposed TDM Ordinance update, which is expected be completed prior to the anticipated construction of the Project.

Goal 13: A system of safe, efficient and attractive bicycle and pedestrian facilities.

Objective 13-1: To promote an adequate system of safe bikeways for commuter, school and recreational use.

Policy 13-1.4: Encourage the provision of changing rooms, showers, and bicycle storage at new and existing non-residential developments and public places.

- As described in Section 2.9 of the Transportation Assessment, the Project will provide bicycle parking per the requirements of the LAMC. The Project will make the required dedications and street widening improvements along Pacific Coast Highway, Frampton Avenue, and 259th Street. The Project will not preclude or conflict with any potential bicycle infrastructure improvements to Pacific Coast Highway, Frampton Avenue, or 259th Street.

Objective 13-2: To promote pedestrian-oriented access and routes that are safe, efficient and attractive for commuter, school, recreational use, economic activity, and access to transit facilities.

Policy 13-2.2: Require the installation of sidewalks with all new roadway construction and significant reconstruction of existing roadways.

- The Project will make the required dedications and street widening improvements along Pacific Coast Highway, Frampton Avenue, and 259th Street. The Project will improve the existing sidewalks along the Project Site's Pacific Coast Highway frontage and will construct new sidewalks along the Frampton Avenue and 259th Street frontages. These sidewalks provide access to transit facilities and other nearby destinations.

Goal 14: A sufficient system of well-designed and convenient on-street and off-street parking facilities throughout the Plan area.

Objective 14-1: To provide parking in appropriate locations on accord with Citywide standards and community needs.

Policy 14-1.1: Consolidate parking, where appropriate, to eliminate the number of ingress and egress points onto arterials.

Policy 14-1.2: New parking lots shall be developed in accordance with the design standards.

- The Project provide parking in accordance with the standards set forth by the LAMC. Vehicular access to the Project's parking garage will be provided via one driveway along the east side of Frampton Avenue. Furthermore, the Project will remove the existing driveways along the property's Pacific Coast Highway frontage. The Project's parking garage will be designed in accordance with City standards.

APPENDIX E

HCM AND LEVELS OF SERVICE EXPLANATION
HCM DATA WORKSHEETS – WEEKDAY AM AND PM PEAK HOURS

LEVEL OF SERVICE FOR SIGNALIZED INTERSECTIONS

In the *Highway Capacity Manual (HCM)*, published by the Transportation Research Board, 2010, level of service for signalized intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and increased travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic, and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during base conditions: in the absence of traffic control, in the absence of geometric delay, in the absence of incidents, and when there are no other vehicles on the road. Only the portion of total delay attributed to the control facility is quantified. This delay is called *control delay*. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay.

Level of Service criteria for traffic signals are stated in terms of the average control delay per vehicle. Delay is a complex measure and is dependent on a number of variables, including the quality of progression, the cycle length, the green ratio, and the *v/c* ratio for the lane group in question.

Level of Service Criteria for Signalized Intersections

Level of Service	Control Delay (Sec/Veh)
A	≤ 10
B	> 10 and ≤ 20
C	> 20 and ≤ 35
D	> 35 and ≤ 55
E	> 55 and ≤ 80
F	> 80

Level of Service (LOS) values are used to describe intersection operations with service levels varying from LOS A (free flow) to LOS F (jammed condition). The following descriptions summarize *HCM* criteria for each level of service:

LOS A describes operations with very low control delay, up to 10 seconds per vehicle. This level of service occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay values.

LOS B describes operations with control delay greater than 10 and up to 20 seconds per vehicle. This level generally occurs with good progression, short cycle lengths, or both. More vehicles stop than with LOS A, causing higher levels of delay.

LOS C describes operations with control delay greater than 20 and up to 35 seconds per vehicle. These higher delays may result from fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, though many still pass through the intersection without stopping.

LOS D describes operations with control delay greater than 35 and up to 55 seconds per vehicle. At LOS D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop, and the proportion of vehicles not stopping declines. Individual cycle failures are noticeable.

LOS E describes operations with control delay greater than 55 and up to 80 seconds per vehicle. This level is considered by many agencies to be the limit of acceptable delay. These high delay values generally indicate poor progression, long cycle lengths, and high *v/c* ratios. Individual cycle failures are frequent occurrences.

LOS F describes operations with control delay in excess of 80 seconds per vehicle. This level, considered to be unacceptable to most drivers, often occurs with oversaturation, that is, when arrival flow rates exceed the capacity of the lane groups. It may also occur at high *v/c* ratios with many individual cycle failures. Poor progression and long cycle lengths may also be major contributing factors to such delay levels.

LEVEL OF SERVICE FOR UNSIGNALIZED INTERSECTIONS

In the *Highway Capacity Manual (HCM)*, published by the Transportation Research Board, 2010, level of service for unsignalized intersections is defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic, and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during base conditions, in the absence of incidents, control, traffic, or geometric delay. Only the portion of total delay attributed to the traffic control measures, either traffic signals or stop signs, is quantified. This delay is called *control delay*. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay.

Level of Service criteria for unsignalized intersections are stated in terms of the average control delay per vehicle. The level of service is determined by the computed or measured control delay and is defined for each minor movement. Average control delay for any particular minor movement is a function of the service time for the approach and the degree of utilization. (Level of service is not defined for the intersection as a whole for two-way stop controlled intersections.)

Level of Service Criteria for TWSC/AWSC Intersections

Level of Service	Average Control Delay (Sec/Veh)
A	≤ 10
B	> 10 and ≤ 15
C	> 15 and ≤ 25
D	> 25 and ≤ 35
E	> 35 and ≤ 50
F	> 50

Level of Service (LOS) values are used to describe intersection operations with service levels varying from LOS A (free flow) to LOS F (jammed condition). The following descriptions summarize *HCM* criteria for each level of service:

LOS A describes operations with very low control delay, up to 10 seconds per vehicle.

LOS B describes operations with control delay greater than 10 and up to 15 seconds per vehicle.

LOS C describes operations with control delay greater than 15 and up to 25 seconds per vehicle.

LOS D describes operations with control delay greater than 25 and up to 35 seconds per vehicle.

LOS E describes operations with control delay greater than 35 and up to 50 seconds per vehicle.

LOS F describes operations with control delay in excess of 50 seconds per vehicle. For two-way stop controlled intersections, LOS F exists when there are insufficient gaps of suitable size to allow side-street demand to safely cross through a major-street traffic stream. This level of service is generally evident from extremely long control delays experienced by side-street traffic and by queuing on the minor-street approaches.

HCS7 Signalized Intersection Results Summary

HCS7 Two-Way Stop-Control Report

General Information

Analyst	JAS
Agency/Co.	Linscott, Law & Greenspan
Date Performed	10/12/2021
Analysis Year	2026
Time Analyzed	Future - PM
Intersection Orientation	East-West
Project Description	1280 PCH

Site Information

Intersection	Frampton / Anaheim
Jurisdiction	City of Los Angeles
East/West Street	Anaheim Street
North/South Street	Frampton Avenue
Peak Hour Factor	0.92
Analysis Time Period (hrs)	0.25

Lanes

Major Street: East-West

Vehicle Volumes and Adjustments

Approach	Eastbound				Westbound				Northbound				Southbound			
Movement	U	L	T	R	U	L	T	R	U	L	T	R	U	L	T	R
Priority	1U	1	2	3	4U	4	5	6		7	8	9		10	11	12
Number of Lanes	0	0	2	0	0	0	1	0		0	0	0		0	1	0
Configuration		LT	T					TR							LR	
Volume (veh/h)		34	523				483	33						15		38
Percent Heavy Vehicles (%)		3												3		3
Proportion Time Blocked																
Percent Grade (%)														0		
Right Turn Channelized																
Median Type | Storage																

Critical and Follow-up Headways

LADOT Assessment Letter

//

FORM GEN. 160A (Rev. 1/82)

CITY OF LOS ANGELES

INTER-DEPARTMENTAL CORRESPONDENCE

1268-1290 W. Pacific Coast Highway and 25900 Frampton Avenue
DOT Case No. HRB21-111596 (51825)

Date: March 24, 2022

To: Susan Jimenez, Administrative Clerk
Department of City Planning

Robert Sanchez (Mar 24, 2022 16:07 PDT)

From: Robert Sanchez, Transportation Engineer
Department of Transportation

Subject: **TRANSPORTATION ASSESSMENT FOR THE PROPOSED MIXED-USED PROJECT "1280 PCH PROJECT" LOCATED AT 1268-1290 W. PACIFIC COAST HIGHWAY AND 25900 S. FRAMPTON AVENUE (CPC-2021-9522-DB-VCU-CU-SPR-HCA)**

The Department of Transportation (DOT) has reviewed the transportation analysis prepared by Linscott, Law & Greenspan, Engineers., dated December 2021, with subsequent revisions dated February 2022, for the proposed project located at 1269-1290 W. Pacific Coast Highway and 25900 S. Frampton Avenue. In compliance with Senate Bill (SB) 743 and the California Environmental Quality Act (CEQA), a vehicle miles traveled (VMT) analysis is required to identify the project's ability to promote the reduction of green-house gas emissions, access to diverse land uses, and the development of multi-modal networks. The significance of a project's impact in this regard is measured against the VMT thresholds established in DOT's Transportation Assessment Guidelines (TAG), as described below.

DISCUSSION AND FINDINGS

A. Project Description

The Project proposes to construct a new mixed-use development consisting of 312 market-rate apartment units, 42 affordable housing dwelling units and 1,500 square feet of high-turnover (sit-down) restaurant. The Project site is comprised of 3.70 acres and is located within the Wilmington-Harbor City Community Plan area. Existing on the project site is a mobile home park with 42 dwelling units and a vacant lot. Parking for the project will be provided within a six-level above-grade parking garage and the project proposed to provide 575 parking spaces. Vehicular access to the project site will be provided by one driveway along the east side of Frampton Avenue. The new driveway will accommodate for full vehicular access, such as left-turn and right-turn ingress and egress directions. An additional driveway at the terminus of 259th street, at the southeasterly portion of the project site will be designated for loading. The existing driveways along Pacific Coast Highway and Frampton Avenue will be closed. The project is expected to be completed by 2026. The project's site plan is shown in Figure 1, **Attachment A** to this report.

B. Trip Generation

The project is expected to potentially generate a net increase of 1,906 new daily vehicle trips, a net increase of 126 new AM peak hour trips (38 inbound and 88 outbound), and a net increase of 134 new PM peak hour trips (81 inbound and 53 outbound). A copy of the proposed weekday AM and PM peak hour trip generation table can be found in Table 2-1, **Attachment B** to this

report. The weekday AM and PM peak hour trip generation estimates are based on rates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition, 2017.

C. Freeway Safety (Caltrans) Analysis

Per the interim guideline for Freeway Safety Analysis memorandum issued by DOT on May 1, 2020 to address Caltrans safety concerns on freeways, the study addresses the project's effects on vehicle queueing on freeway off-ramps. Such an evaluation measures the project's potential to lengthen a forecasted off-ramp queue and create speed differentials between vehicles exiting the freeway off-ramp and vehicles operating on the freeway mainline.
The evaluation included in the latest revised February 2022 assessment identified the number of project trips expected to be added to nearby freeway off-ramps serving the project site. It was determined that project traffic at any of the freeway off-ramps will not exceed 25 peak hour trips. Therefore, a freeway ramp analysis is not required.

D. CEQA Screening Threshold

Prior to accounting for trip reductions resulting from the application of Transportation Demand Management (TDM) Strategies, a trip generation analysis was conducted to determine if the project would exceed 250 daily vehicle trips screening threshold. Using the City of Los Angeles VMT Calculator tool, which draws upon trip rate estimates published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, 9th Edition as well as applying trip generation adjustments when applicable, based on sociodemographic data and the built environment factors of the project's surroundings, it was determined that the project **does** exceed the net 250 daily vehicle trips threshold. The VMT calculator version 1.3 was the latest VMT calculator available at the time the analysis was submitted and accepted by DOT. A copy of the VMT calculator screening pages, with the corresponding net daily trips estimate, are provided as **Attachment C** to this report.

E. Transportation Impacts

On July 30, 2019, pursuant to SB 743 and the recent changes to Section 15064.3 of the State's CEQA Guidelines, the City of Los Angeles adopted VMT as a criteria in determining transportation impacts under CEQA. The new DOT Transportation Assessment Guidelines (TAG) provides instructions on preparing transportation assessments for land use proposals and defines the significant impact thresholds.

The DOT VMT Calculator tool measures project impact in terms of Household VMT per Capita, and Work VMT per Employee. DOT identified distinct thresholds for significant VMT impacts for each of the seven Area Planning Commission (APC) areas in the City. For the Harbor APC area, in which the project is located, the following thresholds have been established:

- Household VMT per Capita: 9.2
- Work VMT per Employee: 12.3

The project has proposed to use the following TDM strategy as a Project Design Feature:

- Bicycle Parking per the Los Angeles Municipal Code (LAMC)

As cited in the VMT Analysis report, prepared by Linscott, Law &Greenspan, Engineers, the Work VMT per employee is not applicable since the project's restaurant component of 1,500 square feet is considered a local-serving retail use. However, the Household VMT per capita is applicable but remains under the threshold at 7.1 Household VMT per Capita. The project's Household VMT per Capita does not exceed the Harbor APC area threshold thus the project is not expected to result in a significant VMT impact. A copy of the VMT Calculator summary report is provided as **Attachment D** to this report.

F. Access and Circulation

During the preparation of the new CEQA guidelines, the State's Office of Planning and Research stressed that lead agencies can continue to apply traditional operational analysis requirements to inform land use decisions provided that such analyses were outside of the CEQA process. The authority for requiring non-CEQA transportation analysis and requiring improvements to address potential circulation deficiencies, lies in the City of Los Angeles' Site Plan Review authority as established in Section 16.05 of the LAMC. Therefore, DOT continues to require and review a project's site access, circulation, and operational plan to determine if any access enhancements, transit amenities, intersection improvements, traffic signal upgrades, neighborhood traffic calming, or other improvements are needed.

In accordance with this authority, the Project has completed a circulation analysis using a "level of service" screening methodology that indicates that the trips generated by the proposed development will not result in adverse circulation conditions at any of the studied locations and will not cause or extend vehicle queuing that exceeds the TAG thresholds. DOT has reviewed this analysis and determined that it adequately discloses operational concerns. A copy of the circulation analysis table (Table 6-2) that summarizes these potential deficiencies is shown as, **Attachment E**.

PROJECT REQUIREMENTS

To comply with transportation and mobility goals and provisions of adopted City plans and ordinances, the applicant should be required to implement the following:

1. Parking Requirements

The project is proposing to provide an overall total of 575 vehicle parking spaces to accommodate the LAMC parking requirements. Also, the project will be providing 181 bicycle parking spaces (17 short-term and 164 long-term) per LAMC requirements. The parking for vehicles and bicycles will be provided onsite. The applicant should check with the Department of Building and Safety on the number of Code-required parking spaces needed for this project.

2. Highway Dedication and Street Widening Requirements

In order to mitigate potential access and circulation impacts, the applicant may be required to make highway dedications and improvements. The applicant shall consult the Bureau of Engineering (BOE) for any highway dedication or street widening requirements. These requirements must be guaranteed before the issuance of any building permit through the B-permit process of the BOE. They must be constructed and

completed prior to the issuance of any certificate of occupancy to the satisfaction of DOT and BOE.

3. Project Access and Circulation
The proposed site plan is acceptable to DOT; however, review of the study does not constitute approval of the driveway dimensions and internal circulation schemes. Those require separate review and approval and should be coordinated with DOT's West LA/Coastal Development Review Section (7166 W Manchester Ave, @ 213-485-1062). In order to minimize potential building design changes, the applicant should contact DOT for driveway width and internal circulation requirements so that such traffic flow considerations are designed and incorporated early into the building and parking layout plans. All new driveways should be Case 2 driveways and any security gates should be a minimum of 20 feet from the property line. All truck loading and unloading should take place on site with no vehicles backing into the project from public streets via any of the project driveways. The applicant should also check with The Department of City Planning regarding the project's driveway placement and design.

4. Worksite Traffic Control Requirements
DOT recommends that a construction work site traffic control plan be submitted to DOT's Citywide Temporary Traffic Control Section or Permit Plan Review Section for review and approval prior to the start of any construction work. Refer to http://ladot.lacity.org/what-we-do/plan-review to determine which section to coordinate review of the work site traffic control plan. The plan should show the location of any roadway or sidewalk closures, traffic detours, haul routes, hours of operation, protective devices, warning signs and access to abutting properties. DOT also recommends that all construction related truck traffic be restricted to off-peak hours to the extent feasible.

5. Development Review Fees
Section 19.15 of the LAMC identifies specific fees for traffic study review, condition clearance, and permit issuance. The applicant shall comply with any applicable fees per this ordinance.

If you have any questions, please contact me, or Valeria Ceja at (213) 485-1062.

Re: A-1 Mobilehome - 1290 W. Pacific Coast Highway Project, Los Angeles County

To Whom It May Concern:

As requested, a search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed based on information submitted for the above referenced project. The results were negative. Be aware that tribes do not always record their sacred sites in the SLF, nor are they required to do so. As such, an SLF search is not a substitute for consultation with all tribes that are traditionally and culturally affiliated with a project's geographic area.

Attached is a list of Native American tribes that are traditionally and culturally affiliated with the project's geographic area. Please contact all of the listed tribes as they may have information about sacred sites within the project area that is not listed with the NAHC.

If within two weeks of notification, a response has not been received, the Commission requests that you follow up with a telephone call or email to ensure that the project information was received.

If you receive notification of a change of address or phone number from a tribe, please inform the NAHC so that we can assure that our lists contain current information.

In addition to engaging in tribal consultation, you should consult the appropriate regional California Historical Research Information System (CHRIS) information center to determine whether it has information regarding the presence of recorded archaeological sites within the project area.

If you have any questions or need additional information, please contact me at Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

RE:

PROJECT ADDRESS: 1268-1290 West Pacific Coast Highway, and 25900 South Frampton Avenue, Wilmington, CA 90710
1280 PCH Mixed Use Development
(Case No. ENV-2021-9523-HES-PEIR) (“Proposed Project”)
FINAL CLOSURE LETTER FOR TRIBAL CONSULTATION
MUTUAL AGREEMENT REACHED

Dear Chairman Salas:

The City, after acting in good faith and after reasonable effort, has concluded that mutual agreement CAN be reached for purposes of tribal consultation pursuant to Mitigation Measure 4.15-1(a) of the Program EIR of the Citywide Housing Element 2021-2029. Based upon the record and the reasons set forth in the Preliminary Closure Letter dated September 19, 2025, the City and Tribe have reached agreement.

Since the City shared its Preliminary Closure Letter dated September 19, 2025, the Tribe has provided an additional request to remove the City’s proposed Condition of Approval for an Inadvertent Discovery of Tribal Cultural Resources. The tribe expressed concern over a duplicative condition since it could conflict with the Kizh Nation Mitigation Measures for this project. The City has agreed to remove the separate inadvertent discovery condition mentioned in the Preliminary Closure letter. The Tribe has provided no further information in response to our Preliminary Closure Letter. As such, for the reasons set forth therein, the Preliminary Closure Letter now becomes final. Please find attached the mutually agreed Mitigation Measures for the project.

The City is expected to finalize and take action on the Housing Element Checklist and Mitigation Monitoring Program in early October 2025. Please do not hesitate to contact me if you wish to share any additional information, comments, or concerns.

Respectfully,

Norali Martinez
City Planner
Department of City Planning – West/South/Harbor Project Planning Division

Attachment:
Conditions of Approval

Attachment

Conditions of Approval - Tribal Cultural Resource

TCR-1: Retain a Native American Monitor Prior to Commencement of Ground-Disturbing Activities

A. The project applicant/lead agency shall retain a Native American Monitor from or approved by the Gabrieleño Band of Mission Indians – Kizh Nation. The monitor shall be retained prior to the commencement of any "ground-disturbing activity" for the subject project at all project locations (i.e., both on-site and any off-site locations that are included in the project description/definition and/or required in connection with the project, such as public improvement work). "Ground-
disturbing activity" shall include, but is not limited to, demolition, pavement removal, potholing, auguring, grubbing, tree removal, boring, grading, excavation, drilling, and trenching.

B. A copy of the executed monitoring agreement shall be submitted to the lead agency prior to the earlier of the commencement of any ground-disturbing activity, or the issuance of any permit necessary to commence a ground-disturbing activity.

C. The monitor will complete daily monitoring logs that will provide descriptions of the relevant ground-disturbing activities, the type of construction activities performed, locations of ground- disturbing activities, soil types, cultural-related materials, and any other facts, conditions, materials, or discoveries of significance to the Tribe. Monitor logs will identify and describe any discovered TCRs, including but not limited to, Native American cultural and historical artifacts, remains, places of significance, etc., (collectively, tribal cultural resources, or "TCR"), as well as any discovered Native American (ancestral) human remains and burial goods. Copies of monitor logs will be provided to the project applicant/lead agency upon written request to the Tribe.

D. On-site tribal monitoring shall conclude upon the latter of the following (1) written confirmation to the Kizh from a designated point of contact for the project applicant/lead agency that all ground-disturbing activities and phases that may involve ground-disturbing activities on the project site or in connection with the project are complete; or (2) a determination and written notification by the Kizh to the project applicant/lead agency that no future, planned construction activity and/or development/construction phase at the project site possesses the potential to impact Kizh TCRs.

TCR-2: Unanticipated Discovery of Tribal Cultural Resource Objects (Non-Funerary/Non-Ceremonial)

A. Upon discovery of any TCRs, all construction activities in the immediate vicinity of the discovery shall cease (i.e., not less than the surrounding 50 feet) and shall not resume until the discovered TCR has been fully assessed by the Kizh monitor and/or Kizh archaeologist. The Kizh will recover and retain all discovered TCRs in the form and/or manner the Tribe deems appropriate, in the Tribe's sole discretion, and for any purpose the Tribe deems appropriate, including for educational, cultural and/or historic purposes.

TCR-3: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects

A. Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in Public Resources Code Section 5097.98, are also to be treated according to this statute.
B. If Native American human remains and/or grave goods are discovered or recognized on the project site, then Public Resource Code 5097.9 as well as Health and Safety Code Section 7050.5 shall be followed.
C. Human remains and grave/burial goods shall be treated alike per California Public Resources Code section 5097.98(d)(1) and (2).
D. Preservation in place (i.e., avoidance) is the preferred manner of treatment for discovered human remains and/or burial goods.
E. Any discovery of human remains/burial goods shall be kept confidential to prevent further disturbance.

Council Member Tim McOsker

RE: Proposed Project at 1268-1290 W. PCH / 25900 S. Frampton Avenue

Dear Council Member McOsker:

The Harbor City Neighborhood Council has reviewed and supports the proposed mobile home park closure and new development of commercial space plus 354 units, including 42 very low-income units, at the above address. We encourage the City to provide the requested entitlements and to enable the new project to proceed. This project is well designed. It will replace a blighted property with a large investment in new housing, including replacement housing for the current residents.

The project is most welcome for the neighborhood and for Harbor City.

Sincerely,

Harbor City Neighborhood Council

Closure Social Impact Report Comments

cynreh@icloud.com <cynreh@icloud.com> Fri, Sep 12, 2025 at 12:42 PM
To: Norali Martinez <norali.martinez@lacity.org>

Re: Case # AA-2019-5528-MPC
From: Cynthia c/o Maria Valencia A-1 Trailer Park Resident, Space C-13

Hi Norali,

I am writing to provide feedback on the closure social impact report for the A-1 trailer park. I am particularly advocating for my mother, Maria, who lives in space C-13.

The document mentions that a relocation coordinator will be assigned to residents and that the area has been surveyed for available relocation spaces. Given that the number of available spaces near Harbor City appears to be low, I have several questions I would like to bring to your attention and to be filed with the deputy advisory.

1. The Relocation Coordinator and Process:

- What are the specific roles and responsibilities of the Relocation Coordinator?
- How soon after the project is approved will this person begin working with residents?
- What process will be implemented to give priority to those needing or wanting to stay close to their community? For example, my mother is partially visually impaired and relies on her familiarity with her surroundings to perform daily activities and errands. Placing her far from her community would be extremely difficult for her.
- Will residents have a say in which City they would like to move to, should nearby is not an available choice to them?

2. Housing and Relocation:

- What provisions are in place for residents who cannot afford the rent at their new housing options?
- What happens if a resident's dwelling cannot be moved because it is not in a condition to be moved?

I understand that the amount of information in the report is extensive, so please excuse me if these questions are already answered in detail. If so, kindly direct me to the exact section where I can find this information. If these discussions have not yet occurred, please let me know when they will be so that I can take part and advocate for my mother and other residents.

Thank you for your time and attention to this critical matter. I look forward to your response.

Sincerely,

Cynthia Rehmani, daughter

Dear Ms. Martinez,

Thank you for your recent e-mail invitation to the September 16, 2025 webinar.

I am an attorney for one of the A-1 Trailer Park tenants.
Since our last public hearing, I have considered and analyzed the Closure Impact Report and Relocation Plan for the park, as well as have had two comprehensive conversations with Mr. Alex Wong.

CONCERNS EXPRESSED ON JULY 24, 2025
During the most recent public hearing, I expressed the following concerns:

The Report does not detail how individual tenant rights are protected in certain instances.
For example, the relocation assistance fee for each unit appears to be framed as if it will be distributed in a single lump sum payment without stating to whom will the payment would be made.

I asked, hypothetically, if a group of four adult tenants live in the same dwelling, how are the individual tenant's rights protected, assuming the payments made under this set of facts are given in one lump sum payment?
If a dispute arises among the single group of tenants for a particular unit about distribution of the lump sum payment among them, how are the individual tenant's rights protected by the Relocation Plan?

SAME CONCERNS EXIST AT THE PRESENT TIME
During my conversations with Alex Wong, he clarified that the developers's plan for the payments is to make them in a lump sum to the Lessor of the mobile home space or the individual holding title to the mobile home, without assurance that the payment is divided among the adult occupants of the unit.

This plan fails to provide protections to all occupants and may result in a complete denial of required compensation to occupants whose name is neither on the title to the mobile home or a lessee of the mobile home space.
Mr. Wong and I discussed this issue in detail on September 16, 2025.
In the specific circumstances of the unit in question, the payment will be relocation assistance, because the value of the mobile home is far less than the relocation assistance.

We concluded that the issues are unresolved at this time and that I would urge that a plan be developed to assure that all occupants of the mobile home park receive individual payments consisting of a *pro rata* share of the relocation assistance for the unit in question and others within the park that are in similar circumstances.

Thank you again.
.
Sincerely,

Damon Guizot, Esq.

To: "Norali.martinez@lacity.org" <Norali.martinez@lacity.org>

I believe this project is in the best interest of Harbor city. I will bring beautification to the neighborhood as well as bringing business to the community. I feel this project will help to bring low income to our neighborhood. I also feel it will help to clean up the neighborhood organically.
I grew up in this neighborhood and watched it go to the gutter. We need to keep the quality high and cost low as to the cost of living in Los Angeles. California has gotten so expensive for most people. We need to bring beauty to a much-forgotten city. The city has Families and small businesses that are fathered in since I was kid. We all as a community deserve better. I think this project will bring a brighter future for these communities.

Thank You,
Melissa Yaklyvich

Re: Stonehaven Maintenance Corp HOA

Dear Alex:

This letter is in regards to the presented proposed Red Oak Investments project with the City of Los Angeles to build an Apartment complex on the corner of Frampton Avenue and Pacific Coast Hwy.

Alex Wong and his partners have presented the HOA Board of Stonehaven Maintenance HOA the proposed planned development to improve the quality of life for the residents that live in the area. This proposal also addresses the low-income housing issues that plague Los Angeles for those families that want to live in an improved environment. We the HOA Board of Stonehaven Maintenance represent the residents of our complex and support Red Oak Investments proposal. We look forward and are eager for the City moving forward with their project.

Should you require any additional information, please feel free to contact me directly or our Management office at your earliest convenience.

Sincerely,

Keith Reels
Board President for
Stonehaven Maintenance Corp HOA

RE: 1280 PCH Project

To Whom It May Concern:

On June 14, 2023, I had the opportunity to meet with Alex Wong who explained the "1280 PCH" project and also previewed with me, examples of the outside, inside, clubhouse, gym, pool area and parking structure.

I am very excited about his plans and feel that this project will be a much-needed upgrade and enhancement to our neighborhood.

Should you have any questions or need further information, please do not hesitate to contact me.

Best Regards,

Lorraine Fowler

RE: Proposed Trailer Park Closure and New Mixed-Use Project at 1280 PCH, Harbor City

To Whom It May Concern,

Cambridge Court is a community of hard-working residents. Our community is the result of hard work, and resolve we pride ourselves in how well we maintain our complex of 130 units. We have some residents who have been here since the complex was built, some for 23 years, and some as little as two years.

The board and some of the residents had the pleasure of meeting Alex Wong from Red Oak Investments on Thursday, August 31, 2023, his investment company goals seem to align with our goals here at Cambridge Court. Cleaning up and developing the community we live in to make it safe and desirable to all. Alex mentioned their plans of developing the Trailer park tearing it down and building a luxury apartment building five stories high with a parking structure in the middle, and retail space below. They are also committed to having at least 15% of low-income as opposed to the standard 10%. The board is in constant communication with our local legislator to keep 259th Street clean and rid of any transients.

The board strongly urges the city of Los Angeles to approve the luxury apartment complex which will improve the appearance and property values in the neighborhood.

Best Regards,

Jan Bedell – President

Rob McClister – Treasurer

Megan Beasley – Secretary

Jon Peterson – Board Member

Subject: Support for the Upcoming Apartment Development in Harbor City

Dear Norali Martinez,

Thank you for taking the time to speak with me today. I am writing to express my full support for the upcoming apartment development planned in Harbor City.

As someone who often passes through nearby cities such as Carson and Lomita, I have noticed many new buildings being constructed there. In contrast, Harbor City has seemed stagnant, which has been disappointing for me and others who care deeply about this community.

I truly hope that this new project will mark the beginning of greater improvements for Harbor City, not only in housing but also in infrastructure, safety, and overall development. Your continued efforts and contributions to the growth of this community are greatly appreciated.

Thank you for your dedication and hard work.

Sincerely,
Alex Choi

Hi Mr. Alex Wong,

Thank you for coming in and showing us the new housing project that will increase the lively hood of Harbor City!

We are very excited to see the development for the neighborhood, it will increase the food traffic for this area and give the city more life.

We want this neighborhood to be safe, clean, and vibrant. Hopefully the new housing will deter and move all the homelessness away from this area so that the city can grow.

We at Jax Donut shop appreciate and support Mr. Wong and Red Oak investment for the new housing development.

Thank you again,
Jax Donut and family

Subject: 1280 pch project

My family is is land owner at 1242 pch, Harbor City, next door neighbor.

A new housing development being built next door is great and overdue, bringing much-needed residential options to the neighborhood. The project helps to address the local housing shortage while supporting a diverse and inclusive community.

Designed with community in mind, the development will make is safe.

By providing more housing opportunities and encouraging neighborhood stability, this development will strengthen the local economy, support nearby business, and make housing available and safe.

Sincerely,

Kevin Hong, neighbor

Good Afternoon Connie,

I hope this email finds you well.

Our office would like to inquire about the status of **The Oasis Project (1268 – 1290 Pacific Coast Highway and 25900 S. Frampton Avenue)** in the City of Los Angeles. We are wondering if this project is still on hold.

Thank you very much for your time!

February 24, 2023

To whom it may concern,

I am writing this letter in support of the proposed **mixed-use development 1268-1290 W. Pacific Coast Hwy & 25900 S. Frampton Ave Harbor City, California 90710**. As a member of this community, I am excited about the prospect of mixed-use development being built to accommodate the growing demand for housing in the area.

The proposed development would offer a mix of market-rate and affordable units, providing an opportunity for families with different income levels to find a housing they can afford.

Moreover, the proposed development is in an area that is well-suited for residential development. The site is conveniently located near schools, parks, and shopping centers, making it an ideal location for families looking for a safe and convenient place to call home.

I also believe that the proposed development will have a positive impact on the local economy. The construction of the new mixed-use development will create jobs, and the new residents will support local businesses, helping to boost the local economy.

In conclusion, I fully support the proposed mixed-use development in Harbor City. It will help to address the growing demand for housing in the area and have a positive impact on the local economy.

Sincerely,

Howard Scott
